• ***Summary:*** The first Appendix, titled "Schedule for carrying out theoretical and practical studies of the recruits in the first term, 1911-1912. By the 2d [2nd] Company, the 3d [3rd] Battalion, Engineers" states (p. 172) under "Bills of fare. Prepared by the 1st Battalion, the 68th Regiment, Infantry. (Extract)."

Sunday (March 10, 1912). Breakfast includes: *Moritsuki*, with Soy, 2 shaku. Tiffin includes: *Furofuki* radish [daikon] with Miso (bean paste), 13 momme. Supper includes: *Shitashi*, with Soy, 15 sai. Cost of fish and vegetables per man, Yen 0.11 7/10.

Monday (March 11, 1912). Breakfast includes: Miso soup with Fried bean-curd 1/3 piece. Bean curd 1/4 piece. Miso, 18 momme. Tiffin includes: *Nimame* with Black [soy] bean, 4 shaku. Soy, 1 shaku. Supper includes: Fresh beef, 10 momme.

"Note: Momme–about 3.8 gram. Shaku–0.004 gallon. Sai–1/10 shaku." Address: Lieut-Col., U.S. Army, Military Attache, Tokyo, Japan.

790. Kuijper, J. 1912. Soja [Soya]. *Departement van den Landbouw, Suriname, Bulletin* No. 29. p. 24-29. Nov. [Dut]

• ***Summary:*** In recent years, since 1908, soya has become a product of great importance on the world market. There are few products whose exports have risen so dramatically in just a few years. The reason for the great expansion of trade in soya can be found in the great demand by industry for oilseeds. For more than 30 years, experiments have been conducted on growing soybeans in Europe, but the results have not been very promising. Some people have suggested that soya might be able to be grown in Suriname. It is grown in many tropical countries, including Siam, British India, and Java. Requirements for cultivation and yields are discussed. Japan reports the highest yields, 2,500 kg/ha, compared with 1,000 to 1,400 kg/ha from the USA. Soybeans produce more protein and oil per unit area of land than any other farm crop. The seed is used mainly for human consumption but the plant also yields, fresh or dried, an excellent livestock feed, which is why so much research on it is now being conducted in Australia and America. It is important for Suriname that soya can be used as a green fodder, for example interplanted and fed with corn.

From soya one can make numerous products such as soymilk (*soyamelk*), soy cheese [tofu] (*soyakaas*, whose food value is higher than that of meat), soy flour, soy bread (*soyabrood*), oil (*olie*), various sauces (soya sauce, Worcester sauce, etc.), and various substitutes for coffee and chocolate, etc. (*surrogaten voor koffie en chocolade enz.*).

In Suriname soya is cultivated on a small scale by the Javanese, for example in Lelydorp and in the settlements of Johan and Margaretha. Many experiments with Soya have already been conducted in the experimental garden (*Cultuurtuin*). Seeds imported from America did not give good results; the plants remained small, yielded few fruits, and died quickly thereafter. It is a common occurrence that plants from temperate or subtropical regions do not grow well in the warm tropics in the rainy season. Of the seeds cultivated in Suriname, two varieties give good results. Those cultivated by the Javanese give hardy plants and a lot of seed though exact yield figures are not available; the planted area is still quite small. But the yield is about 1,000 kg/ha. Apparently the necessary bacteria are present in the soil, for the roots show nodulation.

In the experimental garden two beds of soya were planted on May 24. The first seeds ripened after 3 months and within 4 months all was harvested. Thus the plants developed during the rainy season, and they probably got too much water. The results would probably be better if this season could be avoided. Soya is sold in Suriname for hfl 30 per bag, a considerably higher price than that paid in Europe. On the plantations Peperpot and Jaglust experiments with soya have also been conducted. The European seed that was used gave very limited results. The experiments will be conducted again using Suriname seeds.

With the market price at hfl 10 per bag, it seems very unlikely that the cultivation of soya in Suriname will ever be profitable, unless high yields can be obtained. As mentioned above, this seems unlikely. Small scale cultivation for sale in Suriname, however, seems advantageous at present, while in areas where cattle are raised the use of soya as a green feed to replace more expensive secondary feeds will likely give good results.

Note 1 This is the earliest document seen (May 2009) concerning soybeans in Suriname, or the cultivation of soybeans in Suriname.

Note 2. This is the earliest Dutch-language document seen (Nov. 2012) that uses the term *surrogaten voor koffie* to refer to soy coffee.

Note 3. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *soyamelk* to refer to soymilk.

Note 4. This is the earliest Dutch-language document seen (April 2013) that uses the term *soyakaas* to refer to tofu. Address: Surinam.

791. Tonnelier, Adolfo C. 1912. Soja hispida, Moench: Metodos industriales de elaboracion de sus diversos derivados [The soybean: Industrial methods of manufacturing its various derivatives]. *Revista Industrial y Agricola de Tucuman* (*Argentina*) 3(6):236-39. Nov. See also p. 396. With 5 photos of soybean plants and soybeans. [Spa]
• ***Summary:*** Contents: Introduction. Vegetable milk (*leche vegetal*, soymilk). Vegetable cheese (*queso vegetal*) [tofu]. Oil and casein (*aceite y caseina*, including preliminary operations of washing the seeds, extraction of the oil (*El aceite de Soja*), extraction of the vegetable casein {*caseina vegetal*} which has numerous industrial applications, as in the preparation of water-resistant paints, in the textile, paper, silk, and artificial textile industries, rubber, leather, plastic materials, films, photographic emulsions, etc.). Soy flour. Artificial rubber (*caucho artificial*). Shoyu or soy sauce (*choyou ó salsa de soja*).

"In the vicinity of Paris a factory for the production of soy-based food products has been founded. In England important manufacturers of soy flour, soybean cakes, and the extraction of the oil are in operation. Mr. Karajama [sic, Katayama (1906)], a Japanese chemist, uses soybean seeds to prepare a concentrated milk, a flour of the type that Nestlé makes, and biscuits (*biscochos;* not cookies), obtaining in this way a maximum of food and nutrition at very reduced volume.

"The experiments carried out since one year ago at this part of the Experiment Station, attached to the National School of Agriculture at Córdoba, have verified the easy acclimatization of this plant, the abundance and goodness of its products.

"It is to be hoped that its cultivation with be extensively propagated in the zones that are favorable for it. This leguminous oilseed is not only of interest to the farmer, agriculturist, and landowner, but also to the industrialist, and on no smaller scale.

"It is a new fountain / source of riches for the nation, that we must not neglect."

Note 1. This is the earliest Spanish-language document seen (Aug. 2003) that uses the term *caseina vegetal* to refer to isolated soy protein.

Note 2. This is the earliest Spanish-language document seen (Sept. 2006) that uses the term *El aceite de Soja* to refer to soy oil.

Note 3. This is the earliest Spanish-language document seen (April 2012) that uses the word *choyou* or the term *salsa de soja* to refer to soy sauce.

Note 4. This is the earliest Spanish-language document seen (April 2013) that uses the term *queso vegetal* to refer to tofu. Address: Chief of the Experiment Station, attached to the School of Agriculture, Argentina.

792. *Grey River Argus* (*West Coast, New Zealand*). 1912. Milk made by machinery: Dairies turned into factories. Germ free and cheaper than cow's milk. Dec. 9. p. 1.
• ***Summary:*** "The familiar sign 'Milk from our own dairies' may soon be supplanted in London by the announcement 'Milk from our own factories.'

"This startling development of man's struggle to improve on nature is the result of the discoveries of Dr. Saner and Dr. Gooseell [sic, Gössel; Goessel], two German scientists, who claim to be able to make by machinery milk that is superior to that supplied by the cow.

"A demonstration of this synthetic milk was given at Dane's Inn House, London, in October, in the presence of medical men and Press representatives. Apart from a sort of clinging taste after drinking it, the synthetic draught passed the palate test. It went a little better with coffee.

"The inventors of synthetic milk have been experimenting in Germany for three years, and they claim they have now produced a perfect substitute for the natural article. Analysts in Germany have reported favourably on the new product.

It is claimed that the new milk is:–Free from bacilli; More wholesome than natural milk; Made in various grades to suit, the infant or the adult; Easily standardised; And that it is much, cheaper than the natural article.

"The raw material is said to be purely vegetable, one of the main ingredients being the Soya bean, which is grown in Japan and Corea [Korea], and much used in those countries. As to the process of manufacture. Mr. Faulding stated that various vegetables were put into a machine and subjected to great heat. In plain English the machine does the work of the cow, the raw material, in the scientific sense, being exactly the same as that which supplies the natural article. It takes about seven hours to turn out the finished milk, and it is proposed to 'brew' twice a day.

"The plant is not costly, and taking an average of the various grades of strength the inventors intend to make, the price to the public will be 3*d* per quart. Cheese [tofu] can also be made from synthetic milk, which would be sold for about 3*d* a pound.

"The substitute will not make butter, but it is possible that it may be used in the manufacture of margarine.

"Synthetic milk also gives cream, but it takes longer to

© Copyright Soyinfo Center 2013

make it, as the fat is more evenly distributed than in the case of natural milk.

"Other claims made for synthetic milk are that it is not touched by hand throughout the process of manufacture and that it is not exposed to the atmosphere while being made, except for the brief period required for bottling.

"This, the inventors claim, makes it absolutely free from bacilli [bacteria], and thus, it is claimed, the substitute will greatly diminish consumption [tuberculosis] and other illnesses which are due to or aggravated by, tuberculosis milk.

"It is said that the new milk will keep good twice as long as cow's milk, but as it will be offered for sale in bottles of all sizes, this is not very material.

"If the invention is favourably received it is intended to build a factory in London."

793. *Poverty Bay Herald* (*Gisborne, New Zealand*). 1912. An artificial milk,... Dec. 13. p. 2, col. 2.
• ***Summary:*** "... manufactured from vegetables, which is said to contain all the elements of the best cow's milk, and can be used for the same purpose, was shown to a gathering of scientists in London. Mr. A.J. Faulding, who will be responsible for the introduction of artificial (or synthetic) milk to this country, told a press representative that it was more digestible than ordinary milk, and its cream was for more nourishing. The milk could be used for all cooking purposes, and a very good cheese [tofu] could be made from it, but it would not produce butter. As the milk was germ-free, it would keep longer than cow's milk. The discovery was the work of three Germans, who spent three years in perfecting it. The soya bean in the principal source of the ingredients." Address: Prof.

794. Gibbs, H.D.; Agcaoili, F. 1912. Some Filipino foods. *Philippine J. of Science* 7A(6):383-401. Dec. Section A. Plus 6 unnumbered pages of plates at end. See p. 398-99 + plates III, IV. [2 ref]
• ***Summary:*** "Toyo sauce–This condiment is made principally by Chinese from soja beans, *Glycine hispida* Maxim., imported from China. It is a Chinese sauce of the Worcestershire type." Boiled beans and salt are placed in earthenware jars and spontaneous fermentation is allowed to go on in the sun for 2-4 months (see plate V). "The fermented mass is again boiled for another 12 hours, and the clear liquid is bottled and sold under the name of the toyo sauce. Sometimes it is boiled two or three times producing different grades of strengths of sauce. Molasses or sugar are sometimes added, and this variety is called *si yao* (Chinese).

Photos show: (1) A man in a bihon (thick rice vermicelli) factory using a push-pull apparatus, suspended by ropes from the ceiling, to rotate a traditional stone mill.

Note 1. This same kind of apparatus and mill are used in traditional shops making tofu throughout East Asia.

(2) Soja beans fermenting in earthenware jars, covered with conical woven bamboo lids, in a courtyard, in the manufacture of toyo sauce.

"The Macao Chinese add a quantity of wheat flour to the boiled beans and dry the mixture in thin layers on trays several days before placing in jars for fermentation. This process hastens the fermentation." Note 2. Macao [Macau] is a Portuguese overseas territory, located about 40 miles west of Hong Kong.

Table XVIII gives "Analyses of toyo sauce," including regular toyo, toyo made with sugar, and crude molasses.

Note 3. This is the earliest document seen (April 2012) that uses the word "toyo" or the word "toyo sauce" to refer to Filipino-style soy sauce. Address: 1. Assoc. Prof. of Chemistry, Univ. of the Philippines; 2. Food and Drug Inspector, Bureau of Health. Both: From the Lab. of Organic Chemistry, Bureau of Science, Manila.

795. Linder, William V. 1912. Soy bean cheese. *J. of Industrial and Engineering Chemistry* 4(12):897-98. Dec.
• ***Summary:*** "In the line of my official work a few weeks ago, I had the occasion to examine two samples sent to the laboratory from a western state; these were suspected of being filled cheese... The samples somewhat resembled in appearance and taste a very soft and mushy cream cheese, saturated with water."

Analyses showed that the samples were made from soybeans, and contained no milk, cream, or butterfat. "The investigation proved that the product submitted for examination could not be classed as filled cheese, although a very good substitute."

Note: The "soy bean cheese" was probably tofu, though it could possibly have been fermented tofu. Address: Lab., Bureau of Internal Revenue, Washington, DC.

796. **Product Name:** Tofu.

808. **Product Name:** Tofu.
Manufacturer's Name: Oouchida Tofu-ya.
Manufacturer's Address: 79 Jap Alley, Sacramento, California.
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 53. Note: Oouchi (Ohuchi) Tofu-ya was at this address in 1911 (Directory entry p. 45).

809. **Product Name:** Tofu.
Manufacturer's Name: Sakamoto Tofu-ya.
Manufacturer's Address: 1675 Sutter St., San Francisco, California.
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 17. Note: Aramachi Tofu-ya was at this address in 1909 (Directory entry p. 14), and in 1911 was named Sasaki Tofu-ya (p. 17).

810. **Product Name:** Tofu.
Manufacturer's Name: Shomi (Komi? / Omi?) Tofu-ten.
Manufacturer's Address: 119 E. Lafayette St., Stockton, California.
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 80. Also in 1913, p. 90. Also in 1914, p. 61. Note: This may have been the un-named Japanese tofu shop in Stockton in 1910 (p. 178) and/or 1911 (p. 157).

811. **Product Name:** Tofu.
Manufacturer's Name: Yaoya (Tofu-ya).
Manufacturer's Address: 370 8th St., Oakland, California. Phone: A5599 (Home).
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 29. Note: Shigemoto Tamekichi Tofu-ya was at this address in 1911 (Directory entry p. 27).

812. **Product Name:** Tofu.
Manufacturer's Name: Yasunobu Tofu-ya.
Manufacturer's Address: Care Meiji Riyokan [Ryokan], Salt Lake City, Utah.
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 153.

813. **Product Name:** Tofu.
Manufacturer's Name: Yonemura Tofu-ten.
Manufacturer's Address: 184 E. 14th St., Riverside, California. Phone: Home 236.
Date of Introduction: 1912.
New Product–Documentation: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 122. Also in 1913, p. 142–but now named Yonemura Tofu-ya. Phone: Home 1887. Note: This may have been one of the two un-named Japanese tofu shops in Riverside in 1910.

814. Beltzer, Francis J.-G. 1912. Industries du lactose et de la caséine végétale du soja [Industries producing lactose and soy vegetable casein]. Paris: Librairie Bernard Tignol. 144 p. Undated. (Bibliotheque des Actualites Industrielles, No. 144). [17 ref. Fre]
• ***Summary:*** Contents: Preface. Part 1: The lactose industry (p. 9-95; 4 chapters). Part II: Vegetable milk, vegetable casein, and products from soybean seeds. Introduction. 1. Vegetable milk (*Le lait végétal;* soymilk), microscopic examination of vegetable milk. 2. Vegetable cheese (*Le fromage végétal;* tofu). 3. Industrial uses of vegetable casein, proximate analysis of soybean seeds, quantity and dosage determination, the price of soybeans, price of recovery of vegetable casein, industrial production of vegetable casein, cleaning the soybeans, extraction of soy oil, extraction of soy casein. 4. Plan and installation of a factory for processing (10 tons/day of) whole soybeans [to make industrial vegetable casein], estimate and specifications for special materials, general materials, the buildings, price of recovery of vegetable casein, industrial uses of vegetable casein. Illustrations (line drawings) show: (1) Microscopic view of soymilk globules. (2) Microscopic view of soya bean tegument (exterior). (3) Schematic drawings (cross section and overview) of a factory for making vegetable casein.

Matagrin (1939, p. v) states that with this book, Francis G. Beltzer, a practical chemist, became a major force in visualizing new industrial uses for the soybean in the West.

The Preface notes that in Indochina, vegetable milk and vegetable cheese made from the soybean form the base of the people's nutrition. Cow's milk is largely unknown, and the people raise and nourish their children largely with soymilk. Tofu serves equally for the current nourishment of the poor (p. 6).

© Copyright Soyinfo Center 2013

The Introduction (p. 101-07) notes that soy protein is a globulin, called glycinin or vegetable casein (*caséine végétale*). Osborne & Clapp submitted this substance to acid hydrolysis and found its composition, which is very rich in glutamic acid (p. 102). Soy flour (*farine de Soja*) contains little starch but a large amount of nitrogenous materials, similar to gluten; it is widely used in making bread for diabetics. It can also be used as the basis of foods that are rich in protein and very nutritious, as for colonial or European troops (p. 103).

Soy sauce (*Soja fermenté*) is made in Japan from a mixture of soy and wheat (*koji*). The number of brewers (*brasseurs*) of soy sauce exceeds 12,000 in the entire Japanese Empire, furnishing more than 2,500,000 hectoliters of this condiment (p. 103).

A Chinese factory has been founded on the outskirts of Paris (at Vallées, near Colombes) for the production soy-based food products (*produits alimentaires à base de soja*). This factory currently makes *Caséo-sojaïne* [tofu] and the following food products: Soy flour (*Farine de soja*), soy bread (*Pain de soja*), soy sauce (*Sauce de soja*), soymilk (*Lait de soja*), fermented soymilk (*Lait de soja fermenté*), soy cheese [tofu] (*Fromage de soja*), soy confections (*Confitures de soja*), etc. The Journal, in its issue of 9 Jan. 1911, under the title *"Une usine chinoise fonctionee dans la banlieue parisienne* [A Chinese factory is operating on the outskirts of Paris]" gives some details (p. 106).

In our colonies in Indo-China, the indigenous people have long prepared soymilk, tofu, and several other foods. Soymilk is used like regular milk for feeding babies. Soy cheese, when cooked, is analogous to gruyere cheese; fresh soy cheese resembles our goat cheese. Many Europeans are now preoccupied with making the best of the abundant nutritive principles found in the soybean. One can eat green vegetable soybeans (*Les fruits verts*) like green peas (*pois verts*). In Annam and Japan a sauce is also made from soybeans; its use has spread from East Asia just like that of tofu (*fromage végétal*) (p. 107).

The introduction into Europe and France of soyfoods (*aliments retirés du Soja*), especially soymilk and tofu, will enable us to combat periods of scarcity of animal milk and periods when the prices of certain foods are high. Will the substitution of vegetable casein for milk casein enable us to likewise conserve milk for food use instead of delivering it to industry? (p. 107).

Chapter one, "Soymilk" (p. 108-13), discusses the work of the Japanese chemist T. Katayama (1906) with soymilk and notes that it can be homogenized and condensed. Illustrations show a microscopic view of the globules of soymilk and of okara. The absence of starch in soybeans is a very positive characteristic.

Chapter two, "Tofu" (p. 114-18), notes that in Cochin-China, calcium sulfate is called *Tchack-kao*, and there are three main varieties of tofu: (1) The fermented variety, which is gray or yellow in color, has a piquant taste and resembles Roquefort cheese. (2) The white salted variety resembles goat's cheese. (3) The baked (*cuite*) or smoked variety resembles gruyere cheese and keeps as well as the salted variety.

Chapter three, "Industrial uses of vegetable casein" (p. 119-32), observes that the oil in soybeans must first be removed by pressing or extraction. A table (p. 120) gives the chemical composition of soybeans from Laos and Cochin China, Tonkin, and China and Manchuria. They contain 17.64 to 18.28% oil. In Indochina a food which Beltzer calls *La caséine végétale en lames* ("vegetable casein in sheets" = yuba) has a rather high oil content–about 25-28%. There follows a section (p. 126-32) which contains details on industrial production of soy casein. Chapter four, "Design and installation of a factory for processing soybeans into industrial vegetable casein," describes each piece of equipment and its cost, itemizes the costs of general and special materials plus, buildings and working capital. Also includes a detailed schematic diagram (p. 136-37) with three production lines, and both top and side views. Finally, it lists expenses, income, and profit (p. 139). The last section, applications of industrial vegetable casein, includes paints, paper coatings, silk and artificial textiles, Galalith, and waterproofing of textiles and straw hats. The book contains no bibliography, few footnotes, and no mention of the work of Li Yu-ying–from whom the author appears to have borrowed much.

Note: Although this book is undated, all major sources (except a Seattle Public Library bibliography) give its date as 1912. Address: Ingenieur-Chemiste-Expert, Professeur de Chimie Industrielle.

815. Giles, Herbert Allen. 1912. A Chinese-English dictionary. 2nd ed., revised & enlarged. 2 vols. Shanghai, China: Kelly & Walsh, Ltd.; London: Bernard Quaritch. 33 x 26 cm. Reprinted in 1964, 1978. [4 ref. Eng; chi]

• ***Summary:*** These two massive volumes, each weighing about 9½ lb, contain more than 1,800 pages and 13,848 Chinese characters. Contents of Vol. I: Part I. By the same author (25 books). Dedication. Preface. Extracts from preface to first edition. Dialects (The romanized pronunciation of each character is given in Cantonese, Hakka, Foochow, Wênchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch'uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter). Tables: Insignia of official rank, the family names, the Chinese dynasties, topographical, the calendar, miscellaneous (the Chinese digits, the Chinese decimal system). The 214 radicals. Radical index. Part II. A Chinese-English dictionary (p. 1-1711, in two volumes). Examples of soy-related characters:

Chiang (p. 149, No. 1220). "A soy made by mixing salt with bean flour. Sauce." Fourteen compounds using this

© Copyright Soyinfo Center 2013

character are given, including: Bean sauce, soy. Pickled bean curd. Bean sauce. Soy is of two kinds, the clear and the thick. Dry relishes. Soy [sauce] colour–a dark reddish drab. He won't use money for vinegar to buy soy.

Ch'ih (p. 249, No. 1996). "Salted fruits, etc., dried and used as relishes." Four compounds incl.: Salted beans. Soy, sauce.

Fu (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials–a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (milk + fu) [Note: Probably fermented tofu].

Huang (p. 635, No. 5124). Yellow. Compounds: Yellow beans.

Mao (p. 955, No. 7,679). "Hair, down, feather." But the word *Maodou* ("Hairy beans") = edamame does not appear here.

Ta (p. 1,294-96, No. 10,470). "Great." But the word "Great bean" = soybean does not appear here.

Tou (p. 1,412, No. 11,417). "Beans; pulse." See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Like making bean curd–very tedious. A tongue like a knife, but a bean-curd heart (soft). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja or soya bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,661, No. 13,409). "Oil, fat, grease." 45 compounds incl. Oil, salt, soy, and vinegar = condiments generally. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But "bean-oil" = soybean oil does not appear here.

Note 1 (see p. vii): Other earlier important Chinese dictionaries are: Morrison (1819, English). Medhurst (1843, English). Williams (1874, American). Giles (1892, English). Giles lived 1845-1935.

Note 2. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin). Address: Prof. of Chinese, Univ. of Cambridge, Cambridge, England; and sometimes H.B.M. Consul at Ningpo.

816. Hashimoto, Yojizaemon. 1912. The dairy industry in Japan. MSc thesis, University of Wisconsin. [2] + 67 p. See p. 41-42 [3 ref. Eng]

• ***Summary:*** Chapter 10, "The manufacture of tofu," describes the process in detail, using equipment that was common in 1912. The soaked soybeans are ground with a stone mortar, adding water little by little, then boiled with water for 20-30 minutes. "If it boils over, add a little rape oil in order to prevent foam. After 20 or 30 minutes, pour into a hemp cloth bag and press with the hydraulic press so that a milky substance [soymilk] is squeezed out of the bag which is collected. The deposit remaining in the bag is cooled and is known as Kirazu. This is very palatable and is eaten by the people and domestic animals."

Note 1. This is the earliest English-language document seen (Aug. 2008) that uses the term "milky substance" to refer to soymilk.

Note 2. This is the earliest purely English-language document seen (Dec. 2008) that uses the word "Kirazu" to refer to what is now called "okara" or "soy pulp."

"To this boiling, milky substance is added, little by little, saturated magnesium sulphate (obtained from sea salt) until about 1/20 of a gallon is added. Then cover about ten minutes without disturbing. This curd is poured into a wooden mold, which has a hoop of cheese cloth, and pressed about 30 minutes with light weights.

"The Tofu is a little firmer in texture than junket, which can be handled easily without breaking. Tofu has a mild, pleasant flavor and smooth texture. It is prepared economically and conveniently throughout the Japanese empire and is a most digestible food. It is cut into blocks about four or five inches square, weighing about one pound, which are sold for about half a cent each to customers. It is eaten fresh or may be frozen and kept for a year or more."

A table shows the chemical composition of tofu. Digestibility: Crude protein: 2.7. Carbohydrates: 7.1? Fat 1.2.

On page 63 is an interesting discussion of why dairying has developed slowly in Japan.

Note 1. This thesis was submitted for the Degree of Master of Science in Agriculture. Note 2. At this time, the word "kirazu" appears to have been more popular than "okara" or "unohana."

817. Polk's Portland [Oregon] city directory. 1912. Portland, Oregon: R.L. Polk & Co., Inc. See p. 1142, 1735. *

{*materias azoadas, materias proteicas*}, cellulose, and carbohydrates).

"The results obtained during these last two periods in this Experimental Station permit us to predict a bright future for these industries. The soybean is adequate to use as green manure, green fodder and hay; it produces a grain with which flour is made for the maintenance of people and animals; it also produces oil which leaves a residue cake that can be fed to livestock. Besides these products, soybeans can be a source for artificial milk (*leche artificial;* soymilk), cheese (*queso*) [tofu], and a certain sauce (*cierta salsa;* soy sauce), all of which, even if their use has not yet become part of our custom, are at least widespread in the Chinese Empire" (p. 1).

"The main center for the utilization of the soybean and for the production of flour, oil and cakes is found in Hull, England." Tables show the composition of soy flour and the soybean cake, based on analyses by Maret and Delattre (p. 8).

On page 10 is a discussion of vegetable milk or soy milk. Page 12 discusses *"queso de Soja, ó To Fou"* ("soy cheese, or tofu") and *"la famosa salsa de Soja, llamada Soyou ó Choyou"* ("the famous soy sauce, called Soyou or Choyou" [actually shoyu]). A table gives the chemical composition of fresh and dry tofu.

A full-page table (p. 13) compares the chemical composition of soybeans and soyfoods with similar foods from other sources in six categories: Seeds or grains, cakes (for feed), flour, green forage, milk (incl. soymilk), and cheese (incl. fresh and dry tofu; *Queso de To Fou, fresco; Queso de To Fou, seco*). The dry tofu cheese may be dry-frozen tofu.

"Experiments carried out at this Experimental Station in Cordoba during the last three years plainly confirm the favorable effects that legumes produce as green/unripe manure over other crops such as corn, flax, wheat, barley, rye and potatoes. In the period 1910-1911, as is well known, was not a very favorable one for forage production. A yield corresponding to 36,000 kg/ha of green forage was obtained [from soybeans] at this Experimental Station" (p. 15). "The experimental cultivation of the hispid/hairy soybean in the period of 1910-1911 was carried out on soil of mediocre composition, inferior to that of the average crops in the region. As I stated earlier, that year was extremely unfavorable for all vegetation. Half of the crop either failed to bloom or did not ripen. As a result, by January 19, 1911, the harvest of green forage was 36,800 kg/ha, leaving the other half for seed" (p. 16).

Photos show: (1) A field of soy bean plants (Soja hispida). (2) Close-up view of a man standing with a measuring stick in a field of soy bean plants. (3) Close-up view of leaves of a soy bean plant. (4). Close-up of soybean pods on stem. (5). Soybean pods placed next to a ruler.

Note 1. This is the earliest document seen (May 2009) concerning the cultivation of soybeans in Argentina (one of three documents).

Note 2. The last two lines of the article read: "Cordoba, July 1911. A.C. Tonnelier." Therefore this document contains the earliest clear date seen for soybeans in Argentina, or the cultivation of soybeans in Argentina (1908). The source of these soybeans is unknown.

Note 3. This is the earliest Spanish-language document seen (Aug. 2003) that uses the term *materias azoadas* or *materias proteicas* to refer to nitrogenous substances or protein in connection with soybeans.

Note 3. This is the earliest Spanish-language document seen (April 2013) that uses the term *queso de Soja* refer to tofu. Address: Jefe de la Estación Experimental, anexa á la Escuela Nacional de Agricultura y Ganaderia de Córdoba (Chief of the Experiment Station, attached to the School of Agriculture and Cattle Raising of Cordoba, Argentina).

Address: Privatdozent an der Universitaet Breslau [Germany].

821. Harland, Marion. 1913. Common sense in the home (Letter to the editor). *Chicago Daily Tribune.* Jan. 26. p. F3.
• ***Summary:*** The letter titled "Some inexpensive dishes," by "Real Estate Bill," begins: "With regard to the high cost of living, here are three plants that are little known to the average cook." First come Kaffir corn and cow peas.

"Then try the soy bean. This is known as 'soja bean,' and also as the German coffee beery. It is a highly valued food in Japan. You ought to be able to get them for along about $2 a bushel. I think you will find that they are valued along with cheese and beefsteak, pound for pound, when made into a kind of cake or cheese [tofu]. Beefsteak or cheese at not over 5 cents a pound looks mighty good to a slim pocket-book I am told that much of the salted peanuts now sold are made from soy beans. Try it. Parch a few of them, putting in some butter and salt. Then try a few for coffee. If you don't want to try roasting them yourself take a few of them to the corner peanut man and get him to do it for you... The soy bean and rice help the Jap, and they will help us to solve the high cost of living problem."

822. Granato, L. 1913. A soja [The soybean]. *Sao Paulo Secretaria de Agricultura, Comercio e Obras Pulicas. Boletim de Agricultura, Series 14.* No. 3. p. 159-67. March. Series XIV. [Por]
• ***Summary:*** Contents: Names of the soybean: Scientific and in various foreign countries. Botanical characteristics.

© Copyright Soyinfo Center 2013

Soybean cultivation: In Russia, France, Italy, Austria. Harvest and yield: In Italy, Hungary, France, in Brazil at the Agronomic Institute of Campinas (*instituto Agronomico de Campinas*) where Dutra reported yields of 2,200 to 2,300 liters/hectare. The soybean as a food: Nutritional composition and food value of the seeds of varieties analyzed by König, of varieties cultivated in 1899 at the Agronomic Institute of Campinas and analyzed by Mr. R. Bolliger. Soja as a forage crop. Uses of the soy bean (esp. in Japan and China): Miso, tofu (a type of cheese {*queijo*} called *To-fu*), shoyu, koji, soy flour.

Note. This is the earliest Portuguese-language document seen (April 2013) that uses the word *queijo* or the word *To-fu* to refer to tofu.

Three bar charts (p. 165-66) compare the protein (*albuminoides*), oil and fat, and carbohydrate content of the soybean with those of other major foodstuffs (of both animal and vegetable origin, such as common beans {*feijao*}, beef, eggs, wheat, etc.). Soybeans have the highest content of protein, and of oil or fat, of all foods with which they are compared.

823. Lemarié, Charles. 1913. Les plantes alimentaires du Tonkin [The food plants of Tonkin]. *Bulletin de la Societe d'Acclimatation* 60:367-76. March. See p. 371. [Fre]

• ***Summary:*** In the section on legumes, we read: *"Glycine hispida* Moench.–Soybeans (*Les Sojas*) are cultivated everywhere for the preparation of purées or of kinds of cheeses [probably tofu], or else for the production of sprouts, a food of which the indigenous people are fond. They are not used as a source of oil.

"Varieties from Japan, distributed by the Colonial Garden (*Jardin colonial*) in 1910, to Tonkin, as well as to the Sudan, have given nothing but poor results. These varieties were not adapted to the soil or the climate.

"But the improvement of local varieties and, if possible, the introduction of better varieties, continues to be studied."

Note: The term "Sudan" refers imprecisely to a region (not a political unit) that extends across the African continent from the west coast to the mountains of Ethiopia. Much of it was under French rule from 1898 as part of French West Africa, and included Dahomey (*Dahomey*), French Guinea (*Guinée*), French Sudan (*Soudan français*), Ivory Coast, Mauritania (*Mauritanie*), Niger, Togo (*Territoires Militaires du Niger et Togo*), Senegal (*Sénégal*), & Upper Volta (*Haute-Volta*). It is not clear to which part of the Sudan the soybeans were introduced, nor whether or not they were cultivated there, nor with what results. Address: Director of Agriculture, Tonkin [Vietnam].

824. Woodhouse, E.J.; Taylor, C. Somers. 1913. The varieties of soy beans found in Bengal, Bihar, and Orissa and their commercial possibilities. *India Department of Agriculture, Memoirs. Botanical Series* 5(3):103-76. March. Plus 4 plates on unnumbered pages. Also published as a book in Calcutta by Thacker, Spink & Co. and in London by W. Thacker & Co. 28 cm. [15 ref]

• ***Summary:*** Contents: 1. Introductory. 2. Nomenclature. 3. Varietal characters of soy beans: Habit, foliage, pubescence, flower (morphology, pollination, extent of natural crossing), pods, seeds (morphology), seeds (composition; black, yellow, and chocolate seeded varieties grown by the authors from seed obtained in 1909; the back varieties contained significantly more nitrogen/protein and less oil), maturity, diseases. 4. Description of types: *Kala Bhetmas, Safed Bhetmas, Lal Bhetmas, Barmeli Bhetmas, Nepali Bhetmas* (obtained from Kalimpong and tested at Sabour in 1911). 5. Distribution. 6. Cultivation. 7. Yield. 8. Price. 9. Uses: Food-stuff, bean sauce (soy, or shoyu), chiang or miso, tou-fu (tofu), soy beans as a green vegetable, oil (for use in England in soap-making, or in China "as an illuminant, as a substitute for lard in cooking, though it is inferior to rapeseed and sesamum oil for this purpose, as a lubricant for greasing cart axles, or for waterproofing cloth"), cake and flour. 10. General conclusions.

"In 1909 the survey work on the crops of Bengal was commenced, and in July of that year a number of trial plots of the chief pulse crops of the Province were sown for identification and field study. Among these were three samples of *Bhetmas*, of which one sample of black-seeded *Bhetmas*, received from the Settlement Officer, Bhagalpur, was found to be pure for seed characters... All the plots did well and were identified as varieties of the Soy Bean, but in October it became apparent that the black-seeded type differed from the other two in having darker bullate leaves and a more prostrate habit...

"In 1910 the seed of the single plants which had been analysed was sown together with some samples obtained by Mr. A.C. Ghosh from the Kurseong bazar [bazaar]... a distinctly earlier black seeded form was obtained from a plot (E256 of 1910) grown from seed collected at the Bankipur Exhibition. The trial plots of the seed from Kurseong failed."

"In 1911... the success of the plots of the acclimatized American varieties induced us to exchange seeds of the Bengal types with Mr. Piper, of the United States Plant Industry Bureau, who kindly supplied us with seed of the varieties, Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin [Peking], Pingshu. Another attempt was made to cultivate at Sabour the varieties grown in the Sikkim Himalayas, and plots of the Nepali, Barmeli, black seed, greenish yellow seed and chocolate seed varieties were obtained from Mr. Goodwin, Superintendent of the Kalimpong Homes Farm, and grown successfully at Sabour" (p. 104-05). Note 1. This is the earliest document seen (Sept. 2004) that spells the soybean variety named "Peking" as "Pekin." This spelling also appeared in Cuba in 1920 (3 documents), in Argentina in 1922, and in the United States in 1925 (in Alaska, see Georgeson 1925).

© Copyright Soyinfo Center 2013

Concerning seed morphology (p. 114-15): The weight of 100 seeds in some of the American varieties such as Barchet, Pekin and Pingshu have remained approximately constant, whereas others, such as Duggar, Hollybrook and Mammoth have decreased in weight more or less considerably during the past season. The Nepali type has decreased in weight from 24.4 grams to 12.8 grams per 100 seeds. The variation in weight per 100 seeds in the case of varieties cultivated in new localities would appear to give a good indication of the adaptability of a variety to its new environment."

The authors record the results of a large number of selection experiments which they have carried out with a view to obtaining early-maturing types rich in oil, and also deal briefly with the cultivation and uses of soy beans.

Concerning uses (p. 138): "In Bengal, soy beans are used very little for food as they are said to be too heat producing. It is usually taken after frying over a heated sand bath as *bhunja*, but it is also heated, crushed, and then used as *dal*, and also as *larua* mixed with *gur."* In the "Soya Bean of Manchuria" (1911), Shaw states that soy beans can also be used to make bean sauce or shoyu, chiang or miso, and tou-fu (tofu). They can also be used to make oil, cake, and flour.

"General conclusions (p. 140): At the present time, Soy Beans are grown to a slight extent only in the Darjeeling hills and to no appreciable extent elsewhere although satisfactory yields have been obtained in the experiments conducted by the Agricultural Department in both these areas. We may ascribe the present unpopularity of the crop to the following reasons. For export the price offered in Calcutta is not yet sufficiently attractive; as a food-stuff it is more potent than the ordinary pulses to which the people are accustomed; as a crop for growth in the plains it has the disadvantage of occupying the land during two seasons, it may suffer from waterlogging during the rains, and requires plenty of moisture in October, and it harbours rats during the last two months of its growth. These objections do not appear to us by any means unsurmountable [insurmountable]... The use of Soy Beans for food could be extended if the educated classes once appreciate its value as an addition to a rice diet, and experiment with its preparation for food on the lines suggested."

"Its cultivation in the hills would probably be largely extended on the present lines as soon as the price reached a satisfactory figure. It only remains to say that our work is being continued on the lines indicated in this paper with a view to isolating early maturing types possessing a high yield of oil."

Contains many tables (the 13 tables before page 143 are unnumbered, and many contain no caption), mostly showing the composition of various black, yellow, and chocolate soy beans and the history of descendants of various singly selected plants. Black soy beans contain on average 6.72% nitrogen and 13.52% oil. Yellow soy beans contain 5.61% nitrogen and 16.99% oil.

Note 2. Therefore black soy beans contain 19.8% more nitrogen [protein] and only 79.6% as much oil as yellow soy beans. Chocolate-colored soy beans contain 5.57% nitrogen (the least of all three types) and 17.13% oil (the most of all three types).

A table titled "Life periods of American varieties of Soy Beans grown at Sabour, 1911" (p. 124) gives information on eight varieties: Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin, Pingshu, and Riceland. For example, Duggar: Origin: S.P.I. No. 17268C. Date of planting: July 12, 1911. Date of harvesting: Oct. 11. Life period at Sabour: 91 days. Life period in the U.S.A.: 110-120 days.

Another table titled "Yield of the types of soy beans found in Bengal, Bihar, and Orissa" (p. 135) lists 8 varieties, and for each: Where grown, dates of sowing, area sown, approximate yield in lbs/acre, corresponding yield (on unmanured land) in mds., srs., and chtks. [mds. = maunds; 1 maund = 82.28 pounds or 37.32 kg; srs. = seers; 1 seer = 2.05 pounds; chtks. = chittaks or chittacks or chattaks or chattacks; 1 chittak [also chattak or chattack] = 1/16 seer = 900 grains = about 2 ounces], and remarks. Two trials gave yields of more than 2000 lb/acre (2,189 lb from the variety Nepali in Kalimpong, and 2,164 lb for a Chocolate variety at Bankipur Farm). Seven additional trials gave yields of 1,000 to 1,400 lb/acre.

Numbered tables (starting on p. 143) show: (1) Black soy beans: The history of descendants of various single selected plants. (2) Yellow soy beans (Type 3): The history of descendants of various single selected plants. (3) Chocolate soy beans (Type 4): The history of descendants of various single selected plants. (4) Variations in 24 plots grown from each plant descended from sowing of seed from the single plant No. 94c. (5) Detailed table showing the results obtained from 150 samples of black soy beans analysed in 1911 (p. 146-55). (6) Detailed results obtained in 1911 with 150 samples of yellow soy beans (Type 3) (p. 155-64). (7) Detailed results obtained in 1911 with 152 samples of chocolate soy beans (Type 4) (p. 165-74). (8) Life periods of Bengal varieties of soy beans grown in Bengal.

Photos on unnumbered pages near the end show: (1) Type I–"Late Black-seeded" soybean variety, photographed 28 Oct. 1911. (2) Type V–Barmeli variety. (3) Type VI–Nepali variety on left, and Type IIIa–"Upright long branched greeny yellow seeded variety on right." (4) Barchet variety, photographed 30 Oct. 1911.

Four graphs on the last page show the distribution of chocolate, black, and yellow soybeans according to both their nitrogen and oil contents.

Note 3. This is the earliest document seen (Oct. 2010) that clearly refers to the cultivation of soybeans in Bengal (probably later Bangladesh). Address: Economic Botanist to the Government of Bihar and Orissa, India.

825. *American Review of Reviews.* 1913. Vegetable milk and

© Copyright Soyinfo Center 2013

vegetable meat (Abstract). 47(4):500-01. April. [1 ref]
• ***Summary:*** An English-language summary of the following French-language article: Neuville, A. de. 1913. "Les nouveaux aliments artificiels" [The new artificial foods]. *Revue* (*La*) (Paris) 100(3):384-89. Feb. 1. 24th year. 6th Series.

This summary begins: "In most families the two heaviest items in the cost of food are the expenditures for milk and milk-products and for meat. Moreover, milk and meat are the most difficult foods to procure, to preserve, and to transport in a pure and wholesome condition. And it is this difficulty, coupled with modern standards of hygiene and sanitation, that has helped to make their cost mount steadily higher year by year. All of us, must be warmly interested in the successful efforts of certain foreign chemists to produce synthetically both milk and meat from vegetable sources, since it claimed that the 'near-milk' and 'near-meat' are not only as nutritious as their prototypes, but far freer from dirt and disease-germs, as well as very much cheaper."

The new artificial milk is made from the seed of the soy bean or the Chinese pea.

"From other sources we learn the interesting fact, not mentioned in *La Revue*, that an excellent cheese [tofu] can be made from this milk, which widens its usefulness materially.

The Belgian chemist, M. Effront, has proposed using the refuse from breweries to make a palatable and nutritious [non-soy] substitute for meat.

Note: This is the second earliest English-language document seen (Nov. 2003) that contains the term "vegetable meat" (or "vegetable meats"–with any combination of quotation marks)–and the first to mention "vegetable meat" in connection with soy.

826. Li, Yu-ying. 1913. Method of manufacturing products from soja. *U.S. Patent* 1,064,841. June 17. 3 p. Application filed 10 Oct. 1911.
• ***Summary:*** Li describes himself as "a subject of the Emperor of China, residing at Vallées, in France." "The object of this invention is to provide a simple, efficient and economical method of producing a product from soja beans, and from which product it is possible to obtain by adding certain substances a product resembling human or animal milk, and also to obtain fresh or fermented cheese, milk in the form of powder and concentrated milk, fermented milk, sauces, preserves, etc. The manufacture of this milk comprises a series of operations viz., the cleaning and decorticating of the beans, which are effected in the ordinary manner, the grinding of the said grain previously mixed with a certain quantity of water, the passing of the crude product through a filtering press, from which the liquid, which is of a milky color, runs off to cool through a filter and passes thence into a boiler heated with a water bath, where it is pasteurized or sterilized, and from which it is removed, ready to be delivered for consumption as milk, or for use in the manufacture of the products mentioned above.

"The apparatus necessary for this manufacture is illustrated in the accompanying drawings by a longitudinal sectional elevation." Li's signature, written "Yu Ying Li," is just below the mechanical drawing. A detailed description of the ingenious equipment and process follows. The ground paste is mixed with water; a pump "forces it under pressure into the filtering press..." The slurry is cooked in a "boiler or digester" which is actually a steam-jacketed kettle; there "it is heated to a variable temperature for the purpose of pasteurization or sterilization."

Concerning the okara: "When the operation is finished, the grain [okara] is removed from the filter-press and now forms cakes which can be utilized for feeding human beings (they are in that case dried and reduced to powder). They may also be used for feeding cattle, and, even if these cakes are greatly exhausted, they form a very good nitrated manure, after undergoing certain treatment; drying and dressing."

"The soja milk contains more casein and less lactose and butter than human or animal milk, but by reducing its quantity of casein by adding certain matters a product is obtained resembling human and animal milk. With this milk fresh or fermented cheese can be made as desired.

"In making fresh cheese [tofu], the milk is curdled or coagulated by means of magnesia salts, organic acids and ferments, rennet or lactic ferments.

"The coagulated milk is molded and pressed, and cheese of different forms and consistency obtained according to the degree of coagulation or pressure. The cheeses may be eaten fresh or they may be dried. They are salted or not according to the nature of the manufacture...

"In producing fermented cheese: Roquefort, Permesan, Romatour, Camembert, Gruyère, etc., ferments suitable for the manufacture of those products are employed...

"The fermented milk is obtained by using ferments such as the ferments employed in producing fermented milks–kephir [kefir], yoghourt [yogurt], koumis [koumiss], etc. These are the *Saccharomyces cerevisiae*, *Dispora caucasica*, *Maya bulgare*, etc., and the manufacture is effected by modifying the said milk through the addition of sugar (glucose, levulose, etc.), and more particularly lactose.

"The casein derived from *Soja* is manufactured either from the milk itself obtained as indicated or with the cakes remaining after the extraction of the oil or fatty matter of the soja beans...

"In order to prepare it the soja milk is coagulated. The coagulation having been effected, the product is dried, asepticized or not, ground or not, and may be employed as an alimentary or as an industrial product. This latter product may be employed for all purposes; paste, bedding paper, manufacture of the objects, etc. the same as animal casein. To the casein thus obtained chemical products such as borax, oxid of zinc [zinc oxide], magnesia, gelatin, etc.,

© Copyright Soyinfo Center 2013

may be added in different proportions in order to obtain solid casein. It is also possible to produce sauce with soja milk the fermentation of which is effected by means of special ferments such as sojaobacille and the acetomyces. This sauce is more or less salted with chlorid of sodium [sodium chloride] and an addition may be made of spices; pepper, clove, nutmeg, piment*, etc. The sauce having been made may be concentrated or dried by heating. Soja preserves may also be obtained with soja milk slightly thickened with sugar. In this case, the soja grains are cooked before being ground and may be mixed with or added to dry fruits, chestnuts, almonds, hazelnuts, cocoa, etc."

Note 1. This is the world's 2nd earliest patent seen (June 2011) concerning a fermented cheese made from soja, and also the earliest U.S. soymilk patent.

Note 2. *Webster's Third New International Dictionary* (1963) defines piment as "wine flavored with spice and honey." It defines pimento as a synonym for allspice. Address: Vallées, France.

829. Dodd, Robert; Humphries, Herbert Brooke Perrin. 1913. Preparation of plastic substances and the like from protein containing materials. *British Patent* 15,316. Application filed 3 July 1913. 3 p. Complete specification left 5 Jan. 1914. Accepted 18 June 1914.
• ***Summary:*** "This invention relates to the manufacture of semi-plastic materials resembling ivory, horn, and the like, from protein containing substances, and from the soya bean in particular.

"It has been an ancient custom in the Far East to prepare crude cakes having some strength and hardness, from the soya bean,–for example by macerating the beans with water, adding sea-water to coagulate the emulsion or cream so obtained, and drying and weathering the curd [i.e. dried-frozen tofu]. Further, it has been suggested that the protein or 'casein' of the soya bean should be suitable for the preparation of a plastic material by coagulation with salts or acids at about 100ºC. We have found however that special treatment is necessary to obtain a product commercially satisfactory in regard to strength and workability... closely resembling vegetable ivory or the corozo nut, and capable of replacing the said vegetable ivory in its applications, such as the manufacture of buttons and the like."

This material is prepared by removing the bulk of the soya bean's oil, macerating and extracting the soya cake or meal with water, separating the insoluble and non-emulsifiable substances from the liquors or paste so obtained and coagulating the liquor either warm or cold with aluminum sulfate or formaldehyde. Suitable glutinous, coloring, filling, hardening or other materials may afterwards be added. The resulting cake is treated in a bath of weak formaldehyde and dried. Address: 1. Chemist, 56, Valley Road, Streatham, London, S.W.; 2. Chemical engineer, B.Sc., A.R.C.Sc., Queen Anne's Chambers, Westminster, London, S.W. [England].

Dec. 17. 2 p. Application filed 1 Aug. 1913. First addition 5 Jan. 1914. [Fre]
• ***Summary:*** This new product has as its principal constituent the milk obtained from soybeans (*pois de Chine ou graine de soja hispida*). This milk, obtained by the current process, is used to make tofu (*teou-fou*).

The milk from the seeds of Soja hispida is treated with bases, e.g., ammonia, soda or pyridine in the proportion of 5-10 gm per liter; 10-15 gm of a mixture of acetic, lactic, phosphoric and nitric acids are added at a temperature of 35ºC. The material is then heated to boiling in a solution of aluminum sulfate and the reaction is allowed to proceed for 2-8 days. The plastic product obtained is gelatinized by solvents, such as pyridine, acetic acid and resorcinol and may be hardened by formaldehyde. Address: 1. Côte-d'Or, France; 2. Ain, France.

• ***Summary:*** Contains detailed information on soybeans in Indonesia, including various local names, soybean production in Indonesia by province from 1918-1925 (the top producers in 1925 were Madoera and Madioen; total production grew from 222,426 to 260,125), soybean culture, imports, exports, tempeh, tofu (tao hoe), tao koan, tao tjo (Indonesian miso), and soy sauce (ketjap). Also discusses ontjom and dagé made from peanuts.

Note 1. This is the earliest document seen (May 2010) that gives soybean production or area statistics for the Dutch East Indies (later Indonesia).

Note. This is the earliest document seen (April 2001) that contains the term *tao koan.* Address: Chef van het Museum voor economische botanie te Buitenzorg (Bogor).

832. **Product Name:** Tofu.
Manufacturer's Name: Fugetsu-do.
Manufacturer's Address: 1848 Market St., Denver, Colorado.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 139. They also make Japanese confections (*o-kashi*). Note: Motooka Tofu was at this address in 1914.

833. **Product Name:** Tofu.
Manufacturer's Name: Hideshima Tofu-ya.
Manufacturer's Address: 1509½ Geary St., San Francisco, California.
Date of Introduction: 1913.
New Product–Documentation: The Japanese-American Yearbook (Nichibei Nenkan). No. 9 (Published by Nichibei [Shinbun], Japanese-American News). 1913. p. 25. Also in 1914. p. 14.

Talk with Mr. Seizô Oka, Head, History Room, Japanese Cultural and Community Center, San Francisco. 1989. Dec. 5. The man who ran this company was probably Shichisaburo Hideshima. He was later head of an employment agency.

834. **Product Name:** Tofu.
Manufacturer's Name: Hinode Yao-ya.
Manufacturer's Address: 376 8th St., Oakland, California. Phone: Oakland 6613.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 34. Fresh produce, fish market, and tofu maker. Also in 1914, p. 37. At the same address and phone. This time they have an ad (in Japanese only, titled Japanese American foods) but no directory listing, making us wonder whether they make tofu or buy it from elsewhere. Yet there are no other tofu makers in Oakland. Their ad features tofu, but they also sell vegetables, pickles, dried goods and other food items.

Note 1. A "yao-ya" is a greengrocer. Note 2. This company is still in Oakland in 1940, but at a different address.

835. **Product Name:** Tofu.
Manufacturer's Name: Ito Tofu-ten.
Manufacturer's Address: P.O. Box 6M6, Sugar City, Idaho.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 186.

Note 1. This is the earliest known commercial soy product made in Idaho.

Note 2. This is the earliest known commercial tofu maker in Idaho.

836. **Product Name:** Tofu.
Manufacturer's Name: Jackson Tofu-ya.
Manufacturer's Address: 522 Jackson St., Seattle, Washington. Phone: Elliott 1697J.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 217. Note: Higashiuma (Toouma?) Tofu-ten was at this address in 1912 (Directory entry p. 188).

837. **Product Name:** Tofu.
Manufacturer's Name: Kawamura Seigyo oyobi Tofu-ya.
Manufacturer's Address: P.O. Box 84, Florin, California.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 61. Fresh fish market and tofu shop. Also in 1914, p. 66. But the company name is now simply Kawamura Tofu-ya.

838. **Product Name:** Tofu.
Manufacturer's Name: Kikuya.
Manufacturer's Address: 1429 20th, Denver, Colorado. Phone: Main 4090.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 139. They also make Japanese confections (*o-kashi*).

Washington. Phone: Elliott 2222.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 217. The Japanese American Directory. 1919. p. 447 (directory; King Tofu-ya. Slightly new address: 507½ 7th S. Alley, Seattle. New phone number: Ell. 2222).

840. **Product Name:** Tofu.
Manufacturer's Name: Kuwamoto Tofu-ya.
Manufacturer's Address: 2516½ Shattuck Ave., Berkeley, California. Phone: Berkeley 6916.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 39. Also in 1914, p. 42.

841. **Product Name:** Tofu.
Manufacturer's Name: Misuzu (?) Tofu-ya.
Manufacturer's Address: 319 Jackson St., Los Angeles, California. Phone: A 1682 or Bro. 3503.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 126. Also in 1914, p. 128. Note: Oogushi Tofu-ya was at this address in 1912 (Directory entry p. 115).

842. **Product Name:** Tofu.
Manufacturer's Name: Nitahara / Nidawara Tofu-ya.
Manufacturer's Address: 1620 Park St., Alameda, California. Phone: Alameda 3092.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 42. Note: Hieda Tofu-ya was at this address in 1909 (Directory entry p. 29), Mizoda Tofu-ya in 1911, and Hashimura Tofu-ten in 1912 (Directory entry p. 38). Same phone no.

843. **Product Name:** Tofu.
Manufacturer's Name: Ooe Tofu-ya.
Manufacturer's Address: 1621 Buchanan St., San Francisco, California.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 25. Also in 1914, p. 14. Phone: West 2157.

844. **Product Name:** Tofu.
Manufacturer's Name: Oohira Tofu-ya.
Manufacturer's Address: 7 Nassau Court, Brooklyn, New York City, New York.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 209.

845. **Product Name:** Tofu.
Manufacturer's Name: Shikasho Tofu-ya.
Manufacturer's Address: 79 Japanese Alley, Sacramento, California.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 58. Note: Oouchida Tofu-ya was at this address in 1912 (Directory entry p. 53).

846. **Product Name:** Tofu.
Manufacturer's Name: Shirai Tofu-ya.
Manufacturer's Address: P.O. Box 186, Oxnard, California. Phone: Home 236.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 140. Also in 1914, p. 145. Note: Kajikawa Tofu-ya was at this P.O. Box in 1912 (Directory entry p. 121).

847. **Product Name:** Tofu.
Manufacturer's Name: Takahashi Tofu-ya.
Manufacturer's Address: P.O. Box 94, Visalia, California.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 112.

848. **Product Name:** Tofu.
Manufacturer's Name: Tsumiyoshi (Sekizen?) Tofu-ya.
Manufacturer's Address: P.O. Box 46, Oxnard, California. Phone: Home R 129.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 140. Also in 1914, p. 145. Note: Tateishi (Tachiishi?) Tofu-ya was at this address in 1911 (Ad p. C-14).

849. **Product Name:** Tofu.
Manufacturer's Name: Tsuruta Tofu-ya.
Manufacturer's Address: 218 1st St., Marysville, California.
Date of Introduction: 1913.
New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 71. Also in 1914, p. 76.

850. Friedenwald, Julius; Ruhräh, John. 1913. Diet in health and disease. 4th ed. Thoroughly revised and enlarged.

Philadelphia, Pennsylvania: W.B. Saunders Co. 857 p. Illust. 24 cm. [4 soy ref]

• ***Summary:*** The section titled "The soy bean" (p. 124-26) states: "This bean (glycine hispida), sometimes called the soja bean, is an annual leguminous plant extensively used as a food in China and Japan. Until recently it has been regarded as a botanical curiosity in the Occident. It has recently been extensively used in America as a forage crop and to improve the soil if plowed under... There are a large number of different varieties, which vary in size, shape, color, and length of time they take to mature. Some are grown exclusively for the oil they contain, and it is used for culinary, illuminating, and lubricating purposes. The light-colored beans are eaten in soups, and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as appetizers; the same varieties are often sprouted, scalded, and served with meals in winter as a green vegetable. The bean forms the basis of the so-called soy sauces, used as a condiment all over the world. The Oriental races most frequently eat the bean, in more or less cheesy-like foods, which are prepared from it. The most common of these are natto, tofu, miso, yuba, and shoyu. Natto is a sort of bean cheese made by boiling the beans until they become soft and then placing the resulting mass in a warm cellar where it ferments. Tofu is made by soaking the beans in water, crushing between millstones, and boiling in about three times their bulk of water. The protein is precipitated and the resulting cheese eaten. The white milky liquid of the above has nearly the composition of cows' milk, and tastes something like malt. It may be used in infant feeding to advantage (see same).

"Americans may eat the beans in numerous ways described under the head of soy bean cookery in the recipes at the end of this book. The bean is of particular value in diabetic diets (see same). It may be used to increase the protein of the diet.

There are variations in the composition of the different varieties." A table shows the chemical composition of yellow soy beans grown in the USA, both as is and calculated on a water-free basis. "The Cereo Company of Tappan, New York, have made a soy bean flour which is useful." Its composition is given. "The percentage of protein in this flour is almost one-third greater than the percentage of protein in the whole beans. This is caused by removing the coarse fibrous hulls which contain little protein.

"Vegetable food of such composition certainly is remarkable when compared with round beef, medium"– whose composition is given.

Soy flour can be used as a gruel, in broths, and in making biscuits. A table (p. 126) shows the "Composition of fresh and dried legumes (incl. soy beans, cow peas, chick-peas, peanuts) with that of other foods" (Based on Abel, Farmers' Bulletin No. 121 [1900, p. 17]).

The section on "vegetarianism" (p. 130-31) is the same as that in the 1909 edition (p. 113-14).

In the chapter on "Infant feeding," the section on "Other food for infants" has a subsection on "The soy bean" (p. 297-98) which begins: "In certain conditions the soy bean... is of great value. In cases when milk is badly borne, in certain forms of intestinal disorders, in diarrhea, and especially in the convalescence after diarrhea, in certain cases of marasmus and in malnutrition, the soy bean flour, properly used, is of great value. Each ounce contains 13 grams protein and 120 calories." A table shows the composition when mixed with various amounts of water. Recipes for making gruels are given.

In the chapter on "Diet in disease," in the section titled "Diseases in which diet is a primary factor," is a subsection on "The soy bean" (p. 592) states: "The bean contains about 8 per cent. of sugar and no starch, and furnishes a large amount of available protein and fat." "A patient on a strict diabetic diet, who is excreting a certain amount of sugar, will excrete less sugar when the soy bean is added to the diet. It seems to be of particular value in severe cases. In addition to this action, it is a very valuable food, both on account of its nutritious properties and owing to the fact that it may be prepared in a number of different ways, and so serves to vary the diet."

In the section on "Diabetic Foods" (p. 601-02) is based on Winton (1906) and contains the same information, including that about The Health Food Company of New York.

In the chapter on "Recipes" is a section on "Bread" (p. 740-41) which includes whole-wheat bread, zwieback, and bran muffins for constipation. The same chapter has a section on "Soy bean cookery" (p. 766-69) with the following recipes: Introduction, gruels, broths, muffins, nut-cakes, soy bean cakes, breakfast food (like oatmeal), pancakes, soy bean cheese ("In Seattle, Washington, and other places in the West we are informed that tofu is made by the Japanese and sold to the Oriental residents").

Goff (1911) offers the following: Grilled soy bean [dry roasted soynuts], [whole] soy beans with butter, soy beans au gras (fried with onions and fat), bread or cakes of soy beans.

On page 822 is a "Short list of books on food and diet." 33 books are cited; some are in German or French.

Note 1. Julius Friedenwald lived 1866-1941. John Ruräh lived 1872-1925.

Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term "Grilled soy bean" to refer to dry roasted soybeans / soynuts. Address: 1. Prof. of Gastro-Enterology; 2. Prof. of Diseases of Children. Both: College of Physicians and Surgeons, Baltimore, Maryland.

• ***Summary:*** The material in this book up to page 578 is identical (page for page) to that in the 1876 edition. Thereafter begins "Book III: Supplementary chapters, including history to the beginning of 1912"–about 129 pages of new information in the following chapters:

1. Japan in 1883. 2. Japan in 1886. 3. Japan in 1890. 4. Japan in 1894. 5. War with China (Sino-Japanese War, 1894-1895). 6. Facing the twentieth century. 7. Japan a world power (including a detailed description of the Russo-Japanese War, 1904-1905). 8. Japan on the Asian continent. A separate index covers this supplementary material; soy is not mentioned.

The author reveals his basic viewpoint on the last page of this book (p. 734) by expressing his fervent hope that all of Japan's traditional religions will be "transformed by the spirit of Christ." Address: D.D., L.H.D., Late of the Imperial Univ. of Tokio; presently in New York.

852. Japan year book. 1913. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 702 p. See p. 163-64, 230, 351, 356, 358, 438, 654, 659, 672, 690. [Eng]

• ***Summary:*** In chapter 11, "Agriculture" (p. 155-77) is a table titled "Beans, sweet potato and potato (p. 163) which gives "Soy bean" production in Japan for 1906-1910 (in *koku*).

On page 164 we read: "The three daily articles of diet for all classes, viz. soy [sauce], *miso*, and *tofu* are manufactured from this bean..."

In chapter 15, "Industry," is a paragraph titled "Soy" (p. 230) on the patented Suzuki process for brewing soy [sauce]. "For soy the prefecture of Chiba, which is contiguous to Tokyo municipality, heads all other places on the list. Parched wheat mixed with salt and beans is a principal ingredient. The process is still far from scientific, requiring about 12 months before the liquid is ready for sale. It is also costly, as it does not admit so much labor-saving appliances. To obviate these advantages, several patented processes, notably that by Mr. Suzuki, have been tried, but they do not seem to have attained ideal perfection. It was on the strength of the Suzuki process that a company backed with yen 2,500,000 paid up was started, in 1907, and the '2-months' brewing, the chief merit of the invention, was started. It is to be regretted that this first machine-brewing has failed to produce the soy which can compare with the old process soy in taste and flavor, and that the company has been wound up."

In Chapter 25, "Home trade" is a table (p. 351) titled "Prices of principal commodities in Japan," which includes prices for 1905-1911 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In Chapter 26, "Foreign trade" is a table (p. 356-58) titled "Imports" (in 1,000 yen). Under the heading "Staples articles of over yen 1,000,000" (p. 356) is given the value of soja bean imports for 1908-1912. Under the heading "Trade with China (p. 359) is given the value of imports of "beans" and of "oil-cakes" for 1906-1911.

In chapter 30, "Finance," is a paragraph (p. 438) titled "Tax on Japanese soy" [sauce].

In chapter 34, "Chosen (Korea)," a table (p. 654) on "Exports (in 1,000 yen), under the heading "Foreign trade" has data on beans and peas for 1906-1912. Under the heading "Agriculture" is a paragraph (p. 659) titled "Barley and soya bean," giving acreage and yield for soya bean (no year is specified) with the value (in yen) of exports to Japan in 1909.

In Chapter 35, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 672) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1905-1909.

In Chapter 37, "South Manchuria," is a paragraph (p. 690) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, and amount exported. Address: Japan.

853. Jumelle, Henri L. 1913. Les cultures coloniales: Légumes et fruits. Deuxième édition [Crops of the colonies: Vegetables and fruits. 2nd ed]. Paris: Librairie J.-B. Baillière et Fils. 122 p. See p. 47-51. Illust. No index. 18 cm. [Fre]

• ***Summary:*** This is the 2nd volume of an 8-volume work. In Chapter V, "Vegetables," the section titled *Glycine hispida* Max. discusses soybeans and soyfoods.

854. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1913. Nichi-Bei nenkan [Japanese-American yearbook. No. 9]. 650 Ellis St., San Francisco, California. 716 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into 13 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3) Table of contents, ads (4 p.). (4) Photos (black and white on 12 unnumbered pages). (5) Graphs and charts on 4 unnumbered pages: Three pie charts for 1912: (A) In which U.S. states do Japanese live. (B) Occupations of Japanese in USA. (C) Japanese in USA by gender. Two pie charts (D-E). Increase and decrease of Japanese population by gender. (F) Bar chart: Agricultural land use by Japanese by state. (G) Agricultural crops grown by Japanese. (6) Photo of the site to be of the Panama-Pacific International Exposition (1915) in San Francisco. (7) Two maps: Map of the United States. Map of California (2 p.). (8) Advertisements (A-1 to A-18). (9) Front part (p. 1-152), including general information about

© Copyright Soyinfo Center 2013

America, Japanese in America, U.S. and agricultural census data, etc. (10) Ads (p. 1-16). (11) Back part (p. 1-142). (12) Ads (B-1 to B-64). Appendixes: (13) Table of contents for directory of places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (14) Directory of Japanese living in America, interspersed with ads (p. 1-228). (15) Ads (p. 1-50). (16) Copyright page.

In a table (p. 57), one vertical line gives soybean production statistics in Japan from 1905-1909 (five year average): Area: 464,021 *cho* (*1 cho* = 2.45 acres; so 1,136,851 acres). Production: 3,766,962 *koku* (*1 koku* = 180 liters = 47.6 gallons = 308 lb = 5.13 bushels; so 1,932,452 bushels). Average yield 0.87 *koku/tan or tanpo.* Note: Something seems to be wrong with these soybean statistics. The yield of Japanese soybeans seems too low; only about 1-2 bushels per acre.

A table (p. 92) shows Japanese population in the top 8 U.S. states in 1912. There are 7 columns: Male adults, female adults, male children born in USA, male children born in Japan, female children born in USA, female children born in Japan, and total. The totals are: California: 58,555. Washington: 16,037. Colorado 3,556. Oregon 3,518. New York 2,002. Idaho 1,392. Utah 1,390. Montana 972.

Individual lines in various tables (p. 115-150) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment ($), sales ($/year), workers, salary ($/year). The number of tofu makers by state is: California 28. Utah (Ogden) 1. Idaho 2. Colorado (Denver) 2. Oregon 1. Washington 9. There are also 2 miso makers in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries.

A table (p. 26-27) shows import tariffs on goods from Japan. These include: Soybeans $0.45/bushel. Shoyu, miso, deep fried tofu pouches (*aburage*), dried frozen tofu (*Koyadofu*) and yuba 40% of their value, but a request is being made to change the shoyu, the two tofu products and the yuba to 20%.

The Directory shows Japanese companies making soyfoods in California, Utah, Idaho, Colorado, New York, Washington state, and Oregon. Address: San Francisco, California.

855. Paerels, J.J. 1913. Tweede Gewassen [Second crops]. *Oost-Indische Cultures* (*Dr. K.W. van Gorkom's*) 3:276-88. [11 ref. Dut]
• ***Summary:*** See Prinsen Geerligs (1913, vol. 3, p. 276-88). Address: Indonesia or Netherlands.

856. Polk's Portland [Oregon] city directory. 1913. Portland, Oregon: R.L. Polk & Co., Inc. *
• ***Summary:*** Ota E. Cook. Address: Portland, Oregon.

857. Prinsen Geerligs, H.C. ed. 1913. Dr. K.W. van Gorkom's Oost-Indische Cultures, opnieuw uitgegeven onder redactie van H.C. Prinsen Geerligs. Compleet in drie deelen [Dr. K.W. van Gorkom's East-Indian crops. New edition. 3 vols.]. Amsterdam, Netherlands: J.H. de Bussy. See vol. 3, p. 276-88. Illust. Index. 27 cm. [7 ref. Dut]
• ***Summary:*** In vol. 3 is a section on "Second crops (*Tweede Gewassen*)" (p. 243-91). Chapter 4 (*Hoofdstuk IV*) of that section is titled "Soybeans (*Soja*)" (p. 276-88). Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use of soybeans: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjiong*), Tempeh, composition and nutritive value (*samenstelling en voedingswaarde*).

Note: This is the earliest document seen (Feb. 2009) that contains the term Tao-Tjiong, a term, and perhaps a product, that appears to be between *doujiang* (Chinese-style miso) and *tao-tjo* (Indonesian-style miso).

Photos show: (1) A soybean plant that bears black-seeded varieties (p. 277). A soybean plant that bears white-seeded varieties (p. 278).

Also discusses (in vol. 2): Peanuts (p. 227-41). Sesame seeds (p. 247-51).

Reprinted in Van Gorkom 1918, p. 839-51. Karel Wessel van Gorkom lived 1835-1919. Address: Amsterdam, Netherlands.

858. Sornay, Pierre de. 1913. Les plantes tropicales alimentaires et industrielles de la famille des légumineuses [Edible and industrial tropical plants of the legume family]. Paris: Augustin Challamel. xii + 489 p. Illust. Index. 26 cm. [77* ref. Fre]
• ***Summary:*** This book is dedicated to "Mr. P. Boname, my excellent master and friend." Boname, who wrote the Preface and is now director of the agronomic station on Maurice, was the soybean pioneer in Maurice.

The section on the soybean (*Le Soja,* p. 195-205, 272, 276, 469, 471, 473, 475) is largely summarized from earlier writers, including Aiton, Bonâme, Bloch, Church, Grandeau, Joulie, Kaempfer, König, Korentschewski and Zimmermann, Lechartier, Li and Grandvoinnet, Paillieux, Paillieux and Bois, Pellet, Trimble, and Watt. Most of the section is about soybean production, but there are also subsections on soymilk, tofu (*Fromage de soja*), and shoyu (p. 204-05), plus soy coffee, soy bread and biscuits for diabetics, and trade in soybeans and soybean products (p. 205).

Also discusses: Alfalfa or Lucerne (*Medicago sativa,* p. 309, 453-54, 471, 474). Bambarra groundnuts (*Voandzeia subterranea, pistache voandzou,* 72-75, 277-78, 469, 473,

© Copyright Soyinfo Center 2013

476). Kudzu (*Pueraria Thunbergiana,* p. 429-30). Lupins (*Lupinus albus,* p. 264, 309, 453-54, 468). Peanuts (*Arachis hypogæa, arachide* p. 47-72, 270, 273, 453-54, 467, 471, 472, 474-76). Winged bean (*Psophocarpus tetragonolobus, pois carré,* p. 183-94, 273, 276, 468, 471, 473-76). Address: Asst. Director, Agronomic Station, Mauritius (Station agronomique de l'Ile Maurice).

859. Wilson, Ernest H. 1913. A naturalist in Western China, with vasculum, camera, and gun: Being some account of eleven years of travel, exploration, and observation in the more remote parts of the flowery kingdom. 2 vols. London: Methuen & Co. Ltd. See vol. 2, p. 49, 54-56, 61, 87-88. Introduction by Charles Sprague Sargent, LL.D. Illust. Index. 23 cm.

• ***Summary:*** In volume 2, chapter VI (p. 48-63) is titled "Agriculture: The principal food-stuff crops." "The Chinese nation is to a very large extent vegetarian, flesh being eaten only in small quantities except on festival occasions... The Chinese fry most of their vegetables, and for this purpose a vegetable oil is nearly always used. The oils expressed from members of the Cabbage (*Brassica*) family [such as rapeseed], the Soy Bean (*Glycine hispida*), and Sesamé (*Sesamum indicum* [sesame]) being most in request" (p. 49). The seeds of ground-nut (*Arachis hypogæa,* called "Lao-hua-tsen), opium poppy, sunflower, and cotton seed are also used as oilseeds (p. 61).

Beans are discussed on pages 55-56. "Since the Chinese are to such a large extent a vegetarian people, the various members of the pea and bean family are necessarily most important crops... The soy bean is everywhere a summer crop." The country's most important legume, it is "planted everywhere–in fields by itself, around rice and other fields, and as an undercrop to maize and sorghum. It yields seeds in three colours, namely yellow, green, and black. The Chinese distinguish three kinds of the yellow and two kinds each of the green and black. These varieties yield a succession of beans, the black being fully a month later than the others. The 'Huang-tou' [yellow soybean] is cooked and eaten as a vegetable, or ground into flour and made into vermicelli; preserved in salt it makes an excellent pickle. It is also extensively used in the manufacture of soy sauce and soy vinegar. A variety with small yellow seeds is largely employed in making bean-curd [tofu]. While in Central and Western China the soy bean is cultivated exclusively as a food-stuff, in Manchuria it is grown almost solely for the oil which is obtained from the seeds by pressure, and for the residual-cakes that remain after the oil has been expressed. From Newchwang, the port of Manchuria, there is an enormous export trade done in 'Bean-cake,' which is in great demand as an agricultural fertilizer in all parts of China. The soy bean has recently been exported to Europe in large quantities and the soy-bean oil is employed in soap making and for culinary purposes.

"Two kinds of Gram, *Phaseolus mungo,* 'Lu-tou' and *P. mungo,* var. *radiatus,* 'Hung-tou,' are grown as summer crops. The seeds of the 'Lu-tou' (green bean [= mung bean]) are especially valued for their sprouts... Of the 'Hung-tou' (red bean [azuki bean]) there are two or three varieties. The seeds of these are used as a vegetable or ground into flour and employed for stuffing cakes and sweetmeats."

"Both sesamum and soy bean are cultivated extensively in Western China, but for local consumption only. The large exports of these products that pass through Hankow [located on the Yangtze River near Wuhan and Wu-ch'ang] are brought down by the Peking-Hankow railway. Szechuan is capable of growing enormous quantities of these valuable plants, but cheaper and better facilities for transport are necessary before the products can become articles of external trade. When the much-discussed Hankow-Szechuan railway is *fait accompli* the raw products of the west will be available as articles of export, and a much-needed stimulus given to the agricultural industries of the regions concerned" (p. 87-88).

Note: *Webster's Dictionary* defines vasculum (derived from the Latin meaning "small vessel"; the term was first used in 1844) as "a usually metal and commonly cylindrical or flattened covered box used in collecting plants." Address: V.M.H., England.

860. Grimme, Clemens. 1914. Die Sojabohne und ihre Verarbeitung zu Nahrungs- und Genussmitteln [The soybean and its processing for food and stimulants]. *Konserven-Zeitung* 15(1):1-3, 10-11. Jan. 2. [1 ref. Ger]

• ***Summary:*** The author discusses the many food uses of soybeans and how they are made and used, drawing heavily on *Le Soja* by Li & Grandvoinnet (1912). He notes that there is a steadily rising interest in soyfoods in almost all branches of the German food industry [perhaps in anticipation of World War I].

Foods made from natural [unfermented] soybeans include: Soymilk (*Sojamilch*), tofu (*Sojakäse*), frozen tofu (*Kori-Tofu*), soy flour (*Sojamehl*), soy bread (*Sojabrot*), soya confections (*Sojakonfekt*), soy chocolate (*Sojaschokolade*), soy coffee (*Sojakaffee*), and green vegetable soybeans (*Soja als Gemüse*). Foods and seasonings made from fermented soybeans include: (1) Solid seasonings: Natto (Japan; Tokio Natto, Ping-Ming Natto). Tao-tche (China [fermented black soybeans]. The process for making this Chinese food is exactly the same as that used to make natto in Japan [sic, almost completely different]); (2) Seasonings in paste form: Miso (4 types), and Tao-tjiung (Doujiang, Chinese miso); (3) Liquid seasonings: Shoyu (Schoyou), Tsiang-Yeou (Chinese soy sauce), Ketjap (Javanese soy sauce), Tuong (Annamite soy sauce, made with rice or corn), Tao-Yu (soy sauce made with black soybeans in China and Japan).

Note 1. This is the earliest German-language document seen (April 2013) that uses the word *Sojakäse* to refer to

© Copyright Soyinfo Center 2013

tofu.

Note 2. This is the earliest German-language document seen (June 2009) that mentions green vegetable soybeans, which it calls *Soja als Gemüse.*

Note 3. This is the earliest German-language document seen (Oct. 2003) that uses the term *Sojamilch* to refer to soymilk. As of Jan. 2009 *Sojamilch* is the modern German word for soymilk.

Note 4. This is the earliest German-language document seen (Jan. 2009) that uses the word *Sojaschokolade* to refer to soy chocolate. The German word for "chocolate" is *Schokolade.*

Note 5. This is the earliest German-language document seen (Dec. 2011) that mentions fermented black soybeans, which it calls *Tao-tche.* Address: Dr.

861. Anderson, George E. 1914. Soya bean as food in China. *Daily Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) 17(23):362-63. Jan. 28.

• ***Summary:*** "The soya bean is not generally used for food by the Chinese, though at times it is so used, and its use seems to depend largely upon whether or not supplies of the more usual food products of the people can be had at prices within their reach rather than upon any element of preference. Various other beans, notably a large flat white bean, are used extensively both in the manufacture of flour and as bean 'curd.'" Note 1. Virtually all beans used to make 'bean curd' in China and worldwide are soya beans.

"Soya bean has been raised by the Chinese chiefly for its oil and for the residue, known as 'bean cake,' for fertilizer. Its cultivation on so large a scale as that witnessed in Manchuria in recent years is a matter of development in the past five years or so and represents the response of Chinese farmers to the demand of Europe and the United States for cheap vegetable oil rather than any great Chinese production in the first place."

"The varieties of beans and their uses: There are six varieties of beans commonly grown in North China and shipped more or less extensively to this part of the country and also grown to some extent in South China as well. These varieties are distinguished among the Chinese by their colors and are known as the yellow, the green, the black, the red, the white, and the small green. Of these, the yellow, green, and black are soya beans and are distinguished from the others by their size and ovoid shape. The red bean [xiaodou, azuki] is used by the people as food in much the same shape it is used in other parts of the world, being used largely while green, the pods and all being cooked and served, chopped, with oil or other dressing.

"The white bean is used for the manufacture of a cheap meal or flour like other beans, but is used chiefly in manufacture of what is known as 'bean curd,' one of the most common food products used by the people of central and northern China and used to some extent in South China. The beans are partially cooked and are then ground in a stone mill which often is one of the picturesque features of a Chinese village picture, the mill consisting of a large millstone set in a stone cup, operated by a buffalo or donkey passing around and around the mill, turning the heavy stone directly by a beam it draws. With these beans as they are ground a considerable quantity of water is mixed and the ground product is gathered on a tray and is drained of most of the water. It partially solidifies or rather 'jellies' or 'curds.' When drained it is cut in slices and is eaten with soy sauce, which in itself is the fermented liquor of ground soya beans, ripened for several months. This curd also is dried to a fair degree and is made into cakes, which are fancifully stamped with red or yellow designs or characters, and are sold in shops as cakes. The curd, as it is freshly made, sours in a comparatively short time, while the dried cakes keep longer.

"A substitute for flour–soy sauce: The use of the soya beans, properly so called, as human food among the Chinese is comparatively small, and is, as above indicated, more in the way of substitution. Whenever wheat flour from abroad or from north or central China itself rises in prices beyond the convenient reach of the average Chinese consumer, beans of various sorts, including the soya bean, are brought into use in the manufacture of a substitute. For such purposes the small green variety of soya beans are usually employed in South China, though apparently other varieties are also used in the north, and the small black variety is sometimes used in Canton. Considerable quantities of such flour are imported into Hongkong at times, but the Chinese of South China regard such flour as a substitution, however, and it is not popular.

"Bean oil, of course, which constitutes on an average substantially 20 per cent of the soya bean, is used for all purposes by the Chinese, both as food and as illuminant, and at times in paints. As a food it is used in substantially the same way, and with more or less interchanging with peanut oil, though the bean oil is less readily absorbed by articles cooked in it.

"Soy, the Chinese sauce which is the basis for most modern table sauces, is manufactured extensively in Hongkong from the soya bean, the process simply being that of grinding the beans and mixing the meal with water and a Chinese yeast. The mixture is then allowed to stand for from three to four months, the resulting liquor being the sauce. The United States imports about $50,000 worth of soy [sauce] annually from Hongkong in addition to quantities imported from Japan." Address: Consul General, Hongkong.

862. *Queensland Agricultural Journal.* 1914. The soya bean. 1(1):7-9. Jan. [3 ref]

• ***Summary:*** "Much has been written in the Australian Press during late years of the Soya bean as a profitable crop for farmers, and experiments have been made with it at the State

© Copyright Soyinfo Center 2013

Nursery at Kamerunga, but nothing has resulted from the experiments beyond proving that the soils and climate of some parts of Queensland are well adapted for the cultivation of this crop."

This article summarizes three articles received by the Department of Agriculture and Stock: (1) A communication from "Messrs. Thompson and Co., Dalny, South Manchuria, giving interesting information concerning the commercial possibilities of the [soy] bean, and suggesting that the Department experiment with the seed at the State Farms and in Western districts like the Marona, where the rainfall is comparatively small and uncertain, offering at the same time to supply the necessary seed, and, if the experiments proved successful, the firm would consider the taking up of a large tract of land in Queensland and growing the bean in quantity, as there would be no difficulty in disposing of the product. The present price of the beans in Europe is £9 per ton."

(2) "Messrs. Thompson and Co. furthermore enclosed an extract from the report (for 1912) of the Trades Commissioner for the Government of the Union of South Africa on the subject, which we summarise as follows,..." (see Turner 1914). The Queensland Journal then reflects: Profitability: "But the question to our mind is, whether, under our labor conditions, it would pay as well as it does in cheap-labor countries. A 1,000-lb. crop, at the highest prices for the beans, would sell for £4 10*s.* in Europe, and, deducting labour for production, freights, commission, &c., there would appear to be little in it to attract the attention of farmers, who can make far more [profit] out of dairying, sugar-planting, potato, onion, and maize growing. As a catch-crop amongst coconut and rubber trees, the Soya bean would doubtless prove of great value.

"As far as the feeding value of the [soy] bean is concerned, it is said to be at least twice as valuable for food as maize, as it is very rich in protein, but it is best fed in conjunction with maize. As a green manure, it is undoubtedly valuable in restoring the soil, being a leguminous plant.

"The expenses per ton for bags, railage, and freight to Harbin to Vladivostock [Vladivostok] are set down at £1 13*s.;* add ocean freight to England, £1 10*s.*–£3 3*s.*

"The expense of transport from South Africa to England is set down in the report we quote from at £1 9*s.*

"But Queensland is further from England than South Africa; and while it might pay to grow and export Soya beans thence to Europe, we cannot see that the crop could be profitably produced in this country."

(3) "The following summary of the uses of the Soya bean and its products given by *Tropical Life* [published in England], April, 1913 [p. 71-72], is interesting:–For dynamite and high explosives, soap, linoleum, India-rubber substitute, margarine, paints and varnishes, in place of linseed oil, various edible foods, toilet powder, salad oil, vegetable cooking oil in place of lard, oil, &c., preserving sardines, lamp oil, lubricating, as food in place of peas, flour for soups, biscuits, brown bread, artificial milk and cheese [soymilk and tofu], substitute for coffee, for sauces; cake for feeding cattle, and for manure."

Note: In this same Jan. 1914 issue (p. 3) of this journal, an article titled "Queensland Agricultural Journal," states: "With this number of the Journal we commence a New Series of issue, dating practically from the 1st July 1913, on which date the Journal completed its sixteenth year of publication." It first appeared in July 1897, and today some 60,000 copies a year [5,000 copies a month] are mailed to subscribers worldwide. From now on the Journal will accept "advertisments having reference solely to productions of the land or to manufactured articles needed by rural occupiers, thus not interfering in any way with the general run of advertisements in the public Press." Address: Australia.

863. Eddington, Jane. 1914. Economical housekeeping: More about soy beans. *Chicago Daily Tribune.* Feb. 4. p. 16.
• ***Summary:*** Because of its high protein content, the [whole dry] soy bean must be soaked for a long time then cooked gently for "several hours to reduce it to the required softness.

"It does not make as smooth a purée as the pea or peanut–in fact a rather granular one is obtained–but that nevertheless is palatable when dried over a hot fire, with a seasoning or butter, pepper, and salt if needed." We should manufacture "soy sauce from this bean–that sauce without which chop suey and many other Chinese dishes would not be what they are. In a government bulletin on the legumes we have a general description of how this is made." There follows a summary, with long quoted excerpts, of the section titled "The soy bean and its preparations" in: Oshima, Kintaro. 1905. "A digest of Japanese investigations on the nutrition of man." *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 23 on. Shoyu, tofu, miso and natto are discussed briefly.

864. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune.* Feb. 11. p. 11.
• ***Summary:*** It is called "the soy or soja bean." "In an English food magazine of two years back there is an interesting and very suggestive article, 'About the Soy Bean.' In the first paragraph it is said that medical men have been experimenting with it and writing about it for a year or so. Then it says:

"'The soja (or soy) hispida is the only representative of a genus of leguminosae or the tribe papilionaceæ, and it has been cultivated from time immemorial in Japan and China. It grows freely in tropical countries, and since 1878 it has been grown successfully in the warmer parts of Europe. There are a number of varieties of the soy bean, the difference lying in the size, shape, and color of the seeds. The Japanese is the most highly esteemed and in appearance it is a good deal like the common dwarf kidney or French bean...

"'The bean, which has a most agreeable flavor, is used

© Copyright Soyinfo Center 2013

by the orientals in many ways. The oil is expressed, used as a food, and the residual cake, which contains 40 per cent of flesh forming material, is eaten by the poorer classes [sic]. A paste [miso] and a kind of cheese [probably tofu] are also obtained from the bean, but one of its principal uses–perhaps the best known to us–is for the manufacture of the celebrated soy sauce, the making of which has always been surrounded by a certain amount of mystery.

"'It is the chemical composition of the soy bean which has attracted so much attention of late, and it has been found to be worthy of the highest place among pulses. It is rich in albuminoid, or flesh forming constituents, also in fat or oil, and contains but a very small proportion of starch or sugar.

"'The bean has been said to favor digestion, and it is a fact that the protein it contains is particularly easy of assimilation. A delicate infant, unable to digest cow's milk, often will thrive on a gruel made of the soy bean flour and water, and during the little intestinal disturbances of summer, to which children are so liable, it is much to be recommended. Diabetic patients find it an invaluable article of diet on account of the small amount of starch and sugar which it contains.

"'One might well expect that so valuable a food necessarily would be expensive, but when one learns that both bean and flour are sold for about 3*d* (6 cents) a pound, one feels that it is high time to give it a trial.

"'It is in the form of flour that the soy bean is likely to be most popular on this side of the globe, although the beans themselves, when properly cooked, make good soups and form the basis of many of those little dishes beloved of those who prefer a meatless fare [vegetarians]...

"'The soy bean thus is a cheap substitute for meat. In the dried state it looks more like a pea than a bean, but when soaked in warm water it expands and assumes its beanlike appearance...'"

"The article says that these beans soaked and cooked are excellent mixed with a well flavored tomato or other sauce and made up into cutlets, croquettes, etc., to be used with cheese, etc., because its flavor is not pronounced, for which reason it is more valuable in the kitchen.

"These beans can be obtained at a seed store at just the price one pays for other sorts of beans at a grocery."

865. *Times* (*London*). 1914. Artificial milk. Butter and cheese from soya beans. Romance of a new industry. March 17. p. 4, col. 1.

• ***Summary:*** "A discovery which should prove of great interest to housewives and mothers has recently been brought to perfection in a London chemical laboratory. This is a process of manufacturing synthetically a pure and wholesome milk of high nutritive value, possessing all of the virtues of the original article, none of its many dangers." A German chemist has developed the process.

"The fluid, as far as its appearance is concerned, is quite indistinguishable from rich cow's milk. It is delightfully smooth on the palate. On the other hand, the taste seems to some persons slightly different from that of ordinary milk. It is said that even this slight 'taste' can be removed at will. A dairyman was recently asked to express his opinion of the new milk, and two glasses, one containing his own milk and the other the artificial milk, were placed before him. He praised what he supposed was his cow's milk and expressed a very modified appreciation of the other. His surprise on hearing of his error was naturally great.

"Introduction of bacteria. The new milk has been built up from a basis of casein obtained from the soya bean. Casein, of course, is likewise the basal constituent of cow's milk. The beans are treated by a special process whereby all oil and waste matter are removed and only the pure casein left. To this basis are added in exact proportions fatty acids, sugars, and salts, and emulsification carried out... In order that the synthetic milk may approximate in all respects to the real milk, bacteria of the required strains, including the lactic acid (sour milk) bacilli rendered famous by Metchnikoff a few years ago, are introduced to the fluid and permitted to act upon it until it reaches exactly that state of what may be termed maturity at which fresh cow's milk is obtained. That it is indeed a real milk is proved by the fact that excellent cheeses and 'butter' can be made from it.

"The advantages of the new milk are obvious. It is, of course, free from all suspicion of being contaminated with milk-borne diseases like tuberculosis, scarlet fever, or diphtheria."

The first consignment of soya beans was sent to Europe as recently as 1906. "In this country soya oil has now a very ready and extensive market. It is used instead of the cotton seed variety on account of cheapness. Soap manufacturers are also coming to depend upon it. The chief use, however, would seem to be as cattle cakes for winter feeding. That the article which has fed so many milch cows during the past few years should itself be used in the making of artificial milk is undoubtedly something of a coincidence.

"Most of the soya beans entering this country pass through Hull, which, with its great oil and seed mills, is the natural centre for such a commodity."

866. Nagel, Oskar. 1914. Vorschlaege zur Herstellung neuer und billiger Futter- und Naehrstoffe [Proposals for the production of new and inexpensive feeds and foods]. *Zeitschrift fuer Angewandte Chemie* 27(1):208. April 7. (Chem. Abst. 8:2583). [Ger]

• ***Summary:*** Similar to the plant albumins are the plant caseins, above all the casein of the one plant which is richest in this casein, the soybean (*Sojabohne*), which has been used for centuries in the form of soy cheese (*Sojakäse* or tofu), soy sauce (*Sojasauce*), etc. and is an important Japanese foodstuff. Now in recent years, the soy oil factories of Europe have grown to large dimensions, and presently

© Copyright Soyinfo Center 2013

large amounts of soybean oil cake (*Sojaölkuchen*) and sold inexpensively. So it is time to recognize the value of this raw material for nutritional purposes. The extraction of casein from defatted soybean cake is simple. It dissolves in a dilute alkali solution, is filtered, washed with alkali and dried–for use as food. When we realize that 100 kg of protein contained in soybean oil cake costs less than 50 Marks and that it can be produced less expensively than milk protein, it is clear that large amounts should be used as a raw material.

867. Meyer, Frank N. 1914. Re: Artificial milk, butter, and cheese from the soy bean. In: Letters of Frank N. Meyer. 4 vols. Compiled by Bureau of Plant Introduction, USDA. 2444 p. See p. 1889-90. Letter of 29 April 1914 from Peking, China, to David Fairchild of USDA.
• ***Summary:*** "I am also enclosing a clipping re *artificial milk, butter* and *cheese* from the *soy bean!* Is the fact already known to our specialists?"

One week later, on 2 May 1914 (p. 1898) he adds: "No. 2038a, *Soya hispida,* is a rare local variety. I think I have only seen it once."

Location: University of California at Davis, Special Collections SB108 A7M49. Address: USDA Plant Explorer.

868. *Asie Francaise* (*L'*). 1914. Le soja: Une légumineuse alimentaire Chinoise [The soybean. A Chinese food legume]. 14(158):196-98. May. [Fre]
• ***Summary:*** Begins with a good introduction to the soybean (*haricot soja*), including its early history in France and statistics of current trade between Europe and Manchuria. A footnote (p. 196) states that the statistics are from the Chinese maritime customs. The shipments to Europe for first reported in 1908 by the official statistics. The Suez Canal Company (*La Sociéteé du canal de Suez*) made it known that for some years when not a single kg of soybeans passed through the canal, but 35,000 passed through it in 1908.

At the Nanking Exposition [Nanjing] of 1910 in China, some 400 varieties of soybeans were on display.

Continues with a long discussion of the work and writings of Li Yu-ying (p. 197-98). "It was soymilk that Li first introduced to French vegetarians (*végétariens français*). In 1908 he established a laboratory in Paris for the study of tofu (*la caséo-sojaïne*). Then he set up a factory at Vallées, on the outskirts of Paris, where he employed about 30 specialist Chinese workers. The machinery was constructed in France based on designs by Li and his collaborators.

"The creation of this Chinese factory, smack in the middle of France, was not lacking in originality. But it seems that its output could be as wide and varied as its founders had dreamed. In a shop which sells exotic products, we were told that the Parisian clientele scorned (looked down on) the soy preserves / jams (*confitures*), cheeses, condiments, eggs, and other unique soy products, but they remained faithful to flour, rusks / zwieback (*biscottes*, twice baked bread without added sugar), and the housewives appreciate the soy sprouts that are found today in all the markets of Paris and its outskirts."

869. *Le Monde des Plantes* (*le Mans, France*). 1914. Nouvelles: Lait, creme, beurre et fromage de soja [News: Soy milk, cream, butter and cheese]. 16(88):19. May. Series 2 [2 ref. Fre]
• ***Summary:*** According to the *Molkerei Zeitung,* an institute name Soyama Wecke [sic Soyama Wercke, Soyama-Werke, Soyamawerke] has been founded near the railway station of Bockenheim (Germany). The goal of this institute is the manufacture of artificial milk (*lait artificiel*) from the seeds of the soybean (*de Soja; Soja hispida*) and other substances. The soybean furnishes almost all of the product.

According to the Assembly of Agriculturists (*l'Assemblée des Agriculteurs*), which meets in Frankfurt, a few years ago 50,000 liters of soymilk arrived daily on the market when the factory was pushed to its full capacity. A deputy of the German parliament (*Reichstag*) is at the head of this enterprise which has several million dollars of capital. The Soyama-Werke also makes soy cream, butter and cheese [tofu].

Source: *Journal de la Société national d'Horticulture de France,* Feb. 1914.

Note: In May 1914 Germany was involved in World War I.

870. *Washington Post.* 1914. Beans for milk. June 14. p. M13.
• ***Summary:*** From Worcester (Massachusetts) Post: "Massachusetts lands which fail to give up forests and other crops of sufficient value to suit the tillers should be devoted to raising soya beans. A few Chinamen should be imported to show how that crop is produced to the best advantage. The experts claim it does best in hot climates, but that does not rob the beans of a change in Massachusetts. There is a great need of the beans here." Every session politicians urge less cows in the commonwealth. Farmers have long said, and keep saying, "that they cannot keep cows at the prevailing prices allowed for them for the milk. They are undoubtedly right." Let them quit. "But the soya beans in the course of scientific treatment give up a casein from which the best of butter and cheese are made.

"The imported figures indicate that an acre of land devoted to the beans will make more milk, butter or cheese than any cow in Massachusetts in a year, and no acre supports a cow. The milk and other products of the bean carry no bacteria, so far as reported by science, and that means they will keep indefinitely. There is nothing for the farmers to do but to raise the beans."

The state can save a lot of money by abolishing milk inspectors. "The beans can be sent to central points in bags without regard to special sanitary cars, and there be made

© Copyright Soyinfo Center 2013

into milk, butter and cheese for the community at hand."

This simple change would solve about half of the state's problems. "The soya bean of the Chinese is the solution."

871. *Independent* (*The*). 1914. Milk and cheese from the soya bean. 78:487. June 15.
• ***Summary:*** "A large concern known as the 'Synthetic Milk Syndicate, Ltd.' is about to establish a factory in Liverpool, at which soya milk will be made according to the process of Dr. Fritz Goessel, of Essen, Germany." A detailed description of the process follows. "It is expected that this milk will be retailed in England at 4 cents a quart. It is claimed to have the same nutritive value as natural milk, and will be free of the characteristic oily flavor which makes other soya bean products unpalatable to most people who have not acquired the tastes of the Orient... Treated with a mineral salt or an acid, which acts the part of rennet, vegetable milk can be converted into cheese of several varieties. In Indo-China, where the soya milk industry has assumed large proportions, three principal kinds of cheese are made: a fermented variety with a taste suggesting Roquefort; a white salted variety, resembling goat's milk cheese; and a cooked or smoked variety, like Gruyère."

Note: This is also the earliest English-language document seen (April 2013) that uses the word "smoked" (not including "smok'd") in connection with tofu. Address: England.

872. *Mercury* (*The*) (*Hobart, Tasmania, Australia*). 1914. Rival to milk. Produce from soya beans. Romance of an industry. June 20. p. 14.
• ***Summary:*** This is a summary of: *Times* (London). 1914. "Artificial milk. Butter and cheese from soya beans. Romance of a new industry." March 17. p. 4. The summary begins: "The keen rivalry between margarine and butter is to have a parallel in the fluid product of the soya bean threatening to knock cow's milk out of the market."

873. Loomis, Henry M. 1914. Food products from the soy bean. *American Food Journal* 9(8):472-74. Aug.
• ***Summary:*** Loomis collected information on soybean products while stationed on the Pacific Coast. "Probably the most interesting and important of these food products is soy sauce, or shoyu, as the Japanese call it. It is the only one which is used to any extent among Occidental nations, with whom it forms the principal ingredient of Worcestershire and similar table sauces. It is also used to some extent as an ingredient of bouillon cubes. König estimates that the consumption of this product in Japan amounts to two or three fluid ounces per day for each person, which would make a total consumption for that country alone of three to four hundred million gallons. No figures are available as to the amount of this sauce which is used in China, but all except the poorest class eat it habitually on rice and fish, which form their principal articles of diet."

Japanese soy sauce "is prepared on more scientific principles and it is considered much superior to Chinese soy. Each manufacturer of Japanese soy has special brands or trade marks under which his products are sold. Japanese soy is usually imported into this country in wooden tubs holding about three gallons each and sells at wholesale price of from 75 cents to $1.50 per tub" [i.e. 25 to 50 cents per gallon]. A brief description of the Japanese process for making soy sauce follows; it mentions Koji.

Brief descriptions are also given of the following foods and their method of preparation: (1) "Soy bean curd, or, in Japanese, Tofu, is as its name implies prepared by coagulating or precipitating the legumin or vegetable proteid, of the soy bean by mineral salts. (2) "The frozen bean curd, or 'Koritofu,'..."

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "Koritofu" to refer to frozen tofu. (3) [Yuba]. "The liquor or bean milk is the milky fluid produced in the manufacture of bean curd after straining and before coagulating. Chinese bean curd [sic], or Toufu-pi, is prepared by drying the scum produced on boiling the bean milk. It is imported in the form of vitreous, brittle, yellowish sticks in appearance like dried casein. (4) Soy bean oil. (5) "Kinako is prepared by roasting and grinding soy beans. It has a very agreeable flavor and is much used in the preparation of confections, particularly as a sort of coating powder. (6) Miso, which is made from "Koji, the same ferment as is used in the making of soy. There are two principal kinds imported into this country, the white and red Miso. They differ principally in the rapidity of fermentation and in the amount of salt used."

"Winton and others have suggested the use of soy bean products as foods for diabetics and it appears that there are many of the foods mentioned above which would serve a useful purpose in this regard. There are a number of firms now putting out soy bean meal or flour on a commercial scale and notices have appeared recently that soy bean curd and milk are to be manufactured on a large scale in Europe.

A large table contains nutritional analyses of four types of soy [sauce] (incl. Kikkoman, Kikkoraku, typical Japanese shoyu and Chinese soy) plus each of the foods mentioned above, including tofu (8.6% protein) made in Seattle, Washington, and "Bean milk (strained bean liquor before coagulating; 2.09% protein).

Mr. J.T. Willard notes: "I remember twenty years ago [i.e., 1894] that Prof. Georgeson of the Kansas Agricultural College had half a dozen varieties [of soy beans]. He was a teacher of agriculture in Japan and I suppose he learned as much there as he taught, and he became very enthusiastic over the soy bean. I remember there was a great difference in the different varieties of the soy bean." A portrait photo shows Mr. H.M. Loomis.

Note 2. This is the earliest English-language document

© Copyright Soyinfo Center 2013

seen (April 2013) that uses the term "soy bean curd" to refer to tofu. Address: Bureau of Chemistry, USDA.

874. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune.* Nov. 13. p. 14.
• ***Summary:*** "The soy bean is one of the staples with which we are not very well acquainted, but it is inexpensive and richer in protein than any of the other legumes."

"This bean is considered of particular value in diabetes, but it is the flour that is chiefly used in dishes for the sick, a considerable number of recipes for which will be found in [the book] *Diet in Health and Disease,* by Friedenwald and Ruhräh. A long quoted excerpt is given. "The oriental races most frequently eat the bean in more or less cheesy foods, which are prepared from it. The most common of these are natto, tofu, miso, yuba, and shoyu."

"There is an American company in America [perhaps Waukesha Health Products Co., in Waukesha, Wisconsin] which makes the soy bean flour, the address of which will be sent on request (stamped and addressed envelope) to any one interested. There are about three pages of recipes in the book quoted from. In recommending them for diabetics it says:

"'The simplest way to use the beans is to cook them like the ordinary navy bean, preparing either bean soup, boiled beans, or baked beans, the flavor being rather improved by the addition of a piece of fat salt meat.'"

875. Melhuish, William James. 1914. Improvements in the manufacture of vegetable milk and its derivatives. *British Patent* 24,572. Dec. 29. Application filed 29 Oct. 1913. Complete specification left 23 Dec. 1913.
• ***Summary:*** In manufacturing artificial milk from soy beans by a process similar to that of 27,860, 1912, the oil is first extracted from the beans or meal, or is centrifugally separated from the albuminous extract, which is obtained by treating the meal at about 90º with water containing potassium phosphate, etc., and then filtering. Sesame or other oil mixed with butyric and other cream acids is then thoroughly emulsified in the liquid, which may be done by b. *in vacuo* or by a mixing or homogenizing machine. Dextrin and various sugars such as malt extract, dry maltose, cane sugar, milk sugar, dextrose, honey, etc., sodium bicarbonate, etc., sodium chloride, citric acid, and lactic bacteria are added. When the required acidity is reached, part is set aside, and the rest may be pasteurized. The part set aside is mixed with pasteurized soy milk and added to the next batch. The sesame oil, etc., may be omitted, or may be gradually added to obtain a thick cream, which may be made into margarine. Sugar may be replaced by saccharine, and medicinal iron may be added. Humanized, sterilized, fermented, condensed, or dried milk may be prepared. For making cheese, the casein may be coagulated by lemon juice, etc., rennet, or the ferments present. The soy cake in the filter press may be used as cattle food. Address: Highwood House, Upper Parkstone, County of Dorset [England].

876. **Product Name:** Tofu.
Manufacturer's Name: Fujiwara Tofu-ten.
Manufacturer's Address: 168½ W.S. Temple St., Salt Lake City, Utah. Phone: Was. 4816.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 180.

Note: Between the two shops listed on this page is another business named Yaezono, which may well be a tofu shop as well, but this is not clear. Yaezono is located at 47 S.W. Temple St, Salt Lake City, Utah. However, strangely, in the census part of this book, there are no tofu shops listed in Salt Lake City.

877. **Product Name:** Tofu.
Manufacturer's Name: Hashimoto Tofu-ya.
Manufacturer's Address: P.O. Box 94, Visalia, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 117. Note: Takahashi Tofu-ya had this P.O. Box in 1913.

878. **Product Name:** Tofu.
Manufacturer's Name: Hidejima Tofu-ya.
Manufacturer's Address: 1509½ Geary St., San Francisco, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 14.

879. **Product Name:** Tofu.
Manufacturer's Name: Kurosumi (Kokuju?) Tofu-ya.
Manufacturer's Address: P.O. Box 427, Sebastopol, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 174. Note: Sebastopol is a town in Sonoma County, about 52 miles north of San Francisco.

880. **Product Name:** Tofu.
Manufacturer's Name: Matsumoto Tofu-ya.
Manufacturer's Address: P.O. Box 95, Dinuba, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 115.

881. **Product Name:** Tofu.

Manufacturer's Name: Nakadate (Nakatate or Nakatachi?) Tofu-ya.
Manufacturer's Address: 21 Sausal St., Salinas, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 160.

882. **Product Name:** Tofu.
Manufacturer's Name: Nakajima Tofu-ya.
Manufacturer's Address: 220 Japanese Ave., Sacramento, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 62.

883. **Product Name:** Tofu.
Manufacturer's Name: Nishimoto Tofu-ya.
Manufacturer's Address: 184 14th St., Riverside, California. Phone: Home 1887.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 149. Note: Yonemura Tofu-ya was at this address in 1913.

884. **Product Name:** Tofu.
Manufacturer's Name: Nojima Tofu-ya.
Manufacturer's Address: P.O. Box 136, Isleton, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 87.

885. **Product Name:** Tofu.
Manufacturer's Name: Okamoto Tofu-ya.
Manufacturer's Address: P.O. Box 185, San Juan, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 164. Note: Today, San Juan, located in Orange County, is probably the same as San Juan Capistrano, named after the mission founded there by Padre Junipero Serra on 1 Nov. 1776.

886. **Product Name:** Tofu.
Manufacturer's Name: Oye (Ohye) Tofu-ya.
Manufacturer's Address: 1621 Buchanan St., San Francisco, California. Phone: West 2157.
Date of Introduction: 1914.
New Product–Documentation: The Japanese-American Yearbook (Nichibei Nenkan). No. 10 (Published by Mr. Kyutaro Abiko, of Nichibei [Shinbun], Japanese-American News). 1914. p. 14. The company name is written with the Chinese characters meaning "Large + Bay." Tofu-ya means "Tofu company."

Talk with Mr. Seizô Oka, Head, History Room, Japanese Cultural and Community Center, San Francisco. 1989. Dec. 5. He has talked with Mrs. Sumiko Kawashima (maiden name Oye/Ohye) who now lives in Hinode Tower. Her father, Mr. Masuzo Oye was an early tofu maker in San Francisco. Before him, one of the earliest in San Francisco was said to be Jitsutaro Hayashi.

887. **Product Name:** Tofu.
Manufacturer's Name: Rafu Tofu-ya (Los Angeles Tofu Shop).
Manufacturer's Address: 446 Jackson St., Los Angeles, California. Phone: A2896.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 128. Note: Rafu is the Japanese nickname for Los Angeles. Hirano Tofu-ya was at this address in 1911.

888. **Product Name:** Tofu.
Manufacturer's Name: Sakai Tofu-ya.
Manufacturer's Address: P.O. Box 231, Walnut Grove, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 85. Walnut Grove is a small town in Sacramento County, California, at the bend in the Sacramento River, about 20 miles south of the city of Sacramento.

889. **Product Name:** Tofu.
Manufacturer's Name: Satake Tofu-ya.
Manufacturer's Address: 79 Japanese Ave., Sacramento, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 62.

890. **Product Name:** Tofu.
Manufacturer's Name: Takao Tofu-ya oyobi Gyokujo / Tamaba? (Pool Hall / Billiards).
Manufacturer's Address: Care of Quon Chong Kee, Loomis, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 70. Note 1. No street address or P.O. box number is given. Note 2. Loomis is in Placer County,

© Copyright Soyinfo Center 2013

northeast of Sacramento between Rocklin and Auburn.

891. **Product Name:** Tofu.
Manufacturer's Name: Tamada Tofu-ya.
Manufacturer's Address: P.O. Box 402, Lodi, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 98.

892. **Product Name:** Tofu.
Manufacturer's Name: Tanaka Tofu-ya (K. Tanaka Co., Inc.).
Manufacturer's Address: 885 3rd Ave., New York City, New York. Phone: Plaza 5218.
Date of Introduction: 1914.
New Product–Documentation: The Japanese American Directory. 1925. p. O-69. Company name is in Japanese characters: Tanaka Tofu-ya. Address and phone are in English: 885 3rd Ave., New York City, NY. Phone: Plaza 5218.

See also Tanaka Tofu Seizo-sho (Tanaka Tofu) (1934). Are these two companies, which have very similar names and the exact same addresses, related?

Hokubei Shinpo-sha. 1948. *Nyuyoku Benran: Tsuketari jushoroku, 1948-1949 nendo* [*New York Japanese American directory: 1948-1949*]. Who's Who section, p. 22. In 1914, after a brief visit to Japan, he returned to the U.S., settling in New York, where he soon entered his present business. He continued the tofu shop until the outbreak of World War II. In 1942 he moved into his present shop at 159 East 53rd St [between Lexington and 3rd Ave. if in NYC]. Note: It is not clear when (probably in about 1914) and at what address he began making tofu in New York–nor what the first name of his tofu company was. In the same book an ad on an unnumbered page about 22 pages after Mr. Tanaka's biography states in English: K. Tanaka Co. Inc., 144 West 65th, New York 23, N.Y. Tel. TRafalgar 4-6600. Tel. TRafalgar 4-6601. 159 East 53rd Street, New York, 22, N.Y. Tel. Plaza 3-5218. In Japanese: Tanaka Shokai, Mr. Kaijiro Tanaka and Mr. Kazuo Nakayama. All Japanese foods. Tofu manufacturer. Care package shipping service to Japan. Direct import of foods. Note 3. Of the two addresses given above in English, the 2nd one (159 E. 53rd St.) is for the tofu shop.

In section (3) titled Nyuyoku Benran, on page 29 is a subsection on tofu business. In about May 1943 they were selling 400 to 500 cakes (*chô*) of tofu per month. One year later in 1944 they were selling 1,200 cakes per month. Mr. Tanaka said that one reason for the increased price of tofu was the increase in the Japanese population in New York, as they returned to the city.

The all-English directory at back of book states under New York City–Oriental Foods: "Tanaka, K., Co., Inc. (Sunrise Rice Cake Co.), 159 East 53rd St., New York (22). Plaza 3-5218. Branch: (Formerly E.L. Sauce Co.), 144 W. 65th St., New York (23); TRafalgar 4-6600 and TRafalgar 4-6601."

893. **Product Name:** Tofu.
Manufacturer's Name: Tayama Tofu-ya.
Manufacturer's Address: P.O. Box 524, Penryn, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 72. Note: Penryn is in Placer County, northeast of Sacramento, near Auburn.

894. **Product Name:** Tofu.
Manufacturer's Name: Wada Tofu-ya.
Manufacturer's Address: P.O. Box 33, Selma, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 109.

895. **Product Name:** Tofu.
Manufacturer's Name: Yamamoto Ryokan, Tofu-ya.
Manufacturer's Address: P.O. Box 372, Newcastle, California.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 73. Note: A *ryokan* is a traditional Japanese inn. So the owners operate both an inn and a tofu shop. Newcastle is in Placer County, northeast of Sacramento, in the foothills of the Sierra Nevada mountain range, between Loomis and Auburn.

896. **Product Name:** Tofu.
Manufacturer's Name: Yamamoto Tofu-ten.
Manufacturer's Address: 39½ S.W. Temple St., Salt Lake City, Utah. Phone: Was. 4816.
Date of Introduction: 1914.
New Product–Documentation: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 180.

897. Bosse, Sara; Watanna, Onoto. 1914. Chinese-Japanese cook book. Chicago and New York: Rand, McNally & Co. 120 p. Index. 17 cm.
• ***Summary:*** A remarkable and pioneering East-Asian cookbook. It may well be the earliest Japanese cookbook seen published in America. It is one of the earliest Chinese cookbooks published in America. The cover illustration shows a well dressed Japanese woman in a Japanese room kneeling and cooking over a brazier. Contents: Preface. Part I: Chinese recipes (12 sections, p. 9-64). Part II: Japanese

© Copyright Soyinfo Center 2013

recipes (7 sections, p. 74-110). List of Chinese and Japanese groceries.

The Preface begins (p. 1): "Chinese cooking in recent years has become very popular in America, and certain Japanese dishes are also in high favor. The restaurants are no longer the resort of curious idlers, intent upon studying types peculiar to Chinatown, for the Chinese restaurants have pushed their way out of Chinatown and are now found in all parts of the large cities of America." "There is no reason why these same dishes should not be cooked and served in any American home."

Concerning shoyu, or Japanese-style soy sauce (p. 2-3): "Syou, sometimes called Soye, is similar to Worcestershire and similar European sauces. In fact, the latter are all said to be adaptations of the original Chinese syou, and most of the European sauces contain syou in their makeup. It lends a flavor to any meat dish, and is greatly esteemed by the Oriental peoples."

Note 1. This is the earliest English-language document seen (April 2012) that uses the word "syou" to refer to shoyu or soy sauce.

Syou (soy sauce) is an ingredient in at least 55 recipes in this book, both Chinese and Japanese–starting with Chinese soups (p. 12-17). When first mentioned here it is called "syou (Chinese sauce)," but thereafter simply "syou."

"Miso paste" appears in 5 Japanese recipes: Satsuma soup ("one quarter pound of aburage {oil-fried Tofu}; one quarter pound of miso paste {soy bean and rice cheese}," p. 71-72). Uwo shiru (Fish soup) ("one pound of miso paste {bean and rice paste}; one half cupful of syou sauce," p. 73-74). Shika shiro (Pot-roasted venison) ("one cupful of syou sauce;... one quarter pound of miso paste," p. 80). Tamago bolan (Peony eggs) ("finely mashed miso," p. 91-92). Shiro uri (Stewed squash) ("syou sauce... two tablespoons of miso," p. 95).

"Aburage (oil-fried Tofu)" and regular tofu appears in Satsuma soup (p. 71, see above). Yaki zakana (Fried fish) (with "oil-fried Tofu... Note: Tofu is made from a mixture of syou bean [soy bean] and rice. It is mashed and rolled into a thin cake, and fried in oil, very much like pancakes," p. 77-78). Note 2. A poorer definition of tofu would be hard to find. Yaki udzura (Broiled quail or pigeons) ("aburage {bean cheese paste}" and "Tofu cakes," p. 79). Fried squab (with "fried Tofu," p. 81). Tamago tofu (a tofu-like custard made with eggs and syoyu sauce, but no real tofu, p. 89-90).

Bean sprouts are used in many recipes, but we are never told what type of beans are sprouted [probably mung beans]; a recipe for homemade bean sprouts (p. 109) calls for "ordinary white beans, or dried lima beans." Other interesting ingredients include: "Adzuki (purple beans)" (mentioned once in Yohan candy). Goma seeds [sesame] or goma-seed oil (mentioned 15 times). Kudzu starch (6 times, misspelled once as "kudze"). Peanut oil (at least 10 times). Seaweed (1 can of seaweed; small piece of seaweed), seaweed jelly or gelatine, or Kanton [kanten, agar] (15 times). Sweet rice [mochigome].

The authors, "Winnifred and Sara Eaton were sisters, daughters of a Chinese-born mother and an English-born father, and grew up in a large family in Montreal, Canada. Winnifred Eaton was a very successful fiction writer who, by taking on a Japanese identity, both exploited the public's craze for 'Japonica' at the time, and obscured her Chinese heritage during an age of anti-Chinese sentiment and policies. This cook book was her first collaboration with Sarah, who may have done very little of the writing. A painter, Sarah (1868-1940) lived out her life with her German artist husband, Karl Bosse, in New York. Winnifred (whose Japanese pseudonym was Onoto Watanna) lived 1879-1954, knew almost nothing about Japanese cooking. Winifred's biographer and granddaughter, Diane Birchall, says that the authors' claim in the Preface that the Chinese recipes are "... secret recipes handed down from Vo Ling, worthy descendant of a long line of noted Chinese cooks...' is just a hoax. "According to Birchall, Eaton was awful at cooking Chinese dishes" (MSU introduction and biography).

Note 3. This is the earliest document seen (Jan. 2009) concerning soy ingredients used in Japanese-style recipes, food products, or dishes outside Japan.

898. Chiappini, C. du P. 1914. The trade of the Union: Soya beans. In: W.H. Hosking, ed. 1914. South African Year-Book 1914. London: George Routledge and Sons, Ltd. New York: E.P. Dutton & Co. See p. 192-261, especially p. 247-56.
• ***Summary:*** "The Annual Report of the Trades Commissioner in London for the Union Government of South Africa for the year ending 31st December, 1912, and dated 16th April, 1913, was presented to both houses of Parliament by command of His Excellency the Governor-General."

Soya Beans: Trials in connection with these beans have been, and are being, made by farmers in the Union–principally in Natal. During the past nine years many useful experiments have been made by the Agricultural Department, mainly at the Cedara, Winkle Spruit, and Weenen Government Farms (Natal), and also at Skinner's Court, Pretoria. A great deal of knowledge has thus been gained and made known to farmers by means of bulletins, etc., issued by the Government. I am, however, informed that there has been a check in the progress of this industry, and that in some parts farmers have been disheartened by their first trials, and have dropped the matter... I submit the [following] details in the hope that they will stimulate farmers through the Union to continue their experiments and carry them to a successful issue, my object being to support Mr. Burtt Davy and other officers of the Agricultural Department who are doing such good work in this direction.

"I have been fortunate in securing the valuable assistance of Mr. A. Grenville Turner, Grain and Oilseed

© Copyright Soyinfo Center 2013

Broker, and Assistant Secretary to the Seed, Oil, and Cake Trade Association, C 20, Exchange Buildings, Liverpool, and of Mr. Harold Beckwith, of Peter's Buildings, II, Romford Street, Liverpool, who is a specialist on the production of vegetable oil and on oil milling plant generally...

"During the year 1909 experiments were conducted in the Argentine Republic, Mr. A. Grenville Turner reporting that a crop of beans may be secured there in about thirteen weeks, as against six months in Manchuria, and ten weeks to five months in South Africa, according to zone and climatic conditions. Worldwide interest is now evinced in the culture of the Soya bean, and experiments are being conducted in practically every British Colony. The late Sir Alfred Jones, K.C.M.G., entrusted Mr. Turner with a mission to introduce the cultivation of the bean throughout West Africa, the result of the experiments being successful. On his return from the coast, Mr. Turner was entrusted with a mission by Messrs. Lever Brothers, Limited, to encourage the cultivation of the Soya bean throughout the Union of South Africa. The scheme was enthusiastically taken up by the farmers. Large quantities of seed (with descriptive pamphlets) were distributed by Messrs. Lever Brothers, the result of the experiments proving that South Africa can raise a crop of Soya beans equal, if not superior, to those from Manchuria...

"At the Government Experimental Farms in South Africa, over 80 varieties have been tested, and as high as 2,000 lb. per acre was recorded, while in many instances the yield was well over 1,000 lb. per acre. In Manchuria the yield per acre is from 1,100 to 1,600 lb. per acre...

"The subject has received the hearty support of the Union Government Agricultural Department, the Agricultural Unions, and Messrs. Lever Brothers, Limited, by whose assistance, through Mr. Turner, seed for the planting of three to five acre plots was distributed to over 300 farmers in all parts of the Union, together with printed report forms and descriptive bulletins. One factor was proved–viz., the capability of the plant to resist a long sustained drought, and to grow under conditions that would probably in many instances be too severe even for maize.

A list is given of 18 products which can be obtained from the Soya bean, including "Human consumption, as a vegetable, like marrowfat peas, and in preparation of soups. As a substitute for meat, specially manufactured. Manufacture of a substitute for chocolate. Preparation of macaroni. As flour for biscuits and brown bread. As artificial cream and milk. Manufacture of cheese. As a substitute for coffee. Preparation of plastic substances and artificial horn." Diabetic foods, soy sauce, meal for feeding cattle, stallions or dairy cows, seasonings, beverages, industrial products, and livestock feeds.

The oil can be used for the manufacture of "Dynamite and high explosives. Soaps. Linoleum. India-rubber substitute. Margarine. Paints and varnishes in place of linseed oil. Edible goods and toilet powder. Waterproof cloth, paper umbrellas, and lanterns. Salad oil. Lubricating oil, in China, for greasing axles and native machinery. Lamp oil instead of kerosene oil. It is used on English railways for burning. The Soya oil is also used for preserving sardines, and in place of lard, and cotton-seed oil for cooking.

"Chemical analyses of the beans made in Europe show considerable variation in the percentages of the different constituents... of oil from 15.62 to 23.20 per cent., the latter oil content being the highest recorded, the beans being grown by Mr. Turner, at Sierra Leone (West Africa).

"At the latter end of the year 1908 the Soya beans started to be exported from Manchuria to Great Britain and Europe; the price on the London market being £4 15*s.* per ton, which recently rose to £9 2*s.* 6*d.* per ton in England; the value on the spot at Hull being now given as £8 7*s.* 6*d.* per ton; the value of soya oil on the spot, crushed, is £24 10*s.*, and extracted, £23 15*s.* per ton, and of Soya oilcake, £6 15*s.* per ton."

Note: This is the earliest English-language document seen that uses the term "oilcake" or "Soya oilcake" to refer to ground, defatted soybeans. Address: Trades Commissioner, South Africa.

899. Davison, Mrs. 1914. Domestic economy in Japan. [Tokyo, Japan]: Kyo Bun Kwan (Methodist Publishing House). Tokyo Katei Mondai Kenkyu Kurabu. v + 73 + [16] p.; 17 + 1157 + 6 p. No index. 19 cm.

• ***Summary:*** On the title page: "Compiled by the Home Problem Club, Tokyo." Contents: Soups. Fish. Meats and substitutes. Vegetables. Salads. Puddings. Pudding sauces. Sweets. Cakes. Breads. Native cereals. Preserves. Jams. Pickles. Suggestions. Japanese disinfectants. Useful addresses. Menu-maker (from *Ladies Home Journal*).

The front part of this book (p. v + 73 p.) is in English. The back part (17 + 115 + 6 p., reading from back to front) is in Japanese, and numbered separately. In the middle is a 16-page "Advertising section," mostly in English, on unnumbered pages. Each recipe is numbered sequentially, from 1 to 1-186, in each part. The recipe numbers in the English part correspond exactly to the numbers in the Japanese part.

Soy related recipes: "Tofu" (bean curd) soup (p. 2). [Soy] Bean roast (p. 12). "Tofu" roast (3 types; calls for 1 *cho* or 1 square of tofu, p. 12-13). "Tofu" and celery stew (p. 14). In the chapter on vegetables: "Daizu" (p. 23): "Soja or Soy bean. There are white, green and black soy beans. This bean is used in the preparation of *miso, tofu,* etc. A drink is made from the black soy bean and unhulled barley. These are parched and then boiled in a tea, sweetened with sugar ad used in the summer time." Soya beans (p. 24): "Hull and boil; remove the skins and dress like lima beans. *Azuki* a little red bean may be prepared in many ways. One way, boil, place in center of a mound of rice, and serve with a curry sauce made with apple and onion in it."

© Copyright Soyinfo Center 2013

Tofu (p. 26-29): "Tofu is a most nourishing inexpensive curd made from the bean. It may be served in many ways. The process of preparation takes away part of the bean difficult to digest and leaves one of the most wholesome of foods. It is especially good for diabetic patients. It may be bought in any part of Japan. Always pour boiling water over it before using." These recipes follow: Scrambled "tofu". "Tofu" and cheese. "Tofu" croquettes (3 recipes). "Tofu" box. "Tofu" and tomatoes. "Tofu" and peanut butter. "Tofu" and cheese (2 recipes). "Tofu" and corn.

"Tofu" (bean-curd) salad (with 2 *cho* [= cakes] of "tofu," p. 38). "Tofu" custard (p. 40).

This book also calls for peanuts in many recipes. A few recipes call for *goma* (sesame seeds), *kanten* ("a kind of gelatine made from seaweed. A substitute for gelatine," p. 61). in a few. Pudding sauces and sweets include many recipes for "mizu-ame" ("1 pint of golden-colored mizu-ame." Some is made from millet, and some from rice). "Health food" is mentioned on p. 52. Address: Tokyo, Japan.

900. Fugetsu-do. 1914. Fugetsu-do (Ad). In: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook.* No. 10]. p. 45 in last block of ads. [Jap; eng]
• ***Summary:*** Ad (1/8 page). All in Japanese, except for 1 line (the company address in English). Mr. Torakichi Honoka [owner]. This Japanese company sells tofu, Japanese confections, and fish. Note: In 1913 this company made tofu. But in 1914 Motooka Tofu was also located at 1848 Market St. What does that mean? Address: 1848 Market St., Denver, Colorado.

901. Fujimoto, Taizo. 1914. The nightside of Japan. London: T. Werner Laurie, Ltd.; Philadelphia: Lippincott. xii + 233 p. Plus 40 p. plates on unnumbered pages. Illust. No index. 21 cm.
• ***Summary:*** "Howling of a 'oinarisan' pedlar [peddler] (oinarisan is a kind of sushi, and its pickled rice is wrapped with a piece of fried bean-curd flavoured with sugar and soy [sauce]) and flute of a Chinese buckwheat seller are faintly heard in a distant street" (p. 39).

"To classify the labourers who are staying in these lowest lodging-houses, according to the kinds of their work or business, one half of them are stall- keepers who sell... amé (wheat gluten),... *shiruko* (a dish made of rice cake [mochi] and sugared beans), *inarisushi* (another name of *oinarisan*, which is a mass of pickled rice wrapped up with a piece of fried bean curd),..." (p. 44-45).

Note: This is the earliest English-language document seen (April 2013) that contains the word *inarisushi* (one word without hyphenation).

"Consequently, every night till midnight the streets in the vicinity of these lowest inns are full of small shops and stalls of cheap food and drinks, awaiting the customers from those *kichinyado.* Stalls of hot wine and *oden, inarisushi, shiruko, mochi* (rice-cake), *tsukeyaki pan* (pieces of bread toasted and flavoured with soy [sauce]),..." (p. 47). Note: Mochi is also mentioned on pages 172, 173, and 202.

"In this book you read often of stalls of *odenya*, but the Marugin is a large house situated at the cross-roads of Sudachô, and though it belongs to the eating-houses of the lowest class, it may probably be the first and largest *odenya* in Tokyo. The room, lighted with electric lights, is furnished with tables and chairs, in place of mats and futon, very common in the shops of the lower rank. Oden is, as previously explained, a special kind of food boiled down with soy, its chief materials consisting of fish, bean-curd, konnyaku, and taro" (p. 63-64).

"You often find little boys of nine or ten years at the temple, and their true object of the visit seems not to be prayer to the temple, but they are ambitious to taste the sweet *amazake* (hot beverage made of fermented yeast [sic]), which the temple entertains to the visitors" (p. 153).

902. Gulick, Sidney L. 1914. The American Japanese problem: A study of the racial relations of the East and the West. New York, NY: Charles Scribner's Sons. 349 p. Index.
• ***Summary:*** The author believes that Japanese in America are being treated unfairly, and that they are a real asset to the United States. He tackles each of the accusations against Japanese head-on and very effectively. Of special interest are his summaries of the report of J.D. Mackenzie (p. 29, Appendix B).

Dedication: "To Andrew Carnegie and the host of loyal workers for universal peace and the friendship off the East and West this book is dedicated."

Page 29: "Fortunately, the State of California itself has conducted such an investigation, an appropriation of $10,000 having been made for this purpose in 1909. Much to the surprise of those who had inside information, the report proved unexpectedly favorable to the Japanese. No appropriation, however, was made for its publication. Some assert that it was purposely suppressed. We are, accordingly, dependent for our knowledge of its contents on a brief 'Summary for the Press' furnished by J. D. Mackenzie, Labor Commissioner, May 30, 1910.1 As it is impossible, advantageously, to condense further the material there summarized, the entire summary is reproduced" in Appendix B. Footnote: "Portions of the statistical tables were subsequently published in the Biennial Reports for 1911 and 1913 of the State Department of Labor."

Appendix B: "Summary by Labor Commissioner J. D. Mackenzie of the report of the "Special State Investigation of 1909" of Japanese in California. Given to the press May 30, 1910.

"In 1909 the legislature of California appropriated $10,000 to provide for a "drastic investigation of the Japanese question... This covered free-hold and lease-hold lands, the estimation of Japanese by their neighbors,

© Copyright Soyinfo Center 2013

their value and need of them as farm laborers, their moral relations to society and the industrial, financial, and social effect of their presence here. This exhaustive inquiry was ordered in the language of the act authorizing it, 'to inform the legislature and the President and Congress.' The investigation was made by the State Labor Commission, and the testimony taken by him, names of witnesses, and all facts went into his report. The result was that this investigation so thoroughly disproved the ground upon which anti-Japanese legislation demanded by the legislators who promote it, that our State Government has suppressed the report and it has never been published."

"Quotation from the letter of the Delta Association of California to Hon. William J. Bryan, April 24, 1913, on the occasion of his visit to California to confer with Governor Johnson and the State legislature in regard to the proposed anti-alien legislation."

"The investigation of Japanese in agriculture covered visits to 4,102 farms scattered over thirty-six counties and growing almost every crop common to the State of California. Of this total number of farms visited, 1,733 were operated by Japanese farmers as owners, cash lessees and share lessees. The remaining 2,369 farms were operated by white farmers, being equally distributed between those employing white help exclusively and those employing mixed races, including Japanese. These 4,102 farms contained 697,236 acres and produced crops valued approximately at $28,000,000 annually. On these farms there were employed during the past year an aggregate of 80,982 persons of all races, 9,452 of whom were women, the length of employment varying from a few days to a year. On the 2,369 farms operated by white farmers, employing a total of 63,198 persons, 53.4 per cent of the labor employed was white, 36.4 per cent Japanese, and 10.2 per cent various other races, including Chinese, Mexicans, Hindus, and Indians. On the 1,733 farms operated by Japanese farmers, employing 17,784 persons, 96 per cent of the labor employed was Japanese, while 872, or 4 per cent, was equally divided between male and female white; in other words, on the basis of numbers employed, the Japanese furnished practically 50 per cent, or one half, of the labor necessary to grow and harvest the crop, valued at $28,000,000, produced on the farms visited in this investigation.

"The farms on which Japanese were not employed were, as a rule, much smaller than those on which they were employed, the former averaging 159 acres, the latter 357, demonstrating the necessity of a class of temporary laborers on large acreages. Another important fact developed by this investigation was the relation between the character of the crop grown and the employment of Japanese. On the farms where whites were employed exclusively, no berries or nursery products were grown and very little vegetables outside of beans."

There are sections on average wages paid Japanese vs. white farm workers, "Japanese farms," Landownership by Japanese," "Leasing by Japanese," "Japanese in commercial pursuits," "Japanese population," and Japanese school children."

Japanese in Commercial Pursuits.–That part of the investigation relating to Japanese in business and activities other than agriculture is practically complete. 2,548 establishments [such as tofu shops] were visited throughout the State. 1,934 were owned by individuals, 550 by partnerships, and 64 by corporations. 19.4% have been in business less than one year, 24.2% for one year, 17.2% for two years, and 15.9% for three years, making a total of 76.7% of the total established since 1906. Only 58 establishments, or 2.3% of the total, have been in existence for ten years or more. The capital invested in most instances was very small, 68.7% of the total having a capital of less than $1,000. The total aggregate cash invested amounted to over $4 million. The total annual transactions of these Japanese establishments amounted to $16,114,407, of which $5,938,012 or 36.8% was with white people. The total annual rent paid by these firms was over $900,000. 6,556 persons were engaged in the conducting of these establishments, of which number 2,546 were males and 562 females (principally wives of owners) were employers and 3,214 males and 234 females employees. In addition there were employed by these Japanese firms 35 male and 20 female white persons.1,410, or 55.3% of the total establishments, were conducted entirely by the owners. In 1,782 establishments, or 69.9%, the employees lodged at the place of work.

The sanitary conditions of the places of work were: Good 81.8%. Fair 16.8%. The sanitary conditions of the places of lodging were: Good 68.5%. Fair 27.3%. Bad 4.2%.

1,568, or 61.5% of the total number of establishments were located in seven principal cities of the State, as follows: Los Angeles 505, San Francisco 497, Oakland 178, Sacramento 154, Fresno 100, San José 79, Stockton 54.

Although San Francisco did not contain the largest number of establishments, 34% of the entire investment was represented there and 40.2% of the total amount of business transacted therein.

The prevailing number of hours worked per day was ten and over, and the prevailing wages paid were from 25 to $35 per month with board and $40 to $50 without board. Address: M.A., D.D., Prof. in Doshisha Univ. and Lecturer in the Imperial Univ. of Kyoto, Japan; also author of 4+ books incl. The White Peril in the Far East.

903. Kawakami, Kiyoshi Karl. 1914. Asia at the door: A study of the Japanese question in Continental United States. New York, Chicago, Toronto, London and Edinburgh: Fleming H. Revell Co. 263 p. With a prologue by Doremus Scudder and an epilogue by Hamilton W. Mabie.

• ***Summary:*** The author responds to the charges of

© Copyright Soyinfo Center 2013

nonassimilability and economic competition, while recording the achievements and prominent Japanese and discussing the 1913 California Alien Land Law.

Page 106: "The habit of intensive cultivation, which he must perforce acquire in such a country [Japan], he naturally brings with him to the new country whither he emigrates. It is, therefore, but natural that the Japanese farmers in California should show unique skill and fastidiousness in cultivating their lands. Because of the care which they lavish on the soil, the farm rented to a Japanese commands an unusually high price. This fact is unreservedly recognized in the special report on the Japanese prepared a few years ago by the commissioner of labour of California, Mr. J. D. Mackenzie. The charge that the Japanese abuse the soil finds no endorsement either in the annual report of the Bureau of Labour of California or in the voluminous reports of the United States Immigration Commission, of which Senator Dillingham was chairman."

"When Mr. John D. Mackenzie, commissioner of labour statistics of California, instituted at the direction of the State legislature a special investigation into the conditions of Japanese in the Golden State [including their commercial enterprises, such as tofu shops] one of the surprising facts disclosed was that almost every Japanese, whether a farmer or a farmhand, had in his possession English-Japanese dictionaries and conversation books. All were eager to learn English, and through the knowledge of the language American customs and institutions. Many of them subscribed to local English papers, while their favourite magazines were not fiction magazines, but such substantial publications as the *Outlook,* the *Independent,* the *Review of Reviews,* and the *Literary Digest.* The United States census states that fifty-five per cent. of those Japanese who have been in this country less than five years can speak English. Among those who have lived here more than five years the rate of illiteracy is very small."

904. Koenig, Franz Joseph. ed. 1914. Chemie der menschlichen Nahrungs- und Genussmittel. Vol 3. Untersuchung von Nahrungs-, Genussmitteln und Gebrauchsgegenstaenden. II. Teil. Die tierischen und pflanzlichen Nahrungsmittel... Ed. 4 [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 3. Investigation of foods, food adjuncts (stimulants / enjoyables), and kitchen utensils. Part II. Animal and plant foods... 4th ed.]. Berlin: Verlag von Julius Springer. xxxv + 972 p. See p. 488-89, 610. Illust. Index. 25 cm. [Ger]
• ***Summary:*** The section on commercial sauces (p. 149) mentions Japanese and Chinese soy sauce (*Soya oder Shoja oder Soja oder Soja* {*auch das japanische Shoyuugt* [*Shoyu*]}). The section on plant cheeses (*Pflanzenkäse,* p. 331) mentions those made from soybeans, including natto, tofu (Japan), and tao-hu (China). In Africa the seeds of *Parkia africana* are used to make products such as "Daua-Daua" of "Afiti" whose composition is similar to those made from soybeans. A table gives the composition of Dawa-Dawa cheese (*Daua-Daua Käse*) and Parkia seeds as reported by H. Fincke (1907).

The section on legumes (p. 488-89) discusses soybeans, which are best known in the form of products such as "Indian soy sauce" (*India Soja,* p. 149) or Tofu (p. 331). Recently, defatted soybean press-cake has been introduced as a feed for cattle.

The section on "Microscopic investigations of flours and starches" (p. 609-10) gives details and five cross-sectional illustrations of soybean tissue and cells. The first two, based on A.L. Winton, show: (1) A general cross section (source: Winton 1906, p. 248). 2. Surface of the cotyledons (epidermis), with palisade cells and aleurone cells. The last three, based on A. Scholl, show: (1) A tangential section. (2). Palisade cells. 3. Parenchyma under *Traegerzellen.* Address: Geh. Reg.-Rat, o. Prof. an der Kgl. Westfaelischen Wilhelms Universitaet und Vorsteher der Landw. Versuchsstation Muenster in Westphalia, Germany.

905. **Product Name:** Tofu.
Manufacturer's Name: Miyajima-kan.
Manufacturer's Address: P.O. Box Q, Oxnard, California. Phone: Home 236.
Date of Introduction: 1914. January.
New Product–Documentation: *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. 1914. Directory entry p. 62. Ad (in English and Japanese) on p. 40 in last block of ads. They sell Japanese and western foods, and other goods. They have a billiard parlor, and they make and sell tofu. Note: This company has the same phone number as Shirae Tofu-ya in Oxnard.

906. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1914. Nichi-Bei nenkan [Japanese-American yearbook. No. 10]. 650 Ellis St., San Francisco, California. 693 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]
• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into 14 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3) Table of contents, ads (4 p.). (4) Photos (black and white on 15 unnumbered pages). (5) Maps and charts on 3 unnumbered pages. (6) Advertisements (A-1 to A-16). (7) Front part (p. 1-165), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (8) Ads (p. 1-13). (9) Back part (p. 1-136). (10) Ads (p. 1-66). Appendixes: (11) Table of contents for directory of

© Copyright Soyinfo Center 2013

places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (12) Directory of Japanese living in America, interspersed with ads (p. 1-228). (13) Ads (2 p. + p. 1-50). (14) Copyright page.

In the front part: There is no import duty / tax on soybean oil. The value of the total amount imported was $733,937 (p. 87). There is also no import tax on soybeans (written "sooyabinzu" in katakana for the first time in these Yearbooks) (p. 87). The total value of soybeans imported to San Francisco was $27,867 (p. 91). There is (again) no tax on soy oil (written Soyamame Abura, in kanji). The total value of soy oil imported to Portland, Oregon was $13,692. No tax on soy sauce pickled imported to Portland, Oregon, worth $10,353 (p. 94).

A table (p. 97) shows the Japanese population in the USA for most years from 1860 (6 people) to 1913. For recent years: 1907–89,573. 1908–103,683 (peak). 1909–98,715. 1910–91,958. 1911–93,359. 1912–93,751. 1913–95,843.

A table (p. 98) shows Japanese population in the USA in the 8 states with the highest populations: California, Washington state, Oregon, Colorado, New York, Utah, Montana, Wyoming.

A table (p. 102) shows the number of tofu shops in the USA: Total 48. Owners 48. Workers 7. This research was conducted by Nihonsha ("Japanese Company").

A table (p. 103) shows the total population of California from 1850 to 1919 (projected) and percentage increase during each decade: 1850–92,957 (-). 1860–379,994 (310% increase). 1870–560,247 (47%). 1880–864,694 (54%). 1890–1,213,398 (40%). 1900–1,485,053 (22%). 1919–2,377,540 (60%–projected).

Individual lines in various tables (p. 127-163) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment ($), sales ($/year), workers, salary ($/year). The number of tofu makers by state is: California 34. Utah (Ogden) 1. Colorado (Denver) 2. New York City 1. Oregon 1. Washington 9. There is also 1 miso maker in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries. Note: The information on this page is not identical to that in the directory. For example, for Utah, the directory shows 3 tofu shops in Salt Lake City and one in Ogden.

A table (p. 155) shows Japanese population in the top 8 East Coast states in 1913. There are 4 columns: State, males, females, and total. The totals are (in descending order of population): New York: 2,209. New Jersey 277. Massachusetts 230. Pennsylvania 223. Florida 89. Washington, DC 54. Rhode Island 41. Maryland 29. Five other states except Vermont 89. Grand total 3,275 Japanese, including 3,108 males (95% of total) and 167 females.

Tariff (import duty) reduction on soybeans, from the old rate of $0.45 per bushel to $0.13 per bushel in 1913 (p. 27). Tariff reduction on Manchurian soybeans, from the old rate of $0.45 per bushel to no tax in 1913 (p. 28).

The Directory shows Japanese companies making soyfoods in California, Utah, Colorado, Oregon. Address: San Francisco, California.

907. Ogawa Ryokan. 1914. Ogawa Ryokan (Ad). In: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook.* No. 10]. p. 40 in last block of ads. [Eng; jap]

• ***Summary:*** Ad (1/8 page). All in Japanese. They sell fish and tofu express [probably meaning fresh or fast]. A ryokan is a traditional Japanese inn. It is not clear whether they make the tofu in-house or buy it from an outside tofu shop. Address: 342 3rd St., San Bernardino, California. Phone: Sunset 627. Home 1288.

• ***Summary:*** "Ota H baths 86½ 5th N."

Note: This is actually the Ota Tofu Co. See *Nichi-Bei Nenkan.* Address: Portland, Oregon.

909. Takenob, Y. 1914. Japan year book. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 740 p. See p. 334, 400, 433-34, 439-40, 442, 689, 692, 705, 718. [Eng]

• ***Summary:*** This annual book was first published in 1905. Facing the Preface is a table of Japanese weights, measures and moneys. In chapter 16, "Agriculture" (p. 337-57) is a table titled "Beans, sweet potato and potato (p. 345) which gives "Soy bean" production data in Japan for 1908-1912 (in *koku*). The next paragraph contains information on soy [sauce], *miso,* and *tofu* similar to that in the 1913 year book.

In chapter 20, "Industry," is a table on soy [sauce] production in Japan from 1908-1911, and a paragraph (p. 400) on the patented Suzuki process for brewing soy [sauce].

In Chapter 22, "Trade" is a table (p. 433-34) titled "Prices of principal commodities in Japan," which includes prices for 1907-1912 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In Chapter 23, "Foreign trade" is a table (p. 439) titled "Imports" (in 1,000 yen). Under the heading "Staples articles of over yen 1,000,000" (p. 438) is given the value of soja bean imports for 1911-1913. In a table titled "Soja bean" (p. 442), under the heading "Staple exports and destinations (in 1,000 yen)" (p. 440) is given the value of soja bean exports to China, Kwantung, India, and other places for 1911-1913.

In chapter 35, "Chosen (Korea)," under the heading "Agriculture" (p. 691) is a paragraph (p. 692) titled "Barley and soja bean," which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in

© Copyright Soyinfo Center 2013

1912.

In Chapter 36, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 705) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1911-1912.

In Chapter 38, "South Manchuria," is a paragraph (p. 718) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, amount exported for specific years, and production of various milling centres.

In the advertisements at the rear (p. xiii) is a full page ad for Higeta Shoyu, showing many medals: "Patronized by the Imperial Household. Trade mark. The celebrated Japanese sauce. Established in 1616. Manufactured by G. Tanaka, Chioshi [Choshi], Chiba-ken, Japan." Address: Prof. at Waseda Univ. and Late of the *Japan Times,* Japan.

910. Terry, Thomas Philip. 1914. Terry's Japanese empire: Including Korea and Formosa, with chapters on Manchuria... A guidebook for travelers. Boston and New York: Houghton Mifflin Co.; London: Constable & Co., Ltd.; Tokyo: Kyo-Bun-Kwan, Ginza, Shichome. cclxxxiii + 799 p. See p. 515. Maps. Index. 16 cm. [75 ref]

• ***Summary:*** This guidebook, after its 283-page introduction, is organized geographically into: 1. Central Japan. 2. Northern Japan. 3. Yezo, the Kuriles, and Saghalien. 4. Western Japan. 5. Kyushu and the Loochoo and Goto islands. 6. Korea, Manchuria, ad the Trans-Siberian Railway. 7. Formosa (Taiwan) and the Pescadores. Abbreviations (p. ix). List of maps (13).

In the Introduction: Japanese inns (p. xxxvi, xxxix-xl): The best food is not always to be had in the most pretentious places. In certain modest inns, where the rooms are as bare as a monk's cell, and the general appearance of austerity might argue a strict economy, there will often come, as an agreeable surprise, dainty food served in dishes that delight the lover of beautiful porcelain or lacquer. Later the traveler may learn that the place enjoys fame for some savory specialty–eels boiled in soy, broiled crayfish, stewed octopus, buckwheat-macaroni, or the like."

"Food is served in the guest's room on a lacquered tray... One of the soups may be made of... lobster, or seaweed, in which case it is amazingly thin and unpalatable; the other of beans [miso], bean curd or something of that nature. Salt is not provided unless asked for. Many of the dishes are cooked in soy; a tiny dish of which is supplied for dipping bits into before eating them."

Japanese food (p. xliii-xlvii): "Rice is a luxury with thousands of the peasants; it takes the place of bread with the well-conditioned; and wherever it is eaten to the exclusion of other foods it produces (because the thin phosphorous skin is polished off it) the prevalent beriberi. The proportion of animal food is small. Beans eaten in a variety of ways occupy a conspicuous place in the food of all classes and they supply the nitrogenous matter essential to those who rarely eat meat and who do not get the casein obtained by cheese-eating peoples. The soy-bean (*daizu; omame*) ranks first in extent, variety of use, and value among the pulse of Japan, and in point of nutriment is quite near to meat. It contains nearly two fifths of its weight in legumin, nearly one sixth in fat, and is rich in nitrogen. It is to the Nipponese what frijoles are to Mexicans and garbanzos (chick-peas) to Spaniards. Of the numerous varieties some are made into curd [tofu], and into the widely celebrated bean-sauce (the Worcestershire of Asia) called shoyu (sho, soy; yu, oil), and which is almost as indispensable as rice. It forms the daily relish of the rich man and the beggar, and is in as general use as tea and tobacco."

Fish (sakana)... Teriyaki: Fish in a sauce of soy, mirin, and sugar... Sashimi: raw fish cut in thin slices and eaten after being dipped in shoyu.–Kabayaki: fish which is first steamed then dipped into soy and roasted (or eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted). The latter dish, usually called Unagi-no-kabayaki, is a favorite with the Japanese,..."

"Rice:... Azuki-meshi: rice and red pea-beans mixed (boiled).–Mochi: small dough-cakes made of rice and sold throughout Japan.–Sushi: a general name for food of boiled rice and fish, eggs, vegetables, etc., seasoned with vinegar and soy...–Inari-zushi: fried tofu stuffed with chirashi-zushi.

Note: This is the earliest English-language document seen (April 2013) that contains the term *Inari-zushi.*

- Maki-zushi: boiled rice and other vegetables rolled and wrapped in a sheet of the sea weed called Asakusa-nori...–Kombu-zushi: fish seasoned with vinegar and wrapped in a piece of the edible seaweed known as Laminaria japonica. A differentiation of this popular food is the Kombumaki: baked or roasted fish wrapped in kombu, then tied, and boiled in sugar and soy.

Various:... Tsukudani: small fish boiled in soy and used as a relish or condiment (named for Tsukudajima, a place in Tokyo famous for its preparation).–Oden: a stew (greatly enjoyed by the proletariat) of fried bean-curd, lotus-roots, potatoes, etc." Ame and midzu ame.

"Soup (shiru): Tôfu-jiru: bean-curd soup.–Miso-shiru: bean-soup with vegetables."

Railways–Dining cars (p. lxxxiv): Discusses "The unique and not unpalatable bento,–a sort of national sandwich,–put up (usually cold) in thin, flat, twin boxes (bento-bako) of dainty white wood (1 in. high, 5-7 in. long), along with a paper napkin (kuchifuki) and a pair of chop-sticks (hashi), and sold at many stations, is distinctively Japanese and widely popular... Besides the full box of plain boiled rice, the ordinary (15 sen) bento contains usually... a few boiled black beans (nimame)... seaweed (kobu)..." Rice cakes (mochi) with the kernel of yokan, or sweet [azuki] bean paste, which usually forms their center.

Buddhism (cxc): Again the rice-flour cake [mochi] is

© Copyright Soyinfo Center 2013

offered at the domestic altar. It now takes the form of a lotus-petal with capsule of [azuki] bean-paste." (an).

Yokohama (p. 13): "The return gifts from the emperor and princes included...jars of soy [sauce]; coral and silver ornaments;..."

Tokyo (p. 199): "The hill beyond the intersecting roadway is called Suribachi-yama because of the similarity in shape to a suribachi–an earthenware vessel in which bean-soup [miso soup] is prepared."

Nikko–Shops: "... the kuri-yokan (so-called from the chestnuts mixed with the sweetened bean-paste [azuki]) is good and cheap (10 sen)."

Kyoto–The Shinto Shrine of Inari. There are many local festivals, the most important of which is the Inari-matsuri which usually falls on June 5. There are trick riders on horseback and decorated sacred cars [carts] are "placed in the procession, and the day is devoted to general jollity–and pocket- picking. On this occasion the people eat Inari-zushi, or fried tofu stuffed with boiled rice, since tofu [fried, as aburage] is the favorite food of the fox popularly believed to be the messenger of Inari (and by extension, the God of Rice)."

Kyoto–Miidera (p. 504-05): Travelers visit Benkei's Iron Pot (*Benkei-no-shiru nabe*), a very old, rusted, and broken contraption (about 5 ft. wide and 3 deep) resembling a soap-boiler, and from which Yoshitsune's devoted servitor (and popular hero) is supposed to have eaten his bean-soup [miso soup]–which may well be doubted."

Kyôto to Kôya-San (p. 515): For the Western traveler there is "a tiny kitchen, a blessed refuge wherein, if he is making a prolonged stay, he may cook his un-Christian food without the vegetarian priests knowing (or caring) that such a sacrilege is being committed! Meals are served in one's apartment; the food is purely vegetable, and after the second day distressfully unpalatable. Fish, flesh, fowl, butter, cheese, eggs, milk, bread, coffee, and other necessaries of life are absent, and are replaced by seaweed, greens, bamboo-shoots, cabbage, daikon in various unappetizing forms, and other garden-truck which one eats as a novelty the first meal and rejects with an involuntary tightening of the throat when it is offered at the second and third. In addition there are flabby mushrooms boiled in very thin water without seasoning; the omnipresent boiled rice without sugar, milk, or salt; a bean-curd (*tofu*) for which one acquires a liking only after much patient effort; a yellow substance (known as *yuba*) made of the skin of bean-curd, and looking and tasting like thin sheet rubber;..."

Kobe excursion–The Tansan Hotel (p. 630): The strawberries and other ground fruits and vegetables, which grow nearly all the time in this favored spot, are enriched with [soy] bean-cake only [no human excrement is used] (as a precaution against typhoid)."

Korea (p. 725): "Among the dishes dear to the native heart are pounded capsicum, bean curd [tofu], various sauces of abominable odors, a species of sour kraut (kimshi [kimchi]), seaweed, salt fish, and salted seaweed fried in batter."

Manchuria and the Trans-Siberian Railway (p. 756): "Considerable [soy] bean-cake and furs, and vast quantities of lumber, etc., come down the river from upper Manchuria and Siberia."

Also discusses edible seaweed (p. xliv, 330): Japanese food: "Seaweed in almost endless variety enters largely into foodstuffs. Not only are the giants of the marine flora taken up and utilized in various ways, but also the more delicate red and green sorts–the use of which has been adopted by other nations. Most of the edible green and red algae bear the generic term nori, while the words *umi-kusa*, or *kai-so* (which also means *bêche-de-mer*), are used for algae in general. Many of the weeds are eaten fresh, others in soup. Some are dried or pickled and eaten in vinegar. They usually appear in commerce in the form of little packages, to the sale of which special stores are dedicated. Certain varieties are converted into jelly."

Yezo–fisheries: "Certain of the many varieties of edible seaweed which flourish along the Japanese coast are found in Yezo, particularly the circumpolar tangle (*Laminaria*) and seawracks (*Fucus* species), which prefer cold water and a heavy surf. For this reason sea-algae add considerably to the value of the Yezo exports."

Note: The author resided for almost 12 years in Japan and made repeated journeys on foot (and otherwise) from one end of the country to the other. Address: F.R.G.S. [Fellow of the Royal Geographical Society, England].

911. Winkler, Gustav. 1914. Die Sojabohne: Aus einem Vortrage... gehalten in der Hauptversammlung der Gartenbau-Gesellschaft Frankfurt a.M. am 17. April 1914 [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914]. Frankfurt am Main: Fr. Honsack & Co. 30 p. 22 cm. On title page: Als Manuskript gedruckt (Printed as a manuscript). [3 ref. Ger]

• ***Summary:*** On the gray cover: *Die Sojabohne der Mandschurei* [The soybean of Manchuria]. Contents: Introduction. Sir Alexander Hosie, in his books about Manchuria, counts eight types of soybeans: Yellow soybeans (3 varieties), green soybeans (2 varieties), and black soybeans (3 varieties). The soybean plant. Condition / nature of the soil and the climate. Cultivation of soybeans. Soybeans can enrich the soil with nitrogen. Yield.

Utilization of the soybean: 1. In East-Asia. A. As foods: 1. Soy sauce. 2. The Chinese paste *Chiang* and its near relative Japanese miso. 3. Tou-fu or tofu (incl. firm tofu, tofu curds, tou-fu p'i or yuba, ch'ien-chang or pressed tofu, tung tou-fu or frozen tofu). B. Soybean meal or flour. C. Soybean meal for use as fertilizer or animal feed. D. Soybean oil. E. Lard substitute and margarine. F. Industrial uses such

© Copyright Soyinfo Center 2013

as lubricant and waterproofing agent. Soybean meal. 2. In Europe and the USA. Refined soybean oil used for salad oil, margarine. Utilization of soybean cake in Europe. Utilization of soybean oil in Europe (for making soap, above all). The soybean oil and cake industry in Manchuria.

This booklet begins: A year ago today I had the opportunity to speak about the soybean for the first time. What we knew and understood about it then was still very little. Except within botanical circles, even its name was completely unknown, even though in East Asia (China, Japan, India), for more than 1,000 years, the soybean has been cultivated and is near rice as the main food for more than 500 million people.

Note: Part of this lecture was based the following English-language article, translated into German by Werner Winkler (Gustav's son) in 1913: Shaw, Norman. 1911. "The soya bean of Manchuria." *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series* No. 31. 32 p. Address: Mainkur-Fechenheim [Frankfurt am Main, Germany].

912. *Oshû Nippô* (*The Oregon News*) (*Portland, Oregon*). 1915. [New Years greeting (Ad)]. Jan. 1. p. 20. [1 ref]
• ***Summary:*** A small square greeting / ad from the Ota Tofu shop states: In Japanese (from right to left): *Kinga Shinnen, 1 gatsu Gantan. Kita Dai Go Gai. Oota Toofu-ya. Oota kyodai.*

English translation: "New Years greetings. Jan. 1. 86½ N. 5th [Portland, Oregon]. Ota Tofu Co., Ota brothers."

Note 1. This is the earliest indication we have that the Ota brothers owned this tofu shop.

Note 2. Many small greetings / ad in boxes are on the bottom half of a newspaper page; the top half contains Japanese text related to the New Year.

913. *USDA Bureau of Plant Industry, Inventory.* 1915. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from October 1 to December 31, 1912. Nos. 54426 to 54676. No. 33. 60 p. Jan. 23.
• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Moench.)

Note: This is the earliest document seen (Aug. 2011) in which the scientific name of the soybean is given as "*Soja max* (L.) Piper." This indicates that the name "*Soja max* (L.)" was first given by Dr. Charles V. Piper of the USDA. This name continued to be used in this publication and by the USDA Bureau of Plant Introduction until at least June 1940 (Inventory No. 126, p. 18).

"34643-34654. From Kioto [Kyoto], Japan. Presented by Miss E.R. Scidmore, Seoul, Chosen (Korea). Received November 29, 1912. Quoted notes by Miss Scidmore:

"34645. The soy bean has been listed in previous inventories as *Glycine hispida* Moench. Mr. C.V. Piper has recently shown (Journ. Amer. Soc. Agron., vol. 6, p. 75-84, 1914) that the earliest name given by Linnæus to this plant was *Phaseolus max*, that the generic name should be Soja, and that the correct name is therefore *Soja max* (L.) Piper.

"'*Kuro* [meaning "black" in Japanese]. Used for making sweet paste, but more usually boiled with a pinch of salt and a pinch of sugar added when the water is poured off or shoyu poured on and kept hot until saturated. Served as a relish or accompaniment to each meal and always found in lunch boxes sold at railway stations.'

"34654. '*Shiroi daiozu* [*daizu*] [meaning "white soybean" in Japanese]. Used for making tofu or bean curd.'

"34700/34702. From Shantung Province, China. Grown by Dr. William R. Faries, Coachella, Cal. [California]. Received December 17, 1912. Quoted notes by Dr. Faries:

"34702. 'The yellow bean with the hairy pods (soya) I sent to the department in December, 1894, I think, from Pacific Grove, California, as 'Manchuria beans,' and they were sent to Maine station. This would result in failure, I think. They did not do well in Orange County, California, but grow well here. They are fine for green shelled beans.'"

Note 2. This is the earliest English-language document seen (June 2009) that uses the term "green shelled beans" to refer to shelled green vegetable soybeans. Address: Washington, DC.

914. Fruwirth, C. 1915. Die Sojabohne [Soybeans]. *Fuehlings Landwirtschaftliche Zeitung* 64(3/4):65-96. Feb. 1 and 15. [65 ref. Ger]
• ***Summary:*** Contents: Introduction (work in East Asia and Europe from 1905-10). History. Botanical aspects. Varieties. Breeding. Needs of the plant (incl. "heat units," *Wärmesumme*). Utilization (incl. in German *Tofu, Miso, Chiang, Schoyu* or *Sojatunke* (shoyu, p. 83), *Natto, vegetabilische Milch* (soymilk), soy sprouts). Measures and precautions in cultivating soybeans (incl. yields). The soybean as a crop in central Europe. Conclusion.

Note 1. On p. 83 the term "Sojas" is used to refer to soybeans

Note 2. This is the earliest German-language document seen (April 2012) that uses the term *Sojatunke* to refer to soy sauce.

In 1905 the Japanese made the first attempt to import soybeans from Manchuria to Europe, but it failed because they did not arrive in good condition. The repetition of the attempt in 1908, however, gave good results. Then imports of soybeans grew, followed by imports of soybean cake (*Sojabohnenkuchen*). Major importers today are England, France, Germany, Denmark, Italy, Belgium, Netherlands, Sweden. The high import duty hinders imports to Austria-Hungary.

Toward the end of the 1800s in Russia, Owinsky took early-ripening soybean varieties from China and Japan and requested the expansion of soybean cultivation. In 1899 in Kiev, Owinsky wrote the name of the soybean as Soja hispida praecox (p. 67). Owinsky in Derajne [Derazhne?]

© Copyright Soyinfo Center 2013

grew Podolie soybeans (p. 77). Sempolowsky in Derebzin, Russian Poland, also grew soybeans. European Russia gets soybeans overland (probably from Manchuria). Russia was one of the first countries to take an interest in growing soybeans after 1908. Russia now grows large amounts of soybeans in Podolia. In Germany, Prof. Kallo in Wiesbaden was a pioneer who recommended soybeans as an inexpensive food for the people. North America first started to import lots of soybeans as a source of oil because of a bad cottonseed harvest.

"Since the start of my teaching activities, I have had an interest in the soybean plant and have carried on my own investigations." In 1900 the author received 7 soybean varieties from L.V. Jurdiewicz from Deraznia in Podolia; these had been imported by Owinsky. In 1901 at Hohenheim he began to study the time needed for soybeans to mature; He found it ranged from 141 to 163 days. He continued this research at Hohenheim from 1901 to 1903, getting soybean seed yields of up to 1,560 kg/ha. From 1910 to 1914 he continued at Waldhof-Amstetten, with 5 varieties. The maturity range there was 112-166 days and the yields were up to 1,500 kg/ha (about 23 bushels/acre), but the yields of many varieties were low, about 300 to 500 kg/ha (4.5 to 7.5 bu/acre). Yields of soybean straw, however, were up to 3,600 kg/ha. Fruwirth uses three terms to refer to soybeans: (1) Die Sojabohne; (2) Die Soja; and (3) Sojas, as "Zuechtung von Sojas" or "Sojas, meist gemahlte." There are now a proposal to establish a joint stock company for growing soybeans in central Europe (probably in Germany), using big money. But it may not succeed because soybean yields in Germany and Austria are low. Seedsmen who sell soybeans commercially in 1915 include: Haage and Schmidt (Erfurt, Germany), Vilmorin Andrieux (Paris, France), Dammann & Co. (St. Giovanni at Tedaccio, near Naples, Italy), and Wood and Son (Richmond, Virginia, USA). The main soybean varieties sold by each of these companies are described in detail (p. 73-74).

Utilization (p. 82): Since soybeans are rich in protein and fat, they can be used as a good meat substitute. In Europe the use of soybeans for food is still very small. "In Europe, the first foods from soybeans were made in France, at Vallées near Asnieres: Flour, bread, and cakes for diabetics, and cheese. In Germany not long ago the Soyama-Works at Frankfurt am Main likewise began the production of such foods. Similar foods were also made in Romania. Soybeans sprouted in the dark yield a bitter-tasting salad. Production of vegetable milk started in France at 'Caséo Sojaine' at Vallées (Seine); and is now being studied by the Synthetic Milk Syndicate in England. Using the process developed by Fritz Goessel, this Syndicate made 100 liters of soymilk from 10 kg of ground soybeans at a factory at Liverpool." "It is in no way certain that soybeans will ever be widely used in human foods."

A fairly large amount of soybeans are ground for use as fodder. The main use is for oil extraction. Yet Haberlandt considered that since the soybean contained only about 18% fat (range: 13-22%), its use as a source of oil would not be economical. The main use of soy oil is in soaps, for which it is highly prized. It is also used in making paints as a partial substitute for linseed oil. The best quality may be used as food. In England soy oil is used for margarine production.

Conclusion: The soybean originated in central Asia and is now widely cultivated in China, Japan, Manchuria, and India. Its seeds are rich in protein and, unlike most other legumes, also rich in fat. The plant is used in its homeland mostly as a source of human foods and seasonings, made by fermentation; the oil is used mostly for industrial non-food purposes. In recent years soybean production has expanded significantly in the southern part of the United States. There it is used mainly as green fodder, hay, silage, and soil building. The main expansion of soybean cultivation in Europe has been in Italy, southern France, Hungary, and southern Russia. Good early varieties give yields of 1,100 to 1,300 kg/ha. A large expansion of soybean production in central Europe is possible only in southern Austria and Hungary, and maybe in a few other places where it is warm. But late-maturing soybeans may be grown for forage and silage in the cooler parts of Germany and Austria. Address: Prof., Dr., Wien (Vienna).

915. Leimdoerfer, J. 1915. Unsere Fettversorgung [Our supply of fats]. *Oesterreichische Chemiker-Zeitung* 18(8):63-67. April 15. [Ger]

• ***Summary:*** This is the text of a lecture presented on 20 March 1914 at a plenary session of the Society of Austrian Chemists; Prof. Leimdörfer discusses the need to cultivate oilseeds, especially castor oil seeds and soybeans (p. 65).

The soybean, which makes a good livestock feed, can also be used in the preparation of bread, non-dairy milk, an alternative to coffee, and a non-dairy cheese [tofu]. Address: Prof., Budapest [Austria-Hungary].

916. Schieber, W. 1915. Die Sojabohne und deren volkswirtschaftliche Bedeutung als Nahrungsmittel [The soybean and its economic significance as a food]. *Oesterreichische Chemiker-Zeitung* (*Vienna*) 18(10):85-86. May 15. Excerpts from a lecture to the Austrian Chemical Society, 24 April 1915. [1 ref. Ger]

• ***Summary:*** Includes a summary of information from Li Yu-ying (1912) about foods and food adjuncts made from the soybean: Soymilk, tofu (*Sojakäse*), soy flour (*Sojamehl*), soya bread (*Sojabrot*), soya confections (*Sojakonfekt*), soy chocolate (*Sojaschokolade*), soy coffee (*Sojaskaffee*).

Japanese foods from fermented soybeans: Natto (*Feste Würzen*), miso (*Pasten*), soy sauce (*Saucen*). Plus original nutritional analyses. Address: Austria.

[The soybean and its economic significance as a food]. *Seifensieder-Zeitung* 42(22):471-72. June 2. (Chem. Abst. 10:1558). [Ger]

• ***Summary:*** Descriptions and nutritional analyses are given of a number of different food products prepared from the unfermented and the fermented soy bean. Unfermented: soya milk, tofu (*Sojakäse*), soy flour ("because of its composition it can be recommended as a first class food for diabetics and vegetarians"), soya bread, soya confections (resembling marzipan), soya chocolate, soya coffee, soy grits, whole dry soybeans, and soy sprouts ([*Soja*] *Schoten, Bohnen, und Keime*). Fermented: Solid seasonings such as Japanese natto, pastes such as Japanese miso, sauces (in Japan each year 10,000 factories make 700 million liters of soy sauce), a new German fermented soyfood product is made by a secret process; its contains 45% protein, 6% nutritional salts, and about 2% lecithin.

Note. This is the earliest German-language document seen (Jan. 2013) that uses the term [Soja] Keime to refer to soy sprouts. Address: Dr.

918. *New York Times.* 1915. Latest customs rulings. July 15. p. 14.

• ***Summary:*** "Importers of Japanese shoyu and nigari [a traditional Japanese tofu coagulant] were sustained yesterday by the Board of General Appraisers in the claim for lower duty on these products." A list of the many protesting importers is given.

Paragraph 606 specifies the duty on "soya beans."

919. Robert, J.C. 1915. Preliminary report on the economic value of the soybean. Jackson, MS: Mississippi Agricultural College, Tucker Printing House. 15 p. July 1.

• ***Summary:*** Contents: Introduction (incl. brief soy bean history). Composition of soybeans. Feeding value. Relation to soil fertility (nitrogen fixation, vegetable matter or humus). Yield of soybeans (shelled seed and hay). Uses of soybeans (milk, paints, etc.). Soybeans a valuable crop for the Southern farmer.

"The refined oil is used as a substitute for olive oil. Soybean milk and soybean cheese [tofu] are extensively used as an article of diet in the Orient. The cheese is made as follows:... magnesium chloride being added to precipitate the solution, which is hung in fine mesh cloth–and cottage cheese is obtained.

"In 1912 there was established [by Li Yu-ying] at Les Vales [sic, Valles], France, a large factory for the production of a variety of soybean food. Among these varieties were milk, cheese, casein, oils, bread, biscuits, flour, jellies, cakes, and sauces" (p. 12-13).

Note: This is the earliest English-language document seen (Sept. 2011) that contains the term "soybean food."

"Varnishes made from soybean oil are extensively used, though when subjected to exposure they seem not to wear quite as well as those made from linseed oil. For internal painting purposes, however, these varnishes are equal in every respect to those made from linseed oil. Soybean oils are used extensively in the manufacture of linoleums and table cloths, and for the manufacture of printing ink, and of enamel paints" (p. 14).

"Soybeans a valuable crop for the Southern farmer: As an article of human food, soybeans may become an important factor with us. We have used soybean meal made from our crop of 1913 and 1914 and had for breakfast excellent cakes. These cakes were made from wheat flour and soybean meal, and wheat flour and corn meal. Various proportions were used, sour milk and soda being added. Cakes made from equal parts of wheat flour and soybean meal were very palatable.

"Soybeans seem to be one of the most promising crops before the Southern farmer. Every particle of the plant has economic value, and a great number of commercial products are produced from the seed. It seems that the machinery of our cotton seed oil mills is suited to the manufacture of soybean meal and oil. The soybean straw is a good stock food... Therefore, soybeans offer a golden opportunity to the grain and cotton farmers, the live stock producers and the soil builders" (p. 14).

Photos show: (1) Numerous sacks of soybeans and oil cake in the Orient awaiting shipment (front cover). (2) People cleaning and resacking soybeans for shipment (front cover). (3) Five different varieties of soybeans, Including Virginia (p. 2). (4) Soybean root tubercles, natural size (p. 7). (5) Several osier bins used for storing soybeans (p. 13). (6) Southern Manchurian railway cars, with sacks of soybeans (p. 13). (7) Seven varieties of soy pods and beans: Guelph, Ito San, Buckshot, Austin, Hollybrook, Haberlandt, Mammoth (p. 15).

Tables show: (1) Percentage composition of different soybean varieties (most have values for two years, 1913 and 1914): Wilson, Arlington, Jet, Brown, Tokyo, 19981-A, Mammoth, Small Yellow, Amherst, Ito San, Holly Brook [Hollybrook], Peking, Acme, Virginia, Black, Brachet [Barchet], Dwarf Green, Cloud. For each is given moisture, ash, fat, protein, nitrogen free extract, fiber. (2) Plant food elements in farm crops (N, P, and K, including soybeans as grain, hay, or straw). (3) Yield of soybeans (in lb shelled seed and lb of hay per acre): In 1911 in Mississippi: Hollybrook, Black Soybeans, Brown Soybeans, Small Yellow, Mammoth Yellow. The highest yields were from Small Yellow–2,600 lb seed and 5,500 lb hay. In 1912: Brown Soybean, Black Soybean, Hollybrook, Dwarf Green, Small Yellow, Mammoth Yellow, Haberlandt. Again the highest yields were from Small Yellow–2,680 lb seed and 5,200 lb hay. (4) Farm account with the soil in proposed three-year crop rotation (NPK balance incl. soybeans for hay, grain, or straw). (5) Proposed three-year rotation system for long-pine section of Mississippi (1915-1917).

Note 1. This is the earliest document seen (Jan. 2004) that mentions the soybean variety Virginia.

Note 2. This is the earliest published English-language document seen (Sept. 2006) that contains the term "Soybean oil."

Note 3. This is the earliest English-language document seen (Oct. 2003) that contains the term "Soybean milk."

Note 4. This is also the earliest English-language document seen (April 2013) that uses the term "soybean cheese" to refer to tofu. Address: Director of the Station, School of Agriculture, and Prof. of Agronomy, Agricultural College, Mississippi.

920. *Washington Post.* 1915. 'Soy' bean as war food: German dieticians experiment with it in many prison camps. Product used in Worcestershire sauce is declared by many to be highly nourishing. Aug. 1. p. M8.

• ***Summary:*** "Berlin, July 31.–Protracted experiments with the Japanese 'soy' or 'soja' bean, out of which, among other things, Worcestershire sauce is made, are being conducted with a view to determine whether this vegetable, which can be and is raised in Germany, cannot be used in the many prison camps."

"In the Far East the soja bean is in great demand, both for human and animal food products, and also for the oil it contains. Next to rice it forms one of the principal articles of the food supply in some Eastern countries, especially when combined with cereals and salt. It also plays an important part in sauces and spices. The milk from this bean approximates ordinary milk in nutritive value, and cheese can be made from it.

"When combined with 30 or 40 per cent white flour, the meal of the soja bean lends itself to a tasty and nourishing bread which has been found to be especially good for diabetics because of the high percentage of albumen and fat contained. The roasted soja beans also make a good substitute for coffee. The soja plant forms a good fodder for cattle."

921. *Los Angeles Times.* 1915. Alliance–Japanese beans for Germans: The soy and soja said to be valuable foods. Experiments are to be made to determine if they can be used in the prison camps–together they yield flour, meal, milk, cheese, coffee and fodder. Aug. 8. p. III25.

• ***Summary:*** This article, via A.P. [Associated Press] foreign correspondence, is very similar to one published a week earlier (Aug. 1) in the *Washington Post* titled "'Soy' bean as war food: German dieticians experiment with it in many prison camps." (p. M8).

The last sentence in the article, however, is new: "Exhaustive experiments with the soja bean have already been made at the agricultural station of the University of Wisconsin, all tending to bear out, it is said, the contention of German dieticians in favor of the bean."

922. *Tropical Life* (*England*). 1915. Vegetable oil notes. 11(9):164-66. Sept.

• ***Summary:*** "The Special Supplement to the London *Chamber of Commerce Journal*, dealing with the 'Trade Products of the Empire,' is full of useful information and statistics, including the following:" Using the process known as hydrogenation liquid oils can now be converted "into solid fats, and used for the manufacture of butter substitute,..." This fact is of "great importance to the trade in vegetable oils and oil-seeds." Many oils can be used to make butter substitute including "coco-nut oil, cotton-seed oil, palm oil, palm-kernel oil, ground-nut oil, sesamum oil, mowrah-seed fat, &c." Ground-nut oil is largely used, especially on the Continent. Efforts are being made to establish the crushing of ground-nuts on a much larger scale, but this is being hindered by the War.

"We are sorry to see, however, from the experiments that have been made by now in growing soya-beans in practically every British colony, it seems doubtful whether this crop can be profitably grown for export in competition with the Manchurian beans, which are raised under ideal climatic conditions, and by the cheapest possible labour. We still hope that results may prove to be otherwise before long, as soya-bean meal [flour] can be used for making bread, a use to which it is put on the Continent.

"Against this, *Fairplay* (of London) told us, some time ago that 'owing to the world-wide interest now evinced in the culture of the soya bean, experiments are being conducted in practically every British Colony. In West Africa, the bean arrives at maturity in six, eight or ten weeks, as against six months in Manchuria, while experiments carried out in South Africa prove that the crop could be matured in from ten weeks to five months, according to the zone and climatic conditions. It is expected that Ceylon will make shipments in the near future.

"'It is estimated that Great Britain and the Continent can take ten million tons of [soya] beans per annum in the event of their being used for food purposes for human consumption in the form of milk [soymilk], cheese [tofu], butter, &c., as well as for industrial and other purposes. The Manchurian crop is estimated at over 1½ million tons per annum, but the fact that the experiments as to the cultivation of the bean, both in West and South Africa, have proved that the plant is well adapted to the soil and climate, gives every reason to suppose that large supplies will ultimately be obtained from the Colonies. In this event it will be seen that the South African farmer would be in a position to compete with the Manchurian growers, the latter costing in railage and ocean freight from Harbin to England £2 3*s.* as against £1 9*s.* for railage and freight from South Africa.

"'The storage of soya-beans requires special care. The grain should be thoroughly dry when put into storage, or placed where good ventilation can be afforded, otherwise it

© Copyright Soyinfo Center 2013

is almost certain to heat. During shipment a large number of pipe ventilators are placed in the ship's hold to prevent heating of the cargo, as sweating would otherwise occur on a long voyage from the East. The beans are shipped in bags, vessels being well dunnaged'" [packed to prevent damage].

923. *New York Times.* 1915. From here and there. Oct. 24. p. SM11.
• ***Summary:*** "The usual Japanese breakfast consists of rice, miso soup, pickles, and occasionally fish. Tea is always served with meals, and is drunk clear, without sugar. Miso soup consists of strips of radishes, seaweed, eggplant, or other vegetables cooked with bean curd and water. The cooking is not continued for a long, and so few vegetables are used that the soup partakes only slightly of the flavor of the ingredients."

924. *USDA Bureau of Plant Industry, Inventory.* 1915. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from April 1 to June 30, 1913. Nos. 35136 to 35666. No. 35. 69 p. Nov. 9.
• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

"35600. Grown at the Plant Introduction Field Station, Rockville, Maryland, under Yarrow No. 288. Original seed received from Pomona College, Claremont, California, in 1911.

'It makes a remarkable growth of vines and has extremely large root nodules. Two bushels of seed were secured last year, and this has all been planted this spring.' (J.M. Rankin.).'"

"35601/35657. Collected by Mr. Frank N. Meyer, agricultural explorer. Received June 14, 1913. Seeds of the following; quoted notes by Mr. Meyer:

"35622-28.

"35622. '(Tsinan, Shantung, China. No. 1822a. April 10, 1913.) A small black soy bean locally used to produce soy bean sprouts. Chinese name *Hsiao ghae doh.'* Note: This is the earliest English-language document seen (Jan. 2013) that uses the term "soy bean sprouts" to refer to these sprouts.

"35623. '(Tsinan, Shantung, China. No. 1823a. April 10, 1913.) A soy bean which is black outside and green inside. Used boiled when half sprouted as a human food. Chinese name *Lu li ghae doh.'*

"35624. '(Tsinan, Shantung, China. No. 1824a. April 10, 1913.) A soy bean which is black outside and yellow inside. Used boiled when sprouted, also employed in soy-bean sauce production. Chinese name *Tau hsing ghae doh.'*

"35625. '(Tsinan, Shantung, China. No. 1825a. April 10, 1913.) A good variety of yellow soy bean used in the manufacture of sauce, bean curd, bean oil, for sprouts, etc. Chinese name *Huang doh.'*

"35626. '(Tsinan, Shantung, China. No. 1826a. April 10, 1913.) A large green soy bean, considered locally a fine variety. Used like the preceding one (S.P.I. No. 35625), and besides that it is also eaten roasted and salted as an appetizer before meals. Chinese name *Tsing doh.'*

"35627. '(Tientsin, China. No. 1827a. April 16, 1913.) A large green variety of soybean used like the preceding number (S.P.I. No. 35626). Chinese name *Ta tsing doh.'*

"35628. '(Tientsin, China. No. 1828a. April 16, 1913.) A rare variety of soy bean, being of brown color. Used boiled in soups. Chinese name *Ta tze doh.'"* Address: Washington, DC.

925. *Los Angeles Times.* 1915. Japanese breakfasts. Nov. 27. p. II6.
• ***Summary:*** From the *Boston Transcript:* This article is identical to the following, published about a month earlier: *New York Times.* 1915. "From here and there." Oct. 24. p. SM11.

926. *USDA Bureau of Plant Industry, Inventory.* 1915. Seeds and plants imported during the period from July 1 to September 30, 1913. Nos. 35667 to 36258. No. 36. 74 p. Dec. 23.
• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

"36073-36086. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received at the Plant Introduction Field Station, Chico, Cal., August 13, 1913. Quoted notes by Mr. Meyer, except as indicated.

"36079. '(No. 1864a. San Tun Ying, Chihli Province, China. May 30, 1913.) A local variety of soy bean of a dull-yellow color, used in the making of bean curd and bean sauce. Requires only a short season to mature. Chinese name *Huang tou.'*

"36107/36121. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received September 9, 1913. Quoted notes by Mr. Meyer, except as indicated.

"36116. '(No. 1882. San Tung Ying, Chihli Province, China. May 31, 1913.) A rare variety of soy bean, of an olive color, found among seeds of the ordinary yellow variety. Chinese name *Ma chan tou.'"* Address: Washington, DC.

927. Japan year book. 1915. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 789 p. See p. 349, 401-02, 436, 714, 716-17, 730, 743. [Eng]
• ***Summary:*** In chapter 16, "Agriculture" (p. 340-60) is a table titled "Beans, sweet potato and potato (p. 349) which gives "Soy bean" production data in Japan for 1911-1913 (in *koku*). The next paragraph contains information on soy [sauce], *miso,* and *tofu* similar to that in the 1913 and 1914 year books.

In chapter 20, "Industry," is a paragraph (p. 402) on the patented Suzuki process for brewing soy [sauce] similar to

© Copyright Soyinfo Center 2013

that in the 1913 year book. Following that is a small table with production data for Soy [sauce] (in koku) for 1912-13, 1913-14 and 1914-15–"Year (March to Feb.).

In Chapter 22, "Trade" is a table (p. 436) titled "Prices of principal commodities in Japan," which includes prices for 1911-1913 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In chapter 35, "Chosen (Korea)," under the heading Foreign Trade," is a table (p. 714) on "Staple exports" (in 1,000 yen) which has data on "Beans and peas" for 1910-1914. Under the heading "Agriculture" (p. 716) is a paragraph (p. 717) titled "Barley and soja bean," which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in 1912.

In Chapter 36, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 730) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1912-1913.

In Chapter 38, "South Manchuria," is a paragraph (p. 743) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, amount exported for specific years, and production at various milling centres (almost same wording as 1914 Year Book). Address: Japan.

928. Laxa, Otakar. 1915. Syrarstvi: Popis vyroby a upravy syra jako potraviny [Cheese production: Production of cheese and its productivity]. Prague, Czechoslovakia. 539 p. See p. 488-90. Chap. III, Vegetal Cheeses. Illust. 21 cm. [Cze]*

• ***Summary:*** A similar title was published in 1924. Address: Czechoslovakia.

929. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1915. Nichi-Bei nenkan [Japanese-American yearbook. No. 11]. 650 Ellis St., San Francisco, California. 295 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• ***Summary:*** This book is very different from previous yearbooks in this series in that it has no directory (giving business names, address, and sometimes phone numbers) and almost no advertising. It also contains many fewer pages. It is not clear what caused these major changes.

Like its predecessors, is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into seven parts, each numbered separately. Contents: (1) Front matter (5 p.). (2) Table of contents (5 p.). (3) Ads (3 p.). (4) Photos (black and white on 14 unnumbered pages). (5) Maps and charts on 2 unnumbered pages. (6) Front part (p. 1-176), including names of Japanese people in agricultural enterprises in California, Utah, Idaho, Colorado, Nevada, Wyoming, New Mexico, Texas, Nevada, and Oregon–based on research conducted in Dec. 1914 (p. B1 to B-88). Note: Two ads appear on the bottom half of the last page of the previous section. (7) Copyright and publishing information page.

By a careful reading of part 6, we can extract the following information about business that make soyfoods. There are 45 tofu makers in California (p. 130), 1 in Ogden, Utah (p. 153), 1 in other cities in Utah, 1 in Pocatello, Idaho (in Bannock County, the southeast corner of the state), and 1 in other cities in Idaho (p. 154), 1 in New York City (p. 161), 1 in Oregon (p. 165), and 6 in Washington state (p. 169). There is also 1 shoyu maker in Oregon (probably in Portland) (p. 165). Concerning the tofu makers in California, there are 2 in Oakland and 2 in Alameda (p. 132), 1 in Berkeley, 1 in San Mateo (p. 133), 2 in Santa Clara and 1 in Kason? (p. 134), 2 in Salinas, 1 in San Benito County, 2 in Guadalupe and 1 in Lompoc (both in Santa Barbara County, in southern California) (p. 135), 1 in Sonoma County and 3 in Vacaville (p. 136), 3 in Sacramento and 3 in the Courtland, Walnut Grove, Isleton area (p. 137), 3 in the Loomis, Penryn, Newcastle, Auburn area (northeast of Sacramento), 1 in the Marysville, Colusa, Oroville, Chico, Red Bluff area, and 1 in the Florin, Woodland area (p. 138), 2 in Stockton and 1 in Lodi (p. 139), 1 in Fresno, 1 elsewhere in Fresno County (p. 140), 2 in Tulare County (p. 141), 4 in Los Angeles (p. 142), 1 in Riverside (p. 143), 2 in Ventura County, and 1 in Imperial County (in the far southeastern corner of California) (p. 144). For all of these California tofu shops is given their capital, annual sales in dollars, and number of workers. For all of the California tofu shops (total): Capital: $23,050. Sales in 1914: $74,400. No. of workers: 65. Salaries in 1914: $8,260. Note that no miso makers are listed.

The total value of imports of shoyu [soy sauce] and pickles from Japan to the U.S. for the past 5 years is given (p. 86). The value of shoyu imported to San Francisco in 1914: $133,870 (p. 102). The value of shoyu and pickles imported to Portland, Oregon in 1913: $8,663. The value of soybeans imported to Portland, Oregon in 1913: $2,593 (both p. 105). The total Japanese population in the USA in 1914: 99,321 (p. 171).

The Census shows Japanese companies making soyfoods in California, Utah, Idaho, New York City, Oregon, and Washington state. Address: San Francisco, California.

931. Porter, Robert Percival. 1915. Japan, the new world-power: Being a detailed account of the progress and rise of the Japanese empire. London, New York, Toronto, Melbourne and Bombay: Humphrey Milford, Oxford University Press. xxiv + 789 p. Illust. Seven colored maps. Index. 23 cm. [soy ref]

• ***Summary:*** Japan (regardless of race and colour) intervened in the Great War on the side of her ally Great Britain. They worked together successfully against Germany in the siege of Tsing-Tau in 1914 from Oct. 31 to Nov. 7.

Near the front of the book is a table of "Weights, measures and moneys, for Japan, Great Britain, and the USA."

Page 149-50: "The annual average number of immigrants from Japan is about 20,000. Roughly, half go to China and the United States of America... Since 1907 two batches of Japanese emigrants, under 2,000 in all, have gone to Brazil, the majority of which have been under contract with the Sao Paulo Government to work in the coffee plantations." There are now about 155,000 Japanese in the United States. Since a 1907 agreement between Japan and the USA, immigration of Japanese labour to the USA has been restricted. Some Japanese have tried to enter the USA by going first to Mexico. There are not more than 2,000 Japanese in Canada at present.

Page 232: In Japan: "The necessity for increased military and naval expenditure, which rose in connection with Korea in 1881, called for considerable additional revenue. Fresh military taxes were therefore levied; income-tax was introduced along with indirect imposts [taxes] on soy [sauce], tobacco, confectionery, and stamps, and the tax on *sake* was raised, augmenting the receipts to such an extent that the Government was able in 1886 to reduce the land-tax again. But following the war with China [1894-95] it became necessary to establish occupation and registration taxes, to raise again the *sake* tax, and to create a Government monopoly of leaf tobacco."

A table (p. 233) shows how the ordinary State revenue of Japan was derived in the financial years 1898-99 and 1909-10. The two main sources of revenue were: Land tax (38.4 and 85.7 million yen respectively) and liquor tax (33.0 and 91.5 million yen). By comparison, the soy tax was relatively small: 1.54 and 4.73 million yen.

Page 235-36: "The tax on liquors is levied upon (a) brewers of *shurui* (alcoholic liquor), which is divided into five classes, viz. *seishu,* or refined *sake, dakushu,* or unrefined *sake, shirozake,* or white *sake, mirin,* or sweet sake, and *shochu,* or distilled sake; (b) brewers of beer; and (c) wine and alcohol and alcoholic liquors other than sake or beer."

"Soy tax: The soy tax is levied upon manufacturers of this sauce at the rate of about 1 3/4 yen per *koku.* A tax on soy for household use was introduced in 1900, and ranges from 50 sen to 4 yen per *koku,* according to the amount manufactured. No more than 5 *koku* of soy per annum may be made for household use."

Page 240: A full-page table shows the "Budget for financial year 1911-12." The main sources of "Ordinary revenue" are liquors tax (88.7 million yen), land tax (75.1 million), customs duties (50.5 million), and tobacco monopoly (50.5 million yen). Revenue from the soy [sauce] tax is 4.6 million yen. The sugar excise is 14.7 million yen.

Page 261-62: "The upland fields, being for all intents and purposes unirrigable, are only to a very limited extent utilized for the cultivation of rice. Rotation crops are, however, raised twice a year, usually barley, 'naked barley,' and wheat as winter crops, and soya (more properly soja), sweet potatoes, and millets as summer crops." A key unit of area in agriculture is one *tan* = 0.245 acre. On [lowland] paddy fields, nationwide over the past 10 years, the average yield per *tan* is 7.913 bushels of rice and 6.668 bushels of barley, which may be considered a representative winter crop. "Upland fields, upon the same basis, produce 6.638 bushels of barley as a summer crop and 3.756 bushels of soya bean."

Another key (larger) unit of area in agriculture is one *cho* = 2.45 acre.

A table (p. 263) shows the total area, production, and yield of 17 major crops in Japan in 1897 and in 1910. Both years, the leading crop (by far) in area was rice, followed (in 1897) by barley, naked barley, wheat, and soya bean. For 1897 the three figures for soya beans were: 1,067,000 acres under cultivation, 15,381,000 bushels total production, and 14.41 bushels per acre yield. For 1910 the three figures for soya beans were: 1,137,000 acres, 18,834,000 bushels total production, and 16.56 bushels per acre yield.

Statistics for "small red bean" [azuki] are also given: For 1897 268,000 acres under cultivation, 3,069,000 bushels total production, and 11.45 bushels per acre yield. Thus, in 1897 and 1910 the production of soybeans was roughly 5 times the production of azuki beans.

Chapter 15, "Agriculture," contains a section titled "Soya bean" (p. 264-65): The soya, or soja, bean is well enough known in England as a cattle-food, but in Japan its application is by no means limited to this use. It is the basis of the Japanese sauce, soy, of which enormous quantities are brewed; of *miso,* or bean cheese [sic], used extensively for soup and in cookery in general; and of *topu* [sic, tofu], or bean curd, a cheap, highly nutritious and very popular article of diet. The residue from these manufactures is used both as fertilizer and as cattle food, or, alternatively, an oil of some value may be obtained from it. It is the principal summer crop of the upland fields, and its cultivation, which requires less fertilizer and less labour than other products, is general throughout Japan and particularly in Hokkaido. But the supply is far from equal to the demand, and a large quantity of beans and bean cake is imported from Chosen and

© Copyright Soyinfo Center 2013

Manchuria, the value of the present importation amounting to £3,000,000 annually.

"Among other beans the small red bean is largely cultivated, especially in Hokkaido, and is used for cakes and confectionery, and boiled with rice on occasions of ceremony. The Japanese are very fond of peas, horse-beans, and kidney-beans, which are grown as a stolen crop after rice in the paddies and just before it in the upland fields."

Page 269: "A comparison of the relative positions of human and animal labour in paddy fields and upland farms for the years 1903 and 1908 (the latest year for which figures are available) shows that the area tilled exclusively by human labour still forms a very large proportion of the total, though it tends steadily to decrease." "Manual labour is plentiful and it is chiefly by reason of its abundance that the intensive system can be carried on. Rice-growing requires, for instance, the labour of 17 men and 9 women per *cho* (2.45 acres), barley and wheat 11 men and 6 women, tobacco 25 men and 23 women, soya bean 7 men and 5 women, and so on. Farmers, in the vast majority of cases, are their own labourers, and those who may be distinguished as 'professional labourers' are a very small class."

Page 292: Sea-weeds: "Chief among the sea-weeds used as food is that known as 'Kombu' (*Laminaria*). It grows mostly on the shores of Hokkaido and the south-east of Honshiu [Honshu], and is eaten sliced into very thin shreds. 'Kanten' is made by dissolving the weed Tengusa in water and exposing the resulting gelatinous infusion to the action of cold by night and the sun by day. Only the Chinese use it as food, however; in the West it is a substitute for gelatine, isinglass, starch, and the like. Other sea-weeds are used as paste." Address: Queen Anne's Mansions, London, England.

932. Associated Press (AP). 1916. Nutrition–Find soja bean valuable food. Blockade against Germany shows its merits. Chinese have used it extensively for the last 2000 years and it possesses more universal usefulness than almost any other common article of diet. *Los Angeles Times.* Jan. 13. p. 13.
• ***Summary:*** London, Dec. 15.–Discussion of the food blockade against Germany has served to bring attention to the merits of the soja bean, to which is given up more than twenty-five per cent. of the cultivated area in Manchuria. Although the soja is well known and highly regarded in Germany and the Scandinavian countries and is now second on the list of China's exports, it has hitherto achieved small general reputation in the English-speaking countries, and even the latest dictionaries dismiss it with the brief description: An Asiatic leguminous herb, Glycine Soja, the seeds of which are used to prepare sauce called soy."

The "first important shipment to Europe was made in 1908 by a British firm. The Germans almost immediately began to experiment with it and five years later were using the major part of an importation estimated at over $200,000,000 a year.

"The secret of the soja bean is its universal usefulness. A British government report gives the following list of soja products: 'Vegetable food (like marrowfat peas); soups; meat substitutes; chocolate substitute; macaroni preparation; flour; artificial milk; cheese [tofu]; coffee substitute; artificial horn; biscuit and food for diabetic patients; sauce; meal for cattle; oils, oil cake for fodder; fertilizer; beancake.'

"The same report points out that the oil from the bean is used in the manufacture of the following articles: 'dynamite and high explosives, soaps, linoleum, rubber substitute, margarine, paints, varnishes, toilet powder waterproof cloth, paper umbrellas and lanterns, salad oil, lubricants, lamp oil, preservative for sardines, substitute for lard.'"

"There are three principal varieties of the bean–yellow or huangtou [huangdou], green or chingtou [qingdou], and black or wutou [wudou]. The yellow contains more nutritive ingredients than the others, and this is the variety almost exclusively used for export. The quantity of oil extracted from the beans runs as high as 10 per cent. of the total weight.

"Sweden uses large quantities of the bean cake as food for milch cows; Denmark has a large pressing factory at Copenhagen; France has a factory built in Paris by a Chinese firm [Li Yu-ying]; and South Africa has recently begun to grow the bean in competition with the Manchurian Farmers. Germany in 1912 rescinded her former import duty and installed reduction plants for the far-eastern vegetable products in all her oil mills, importing the beans directly from Vladivostok by the shipload."

933. Puig y Nattino, Juan. 1916. El cultivo de la soya [The cultivation of soybeans]. *Revista del Ministerio de Industrias* (*Montevideo, Uruguay*) 4(19):78-91. Jan. [7 ref. Spa]
• ***Summary:*** Describes variety trials conducted in Uruguay using seeds supplied by the USDA. The varieties harvested in March 1915 included Peking, Arlington, Pinsu [Pingsu], Jaba, and Mammoth. A table (p. 79) shows that the yields of seed were very small, but that Mammoth gave by far the largest seed yield, 320 kg/ha. Discusses the many ways that soybeans (*las habas de soya*) are used as food in Japan, including soy sauce (*Shoryu* [*sic, shoyu*]), cooked whole soybeans, tofu or soybean cheese (*Tofú ó Queso de habas de Soya*), and soymilk. They used Mammoth variety soybeans, grown in Uruguay, to make soymilk. Seven tables (p. 84-90) give the nutritional composition of five different soybean varieties tested in Uruguay, planted in 1914 or 1915. An 8th table (p. 91) gives the nutritional composition of soymilk.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Uruguay, or the cultivation of soybeans in Uruguay.

Note 2. This journal is published in Uruguay by the *Ministerio de Industrias y Trabajo.*

Note 3. This is the earliest Spanish-language document seen (April 2013) that uses the word *Tofú* or the term *Queso*

de habas de Soya to refer to tofu. Address: Ing. Agrón., Director del Laboratorio Agronómico en la Inspección Nacional de Ganaderia y Agricultura.

934. Latham, F.P. 1916. Soy beans as a cereal: Soy beans a great crop for southern farmer. *Progressive Farmer* 31(8):254-55. Feb. 19. See also p. 286 (Feb. 26) and p. 342 (March 4).

• ***Summary:*** "The first mention of the soy bean in this country was in the early part of the 19th century; however, it attracted little attention prior to 1854, when 2 varieties were brought to this country from Japan by the Perry expedition. It followed that other varieties were found and introduced, among them that 'old standard,' the Mammoth Yellow, which came to our shores sometime previous to 1882. The success with Mammoth furnished an encouraging lead to our diligent research workers, resulting in the importation into this country by the Department of Agriculture of some 800 distinct varieties."

As a cereal, it is widely produced in Japan, China, Korea, and Manchuria. "By certain processing of the ground beans a milk is extracted which is not such a poor substitute for the real article; from this a cheese [tofu] is made that resembles in texture and nutrient value, our cottage cheese. Another product is a heavy, rich sauce [miso], similar to our peanut butter, which is consumed in large quantities. Soys occupy the place in the diet of these people that navy and lima beans do in our own, and are prepared in a like manner. They furnish the brown man his 'peanut.' By the simple process of soaking in salt water, then roasting they at once become a close competitor of the famous American delicacy."

"So far as I have been able to ascertain there is but one mill in the United States built for and operating exclusively on soy beans. The Pacific Oil mills, of Seattle, Washington, have build up a lucrative business in this line and only get foreign beans for crushing, its output of both oil and meal meeting a ready demand in the West. That such can be done profitably in the South is no longer a question. The fact has already been demonstrated by several cotton oil mills in eastern North Carolina... If these satisfactory results can be obtained in mills not constructed for the purpose of handling beans, it is entirely reasonable to suppose that specially constructed machinery will in time be installed that will further enhance the profits accruing from such operations."

A portrait photo shows F.P. Latham.

Note 1. This is the earliest document seen (Aug. 2011) that mentions Pacific Oil Mills of Seattle, Washington.

Note 2. This is the earliest of many articles seen (Aug. 2011) that likens tofu to cottage cheese, or roasted soybeans to peanuts. Address: Belhaven, North Carolina.

"36653. From Peh tuan lin tza, northern Manchuria. Presented by Mr. N. Kristiansen, at the request of Dr. S.A. Ellerbeck, Mukden Hospital. Received November 29, 1913. 'Manchurian bean, from Heilung chiang [Heilungkiang / Heilongjiang], northern Manchuria.' (Kristiansen.)"

"36718/36810. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received November 28, 1913. Quoted notes by Mr. Meyer.

"36785. '(No. 1972a. Peking, China. September 29, 1913.) The original wild soy bean, which occurs in North China here and there in hedges, copses, between shrubbery, and between reeds (*Phragmites communis*) on the drier places, where it turns itself around any support available. The beans are blackish and very small and are inclosed in small pods, which are quite hairy, though looking typically like some of the smaller cultivated varieties of soy beans. The poorest of the Chinese eat the young pods when boiled, but the plant at large is considered a weed and is gathered only

© Copyright Soyinfo Center 2013

when large quantities are found, in which case it is fed to domestic animals as a fodder. Of value possibly as a fodder plant when sown out among erect-growing vegetation, like barnyard millet, Johnson grass, and corn. Chinese name *Mau doh*, meaning 'hairy bean'.'"

"36809. '(No. 1996a. Peking, China. October 30, 1913.) A rare, brown and black striped variety of soy bean, used roasted as a delicacy. Very wholesome, apparently, and worthy of trial by the American public. Could be slightly salted and buttered and sold like pop corn and peanuts. Chinese name of this bean *Ghu pee doh*, meaning 'tiger-skin bean.''

"36829/36840. From Pying Yang, Chosen (Korea). Presented by Mr. Charles L. Phillips, Presbyterian Mission. Received December 10, 1913. Quoted notes by Mr. Phillips.

"36829-36837. 'The soy bean in Korea is usually sown in the fields with millet. In the early spring, after the millet has reached the height of 2 or inches, the beans are dropped in between the hills of the grain, all of which is sown in rows and cultivated with the Korean ox plow. Beans of this kind produce best in heavy clay soil rather than in light, stony ground. These beans serve as food for man and beast and are used most extensively throughout this whole northern country. For man, bread and cake are baked with these beans, a sloppy cereal dish is cooked, and, of course everywhere soy is made. Especially with the yellow varieties, bean spouts are grown during the winter, which furnish a fresh vegetable dish for the people when green things are scarce. The beans are put in an earthen dish and daily sprinkled with water and kept in the warm living room of the house, where they are quickly sprouted and send long shoots out from the dish. These sprouts are a great relish. They are boiled and eaten with rice and millet. For fodder, the beans are fed in the pod to the cattle and horses, but in cold weather are most often boiled and fed as a hot mash.'

"36829. 'No. 1. Yellow. This is the most common of all soy beans in Korea.'

"36830. 'No. 2 Small Yellow.'

"36831. 'No. 3. Black.'

"36832. 'No. 4. Green. These beans are also roasted and popped like our pop corn or like roasted chestnuts. A great favorite among the Korean children.'

"36833. 'No. 5. Brown. Rarely grown in northern Korea.'

"36834. 'No. 6. Brown and black.'

"36835. 'No. 7. Black and yellow.'

"36836. 'No. 8. Mottled green and black.'

"36837. 'No. 9. Black with white spots. Called sometimes in this province 'widowers' beans.'"

"36846-48. From Dalny, Manchuria, Presented by Mr. Albert W. Pontius, American consul. Received December 10, 1913.

'A large variety of beans is grown in Manchuria, and together with their resultants, bean cake and bean oil, they constitute by far the most valuable item in the export trade of the three provinces. In the month of April they are sown by hand in drills and the crop is ripe in September; but as regards the beans of commerce there is an exception, namely, the small green bean known as *Lu tou* (*Phaseolus aureus* Roxb. [Roxburgh, mung bean]), which ripens as early as July and can be sown again in that month and gathered early in October. The Chinese distinguish the beans of commerce by their colors. At the end of March or beginning of April the ground fertilizer (night soil and animal manure) is spread over the fields in the furrows in which the previous season's beans were cultivated. The soil in the old ridges is then turned with the ordinary shallow native plow, the new ridges being formed where the fertilizer has been spread. The ground is broken with a wooden roller drawn by a mule, the tops of the ridges being partly leveled. A line marker is then used on the leveled ridges, this implement marking a shallow trench, preparing the ground for seeding purposes.

"The planting of beans in Manchuria takes place during the month of April. The seeding is effected in two manners, the beans being sown in light furrows or in finger holes placed uniformly apart. The former method is quite simple and requires no explanation; in the use of the latter method, the finger holes are about 9 inches apart, four or five seeds being dropped in each hole. The amount of seed used differs in the various districts, a higher altitude requiring a proportionately larger quantity of seed. The following shows the different quantities of seed used in the varying latitudinal districts of Manchuria: Liaotung Peninsula (district south of Tashihchiao), thirty to forty-five hundredths of a bushel per acre; Mukden, Tiehling, and Kaiyuan, from forty-five to sixty hundredths of a bushel per acre; Kirin, from sixty-five to eighty hundredths of a bushel pre acre; Heilungchiang [Heilungkiang / Heilongjiang]; eighty hundredths of a bushel or more per acre. The first breaking and weeding of the soil takes place from six to ten days after seeding and when the sprouts are from 3 to 4 inches in length. Weeding is subsequently effected during intervals of four or five days (every ten days in northern Manchuria). Native hoes and rakes are used for weeding, the ground being broken with a wooden plow drawn by a horse or mule. The period of harvesting is from the latter part of September to the beginning of October, the bean plants being ut close to the roots, a stone roller or wooden flail being used in hulling. The average crops per acre by districts are estimated as follows: In southeast Manchuria and the coast of the Yellow Sea the yield is from 10 to 15 bushels per acre; in the Liao River valley, Changtu, Kaiyua, Tiehling, and Mukden the yield is from 40 to 50 bushels per acre; at Kirin the yield is from 24 to 26 bushels per acre; and in Heilungchiang (Amur district) the yield is from 17 to 22 bushels per acre.' (Pontius).

"36846. 'Yellow bean. *Pai mei,* 'white eyebrow,' from the white scar on the saddle, or point of attachment to the

© Copyright Soyinfo Center 2013

pod. This variety is highly prized for the quantity of oil or fat which it contains. Shipped from Fanchiatun station, near Changchun, south Manchuria.' (Pontius.)

"Yellow bean. *Hei chi,* 'black belly,' from the dark-brown scar on the saddle. This variety is highly prized for the quality of oil or fat which it contains. Shipped from Kinchou station, leased territory.' (*Pontius.*)

"36848. 'Green bean. *Ching tou.* This variety is said to yield more legumin in the manufacture of bean curd than the yellow bean, but the quality is inferior. It is also boiled and used as food.' (*Pontius.*)

"36901-06. From Peking, China. Presented by Mr. John McGregor Gibb, Peking University. Received December 26, 1913. Quoted notes by Mr. Gibb.

"36901. 'Iron Pod.'

"36902. 'Small golden flower.'

"36903. 'The yellow four in a pod.'

"36904. 'Big, white eyed.'

"36905. 'White, flower, short stalks.'"

"36906/36912. From Dalny, Manchuria. Presented by Mr. Albert W. Pontius, American consul. Received December 26, 1913. Quoted notes by Mr. Pontius.

"36906. 'Black soy bean. Shipped from Suchiatun station.'"

"36913/36924. Presented by Mr. Lewis S. Palen, Harbin, Manchuria, Received December 29, 1913. Quoted notes by Mr. Palen.

"36914-36919.

"36914. '(From Tsitsikhar, Manchuria. November 5, 1913.) Yellow. White-eyebrow variety, *Ta pai mei.* This bean is used for oil, bean curd, sauces, and bean sprouts. This sample is from about 100 miles east of this neighborhood. This variety is found mostly west of Kaiyuan and Tiehling on the South Manchuria Railway. The estimated yield is from 936 to 2,574 pounds per acre, and the price roughly estimated at 46 cents gold per bushel of 60 pounds on the market.'

"36915. '(No. 2. Changchun, Manchuria. November 1, 1913.) Yellow. Golden, round variety, *Chin yuan tou.* This bean is used for oil, bean curd, sauces, and bean sprouts. It is the variety most generally found scattered all over the bean districts of Manchuria. The estimated yield is from 936 to 2,574 pounds per acre, and the price is roughly estimated at 46 cents gold per bushel of 60 pounds on the market. The Chinese are most casual in their estimates of yields.'

"36916. '(No. 3. Kirin, Manchuria. November 1, 1913.) Large green variety, *Ta ching tou.* A bean with green epidermis and green interior. The percentage of oil is less than that of the yellow. Used as bean curd, and as bean sprouts boiled with vegetables. The estimated yield is from 936 to 2,574 pounds per acre and the price slightly less than that of the yellow, roughly, 3 per cent.'

"36917. '(No. 3. Changchun, Manchuria) Small green. Green epidermis and yellow interior.'

"36918. '(No. 4. Changchun, Manchuria. November 1, 1913.) Large black variety, *Ta wu tou.* The oil equals about 75 per cent of that from the yellow. Mostly fed to horses and cattle. In some places officials prohibit the use for oil, in fear of the cost of feed being too greatly enhanced. It grows best and is much used on wet and marshy lands, where the yellow and green varieties will not do well. The yield is about the same as that of the yellow. The price is from 1 to 2 per cent higher than the yellow, owing to the Japanese demand at Dalny. The Chinese do not know the reason why it is preferred to the yellow.'

"36919. '(No. 5. Tsitsikhar, Manchuria. November 5, 1913.) Flat, black variety, *Pien wu tou.* The oil equals about 75 per cent of that from the yellow. Mostly fed to horses and cattle. In some places officials prohibit the use for oil, in fear of the cost of feed being too greatly enhanced. The sample comes from about 100 miles to the northeast of here. It will do well in very wet ground. The price is estimated at about 50 cents gold per bushel of 60 pounds on the Tsitsikhar market, which is slightly lower than the price of the yellow.'" Address: Washington, DC.

936. *Washington Post.* 1916. Uses of soya bean: Merits not sufficiently appreciated, food experts point out. April 3. p. 10.

• ***Summary:*** "The general value of the soya bean has not attracted the general attention it deserves, according to experts who are bringing it to the attention of the American people. The Japan Society Trade Bulletin points out that the secret of the soya bean is its universal usefulness. Almost more remarkable than the rise of the bean trade itself is the number of discoveries of the uses to which it can be put. The trades commissioner for the government of South Africa gave the following list of soya bean products: Vegetable (like marrowfat peas) soups, meat substitute, chocolate substitute, macaroni preparation, flour, artificial milk, coffee substitute, cheese [tofu], biscuits, [soy] sauce, meal for cattle, oil, oilcake, fertilizer, beancake.

"The oil extracted from the soya bean, he pointed out, was used in the manufacture of the following articles: Dynamite and high explosives, soaps, linoleum, rubber substitute, margarine, paints and varnishes, toilet powder, waterproof cloth, paper umbrellas and lanterns, salad oil, lubricating oil, lamp oil, preserving sardines, lard substitute."

937. Beille, L. 1916. Le Soja [Soya]. *Gazette Hebdomadaire des Sciences Medicales de Bordeaux* 37(9):67-70. May 7; 37(10):73-76. May 21. [4 ref. Fre]

• ***Summary:*** "The question of the soybean (*haricot Soya or Soja*) reappears in our scientific and medical journals from time to time; the importance that this grain has acquired in the diet of the essentially vegetarian peoples of the Far East, and its richness in oil, albuminous materials, and minerals, have long called it to the attention of hygienists.

© Copyright Soyinfo Center 2013

Some authors have wanted to portray the soybean as an ideal food, a little jewel with a nutritive power comparable to that of eggs and meat; others have extolled the milk-like emulsion, obtained by grinding soybeans with water, as an advantageous substitute for cow's milk.

A factory, established on the outskirts of Paris, at Vallées (Seine), was able to supply French consumers with flour, cheeses [tofu], sauces, and many other soy-based preparations used in China and Japan.

"Leaving aside the inevitable exaggerations that accompany a product which is new to us, but which already has an established reputation elsewhere, it is necessary to recognize that the chemical composition of the soybean is of real interest. The Parisian clientele promptly abandoned the sauces, cheeses, and milk made from soya, but they appreciated the sprouts, which are still selling well as vegetables in the markets of Paris and its suburbs; soy-based flour and biscuits are very well adapted for use in diabetic diets."

The author then gives an overview of the soybeans from a medical viewpoint, including a brief history and review of worldwide production and nutritional studies. "In 1779 this plant was introduced to France and cultivated in Paris at the Jardin du Roi. Since that period, despite the laudable efforts of the National Society for Acclimatization, the cultivation of the soybean has not gone beyond botanical gardens and some experimental fields. Nor has it had any more success in England or Italy. However in North America it is cultivated in all the southern parts of the United States, but as a forage plant."

Through the merchant and importer Mr. A. Denis of Bordeaux, the author obtained two varieties of soybeans, one from Manchuria and one from Japan. He conducted a nutritional and microscopic analysis of these.

The author concludes that the soybean has great potential as both a food and an in industrial uses, where the precipitated protein for example, can be used in place of milk casein to make Galalith, artificial ivory, glue, and paper coating.

Part II of this article discusses more about the general nutritional value of soybeans. He then discusses soy flour (*farine de soja;* he has a sample produced by the factory at Valées), soy milk (*lait de soja*), tofu (*fromage de soja*), shoyu and various soy-based sauces (such as *Tao-Tjung* of China, or *Touong* of Indo China).

"In summary the soybean is of great interest from the industrial point of view. The place that it occupies in the oil mills of Europe is already important... Its oil, for food or industrial uses, and its by-product, soy casein, are likely to receive a host of diverse applications. On the other hand, the future of the soybean as a food substance in Europe would seem to be more modest: its disagreeable taste removes it from daily consumption and enables it to be used only as an ingredient in mixtures."

"If, in Europe, with a few reservations, we can include soya in the diet of healthy people, then there will be even stronger reasons to give it to sick people. At first glance soya, which is rich in fats and protein, with little or no carbohydrates, appears to be a food of choice for diabetics. And we must recognize that it has attained the greatest success among these sick people. But, here again, it would be appropriate to give soya in the form of rusks/zwieback (*biscottes*), or mixed with vegetables or fruits; if it is not tolerated by sick people in these forms, then we should not hesitate to stop using it." Note: In Europe, rusks are widely given to sick people, like chicken soup in the USA. Both are considered to be good medicinal foods that are easy to digest. Address: Professeur â la Faculté de médecine et de pharmacie de Bordeaux.

938. Gagnepain, François; Lecomte, Henri. ed. 1916. Flore générale de l'Indo-Chine. Tome deuxième, fascicule 4–Légumineuses : Papilionées [General flora of Indo-China. Vol. 2:4–Legumes: Papilionoidae]. Paris: Masson et Cie, Éditeurs. See p. 398-99. [7 ref. Fre]

• ***Summary:*** The entry for *Glycine* L. begins with a botanical description of the genus, which contains two species: *Glycine Soja* and *Glycine laotica.*

For *Glycine Soja* (an annual), after the botanical description we read: More than 30 varieties are known. May derive from *G. ussuriensis,* which grows wild in China, Manchuria, etc.

Cultivated in: Tonkin, Laos, Cochin China–China, Japan, Philippines, Java, etc. etc.

Vernacular names: *Dâu nanh, Mak toua kon* or *ta tone.*

Uses: The seeds are consumed like those of the Haricot bean, or can be used to make a cheese [tofu], a condiment, or as a source of oil. The black variety is used for animal feed; the stem and leaves as forage.

Note: This nine-volume series was published under the direction of Henri Lecomte (lived 1856-1934). Address: Museum of Natural History, Paris, France.

939. Johnson, Nelson Trusler. 1916. Manufacture of bean milk at Changsha. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 19(183):468-69. Aug. 5.

• ***Summary:*** "A firm composed of Chinese from the Province of Chekiang has recently opened a small factory at Changsha for the manufacture of milk from beans. This milk has long been known to the Chinese under the name of *to fu chiang* [soy milk] or bean-curd sauce. This is not to be confused with the product known as *chiang yu,* a fermented sauce made from beans which is well known as the soy of the Japanese and as one of the constituents of the famous sauces of Europe [such as Worcestershire sauce].

"Bean milk is made from small yellow beans, the same

© Copyright Soyinfo Center 2013

variety from which the Chinese bean curd [tofu] and *chiang yu* or soy [sauce] are made. The process appears to be a very simple one. The beans are soaked and then crushed between two stones. The crushed mass is allowed to run off into a tub and is then strained through cheesecloth and diluted with water and boiled. After boiling, it is again strained and the white milk run off into bottles and sold to the factory's customers." Note 1. The milk is first filtered when cold, before it is heated or boiled.

"An analysis of the bean-curd milk [soy milk] shows that it has a specific gravity of 1.020 and a fat content of 3.125 [percent], contrasted with a specific gravity of 1.029 and a fat content of 3.9 [percent] for good average cow's milk in America.

"No complicated machinery: The factory is a very small one. The proprietors informed me that they did all their work at night, in order to have fresh milk for delivery the following morning. They begin their work at about 10 o'clock. The milk is ready and bottled by daylight, when it is sent out by coolie to the various customers." Note 2. See photo in Piper & Morse 1923, p. 231.

"The room where the milk is made shows that no complicated machinery is necessary in the manufacture of the milk. At one end of the room are found two of the small stone mills in which the beans were ground. Large numbers of bottles were arranged on a rack near the wall, clean and ready to receive the morning's supply of milk. At the opposite end of the room there were three wooden [sic, metal] vats built into a concrete foundation, which proved to be a furnace. The prepared product is poured into these vats and boiled, the furnace being supplied with fuel from a hole in the outside wall. On either side were two earthenware jars into which the boiled product is poured and through which it is allowed to run through stop cocks into the bottles.

"The manufacturers of this milk seem to be endeavoring to conduct their factory along hygienic lines. They invited inspection of their factory and expressed a desire to carry out the suggestions made by the inspecting physician. These suggestions related principally to the sterilization of the bottles before allowing the milk to run into them. The whole room was very clean.

"Possible opening for milk bottle manufacturers: The manufacture and sale of this milk appears to be a new enterprise in Changsha, although I am informed by the natives of Shanghai and its neighborhood that it is an old and well-known product in that part of the country. To the eye the product looks exactly like unskimmed cow's milk. It has an odor of raw beans and is said to be not unpleasant to the taste. I am informed that a member of the family of Li Hung Chang is now engaged in manufacturing the various products of beans in Paris, his factory turning out, among other things, this bean milk.

"The product is very cheap compared with cow's milk. The factory undertakes to supply one pint each morning for approximately 50 cents gold a month. If this industry proves a success, manufacturers of milk bottles and patent milk-bottle tops should find a market for their wares here at Changsha, if they could be brought in cheaply... The milk bottle manufacturer will, of course, have to compete with the enormous numbers of empty bottles discarded by families who use aerated waters and wines. These bottles are sold by the servants, and are purchased for use in just such factories."

Note 3. This is the earliest document seen (Dec. 2006) describing the selling of soymilk in bottles in China. Changsha is in southeastern China, far to the southwest of Shanghai. Note 4. Consul Johnson seems to be a careful and well informed observer and reporter. Address: Consulate, Changsha, China.

940. Murakami, Kamekichi. 1916. Bean-curd and the process for making same. *U.S. Patent* 1,195,843. Aug. 22. 3 p. Application filed 11 March 1916. 5 drawings.
• ***Summary:*** The inventor, a citizen of Japan, describes the process and apparatus for making "bean cubes" from "beans known as the 'soy' bean, raised largely in Korea and Japan and to some extent in California." Illustrations (line drawings) show: (1) Two views of one of the cubes. (2) A vertical sectional view of the stone grinder or mill, in which the soaked beans are ground with water. (3) A similar view of a lever press for pressing the soymilk from the pulp. (4) A box in which the "bean jelly" is formed; it has drainage holes in the sides and bottom. (5) Detailed views of the bottom and one side of the forming box.

The ground beans are slowly poured into boiling water; the mass of bean paste is kept in a boiling condition for 15-20 minutes. During boiling a mixture of 3 parts slaked lime and 7 parts edible vegetable oil is added, causing the foam on the surface to sink. Salt water or nigari is used as the coagulant, and it is added in 4 steps.

Note: The person who wrote the final patent apparently had difficulty understanding the process Mr. Murakami was describing. He wrote "skins" instead of okara or pulp, and wrote "pulp" instead of soymilk. Address: Seattle, Washington.

941. Cunningham, Edwin S. 1916. China's production of beans, bean oil, and bean cake. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 19(209):886-87. Sept. 6.
• ***Summary:*** "The soya or soy bean in recent years has become an important article of trade. It grows on a plant from 2 to 3 feet in height and is contained in pods about 2 inches long. The plant is cultivated everywhere, in fields by itself, around rice and similar crops, and as an undercrop to maize and sorghum. There are 25 to 50 varieties of the soya bean, but in commerce only 3 are ordinarily recognized–

© Copyright Soyinfo Center 2013

yellow, green, and black.

"The yellow bean, which is of greatest importance, is found generally throughout Manchuria, and it is reported that the finest crops come from the highlands to the north of Mukden. The green variety comes from the Liaotung district and the Yalu basin, and the black bean from Liaoyang and the south of Mukden. There are two other varieties, the brown bean and the mottled bean, which are grown to some extent in the Yangtze Valley, but these varieties are of little importance.

"Grown largely for its oil in Manchuria: The Soya bean is put to many uses in the Far East. It is cooked and eaten as a vegetable, made into a sauce or soy, preserved as a pickle, ground into a flour and made into vermicelli, and employed extensively in the manufacture of vinegar. One particular variety, having small yellow seeds, is used in making bean curd. In Manchuria, however, the soya bean is grown almost exclusively for its oil properties and for the residual material called bean cake.

"The soya bean contains about 18 per cent oil. When the hydraulic-press method is employed only 11 to 12 per cent of the oil can be extracted, but with the use of benzene in the chemical process 17 per cent is obtainable. This oil is used as an illuminant, a lubricant, for culinary purposes, and in the manufacture of soap. In southern China it is also used in the making of waterproof cloth, paper umbrellas and lanterns, and when mixed with lacquer is employed in the manufacture of varnish and printing ink.

"Dairen is the center for the bean-oil industry, exporting more than eight times as much as Hankow, its nearest competitor. The oil mills, which are to be found in every town throughout the bean district, are growing in numbers and becoming more modern all the time. The old crush-stone mills worked by animals are rapidly giving way to up-to-date hydraulic, steam, and oil-motor plants. Hankow has about 10 such mills. During 1914 the local exportation of bean oil was 4,714 tons, valued at $393,759 gold, and during 1915 there were 6,882 tons, valued at $482,694.

"Japan takes practically all bean cake exported: After the oil has been pressed from the bean, the residue is pressed into the round, flat cakes known as bean cake. The product is very valuable as a fodder for animals, and as a fertilizer... Japan takes practically all the bean cake exported, and the United States none.

"The greatest original exporting center for bean cake is Dairen; Newchwang is second, and Hankow a poor third..." Address: Consul General, Hankow.

942. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products. *USDA Bulletin* No. 439. 20 p. Dec. 22. [9 ref]
• ***Summary:*** Contents: Introduction. Soy beans in Manchuria. Soy beans in Japan. Soy beans in Europe. Soy beans in the United States. Methods of oil extraction. Soy-bean meal as human food. Soy-bean meal as stock feed. Soy-bean meal as fertilizer. Uses of soy-bean oil. Analysis of important varieties of soy beans. Possibility of developing a manufacturing industry with American-grown soy beans.

"Analyses of important varieties of soy beans (p. 16-17):... In determining the range in the oil and protein contents of over 500 varieties grown in the variety tests at Arlington Farm, Virginia, the percentage of oil was found to range from 11.8 to 22.5 [Tokyo had 20.7% and Biloxi had 20.3% oil] and of protein from 31 to 46.9 [Chiquita had 46.9% protein]... At the present time the Mammoth Yellow variety is the most generally grown throughout the South and is the one used in the production of oil. The yellow-seeded varieties, which are most suitable for the production of oil and meal, contain the highest percentage of oil.

"Environment has been found to be a potent factor in the percentage of oil in the same variety. Considerable differences occur in oil content when soybeans are grown in different localities. The Haberlandt variety grown in Mississippi, North Carolina, Missouri, Virginia, and Ohio gave the following percentages of oil, respectively: 25.4, 22.8, 19.8, 18.3, 17.5; while the Mammoth Yellow variety grown in Alabama, South Carolina, Tennessee, North Carolina, and Virginia gave, respectively, 21.2, 19.6, 19.5, 18.4, and 18.8. Variety tests conducted in various parts of the country indicate a higher percentage of oil with the same variety for southern-grown seed. Similar results have been obtained in Manchuria, the North Manchurian beans showing an oil content of 15 to 17 percent and the South Manchurian beans from 18 to 20 percent."

Photos (both by Frank N. Meyer) show: (1) A fleet of junks carrying soy beans to Newchwang, Manchuria.

(2) Coolies at Newchwang, carrying loads of soy beans from junks to big stacks.

An outline map of the USA (p. 8) shows the area to which the soy bean is especially adapted for growing for oil production. The area of double hatching shows that it is especially well suited to the Deep South. The northern boundary of the area were it is "less certain of profitable production" includes the southern one-third of Ohio, Indiana, and Illinois, and most of Missouri. On the west, the "less certain" area includes the eastern one-third of Nebraska, Oklahoma, and Texas.

Tables show: 1. "Exports of soy beans, bean cake, and bean oil from the principal ports of South Manchuria (Antung, Dairen, Newchwang), 1909 to 1913, inclusive." 2. "Quantity and value of exports of soy beans and soy-bean oil from Japan to foreign countries, 1913 and 1914." The countries are: China, United Kingdom, France, Germany, Belgium, United States, Hawaii, British America, Australia, other countries. 3. "Quantity of imports of soy beans, soy-bean cake, and soy-bean oil from Dairen, Manchuria, into Japan, 1911 to 1914, inclusive. The greatest imports were of soy-bean cake, followed by soy beans, with only small

© Copyright Soyinfo Center 2013

amounts of oil.

(4) "Quantity and value of imports of soy beans, bean cake, and bean oil by European countries, 1912 to 1914, inclusive." The countries are: Austria, Belgium, France, Germany, Italy, Netherlands, Russia, Sweden, United Kingdom. In 1912, the UK imported the most soy beans, while Netherlands imported the most cake and oil. (5) "Quantity and value of imports of soy beans, soy-bean cake (Footnote: Includes bean cake [perhaps fermented tofu or canned regular tofu], or bean stick [probably dried yuba sticks], miso, or similar products, with duty, 40 per cent) and soy-bean oil into the United States, 1910 to 1915, inclusive." The quantity of soy bean imports was greatest in 1915 with 3.837 million lb. The quantity of soy-bean cake imports was greatest in 1913 with 7.005 million lb. The quantity of soy-bean oil imports was greatest in 1911 with 41.106 million lb. "Prior to 1914 soy beans were not classified separately in the customs returns" (p. 9). (6) "Composition of soy-bean flour in comparison with wheat flour, corn meal, rye flour, Graham flour, and whole-wheat flour."

(7) "Value of a short ton of soy-bean cake and other oil cakes in the principal European countries" (Incl. cottonseed, linseed, peanut {Rufisque}). Countries: Germany, United Kingdom, Netherlands, Denmark, Sweden. (8) "Analyses [nutritional composition] of soy-bean meal and other important oil meals." (Incl. Cottonseed, linseed (old and new processes), peanut (decorticated), sunflower seed). (9) "Fertilizing constituents [nitrogen, ammonia, phosphoric acid, potash] of soy beans, soy-bean meal, and cottonseed meal."

(10) Analyses for protein and oil of important varieties of soy beans grown at Arlington Farm (Virginia), Newark (Delaware), and Agricultural College (Mississippi). The varieties are: Mammoth, Hollybrook, Manchu, Haberlandt, Medium Yellow, Ito San, Chiquita, Tokyo, Lexington, Guelph, Black Eyebrow, Shanghai, Peking, Wilson, Biloxi, Barchet, Virginia. Note 1. "At the present time, the Mammoth Yellow variety is most generally grown throughout the South and is the one used in the production of oil" (p. 16). (11) "Acreage, production, and value per ton of cottonseed in the boll-weevil states." "Since the boll weevil first entered Texas in 1892," it has steadily decreased production of cottonseed. The soy beans offers a good replacement. (12) "Comparative prices per ton of cottonseed and soy beans on the European market, 1911 to 1914, inclusive." Soy beans are usually slightly more expensive.

Note 2. This is the earliest published document seen that contains soy-related photos by Frank. N. Meyer.

Note 3. This is the earliest document seen in which William Morse describes soy milk, or mentions natto, or correctly mentions tofu.

Note 4. This is the earliest document seen (Sept. 2004) that mentions the soybean varieties Biloxi or Lexington. Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

943. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products: Soy beans in Japan, in Europe, and in the United States (Document part). *USDA Bulletin* No. 439. 20 p. Dec. 22. [2 ref]

• ***Summary:*** "Soy beans in Japan (p. 4):... In many districts it is cultivated not in fields by itself, but in rows along the edges of rice and wheat fields. Although not grown to any considerable extent as a main crop by the Japanese farmer, the average annual production is about 18,000,000 bushels. In quality the beans raised in Japan are said to be superior to those of Manchuria and Chosen [Korea] and are used exclusively in the manufacture of food products. The imported beans, of which very large quantities are obtained from Manchuria and other Asiatic countries, are used principally in the manufacture of bean cake and oil."

"The soy bean forms one of the most important articles of food in Japan. It is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are also eaten as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh and a form of condensed milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes and for the poorer classes are the principal source of protein. To a limited extent, soy beans are used as a horse or cattle feed, being sometimes boiled and mixed with straw, barley, and bran."

"Soy beans in Europe (p. 6): The soy bean was first introduced into Europe about 1790 and was grown for a great number of years without attracting any attention as a plant of much economic importance. In 1875 Professor Haberlandt, of Vienna, begun an extensive series of experiments with this crop and strongly urged its use as a food plant for man and animals. Although interest was increased in its cultivation during the experiments, the soy bean failed to become of any great importance in Europe. At the present time it is cultivated only to a limited extent in Germany, southern Russia, France, and Italy."

"Soy beans in the United States (p. 7): Although the soy bean was mentioned as early as 1804 (Footnote: Willich, A.F.M. American Encyclopedia, 1st Amer ed., v. 5, p. 13. Philadelphia, 1804), it is only within recent years that it has become a crop of importance in the U.S. At the present time the soy bean is most largely grown for forage. In a few sections, such as eastern North Carolina, however, a very profitable industry has developed from the growing of seed... The yields of seed to the acre in various sections of the United States range from about 15 bushels in the Northern

© Copyright Soyinfo Center 2013

States to about 40 bushels in the northern half of the cotton belt. The average yield in eastern North Carolina is about 25 bushels, although many fields produce 35 bushels or more to the acre..." Note: This is the earliest U.S. document seen (June 2003) that cites the 1804 publication by Willich [and James Mease] concerning the soybean in Philadelphia. Note that this article appeared 112 years after 1804.

"The first extensive work in the U.S. with the soy bean as an oil seed was entered upon about 1910 by an oil mill on the Pacific coast. The beans, containing from 15-19% of oil, were imported from Manchuria, and the importations, most of which are used in the manufacture of oil and cake, have gradually increased, as shown in Table V. The oil was extracted with hydraulic presses, using the same methods employed with cottonseed and linseed. It found a ready market, as a good demand had been created for this product by soap and paint manufacturers, which up to this time had been supplied by importation from Asiatic countries and England. The soy cake, ground into meal, was placed on the market under a trade name and was soon recognized as a valuable feed by dairymen and poultrymen. The use of the cake has been confined almost wholly to the Western States, owing principally to the high cost of transportation."

"An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of 'vegetable milk.' At the present time a factory in New York State is being equipped for this purpose." Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

944. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products: Soy-bean meal as human food (Document part). *USDA Bulletin* No. 439. 20 p. Dec. 22. See p. 11-13. [2 ref] • ***Summary:*** "The meal remaining after the oil is extracted from Mammoth soy beans is bright yellow in color when fresh and has a sweet, nutty flavor. The use of the meal as flour for human food has become an important factor in several European countries during the last few years and to some extent in America as a food of low starch content."

"In England, manufacturers have placed on the market a so-called 'soya flour,' which is 25% soy-bean meal and 75% wheat flour. This soya flour is being used by bakers in making a soy bread which is very palatable and may be found on the market. A similar product has been manufactured in Amsterdam [Netherlands] for 25 years. 'Soya biscuits' are also manufactured from this flour and constitute an article of export from England. German millers have been experimenting to some extent with soy meal in making brown bread by mixing with rye flour... Soy-bean flour enters largely as a constituent in many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties.

"As a human food, soy-bean flour has been used principally in the U.S. as a special article of diet and is sold by a number of food companies manufacturing special foods. Extensive tests are being conducted by the USDA with soy-bean flour in the making of bread. The flour or meal can be successfully used as a constituent for muffins, bread, and biscuits in much the same way as corn meal. In these various food products about ¼ soy flour and 3/4 wheat flour have been found to be the proper proportions." Note: This is the earliest document seen (Sept. 2004) which clearly states that soy-bean flour has been used to make bread in the USA.

"Although soy-bean milk has been used in both the fresh and condensed form and in the manufacture of cheese [tofu] in Japan and China for centuries, it only recently has been considered of possible importance in the United States. Soy-bean milk, owing to its food value and for sanitary reasons, is said to be of the greatest importance for cooking purposes and can be used by bakers, confectioners, and chocolate manufacturers. In Asiatic countries the whole bean is utilized in the manufacture of the milk, but quite recently it has been discovered that soy-bean meal, after the oil is extracted, is fully as useful for milk purposes as the whole bean.

"If the milk from the soy bean is used in the manufacture of products as a substitute for milk, the labels of such products should indicate that the substitution has been made, otherwise it would constitute adulteration under the food and drugs act.

"In addition to its uses for flour and milk, the soy bean can be prepared as human food in numerous ways. The green bean, when from three-fourths to full grown, has been found to compare favorably with the butter or Lima bean... The soy bean has been utilized not only in the U.S. but in European countries as a substitute for the coffee bean. When roasted and prepared, it makes an excellent substitute for coffee." Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

945. Fuerstenberg, Maurice. 1916. Die Einfuehrung der Soja, eine Umwaelzung der Volksernaehrung [The introduction of soya, a revolution in the food of the people]. Berlin: Paul Parey. 30 p. Foreword by Dr. Gottlieb Haberlandt, Director of the Plant Physiology Institute, Univ. of Berlin. [5 ref. Ger] Address: Germany.

946. Laxa, Otakar. 1916. Rostlinné mléko, levna nahrazka mleka kravskeho [Vegetable milk, an inexpensive substitute for cow's milk]. *Zpravy Laktologickeho Ustavu* (*Dairy Institute News*) (*Prague*) No. 5. 10 p. [26 ref. Cze; ger] • ***Summary:*** According to Horvath (1927, p. 65) this article recommends the following procedure: "100 gms. of good yellow or green soybeans washed in cold water until the water is absolutely clear. After the cleaning soak for 24 hours in an amount of cold water just sufficient to cover them. After the beans become soft, mash in an almond-mill of the kitchen type. Pour the resulting milk mass in a bottle with a

© Copyright Soyinfo Center 2013

capacity of 2 liters to which are added 900 cc. of cold water, 10-15 gms. of cane sugar, 1 gm. of sodium chloride and one drop of essence of fresh hay, in order to cover the beany taste and smell with an aroma similar to cow's milk. Close the bottle and shake the contents from time to time. Filter the liquid through a clean linen bag after 4 hours so the residue is pressed out. In this way about 750 cc. of soybean milk are obtained.

Note: This is the earliest document seen (Jan. 2010) that contains a detailed description of how to make soymilk at home or in a typical European kitchen.

The chemical composition (without adding the values for cane sugar and sodium chloride) is: water, 94.85%; fat, 1.00%; protein, 1.78%; reducing sugar, 0.11%; galactanes and other soluble carbohydrates, 2.02%; ash 0.34%; dry substance, 5.15%. The addition of 10 gms. cane sugar and 1 gm. table salt to 1 liter raises the amount of dry substance to about 6% and also the ash content and the nutritive value. The food value of such soybean milk is estimated by Prof. Laxa to be equal to about one-half of the food value of whole cow's milk, or two-thirds the value of skimmed milk. The cost of one liter of this soybean milk in Prague in 1916 was estimated by Laxa to be two and a half cents (Mex.) if made at home." Notice that no mention is made of cooking the soymilk!

Horvath (1927, p. 60) continues: "According to Prof. Laxa, the fresh soybean milk shows a slight alkaline reaction. 'At 12 degrees of acidity of Soxhlet-Henkel it coagulates on boiling. The fresh soybean milk gives a strong peroxidase reaction of Storch [Starch]. It is also rich in katalase [catalase]. If hydrogen peroxide (a 10% solution) is added to soybean milk in proportion 5 cc. to 15 cc., 15cc. of oxygen are formed (liberated) in two hours. The reductase test, on the contrary, goes very slowly. No change can be observed if rennet is added to slightly warmed soybean milk. But if one increases the content of soluble calcium salts (adding f.e. calcium citrate), a finely flocculated precipitate is formed. The soybean milk curdles spontaneously at room temperature if the developed acidity reaches 14.8 degrees of Soxhlet-Henkel. In order to inhibit the putrefication [putrefaction] of soybean milk it is advisable to add a few drops of a culture of lactic acid bacteria. Soybean milk supplemented with lactose and inoculated with a culture of yoghourt [yogurt] bacteria, coagulates at 40ºC in 4 hours and gives a curd-like acid mass.'

Yeu (1933, p. 14) states: "It was not until 1916 that a study of soymilk as a substitute for cow's milk was undertaken. O. Laxa gives the composition of milk obtained from soybeans cultivated near Prague. He made a soy yogurt. He concluded that soymilk was not important except in places totally lacking animal milks."

The author is a doctor. Hromadko (1926, p. 321) and Pume (1941 #069) cited this article correctly. Horvath (1927, p. 85) and L'Heureux (1933, p. 370) cited it as if it were a German journal article (from Berichte der Laktologischen Anstalt an der K.K. Boehm. Technischen Hochschule in Prag. 1916). Several subsequent French authors (Maillet et al. 1932, p. 490; Yeu 1933, p. 103) cited this as if it were a French journal article (from *Rapports de l'Institut de l'Ecole Polytechnique, tchèque.* No. 5. Prague). Nakazawa cited him as publishing in Extr. de la Rev. gener. du Lait, and Zbl. Bakt. II. 51, 423 (1920). or II. 86, 160 (1932). Or Biol. Abst. 7, 19020 (1933). Address: Prof., Dr., Czechoslovakia.

948. Ou Lu jiaoyu yundong [The movement for education in Europe]. 1916. Tours, France: Zhonghua Yin Zi Ju [Impremerie chinoise]. 123 p. [Chi]
• ***Summary:*** This book contains many photographs on unnumbered pages, including a rare photo (between pages 48 and 49) of the outside of the brick tofu factory named *La Caséo-Sojaine,* established by Li Yuying at Garenne-Colombe near Paris.

Another photo (between pages 70 and 71) shows Chinese students taking evening courses at *La Caséo-Sojaine,*

Note: This book was written entirely in Chinese; it contains no French text. The title translated into French would be: *Le mouvement d'éducation en Europe.*

This publishing company, which has become famous as the first Chinese publishing company in France, was founded in 1905 (6 years before the Chinese Republic) by Wu Zhihui, Li Shizeng, Zhang Jingjiang, and Chu Minyi. Their earliest publication at the archives at Lyon is the magazine *Shijie.* The publishing company was founded in Paris, but moved to Tours during World War I for security reasons; that is why this book was published in Tours.

949. Sornay, Pierre de. 1916. Green manures and manuring in the tropics, including an account of the economic value of leguminosæ as sources of foodstuffs, vegetable oils, drugs, etc. Translated from the French by F.W. Flattely. London: John Bole, Sons and Danielson, Ltd. xvi + 466 p. Illust. 26 cm. [12 soy ref]
• ***Summary:*** This book is dedicated "To my esteemed Master and Friend M.P. Bonâme. A token of deep gratitude and sincere admiration." It "was awarded a gold medal by the *Société Nationale d'Agricole de France."* The translator is from the International Institute of Agriculture, Rome, and the Dep. of Zoology, University College of Wales, Aberystwth. In the introduction H. Pellet states (p. viii) "M. de Sornay, who for a number of years has been a member of the Agronomic Station of Mauritius, had already published, some time ago, in the *Bulletin* of the Station, a short treatise on the Leguminosæ." This volume is a major

© Copyright Soyinfo Center 2013

expansion of that work. The author was one of the first to study intercropping of sugar cane with legumes. Working in Mauritius, he found that legumes used in mixed cultivation with sugar prevented the growth of weeds and retained the soluble salts which would have been washed away by rain. A trailing variety of peanut was used. He also suggested soybean as an intercrop because "it does not interfere in any way with the small canes; the soybean may be used on a mixed cultivation and may even be sown in two rows in interspaces of canes" (p. 184). Also includes concise information about the cultivation and yield of soybeans.

Chapter 1, "General remarks" (p. 1-9) begins: "The family of the Leguminosæ, which numbers not less than 7,000 species distributed over every portion of the globe, contains, according to Van Tieghem, 430 genera." "The Leguminosae are generally divided into three great sub-families: Cæsalpineæ, Mimoseæ, and Papilionaceæ." The first two sub-families prefer tropical climates, whereas the Papilionaceæ "adapt themselves to every climate and are found distributed from the Equator [Ecuador] to the Poles." The Papilionaceæ are divided into eleven tribes; a table shows these and the subtribes or genera they contain. The genus Glycine is in the tribe Phaseoleæ, subtribe Glycina.

Chapter 2 is an "Account [history] of the theories on the absorption of nitrogen from the air by the leguminosæ." Chapter 3 (p. 9-46) is a "Description of the various leguminous plants of agricultural value." The 37 species discussed include the peanut (p. 47-70), Bambarra ground-nut or Voandzou (p. 70-72, native of Madagascar), *pois carré* [winged bean] (*Psophocarpus tetragonolobus*), and Soja, or Soy bean (p. 182-92).

The rambling treatment of the soy bean discusses bits and pieces of its history, botany, and yields in India, South Africa, and Mauritius. Nineteen tables show its composition. Concerning uses: "The seed of the soy bean is eaten as a vegetable by the majority of Chinese and Japanese, and they make numerous other uses of it." The chief ones are: Soy milk, soy cheese [tofu], and shoyu. "The roasted seeds of the soy bean are used in the United States and Switzerland as a substitute for coffee. Not containing any starch, these breads are used in the manufacture of breads and biscuits for people suffering from diabetes. They are found on the European market... The seeds are pressed in order to extract the oil, the oil resulting from the first expression being used in the manufacture of soap, whilst that from the second is used as machine oil. The cake is given to cattle mixed with other nutriments of lower nitrogen content. The trade in soy has increased considerably during the last five years." Trade statistics (exports of soy beans from Manchuria and imports to Europe) and prices on the London market (of soy beans, oil, and cake) are given.

Chapter 7, "Starch in the leguminosæ" (p. 246+) discusses the "Characters of the principal starches in the Leguminosæ." It contains an illustration (line drawing) of the starch in Soja hispida (Fig. 42, p. 251), and a description (p. 255) as follows: "Soja hispida.–Soy contains very little starch. The shape of the grains is fairly uniform, whilst their size is very variable. All the grains polarize clearly. The hilum is linear, occasionally stellate, but of rather rare occurrence. The striations are only visible at the edges and are very close together. Starch only very slightly homogeneous." Address: Chemist, Ex-Asst. Director of the Station Agronomique of Mauritius, Laureate of the Association des Chimistes de Sucrerie et de Distillerie de France et des Colonies, Laureate of the Société Nationale d'Agriculture de France.

950. Zhu Chen. 1916. Dongting Dongshan wuchankao [Survey of products of the Eastern Mountain of Dongting lake]. China. Passage on soy reprinted in C.N. Li 1958 #351, p. 249-50. [Chi]

• ***Summary:*** Wade-Giles reference: *Tung T'ing Tung Shan Wu Ch'an K'ao,* by Chu Chên. Republican period. The section titled "Yellow soybeans" (*huangdou*) states: When fresh, they are called green vegetable soybeans (*maodou;* "hairy beans"); when dry, they are called yellow soybeans. Plant them in the 4th lunar month. The stem grows to a height of 2 feet. The leaves are round with pointed tips. The color is deep green, with little yellow flowers. The pods are a little more than an inch (*cun*) long, have green hairs, and contain 2-3 beans. When the beans are fresh, they are green; but when they grow old, they turn yellow. They are round like pearls. After removing the skin [seed coat] from the individual beans, you will find two parts [cotyledons]. They are like almond seeds. Most beans have that same structure. Green vegetable soybeans (*maodou*) are boiled in the summer and served on a plate as a vegetable.

There are two kinds of green vegetable soybeans. One kind is called *guanbangqing;* in the 5th month you can harvest them as green vegetable soybeans, or in the 7th month you can harvest them as yellow soybeans (mature). Another kind is called *shijiaxiang;* in the 7th month you can harvest them as green vegetable soybeans, or in the 9th month you can harvest them as yellow soybeans.

For some, you do not wait until they are mature; just harvest the [green] pods and boil them, then spread them in the sun until dry; they are called dry green soybeans (*xunqingdou*). They are also called *maodougan* ("green vegetable soybeans dried").

Green vegetable soybeans (*maodou*) are easily infested by worms. There is no way to prevent this, whereas [mature, dry] yellow soybeans can be stored for a long time. After you get rid of the pods, they do not become wormy.

There are many ways to eat yellow soybeans. You can boil them, roast them, use them to make jiang or tofu (*doufu*), or to obtain oil. These are methods handed down to us from antiquity. Their nature is warm. They benefit the large intestine. If you eat them raw, the flavor is not good;

© Copyright Soyinfo Center 2013

they have an unnatural flavor. If you have an ulcer, then their flavor is sweet. Western doctors say the efficacy of yellow soybeans is better than cow's milk. Therefore, in recent years, many Westerners [in this part of China] have begun to drink soymilk (*doufujiang*), so its price has risen. When you put yellow soybeans among the rice straw and pour water on them, after 6-7 days, the soybeans will sprout to a length of 2-3 inches to become soybean sprouts (*douyacai*). The villagers call them *ruyicai* ("as you wish vegetable") [probably because you can grow soy sprouts quickly, for use as a vegetable, whenever you wish, year-round]. The stalks can be dried and used as fuel. (Translated by H.T. Huang, PhD, April 2003).

951. *Weekly News Letter* (*USDA*). 1917. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. 4(27):3. Feb. 7. [1 ref]
• ***Summary:*** "The soy bean... may be utilized in a greater number and a greater variety of ways than almost any other agricultural product...

"In Japan the soybean forms one of the most important articles of food in use. It is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed milk is manufactured from it."

In several European countries and to some extent in America, soy-bean "flour enters largely as a constituent in many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties.

"Soy-bean milk... has been produced in small quantities in the United States, and recently a factory has been equipped to make this product." In Europe and America soybeans are roasted to make "an excellent substitute for coffee. In Asia the dried beans, especially the green-seeded varieties, are soaked in salt water and then roasted, this product being eaten after the manner of roasted peanuts."

Soy-bean meal (for use as a stock feed) and soy-bean oil are also discussed. "In addition to its availability as a food, soy-bean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink."

953. *New York Times.* 1917. Japan's Copper King owes fortune to father. March 4. p. X8.
• ***Summary:*** Japan ranks 2nd, after the USA, among the world's copper producing countries. Japan's Copper King is Baron Furukawa, whose father, Ichibei Furukawa, was a self-made man. Ichibei was born in Kyoto's suburbs. When his father, a sake brewer, sank into poverty through business reversals, young Ichibei turned from brewing sake "to selling tofu, or bean curd." One day, while working as a "peddler of tofu... he collided with a palanquin bearing a stately samurai or nobleman, and his stock of bean curd was thrown into the street. Refusing to be overawed by the splendor of the nobleman, the boy requested that he be compensated for his loss, but the bearers of the palanquin, filled with a sense of their master's importance, scornfully refused to heed his request and continued on their way." From that moment, he made up his mind to rise in life. Yet he peddled tofu for at least 2 more years to save up his money.

• ***Summary:*** Reprinted from the *USDA Weekly News Letter* 4(27):3 (7 Feb. 1917). Address: Cleveland, Ohio.

955. Mairin, C. 1917. Le Soja hispida [Soja hispida]. *Annales Africaines* 24(6):71. March 15. New Series. [24 ref. Fre]
• ***Summary:*** Praises the many benefits of the soybean. From it one can make soy milk (which is equivalent to animal milk), cream and butter and cheese (tofu). Combined with wheat flour, it can furnish, at a low price, a complete bread–and, I would add, one that is good for diabetics. This flour can be used to make all the different types of pastries and cakes. Finally, roasted like coffee, it makes an excellent alternative–with all the aroma of mocha.

956. Eddington, Jane. 1917. Tribune Cook Book: Baked soy beans. *Chicago Daily Tribune.* March 16. p. 10.
• ***Summary:*** "Soy beans, 10 cents a pound and three pounds for 25 cents." Within the past few months, "this bean has begun to appear in many a grocery store, perhaps without catching the eye of most people.

"If we can get into a Chinese grocery we may see a pile of something that looks like milk curds but is white blocks of soy bean substance ready for frying. Alongside of the white blocks, in these stores, are also piles of the same thing which

© Copyright Soyinfo Center 2013

have been fried. This is undoubtedly the 'tofu' described in that ponderous book, 'Diet in Health and Disease' [by Friedenwald and Ruhräh]...

To bake soy beans: Soak overnight in two cups water to one cup beans. Add 4 cups water. Bake for 4 hours in an earthen pot in a slow oven or between two hot stones in a fireless cooker.

957. McClelland, C.K. 1917. Farms and farmers: Soy beans (Continued). *Atlanta Constitution* (*Georgia*). March 18. p. A10.
• ***Summary:*** Discusses soy bean harvesting machinery and uses for human food (shoyu, miso, natto, tofu, and soy bean meal [flour]). Address: Editor & Prof., Experiment, Georgia.

958. Williams, C.G.; Park, J.B. 1917. Soybeans: Their culture and use. *Ohio Agricultural Experiment Station, Bulletin* No. 312. p. 577-600. March. [3 ref]
• ***Summary:*** This bulletin consists of two articles: "Soybean Culture" by Williams, and "Uses of Soybeans" by Park. The latter, which contains extensive information on soyfoods, is an extract of Park's paper titled "Soybeans as Human Food. Palatable Dishes Made from a Comparatively New Legume"; it was printed in Ohio Agricultural Experiment Station Monthly Bulletin 2(9, whole no. 21):299-303. Sept. 1917.

Contents: I. Soybean culture. Introduction: Production in Ohio, place. Climate and soil requirements: Climate, soil, fertilizers, inoculation. Seeding and cultivation: Seed bed, time of seeding, manner of seeding, depth seeding, rate of seeding, cultivation. Harvesting: For hay, for silage, for seed ("The best implements for cutting soybeans for seed are the mowing machine with side-delivery attachment, the self-rake reaper and the grain binder."), threshing. Varieties: For seed production, for hay. The effect of soybeans in crop rotations.

Tables show: (0) Acreage planted to five legumes in Ohio. Red and alsike clover: 880,676 acres (No. 1). Soybeans: 4,921 acres (No. 4). (1) Rate of seeding and yields of soybeans in Ohio from 1909 to 1916. Best rate–3 pecks/acre–gave 6-year average yield of 3,540 lb/acre of beans. (2) Description of 25 varieties: Amherst, Auburn, Cloud, Ebony, Elton (Chestnut)* (* = The Elton was first sent out by the U.S. Department of Agriculture under the name of Chestnut), Habaro, Hollybrook, Ito San, Ito San 17268, Manchuria, Medium Green, Mongol, Mikado, Ohio 7491, Ohio 7496, Ohio 9001, Ohio 9016, Ohio 9035, Ohio 9100, Ohio 9110, Sable, Shingto, Taha, Wing's No. 1, Yosho. The five highest yielders of grain are: Ohio 9016 (29.22 bu/acre, 5 year average), Ohio 7496, Elton, Ito San 17268, and Shingto.

(3) Yields of grain and straw of these 25 varieties. (4) Variety tests at the county experiment farms (yields of 8 varieties). (5) Soybean hay test (yields of 10 varieties, 1912-1916). (6) Wheat yields following crops of corn, soybeans (the highest), potatoes, or oats.

Part II. Uses of soybeans. Introduction. Use for animal food: Hay, grain, soiling crop. Special uses and products: Soybean meal, soybean oil. Use for human food: Soy sauce, soybean milk, use of the whole beans.

Concerning soymilk and tofu (p. 300): "If a small amount either of acid or of magnesium or calcium salts is added to the liquid [soybean milk], or if it is allowed to stand until sour, a curd is formed which settles out, leaving a clear, yellowish, watery liquid. The grayish white curd can be drained, pressed and eaten like cottage cheese. When salted and fried it is palatable, and can be used as a salad. This bean curd is the tofu which is so extensively eaten in the Orient. It is made fresh every day, and is as staple an article of diet of Oriental peoples as bread is of ours. As used by the Japanese these cakes contain 83 to 88 percent of water, 7 to 11 percent of protein and 4 to 5 percent of fat."

Concerning use of whole soybeans: "When properly roasted and prepared, the ripe soybean makes a good substitute for coffee, equal to many of the cereal preparations on the market" (p. 302).

Photos show: (1) A soybean plant with its leaves removed to show pods (front cover). (2) A field of soybeans, with about half the leaves fallen, ready to be cut for seed (opposite p. 581). (3) Root system of a soybean plant with "numerous nodules in which nitrogen-fixing bacteria live" (p. 583).

Tables show: (7) Percentage composition and digestibility of soybean meal (pressed, or extracted) and other foodstuffs [oil meals and feed grains] for comparison. (8) Quantity and value of imports of soybeans, soybean cake, and soybean oil into the United States, 1910-1915.

Bar charts show (p. 600): (1) Pounds of digestible protein in 100 pounds of 14 food materials; soy beans are highest at 28.3 lb. (2) Pounds of digestible protein and digestible carbohydrate that one dollar will buy in the form of the same 14 food materials; in the form of soy beans, it will buy the most digestible protein (9.43 lbs at 3 cents/pound) and the 4th most digestible carbohydrate (after corn meal, rice, and wheat flour). Address: Wooster, Ohio.

959. *Los Angeles Times.* 1917. Grow soya beans: Movement to start a new and profitable industry at Tacoma [Washington]. April 8. p. III22.
• ***Summary:*** From Philadelphia Public Ledger: "An attempt to inaugurate an entirely new and profitable industry in Tacoma and the Puyallup Valley [both in Washington state], in the growth of the soya bean, with the probability that the experiment will prove successful and result in the erection in Tacoma of an oil-extracting plant to cost from $50,000 to $75,000, is announced.

"The soya bean is one of the most valuable imports of the United States from Japan, and a product which may be put to more uses than probably any other." Many uses are listed.

© Copyright Soyinfo Center 2013

"Some time ago W.H. Paulhamus of the Puyallup and Sumner Fruit Growers' Association suggested that the Keystone Cereal Company of this city, which imports an enormous quantity of the bean in cake form, make an effort to obtain some seed. The agents of the company in Japan, after lengthy negotiations, were finally able to purchase a quantity of seed, the concession being made by the Japanese only because of the trade the local company gave them. This seed will be distributed free of charge to farmers of the Puyallup Valley and Western Washington by the growers' association and cereal company. The seed will be sown in January, and it is expected a good crop will result, as the Puget Sound climate is very similar to that in Japan."

"Two shipments of the cake form of the beans are due here next week, each amounting to 1,000 tons. All of the beans received in America have passed through an oil-extracting mill, where from 16 to 18 per cent. of their oil has been extracted, and the cake is then sold at from $35 to $38 a ton. If the bean could be grown in this country an immense profit would result to the grower and manufacturer, it is said.

"Previous attempts have been made to get seed of the bean and test it in this country, but a sufficient quantity has never been obtained, the Japanese merchants being unwilling to jeopardize their trade in the commodity.

"The soya bean is very common in Japan,... Cakes made from the bean [probably tofu] form one of the delicacies in the diet of the common people."

960. Li, Yu-ying. 1917. Procédés et dispositifs pour la transformation intégrale du soya [Processes and technology for the transformation of whole soybeans]. *Chemisch Weekblad* 14(15):348-51. April 14. Included within a longer paper in this journal by de Waal, p. 344-56. [Fre; dut]

• ***Summary:*** This lecture, delivered in French on 11 Nov. 1911, includes a description of and an interesting, complex diagram showing the basic processes by which the many food and industrial uses of the soybean are created. "In the soybean industry, it is not only the whole seed / bean which constitutes the usable raw material, but also its derivatives such as soy flour, milk, etc., and even the by-products (cakes), which can, themselves, serve as the basis for a large number of products." A table (p. 349) shows these raw materials in five degrees: 1st. Whole soybeans. 2nd. Dehulled soybeans, cellulose/fiber, cakes, oil-rubber, milk, cakes. 3rd. Flour, cakes, oil, milk, cakes. 4th. Flour, milk, cakes, casein (*caséine*), flour. 5th. Casein, flour. "These five groups are composed of 19 products which can be considered as the raw materials which derive from a series of transformations leading up to the complete utilization of the bean.

"The course of operations to obtain the announced products comprises the following phases which are represented in figure 1.

"Dehulling of the beans. Grinding of the dehulled product, of oilcakes (*tourteau d'huilerie*), cakes for [soy] dairy production (*tourteaux de laiterie*), of casein.

"Pressing to obtain oil, or to obtain *sojalithe* (an industrial soy casein resembling ivory or horn).

"Drying of the casein, of the soymilk cake [okara] (*tourteaux de lait*), of the powder for preserves (*confiture*) [such as chestnut cream (*crème de marron*)].

"Cooking for the production of preserves, or for making sauce.

"Roasting / grilling for the manufacture of [soy] chocolate or [soy] coffee.

"Wet-grinding to obtain milk [from soybeans], or to obtain milk from okara (*lait provenant de tourteaux*).

"Fermentation for the manufacture of sauce [jiang or soy sauce], cooked soybeans, or milk.

"Concentration for the manufacture of milk, [okara] (*torteaux de lait*), or sauce.

"Desiccation / drying to obtain powdered [soy] milk, powdered [soy] milk cake [okara] (*poudre de lait de tourteaux*), powdered soy sauce.

A chart (fig. 2, p. 350) describes the progress and combination of different necessary operations to obtain these products.

"You can see that the soybean is first dehulled so that it can be cooked or ground either dry or with the addition of water. The dry-ground products, made into flour, are used for baking, pastry-making, and the fabrication of pasta (*pâtes alimentaires*).

"Dehulled soybeans treated by wet-grinding yield soymilk, which can itself be transformed into fermented milk, concentrated milk, powdered milk, or it can serve for the production of fresh or fermented cheeses, of [soy] sauce (by fermentation), as well as to obtain casein that can be dried or powdered; by pressing casein one obtains 'sojalithe.' The oilcakes [okara] resulting from the fabrication of milk are pressed and ground and can be used to make casein.

"Soybeans are pressed to obtain oil which can itself serve as a base to make candles, soaps, paint, artificial rubber, etc. Oilcakes remaining as by-products can be ground to make milk or pulverized to obtain flour.

"Cooked soybeans are also used to make condiments, fermented [soy] sauce, liquid sauce, solid [sauce], [sauce] concentrated into a paste or in dry powder. Cooked soybeans are also used to make pasty preserves (*confitures pâteuses*) or in powder.

"Cooked and grilled soybeans again serve to make [soy] coffee and chocolate." Address: Seine, France.

961. Waal, A.J.C. de. 1917. Over soja-producten [On soy products]. *Chemisch Weekblad* 14(15):344-56. April 14. (Chem. Abst. 11:2001). [22 ref. Dut]

• ***Summary:*** Describes the work done by men in different countries on various soybean preparations and includes a paper by Li Yu Ying (cited separately) titled "Procédés

© Copyright Soyinfo Center 2013

et Dispositifs pour la Transformation Intégrale du Soya," including food and industrial uses of soybeans. A complex, full-page French-language diagram (p. 350) shows the basic processes by which the many food and industrial products that can be derived from the soy bean, and summarizes patents related to many of these. By milling and baking: soya meal (*soja-meel*) and soy bread (*soja brood*). Soya milk (*soja-melk*) and Western-style cheeses. Coffee and chocolate substitutes: Soy coffee (*soja-koffie*) and soy chocolate (*soja-chocolade*). Pork-butcher products, incl. soy sausages (*soja-worst*) in which one can use soy cheese (*soja-kaas*). Soy protein (*soja-eiwit*). Worcestershire sauce (*Worcestershire-saus*). Li is a resident of Seine France. This paper was presented on 11 Nov. 1911, and published on 20 Jan. 1912.

Note 1. This is the earliest Dutch-language document seen (March 2001) that used the term *soja-koffie* to refer to soy coffee.

Note 2. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *soja-melk* to refer to soymilk. Address: s' Gravenhage (The Hague), Netherlands.

962. Eddington, Jane. 1917. The Tribune Cook Book: Chinese foods. *Chicago Daily Tribune*. April 15. p. B8.
• ***Summary:*** "In some recent stories with a Chinese background a poor student is described as 'the son of a man who dines on no richer dish than rice and soy gravy.' This soy or shoyu or syou sauce is procurable at almost any grocery store. It is one of the ingredients of Worcestershire sauce, which is one of the proofs that is has been used in England for nearly a century. When the soy is not procurable a little Worcestershire may be used."

Note 1. This is the earliest English-language document seen (April 2012) that uses the term "syou sauce" to refer to shoyu or soy sauce.

"At this [Chinese food] store I might have purchased fresh pig stomachs or soy bean cheese [probably tofu, but possibly fermented tofu], both cooked and uncooked, and I did get [mung] bean sprouts (15 cents a pound), and the tiny beans from which these are grown. These beans are green of color and not half as large as the smallest peas I have seen.

A boy in a story "says that he likes iced seaweed jelly, referring probably to jelly of the agar, or what we call vegetable gelatin,..." A recipe for "Seaweed jelly" states: "One ounce of agar-agar will make a gallon of jelly, or even more."

963. *J. of Home Economics.* 1917. The soy bean. 9:183-84. April.
• ***Summary:*** "The soy bean, already one of the most important crops of Asia, promises to take an important place in the agricultural industry of the United States. It is said that it may be utilized in a greater number and a greater variety of ways than almost any other agricultural product. Not only are the beans, and the oil expressed from them, available as food, but soy bean oil is used for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants, besides its use in the Orient for lighting and other purposes.

"In Japan the soy bean is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, not only forming the basis for the manufacture of the different kinds of vegetable cheese, but used fresh, while a form of condensed milk is also made from it. All of these food stuffs are used daily in Japanese homes, and for the poorer classes are the principal source of protein.

"Soy bean oil resembles that of cotton seed in many ways. The meal remaining after the oil is extracted from the beans has become important during the last few years as a food of low starch content, and so adapted to the use of diabetic patients.

"Soy bean flour enters as a constituent into many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties. The flour or meal may be used successfully in the household as a constituent of muffins, bread, and biscuits in much the way in which corn meal is used.

"An artificial milk like that manufactured in the Orient has been produced in small quantities in the United States, and recently a factory has been equipped to make this product. Such milk may be used for cooking in the household, and by bakers, confectioners, and chocolate manufacturers. Such products must, of course, be properly labeled.

"The soy bean has also been utilized as a substitute for the coffee bean. When roasted and prepared, it makes an excellent substitute for coffee."

964. Prinsen Geerligs, H.C. 1917. Ueber die Anwendung von Enzymwirkungen in der Ostasiatischen Hausindustrie [On the application of enzymes in East Asian cottage industries]. *Zeitschrift fuer Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57. May 8. [Ger]
• ***Summary:*** Paper read before the *Niederlaendische Chemische Vereinigung* (Dutch Chemical Union), General session in The Hague, December 28, 1916.

This paper is on the domestic application of enzyme actions in Eastern countries, and describes, among other things, the making of fermented and non-fermented soybean food products. "To make soymilk (*Milchersatz*), only white soybeans are used, softened in water for 3 hours until they have swollen to 3 times their original size. Then, while water is added continuously, they are milled between two hard stones and fall through a hole in the bottom stone into

© Copyright Soyinfo Center 2013

a pail. A very small amount of the thin soybean slurry is set aside; through the proliferation of lactic acid bacteria it quickly becomes so sour that after several hours that lactic acid content has risen to 1.5%. The above mass is cooked in a large pan. The now pasteurized liquid is filtered through a large sieve to remove the hulls and hard pieces. The filtered milk-white liquid has, in appearance and chemical composition, the greatest similarity with animal milk. A sample contains 6.9% solids, 3.13% protein, and 1.89% fat. It gives an alkaline reaction and contains a solution of legumin bound to potassium phosphate, while the fat is emulsified in the thick protein solution. Unfortunately this soymilk (*Bohnenmilch*) tastes very much like raw French-beans (*Schneidebohnen*), so that people who are accustomed to cow's milk do not enjoy it much. But infants should be very content with it.

"If cheese is to be made from this milk, a small amount of the slurry soured with lactic acid is added to it. Thereby, the legumin (protein) is dissolved from the potassium phosphate and coagulated, then settles out with the fat with which it is emulsified. When the milk, through several hours mixing with the coagulation liquid, has become fully firm, it is packed in cloths and pressed between boards, in order to remove any excess water. Then the cakes are cut into square pieces; if they are to be eaten raw, it must be done quickly, lest they continuing souring and spoil. In order to impart a pleasant color to the cakes, they may be placed for several moments in a Curcuma [turmeric] decoction. Mostly the cakes of cheese (*Kaesekuchen*) are dried in the sun or fried (*gebraten*). They then keep better and acquire a pleasant flavor."

"Of much greater significance is the preparation of the most popular and prevalent soybean preparation, soy sauce (*der Soja*), which in East Asia is an indispensable seasoning for a variety of dishes, and is produced and used in unbelievably large quantities. There are various types, some of which contain wheat flour. But here we will consider only the type that is made [in the Dutch East Indies] with soybeans plus some added ingredients to improve the flavor.

Note: This is the earliest German-language document seen (April 2012) that uses the term *der Soja* to refer to soy sauce.

For the preparation of soy sauce, brown or black soybeans are cooked for several hours. After pouring off the cooking water, the beans are placed in flat trays (*Hürden* [*tampah*]) of woven bamboo and dried for half a day in the sun, then cooled in the shade. When they are cooled, the beans are covered with leaves of *Hibiscus tiliaceus*, a species of mallow, and they are soon covered with a layer of Aspergillus mold, which is usually found on the tiny hairs or cilia on the underside of the hibiscus leaves and so is transferred to the beans. The mold filaments or hyphae penetrate between the tough and thick cell walls, dissolve these through hydrolysis, and thus make the cell contents accessible to the influence of the molds. The mold is allowed to work until it forms spores (*Fruchtstaende*). The beans then appear to be covered with a brownish green felt. The beans are then dried in the sun and placed in a strong, cold salt solution. The mixture is placed in the sun for several days and then cooked. The brine solution, which contains the soybean extract, is poured off and the beans are cooked several more times until they have lost their salty taste. The various cooking extracts are mixed, filtered through a fine sieve, then mixed with palm sugar, aniseed [*Pimpinella anisum*], and an herb extract, which one can buy at a druggist's shop, and finally cooked until salt crystals appear. The soy sauce (*Soja*), which is now ready to use, is a dark brown, thick, very salty liquid, in which a viscous sediment forms. By diluting with water, it becomes turbid. But the solution again becomes clear with the addition of salt. This thorough investigation has shown that the mold hyphae branch out into the cell walls, hydrolyze and dissolve the pectin substances, and likewise break down the protein content of the cells to leucine, tyrosine, asparagine, and other decomposition products of legumes.

"But this action and result is of secondary importance. The main point is the dissolution of the cell walls, whereby the protein becomes free and can be dissolved in the concentrated salt solution. The composition of soy sauce, except for the salt content, is very similar to that of meat extract, so that it can completely replace meat in the largely vegetarian diets of the people of the East.

"In a similar way, various other foods are obtained, whereby a mold dissolves the cell wall and so fulfills the function otherwise accomplished by cooking. We mention here only the bean paste (*Bohnenbrei*) [*tao-tjo*], for the preparation of which, dehulled white soybeans are cooked and then mixed with rice flour and glutinous rice flour (*Kleereismehl*). The mixture is placed in a small basket that is lined with the same hibiscus leaves mentioned above, and the Aspergillus molds growing on the leaves are allowed to develop. This saccharifies the rice starch flour and dissolves the bean cell walls. Thereby, the mixture becomes sticky and glutinous, and tastes sweet. It is dried and placed in a pot with saltwater. There it remains until each bean is permeated with salt and a sample tastes salty. Palm sugar is added to taste and it is ready for use without further cooking. Microscopic analysis showed that the cell walls were completely dissolved and the contents lay free, so that the mold growth had greatly improved the digestibility of the beans.

"In Java, soybeans are also cooked and made into flat cakes on a flat bamboo lattice. A small piece of an old cake is added and the mass is covered with banana leaves. One soon observes a rise in temperature and the development of moisture. The mass is penetrated by hyphae of *Rhizopus Oryzae*, which again dissolves the cell walls and frees their contents. The cake [tempeh, though the term is not

© Copyright Soyinfo Center 2013

mentioned] with its covering of mold, is consumed without further processing, raw or fried (*gebraten*).

Also discusses the preparation of onchom from peanut press-cake. Address: PhD, Netherlands.

965. Van Meter, Anna R. 1917. How to cook soybeans. *Ohio Farmer* 139(20):701-02. May 19.

• ***Summary:*** "At this time of high food prices and of immanent food shortage, it is a matter of satisfaction to be able to call attention to so promising a food material as the soybean." Gives the composition of the soybean, and describes how to make and use soybean milk and "the curd or cheese-like substance which forms in the soybean milk on treating with an acid" [i.e. tofu]. Gives recipes for: Boiled whole soybeans with tomato sauce, sour pickle sauce or gravy. Baked soybeans. Green soybeans. Soybean meal [i.e. flour, "a useful substitute for wheat flour in bread, biscuits and muffins"]. Soybean meal soup.

"Green Soybeans.–These are excellent. Altho the pods are too tough to be eaten, the beans should be boiled in the pods, since they can then be shelled much more easily than when raw."

Note: This is the earliest English-language document seen (June 2009) that uses the term "Green Soybeans" to refer to green vegetable soybeans. Address: Dep. of Home Economics, Ohio State Univ.

966. Williamson, A.A. 1917. Soya beans for American mills. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 20(125):795-99. May 29. [1 ref]

• ***Summary:*** Discusses the Manchurian soybean industry with reference to the possibility of soybean imports for use in American mills. Contents: Introduction. Trade developed originally with England. Special regulations established. Arrangements for settling future deals. Advisable course for American buyers. Production in the Harbin consular district. Varieties of soya beans. Put to many uses in Far East (in central and western China it is ground into a flour to be made into vermicelli, and employed extensively in the manufacture of vinegar and bean curd). Dairen a center for oil industry. Places of production–export figures. Differences in quality of oil.

"Soya beans have never been shipped from Dairen to the United States so far as is known at the American consulate. Certainly they have never been among the declared exports, although they may have gone by way of a Japanese port...

"The soya bean first became known to world trade in 1908 when shipments to England were made by the Mitsui Bussan Kaisha, although it has long been an article of everyday use among the Chinese. In the boom that followed many evil practices arose, as a result of which losses of considerable amounts were sustained by firms interested in the business and not engaged in speculation, largely through the failure of some dealers and speculators to deliver merchandise contracted for in advance. By 1910 things had come to such a condition that whenever a ship came in to load for Europe the price of beans would soar far above the normal market prices, as it was known that several of the foreign firms had contracted to deliver beans but had not been able to obtain delivery of the 'future' beans they had bought. So it came about that the date of a ship's arrival was kept secret by its agents as long as possible to enable the charterers or special clients quietly to get together their cargo before the market began to rise. Several firms became bankrupt as a result of their losses, and the soya-bean business itself began to fall into bad repute.

"Japanese officials sought a remedy, and as a result the Dairen Staple Products Exchange and the Dairen Trust & Guaranty Co. were formed in June, 1913. By the regulations then put into force, all deals had to be made between licensed dealers, and both parties were protected...

"Beans are generally shipped in gunny bags holding 150 kin (198.42 pounds). The 100-pound bag favored by the American trade is not known here... The picul (133 1/3 pounds in China) is a standard weight in the Far East, 100 kin or catties making a picul...

"Soya beans, under the 1909 tariff, were subject to an import duty in the United States of 45 cents per bushel of 60 pounds. Oil was duty free. Under the 1913 tariff both are on the free list...

"The Dairen wharves are good and are well equipped to handle large ships. Although elevators and loading machinery are not employed here because of the cheapness of coolie labor and for other reasons, the work is done expeditiously, 17,000 tons having been loaded in one day, while about 10,000 tons may be put down as the average, without night work...

"Dairen is the center of the bean-oil industry, shipping about eight times as much each year as Hankow which is its nearest competitor... Japan takes practically all the bean cake exported. The United States takes none...

"The exports of soya beans from Hankow during 1915 were: Black 8,927 tons, green 10,513 tons, and yellow, 52,218 tons." Exports for 1916 are also given in a table. Address: Consul, Dairen, Manchuria.

to his 1917 translation of: Wu Ch'i-chün, ed. 1848. *Chih wu ming shih t'u k'ao.*

"*The Shih Ching,* or Book of Odes, under the heading of 'Pin Feng Seventh Month', says: N. B.–Translated; see Chih (*Chih wu ming shih t'u k'ao*) translation–Pai ta tou, p. 31.

"In the *Hsiao ya* (Lesser Eulogium–Section of *Shih ching*), there is a poem entitled the *Pai chu,* or White colt, in which it says: "Let the brilliant White colt graze in my field. of Huo, or young bean plants." In the *Ta ch'üan* (Complete Commentaries on the Classics, by Chu Hsi), there is a. passage as follows: 'Hua Ku-yen says the name *Huo* denotes the leaf of the bean plant and is used in making Kêng, or broth.'

"In the *Ta ya* (Greater Eulogiums–Section of *Shih ching*) there is a poem entitled *Sheng min,* or Decade of Shêng-min, in which it says: N. B.–Translated; see Ch. translation, p. 3, 27.

"The *Erh Ya,* or Ancient Dictionary of Classical Terms, says: N. B.–Translated.; see Ch. translation, *Pai ta tou,* p. 2, 27.

"The *Sheng Shu,* or Canons of Yao and. Shun, says: N. B.–Translated.; see Ch. translation, *Pai ta tou,* p. 25.

The *Ch'un ch'iu,* or Spring and Autumn Annals, says: "The term Shu is a general one for the bean, and it grows in the spring and ripens in the autumn. They are classified according to their uses and form. The *Chih,* or Scarlet, and the *Hei,* or Black beans are suitable for the *yin,* or negative principle, while the *Sheng* or fresh beans are good for the *yang,* or positive principle. When the Shu becomes scarlet and black it changes gradually from the negative to the positive. In general it has the same character but it changes a little in order to have the positive appearance.

"According to the *Tso chu chih* the god of beans has the name of *Ling Chih,* and his family name is *Lao,* is seven feet tall, has large eyes, and he understands the change of the seasons."

The *Hsiao ching,* or Book of Filial Piety, by Pa Shen-ch'i, says: "Red soil is suitable for the Shu."

The Hsia hsiao chêng says: N. B.–Translated; see Ch. Pai ta tou translation, p. 17.

"*Huai nan-tzu* says: 'The mud from the river bottoms is good for the Shu.'

"The *Po ya,* or Ancient Dictionary, by Chang I, describing the Tonu (1 Cc), or bean, says: 'The *Ta tou* (2 Cc) [soybean] is identical with the Shu (1 Cc);, while the *Hsiao tou* (2 Cc) [azuki bean] is called the *Ta* (1 Cc). There are also the *P'i tou* (2 Cc), which is also known as the *Wan tou* (2 Cc), and *Liu tou.* The *Hu tou* (2 Cc) is also known as the *Chiang tou* (2 Cc) and *Shuang tou* (2 Cc). The bean pods are called *Chia* (1 Cc), the leaf is called *Huo* (1 Cc). The *Pa shu,* is identical with the *Pa tou* (2 Cc).'

"*The Chung shu shu* (See Bretschneider, *Botanicon Sinicum,* 1:79), a Treatise on the Art of Planting, by Kuo T'o-t'o, a work of the 7th or 8th century, describing the bean, says: 'Plant the bean, *Yu ma* (2 Cc), and *Ta ma* (2 Cc) (*Cannabis sativa*). If the beans are not planted at the proper time they will be injured by weeds, and even if they bear some pods, there will not be many beans. There is a maxim which says: *Ma yun ti tou yün hua,* "Cultivate the Ma, or hemp earth; cultivate the Tou, or bean blossom." This means that the *Ma,* or hemp, should be cultivated before it has even sprouted, while the *Tou,* or bean should not be cultivated until it has blossomed.. The Ta tou, or Large bean [soybean], should not be planted on a Shên day.

"The *Erh ya i* (Appendix to the Erh Ya, by Lo Yüan, a writer of the 12th century), describing the Shu, says: 'The *Shu* is identical with the Tou and this class includes very many varieties. All mention of grains included these two names. In ancient times it was said that the hundred grains were made of varieties of *Liang* (1 Cc) (now *Setaria italica,* Kunth), which was a general name for grains like *Shu,* or glutinous variety of *Panicum miliaceum,* L., and *Chi* (1 Cc), also *Panicum miliaceum,* and *Tao* (1 Cc), or *Oryza sativa* [rice]. The term *Shu* is generally used to denote all *Tou* (1 Cc), or beans. These three classes each had twenty varieties, making a total of sixty, while the *Shu* (1 Cc), or Vegetables, and *Kuo* (1 Cc), or Fruits, each had twenty varieties, making a grand total of one hundred. But I (Lo Yuan) think that each kind of grain includes not under ten varieties, so that we do not need to include the vegetables and fruits in order to make up the total of one-hundred.' The *Kuang ya* (Ancient Dictionary), says: 'The *Ta tou* is identical with the *Shu.* The *Hsiao tou* [azuki] is the same as the Ta. The *Pi tou* is also known as the *Wan tou* and *Liu tou.* The *Hu tou* is also known as the *Chiang tou* and *Shuang tou.* The pods of the been plant are called *Chia,* while the leaves are known as *Huo.* The *Pa shu* is identical with the Pa tou.' The *Kuang chih* (See Bretschneider, *Botanicon Sinicum,* 1:164), or Ancient Records, by Kuo I-kung of the Liang dynasty (AD 502-556), says: 'In one year there are three crops of *Hsiao tou,* or Small beans [azuki] ripened. There is an inscription which reads, *Kan pai tou ts'u* 'sweet, coarse, white large bean.' The large bean may be eaten (?), and the *Tzu tou* (2 Cc) may also be eaten. The *Chü tou* (2 Cc) has a sprout or stem similar to that of the *Hsiao tou* (2 Cc), has a purple blossom and may be utilized in making Mien, or noodles. These beans grow in Chu-ti and Chien-ning. The *Hu tou* class of beans includes both green and yellow varieties. This is a general summary of the different kinds of beans. The *Ta tou,* or Large bean [soybean], is planted during the second decade of the second month, this being the best season. If the planting is delayed up to the third or fourth month, much of the seed will be wasted. The *Hsiao tou,* or Small bean [azuki], should be planted in the fifth month, as this is the best season for this bean. The *shang fu* (2 Cc), or first part of the three decades of summer, is regarded as the second best period, while the *chung fu* (2 Cc), or middle summer period, is considered third best. These beans are harvested in the autumn in the

© Copyright Soyinfo Center 2013

eighth month, and for this reason, the rains of the eighth month are called the *Ta hua yü,* or Bean blossom rains.' The *Lu Shih Ch'un ch'iu* (Spring and Autumn Annals of the Lu Shih), says: 'When the Shu is planted at the proper time, it will have a long stalk and short root, and its pods usually grow in groups of from two to seven. This plant grows many branches with a number of joints. The leaves grow very profusely and the plant bears many beans. The Shu class of grains is considered inferior to the other Ku, or grains. This is why the *P'in fêng* poem of the *Shih ching* says that in the ninth month, for food, they gather the Shu (1 Cc), or Bean, and *Chü* (1 Cc), or seeds of the female nettle hemp plant (*Boehmeria nivea*), and *T'u* (1 Cc), or Sow thistle (*Sonchus oleraceus*), while for fuel they gather the wood of the *Ch'u* (1 Cc), (*Ailantus glandiculosia,* Desf.). The farmers are made to eat the Shu, or beans, and *Chu,* or Nettle hemp seeds, for food, although they are very coarse and poor, and the T'u ts'ai, or Sow thistle, which is very bitter, while for fuel, they are compelled to use the *Ch'u,* or fetid tree (*Ailantus*), which makes a very ill-smelling firewood. This is the reason why the farming people were considered coarse and were forced to be frugal and industrious, yet in spite of these hardships, as a class they were happy. Even Confucius said that to eat the Shu and drink water could be called proper conduct, and demonstrated filial piety better than the indulgence in ease and luxury and worship of material things.' The *Han shu* (History of the Han dynasty), says: 'At the present time, when there is a famine and the people are poverty stricken, half their diet consists of Shu, or Beans, and when food for the soldiers was scarce, the Shu was mixed with other grains and eaten by them. The Shu is put to very many uses, and is also placed in the sacrificial vessels used for worship. There are four preparations made from Tao mi, or rice and Shu, or Millet, which are called *Chou* (1 Cc), *Erh* (1 Cc), *Fen* (1Cc), and *Tzu* (*1 Cc*). When both are mixed together and boiled the substance is called *Erh;* when made into cakes, it is called *Tzu.* Because of their sticky glutinous nature, these grains are ground into flour. The Ta tou, or Large bean [soybean], is boiled and used as *Piao* (1 Cc), an outside coating or garnish for food. According to the commentary of the second Ch'êng, the term *Erh* is identical with *Ch'ou* and *Tzu* is identical with *Fên.* In the commentary of the former *Chêng,* these are separated into different classes and the Fên is described as being a *Tou hsieh* (2 Cc), or Bean flour. This is not the same. The bean was also used to make *Shih* or Bean relish' [fermented black soybeans]. The *Ch'u tzu* (See Bretschneider, *Botanicon Sinicum,* 1:203) (Elegies of Ch'u, by Ch'ü Yüan, 4th century BC), mentions a preparation called *Ta ku hsien suan hsin kan hsing.* Some one has said that the *Ta ku* (1 Cc) here mentioned refers to *Shih* (1 Cc). This description would seem to refer to liquid bean relish, a. mixture obtained by mixing salt, pepper, ginger, and honey with beans. These ingredients, when mixed together, make a substance which has an acrid-sweet taste and is used in preparing *Chou,* or Congee. It is said that Kung Kung (A legendary being. See Giles, CBD, p. 393) had a stupid son, who, on one occasion of the winter solstice, died of a plague. His ghost feared the *Chih hsiao tou,* or Small scarlet bean, and for this reason congee is made and eaten, at the winter solstice to ward off the evil spirits.' The *Yang shêng lun* (See Bretschneider, *Botanicon Sinicum,* 1:210), by Chi K'ang, says: 'The bean diet will cause the body to become heavy, and if it is eaten for three years, the body will become very heavy and movement difficult. If it is constantly eaten, it will cause the body to become very fat and the flesh very coarse and dry. In the tenth month of the first year of Duke Ting, the bean crop was killed by frost. Formerly the learned men regarded the Shu, or bean plant, as being very resistant to frost, and there was a saying that if the bean plant was killed, all plants would perish.' A table (p. 11) compares the nutritional composition of [soy] bean milk and cow's milk.

969. *New York Times Magazine.* 1917. Woman off to China as government agent to study soy bean. Dr. Kin will make report for United States on the most useful food of her native land. June 10. p. 9. (New York Times section 6).
• ***Summary:*** The *New York Times Magazine* is part of the Sunday *New York Times* and may be simply cited as such. Dr. Yamei Kin is "the only Chinese woman with a physician's diploma from an American college," the Woman's Medical College of New York. "She left New York a few days ago for the orient to gather data on that humble but nutritious food [the soy bean] for the Department of Agriculture at Washington." During World War I, new demands are being placed on America to feed its citizens and allies. "The appointment of Dr. Kin marks the first time the United States Government has given so much authority to a Chinese. That it is a woman in whom such extraordinary confidence is now reposed detracts nothing from the interest of the story."

China was the first country to invent paper, printing, gunpowder, porcelain, chess, playing cards, and silk. "And now Dr. Kin is going to see if her native land can teach the United States how to develop a taste for the soy bean in its

© Copyright Soyinfo Center 2013

numerous disguises...

"'The world is in need of tissue-building foods,' said Dr. Kin, 'and cannot very well afford to wait to grow animals in order to obtain the necessary percentage of protein. Waiting for an animal to become big enough to eat is a long proposition. First you feed grain to a cow, and, finally, you get a return in protein from milk and meat. A terribly high percentage of the energy is lost in transit from grain to cow to a human being."

"'The statement is frequently made that the Orientals live almost exclusively upon rice, eating little meat. It is not generally known, perhaps, that deficiency in protein is made up by the consumption of large quantities of products of the soy bean, which take the place in our dietary of meat and other costly nitrogenous foods. They are eaten in some form by rich and poor at almost every meal. Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy bean, which is protein, meat, and milk in itself. We do not eat the plain bean in China at all. It is never eaten there as a vegetable, but in the complex food products–natto, tofu, miso, yuba, shoyu, and similar dishes.

"'The chief reason why people can live so cheaply in China and yet produce for that nation a man power so tremendous that this country must pass an Exclusion act against them is that they eat beans instead of meat.'"

She then describes how to make tofu. "'Soup noodles are made out of bean curd. Entrées made of bean curd are served with cream mushroom sauce or a hot Spanish tomato sauce. A salad of bean sprouts, accompanied by cheese–the cheese [fermented tofu] a cross between Camembert and Roquefort, and made from the soy bean–is very nutritious and palatable. Americans do not know how to use the soy bean. It must be made attractive or they will not take to it. It must taste good. That can be done. We make from it a delightful chocolate pudding. A black soy bean sauce we use as a foundation for sweetmeats in China."

Note: None of the various Chinese food experts whom we have asked can understand what Dr. Kin means by the previous sentence. None has ever heard of a "black soy bean sauce" that is used as a foundation for confections or sweets in China. The two black soy bean sauces made in China, from either fermented black soybeans or jiang, are both salty. (WRS Jan. 2009). Nevertheless: This is the earliest English-language document seen (Oct. 2008) that uses the term "black soy bean sauce" to refer to a kind of sauce made from soybeans.

"The soy bean contains practically no starch, which means that it is a most desirable food for diabetics, and also, of course, for vegetarians. Buddhists kill no animals–they thrive by making a specialty of the soy bean, which, by the way, is already being used in the French Army. They find there that soy bean mixed with flour makes a good cracker, more nourishing than any other cracker.'"

"The Chinese do not know what worn-out soil is. Some places are so fertile and are cultivated with so much care and skill that three or four crops a year are regularly gathered... it is very common to see two crops in the same field at the same time... The Chinese have a passion for fertilizing the soil..."

"Dr. Kin is a graduate of the Woman's Medical College of New York, and her great interests have always been domestic sanitation, civic hygiene, the conservation of life, and questions of nutrition. She is the head of the Imperial Peiyang Woman's Medical School and Hospital, near Peking... the Imperial Infant Asylum in Tien-tsin, the Widows' Home, and the Girls' Refuge all come under her supervision as head of the woman's hospital work of Northern China. She will return to this country in October, bringing to our Government the detailed results of her study of the uses of the soy bean as a foodstuff needed by this country and by the world in the campaign of food raising and conservation." An illustration (line drawing) shows a portrait of Dr. Yamei Kin.

Note 2. This is the earliest published document seen (July 2000) that mentions Dr. Yamei Kin. Frank N. Meyer wrote letters about her in 1911 and 1916.

Note 3. This is the earliest document seen (Oct. 2001) that mentions a soy pudding (a "delightful chocolate pudding" made from bean curd).

970. *Literary Digest.* 1917. To study the soy-bean for Uncle Sam. 55(2):52-53, 55. July 14. Whole No. 1421.
• ***Summary:*** This is a lengthy summary of an interview with Dr. Yamei Kin, published in *The New York Times Magazine* on 10 June 1917. It includes several lengthy excerpts. "So interested has the United States become in this discovery [China's knowledge of the soy-bean] that Dr. Yamei Kin, a Chinese woman graduate of an American college, has been sent back home to gather for the Agricultural Department at Washington [DC] all the facts that are known in China about the soy-bean."

"'Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy-bean, which is protein, milk, and meat in itself,' says Dr. Kin.

"The plain bean, however, is never eaten, but it furnishes such products as natto, tofu, miso, yuba, shoya [sic, shoyu], and other dishes with queer-sounding names..."

A letter dated 26 March 1917 from Frank N. Meyer in China gives the address of Dr. Mrs. Yamei Kin as 500 W. 111th St., New York City.

971. *Hartford Courant* (*Connecticut*). 1917. The case of the soy bean. July 21. p. 10.
• ***Summary:*** That the soy bean "will become forthwith an

© Copyright Soyinfo Center 2013

article of food for New England folk is very unlikely even though the National Emergency Food Garden Commission is now urging the public to can the beans.

"The strange campaign for the introduction of this new article of diet has moved W.P. Brooks of the Massachusetts Agricultural Experiment Station to publish a fairly conclusive statement upon the matter. He says the advocates of the soy bean say something like this about it: -

"'The soy bean is a very rich food; it can be successfully grown in Massachusetts and will give a large yield; it is palatable prepared and served in similar ways to those employed in the cooking of ordinary field and garden beans. The last statement is, I believe, absolutely incorrect, and the others require qualification. The fact that I have had unusual opportunities of observation and experience with this crop leads me to ask space for this article since I hope it may be the means of preventing discouragement and disappointment. I lived for twelve years in Japan. In that country the soy bean has for many hundreds of years been an important crop. The Japanese made practically no use of it as a vegetable prepared by ordinary methods of cooking. They are very largely vegetarians, and if it were adapted to such use there can be no doubt they would so employ it.'

"Then Mr. Brooks goes on to say that since coming to this country he has tried baking the soy bean and the members of his family were a unit in agreeing that it was nowhere near as desirable as the native varieties. He had roasted and ground the bean and used it as a substitute for coffee and found it a trifle less worse than when baked.

"He says that the bean is rich in protein and fat but he adds that it is much too rich to be palatable. While the Japanese do not use it as a cooked food they contrive to make a cheese [tofu] of it, but this they do not prepare in the family but buy it of manufacturers. They also use the bean in preparing a sauce [soy sauce] and make extensive use of it as a food for cattle. Finally he says that while he does not wish to discourage experiments he does not think it will be regarded as useful as an article of food.

"The most productive varieties, he says, are not likely to mature in Massachusetts but several varieties will generally produce a crop. They need, he says, a season a little longer than the larger sorts of field corn and they will produce from twenty to twenty-five bushels to the acre. Do Connecticut people care to raise soy beans with this outlook, especially when it is considered desirable to inoculate the soil with a certain bacteria before attempting to get a crop?"

972. *Ladies' Home Journal.* 1917. The most nourishing of all beans. Plant soy beans: They will come in handy next winter. 34:29. July.

• ***Summary:*** "Now that we are taking stock of our food resources we find these beans a palatable, nutritious food... they make an emergency addition to our daily food and, most important of all, they can be used as a meat substitute. The fact that they contain no starch makes them valuable for invalids who cannot eat starchy foods."

Soy beans "may be boiled and served as a vegetable, roasted like peanuts and made into soy-bean coffee and soy-bean cheese. There is a soy-bean milk rich in protein, which makes an excellent substitute for condensed milk and is particularly valuable in cooking. There is also a soy-bean oil, which is valuable as a food product.

"The beans may be grown easily in practically all sections of the country where corn is grown, and they will give heavier yields than most other beans."

"The dried beans may be purchased now in some markets in various parts of the country, often under the name of togo beans, or Manchurian or Chinese or black beans, but, with the increased acreage which will be given to raising them this summer, will be more generally available."

"Soy beans have been canned in considerable quantities during the past season, baked with pork, and are on sale in this form in numerous markets. Canned green soy beans, which may be compared with lima beans, also are on the market in some sections of the country."

"There are several varieties of bean cheese made from the soy bean." The article then describes how natto and tofu are made and eaten. Gives a recipe for soy beans with bacon and molasses.

Note 1. This article, published about 3 months after the United States entered World War I, is based in part on *USDA Weekly News Letter* (11 April 1917, p. 7).

Note 2. This is the earliest English-language document seen (Nov. 2012) that uses the term "soy-bean coffee" to refer to soy coffee.

Note 4. This is the earliest article on soy seen (Aug. 2002) in *Ladies' Home Journal* magazine.

973. *New York Produce Review and American Creamery.* 1917. Navy bean has rival: Soybean has higher food value–Bean milk preparation. 44(14):565. Aug. 1. [1 ref]

• ***Summary:*** Discusses the advantages of soybeans over navy beans, based in part on *Ohio Agric. Exp. Station Bulletin* 312. "Soybeans are rapidly finding a place as human food, used as common white beans and in new preparations, but more nutritious and economical. Less risk and labor are involved in growing and harvesting soybeans as compared with navy beans.

"Boiled or baked alone, or in combination with pork, potatoes or rice, soybeans take the place of navybeans. Soaking over night in considerable water is necessary to remove the strong flavor of the beans. A little soda in the water during cooking makes them softer.

"Green soybeans cooked in the pod shell easily, and make a palatable dish when served with butter or milk. The pods are tough and seldom eaten.

"A little soybean flour added to cornmeal makes mush made from the mixture brown and quicker and increases its

© Copyright Soyinfo Center 2013

food value."

"Soy sauce, bean milk, bean curd and a ripened vegetable cheese called 'miso' are common foods made of soybeans in Japan and China."

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term "soybean flour." Address: New York.

• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

"37036-37058. From Chusan, Chosen (Korea). Presented by Rev. George H. Winn, Presbyterian Mission. Received Jan. 28, 1914.

"37036 and 37037. Soja max (L.) Piper. (*Glycine hispida* Maxim.)

"37036. 'No. 1. *Yulgochi* bean. Very hardy, will grow and produce where the ordinary beans will not amount to much.'

"37037. 'No. 2. *Kambool.* Very commonly found in the markets.'

"37038 and 37039. Phaseolus angularis (Willd.) W.F. Wight. Adzuki bean."

"37040 to 37055. Soy bean.

"37040. 'No. 5. Brown mottled bean; carefully cultivated and given sufficient fertilizer.'

"37041. 'No. 6. Brown. Planted around the edges of the rice fields or where there is a small corner that can be utilized, they are very hardy and will grow and produce where the ordinary beans will not amount to much.'

"37042. 'No. 7. Large white-eyed bean; carefully cultivated and given sufficient fertilizer.'

"37043. 'No. 8. Large green bean. The larger beans are all carefully cultivated and given sufficient fertilizer.'

"37044. 'No. 9. Black mottled brown bean. As a rule, the smaller beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are very hardy and will grow and produce where the ordinary beans will not amount to much.'

"37045. 'No. 10. White mottled black bean; carefully cultivated and given sufficient fertilizer.'

"37046. 'No. 11. Ordinary green bean. As a rule, these beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are, however, often planted in fields. They are very hardy and will grow and produce where the ordinary beans will not amount to much.'

"37047. 'No. 12. Brown mottled bean; often planted around the edges of rice fields and where there is a small corner that can be utilized; very hardy and will grow and produce where ordinary beans will not amount to much.'

"37048. 'No. 13. Large blue bean; carefully cultivated and given sufficient fertilizer.'

"37049. 'No. 14. Large black bean; carefully cultivated and given sufficient fertilizer.'

"37050. 'No. 15. Small black bean; grown around the paddy fields. It is cultivated in larger areas because it is supposed to be extra nourishing, and some seem even to suppose it has medicinal properties, but I fear there is not much to it.'

"37051., 'No. 16. The larger beans are all carefully cultivated and given sufficient fertilizer.'

"37052. 'No. 17. The red bean; carefully cultivated and given sufficient fertilizer.'

"37053. 'No. 18. Black mottled yellow. Small beans which are planted around the edges of the rice fields or where there is a small corner that can be utilized; very hardy and will grow and produce where the ordinary beans will not amount to much.'

"37054. 'No. 19. Maroon bean. One of the larger beans, all of which are carefully cultivated and given sufficient fertilizer; but this is not very commonly found.'

"37055. 'No. 20. Ordinary white bean. One of the larger beans; carefully cultivated and given sufficient fertilizer.'"

"37062 and 37063. Soy bean. From Harbin, China. Presented by Mr. Southard Warner, American consul, at the request of the American consul at Newchwang. Received Feb. 5, 1914.

"See report on the 'Soya Bean of Manchuria,' 1911 [by Norman Shaw, Dairen].

"37062. Grown south of Harbin.

"37063. Grown north of Harbin."

"37069 to 37083. From Tientsin, China. Presented by Dr. Yamei Kin, Peiyang Woman's Medical School and Hospital. Received Feb. 6, 1914.

"37074 and 37075. Soy bean.

"37074. '*Yüeh ya tou*, literally 'moon-tooth' bean, so called from the edge of the green peeping outside of the black thick skin like the crescent moon in the sky. Is largely used for making bean sprouts, which they say requires a bean that is not mealy or farinaceous, as that kind becomes mushy in the process of germination and has no taste left. Also is good for feeding animals, requiring to be lightly steamed before feeding, not boiled, for then the oil escapes and the flavor is lost. This kind is valued for its oil, which it contains in a great amount, and for making bean curd. This must be grown in a well-drained clay soil; black or moist earth will not do.'

"37075. '*Cha tou.* Specially used for making bean curd and bean sprouts.'"

"37077. Soy bean. '*Huang tou.* Used for making bean curd as well as starch and vermicelli.' Note: #37078 is Mung bean (*Phaseolus aureus* Roxb. [Roxburgh], *Lü tou*).

"37080. Soy bean. '*Ching tou.* Used only for the oil expressed and fodder purposes.'"

"37228 to 37325. Soy bean. From Seoul, Chosen (Korea). Presented by Mr. George H. Scidmore, American consul general. Received Feb. 17, 1914.

"'I submit the following information, which has been obtained, for the most part, from the Director of the Department of Agriculture, Commerce, and Industry, of the General Government of the Chosen. The same officer has very kindly supplied samples of 98 varieties of soy beans.

"'The usual period during which the seed is sown extends from the middle of May to about July 10. In case the sowing is postponed till the latter part of that period, the fields from which wheat has already been harvested are used. The soil is first prepared by plowing and is then shaped into small hemispherical hillocks about 4 ft in diameter. The seed is then planted in drill holes on the top of these hillocks, 6 or 7 inches being left between drill holes and 5 or 6 seeds being sown together in a hole. As a general rule, no manure or other fertilizer is used, but when it is desired to enrich the soil ashes are most commonly employed. After the plants have sprouted sufficiently, the shoots are thinned out so as to leave two or three only to each drill hole. This process takes place at the time of the first weeding. The ground surrounding the plants is gone over with a hoe or other implement two or three times to turn over the soil and to weed the field. The process outlined above gives briefly the method of cultivation generally in use throughout Chosen, and is applicable whether the beans are planted in separate fields by themselves or in the same fields with other crops.

"'It is used mainly for its food value, the oil, and the residue as a fertilizer after the oil has been expressed. It is valuable as a food product for both men and cattle, the latter finding it a very excellent fodder when the whole plant is used. The principal food products for human consumption derived from the soy bean are bean paste [jang, Korean miso], soy [sauce, kan jang], bean curd, meal, etc.'" There follows a long list of 98 new soybean introductions from Korea, grouped by seed color; the first four are representative of the rest:

"37228. 'A1. *Six Months.* Yellow. From South Chusei Province, Koshu district.'

"37229. 'A2. *Widower.* Yellow. From North Heian Province, Seisen district.'

"37230. 'A3. *Broad River.* From South Heian Province, Junan district.'

"37231. 'A4. *White.* Yellow. From North Zenra Province, Chinan district.'

"37232. 'A1. *Early Yellow.* Yellow. From North Heian Province, Kokai district.'

Note: This is the earliest document seen (March 2009) that mentions Korean-style soy bean paste; it is also the earliest English-language document seen (March 2009) that uses the term "bean paste" to refer to Korean soybean paste (*jang*).

Other interesting names among these 98 introductions from Korea are: *Rengyo Egg, Large-Grained White, White Rat's Eye, Rich and Virtuous, Large Date, Indigo, Bluish, Barbarian Blue, Clasped Hands, Clear Blue, Black Rat's Eye,* and *Thousand Tied.* A tally of the seeds by color shows: Yellow 35. Green 22. Gray 17. Black 16. Striped 8. Note that Yellow seeds comprise only 35.7% of the total by color. Address: Washington, DC.

975. Meyer, Frank N. 1917. Re: Soybeans, soybean products, and other beans in China. In: Letters of Frank N. Meyer. 4 vols. Compiled by Bureau of Plant Introduction, USDA. 2444 p. See p. 2393-95. Letter of about 18 Sept. 1917 from Kingmen, Hupeh, China, to Mr. Menderson.

• ***Summary:*** Mr. Menderson seems to be working with William Morse at the USDA. Meyer begins: "I was delighted to get your enthusiastic letter of July 24, 1917, on the bean situation, and I am really sorry I cannot get a taste of some of these products you and Mr. Morse are creating.

"You ask me whether there is a simple flavoring to take away the beany taste of beancurd [tofu]. No there is not! The Chinese are of course used to this peculiar paint- or putty-like flavor, but even then they often season their bean curd dishes highly with salt and chili peppers. I have noticed tho [sic] that the curd in some towns tastes much better than in others, and I found that greenish yellow soy beans have a coarser taste and flavor than light yellow ones. I have some idea that the quality of oil has something to do with this characteristic. If I were you I would try to cook with superheated steam for a considerable time and see if that does not remedy the matter considerably. Remember that Boston baked beans need a whole night and morning of slow heat before they are 'tasty.'

"You also might try to de-fatten the beans, before making them into curd. Before doing so, first see whether bean cake can be used for making curd; if so, we are on the road to kill 2 birds with 1 stone."

Meyer has come into contact with numerous vegetable seeds that can be sprouted, including: "*Phaseolus angularis.* Adzuki bean; the speckled grayish black variety supplies the finest quality of beansprouts, of very sweet and juicy flavor. The red varieties are boiled, pounded with sugar and used as a filling in cakes and as sweetmeats.

"*Phaseolus aureus,* Mung bean, the ordinary sea-green variety supplies good beansprouts, vermicelli and gelatine; also much eaten boiled with rice as a broth or gruel.

"*Soya max,* the small green and yellowish green varieties are sprouted, but the sprouts have a rank flavor; the large green varieties are allowed to germinate only, or often not even that, and are fried in oil and some salt sprinkled over them; they are very appetizing. Often they are served with bits of raw, chopped-up carrots in between, creating a dish pleasing to the eye. From the small yellow and yellowish green soybeans, beancurd is made in all its forms. The large yellow varieties are used for oil production."

© Copyright Soyinfo Center 2013

Broadbeans (*Vicia faba*) and peas (*pisum sativum*) can also be sprouted. "Mustard seed (*Sinapis juncea*), in wintertime is sown out in warm, moist and dark places and the tiny plants eaten with sugar sprinkled over them. *Amaranthus blitum* and *A. tricolor* are eaten in the same way.

"Chives, *Allium schoenoprasum*, are forced in dark, warm places and eaten in soups, with meats, and baked in extremely thin pancakes, made from yellow soybean flour. They are considered, together with the garlic, to prevent ptomaine poisoning.

"Of all these forced winter vegetables the Mung bean is the most commonly used, on account of cheapness and availability, but in my opinion the Adzuki beansprout is the best."

"Did you have a look at my fotos [photos] of soybean products? I hope they gave you, Mr. Morse and others some ideas how big an affair the soy bean is in the daily life of 1/4 of the world's population, and if the white races do not soon stop committing suicide, these people will, by the year 2000, constitute 1/3 of the earth's inhabitants."

977. Eddington, Jane. 1917. The Tribune Cook Book: Beans, soy special. *Chicago Daily Tribune.* Oct. 14. p. E8 (Part 6, p. 8).
• ***Summary:*** "We do not know enough about that most charming family of plants which furnish us the meat stuff of the vegetable kingdom, or vegetable protein."

"'Don't forget the soy bean,' was one of the commands urged on growers this year, 'for there is sure to be a larger demand for the beans for human food.' Last year these beans cost no more than a third as much as navy beans and only a fourth as much as limas, and more people were trying them and failing in their cooking than ever before. They really ought never to be subject to a boiling temperature. Protein of any sort is easily hardened by much heat, and these beans have a high per cent of this food principle. With this in mind they may be baked, etc., like navy beans.

"The soy bean, though so long used in China and Japan, whence we have such products as soy sauce, was introduced many years ago into the United States as a soil renewer and fodder crop."

Years ago, experiment station bulletins were discussing "the total digestible nutrients" of fodder crops. Yet more than 25 years were to pass "before even a few people would listen to the word 'nutrient' in reference to their own diet. 'Roughage' was a term much used that far back, as contrasted with such condensed foods as grains, while now we use the term in talking about human diets."

"Perhaps we shall some time learn to make the bean curd of soy beans which the Chinese use so much. I am hoping to get a precise recipe. The soy bean flour came into use some time ago."

"The medical writers, who for a considerable number of years have used this bean extensively and written much about it with recipes," say that the "yellow soy bean" contains 35 per cent protein.

The section titled "Soy bean cheeses" contains a long excerpt from Friedenwald and Ruhrah (1913, p. 124-26), which states that the most common of these "cheeses" are natto, tofu, miso, juba [sic, yuba], and shoyu. A brief description of each is given.

The last section, titled "Home made soy bean flour," again discusses Friedenwald and Ruhrah, "patent soy bean flour, mostly known to doctors only," grilled soy beans, diabetics, and a recipe for home made soy flour.

978. *Los Angeles Times.* 1917. China's bean food. Oct. 22. p. II7.
• ***Summary:*** From the *East and West News:* "One of the first qualifications of a useful Chinese matron throughout the northern provinces, and in many of the southern, is her ability to concoct from beans, green, black, and yellow, those staple factors in Chinese diet known as 'teu fu' [tofu] and 'Hang fen.' The bean seldom appears in its pristine entireness upon a Chinese table, and it is not considered fit to eat in many parts of the country until it has been reduced to its essences and put up in the form of bean curd or the bean gelatine which one sees for sale in every roadside food shop gathering dust and microbes on its translucent surface... In the large cities bean manipulation of this sort is a craft and a commerce,... but it can scarcely be classed as an industry, except perhaps as an incipient industry. The beans must be crushed, soaked, boiled, strained and so on before the essences appear."

Note: This is the earliest English-language document seen (Sept. 2011) with the term "bean food" in the title.

979. Han, John E.S. 1917. Bean curd. *Yale-in-China Student* (*The*) (*Changsha, China*) 1(2):8-14. Nov.
• ***Summary:*** Contents: Historical. Bean curd as an ideal food. Manufacture of bean curd (with 6 illustrations–line drawings): Primary soaking, grinding, filtration, maceration, dilution, boiling (and yuba), coagulation, shaping of the commercial curd. Calculation for yield and profit (averaged). Suggestion as to the improvement of the manufacturing process.

"Bean curd manufacture was not known before the

Three Dynasties [Three Kingdoms, A.D. 220-265]. It was invented in the Han dynasty." A table shows the cost (in cash per catty [about 1.1 pounds weight] in Changsha) and nutritional composition of various foods. The costs are: bean curd 33, fish 340, beef 380, duck 440, chicken 460, pork 480, mutton 560, eggs 576. The author discusses the many diseases caused by meat in the diet. To coagulate tofu, magnesium chloride (a by-product of salt manufacture) is used in the North of China whereas plaster of paris [calcium sulfate] is exclusively used in the South.

Concerning suggestions for improving the tofu manufacturing process, the author states: "The serious drawback in native factories is the enormous amount of manual labour required in producing such a small output. In the Chinese Bean Curd Factory at Paris, many scientific improvements have already been put into practical use. The soaking is done on the second floor, and the soaked bean is conveyed to the mill by a tube like box. After grinding it is filtered by means of a filter-press which gives a much better extract in less time. The extract is carried from the mill to the filter-press and also from the filter-press to the pans by tube connections. A screw press is used to press the excessive water, both from the bean curd and from the 'Chia.' In large plants, I should recommend a hydraulic press rather than a screw-press and steam heating rather than direct fire.

"Hydrometers are perhaps used in the Paris factory, and it is very necessary for the native manufactures to have them. Such an instrument not only aids the manufacturers to judge the exact consistency of the extract, but also to secure a standard strength of bean milk throughout the country."

As of 1992 Yale still has campuses in China and Hong Kong. The Yale-China Association at Yale is still active. Phone: 203-432-0880. Address: Yale-in-China, Changsha, China.

• ***Summary:*** Subtitle: "Containing more than one hundred recipes for everyday food prepared in the wholesome Chinese way, and many recipes of unique dishes peculiar to the Chinese–including Chinese Pastry, "Stove Pastries," and Chinese Candies." Contains 151 recipes.

Page 15: "Chinese white cheese (Cc = Chinese characters given). Foo yue [fermented tofu]. (a) Cut bean cake [tofu], made of Chinese white beans, into half-inch squares ¼ inch thick. (b) Put into a jar provided with an airtight cover, the size of the jar depending upon the amount to be made. (c) Fill the jar ¼ full of Fun Wine. (d) Salt to taste. (e) Cover air tight and put away for not less than two weeks.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "Foo yue" to refer to fermented tofu.

Page 16: "Chinese red cheese (Cc). Noum yue [red fermented tofu]. For this the bean cake is made of Chinese red beans [azuki?]: (a) Wrap up the cakes in a piece of cloth in any desired size. Put pressure on top for 5 days. (b) Take off the weight. Then the cloth. Scrape off the mold on top. (c) Place in a jar. Fill the jar ¼ full with Fun Wine, and add plenty of salt. (d) Cover air tight, and set away for not less than 2 weeks; the longer, the better, provided the jar is kept air-tight."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "Noum yue" to refer to fermented tofu.

Page 147: "Bean cake. Do fu. This is a most delicious dish for its price. Many people in Paris can tell you how delicious it is, for there is a factory in Paris that makes millions of dollars each year by manufacturing this cake. The process of making bean cake is really so complicated that it would require a separate volume to describe it. Put white beans in water for a few hours. Then grind in a water stone grinder. Cook for 5 hours with calcium powder. Let it filter through a cloth and run into a cup or bowl. When cool it becomes solid. Tie this in a piece of cloth and boil. This is called bean cake" [Note: the above process, which does not even call for soybeans, will not make tofu!].

981. Couling, Samuel. 1917. Encyclopaedia Sinica: Bean, Soya. London: Oxford University Press, Humphrey Milford; Shanghai: Kelly and Walsh. See p. 46. 28 cm. [2 ref]
• ***Summary:*** "*Glycine hispida,* Monch. or *Dolichos soja,* L. This bean, so valuable for the oil which is expressed from it, has come into great prominence of recent years, owing to the enormous dimensions of the export trade in it since the Russo-Japanese War... The oil-yielding variety par excellence is the yellow bean, of which nearly 15 million piculs, or not far short of one million tons, were exported in 1915, 90% of this being from Manchuria, and the balance from Chihli, Hupei and Kiangsi... For several generations beans, but more especially beancake, had been sent to South China as manure for the sugar plantations; exportation abroad was prohibited until 1869, when shipments were made to Japan, which soon became a large customer both for beans and bean oil... In the Far East soya beans are used, as human foodstuffs, for making soy [sauce], bean paste, or *chiang*, as *tou fu* or beancurd, in soups, etc.; in cooking instead of rapeseed and sesamum oil; and the cake is employed as a fertilizer and for fattening hogs... Besides the Soya Bean there are many other kinds of bean cultivated in China, and entering largely into the diet of the people. The chief of these is *Phaseolus mungo* L, the green bean Lü Tou [mung bean], which contains little oil but is used in the manufacture of vermicelli.

"The annual export of vermicelli, principally from Chefoo, is considerable–amounting in both 1913 and 1915 to nearly Hk. Tls. [Haikwan Taels] 3,000,000; it goes to Chinese emigrants abroad." Address: M.A. (Edin.), Lately honorary secretary and editor, North China Branch, Royal

Asiatic Society.

982. Crevost, Charles; Lemarié, Charles. 1917. Catalogue des produits de l'Indochine. 5 vols [Catalog of the products of Indochina. 5 vols.]. Hanoi: Imprimerie d'Extrême-Orient. 29 cm. Formerly published in Bulletin Economique de l'Indochine, Vols. 25 and 26. [Fre]

• ***Summary:*** Volume 1 (published in 1917; 175 p.), titled *Produits Alimentaires et Plantes Fourragères* (*Nutritious Products and Forage Plants*), describes plants grown in Indochina and the nutritive value of each. Pages 106-09 describe "Soja–Glycine Soja," the soybean. Local names are given in Annam and Tonkin, Cambodia, China, and Japan. "The plant is widely cultivated in Indochina for its seeds, which are consumed in various forms. Soybean seeds in Indochina are typically yellowish white... It is well known that the Japanese use the soybean to prepare a sauce named *shoyu* (*teou yeou* in China), as well as a *fromage de pâte* or vegetable cheese named *to fu* [tofu], or *teou fou* in Chinese. The Annamites also prepare an analogous sauce named *tuong* and a *fromage de pâte* named *dau phu* and *dau phu-ao*. Cambodia and the Indochinese province of Châu-dôc produce significant quantities of soybeans, of which a part is sent down to Saigon to be consumed or exported. There are good varieties on the high plateaus of Tonkin, especially in the province of Lang-son, whence large amounts can be obtained for export.

"The dead leaves are ordinarily burned. However some indigenous people partially burn the stems of the soybean plants, stripped of their leaves, to obtain a very fine charcoal dust or ash, which they mix with the resinous balm of *Canarium commune*, to use in making joss sticks. These are slender incense sticks burned as offerings in the pagodas and at the altars of their ancestors in their family homes." [Note: A joss house is a Chinese temple or shrine.] A large, excellent, and very detailed illustration (p. 108) shows a soybean plant, with leaves, pods, seeds, and flowers. Nutritional analyses of soybeans from Laos, Tonkin, and Manchuria are given (from other sources).

Volume 3, titled *Matières Grasses Végétales* (*Fats and Vegetable Matter*), includes analyses of Indochinese plants and their fat and oil contents. The contents of Vol. 3. was first published in the *Bulletin Économique de l'Indochine* 1922-1924. Pages 75-78 discuss "Soja–Soja Max (Lin.) Piper," the soybean. "Mr. Li Yu-ying, a member of the Biological Society of the Far East, has greatly contributed, following several attempts made for more than a century by naturalists and those who acclimatize plants, to popularize in France this plant of many uses. He introduced cultivation of the plant in the area around Paris and, in Paris itself, in 1908 he established a laboratory for the study of the soybean, since completed by a soyfoods factory (*l'usine de la caséo-sojaïne*), where all the products derived from this plant are manufactured: Soymilk (regular, concentrated, powdered, or fermented), tofu (*fromage de soja*), soya patés (*pâtes de soja*), soya casein (*caséïne de soja*), soy flour and bread, etc." The rest of the article is concerned mostly with characteristics, uses, and trade of soybean oil.

Crevost was born in 1858. Note: The meaning of soya casein is not clear. Address: 1. Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi; 2. Ingénieur-Agronome, Directeur des Services agricoles et commerciaux du Tonkin, Lauréat de la Société nationale d'acclimatation.

983. Fuerstenberg, Maurice. 1917. Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmoeglichkeiten [The soybean, a cultivated plant of the future, and possibilities for its utilization]. Berlin: Paul Parey. 40 p. Illust. No index. 21 cm. [59 ref. Ger]

• ***Summary:*** Dedicated to the Prof. Friedrich Haberlandt, who introduced the soybean to Central Europe. Contents: Foreword. Introduction: The soybean. Ways of using the soybean in its homeland (East Asia, especially Japan and China). Shoyu or soy-sauce. Miso (vegetable cheese). Natto. Tofu of the Japanese or Tao-hu of the Chinese (bean cheese). The soybean as an oilseed. Soybean meal (and flour). Soy as a coffee substitute or extender. Soybean milk. Soy meat substitutes. Soybeans as a chocolate substitute. Soy rubber substitute. The utilization of the soybean in agriculture: As cow fodder. Summary. Bibliography.

Photos show: (1) A field of soybeans (p. 6). (2) A soybean plant with the leaves removed to show the pods (p. 12). (3) Soy beans and pods from inoculated and uninoculated plants (p. 13).

Contains numerous tables, most without captions and mostly from other sources–See pages 11, 16-17, 19, 25, 27, 30, 35-37. Contains one of the best early European bibliographies on the soybean.

The author wrote this book during World War I. In his first book, published one year earlier in 1916 and titled "The Introduction of Soya, a Revolution in the Food of the People," he discussed what he believed to be the great agricultural and nutritional value of the soybean. He uses two terms, *Die Soja* and *Die Sojabohnen* to refer to soybeans.

Chapter 1 (p. 5-7): In 1908 England started to import large quantities of soybeans; in 1909 these increased to 400,000 tonnes and in 1910 to 800,000 tons. Also in Germany, in the years just before World War I, imports of soybeans climbed in an unexpected way, reaching 43,500 tonnes in 1910, 90,600 tonnes in 1911 and 125,200 tonnes in 1912. Note: These units are given in dz. One dz (*doppelzentner*) = 100 kg.

The first manufacture of soyfoods in Europe took place in France, at Valees near Asnieres, where they made flour, bread, cakes, cheese [tofu], and soymilk (*Mehl, Brot, Kuchen und Käse, vegetabilischer Milch*)–though only in small quantities and, above all, for diabetics. In England, soy flour

© Copyright Soyinfo Center 2013

has been used for a long time in the preparation of cakes (p. 5-6).

However it was in Germany that the utilization of soybeans for food took place on a large scale; this began shortly before the war. The supply of foods to Germany was almost completely cut off during the war, so general attention soon turned to the new foods prepared from soybeans and people quickly became aware of their great nutritional value. Thus, in the middle of the war, a soybean industry was built in Germany. Unfortunately this youngest twig of the food industry was left crippled due to lack of raw materials. However one can predict that this industry has a bright future because of the great encouragement given to these products in so short a time. For example, in October 1914 the *Agumawerke* (Aguma Works) located in Harburg (near Hamburg) on the Elbe, first began mass production of a soy flour according to its own process. During the next few years it made many thousands of tonnes of this meal, until the production had to be stopped for lack of raw materials (p. 6).

Equally gigantic sales of soy products were made by the *Soyamawerke* (Soyama Works) in Frankfurt am Main; this company made only soy food products. In addition to a meal (flour), it also produced a meat substitute (*Fleischersatz*), and, largely from soybeans, fresh and dried milk (*Frisch- und Trockenmilch*) as well as a fresh and dried cream preparation (*ein Frisch- und Trockenrahm-Präparat*). Likewise, this firm had to cease production of most of its soy products because of difficulties in soybean procurement, and concentrate only on the production of meat substitutes (*Fleischersatz*). These articles likewise entered all classes of the population splendidly as is seen from the large demand for them. Within 3-4 weeks this firm had orders for more than 1½ million pound cans, of which unfortunately it was able to satisfy only a small part. In addition to these two well-known firms, there are in Germany still a number others that are occupied with the production of foods from the soybean.

In Austria [the Austro-Hungarian empire], there exists a unique firm, the food factory Santosa in Prague [in the Czech Republic as of Sept. 2002], which is still processing soybeans. They introduced soy coffee into commerce. I understand that in Austria a large-scale soy processing venture is now being planned.

Certainly the soy processing industry finds itself in a beginning state and, like all young industries, in need of improvement. Remember the sugar-beet industry was also once young but it made improvements and went on to great success, as will be expected of this new twig on the food industry. In any case, the beginning of utilization of the soybean as food for the people has been made, and in the foreseeable future the soybean may, as in China and Japan, become an indispensable part of our people's food.

It is different with the introduction of the soybean as a cultivated plant in Central Europe. Forty years ago Friedrich Haberlandt showed (and after him countless others have shown) that the soybean grows well in Central Europe. Although additional new tests verify this, there are still those who object to soybean culture. One objection is the long time required by the soybean to come to maturity; the answer is the development of new varieties. Another is the relatively low yield compared with other beans; the answer lies in the use of inoculation. The author then discusses nutrient yield per acre and per unit of money, showing both to be high for soybeans.

Pages 10-11: It is well know that legumes possess the ability to transform and fix free nitrogen from the air. In 1886 Prof. Hellriegel discovered that this capability is due to certain bacteria that live in the soil and move through the root hairs into the root, where they cause nodule formation. The nitrogen-fixing bacteria living in the nodules nourish the plant. The author then talks about inoculation using either soil from a previous planting or "Nitragin," a pure culture of root bacteria, which is well known and has recently been improved. Dr. Kuehn of Berlin-Grunewald showed that soil inoculated with Nitragin gave a 3- to 4-fold increase in yield, plus an increase in protein in the roots and leaves. He then discusses improved cultural practices. Winkler says that transplanting improves yields. Continued. Address: Frohnleiten, Steiermark [Austria].

984. Fuerstenberg, Maurice. 1917. Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmoeglichkeiten [The soybean, a cultivated plant of the future, and possibilities for its utilization. Part II (Document part)]. Berlin: Paul Parey. 40 p. 28 cm. [59 ref. Ger]

• ***Summary:*** Continued on p. 14. Ways of using the soybean in its homeland (East Asia, especially Japan and China): Note: In this section, starting on p. 15, the author repeatedly uses the word *Sojaspeisen* meaning "soyfoods." The soybean probably originated in India. The Chinese and Japanese used it to fortify their rice-based, protein-poor diet. The practice came before the theory. The author says (incorrectly, p. 15) that all the basic soyfoods are fermented. He then gives a long description of koji and how it is made.

Shoyu or soy sauce (*Shoju oder Soja-Sauce*) (p. 15-17): In Japan, 540-720 million liters are manufactured each year so each Japanese uses 60-100 ml/year. The fermentation time is 8 months to 5 years. The best soy sauce is fermented for 3 to 5 years. He explains how, as soy sauce is fermented, the protein is broken down into amino acids such as leucine, tyrosine, and members of the "Xanthin" group.

Miso (vegetable cheese, p. 17-18): Miso is widely used in soups. More than half of the yearly Japanese soybean harvest is used for making miso. This is 30 million kg per year. Types of miso include *shiro miso* and Sendai miso. Winkler, in his small work titled "The Soybean of Manchuria," mentions two other types of miso: Aka or red

© Copyright Soyinfo Center 2013

miso and nuka miso. Kellner investigated five types of miso; a table shows their composition. Loew reports that this vegetable cheese (miso) is consumed either raw or in soups. Kellner, Nagasaka and Kurashima report that, based on their investigations, the amount of amino-nitrogen increases 3-fold and the quantity of carbohydrates is significantly diminished through lactic acid and alcoholic fermentation. The carbonic acid created thereby rises significantly during fermentation (Loew).

Natto (p. 18): Discusses the findings of Yabe.

Japanese tofu or Chinese Tao-hu (p. 18-20): This is the so-called "bean cheese" (*Bohnenkäse*). A table (p. 19, from König) shows the nutritional value of fresh tofu (84.8% moisture) and frozen tofu (17.0% moisture). E. Senft studied frozen tofu, a Japanese military preserved food (*Militärkonserve*) that is not canned; he found it had a beige color and a unique, slightly sour aroma which was at times reminiscent of dextrin. It has a uniform texture throughout, with many tiny pores. Winkler refers to five other types of soy cheese. Concerning the military preserved foods, they were highly regarded during the Russo-Japanese War and (according to Senft) played a key role in the war. (Footnote: The descriptions of the various preparations made from soya make E. Senft's treatises (1906 and 1907) valuable; in them he published his investigations of a number of Japanese vegetable foods and military preserved foods or conserves). The well-known food manufacturer Maggi in Kempttal, Switzerland, has tried for many years to introduce a commercial miso-like product, but was not successful.

The soybean as an oil plant (p. 20-26): Winkler, in his brochure, discusses the uses of soybeans in Manchuria. After 1908, soybeans were sold in Europe at incredibly low prices which resulted in the expansion of imports and production. Then tariffs were levied on soybeans. There were some major problems in the Austrian oil industry.

Soybean flour (*Sojabohnenmehl;* p. 26-28): In recent years, various processes have been patented. One manufacturer is Soyamewerke in Frankfurt am Main, which makes *Soyama Kraftmehl.* Yellow soybeans are mechanically cleaned, washed, dried, and dehulled according to the process of Dr. Fritz Goessel. Agumawerke in Harburg also makes soy flour.

The soybean as a coffee substitute and extender (p. 28-31): Coffee is known to be detrimental to good health and void of nutrients. Rye, for example, has been used since the 17th century as a coffee substitute. Barley also plays a major role, especially as malt. A table (p. 30) shows the nutritional composition of ten coffee substitutes, including chicory, figs, lupin, and carob. Soy coffee tastes remarkably similar to real coffee. In Istria (*Istrien*), in the Austrian alps, in Switzerland as well as in Alsace (*Elsass*), the soybean has been used since its introduction as a coffee substitute. Haberlandt reported in his work that a teacher from Capo d'Istria told him that the soybean was used as a coffee substitute in Istria, and a friend told him that there was no difference between the flavor of the two. The Thunschen is used to make good soy coffee. The soybeans are mechanically cleaned, put into a trommel, agitated with water at 65-70ºC, brushed and thereby freed of a large number of impurities which can leave a burned smell. The aroma of soy coffee can be improved by impregnation with an extract of largely decaffeinated coffee. It has roughly twice the nutrients of regular coffee and no harmful constituents.

Soybean milk (*Sojabohnen-Milch,* p. 32-33): The most popular vegetable milk is Dr. Lahmann's Vegetable Milk (*Lahmannsche Vegetabile Milch*), an emulsion made from almonds and nuts. In Japan, they make milk from soybeans; he describes the process, inaccurately, based on information from Winkler. This milk is also used to make cheese [tofu]. Also in Europe there have been successful attempts to make a soymilk adapted to European tastes, as in France by the Caseo-Sojaine at Vallées near Asnieres, and in England by the Synthetic Milk Syndicate. Using the process of Dr. Fritz Goessel, the latter company has a factory in Liverpool; it makes 100 liters of soymilk from: 10 kg ground soybeans plus 5 gm sodium phosphate, 2.4 kg lactose, 2 kg sesame oil, 6 gm common salt, and 60 gm sodium carbonate. Also the Soyamawerke in Frankfurt makes a soybean milk, named Soyama, as mentioned above (fresh and dried milk and cream). Recently Prof. Melhuish developed a new method using soybean, peanuts, and added coconut milk fat.

Soy meat substitutes (*Soja-Fleischersatz;* p. 33): Soyamawerke makes a product named *Soyama-Fleisch-Ersatz.*

Soybean as a chocolate substitute (p. 34): Haberlandt reports such a product.

Soya rubber substitute (p. 34): Goessel and Sauer have developed a rubber substitute made from soybean oil.

The utilization of soya in agriculture (p. 34-38): Use as fodder for cows. In 1880 Blascowicz [Blaskovics], Assistant at the Royal Hungarian Academy in Hungarian Altenburg, conducted fodder tests, whose results are given in various tables.

Conclusions (p. 38).

Note: This is the earliest document seen that uses the word *Ersatz* or the word *Fleischersatz.* They mean "artificial or inferior substitute" and "meat substitute" respectively. Though often associated with World War I, the word "ersatz" (which means simply "substitute" in German) was actually adopted into English as early as 1875, in reference to the German army's "Ersatz reserve," or second-string force, made up of men unqualified for the regular army and drawn upon only as needed to replace missing soldiers. Hence the meaning "inferior substitute." Address: Frohnleiten, Steiermark [Austria].

985. Lyman, Benjamin Smith. 1917. Vegetarian diet and dishes. Philadelphia, Pennsylvania: Ferris & Leach. 416 p.

© Copyright Soyinfo Center 2013

See p. 155-58. Index. Portrait. 21 cm. [3 ref]
• ***Summary:*** Discusses the physiological, economical, and ethical advantages of a vegetarian diet, with recipes and principles of preparation. The author, who wrote mostly about geology, lived 1835-1920.

A large table titled "Composition of foods" (p. 44-47) gives the percentage of protein, fat, carbohydrates, and ash (on a dry basis) for many foods, including natto, fresh tofu, soy bean–dried, Swiss miso, soy [shoyu] No. 1 and 2, and white miso (all figures from Abel 1900), plus peanuts–dried.

In the chapter titled "Foods of vegetable origin" (p. 141-267), the section on "Pulse" (p. 152-78) contains a subsection titled "Soy bean" (p. 155-58), which begins: "The soy bean of China and Japan is perhaps the most important food plant there, next to rice. The bean is eaten to a small extent boiled like other beans; but is generally elaborated into a variety of products remarkably rich in protein and fat and therefore going well with rice so deficient in those constituents." The following soy-related subjects are discussed, based largely on the writings of others: Soy sauce (Abel), natto (Abel), miso (R. Takahashi), tofu (Abel), *aburage, koritofu,* substitutes for milk and cheese, and nutritional comparison with eggs, milk and cheese (Abel, Atwater).

The section titled "Substitutes for milk and cheese" states: "The Chinese in Paris [probably Li Yu-ying] have been urging the culture of the soy bean. The seeds, when boiled, mashed, and pressed, yield both milk and cheese; if thinned with water, a very good substitute for animal milk; and if coagulated with mineral salt, a cheese that is usually eaten fresh, though it may be preserved by salting or smoking, after being cooked. Three varieties of the cheese are common in the oriental markets; a fermented kind [fermented tofu], white, yellow, or gray in color, with a piquant taste, like roquefort; a salty and white kind, like goats' milk cheese; and a third kind, smoky and resembling Gruyére. The soy cheese costs about a fiftieth as much as animal cheese; and in nutritive value, like the vegetable milk, compares very favorably with the ordinary products of the cow. ('Phila. Ledger,' Sept. 27, 1906)."

Note 1. No such article in the *Philadelphia Ledger* or the *Public Ledger* (Philadelphia, Pennsylvania), of this date, can be found.

Note 2. This is the earliest U.S. document seen (Dec. 2008) that mentions smoked tofu.

The section on peanuts (p. 158-62) includes roasted peanuts, peanut butter, peanut taffy, and "Terralac or peanut-milk (here first published)." Details on how to make peanut-milk at home are given, followed by many recipes for its use–each preceded by the word "Terralac." Thus: Terralac custards, Terralac punch. Terralac cream, salad dressing, sauce, cream sauce, creams, blanc-mange [blancmange], cream pie, Bavarian cheese, Terralac in soup, "Ice-Terralac, or peanut ice-cream," peanut soup, salted peanuts.

There are also sections on the cowpea (p. 163+), almonds (p. 263-65; incl. salted almonds, marchpane, macaroons, nougat or almond cake, almond milk, orgeat syrup, burnt almonds, replacing almonds), vegetable-gelatine (p. 384-87, incl. carrageen or carragheen [carrageenan], Irish moss, and kanten), sesame oil or gingelly oil (p. 388), peanut oil or groundnut oil (p. 388), almond oil (p. 389), and sago and sago recipes (p. 390-91, incl. three sago puddings).

Note: *Merriam-Webster's Collegiate Dictionary* (1998) defines orgeat (a word first used in 1754) as "a sweet almond-flavored nonalcoholic syrup used as a cocktail ingredient or food flavoring."

986. Morse, Edward S. 1917. Japan day by day, 1877, 1878-79, 1882-83. 2 vols. Boston & New York: Houghton Mifflin Co. Vol 1, xiv + 441 p.; Vol. 2, 453 p. Illust. (Color frontispieces + sketches). Index. 22 cm. [20+* ref]
• ***Summary:*** These charming books, illustrated with 777 illustrations from sketches in the author's journal, is a diary (to avoid the duplication of home letters; subjects are treated chronologically rather than topically), filled with detailed observations about most aspects of Japanese life and the author's pioneering work there as a professor. It gives a vivid picture of daily life in Japan in the late 1870s. Morse quickly grew to admire and love the Japanese people; his greatest problem was learning to enjoy Japanese food.

Volume 1: "Almost everything in the sea furnishes food for the masses... Seaweed, a thin green leaf, is also eaten; it is dried and put up in tin boxes," apparently a species of ulva. "I have mustered courage enough to taste a few of the dishes, and have succeeded in swallowing but one of them, and that was a kind of soup... Water was boiled in a tin vessel with a sauce [shoyu or miso] made from fermented bean [sic, beans], dark in color like Worcestershire sauce; into this were put slices of what looked like a cucumber, and then followed large blocks of a substance which resembled new white cheese [tofu], fresh from the press; this was cut into triangular slices. This last substance was made from [soy] beans, strained to remove the skins, and then made into a paste-like block. This soup was certainly nourishing and with a little practice one might come to like it. Another common article of food is made from seaweed an is known as *tokoroten"* (p. 87-88).

"It was delightful... to sit down again to a dinner of rare roast beef, real butter, and good bread. It is difficult to understand a country in which there is no milk, butter, cheese, bread, or coffee, and never has been. Butter is so distasteful to the Japanese that they cannot eat cake or other article of food in which composition butter is used" (p. 120).

A famous preparation is "cold raw fish, cut in this slices from the fish while fresh and alive. The idea of eating raw fish is particularly repulsive to our taste, though we eat raw oysters; nevertheless, foreigners soon get accustomed to it. The sauce [soy sauce] made of fermented [soy] bean, barley,

© Copyright Soyinfo Center 2013

and some other grain seems to have been specially created for this kind of food. I ate a great deal of it and must confess that my first experience was fairly good,... (p. 143-44).

"The tail of the fish was cut off and flung overboard... the [raw] fish was chopped into small pieces, head, eyes, bones, and all, and this hash was put into a wooden bowl... From a box was added a substance [miso] that had a very sour odor, something made of beans and allowed to ferment, a little water was added, and it was all stirred up together, and such an unsavory-looking mess I never saw before. The gusto, however, with which the man ate it to the last grain, showed that it was palatable to him at least" (p. 185).

"I have lived on rice, sweet potatoes, egg plant, and fish for two weeks. I would give all my old shoes, and new ones too, for a good slice of bread-and-butter, a bowl of bread-and-milk, or any other thing you are enjoying at home" (p. 227).

"The cakes had a stamp of the chrysanthemum on top; these were red and white and were made of [azuki] bean paste and sugar. The Japanese are very fond of them, but they are rather insipid in taste" (p. 395).

"I have finally resigned myself to the Japanese food of this region [Yezo {Hokkaido} near Hakodate]... And of all places to start such an experiment in this village! It required some courage and a good stomach to eat for dinner the following: fish soup, very poor; bean paste [miso?], which was not so bad;... and holothurian, or sea cucumber,... by no means agreeable. It was eaten with Japanese sauce, *shoyu*, which renders everything more or less palatable... On the whole, I am keeping body and its animating principle together, but long for a cup of coffee and a slice of bread-and-butter. I am the only outside barbarian in town" (p. 440-41).

Volume 2: The New Year's food included "a bean pickle in sugar syrup and Japanese sauce" [probably black soybeans (*kuromame*)] (p. 93). A detailed description of mochi and its pounding are given, with two illustrations (p. 95).

As they left Izumi and entered the Province of Kii [today's Wakayama], "I saw the process of manufacture of a curious kind of food one often sees in certain soups. It has a bright-yellowish color, as thin as paper, and has no definite flavor. The substance is made from soya beans by a curious and simple process. The beans are boiled in a large boiler till they are very soft; they are then ground in a mill to a fine paste, and mixed with water and colored by some stuff that is imported from abroad (fig. 675). This material is then put into a shallow trough divided by square partitions, beneath which is a charcoal fire which keeps the stuff gently boiling. The surface coagulates as it does on boiled milk, or on a cup of cocoa, and the film that forms is taken off very skillfully with slender bamboo sticks and hung up to dry (fig. 676). Other films form and are promptly removed by a girl who is kept busily at work" (p. 286-88).

In Kawagoe [a city in today's Saitama prefecture, about 20 miles northwest of Tokyo]: "It is a common custom... to eat grasshoppers as a relish... The Japanese prepare them by boiling them in shoyu, sugar, and a little water, till the water has nearly all boiled away" (p. 324-25).

At New Year's "our old cook brought me a box of *yokan* (made of sugar and [azuki] beans)... (p. 393).

Edward Sylvester Morse, a marine biologist specializing in Brachiopods, lived 1838-1925. Address: Salem, Massachusetts; Former Prof. of Zoology, Imperial Univ., Tokyo.

987. Nigay, Antoine. 1917. Le regime alimentaire des diabétiques [The food regimen for diabetics]. Paris: Librairie O. Berthier, E. Bougault, Successeur. 91 p. Preface by M. Marcel Labbé. [Fre]

• ***Summary:*** At the top of the title page is a quotation from Voltaire: *Règime vaut mieux que médecine* (A good diet is worth more than medicine).

At the end of the section on "Cheeses" (*Fromages*) we read: Soy cheese (*le fromage de Soja*), a food much liked by the Japanese (who call it *Tofu*), the Chinese (*Téou-fou*), and the Annamites (*Dau-Phu*), is obtained by the coagulation of a concentrated soymilk (*d'un lait de Soja*) (Footnote: Soybean milk is obtained by the maceration / grinding of soybean seeds in water; it has nothing in common with cow's milk, except in appearance), with the aid of magnesium chloride or of bittern [nigari]; it is not, strictly speaking, a cheese; rather, it is unique. It contains only 4.33% oils and fats, and 1.30% nitrogenous materials, which is to say that it is not very nutritive, however it does not contain any carbohydrates. It is therefore permissible [in diabetic diets].

Soy cheese must be consumed the same day it is prepared, or the next day; however, dehydrated, it can last for several months. In the Orient, it is consumed after having been cooked in a decoction of the rhizome of curcuma (turmeric, which is yellow). The factory at Vallées (Seine) [Li Yu-ying] furnishes this cheese, as well as other soy-based products. Address: Dr., Consulting physician at Vichy. Physician at the Thermal Hospital of Vichy. Director of the *Journal de Médicine de Paris.*

988. Chicago Daily Tribune. 1918. Learning how to win the war: Hoover's aid yesterday complimented Chicago on having the first large patriotic food show. It opened in the morning at the Coliseum. Jan. 6. p. 5.

• ***Summary:*** *Three photos from the show are shown. The largest and the smallest are placed side by side so that they run together. The smallest, which bears the caption "Hattie Don Sang," shows a young Chinese lady, about age 18, dressed in a school uniform, standing behind a table on which are arranged many foods–probably made from soy beans. Two signs read:* (*1*) *"Bean Bread."* (*2*) *"Plain Toufu."*

Unrelated to soy, the two other photos show: (*1*) *Miss Dorothy Grohnke, Ethel Mundall, and Frederick C. Walcott*

© Copyright Soyinfo Center 2013

(*Hoover's aid*). (*2*) *Private John Rodden and Miss Springer Brooks.*

989. Currey, Margery. 1918. World's first patriotic food show starts: Crowds throng coliseum to learn how to help win the war. Chicago Daily Tribune. Jan. 6. p. 5.
• ***Summary:*** *"'Chicago may be proud of having produced the first and only great show ever attempted to bring home to the people the message of the United States food administration'" said Frederick C. Walcott, assistant to Food Administrator Herbert Hoover as he returned last night to his office in Washington, D.C.*

Women in one booth had a "demonstration of fats, their uses, their substitutes, and the reasons for the conservation of fats."

"In another booth, two Chinese girls, Marion G. Moy and Hattie Don Sang, demonstrated the use of soy beans."

Note: These Chinese girls might possibly be connected with the "Chicago Bean Bread Co." which contributed tofu recipes to the book ÈThe Soybean, by Piper & Morse (1923, see p. 273).

990. Eddington, Jane. 1918. Tribune Cook Book: Soy bean products, etc. *Chicago Daily Tribune.* Jan. 8. p. 14.
• ***Summary:*** "The marvel and glory of our patriotic food show is that it is truly and wonderfully educational. More, the attendance and interest shown in the exhibits and demonstrations show that people are seeking education with a fervor that is not only patriotic but as deep as humanity itself.

"At the Universal Food and Cookery show held in London for many years," commerce was unfortunately emphasized over education.

"Probably what will seem to most people the unique exhibit is that of the Chinese soy bean products. Their bread and rolls are deliciously palatable, so much so as to provoke criticism of ordinary baker's products made of white flour and flavorless almost save for the fat. "When this exhibit was being installed a woman" asked where she "could get soy bean flour.

"'We only make enough for our own bakery,' was the reply. One of their trade secrets they revealed was that only one-tenth white flour or simply enough to forward fermentation was used in these breads. There ought to be a suggestion for us in that fact.

"Bean curd, uncooked and breaded and fried, or toufu and [mung] bean sprouts are the other products they have on display, with recipes.

"One of the Chinese young women who presided at the booth" told the writer to use a cloth in growing mung bean sprouts [from tiny green beans] and to water and drain them frequently.

"The official recipe book has a number of soy bean recipes. There is no reason why we cannot make our own soy meal for muffins or griddle cakes, if we have a hand mill for grinding wheat. One of my readers began to do this three or four years ago with success. If we watch out we may find out how to make soy bean cheese or toufu."

991. *Davis County Clipper* (*Utah*). 1918. Makes new kind of meat. Feb. 26. p. 7.
• ***Summary:*** "On the top floor of 641 Washington street, New York city, is one of the most interesting kitchens in the world, presided over by a Chinese woman doctor." Dr. Yamei Kin, who recently traveled to China for six months to study the soy bean, says that its protein is equal to that of meat. A "sort of vegetable cheese [tofu]," it is a replacer of meat and forms no acid; it is an alkaline form of protein. The salty black sauce [soy sauce] served on top of "chop suey," "chow mein" and other dishes in Chinese restaurants, is made from soy beans. Dr. Kin can make from soybeans a roquefort cheese [fermented tofu] that looks and smells like the real thing. "In all the world there is not a more misunderstood vegetable than the soy bean, says Doctor Kin." An illustration shows Dr. Yamei Kin standing, holding a plate in her left hand.

992. Howell, E.V. 1918. Soy beans and soy bean oil. *J. of the American Pharmaceutical Association* 7(2):159-63. Feb. [14 ref]
• ***Summary:*** "This bean is a native of southeastern Asia. It is at present the most important legume grown in China and Japan, where it is grown almost exclusively for human food. It has been cultivated from a remote period, each district having its own distinct variety, some two hundred kinds in all... The bean was introduced into England in 1790. Apparently the first mention of soy beans in American literature was in the *New England Farmer,* October 23, 1829, in an article by Thomas Nuttall." There follows a summary of this article and several other early U.S. documents that mention the soy bean.

"Importance: I think the soy bean is the most important plant introduced into the South within a hundred years. This opinion is based on the range of the plant, the value as a soil improver, and the numerous uses of the seed and oil, together with the fact that the present cottonseed oil mills can produce the oil with practically no change in machinery and thus double their mill season. The beans can be stored, as they are practically immune to insects. Especial emphasis is placed on this statement in the present demand for food on account of the war. In Japan the bean forms one of the most important articles of food, by nature a meat, to go with the starch of rice. The Chinese make from the beans a cheese resembling our own cheese, while the Japanese make the well-known sauce for rice or fish, soy or suey sauce. It is one of the principal ingredients in 'Tofu' (bean curd), natto (steamed beans), and white and brown miso, which is like our molasses brown bread."

"A factory for the production of this [soy] milk has

© Copyright Soyinfo Center 2013

recently been established in America. This can be used in cooking, by bakers, confectioners, and chocolate manufacturers. I have before me the following food articles in which soy bean meal is the principal ingredient: Egg substitute No. 1, egg substitute No. 2, colored cocoanuts, coffee substitute, cocoa substitute, roasted malted nuts, coloring curry powder, cutlet powder, soy and navy beans with pork, the equal of any pork and beans.

"The use of the soy meal for soups, for proportional use in muffins, cookies, fritters, croquettes, biscuit, and loaf bread is unlimited. Its use is checked only by our prejudice for certain customary flavors, just as northern people and Europeans do not use corn meal. In other words, North Carolina, if forced to by war conditions, could largely exist on the soy beans crushed in the State this year, including the imported and native beans crushed, the oil from which I estimate to yield this year 400,000 gallons. This oil can be used for frying, and for a salad oil in French dressing or in mayonnaise. I fried a partridge in the crude unrefined oil, and found it delicious.

"While the chief use, so far, of the oil has been for soaps and paints, the particular object of this paper has been to call attention to the use of soy oil in pharmaceutical preparations."

Tables show: (1) The specific gravity, saponification value, and iodine for three samples of Manchurian soy oil purchased in New York. (2) The chemical composition of soy bean meal (8.77% fat), compared with the meal of five other seeds (including cottonseed, linseed {old and new process}, decorticated peanut, and sunflower seed). (3) Four chemical constants of seven samples of domestic and imported soy oils (from L.P. Nemzek). (4) The food values (nutritional composition) of soy beans and six other foods, including lean beef, milk, and eggs.

Because of World War I: "During the past six or seven months there has been produced in this country in the neighborhood of one hundred thousand gallons of soy oil. The largest part of this quantity has been produced in North Carolina by the Elizabeth City Oil & Fertilizer Co., Winterville Cotton Oil Co., and the New Bern Cotton Oil & Fertilizer Mills. Samples from the different crushings have been examined in comparison with the imported oil."

"Medicinal use: In England a diabetic biscuit is manufactured. In this country an infant's food from the soy bean is on the market. The enzyme in the bean is also attracting attention and opening a field for investigation."

Note 1. This paper was presented at the Scientific Section, American Pharmaceutical Assoc., Indianapolis meeting, 1917.

Note 2. This is the earliest English-language document seen (Oct. 2008) that contains the word "crushings."

993. Makino, Magotaro. 1918. Soy-bean food (tofu). *U.S. Patent* 1,258,427. March 5. 2 p. Application filed 5 Dec. 1916.

• ***Summary:*** Soy bean flour is mixed with water and a small quantity of an edible oil, the mixture is heated, filtered, and the proteins in the filtrate are precipitated/coagulated with Epsom salts and separated from the liquid.

Note: This is the earliest document seen (Sept. 2011) with the term "Soy-bean food" (or "soy bean food") in the title. Address: San Francisco, California.

994. Johnson, Nelson Trusler. 1918. Process used by Chinese in making bean curd. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 21(58):926-28. March 11.

• ***Summary:*** This report begins: "Probably the first article of diet that attracts the attention of the foreigner coming to China is the bean curd which is served to him at the Chinese restaurant or hotel, or in the Chinese family in many ways. Bean curd is only one of a number of products derived from soya beans. Among these are bean meal, a kind of spaghetti, bean cheese, bean sauce (known as shoyu to the Japanese, chiang yu to the Chinese, and soy in commerce), bean milk, and bean oil. All of these products are used by the Chinese as foods. The shoyu is used as a foundation for a certain well-known brand of sauce." Note: Probably Lea & Perrin's Worcestershire Sauce.

The next section, titled "Product called an ideal food," is largely a summary of a 1917 article by John E.S. Han titled *The Yale-in-China Student* (Changsha, China) 1(2):8-14. Nov. Contents: Introduction. Product called an ideal food. Uniform quantities of beans used. Specific gravity near that of milk. Method of coagulating emulsion. Suggested improvements in process.

On the last point, Mr. Johnson notes that the changes Mr. Han recommends "are largely the same as those proposed by Li Yu-ying." Address: Consul, Changsha [China].

995. Howe, H.E. 1918. A lesson from the Orient. *Scientific American* 118(11):230. March 16.

• ***Summary:*** "In the south are many acres where the boll weevil makes it impossible to continue the profitable production of cotton. The search for a substitute crop has introduced the soya bean from Manchuria where it is a very important staple and it bids fair to become most useful. The soya bean yields an oil upon hot pressing and just prior to the war, the Germans set up a naphtha solvent process in the Orient but the oil recovered was considered inferior to that from the native presses. The potentialities of soya bean oil have not been fully determined. It has become established in the industries and we are learning how to make better use of it as a food product. The oil cake or meal left after pressing is a valuable component of stock foods, being high in nitrogen compounds.

"Some of the varieties of the soya bean are suitable for

© Copyright Soyinfo Center 2013

human food and in combination with peanuts, a foundation for several materials high in fat and protein is obtained. The soya bean alone comprises a ration that is nearly complete, for it contains a large amount of protein, fat in the form of oil and the starch furnishes a carbohydrate. The bean also carries a vitamine which is necessary to sustain and promote bodily growth but the mineral content is deficient."

"In the Orient soya beans are used to make a kind of cheese and a milk substitute. A peculiar cake is also made from them as well as a sort of fermented beverage.

"Experiments are under way to improve greatly the food values in soya beans and increase the oil content...

"And so these cotton lands of the south which have so long contributed to our clothing may now greatly supplement our food supply."

Note: This is the earliest English-language document seen (Oct. 2003) that uses the term "milk substitute" to refer to soymilk. Address: Chemical engineer.

996. Itano, Arao. 1918. Soy beans (Glycine hispida) as human food. *Massachusetts Agricultural Experiment Station, Bulletin* No. 182. 10 p. March. [16 ref]

• ***Summary:*** Contents: Introduction. Chemical composition and digestibility. Human food prepared from soy beans (practical recipes for making Japanese foods at home; names in parentheses indicate the Japanese name). Soy bean milk (*Toniu*)*:* The ordinary method employed in Japan, toniu from soy bean meal (made by grinding soybeans in a wheat flour mill or fine coffee mill), author's method [from soy bean meal, plus inoculation with *Bacillus coli* and *B. lactis aerogenes*], synthetic toniu, condensed soy bean milk (condensed toniu). Evaporated soy bean milk (yuba). Soy bean curd (tofu): Fresh curd (tofu), frozen tofu (*kori tofu*), fried tofu (*abura-age*). Baked beans. Boiled beans. Roasted beans.

"Powdered beans–Roasted: 1. Roast as in the roasted beans [either in an oven or in an ordinary corn popper]. 2. Let them stand until cool to harden them. 3. Grind them in a coffee mill or any other suitable grinder. Note.–The powder can be used as a salad dressing or cooked with cookies like peanuts or other nuts, or employed as a substitute for coffee."

Powdered beans, raw (soy bean meal). Green beans. Soy bean pulp (*kara*). Fermented boiled beans (natto). Ripened vegetable cheese (miso; discusses koji). Soy bean sauce (shoyu). Vegetable butter, ice cream, oil (table use) and lard (cooking): "The manufacture of these articles from soy beans needs further investigation." How to make "Evaporated soy bean milk (Yuba)" at home (p. 5): "1. Boil the soy bean milk until a film is formed on the surface. 2. Collect the film and cut it into any shape desired. Note.–The film consists of coagulated albuminoids and fat. It may be used as an article of food, cooked in soup, etc."

Note 1. Even though it is very brief and inadequate, this is the earliest document seen (Oct. 2012) that contains a description of how to make yuba at home.

How to make "Baked beans" at home: (p. 7). "1. Soak the beans, suspended in a cloth bag, in a large quantity of hot water over night. (Soaking for twenty-four hours in ice-cold water which is changed occasionally will give the same result.) 2. Change the water, when hot water is applied, in the morning and an hour or two before cooking. 3. Add 1 teaspoonful of soda [sodium bicarbonate] per quart of beans and boil until the beans become soft. 4. Bake like other beans. Note.–The characteristic strong flavor of the beans is removed by soaking before cooking; the addition of soda [sodium bicarbonate] makes the beans soft. Cooking with salt pork, potatoes, onions, molasses and other substances makes the beans more palatable to some tastes."

Concerning the "Roasted beans" (p. 7). "1. Roasting can be done either in an oven or in an ordinary corn popper. 2. Roast until the skin of the bean is burst by popping. Note.–The beans can be kept soft by immersing them in a syrup while they are hot. Thus very wholesome candy is prepared."

Concerning the "Powdered beans: Roasted" (p. 7). "1. Roast as in the roasted beans. 2. Let them stand until they cool to harden them. Grind them in a coffee mill or other suitable grinder. Note.–The powder can be used as a salad dressing or cooked [baked] with cookies like peanuts and other nuts, or employed as a substitute for coffee." Note 2. This is the earliest English-language document seen (Nov. 2012) that uses the term "Powdered beans: Roasted" to refer to roasted soy flour.

Concerning "Green beans: 1. Pick them when the beans are three-fourths to full grown. Boil them in salt water. 3. Discard the pods. 4. Serve the beans with butter or milk. Note–The pods are tough and they can be removed easily on boiling."

Concerning "Soy bean pulp (kara): 1. This is the residue after the milk is extracted in the process of preparation of soy bean milk. 2. Cooked like any other vegetable with proper seasoning. Note.–Makes a very rich dish; an addition of green onions, cabbage or parsnip may improve it."

Tables contain analyses of the chemical composition of each of the basic foods discussed.

Note 3. This is the earliest English-language document seen (March 2007) concerning soy ice cream, which it calls simply "ice cream." This is also the earliest document seen (March 2007) concerning the etymology of soy ice cream.

Note 4. This is the earliest English-language document seen (Oct. 2001) that uses the term "soy bean pulp" to refer to okara. Address: Amherst, Massachusetts.

997. *British Medical Journal.* 1918. A vegetable milk. i(2889):430. April 13.

• ***Summary:*** "From a correspondent: In these days of agalactia [failure of the secretion of milk in mammals] any reasonable substitute for milk is certain of a welcome, so that particular interest attaches to the soy bean, an alimentary

© Copyright Soyinfo Center 2013

plant grown on a very large scale in China, and imported into this country [Britain] by hundreds of thousands of tons annually for the sake of the oil it contains, which is utilized in the manufacture of soap, margarine, etc.

"More interesting from the alimentary point of view is the fact that it can be made to yield a substitute for milk, which in respect of appearance and composition so nearly approximates the familiar article as to be wellnigh indistinguishable therefrom.

"The process is simple. Five ounces of the bean are soaked overnight in a quart of cold water; it is then coarsely ground, mixed with the water in which it has been soaking, and filtered through muslin [coarse cotton fabric]. The result is a milky fluid with a rather strong smell of haricot bean, which disappears after it has been raised to boiling point. Infants take it readily, and, mixed with tea or coffee, the taste is imperceptible. Fresh soy bean milk has a fairly acid reaction; it is quite homogeneous under the microscope, and its physical properties are those of cow's milk; rennet causes it to curdle, lactic acid germs cause it to undergo lactic acid fermentation. When boiled it 'rises' like ordinary milk and forms a pellicle [yuba] on the surface.

"Its composition is: Casein 3.13 per cent., fats 9.89, but it lacks carbohydrates, a shortcoming which can easily be remedied. As the fatty constituent is an oil, butter cannot be made from soy bean milk, but it can be made to provide cheese (120 grams of the bean yields 184 grams of cheese), and the cheese [fermented tofu] can be made to resemble any of the popular cheeses in the market; it is merely a question of employing the proper flavouring ferment. Soy-bean milk can be retailed at 3 centimes a litre. The residue, after making milk, is still very rich in alimentary principles, and can be worked up into very palatable 'almond' cakes and biscuits. Being practically free from starch, these cakes are especially suited for consumption by diabetics.

"Roasted, the bean provides a colourable imitation of coffee, just as do barley and oats, to what a satisfactory degree only those who make use of these substitutes will understand."

"A practical idea of its alimentary value may be formed by contrasting the cost of this as compared with other albumins: 100 grams of albumin, at before-the-war prices, would cost–from egg 1s. 8d. [1 shilling 8 pence], from meat 1s. 4d., from pork 8d, dried peas 3d., and from soy bean 2d. The bean contains four times as much mineral constituents as meat, and is twice as rich in phosphoric acid." A table compares the nutritional composition of soy beans (water plus 5 nutrients) with lentils, haricot beans, peas, and broad beans.

998. *Bulletin Bi-Mensuel, Office de Gouvernement Général de l'Algérie.* 1918. La culture et l'utilisation du soja [The cultivation and utilization of the soybean]. 24(4):54. April 1-15. [3 ref. Fre]

• ***Summary:*** This article appears in the section on "Agriculture" (p. 51-55). We reproduce the following note published by "Algerian Information" (*Informations algériennes*) on a question that presents a reality and an interest of the first order for Algeria:

"We can hope to see taken up, from this year forth, the cultivation of soybeans (*graine de soja*) even more as a letter received from Palestro gives us full confidence; the movement was already begun two years ago."

Having found a letter on this subject in the July issue of the *Bulletin of the Society of Agriculture* from Mr. Aimé Zurcher, of Zaatra near Courbet, we wrote him and he responds to us:

"I have, in fact, cultivated soybeans for 7 years from the point of view of industry. For, as you know, this precious bean furnishes several food products: milk, cheese [tofu] that is equal to meat, confections, oils, coffee, etc. I ate all these foods that I ordered from Paris where a company [founded by Li Yu-ying] makes them. And it was with the goal of selling my products to this company that I cultivated soybeans. I had distributed many grains and beans.

"The war having cut off my relations with this company, a certain quantity of soybeans remained. At the end of 3 years, they no longer germinated. I abandoned cultivation.

"I occupied myself with yellow soybeans with round seeds. I have had very high yields, even in nonirrigated, plowed soil and in slightly humid soil with ordinary labor.

"The lively, robust plant adapts to almost all terrain and completes its entire development in 3-4 months; it attains a height of 1-1.4 meters. It requires the same care as the ordinary haricot bean and more especially the dwarf haricot (*haricot nain*). It is then in March, even at the end of March and April that it should be sown (2 seeds/hole; but too much humidity can damage it).

"Nothing is lost of this precious plant. After threshing, the leaves and stems are very esteemed by livestock."

"... We also remark that for a liter of milk, that has nothing in common in taste with cow's milk but which is just as nourishing, 100-200 g [of soybeans] is used [to make the milk]; little matter, it's an insignificant expense. In any case the remains [okara] that the mincer (*hâche-viande*) (business M.F.G. Co., Philadelphia [Pennsylvania]) leaves must be used to obtain the result. We believe that we should give the recipe furnished by an ingenious experiment:

"[To] the okara (*drèche*, which originally meant dregs) that produced the milk [sic, that is a by-product of producing soymilk] is added half its weight in sugar and enough water to dissolve this sugar; it is then cooked to have confections that you can flavor.

"These confections, instead of being consumed as is, can be mixed with an egg, 4-5 bitter peeled almonds, [or] 2 spoonfuls of flour and divided into small cakes, macaroons, that are cooked in the oven again on a lightly buttered pan. These cakes are delicious, a true luxury product rivaling the

© Copyright Soyinfo Center 2013

best *petits fours* (a small cake cut from pound or sponge cake and frosted) of pastry-makers."

Two more articles on soy are cited, both published in *Nature*, in 1907 and 1910.

999. *USDA Bureau of Plant Industry, Inventory.* 1918. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1915. Nos. 39682 to 40388. No. 42. 123 p. April 17.

• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. Fabaceæ. (*Glycine hispida* Maxim.)

"39967-39982. From Soochow, China. Presented by Mr. N. Gist Gee, Soochow University. Received February 11, 1915. Quoted notes by Mr. Gee, except as otherwise indicated. "39967-39972.

"39967. '(No. 1. *Kua shu tou* (*Kwa zoh*). Melon-ripe bean.) This is so named because of its time of ripening. Seeds are sown about the first of May and cropped late in June when melons are ripe. Used only as a vegetable.'

"39968. '(No. 2. *Chia chia san tou* (*Kah kah sen*). Pod pod three bean.) Planted in the middle of May and reaped during September. Used as a vegetable and for manufacturing of oil.'

"39969. '(No. 3. *Hung hsiang chih tou* (*Ong sing sze*). Red familiar bean.) These are "Loving beans," as the characters suggest. Planted in the middle of May and harvested about September. Used both as vegetables and in the manufacture of oil.'

"39970. '(No. 4. *Hei tou* (*Huk*). Black bean.) Owing to their color, these are called "Black beans." Planted in the first part of June and reaped in the middle of October. Used as a vegetable and in the manufacture of oil.'

"39971. '(No. 5. *Ku li ch'ing* (*Kwa lea ching*). Bone inside green.) Planted early in June and harvested in late October. Used only in making oil.'

"39972. '(No. 6 *Shih tzû ho tou* (*Zee tee 'ah*). Persimmon-seed bean.) Planted in the first part of June and cropped in the middle of September. They are largely used as vegetables.'

"39974-39977.

"39974 '(No. 8 *Pa yüeh pai tou* (*Gee buh*). Eight-month white bean.) The combined meaning of its color and its time of ripening indicates the name. Planted in May and harvested in September, which is the eighth month of the Chinese calendar. Used to make oil. This and No. 9 [S.P.I. No. 39975] are the best two for oil manufacture.'

"39975. '(No. 9. *Shui pai tou* (*Gee buh*). Water white bean.) Planted in late May and reaped in September. Used to manufacture oil; one of the best two for oil manufacture.'

"39976. '(No. 10. *Niu t'a pien* (*Nue duh pea*). Cow crush flat.) Its use and time of harvesting are the same as those of the *Gee buh* [S.P.I. No. 39975]. The beans are trodden out by cows; hence the name.'

"39977. '(No. 11. *Wu ch'iao tou* (*Oh tsah*). Sparrow's cackling (or magpie) bean.) Planted about the last part of June and cropped in mid-October. Used largely to make oil.'"

"39982. '(No. 16. *Lü tou* (*Loh*). Green bean [mung].) Planted in the early part of June and cropped early in September. Used the same as the *Ch'ih tou* [S.P.I. No. 39980]. Called "green bean" because of its color, probably.'"

"40106/40138. From Wakamatsu, Iwashiro, Japan. Presented by Rev. Christopher Noss. Received March 8, 1915. Quoted notes by Mr. Noss. 'From an exhibition in Kawamata, near Fukushima City.'

"40106-40127.

"40106. '*Mochidaizu* (*dai*, large; *zu*, bean [daizu = soybean]), used in *mochi* (glutinous rice boiled and pounded in a mortar).'

"40107. 'No. 2. *Nakatedaizu* (second early), used in *miso* (beans, etc., pickled in salt and made into soup), *tofu* (bean curd).'

"40108. 'No. 3. *Shichi-ri-korobi-daizu* (20-mile rolling), used for *tofu, soy, and miso.'*

"40109. 'No. 4. *Yuki-no-shita-daizu* (under the snow), used for *tofu, soy, and miso.'*

"40110. 'No. 5. *Wasedaizu* (early), used for *tofu, soy, and miso.'*

"40111. 'No. 6. *Misodaizu.'*

"40112. No. 7. *Ko-tsubu-daizu* (small grain), used for *miso* and *natto* (buried, fermented, and eaten as a relish).'

"40113. 'No. 8. *Kinako-daizu*, made into *kinako* (a flour used in cooking) and also *natto.* Said to have been brought by soldiers from Manchuria.'

"40114. 'No. 9. *Tamazukuridaizu* (name of a country near Sendai), used boiled.'

"40115. 'No. 10. *Asahidaizu* (morning sun), used for *natto.'*

"40116. 'No. 11. *Darumadaizu* (Dharuma [Bodhidharma], whose image was a roly-poly, can not be upset), used boiled and for *tofu.'*

"40117. 'No. 12. *Taiwandaizu* (Formosa), used boiled.'

"40118. 'No. 13. *Hato-koroshi-daizu* (dove killer), used boiled.'

"40119. 'No. 14. *Usu-ao-daizu* (light green), used for *kinako* and boiled.'

Note 1. This soybean and the *Ao-daizu*, below, might give naturally greenish kinako.

"40120. 'No. 15.

Ao-daizu (green), used for *kinako* and boiled.' Note 2. This is the earliest English-language document seen (Nov. 2012) which states that green soybeans are used to make kinako.

"40121. 'No. 16. *Aka-kuki-daizu* (red stalk), used for *natto* and *miso.'*

© Copyright Soyinfo Center 2013

"40122. 'No. 17. *Fuku-shiro-daizu* (clothing white), used for *tofu.'*

"40123. 'No. 18. *Hachi-ri-han-daizu* (21 miles), used boiled. The name *Hachi-ri-han-daizu* involves a curious play on words. *Hachi-ri-han-daizu* means "eight ri (a ri is 2.5 miles) and a half," which is just a little short of *ku-ri.* Now *ku-ri* means nine ri, and *ku-ri* also means chestnut, so the expression in question means that the beans so named are almost equal to chestnuts.'

"40124-40127. 'Beans are used boiled.'

"40124. 'No. 19. *Yoshiwaradaizu* (harlot quarters in Tokyo).'

"40125. 'No. 20. *Chadaizu* (tea, alluding to the color [brown]).'

"40126. 'No. 21. *Kichidaizu* (lucky).'

"40127. 'No. 22. *Kurodaizu* (black).'"

"40370-76. From Wakamatsu, Iwashiro, Japan. Presented by Rev. Christopher Noss. Received March 27, 1915. Quoted notes by Mr. Noss.

"40370. 'No. 33. *Hikagedaizu* (shade), produces in shady places; used for *miso.'*

"40371. 'No. 34. *Dekisugidaizu* (excessive yield); used for *miso.'*

"40372. 'No. 35. *Kurodaizu* (black); eaten boiled and sugared.'

"40373. 'No. 36. *Nakatedaizu* (medium early); used for *miso.'*

"40374. 'No. 37. *Hishidaizu* (water caltrop, alluding to the flattened shape); eaten parboiled and seasoned with shoyu and salt.'

"40375. 'No. 38. Name unknown, cultivated from ancient times in Soma County, Fukushima Ken; used for *miso.'*

"40376. 'No. 39. *Hakodate-nishiki-daizu* (Hakodate brocade); used for *miso.'"* Address: Washington, DC.

1000. Dorsey, Henry. 1918. Growing soybeans. *West Virginia Univ., College of Agriculture, Extension Dept., Circular* No. 204. p. 1-8. April. [1 ref]

• ***Summary:*** "Within the last five years soybeans have assumed, due to their many desirable qualities, an important place in West Virginia agriculture and their importance is quite likely to increase. Less than a decade ago the crop was practically unknown. A conservative estimate derived from county agents' annual reports indicates an acreage of more than 6,000 in 1917. This acreage is almost equal to that of clover alone according to the census figures of 1910."

Contains sections on the importance of the crop, harvesting, yields, suitable varieties, special uses, human food, and in crop rotations.

The section on human food uses states: "The scarcity of meats will doubtless lead to a wider use of soybeans in the human dietary. For centuries they have supplied a large proportion of the nitrogenous part of the food of the Chinese and Japanese. In the Orient the whole beans are not eaten directly but soy sauce, bean milk, bean curd, and vegetable cheese are made from them. Americans would doubtless object to many of these products. The whole beans have often been used like other beans–boiled, baked, or with pork. They need to be soaked several hours to remove the strong flavor. Soybean flour has great possibilities as a substitute for part of the constituents of various breads. When Americans learn to use the products of the seed, then there will be a ready market for the crop and it will take a regular place in our cropping scheme." Address: Asst. Prof. of Agronomy, West Virginia Univ., Morgantown.

1001. Trabut, Louis. 1918. Le Soja: Soja Max (L.) Soja hispida *Savi* [The soybean]. *Algerie, Service Botanique, Informations Agricoles. Bulletin* No. 55. 16 p. April. [7 ref. Fre]

• ***Summary:*** One cannot say that the soybean has been introduced to the Western world only relatively recently; it has been cultivated at the Jardin des Plantes since 1779. There the soybean has always produced seeds, which have been distributed to botanical gardens and amateurs interested in plants. It would be unjust to say that for 138 years no one has been involved in the utilization of soya in Europe. In fact, there have been a number of fervent popularizers and propagators of the plant. A history of this work is given, including the Vienna Exposition of 1873, the work of Prof. Haberlandt in Austria disseminating and testing soybeans and his remarkable book on the soybean published in 1878, the work of the Society for Acclimatization in France from 1855 (they made the vegetable cheese, tofu [To-fou]), and exports from Manchuria to Europe.

Since 1898, Manchuria, which can no longer cultivate the opium poppy, has greatly expanded its cultivation of soybeans and has looked for outlets in European markets. In 1909 Manchuria exported 410,000 tonnes of soya, a figure which rose to 650,000 tonnes in 1912.

A that time, according to Mr. Brenier, Director General of the Chamber of Commerce at Marseilles, the industry of Marseilles, confronted with a influx of new oilseeds, tried to obtain soya but ran into customs problems. It wasn't clear whether soya should be classified as a legume (because it is a bean) or as an oilseed (*graine oléagineuse*). While the matter was being debated, all the available beans had been purchased by Hull, England, and Hamburg, Germany (*Académie d'Agriculture de France*, 1917, p. 189).

"As the Director of the Chamber of Commerce of Marseilles informs us, in England, Germany, and the Netherlands, the industrial use of the soybean has been growing in importance for several years. In Germany there even existed an important manufacture of soymilk.

"A Chinese factory [run by Li Yu-ying] was installed a few years ago near Paris to enable the soybean to realize its full potential and to introduce various commercial food

© Copyright Soyinfo Center 2013

products made from this seed. In 1912 Messrs. Li Yu-ying and Grandvoinnet published a work on the soybean, recommending its cultivation in France.

"In 1917 Mr. Balland notified the Academy of Sciences of the utilization of soya in war bread, biscuits, etc. All these products, said the knowledgeable chemist, can contribute to a good diet because of their rich nutrient content.

"The Swiss, who consume many coffee substitutes, roast the soybean seeds to make a coffee.

In Algeria, starting in 1894, soybean agronomic trials were started at the botanical station of Rouïba. The results were communicated to the other French colonies in 1898 [by Louis Trabut] in Bulletin No. 16 of the Botanical Service." The results of these and subsequent trials in 1896 and 1897 in Algeria are summarized.

In 1896 a soybean with a green seed coat yielded 2,980 kg/ha of soybeans.

Pages 7-11 include discussions of the nutritional value of soybeans, their use in diabetic diets, the fact that soybeans are rarely consumed as such but are almost always processed into more sophisticated foods (including fermented foods). Following these trials, that were focused on a very important collection (80 soybeans in number) received [in France] from a missionary in China through the intermediary of Mr. H. de Vilmorin, the seeds were distributed and the results of their cultivation were generally good. There follows a letter from a person in Bou-Medfa [Bou Medfaa, Algeria]. Also discusses the availability, benefits, and method of producing soybean milk which the Chinese prefer to animal milks, and which is free of bacteria that can cause tuberculosis. In Algeria, soybean yields range from 12 to 30 quintals per hectare. Note: 1 quintal = 100 kg. The Arabs consume soybeans boiled in salted water. In England a Soya Flour is sold which contains 75% wheat flour and 25% soy flour. This flour is used commercially to make a soy bread. A Soja Biscuit is made in the Netherlands.

Pages 12-14 list 26 soybean varieties in order of their earliness. Synonyms and characteristics are also given: *Soja très hatif à grain noir* (Extra Early Black; Vilmorin or Ogema [Ogemaw] of Michigan. Matures in 80-90 days). *Brun précoce* (Early Brown from Indiana). Vireo (Tokyo). Chernie (Khabarovsk, Siberia; black seed). Auburn (American selection). Merko (Mekoechofka of Siberia; brown seed). Elton (Khabarovsk, Siberia; yellow seed). Chestnut (American selection 1907; brown seeds). *Jaune d'Etampes* (Yellow Etampes, or Ito San in America; One of the earliest varieties introduced to Europe and America). *Vert de Samarow* (Green Samarow, or Guelph in America; green seeds, matures in 120 days). Butterball (or *Jaune géant* {Yellow Giant} from Dammann, from Tokyo; yellow seeds. Matures in 110 days). *Soja noir de Podolie* (Black Podolia, or Buckshot in America; black seeds). Wilson Black (Manchuria). Meyer. Austin. Haberlandt. *Huang-Tou* (Yellow Bean, from Ningouta {Ninguta, see Ning'an}). Bhetmas (from India; seed chocolate and yellow). Medium Yellow. Shingto (From Tieling {T'ieh-ling or Tiehling, Liaoning prov.}, Manchuria). Swan (from Canton). *Soja tigré* (Striped, spotted, or speckled soybean from Peking; seeds are grilled and eaten like peanuts). Brooks (Manchuria and China). *Maculata gigantea* (Large spotted, sold under this name by Dammann; probably the same as the American variety Meyer). Mammoth (American selection). Riceland (From China).

The importance of inoculation with bacteria is emphasized. Soybeans can be cultivated with cowpeas for forage. An illustration (line drawing) on the cover shows the soy bean plant, with a close-up of the pods.

Note 2. This is the earliest document seen (Oct. 2004) that mentions the soybean variety Wilson Black. Address: Director of the Botanical Service for the Government of Algeria.

1002. Gray, Olive. 1918. The new. Latest view in stores and homes. Novelties, ideas, and practical suggestions. *Los Angeles Times.* May 19. p. III-15, III-15.
• ***Summary:*** The section titled "Soy dairy products" states: "At a Japanese place, where groceries and produce popular with the orientals are always in stock, I was interested in observing the 'soy bean milk,' 'soy bean cottage cheese'– maybe it is pagoda cheese [probably tofu]. Soy bean flour [probably roasted] is also there, and recipes are issued which teach many ways of utilizing this so-nutritious food product."

1003. *Weekly News Letter* (*USDA*). 1918. Soy beans, used like navy kind, make valuable food: Ancient China's product can be served in numerous desirable ways. 5(42):3. May 22.
• ***Summary:*** "While the soy bean has been grown in the United States primarily as a forage crop, its availability as a valuable food for human beings is being given increasing attention. Many schools of cookery and domestic science in this country, as well as home economics experts and home-demonstration agents of the United States Department of Agriculture, have shown that dried beans can be used successfully in the same manner as navy beans." After the beans are soaked, then boiled slowly, they "may be seasoned and used as the principal part of a meal, as they are or may be made into bean loaf, bean croquettes, or other dishes.

"When soy beans are three-fourths or more grown, the seed make a palatable and nutritious green vegetable."

Also discusses "soy-bean milk" ("a milky emulsion is obtained which is similar in appearance and properties to cow's milk"), "tofu or bean curd" (the addition of either magnesium chlorid [chloride] or calcium sulphate to soy-bean milk precipitates some of the proteid substances, forming a grayish-white curd).

"Soy or shoyu sauce is a dark-brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water, inoculated with a

© Copyright Soyinfo Center 2013

culture known as rice ferment and left in casks to ferment for six months to a year or longer. The liquid obtained is used in many countries, including the United States, as a sauce for meat or vegetables." Address: Washington, DC.

1004. *Atlanta Constitution* (*Georgia*). 1918. Fine cooking exhibit feature at convention: Interstate oil mill superintendents and oil mill exhibitors will met here. May 26. p. 5.
• ***Summary:*** "Delicious biscuit, served piping hot from the oven, bread with a tempting flavor all its own, cooked as fine as were ever baked, and muffins that melt in your mouth, all made from peanut flour and soybean flour, will be a feature of the annual joint convention of the Interstate Oil Mill Superintendents' Exhibition association to be held at the Auditorium in Atlanta May 29, 30 and 31.

"In addition to the cooking exhibit,... there will also be a display of the food products of the cotton seed, peanut and soya bean mills of the south. Soybean cheese [tofu] and vegetable coffee made from soybeans will be also be on exhibit, together with cotton seed oil, peanut oil, peanut meal, peanut flour and soybean flour.

"The annual convention of the two associations which was held last year..." in Atlanta June 13-15 "brings together hundreds of delegates and visitors from all parts of the south." Lists the officers of each association.

1005. Thurston, Azor. 1918. Soya bean oil. *Midland Druggist and Pharmaceutical Review* 52(5):202-03. May. [3 ref]
• ***Summary:*** This oil is called *huile de soja* in French, *Sojabohnenoel* in German, and *olio di Soia* in Italian. "Soya beans are cultivated in Russia, Japan, China and the Southern part of the United States. Constants: Refractive index at 20ºC, 1.4768; specific gravity at 25ºC, 0.9194; solidification value, -15 to -16ºC; saponification value, 191 to 194; iodine value, 130 to 135; Reichert-Meissl value, 0.45 to 0.69. Principal components: Glycerides of oleic, linolic, stearic and palmitic acids." After discussing the oil's preparation, properties, and tests of purity, the author describes its uses: "Soya bean oil is used in soap making, in paints and varnishes as well as in making waterproof clothing. It is used as an edible oil in the manufacture of lard substitutes and oleomargarine. It is used to a limited extent as a lubricant and burning oil. 'German Coffee Berry' is a species of soya bean the seed of which, being parched and ground, is used as coffee. As a by-product the soya-bean meal is a valuable stock food." He then discusses natto, based on a 1912 article by S. Muramatsu. He adds, incorrectly, that "Tofu is a liquid preparation resembling cow's milk and manufactured from soya beans."

Note: Azor Thurston lived 1861-1922. Address: Ohio State Univ.

1006. *Los Angeles Times.* 1918. The last of the House of Honda. June 2. p. MF4-5.
• ***Summary:*** In this short story (fiction), an American traveler finds himself on the island of Luchu (perhaps Okinawa, in today's Ryukyu Islands, which extend in a 600-mile-long arc between Kyushu {Japan} and Taiwan). He is taken, at night, to the home of a stranger–a Japanese aristocrat–on a large estate. There, the servant "set before me more awamori and a dish of bean curd and bamboo root" (p. 2, col. 1.4).

1007. *Bean-Bag* (*The*) (*St. Louis, Missouri*). 1918. The soy bean. 1(1):43. June.
• ***Summary:*** Contents: Wide use of soy beans [in North Carolina]. Soy bean has food value. Soy beans for hay. Concerning food value: "This remarkable legume has a composition very closely resembling fat meat. Chemical analysis shows in its composition one-third protein, or more than is found in beef, and one-fifth of its weight in fat. And so the soy bean serves the Chinaman for both beef and butter.

"Another point in favor of the soy bean is the fact that the protein which it contains is a complete protein. That is, it is capable of fully supplying the place of lean meat, milk or eggs. It is for this reason that Chinese and Japanese are able to prepare from the soy a very good substitute for milk. A very fine cheese is also made from the soy, which is in many respects superior to ordinary cheese.

"The fat or oil of the soy is of excellent flavor and is more easily digestible than animal fat.

"The soy is a vigorous grower and produces more bushels to the acre than does the ordinary bean. Pound for pound the soy bean supplies one-half more nutriment, so that a parcel of ground planted to the soy bean supplies one-half more nutriment than if planted with ordinary beans."

1009. Layosa y Makalindong, Pedro. 1918. Field tests of soy beans. *Philippine Agriculturist* 6(10):276-91. June. Based on his thesis, College of Agriculture, No. 92. [8 ref]
• ***Summary:*** "Of the leguminous crops in the Philippines the soy bean is the only one of which the finished products are used. These finished products, the most important of which are the [salt pickled] soy bean curd (*tahuri*) and soy bean sauce (*toyo*) have been long known all over the islands. In spite of this evidence of its economic importance, the crop has been given but very little attention by Filipino farmers."

The field tests were carried out in the Philippines. The

© Copyright Soyinfo Center 2013

author mentions that soy beans are used in China, Japan, and other countries as a substitute for meat.

The author has carried on the breeding work with soybeans begun by Maceda in the Philippines to determine their commercial value and to find the varieties best suited for the rainy and the dry seasons, respectively. It was found that the selections from the variety Kedilcie Wit grown during the rainy season and strains from Ami's bean grown during the dry season produced the highest yields. Address: Philippines.

1010. *Gardens' Bulletin, Straits Settlements* (*The*) [*Singapore*]. 1918. Soy bean. 2(1):12. July 4.
• ***Summary:*** "The Soy bean is of enormous importance in Japan, Manchuria and China; and thence a great feature in world commerce. It is now being extensively planted in the United States. It has been said that it could not be grown in the Tropics, and some first trials of it in the Philippines a few years ago led to statements that it could not be successfully grown there. However this was merely a case of the wrong variety for the season in which the planting was done; for there are many distinct varieties of Soy of quite different possibilities; and more comprehensive trials in the Philippine islands developed the fact that certain varieties were suited only to the wet season, others only to a drier period, and some were heavier yielders of hay, others of grain, and so on, it now being recognized that soy is a practicable crop for the country.

"Three varieties were brought to Singapore from the Philippines. Two did not germinate. The third gave but few plants, but these grew well and are now setting pods. Great care should be taken to continue and develop this culture* since out of it may arise a real asset to the country. Comprehensive trials of all the plant in furnishing direct food for man and beast is but a part of its value, since its secondary products are used the world over. Vast quantities of the famous soy sauce** are consumed yearly in all parts of the world, while bean curds [probably tofu] and oil from this source are well known.

Footnotes: "* The second crop of Soy bean was for some unknown reason a complete failure. E.H.M. ** Basis also for one of the best known English [British] table sauces" [Worcestershire sauce].

• ***Summary:*** "Following experiments by the Department of Agriculture in the preparation of soy bean curd as a meat substitute, members of the National Canners' Association have received this letter from Dr. B.R. Hart, Chief of the Eastern District of the Bureau of Chemistry: 'Dr. Yamei Kin, who has been connected with the Department of Agriculture in the study of the soy bean and its properties, has been carrying on considerable work at the Laboratory of the Bureau of Chemistry, Department of Agriculture, 641 Washington Street, New York. This work has consisted of the preparation of soy bean curd in its various forms suitable for use as a meat substitute. Heretofore the soy bean has been used chiefly in the same manner as our common white bean and as a cereal substitute. The Department of Agriculture has instituted the present work in an effort to render available the high protein content of the soy bean as a partial substitute for meat in the dietary of the people of the United States. This matter is being brought to your attention because we feel that the soy bean dishes are well suited for canning, and in view of the present shortage of meat they can be added with advantage to the preparation you now have on the market.

"'A number of prepared dishes of various kinds have been made up ready for use, and these as well as the process for manufacturing the curd have been worked out quite in detail. In case you believe your firm would care to place any of these preparations on the market, or would like to make a study of them with that idea in view Dr. Kin would be glad to grant you or your representative a personal interview and explain the whole matter in detail.

"'If you care to go into this matter and will be good enough to advise us concerning the date which would suit your convenience, we will appreciate it very much.'"

Note: Dr. Kin was apparently never involved in a commercial tofu manufacturing company, as W.T. Swingle (1943) seems to imply.

woman doctor favors soy beans. 1(3):28. Aug.
• ***Summary:*** "Dr. Yamei Kin, a Chinese woman doctor of New York City, recently spent six months in China, studying and analyzing the soy bean. Dr. Kin says that the protein contained in the soy bean is equal to that of meat, and is of great value to persons who cannot safely eat meat. It is a replacer of meat, a sort of vegetable cheese. It forms no acid. It is an alkaline form of protein.

"There are several varieties of soy beans, says Dr. Kin. They look like dried peas, and taste like pebbles. Combined with hash or any form of meat leavings, it forms a wonderful food for diabetics, as the curd contains no starch. When you eat 'chop suey,' 'chow mein' and other dishes in Chinese restaurants, the salty black sauce [soy sauce] served with the food is made of soy beans.

"Excellent cheese [tofu] can be made from soy beans, according to Dr. Kin. She says she can make roquefort cheese [fermented tofu] that smells and looks like the real thing. She also says that when the public becomes educated to the soy bean it will take its place at the head of the procession of American products. In all the world there is not a more misunderstood vegetable than the soy bean, says Dr. Kin."

1015. *J. of Agriculture and Horticulture* (*Quebec*). 1918. Soy beans as food. 22:48. Sept. 1.
• ***Summary:*** "The housewife of to-day who desires to patriotically conserve needed foods for overseas and at the same time provide adequately for her own household is naturally on the lookout for new articles to add to her dietary list. Such a one which has much to recommend it is soy beans...

"Most varieties require a longer season for maturity than our northern climate provides but there are one or two that appear to thrive in Quebec and a number of people are trying them this year. They are said to produce abundantly so it is probable that many housewives will be giving them a trial this season for the first time, and a few suggestions as to their treatment may be welcome.

"In Japan and China soy bean milk is prepared and used extensively. This milk is also sold in a condensed form and as curd [tofu]. Other preparations are vegetable butter and cheese, and the extracted oil is sold for table use and for cookery.

"The Food Preservation Demonstrations of the Canada Food Board form an interesting feature of the fall fairs this year."

Describes the preparation of: (1) Green soybeans. "If cooked when about three-fourths grown as green beans the water should be changed once during cooking". (2) Dry soybeans. Long soaking in a large quantity of water improves the flavor by assisting "in the removal of any disagreeable principle." To serve as baked beans, in a crock, add to 2 cups cooked beans, ¼ teaspoon mustard, salt, a few grains of cayenne pepper, ½ cup tomato catsup, or if desired a few drops of onion juice, or 2-3 tablespoons molasses, or a teaspoonful of Worcestershire sauce. (3) Soy flour. "The raw soy beans may be ground into meal and combined with flour for bread, biscuits, or muffins. In the bread 1/3 soy bean meal may be used, in the biscuits and muffins a larger proportion." The meal tastes best if slightly browned.

Note: This is the 2nd earliest document seen (Jan. 2010) concerning soybeans in Quebec province, Canada, or the cultivation of soybeans in Quebec province (one of two documents). Address: Canada.

not know. Since Saizo and Heiji were registered by the same person on the same date at the same place, they probably traveled to Portland from Japan together; why, we do not know.

1018. Jordan, Sam. 1918. Soy beans from soup to nuts: A new crop with many uses both on farms and in factories. *Country Gentleman* 83(39):7, 34. Sept. 28.
• ***Summary:*** Begins by discussing: The possibilities of soy beans "as a substitute for meat." The rising demand for "soy oil" which started a few years ago when the flax crop was little better than a total failure. "Industrial uses" of soy oil in soap, paint, and varnish. "Several packing houses were experimenting with the oil as a possibility in oleomargarine manufacture." "Soys fix soils for cotton." "Varieties of soy beans have been matured as far north as Quebec" [Canada]. The "development of the soy in the cotton sections will no doubt be swifter from an industrial standpoint because of the already existing facilities for oil extraction."

Concerning food uses, the author believes that "the soy bean as human food is destined to play a leading part in the way of a substitute for meat. From studies made of soy beans as food, the use of flour seems to be one form in which their use will suit the American taste and palate best."

"I have heard that the soy-bean milkman comes around before breakfast each morning in the Orient and leaves soy-bean milk." A Chinese student recently verified this story and said that in his family's household "it was customary to drink a glass of the milk upon arising." The student added that fried bean curd was often served for breakfast, and with soy sauce for dinner. "This soy sauce is something more or less familiar to Americans, the acquaintance being contingent upon the frequency with which our Chinese restaurants are patronized. It is the dark-brown liquid usually on the tables in the vinegar bottles. It is also the base of our Worcestershire sauces.

"For supper a favorite dish is sprouted beans in salad form, mixed with small pieces of meat or egg. They usually have also some form of bean cheese or fermented boiled beans. Next to baked and boiled beans, the preparation of soy-bean milk is a thing which should be more widely known."

"The author gives a brief description of how this milk is made, noting that it can be used in "cream sauces, puddings, custards, and even ice cream when some high flavoring is added to kill the beany taste. Much of the strong taste can be eliminated by boiling the milk slowly and stirring to prevent scalding.

"The residue [okara] obtained by straining the milk makes an excellent base for muffins and even bread, when it is used in the proportion of one part to three or four parts of wheat flour."

"In regard to fresh bean curd or 'tofu,' as the Chinese call it, it is hardly probable that we shall use it generally at an early date. The process of making it will no doubt come through the activities of our increasing number of women home-demonstration agents and, also, it is being made commercially by several Chinese firms in this country. When it does become more widely known, however, it is destined to be used extensively. It has very little taste of its own, and takes the flavor of everything with which it is used, generally as a base. It is also highly nutritious.

"Soy sauce is likewise destined for greater use, but the process of its manufacture is too complicated for domestic preparation. It can be purchased at Chinese groceries in this country, and probably from the majority of Chinese restaurants.

"Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

"And here is one for vegetarians–a 'vegetarian roast.' This is made by using equal parts of soy beans and peanuts, with the peanuts roasted and the beans boiled until soft before both are mixed and treated as an ordinary meat loaf. Such a roast as this is now being prepared by several food-manufacturing firms in the South, where both peanuts and soy beans are plentiful. It is being placed on the market in one and two pound containers."

"The beans served as a green vegetable are treated after hulling in much the same manner as Lima beans or peas. To hull, however, they should be boiled in the pods for about five minutes, then dipped into cold water, after which they shell easily. They can also be canned in this way, treating them after hulling the same as Lima beans. It is often desirable to serve them with rice or potatoes."

"So here we have a small glimpse of what their [soy beans'] future really is. A crop with a great industrial importance, a crop with known forage and manurial possibilities, and a crop holding forth a beneficent promise as an essential food, soy beans will soon be giving corn and wheat a close race for the more prominent places on our agricultural map."

Photos show: (1) Soy beans after being soaked but before boiling. (2) Piles of hay, used for forage. (3) Side view of a soy-bean harvester (with a man on top, pulled by two horses) used in the South, showing the bags filled. (4) A rear view of the same separating and bagging soy-bean harvester.

Note 1. This is the earliest document seen (March 2012) that uses the term "from soup to nuts" in connection with soybeans.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "soy-bean sprouts" to refer to these sprouts. Address: Columbia, Missouri.

meat substitute. 1(4):23. Sept.
• ***Summary:*** "Following experiments by the Department of Agriculture in the preparation of soy bean curd as a meat substitute, members of the National Tanners' Association have received this letter from Dr. B.R. Hart, chief of the Eastern District of the Bureau of Chemistry:

"'Dr. Yamei Kin, who has been connected with the Department of Agriculture in the study of the soy bean and its properties, has been carrying on considerable work at the laboratory of the Bureau of Chemistry, Department of Agriculture, 641 Washington Street, New York. This work has consisted of the preparation of soy bean curd in its various forms suitable for use as a meat substitute. Heretofore the soy bean has been used chiefly in the same manner as our common white bean and as a cereal substitute. The Department of Agriculture has instituted the present work in an effort to render available the high protein content of the soy bean as a partial substitute for meat in the dietary of the people of the United States. This matter is being brought to your attention because we feel that the soy bean dishes are well suited for canning, and in view of the present, shortage of meat they can be added with advantage to the preparation you now have on the market.

"'A number of prepared dishes of various kinds have been made up ready for use, and these as well as the process for manufacturing the curd have been worked out quite in detail. In case you believe your firm would care to place any of these preparations on the market, or would like to make a study of them with the idea in view, Dr. Kin would be glad to grant you or your representative a personal interview and explain the whole matter in detail.'"

1020. *J. of Agriculture and Horticulture* (*Quebec, Canada*). 1918. Soy beans, used like navy kind, make valuable food: Ancient China's product can be serve in numerous ways. Oct. 1. p. 67.
• ***Summary:*** From Weekly News Letter, U.S. Dept. of Agriculture [22 May 1918, p. 3]: "When prepared like the ordinary field or navy beans, soy beans should be soaked for 10 or 12 hours or more, if necessary, and boiled slowly. The boiled soy beans,... may be seasoned and used as a principal part of a meal as they are or may be made into bean loaf, bean croquettes, or other dishes.

When soy beans are three-fourths or more grown, the seed make a palatable and nutritious green vegetable.

Also discusses "soy-bean milk" ("a milky emulsion is obtained which is similar in appearance and properties to cow's milk"), "tofu or bean curd" (the addition of either magnesium chlorid [chloride] or calcium sulphate to soy-bean milk precipitates some of the proteid substances, forming a grayish-white curd).

"Soy or shoyu sauce is a dark-brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water, inoculated with a culture known as rice ferment and left in casks to ferment for six months to a year or longer. The liquid obtained is used in many countries, including the United States, as a sauce for meat or vegetables."

1021. MacDougal, Sarah. 1918. The soy bean's many aliases: An artistic and appetizing demonstration of the many-sidedness of a 2,000-year-old Chinese vegetable that is meat, fish, milk, butter, cheese and many more in one. *San Antonio Light* (*Texas*). Oct. 6. p. 44. [1 ref]
• ***Summary:*** "Soy beans: Once I tried to cook them. After that I never wanted to hear any more about them. But that was before I went the other day to see Dr. Yamei Kin, a Chinese woman who is giving her time and talents to the Government to help solve the food problem.

"I found her in a blue silk kimono and a big white apron hustling about the kitchen in the United States Department of Agriculture Laboratory on Washington St., New York. The place looked as if some one had just milked the cows and brought in the milk pails. On the floor near the stove were two twelve-quart pails filled with warm milk. The Chinese boy helper strained the stuff through an aluminum strainer and cheesecloth. They were going to make cheese.

"That same Chinese lad had just finished milking the soy bean before I came in. That may sound queer, but it's all very simple. If we knew as much as we ought to know about soy beans there wouldn't be any absolute necessity for cattle or grazing lands or winter fodder. Because soybeans are ready to supply meat and milk and butter and cheese and all the rest of it. Dr. Kin said so and there were rows of jars and bottles on shelves and tables in that kitchen to prove it."

"'I might talk to you until doomsday about the manifold uses of soy beans, but you wouldn't understand,' she told me candidly, and then invited me to have luncheon in her apartment [at No. 56 West Eleventh St., New York City], promising a practical and palatable demonstration."

Since her guest had said that Roquefort was her favorite kind of cheese, Dr. Kin said she would serve that–[fermented tofu] made from soy beans–at the luncheon.

"Dr. Kin was born of Christian parents at Ningpo, south of Shanghai. Her father was a native pastor. Both parents died when she was three years old, and the Chinese child was taken into the home of medical missionaries, Dr. and Mrs. D.B. McCarter. When they came to the United States on furlough, she came with them. When she was sixteen she entered the Woman's Medical College of New York Infirmary for Women and Children, was graduated three years later, took a post graduate course for two years, and went back to China to practice medicine. She was appointed head of the Imperial Peiyang Woman's Medical School and Hospital, and later she was made head of woman's hospital work in northern China. She was married in 1894 and retired to private life. Her husband died a few years later, and in order to support herself and her son, Dr. Kin embarked on a

© Copyright Soyinfo Center 2013

lecture tour.

"Food is only one of the subjects she is interested in. She is recognized as an authority on Chinese art and literature.

"The one thing uppermost in her mind to-day is the winning of the war. She believes that food is one of the greatest agencies to that end.

"'My boy [Alexander] is at the front doing his bit,' she told me simply, and added: 'I want to do mine, too.'"

An excellent portrait photo shows Dr. Yamei Kin.

1022. *Bean-Bag* (*The*) (*St. Louis, Missouri*). 1918. Products secured from a ton of soybeans (Diagram). 1(5):37. Oct.
• ***Summary:*** This diagram shows all the things that can be made from 2,000 pounds of soybeans: Meal 1,650 lb. Oil 32 gallons. Trash and moisture: 120 pounds.

From the meal: Food (animal or human), fertilizer, and cellulose. Human foods include macaroni, flour, soy sauce, milk [soymilk], cheese [tofu], coffee, lard [sic].

From the oil: Food (cooking oils, butter [substitute, lard substitute]), paints, enamels, blown oil (linoleum, varnishes, India rubber substitutes), soap stock (soaps, glycerine).

1023. MacDougall, Sarah. 1918. Introducing to America an entirely new food–The soy bean: Dr. Yamei Kin. *Bean-Bag* (*The*) (*St. Louis, Missouri*) 1(5):17-19. Oct.

• ***Summary:*** From St. Louis Post-Dispatch Sunday Magazine: "Soy beans! Once I tried to cook them. After that I never wanted to hear any more about them. But that was before I was invited to a soy bean luncheon in a Greenwich Village apartment. Whenever anyone said 'soy beans,' I would recall that bowl of pebbles and then an unspeakably unpalatable mass of stuff that had to be thrown away. But now! As long as I live soy beans will seem like a symbol of pleasant sensations inside and out. I must tell you about that luncheon.

"I went the other day to see Dr. Yamei Kin, a charming Chinese woman, who is giving her time and talents to the Government to help solve the food problem. Her specialty is Oriental food, especially soy beans, and she has been spending the summer showing how that food can be adapted to Occidental appetites. I found her in a blue silk kimono and a big white apron, hustling about the kitchen of the United States Department of Agriculture Laboratory in New York.

"The place looked as if somebody had just milked the cows and brought in the milk pails. On the floor near the stove were two 12-quart pails filled with warm milk. Dr. Kin was starting to make curds and whey. I watched her put a couple of spoonsful of fluid into each pail and saw the milk curdle in the good old way. Then the Chinese boy helper strained the stuff through an aluminum strainer and cheesecloth. They were going to make cheese.

"The Chinese lad had just finished milking the soy beans before I came in. That may sound queer to a mind that doesn't orientate toward those beans. But its all very simple. If we knew as much as we ought to know about soy beans there wouldn't need to be any cattle or grazing lands or winter fodder. Because soy beans are ready to supply meat and milk and butter and cheese and all the rest of it. Dr. Kin says so. And there are rows of jars and bottles on shelves and tables in that kitchen to prove it. Besides, there was a soy bean luncheon.

"The beans from which the milk had been extracted were soaked the night before. In the morning the Chinese lad put them through the mill, which is part of the kitchen equipment. It looks primitive, being made of two huge pieces of granite, imported from China. In its homeland this mill is worked by coolies, in New York by electricity. When the grist comes out of the mill it is strained. That was the stuff that filled those two pails. Dr. Kin told me that in China people eat the curds and cheese in their natural state. Here, however, she is making that cheese a base for a series of camouflage experiments.

"'We made ours into fish for dinner last night,' said a man from a nearby laboratory, who comes in every day to find out whatever happens to be new about soy beans.

"'How was it?' asked Dr. Kin.

"'Great,' said the man. 'My wife fried a couple of fish and then fried some soy bean cheese in the gravy, and, honest to goodness, I couldn't tell which was which. It has a way of absorbing the flavor of whatever it's cooked with,' he explained to me.

"'We had ours with chops,' remarked another laboratory expert who joined us. His name was Mr. Gleason. He declared that if he didn't know the difference he might have thought he was eating an extra chop. Everybody in the place was ready to root for soy beans.

© Copyright Soyinfo Center 2013

"Dr. Kin explained that the reason the soy bean has been misunderstood in America was because people didn't take the trouble to investigate and analyze It, and to find out what are its food properties with reference to the nutrition we get from meat and vegetable.

"'Don't try to think about soy beans in a scientific way,' she advised me. 'This thing I am working with is in reality a vegetable cheese. It takes the place of meat. We've been using soy beans in China for over 2,000 years, and they are really very delicious and nutritious,' this in an offhand way, as if an experiment of 20 centuries or so ought to pave the way for the American appetite. She didn't want me to get my mind cluttered with such terms as carbohydrates and proteins.

"'I wouldn't waste a minute experimenting with food that was merely nutritious,' she told me. 'This whole movement about finding out the possibilities of food is part of the cultural development of the American people. The older a civilization becomes, the more people like to be surrounded by beautiful things. Chinese art, you know, is the most highly developed art in the world. All this bother about beans is not a question of science or of what is good for us, but it is a question of what is dainty, what is nice, what appeals to the taste. Making a study of eating is a part of the fine art of living.

"'American women, you must admit, are lacking in artistic sense. That is because the country is so young. When the process of refinement is farther advanced they will not regard household work, and especially cooking, as drudgery. It is really art. The older nations, being more cultured, make a deeper study of things. Chinese, for instance. But the Americans are very susceptible, very open-minded and frank and eager to acquire new ideas.

"'The trouble with vegetarians was that they expected us to eat such awful things. I'm not a vegetarian, but I must admit that I find great satisfaction in being able to sit down to most of my meals without facing the fact that I am eating slices of what was once a palpitating little animal, filled with the joy of life. I shouldn't be surprised if the soy bean will save the lives of many American animals.'

"On a long table was a row of glass jars filled with what looked like slices of white cheese [fermented tofu]. It was soy bean cheese. A jar was filled with a brownish paste [probably a type of Chinese jiang]. It was soy beans. There were bottles filled with the condiment we get with chop suey. That, too. was made from soy beans. Talk about dual personalities! The soy bean has so many aliases that if you couldn't like it in one form you would be pretty sure to like it in another.

"Dr. Kin has been trying any number of experiments with a view to boosting the bean to a bigger place commercially. In due time the results of all these experiments will be catalogued at Washington [DC]. Perhaps some day there will be a Bureau of Beans, from which may be obtained for the asking recipes on a thousand ways to prepare soy beans.

"Because she is working for the Government Dr. Kin doesn't disclose many details about the things she is doing. All that is worth while will be public information in due time, she says. Canning curds and cheese so they can be kept an indefinite length of time and then utilized in various forms is something she is trying to perfect.

"'I might talk to you until doomsday about the manifold uses of soy beans, but you wouldn't understand,' she told me candidly. Then she invited me to have luncheon in her apartment, promising me a practical and palatable demonstration that would make an impression in the way food ought to interest us. Of course, I was charmed with the idea. The only hitch was that I had to have luncheon without my hostess. Dr. Kin was going out of town early in the afternoon.

"While the Chinese lad was getting his instructions about piloting me to the apartment and serving luncheon, Dr. Kin turned to me and asked what kind of cheese I liked best.

"'Roquefort,' said I.

"'That's good,' said she, and then she told the boy something else in Chinese, told me she hoped I'd enjoy the luncheon and invited me to spend all afternoon at the flat if I cared to read any of her books or look at her pictures.

"Before we turned in at 56 West Eleventh street, I discovered that Wei, my amiable escort, was somewhat limited as to English vocabulary. He had been here only six months. When he entered the apartment he ushered me into a cool-looking parlor, indicated a comfortable big chair beside an open window, and disappeared with a smile that seemed to say: 'I'll rustle along the luncheon if you just sit there and fan yourself.'

"In a corner over near a window there was a big mahogany desk that looked like business. On it was the photograph of a Chinese-American youth, a strapping tall fellow who looked every bit a soldier. He is Dr. Kin's soldier son, Alexander, 21 years old, who left college to enlist as a private, and is now with Pershing's Eighty-second Division.

"A book and a magazine lay side by side on that desk. The book was Rabindranath Tagore's 'Nationalism.' The magazine was 'The Bean Bag.' I took up the magazine. Here are a few things I learned:

"Three million acres have been cultivated to soy beans in the South, principally in North Carolina; man could come nearer living well on soy beans alone than on any other food: it is the nearest substitute to meat there is; containing starch, sugar, fat, cellulose, albuminoids, mineral salts; a new harvester has been invented that threshes the beans on the vines, over 100 American manufacturers are using soy bean oil for soap, paint, varnish, enamel, salad oil; soy beans are listed in the food market of the District of Columbia; the soy. or soja, is the first and oldest of the 150 branches of the bean family; Manchuria claims the honor of its nativity;

© Copyright Soyinfo Center 2013

the Manchurian railroad recently opened a branch and an improvement station for distribution of the Ssupingkai special." Continued.

1024. MacDougall, Sarah. 1918. Introducing to America an entirely new food–The soy bean: Dr. Yamei Kin (Document part II). *Bean-Bag* (*The*) (*St. Louis, Missouri*) 1(5):17-19. Oct.

• ***Summary:*** From St. Louis Post-Dispatch Sunday Magazine: Continued. "While I was trying to figure out how to pronounce that word Wai came in so quietly I hadn't heard him enter.

"'Please.' said he, with a slight bow and a wave of one graceful hand toward the dining room, smiling and amiable as ever.

"I hadn't even heard him lay the table, although the door to the dining room was open.

"I took my place at the head of the table.

"'Soy beans,' said Wai, with another gracious smile, introducing the contents of the green pepper on my blue plate. Then the boy disappeared silently.

"An hour earlier I had been starvingly hungry. But there I sat looking at that decorative food. I recalled something Dr. Kin had said about art and eating. Before me was a symphony of blue and white dishes on dainty blue and white doilies, with a vase of crackled green glaze filled with asters and asparagus ferns on the center of the table.

"If Dr. Kin hadn't told me I was going to have a soy bean luncheon I wouldn't have believed that pepper was stuffed with anything that was even a distant relation to the soy beans I had tried to prepare. Honestly, I've never tasted anything more delicious. The little salted biscuits were made of soy bean flour. In due time Wai came in with the dessert.

"'Soy beans,' said he, introducing a trembling pyramid of chocolate blancmange, topped with white sauce. He stood there until I tasted it, and when I looked up incredulously, he smiled affirmation and repeated: 'Soy beans.'

"There was nothing to do but believe the boy. It was so good it didn't seem to matter what it was made of, for I was beginning to forget that I was out on a story. Then he brought some cheese and went through the same old ritual by way of introduction. Dr. Kin had asked what kind of cheese I liked. It didn't look like roquefort. but it certainly tasted like it. And Dr. Kin had told me it could be made for next to nothing, that it would be so inexpensive that everybody could afford to eat it.

"Of course I wanted to know just how all these palatable things were prepared. But Dr. Kin told me before I went to luncheon that she is not giving out any recipes while she is working for the Government–that they will be made public from Washington [DC] in due time.

She did tell me afterwards, however, that the green pepper was stuffed with chopped soy bean curd, which had been made up like chicken hash, with onions, celery and some chicken stock, but no meat. The cheese was entirely made of the soy bean curd, which had been through a cheese process to make the different brands of cheese. The dessert was made of a little red bean, flavored with chocolate.

"If anyone asks you to a soy bean luncheon. don't miss it. It isn't a question of what is good for you. It is a question of what is dainty, nice–what appeals to the taste, and you will find it a lovely little contribution to the art of living."

Note: On page 21 of this issue is the following notice: "Corp. A.A. Kin killed in action."

"Corp. [Corporal] A. A. Kin, only son of Dr. Yamei Kin, noted Chinese woman scientist who has been making extensive tests of the soy bean for the Government, was killed in action in France just before the armistice was signed. Corp. Kin was a graduate, of Columbia University.

"Dr. Kin was employed in the Government laboratory at New York, and found many ways of using the soy bean as a human food. She has now returned to China."

1025. Winkler, Gustav. 1918. Die Sojabohne: Aus einem Vortrage... gehalten in der Hauptversammlung der Gartenbau-Gesellschaft Frankfurt a.M. am 17. April 1914. Zweite Auflage [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914. 2nd ed.]. Mainkur bei Frankfurt am Main, Germany: Published by the author. ii + 28 p. Illust. 22 cm. [4 ref. Ger]

• ***Summary:*** On the cover: "Die Sojabohne der Mandschurei [The soybean of Manchuria]. Much of this lecture (as stated on the title page) was based the following English-language article, translated into German by Werner Winkler (Gustav's son) in 1913: Shaw, Norman. 1911. "The soya bean of Manchuria." *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series* No. 31. 32 p.

Contents: A 2-page insert at the front. Photos show: (1) The author (with a large white beard and moustache) with a many-branched soybean plant, stripped of its leaves, mounted on a 2 x 3 foot wooden board, from his beanfield (*Winklers Bohnenfeld*) at Mainkur. This one plant grew from May 10 to Oct. 15, 6 months, producing 242 pods containing 503 completely mature soybeans. This line was acclimatized for 6 years and cultivated in the soil for 5 years. (2) The author standing and holding (with the roots facing upward) one soybean plant in each hand. In his right hand is an acclimatized soybean which produced 58 beans in 100 days. In his left hand is a plant grown from Chinese seeds of 1912-13 which produced 224 flowers and no seeds in 100 days. (3) A many-branched soybean plant, stripped of its leaves, from Winkler's beanfield, affixed to a board. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1917 until Oct. 1, five months. 105 pods produced about 250 completely mature soybeans. From seeds that were not yet acclimatized grown on cultivated soil. (4) A similar looking

© Copyright Soyinfo Center 2013

plant from Winkler's beanfield. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1918 until Oct. 15, five months. 160 pods produced about 350 soybeans. The seeds were not yet completely ripe because of bad, raw weather in 1918.

Foreword to the 2nd edition. Introduction. Diagram in the shape of a rhombus / diamond, showing how the various colored soybeans change from one color into another (adapted from Shaw 1911, p. 2). Description of the diagram: Discusses: (1) Ball, Carleton R. 1907. "Soy bean varieties." *USDA Bureau of Plant Industry, Bulletin* No. 98. 30 p. + 5 plates. May 27. (2) Hosie, Alexander. 1910. *Manchuria: Its People, Resources, and Recent History.* London: Methuen & Co. xii + 293 p. Hosie describes 3 types of soybeans: Yellow, with 3 subvarieites. Green, with 2 subvarieites. Black, with 3 subvarieites.

The rest of the contents is fairly similar to that of the 1st edition (1914), but the details within many sections are greatly expanded. On the rear cover is a photo of two soybean plants attached to a board, one month after planting the seed, Summer 1917; 15 May to 15 June. In the Supplement (p. 26-28), the author summarizes the results of his 8 years of soybean cultivation in Frankfurt; he concludes that it can be grown with good results in southern Germany. Frankfurt am Main is about midway between the northern and southern tips of Germany. Address: Mainkur bei Frankfurt am Main, Germany.

1026. *Schweizerische Milchzeitung* (*Schaffhausen, Switzerland*). 1918. Soja-Milch [Soymilk]. 44(93):1. Nov. 22. Friday. [Ger]
• ***Summary:*** The soybean is imported in large quantities to Europe for industrial uses. In the *British Medical Journal* of April 1918 [April 13, p. 430] we find a recipe for the preparation of soya milk. The recipe is summarized and the properties of soymilk are described. When fresh, this "soybean milk" has a slightly acid reaction, is microscopically homogeneous, and in its physical properties, resembles cow's milk. Lactic fermentation bacilli are active in it. It contains 3.13% casein and 9.89% fat. As the fat is rather oily, churning is impossible. When soymilk is heated, a skin [yuba] forms on its surface. A cheese [tofu] can also be made from soymilk. Soymilk and its derivatives are rich in phosphates, which would be good for nourishing infants and children. In normal times, soymilk should be very inexpensive. The residue from making soymilk [okara], which is still rich in nutrients, could be used in making cakes.

1027. *Christian Science Monitor.* 1918. Kei Hara cabinet: New Japanese Prime Minister heads ministry of self-made men, whose policy is for economic advancement of the nation. Nov. 28. p. 7.
• ***Summary:*** "Mr. Utaro Noda, Minister of Communications, is one of the best-known characters of Japanese public life. His very humble parents lived in a village near Nagasaki, where his young manhood was passed as a vendor of 'tofu,' or bean-curd, a staple food of the poor of his native district. Tramping the country roads with his tofu stick over his shoulder, he found time to study sufficiently to give himself quite a fair education,..."

1028. Arnold, Julean. 1918. Chinese products of interest to Americans. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 21(299):1110-19. Dec. 21.
• ***Summary:*** About Chinese vegetable products. Two long sections ("Chinese production of beans" and "Extensive use of bean products–Exports during 1917") contain detailed discussions of soybeans and soyfoods in China. However, the author states (p. 1112) that the "greater part of the descriptive information above is taken from:" Shaw, Norman. 1911. "The soya bean of Manchuria." *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series.* No. 31. 32 p.

The first of these sections states: "It is only within the past 10 years that the outside world has become acquainted with the soya bean of China. It is probably safe to say that the sudden rise of the soya bean from a position of comparative obscurity to a position of prominence in the world of trade, during a period of little more than a decade, constitutes one of the commercial wonders of the world.

"In the Far East soya beans are used for the following purposes: (1) For bean sauce or soy ('soya' is a corruption of the Japanese 'shoyu'), known to the Chinese as 'chiang-yu' and made... The sauce is clear, resembles Worcestershire sauce, and is used in a somewhat similar way. (2) For 'chiang' or bean paste, eaten with fish, meat, and vegetables, and made by... (3) For 'tou-fu' or bean curd [tofu], made from green or yellow beans by... (4) For a form of flour, extensively used for bean vermicelli, which is tasty and nutritious. (5) As a table vegetable [green vegetable soybeans]. (6) For soups. (7) For making confectionery (in Japan). (8) For oil, as a substitute for lard, as a lubricant, as an illuminant, and to make waterproof cloth, paper umbrellas, and lanterns."

Also discusses "Exports of peanuts" (p. 1118-19): Just before the outbreak of World War I, the peanut export industry in China reached a peak. "The annual exports then were about 70,000 tons of shelled peanuts and about 50,000 tons of oil. More than 40% of these exports went from the port of Tsingtau [Tsingtao] as Shantung has developed into the largest peanut producing Province in China." Address: Commercial Attaché, Peking.

1029. Castet, M. 1918. Utilisation du soja [Utilization of soybeans]. *Revue Horticole de l'Algerie* 22(10-12):160-61.

© Copyright Soyinfo Center 2013

Oct/Dec. Meeting of 20 Oct. 1918. [2 ref. Fre]
• ***Summary:*** The author (a woman, Mlle. Castet) is especially interested in the use of soymilk (*le lait de Soja*) for infant feeding. The soybean grows very well in Algeria and easily gives abundant harvests. In a small household, soya can furnish milk and very nourishing pastries at a low price. Properly prepared and cooked, it has an acceptable taste. Sweetened appropriately, infants also accept it well. One can mask its less agreeable flavor with two drops of essence of cut hay.

By reason of their extremely low price, one can pardon soymilk and tofu (*fromage de Soja*) if their flavor is not quite as good as their dairy counterparts.

According to the author, soymilk can entirely replace cow's milk. She believes that its use in place of cow's milk would reduce infant mortality.

Okara (*la drèche, drêche* = dregs or residue) can be used to make a sweet paste or cookies. Add half its weight of sugar plus just enough water to cover, then cook for at least one hour to give it an attractive brown color, with the taste and appearance of almond paste. It can be consumed as is or used to make stuffed dates. "One can even push the technique further. Mix with this jam one egg yolk, 2 egg whites (beaten until fluffy), and 3-4 gm of bitter almonds (crushed). Spoon onto a cookie sheet and bake for 4-6 minutes. Remove the cookies before they cool, lest they stick to the sheet."

Mlle. Castet also made a cheese (tofu) from soymilk, using magnesium chloride as a coagulant. Address: Secrétaire de la Société d'Horticulture d'Alger, Algeria.

1030. Crevost, Charles. 1918. Plantes oléifères de l'Indochine [Oil-bearing plants of Indochina]. In: Congrès d'Agriculture Coloniale, Gouvernement Générale de l'Indochine. 1918. Hanoi-Haiphong: Impr. d'Extrême-Orient. 57 p. Series: Hanoi No. 6. See p. 26-27. [100* ref. Fre]
• ***Summary:*** Following an overview, the various oil-bearing plants are described in detail, organized by family. The section on Soja (p. 26-27) states: Indigenous names in Cochin China, Annam and Tonkin: Dau nanh, Dau tuong. Cambodia: Sandek sieng. China: Teou [dou]. Japan: Daizu mame. The plant is widely cultivated in Indochina for its seeds which, although not consumed directly as food, are used nevertheless to make various other foods: cheeses (dau phu and dau oc [tofu]), and a condiment sauce [soy sauce] (tuong).

In Indochina there is only one variety of soybean, which has oblong yellowish-white seeds, slightly flattened, more or less large according to its place of origin, whereas in China and Japan soybeans come in various colors and colorations.

The best seed in the colony come from Cambodia and the province of Lang-son in Tonkin.

It is well known that soy protein (*graine de soja à base de caséo-sojaïne*) serves as the basis for numerous food preparations; but the seeds are now most widely used in the manufacture of an oil, used for illumination [in lamps] or food; it tends to replace cotton oil in the soap industry, whereas soybean cakes (*les tourteaux de soja*) are considered excellent for use as a fertilizer or for fattening cattle.

A table shows nutritional analyses of soybeans from three locations, conducted at the colonial garden of Nogent-sur-Marne: Laos, Tonkin, and Manchuria. For each the moisture, protein, oil, carbohydrate, and mineral content are given.

Also discusses: Peanuts (p. 25-26, with illustration facing p. 25, and 9 references), sesame (p. 29-30, with illustration facing p. 29), perilla (p. 30).

Note the interesting phrase *graine de soja à base de caséo-sojaïne*, based on the work of Li Yu-ying near Paris, France. Address: Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi.

1031. Morse, W.J. 1918. The soy-bean industry in the United States (Continued–Document part II). *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. See p. 106-10. Contains many photographs by Frank N. Meyer.
• ***Summary:*** Continued from p. 106. "Soy beans for human food: In Asiatic countries, especially China and Japan, the soy bean and the various food products made from it are so largely consumed that it is second only to rice in importance as a food crop. The soy bean is eaten only to a very small extent like other beans, but in China and Japan it is elaborated into a great variety of products, all having a high percentage of protein and making a well-balanced diet when eaten in connection with the staple food, rice. Some of these products are said to be eaten at every meal and by rich and poor alike. Of these numerous preparations, only one, 'shoyu,' or 'soy sauce,' has been introduced to any extent in other countries. It is quite possible that some of these products would appeal to the American taste and with proper exploitation become established on the American market.

"Although the soy beans as an article of food has attracted attention from time to time in the United States, thus far it has been used but little except as a special food for invalids. The beans contain only a trace of starch and are highly recommended as a food for persons requiring a diet of low starch content. During the past year, however, much interest has been manifested in the possibilities of the soy bean as a staple food.

"Many schools of cookery and domestic science throughout the country have conducted experiments rather successfully, utilizing the dried beans in the manner of the navy bean. As a result, the dried beans can now be purchased in the markets in nearly all of the large cities. The variety and palatability of the forms in which the bean can be served make it a very desirable article of food, and it may be expected to grow in favor as it becomes better known (p.

© Copyright Soyinfo Center 2013

107)."

"Dried beans:... During the season of 1916 about 100,000 bushels of American-grown [dried] soy beans were packed as baked beans by several canning companies in the Central and Eastern States." Properly roasted, the dried beans "make a good coffee substitute. Those fond of cereal beverages pronounce it equal to many of the preparations on the market. In China, the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts. This method of preparing the beans is improved by soaking the beans for about twelve hours in a 10 per cent salt solution, boiling slowly for about 30 minutes, and then roasting to a light-brown color. The yellow-seeded and green-seeded varieties are preferable, as they make a product of better appearance.

"Green beans: When soy beans are three-fourths or more grown, the seed makes a most palatable and nutritious green vegetable. As such it may be used much as is the green pea or the Lima bean. The pods are somewhat tough and not desirable to eat. The green beans are rather difficult to shell, but after cooking in the pods for about five minutes, they shell out very easily."

"Soy-bean milk:" If dried soy beans are soaked, crushed, and boiled "a milky emulsion is obtained which is very similar in appearance and properties to cow's milk. This liquid, separated out by means of a very fine sieve or through a cloth filter, is the soy-bean or 'vegetable' milk used so extensively in China." "Soy-bean milk has a rather strong characteristic taste and odor which may be masked by the addition of a small quantity of coumarin or vanillin. This 'vegetable milk' can be used in numerous preparations, such as breads and cakes, in creaming vegetables, in milk chocolate, and in custards. If allowed to remain in a warm place the milk becomes sour, like animal milk, and in that form may be employed just like sour milk or buttermilk...

"After separating the milk from the solid material, the residue [okara] is still very rich in nutritive substances. It can be dried and used for cattle feed or possibly made into a meal or flour for human consumption."

"Soy-bean cheese: "The addition of magnesium or calcium salts (about a 1 per cent solution) to soy-bean milk when hot precipitates some of the proteid substances, forming a grayish white curd which settles out, leaving a yellowish watery liquid. This curd, after being drained and pressed, represents the tofu, or bean curd, which is so extensively eaten and forms the basis of numerous fermented, smoked, and dried cheeses in China and Japan (Plates III and IV). Tofu is made fresh daily and is a staple article of diet of oriental peoples. In many cities of the United States having a large Asiatic population, fresh bean curd generally may be found in the Chinese markets. Although the fresh curd, or tofu, is tasteless, it is a highly nutritious food and no doubt could be elaborated by the American housewife into a variety of palatable dishes.

"Soy sauce: Soy or shoyu sauce is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat (barley is sometimes used), salt and water. This mass is inoculated with a culture known as rice ferment (*Aspergillus oryzae*) and left in casks to ferment from six months to a year and sometimes longer (Plate V)... This product may well serve as the basis of sauces of the Worcestershire type... The manufacture of soy sauce is conducted on a large scale in China and Japan, and to some extent in India. The yearly production of Japan is said to amount to nearly 2,000,000 barrels. The brewing of this sauce has also become a well established industry in Hawaii. Although there are no factories in the United States, considerable quantities of the sauce are imported annually, and it can be obtained at Chinese stores in most of our cities."

"Soy-Bean sprouts: Several species of beans are sprouted and used as a green vegetable by the Chinese (Plate VI). Soy beans are used to a very considerable extent for this purpose, as these sprouts are larger and firmer than those of most other legumes. Bean sprouts can be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of heat and moisture. It is quite possible that sprouted soy beans utilized in various vegetable dishes would appeal to the American taste."

Note 1. This is the earliest English-language document seen (Jan. 2013) that uses the term "sprouted soy beans" (or "sprouted soy bean") to refer to soy sprouts.

A table (p. 111) shows the "Quantity and value of soy beans, soy-bean cake, and soy-bean oil imported into the United States, 1910-1917, inclusive.

Photos on unnumbered pages show: (1) A typical soy bean plant. (2) A field of the Biloxi soy bean grown at Biloxi, Mississippi. (3) Pods and seeds of 7 common varieties of soy beans.

(4) "Large blocks of freshly made bean curd, 'tofu' [on a round wooden table], ready to be cut up into squares and sold to the housewife."*

(5) "Large bamboo tray of various kinds of soy-bean cheese of the drier type" [pressed tofu sheets].*

© Copyright Soyinfo Center 2013

(6) "A dark room of even temperature where wooden trays, full of bean curd [tofu] are piled. This is another method of preparing soy-bean cheese" [fermented tofu].*

(7) "Large earthen jars full of squares of bean curd, which are covered with spiced brine and soy sauce. After several months' curing a bean cheese [fermented tofu] is formed, which can be kept for many years."*

(8) A "courtyard full of covered pots of fermented soy beans and brine from which soy sauce is made."*

(9) The basket on the left contains "sprouted soy beans, which are sold and used as a green vegetable" [in China]* * = Photographed by Frank N. Meyer, Agricultural Explorer, USDA.

Note 2. This is the earliest published document seen (Jan. 2001) that contains photos of soyfoods by Frank. N. Meyer. Most of the photos appear to have been taken in China.

Note 3. This is the earliest document seen (Jan. 2013) in which William Morse describes "soy-bean sprouts" or "soy-bean cheese" (tofu).

Note 4. This is the earliest English-language document seen (Oct. 2011) that uses the term "soy-bean cheese" to refer to fermented tofu.

Note 5. This is the earliest English-language document seen (Oct. 2003) that uses the term "milky emulsion" to refer to soymilk.

Note 6. This is the earliest English-language document seen (May 2005) that uses the term "masked" (or any other form of that verb) in connection with the undesirable taste or odor of soyfoods (soy-bean milk) or soy beans. Address: Scientific Asst. in Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

1032. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1918. Nichi-Bei nenkan [Japanese-American yearbook. No. 12]. 650 Ellis St., San Francisco, California. [20] + 432 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• ***Summary:*** This book is somewhat similar to the 1915 yearbook but very different from previous yearbooks in this series in that it has no directory (giving business names, address, and sometimes phone numbers). It has more pages of advertisements than the 1915 edition but fewer than previous editions. Moreover the structure and contents are very different. For the first time, the pages are numbered sequentially throughout the book–except for the first 20 pages which are unnumbered. Again, it is not clear what caused these major changes. But the main message seems to be: Japanese are hard-working people adding significantly to the production and value of the United States.

Like its predecessors, it is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

Contents: Front matter (6 p.). Preface, correction notice, and full-page ad for Pacific Trading Co. (soy is not mentioned) (2 p.). Photos (black and white on 6 unnumbered pages). Maps and charts on 2 unnumbered pages: Total value of agricultural products by Japanese farmers in the USA in 1917: (1) Pie chart of value ($) of principal crops produced. The top 5 are vegetables, beans, grapes, sugar beets, and potatoes. (2) Bar chart of percentage of principal crops produced by Japanese, showing their adaptability for intensive cultivation (average 1915-1917). Japanese produce 90% of all celery, 88% of berries, 86% of asparagus, 85% of cantaloupes, 83% of onions, 80% of tomatoes, 72% of florists' products, 53% of seeds, etc. Bar chart showing the increase in land value under the cultivation of Japanese in 12 places of California. For each place, a white bar shows land value per acre before 1913 and a black bar shows land value per acre in 1918. These places include: Imperial Valley (melon ranch). Colusa (rice field). Sonoma (vineyard & orchard), etc. On average, the land has increased in value from 4.5-fold to 6.7 fold.

Table of contents (2 p.). Map showing yearly amount of rainfall in California (1 p.).

Nichibei Nenkan No. 12–Industrial edition (p. 1-). Japanese agricultural conditions (p. 1-20, with ads on p. 16-17). Various other Japanese industries (p. 21-28). Ads (p. 29-36). Education (p. 37-64). Ads (p. 65-80). Agriculture (part 1 of 3; p. 81-209, with ads p. 204-209). How to run an agricultural business (part 2 of 3, p. 210-340, with ads p. 297-300, 341-348). Agricultural production industry (part 3 of 3, p. 349-389). Industries: Fishery (p. 389-419). Forestry (p. 420-24). Mining (p. 425-28). Manufacturing (p. 429-31). Ad (Hinoe / The Hinoy, p. 432). Summary: Tofu makers (*tofu-ya*)*:* In 1908 there were 20 tofu makers. This number increased to 50 in 45 locations in 1917 (p. 25). Miso makers (*miso seizô-sho*)*:* Since 1908

© Copyright Soyinfo Center 2013

there have been 12 miso makers that opened; some have closed. In 1917 the number increased to 6 due to the ban on importing Japanese miso. Among the oldest and most established in Los Angeles: Miso Seizô-sho. Their capital investment is $12,000. They use 180,000 *kin* of soybeans (1 kin = 1.323 lb = 600 gm) and 240,000 *kin* of rice. Sales are $36,000/year. Number of workers: 4 (p. 28). The only soy-related ad in this volume is for "L.A. Miso Mfg. Co., 605-7-9-N. Alameda St., Los Angeles, California." Trade mark: Shows 3 horizontal lines in a circle, probably pronounced "marumi"–which means "flavor" in Japanese. In Japanese is written (in big, bold characters). *Rafu Shiromiso Seizô-sho.*

The Directory shows Japanese companies making soyfoods in California and other states. Address: San Francisco, California.

1033. Paerels, J.J. 1918. Soja [Soya]. In: Dr. K.W. Van Gorkom's Oost-Indische Cultures. 1918. Amsterdam: J.H. de Bussy. 2nd ed. Vol. 2. Edited by Dr. H.C. Prinsen Geerligs. See p. 839-51. Figs. 285-86. [8 ref. Dut]

• ***Summary:*** This is a reprint of Paerels 1913. Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjiong* [a term, and perhaps a product, between *doujiang* and *tao-tjo,* Indonesian-style miso]), composition of the seeds and nutritive value (*samenstelling en voedingswaarde*). Photos show: Plants of a black variety (p. 840), and a white variety of soybeans (p. 841). Address: Netherlands.

1034. Roux, François de. 1918. Rapport général de la section de oléagineux [General report of the section on oil-bearing materials]. In: Congrès d'Agriculture Coloniale, 21-25 Mai 1918. Compte Rendu des Travaux (Congress of colonial agriculture, 21-25 May 1918. Conference proceedings). Paris: Augustin Challamel (Libraire Maritime et Coloniale). 639 p. See Vol. 2, "Section de Oléagineux." p. 7-11. [Fre]

• ***Summary:*** In the section titled "Colonies which must intensify the cultivation of oil-bearing materials" (p. 10-11) includes: Peanuts: Senegal, Upper-Senegal-Niger, and Guinea. Sesame: Indochina, Senegal, Guinea, Upper-Senegal-Niger. Soybeans (*Soja*)*:* Cambodia. Olives: Tunisia, Algeria, Morocco.

The section titled "Other seeds" (p. 73-75) contains a long discussion of the soybean. The soybean represents an element of trade of the first importance and England, up until the present, has been its main destination in Europe. This movement, which reached 510,000 tonnes (metric tons) in 1910, declined in the following years for three reasons: Freight difficulties to Europe, more importation in the form of soy oil, and, above all, the detour / routing of more and more of the soybeans and soy products to the United States because it was closer to the major producer, Manchuria.

France did not participate very much in this movement, with imports varying as follows between 1911 and 1916: Soybean seeds 12 to 6,227 tonnes, and soybean oil 200 to 2,000 tonnes. But Cambodia and Lower Laos (*Bas-Laos*) can supply a variety of soybean having a higher oil content than that of Manchurian soybeans: 12.280% vs. 17.640%.

A greater utilization of the soybean in France would be a happy result in adding value to the vast territories in France's protectorate.

We need to look into using this product in a form that is different from the one admitted to date. (i.e., New uses might be found in addition to oil and meal).

Indeed, from the view point of oil mills, the [soybean] seed is of relative interest because of its fairly low oil content and because of the difficulty of finding an outlet for the large amount of cake that it generates.

The fine tuning / development of process for extraction of the casein (protein) or the flour (the indigenous peoples draw from it kind cheese [tofu] and also alimentary pastes [pastas]) allow us to consider the oil as a by-product and would also give some more financially rewarding end products to industry.

1035. Shih, Chi Yien. 1918. Beans and bean products. Shanghai, China: Soochow University Biology Dept. 13 p. 24 cm. [Eng]

• ***Summary:*** The author's name in pinyin is probably Shi Jiyan. At the head of each section, the name of each product or type of bean is written in Chinese characters. Contents: Introduction by N. Gist Gee of the Dept. of Biology, Soochow Univ., China.

Note 1. Soochow, also called Su-chou (formerly Wuhsien) is a city in southern Kiangsu (pinyin: Jiangsu) province, in eastern China, on the Grand Canal. Introduction and names of soy beans: Classical Chinese names, colloquial Chinese names, Latin names, and English name (Soja bean). Soy beans. The food products of soy beans. Bean curd (Cc). Tou fu koen. Po yeh. Yu tou fu [fried tofu]. Ju fu [fermented tofu]. Tsao ju fu [fried fermented tofu]. Ch'ing hsien ju fu. Tou chiang or bean sauce. Chiang yu. Bean ferment or tou huang. Bean Sprouts. Bean relish or tou shih [fermented black soybeans]. Bean oil.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term *You tou fu* (regardless of hyphenation).

Beans (Four varieties of *Phaseolus mungo* var. *radiatus:* chidou = dark-red [azuki] bean, baichidou = white dark-red bean, lüchidou = green red bean, and lüdou = green [mung] bean): The food products from the green [mung] beans (lüdou): Bean sprouts, green bean congee or lu tou chou, green bean soup or lu tou tang, green bean pudding or lu tou

© Copyright Soyinfo Center 2013

kao and lu tou sha. The food products from the red [azuki] bean (quite similar to those made from the green [mung] bean): Congee, rice, pudding, tou sha.

Hyacinth beans (*Dolichos lablab;* five Chinese varieties / names: biandou, baibiandou, qingbiandou, zibiandou, longzhao biandou). Asparagus beans [cowpeas] (*Vigna catiang;* four Chinese varieties / names: jiangdou, panxiang jiangdou, manli jiangdou, baimi jiangdou). The food products from Pien Tou and Chiang Tou. Medicine. Flowers and seeds of the Pai Pien Tou, the broad bean, windsor bean, or horse bean (*Vicia faba*)*;* In China it has two names: (1) Ts'an Tou or silkworm bean, because it is harvested at the time the silkworm is making its cocoon; (2) Han Tou or cold bean, because it grows through the winter. The food products from Ts'an tou (broad bean): Bean shoot (tou miao), Ch'ing tou (as a vegetable), Ja tou (broad bean sprouts), Shien fan and fan bee (made from broad beans and mung beans), Tou sha. The section on the names of beans (p. 1) we will give the English name, Latin name, the classical Chinese names / colloquial Chinese names, and an English translation in parentheses, as follows: (1) Soja bean, *Glycine hispida:* heidou / heidou (black [soy] bean), huangdou / huangdou (yellow bean), yangyandou / yangyandou (sheep eye bean), maliaodou / maliaodou (horse material / feed bean),–/ guguo qingdou (bone wrap green bean),–/ jiajia sandou (pod pod three bean), xiangsidou (mutually think bean) / xiaqngzhidou (fragrant branch bean),–/ bayue baidou (8th month white bean). Soja bean: *Dolichos cultratus* quedou (magpie bean) / equedou (chirp magpie bean). Soja bean: *Phaseolus vulgaris* baidou (white bean) / shui bai dou (water white bean),–/ shidou (fennel bean) (Note 3. shiluo means "fennel"),–/ guashudou (melon ripe bean),–/ maquedou (sparrow bean),–/ niuta biandou (cow tread flat bean),–/ yadou (sprout bean),–/ shijia xiangdou (ten family fragrant bean),–/ xifeng qingdou (west wind green bean),–/ shizi hedou (persimmon pit bean),–/ denglongdou (lantern bean).

Note 4. The large title "Soy Beans" at the top of this table, the right column which says that the English name of each variety is "Soja bean," and the next 8 pages which are only about soy beans, strongly indicate that all the colloquial names in this table refer to different varieties of soy beans. Moreover, all these colloquial names appear again on page 3 in a table on planting and harvest times of different varieties of [soy] beans. The bottom half of the colloquial names are probably from different parts of China, since Dr. H.T. Huang (a soybean expert) has never heard many of these colloquial names before. The most puzzling question is: What are *Dolichos cultratus* and *Phaseolus vulgaris* doing at the bottom of the "Latin name" column? *Dolichos cultratus* is not listed on either of the two comprehensive taxonomy databases (GRIN and ILDIS, which include all past Latin / scientific names). *Phaseolus vulgaris* refers to the common bean, such as the kidney bean, pinto bean, navy bean, frijole, etc.

2. Soy beans. "They were introduced into France during the reign of Ch'ien Lung about 1740 A.D. by a French Consul; into England in 1790, into Australia in 1875, into Germany 1881, and 1888 into America. They were known here from ancient times and were mentioned in the oldest books Pên Ts'ao Kong Mu, which were written by the Emperor Shen-nung in the year 2838 B.C., and the later Chinese Classics."

Note 5. This is the earliest English-language document seen (Aug. 2002) that treats Shen Nung as a real, historical figure, or that says the first written record of the soybean appears in a book written by him. The information about that book is wildly inaccurate. The *Bencao gangmu* (The great pharmacopoeia), perhaps China's most famous materia medica, was written by Li Shizhen (+1596). The above information, which is all wrong, has been cited again and again, down to the present day (2002), in connection with the supposed origin of the soybean.

"Even during the ancient times they were considered by the people to be the most important of the cultivated leguminous plants." Note 6. This is the earliest document seen (Aug. 2002) which states, incorrectly, that the date of Emperor Shen-nung's book is 2838 B.C.

"The methods of cultivation are as follows: In general all of the soja beans are planted in rows along the banks of canals and the boundaries of the fields, which separate the fields of one family from those of another, except those which are called oil beans or Eighth month white bean and Water white bean. These last are planted in large fields. The oil beans are planted early in June." The method of cultivation, harvest, and threshing is then described in detail. A table gives the time of planting and harvest for 18 varieties of Chinese soybeans, grouped into 6 types by planting and harvest dates: (1) Plant in latter part of April, harvest in latter part of Sept.: *Heidou* (black [soy] bean), huangdou (yellow bean), *maliaodou* (horse material / feed bean), *guguo qingdou* (bone wrap green bean), *jiajia sandou* (pod pod three bean), *xiangzhidou* (fragrant branch bean). (2) Plant in early part of June, harvest in middle part of Sept.: *bayue baidou* (8th month white bean), *shuibaidou* (water white bean), *maquedou* (sparrow bean). (3) Plant in early part of July, harvest in early part of Oct.: *equedou* (chirp magpie bean). *niuta biandou* (cow tread flat bean), *shijia xiandou* (ten family fragrant bean), *xifeng qingdou* (west wind green bean), *shizi hedou* (persimmon pit bean), *denglongdou* (lantern bean). (4) Plant in early part of April, harvest in early part of July: *guashudou* (melon ripe bean). (5) Plant in early part of April, harvest in latter part of July: *shidou* (fennel bean). (6) Plant in early part of April, harvest in latter part of June: *yadou* (sprout bean).

The rest of the work concerns the food products of the beans, including a detailed description of how each is made.

Note 7. This document contains the earliest date seen for soybeans in Australia or Oceania (1875). It is not clear

© Copyright Soyinfo Center 2013

whether or not these soybeans were cultivated in Australia; they may well have been. The source of these soybeans is unknown, as is the author's source of information concerning that early introduction, 43 years before Shih wrote this booklet. He is the first to give such an early date for the introduction of soybeans to Australia. Yet the date does not seem unreasonably early since there were 17,000 Chinese in Australia by 1855 (see Australian Department of Immigration and Ethnic Affairs. 1985. "A Land of Immigrants"). Address: Biology Dep., Soochow Univ., China.

1036. Shih, Chi Yien. 1918. Beans and bean products: Bean curd [tofu], to fu koen [pressed tofu], po yeh [pressed tofu sheets], and yu tou fu [deep-fried tofu] (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 3-5. [Eng]

• ***Summary:*** (Cc) = Chinese characters inserted in text. Bean curd (Cc): "The making of bean curd had its origin in the Han dynasty (Cc), during the reign of Huai Nan Wang (Cc) (A.D. 22) at Liuan. All sorts of black beans, yellow beans, green beans, etc. can be used in its preparation; but largely we use the beans which are called Cc (Eighth Month White Bean) Glycine Hispida and Cc (Water White Bean or Tenth Month White Bean) Phaseolus Vulgaris. The other beans are not so much planted by the farmers for this purpose; they only eat them when the beans are young.

"The processes necessary to prepare Bean Curd are as follows:–(1) Soaking the beans in cold water for six or seven hours in summer time, and twenty-four hours in winter time. (2) Washing the beans thoroughly after soaking. (3) Grinding with cold water [then filtering] to form Bean Milk (Cc = doufujiang). (4) Pouring this into a big kettle and cooking it.

"(5) After about a quarter of an hour, there is a film or skin which floats on the surface of the bean milk. A stick is used to take this up and it is then put aside and left to dry. This film or skin is called Tou Fu Yi (Cc = doufu i = bean + curd + clothes / robes). From one kettle of bean milk, twenty or thirty films can be obtained. If more than this are taken off, the bean milk will become thin and will not be fit to make bean curd.

Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term "Tou Fu Yi" to refer to yuba.

"(6) After boiling the bean milk about half an hour, it is poured into a big earthenware jar and a gypsum or salt solution is added to curdle it. If 133 pounds of beans are used, 6 ounces of gypsum or salt will be required. Then it is left in the jar for about 15 minutes. The curdled material is called Tou Fu Ho (Cc = doufuhua = bean + curd + flowers)."

"(7) A piece of board, about two feet five inches long and one foot five inches wide, is used to make a bottom for a frame slightly smaller than the board and about two inches high. Then a piece of coarse cloth, twice as big as the large piece of board, is used to fold in the frame. The curdled material is poured on the cloth and wrapped up in it. Then another piece of board, as large as the bottom one, is placed on top of the cloth and it is pressed by a heavy block of wood for about fifteen minutes. Then the top board and the frame are removed and a knife is used to divide it into small pieces which are called Bean Curd or Tou Fu.

The price is about five cash for one small piece, about three inches square and one inch thick.

"Tou Fu Koen (Cc = doufugan = tofu + dry): Tou Fu Koen is made from bean curd or Tou Fu. A small piece of coarse cloth, above five inches square, is used to wrap the small pieces of bean curd and they are pressed between two boards, which are used to press the bean curd, for about six hours, then the cloth is removed and the small pieces are cooked in [soy] sauce, or Chiang Yu (Cc = jiangyou). After cooking they are called To Fu Koen.

"Po Yeh (Cc = baiye = 100 sheets / leaves): Po Yeh is prepared from Tou Fu Ho (Cc = doufuhua). The apparatus which is used to prepare the Po Yeh is the same as that used to prepare the bean curd; but is smaller, its dimensions being only about one foot square and eight inches high. A piece of coarse cloth about twenty feet long and one foot wide is used to fold in the frame. At first, one end of the cloth is spread on the bottom of the frame and then a thin layer of Tou Fu Ho is poured on the cloth, and then the cloth is turned back on the Tou Fu Ho and another layer is added, etc., until the frame is filled with the material and it is then pressed with a heavy block of wood about six hours. Then it is brought to the market for sale. The price is about four coppers for one catty.

"When eaten, it is usually first boiled with pork or cabbage, bean curd, turnip, etc.

"Yu Tou Fu (Cc = youdoufu = oil + tofu): Yu Tou Fu is the small piece of Tou Fu which is boiled in the bean oil or rape seed oil. The oil is boiled first and then the small pieces of Tou Fu are poured into the boiling oil. After four or five minutes the small pieces usually float on the surface of the oil and they are then taken out. These are called Yu Tou Fu.

"They are used to boil with cabbage or with meat. Sometimes an opening is made on one side of the Yu Tou Fu and pork cut into very fine pieces is put into it and then it is boiled. It is sold for about twenty cents for one catty."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term *Yu tou fu* to refer to fried tofu. Address: Biology Dep., Soochow Univ., China.

1037. Shih, Chi Yien. 1918. Beans and bean products: Ju fu [fermented tofu], tsao ju fu [redolent tofu], chiang ju fu, ham ju fu, ch'ing hsien ju fu (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 5-6. [Eng]

• ***Summary:*** (Cc) = Chinese characters inserted in text; pinyin romanization has been added. "Ju Fu (Cc = rufu = fermented + tofu): Ju Fu is made from raw Tou Fu Koen (Cc = sheng doufugan = raw + tofu + dry), but it is less

© Copyright Soyinfo Center 2013

compressed than Tou Fu Koen. The different kinds of Ju Fu are prepared by different methods.

Chiang Ju Fu is taken as our first example. A kind of whitish mold, which is called Chiang Hsi, is required to prepare Chiang Ju Fu. This mold is obtained during the middle of the summer in the following way:–(1) Wheat flour is mixed with cold water to make slipper-shaped cakes. (2) Then these are put into boiling water and cooked thoroughly. (3) After boiling, the cakes are broken into small pieces and put aside in some exposed place to allow them to mold. (4) After about one week, the small pieces are all covered with mold and then they are placed in the sunshine for two days in order to dry them. (5) Next they are ground into powder which is called Chiang Hsi (Cc = jiangxi).

"To prepare three catties of raw Tou Fu Koen requires six ounces of salt, four ounces of Chiang Hsi. These are thoroughly mixed with the Tou Fu Koen and put into an earthenware jar and one catty of rice wine, one catty of Chiang Yu [soy sauce], one catty and four ounces of sugar solution, (which contains one catty of water and four ounces of sugar), are added into the jar and it is then thoroughly sealed.

"The method of sealing the jar is interesting. First a cloth is laid across the mouth of the jar, then large bamboo leaves are placed on top of this and they are bound together around the neck of the jar with a cord. Then mouth and neck of the jar are entirely covered with a sticky clay mixed with the flowers of the reed to hold it together. The jar must be kept sealed for at least four months before its contents can be used for food, and if the vessel of opened before the end of this time the Ju Fu will spoil.

"It is used as food throughout the year and is eaten without further cooking as a vegetable with soft rice.

"It is red in color which is due to the presence of a kind of red rice. Three catties of Tou Fu Koen requires two ounces of red rice (Cc = hongqu). The price is about ten cash for a piece about two inches square and half an inch thick.

"There is another way of making Chiang Ju Fu. The Tou Fu Koen is first put on a board and allowed to mold, and then it is salted thoroughly and packed in an earthenware jar for about four or five days. The Chiang Yu [soy sauce], sugar solution, and red rice (Cc) are added. The proportions of ingredients are as follows: One catty of Tou Fu Koen, two ounces of salt, six ounces of red wine, six ounces of Chiang Yu [soy sauce] and four ounces of sugar in six ounces of water.

"After this, the jar is sealed and not opened for about four or five months. It is eaten in the same way as the other Chiang Ju Fu, and the price is approximately the same.

"Ham Ju Fu (Cc = nantui furu) is the Chiang Ju Fu which has ham mixed with it.

"Tsao Ju Fu (Cc = zaofuru): Tsao Ju Fu us made from Tou Fu Koen which is first allowed to mold, just as in the process of preparing Chiang Ju Fu in the second way. After molding, the cakes are thoroughly salted, using about three ounces of salt to one catty of Tou Fu Koen. Then they are put in an earthenware jar for about four days and Chiu Niang (Cc = jiuniang) is added to cover all of the Tou Fu Koen.

"Chiu Niang is made from rice which is first steamed and then poured into a big earthenware jar where it is allowed to cool. After this, a kind of yeast powder is added to the rice. Sixty seven pounds of rice requires six ounces of yeast powder. The two are mixed together and cold water is added to moisten the rice. Then a hole is made in the rice at the center of the jar and the rice is pressed back against the side of the jar. A straw cover is used to cover the mouth of the jar and a straw matting is wrapped around it. This is to keep its temperature high enough to hasten fermentation of the mixture. During cold weather the jar must be kept in a warm place. After about three days the wine collects in the central cavity. The fermented rice is called Chiu Niang.

"After Chiu Niang is poured into the Tou Fu Koen, the jar is sealed in the same way as in the making of the Chiang Ju Fu. The cakes of Tsao Ju Fu can be eaten after about two months.

"The price is about ten cash for one piece which is about the same size as that of Chiang Ju Fu.

"Ch'ing Hsien Ju Fu (Cc = qingxian furu): This is made from Tou Fu which is first divided into small square cakes. These are exposed upon matting or boards to allow them to mold. After about eight or nine days a whitish mold, about half an inch long thoroughly covers the Tou Fu cakes. The cakes are first salted, using about three ounces of salt to one catty of Tou Fu. Then they are put into a big earthenware jar and covered with cold water to the depth of an inch. It is not necessary to seal the mouth of the jar, so it is only kept free from the dust by being covered with a piece of cloth. After ten or twelve the Ch'ing Hsien Ju Fu is used in the same way as the Chiang Ju Fu.

"Its price is about sixty cash for one catty."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms "Ju Fu" or "Tsao Ju Fu" or "Chiang Ju Fu" or "Ham Ju Fu" or "Ch'ing Hsien Ju Fu" to refer to fermented tofu. Address: Biology Dep., Soochow Univ., China.

1038. Shih, Chi-yen. 1918. Studies in Chinese economic botany. Shanghai, China: Chinese Government Bureau of Economic Information. 71 p. 27 cm. China–Ministry of Industry, Booklet Series 1. *

• ***Summary:*** See Shih (1918), "Beans and Bean Products." Horvath (1927, p. 416) states: "In Southern China, according to Shih,* the soybeans called 'eighth month white beans' and 'water white beans or tenth month white beans' are mostly used" to make tofu.

* Footnote: "Gives detailed information about the manufacture of tofu and various products derived from it."

© Copyright Soyinfo Center 2013

1039. *Virginia Department of Agriculture and Immigration, Bulletin.* 1918. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. No. 126. p. 174-76.

• ***Summary:*** "In addition to its availability as a food, soy-bean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink. In Japan the soy bean forms one of the most important articles of food in use. It is one of the principle ingredients in the manufacture shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes, and for the poorer classes are the principle source of protein."

"An artificial milk like that manufactured in the Orient has been produced in small quantities in the United States, and recently a factory has been equipped to make this product." Photos show: (1) Soy beans as a forage crop, arranged in stacks. (2) Lime spreader at work. Address: Virginia.

1040. Daizu Seisan Gaisha (Soybean Food Products Co.). 1919. Save food. Dealers in soybeans and soybean products (Ad). In: Nichibei Shinbun-sha. 1919. *Japanese-American Directory* (*Nichibei Jushoroku*). Page 40 near front. [Jap; eng]

• ***Summary:*** Ad (full-page). The top half of this ad is in English, with large, bold letters. The company, which has a factory in Petaluma, lists the following products in Japanese characters (*kanji*)*: Daizu shushi* [Soybean seeds]. *Shoyu-yo daizu* [Soybeans for use in making shoyu / soy sauce]. *Jozo-yo daizu* [Soybeans for use in making fermented products; miso and perhaps natto seem to be implied]. *Tofu-yo daizu* [Soybeans for use in making tofu]. *Tofu-ko* [Tofu powder]. Note: It is not clear what *"Tofu-ko"* is / means. *Seisei nigari* [Refined nigari (probably magnesium chloride)]. *Mamekasu* [Soybean presscake, probably left over from making soybean oil].

The following product names are written in Japanese katakana characters: Soybean oil, soybean flour, soybean table sauce. soybean butter, soybean cheese, soybean candy, soybean feed.

In the center of the ad is the company's smaller logo, with all the text in English: Sun Brand Soy. Registered U.S. Patent Office. Above the huge "Save Food" logo near the top of the is an American flag in a circle surrounded by ears of wheat. Just above that, across the very top of the ad we read: "With patronization of U.S. Food Administration."

Note 1. Letter (e-mail) from John Benanti, Researcher, Petaluma Museum research library collection. 2009. April 16. "The 1917 Petaluma City Directory does not mention the Soybean Production Co. The next city directory we have is 1939 and it is not mentioned there either.

"However, we have a number of Sonoma County Telephone Directories where the company is mentioned. A listing for "Soy Bean Company, Wilson" is first found in the April, 1923 directory. The same listing then appears in the April, 1924, May, 1926, May, 1927, November, 1927, and May, 1928 directories. There is no listing in any directory after that date.

"I also looked in three Sonoma County histories, 1911, 1926, and 1937. There is no mention of the company or soybean production in any of them.

"The 1919 Sanborn fire insurance map for Petaluma (p. 22) shows the Soy Bean Co. mill at a time it was located on Weller St., a few blocks from Wilson. I have gone over the 1923 Sanborn map and do not find the mill anywhere on it. I can not explain why it is not there when the directory says it was on Wilson Street in 1923."

Note 2: This company, which existed from at least 1919 to 1928, is the earliest known company with a name and address that cultivated soybeans in California. Its only other entry in the Japanese American Directory is 1925, p. N-142.

Note 3. No address in San Francisco is given in the ad.

Note 4. World War I ended not long ago. Address: San Francisco, California.

1041. **Product Name:** Tofu.
Manufacturer's Name: Itano Tofu-ya.
Manufacturer's Address: 1509½ Geary St., San Francisco, California. Phone: West 8293.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 67. Note that two earlier companies made tofu at this same address starting in 1911, and 1913.

1042. **Product Name:** Tofu.
Manufacturer's Name: Jackson Tofu-ya (Jackson Tofu Shop).
Manufacturer's Address: 308½ 6th S. Alley, Seattle, Washington. Phone: Main 1403.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 447. Note: In 1913 Jackson Tofu-ya last made at 522 Jackson St. in Seattle. It is unclear if there is any relationship between these two companies.

cities. 23 cm. [Eng; Jap]
• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, San Jose, Sacramento, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. This directory was published on 1 Jan. 1919 by *Nichibei Shinbunsha.* For each of the directory entries, the company name is written in Japanese characters; the street address and phone number are written in English. Within each city, businesses of the same type are grouped together under a Japanese heading. In this volume the makers of soyfoods in San Francisco are all on pages 67-68 under the heading *Shokuryo-hin Siezo-sho* (Food manufacturing companies). Address: San Francisco, California.

1044. **Product Name:** Tofu.
Manufacturer's Name: Kamiya Tofu-ya.
Manufacturer's Address: 414 L & M Alley, Sacramento, California. Phone: Main 4618R.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 246. Also in 1920, p. 158. The phone number is now 4618W. Also in 1921, p. 169.

1045. **Product Name:** Tofu.
Manufacturer's Name: Koyama Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: Main 2162J.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 246.

1046. **Product Name:** Tofu.
Manufacturer's Name: Okamoto Tofu-ya.
Manufacturer's Address: 216 L St., Sacramento, California. Phone: Main 2543J.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 246. A company named Okamoto Tofu-ya made tofu in Sacramento in 1911 at 87 Jap Alley–then disappeared. It is unclear whether there is any relationship between these two companies.

1047. **Product Name:** Tofu.
Manufacturer's Name: Ooe (Ohye) Tofu-ya.
Manufacturer's Address: 1613 Buchanan St., San Francisco, California. Phone: West 2157.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 67. Note that in 1914 this company was making tofu at 1621 Buchanan St. in San Francisco.

1048. **Product Name:** Tofu.
Manufacturer's Name: Tomoe Tofu-ya (Tomoe Tofu Shop). Renamed Tomoe Tofu-ten in 1923. Renamed Tomoe Tofu Seizo-sho (Tomoye Tofu Mfg. Co.) in 1940.
Manufacturer's Address: 324 Jackson St., Los Angeles, California. Phone: 11682.
Date of Introduction: 1919. January.
New Product–Documentation: The Japanese American Directory. 1919. p. 293. Also in 1920, p. 296. Ad (1/8 page) is all in Japanese. At the top center is a 3-part (tripartite) *t'ai chi* (pinyin: *taiji*) or yin yang symbol–white on mostly black. The address is now given [in error] as 224 Jackson St., Los Angeles. Same phone. Making and selling Tomoe Nigari.

Also in 1920 directory, p. 304. Tomoe Tofu-ya, 324 Jackson St., Tel. 11682. Also in 1921, p. 314 (same ad as in 1920, incl. nigari) and p. 326 (directory). Also in 1922, p. 329 (directory and ad). Also in 1923, p. 357 (directory; the company name is now written in Chinese characters (*kanji*) instead of katakana, and the name has changed to Tomoe Tofu-ten from Tomoe Tofu-ya). Also in 1924, p. 395 (directory and 1/8 page ad; they also make and sell Tomoe-brand Nigari).

Also in 1925, p. S-46 (directory; new phone number: VAndike 5676) and p. S-50 (1/8 page ad; Tomoe Tofu-ya, 224 Jackson St. Phone: VAndyke 5676. Making and selling Tomoe tofu and nigari). Also in 1926, p. S-36 (directory) and p. S-71 (1/8-page ad, bottom right. New address–given only here–is 126 Rose St.).

The Japanese American Directory. 1930. p. S-53 (directory. Tomoe Tofu Seizô-sho, 126 Rose St., Los Angeles, California. Phone: VAndike 5676). and p. S-66 (1/8 page ad). Also in 1932, p. 346 (directory; Address: 126 Rose St.) and p. 346 (1/8 page ad; 126 Rose St. Makes and sells Tomoe brand nigari). Also in 1934, p. 305. Also in 1936, p. 356 (directory) and p. 356 (1/8-page, simpler than previous ads, and without Asian logo. Nigari is not mentioned). Also in 1937, p. 320 (directory) and p. 320 (1/12 page ad). Also in 1938, p. 348 (directory). Also in 1939, p. 340 (directory). Also in 1940. p. 326-27. Listed in the category "Foodstuff Factory." Named changed to: Tomoe Tofu Seizô-sho (Tomoye Tofu Mfg. Co.), 126 Rose St., Los Angeles, California. Phone: VAndike 5676. Also in 1941, p. 328.

Los Angeles City Directory. 1942 (the last one published). Tomoye Co. Food products. 126 Rose, Los Angeles. No mention of tofu. No listing for Tomoye or Tomoe as company or person in 1942.

Interview with Shoan Yamauchi in Lafayette. 1982. Aug. 11. He thinks the company was founded just after World War II [sic, it was founded in 1919 at 324 Jackson St.], at First and San Pedro Streets. It was bought out by Matsuda Tofu Co. in 1946 for $8,000.

1049. Eddington, Jane. 1919. The Tribune Cook Book: Soy beans as human food. *Chicago Daily Tribune.* Jan. 12. p. B4.
• ***Summary:*** Miss Eddington first got interested in the use of "soy bean flour" in the human diet about 5 years ago

© Copyright Soyinfo Center 2013

when she "first received samples of this flour for a medical manufactory." During these five years "soy bean flour has come into wide use in hospitals and homes. From being used in the United states to renew worn out soil and then for hog feed, the soy bean has come to be used largely as a food for those who have worn out kidneys, the diabetics."

"Soy bean cookery, especially the whole bean cookery, must be good, of the variety [of] vegetable meat contained in it is ruined, becoming as indigestible as white of egg cooked to a crisp." The key is to cook the whole bean at a low temperature for a long time. "Baked soy beans must be cooked at least eight hours."

"In Washington [DC], the government experts used 30 per cent soy bean flour with 70 per cent of wheat flour and called their product 'a high powered bread.'" She then gives four wartime recipes for "Soy bean muffins." Some call for "soy bean meal." Note: This "meal" is probably soy bean flour.

"Used as a meat substitute:... The tofu, a sort of cheese which is fried in deep fat and used as a meat substitute, was exploited by the United States department of agriculture last year, along with other of the soy bean products..." She then cites (incorrectly): Morse, W.J. 1918. "The soy-bean industry in the United States." *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. Then, from the section titled "Soy beans for human food," she includes the recipes for "Soy-bean milk" and "Soy-bean cheese," and the description of soy sauce. "Soy or shoyu sauce Is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water..."

1050. **Product Name:** Tofu.

1051. U.S. Department of Commerce, Far Eastern Div. 1919. Oil and oilseeds of the Orient. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 22(33):611-16. Feb. 8.

• ***Summary:*** Contents: Introduction. Method of cultivation [and harvesting] in China. Bean curd a Chinese delicacy. Domestic methods of marketing oil in China. Japanese production of vegetable oils [and exports to the United States]. China's production of oil steadily growing.

Tables show: (1) Total quantity and value of Chinese vegetable-oil exports, and the value of exports to the United States, including transshipments [from Manchuria], in 1917. Of total oil exports, coconut oil is by far the leader in quantity and value, followed by soya bean oil. But of oil exports to the USA, soya bean oil is by far the leader. Dairen exported 90% of the soya bean oil in 1917.

(2) Exports of vegetable oil from China in 1915, 1916, and 1917 (the quantities are expressed in piculs of 133.33 pounds and the values in Haikwan taels worth $0.62 in 1915, $0.79 in 1916, and $1.3 in 1917). Soya bean oil was by far the largest oil export in both quantity and value all three years. The quantity increased from 1.017 million in 1915 to 1.566 million in 1916 to 1.891 million in 1917.

(3) Exports of oil-bearing seeds and beans from China in 1915, 1916, and 1917. Soya beans were by far the largest bean or seed export in both quantity and value all three years. The quantity was 10.235 million in 1915, then 6.732 million in 1916, rising to 7.927 million in 1917.

"No single vegetable product has developed such importance in the Far East as the soya bean... As a food it is the principal ingredient of soy sauce, bean curd, and steamed beans. The bean cake, containing a high percentage of nitrogen, is a valuable fertilizer and is used extensively in Japan, and recently bean oil temporarily replaced petroleum for lighting in China when lack of shipping facilities kept that product off the market. The center of soya-bean production is Manchuria, and Japan is the chief crusher and producer of oil and cake, though the manufacture of bean oil and cake is also a very important industry of Dairen, Kwantung Leased Territory. Mukden is the center of the bean trade and the beans are there bought for cash from the farmers."

"Bean curd a Chinese delicacy: Bean curd is made mostly from the two kinds of oil beans described [Eighth Month White Bean and Water White Bean], although all varieties may be used in its preparation. As a rule, however, the other varieties of beans are not planted for oil or curd, but are eaten steamed when the bean is young and tender.

"Bean curd is prepared by first steeping the beans in cold water for 6 or 7 hours in summer or 24 hours in winter, and, after washing, grinding with cold water to form a bean milk. This milk is cooked in a large kettle and the film removed from the surface after a quarter of an hour and dried. This film or skin is known as Tou Fu Yi [doufu pi, usually called "bean curd skin" in English; yuba in Japanese] and 20 or 30 films can be obtained from a kettle without thinning the milk too much. After boiling half an hour the remaining milk is poured into a jar and a gypsum or salt solution added to

© Copyright Soyinfo Center 2013

curdle it. The proportion is 6 ounces of salt to 1 picul (133.33 pounds) of beans.

Note 1. This is the earliest English-language document seen (Oct. 2010) that uses the term "doufu pi" (regardless of hyphenation or spacing) to refer to yuba.

Note 2. Yuba is described as an early step in the tofu-making process. Viewed in this way, the word "bean curd skin" makes more sense.

"After standing 15 minutes a curdled substance called Tou Fun No [bean curd brain] is the result. This product is molded in wooden frames by a heavy block of wood for 15 minutes and is then cut into small pieces with a dull brass knife. A piece 2 inches square and half an inch thick retails for 5 cash (0.5 cent). This curd forms the basis for numerous Chinese articles of food and is prepared in various ways. Perhaps the most usual form of serving is to press the curd, wrapped in cloth, for six hours in a box 1 foot square and 8 inches high and then cook in oil. It is also boiled, after such preparation, with pork or cabbage."

"Japanese production of vegetable oils: The present estimated production of Japanese oil mills is 90,600 long tons of vegetable oils annually and is made up as follows: Soya-bean oil, 37,509 tons; coconut oil, 27,542 tons; rapeseed oil, 17,848 tons; cottonseed oil, 6,433 tons; and peanut oil, 1,268 tons. Seventy-five per cent of this crush is made in the Kobe district and is handled by 25 oil mills, modernly equipped." In 1917 Japan exported (including transshipments) 34,916,260 lb of coconut oil, 22,643,623 lb of soya bean oil, and 19,677,825 of rapeseed oil. He concludes that "American importers of Far Eastern products may well investigate the domestic market for Far Eastern oilseeds with a view to supplying oil mills in the U.S. with raw material." A table shows import and export data. Address: Asia.

1052. *San Francisco Chronicle.* 1919. World wide jottings touch commerce and industry situation. March 17. p. 17.
• ***Summary:*** "One of our consuls in China points out that the epicure demanding Western delicacies would find that country an expensive habitat. Aside from certain fruits and vegetables, eggs and pork products, food is not plentiful. The vast majority of the natives use bean curd as we do butter, and the rice as we do bread."

1053. *Le Mutilé de l'Algerie.* 1919. "Ce qu'il faut savoir:" Utilisation du soja [Let it be known: Utilization of soya]. 4(82):7. March 30.
• ***Summary:*** A French-language extract from the following French-language document: Castet, M. 1918. Utilisation du soja [Utilization of soybeans]. *Revue Horticole de l'Algerie* 22(10-12):160-61. Oct/Dec. Meeting of 20 Oct. 1918.

1054. Holland, J.H. 1919. Food and fodder plants. *Kew Bulletin of Miscellaneous Information* Nos. 1&2. p. 1-84. April 16. See p. 11-12. [5 ref]
• ***Summary:*** Great Britain imported large quantities of soy oil before World War I to make up for the shortage of cottonseed oil needed to manufacture soaps: 875,526 hundredweight from Manchuria, 816,032 hundredweight from China, and 43,209 hundredweight from Manchuria. Note: A hundredweight is 112 pounds weight.

"Considerable interest has been taken in the cultivation in England, but results of experiments made at Cambridge, Midland Agricultural College, South Eastern Agric. College, Wye, &c., go to show that no variety so far has been found that can be relied on to produce seed here.

"In Japan and China they [soy beans] are largely known in the preparation of the sauce known commercially as 'Soy,' and they make there a preparation used as a substitute for milk, and from this a food product call 'Tofu,' which in turn forms the basis of the bean cheeses of Japan. The meal [flour] in this country is used in the manufacture of biscuits and in making a bread for special use in diabetes; but the principal use here is for the extraction of the oil of which the beans contain about 18 per cent., suitable for soap-making and in general as a substitute for cotton seed oil, the residue being a valuable cattle feed.

Also discusses the adzuki bean (*Phaseolus angularis*, Wight). "This bean appears to have been coming into the market recently in quantity. Trade samples have been submitted to Kew for name as 'Dainagon Azuki Beans.'" They are important human food in Japan, Korea, China, and Manchuria, cultivated for the purpose.

1055. Acosta Henríquez, Juan. 1919. Habichuelas soyas [Soybeans]. *Revista de Agricultura de Puerto Rico* 3(1):18-29. June. [Spa]
• ***Summary:*** Contents: History. Varieties grown in Puerto Rico and their characteristics. Soils. Sowing. Harvest. Production and yield per acre. Seed storage. Uses. Silage. Green forage. Hay. Green manure. Uses of the seed (for humans and animals). Assimilation (by humans and animals) and digestibility. Soya as a domestic food (incl. soymilk and tofu). Soy flour (*harina de soya*). General considerations. Enemies of the soybean.

"The soybean (*La habichuela soya*) is a new crop in Puerto Rico. It was introduced from the United States and though, in some towns on the island it has been sold occasionally as a domestic food, it has not been cultivated for that purpose. The federal agricultural experiment station of Mayagüez [Mayaguez] is the only site where experiments have been conducted with this bean (*grano*). Its field of experimentation has been expanded to almost all the towns of Puerto Rico, where one would have been able to obtain very satisfactory results if it were not for the carelessness of the farmers on whose land the trials were conducted; for after seeing that their plants had grown a little, the farmers stopped tending them [assuming that the plants would grow

© Copyright Soyinfo Center 2013

by themselves]. On the grounds of the station at Mayagüez, we were able to carry out various experiments concerning the cultivation and utilization of this crop, and all gave favorable results."

At the Mayagüez station, the author conducted soybean trials for 18 months, and he is sure that the soybean can be cultivated in and adapted to Puerto Rico. This is especially important today when yields of native beans are decreasingly rapidly. In 1918 at Mayagüez, the author planted the following soybean varieties: Mammoth Yellow, Ito San, Wilson's Five, Tokyo, Haberlandt, Manchu, Chiquita, Virginia, and Early Green. With these introductions an average production of 1.128 tons of dry hay per acre were obtained.

"The soybean has not been used to a great extent as a food in people's homes in Puerto Rico. Experiments have been conducted in this regard and the results have been satisfactory." The author believes that in Puerto Rico, the soybean has not been used as it should be for food. He does not believe that Puerto Ricans will use the soybean as it is used in Japan, with the exception of tofu (*queso de soya*). "This cheese could be made in Puerto Rico with very good results." He then describes how to make soymilk and tofu, and says that the tofu can be sold either fresh or refrigerated. "The pods [*las vainas;* he probably means green vegetable soybeans] can be used in salads before they harden. They must be washed and the fibers removed. They are parboiled like soft beans and served with oil and vinegar, resulting in a delicious dish." Note: Habichuela means "French-bean or kidney bean." Tables contain data on production and composition of soybeans.

Note: This is probably the earliest Spanish-language document seen (June 2009) that mentions green vegetable soybeans, which it describes as shown above. Address: Subinspector de Agricultura, Puerto Rico.

1056. Oka, Takeo. 1919. Nippon in New York. *New York Times.* July 6. p. 34.

• ***Summary:*** An estimated 5,000 to 7,000 Japanese now live in New York City, including about 300 Japanese women. "Dr. Jokichi Takamine of the Takamine Industrial Company has broken into the company of 'Who's Who.'"

"The metropolis boasts no less than a dozen Japanese restaurants. Your casual visit will introduce you to fresh sliced fish taken raw [sashimi], seasoned bamboo shoots, and lotus root and pickled radish served on the same table with 'sukiyaki,' palatable at least to the Japanese. 'Sukiyaki,' a compound word still unauthorized in any standard English dictionary, is the Japanese 'quick lunch,' eaten while being cooked on a small charcoal table stove.

"Beef, onions, cabbage, beancurd [tofu], and other vegetable additions, not forgetting Japanese soy [sauce], sugar, and a little sake, are ready to be prepared in a shallow pan à la japonaise on the fire. The rest devolves upon you and your company, ladies not honorably excluded! A great time saving it is for the proprietor, this having his guests prepare their own meals!"

Note: This is the earliest document seen (Aug. 2010) stating correctly that the basic ingredients in sukiyaki include tofu and soy sauce.

1057. Palen, L.S. 1919. The romance of the soya bean. *Asia and the Americas* 19(1):68-74. July. Illust.

• ***Summary:*** The author, who begins by acknowledging his indebtedness to Dr. Yamei Kin, Dr. John Harvey Kellogg, and Mr. W.J. Morse for much of the material in this article, gives an overview of the soya bean worldwide. The article contains excellent photos (many by Adachi): (1) Stacks of soya bean cake in open storage on Dairen wharves, South Manchuria. (2) Horses plowing soybean fields in North Manchuria. (3) Modern machinery [a huge steam-powered tractor] used in bean cultivation in remote parts of Manchuria where foreign interests are involved. A Western man and woman ride horses nearby. Caption: "To the Manchurian farmer, with his laborious methods of hand cutting and hand winnowing, the introduction of modern Western farming methods would spell many-fold prosperity." Note: This is the earliest document seen (Feb. 2003) that shows a photo of a tractor in connection with soybeans. (4) Stacks of soybeans piled high in sacks in Manchuria as far as the eye can see. (5) Soybeans stored in huge cylindrical, 20-foot-high osier bins, each covered with a conical top.

Soy oil is purified and flavored with an admixture of olive oil for use as a salad oil. It also forms the basis of some of our butter and lard substitutes. "What Mr. Li Yu-ying accomplished in Paris in the establishment of a Laboratory of Research and of a factory for the production of all the products derived from the soya has been the forerunner of activity on the part of certain independent Chinese companies in America and of government and private investigations."

"In general the use of whole soya beans has not been attended with much success because of the ever present flavor of the oil content and because, with the ordinary method of cooking, they remain hard and unpalatable; but it has been found that cooking at a temperature somewhat above the boiling point, say from 220 to 230 degrees, breaks up the cellulose structure and develops a richness of flavor that is not obtainable with the lower temperature."

"By far the most extensive use of the soya is in the products manufactured from it. And it is here that Dr. Yamei Kin, the talented Chinese physician, is making her chief studies under the direction of the Pure Foods Division of the Department of Agriculture, with the purpose of spreading a knowledge of the soya among Americans. For convenience of consideration the products studied may be divided into sauces, curds, cheeses and milk.

"Of the sauces the liquid form is already familiar,

© Copyright Soyinfo Center 2013

although unrecognized, perhaps, by a large percentage of Occidentals through the work of early English traders in bringing back the base of the now famous Lea and Perrins Worcestershire Sauce. This original Chinese *shi-yu* was highly spiced and became a well recognized adjunct to many an English meal. Following the example of Lea and Perrins, others have put out sauces with the same base without, however, attaining the same success, because the makers did not understand that there are many kinds of soya sauce. While they are all made by the same ferments and in the same general way, they differ very greatly in quality according to the locality and to the manufacturer, just as wine, though made from the identical kind of grape and by the same process of fermentation, may be a very different article from different hands. It takes several months to make this liquid form of sauce, while the best kind requires a year or more to attain the finest flavor and mellowness. The hot condiment added by Lea and Perrins is not favored by the Chinese, since according to their taste it detracts from a wide use of the soya sauce."

Tofu (spelled to-fu) is discussed in detail. "There are records to show that it has been used since at least nine hundred years B.C. *To-fu* making is a staple industry in every little community. Usually it is done at night so that the fresh curd will be ready for the morning demand in the market, or for peddling around the streets. It provides, for the fraction of a cent, the indispensable equivalent of meat and affords very often the explanation of how the Chinese laborer does so much work on what is purely vegetable diet, popularly supposed not to contain much protein. *To-fu* is made in many different forms and the bean stalls occupy quite as large and prominent places in the city market as the fish and meat stalls...

"Cheeses are also made from the growth of cheese-making moulds on *tofu.* The Chinese resident in America regularly import a certain highly flavored red bean cheese for their own use...

"Perhaps the greatest contribution of the soya to the life of the Occident will be in its form of milk. Back in the golden era of peace there had been established in London a soya bean milk factory which was prepared to place its product regularly on the market, and there were said to be plans consummated for the erection of two others at Manchester and Liverpool; but of what the development has been we have no definite information. In Shanghai, Peking and Dalny Chinese companies are supplying hospitals and individuals with an 8 or 10 ounce bottle of concentrated milk per day at a cost of $1.00 Mex per month.

"In its competition with the cow the legume has in its favor the following facts: Soya milk can be produced with less contamination; it is tuberculosis-free; its caseins break down much more readily than the caseins of cows' milk and do not form curds in the stomach in the same degree...

"By those who advocate and urge a vegetarian diet, a very strong bill can be drawn in favor of this oriental substitute. In these days when war has thrown new light on many of our life problems, it will be easier to secure acceptance for their contention that the world must for both economic and physiological reasons adopt the biological diet. It has been calculated that, roughly speaking, it takes 100 pounds of foodstuffs to produce 3 pounds of beef and that a given acreage of land can support five times the population if the necessary protein can be derived directly from vegetable sources rather than going through the roundabout way of an animal form, imposing upon the body the burdens incident to taking in the toxines [toxins] resultant from the catabolism of the cells of the animal, and from possible putrefaction. In China the Buddhist priests and people who enter the various temperance societies all depend on varieties of *to-fu."*

1058. Arnold, Julean. 1919. Commercial handbook of China. 2 vols. Washington, DC: Government Printing Office. 629 p. + 472 p. Dep. of Commerce, Bureau of Foreign and Domestic Commerce, Miscellaneous Series No. 84.

• ***Summary:*** In Vol. 1: The "Letter of submittal" from the Department of Commerce, Bureau of Foreign and Domestic Commerce, states that the Bureau "realizes keenly the desirability of an immediate, vigorous, and systematic effort to promote American trade with this great friendly nation in the east of Asia. Such an effort... must be based on the most recent and dependable economic information. To supply that information is the purpose of this handbook.

"This handbook, the most detailed publication of its kind ever issued by the Department of Commerce, will appear in two volumes." The basic organization will be by each of the 17 American consular districts.

Digital searches for "soy" or "soya" or "beans" or "bean curd" or "bean cake" or "bean oil" will result in many hits and a vast amount of information. For example:

Pages 42, 45: A table titled "Commercial statistics for China as a whole," under "Exports, sundries" includes:

"Bean cake" (pounds). For 1913. Quantity: 1,575,792,400 pounds. Value: $18,197,871.

"Bean cake" (pounds). For 1918. Quantity: 2,182,241,744 pounds. Value: $35,650,215.

"Bean curd" (pounds). For 1913. Quantity: 4,846,543 pounds. Value: $144,849.

"Bean curd" (pounds). For 1918. Quantity: 3,765,591 pounds. Value: $265,141.

"Beans" (black, green white, yellow, other kinds) (pounds). For 1913. Quantity: 1,376,795,200 pounds. Value: $16,983,422.

"Beans" (black, green white, yellow, other kinds) (pounds). For 1918. Quantity: Yellow (#1): 849,479,313 pounds. Value: $17,106,454. Values are also given for Other kinds (#2), White (#3), Green (#4), and Black (#5): 13,481,033 pounds. Value: $295,796.

© Copyright Soyinfo Center 2013

"Oil, Bean" (pounds). For 1913. Quantity: 65,575,600 pounds. Value: $2,720,637.

"Oil, Bean" (pounds). For 1918. Quantity: 393,621,508 pounds. Value: $29,802,630.

"Soy" (pounds). For 1918. Quantity: 820,531 pounds. Value: $45,871.

Page 115: "Canton Consular District." "Other native industries of Canton that give employment to large numbers of people in the aggregate are:... The making of a Chinese sauce called 'soy,' which is made from a certain bean which as been boiled slowly and to which wheat or barley flour is added (soy is exported for the use of Chinese living abroad and also for the making of certain foreign sauces and condiments);" [such as Worcestershire sauce?].

Page 200: "Export trade:... The leading products shipped from Hongkong to all parts of the world are:... beans,...soy, tapioca flour, tea..." Pages 202-03: Trade between Hongkong and the United States during 1918. Hongkong Consular District. Value in 1913: Soy. Shipped to the United States: $51,595. Shipped to the Philippine Islands: $1,430. Shipped to Hawaiian Islands: $1,140.

In the section on "Mukden Consular District" under "Agriculture" we read: (p. 216): "Soya beans furnish material for bean oil, bean curd, and bean sprouts, besides serving as a food when boiled. Bean oil is used locally for cooking and as an illuminant; the bean oil for export is employed in soap and olive-oil manufacture, while in the mixing of paints it serves as a substitute for cotton and linseed oils. Bean cake is used as fertilizer and as food for cattle. About 70 per cent of the output of beans is annually exported, the rest being consumed locally. The annual production of bean cake and bean oil in the Mukden consular district is estimated at 433,992 and 54,279 tons, respectively.

"It is estimated that one-eighth of the beans exported are shipped to Hongkong, the Straits Settlements, and Europe, three-eighths to South China ports, and the remaining four-eighths to Japan. Of bean oil, Europe, China ports, and Japan are buyers in about equal proportions. A somewhat smaller quantity goes to the United States. Bean cake exported from Manchuria is marketed almost exclusively in Japan, Taiwan, and South China."

Page 365-66: "Amoy Consular District." Manufacturing and other industries. The Amoy Tinning Co. (Ltd.) and The China Canning Co. (Ltd.): The output of these two factories includes "soy and soy sauce."

Page 397. Antung Consular District. Exports include soy.

Page 478: "Shantung Province is the original home of the soya bean and the bean-crushing industry in this part of the world, and until the possibilities of Manchuria were discovered and developed this Province led the industry." "Manufacture of vermicelli: The principal crude native industry is the manufacture of Chinese vermicelli from a small green bean known as the 'lu tou' [mung bean]. This vermicelli is manufactured not only in large factories but also by individual farmers and in the homes of the natives in all parts of the Province."

Page 517-18: Dairen Consular District, Agriculture. The principal crops and their yield per acre: soya bean, 4.5 bushels. "The principal fertilizers are manures and bean cake (the residue after the oil has been pressed from soya beans)." "Soya beans, and the bean oil and bean cakes manufactured therefrom are the principal agricultural products exported from this district." Address: Commercial Attaché, Peking, and various American Consular Officers, China.

1059. Arnold, Julean. 1919. Commercial handbook of China. 2 vols. (Continued–Document Part II). Washington, DC: Government Printing Office. 629 p. + 470 p. Dep. of Commerce, Bureau of Foreign and Domestic Commerce, Miscellaneous Series No. 84.

• ***Summary:*** Continued: Volume 2 of an outstanding, comprehensive book. The basic structure and content of Vol. 2 is completely different from that of Vol. 1. In Vol. 2: The "Letter of submittal" from the Department of Commerce, Bureau of Foreign and Domestic Commerce (p. 13-14) is date Aug. 15, 1919.

Contents: Outline of Chinese system of government (p. 24+). Commercial treaty between China and United States (p. 34+). Judicial procedure in China (p. 42+). American courts in China (p. 46+). The American consulate and its relation to the public (p. 55+). Trade-marks, patents and copyrights in China (p. 61+). United States Customs requirements (p. 65+). China's tariffs and internal taxes (p. 83+). Postal facilities in China (p. 106+). Railways in China (p. 115+). Chinese ports and shipping facilities (p. 130+). Currency, exchange, and banking (p. 158+). Chinese government finance (p. 201+). Concessions and titles in China (p. 222+). Chinese guilds and chambers of commerce (p. 245+). Position and function of the Chinese comprador (p. 254+). Chinese products of interest to Americans (p. 261+, includes [Soy] Beans {p. 282-83 with photos facing pages 282 and 283}). Animal industries in China (p. 306+). Progress of forestry in China (p. 316+). China's commercial and industrial progress and prospects (p. 319+). Miscellaneous economic activities. Cotton goods in China (p. 329+). Suggestions to American manufacturers and merchants (p. 356+). Pertinent points for Americans seeking trade with China (p. 367+). Essentials of business practice in China (p. 370+). Advertising American goods in China (p. 387+). Training Americans to know Asia (p. 396+). Teaching the Chinese language to foreigners (p. 402+). Present conditions of government education in China (p. 406+). Chinese students in the United States (p. 420+). American missionary work in China (p. 423+). Labor and living conditions in China (p. 432+). Methods of keeping well in China (p. 439). Land values in China (p. 443+). Words and expressions in common use in foreign

© Copyright Soyinfo Center 2013

communications in China (p. 444+). Notes on Chinese social customs and etiquette (p. 450+). Important days in Chinese calendar (p. 454+). Chinese weights and measures (p. 455+). Lists of officials, organizations and institutions (p. 457+). Useful literature on China [Bibliography] (p. 460). Shipping Board freight rates from United States to China (p. 467+, by commodity per 100 pounds).

Words and Expressions (p. 444+). "Bean cake.–The refuse after the oil has been expressed from the beans. It is pressed into huge cakes and used very extensively as a fertilizer."

"Bean curd.–A thick, white, cheesy substance made of beans, which may be called bean cheese. It is very nutritious and is eaten extensively throughout China."

"Chop-suey.–In Cantonese 'Tsap-suey,' literally miscellaneous pieces or odds and ends,..."

"Comprador.–The Chinese agent in a foreign firm, through whom the foreign firm transacts much of its business with Chinese and who often guarantees the credit of the firm's Chinese customers."

"Congee.–A thick rice or millet soup or gruel."

"Coolie.–An appellation for the unskilled laborer of China."

"Godown.–This word is always used in China in place of the word warehouse. It is a pidgin English word."

"Haikwan,–The Maritime Customs of China..."

"Hong–A mercantile house... or a merchandising establishment."

"Kang.–A Chinese word meaning a brick or clay bed with an opening beneath for a fire, used all over the north of China."

"Kin.–A catty, or 1 1/3 pounds avoirdupois."

"Kong or kang.–A large earthenware jar used for holding water, or Chinese pickles, etc."

"Li.–A Chinese mile, equivalent to about 3/10 of an English mile but varying in different parts of the country."

"Liang.–A Chinese ounce, known to foreigners as a tael, or 1 1/3 ounces avoirdupois."

"Mandarin.–A Chinese official."

"Mandarin dialect.–The official language of China, spoken by about three-fifths of the people of the country."

"Picul–A measurement of weight in China, equivalent to 133 1/3 pounds avoirdupois."

"Soy.–Bean sauce." Address: Commercial Attaché, Peking, and various American Consular Officers, China.

1060. Bowers, William G. 1919. Some studies on the nutritive value of the soy bean in the human diet. *North Dakota Agricultural Experiment Station, Special Bulletin, Food Department* 5(13):278-328. Aug. Reprint of his 1919 PhD thesis, Ohio State Univ. 28 cm. [65 ref]

• ***Summary:*** Contents: Part I: Introductory. Extent of production. Human food preparation made from the soy bean. Varieties and chemical composition. Character of the carbohydrates of the soy bean and its bearing on nutrition. Character of the fats of the soy bean and its bearing on nutrition. Character of the protein and its bearing on nutrition. Vitamines of the soy bean. Minerals of the soy bean. The soy bean compared to some other legumes used as human food as to fuel value and organic nutrients. Digestibility of soy bean products.

Part II: Experimental part. The character of the materials used in the experiments. Digestibility of soy cake meal baked into bread. Digestibility of soy cake meal mush. A study of the nutritive value of the nitrogen free contents of the soy bean. Malt digestion. One per cent HCl [hydrochloric acid] extract (incl. pentosans, galactans, true cellulose). Milling of the soy bean: Composition of parts (incl. "the bran"), digestibility of the bran, the nitrogen-free extract, crude fiber, physical effects of a diet solely of a mush made from the bran, the calcium oxide and phosphorus pentoxide content of the soy bran and soy meal. Toxic and disagreeable or unpalatable substances of the soy bean: Some investigations as to the possible poisons, location and elimination of the disagreeable and unpalatable substances (20 experiments, incl. soy and navy bean bran, benzine extracted soy and navy bean meal, alcohol extracted soy and navy meal, a steam distillation for the purpose of separating objectionable flavor). Discussion of results. Summary.

Introductory: Only within the last 35 years "has the soy bean been considered with much favor as a food for stock. Only within the last ten or fifteen years has it met with any favor at all as a food for man" (p. 279). "Soy milk and soy milk products are being made in the United States now" (p. 280). "Roasted beans. Soy beans may be roasted in an oven or ordinary corn popper. They are heated until the beans are burst like popcorn. The beans thus roasted may be softened by immersing in a syrup while they are hot. This is said to make a wholesome candy. The roasted beans may be powdered and used as a salad dressing or employed as a substitute for coffee" (p. 281). "The fresh green beans, those that have been dried without being allowed to ripen thoroly [sic, thoroughly], or those that have ripened on the vine after the vine has been pulled show slight amounts of starch" (p. 282).

"Experimental part (p. 287): "In our experimental work we propose to inquire into the digestibility of soy cake meal. We shall then determine the digestibility of the different carbohydrates as found in a representative variety of the soy bean. After passing some of the beans thru a milling process we shall study the composition and digestibility of the meal and bran and determine their relative amounts of calcium and phosphorus, and locate any possible poisons or objectionable substances that my be present in either of these. This will make it possible, then, to determine whether or not it would be profitable to carry on the milling process and eliminate certain products, or whether by the use of certain extractives we can get rid of the objectionable constituents."

© Copyright Soyinfo Center 2013

Recalling the fact that "navy bean bran is so indigestible and is responsible for fermentation and discomforting gas in the digestive system, we were led to the effort to separate the bran and the meal of the soy bean and make determinations of each separately... we found the bran to constitute 8% of the whole bean." The germ was 1½% and the remainder was cotyledon. "The bran consisted of very large flakes. We had to grind it thru a burr mill three times before it would pass thru a twenty mesh sieve" (p. 301-02). The bran can be easily separated from the soy bean by milling. It is composed of about 37% crude fiber and 43% nitrogen free extract. "Digestibility experiments on the bran showed that the nitrogen free extract, including the hemicelluloses and waxes, is about 84% digestible, which is much less than that of the whole bean. (p. 323).

"In order to see what would be the physical effects of a day's diet on the bran alone, we made three meals of 30 grams each for one day. Next day we were a little uncomfortable on account of a slight amount of gas in the bowels. We were a little weak and very hungry but not sick. The next day the stool was voluminous but not so very soft. The diet had neither a laxative nor a constipating effect that could be noticed" (p. 304).

"In most of the Japanese foods made from the soy bean the disagreeable flavor is avoided by the nature of the preparation made. These, of the most part, involve some sort of fermentation which changes the flavor entirely. The Domestic Science Department of the Ohio State University [under the leadership of Dr. J.F. Lyman, with help on milling from Dr. Park of the Farm Crops Dept.], has carried on considerable experimentation making different preparations, combinations and extractions, as well as making use of different methods of cooking soy bean preparations, to avoid the disagreeable flavor."

The calcium oxide content of the bran was found to be 0.8% and the phosphorus pentoxide content 0.27%. No salicylic acid was found in the bran, and no hydrogen cyanide or cyanates in the samples tested. There was no trace of tannin in the bran and only a slight trace of alkaloids.

"As far as flavor is concerned there is no point gained in removing the bran from either the soy bean or the navy bean. The beany flavor and some of the disagreeable taste can be easily removed from the soy bean by steam distillation, but the disagreeable flavor in the oil cannot be removed in this way."

Nineteen tables (all but one without captions) show compositional percentages of soy beans, and a summary of results. An illustration (line drawing; p. 297) shows the apparatus for extracting meal with 95% alcohol. Three bar charts (p. 316-18) gives a summary of experimental results.

Note 1. Although this document was reprinted as a Special Bulletin by the Food Department of the North Dakota Agricultural Experiment Station, it has nothing to do with North Dakota per se, and makes no mention of soybeans being used or grown in North Dakota.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions soy bran, which it calls "soy bran." It is also the earliest document seen concerning the etymology of soy bran.

1061. *Journal des Praticiens: Revue Generale de Clinique & de Therapeutique.* 1919. Le lait de soja [Soymilk]. 33(38):607-08. Sept. 20. [1 ref. Fre]

• ***Summary:*** This article in the "Food Hygiene" section notes that the soybean [*la soja*] is a legume whose seeds are very similar to those of haricot beans or beans, but the contain more protein and fat, and less carbohydrates. For this reason, they have been recommended in diabetic diets. Soy bread has had little success. Presently, soymilk is widely used (see articles in *Revue Horticole de l'Algerie* by Mlle. Castet, Oct/Dec. 1918, and by Delaye, March 1919).

In 1914, a ton of soybeans from Manchuria sold for 202 French francs in London [England]. Since 150-160 gm of soybean are sufficient to make a liter of milk, the cost of the raw materials is only about 3 centimes. The labor could not be very expensive because the process is very simple. Thus, even with increasing freight rates, the actual cost of a liter of vegetable milk (*lait végétal*) is probably not more than about 20 centimes.

A brief description of the process soymilk making process is given. The flavor is very acceptable. Suitably sweetened, it is also well accepted by infants.

Mr. Delaye says that he has succeeded in removing the bad taste from soymilk, but he does not describe his process. According to Mlle. Castet, in all culinary preparations, as well as in side dishes or sweets, soymilk can entirely replace cow's milk. We suppose that its use in the feeding of young infants would diminish their mortality rate, but this supposition has not yet been supported by facts.

Mlle. Castet makes a cheese [tofu] with soymilk, using magnesium chloride as a coagulant. The taste is not bad, but rather tasteless. It should be sweetened. In the future, one can imagine an industry making various foods from soymilk curds.

In the preparation of soymilk, that which remains in the filter [okara] is not without value. Mlle. Castet adds sweetener plus a little water and cooks it for an hour or less until it has the appearance and taste of almond pâte. It can be consumed as is or used in making pastry, such as almond pâte.

1062. Carver, G.W. 1919. Re: Milk from peanuts. Letter to Mr. Walter M. Grubbs, Peanut Product Corporation, Birmingham, Alabama, Oct. 1. 1 p. Typed, without signature (carbon copy).

• ***Summary:*** "It is true that our Research Laboratory has succeeded in producing a milk from Peanuts, eminently commercially practical. I am not ready however, to release it,

© Copyright Soyinfo Center 2013

as the discovery is less than a week old and it has a number of possibilities that I am perfecting; at present I have three grades. First, the Normal milk, Second, a very rich product which I choose to call Cream; Third, a Butter milk; they are all three wonderfully interesting products and every way that I have tried them out, they have proven a success.

"I have used the sweet milk for making both Corn-bread and Biscuits with perfect success; have used the sour milk with baking powder for biscuits with equally as much success. The Butter milk is delicious for drinking. I am making yeast bread with it today, hope to make ice cream very soon; The cream works very nicely in coffee, changes the color similar to the cream from cow's milk and those who tried it out with me, pronounce it excellent; in fact, I am trying it out upon a great many people here who are really fastidious. I do this in order to get whatever objections they may have to it, so as they may be corrected before it is released."

"I think I am conservative in my statement when I say that it is without a doubt, the most wonderful product that I have yet been able to work out, and I see within it, unlimited possibilities. It curds much like cow's milk and the curds make a delicious cheese [tofu]. I hope to have it perfected sufficiently to let it go out before a great while.

"P.S. [handwritten] I have just tried it out in rolls made with just the peanut milk instead of water. Yeast was used in the usual way. The rolls were simply delicious and taste like real milk rolls only more nutty in flavor. Experienced bread makers say the rolls are delicious."

Location: Library of Congress, Washington, DC. Microfilm of The George Washington Carver Papers in the Tuskegee Institute Archives, Roll 6 #0328. Address: Director, Dep. of Research & Experiment Station [Tuskegee, Alabama].

1063. Le Goff, Jean. 1919. Le soja: Un aliment précieux pour diabétiques [The soybean: A valuable food for diabetics]. *Gazette des Hopitaux* 92:1120-21. Nov. 18-20. [3 ref. Fre]
• ***Summary:*** "In two preceding articles in this journal (22 May 1910 and 7 March 1911) I have called attention to the use of soya in diabetic diets, I have demonstrated that it is to cultivate this plant in France, and I am hopeful that some day there will be interest in cultivating the soybean as a garden vegetable." In the United States the soybean is being introduced to many states under the direction of Mr. W.J. Morse, who has also written various bulletins dedicated to the study of the soybean, its cultivation and usage.

From the viewpoint of food, the soybean has been neglected up until the present. However I noticed in the *New York Herald* (May 1916) the name of this seed among the substances that the Germans have fed to our poor prisoners of war. And these soybeans came from France!

"Here, in effect, is what one reads in the *Journal de Genève* on Thursday, 10 August 1916, page 6, 1st edition. "Export of soybeans." Berne (Switzerland): "The *Nouvelle Gazette de Zurich*, in its issue no. 1238, has published the following note: 'We have said that Mr. G. Liechti, in Zurich, is the importer from France of 2,000 railway cars (*wagons*) of soybeans. At a later date, these soybeans were re-exported to Germany. He submitted to us the file of this case in which the press took such great interest.'" Note: These soybeans were probably not grown in France (or even Europe), but rather imported to France from East Asia.

"We would like to know what the role of our Minister of Blockade (*Ministère du Blocus*) has been in this affair, which I brought to their attention.

"Food uses of the soybean.–The soybean can be used in either the dry or fresh state. To date, it has been used only in the dry state in Europe: (1) As a flour, with which one can make biscuits, pastries, and bread. (2) As an edible oil. (3) As a vegetable milk with which one can make a cheese [tofu], that can be consumed fresh, dry, smoked, or fermented. (4) A coffee substitute, after roasting.

"In the fresh state, the soybean is rarely used because agriculture does not take enough interest in this plant, which not only fertilizes the soil by fixation of atmospheric nitrogen, but also furnishes forage and an edible seed of the first order. This is the vegetable of choice for those with diabetes mellitus." Soybeans harvested fresh in France are very easy to cook–quite unlike dry soybeans. A table shows the chemical composition of 3 samples of dry soybeans.

Two photos by Dr. Le Goff show: (1) A mature soybean plant with pods, harvested in the suburbs of Paris; it bears 38 pods containing 90 soybean seeds. (2) A portion of the roots of a soybean plant with nodules. Address: Dr.

1064. **Product Name:** Sweet White Miso (*Shiro Miso*), and Koji (by 1922).
Manufacturer's Name: Norio Co. Renamed Norio Koji, Miso Seizo-sho by 1922. Renamed Norio Co. by 1941.
Manufacturer's Address: 1531 Geary St., San Francisco, California. Phone: Fillmore 4368.
Date of Introduction: 1919.
New Product–Documentation: The Japanese American Directory. 1922. p. 40 (directory; Norio Koji, Miso Seizô-sho, 1531 Geary St. Phone: Fillmore 4368) and p. 41 (1/8-page ad, lower left. Norio Shokai, 1531 Geary St. Same phone. Making shiro miso (sweet white miso), koji, and Sakura Miso {probably a red rice miso}. Logo: The character for 10,000 in a circle, probably pronounced "Maruman"). Note: In 1921 Maruman Miso was at this address and phone number.

Note: In the San Francisco City Directories (all English), 1917-1930, there is no listing for Norio Co. or anything like it except a 1930 listing for Norio Sadaichi rice dealers.

The Japanese American Directory. 1923. p. 60 (directory). Also in 1924, p. 58 (directory).

In Japanese: Maruman brand. Miso koji seizô [manufacturing]. Note: Do they make both tofu and koji?

Hokubei Mainichi Nenkan (Year Book). 1970. Page 11. Half-page vertical ad. Address has expanded to 1532-34 Post St., San Francisco 9, Calif. Phone: 931-8672. "Soy bean products" (in English). Their large logo is still Maruman, with the character *Man* (meaning ten thousand) inside a bold circle. The bottom half of the ad (in Japanese) states that they make and sell (wholesale) Maruman brand miso and koji. They also sell tofu and agé. Directory entry, p. 37 under "Food Products." *Norio miso tofu seizô-sho* [Norio, maker of miso and tofu].

B.W. 1971. East West Journal. 1(14):6. Arikawa. 1982, personal communication; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. The second earliest know miso company in the continental USA was started in 1919 by Mr. Masaichi Norio. He made only shiro miso and exported most of it to Hawaii (Based on two interviews with Mr. Arikawa, former owner of the Norio Co.; He still lives in San Francisco. Phone: 415-387-7217). Note: Even though the company may have "started" in 1919, it was not listed in any directory seen until 1922.

Talk with Mr. Arikawa. 1989. Dec. 6. The company started on Geary St., then moved to 1532 Post St. before 1930. The owner bought the company of a competitor at that address on Post street [probably Kanedai Koji Miso Co. at 1534 Post St.] and merged the two companies.

1065. Calvino, Mario. 1919. La soya [The soybean]. *Informe de la Estacion Experimental Agronomica* (*Santiago de las Vegas, Cuba*). p. 98-103. For the years 1917-1918. [1 ref. Spa]

• ***Summary:*** This report, which describes the first soybean experiments in Cuba, begins by discussing the composition of the seed, and its various uses in China, Japan, and Europe (including for manufacture of soaps and as a drying oil in paints, and as foods such as whole dry soybeans, soy coffee, roasted soybeans [soynuts] {*"Se comen también tostados..."*}). In China they are sprouted in darkness and the white sprouts, up to 3 cm long, make an excellent green vegetable."

Note. This is the earliest Spanish-language document seen (Jan. 2013) that mentions soy sprouts, which it calls *sus gérmenes blancos.* From soybeans the Chinese also make a special soy cheese (*un queso especial*), a type of milk (*una especie de leche*), and other drinks. The author then states: "We thought it would be useful to test varieties of soya suited for hot/tropical countries, and we were able to obtain two types of Japanese soybeans, those that gave satisfactory results without having been inoculated.

"Since these soybean types did not find suitable bacteria for the purpose of being inoculated naturally in our terrain, I asked the Mulford house (*casa de Mulford*) for a special bacterial strain for soy (Soya) and proceeded with the artificial inoculation of the seed. The result has been magnificent, as one can see in the accompanying photographs.

"Now we have inoculated land, with which we have

© Copyright Soyinfo Center 2013

been able to ensure the most success for our crop. The harvest [yield] during this first year in Cuba was 2,000 kg/ha of seed. We have also found that it is best to cultivate soya in rows 60 cm apart, with the seeds planted 10 cm apart in each row. This is very dense planting, but it is better to thin the plants than to transplant in others to get the desired plant density. Transplanting is often unsuccessful, and if a crop is not planted evenly the first time, it is difficult to make it even later by transplanting.

"I have had a chemical analysis done of the soybean seeds from our crop. The report prepared by the Department of Chemistry shows that they contain 10.4% water, 41.95% protein, 17.5% oil, 2.45% carbohydrates, 2.5% fiber, and 5.2% ash. The analyst was F. Dominguez." An analysis is also given of assimilable or digestive elements in the soybean from a book by R. Gouin titled *Alimentation rationelle des animaux domestique* [*Rational feeding of domestic animals*]. Three full-page photos show soybean plants: (1) Root nodules on a soybean plant grown in Cuba without the use of inoculant (p. 99). (2) Two soybean plants grown at the agronomic station that contain many pods (p. 101). (3) Four soybean plants with roots; two were inoculated and bear nodules (p. 103).

Note 1. This is the earliest Spanish-language document seen that refers to soynuts. Note 2. This experiment station is under the Secretary of Agriculture, Commerce and Labor (*Secretaria de Agricultura, Comercio y Trabajo*). This 515-page report is published in Havana by Alvarez López y Cie. Address: Director, Estacion Experimental Agronomica, Doctor en Ciencias Agricolas de la Universidad de Pisa [Italy].

1066. Koenig, Franz Joseph. 1919. Chemie der menschlichen Nahrungs- und Genussmittel. 4 Aufl. Nachtrag zu Band I. A. Zusammensetzung der tierischen Nahrungs- und Genussmittel [The chemistry of human foods and food adjuncts (stimulants / enjoyables) 4th ed. Supplement to Vol. I. A. Composition of animal foods and food adjuncts]. Berlin: Verlag von Julius Springer. 594 p. See p. 286-87, 346, 528. [6 ref. Ger]

• ***Summary:*** On pages 286-87 is a section on "Sunflowerseeds, soybean cake and soybean meal (*Sojakuchen und–mehl*) as fodder for milk cows," by Nils Hansson. A table shows the weight of the feed and the resulting milk, and the fat content of that milk. Soybeans (*Sojabohnen*) are also mentioned in two places on p. 346 as a raw material for soymilk–which is described in German as a "fluid resembling cow's milk" or a "soybean emulsion" (*Sojabohnenemulsion*) (Footnote: *Die Sojabohnenmilch, Sojamilch, Sojaglobulin*).

A table titled "Plant cheeses (*Pflanzenkaese*)" gives the composition of tofu, kori-tofu (frozen tofu), Hamananatto, three types of soybean cheese (*Sojabohnenkaese;* from the year 1912, one type prepared in a laboratory), Chinese tofu, and Daua-Daua (Dawa-Dawa) cheese made from the seeds of *Parkia africana.* The source of all data is given, and the lengthy footnotes accompanying each entry in this table take up more space than the table itself.

Note: This is the 2nd earliest German-language document seen (Dec. 2011) that mentions fermented black soybeans, which it calls *Hamananatto.* Address: Germany.

1067. Mattei, G.E. 1919. La soja ed i suoi prodotti [The soybean and its products]. *Bollettino di Studi ed Informazioni del Regio Giardino Coloniale di Palermo* 5(1/2):1-34. [40 ref. Ita]

• ***Summary:*** This article contains one of the best histories seen to date of the soybean in Italy, from 1760 to 1813. Contents: Brief history of the soybean. History of its taxonomic classification. Botanical description of the wild and domestic soybean. Varieties. Introduction of the soybean to Europe (especially France and Italy). The question of the root nodule bacteria. Cultural requirements. Importance / value of the production. Utilization of the seeds. Soy flour (*farina di soja*). Soymilk (*latte di soja*). Soy cheese [tofu] (*formaggio di soja*). Soy oil (*olio di soja*). Soy cakes (*panelli di soja*). Other Japanese preparations: Miso, shoyu, koji. Opportunities for soybean cultivation in Italy. Results of cultural trials at the Colonial Garden (*Giardino Coloniale*) in Italy.

"Introduction of the soybean into Europe: The soybean (*La Soja*) was long confined to East Asia, and it is only towards the 17th century that it appears in the Indian Archipelago; in fact, if it had existed in the Pacific islands at the time of Cook's voyage, Forster surely would have reported it. Its introduction to the East Indies is even more recent. Roxburgh mentions its cultivation in the Botanical Gardens of Calcutta from seeds acquired from the Moluccas, in 1798. On the other hand, as Alphonse de Candolle observes, if its cultivation were ages-old, it would have spread long ago toward the West to Syria and Egypt, which did not occur.

"Its introduction to France is said to date back to 1739, when certain missionaries sent soybean seeds, from China, to the *Jardin des Plantes* in Paris: the uncertainty however arises as to whether, even before this time, it was cultivated in Europe, since, as Saccardo points out, it appears that essays (*saggi*) on the plant exist in the *Herbarium* of Bartolomeo Martini of Verona, Italy, written (*composto*) in 1701.

"In any event, concerning France, the soybean is reported as being grown extensively in about 1821 at Champ-Rond near Etampes; it seems, however, that subsequently its cultivation was nearly lost; in fact, Lachaume, in the *Revue Horticole* of 1857 [pages 568-70. Nov. 16], reports it as a new introduction, thanks to the French Consul in Shanghai, and he describes and illustrates it.

© Copyright Soyinfo Center 2013

"As for Italy, Pinolini [1905] dates the soybean to 1848 [sic, 1840]. It is possible that its cultivation as an agricultural plant began to spread from that date, but the existence of the soybean in Italy antedates this date by at least a century. Saccardo says in fact: 'cultivated since the mid-18th century, and at times extensively, as in the Treviso region.'

"With the existence, as I have stated, of essays on the soybean in the *Herbarium* of Bartolomeo Martini of Verona, an herbarium written in 1701, one might suspect that from that time the soybean was being cultivated in the Verona region; but who could have brought the seeds? And if this were the case, why do we not find any reports of it in somewhat later authors? Or was the above-mentioned essay brought directly from the Orient. It should be noted that Kaempfer's voyage to Japan dates to 1690, and we have the first accurate reports on the soybean in 1712 with Kaempfer's own publication. Should we perhaps believe that some study, brought back by Kaempfer, was given to Martini? He might have obtained it from Zannichelli who, as Targioni-Tozzetti relates, in the life of Micheli, carried on a correspondence with Martini himself? Assuredly Kaempfer had to regard a plant which is used for so many purposes in Japan as important and it is possible he brought back essays about it, and perhaps even seeds.

"In any event, the Jardin des Plantes in Paris, after 1739, must have distributed seeds to various botanical institutions, including Italian. In fact, from the old *Catalogs* (*Cataloghi*) of the first Italian botanical gardens and from the pertinent *Index seminum*, we see that in the second half of the 18th century, the soybean is being cultivated almost everywhere: in 1760 Allioni mentions its cultivation in the Botanical Gardens of Turin; in 1780 Abbot (*l'Abate*) Farsetti introduced it to his Santa Maria di Sala garden near Venice; in 1785 Scopoli mentions it in Pavia; in 1787 Guatteri records it in Parma; in 1790, with the Botanical Gardens barely established, Tineo was cultivating it in Palermo, as results [show] from the Catalogue published in precisely that year; in 1793 Zuccagni refers to it in Florence; in 1798 Durazzo had introduced it into his garden Dello Zerbino near Genoa; in 1801 Tilli mentions it in Pisa; in 1805 Graefer refers to it in Caserta; in 1807 Arduino introduced it to the Agricultural Gardens (*Orto Agrario*) of Padua; in 1811 Fabriani refers to it in Modena; in 1813 Tenora points it out in Naples, and the same may be said for other more recent reports. From this we see that, at the end of the 18th century, the soybean was already cultivated throughout Italy, not for agricultural but for scientific purposes, that is, in Botanical Gardens.

"Perhaps this information escaped those, like Pinolini, who did research on the soybean as an agricultural plant because, in all works dealing with plants cultivated at that time, the soybean is found under the name of *Dolichos soja*, the generic name *Soja*, of Moench or Savi, not yet having been adopted."

In 1918 a soybean cultural trial was conducted at the Colonial Garden, Palermo, on a plot of 350 square meters; smaller experiments had been conducted in previous years. A variety was chosen which had almost spherical seed and was greenish yellow in color. The seeds were planted on March 29, in furrows at a spacing of 30 x 40 cm.; they germinated regularly about 10 days later. The plants were hoed twice to reduce weeds and irrigated eight times from the end of May until the end of August. Flowering began in early July and the seed was harvested on Nov. 15. The entire vegetative period was, therefore, 7½ months. The plants reached an average height of 90 cm. Their growth was luxuriant and there was a normal development of nodules on the roots. From this plot of 350 square meters, 51 kg of clean seed was harvested; this corresponds to a yield of about 1,450 kg/ha, which is considered quite satisfactory and could be increased by manuring. The beans, when cooked in different ways, were found to have an agreeable taste.

Talk with Ted Hymowitz, soybean geneticist, Univ. of Illinois. 2003. Aug. 18. Caution! It is not clear whether the early dates for soybean in Italy in this article are based on herbarium specimens or living plants. With herbarium specimens, it is easy to make errors.

Note 1. This document contains the earliest solid dates and the second earliest overall dates seen for soybeans in Italy, or the cultivation of soybeans in Italy (1760). The source of these soybeans is unknown. Yet note that the earliest possible date that the soybean was cultivated in France was about 1740. Perhaps there was some connection between the earliest possible soybean cultivation in France and in Italy.

Note 2. This is the earliest Italian-language document seen (April 2013) that uses the term *formaggio di soja* to refer to tofu.

Note 3. This article was reprinted in the Nov. 1991 issue of *Il Giornale della Soia* (p. 11-16). Address: Royal Botanical Garden (R. [Regio] Orto Botanico), Palermo, Italy.

1069. **Product Name:** Tofu.
Manufacturer's Name: Emu-gai Tofu-ya [M Street Tofu Shop].
Manufacturer's Address: 315 M St., Sacramento, California. Phone: Main 1725 W.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 158.

1070. **Product Name:** Tofu.
Manufacturer's Name: Hayashi Tofu-ya.
Manufacturer's Address: 1509½ Geary St., San Francisco, California. Phone: West 8293.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 57. Note: In 1919 Itano Tofu-ya made tofu at this address. In 1911 a Hayashi Tofu-ya was at 1621 Buchanan St. in San Francisco.

1071. **Product Name:** Tofu.
Manufacturer's Name: Hinode Tofu-ya.
Manufacturer's Address: 339 7th St., Oakland, California. Phone: OAkland 6613.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 88. Also in 1924, p. 99. Also in 1925, p, N-67. Also in 1926, p. N-67.

The Japanese American Directory. 1930. p. 67. Hinode Tofu-ya, 339 7th St., Oakland, California. Also in 1932. The phone number is now GLencourt 7297. Also in 1934, p. 68; Ad (1/8 page), p. 72. All in Japanese. Original tofu maker. Tofu, aburaage, ito-konnyaku, and goldfish. Also in 1936, p. 86. Also in 1937, p. 59. Also in 1938, p. 64. Also in 1939, p. 62.

The Japanese American Directory. 1940. p. 60. Hinode Tofu Seizô-sho (Hinode Co.), 339 7th St., Oakland, California. Phone: GLencourt 7297. Listed in the category "Food Products." Note: See 1913 entry for this company at a different address in Oakland. Also in 1941, p. 60.

1072. **Product Name:** Tofu.
Manufacturer's Name: Sakumura Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: Main 2162-J.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 158. Note: Koyama Tofu-ya was making tofu at this address in 1919.

1073. **Product Name:** Tofu.
Manufacturer's Name: Takasugi Tofu-ya.
Manufacturer's Address: 1613 Buchanan St., San Francisco, California. Phone: West 2157.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 57. Also in 1921, p. 64 (But the name has changed to Takasugi Tofu-ten). Also in 1922, p. 40. Also in 1923, p. 60. Also in 1924, p. 59.

Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 51. The company name is given as Takasugi Tofu Seizô-sho (Takasugi Tofu Mfg. Co.; same address and phone) is listed under the category "Miscellaneous foodstuffs (*Zatsu shokuryo-hin*)."

1074. **Product Name:** Tofu.
Manufacturer's Name: Tanabe Tofu-ya (Tanabe Tofu Shop).
Manufacturer's Address: 842 Japanese Alley, Fresno, California. Phone: 2615J.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 225. Note: A company with this same name started in 1909 at 830 F St., in Fresno. Their last listing in Fresno was in 1914, when their address was 847 Japanese Alley. Then they disappeared for 6 years or more. The relationship between these two companies is not clear.

1075. **Product Name:** Tomoe Nigari.
Manufacturer's Name: Tomoe Tofu-ya (Tomoe Tofu Shop). Renamed Tomoe Tofu-ten in 1923.
Manufacturer's Address: 324 Jackson St., Los Angeles, California. Phone: 11682.
Date of Introduction: 1920. January.
New Product–Documentation: The Japanese American Directory. 1920. p. 296. Ad (1/8 page) is all in Japanese. At the top center is the company logo, a 3-part (tripartite) *t'ai chi* (pinyin: *taiji*) or yin yang symbol–white on mostly black. The address is now given [in error] as 224 Jackson St., Los Angeles. Phone: 11682. Making and selling Tomoe Nigari. Also in 1920 directory, p. 304. Tomoe Tofu-ya, 324 Jackson St., Tel. 11682. Also in 1922, p. 329 (directory and ad). Also in 1924, p. 395.

224 Jackson St. Phone: VAndyke 5676. Making and selling Tomoe tofu and nigari).

Also in 1932, p. 346 (directory; Address: 126 Rose St.) and p. 346 (1/8 page ad; 126 Rose St. Makes and sells Tomoe brand nigari). Note: In an ad in the 1936 directory, nigari is not mentioned.

1076. Le Goff, Jean. 1920. Un aliment précieux pour diabétiques: le soja [A valuable food for diabetics: Soya]. *Repertoire de Pharmacie* 32(1):1-4. Jan. 10. Series 3. 76th year. (Chem. Abst. 14:1169). [Fre]

• ***Summary:*** A call for the cultivation of the soy beans in France on the ground that they can be the source of valuable food products. Soybeans are said to be especially valuable as a food for diabetics, since they are is composed almost entirely of nitrogenous and fatty materials and contain practically no carbohydrates.

Food uses of soya: In the past, it has been objected to as a food because the dried beans are difficult to cook. The fresh beans, however, are said to be as easily cooked as peas and to have a flavor somewhat resembling that of chestnuts. The soybean can be used to make: (1) Flour, from which biscuits, pastries, and bread can be made. (2) Edible oil. (3) Vegetable milk (*lait végétal*), from which one can make a cheese [tofu] that can be eaten either fresh or dry, smoked or fermented. (4) A coffee substitute, after roasting.

A table compares the nutritional composition of soybeans grown in China, Hungary or France; there is no significant difference in their chemical compositions. Address: M.D., licencié ès sciences.

1077. U.S. Department of the Interior, Census Office. 1920. Saizo Ohta, Shino Ohta, and Matsuo Ohta in the 1920 U.S. Census in Portland, Multnomah County, Oregon. Portland, Oregon. Jan. 15.

• ***Summary:*** "Township or Division of County: Precinct 63 Supervisor's District No. 3. Enumeration District No 27. Page 13 A. Census taken on January 15, 1920. Street: Madison, probably 223 1/2. Dwelling enumerated: 70th. Family enumerated: 216.

There are 19 other people living at that address, making 22 in all with the Ohta family. The others are shown as lodgers except for the Ohta family as follows:

Ohta, Saizo. Head of Household, Renting, Male, Japanese, age 40, married, Immigrated to the US in 1905. He is an alien as is his wife. He was born in Japan; his native tongue is Japanese; his father and mother were both born in Japan and Japanese was their native tongue. He can read and write. He can speak English. He is a Hotel Manger [Manager is very clear; hotel not so but I think that's what it says. There are 19 lodgers in his hotel.] He was a worker for wages. [Line 34]

Ohta, Shina. Wife of Head of Household. Female, Japanese, age 26, married, immigrated to the US in 1913. She is an alien. She was born in Japan; her native tongue is Japanese. Both parents were born in Japan and their native tongue was Japanese. She can read and write. She can speak English. She has no occupation. [Line 35]

Ohta, Matsuno, daughter of the Head of Household, Female, Japanese, Age 4, Single. She can read English but apparently not write it since that column is not checked. She was born in Oregon. Both parents were born in Japan and Japanese was their native tongue. It is not checked that she can speak English. She has no occupation. [Line 36].

1078. Parry, Charles A. 1920. Travel sketches, LXXXIII– Bean that made Manchuria famous: A factory at Shimizu– The bean of many qualities. *Japan Advertiser* (*Tokyo*). Jan. 25. p. 7. [Eng]

• ***Summary:*** Contents: Introduction. Sweet and nasty. "Not now." The tea port. History of a bean. Substitutes. Big business. Japanese place names. On 26 Nov. 1919 the author traveled by train from Tokyo to the port city of Shimizu, on Suruga Bay, in Shizuoka prefecture (about 90 miles southwest of Tokyo). "Shimizu is one of the 36 treaty ports, and it was opened along with now fewer than 26 others, in 1899. The name means 'clear water'... My chief object in coming to Shimizu is to visit the Suzuki Company's Bean Oil Factory, for which I have obtained permission by courtesy of the Japan Tourist Bureau. This consists of several large buildings, erected three years ago, including a central office and two mills which being built in a castellated Gothic style, make a picturesque adjunct to the scenery as they rise by the calm waters of Shimizu Bay. The mills deal at present with two only of the many products of the wonderful manchurian [sic] or soy bean, called in Japanese daizu (glycerine [sic, Glycine] hispida) the crushed bean and the oil." The two mills are capable of treating 300 tons of beans per day. The process is secret. "I am informed that factories for the extraction of this oil exist only in Japan and Manchuria; but the Suzuki Co. has a branch office in New York, and the business is rapidly extending."

"The oil is used for frying, for lubricating, for water-proofing clothes, for medicine, as a butter substitute, and in the manufacture of soap, candles, guncotton, and artificial rubber; though it can hardly yet be said to be on the market." For culinary purposes it is not as good as the ordinarily used goma (sesame) oil, being much lighter and requiring the use of a deep saucepan. Yet it costs only about 62% as much as sesame oil; the latter costs ¥1.60 per sho (1.58 quarts).

"At present its chief use is for making soap, for which it is taken at a less refined stage, of a dark brown color while the finished product is light yellow. The oil is at present little used in Japan because little known; its retail sale seems to be limited to the neighborhood of the factories. Of these there are three, the two others being at Yokohama and Kobe, both established only last year.

"One large shed is devoted to storing the crushed beans

© Copyright Soyinfo Center 2013

(*kasu*) after the oil has been extracted, large piles of which lie about... The chief use of this at present is for cattle-food; but it is now to be manufactured into flour, useful for mixing in various proportions with wheat flour."

"The daizu [soy] bean has long been known in Japanese cookery in the form of 'kiriako' [sic, kinako] ('yellow powder') to make which the entire bean is slightly roasted and pulverized; then used for mixing with flour to make light cakes, for giving savor to boiled rice, etc. The prices are not yet determined, the cost of manufacture not being known; but it will be cheaper than flour, as well as more nutritious, and will help to relieve the scarcity of rice.

"Substitutes: Other products of the bean are: tofu, the white bean-curd, used universally in Japan and, until recently, almost absurdly cheap; also used in the forms of age-dofu (fried in cottonseed oil), yake-dofu (baked) [yaki-dofu (grilled)], and the curious gori-dofu [kori-dofu], 'frozen tofu,' also called koya-dofu (from koya-san), tofu sprinkled with hot water, frozen, dried, and cut into small cakes; miso, the cheap condiment made of daizu beans fermented with yeast and barley; and soy, Japan's only sauce. A later addition to the list has been to-nyu, or tofu-milk [sic, "bean milk], a very passable substitute for cow's milk at half the price; and still more recently tofu-butter. The whole bean, parched and boiled, is an excellent coffee-substitute, yielding when parched just to the right degree, much of the aroma of that fascinating drink without any of its deleterious effects."

Note. This is the earliest English-language document seen (April 2013) that uses the term "gori-dofu" or the term "koya-dofu" to refer to dried-frozen tofu.

"The present demand for been cake in Japan is met by the three factories of the Suzuki Co. that at Shimizu supplying central Japan, Yokohama Northern and Kobe Southern.

"There are several varieties of the bean known as white, yellow green and black, the first two being the most used. The plant is as yet little grown in Korea and Japan.

"Big Business: The Shimizu factory, which is the largest of the three, employs about 300 workpeople on day and night shifts. This new bean-industry is, however, only the latest among many activities of the Suzuki Co. which ranks among the great industrial concerns of the world, the third largest in Japan, standing next to the Mitsui and the Mitsubishi, and employing a total of over 3,000 clerks and 100,000 workpeople. It deals also in rice, wheat flour, sugar, sake-brewing, coal, timber, metals, camphor, wool, cloth and manure besides numerous small lines. It has three dockyards, at Harima, Toba and another; a coal-mine in Kyushu; copper mines at Hibi (Okayamaken) Hiroshima (Yamaguchiken) and Dairi (Fukuoka ken) also mines of zinc and iron; while its steel works (*seikojo*) at Kobe are the largest in Japan."

"Shimizu is well situated for growth being midway between the ports of Yokohama and Yokkaichi and serving a prosperous hinterland. Its chief exports are tea and oranges and its imports coal and timber." Address: Japan.

1079. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1920. Nichibei jûshoroku [The Japanese American directory. No 16]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]

• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Address: San Francisco, California.

• ***Summary:*** Contents: Introduction. Soy-bean milk. Soy-bean cheese. Soy sauce. Soy-bean sprouts." Photos show: (1) A typical soy bean plant with leaves and pods. (2) A large basket full of "sprouted soy beans, which are sold and used as a green vegetable" [in China].* (3) "Large blocks of freshly made bean curd, 'Tofu' [on a round wooden table], ready to be cut up into squares and sold to the housewife."*

Note 1. This article consists mainly of long quotations from the following article: Morse, W.J. 1918. "The soy-bean industry in the United States." *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. * = Photographed by Frank N. Meyer, USDA Plant Explorer.

Note 2. The cover of this issue reads: "Edited by John Harvey Kellogg, MD, LLD. Devoted to race betterment and biologic living."

1081. Adolph, W.H.; Kiang, P.C. 1920. The nutritive value of soy bean products. *National Medical J. of China* (*Shanghai*) 6(1):40-49. March. [15 ref. Eng]

• ***Summary:*** "One of the problems of science has been the search for a perfect food. Though eggs and milk are presently considered to be "perfect foods," the authors believe that the soy bean should also be considered. "The recent world shortage of food, and the demand for foods which are high in nutritive value has turned the attention of dietitians to the possibilities of the soy bean." It is a distinctly well-balanced food.

"During the last few years, the soy bean has found application in the West in the infant dietary, frequently with an admixture of some cereal for additional carbohydrate (Ruhräh 1915), and in summer diarrhea (Sinclair 1916). It is one of the recognized diabetic foods. One of the most satisfactory forms of artificial milk is made from soy beans. The bread used by the French army in the recent war was made essentially from soy bean flour."

"Soy bean products in China: History–The use of the soy bean in China dates back to the beginning of China's agricultural age under the emperor Shen Nung. It

© Copyright Soyinfo Center 2013

is mentioned in the *Ben Tsao Gang Mu* [*Bencao gangmu*] written by Shen Nung in the year 2838 B.C."

Note 1. This is the second earliest English-language seen (Aug. 2002) that treats Shen Nung as a real, historical figure, or that says the first written record of the soybean appears in a book written by him. The *Bencao Gangmu* (The great pharmacopoeia) was actually written by Li Shizhen in +1596.

"Tradition says that the manufacture of soy bean curd [tofu] originated in China in 164 B.C. during the reign of Han Wen Di, by a man named Liu An, the duke of Hwai Nan [Huai Nan]. The colloquial name for soy bean curd is *Do Fu*, and the classical name, *Li Chi*, probably meaning 'the morning prayer.' Its exact derivation, however, could not be traced. It is interesting to note that in China, at the present day the bean curd is made in the early hours of morning, and sold at daybreak."

"Liu An was a great friend of the Buddhist monks, and it is quite probable that he invented this bean curd in order to provide a change or a delicacy to break the monotony of the monastic ration. As a matter of fact, the bean curd is a real delicacy if carefully made and well cooked. Chinese who are connoisseurs on the subject assert that when so prepared it has the taste of pig's brain. The foreigners eating Chinese food often eat carefully prepared bean curd thinking it pork. With sugar it produces a dish like custard. Prepared with salt it resembles scrambled eggs."

"Application–The Chinese people make practically no use of dairy products, and the bulk of the people consume only very meager amounts of meat. Yet in spite of this they have lived for centuries on what appears to be a remarkably well-balanced diet by use of the soy bean."

"A number of interesting examples are found in China of the use of bean products as an agent for growth. One of us has observed in Anking that dealers in birds employ bean curd as the sole food for infant birds. The birds are robbed away from their nests immediately after they are hatched, and are then fed bean curd to tide over the infantile period till able to feed themselves. Possibly more interesting is the case of the true Buddhist monk who from birth is consecrated to the priesthood, and is carried through the period of childhood growth on a rather heavy diet of bean curd. The apparently normal growth of these monks would seem to be paralleled by the experiments of Osborne and Mendel (1917) on the promotion of growth in rats by both the water-soluble and fat-soluble vitamines contained in the soy bean. The country monastic diet is noted for its high content of soy bean products."

"The Chinese coolie... in spite of the scanty intake of meat and the constant exposure to overwhelming sources of infection, still does possess a wonderful resistance. The diet of the average coolie contains a surprisingly large amount of beans and bean products."

"A common saying in some parts of China terms *bean milk the poor man's milk*, and *bean curd the poor man's meat*... It is commonly stated that a meat diet is characteristic of the most aggressive peoples of the world. Has the protein of the soy bean replaced meat in the Orient?

"Bean milk is another bean product which is in composition not far different from cow's milk. In many places in China bean milk is a food drink. It is usually drunk sweetened with sugar. Western countries employ a number of patented methods for removing the 'beany taste' objectionable from the point of view of the Western consumer."

"It would be almost impossible to make a complete list of all the products manufactured from the soy bean in China. The best known and most important are the bean milk, bean curd, bean sauce (soy), and bean oil. In addition to this are the different forms of bean curd preparations, bean sprouts, and a large variety of sauces and condiments into which the soy bean enters as one of the constituents."

Details are then given on bean milk and bean curd. In making bean milk, the "bean residue [okara] which does not pass through the sieve is used as feed for hogs. On coagulation of this solution the soy bean curd (tofu), often called Chinese cheese, separates. As far as is known to the authors there are at present four agents employed in China to effect this coagulation. These are: (1) *lu*, the residue from the crystallization of salt, (2) gypsum; (3) *swan giang*, the soured bean milk whey remaining from the previous coagulation of bean curd; and (4) vinegar."

Table 1 gives the average chemical composition of the yellow soybean [*huangdou*] common throughout Shantung. Table 2 gives the chemical composition of two samples of soy bean curd purchased on the streets of Tsinan and made with *lu* [nigari] as a coagulating agent: The composition of the first sample is: protein 10.22%, fat 3.66%, water 80.90%, ash 1.09%, nitrogen-free extract 4.13%. This composition is compared with that of cottage cheese. Table 3 compares analyses of the ash of soy bean curd with that of soy bean. When it is made by coagulating soybean milk with bittern (from sea salt) the curd is rich in all the inorganic essentials (especially calcium, sodium, and chlorine) missing from the soy bean itself. The authors suggest that some of the racial characteristics of the Japanese people can be traced to their dependence largely on vegetable protein.

Table 4 gives analyses of 2 samples each of [soy] bean milk, cow's milk, bean milk whey, and bean residue [okara]. The chemical composition of the first sample of bean milk is: protein 4.22%, fat 1.87%, ash 0.40%.

Note 2. This is the second earliest document seen (Jan. 2002) that mentions Liu An of Huai Nan in connection with tofu.

Note 3. This is the earliest English-language document seen (April 2013) which states that *Li Chi* was an early or classical name of tofu.

\ Note 4. This is the earliest English-language document

seen (April 2013) that uses the term "poor man's meat" to refer to tofu. Address: Lab. of Chemistry, Shantung Christian Univ., Tsinan, China.

1082. Valderrama, Santiago F. 1920. Notas sobre el cultivo de la soja: Ampliadas con las experiencias de los años 1914 al 1919 [Notes on the culture of soybeans: Enlarged with experiments of the years 1914 to 1919]. Cordoba, Spain: Printed by M. de Sola. 26 p. April. 16 cm. [Spa]
• ***Summary:*** This rare, valuable, and very interesting booklet was sent to Soyfoods Center on 15 June 1995 by Manuel Ruiz Luque, a collector of antiquarian books, from Montilla (Córdoba), Spain. Contents: Introduction (description of the plant and brief history). Cultivation of soybeans. Manures and fertilizers. Preparation of the soil. Time of planting. Spacing of the plants. Quantity of seeds and depth of planting. Work. Yield. Photo of a soybean plant (yellow seeds) grown at Montilla (Cordoba) by Don Santiago F. Valderrama and harvested in 1916 (p. 15). Nutritional analysis of the seeds of this plant (conducted Aug. 1916 at Granada by Mariano Moreno). Soy products: Soymilk (*leche de Soja*), various types of tofu (*queso de Soja*). Soybeans and products cultivated in Montilla and exhibited in May 1918 at Cordoba: 16 types of seeds (7 yellow-seeded, 4 black, 3 green, 1 variegated, and 1 red), 6 green soybean plants (from yellow, green, or black seeds), 1 dry soybean plant, and 11 soy products. Summary.

The soy products exhibited in 1918 at Cordoba are: 1. Soy oil obtained from 5 kg of seeds. 2. Soy flour (full-fat). 3. Soy flour (defatted). 4. Soy bran (finely ground; *Moyuelo de Soya*). 5. Soy bread (made with full-fat soy flour). 6. Soy bread (made with defatted soy flour). 7. Soy extract (*Extracto de Soja;* "This product can be substituted with advantage for all food extracts"). 8. Legumine (*Legumina*) extracted from soya; "Similar to the casein of milk and with equal applications." 9. Soymilk. "Of great nutritional power. This product, fermented, yields an exquisite cheese." 10. Urease. "A chemical reagent of great application, extracted from soya." 11. Soybeans pods (*Cáscara de la Soja*).

Bottari (1923, p. 2) writes in Italian: "Spain, through the initiative of Col. Santiago F. Valderrama, follows this example" [of the USA, where soybean acreage is expanding].

On page 49 he continues. "In Spain, the first attempts at soybean cultivation were made by the Count of San Bernardo, who cultivated soybeans on his estates at Almillo (in Écija [a city in southwest Spain, 48 miles east-northeast of Seville]) at the beginning of this century. But the person who has given a truly admirable impetus to this cultivation is Col. Santiago F. Valderrama who, during the last decade, as well as obtaining marvelous plants, some of which we will show in a photo (page 70, fig. 1), also introduced his own varieties, of which we will speak later (p. 85). He estimates a really favorable yield, which cannot be obtained except in favorable regions having warm climates, where cotton, sugar cane, date palms, and bananas grow luxuriantly. In fact, he gets a yield of 2,500 kg/ha, which we can't wait to have here in Italy."

An illustration shows a soy bean plant (frontispiece, facing the title page). Note: This is the earliest document seen (Feb. 2001) concerning the cultivation of soybeans in Spain. Address: Montilla, Spain.

1083. Fellers, C.R. 1920. Re: Information on soy cheese and canned soy curd. Letter to Margaret B. Church, Bureau of Chemistry, USDA, Washington, DC, April 20. 1 p. Typed, without signature. [1 ref]
• ***Summary:*** "I have obtained some information regarding the manufacture of soy cheese and canned soy curd and have made one factory inspection. I hope to make a couple more soon and will be glad to send you a copy of my report when it is finished. As you probably know, *Aspergillus* is used in the manufacture of these products."

Note: This is the earliest English-language document seen (April 2013) that contains the term "soy curd" or the term "canned soy curd." "Soy cheese" almost certainly refers to fermented tofu, and "canned soy curd" to canned tofu. Address: Bacteriologist, San Francisco, California.

1084. Kimura, Jirô. 1920. Tôfu oyobi kôri-dôfu tanpakushitsu-chû no jiamino-san no teiryô [Determination of diamino acids in tofu and dried-frozen tofu]. *Tokyo Kagaku Kaishi* (*J. of the Tokyo Chemical Society*) 41(5):413-20. May. (Chem. Abst. 14:2813). [4 ref. Jap]
Address: Nôgaku-shi, Japan.

1085. List or manifest of alien passengers for the United States: Heiji Ohta, Saizo Ohta, Shina Ohta. 1920.
• ***Summary:*** Ship: S.S. Afurica Maru. Passengers sailing from Yokohama, Japan, on 16 June 1920. Arrival at: Seattle, Washington.

Passenger #1: Ota, Heiji. Age: 48 years, 6 months. Sex: Male. Married or single: Occupation: Bean cake [tofu]. Married. Able to–Read: Yes (?). Write: Yes. Nationality–Country: Japan. Race or people: Japanese. Last permanent residence: Portland, Oregon. The names and complete relatives of nearest relatives: Mother. Mrs. M. Ohta, Shiraishimura, Okayama-ken. Final destination–State: Oregon. City: Portland.

Passenger #2: Ota, Saya (?). Age: 48 years, 9 months. Sex: Female. Occupation: Housewife. Everything else is the same as for Heiji (#1).

Passenger #3: Ota, Shina. Age: 25 years, 5 months. Sex: Female. Occupation: Housewife. Everything else is the same as for Heiji (#1).

1086. *Scientific American Monthly.* 1920. Food economy. 1:560. June.

• ***Summary:*** Dr. C.O. Johns of the USDA Bureau of Chemistry has found that the quality of protein in soy beans and mung beans (unlike most common beans) is unusually high because of their high content of cystine. "If the press cake from the soy bean oil presses is used with peanut flour and white flour to make a loaf of bread it is claimed that such a loaf is a complete ration and will be found more easily assimilated than meat and equally nutritious and sustaining...

"Of late an increasing acreage has been devoted to raising soy beans, particularly in the South where the boll weevil makes the cultivation of diversified crops a necessity...

"The variety of materials made from the soy bean and its products in the Orient is remarkable. It forms the basis for an artificial milk. It is fermented into a drink. It affords an artificial cheese and the casein recovered from it has a variety of application. It will be seen, therefore, that nature has been particularly good to the Orient and naturally provided it with a particularly useful variety of bean."

1087. *WW The Wasatch Wave* (*Utah*). 1920. The Paris of China [Canton]. Aug. 20. p. 8.

• ***Summary:*** "Prepared by the National Geographic Society, Washington, DC." "The Chinese say that he who has not lived in Canton knows not luxury. Equally true is it that the American of lowliest estate who has not seen Canton knows not poverty. In contrast to ancient temples and palatial homes surrounded with park-like gardens are the beggars at their gates, covered with sores and whining for a pittance... women haggling for a pigeon-egg-sized lump of bean curd [tofu], half a dozen peanuts, a dozen roasted beans,..."

Canton is also the art center and the revolutionary center of China, for it was the birthplace of the revolution in 1911 that ended the Manchu dynasty, and has been the center of other revolutionary activities since.

1088. *Japan Advertiser.* 1920. Tokyo a city of many kinds of specialty restaurants: All sorts of food can be found at all sorts of prices if one knows where to go. No. 9,307. Aug. 22. p. 5, cols. 1-3. Sunday. [Eng]

• ***Summary:*** This introduction to the many types of restaurants in Tokyo mentions various soyfoods. Better class houses serve beef. The centerpiece is the "nabe"–"the iron skillet in which the food is cooked. The cooking is done by the customer, no skill being required as the secret of good 'nabe' is in the tenderness of the meat and in the sauce which is prepared by the house. Onions, either Bermuda or the long leek variety, tofu, konnyaku (a stringy preparation made out of a root), and sometimes cabbage leaf are the usual ingredients which are put in the nabe along with the thin slices of meat. Sake can be had if ordered. A reasonable meal at a beef house now costs about ¥1.50, although the nabe alone is probably listed at only 60 or 70 sen.

"Another name by which this dish is usually known outside of Tokyo, is sukiyaki. This is derived from *suki,* which means a spade, and *yaki,* to cook. The reason for this unusual derivation is that when meat we first introduced into Japan as food for humans, there was a very great prejudice against it. Those who wished to indulge in this 'unclean' food were forced to go into the mountains, far from any habitation and conveniences, and they made use of the farmer's broad spade on which to cook the meat. Another reason, aside from the fact that Buddhism preached abstinence from the flesh of animals, that the Japanese did not look with favor upon meat as a food was the flesh has always been eaten by the Eta, or the outcast class of the country."

"In contradistinction to meat, eels have always been looked upon as a delicacy. Eel restaurants are numerous in Tokyo, but they are not cheap... The customer is served in private rooms at these eel houses... Eels are considered very nutritious and are eaten by all classes. It is a favorite dish with coolies when they have the price... The first 'ox' day of the summer doyo, or period of greatest heat, is set aside as a special day to eat eels.

"There is not much choice in the way in which eels are prepared. Kaba-yaki is the name of one style. The bones are all removed, the eel is laid out flat and broiled over a charcoal fire with a special shoyu sauce and served on a big flat plate. Rice is also served..." One serving typically costs 1-3 yen.

"A very cheap kind of food, yet one whose 'social standing' is as good as any, is soba or udon... Cold soba is known as mori, and is eaten by being dipped into shoyu sauce and is flavored with sea-weed." "Tempura soba is served in a bowl with a piece of tempura placed on top. This is a very nutritious dish. Soba is served is served in the same way with onions or a piece of abura-age or fried tofu and is known as okame soba."

"A typical Japanese restaurant where a table d'hote is served is known as a kaiseki restaurant." One popular dish is "onuko, or fish mixed with miso and flavored with vinegar."

In Tokyo, pork "is eaten more than any other kind of meat, but as it is the cheapest it is found only in the poorest restaurants." Surprisingly large quantities of horse-meat are consumed at cheap restaurants. Tempura, which is very popular, "means a certain way of cooking–namely, dipping in this wheat-flour batter and frying in deep oil, usually goma-abura, or sesame oil, although almost any vegetable oil can be used." Also discusses sushi. Rice comes at the end of the meal. Sake is not supposed to be drunk after rice is consumed, as it produces indigestion. Address: Tokyo.

1089. Carver, George W. 1920. Peanut milk. *American Food Journal* 15(8):25. Aug.

• ***Summary:*** Properly made, peanut milk is one of the most perfect and stable emulsions. "When it sours, the clabber or curd is about the same in quantity and physical appearance as that of cow's milk." "The curd can be converted into

© Copyright Soyinfo Center 2013

many fancy types of cheese, such as the pimento, nut sage, tutti fruiti, chocolate fillers, cream bonbons, etc., etc." The chemical composition of both peanuts and peanut milk are given. Note: This is the earliest English-language document seen (June 2002) with the term "peanut milk" in the title. Address: PhD, Dep. of Research and Experiment Station, Tuskegee Inst., Tuskegee, Alabama.

1090. **Product Name:** Tofu.
Manufacturer's Name: Nakaoka Tofu-ten.
Manufacturer's Address: 1421 Kern St., Fresno, California. Phone: 2-2960.
Date of Introduction: 1920. August.
New Product–Documentation: The Japanese American Directory. 1930. p. 264. Letter from A.M. Araki. 1990. Dec. 31. "I came to the USA in Aug. 1920. At that time in Fresno there were two tofu shops in Japantown: Yokota Tofu-ten, and Nakaoka Tofu-ten. The owner of Nakaoka Tofu-ten died in about 1922, so the company was taken over by Mr. Zenkichi Nagahama, who renamed it Nagahama Tofu-ten, and ran it for about 20 years until 1942."

Note 1. Tofu shops in Fresno during the period from 1920 on, according to the very complete and detailed *Japanese American Directory*, were: Kawamoto Tofu-ya (1920-1926), Tanabe Tofu-ya (1920), Togawa Tofu-ya (1921), Yokota Tofu-ya (1922).

Note 2: For future history, see Nagahama Tofu-ten (1922).

1091. Rindl, M. 1920. Vegetable fats and oils. IV-V. Semi-drying oils. Soy bean. *South African J. of Industry* 3(6):518-31. June; 3(8):742-49. Aug. [29 ref]
• ***Summary:*** These are 2 installments of a series of articles on vegetable fats and oils, forming a Report to the Advisory Board of Industry and Science on Vegetable Oils, Fats, and Waxes. Soybeans are considered among the semi-drying oils. Contents of Part I: Introduction. Early [soybean] experiments in South Africa. Botanical characters. Varieties. Germination. Inoculation. Technique of inoculation. Soy beans as a rotation crop for maize. Comparison of soy beans and cowpeas. Storage of seed. The soy bean as human food. Vitamines. Soy-bean [food] preparations: Soy-bean milk, soy-bean curd [tofu], the soy bean as a vegetable (baked, boiled, roasted, green beans [green vegetable soybeans], soy-bean pulp (kara)). Soy-bean meal [soy flour and its uses]. Fermented soy-bean products: Fermented boiled beans (natto), ripened vegetable cheese (miso), the Chinese paste chiang, soy-bean sauce (shoyu).

Contents of Part II: Oil content of seed produced in South Africa. Quality of oil from South African beans. Extraction of oils. Nature and composition of soy-bean oil, and methods of treatment. Uses of the oil. Soy beans as forage. Enemies of the soy bean. Method of shipment from the East.

"The first systematic trials [with soy beans] were initiated about 1903 at Skinner's Court, on the Springbok Flats, and at the Natal Experiment Farms, Cedara, Weenen, and Winkle Spruit. These latter were continued until the season 1910-1911 when the field trials referred to above [by the Transvaal and Natal Departments of Agriculture] were carried out by the Department of Agriculture in conjunction with Messrs. Lever Bros. and a large number of farmers" (p. 519).

The best yields during the 1910-11 season at the three Natal Experiment Farms were: At Cedara: Haberlandt 2,000 lb/acre. Winkle Spruit: Mammoth Yellow 1,191 lb/acre. Weenen: Mammoth Yellow 1,400 lb/acre.

"Method of shipment from the East. The beans are shipped in bags, vessels are well dunnaged, and a large number of wooden pipe ventilators are placed in the ships' holds to keep the cargo from getting heated. The beans, on a long voyage from Eastern Asia to Europe, being liable to sweat, are sometimes dried before shipment."

Tables show experimental yields and chemical compositions of soy beans from different countries and soy-related products. A diagram (outline-form) shows the various ways in which plants and seeds of soy beans are utilized.

Note: This is the earliest English-language document seen (April 2013) that uses the term "soy-bean curd" to refer to tofu. Address: Ing. D., Prof. of Chemistry, Grey University College, Bloemfontein [Orange Free State, South Africa].

1092. Adolph, W.H.; Wu, C.M. 1920. Additional notes on soy bean products. *National Medical J. of China* (*Shanghai*) 6(4):231-33. Dec. [2 ref. Eng]
• ***Summary:*** Tables give the following nutritional analyses of soy bean products purchased in the streets of Tsinan: Dry soy bean curd (salted or unsalted). Soy bean sprouts. Soy bean curd (86.4% water or 83.0% water; some is coagulated with gypsum (pinyin: *shígao*) and some with *lu* (nigari); in Shantung, soft tofu made with gypsum is called "southern tofu."). Ash of soy bean curd. Soy bean cake ("the press cake remaining after the expression of soy bean oil." Employed as a fertilizer and cattle feed, it contains 5.3 to 5.8% moisture, 39.1 to 39.8% protein, and 10.7 to 10.9% fat). Address: Lab. of Chemistry, Shantung Christian Univ.

1093. **Product Name:** Tofu.
Manufacturer's Name: Kawamoto Tofu-ya.
Manufacturer's Address: 1031 F St., Fresno, California. Phone: 1953W.
Date of Introduction: 1920.
New Product–Documentation: The Japanese American Directory. 1920. p. 225. Also in 1921, p. 236. Also ad (1/8) page in 1925, p. N-270. Name, address and phone have changed to: Kawamoto Tofu-ten, 1421 Kern St. Phone: 4065R. Quick service.

Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory*

of Japanese in the USA). p. 238. Kawamoto Tofu-ya is now at a new address: 1421 Kern St., Fresno. Phone: 1953-R. Also in 1924, p. 285 (directory; phone number is now 4065R). Also in 1925, p. N-261 (directory). Also in 1926, p. N-256 (directory).

1094. Kellogg, John Harvey. 1920. The health question box, or a thousand and one health questions answered. 2nd ed. Battle Creek, Michigan: Modern Medicine Publishing Co. 907 p. Illust. Index. 21 cm. 1st ed. was 1917.
• ***Summary:*** "Foreword: For more than forty years, the writer of this volume has each week stood before an audience of invalids at the Battle Creek Sanitarium to open a popular question box. During a longer period the writer has supplied each month to the monthly journal *Good Health* several columns of answers to correspondents." More than a thousand of these have been selected, with their answers, for this volume.

The following questions concern the soy bean (p. 350-53, 886; also 125, 200, 347, 349): In what respect is the soy bean superior to the navy bean and other varieties? What is soy bean curd or cheese (to-fu), and how is it made? What is the food value of the soy bean? What is the composition of the soy bean, especially in relation to the amount of carbohydrate it contains?

Concerning peanuts (p. 348-49): Is the protein of the peanut equal to that of meat or eggs? Which is the more digestible, roasted or raw peanuts? Why is it necessary to cook peanuts to prepare them for digestion?

"In North China and various other countries where the peanut flourishes, it has long held a prominent place in the national dietary; but in this country its great value has been so little appreciated that it has been scarcely recognized as a food, having been eaten as a dainty or luxury.

"Although, since the writer–some twenty-five years ago [i.e., ca. 1895]–introduced the crushed nuts, or peanut butter, into the bill of fare of the Battle-Creek Sanitarium, the use of peanuts in this form has rapidly extended and it has found its way to many thousands of tables."

One discovery has "placed the peanut upon a high pedestal among foodstuffs... It is the fact that the protein of the peanut belongs to a special class very rare among the products of the vegetable kingdom, known to the chemist as 'complete protein.' The complete protein is one which contains all the elements needed for making any of the many different kinds of tissue found in the human body. Very naturally these proteins are found in eggs, milk and meat, but they are not found in cereals or vegetables." The almond and soy bean also contain complete proteins.

Concerning the natural diet of man (p. 96-109, 124-25): What was the diet of prehistoric man? Ans: Fruits and nuts. What is the natural diet of man? Ans: Fruits, soft grains, nuts, tender shoots and juicy roots. Man is not carnivorous. What was the Brook Farm experiment? What is the simple life? What is biologic living? Ans: Living in accord with the "great biologic laws... which rule our physical being." What is Fletcherism? Ans: Thorough mastication. When eggs and meat are discarded what vegetable foods should take their place? Ans: No substitutes are needed. "Protose, Nuttolene and other vegetable meats are rich in protein. The newly introduced soy bean is more than a substitute for meat. It is rich in lime and vitamins which meat lacks. Its protein is 'complete.'" Have human beings a natural appetite for flesh? Do scientific authorities admit that animal flesh is a necessary part of the human dietary? Ans: "All modern physiologists admit that flesh food is not an essential part..." Is a meatless diet capable of maintaining the body in a state of vigorous health? Is there any authority for the elimination of flesh foods from the dietary? Does a flesh diet injure the kidneys? Is it not true that laborers universally require a large amount of meat.

Concerning roughage, bran, and constipation (p. 197-99). Diabetic foods (p. 199-201, incl. soy bean and soy bean curd). Dietary oils and butter (p. 338-41, incl. nut oils, peanut oil, olive oil, malted nuts). Concerning tree nuts (p. 341-47, 354-59): What is the food value of nuts? Ans: The "most highly concentrated of all natural foods." Tropical fats–Where do the natives of the tropics get their fat? Nuts for nursing mothers–Is there any food which will increase the flow of her milk? Ans: Nut milks, Malted Nuts. How did the Jordan almond get its name? Ans: This choicest of all almonds came originally from Malaga in southern Spain. Almond milk–Is it possible to prepare a substitute for milk from vegetables? Ans: Yes. "The writer has made large use of almond milk for thirty years. It is more easily prepared from almond butter." "Almost equally good milk preparations may be made from the soy bean and the peanut." Are nuts good food? Yes, incl. peanut butter. Nuts make good "meat substitutes."

On the last page is a list of 18 health books by Dr. Kellogg, all published by the Modern Medicine Publishing Co. Address: M.D., Battle Creek, Michigan.

1095. Noorden, Carl von; Salomon, Hugo. 1920. Handbuch der Ernaehrungslehre. Erster Band. Allgemeine Diaetetik [Handbook of nutritional education. Vol. I. General dietetics]. Berlin: Verlag von Julius Springer. xxxiii+ 1237 p. [100+* ref. Ger]
• ***Summary:*** The section titled "Vegetable Milk and Cream" (p. 311-14) notes that the authors have had extended experience with soybean milk and soy flour made by Frankfurter Soyama-Werken in various forms. For each product the percentage protein, fat, carbohydrates, ash, and calories per 100 gm is given, based on analyses of Dr. G. Popp in Frankfurt: Soyama Flour (*Soyamamehl;* 42% protein, 18% fat), Soyama Milk (*Trink-Soyamamilch* [normal], 3.77%, 3.36%), Soyama Milk for Diabetics [low in carbohydrates] (*Trink-Soyamamilch* [*fuer Diabetiker*],

© Copyright Soyinfo Center 2013

3.77%, 3.40%), Soyama Milk for Baking (3.29%, 4.40%), Soyama Cream (Soyamarahm [normal], 2.93%, 11.50%), Soyama Cream for Diabetic (*Soyamarahm* [*fuer Diabetiker*], 2.95%, 11.50%), Soyama Cream [extra rich in fat, especially for diabetics] (*Soyamarahm*, 2.50%, 30.0%). The soybean is of special importance in diabetic diets because of its low carbohydrate content, which can be reduced even more by a special process.

When Soyama Cream is mixed with coffee, tea, or chocolate, once can scarcely tell whether or not one is using cow's milk. Pages 312-13 summarize the findings of Fischer on the ease with which plant- or vegetable milks are digested.

The section on variety breads (p. 427) notes that soybean flour is now warmly recommended in such recipes.

A section titled "Soybeans" (p. 542-43) notes that edible soy products are made by Aguma-Werken F. Thoerl in Harburg, Vaterland brand soy flour is made by E. Friedrichsen in Berlin, and an excellent soy flour is made by Soyama-Werken in Frankfurt am Main. In Japan and China countless preparations made from soybeans are on the market. Especially prized is the cheese named tofu (To-fu). Soy sauce is also known worldwide. Soy coffee (p. 694) is of much less economic importance than imitation coffees made from cereal grains or malt. Page 714 mentions tests using soybean flour to make cocoa or chocolate. Page 800 discusses soya seasonings such as shoyu fermented with koji, and miso.

Pages 887-903 discuss vegetarian cures for diseases, and ten specific diseases for which they are well suited. Some groups of German vegetarians are endeavoring to return to a more "natural way of life," and some of these eat a raw-food diet. Pages 898-99 give the protein content and calories per 100 gm of soy flour and soymilk, plus a discussion of soymilk. Page 979 gives the composition of two brands of soymilk and one of soy cream. Also contains early information on using baking soda for cooking whole soybeans. Noorden lived 1858-1944. Address: 1. Geheimer Medizinalrat und Prof., Frankfurt-am-Main, Germany; 2. Prof., Vienna, Austria.

1096. U.S. Tariff Commission. 1920. Summary of tariff information, 1920; prepared for the use of the Committee on Ways and Means, House of Representatives. Washington, DC: Government Printing Office. 1004 p. See p. 320-22, 779-80, 990. [7 ref]

• ***Summary:*** Contains a description of the soybean, its uses, production, and quantities imported, and the tariff regulations applicable to the various soy products.

Paragraph 200, page 321: "The provision in this paragraph for 'bean stick [dried yuba sticks] or bean cake, miso, and similar products,' covers a Japanese food product made from ground soja (soya) beans and water, known as frozen tofu or koya-dofu, and fried tofu or hoshi aburage, the frozen tofu or koya-dofu being in the shape of small, porous, yellow cakes about one-half inch thick, from 1½ to 2 inches square, and the fried tofu or hoshi aburage being in thin cakes one-quarter inch thick and 2½ to 5 inches in diameter, which have been fried in some kind of oil or grease. Even if not bean cake it is dutiable as a product similar to bean cake, bean stick, and miso. (G.A. 8045, T.D. 37079, of 1917, following Abstract 29577, T.D. 32780, of 1912.) *'Amasake,'* made from rice yeast (30 per cent) and boiled rice (70 per cent), used as a drink among the Japanese, was likewise classified as a 'similar product,' apparently as similar to miso. (Abstract 31147, of 1913).

Oil cake produced from the soya bean is free of duty as oil cake provided for in paragraph 560. (Abstract 23794, T.D. 30828, of 1910)."

Paragraph 201, p. 321-22: In the Act of 1909, sauces of all kinds were subject to a 40% ad valorem duty; this decreased to 25% in the Act of 1913. Thick sauces include dressings and condiments such as chutney. "Thin *Chinese soy* made by mixing cooked soy beans with wheat flour, salt, and water and exposing to the sun for about three months, used to flavor and color soups, fish, and meats, about 80 per cent being used in the kitchen and about 20 per cent on the table, is dutiable as a sauce hereunder and not as a nonenumerated manufactured article under paragraph 385. (9 Ct. Cust. Appls., -; T.D. 37976, of 1919.) *Japanese shoyu* is also classified as a sauce under this paragraph. (T.D. 37574, of 1916; Abstract 43496, of 1919.)"

Paragraph 606, p. 779-80. A duty is first levied on soya beans in the Act of 1913.

"Description and uses.–*Soya beans* used in oil mills, the important consumers, are chiefly imported. Soya-bean cake, or meal, a by-product of oil manufacture, is a valuable cattle feed and enters extensively into international trade. (See pars. 560 and 561.) In China and Japan the beans, cake, and oil are elaborated into a large number of food products, such as milk, cheese, flour, bean cake, and soya sauce... Except by resident Asiatics there is only a limited use of soya beans for food purposes.

"Production.–Soya-bean culture has recently developed rapidly... Imports of *soya beans*, too small to be listed separately prior to 1914, rose from about 2,000,000 pounds in 1914 to about 32,000,000 pounds in 1918; during the same period imports of soya bean *oil* rose from 16,000,000 to nearly 337,000,000 pounds.

"Soya beans cooked and salted, but not enough to so change them as to prevent their identification as soya beans, and packed in tins, jars, bottles, or similar packages, do not thereby lose their status as soya beans and are free of duty under this paragraph rather than dutiable under paragraph 199. (6 Ct. Cust. Appls., 415, of 1915.) *Soya beans* in stone jars and hermetically sealed tins, invoiced as *bean sauce*, were likewise classified, and not dutiable as prepared beans under paragraph 199, nor as sauce under paragraph

201. (G.A. 8217, T.D. 37860, of 1918.) *Beans* and *bean sauce* prepared or preserved in tins, jars, bottles, or similar packages, were also held free of duty under this paragraph, analysis of the samples showing them to be soya beans, either natural or prepared. (Abstract 41021, of 1917.)... A *black bean* known to the Japanese as *Kuromame*, was held not to be free of duty under this paragraph, the evidence being insufficient to prove that the merchandise was soya beans. (Abstract 42852 of 1919)." Address: Washington, DC.

1097. **Product Name:** Aburaage [Deep-fried tofu pouches].
Manufacturer's Name: Ota Tofu-ya.
Manufacturer's Address: 86½ N. 5th Street, Portland, Oregon.
Date of Introduction: 1920?
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 151. In Japanese: Ohta Tofu-ten. In English: 266 Davis St., Portland. Phone: A4069. Note: This may have been the un-named Japanese tofu shop in Portland in 1909. However it is definitely the earliest document seen (July 2008) that mentions Ota Tofu in Portland, Oregon.

Also in 1912 directory, p. 177, but the address is now 96 N. 5th St., and the phone is A1069. Also in 1913 directory, p. 226, but the address is now 86 N. 5th St., and the phone is A 4069.

Hokubei Nenkan–North American Yearbook. 1913, p. 43. The names of the Ota brothers, Saizô and Heiji given in Japanese characters. No address is given, but the entry says they came from Okayama.

Nichibei Nenkan: Also in 1914, p. 215. But the address is now 86½ N. 5th St.

Ad in *Oregon News / Oshû Nippô*. 1915. Jan. 1 (Taisho 4). p. 20. Includes Ota Tofu-ten (at 86½ N. 5th Street, Portland). Note: The new location is only about 3 blocks from the original one. This ad was discovered by Dave Conklin of Portland, Oregon (See March 2007 SoyaScan Interview).

Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 357. Ota Tofu-ten, 86½ North 5th St., Portland. No phone number is given.

The Japanese American Directory. 1920. p. 451 (directory; Ota Tofu-ten, 86½ N. 5th St., Portland. Phone: A4069). Also in 1921, p. 471 (directory). Also in 1923, p. 554 (directory; slightly new address: 86 N. 5th St. Slightly new phone: 5-4069). Also in 1924, p. 595 (directory; new address: 86 N. 4th St. New phone number: Bea 4069). Also in 1925, p. O-75. Also in 1926, p. O-76.

The Japanese American Directory. 1930. p. S-319. Ota Tofu-ten, 86 North 4th St., Portland. Phone: BEa 4069. Also in 1932, p. 612 (directory; 86 N. 4th St. Bea. 4089). Also in 1934, p. 519 (directory; new address: 322 N.W. 5th Ave., Portland. Phone: Bea. 4069). Also in 1936, p. 608. Also in 1937, p. 541. Also in 1938, p. 564. Also in 1939, p. 553. Also in 1940, p. 573 (directory; new phone number: BE 1720).

Polk's Portland City Directory for 1915 has a listing for "Ota, S. Baths 86½ 5th N." The 1921 edition, p. 954, lists "Ohta, H. (T). Baker. 86½ 5th N. Home same." The 1924 edition, p. 1276, lists "Ota, H. Restaurant 86½ 5th N. Home same." The 1926 edition lists "Ohta, S. Baker. 86½ 5th N. r do" (= Residence, ditto). The 1930 edition, p. 1232, lists "Ohta, Saizo (Shino). Food products. 86½ 5th N. Home, 92 5th N." The 1936 edition, p. 976, lists "Ohta, Saizo wholesale baker 322..." The 1941 edition, p. 1130, lists "Ohta Saizo (Shina) wholesale baker 322 NW 5th av h324 do." The 1950 ed, p. 802, first mentions soy: "Ohta Shina (widow of Saizo) (Soybean Cake Co) home 322 NW 5th av." Note: Why does this Caucasian-owned directory fail to understand that this company makes tofu, when the Japanese-owned directory understands so clearly? (1) It could have been a lack of interest, combined with some racism. (2) There may well have been a language barrier, especially with a word like tofu, which was not yet part of the English vocabulary. (3) The Japanese, who were being persecuted during this time, may not have wanted the dominant culture to know what they were doing–for various reasons.

Crane Portland Directory. 1949, p. 12. "NW 5th–322 Soy Bean Cake Co."

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 410. Under "Stores." Surprisingly, there is no listing for Ota Tofu Co. However there is an entries (p. 413) for four Ohtas residing in Portland: Ohta, George. 4743 S. Hawthorne St. Phone: EM. 5137 Ohta, Zenjiroo (or Yoshijiroo), 415 N. Kiska St. Ohta, Shina, 322 N.W. 5th Ave. Tel. BR. 8363. Ohta, Suejiroo, Rt. 7, Box 80-E. There is also an entry (p. 410) for: In Japanese: Asahi Tofu-ten. In English: Asahi Tofu Co., 322 N.W. 5th Ave., Portland. Note: Talk with Eileen Ota. 2009. April 9. Ko said their grandmother is said to have renamed the company Asahi Tofu Co. She remembers because when they were trying to choose a logo for their first packages, Ko's father chose one with a sun on it; he said it was because the company used to be called Asahi. At some point the grandmother moved (Eileen recalls) from 5th Ave. to 322 N.W. Everett St.

Third generation members of the Ota clan continue a business started in 1918." The company is now named Ota Tofu Co.

Talk with Eileen Ota. 1992. March 26. History of Ota Tofu Shop in Portland, Oregon (which see)

Talk with Eileen Ota of Ota Tofu Co. in Portland. 2007. May 7 and June 11. The first character of the name Ota has always been written with the character pronounced "futoi" or "Oh" and meaning "fat." Therefore, the name of this company is pronounced "Ota" / "Ohta," not "Futoda." Both of the above addresses were definitely in Japantown, which was north of Burnside Street. Chinatown was south of Burnside. During World War II, when the Japanese were evacuated and relocated, the Chinese moved into Japantown and largely took it over. Eileen (who was born in 1949) recalls that when the Japanese were allowed to return to Portland after World War II, when she was growing up, there were still many abandoned buildings in the old Japantown with winos and gypsies living in them or in their doorways. Today Ohta Tofu is located on the east side of the Willamette River, where they moved in about 1980-81.

Letter (fax) from Geoffrey Wexler, Senior Archivist, Oregon Historical Society, 1200 SW Park Ave., Portland, Oregon, to Mr. Roy Yotsuuye. 2007. June 1. Concerning the Ota Tofu Co. The "two addresses (226 [sic] Davis Street and 96 North Fifth St.) were not the same location. The major street renaming took place around 1892, when the 'alphabet' streets (A, B, C, etc.) were given the names of Portland pioneers (Ankeny, Burnside, Couch, Davis, etc.). The next major change was between 1931 and 1933, when all the house numbers in the city were changed and many street names were altered too. At that time North Fifth Street became Northwest Fifth Avenue, and Davis Street became Northwest Davis Street."

1098. **Product Name:** Tofu.
Manufacturer's Name: Araya (Shinya?, Shintani?, Aratani?) Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: Main 2165-J.
Date of Introduction: 1921. January.
New Product–Documentation: The Japanese American Directory. 1921. p. 169. Note: Sakumura Tofu-ya was making tofu at this address in 1919. The phone number has also changed. Note: The correct pronunciation of the 1st word in the company's name (written only in Chinese characters [*kanji*]) is unclear. Also in 1922, p. 158. Phone number is now 2162J.

1102. Adkins, Dorothy Margaret. 1921. The soya-bean problem. *Science Progress* (*London*) 15(59):445-51. Jan. [9 ref]
• ***Summary:*** This is a popular article. Contents: Introduction. Practical applications of the bean: Food uses include Tofu, or bean cheese (Japanese), Miso similar to chiang (Chinese), Shoyu (Japanese) and chiang-yu (Chinese), Natto (Japanese), whole dry soybeans, soybeans canned as a green vegetable (see description below), vegetable milk, soya-beans roasted, ground and used as a coffee substitute in Switzerland and the USA, soya flour, soya in diabetic diets and macaroni. Utilisation of soya-bean oil: In Italy, China, Manchuria. Utilisation of soya-bean cake and meal: As fertilizer in China and Japan, for feeding stock. Food value of the bean. The cultivation of the soya bean: China, Japan, United States, Australia (New South Wales), South Africa, West Indies, British East Africa, West Africa, Burmah [Burma], England.

"In Japan beans are germinated until the sprouts are about five inches long, and eaten with vinegar; beans, germinated and treated with brine, have also been noted in Spain." Note: It is not stated clearly that these beans in Japan or Spain are soya beans.

"Soya-beans may be cooked and used in the same way as haricot-beans, and may also be picked when young and treated like green peas, in which condition they may be canned."

"In South Africa success has been achieved in growing the plant; in 1910 the outlook was so hopeful that a project for constructing oil mills was suggested. Unfortunately the bean was not taken up by farmers, who preferred to cultivate maize, as it was an easier crop to produce. Thus no extensive culture of the bean was attempted, and the subject was dropped.

"In other parts of the Empire, for example the West Indies, British East Africa and West Africa, trials of soya-beans have proved successful, but in no district have promising early experiments been followed by tests on a larger scale."

"In certain parts of India, for example Burmah, soya-beans are grown on a large scale and are consumed by the natives."

Note: "Lower Burma is a historical region, referring to the part of Burma annexed by the British Empire after the Second Anglo-Burmese War, which took place in 1852... Lower Burma was centered at Rangoon, and composed of all of the coast of modern Burma, and also the lower basin of the Irrawaddy River, including Prome. The area was also known as British Burma" (Source: Wikipedia, Oct. 2010). Address: Royal Holloway College, London.

1103. Carver, G.W. 1921. Prof. G.W. Carver's lecture–Farmer's Conference. 19+ p. See p. 18. Feb. 16.
• ***Summary:*** "Here is a bottle of worcestershire sauce and it is made of Peanuts. The original worcestershire is made from the soy bean but I find this is just as nice as the soy bean and therefore will be attractive in that particular. Here is a bottle of Peanut coffee...

"Here is a bottle of tofue [tofu]. It is a Chinese preparation made from the soy bean and I find that the peanut makes it just as nice as the soy bean. The Peanut milks have just about the same quality of curds as cow's milk. Here is a bottle of Curds and all that is necessary is to freshen them up and you can make any of the various cheeses, or koumiss."

Note 1. The above lends support to the theory that Carver may have been influenced in his peanut research by his knowledge of existing processes for making products from soybeans. Note 2. This lecture was presented at the Voorhees Normal and Industrial School, Denmark, South Carolina. Address: [Tuskegee, Alabama].

1104. Meekins, Lynn W. 1921. Favorable outlook for American trade in Manchuria. *Commerce Reports* [*USA*] (*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 24(41):983-93. Feb. 18. See p. 989-91.
• ***Summary:*** "The South Manchuria Railway Co., the largest purchaser of American products, proposes to spend more than $200,000,000 gold upon improvements and extensions of its enterprises within the next five years... In spite of Japan's special advantages in Manchuria there is an excellent opportunity for the marketing of many lines of American goods,..." Manchuria is made up of three provinces having an area of some 365,000 square miles.

"American trade with Dairen–Dairen versus Vladivostok: The share of the United States in the trade of Dairen is much larger than that shown by the Maritime Customs statistics, owing to the extensive shipments of goods to and from the United States credited to Japan as the country of immediate destination and origin. The direct trade between Dairen and the United States exceeded $38,000,000 in 1919, of which imports [to Dairen] comprised two thirds and exports one third."

"As between Dairen and Vladivostok, at present a greater risk is involved in using the Vladivostok route. Costs of handling cargo at that port are higher than at Dairen; there is no market at Vladivostok itself for produce shipped there, wharves and warehouses are inadequate, and shipping services are irregular. Until these conditions are improved Dairen will probably continue to handle most of the exports of Manchurian products, as well as the imports of American goods for sale in Manchuria.

"If Vladivostok were made a free port and provided with facilities which Dairen now enjoys, full advantage could be taken of it as a real open door to Manchuria. Vladivostok, rather that Dairen, offers the more promising outlook to

© Copyright Soyinfo Center 2013

American firms seeking non-Japanese business in Manchuria and eastern Siberia."

"It is estimated that 2,500,000 tons of soya beans are produced annually in the three Provinces of Manchuria. The wheat and millet crops generally approximate 1,000,000 tons each. The Japanese firm of Suzuki & Co. has sold 100,000 tons of Manchurian wheat to the United Kingdom and 50,000 tons to Italy during the last few months."

"The products of the soya bean include bean curd [tofu], flour, milk, cheese, soy sauce, oil, and cake. The Chinese are concerned chiefly with the food products mentioned and the Japanese use large quantities of the cake for stock feed and fertilizer. The United States is the principal purchaser of the oil, a substitute for cottonseed and linseed oil employed in the manufacture of soap and paint and also as a lubricant."

"How bean trade is conducted: In Tiehling and Sunkiatai (Fengtien) and Kwanchengtze (Kirin) there are about 300 Chinese wholesale bean companies whose capital averages from $100,000 to $200,000 Mukden currency. Four Chinese banks–the Bank of China, the Bank of Communications, the Government Bank of the Three Eastern Provinces, and the Hsing Yeh Bank of Mukden–negotiate loans upon the joint guarantee of two of these companies without security; other Chinese banks require in some cases that the beans be pledged. Such loans are for three months or six months, sometimes one year, and the rate of interest has been less that 10 per cent. The Japanese banks lending money to bean dealers are the Yokohama Specie Bank and the Bank of Chosen [Korea], the former issuing Newchwang notes and the latter gold notes. It is estimated that between 60 and 70 per cent of the loans made by the Japanese banks is to Chinese and between 30 and 40 per cent to Japanese companies.

"The bean business may be said to commence in September, when buyers visit the producing districts and pay from 10 to 20 per cent of the stipulated price in advance. To the towns mentioned above, from 1,000 to 2,000 cartloads of beans are brought daily from November to January. The average price during the past two years has been $2 Mukden currency per 27 catties (36 pounds), exclusive of the production tax and the cost of transportation to Dairen and Newchwang. Mukden currency–that is, small coin dollars–exchanges for Mexican dollars at an average value of $1.40 to $1. At the present rate they are equivalent to about 40 cents in United States currency.

"Owing to the lack of good roads in Manchuria the beans must be carried to the market centers during the winter months, when the fields and streams are frozen. By March the crop has been collected and stored and exports become most active.

"Through the system of mixed storage, the South Manchuria Railway Co. has effected a great improvement in the handling of beans. When brought to the railway stations the beans are examined and graded according to quality and size. A certificate issued to the depositor entitles him to draw from the mixed-storage depot at Dairen or Newchwang an equivalent amount of beans of the same quality and size. The bags used in packing are also examined, and when the grade of bags deposited and that of the bags delivered is different the loss or gain thereon is adjusted by paying to or collecting from the depositor the difference in value. The new system saves the railway the trouble of transporting and storing each consignor's cargo separately. It also saves the shipper from the risks attending delay in transportation and from searching for his goods after they have arrived at their destination.

"Production of oil: The 60 bean mills at Dairen produce daily nearly 400 tons of oil and 3,700 tons of cake. Newchwang and Harbin are next in importance as oil-mill centers. The most widely used method of production is the expression system, by which one picul (133.33 pounds) of beans yields about 12 pounds of oil and 122 pounds of cake (in two equal pieces of 61 pounds each). By the chemical extraction system one picul of beans yields an average of 17 pounds of oil and 116 pounds of meal. The specific gravity of the oil is from .922 to .930.

"Sapan-wood, hemp seed, sesamum, and bean oil are being used by the Manchuria Paint Factory in Dairen, organized in February, 1920, with a capital of 1,000,000 yen, to manufacture paints for the South Manchuria Railway Co. and for various markets. The daily output is about 7,000 pounds, or 250 tins containing 28 pounds each. The colors produced include white, 'iron rust' red, and brown.

"The Japanese initiated the export trade in soya beans from Manchuria and developed the business to its present proportions. These middlemen, conversant with oriental ways, studied occidental needs and learned enough about western business methods to deal successfully with American and European firms. their strong position is due to their control of railways, their banking connections, their oil mills, and, in general, their special organization in South Manchuria for handling the business. Eventually it may be possible by exporting beans and oil through Vladivostok for Chinese sellers and American buyers to deal directly with each other. Meanwhile the most effective methods to be employed involve the development of selling and buying organizations able to cope with the situation now existing."

"About two thirds of the population of Manchuria is in the Province of Fengtien, which composes, in general, South Manchuria." Address: Trade Commissioner, Peking.

1105. Morse, W.J. 1921. La industria del "soy bean" en los Estados Unidos [The soybean industry in the United States]. *Revista de Agricultura, Comercio y Trabajo* (*Cuba*) 4(3):521-24. March. [1 ref. Spa]

• ***Summary:*** This is a translation of Morse 1918, from the USDA *Yearbook of Agriculture* (1917). Contents: Early history of the soy-bean industry. The soy bean in the United States. Cultural requirements. Varieties. Soya as forage.

Soya for oil. Soy-bean meal (*Harina de "Soya"*). Soy beans for human food: Dried beans (*frijoles de soya secos*), green vegetable soybeans (*frijoles de soya verde*), soy-bean milk (*leche de frijol de soya*), soy-bean cheese (*queso de frijol de soya*), soy sauce (*salsa de soya*), soy-bean sprouts (*brotes de frijol de soya*). Possibilities of the soy-bean industry in the United States.

A table shows the quantity and value of soybeans (*Frijoles de soya*), soybean cakes (*Tortas de soya*), and soybean oil (*Aceite de soya*) imported by the United States from 1910 to 1917, inclusive.

Note 1. This is the earliest Spanish-language document seen (June 2009) that uses the term *frijoles de soya verde* to refer to green vegetable soybeans.

Note 2. This is the earliest Spanish-language document seen (April 2012) that uses the term *salsa de soya* to refer to soy sauce.

Note 3. This is the earliest Spanish-language document seen (Jan. 2013) that uses the term *brotes de frijol de soya* to refer to soy sprouts. Address: USDA, Washington, DC.

1106. Muhse, Effie Funk. 1921. The soy bean in Chinese cookery. *Good Health* (*Battle Creek, Michigan*) 56(3):108-114. March.

• ***Summary:*** Contents: Introduction. Sprouted seeds. Bean oil. Soy sauce. Bean curd.

"Sprouted seeds: Beans, along with other sprouted cereals, such as peas, wheat and barley, are on sale in the shops and market stalls, practically regardless of the season. Beans with sprouts an inch long or more are seen heaped high on bamboo trays. They are sold by the catty (one and one-third pounds) for from 3 to 6 coppers (Mex.)."

"The method of producing bean sprouts is thus described by a native. 'Soak some beans in water in a flat dish. Spread the beans out: do not let one cover another. Cover with a piece of wet cloth and water every morning. The sprouts will appear in [?] nights. They are ready to eat when they are two inches long.'"

Bean curd: Describes how bean curd is made in a commercial shop. In a large room, soy beans were soaked in water in large vats over night. "Close at hand was a stone mill consisting of two circular stones, each about 6 inches thick, and about 18 inches in diameter. The stones were securely placed over a drain, and high enough to allow a vat to be pushed in, or drawn from under. The upper stone was moved to and fro, in partial revolutions, by means of a bamboo shaft, one end inserted in the stone's center and the other in the ceiling timbers. Two men kept the mill in constant motion, each with his arm through a sling fastened to the shaft. The upper stone had a hole about 4 inches across, into which at every second revolution one man poured a half pint of beans and water, which he dipped with clock-like regularity from the vat of soaking beans.

"And into the vat beneath oozed from the edges of the edges of the mill a milky, crushed mass. A strong cloth, pocketing down into the vat, was securely tied about the vat's rim; and when the grinding ceased, the vat was drawn from under the mill, the cloth twisted into a bag, through which all the contents possible were pressed by means of a crescent-shaped, concave wooden paddle. The mass in the cloth was washed out and pressed a second time, and the water from even a third pressing served as that in which to start the next beans soaking. The waste, which was principally hulls, was placed in a bin in the court, where it was carried away, presumably to be used as fertilizer in the truck gardens round about the city. On the side of the room opposite the mill was a typical, native brick stove, with three fire-holes, on which rested metal basins about two feet in diameter and 14 inches deep. Into these the creamy mass obtained from the first and second pressings was poured, and carefully stirred during the boiling. The boiling finished, it was poured into a vat and white powder added to coagulate the mass, after which the whey was dipped off, Whether this latter found a further use was not ascertained, but it is a truth that nothing in China goes to waste. The curd was then ready for the molds and pressure.

"I have spoken of the white powder that was added to coagulate the boiled mass. In nearly every factory one would see a basket sitting about, holding four or five pounds of it, sometimes in lumps, sometimes in powdered form... I had the characters put on paper at two different factories, and always 'plaster of paris' was the translation by anyone asked about the matter, even an English chemist who was asked to verify it." Note: It was calcium sulfate.

The final process of changing the coagulated mass into products for the sales counter was very interesting, particularly since the workmen were so patient and so adept in every movement. The bulk of it was molded into masses about 3 inches thick and 16 inches square. A square wooden frame of these dimensions was laid on a slat base, and diagonally across the frame a large square of cloth was spread. The requisite amount of coagulate was poured into the cloth, the corners of which were folded over. Another frame with a bamboo slat base was then superimposed upon the one just filled, another and another, till possibly a dozen or more stood [?] in a pile; and on the top were placed large weights."

"Merchants doubtless study their localities and adapt their products to the buying power and preferences of their customers; one merchant seemed to have a brisk daily, trade in tiny raw, as well as fried, cubes which sold to children for a "cash" (about 1-17th of a cent) apiece.

In the photographs note the pile of little squares–thin bean-curd wafers about 10 inches across. They were made by a pressure method very similar to that by which the large masses were made. Over a mold 10 inches square was laid crosswise a cloth about the size of a man's handkerchief. On this a spoonful of coagulate [curds] was spread out and

© Copyright Soyinfo Center 2013

the cloth folded over. Another cloth was laid on, filled, and folded, and so on without limit, or until the mold was filled. They were then put under pressure, and in due time the reverse process was again patiently gone through with, and the wafers laid out in a pile. Eight such wafers weigh a catty, and sell two for a copper.

"In each bean-curd establishment visited there was work for seven persons, usually all men, besides the man who carried away the waste–the salesman, who also attended to the cutting of the curd; three men who coagulated and placed in the molds; one at the stove and bellows, who also attended to the boiling; and two at the water mill. The workmen in the Shanghai factories, I was told, usually came from the country villages and did not bring along their families. For their services they received a monthly wage of from four to five dollars (Mex.), a place to sleep, and their food. The bean-curd establishments are typical of industrial development in China. The master and workmen, right there in a little shop, carry to completion the process of manufacture from the raw material to the finished product, and from the shop sell the product direct to customers. Fresh bean cubes, the fresh curd cakes in boiling oil, and the wafers, were on sale in all parts off China visited.

"The Chinese cook uses the bean-curd as an ingredient for many choice dishes. It is very extensively used in the cookery of the Chinese of all classes, despite the statement that it is 'a food for the common people.' The writer has eaten bean-curd deliciously combined with beef in the home of one of the most prominent Chinese families of Shanghai, who had educated four children in American and European colleges. Another American-educated Chinese, being asked for a typical home-dinner menu of well-to-do Cantonese families, included 'bean-curd with shrimp eggs' as one of five courses."

Photos show: (1) Many large containers storing soy sauce, oil and wine in Shanghai; each is "made up of an outside covering of wicker, a thick body of clay, and a lining of oiled paper." (2) About 300 sixty-gallon earthenware vats with cone-shaped wicker tops containing yellow soybeans, salt, and water in the process of becoming soy sauce in the immense court of a soy sauce factory in Shanghai. (3) A man in the street end of a bean curd factory. (4) Scene from a bean curd factory, including many people. Caption: "All the products of the factory are to be seen,–fresh curd masses, a pile of wafers, and a tray of cooked bean curd. Beneath the table is a basket of the powder used to coagulate the boiled, crushed beans."

1107. Embrey, Hartley; Wang, Tsan Ch'ing. 1921. Analyses of some Chinese foods. *China Medical Journal* 35(3):247-57. May. [5 ref. Eng]

• ***Summary:*** Contents: Introduction. Classification of food stuffs: Protein, carbohydrates, fats, etc. Method of calculating food values. Description of the foods analyzed: Methods of preparation. Table of analytical data. A brief description is given of how Bean Curd or "Tou Fu" is made in Peking from Yellow Soy Beans. The residue, on top of the sieve, is washed once with hot water then "sold as food for animals or for very poor people. Its Pekingese name is 'Tou Fu Cha,' which means 'Bean Curd Dregs.'

"The filtrate [soymilk], consisting of particles which have passed through the sieve, together with the washings from the coarser residue remaining on the sieve, is heated for about half an hour. A film or skim [yuba] forms on top, which is carefully removed with a stick, and put aside to dry. The first films which are called 'T'ien Chu,' those forming still later 'Yu P'i,' and the last ones which form are called 'Fu Chu.' From fifteen to twenty such films may be removed without affecting the value of the 'Tou Fu,' but as a rule the films are not removed when the manufacture of 'Tou Fu' is the main object.

Note 1. This is the earliest English-language document seen (Oct. 2012) that describes three different types and grades of Chinese-style yuba, based on the order in which the films are removed. Consider the following very interesting statement concerning yuba and tofu: "From fifteen to twenty such films may be removed without affecting the value of the 'Tou Fu,...'"

Note 2. This is the earliest English-language document seen (Oct. 2012) that uses the term "Yu P'i" (regardless of capitalization) to refer to yuba–specifically to the middle grade of yuba, or that uses the term "Fu Chu" (regardless of capitalization) to refer to yuba–specifically to the lowest grade of yuba.

The 'Tou Fu' is precipitated by adding the precipitating reagent 'Lu Shui' [nigari], a salt solution usually containing gypsum, to the filtrate. It may be added without removing the films or after the films are removed. In the former case the amount of 'Tou Fu' precipitated is greater, and its composition is somewhat different. The 'Tou Fu' analyzed by us was precipitated without previously removing the films."

"'Tou Fu Kan,'–This is made from 'Tou Fu' or Bean Curd. The small pieces of curd are wrapped in coarse cloth and pressed between two boards for half a day. Then the cloth is removed and the curd boiled with salt and 'Wu Hsiang,' or the 'Five Condiments,' viz., cayenne pepper, aniseed, dried orange peel, cassia bark, and star anise. After this it is boiled with 'T'ang Se,' or black sugar residue to give it a dark color." Note: This is the earliest document seen (April 2013) that mentions five-spice pressed tofu, or any type of seasoned or flavored tofu.

"'Yu Kan or T'sai Kan.' [sic, Ts'ai Kan]–Bean Curd is boiled in salt solution, cut into small pieces about one inch wide, three inches long and one inch thick, and smoked with the smoke produced from burning sawdust."

A table (p. 255-57) gives nutritional analyses for the following foods; many of the methods of preparation are described earlier, and each food is accompanied by its

© Copyright Soyinfo Center 2013

Chinese characters: "8. Bean curd made from green mung bean (*ma tou fu*). 9. Yellow soya or Soya max (*huang tou,* yellow bean). 10. Bean curd from the yellow soya (*tou fu,* bean curd). 11. Refuse from the yellow soya bean (*tou fu cha,* bean curd dregs [okara]). 12. Tou fu boiled in salt and spices (*tou fu kan*). 13. Sprout from the yellow soy bean (*Huang tou ya,* yellow bean sprout). 14. Skim [Skin] which forms on boiled soy bean milk (*yu p'i,* oil skin [yuba]). 15. A later skim from boiled soy bean milk (*fu chu*). 16. Smoked bean curd (*yu kan*). 17. Green soya or Soya max (*Ch'ing tou,* green bean). 18. Green soy sprouts root removed (*ch'ing tou ya,* green bean sprouts). Red gram or Phaseolus angularis, Willd. (*adzuki, hung hsiao tou,* red small bean). Mottled gram or Phaseolus angularis, Willd. (adzuki, hei hsiao tou, black small bean). Black soya or Soya max (wu tou, black bean). Small black soya or Soya max (hsiao hei tou, small black bean)."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "Smoked bean curd" or the term "Yu Kan" or the term "Ts'ai Kan" [pinyin: yougan or caigan] to refer to smoked tofu.

Note 2. This is the earliest English-language document seen (Jan. 2013) that contains the modern term "soy sprouts." Address: Labs. of Food Chemistry, Peking Union Medical College, Peking, China.

1108. *San Francisco Chronicle.* 1921. Soya bean cheese is passed by Mitchell. July 22. p. 6.
• ***Summary:*** "To ascertain whether or not there is any kick in Chinese (?) soya bean cheese made with alcohol,... Director E.E. Mitchell yesterday lunched on this delectable dish–that is, he attempted to make a lunch out of the delicacy.

"'Its sure got a kick all right,' he said, after partaking of a sample. 'But not the kind I'm paid to look for. The kick in this cheese is of the limburger variety. No one can get intoxicated on soya bean cheese. Formula approved.'

"Soya bean cheese is made by preparing a paste [sic, firm tofu] from soya beans and cutting it up into pieces which are pickled in 20 per cent alcohol and brine. At the end of sixty days it is ripe. The liquid is poured off and the cheese, which retains 3 (?) per cent alcohol, is used as a condiment."

Note 1. We call this product "fermented tofu." The text of this article is very hard to read, as indicated by "(?)" after uncertain words or numbers.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "soya bean cheese" to refer to fermented tofu.

1109. Carver, Geo. W. 1921. Many products can be made from peanut and sweet potato. *American Food Journal* 16(8):20. Aug.
• ***Summary:*** Carver now has 150 tested recipes for the peanut. "First let us examine the peanut as food for man. We find on our list peanut brittle, peanut fudge, peanut cream candy, peanut oil, which constitutes one of the choicest of cooking oils, peanut butter, peanut flour, peanut cake, peanut crackerjack, peanut caramels, peanut butter scotch, peanut kisses and peanut breakfast food.

"Under the head of general usefulness, we find peanut hulls, ground, a powder much prized for the scouring and finishing of tin plate, peanut skins for dyes, peanut wood stains, peanut axle grease, peanut oil soap, peanut quinine, peanut linoleum, peanut butter chili, peanut lard compounds, peanut margarin [margarine], and finally peanut germs, a by-product from various manufacturing processes which makes one of the most desirable pigeon feeds now on the market.

"Value of peanut milk. We next come to one of the most important peanut products–peanut milk... It is one of the most perfect and stable emulsions that I have seen when properly made." A table compares its composition with that of cow's milk. "When it sours the clabber or curd is about the same in quantity and physical appearance as that of cow's milk. The possibilities of this milk are practically unlimited, but it might be well to mention a few: Cooking purposes, sweet and sour milk, buttermilk, cream for coffee, cream for ice cream, evaporated milk, fancy fruit punch, Worcestershire sauce, peanut coffee, instant coffee, clear white oil, tofu–a highly flavored peanut sauce.

"And among the more astonishing products resulting from the peanut are mock oysters, made from the curds, and a very satisfactory substitute for real oysters; face pomade, ink, a fine blue black ink being derived from the vines, and finally a vinegar." Address: Dep. of Research and Experiment Station, Tuskegee Inst., Alabama.

1110. *Christian Science Monitor.* 1921. A Chinese market. Sept. 19. p. 8.
• ***Summary:*** Describes a visit to a noisy market in south China. Every shopper takes his or her own scales, based on a polished wooden rod. "And what is this? It is cheese made of bean curd! Would you like some? The Chinese are very fond of it. How do you suppose it is made? Let us ask this man. He tells us in broken English that the [soy] beans are first ground fine in hand mills. The ground mass is then dissolved in water; then strained and steamed. The result is a white cake like blanc mange. Sometimes this cheese is dried, sometimes it is eaten with shrimp sauce, and considered delicious."

1111. *Light of Manchuria.* 1921. Present Manchuria and Mongolia, Series II. Oct. 1. p. 12-14, 30-31, 46-47.
• ***Summary:*** This article, continued from the September number, notes that one of the principal agricultural products of Manchuria and Mongolia [probably Inner Mongolia] are soya beans. "Yellow (Soya) Beans belong to the most common species. They contain a good percentage of oil and are also good as an article of food and also for the expression

© Copyright Soyinfo Center 2013

of oil. The Manchurian (Soya) Beans have become widely known all over the world. Hitherto they used to be used by Manchurian inhabitants as a food-stuff and for the expression of oil as a source of light. The residue left after oil was obtained served as cattle feed. Since the residue popularly known as Bean Cake came to awake demand in Japan as fertilizer, and Bean Oil began to be exported to the Western countries as industrial material, a marvellous development has been noted in the cultivation of Soya Bean. This belongs to only a recent date...

"The Chinese not only use Beans and Bean Oil in their daily cooking, but also *tofu* (bean curd palatable also to the Western palate and pronounced by the qualified chemist as similar in its composition to cow's milk), *miso* (an article of the staple food to both Japanese and Chinese), and *soy* are also made from Beans...

"Beans put out in Manchuria and Mongolia are put at about 20,000,000 *koku* (1 *koku* being equivalent to 4.96 bushels), but the outputs are increasing rapidly year by year, and there is a vast area of territory awaiting cultivation."

Page 30, under "Manufacturing Industry," notes that "Bean milling ranks foremost in manufacturing industry... Bean milling is best developed at Dairen, which is now possessed of sixty mills. In the interior of the country, the old primitive system by which a few head of mules or donkeys and a few hands do the work of expressing oil from Beans is still found in vogue. Such is only a domestic bye-industry. However, such extensive mills as use steam engines and express oil by hydraulic pressure are mostly found at Dairen. The Suzuki Bean Mill at Dairen is operated on the chemical extraction system which is the latest scientific method. The round-shaped cake left after the expression of oil weighs 46 *kin* a piece, which is the standard weight for export cake. In the fiscal year 1919, 19,693,000 piculs valued at 43,029,000 *Hk. taels* [Haikwan taels] were exported to Japan. Bean Meal, which is put out at the Suzuki Mill, is good for use as it is. Bean Cake is used by the Chinese for cattle-feed, and by the Japanese as fertilizer."

On pages 46-47 are tables giving exports and imports at Dairen. The three exports with the greatest value (in Haikwan Taels) were Bean Cake (36,851,244), Beans (Soya) (24,750,377), and Bean Oil (17,369,655). Imports included Miso and soy [sauce] (97,305).

1112. North, J.L. 1921. To solve the cost-of-living problem? A magic bean. *Illustrated London News* (*The*). Oct. 8. p. 476-77. [1 ref]

• ***Summary:*** "The leading article and letter in the *Times* of Sept. 28 from its Vienna correspondent about Manna flour, manna bread, and milk substances made from the Soya bean, are likely to do good if they help us to realise how much we are losing by our neglect of this, the most valuable–for the uses to which it can be put–of all legumes.

"In the letter giving the details of the researches of Dr. László Berczeller of Vienna, there is no reference to the fact that these 'Manna' or Soya bean products were first made in England before the war. Samples of the flour and biscuits are to be seen in the cases of the London Institute of Hygiene, and Manna milk has been for years–and, no doubt, still is–sold here under the name of 'Solac' at a price considerably lower than that charged for milk by dairymen. The appearance and rapid rise into importance of the Soya bean is one of the most remarkable commercial events of modern times."

"In 1790 the [soy] bean was brought to Europe when its cultivation was first attempted by Young [Arthur Young, lived 1741-1820 in England], the father of British Agriculture, though without success. In 1878 an Austrian professor, Haberlandt, tried it, but failed [Note 1. Haberlandt did not fail; he successfully cultivated soybeans in Austria as early as 1875, and many times thereafter.] When the bean came here in 1908 there was an immediate rush to grow it both in Europe and America. Experiments were started by our Board of Agriculture, the Royal Agricultural Society, and many semi-public bodies. The early experiments failed completely, for the reason that they were made with seed whose climatic origin was unknown, as well as the orthodox Chinese methods of growing it. Later, this was remedied..."

By 1918 Europeans were aware of 500 different soybean varieties that were growing experimentally at Arlington, Virginia.

"My interest in the Soya bean began in 1913 with a visit from an agent of a German cultivator at the office of the Royal Botanical Society at Regent's Park. He was, he said, trying to form a syndicate to grow what he called an acclimatised Soya bean, brought from China in 1910, and already in cultivation in Germany. He refused seeds for testing, but sent from Hamburg a plant which had been carefully cleared of the seed, though the *empty* pods, nearly sixty in number, were left. The syndicate never materialised, and I thought no more of the matter, until later on, whilst examining the dried plant, I noticed a tiny pod, scarcely half an inch long, which contained a seed no bigger than a pin's head. Going over the plant I found other pods which evidently had been thought too insignificant to be of use, and from these I obtained thirteen seeds. These were sown in 1914 and resulted in thirteen plants, which produced four hundred and forty seeds. From thirty-three plants in 1915 one thousand seeds resulted, and in 1916 no less than twelve thousand. Many experiments as to the value of different methods of growing them were made in several countries, and with no less than twenty-one different foreign varieties. One thing came clear throughout the tests, and that was that the original variety started with was by far the best. It says a good deal for German astuteness that they should have gone to Manchuria and, from hundreds of varieties, chosen the one best for them and for us."

The future of the Soya bean in England is uncertain.

© Copyright Soyinfo Center 2013

"Natural selection helps the plants that mature earliest produce most seed; those that mature late die out. It is noticeable that the plants experimented with in England fruit earlier now than they did at first, and this is a very hopeful sign. Another satisfactory fact is that there is no lessening in the number of pods produced, but rather a gain. This year there are plants with three times the number of pods shown in a photograph of the best German-grown specimen of 1912."

In China and Japan the Soya bean "enters into the composition of most dishes, and in one form or another, as Soy sauce, bean paste, bean cheese, bean curd, bean milk, bean wafers, bean cakes and confectionery, is used everywhere. For a hundred years Soy sauce has been imported–the principal ingredient in the well-known Worcester [Worcestershire] sauce."

Apart from its value as a food, it is used in the manufacture of glycerine, explosives, enamels, varnish, varnish, waterproofs, linoleum, paints, soaps, celluloid, printing inks, and as a lubricant."

Photos (all but #1 by Frank N. Meyer of the USDA) show: (1) A typical pod from a soya bean plant grown by Mr. J.L. North at Chiswick, England, in 1921. (2) Two large, thin "blocks of tofu (bean curd)" on a round, wooden table. "Soya bean cheese for human food... Ready to be cut up into squares for sale to the public. Tofu, or Soya bean curd, is made by adding magnesium or calcium salts (about a 1 per cent. solution) to hot Soya bean milk; the product is drained and pressed. (3) "Varieties of soya bean cheese on a bamboo tray. Tofu, or Soya bean curd, forms the basis of many fermented, smoked, and dried cheeses in China and Japan." (4) "Soya bean cheese [fermented tofu] in preparation: A pile of wooden trays full of bean curd in a dark room of even temperature." (5) "Used by the Chinese as a green vegetable: A basketful of sprouted soya beans." (6) Soy bean plant with leaves, many pods and roots, grown at Chiswick.

Note 2. This is the earliest document seen (March 2002) written by Mr. J.L. North, the pioneer in cultivating soybeans in England.

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "soya bean cheese" or the term "soya bean curd" to refer to tofu.

Note 4. This is the earliest English-language document seen (July 2007) that uses the term "magic bean" or that uses the word "magic" as an adjective to refer to the soybean.

Note 5. This is the earliest English-language document seen (Jan. 2013) that uses the term "sprouted soya beans" to refer to soy sprouts.

Note 6. Concerning Arthur Young. He was the author of many books on agriculture, which were very influential in their day. He was an important advocate for the progressive agricultural practices of his time, advocating such innovations as the seed drill, improved crop rotations, the use of marl as fertilizer, and the enclosure of open fields. In 1767 he undertook the management of a farm in Essex. He conducted various experiments and published the results in *A Course of Experimental Agriculture* (1770). In 1784 he began the publication of the *Annals of Agriculture*, a periodical which was continued for 45 volumes and had many contributors. Young traveled to France during 1787-89 and in 1792 published an important book about his travels and observations there. The soybean was first grown in Paris, France, perhaps as early as 1740, definitely by 1779. So he may have learned about soybean from fellow agriculturalists in Paris while on this trip. Address: Curator of the Royal Botanic Society of London.

1113. Brook, Harry Ellington. 1921. Care of the body. *Los Angeles Times.* Oct. 30. p. VIII-18. Sunday magazine.
• ***Summary:*** The section titled "The soya bean" states: "English and Hungarian agricultural chemists have collaborated in the production of a soya bean for which great things are promised. We are told that it is to take the place of bread, butter, flour and milk. Nonsense.

"The soya bean is largely used by the Chinese. The white cheeses you can see at Chinese stores are made of soya bean curd [sic, they *are* soya bean curd, or tofu].

"In France, a liquid made from the soya bean has been used as a milk substitute. It is not good for that purpose because, like all beans, it is largely starch.

"The soya bean is a valuable food, but it is inferior to peanuts. They contain much fat, which beans lack."

Note 1. Tofu was apparently sold at Chinese stores in Los Angeles by 1921. Note 2. The writer doesn't realize that soya beans, unlike common beans, contain very little starch. Address: N.D. [Naturopathic Doctor].

1114. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean. *Tohoku Imperial University, Technology Reports* (*Sendai, Japan*) 2(2):1-124 (41-164). Oct. 28 cm. [Eng]
• ***Summary:*** Contents: 1. General description of the soy-bean: The use of the soy-bean (as a food-stuff [shoyu, miso, tofu, natto], soy bean oil [for the manufacture of soap, hydrogenated oils, paints, varnishes, oil-cloth, and rubber substitutes], and bean cake or waste residue from the manufacture of soy-bean oil [nitrogenous fertilizer, as a cattle food, Solite–a water-based paint]). 2. Classification and analysis of soy beans and their standardization: By color, by protein / proteid content, conclusion of analysis (the best soy-beans are Tsurunoko and Kauro grown in Hokkaido): Standardization of the raw material, content of proteids, color of the raw material, moisture, regularity of the grain, specific gravity of the soy-bean, impurities. 3. Microscopical observations of soy-beans: Colour reactions of cellular substances, distribution of proteids and fatty acids, distribution of fatty oils. 4. Oil extraction (p. 17): Influence of hulls, influence of moisture, influence of oxidation,

© Copyright Soyinfo Center 2013

comparison of the dissolving power of various solvents, to find the best conditions for the extraction of oil by means of benzine, how to extract the oil technically without denaturing the proteids and how to remove the retained solvent, on the apparatus employed in oil extraction, working of the extracting apparatus, recovery of solvent by application of the vacuum system, separation of oil from the solvent and oil refining, reserving the oil-freed soy-bean meal.

5. Isolation of proteids out of oil-freed soy-bean (p. 35): General discussion, necessary and sufficient conditions for the extraction of proteids (on the quality of isolated proteids [plasticity, solubility, coloration], on the purity of isolated proteids, to obtain a maximum yield). 6. The extraction of proteids by means of water (p. 41): General properties of bean meal, on gummy substances and their properties (saccharo-colloids, incl. stachiose [stachyose], araban, galactan; p. 43), quantitative estimation of water-soluble proteids and carbohydrates, determination of the volume of water necessary for the extraction of soluble carbohydrates, relation of the duration of extraction to the quantity of extractable proteid and carbohydrates, effect of the process of water-extraction. 7. On the extraction of proteids by means of alkaline reagents: General properties of glycinin against alkaline reagents, classification of alkaline reagents, comparisons of dissolving power of alkaline reacting compounds, relations of the plasticity and coloration of the proteid to various kinds of extracting agents, standardization of plasticity of isolated proteid, on the relations between plasticity and chemical reagents, comparative experiments relating to the extracting process by means of sodium sulfite and sodium hydroxide.

8. The determination of the concentration, quantity, and other factors of Na_2SO_3 [sodium sulfite] in the process of extraction (p. 69): Determination of the concentration of sodium sulfite, the determination of the relation between the plasticity of the protein and the concentration of sodium sulphite, to determine the relation between the yield and the time of extraction, to find out the actual yield of proteid, as well as the volume of sodium sulfite solution provided the bean meal is previously extracted by water, then extracted with sodium sulphite, conclusion of this chapter. 9. Extraction of proteids by means of caustic alkalies [alkalis] (p. 80): To determine the concentration of the caustic soda [sodium hydroxide] solution, determination of the relation between the time of extraction and the yield of proteid, to determine the volume of caustic soda, the systematic extraction of proteids (using water, sodium sulphite, or alkali). 10. Clarification of extracted proteid solution and precipitation thereof (p. 86): Precipitation of proteids, precipitation by means of alkaline earth metals (such as magnesium sulphate), by means of colour base (such as malachite green, methyl violet, brilliant green, auramine, or new fuchin), by means of alcohol, by means of heating, by means of formaldehydes, by means of fermentation, by means of acids (choice of acid, yield of precipitated proteid, quality of proteid). 11. Quantitative investigations on the precipitation of proteids (p. 101, 11 experiments with summary of conclusions). 12. Effect of heating on the yield of proteid (p. 115). 13. Separation of excess water from the proteidal precipitate (p. 118). 13A. Process for drying the proteidal mass and for drying the residue (p. 121). 14. Pulverizing the dried proteid (p. 122). 15. Recovery of carbohydrates from waste liquid (p. 123).

World soybean production (in short tons): Manchuria 1,850,000 (25% is used in Manchuria as food; 75% is exported to all parts of the world in the form of "bean cakes or bean meal"). Japan 450,000. Korea 322,500. Kantoshu 15,400. Total of the above: 2,640,000 tons valued at more than 200 million Japanese yen (p. 2).

The author investigated the use of soy-bean proteins in plastics. There are upwards of 30 varieties of soybeans which may be classified into yellow, blue, and black. The first contain the most protein and oil, the last the least. The protein content varies from 35-40.5% and the oil content from 15.4 to 20.9%. The mean analysis of 16 different varieties was: Water 10.2%, proteins 37.8%, oil 18.9%, carbohydrates 23.5%, fiber 5.2%, and ash 4.4%. The carbohydrates consist mainly of non-reducing sugars with little or no starch. The cell membrane consists of galactan or hemicellulose, with a little free cellulose. The presence of the hulls in the crushed bean reduces the speed of extraction of the oil and the yield, and gives the oil and protein a brown color. Note: This is the earliest document seen (May 2004) containing the word "hemicellulose." *Webster's Dictionary* defines hemicellulose, a word first used in 1891, as "any of various plant polysaccharides less complex than cellulose and easily hydrolyzable to simple sugars and other products." The sugar molecules in this polymer each contain 5 carbon atoms.

Oil extraction: Benzene is the most suitable commercial solvent; the solvent must not be recovered by direct steaming of the meal, but by the use of a vacuum.

Protein extraction: The soluble carbohydrates are removed from the meal by washing with very dilute acetic acid. The protein is then extracted in 3 stages, i.e. with water, with 0.2-0.4% sodium sulphite solution, and with 0.2% sodium hydroxide solution. 20-30% of the total available protein is extracted in the first stage, a further 50% in the second, and the total yield is about 95%. The protein is finally dried at the lowest temperature and highest vacuum and in as short a time as possible. The dry protein is very tenacious and can only be ground in high-speed disintegrators; it is then suitable for the manufacture of plastic materials, lacquer, enamel, or imitation leather. The soluble carbohydrates, which amount to 10-12% of the meal treated, can be worked up into syrup or converted into alcohol or lactic acid by fermentation. The bean residue consists of fiber, galactan, and protein and can be used for

© Copyright Soyinfo Center 2013

cattle feed or as an ingredient of linoleum-like products.

Note: This is the earliest document seen (Sept. 2010) concerning isolated soy proteins (other than simply isolation as part of nutritional research).

Continued. Address: Kôgakuhakushi.

1115. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean: Illustrations and tables (Continued). *Tohoku Imperial University, Technology Reports* (*Sendai, Japan*) 2(2):1-124 (41-164). Oct. 28 cm. [Eng]

• ***Summary:*** Continued: Illustrations show: (1) The cells of the soy-bean (after Winton, p. 55). (2) The effect of various chemicals on soy-bean cells (8 figures, after p. 16). (3) A rotary drum extractor used with solvent and a vacuum system (p. 68). (4) An endless belt system for drying proteid precipitate.

Tables show: (1) Percentage of proteids and fat found in 23 samples of beans. The varieties are: Akakiji bean, Nagaaneko bean, Kintoki bean, Shônembo bean, Biruma ingen bean, Chûnembo bean, Maru uzura bean [speckled], Naga uzura bean, Kumamoto ingen bean, Azuki, Chûnaga uzura bean, Aneko bean, Shiromarufuku bean, Green pea, Dainenbô bean, Daifuku bean, Chûfuku bean, Red pea, Black soy-bean (38.61%), Yellow soy-bean from Manchuria {2 samples, 38.65% and 39.12%}, Yellow soy-bean from Korea (41.00%, and 22.826 fat–the highest fat of any bean tested), Yellow soy-bean from Hokkaido, Japan (41.92%–the highest proteid of any bean tested) (p. 6-7). (2) Previous analyses of the chemical composition of 16 soybean samples from Manchuria, Korea, and Japan. For each, gives the district, variety (mostly yellow but one "Blue variety"), water, proteids, fat, carbohydrate, fiber, ash, name of analyst (an organization) (p. 8). (3) Analyses by Sato of the chemical composition of 14 soybean varieties from Manchuria, Korea, and Hokkaido (Japan). For each, gives the varietal name, growing region, "moisture, total protein, soluble proteose, available protein, non-proteidal nitrogenous matter, fat, nitrogen-free extract, fiber, ash, color and shape (all yellow), producing organization (Korean Central Experimental Station or Sapporo), date of production. Named varieties include: Harupin, Shoshu bean, Utsuzan bean, Ampen bean, Chogei bean, Ryusan bean, Turunoko [Tsurunoko], Kanro, Yoshioka, Otanizi [Otaniji] (41.92% total protein and 37.53% available protein, both the highest of any bean tested) (p. 11). (4) Effect of hulls on solvent extraction of soy-bean oil with 3 varieties: Kanro, Otaniji, Yoshioka (p. 18). (5) Influence of moisture on solvent extraction (ether) of soy-beans (p. 19). (6) Effect of using benzine in place of ether in solvent extraction of soy-bean oil. The best moisture content is 7.5% to 12.5% (p. 20). (7) Substitution of vacuum drying for open air drying in removing moisture. Shows that the smaller the quantity of moisture contained in the bean, the greater the yield of oil, provided that the oil is protected from oxidation (p. 22). (8) Effect of different solvents on oil extraction: Carbon bisulphide (flammable and expensive), ether (flammable and expensive), benzine (boiling point 75ºC), carbon tetra chloride [tetrachloride]. (9) Separation / distillation of benzine from oil solution (p. 34).

(10) Chemical composition of "soy bean meal" from which the hull and oil have been removed (p. 42). (11) Composition of carbohydrates or saccharo-colloids, based on S. Yukawa (p. 43). (12) Composition of para-galacto-araban / gummy substances in 9 varieties (p. 44-45). (13) Percentage of water-extractable substances and reducing sugars in flattened and powdered soy-beans (p. 46-47). (14) Sugars in soy-beans (p. 48). (15) Proteids and soluble carbohydrates in soy-beans (p. 49). (16) Effect of acetic acid in retarding dissolution of the globulins (p. 50). (17-18) Dissolving power of alkaline reagents on proteids in bean meal (p. 54-56). (19) Effect of reagent on plasticity and coloration of proteids (p. 56).

(20-22) Amount of proteid extracted in 3 consecutive extractions, or with pressure (p. 63-65). (23) Effect of 4 consecutive washings in removal of ash (p. 66, 68). (24-26) Percentage of proteid extracted with sodium sulfite after 1 or 2 hours (p. 70-71). (27) Concentration of sodium sulfite, mark of plasticity [rating], and color of precipitate (p. 73). (28) Relation between time of extraction and yield of nitrogen and proteid (p. 74). (29-30). Yield of proteid with water or sodium sulfite and 5 or 6 consecutive extractions (p. 76).

(31) Test to maximize yield of proteid using sodium sulphite solvent; the weight of the solution must be 16 times that of the meal, and the yield will be 52.20 (p. 78). (32) Effect of adding acetic acid on yield (p. 79). (32-33). Effect of caustic soda (sodium hydroxide) on percentage of proteid extracted (p. 81) (34-37) Relation between time of extraction and yield of proteid using caustic soda (p. 82-83). (38) Volume of caustic soda consumed by different volumes of bean meal solution (p. 83). (39) Volume of caustic soda solution needed in three extraction processes: water, sodium sulphite, or alkali (p. 85).

(40) Extraction with magnesium sulphate for 1, 2, or 3 hours (p. 90). (41) Percentage of proteids precipitated by different precipitants; "isolated proteid," "glutinizing chemicals" (p. 95) (42). Effects of sulphurous acid, formaldehyde, and formalin (p. 96). (43) Effect of different precipitants on quality of precipitate; "sulphurous acid gives proteid of the whitest and best quality, and most suitable for the manufacture of plastic products" (p. 100). (44) Yields of proteid with different volumes of sulphurous acid; all yields are very unsatisfactory (p. 103). (45-47) Effect of adding sulfur dioxide to sulphurous acid at various concentrations; remarkable increase in yield (p. 104-06). (48-51) Precipitation of water extracted protein using acetic acid (p. 107-10). (52-55) Effect sulphuric acid for precipitation of proteids (p. 111-14). (56-57) Effect heating on yield of

© Copyright Soyinfo Center 2013

proteids (p. 116-17).

Note: Horvath (1937) states: "The extraction of protein from soybean meal, its subsequent precipitation and properties, as well as its industrial applications have been extensively studied by S. Satow, and the results published (in English) in 1921-23 in two voluminous reports [*Technology Reports, Tohoku Imperial University* (Japan): 2(2) and 3(4)]. These reports continue to serve as an unsurpassed source of information on this subject, and a number of discoveries during the last 15 years can be traced to the researches of Satow." Horvath then summarizes many of Satow's key findings. Address: Kôgakuhakushi.

1116. Muramatsu, Shunsuke. 1921. Tôfu no seizô ni kansuru kenkyû [Studies on tofu production]. *Nogaku Kaiho* (*J. of the Scientific Agricultural Society, Japan*) No. 227. p. 585-96. [Jap]
Address: Morioka Koto Norin Gakko, Nogei Kagaku Jikken-shitsu.

1117. Kellogg, John Harvey. 1921. The new dietetics: What to eat and how. A guide to scientific feeding in health and disease. Battle Creek, Michigan: The Modern Medicine Publishing Co. 933 p. Illust. Index. 24 cm.
• ***Summary:*** This is the first edition of this important book; subsequent editions were published in 1923 and 1927. Contents: Foods: Food Principles. The digestive process: The liver, mastication, hunger. Metabolism: The energy of food–the calory [calorie]. The physiology of eating: The protein ration, fats, carbohydrates–starches and sugars, food salts, vitamins, cellulose, the acids of foods. Wholesome foods: Cereals (incl. wheat bran), vegetables, green vegetables, root vegetables, vegetable or garden fruits (incl. tomato, cucumber, eggplant, watermelon, muskmelon, squash, vegetable marrow, pumpkin, chayote), legumes (incl. the adsuki [azuki] bean, the Hahto bean, the soy bean, composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, soy bean sprouts), fruits, nuts (incl. the ground nut, the peanut, peanut butter, flour from the peanut, peanut milk, malted nuts). Animal foods. Condiments. Tea and coffee (They are poisonous drugs, in 1921 the U.S. per capita consumption increased to 12 lb/year, chronic caffein [caffeine] poisoning, coffee raises blood pressure, tea, coffee and uric acid, coffee cripples the liver, other coffee poisons, some poisonous effects of tea and coffee, soda fountain drinks containing caffein, coffee substitutes {most consist of cereals plus molasses, roasted until part of the starch and sugar are caramelized; the roasting process makes them unwholesome}), tobacco. Ptomains–Poisoned foods. Water drinking. Medical dietetics: Introduction, scientific tests of the nutritive functions, regimens and dietaries, diet in disorders of the digestive organs, diet in disorders of nutrition, diet in joint diseases (rheumatism, arthritis, gout), diet in disease of the heart and blood vessels–Cardio-vascular-renal diseases, diet in disorders of the nervous system, diet in disorders of the urinary organs, diet in diseases of women, diet in management of fevers, diet in chronic infectious diseases, diet in diseases of the skin, diet in surgical cases, diet in diseases of the eye, ear, nose, and throat, infant feeding, the rice regimen. The world's foods: Making the bill of fare.

A table (p. 138) titled "Vegetable fats" lists "The principal sources of edible vegetable fats..." including: Cocoanut meats 36%, corn 5%, hemp seed 32%, palm nut 72%, peanut 52%, sesame seed 51%, soy bean 20%

A table (p. 166-67) lists the 7 main food salts [minerals] found in various foods, including soy beans, gluten (pure, 40%, or 20%), and peanuts.

Table XII (p. 170-71) lists foods rich in iron. Columns (a) shows the grains of iron in one ounce, and column (b) shows the number of ounces required to supply one day's ration of iron. Includes (in descending order of iron content): Savora (yeast extract), Gluten–pure, gluten–40%, egg yolk, dried lentils, wheat bran, soy beans, Protose, Brose (oatmeal, corn meal, bran), Nuttolene, Graham Flour, tenderloin meat, Graham bread, Zante currants.

Table XIV (p. 182) lists foods rich in lime [calcium] in descending order of lime content, with the same two columns as table XII. Includes: Cheese, yogurt cheese, mustard greens, linseed meal, turnip tops, soy beans.

Page 183 discusses "The acids and bases of foods–The reaction balance. As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman of Columbia University, foodstuffs differ in relation to their acid and basic contents... The waste products of the body are predominantly acid, consequently it is desirable that the foodstuffs should be predominantly basic... The predominance of acids gives rise to a condition known as acidosis (p. 719), and care must be taken to protect the body from injuries which result from this condition... Meats of all sorts, especially the lean meats, tend to acidify the tissue fluids to a marked degree. Eggs tend in the same direction, though less strongly than do meats."

In the chapter titled "Diet in disorders of the digestive organs," pages 654-55 discuss soy flour, yeast extract (Savita, Marmite–which is a very useful source of iron and vitamins), Malted Nuts, 20% gluten meal, and the "Gluten-feeding method."

In the section on diabetes, page 703 gives a recipe for gluten bread. Gluten is also mentioned on p. 718. The section titled "Diet for acidosis" (p. 719) begins: "The blood and tissue fluids are slightly alkaline in reaction. This slight degree of alkalinity is essential to the maintenance of health. When, through disordered metabolism, the body becomes charged with an excess of acids, so that the alkalinity of the blood and tissues is diminished, the result is a condition known as acidosis. Among the symptoms due to acidosis may be mentioned nervousness, mental depression, mental

© Copyright Soyinfo Center 2013

confusion, drowsiness, convulsions, and coma. Air hunger with shortness of breath is one of the early symptoms of acidosis. This condition is most pronounced in advanced cases of diabetes and is encouraged by a meat diet, particularly by the use of an excess of fats. Fasting persons always show a condition of acidosis after fasting for a day or two. Professor Fischer believes that this preponderance of acids, or chronic acidosis, is the exciting cause of Bright's disease."

The section on diet and heart disease notes (p. 738-39): The "great frequency with which arteriosclerosis is encountered in modern times is the result of the increase in flesh eating which in recent years has been very marked in all civilized countries." It "has become the universal custom among practical physicians to exclude meats, meat extracts, and broths of all sorts from the diet of patients suffering from arteriosclerosis, as the most efficient means of checking the degeneration of the arteries..." Foods containing uric acid, plus coffee and tea, should be discarded. Bran, agar, paraffin oil, and an enema should be used freely. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

1118. Kellogg, John Harvey. 1921. The soy bean. Composition of the soy bean (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 299-302. 24 cm.

• ***Summary:*** In the chapter on "Legumes," the section titled "The Soy Bean" (p. 315-21) has the following contents: Introduction and history (incl. a long extract from a publication by W.J. Morse (1918), and discussion of soy beans and diabetic diets). Composition of the soy bean (according to Bailey and Street 1915). Soy bean milk. To fu (tofu). Soy sauce. Soy bean sprouts. Composition of soy bean sprouts compared with mung bean sprouts.

The section begins: "The soy bean has been used in China since 2838 B.C. It was introduced into France in 1740, England 1790, and this country not until a century later. This bean requires a long season and does best in the Southern states on this account. It is quite hardy, however, and some varieties have been found which mature as far north as Canada.

"The soy is the best of all beans. It differs decidedly from other beans in its composition. It contains 40% protein, practically no starch, and nearly 20 per cent fat, giving it characteristics approaching those of the peanut more closely than those of ordinary beans.

"More than one thousand varieties have now been tested by the U.S. Department of Agriculture. Twenty varieties are at the present time being handled by growers and seedsmen in this country. The green and yellow varieties are best adapted for food. The black and brown are chiefly for forage.

"In China, the soy bean is very little used in the manner in which beans are used in this country. Instead, according to W.J. Morse [1918], of the U.S. Department of Agriculture, 'the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts.'" Dr. Kellogg then quotes two passages from Morse; one about roasted soybeans, and the other about soy beans which, when three-fourths or more grown, can be used as "a most palatable and nutritious green vegetable."

"This bean not only contains a large amount of protein, more than is found in the same weight of beef, but its protein is of a particularly fine quality. Heretofore, the casein of milk has enjoyed a unique reputation as a protein of finest quality, but now 'the protein of the soy bean appears to be as valuable as the casein of milk.' In view of the shortage of milk, which is likely to increase, it is gratifying to know that a protein has been discovered equally valuable as casein, and one which may be produced in unlimited quantities.

"For promotion of growth, it is not only necessary for the food to contain 'complete' protein in proper amount, but it must also contain a sufficiency of the two vitamins, designated as fat-soluble A and water-soluble B. Osborne and Mendel demonstrated that the soy bean contains an adequate supply of both fat-soluble and of 'water-soluble vitamins,' in which respect it is superior to all seeds heretofore examined, with the possible exception of flaxseed and millet.

"The soy bean is destined to become one of the great food staples, not only of this country but of the world. It is capable not only of supplying the essentials for growth and maintenance, but may also act as a complement to other imperfect foods, such as corn for example, in combination with which it has shown most excellent experimental results.

Composition of the soybean: A table shows the composition of the soy bean, compiled from various sources. "The above analysis clearly shows the soy bean to be a most remarkable food product. Its composition is in some respects more like that of a nut than that of other legumes. In this respect it very much resembles the peanut. Its protein content, nearly 40 per cent, is higher than that of any other foodstuff. Even lean meat affords but half as much. Its high percentage of fat gives it a very high food value and makes it a rich source of oil for various industrial purposes as well as for food.

"The soy fills the place of meat as well as milk in the dietary of many millions of sturdy Orientals. Since the composition of the soy has been understood, it has been much used as a food for diabetics. It is evident from the above [table] that it contains little which can be objectionable in diabetes. The small amount of dextrin and sugar may be easily removed, when necessary, by parboiling.

"Experiments by Holmes [1920], of the office of Home Economics, U.S. Department of Agriculture, have shown that the well cooked soy bean (cooked for two hours under steam pressure) is very easily digestible, and is an exceptionally wholesome article of food, superior to most other legumes.

© Copyright Soyinfo Center 2013

"The soy bean may not become really popular until the pressure cooker comes into general use, which may be some time. In the meantime, while the patent pressure cooker is coming, any resourceful housewife may improvise a perfectly good and satisfactory pressure cooker from inexpensive materials close at hand. Get a stone jug or jar that can be hermetically sealed. The little stone jars in which apple butter is sometimes sold are well adapted to the purpose. After soaking the beans over night put [them] in the jug with a little salt and enough water to cover, seal up tight and secure the cover well, remembering that the pressure will be from within. Set the jug in a saturated solution of common salt, place over a smart fire and boil for one to two hours. The salt solution boils at a temperature of 220ºF. and so the beans are exposed to a higher temperature than in ordinary boiling... Cooking at the higher temperature not only softens the cellulose and so renders the foodstuffs tender, but greatly improves the flavor.

Note: This is the earliest document seen (Sept. 1996) that uses the term "pressure cooker" in connection with soy beans. Address: Battle Creek, Michigan.

1119. Kellogg, John Harvey. 1921. To fu (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 303-04. 24 cm.
• ***Summary:*** "This is a cheese like preparation made from the soy bean, much used in China. The method is as follows:

"Prepare soy bean milk. While it is boiling add one-fifth its volume of a one-half per cent solution of citric acid, stirring. Strain through a cloth to separate the curds.

"To fu omelet is more palatable and more wholesome than ordinary egg omelet. It is made as follows: Four ounces of to fu, one rounded teaspoonful of graham flour, milk sufficient to give the mixture the consistency of pancake batter. Add one well beaten egg. Cook in the usual way. This to fu or soy bean omelet is more wholesome than the ordinary egg omelet and is more easily digestible. Made without the addition of flour the to fu omelet is a valuable dish for diabetics.

"The following is the [percentage] composition of to fu as given by Adolf [sic, Adolph] and Kiang [1920]:

"Protein 10.22, fat 3.66, salts 1.09, [nitrogen-free] extract 4.13, water 80.90." Address: Battle Creek, Michigan.

1121. Rouest, Leon. 1921. Le soja et son lait végétal: Applications agricoles et industrielles [The soybean and its vegetable milk. Agricultural and industrial applications]. Carcassone (Aude), France: Lucie-Grazaille. 157 p. Illust. No index. 25 cm. [42 ref. Fre]
• ***Summary:*** Contents: Preface, by Louis Forest. Introduction–What is soya? 1. History of the dissemination of soya: In 1712 the naturalist Kaempfer introduced soya, introduction of soya to France and Europe, soya is cultivated in Austria in 1875 by Prof. Haberlandt, soya is the object of many trials in France from 1876 to 1881, the study and acclimatization of soya becomes widespread, the causes of setbacks in the cultivation of soya.

2. Cultivation of soya: Botanical characteristics of soya, the varieties of soya, Chinese varieties and soya in China, Japanese varieties and soya in Japan, American varieties and soya in America (varieties: Mammoth, Hollybrook, Ito San, Guelph, Haberlandt, Medium Yellow, Wilson, Peking, Tokio, Mandchu [Manchu], Black Eyebrow, Barchet), soya in Europe–France and Italy, seven varieties of soya tested in France, soya in the experimental farms for new crops (*les Fermes Expérimentales de Néoculture;* Many varieties from the USA were tested, including Manchu, Wilson Five, Haberlandt, Tokio, Virginia, Hato [Hahto], Early Medium Green), the cultural and geographical appearance of soya, its production worldwide, planting soybeans, heat units (*degré thermique*) and the germination of soya, the importance of spacing between plants, number of seeds per hectare, soya during its vegetative stage, the vegetation of soya compared with that of the haricot at high altitudes, rolling the seeds and types of crop maintenance, growth of the plant, acclimatization, the enemies of soya.

3. Composition of the soybean plant. 4. Soya forage: Green soya forage, soya hay, soya as a plant for soil improvement. 5. Harvesting soybean seeds: Maturity of the seed, harvesting soya, the food value and composition of soya seeds. 6. Soya as an oil plant: Richness in oil, defatted soybean cake, imports and exports of soya cake from 1915 to 1919 (Imports to: Sweden, Canada, Korea, Japan, Formosa. Exports from: England, China, Korea), production of soya cake from 1915 to 1919 (Denmark, Great Britain and Ireland, Netherlands, Sweden, USA, Japan, Formosa, Korea, Java and Madura).

7. Soymilk: Its manufacture (in 1910-1913 Li Yu-ying installed a factory named "La Caséo-Sojaïne" at Vallées {Asnière-Seine} near Paris. Rouest visited this factory and saw them make soymilk, which was filtered using a filter-press resembling those used in sugar refineries), its properties and composition, composition compared to other types of milk, powdered soymilk, soymilk in the nursing and feeding of animals, soymilk related to tuberculosis in animals and in humans, soymilk would allow the milk and butter from animals to be reserved exclusively for human foods and could be used for raising many piglets, manufacture of non-dairy milk in Canada (a factory is now under construction). 8. Soya in Industry: Soymilk and soy casein, Sojalithe (like Galalithe).

© Copyright Soyinfo Center 2013

9. Soya in human nutrition: Soy flour and its applications (incl. Li Yu-ying's usine de la Caséo-Sojaïne, and bread made of soya and wheat), soya compared to dry legumes (such as lentils, haricots, peas, beans), soya used as a legume (whole soybeans), the food value of soy sprouts, preserves and confections made from soya, soya chocolate and coffee, the amount of nutrients produced by soya and other crops from a unit of land, a meal of soya served in France (prepared and served some years ago by Li Yu-ying's soyfoods plant La Caséo-Sojaïne for the major print media, the medical press, the National Society for Acclimatization, etc.; it consisted of 2 soups {one with 'soya meat' and one with soymilk}, 2 entrees {an omelet with smoked soya ham, and fritters stuffed with soy meat}, soy [actually mung bean, *lüdou*] sprouts in a salad and sauteed, 3 desserts {soya cake, biscuits, and confection}, and soy coffee; a recipe for each is given; soya meat is smoked tofu).

10. Use of soya in East Asia: Tofu (*fromage végétal*), soy-based condiments (such as natto {Ping ming Natto and Tokio-Natto}, miso, Chinese miso or tao-tjiung [doujiang], and shoyu {Soyou or Schozou}), making soy sauce in Kwantung, China (from Groff).

11. The opinions of several authors concerning soya (from the French medical and hygienic press): Introduction–E. Maurel. Soya and soy bread in diabetic diets–Dr. Dujardin-Beaumetz, Dr. Bloch, Dr. J. Le Goff, L. Beille, M. Gautier. Soya used as a bean–M. Gautier. Soy sauce used in place of meat extracts. The state of cheese. The popularization of soya in Europe–A. Paillieux.

Conclusions: The influence of cultural technology on variation. Appendix: Advice to experimenters on the acclimatization of soya in France. Other methods of obtaining early-maturing soybeans.

The author concludes (p. 140): We must make every effort to acclimatize soya in France. We must develop the will and learn from past mistakes. Most soybean varieties now available in France are too late. We must get varieties from Manchuria, whose climate is similar to that of southeastern France, and from the northeastern USA. It is urgent that, in the near future, we start a Soybean Experiment Station to take responsibility for this work. The setbacks since 1830 can be overcome by present science and genetics. The first step is to introduce better varieties.

On the last page is a full-page advertisement for various seeds sold by Mr. Rouest, including 30 varieties of soybeans (*Soja hispida*)*;* the names of the individual varieties are not given.

Illustrations show: (1) A soy bean plant with many pods (title page). (2) Flowers and pods of the soy bean plant (p. 29). (3) Soy pods and beans (p. 30). (4) A soy bean plant drawn by a Chinese artist (p. 32, from Li Yu-ying). (5) Pods of the Hato [Hahto] variety of soy bean (p. 51). (6) Germinating soy bean seeds (p. 54, from Li Yu-ying). (7) Soy bean roots with nodules (from a photo by Dr. Le Goff; p. 73). (8) Soy bean pods, opened to show 3 beans in each (p. 82).

Tables show: (1) Production of soybeans by color in China in 1916 and 1917 (p. 35, in quintals, from the International Yearbook of Rome, Vol. 1, 1919): In 1917: Yellow 4,069,822. Other 953,012. Green 181,190. White 71,234. Black 40,066. Total: 5,315,324.

(2) Percentage composition of various oilseed cakes (p. 95, from Kellner). (3) Imports and exports of soybean cake, by country, from 1915 to 1919 (in quintals, p. 96). Imports are given for Sweden, Canada, Korea (from 1916), Japan, and Formosa [Taiwan]. Exports are given for England (6 quintals in 1915), China (including Manchuria, by far the biggest exporter, from 1916), and Korea (from 1916).

(4) Production of soybean cakes, by country, from 1915 to 1919 (p. 97, in quintals, based on statistics from the International Bureau of Agriculture, Rome, 1919). In descending order of production in 1915 (in quintals): Japan 5,439,337. Korea 3,209,238. Great Britain and Ireland: 1,513,059. Denmark 921,782. Java and Madura 503,025. Note that China is not listed. Netherlands 144,523. Formosa [Taiwan] 62,131. Sweden 1,733. USA 0, but 501,822 in 1916.

Note: When Alsace was occupied by the Germans during World War I, the Rouest family moved from Alsace to Paris. Mr. Rouest brought soybeans from Africa and adapted them to France. He paid for the publication of this book. Address: Directeur des Fermes Expérimentales de Néoculture, Carcassonne (Aude), France.

1122. Rouest, Leon. 1921. Le soja et son lait végétal: Applications agricoles et industrielles [The soybean and its vegetable milk. Agricultural and industrial applications]. Carcassone (Aude), France: Lucie-Grazaille. 157 p. Illust. No index. 25 cm. [42 ref. Fre]

• ***Summary:*** This is a summary of interesting points throughout this book. The main early use of soy in Europe was more therapeutic than nutritional (p. 3); it was used mainly in diabetic diets.

Nothing remains of the early trials conducted 20 years ago in France and Austria. The reasons for the crop's failure were lack of understanding of the laws of acclimatization and genetics, and the fact that soya (*soja*) was introduced as a new food legume, when actually it can only be utilized as a forage plant and industrially (for oil, cakes, and casein). Later, when the plant has been adapted, when it is understood that soya is not being propagated to competed with other dry legumes, that it is not being cultivated to extract from the seeds a vegetable milk for people, but simply as a forage plant–and the most remarkable one that exists (p. 3).

The English are trying to acclimatize soya to their colonies, especially those in southern Africa. In 1908 some 200,000 tonnes (metric tons) of soybeans were exported from China [including Manchuria] to Europe, followed

© Copyright Soyinfo Center 2013

by 500,000 tonnes in 1909. One can extract from soybean seeds a vegetable milk (*lait végétal*) which has the same value as animal milk for use in raising young animals. Its seeds and forage are also fine for raising farm animals and for industrial products. The author thanks all those who have helped him to acclimatize the soybean to France and to create new varieties of soya in France (p. 4).

Introduction of the soybean to France and to Europe (p. 6-7): A good but brief review of the literature on this subject. In 1739 Buffon was made director of the Jardin des Plants in Paris. Shortly thereafter, Christian missionaries in China sent him specimens of seeds and plants. The soybean must have been among them. The soybean has very probably been cultivated at the Museum since 1779, certainly in 1779 and later from 1834 to 1880. In 1855 Baron de Montigny was charged by the Society for Acclimatization to distribute five varieties of soya sent from China by Mr. Montigny; these were from northern China. The plants first bore seeds in France in 1854; their acclimatization is assured. In 1857 Mr. Lachaume transmitted to the Society for Acclimatization details of the success he obtained at Vitry-sur-Seine with soy culture. The seeds were planted in 1856. In 1858 a report to the Society for Acclimatization indicated that the acclimatization of the soybean was complete. In 1859 Mr. de Vilmorin reported on cultural trials sent from China by Mr. Perny. The varieties matured too late. The same year Dr. Turrel harvested soybeans at Toulon. In 1862 the Society for Acclimatization received seeds from Mr. Guillemin; the yellow soybean was said to be used for making tofu. Following the events of 1870, the cultivation of the soybean in France was apparently discontinued. Note: The brief war of 1870 between France and Bismark's Germany ended in France's defeat and the ceding to Germany of Alsace-Lorraine.

In the long section on Prof. Haberlandt's work with soya, starting with his cultivation of it there in 1875, is a quotation from him: "I don't know, in this history of cultivation, any example of a plant which has, in so few years and to such a high degree, excited such general interest" (p. 8).

From 1876 to 1881, the soybean was the object of numerous trials in France by the Society of Horticulture at Etampes (Seine-et-Oise). During this same period, one Dr. H. failed with varieties sent from Japan but succeeded in cultivating a yellow soybean sent from China, and used the latter to make his own tofu (*fromage végétal*) for use at home. In 1880 Messrs. Vilmorin-Andrieux introduced in their catalog a species cultivated in Austria-Hungary (p. 17-18).

In 1878, Japan, China, and the Indies (*les Indes*) presented all the varieties of Soya at the Universal Exposition, and their seeds filled more than 20 boxes. In 1880 the National Society for Acclimatization was able to distribute soy in France and tests were conducted in 24 regions; they were largely successful, especially in central and southern France (p. 19-22).

Tests were then abandoned from this time until about 1888, when the soybean started to grow in the southern states of the USA. That same year Messrs. Lecerf and Dujardin-Beaumetz first had the idea of using soy bread in diabetic diets (p. 22).

Causes of setbacks in soybean culture (p. 24-27): First, the varieties used matured too late and were not acclimatized in a progressive manner. We must choose varieties from northern China and adapt them to the south of France (*le Midi*) [which is on the same latitude as Toronto, central Wisconsin, or southern Minnesota]. From these, we must develop hybrids, and gradually move them northward.

The soybean has been ostracized in France. Major commercial, financial, and social interests have viewed with terror the production of an inexpensive food and have retreated into the egotistical "Malthusian agriculture." This is the truth! (p. 26).

Soy cheese is even feared by the cheese industry in France. They ask if they should abandon their excellent cheeses in order to adopt a vegetal cheese (*fromage végétal*).

A long quotation from the *Chinese Imperial Encyclopedia of Agriculture* (p. 34) gives the various colors of soybeans, including black, white, grey, and even some speckled / mottled with blue. The black ones can be used for medicine. And they are used as an ingredient in the condiment called fermented black soybeans (*Chi* [*douchi*]), made of soybeans, ginger, and salt.

In 1910-1913 a factory named "La Caséo-Sojaïne" was installed near Paris. I (Rouest) visited this factory in which were installed all the modern conveniences (*tout le confort moderne*), and presented the best guarantees of hygiene. The milk was filtered using a filter press similar to those used in sugar factories (p. 99).

Note: Rouest has borrowed a great deal of material from earlier publications by Li Yu-ying, usually without acknowledgment and often arriving at very different conclusions, especially on the question of using soya to make human foods (Li) vs. foods and milk for animals (Rouest).

Rouest strongly recommends the use of soymilk to feed young domesticated animals. For us, soy will not replace green beans, milk or cheese. During World War I, the Germans were actively involved with the study of soymilk. A translation of an article from the *Schweizerische Milchzeitung* (Nov. 1918) tells how to make soymilk and tofu (p. 102). By using soymilk, there is no fear of transmitting tuberculosis. Address: Directeur des Fermes Expérimentales de Néoculture, Carcassonne (Aude), France.

1123. **Product Name:** Tofu.
Manufacturer's Name: Fukumoto Tofu-ya.
Manufacturer's Address: 414 L & M Alley, Sacramento, California. Phone: Main 4168W.

• ***Summary:*** Soy bean introductions: *Soja max* (L.) Piper. Fabaceæ. (*Glycine hispida* Maxim.)

"44203-44238. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received February 9, 1917.

"44209-44214. 'From Malanyu, Chihli Province, China, November 25, 1916.'

"44209. '(No. 2337a.) *Huang tou,* meaning "yellow bean." An early-maturing medium-sized yellow variety of soy bean, primarily used to make bean curd.' (*Meyer.*)

"44210. '(No. 2338a.) *Huang tou,* meaning "yellow bean." A late-maturing medium-sized yellow variety used for oil production and in making bean curd and sauce.' (*Meyer.*)

"44211. '(No. 2339a.) *Ta ch'ing tou,* meaning "large green bean." A pale-green variety, used in bean curd and sauce manufacture.' (*Meyer.*)

"44212. '(No. 2340a.) *Ch'ing tou,* meaning "green bean." A green variety, often used as an appetizer with meals when slightly sprouted and salted or when fried and salted.' (*Meyer.*)

"44213. '(No. 2341a.) *Ch'ing tou,* meaning "green bean." A green variety, slightly different from No. 2340a [S.P.I. No. 44212]. Used as an appetizer with meals when slightly sprouted and salted or when fried and salted.' (*Meyer.*)

"44214. '(No. 2342a.) *Hei tou,* meaning "green bean." A small, shining, black soy bean, generally used, when boiled, as a food for hard-working horses, mules, donkeys, and oxen, mixed with chopped straw and kaoliang grains.' (*Meyer.*)" Address: Washington, DC.

1126. Adolph, William Henry. 1922. How China uses the soy bean as food. *J. of Home Economics* 14(2):63-69. Feb. [11 ref. Eng]
• ***Summary:*** This article is quite similar to a 1920 article by Adolph and Kiang titled "The nutritive value of soy bean products," published in *The National Medical Journal of China* (6:40-49). It combines a review of the literature with the author's personal experience in China and a summary of some studies conducted in the Shantung Christian University laboratory on soy bean products. "The soy bean is probably the most universal article in the Chinese dietary. When the Chinese finds it necessary to distinguish between the soy bean and other varieties of bean, he refers to the soy bean as the *yellow* bean (*hwang dou*), and this is the name most common throughout the orient... The use of the soybean in China dates back to the beginning of China's agricultural age under the Emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu,* the ancient materia medica, written by Shen Nung himself in the year 2838 B.C."

"The soy bean as such is not very largely used as food in China, but it is the source of a number of products. It would be impossible to make a complete list of all these. The best known and the most important are the bean milk, bean curd, bean sauce (soy), bean sprouts, bean oil, and bean cake. The student of nutrition is particularly interested in the bean curd or 'bean cheese.'" There are four agents employed in China to make soy bean curd, often called Chinese cheese. "These are: (1) *lu,* the solid residue prepared by the evaporation of salt bittern; (2) gypsum; (3) *swan giang,* the soured bean milk whey remaining from the previous coagulation of bean curd; and (4) vinegar.

"In spite of the tremendous consumption of bean curd in China, the industry does not center in large factories, but myriads of small shops, as numerous as our own candy stores and fruit stands, make and supply the daily needs in bean curd for the millions throughout the Chinese republic. Every small town has at least one bean curd shop. Good bean curd must be manufactured fresh every day. The coagulated curd is white in color and resembles our cottage cheese. After coagulation it is pressed between cloths, cut up into squares or moulded into cakes about five inches in diameter and an inch thick, and sold to the Chinese housewife. A cake of the size indicated costs approximately $0.01 in U.S. currency. The cakes of bean curd may also be salted and dried, yielding a product which resembles our cream cheese.

"Tradition says that the manufacture of soy bean curd was originated in China in 164 B.C. during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. The common Chinese name for soy bean curd is *dou fu,* often romanized *tofu;* and the classical name is *li chi,* probably meaning 'the morning prayer.' It is interesting to note that in China at the present day the bean curd is made in the early hours of the morning, and sold at daybreak.

"Liu An was a great friend of the Buddhist monks, and it seems quite probable that he invented this bean curd in order to provide a change or delicacy to break the monotony

© Copyright Soyinfo Center 2013

of the monastic ration. As a matter of fact, bean curd is a real delicacy if carefully made and well cooked. Chinese who are connoisseurs on the subject assert that when so prepared it has the taste of pig's brain. Americans and Europeans eating Chinese food often eat carefully prepared bean curd thinking it is pork. With sugar it produces a dish like custard. Prepared with salt it resembles scrambled eggs.

"The Tsinan variety of bean curd is made exclusively with the use of *lu* as a coagulating agent. In the following table the analyses of bean curd are compared with that of common cottage cheese."

Table II gives an analysis of both fresh and dried soy bean curd, and compares them with cottage cheese. Table III gives an analysis of the ash of soy bean curd and soybeans.

Soy bean milk is discussed and Table IV gives its composition (4.22% protein, 1.87% fat), plus that of cow's milk (3.3% protein, 4.0% fat) and bean milk whey.

"Soy bean sprouts. Soy beans soaked in water and allowed to sprout are much relished as a vegetable by the Chinese. Very considerable quantities of soy bean are used in this way. The sprouts are usually cooked in oil, and produce a dish which appeals very strongly to the taste of Americans in China. It is strongly recommended for use as a vegetable on the American table." Table V shows that soy bean sprouts contain 5.7% protein and 0.8% fat.

"The soy bean cake is the press-cake which remains behind after the removal of the soy bean oil in the press mill. The orient has used soy bean cake for cattle feed and for fertilizer. It is of note that it contains a high percentage of nitrogen, but, economical though the Chinese have been, they do not seem to have attempted to convert it into a human food. Only recently has it been very seriously suggested that both in the occident and in the orient this rich nitrogenous material should be converted into some form of food for human consumption. During the north China famine of 1920-1921, the soy bean cake was actually used in the starvation diets to bolster up a failing food supply."

"Discussion: The Chinese people make practically no use of dairy products, and the bulk of the people consume very meagre amounts of meat. Yet in spite of this they have lived for centuries on what appears to be a remarkable well-balanced diet by the use of the soy bean...

"A number of interesting examples are found in China of the use of bean curd as an agent for growth. One of the writer's Chinese colleagues, whose home is in Anking, has observed that dealers in birds employ bean curd as the sole food for infant birds. The birds are robbed away from their nests immediately after they are hatched, and are then fed bean curd to tide over the infantile period till able to feed themselves. Still more interesting is the case of the true Buddhist monk who from birth is consecrated to the priesthood, and is carried through the period of childhood growth on a rather heavy diet of bean curd... The country monastic diet is noted for its high content of soy bean products...

"The Chinese coolie... in spite of the scanty intake of meat and the constant exposure to overwhelming sources of infection, still does possess a wonderful resistance. The diet of the average coolie contains a surprisingly large amount of beans and bean products...

"A common saying in some parts of China terms 'bean milk the poor man's milk, the bean curd the poor man's meat.' This simply indicates the extent to which bean curd has been incorporated into the diet of the Chinese...

"Soy bean propagandists have been especially enthusiastic over the introduction of soy bean curd into America. Dr. Yamei Kin, a Chinese dietitian, has become particularly well-known as an exponent of bean curd on her visits to the United States."

Note 1. This is the earliest document seen (April 2013) that uses the terms "poor man's meat," or *li chi* or *dou fu* or "bean cheese" or "Chinese cheese" to refer to tofu. Use of the word "bean cheese" is confusing, since it could also refer to fermented tofu (also called "Chinese cheese" or "bean cake").

Note 2. This is the earliest document seen (Aug. 2003) that uses the term "poor man's milk" to refer to soymilk. Address: Assoc. Prof. of Chemistry, Shantung Christian Univ., China.

"45279. '(No, 2411a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou.* A small, greenish yellow soy bean.'

"45280. '(No. 2412a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou* A small, greenish yellow variety of soy bean, used almost entirely in bean-curd production.'

"45281. '(No. 2413a. Shuichaipang, Hupeh Province. April 2, 1917.) *Hsiao huang tou* (small yellow bean). An exceedingly small variety of yellowish soy bean, used in making bean curd.'

"45282. '(No. 2414a. Changsha, Hunan Province, May 12, 1917.) *T'ien ch'ing tou* (field green bean). A medium-large, pale-green variety of soy bean; rare. Eaten as a sweetmeat when roasted with sugar; it is then a very tasteful, wholesome and nourishing product.'

"45283. '(No. 2415a. Changsha, Hunan Province. May 16, 1917.) *Ch'ing tou.* (green bean). A dull pale-green variety of soy bean.'

"45284. '(No. 2416a. Changsha, Hunan Province. May 16, 1917.) *Ch'ing tou.* A small, green soy bean, often used as an appetizer with meals, when slightly sprouted, scalded, and salted. Also eaten as a fresh vegetable when having firm sprouts 3 inches long.'

"45285. '(No. 2417a. Ichang, Hupeh Province. March 24, 1917.) *Ch'ing pi tou* (green skin bean). A dark-green soy bean of medium size, used like the preceding number. The beans are also eaten fried in sweet oil with salt sprinkled over them as an appetizer before and with meals.'

"45286. '(No. 2418a. Hankow, Hupeh Province. March 7, 1917.) *Ch'ing tou.* A medium-sized, dull-green variety of soy bean, used in the same way as the preceding number.'

"45287. '(No. 2419a. Ichang, Hupeh Province. March 24, 1917.) *Ch'ing p'i tou.* A medium-sized variety of green soy bean, often speckled with black. Eaten like No. 2416a. [S.P.I. No. 45284].'

"45288. '(No. 2420a. Changsha, Hunan Province. May 16, 1917.) A rare variety of soy bean of pale-green color, with brown splashes.'

"45289. '(No. 2421a. Changsha, Hunan Province. May 12, 1917.) *Ch'a hua tou* (tea-flower bean). A peculiar variety of soy bean, of dull brown color, said to ripen very late. Locally much eaten when roasted with salt sprinkled over, like salted peanuts. Very nourishing and appetizing. Well worth introducing to the American public as a new, wholesome, and nourishing sweetmeat.'

"45290. '(No. 2422a. Ichang, Hupeh Province, March 24, 1917.) *Hei tou* (black bean). A medium-large, black soy bean, used when boiled, as a food for hard-working field animals and for oil production; it is also eaten by the poor.'

"45291. '(No. 2423a. Hankow, Hupeh Province. March 7, 1917.) *Hei tou.* A medium-sized, black soy bean, used like the preceding number.'

"45292. '(No. 2424a. Wuchang, Hupeh Province, March 9, 1917.) *Hei tou.* A medium-sized variety of black soy bean; said to be an early ripener. Used like No. 2422a. [S.P.I. No. 45290].

"45293. '(No. 2425a. Wuchang, Hupeh Province. March 9, 1917.) *Hsiao hei tou* (small black bean). A small, flat, black soy bean, used when boiled, salted, and fermented as the main ingredient in a sauce; also fed, when boiled, to water buffaloes.'

"45294. '(No. 2426a. Changsha, Hunan Province. May 16, 1917.) *Hei tou.* A small, flat soy bean of shining black color, used like the preceding number.'

"45295. '(No. 2427a. Changsha, Hunan Province. May 16, 1917.) *Hei tou.* A small, round variety of soy bean of dull black color; used like No. 2425a [S.P.I. No 45293].'

"45449/45476. From Soochow, China. Seeds presented by Prof. H. Gist Gee, of the Soochow University, through Dr. Yamei Kin. Received October 27, 1917. Quoted notes by Prof. Gee.

"45470. '*Ya tou* (*soy beans for sprouts*).'"

Other non-soy species of Chinese seeds presented by Dr. Yamei Kin (Peking, China) are listed and described on p. 18-19; they are pai ts'ai, chestnut, muskmelon, cucumber, squash, radish (*Raphanus sativus*), and spinach. Address: Washington, DC.

1128. *Toronto Daily Star* (*Canada*). 1922. Milk from soya bean being made in Vienna [Austria]. April 19. p. 8.

• ***Summary:*** This is a summary for an article from Scientific American [sic]. "'Manna' milk from the soya bean is now being made in Vienna at one-sixth the cost of fresh cow's milk. In proteid, carbohydride [carbohydrate] and fat content, and in color, it closely resembles cow's milk, being, or course, free from milk-borne diseases. Butter and cheese [tofu] can also be made from the bean, and 'manna' flour, one part of which equals in nutritive value two parts of meat and one-third part of wheat flour. So, at least, Dr. Berczeller,

© Copyright Soyinfo Center 2013

a young Hungarian scientist tells us; he designates the soya bean as an ideal food containing 40 per cent albumen and 20 per cent fat."

Note 1. As of Aug. 2011, we have been unable, searching Google Books and the magazine itself, to find this article in *Scientific American.*

Note 2. This same article appeared in *The Labor Digest.* 1922. June p. 40 (Vol. 14, No. 3).

1129. *Los Angeles Times.* 1922. "Manna" from soya bean. May 21. p. IV12.

• ***Summary:*** From Scientific American: "'Manna' milk from the soya bean is now being made in Vienna at one-sixth the cost of fresh milk. In proteid, carbohydride [carbohydrate] and fat content, and in color, it closely resembles cow's milk, being, or course, free from milk-borne diseases. Butter and cheese [tofu] can also be made from the bean, and 'manna' flour, one part of which equals in nutritive value two parts of meat and one-third part of wheat flour. So, at least, Dr. Berczeller, a young Hungarian scientist tells us; he designates the soya bean as an ideal food containing 40 per cent albumen and 20 per cent fat."

1130. Guillaumin, A. 1922. Les variétés de soya d'Extrème-Orient: Origine probable du soya [The varieties of soybeans in East Asia: The probable origin of the soybean]. *Revue de Botanique Appliquee & d'Agriculture Coloniale* 2(10):254-58. June 30. [10 ref. Fre]

• ***Summary:*** "The soybean (*Le Soya; Glycine Soja* Sieb. et Zucc., *Dolichos Soja* L, *Soja hispida* Moench, *S. angustifolio* Miq.) has been cultivated in the Far East since antiquity. Shen-Nung (*le Shénon*), written up by Houandi in about 3,000 to 3,500 years before Jesus-Christ, already mentioned the soybean. Since then, its culture has expanded to Indochina, India, Malaysia, Europe, America, and Africa.

"Long ago, in Austria and in France, varieties such as *Soja d'Etampes*, were selected for their high yield. In America, efforts have long been made to obtain, for the diverse climates, both forage varieties and seed varieties. And the U.S. Department of Agriculture has assembled in its test fields more than 500 varieties, of which about 20 are currently in commerce. Among the forage varieties are (Ball 1907): Early Brown, Black Eye Brown, Peking, Wilson Five, Virginia, Barchet, Biloxi, Laredo, Atoo San [sic, Ito San?], Tarheel Black, and Wisconsin Early Black. Among those grown for their seeds are: Ito San, Manchu, Elton, Medium Yellow, Mikado, Hollybrook, Haberlandt, Mammoth, Tokyo, Guelph, Austin, Easy Cook, Morse, Hahto, Early Medium Green, Mandarin, and Chiquita.

Note 1. This is the earliest document seen (Oct. 2004) that mentions the soybean variety Black Eye Brown. However, it does not appear in Ball (1907) as stated, nor does any name even vaguely resembling it appear. The Black Eye Brown variety is mentioned in only 3 known documents, all published in France in 1922.

"Note that the forage varieties all have black- or dark-colored seeds, whereas the seed varieties have yellow or greenish seeds.

"In Turkestan it seems that the only varieties are ovoid (5.7 x 3.7 mm), brilliant yellow, with brown hilum and traversed longitudinally by a bright line." Note 2. Turkistan or Turkestan is an historical region of Central Asia, usually thought to comprise Turkmenistan, Uzbekistan, Kyrgyzstan, Tajikistan, southern Kazakhstan, western China, and northeast Afghanistan.

Note 3. This is the earliest document seen (April 2008) concerning soybeans in Turkestan, or the cultivation of soybeans in Turkestan (not including Chinese Turkestan). This document contains the earliest date seen for soybeans in Turkestan, or the cultivation of soybeans in Turkestan (not including Chinese Turkestan) (1922). The source of these soybeans is unknown. Unfortunately, it is not clear in which part of Turkestan the soybeans were grown.

"In India, soybeans are cultivated in the United Provinces and at the foot of the Hamalayas from Kashmir to Darjeeling." David Hooper (1912) distinguished five different soybean races in India.

"In Cambodia, the only known variety is ovoid (6.3 x 4.2 cm), dull yellow, brown hilum, with a long, clear white line, known as *Sandek sieng* in Cambodian and *dau nanh in Annamite.* It is cultivated along the steep banks of the Mekong River.

"In Cochin China, the soybean is cultivated only on the red soils of the provinces of Chau-doc, Baria, and Bien-Hoa; in the western provinces, cultivation is insignificant and the seeds come from Cambodia. It seems that there is only one variety, closely related to that of Cambodia, called *dau nanh* or *dau-xa*, but it is not well established / widely grown, for it bears black or brown seeds.

"In the province of Baria one can obtain two harvests in a wet year–one in September, the other in December-January. In the province of Bien-Hoa, there is only harvest.

"In Annam, there is one variety similar to that cultivated in the lower parts of the provinces of Bin-dinh, Thua-hien, Dong-hoï, and Tanh-hoa.

In Tonkin, the soybean is known as *dau tuong;* in the [Mekong] delta, one can distinguish a small, ovoid variety (5.1 x 3 mm), with a yellow seed coat and a hilum surrounded by a brownish black aura that sometimes overflows the sides. In the region of Lang-son, on the plateaus 100-500 meters in height, it is replaced by a larger variety, ovoid (7.1 x 5 mm), dull yellow, and a hilum that is uncolored [pale] or brownish; one variety is also cultivated at Lao-kay.

"In Laos, the soybean is known as *Mok toua kon* and *Ta tone*, according to Dr. Spire, but precise information is lacking.

In the territory of Kwang-cho-wan (French: *Kouang-*

© Copyright Soyinfo Center 2013

tchéou-wan, in southeast China) the soybean is cultivated in the region of Taï ping, at an altitude of 30 meters. It is planted in the spring and harvested in the summer. One can distinguish two varieties here. One is very elongated (8 mm x 4.6 mm), dull yellow with a very clear brown hilum, called *Wong tao* or *Wong tao tsaï* in Cantonese. The other is small, flat (6.4 mm x 3.7 mm), dull black, with a large hilum, called *Hat tao* in Cantonese; it is absolutely the same as the variety Nigra cultivated at the botanical gardens of Cluz (Romania), and in Trieste (Italy), but different from that which is cultivated under this name at the botanical gardens of Cracow / Krakow (French: *Cracovie*) (Poland), Tabor (Czechoslovakia), and Delft (Netherlands), which is fatter, more round (7 mm x 4.8 mm) and of a velvety black color.

Note 4. This is the earliest document seen (Feb. 2005) concerning the cultivation of soybeans in Czechoslovakia (which became a country in 1918). This document contains the earliest date seen for the cultivation of soybeans in Czechoslovakia (June 1922). The source of these soybeans is unknown.

"In China, in Szechwan, only the yellow and green varieties are known. In the region of Shanghai, R.P. Courtois, of the Museum of Zi-ka-wei, has assembled an important collection of soybean varieties. Descriptions are given of varieties with the following colors and names: (1) Yellow: *Ta hoang téou* (large, yellow, almost round), *Kiu hoang téou* (ovoid, brilliant yellow). (2) Green: *Tsing pi téou* (roundish, 7.1 x 5.5 mm, clear green with clear hilum). (3) Brown: Large, ovoid (9.1 x 6.4 mm), reddish brown, with a slightly clearer hilum; no name given. (4) Black: Many varieties. (4A) Large ovoid seeds (9 x 4.3 mm), with large hilum; indigenous name unknown; (4B) A little smaller and bulging (8.3 x 5.4 mm), with ornate hilum and a longitudinal white line, named *Ta hé téou;* (4C) Ovoid (8.1 x 4.7 mm) with a wide hilum traversed by a white line, called *Hé téou;* (4D) Small (6.7 x 3.1 mm) and brownish black named *Siao hé téou;* (4E) And finally a very small, flat (6 x 2.7 mm), brownish black named *Ni téou.* By their shape, form, and color, the seeds of these last appear very similar to the American variety Laredo."

"In Europe, soya has its apostles, but it will never amount to anything more here than a small-time vegetable. Despite the Caséosojaïne at Vallées near Paris, France (Li Yu-ying, 1911) and the Soyama Werke at Bockenheim, Germany (1914), the milk, cream, butter, and cheese [tofu] made from soya will never be more than ersatz. The "soy bread" is only good for diabetics and the "soy ham" (*jambon de Soja*) in nothing but a weak imitation of pork. Soybeans themselves are indigestible and require a very long time to cook–even the yellow or white varieties. Soy sprouts (*germes de Soja*), which enjoyed some popularity before the war and deserved it, for they are a nice hors d'oeuvre, are actually nothing but mung bean sprouts."

Based on other sources (most of which are cited), the writer also discusses the soybean varieties of Manchuria (Hosie 1901), and Japan (Lemarié 1910), and discusses soybeans briefly in Korea, Philippines, Netherlands Indies.

In Europe, the soybean has its apostles: Caséosojaïne at Vallé near Paris (1911), and Soyama werke at Bockenheim (Germany) (1914). The latter makes milk, cream, butter and cheese (*le fromage de Soja* [tofu]), which are nothing but imitations. Soy bread has a good taste, especially for diabetics. Soy ham (*jambon de Soja*) is but a vague imitation of the pork product. The seeds, themselves, are hard to digest and take a very long time to cook, even the yellow or white varieties. As for the soy sprouts (*germes de Soja*), which enjoyed some popularity before the war, which they deserved as an agreeable hors d'oeuvre, they are nothing but young mung bean sprouts (*de jeunes germinations du Haricot Mungo*).

Also mentions foods such as soy sauce, fermented tofu, and tofu, made from soybeans in India, Indo-China, China, and Japan. Tofu is known as *dau phu* in Annamite, *tao fou* in, Cantonese, *téou fou* in Chinese, and *to fou* in Japanese. A significant amount was being exported from China before the war. In Manchuria soybeans occupy 1/5 of the cultivated land. Speculates on the origin of the soybean. Address: Asst. to the Crop Service, Museum of Natural History (Assistant du Service de culture au Muséum d'histoire naturelle).

1131. *Christian Science Monitor.* 1922. Coolie trackers of the Yangtze River, philosophers of great brawn and courage. July 1. p. 9.

• ***Summary:*** These men use long tow ropes to pull boats or junks upstream along a 100-mile stretch of gorges on the Yangtze west of Ichang. It takes about 25 trackers to pull a houseboat 15-20 miles a day against the current. The happiest time of day for these "half starved" men is "chow time" at noon. They gulp down rice and return to work within 15 minutes. A vegetable soup is often included. "The basis of the soup is boiled beans, peas, or bean curd. Bean curd is a high protein food made by grinding soya beans under water, adding a little gypsum water and allowing the material to stand all night. A thick white curd settles out. It is sold wet or dried and smoked. The smoked product in three-inch squares and inch thick keeps very well; these are the kind used aboard the boats."

"The captain's contract with the men calls for a catty (1 1/3 lbs.) of pork a month. No other meat is served on the trip... The poorer Chinese families buy meat in two-ounce lots at long intervals. It is a luxury and not a necessity. The wealthy Chinese are heavy meat eaters, but the real workers live on a practically vegetable diet. The only condiment of the trackers is dried capsicum peppers ground in soya bean sauce." Note: It is not clear whether this sauce is *jiang* or soy sauce (*jaingyou*). Five photos show the boats and trackers.

plant: Used in the United States only in recent years–Many products can be made from it. *American Food Journal* 17(7):11-12. July.
• ***Summary:*** Contents: Introduction. Exceptionally high in protein. Soy bean one of the newest foods in the U.S. Soy bean cheese [tofu] (This long section is based on an article by Prof. Adolph in the February issue of the *Journal of Home Economics*). Experiments have shown high vitamin content. Shoyu one of the best known products (largely based on an article by K. Oshima in *American Food Journal*, Jan. 1922, p. 30-31).

Tables: (1) "Analysis of soy bean curd compared with cottage cheese." Values are given for "Soy bean curd, Cottage cheese, and Dried soy bean curd." (2) "Analysis of ash of soy bean curd (in percentage of water-free portion). (3) Composition of soy sauce.

(4) Yields per acre, lbs. protein per acre (digestible), and calories per acre from various crops. The soy bean produces twice as much protein per acre as any other crop. On the latter point, soy beans, yielding 16 bushels per acre, produce 294.7 lb of digestible protein per acre. Beans (yielding 14 bu/acre) produce 157.9 lb of protein. Corn (yielding 25 bu/acre) produces 147.0 lb of protein. Peanuts (yielding 34 bu/acre) produce 126.2 lb of digestible protein per acre. A photo shows the soy bean plant with roots. Address: Minnesota Agric. Exp. Station.

1133. Thuey, Lee Len. 1922. Frozen confection and process of making same. *U.S. Patent* 1,437,162. Nov. 28. 1 p. Application filed 18 Oct. 1920.
• ***Summary:*** This is a patent for the world's first tofu ice cream. "This invention relates to a frozen confection... resembling ice cream... The chief feature of the invention consists in associating an extract of soy beans, powdered gypsum, or sulphite of lime, a flavoring extract and a sweetening extract." The author also describes his invention as "The process of forming a milkless frozen confection."

Note: This is the earliest English-language document seen (March 2007) that uses the term "milkless frozen confection" to refer to soy ice cream. Address: Indianapolis, Indiana.

1134. **Product Name:** Tofu.
Manufacturer's Name: Eto Tofu-ten.
Manufacturer's Address: 119 E. Lafayette St., Stockton, California. Phone: 4408-W.
Date of Introduction: 1922.
New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 409. Note: See the 1941 listing for Lafayette Tofu at this address.

1135. **Product Name:** Tofu.
Manufacturer's Name: No-?? Tofu-ya.
Manufacturer's Address: 635 North 6th Street, San Jose, California.
Date of Introduction: 1922.
New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 207. The pronunciation of the second character in the company name is unknown. In the 1940 directory a company named Yoshizato Tofu Ten was listed at this address.

1136. **Product Name:** Tofu.
Manufacturer's Name: Ohchi Tofu, Unso.
Manufacturer's Address: 423 First St., San Diego, California.
Date of Introduction: 1922.
New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 346. The company name is written with the Chinese characters meaning "Big + Pond." Unso refers to a drayage/transportation company. No phone number is given.

• ***Summary:*** Chapter 2, "Drying oils (*Huiles siccatives*)" contains a section on "Soybean oil (*Huile de Soja hispida; Huile de pois"*) (p. 368-76). Its contents: Origin (Incl. miso, shoyu, tofu). Manufacture (China, Japan, above all Formosa). Physical and chemical properties. Table showing such properties, with 16 references. Applications and uses. Residues (soybean cake remaining after the oil is pressed from soybeans; *le tourteau de soja*).

Also discusses: Margarine (p. 232-33). Peanut oil (*Huile d'arachide,* p. 238-48, 699-701). Colza oil (Coleseed oil, *Huile de colza*), rapeseed oil (*Huile de navette*), and rubsen oil (*Huile de rabette*) (p. 265-72, 652). Sesame oil (*Huile de sésame,* p. 273-81, 705-06).

Note 1. The first edition of this work was published in 1905, and the second edition in 1914.

Note 2. This is the earliest document seen (March 2005) that uses the English word "coleseed" or the term "coleseed oil" to refer to rapeseed or to rapeseed oil, respectively. Address: Ingénieur-Chemiste.

1142. Hearn, Lafcadio. 1922. The writings of Lafcadio Hearn, in 16 volumes: Volume V. Glimpses of unfamiliar Japan, in two volumes. Vol. 1. Boston and New York: Houghton, Mifflin Co. 394 p. Illust. 23 cm.
• ***Summary:*** Chapter 15, titled Kitsune [Foxes] (p. 358-94). In front of the many Shinto shrines throughout Japan, the is usually a pair of seated foxes, in stone, on either side, facing one another. Such shrines and temples are dedicated to Inari, the God of Rice.

At Matsue there is the God of Coughs and Bad Colds. "And those who are cured of their coughs and colds after having prayed to him, bring to his temple offerings of tofu" (p. 362).

"At the rear of almost every Inari temple you will generally find in the wall of the shrine building, one or two feet above the ground, an aperture about eight inches in diameter and perfectly circular. It is often made so as to be closed at will by a sliding plank. This circular orifice is a foxhole, and if you find one open, and look within, you will probably see offerings of tofu or other food which foxes are supposed to be fond of" (p. 365).

"Strange is the madness of those into whom demon foxes enter. Sometimes they run naked shouting through the streets. Sometimes they lie down and froth at the mouth, and yelp as a fox yelps. And on some part of the body of the possessed a moving lump appears under the skin, which seems to have a life of its own. Prick it with a needle, and it glides instantly to another place. By no grasp can it be so tightly compressed by a strong hand that it will not slip from under the fingers. Possessed folk are also said to speak and write languages of which they were totally ignorant prior to possession. They eat only what foxes are believed to like–tofu, aburagé,* azukimeshi, etc.; and they eat a great deal, alleging that not they, but the possessing foxes, are hungry. *Footnote: "Aburagé is a name given to fried bean-curds or tofu. Azukimeshi is a preparation of red beans [azuki] boiled with rice" (p. 374).

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "aburagé" to refer to deep-fried tofu pouches.

"It not unfrequently happens that the victims of fox-possession are cruelly treated by their relatives–being severely burned and beaten in the hope that the fox may be thus driven away. Then the Hôin or Yamabushi is sent for–the exorciser [exorcist]. The exorciser argues with the fox, who speaks through the mouth of the possessed. When the fox is reduced to silence by religious argument upon the wickedness of possessing people, he usually agrees to go away on condition of being supplied with plenty of tofu or other food; and the food promised must be brought immediately to that particular Inari temple of which the fox declares himself a retainer... As soon as the possessed has been freed from the possessor, he falls down senseless, and remains for a long time prostrate. And it is said, also, that he who has once been possessed by a fox will never again be able to eat tofu, aburagé, azukimeshi, or any of those things

© Copyright Soyinfo Center 2013

which foxes like" (p. 375).

"Indeed, the richest and the most successful farmer of Izumo, worth more than a hundred thousand yen–Wakuri-San of Chinomiya in Kandegori–is almost universally believed by the peasantry to be a kitsune-mochi. They tell curious stories about him. Some say that when a very poor man he found in the woods one day a little white fox-cub, and took it home, and petted it, and gave it plenty of tofu, adzukimeshi, and aburage–three sorts of food which foxes love–and that from that day prosperity came to him. Others say that in his house there is a special zashiki, or guest-room for foxes; and that there, once in each month, a great banquet is given to hundreds of Hito-kitsune. But Chino- miya-no-Wakuri, as they call him, can afford to laugh at all these tales. He is a refined man, highly respected in cultivated circles where superstition never enters" (p. 381-82).

"Curious advantages have been taken of the superstitions relating to the Fox-God.

"In Matsue, several years ago, there was a tofuya which enjoyed an unusually large patronage. A tofuya is a shop where tofu is sold–a curd prepared from beans, and much resembling good custard in appearance. Of all eatable things, foxes are most fond of tofu and of soba, which is a preparation of buckwheat. There is even a legend that a fox, in the semblance of an elegantly attired man, once visited Nogi-no-Kuriharaya, a popular sobaya on the lake shore, and ate much soba. But after the guest was gone, the money he had paid changed into wooden shavings.

"The proprietor of the tofuya had a different experience. A man in wretched attire used to come to his shop every evening to buy a cho of tofu, which he devoured on the spot with the haste of one long famished. Every evening for weeks he came, and never spoke; but the landlord saw one evening the tip of a bushy white tail protruding from beneath the stranger's rags. The sight aroused strange surmises and weird hopes. From that night he began to treat the mysterious visitor with obsequious kindness.

"But another month passed before the latter spoke. Then what he said was about as follows: Though I seem to you a man, I am not a man; and I took upon myself human form only for the purpose of visiting you. I come from Taka-machi, where my temple is, at which you often visit. And being desirous to reward your piety and goodness of heart, I have come tonight to save you from a great danger. For by the power which I possess I know that to-morrow this street will burn, and all the houses in it shall be utterly destroyed except yours. To save it I am going to make a charm. But in order that I may do this, you must open your go-down (*kura*) that I may enter, and allow no one to watch me; for should living eye look upon me there, the charm will not avail.

"The shopkeeper, with fervent words of gratitude, opened his storehouse, and reverently admitted the seeming Inari, and gave orders that none of his household or servants should keep watch. And these orders were so well obeyed that all the stores within the storehouse, and all the valuables of the family, were removed without hindrance during the night. Next day the kura was found to be empty. And there was no fire" (p. 384-85). Address: Matsue, Japan.

1143. Hosie, Alexander. 1922. Szechwan: Its products, industries and resources. Shanghai, China: Kelly & Walsh, Ltd. 185 p. See p. 31-32, 70, 178-79. Maps. Index. 25 cm.
• ***Summary:*** This book is based on Hosie's 1904 report on Ssuch'uan. The Preface notes that on 13 Sept. 1876 Britain and China signed the Agreement of Chefoo, dealing with government relations and trade. This Agreement marked the beginning of an official British connection with the Chinese province of Szechwan, for Section III provided that the British Government would be free to send officers to reside at Chungking to watch the conditions of the British trade in Szechwan. Edward Colborne Baber was the first officer to take up residence there, and in 1881 Hosie was subsequently appointed to the post. During the three following years Hosie made three journeys through the provinces of Szechwan, Kweichow and Yünnan to study the conditions of trade in Western China. Reports of these journeys were issued as Parliamentary Papers at the time.

In 1902 Hosie was appointed Consul-General for the province of Szechwan. His first report on the province was issued as a Parliamentary Paper in Oct. 1904. In the second year he visited the Eastern Frontier of Tibet and a report of this journey appeared as another Parliamentary Paper in Aug. 1905. In 1911 he again visited Szechwan as Special Opium Commissioner and during these later journeys he was able to collect information additional to that contained in his 1904 report. He integrated this new information into the 1904 and had it published as this book.

In Chapter 2, titled "Agricultural and horticultural products," is a section on "Pulse" (p. 31-34) which begins with a lengthy discussion of the "Soy Bean (*Glycine hispida*, Max.)." The soy bean is not as important a crop in Szechwan as it is in northern China, and especially Manchuria. "The great oil yielding plant of Szechwan is rape, and although oil is extracted from the soy bean, it is as an article of food, whether cooked whole or in the form of resultant products, that the latter is appreciated in Western China. Three well-marked varieties, each with two or more sub-species, are cultivated." I. Yellow soy bean: (a) "Pai Huang Tou," or white yellow bean, is the lightest in color of the 3 sub-species. A bushel of 40 lb costs T. 0.8.8. [T. = Haikwan Tael], or about 2*s.* 1*d.* [2 shillings and one pence]. "The beans, which are ovoid in shape, are not much larger than the common pea, and weigh 150 to the ounce. As a rule, they are cooked whole and served as a vegetable condiment." (b) "Ta Huang Tou," or large yellow bean. Eaten like the white yellow bean but larger and heavier (122 beans/ounce). It costs 2-3% more than the white yellow bean; (c) "Hsiao Huang Tou," or small yellow bean. It is

© Copyright Soyinfo Center 2013

much smaller than the other two sub-species (266 beans/ounce) and less expensive. For this reason it is in demand for the manufacture of "beancurd" in its various forms. Oil is extracted from (a) and (b), and to a much less extent from (c).

II. "Ching Tou," or green soy bean. In sub-species (a) the epidermis [seed coat] and inside [cotyledons] are both green, whereas in (b) the epidermis is green and the inside yellow. "The former is more commonly cultivated in Szechwan, and both are eaten and cooked as a vegetable [green vegetable soybeans]. They are also salted and put away in jars for winter use. This bean is the same size, shape, and weight as the white-yellow bean, and valued at T. 0.8.0 a bushel of 40 lbs. The above green and yellow soy beans occupy the ground from April to August, whereas the next variety (black) takes a month longer to mature."

III. "Hei Tou," or Black Soy Bean. The first sub-species (a) is much larger, rounder, and heavier than the yellow and green variety. Only 88 are required to make up an ounce. Like the green bean, it is used cooked in its fresh state as well as pickled. The second sub-species (b) is a small, flattish bean; about 450 are required to make up one ounce. It is used in medicine and for food, principally the former. Both these sub-species are black outside and yellow inside, the epidermis of the former being readily detachable when crushed.

In Section 11, titled "Varnish, tallow, soap, and oil plants," the subsection on "Oil plants" includes a discussion (p. 70) of: (e) "*Glycine hispida*, Max.–In Szechwan, the soy bean or Northern China and Manchuria is replaced by the rape seed, and it is cultivated more as a vegetable [green vegetable soybeans] than for its oil. The production of the latter is insignificant from a commercial point of view."

Pages 173-80 give a detailed description of how salt is collected and refined in Szechwan. As part of this, pages 78-79 describe how nigari (called "Tan Pa,") is "used to cause coagulation of the legumine [legumin] in the manufacture of beancurd..." Address: M.A., LL.D., F.R.G.S., Formerly H.B.M. (His Britannic Majesty) Consul-General for Szechuan. Presently: Sandown, Isle of Wight.

Address: San Francisco, California.

1145. Vidal de La Blache, Paul; Martonne, Emmanuel de. 1922. Principes de géographie humaine: publiés d'après les manuscrits de l'Auteur [Principles of human geography: published in accordance with the author's manuscripts]. Paris: Librairie Armand Colin. vii + 327 p. See p. 144. Maps. Author index. Subject index. 26 cm. [Fre]
• ***Summary:*** In Part II of this book, "The forms of civilization," chapter 3 is titled "The means of nourishment" (p. 133+). In section 5, "Asiatic types," is a subsection titled "The Chinese type," which states (p. 144): However, in this climate which, as you progress northward, soon becomes more rigorous, the need for a food more substantial than rice soon arises. North of 32 degrees north latitude (by the way), rice stops being the main crop. The necessary supplement is obtained from various dolics (*doliques*) or beans, species for which the northern region of China is wonderfully suited and that, from time immemorial, have been a part of the basic human diet. The soybean (*Le soja*) deserves... the recognition of humanity. Its seed combines with its nutritive qualities, oleaginous properties that permit to extract preparations analogous to oil and to butter and to make from it a plant-based cheese (*fromage végétal*) (teou-fou) that provides a food that can be carried around and that, among such dense populations, is a resource particularly appreciated by the common people.

In French: *"Le soja mérite... la reconnaissance de l'humanité. Sa graine joint à ses qualités nutritives des propriétés oléagineuses qui permettent d'en tirer des préparations analogues à l'huile et au beurre, et d'en composer un fromage végétal* (*teou-fou*) *qui fournit un aliment transportable et qui est, parmi ses populations si denses, une ressource particulièrement appréciée du bas people."*

Note: In France, Paul Vidal de La Blache (lived 1845-1918) is a very famous geographer; he has been called "the father of modern French geography." Address: Member of the Institute, France.

1146. **Product Name:** Tofu, and Agé.
Manufacturer's Name: Tofu-ya.
Manufacturer's Address: 437 5th Ave. between Island Ave. and J Streets, San Diego, California.
Date of Introduction: 1922?
New Product–Documentation: Talk with Haruki Koba, former owner of Oriental Groceries. 1989. Oct. 25. In the early 1920s, before the War, there was a tofu shop in San Diego on 5th Street between Island and J Streets, very close to where Mr. Koba used to make tofu, near where the Nanking restaurant is now. It was later purchased by Mr. Himaka. Haruki was born in Coronado (southern California) in 1920 and he recalls eating tofu when he was small.

Talk with Osa Himaka, son of Chosuke Himaka. 1989. Oct. 26. In about 1928 his father bought a tofu business from another tofu maker, whose name Osa does not remember. It was named Tofu-ya (written only in Japanese characters).

1147. **Product Name:** Tofu.
Manufacturer's Name: Asahi Tofu-ten (Asahi Tofu Co.).
Manufacturer's Address: 52 North 3rd Street, Portland, Oregon.
Date of Introduction: 1923. January.

1148. **Product Name:** Tofu.
Manufacturer's Name: Ishihara Tofu-ya.
Manufacturer's Address: 414 L & M Alley, Sacramento, California. Phone: Main 4618W.
Date of Introduction: 1923. January.
New Product–Documentation: The Japanese American Directory. 1923. p. 182. Note: In 1922 Fukumoto Tofu-ya was making tofu at this address. Also in 1924, p. 193. Phone number is now Main 1424. Also in 1925, p. N-164. Also in 1926, p. N-162. Also in 1930. p. 170. Also in 1932, p. 169. Also in 1934, p. 172. Also in 1937, p. 173. Also in 1938, p. 190.

1149. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1923/01. Nichibei jûshoroku [The Japanese American directory. No 19]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

1150. **Product Name:** Tofu.
Manufacturer's Name: Rafu Tofu-ten (Los Angeles Tofu Shop).
Manufacturer's Address: 921 San Julian St., Los Angeles, California. Phone: 824304.
Date of Introduction: 1923. January.
New Product–Documentation: The Japanese American Directory. 1923. p. 357. Note 1. A company named Rafu Tofu-ya started making tofu in Los Angeles in 1914. The relationship (if any) between these two companies is unclear. Note 2. Rafu is the Japanese nickname for Los Angeles.

1151. **Product Name:** Tofu.
Manufacturer's Name: Sawamura Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: Main 2162-J.
Date of Introduction: 1923. January.
New Product–Documentation: The Japanese American Directory. 1923. p. 182. Note: Araya (Shinya?, Shintani?, Aratani?) Tofu-ya was making tofu at this address in 1922. Also in 1924, p. 193. Also in 1925, p. N-164.

1152. Piper, Charles V.; Morse, William J. 1923. The soybean. New York, NY: McGraw-Hill Book Company, Inc. xv + 329 p. Feb. Illust. Index. 24 cm. Reprinted unrevised in 1943 by Peter Smith Publishers, New York. [563 ref]
• ***Summary:*** This is the first comprehensive book about the soybean written in English, and the most important book on soybeans and soyfoods written in its time. Contains an excellent review of the world literature on soybeans and soyfoods with a bibliography on soy that is larger than any published prior to that time (563 references), a good description of the present status of the soybean worldwide based on the authors' extensive contacts, and a great deal of original information. It quickly became a key source for people and organizations working with soybeans and soyfoods in all countries, and a major factor in the expansion of the soybean in the western world. Because of its scope and influence, Soyfoods Center considers the year of its publication to mark the end of the "Early Years" of the soybean worldwide. It remained in print until about 1986.

Contents: Preface. 1. Introduction: Name of the plant, origin, literature, use by the Chinese and Japanese, present importance, future prospects in the U.S., recognition of the possibilities. 2. The commercial status of the soybean: Manchuria and China, Japan, Europe, U.S., other countries, summary of imports and exports of soybeans and soybean oil. 3. Botanical history of the soybean: History prior to Linnaeus' "Species Plantarum" 1753, Linnaeus' misunderstandings of the soybean, Prain's elucidation, other and the correct botanical name.

4. Agricultural history of the soybean: Vernacular names of the soybean, China, Korea, and Japan, India and neighboring regions, Cochin China, Malayan region, early introduction into the United States, later U.S. introductions, the early introduced varieties (grown in the USA by 1898–Ito San, Mammoth, Buckshot, Guelph or Medium Green, Butterball, Kingston, Samarow, Eda, Ogemaw or Ogema), soybean in Europe, varieties grown in Europe and identification, Hawaiian Islands, Australia, Africa, Argentina (p. 50), Canada ("Soybeans are grown in very small quantities in Canada and then usually as a forage crop"), Philippines, Egypt, Cuba (p. 52), British Guiana, Mauritius (p. 53), present culture distribution. 5. Culture of the soybean: Climatic adaptations, soil preferences, water requirement, preparation of seed bed, time of planting, methods and rate of seeding, seeding for pasturage, depth of seeding, inoculation, fertilizer reactions, cultivation, soybeans in mixtures (with cowpeas, sorghums, Sudan grass, Johnson grass, millet, corn, or sunflowers and corn).

6. Harvesting and storage of soybeans: harvesting soybeans for hay, silage, for the seed, seed yields, proportion

© Copyright Soyinfo Center 2013

of straw to seed, storing seed, separation of cracked from whole soybean seed, viability of soybean seed, pedigreed, inspected, registered, and certified seed. 7. Composition of the soybean: Proportions of stems, leaves and pods, composition of plant and seed, nutritive and mineral constituents, forms of nitrogen in soybean nodules, factors affecting oil content of seed. 8. Utilization of the soybean: Diversity of uses (a chart, p. 129, shows 59 products that can be made from soybean seeds, and 6 more that can be made from soybean plants), soybeans for green manure, pasturage, soiling, ensilage, hay, straw.

9. Varieties: Japanese, Manchurian, botanical classifications, vital characteristics, descriptions of important varieties, key for identification, breeding and improvement, genetic behavior, oil content.

10. Structure of soybean seeds. 11. Soybean oil: Methods of extraction [Manchurian, and solvent], American oil mills, methods of shipping and marketing, prices, utilization in soap manufacture, food, paint manufacture, miscellaneous. 12. Soybean cake or meal: Feeding value, composition, use for feeding for dairy cows, cattle, swine, sheep, poultry, digestibility, injurious effects, fertilizer.

13. Soybean products for human food: Food value of the soybean, digestibility of the soybean and its products, mature or dry soybeans, immature or green soybeans (a "nutritious green vegetable"), soybean flour, digestibility of soybean flour, soybean bran (p. 225-26), soybean sprouts, soybean coffee, soybean or vegetable milk [soymilk] (preparation, composition, residue from the manufacture of vegetable milk [okara], utilization of soybean milk, condensed vegetable milk, vegetable milk powder, fermented vegetable milk), vegetable casein, tofu or soybean curd (names and brief history, method of manufacture, coagulating agents, manufacturing yields, digestibility, utilization of bean curd and manufactured products, bean curd brains or *tofu nao,* dry bean curd or *tofu khan,* thousand folds {*chien chang tofu*}, fried bean curd {*tza tofu*}, Fragrant dry bean curd {*hsiang khan*}, frozen tofu {*kori tofu*}, Chinese preparation, various dishes), natto, hamananatto [hamanatto], yuba, miso, shoyu [soy sauce], confections. 14. Table dishes of soybeans and soybean products: mature or dry beans, flour, tofu, sprouts (86 recipes). 15. Enemies of the soybean: bacterial, mosaic, fungous [fungus], and nematode diseases, insects, rodents. This last chapter is a comprehensive review of the literature on soybean diseases and insects published before 1922.

The Preface begins: "The soybean, also known as soya or soja bean, has assumed great importance in recent years and offers far-reaching possibilities of the future, particularly in the United States. It is, therefore, desirable to bring together in a single volume the accumulated information concerning this crop...

"The aim has been to present the information so as to make it useful from both agricultural and commercial standpoints, not omitting, however, much that is mainly of historical or botanical interest..."

The introduction begins: "There is a wide and growing belief that the soybean is destined to become one of the leading farm crops in the United States."

Note 1. C.V. Piper lived 1867-1926. Note 2. This is the earliest English-language document seen (July 2003) that uses the term "soybean bran" to refer to soy bran.

Note 3. This is the earliest document seen (July 2003) in which Piper or Morse describe natto, Hamananatto [Hamanatto], yuba, or miso.

Note 4. This book was published by March 1923 (See *Ohio Farmer,* 10 March 1923, p. 313). Address: 1. Agrostologist; 2. Agronomist. Both: United States Dep. of Agriculture, Washington, DC.

1153. Read, Bernard E. comp. 1923. Botanical, chemical, and pharmacological reference list to Chinese materia medica. Peking, China: Printed by the Bureau of Engraving and Printing. v + 38 p. Feb. 28 cm.

• ***Summary:*** Contents: Chemical and pharmaceutical references (45 entries; p. i-ii). Botanical literature (17 entries; p. iii). Bibliography of materia medica and medical botany other than cited in this reference list (47 entries; p. iv-v). Note: For these first three parts, column 1 is the abbreviation; column 2 is the full title.

The rest of this book consists one long table (p. 1-38) composed of four columns. (1) Chinese names (The name of each materia medica substance written in Chinese characters). (2) Romanized Wade (The Wade-Giles romanization of the Chinese name; the table is sorted alphabetically by this column). (3) Botanical references (such as the scientific name of a plant, or terms like "soy oil," "rice congee," or "rice gruel"). (4) Chemical & pharm. references (Abbreviations of references to documents containing information about this plant or other substance).

Chiang Yu–Soy oil appears on p. 3. References: (1) USDA Office of Experiment Stations, Bulletin No. 68, p. 36 (1899). (2) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (3) J. of the College of Agriculture, Tokyo Imperial University 1:97 (16 June 1909). (4) J. of the College of Agriculture, Tokyo Imperial University 1:89 (16 June 1909).

Huang Ta Tou–Glycine hispida [The yellow soybean] appears on p. 11. References: (1) Matsumura, J. Shokubutsu-mei-i, Tokyo, 1915. (2) China Medical Journal 35:247 (1921). (3) Martindale and Wescott, Extra Pharmacopoeia, London, 1921, p. 824, 1913. (4) Pharmaceutical Journal (London), II, p. 120, 1913. (5) Loureiro, J. Flora cochinensis, 1790, vol. II, 1844, 1912. (6) Pharmaceutical Journal (London), II, p. 154 (1912). (7) USDA Office of Experiment Stations, Bulletin No. 68, p. 33 (1899). (8) Wehmer, C. Die Pflanzenstoffe, Jena, 1911, p. 362.

Pai Tou–Soja hispida [The white soybean] appears on p. 11. References: (1) Stuart, G.A. 1911. Chinese materia

medica, Shanghai. (2) Wehmer, C. Die Pflanzenstoffe, Jena, 1911, p. 362. (3) American J. of Physiology 19:468 (1907). (4) J. of the American Chemical Society 20:419 (1898).

Ta Tou–Glycine hispida M. [The soybean] appears on p. 11. (3) Bretschneider, E. Botanicon sinicum, 1881, 1892, 1895. (4) Giles, H.A. A Chinese-English dictionary, 1892

Ta Tou Ch'in–Bean relish appears on p. 30. No references.

Ta Tou Huang Chüan–Bean sprouts appears on p. 30– References: (1) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (2) USDA Bureau of Plant Industry, Bulletin No. 107 (?), p. 28. (3) China Medical Journal 35:247 (1921).

Note 1. The references in this book are very cryptic and hard to understand, even after careful analysis. The book also contains quite a few typographical errors, inconsistencies, and mistakes.

Note 2. Other interesting substances mentioned in this book are: Mung beans (p. 4; *Phaseolus mungo*). Laminaria and Sargassum (p. 7, 15; types of sea vegetables, like kombu). Amarantus (p. 9). Sesame seeds (p. 10; *Sesamum indicum*). Fermented nonglutinous rice (p. 12). Job's tears (p. 12; *Coix lachryma*). Kudzu (p. 13; *Pueraria hirsuta*). Daikon (*Raphanus sativus*). Umeboshi plum (p. 19; *Prunus mume*). Address: Dep. of Pharmacology and Physiological Chemistry, Peking Union Medical College.

1154. Piper, Charles V.; Morse, William J. 1923. Table dishes of soybeans and soybean products (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p. See p. 259-79.

• ***Summary:*** This chapter contained the largest collection of soya recipes published in the western world at that time. They are organized into four categories, based on the type of soyfood being used. "All are highly nutritious, and many of them of peculiar and delightful flavor and palatability.

"Mature or Dried Beans.–Experiments by the Office of Home Economics, U.S. Department of Agriculture and by the Home Economics department of many colleges have shown the mature or dry soybeans can be used in many palatable ways. The ordinary varieties of soybeans as the Mammoth, Midwest, Ito San, etc., require a longer period of soaking and cooking than navy beans. The Easycook and Hahto varieties need no more preparation than the ordinary bean as they cook up very readily. Time may be saved by using a pressure cooker for they soften very readily when thus treated. In general it is well to soak the beans and then cook them until soft. The time required will vary with the dryness of the bean and also with the variety. After soaking for 20 to 24 hours the beans should be cooked until they are well softened which may require as much as 2 hours or more." Recipes are given for: Boiled soybeans. Baked soybeans, No. 1, 2, and 3. Soybean soup. Soybean vegetable soup. Cream of soybean soup. Soybean croquettes, No. 1 and 2. Soybean loaf, No. 1 and 2. Soybean chili con carne. Soybean roast. Soybean timbales. Mexican frijoles. Soybean souffle. Soybean pudding. Soybean and fruit pudding. Soybeans and macaroni. Soybean salad. Soybean and cottage cheese salad. Soybean filling for sandwiches. Soybeans and rice. Soybean pastry. Soybean cookies. Soybean crust. Soybean muffins.

"Soybean flour. -... As soybean flour contains considerable fat, not much shortening is required." Recipes: Soybean biscuits, No. 1 and 2. Soybean muffins, No. 1, 2, 3, 4, and 5. Soybean griddle cakes, No. 1, and 2. Soybean coconut pudding. Soybean spice cake. Soybean mush. Soybean croquettes (mush). Soybean loaf (mush). Soybean omelet. Soybean fruit cake. Soybean gems. Soybean spoon bread. Soybean wafers. Soybean jam pudding. Soybean ginger cookies. Soybean gingerbread. Soybean filled cookies. Soybean yeast raised coffee cake. Soybean soft ginger cake. Soybean nut bread. Soybean and rye bread. Soybean cup cakes. Soybean pancakes. Soybean flour and celery soup.

"Tofu.–Attempts have been made during the past 5 years to introduce tofu to the American people, but without much success. In cities having a large oriental population fresh tofu or bean curd may be had at the Chinese stores. The following recipes prepared by the Soy Products Co., and Chicago Bean Bread Co., indicate the wide adaptability of tofu, or soy cake as it is termed by one company, to all kinds of cooking, and at the same time may suggest other practical ways in which this valuable food may be prepared. Recipes: Chicken soy cake (tofu). Soy cake (tofu) with tomatoes. Soy cake (tofu) with tomatoes and cheese. Mushrooms with soy cake (tofu). Potatoes with soy cake (tofu). Soy cake stuffed peppers. Cabbage or cauliflower soy cake (tofu). Eggs a la Caracas with soy cake (tofu). Soy cake (tofu) with tuna fish. Soy chicken salad. Soy cake (tofu) salad dressing. Salted tofu (p. 276, 278). Tofu for soup. Tofu and fish. Tofu with cheese. Creamed tofu in ramekins. Tofu and vegetable stew. Tofu and bacon. Pickled tofu. Tofu cakes. Curried tofu. Tofu in pineapple jelly.

"Soybean sprouts.–Soybean sprouts are especially valuable as a green vegetable and on account of their high nutritive value. The sprouts are easily prepared, have no waste, are quickly prepared, not more than 4 or 5 minutes in any given way. Boiling water should be poured over the sprouts before using for soups, stews, fried or boiled and creamed." Recipes include: Fried sprouts. Creamed sprouts. French sprout salad. Spanish salad. Potato salad. Potato salad. Sardine salad. Fruit salad. Chicken salad. Fish salad.

1155. Piper, Charles V.; Morse, William J. 1923. Tofu or soybean curd (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p. See p. 234-44, 273-78. [6 ref]

• ***Summary:*** Contents: Introduction. Method of manufacture. Coagulating agents. Manufacturing yields. Composition of soybean curd. Digestibility of soybean curd. Utilization

of bean curd and manufactured products. Bean curd brains or *tofu nao*. Dry bean curd or *tofu khan*. Thousand folds (*chien chang tofu*). Fried bean curd (*tza tofu*). Fragrant dry bean curd (*hsiang khan*). Frozen tofu (*kori tofu*). Chinese preparation. Various dishes.

Tofu, "a sort of white cheese or curd,... is called "Teou fu' by the Chinese, 'Tofu' by the Japanese, and 'Dan Phu' by the Annamites [in today's Vietnam]. It is said to have been originated by the Chinese philosopher, Whai Nan Tze, before the Christian Era, and was undoubtedly introduced into Japan from China by the Buddhists."

"The coagulating agents most generally employed throughout the Orient are the concentrated mother liquid obtained from the manufacture of salt from sea water, burned powdered gypsum, and magnesium chloride... The junior author (Morse) has obtained successful results with rennet and 1 per cent. solutions of acetic, tartaric, and lactic acids. Sour milk has also given satisfactory results as well as the water [whey] drawn from the bean curd after coagulation. By the use of pure salts or rennet the bitter taste which is generally found in the curd made by Oriental methods is avoided."

Yields: In commercial tofu production, 1 pound of beans is said to yield about 3.57 lb of tofu (i.e., the yield is 3.57). Champion (1885) got a yield of 1.53 and Paillieux (1880) got a yield of 1.50. Morse conducted many tests to determine the yield of curd from 19 different soybean varieties. His yields ranged from 0.686 to 0.282–extremely low.

Different types of Chinese tofu: (1) Dry bean curd or *tofu khan:* bean curd squares are dipped in burnt millet-sugar sauce until rich brown in color. "Fine salt also has been rubbed on them. This form of cheese can be kept for several days and is generally eaten in soups."

Note 1. This is the earliest English-language document seen (April 2013) uses the term "bean curd squares" to refer to Chinese-style pressed tofu. And this is the earliest English-language document seen (April 2013) that uses the term "soybean curd" to refer to tofu, or that uses the term "Teou fu" (or "Teou-fu"), or the term "Dan Phu" (or "Dan-Phu") to refer to Chinese-style tofu.

(2) "Thousand folds (*chien chang tofu*)*:* This product is prepared by placing very thin layers of the bean curds on cloths, on top of one another, and subjecting them to considerable pressure and allowing them to dry for a short time. The layers of bean curd are then removed and rolled together like a jamroll. It is said to be eaten cut into strips, like noodles, in soups. When allowed to mold for several days it is fried in sesame oil and has a meat like flavor."

(3) "Fried bean curd (*tza tofu*)*:* The fresh bean curd is cut into small squares and fried in deep fat. After a few minutes the bean curd pieces float on the surface and they are taken out. This product is often fastened on bamboo fibers (Fig. 65) and may be kept for several days. They may also be eaten with syrup as fritters." (4) "Fragrant dry bean curd (*hsiang khan*) [*wu-hsiang toufu kan*]*:* This form is made like the ordinary bean curd but great pressure is applied to drive out as much water as possible. The squares (Fig. 66) are first soaked in a weak brine or bean sauce to which powdered spices and burnt millet-sugar have been added and then are thoroughly dried out. The curd becomes very hard and can be kept indefinitely. It is said to be eaten sliced in soups and in various vegetable dishes."

(5) "Frozen tofu (*kori tofu*)*:* Frozen bean curd is an excellent example of the application of the freezing process for the drying or concentration of a food. Fresh bean curd contains rather a high per cent. of water and is therefore a very unstable product. The fresh bean curd is cut into small pieces and exposed to severe cold weather. By freezing, the vegetable proteid shrinks and forms a porous cake permeated with ice crystals. This frozen cake can be readily thawed out and dried. It forms a product much resembling gluten bread in appearance. If the tofu is not frozen, it is difficult to dry and the resulting material is dense and horn-like..." (6) "Chinese preparation:... Tofu is quite generally preserved in loaves (100 to 150 grams) which are cooked in a decoction of turmeric roots. It is also preserved with salt. Often the curd is cut into small pieces and preserved in rice brandy [to make fermented tofu]. When smoked, the curd also keeps very well and can be wrapped in tinfoil for the market. Smoked curd is prepared by cooking the curd in a sauce diluted with water (80 per cent. and 20 per cent. soy sauce) and after cooking the curd is smoked in the same manner as meat."

Various American- and European-style recipes: "When cut into small pieces and cooked with an egg, it furnishes an excellent omelet. It also may be used as the principal ingredient in baked stuffed peppers. The fresh tofu makes an excellent salad or sandwich filling if the curd is chopped finely and chopped olives, pepper, salt, and mayonnaise dressing are added. When cut into small pieces and cooked in tomato sauce or similar sauces, a very good meat substitute is obtained. Cooked with meat broth, the curd takes the flavor of the meat. It is readily seen that the fresh bean curd can be utilized in many ways and when the people of the western world become better acquainted with this simple method of manufacture, it will no doubt, become more generally utilized."

Nineteen tofu recipes are given on pages 273-78.

Photos show: (1) "Large blocks of freshly made bean curd 'Tofu' ready to be cut up into squares and sold for breakfast." (2) "A large bamboo tray full of various kinds of bean curd. In the little wooden tubs on the ground the watery sorts of curd are kept immersed in saline water." (3) "Squares of fresh bean curd fried in oil and put on a string of bamboo fiber. Called tza tofu (fried bean curd) and said to supply a 'snack' in between meals for hard working Chinese laborers." (4) "A semi-dry bean curd of the consistency of smoked sausage, called 'Hsiang khan' (fragrant dry) which

© Copyright Soyinfo Center 2013

is eaten sliced in soups, and with vegetable dishes." Two squares, each bearing a stamped mark, are shown next to an open pocket knife for size comparison. (5) "A semi-dry fresh bean curd, called 'Lao to fu' (old bean curd) said to be used by the poorer classes of Chinese for breakfast." One square (with a cloth-like texture on the surface) on a small plate, and a broken half square are shown. (6) A room in which fermented tofu is being made. "A dark room of even temperature where wooden frames, full of squares of bean curd are piled, one on the other, the lowest resting on a layer of somewhat damp rice straw." One tray is open, showing the rows of tofu cubes, each covered with a white mycelium. (7) "Large earthen jars, full of squares of bean-curd, which are covered over with spiced brine and soy-sauce. After several months' curing a new product has been formed, called 'Foo-yu'–Bean cheese [fermented tofu], which can be kept for many years and becomes better with age."

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "Foo-yu" to refer to fermented tofu.

Note 3. Each of these 7 photos was taken (probably in China) by Frank N. Meyer, Agricultural Explorer, USDA.

Tables show: (1) Yields of bean curd obtained by William Morse from different varieties of soybeans. Variety #37062 gave the highest yield of tofu. 50 grams of soybeans yielded 34.3 gm of tofu and 30.5 gm of "Cake" [okara]. Note 4. This yield of 0.69 is very low; it should be at least 2.5. Variety #38462 gave the lowest yield, 0.28. (2) Composition of tofu and tofu products, compiled from various sources: Five samples of fresh tofu (6.0% protein on average), one frozen tofu (48.65% protein and 28.65% fat), and one fried tofu (21.96% protein and 18.72% fat).

1156. Piper, Charles V.; Morse, William J. 1923. Photographs and illustrations (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p.

• ***Summary:*** Photos show: (Fig. 1) Typical soybean plant (p. 1). (2) Plant of wild soybean (p. 2). (3) A fleet of junks engaged in carrying soybeans to Newchwang, Manchuria, from different points in the interior, taking away bean oil and bean cake to other places * (p. 6). (4) Soybeans in sacks brought to a bean center by horses in winter in Manchuria (p. 8). (5) Chinese bean cart loaded with beans in wicker containers in Manchuria (p. 8).

(6) Type of cart and method of hauling soybeans with a horse in Manchuria (p. 10). (7) Manchurian farmers hauling the bean crop to market in winter on sleds (p. 10). (8) Plants of a soybean variety from India (p. 38). (9) Plants of the wild soybean from Soochow, China, grown at the Arlington Experimental Farm, 1908 (p. 38). (Fig. 15) Soybeans grown on the edges of a rice field in southern China * (p. 58).

(16) A man in a field of the Peking variety of soybean grown in rows and cultivated (p. 61). (17) A broadcast field of soybeans showing how weeds have overrun the field (p. 61). (18) The ordinary grain drill furnishes a most convenient method of seeding in rows or broadcast (p. 63). (19) Soybeans and corn grown in alternate rows for pasturage; a man in a hat stands between the rows (p. 65). (20) The roots of a soybean plant, showing abundant development of nodules (p. 66).

(21) A man standing in a plat of soybeans without inoculation (in the foreground) and an adjacent plat which had been inoculated, in the background (p. 67). (22) A man seated on a cultivator pulled by two horses doing the last cultivation on a field of soybeans (p. 79). (23) Soybeans and sorghums grown in mixture for forage purposes (p. 80). (24) A field of soybean and Sudan grass grown in mixture for hay (p. 81). (25) A field of soybeans and corn grown in the same row for ensilage (p. 82).

(26) Soybean hay on frames. Under favorable weather conditions, hay can be successfully cured in this manner (p. 86). (27) A field of mature soybeans ready to cut for seed (p. 90). (28) Harvesting soybeans for seed with a bunching attachment on the mower (p. 90). (29) Self-rake reaper used in cutting soybeans for seed (p. 91). (30) Soybeans cut for seed with binder and soybeans placed in shocks for curing (p. 92).

(31) The ordinary gasoline threshing outfit which may be used in threshing soybeans (p. 92). (32) A special bean harvester used in gathering the soybean seed from the standing mature plants and also cleaning it (p. 94). (33) A special bean harvester by which the plants are cut, thrashed, and cleaned (p. 94). (34) A special soybean harvester used to gather soybean seeds from the standing mature plants, and which can be adjusted to level or ridged cultivation. On one side is written "The Little Giant Bean Harvester," manufactured by Hardy & Newsom, La Grange, North Carolina (p. 95). (35) Method of storing soybean seed awaiting shipment in Manchuria. The beans is sacks are stacked under Chinese mats (p. 98).

(37) Pasturing a corn and soybean mixture with sheep (p. 133). (38) Thrashing soybeans from the field and baling the straw (p. 141). (39) The larger plant is the Guelph or Medium Green which is very pubescent, while the smaller plant is a nearly smooth variety from Japan (p. 149). (40) Pods of soybeans showing the range in size and shape (natural size; p. 151).

(41) Seeds of the most important varieties of soybeans now grown in the United States showing the wide range in size and shape of seed. The name of each of the 20 varieties is given. A side view and a ventral view of each pair of seeds is given (p. 152). (42) Seeds of a black and white variety (Widower) from Korea. The white is due to the splitting of the outer later of the testa. A side view of six varieties is shown (p. 155). (43) A field of the Biloxi soybean, which requires a long season to mature (p. 163). (44) A man standing in a field of the Virginia variety of soybeans (p. 170). (45) Seeds of a natural soybean hybrid

Illustrations (line drawings) show: (Fig. 48) Flower of the soybean enlarged. Front view. Side view. Parts of the corolla, standard, wing, one of the keel petals. Stamens. Pistil (p. 177). Figures 50-55, from Kondo (1913) are described at Kondo.

Maps show where the soybean is extensively and successfully grown in: (Fig. 10) The Orient (p. 51). (11) North and South America (p. 52). (12) Europe and Africa (p. 53). (13) A map of Manchuria shows the soybean districts and seed production of different localities (p. 56). (14) An outline map of the United States shows the areas with shading to which the soybean is especially adapted as to varieties and purposes (p. 57).

A diagram (Fig. 36, p. 129) shows the various ways in which the plants and seeds of soybeans are utilized. Level 2: The first two categories are seeds and plants.

Level 3: Under seeds: Food products, oil, and meal. Under plants: Hay, ensilage, soiling.

Level 4: Under food products: green beans and dry beans. Under oil: Glycerin, explosives, enamels, varnish, food products, waterproof goods, linoleum, paints, soap stock, celluloid, rubber substitute, printing inks, lighting [illumination], lubricating. Under meal: Human food, stock feed, fertilizer. Under forage: Hay, ensilage, soiling.

Level 5: Under green beans: Green vegetables, canned, salads. Under dried beans: Soy sauce, boiled beans [from whole dry soybeans], baked beans [whole], soups, coffee substitute, roasted beans, vegetable milk, breakfast foods. Under soap stock: Soft soaps, hard soaps. Under oil–food products: Butter substitute, lard substitutes, edible oils. salad oils. Under meal–human food: Breakfast foods, diabetic foods, flour, infant foods, macaroni, crackers, [soy] milk.

Level 6: Under dried beans–vegetable milk: Cheese, condensed milk, fresh milk, confections, casein. Under meal–human food–flour: Bread, cakes, muffins, biscuit.

Level 7: Under cheese: Fresh, dried, smoked, fermented.

1157. Piper, Charles V.; Morse, William J. 1923. Tables (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p.

• ***Summary:*** Tables: (1) Acreage, production and yield of soybean seeds in the United States. Gives statistics for each for 1918, 1919, and 1920 for 14 states, other, and total. The states are listed in descending order of soybean acreage in 1921, as follows: North Carolina, Virginia, Alabama, Illinois, Ohio, Kentucky, Missouri, Tennessee, Wisconsin, Indiana, Georgia, Pennsylvania, S. Carolina, Mississippi.

(2) Estimates of soybean production of Manchuria for various years (in million tons): 1906 = 0.6. 1907 = 0.6 to 0.9. 1908 = 1.150. 1909 = 1.150. 1910 = 1.4. 1913 = 1.2 1921 = 4.52.

(3) Cost of production of soybeans per acre in Manchuria, 1910. (4) Monthly capacity of steam oil mills at Newchwang, Manchuria, 1917. (5) Export of soybeans, bean cake, and bean oil from the principal ports of South Manchuria, 1909 to 1913, inclusive. (6) Five-year averages of acreage, production, and yield per acre of soybeans in Japan. (7) Amount and value of soybeans imported by Japan. (8) Importations of soybean cake and bean oil into Japan. (9) Quantity and value of exports of soybeans and soybean oil from Japan to foreign countries, 1913 and 1914. (10) Quantity and value of exports of miso (bean cheese) and shoyu sauce, 1903 to 1907, inclusive. (11) Quantity and value of imports of soybeans, bean cake, and bean oil by European countries, 1912 to 1914, inclusive. (12)

1158. Church, Margaret B. 1923. Soy and related fermentations. *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• ***Summary:*** This long and very informative paper, with its excellent bibliography and review of the literature, is the third earliest study seen of a fermented food published by a USDA researcher. The focus is on Japanese fermentations because of the laboratory's contact with Japanese researchers, such as Dr. T. Takahashi and Dr. G. Kita. "The experimental work reported here was conducted under the direction of Charles Thom, mycologist in charge, Microbiological Laboratory, Bureau of Chemistry."

Contents: Introduction. Work of previous investigators. Experimental work: Apparatus, material, preparation of ingredients, shoyu-koji, peanut press cake koji, shoyu-moromi. Proportions of ingredients. Yields. Chinese soy sauce. Peanut sauce. Relation of enzymic activity to soy processes. Manufacture in the United States. Related fermentations (Miso, soy cheese [fermented tofu], natto). Summary. Bibliography. "Soy sauce is a dark-brown salty liquid made by the fermentation of soy beans with, as a rule, some additional starchy component. It is widely used as a seasoning throughout Japan, China, and Java [Indonesia], and has been introduced into the Philippines and Hawaii* (* = See letter from C.W. Carpenter, Sept. 23, 1918). Where the occidental would use a vegetable or meat extract and salt, the oriental daily uses soy sauce. Americans are familiar with soy sauce as it is used in the Chinese-American restaurants and as an ingredient which produces the characteristic flavor of the Worcestershire type of sauce." In Japan, the process of preparing "shoyu-koji," a mold-fermented product made from "tane-koji," takes 3 to 4 days. "The mold-fermented material is emptied into a strong brine, thus producing a mash. Constant daily attention is given to aeration, even distribution, and stirring of the solid ingredients. Progressive changes take place over a period of from six months to several years, until at last the mature 'moromi,' as the mash is designated by the Japanese, is produced. These changes are due partially to the activity of bacteria and yeasts, but chiefly to the enzymes of the mold introduced into the mash with the koji."

"Experimental work: The Department of Agriculture had certain strains of the *Aspergillus flavus-oryzae* group of molds known to be used in making soy sauce. Through the courtesy of W.T. Swingle, of the Bureau of Plant Industry, a can of commercial Japanese rice *tane-koji* designed for shoyu manufacture was also received. Dr. Gen-itsu Kita brought additional samples of shoyu *tane-koji* under sterile conditions directly from Japan. Provided thus with soy beans, wheat, and the mold ferment, experiments with soy sauce were undertaken by the Bureau of Chemistry in 1918.

(1) "Apparatus: The apparatus was made according to specifications drawn by Doctor [T.] Takahashi, of the Imperial University of Tokyo, who worked in the bureau for a month." "The usual Japanese koji room (fig. 2) is 32½ feet long, 11 feet wide, and 7 feet high. The walls are thick, and in the more modern factories are built of brick, which does away with fluctuations in the temperature from without. At one end of the room is an entrance and at the opposite end a window. In the ceiling several openings provide means of escape for the carbon dioxid [dioxide] and the damp air. Steam pipes along the floor make it possible to warm the room in cold weather. The ceiling is built with many layers of straw in order that the condensing moisture may be absorbed. One disadvantage of such a ceiling is that infection always occurs in the wet straw. A large area of infection directly over the piles of koji trays is detrimental to the production of sweet koji. In modern buildings, therefore, the surface of the ceiling is coated with cement. When a cement ceiling is used the condensed water drops on the trays of koji, which also is harmful... The burning of sulphur is useful in combating any infection of a koji room" (p. 5).

Material: "The mold ferment employed in shoyu-koji manufacture is *Aspergillus flavus* Link, occasionally *A. oryzae* (Ahlb.) Cohn, or strains intermediate between the two species." "Certain Japanese manufacturers add cultures of pure yeast belonging to the genus *Zygosaccharomyces* at the time of placing the first mold-fermented material in the brine."

Preparation of ingredients: While soaking the soy beans, the water should be changed at intervals of several hours to prevent the formation of spore-forming rods, which

© Copyright Soyinfo Center 2013

cause heating and souring. The spores of these bacilli are on the beans as they come from the field. "After being soaked for 20 to 24 hours the swollen beans are cooked in an open kettle or under pressure until they are soft enough to be easily pressed flat between the thumb and finger. This desired softness can be obtained by autoclaving at 15 pounds pressure for 50 minutes and also by much longer cooking in an open kettle. Autoclaving under pressure has the advantage of sterilizing the material." After roasting, the wheat is crushed or cracked. It is important to "reduce some portions of the kernel to a fine powder or dust." The cooked beans and cracked wheat are "mixed in large trays or on mixing tables." Hot beans "may be cooled with a draft of air directed over a thinly spread layer." These "two ingredients need to be thoroughly mixed, so that the wheat dust may form a coat over each bean. The lower water content thus induced on the exterior of the beans makes them better adapted to mold growth than to bacterial growth."

"Shoyu-koji–Ripening: After the beans and wheat are thoroughly mixed, a very small quantity of previously molded material, such as mature rice koji (tane-koji), some shoyu-koji, or a pure mold culture, is thoroughly mixed into the ingredients. The whole mass is then distributed into the small flat koji trays (Plate II, inserted between pages 4 and 5) which are immediately placed into the koji fermentation room before they cool further. Each tray holds about 1.8 liters, or about 2 quarts of raw material. The koji trays are placed in tiers along the wall of the room (Fig. 3)." They are usually stacked in a zigzag fashion to ensure adequate aeration. This is extremely important "because moisture and the lack of oxygen induce the development of mucors and bacteria, and are said to cause the diastatic enzyme to develop at the expense of the proteolytic enzyme. In some localities in Japan no such trays are used, but a broad straw mat with which very good koji can be secured." "The koji room or compartment is kept at a temperature of 24º to 25º C., with a definite humidity." Continued. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

1159. Church, Margaret B. 1923. Soy and related fermentations (Continued–Document part II). *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• ***Summary:*** Continued from p. 9. Shoyu-koji: Ripening. The temperature of the koji starts at 24-28ºC. Eighteen hours after the trays have been stacked in the koji room, they should be examined; the temperature inside the koji should be 27 to 29ºC. "Any higher temperature is due to serious bacterial contamination, or to unsatisfactory conditions of temperature and humidity in the koji room. At the end of 18 hours the koji is stirred, the bottom being brought to the top and the beans are broken apart. Thorough stirring is necessary, for the beans and wheat are now bound by the mycelium or white threads produced by the shoyu-mold." Sporulation must not have begun. "This immature koji should be spread out and exposed by stirring until it has cooled down to 24º or 25º C. (70-72ºF) or lower." The koji should now be heaped in two piles extending the length of the tray (Plate II, B). "The material should come in contact with the sides of the tray as little as possible, since condensed water on the surface of the saturated wood induces bacterial growth when absorbed by the tray or retained by the beans and wheat."

The trays are left undisturbed in the koji room for 6-7 hours. The temperature of the room should be just under 30ºC while that of the koji should be 27-29ºC. "The mycelial growth is now heavier but no sporulation should be evident. At the end of this second incubation period, the koji is stirred thoroughly a second time, the beans and what being broken apart. The mass is cooled below 24ºC. After this stirring, four furrows, running the short way of the tray and forming three heaps, are made (Plate II, C). The trays of koji are again placed in the koji room."

"When examined at the end of 40 hours, 12 to 14 hours after the second stirring, the surface of the koji should be a clear 'flavus' or yellow color from the fruiting heads of Aspergillus... The temperature of the best koji should now be not much above 35ºC, although 35º to 36ºC is permissible... Mature koji has a clear yellow to yellow-green color on the surface and throughout the whole mass. If well ripened, it may be lifted from the tray as one entire block.

"The koji may become infected with *Rhizopus nigricans* if the atmosphere of the koji chamber is moist to the point of condensation as drops. A little Mucor or Rhizopus is disregarded in the material, unless a bad flavor or odor is also present. It is poor practice, however, to allow the Rhizopus to enter..."

Proportion of wheat: Japanese shoyu requires "at least one part of prepared wheat to three parts of prepared beans. This proportion of wheat is somewhat less than equal parts of the unprepared ingredients by volume."

"Color: Mold-ripened soybeans and wheat are usually clear yellow when prepared by the Japanese method for shoyu-koji. This coloration is due to pigments of the spores or seedlike bodies of the mold. Occasionally the color of the mass of beans and wheat is yellowish green. The reason for this variation is not easily defined."

"Bacterial count: Condemnation of batches of koji may be readily based on the presence or absence of an ammoniacal odor or evidence of putrefaction. Any odor of ammonia or of putrefaction, any sticky condition, or any appearance of rottenness in koji is due to bacterial and not mold activity. The bacteria involved in the ripening of shoyu-koji in these experiments belong to the *Bacillus mesentericus* and *B. vulgatus* groups." These are aerobic spore formers. The spores of these bacteria, which grow if the bean soaking water is not changed, can survive pressurized cooking at 15 pounds for 30 minutes."

The author successfully made koji from "commercial

© Copyright Soyinfo Center 2013

peanut press cake."

"Shoyu-moromi: The shoyu koji when mature is emptied into a tub of brine. In the experimental work conducted in cooperation with Dr. T. Takahashi one-half of a 65-gallon wooden cask was used for the tub or vat. The brine was a solution of commercial salt at a strength of 20º to 22º B [Baumé, a measure of specific gravity]... Each tub of moromi was inoculated on the first day with four flasks (450 cubic centimeters of wort extract broth and 5 per cent sodium chlorid in each) of a yeast culture of Zygosaccharomyces sp... In Japan sea salt is used. It is said that one part of the sea salt to two parts of water by volume gives a brine from 20º to 22º B., presumably because of the coarseness of the native Japanese sea salt."

Three different batches of experimental shoyu-moromi were made. Two were kept at the ambient temperature of the laboratories (20-24ºC). Mash C was made with a weaker brine and kept at a higher temperature. These mashes were stirred daily for 1 hour. "Also a blast of air was bubbled into the material in order to supply oxygen for the microorganisms present." The ripening lasted 10 months. Mash C was of inferior quality. "Doctor Takahashi stated that shoyu A compared favorably with the best commercial shoyu of Japan, while others thought that it resembled the heavy soy made by Japanese housewives in the country districts... The highest quality of shoyu in Japan is said to go under the label 'Mogi' or 'Kikkoman,' but chemical analyses in König (1904) and in the Bureau of Chemistry records indicate no consistent chemical composition."

Bacteriological examination: The main bacteria in this shoyu-moromi seemed to be *Bacillus mesentericus.* "In January 1920 two lots of sauce were started. One was composed of soy beans and wheat and the second of peanut press cake and, for the most part, wheat as a starchy substance." Dr. Edwin LeFevre of the Bureau of Chemistry helped with the bacteriological analyses.

Proportions of ingredients: Table 3, prepared by Dr. Takahashi, shows the proportion of ingredients by volume used in Japan to make 3 grades of shoyu: Best, good, and common. For the best grade use 100 parts (by volume) each of soy beans and wheat, 90 parts of Japanese sea salt, and 180 parts of water.

Yields: When pressed in sacks with a hydraulic press under 1,250 pounds per square inch for 23 hours, 100 liters of moromi yields, on average, 78.7% shoyu and 21.3% residue.

Note: This is the earliest document seen (April 2012) that describes how to make fermented soy sauce on a commercial scale–that will actually work. All known previous descriptions omitted the "mold culture" or koji stage. Address: Microanalyst, Microbiological Laboratory, Bureau of Chemistry [USDA].

1160. *Good Health* (*Battle Creek, Michigan*). 1923. Food value of the soy bean. 58(8):15-16. Aug. Advertising section.
• ***Summary:*** D.W. of Louisiana asks in a letter, "What is the food value of the soy bean?" Answer: "The soy bean is rich in fat, containing twenty times as much as the navy bean. It is also rich in protein, of which it contains fifty per cent more than the same weight of meat. The protein of the soy bean closely resembles that of milk, being a 'complete' protein and capable of replacing the protein of eggs, meat or milk. This has been demonstrated by animal feeding experiments.

"A milk closely resembling cow's milk may be prepared from the soy bean, and also cheese... In China and Japan the soy is used only in the form of *to-fu,* or curd... The half-grown beans of certain varieties are delicious."

1161. *Tropical Life* (*England*). 1923. Billiard balls at present being grown at the Royal Botanic Gardens, Regent's Park, N.W. [Soya bean cultivation in London]. 19(8):119. Aug.
• ***Summary:*** This summary of an article in the *Daily Mail* (London) notes that the soya beans, which are growing nicely, could be made into billiard balls, knife- and umbrella handles, buckles and beads, cheese [tofu], flour, table-oil, cake, sauce, soap, lubricating and illuminating oil, glycerine, paint, varnish, celluloid, printing ink, waterproofs [waterproof gear and cloth], explosives, and linoleum.

The soya beans are being grown by Mr. J.L. North, curator of the Royal Botanic Gardens (See "Our Friend" in the Jan. 1923 issue). North, who is known as London's soy wizard, has been growing soya beans for 9 years [i.e., since 1914]. Since there is so little room for them in the Gardens, he is experimenting at Chiswick [in the Greater London borough of Hounslow] with 17 species from Europe and America. He believes they are of great importance to England–a country that grows no oil plants.

1162. Slosson, Edwin E. 1923. Catching up with China. *Scientific Monthly* 17:283-85. Sept.
• ***Summary:*** The soy bean "was first introduced to America in 1804, but it was a hundred years before we could be induced to take it seriously... But in the last ten years it has rapidly come to the front as one of our major crops and is likely in the next ten years to go ahead of oats in acreage in some of our states... The latest bulletin of the Department of Agriculture lists fifty different uses for soy products, and doubtless Yankee ingenuity can and will add more when we get our minds to working on it.

"Even the Japanese have not exhausted their ingenuity in this field, long as they have been at it. A Japanese scientist named Sato has invented a new plastic which he has called, according to American precedent, 'Satolite.' It is made by precipitating the protein with sulphite, hardening it with formaldehyde, and molding it under heat and pressure into combs, buttons and whatever we make from hard rubber or celluloid or the casein of milk.

"The soy bean is rich in protein and fat, and lacking in

© Copyright Soyinfo Center 2013

starch; in that more like animal than like vegetable food. You can make a milk out of it by simply soaking the dried beans till soft, then crushing fine in a meat grinder, boiling in three times the volume of water for half an hour and straining through cloth. If you do not like the flavor you can add vanillin or something else. This vegetable milk sometimes agrees with children when cow's milk does not. It can also be used for cakes and custards.

"The soy milk may be made into curds and cheeses of various sorts which form a large part of the diet of orientals, but for which we have not yet acquired a taste. Soy meal has come into common use in America, not only as a cattle food, but also for bread and pastry mixed with three parts wheat flour.

"Soy sauce has long been familiar but quite unknown to us. We did not recognize it under its aristocratic English name and its added flavors. But when the high cost of living drove us to the chop sueys, we became acquainted with the cruet of brown salty sauce called 'shoyu,' and we found, as the Chinese had found thousands of years before, that a sprinkling of it would make tasty a large lot of rice and serve as substitute for meat, both in taste and nutriment. Soy sauce is of several sorts. If you want it strong take the Korean. If you want it sweet take the Japanese. It is made by fermentation and the flavor depends upon the way it is brewed and the length of time it is left to ripen. To suit the palate of a Korean connoisseur the jars must be exposed to the sunshine by day and covered by night for a period of thirty years. We Americans, when we get to making it, will undoubtedly speed up the process.

"So far the oil is the most in demand of the soy products. The beans contain from 18 to 20 percent. of a fine palatable oil, which we have imported at the rate of a hundred thousand tons in a year, but which we are now growing for ourselves. It can take the place of cottonseed oil in vegetable substitutes for lard and butter, and of linseed oil in paints. Formerly the oil went mostly to Germany and England, but the war made a shift in the currents of Pacific trade, and we learned to appreciate its value. But we have a lot to learn yet before we catch up with the orientals in the utilization of this multifarious bean."

1163. Carqué, Otto. 1923. Rational diet: An advanced treatise on the food question. Los Angeles, California: Times-Mirror Press. xvi + 540 p. Illust. 24 cm. [104* ref]

• ***Summary:*** The preface of this book begins: "The aim of this book is to disseminate a better knowledge of diet and its relation to health and disease, in plain non-technical language, understandable to all who seek more scientific information on this vitally important subject." The author advocates a vegetarian diet, with dairy products and eggs consumed in small amounts–if at all; their pros and cons are discussed on pages 324-340.

In the chapter on "Flesh Foods," pages 353-54 state: "Writing to his friend Firmus, who had abandoned the Pythagorean doctrine in order to eat meat, the philosopher Porphyry, living in the third century, said: 'I cannot believe that your change of diet is due to reasons of health, for you yourself have constantly affirmed that a vegetable diet is much more suitable than any other, not only to give perfect health, but even a philosophic and balanced judgment, as a long experience had taught you.'

"And Seneca, who, after studying the problem of nutrition for many years, had adopted vegetarianism, wrote: 'Struck by such arguments, I also have given up the use of flesh of animals, and at the end of a year my new habits have become not only easy to me, but most agreeable; and it even seems to me that my intellectual aptitudes have become more and more developed.'

"Isaac Newton adhered strictly to a vegetarian regimen while performing the prodigious intellectual work which made his name immortal. Among the modern philosophers and artists who have followed or advocated a rational vegetarian regimen may be mentioned: Shelley, Byron, Thoreau, Tolstoi [Tolstoy], Richard Wagner, Tagore, Maeterlinck, Alexander Pope, and George Bernard Shaw."

Chapter V, "Cereals, Legumes, and Miscellaneous Food Products," contains a section titled "Beans," which is largely devoted to soy beans (*Dolichos soya*) (p. 316-318). It discusses green vegetable soybeans ("Soy beans, when about three-fourths grown, make a most palatable and nutritious green vegetable, like the green pea or the lima bean."), soy flour, soy bean milk, bean cheese (tofu), and soy sauce.

Note: This is the earliest document seen (Nov. 2010) in which Otto Carqué mentions or discusses soybeans or soyfoods.

Concerning the wastefulness of the animal as a converter of feed to food, page 361 contains a long quotation from an article in the prestigious journal *Science* titled "The cost of roast pig," by Prof. Henry P. Armsby (1917).

In extensive tables of food composition, the composition of soy beans is given on page 504. The author lived 1867-1935. Address: Los Angeles, California.

1164. Rose, Mary Schwartz; MacLeod, Grace; Bisbey, Bertha. 1923. Maintenance values for the proteins of milk, bread-and-milk, meat and soy bean curd in human nutrition. *Proceedings of the Society for Experimental Biology and Medicine* 21(3):143-44. Dec.

• ***Summary:*** Gives the results of food trials on two healthy women subjects. The relative biological values of the foods consumed are: Soy bean: 101. Meat: 101. Milk: 121. Milk and bread: 116. Address: Dep. of Nutrition, Teachers College, Columbia Univ., New York City.

1165. **Product Name:** Tofu?
Manufacturer's Name: Chicago Bean Bread Co.
Manufacturer's Address: Chicago, Illinois.

© Copyright Soyinfo Center 2013

Date of Introduction: 1923.
New Product–Documentation: Piper and Morse. 1923. The Soybean. p. 273. Notes that "The following [tofu] recipes prepared by the Soy Products Co. and the Chicago Bean Bread Co., indicate the wide acceptability of tofu, or soy cake as it is termed by one company, to all kinds of cooking..."

1166. **Product Name:** Tofu.
Manufacturer's Name: Iwanaga (H.) Daufu.
Manufacturer's Address: Rear 1031 Aala, Honolulu, Oahu, Hawaii. Residence same.
Date of Introduction: 1923.
New Product–Documentation: Honolulu City Directory. 1923. H. Iwanaga Daufu Manufacturer (H. Iwanaga, proprietor). Rear 1031 Aala, Honolulu.

Note 1. This is the earliest known tofu maker in the Hawaiian Islands (one of three). Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word "daufu" to refer to tofu. Since the company is owned by a Japanese man (H. Iwanaga), this was probably an error in transliteration; it was changed to "Tofu" in 1924.

Honolulu City Directory. 1924. Now listed as H. Iwanaga Tofu Manufacturer. 1925 Directory. Listed as Mrs. Chita Iwanaga Tofu. Same address. Probably the widow. Not listed 1926. The earliest listings seen for tofu manufacturers in Hawaii appeared in 1923. Three companies were listed and this was one of the three. After being purchased twice by Shoshiro Kanehori and Mrs. Haruko Uyeda, it was finally purchased in 1939 by Mr. and Mrs. Shokin Yamauchi, and later renamed Aala Tofu Co. It is thus the earliest known Hawaiian ancestor of Hinode Tofu Co., America's largest tofu manufacturer, run by Mr. Shoan Yamauchi.

Note 3. This is the earliest record seen (March 2013) concerning Hinode Tofu Co.

1167. **Product Name:** Tofu.
Manufacturer's Name: Ono (Yazaemon) Tofu.
Manufacturer's Address: 1131b Kapahulu Ave., Honolulu, Oahu, Hawaii.
Date of Introduction: 1923.
New Product–Documentation: Honolulu City Directory. 1923. Yazaemon Ono Tofu (Yazaemon Ono, proprietor). Residence, 1131b Kapahulu Ave., Honolulu. Not listed 1925. 1927 Directory. Listed as Yazaemon Ono Tofu. Address same. 1930-31. Address listed as 1131 Kapahulu, Honolulu. Not listed 1934-35. Listed again in 1937-38 directory. Not listed 1954.

Note: This is the earliest known tofu maker in the Hawaiian Islands (one of three).

1168. **Product Name:** Tofu.
Manufacturer's Name: Tanouye (Yasuzu) Tofu.
Manufacturer's Address: 1612 Colburn, Honolulu, Oahu, Hawaii.
Date of Introduction: 1923.
New Product–Documentation: Honolulu City Directory. 1923. Yasuzu Tanouye Tofu (Yasuzu Tanouye, proprietor). Rear 1612 Colburn, Honolulu. Also in 1928-29 Directory. Address listed as 1612 Colburn, Honolulu. 1934-35 Directory. Name listed as Yasuzo Tanouye Tofu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 180. Yasuzô Tanoue (from Kumamoto prefecture), tofu maker, 1602 Colburn St., Honolulu.

Not listed 1947-48 Honolulu City Directory.

Note: This is the earliest known tofu maker in the Hawaiian Islands (one of three).

1169. Wong, T. 1923. [Soy-bean industries]. *Chung-hua Hua Hsueh Kung Yeh Hui Hui Chih* (*J. of the China Society of Chemical Industry*) 1:83-92. (Chem. Abst. 17:2514). [Chi]*
• ***Summary:*** "Methods of preparation and analyses are given for 9 products manufactured from soy bean, including oil, been curd, bean milk, etc...

"Soy-bean cake contains 42.1% protein and 9.6% oil. This might be used for the manufacture of artificial marble and similar products."

1170. Bottari, Fulvio. 1923. La soja nella storia, nell'agricoltura e nelle applicazioni alimentari ed industriali [The soybean in history, in agriculture, and in food and industrial applications]. Torino & Genova, Italy: S. Lattes & Co. 243 p. Preface by Prof. Oreste Mattriolo (R. Università di Torino). With 34 illust. 22 cm. [25 ref. Ita]
• ***Summary:*** Contents: Preface. Reason for the work; its scope and limits. Part I: The origin and history of the soybean. Reason for this history, the origin of the soybean and its early dissemination, soya (including production statistics) in Oriental countries (China, Manchuria, Japan, Formosa, Korea, French Indochina), how the soybean was introduced to Europe, the cultivation of soya in France, Soya in England, Austria, Germany, Denmark, Holland, Russia, Sweden, Alsace-Lorraine (now in northeast France), Spain, Italy, America, Conclusion.

Part II: Cultivation of soya. Part III: Soya in the feeding and nutrition of humans and animals. 1. The analysis and physiology of metabolism as an element in the study of nutrition. 2. Soybean forage in the feeding of animals. 3. Soybeans (*il grano di soja*) and soy products in the feeding of humans and animals: Commercial and nutritional value and digestibility of the soybean, how to prepare and cook whole soybeans, soy broth, thick soups, salads, and meat dishes, soy purée (*puré di soja*), soybean cakes (*torté di soja*), soybean sprouts (*germi di soja*), roasted soybeans (*grano di soja come frutta secca*), soy coffee (*caffé di soja*), soy chocolate (*cioccolata di soja*), soy confections (*confetture di soja*), special soy sweets and chocolates for diabetics and tuberculosis patients, the soybean as a feed for

© Copyright Soyinfo Center 2013

animals.

Note: This is the earliest Italian-language document seen (Nov. 2012) that mentions soy chocolate, which it calls *caffé di soja.*

4. Flour, pasta, and bread in feeding. 5. Soymilk (*il latte di soja*) and its use in the feeding of animals and humans. 6. Tofu (*il formaggio di soja*). 7. Soy oil and oil-cakes (*panelli*). 8. Condiments and sauces: Natto, miso, soy sauce (*le salse,* called *Schogon* [sic] in Japan, *Tsinag-Yeou* [sic] or *Tao-yu* in China, *Ketjap* in Java, and *Tuong* in Annam). 9. Enzymes (I fermenti, incl. urease). 10. Conclusions.

Part IV: Industrial applications of soya.

Part V: General conclusions.

The first test of the lactation of calves with soymilk was conducted in the winter of 1916-17 by the Bonafous Institute in Turin. The results were splendid, and have encouraged eminent pediatricians such as Dr. Casalini, Prof. Dr. Alberto Muggia (teacher of clinical pediatrics at the University of Turin), and Dr. Enrico Gasca (vice director general of infants at Turin) to extend their experiments (p. 6).

In Italy vegetable oil production has decreased steadily from 1870 to 1920. Attempts were made to grow sesame, peanuts, and rapeseed, and to import oils from abroad. During World War I, unrefined soy oil was introduced to the market in large quantities, but its unappealing taste disgusted consumers and for a while nothing more was heard of it. Then in 1921 it began to be introduced again, but this time it was refined at Italy's national oil works. The good results obtained encouraged the Italian oil milling company, Sairo, and other oil works to make great progress in soy oil production. Several thousand quintals (i.e., several hundred metric tons) of the best soy oil, sold under the name "refined oil from seeds," were introduced in the first half of 1922 by the national oil works of Genoa.

Returning to the early history of soya in Italy, we find that in 1848 some missionaries brought soybean seeds and a little soil to Italy from Japan. They waited for the cultivation for several years, then nothing else was said. In 1880 the Italian Ministry of Agriculture recommended the cultivation of soybeans as a fodder crop for the future, as was being done in the USA, but their suggestion received no attention. In 1918, according to Mattei, a test of soybean culture was done at the Colonial Garden of Palermo on a parcel of 300 square meters.

Since 1912, after seeds had been brought by foreign delegates to the International Exhibition at Turin in 1911, repeated experiments with soybean cultivation have been conducted at the Bonafous Agricultural Institute in Turin, with the goal of developing two well adapted varieties, one for fodder and one for seed. Their green variety is for fodder and their yellow one for seed.

From 1920 the directorship of the cultural work was given to the head professor at the Institute, Venanzio Manvilli, also professor of the Germano Sommeiller Technical Institute, professor the faculty of agriculture, University of Turin. They worked with seeds already selected from the institute and with those obtained from Prof. Don Ricaldone, and from Tientsin, China, directly. Others who have done important work with soya in Italy are Paolo Bottari (with soymilk at the Bonafous Institute), Tamanini Guido, Mossello and Bellia, Prof. Cav. Giov. Batt. Allaria, Dr. Mose Miccinelli

A table (p. 31) shows soybean and cotton hectarage and production in Korea from 1909 to 1917. Soybean hectarage increased from 277,776 ha to a record 487,134 ha. Soybean production grew from 1,991,126 quintals (1 quintal = 100 kg or 0.1 metric tons) to a record 3,816,498 quintals.

Page 35: "Prof. Rouest of Luxey (Landes) in France wrote us on 30 Nov. 1921. 'I have finished only the period of acclimatization of the soybean. It remains for me to propagate it a little everywhere. The experiments of 1921 were extended in all the Departments, being viewed from an industrial and commercial point of view. I must now study which variety adapts among those I am cultivating. Soy flour will not be able to be made until we have many thousands of hectares under cultivation, and then we will be able to think of other applications as well... Actually the firm Hendebert de Lion sells its flour, originating in China, at 10 French francs per kg, a prohibitive price.'"

Page 206: At the pediatric congress held in Milan in Sept. 1922, the question of lactation (feeding children) with vegetable milk was discussed in a favorable way, proposed by Prof. Muggia and sustained by the illustrious Prof. Berghius, Director of the Pediatric Clinic of the University of Padua, and by Prof. Francioni of Bologna. We can also add that experiments on lactation are proceeding in Italy at the pediatric clinics of Turin, Bologna, Padua, Genoa, and Florence, and also at the Infant's Dispensary in Turin.

Photos show: (0) An infant fed soymilk in Turin in 1921, together with a table showing its weight gain from 18 July 1921 until 14 Jan. 1922 (p. 7). (1) Three different varieties of soybean plants (p. 70). (2) 2 soybean plants up close (p. 71). (3) The leaves of 3 different varieties of soybean plants (p. 72). (4) Close-up of the stem and pods of a soybean plant (p. 73). (5) Beans and pods of soybeans (p. 74).

(6) Different stages of germinating soybean seeds (p. 75). (7) Close-up of soybean roots (p. 76). (8-9) Field of soybeans at the "Istituto Bonafous" (p. 106, 108, 113). (10-11) Field of soybeans grown with corn (p. 122, 123). (12) Cellular transverse section through a soybean (facing p. 152). (13-14) Soy flour and wheat flour, each in a sack and loose (p. 177). (15) Pasta made from soy (p. 181). (16-21) Bread made from soy (p. 183-89). (22-23) Soy bran and wheat bran, each in a sack and loose (p. 191). (24) Two bottles of soymilk (p. 194). (25) Two bottles of soy oil (p. 214).

A diagram (p. 227) compares the chemical composition of animal casein and vegetable casein.

Note 1. Quite a bit of the historical and non-Italian

information in this book comes from Léon Rouest's 1921 book *Le soja et son lait végétal: Applications agricoles et industrielles.*

Note 2. This is the earliest Italian-language document seen (Jan. 2012) that mentions natto, of which it says: "il *Natto* in Giappone che corrisponde al *Tao-Teche* della Cina."

Note 3. This is the earliest Italian-language document seen (Jan. 2013) that mentions soy sprouts, which it calls *germi di soja.* Address: Dr. of Economic and Commercial Science, Turin [Torino], Italy.

1171. Choux, P. 1923. Revue générale de botanique, tropical and subtropical (1910-1919 (suite)). [Review of botanical works, tropical and subtropical (1910-1919) (conclusion)]. *Revue Generale de Botanique* 35:141-43. [24 ref. Fre]
• ***Summary:*** This is a brief and very limited review of the literature with 24 references–several of which contain errors. It begins:

In France, in effect, the attention seems to have been attracted by the medical uses of the soybean and by soyfood products (*les produits alimentaires à base de Soja*)*:* soymilk, soy cheese (*fromage de soja*), soy casein, flour and bread, manufactured at the factory of *Caséo-Sojaïne* [the soy casein factory = tofu factory] installed at Vallés (Seine).

Everyone knows that in China the soybean plays a very important role in the diet of several million people and forms the basis of an entire series of food products that have been brought to our attention by Messrs. Li Yu Ying and Grandvoinnet.

1172. Kellogg, John Harvey. 1923. The natural diet of man. Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]
• ***Summary:*** This classic of vegetarian literature contends that a vegetarian diet is the natural diet of man. Contents: 1. Man not naturally a flesh-eater: Modern civilized life unnatural and unbiologic, animal dietaries, lessons from the monkey, porcine wisdom in diet, animals classified by diet, the ancient family of primates, all mammals originally vegetable feeders, when germ diseases were unknown, kinship of higher apes and men, flesh-eating never a universal human custom.

2. Twenty popular delusions about flesh foods: D-1. That meat is superior as a blood-making food, and, hence, is needed in anemia. D-2. That meat is essential as a flesh-building food. D-3. That a flesh diet is essential to support severe or prolonged activity; that is, promotes endurance. D-4. That flesh-eating is necessary to produce physical courage. D-5. That vegetarian races are inferior physically and mentally to races using a mixed diet. D-6. That flesh foods are more refined and more easily digested and, hence, more nutritious than are foods of vegetable origin. D-7. That man is naturally omnivorous. D-8. That flesh foods are stimulating and thus supply an element needed especially by brain workers. D-9. That beef tea is a useful nutrient. D-10. That a meat diet is required to prevent or cure gastric acidity. D-11. That a meat diet is desirable in tuberculosis. D-12. That a meat diet is necessary in diabetes. D-13. That a flesh diet is essential in the treatment of obesity. D-14. That meat is required in beri-beri. D-15. That meat is essential as a "building-up" or restorative food. D-16. That meat is needed by growing children. D-17. That meats are needed as a stimulus to appetite. D-18. That the beef industry is a necessary part of our national economic system. D-19. That a meat diet is necessary to insure reproductive activity. The law of diminishing returns versus flesh-eating. D-20. That meat is a harmless luxury.

3. Scientific objections to the use of meat: Human liver not adapted to meat diet; important differences between meat and milk; meat deficient in vitamins and food lime; Eskimos eagerly seek vegetable food; ill effects of meat diet on Arctic explorers; meat saturated with tissue poisons; meat readily putrefies, natural foods do not; the poisons of meat; meat extracts; why viscera are especially objectionable; bacteriology condemns meat as food; vast numbers of bacteria in meat; putrefactive products of meat; why physicians forbid meat in cases of kidney disease and high blood pressure; how flesh-eating causes constipation.

4. Diseases due to flesh eating: Tuberculosis in animals, cancer from meat eating, cancer rare and appendicitis unknown among flesh abstainers, meat-eating causes disorders of nutrition, acidosis from a flesh diet, a meat diet and scurvy, meat eating and arteriosclerosis, pernicious effects of a meat diet experimentally proven, recognized meat contraindications, the peregrinations of a deadly parasite, typhoid germs in meat products, flesh poisoning, no protection for meat-eaters, oyster poisoning, converting sewage into food.

5. Experimental evidence against flesh eating: McCollum's experiments, Dr. S. Weir Mitchell endorses the meatless regimen, an eminent scientist on meat diet, Fauvel's observations, greater endurance of flesh-abstainers, the death rate reduced by meatless diet, flesh-eating does not develop intelligence, meat-eating and race degeneracy, meat-eating a city habit, non-meat diet best even for carnivorous animals, the Scotchman's dog, the effects of a meat diet on rats, the effects of a flesh diet on rabbits, flesh-eating animals short lived. 6. The ethical argument.

7. Historical facts and authoritative opinions: Biblical teaching about flesh eating, apostles who were flesh abstainers, the Essenes were flesh-abstainers, the diet of the ancient Greeks, King Cyrus a flesh-abstainer, Julius Caesar's army ration, diet of Peruvian soldiers, diet of athletes of ancient Greece, ancient philosophers were flesh-abstainers, Plutarch's essay on flesh-eating, fleshless diet of a Roman emperor, meatless diet endorsed by Gautier, views of Seneca, diet of the ancient Sumerians [today's Iraq], eminent modern flesh abstainers, vegetarian monks, Thoreau on the fleshless

© Copyright Soyinfo Center 2013

diet, a Chinese statesman's experience, the views of two great naturalists, the poet Shelley a food reformer, a child's natural repugnance to meat, Liebig on the advantages of a non-flesh diet, Sylvester Graham's diet reform movement.

8. Interesting facts concerning the dietary habits of various peoples. 9. The marvelous adaptation of the natural diet to human needs. 10. How to discard meats comfortably and safely.

11. Is the disuse of meat advisable from a practical standpoint? The U.S. Department of Agriculture shows the use of less meat to be safe and economic, the importance of planting nut trees, avoidance of meat is necessary to change the intestinal flora, vegetable substitutes for meat, the recent low protein movement in the United States, the half century experience of the Battle Creek Sanitarium with a fleshless diet.

12. Newspaper and magazine misinformation: An "eat-more-meat" campaign, Professor Fisher of Yale University [Connecticut] refuses to support the "eat-more-meat" campaign of the [Chicago, meat] packers, pernicious piffle.

Soy is mentioned in many places. The section titled "Flesh-eating never a universal custom" states (p. 33-34): "According to Mori, the Japanese peasant of the interior is almost an exclusive vegetarian. He eats fish once or twice a month and meat once or twice a year... The soy bean is held in high esteem and used largely in the form of *miso*, a purée prepared from the bean and fermented; also *to-fu*, a sort of cheese; and *cho-yu* [shoyu, soy sauce], which is prepared by mixing the pulverized beans with wheat flour, salt, and water and fermenting from one and a half to five years. The Chinese peasant lives on essentially the same diet, as do also the Siamese, the Koreans, and most other Oriental peoples. Three-fourths of the world's population eat so little meat that it cannot be regarded as anything more than an incidental factor in their bill of fare."

Page 45: Complete "proteins are found in milk and eggs as well as in most nuts, peanuts, and the soy bean..."

Page 73: "The protein of milk, of the soy bean, and of nuts is known to be superior to meat as a source of body nitrogen." Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

1173. Kellogg, John Harvey. 1923. The soy bean (Document part). In: J.H. Kellogg. 1923. The New Dietetics: A Guide to Scientific Feeding in Health and Disease. Revised ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1021 p. See p. 315-21. 24 cm.

• ***Summary:*** This section is quite similar to that in the 1921 first edition of this book, but on different pages. Changes appear on the following pages: 316 (addition of a paragraph stating that the soy bean is a highly valuable food for persons suffering from diabetes), 318 (deletion of the statement that the writer "has for twenty-five years made use of milk prepared from the almond and other nuts."), 320-21 (addition of a table, supplied by William Morse of the USDA, giving the composition of soy beans sprouts and mung bean sprouts). Address: Battle Creek, Michigan.

1174. Kempski, Karl E. 1923. Die Sojabohne: Geschichte, Kultur und Verwendung unter besonderer Beruecksichtigung der Verhaeltnisse in Niederlaendisch-Indien [The soybean: History, culture and use, with special attention to the situation in the Netherlands-Indies]. Berlin: Paul Parey. 88 p. Illust. Index. 22 cm. [101 ref. Ger]

• ***Summary:*** Contents: Introduction. Some remarks on the soybean's early history. Overproduction of soybeans in Manchuria after the Russo-Japanese War–English oil mills make their first trials. Soybean production in Manchuria. Soybean production in Korea. Soybean production in Japan. Soybean production in America–Soybean meal and soybean milk are introduced. Soybean production has also expanded in Africa, British India, and the Philippines. The introduction of soybean cultivation to Europe. The many uses of the soybean in Europe. Uses of soy oil. Old and new methods of obtaining soy oil. Soybean production and use of soybeans in the Netherlands-Indies. Appendix: Descriptions of how the most important soybean products are manufactured: In Java (tao-hoe [tofu]), tempeh, ketjap [soy sauce], tao-tjiong [or tao-jiung, a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], in China and Japan (soy sauce, miso, tofu, frozen tofu, natto, soymilk) (p. 62-68). Supplements: I: Soybeans in Manchuria. II; Hansamuehle [Hansa Muehle] in Hamburg, Germany. III: *The Soybean* by Piper and Morse.

Note the extensive, early bibliography. Unfortunately, it contains many errors.

This book is largely a review of the literature, but with some original information, especially on Indonesia and Germany. In 1923 Java imported 150,000 to 200,000 tons of soybeans and had a population of 35 million. The area of soybeans planted in Java (including Madura) increased from 157,600 ha in 1918 to 164,700 ha in 1922 (p. 32). In 1921, 67.3% of Java's soybean acreage was in Central Java, 20.7% was in East Java, and only 5.7% was in West Java. (p. 35). Large quantities of soybeans are imported to the Netherlands-Indies from Manchuria: 35,105 metric tons (tonnes) in 1920, rising to 95,742 tonnes in 1922. From these and local soybeans are made tempeh [spelled like this!], tofu (*tahoe; Bohnenkäse*), soy sauce (*Ketjap, Sojasauce*), etc. In Java, mostly black soybeans are grown. To make tofu yellow, it is cooked in an extract of the *Curcuma* root / rhizome. Sometimes it is also sun-dried or fried/roasted (*gebraten*). Tempeh is inoculated with a piece of tempeh from a previous fermentation, and often fried in coconut oil. Detailed descriptions are given of the production of soy sauce (*ketjap;* which is made from black soybeans) and Indonesian miso (*taucho; tao-tjiong*). The author (p. 64) states that ketjap and tao-tjiung are both inoculated using *Hibiscus tiliaceus*

© Copyright Soyinfo Center 2013

(hibiscus) leaves, called *waroe* in Java. Today Germany, like America, produces fresh and dried soymilk, fresh and dried soya cream, meat analogs, and soy sauce (p. 25).

This book contains 17 interesting, old photos. Descriptions of those reproduced from other periodicals are omitted. (1) A soybean field on the farm Kikai Nojo near Sempo-Station, Korea, owned and run by Mr. Moegling (p. 12). (2) A combine used for harvesting regular beans in California in 1918 (p. 19). (3) Many hydraulic presses in a modern American oil factory (p. 29). (4) The equipment used in steaming the soybeans before they are crushed in an American "steam mill" type oil mill (p. 31). (5) The interior of a British oilmill (p. 33). (6) The electrical generators in a modern oilmill (p. 34). (7) Soybeans being harvested manually at Madioen [Madiun, in East Java], Java (p. 48). (8) Harvested soybeans being dried on racks in a field in Java, and carried away by one worker (p. 48). (9) Workers dividing up the harvest in Java (p. 50). (10) Threshing soybeans with bamboo flails in the courtyard of a small farmer in Java (p. 51). (11) Selling soybeans in a small market in Central Java (p. 51).

Tables show: (1) Imports of soybeans to Germany from 1910 (43,500 tonnes) to 1912 (more than 125,200 tonnes) (p. 24). (2) Soybean acreage in Java (including Madoera) from 1918 (157,600 ha) to 1922 (164,700 ha) (p. 32). (3) A breakdown of soybean area in Java in 1921 (of 226,186 bouws) into West Java (12,980 bouws), Central Java (152,154 bouws), and East Java (61,082 bouws) (p. 35). Note: 1 bouw = 1.754 acres (Johnstone 1975). (4) Imports of Manchurian soybeans to Java (including Madoera) and other parts of the Dutch East Indies (mainly Sumatra) from 1920 to 1922 (p. 36). (5) Yields (average or range) of soybeans in various countries: Germany, Italy, British Indies, Manchuria (incl. China and Korea), Japan, America (up to 2,700 kg/ha), Java (p. 52). (6) Comparison of the nutritional composition of soybeans, peas, and regular beans (Phaseolus varieties) (p. 53). (7) Comparison of the nutritional composition of soya cheese (*Sojakäse*, tofu), beef, and lean pork (p. 53). (8) The prices of white and of black soybeans in Java during January and December 1922 and the same two months of 1923 (in Gulden) (p. 56). (9) Comparison of yields, price, costs, and profit for peanuts (*Katjang tanah*) and soybeans in Java (p. 57-58). (10) Nutritional composition of canned frozen tofu (based on E. Senft) (p. 68). (11) Exports of soybeans from five Manchurian ports (Dairen, Antung, Newchwang, Suifenho [Suifenhe], and Sansing) in 1919, 1920, and 1921 (p. 70). (12) Exports and value of soybeans from all of China to four countries (Netherlands, Russia, Japan, Dutch East Indies) in 1919, 1920, and 1921 (p. 72). (13) Exports of soybean oil from five Manchurian ports (Dairen, Antung, Newchwang, Suifenho [Suifenhe], and Harbin) in 1919, 1920, and 1921 (p. 72). (14) Exports and value of soybean oil from all of China to five countries (England, Netherlands, Belgium, Japan, USA) in 1919, 1920, and 1921 (p. 72). (15) Exports of soybean meal from four Manchurian ports (Dairen, Antung, Newchwang, Suifenho [Suifenhe]) in 1919, 1920, and 1921 (p. 73). (16) Exports and value of soybean meal from all of China to three countries (Japan, Russia, USA) in 1919, 1920, and 1921 (p. 73). (17) Names of the five major railway lines in Manchuria (South Manchuria Railway, Chinese Eastern Railway, Peking Mukden Line, Kirin-Changchun Line, Saupingkai-Taonan Line) (p. 74). (18) Amounts (in tons) of soybeans, soybean cake, and soy oil (*Sojaöl*) shipped over the South Manchuria Railway, and the Chinese Eastern Railway in one year (p. 74). (19) Railway transport and production amounts of the mills (in tons) in Dairen and Newchwang of soybeans, soybean cake, and soy oil (*Sojaöl*) during the year 1921 (p. 74). Address: Agricultural Expert in Poerbasari te Pengalengan, Java.

1175. Lewis, William S.; Murakami, Naojiro. eds. 1923. Ranald MacDonald: The narrative of his early life on the Columbia under the Hudson's Bay Company's regime; of his experiences in the Pacific Whale Fishery; and of his great adventure to Japan; with a sketch of his later life on the western frontier, 1824-1894. Spokane, Washington: Published for The Eastern Washington State Historical Society by The Inland-American Printing Co. 336 p. 25 cm. [127* ref]

• ***Summary:*** Ranald MacDonald was born on 3 Feb. 1824 at Fort George, a great trading post located at the mouth of the Columbia River, owned by the Hudson's Bay Company, and formerly called Astoria; this area is now in Oregon. His mother was an Indian (he believed that she was a daughter of the great Chinook Chief Com-comly) and his father, Archibald, was a Scotch highlander; he was born a British subject. His mother died a few months after his birth and he was raised by his mother's sister. In Sept. 1825 his father remarried and he was raised by a stepmother, Jane Klyne. He worked with the Hudson's Bay Company, of which his father was chief trader and chief factor. The Oregon Treaty of 1845 made him a citizen of the United States.

"In March 1833 a Japanese junk laden with crockery..., blown across the Pacific, was wrecked about 15 miles south of Cape Flattery [on the northwest coast of Washington] and all of the seventeen men on board lost except three who were seized and held as slaves by the local Indians... These Japanese were subsequently rescued from the Indians in May, 1834, by Captain William McNeil–the Boston skipper–on board the Hudson's Bay Company ship 'Llama' and taken to Fort Vancouver." Numerous primary sources for this information published in the 1830s are cited. The kind Dr. John McLoughlin attempted to return these shipwrecked Japanese to Japan via London (England), and Macao, China–but Japan would not accept them. These were apparently the first Japanese in the U.S.A. and the incident inspired MacDonald to travel to Japan to learn more about the Japanese. At age 24, in July 1848, he arrived in the Japan

© Copyright Soyinfo Center 2013

Sea on the American whale ship 'Plymouth' under captain Edwards. He then left the whale ship alone in a small boat. After going ashore on 3 small islands (Teure, Yankeshiri, Rishiri) inhabited by Ainu off the coast of Yesso (Yeso, now called Hokkaido), he landed at Soya on the northernmost tip of Hokkaido. Then, treated as a prisoner, he was sent on the ship Tenjinmaru to Nagasaki and saw the small island of "Dessima" (Deshima, Dejima) in the harbor. He was confined to a sort of prison which he was never allowed to leave and made to wait about 7 months until the next Dutch ship arrived. During this time he taught English to various eager pupils and interpreters. He was the first English instructor in Japan. His best student was the brilliant Yeanosuke Murayama, who was already fluent in Dutch. He stayed in Japan until 26 April 1849 when he was removed on the American ship 'Preble' under commander James Glynn.

While in Japan MacDonald compiled a glossary or dictionary of about 550 Japanese words and their English equivalents. Among these were tofu (he wrote "tove"; see p. 288), and shoyu [soy sauce] (he wrote "shon" or "son"; see p. 297). After further travels to China, India, Australia and Europe, he returned to America in 1853 to live his later years in his native homeland near the Columbia River, in the Pacific Northwest.

Note: This book is extremely well written and carefully documented, with extensive scholarly footnotes. There are numerous appendixes, a glossary, and two bibliographies. One of the appendixes (II-C, p. 280-84) is a deposition taken by commander Glynn on 30 April 1849; it tells of MacDonald's life and the story of his stay in Japan up to that time. It appears in U.S. Senate, Executive Docket, 32nd congress, 1st session, No. 59, p. 25-28.

An illustration (p. 208) shows Maruyama and Tokojiro, two Japanese men in Edo period dress. Both pupils of Ranald MacDonald, they were the chief interpreters in negotiations with Commodore Perry.

Footnote 238 (p. 209) states: "During the period of exclusion, Occidental knowledge of Japan was derived through the Dutch. Three physicians attached to the Dutch factory at Nagasaki contributed principally to this knowledge of Japan: Englebrecht [Englebert] Kaempfer (Japan 1690-1692), author of a *"History of Japan and Siam,"* London, 1727; Charles Peter Thunberg (Japan, 1775-1776), author of *Travels in Europe, Africa and Asia;* and Philip [sic, Philipp] Franz von Siebold (Japan 1822-1830), author of *Nippon, an Archive towards the description of Japan.* In addition to these, three directors of the Nagasaki factory, Isaac Titsingh, J. F. van Overmeer Fisscher and G. F. Meijan, furnished further information. Additional information was received through Russian sources from the published account of Georg Heinrich von Langsdorff, a German physician attached to the Reasanoff expedition (1804), and from Captain Vasili M. Golownin's *Memoirs of His Captivity in Japan, 1811-1813.*

"In like manner whatever Japan received of the material civilization of the Occident during these years was obtained principally through the Dutch." Address: 2. Head, School of Music, Imperial Univ., Tokyo. Formerly head of the Dep. of Foreign Languages at the Imperial Univ.

1176. Moore, Alice. 1923. Chinese recipes: Letters from Alice Moore to Ethel Moore Rook. Garden City, New York: Doubleday, Page & Co. 113 p. 10 x 13 cm.
• ***Summary:*** The Preface (p. viii to ix) states: "The Chinese use no butter, no milk, no cheese, and no bread." "One of the most startling differences between this cuisine and ours is the complete absence of salt. Its place is taken by a sauce made from the soy, or soya, bean. The beans are allowed to ferment in big pots for two months under the blazing sub, an enormous amount of salt and other seasoning is added during the process and the result is an inexpensive brown sauce which is very salt [sic, salty?] and very appetizing. It is much like Worcester sauce of which it is the base. Soy may be had in bottles or in imported brown jugs.

"The fat used in these recipes is always sesame oil, made from the sesame seeds. It has a more delicate flavour than peanut oil which is sometimes substituted. Like soy sauce, it is inexpensive, like it also it gives a piquant flavour to ordinary dishes."

Page 3: "North (the Chinese use the points of the compass always, and always correctly, I mean in front, right being east) is a dish of Chinese (Soy) sauce."

This book contains 66 recipes. On page 104-05 is a recipe for Buddha Dish, which calls for "½ cup of fried bean curd and ¼ cup of soy sauce."

Note: A review of this book in the *New York Times* by Nicolas Poussin (16 Dec. 1923, p. BR20) begins by asking if anything will ever dethrone the French culinary art, then adds: "But Alice Moore,... who has lived a dozen years in China, eaten all manner of things in the East and Near East and is familiar with American and European cooking, awards the palm for delicious cookery to the Chinese. Again and again she emphasizes her conviction that the Chinese are 'past masters of the culinary art' and the best cooks in the world." Among the dishes "declared to be delicious by the author [Poussin] are... tea eggs–made by soaking hard boiled eggs in a concoction of hot water, soy sauce, tea leaves and cinnamon..."

or manufacture together with various tests, etc., by means of which the different products may be readily identified. Shanghai, China: Statistical Dept., Inspectorate General of Customs; sold by Kelly & Walsh [etc.]. xi + 630 p. Illust. 28 cm. The Maritime Customs. II. Special Series No. 38.

• ***Summary:*** Section II, titled "Oils, fats, and waxes" (p. 76-149) contains detailed definitions of the following: Bean oil (*Tou-yu* or *Oleum dolichos*) obtained from the soya bean of China, and the residual meal (*tou-ping-fên*) (p. 85-86). "In China bean oil is used as a food; for cooking purposes; for mixing with lacquer; in making varnish and printing ink; in soap making; and, to a slight extent, as an illuminant, although for this purpose it has been almost superseded by kerosene. It is also used in water proofing cloth and paper for making umbrellas and lanterns. In foreign countries, where the demand for the oil is practically unlimited, bean oil is used chiefly in the manufacture of soap and in preparing salad oils. On account of its drying properties bean oil is not very suitable for use as a lubricating oil.

"Bean oil appears in Chinese commerce packed in wooden tubs, paper-lined baskets, or in earthenware jars, of no standard weight. It is exported in great quantities from many of the northern ports, particularly from Dairen and Newchwang, and, to a smaller extent, from Hankow and other Yangtze ports."

Section VI, titled "Miscellaneous products" contains a long subsection on "Beans, Soya" (Tou) (p. 320-21). "Soya beans, or 'soy beans'... are cultivated in enormous quantities in Central Manchuria... It is estimated that about 1,600,000 tons are produced annually in Manchuria alone... The beans are small,... the yield per acre being from 1,100 to 1,600 pounds [18.3 to 26.6 bushels]. Several varieties are grown in China and are commonly classified by the Chinese according to form, colour, size, use, and other characteristics. The best known of these varieties are (with Chinese characters for each term): -

(1) Yellow beans (*huang-tou*), subdivided into *pai-mei-tou* or 'white eye-brow bean,' so called from the whiteness of the prominent hilum; *chin-yüan-tou* or 'round golden bean'; and *hei-ch'i-tou.*

(2) Black beans (*wu-tou*), subdivided into (*ta-wu-tou*) or 'large black bean'; (*hsiao-wu-tou*) or 'small black bean'; and (*pien-wu-tou*) or 'flat black bean.'

(3) Green beans (*ch'ing-tou*), subdivided into two varieties, one of which has a green epidermis and green interior, the other a green epidermis and yellow interior.

Three subspecies [of soya beans], yielding very small beans, are known as: (*hsiao-pai-tou*) or 'small white bean'; (*hsiao-hung-tou*) or 'small red bean'; and (*hsiao-lü-tou*) or 'small green bean.'" Note 1. The writer may be mistaken in calling these last three subspecies of soya beans. They are probably white azuki beans, red azuki beans, and mung beans.

Soya beans "are valued chiefly as a source of bean oil, but are also extensively used as food, either whole or ground to flour in making beancurd, bean milk, bean sauce, or 'soy,' and salted relish (*ta-tou-shih*) [fermented black soybeans], which is used both as a food and as a medicine. The black beans, which are not much used as food because they are supposed to make the body too heavy, are used in medicine, to impart strength and vigour, as a carminative, and also as an antidote for vegetable poisons, such as aconite, croton oil, etc. The hulls of green [soy] beans are applied to smallpox ulcers and other sores; the bruised leaves of the plant are used in treating snakebite; the flowers are used in treating diseases of the eyes. Young bean sprouts (*tou-ya*) are used as a vegetable food." Details are given on the following products made from soya beans: "Beancurd (*tou-fu*), bean milk (*tou-fu-chiang*), bean sauce (see under 'soy'), and bean vermicelli (*Fen-ssu, Tou-fen-ssu, Hsi-t'iao-mien,* or *Kua-mien.*–A very famous vermicelli made in the Chefoo district, from beans most of which are originally imported from Manchuria).

Note 2. This is the earliest document seen (Nov. 2012) that contains the term *Tou-fen*, which probably refers to roasted whole soy flour.

Note 3. This is the earliest English-language document seen (Nov. 2011) that uses the term "salted relish" to refer to fermented black soybeans.

The section titled "Soy (*Chiang or Chiang-yu"*–with Chinese characters for each term) states: "Soy is a sauce made in China from the soya bean (*Soja hispida*). In preparing it, a quantity of beans are slowly boiled, an equal quantity of coarsely ground wheat or barley being added. The mixture, after being allowed to ferment for some time, is put into a jar with an equal amount of salt, a few aromatics, and three times as much boiling water as there were beans at first; the whole is then allowed to stand for several weeks exposed to the sun, after which the liquor, which constitutes the soy, is separated by pressing and straining the mass. The finished product is afterwards packed into jars or bottles ready for the market.

"Soy is thin, and, in colour, very dark brown or almost black; it becomes brighter and clearer on being kept, has an agreeable salty flavour, and produces a yellowish froth when even slightly shaken. It is much used by the Chinese as a sauce and condiment, as it creates an appetite and is supposed to counteract the injurious properties of contaminated food; it is also used in medicine as an application for burns, scalds, eczema, leprous sores, etc. Soy is often exported from China to foreign countries, where it is extensively used in the manufacture of many European sauces."

Also discusses: Groundnut oil (*Hua-shêng-yu*), also called peanut oil, earth-nut oil, and arachis oil (*Oleum arachis*) (p. 105-06). Hemp-seed oil (*Ma-yu or Ma-tzu-yu*) (p. 106).

Sesamum-seed oil (*Chih-ma-yu or Hsiang-yu; Oleum*

© Copyright Soyinfo Center 2013

sesame) also known as "gingelly oil," "teel oil," or "benne oil" (p. 133-35). Groundnuts (p. 421-22). Wheat gluten (*Mien-chin*, p. 574). A second edition was published in 1930. Address: Chief Appraiser, Chinese Maritime Customs.

1179. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1924/01. Nichibei jûshoroku [The Japanese American directory. No 20]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

1180. **Product Name:** Tofu.
Manufacturer's Name: Takumi Tofu Sakana-ten (Takumi Tofu and Fish Shop).
Manufacturer's Address: P.O. Box 144, Alvarado, California. Phone: 37.
Date of Introduction: 1924. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-94. Name is in Japanese only. Address and phone no. are in English. Phone: 37. Ad (1/10 page) p. N-95. Note: Alvarado is just south of Hayward and east of Union City in northern California.

1181. **Product Name:** [Tofu Powder, and Processed Shrimp].
Foreign Name: Tôfu-ko Oboro Ebi.
Manufacturer's Name: Tofu-ko Oboro Ebi Seizo Gaisha.
Manufacturer's Address: 1909 Bush St., San Francisco, California. Phone: Fillmore 2606.
Date of Introduction: 1924. January.
New Product–Documentation: The Japanese American Directory. 1924. p. 59. The directory listing raises several questions: What is Tofu-ko / Tofu powder? What is Oboro Ebi? A food made from processed shrimp? In the world of soy, "oboro" means soymilk curds, which are pressed to make tofu. Is there any connection or relationship between Tofu-ko and Oboro Ebi, or are they two different, completely independent foods?

Also in 1925, p. N-17. The phone number appears to have changed from Fillmore 2606 to Fillmore 2660. Also in 1926, p. N-22. Phone is Fillmore 2660.

1182. Loew, Oscar. 1924. The soy bean, a superior crop. *Porto Rico Agricultural Experiment Station, Agricultural Extension Notes* No. 64. p. 1-2. Jan. 15.
• ***Summary:*** "The soy bean originated in Eastern Asia and has been introduced during the past 30 years into different countries of the world. It can be grown successfully even in a rather poor soil, in the absence of nitrogenous manure, provided the specific root-nodule bacteria are present. This plant is far superior to other leguminous crops, even those very rich in protein, as the lupin, which it equals in protein and highly surpasses in fat content. In fact, the soy bean is richer in fat than all other leguminous crops and is, therefore, sometimes called the oil bean. The soy bean does not contain alkaloids and bitter tasting matters like the lupin..."

A table compares the nutritional composition of the pea, common bean, lupin, and soy bean. "From the analyses it would appear to be of great advantage for the people of Porto Rico to replace the common bean now serving as an essential part of the daily food, by the soy bean, it providing a higher percentage of protein and fat... Since the Soy bean needs prolonged boiling until it reaches a sufficient degree of softness, it is best soaked for a day in water to which some soda and common salt are added (about a teaspoonful of each to half a liter) followed by washing two to three times with fresh water and then boiling for an hour or so. The taste of this dish is very agreeable.

"In Japan the soy bean serves for several preparations, called 'tofu,' 'yuba' and 'miso,' which might be prepared in Porto Rico. Also, a dressing or condiment similar to the English Worcestershire sauce, is prepared from the seeds." The preparation of tofu is described. It is "generally fried like cakes and represents an excellent food."

"The milky liquid can also doubtless be used as a suitable nutrient, but it can never replace the mother's or cow's milk for children, since the lime content is exceedingly small and the protein differs widely from the casein of the milk.

"In our trials with soy beans at the Experiment Station, Mayaguez, the results at first were disappointing. This was found to be due to the fact that the soil was not inoculated with the proper bacteria for assimilating nitrogen for the roots. We now have inoculated soil, and before planting on ground new to this crop inoculating material should be secured from the Station for mixing with the seed at the time of planting. When the soil is once inoculated it will remain so for all succeeding crops."

Note: Who was Dr. Oscar Loew and how did he learn about soyfoods? From 1897 to 1906 he was a Professor of Agricultural Chemistry at the Imperial University of Tokyo, Japan, where he wrote articles about soy sauce, tofu, soymilk, and yuba. In 1911 he was in Munich, Germany, where he wrote an article about soymilk. When he speaks of "our trials with soy beans at the Experiment Station, Mayaguez," he seems to indicate that he was living at the Station in Porto Rico in about 1924. Address: Mayaguez, Porto Rico.

1183. Slosson, Edwin E. 1924. Soy. *Scientific Monthly* 18:109, 111. Jan.
• ***Summary:*** "The recent rise in restaurant prices has sent

© Copyright Soyinfo Center 2013

economical Americans flocking to the chop sueys, where a savory and satisfying meal can still be obtained for a small sum. The Chinese, in their efforts to keep three hundred million people above the starvation point for three thousand years, have been forced to figure closely on food values... With us Americans meat has been the main part of the meal with vegetables on the side. With the Chinese this is reversed, and meat has in many cases been reduced to a condiment...

"The chief difficulty of a vegetarian diet is to get a sufficient amount and variety of proteins. Beans and peas are the richest in proteins, but they are not of the sort and proportion found in meats and needed for our muscle-making.

"But there is one exception and that is the soy-bean... The soy bean resembles animal foods in being rich in fat and protein and devoid of starch. What is more remarkable, the soy bean contains a dozen kinds of protein compounds that are the same as those found in milk. In fact a 'vegetable milk' can be made from soy beans and from this vegetable curds and cheese. These form a large part of the diet of Chinese and Japanese who abstain from animal food either because they are Buddhists or because they are poor. By milking the soy bean they can get ten times as much lacteal fluid per acre as if they pastured cows on the land. Italian physicians who used soy milk as infant food during the war report that it was better tolerated than cow's milk by some of the babies.

"The soy milk products have not yet come into use with us, but the American patron of the chop suey has acquired a taste for another product of the bean, the little glass cruet of brown sauce that seasons the rice. It looks and tastes like meat extract, such as we use in making beef tea, and is really much like it in composition and nutritive value. This shoyu or soy sauce is made by long fermentation and ripening of a mixture of beans and wheat in brine. The longer the process the better the product. Six months or a year may suffice for the masses, but to suit the taste of the Oriental connoisseur it must be sunned for five years or even thirty, the jars being patiently uncovered every day and covered every night or whenever it rains. Over two million barrels of soy sauce are made in Japan every year."

1184. Spring, F.G. 1924. The soya bean (Glycine hispida). *Malayan Agricultural Journal* 12(2):55-57. Feb.
• ***Summary:*** "A large quantity of Soya beans is consumed in the Peninsula, particularly by Chinese." Describes how soybeans are grown at Manchis, Pahang, by about 30 Chinese small holders, each growing about 1 acre. "The Soya beans are consumed mostly by the growers themselves but any surplus stock is sold in Bentong or Kuala Pilah where there is a ready market for the produce... The beans are eaten in a number of ways but are generally boiled and eaten alone or in conjunction with rice or other foodstuffs. They are also pounded into flour and made into cakes. In India the beans are eaten in the form of 'dhal.'

"The inhabitants around Manchis are almost entirely self supporting as regards food and it is to be hoped that the growing of the soya bean may be taken up in other districts... The bean is known by the Chinese as *'Wong Tau'* (Cantonese) which means the yellow bean, in Hakka as Vong Theu and in Hokkien as Ui Tau.

"Note. In amplification of the above article a note has been received from the District Officer, Bentong, stating that the Soya Bean is grown not only at Manchis but also nine miles from Bentong on the road to Kuala Lumpur... Hakka vegetable gardeners in Raub are also said to grow the Soya bean freely, interplanted with other crops.

"At Bentong there is a bean curd factory in an attap shed behind the town where the bean curd (or *Tau Fu* in Cantonese) is made for sale in the local market."

Note: *Webster's Third New International Dictionary* (1963) defines atap or attap, derived from the Malay meaning "roof or thatch," as "3. A thatched roof often made with the leaves of the nipa palm." Address: Malaya.

1185. *Los Angeles Times.* 1924. China has most things Chinese but chop suey isn't to be found there. May 25. p. I2.
• ***Summary:*** Although most Americans believe that chop suey is a Chinese dish, it cannot be found there–excepts perhaps in the American quarter of Shanghai.

The invention of chop suey is attributed to the genial Li Hung Chang, who, during a visit to the USA, was at a loss when asked to entertain some American guests who wanted to enjoy a Chinese banquet.

"His cook, collecting such ingredients as were available, concocted a dish to which he gave an exotic tang by adding a piquant sauce made from the soya bean." When asked what the dish was called in China, "his merry eye happened to light upon the chop sticks and the bottle of soya sauce, and he answered 'chop soya,'" which has been corrupted into chop suey. He communicated his discovery to his compatriots in San Francisco, where America's chop suey is thought to have started.

So what do Chinese eat? They "eat enormously and yet so economically that what is wasted in the United States would feed 60,000,000 Chinese in comparatively luxury." "The cost of feeding one adult in China averages two cents a day. A coolie never drinks milk or eats butter. He seldom tastes sugar or meat." His typical diet is described. A Chinese laborer, eating a simple diet derived from plants, accomplishes a prodigious amount of work.

"'Two cubic inches of bean curd, four walnuts, five peanuts, fifteen roasted beans, and twenty melon seeds make a meal, says Prof. Edward Alsworth Ross..." [Source: Thomas Steep in the *New York Tribune*].

Note: The rest of this article is highly condescending and racist.

1186. Tang, Chi Yu. 1924. An economic study of Chinese agriculture. PhD thesis, Cornell University, Ithaca, New York. 514 p. June. See p. 420-23. [2+ ref]
• ***Summary:*** In Part V, Chief Agricultural Enterprises, chapter 24 is titled "Soy beans." It begins: "China leads the world in the production of soy beans. Statistics on acreage and production of soy beans in China proper are lacking. The soy beans acreage in Manchuria, however, was estimated at 7,200,000 acres, and production 3,700,000 tons" (see *Chinese Economic Bulletin* No. 156, p. 9 {16 Feb. 1924}). "During the period 1891-1904, exports of soy beans and soy bean products were almost entirely absorbed by Japanese markets. The Russo-Japanese war in 1904 and 1905 stimulated the production of soy beans in Manchuria, After the war, the surplus beans had to be disposed of in some markets, and for the first time trial shipments were made by Japanese firms to English mills in 1908... During the period 1909-1922, acreage and production of soy beans increased by leaps and bounds" [in the USA].

The chapter then lists five major reasons that soy beans have become so important in China: "1. Soy beans thrive in a variety of climatic conditions. They do well in dry seasons and at the same time do not reduce greatly in yield in a wet season. 2. Since they are a leguminous crop, soy beans are grown to maintain soil fertility... 3. Soy beans have a high food value in comparison with other foods. They are especially rich in protein... 4. Many by-products are made from soy beans, including bean oil cake, bean meal, bean flour, bean bran, bean sprouts, bean coffee, bean milk and bean curd. Because of the large range of by-products that have been made, the price of soy beans has become stabilized... 5. Further expansion of soy bean production possible when North Manchurian lands are brought under cultivation."

Table 45 (p. 422) shows China's exports of soy beans, bean cake, and bean oil for the years 1913, 1920, 1921, and 1922 in piculs (133.33 lb) and taels (a monetary unit). Each of the three increased during this period which included World War. I. In 1922 exports of bean cake were worth the most, followed by soy beans and bean oil. Soy bean exports grew from 7,419,511 piculs in 1913 to 12,462,350 piculs in 1922. [Soy] bean oil grew from 49,817 piculs in 1913 to 12,294,006 piculs in 1922.

Table 46 (p. 423) shows the weight and value of these three products exported to various countries. Beans are mostly exported to Russia, Japan, and the Dutch Indies (in that order). Bean cake is mostly exported to Japan (86% of the total) and Russia. Relatively little bean oil is exported: it goes mainly to the "Turkey, Persia, Egypt, etc." [grouped as one unit] (380,000 piculs), Russia (250,000 piculs), Great Britain (246,000 piculs), the Netherlands (201,000 piculs), and the United States (116,000 piculs).

Note: This is the earliest English-language document seen (May 2003) that uses the term "bean bran" to refer to soy bran. Address: Cornell Univ., Ithaca, New York.

1187. *Japan Magazine* (*The*)*: A Representative Monthly of Things Japanese.* 1924. Japanese child games: The "Oden-ya." 15(1):10-11. Sept.
• ***Summary:*** Page 10: "*Oden* is a kind of Japanese popular food." Among the many things it contains are *yaki-dofu* (broiled beancurd), *ganmodoki* (bean-curd fried with condiments), potatoes, etc., which are cooked in a soup of soy [sauce], after which they are skewered and eaten, usually with mustard. The seller of *oden* is called *oden-ya*.

In this game, "boys and girls imitate this familiar food hawking in their play. It is an outdoor game [played] by at least 6 or 7 children.

"There are two taggers chosen at first. One hawks *oden* and another buys, the rest forming the *hanpen, chikuwa, konnyaku, yaki-dofu, ganmodoki* and potatoes respectively. The *oden-ya* arranges in a line these foods beside him, waiting for one coming to buy them..."

Note 1. This is the earliest English-language document seen (April 2013) that contains the term *yaki-dofu* or the term "broiled beancurd." Both refer to grilled tofu.

Note 2. This is the earliest English-language document seen (April 2013) that contains the word *ganmodoki* (written as one word); it refers to deep-fried tofu burgers.

Note: This remarkable periodical was founded by Baron Hirayama, P.C., in 1910.

1188. *Bean-Bag* (*The*) (*Lansing, Michigan*). 1924. Manchuria: Home of the soy bean. 7(6):11-12. Nov.
• ***Summary:*** This article is based on (and quotes widely from) a bulletin released by the National Geographic Society (Washington, DC).

"Manchuria's major crop is the soy bean–and it is soy bean sauce which lends flavor to chow mein, chop suey, yakamin [sic], and other American versions of Chinese cooking.

"The soy bean's rise from obscurity, only 15 years ago, to its present importance is a wonder of modern commerce."

"Not only does the soy bean provide a sauce which is the Worcestershire of China, but it also masquerades as cheese [tofu], candy, fertilizer, flour, oil for lighting and lubricating and it does further duty in waterproofing umbrellas and cloth.

"The Japanese use it widely [in the form of kinako, or roasted soy flour] as the basis of confectionery. In this form it is highly palatable and the Japanese consider their candies and pastries more wholesome than ours–indeed they are appalled by the quantity of sugar which Americans consume."

"Only a fraction of the bean oil that comes to this country is used in edibles. Much of it is utilized in making soaps, paints, lubricants and toilet powders. After oil is

© Copyright Soyinfo Center 2013

extracted from beans and the residue is made into bean cakes. These are manufactured extensively in Mukden. They are retained in the east, and serve as fertilizer and cattle feed both in China and Japan.

"Aware of its enormous soy bean crop, and its heavy yield of sorghum and millet, the visitor expects to see great farms of these products. The Manchurians, like most Chinese, are gardeners rather than farmers. The vast aggregate of these grains and vegetables come from patches of an acre or so. Tens of thousands of farmers with tens of thousands of the primitive plows, shaped like crude shovels, turn up millions of ridges, and drop seeds into the loose earth. Then they run a roller over their patches and wait until it is time to spread their beans or their grain on clay floors. They thresh the grain with flails or with oxen to trample it.

"Southern Manchuria has the best railroads in China; some of the busiest cities, such as Mukden, Harbin, Kirin, and Port Arthur; and its general prosperity is high."

1189. Cullison, W.V. 1924. The soy bean and commerce. *Oil Miller* 20(3):17-18, 20-22. Nov. Reprinted from The Staley Journal.

• ***Summary:*** Contents: Introduction and history. Three methods of producing soybean oil: Old hydraulic method, extraction process using "light petroleum naptha" [naphtha], and by the Anderson Expeller mill (continuous process). Crude soy bean oil. Use of oil in hard soaps and paints. Soy bean meal: Soy bean flour as food. Food uses of soy beans in China and Japan: Soy bean or vegetable milk, tofu or soy bean curd, miso or soy bean paste, soy bean sauce (shoyu). Soy beans and the farmer: North Carolina led in acreage until 1923, when Illinois gained first place. Growing soy bean. history of the soybean, uses, methods of oil production, and uses for the oil and meal.

"The soy bean has been grown in the United States since 1804, under the names of Coffee bean, Japan pea, Soja, Soy, Soya and Stock pea. During the period of the Civil War the soy bean was used rather extensively in the southern States as a coffee substitute. For a considerable while seedmen sold certain varieties under the names Coffee Berry and Coffee Bean.

Note 1. This is the second earliest document seen (Nov. 2005) which states that soybeans were used as a coffee substitute during the Civil War in the United States.

The 2nd process for producing soy bean oil is the "Extraction Process wherein the ground seed is leached with light petroleum naptha, which dissolves the oil, leaving a meal containing less than 4 per cent oil. The naphtha extract is distilled, the naphtha recovered and used over again, and the soy bean oil obtained as a residue from this distillation."

"The demand and market for soy bean products, especially the oil, is here and now. Whether or not this demand will be filled by American grown beans, or by beans and oil imported from Manchuria depends upon the American farmer."

A map shows where soy beans are produced in the USA. A flow sheet shows the basic steps in making soy bean oil, meal, and other chief products. A photo shows a line of expellers, powered by overhead belts, as they "extract soy bean oil."

Note 2. This article says nothing about the A.E. Staley Manufacturing Company's work with soybeans. Address: Research Chemist, A.E. Staley Mfg. Co., Decatur, Illinois.

1190. Muramatsu, Syunsuke [Shunsuke]. 1924. On the composition of the soy bean. *Bulletin of the Imperial College of Agriculture and Forestry, Morioka* No. 7. 52 p. Nov. [15 ref. Eng]

• ***Summary:*** Contents: I. Chemical studies on the soy bean proteins (p. 1-23; 15 ref).

II. On the starch of soy bean (p. 25-30; 0 ref). Illustrations show (after p. 26): (1) Section of a green seed stained with iodine solution. (2) Section of a ripened seed stained with iodine solution. (3) Section of an imperfectly ripened seed stained with iodine solution. (4) Ditto. (5) Spermoderm of a green seed stained with iodine solution, showing that its palisade cells contain starch granules. (6) Spermoderm of a ripened seed stained with iodine solution. ps = Palisade cell. ed = Endosperm. (7) Section of a cotyledon of a green seed stained with iodine solution, showing the starch granules in it. (8). Ditto, a ripened seed. (9) Section of a cotyledon of a green seed showing the mode of aggregation of starch granules in the cell. (10). Starch granules X 1000 magnification.

III. On the natural soap occurring in soy bean (p. 31-41; 0 ref). Illustration (p. 38): Crystals of hispidic acid X 450 magnification.

IV. On the preparation of tofu (p. 43-52; 0 ref). Contents of part IV, "On the preparation of tofu." Introduction." Introduction. Raw materials: Soy bean, nigari (the composition of each is given). The method of preparation of tofu. An improvement for the preparation of tofu (using calcium chloride as a coagulant to increase the calcium content and quality). Conclusion.

It is said the method for preparing tofu was developed in China during the Han dynasty, and was brought to Japan during the rule of Toyotomi Hideyoshi (1585) from Korea. The author analyzed the composition of 7 varieties of soybeans used to make tofu. They contained on average 12.29% moisture, 43.18% crude protein, and 18.72% crude fat. The smaller beans contained more protein and gave higher yields of tofu. Address: Morioka Koto Norin Gakko, Nogei Kagaku Jikken-shitsu, Morioka, Japan.

• ***Summary:*** Name of company with diacritics is: Minami Manshû Tetsudô K.K. Kôgyô-bu. Nômu-ka. This important, major work was written by Yoshitane Satô. Contents: Photos (on unnumbered pages at the front of the book) show 16 scenes of soybean transportation, storage, and processing in Manchuria, as follows: (1) Mule drivers whipping mules trying to pull carts loaded with large sacks of soybeans over muddy roads. (2) Cylindrical osier storage bins for soybeans. (3) Row upon row of sacks of soybeans piled high in storage near docks. (4) Soy sauce being made in a courtyard; each earthenware jar is covered with a woven conical lid. (5) The inside of a huge and modern soy sauce plant. (6) Wooden kegs and glass bottles of Yamasa shoyu. (7) Soy sprouts (*daizu moyashi*) growing in round woven baskets. (8-11) Soy oil being pressed using vertical screw presses [as an alternative to hydraulic presses]–four views. (12) Boilers used in a soybean mill. (13) A wooden barrel of soybean oil being sealed. (14) Soy oil packaged in many small containers, each surrounded by a wicker basket. (15) Round soybean cakes stacked high on railway flatcars. (16) The inside of a modern soy oil factory.

Note 1. This is the earliest Japanese-language document seen (Jan. 2013) that uses the term *daizu moyashi* to refer to soy sprouts.

Contents: 1. Current status of soybean production and consumption: A. Production: Overview (p. 2), Japan (p. 4), Korea (p. 12), Manchuria (p. 16), China (except 3 eastern provinces, but including Eastern Inner Mongolia, p. 31), USA (p. 34), British colonies (p. 37), European countries (p. 40). B. Consumption: Japan (p. 41), Korea (p. 52), Manchuria (p. 57), China (p. 59), Dutch East Indies

© Copyright Soyinfo Center 2013

(Indonesia, p. 60), USA (p. 61), European countries (p. 63).

2. Characteristics of soybeans: A. From a physical sciences viewpoint (p. 67): Structure (overview, cotyledons, hypocotyl, seed coat), contents of each system (p. 70), appearance (p. 73; color, gloss, shape, size, hilum (*fusuma*) color, young plumule leaf color, ratio of seed to seed coat). B. From chemical viewpoint (p. 82): General composition, structure of each component (p. 109; protein, oil, carbohydrate, ash/minerals, vitamins). C. Appearance and relationship between oil and protein content (p. 126): Oil and protein color related to color, glossiness, shape, size, hilum color, young plumule leaf color. D. Evaluating soybean quality (p. 140): Overview, key points (sizes, shapes, colors, glossiness, hilum color, young plumule leaf color, ratio of seed coat to seed, dryness of seed, volume, weight, smell, mixing of different varieties, ratio of imperfect seeds, amount of other types of seeds), collection of materials for testing, testing and evaluating commercial soybeans.

3. Soybean usage and processing (p. 175). A. One view of main usage of soybeans. B. Nutritional value of soybeans as food (p. 183): Nutritional value of soy protein. C. Processed soyfoods (p. 208): Soy sprouts (p. 208), natto (*itohiki nattô*, p. 212, Hamanatto, p. 224), types of tofu (regular tofu [*nama-dôfu*, p. 226], *kori-dofu* or *koya-dofu*, p. 240, aburaage, p. 245, tofu curds [*tofu nô*, p. 247], hard tofu [*tofu-kan*, p. 247], fragrant hard tofu [*kô-kan*, p. 248], *senchô tofu*, p. 249, fermented tofu [*nyûfu or funyû*, p. 249]), *tofu-p'i* or yuba (p. 256), soymilk and artificial cow's milk, p. 259, soybean flour raw, or roasted (kinako, p. 263), shoyu (p. 266; overview of miso and shoyu, Japanese traditional regular shoyu, p. 267, Japanese traditional special shoyu and tamari, p. 269, Chinese soy sauce, p. 272, recent shoyu research and development, p. 274), miso (p. 280; Japanese traditional regular miso, Japanese traditional special and processed miso, p. 282, Chinese miso, recent miso research and development, p, 285). D. Soybeans as feed or fodder (p. 287; green soybeans as feed, p. 290): Fresh forage, dried forage or hay. E. Soybeans as manure or fertilizer (*hiryô*, p. 297; in the Kaijô area of Manchuria, have been roasted and steamed, and mixed with compost, and used for green manure (*ryokuhi*) or soybean cake (*daizu kasu*). This method has also been used in the northeastern provinces (*Tohoku Chiho*) of Japan in rice fields). F. Soybeans as oilseeds (p. 302). G. Use of soybean protein in industrial products (p. 304).

4. The soy oil extraction industry (p. 305): A. Methods of removing the oil (origins, traditional methods, hydraulic pressing, extraction method, p. 340). B. Advantages and disadvantages of each method (p. 348). C. The soy oil industry in Manchuria (p. 357): History of development, important places for soy oil on the Manchurian Railway, economic condition of the Manchurian oil industry (p. 420), oil extraction in Japan (history, p. 437, commercial factories, p. 442, development of these factories, p. 451).

5. Soybean meal or cake and its composition (p. 464). A. The varieties of soybean meal or cake and the composition of each. B. Evaluation of quality (p. 473). C. Soybean meal or cake as a fodder (p. 478): Feeding value and digestibility, incorrectness of the theory that there are bad effects from feeding soybean meal or cake (p. 479). D. Soybean meal or cake as a fertilizer (p. 490). E. Soybean meal or cake as food (p. 504): Use as a raw material for shoyu production (p. 506), use to make soy flour (p. 509). F. Soybean meal or cake as a source of protein in industrial products.

6. Soy oil and its processing (p. 526). A. Characteristics of soy oil: Composition, physical characteristics (p. 535), chemical characteristics, testing and evaluating soy oil (p. 564), the quality of commercial soy oil products (p. 577). B. Refining soy oil (p. 587). C. The use and processing of soy oil (p. 631): Overview, refined soy oil as a food, substitute for salad oil, or for deep-frying oil, as an illuminant, as a cutting oil, lard substitute, margarine, in paints, soap, hardened oil, for waterproofing, substitute for petroleum oil, glycerin, fatty acids, stearine.

7. Exports and imports of soybeans, soybean meal or cake, and soy oil (p. 708). A. Manchuria. B. Manchurian exports. C. China. D. Japan. E. Korea. Appendix: Bibliography of soybeans (Japanese-, German, and English-language works; p. 748). List of photos.

Note 2. This is the earliest Japanese-language document seen (Oct. 2011) that mentions fermented tofu, which it calls *nyûfu* or *funyû*.

Note 3. This is the earliest Japanese-language document seen (Feb. 2012) that uses the term *itohiki nattô* to refer to natto. Address: Dairen, Manchuria.

1200. Polk's Portland [Oregon] city directory. 1924. Portland, Oregon: R.L. Polk & Co., Inc. 1972 p. See p. 1276. • ***Summary:*** "Ota H restr [restaurant] 86½ 5th N. Home same."

1201. **Product Name:** Tofu.
Manufacturer's Name: Denver Tofu Co.
Manufacturer's Address: Downtown Denver.
Date of Introduction: 1925. January.
New Product–Documentation: Denver City Directories. 1925 and 1941. No listing for Sakurai.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 899. Directory entry, under "Food Products." In Japanese: Denbaa Tofu-sho (Yoshida). In English: Denver Tofu Co., 2430 Larimer St., Denver, Colorado. Phone: 623-5031.

Kate Bulkeley. 1988. Denver Business Journal. July 11. "Soy Products New Favor Spices Denver Tofu." Denver Tofu Inc., now owned by president Haru Yamamoto, is 63 years old. He bought the company in 1973, at which time he made about 150 one-pound pieces of tofu a day. Talk with Mr. Yamamoto. 1988. Aug. 25. The company was founded

© Copyright Soyinfo Center 2013

in 1925 by a Mr. Sakurai, and was then located in downtown Denver. In about 1960 Mr. Kiichi Yoshida bought the company, and in 1973 he sold it to Mr. Yamamoto. At that time it was located on Larimer St. From the beginning only one product had been produced, a fairly firm tofu coagulated with calcium sulfate.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. Denver Tofu Co., 6150 N. Federal Blvd. Denver, Colorado 80221. Phone: 303-426-0122. Owner: Mr. Harubisa Yamamoto.

1202. **Product Name:** Tofu.
Manufacturer's Name: Doi Tofu-ya.
Manufacturer's Address: P.O. Box 779, Kemmerer, Wyoming.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. O-32. Company name is in Japanese characters. Address and phone are in English.

Note: This is the earliest known commercial soy product made in Wyoming.

Indeed both soyfoods and tofu were first made in Wyoming by Japanese Americans.

1203. **Product Name:** Tofu.
Manufacturer's Name: Furushizu? Furunori? Furumori? Furuyasu? etc. Tofu-ya.
Manufacturer's Address: P.O. Box 423, Walnut Grove, California.
Date of Introduction: 1925. January.
New Product–Documentation: Japanese American Directory. 1925. p. N-214. Ad (1/8 page). p. N-214. Tofu making and pool hall (*kyôjô*). Owner's first name: Yoshimatsu. Pronunciation of surname is unclear.

1204. **Product Name:** Tofu.
Manufacturer's Name: Furuya Ryokan [Japanese-style Inn].
Manufacturer's Address: P.O. Box 91, Guadalupe, California. Phone: 12M.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/10 page) in The Japanese American Directory. 1925. p. S-172. All in Japanese. Furuya Ryokan, P.O. Box 91, Guadalupe, California. Owner: Mr. Shinjirô Furuya, Phone: 12M. Making and selling tofu.

Note 1. By 1930 this inn had changed its name (Endo Ryokan) and owner (Mr. Kinosuke Endo). But it was still at the same address and still make tofu.

Note 2. Guadalupe is near Santa Maria in Santa Barbara County, southern California.

1205. **Product Name:** Tofu.
Manufacturer's Name: Hamazaka Ryokan oyobi Tofu-ya [Japanese-style Inn and Tofu Shop].
Manufacturer's Address: 218 1st St., Marysville, California. Phone: 228-W.
Date of Introduction: 1925. January.

1215. **Product Name:** Tofu, and Agé.
Manufacturer's Name: Kamiya Shoten (Kamiya Co.).
Manufacturer's Address: 468 Broadway, El Centro, California. Phone: 282.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (¼ page) in The Japanese American Directory. 1925. p. S-223. Across top of ad in English: Kamiya Co. In Japanese: Kamiya Shoten, 468 Broadway, El Centro, California. Owner: Mr. Matsutarô Kamiya. Phone: 282. Sells Japanese and Western foods, other goods, and fresh fish. Makes and sells agé and various kinds of tofu.

Note: El Centro is about 90 miles east of San Diego, and 10 miles south of Brawley, California.

Ad (¼ page) in The Japanese American Directory. 1930. p. S-249. Same as 1925 ad. Also in 1934, p. 454. Ad (¼ page). Quite similar to 1925 ad. The company sells tofu and aburage, but it is not clear that they make these foods.

The Japanese American Directory. 1941. p. 530. A 1/6 page ad (in both Japanese and English) at the bottom of p. 531 is titled "Kamiya Co." It states that this Japanese and Western grocery store, owned by Mr. Masutaro Kamiya, sells fresh fish, aburage, and various types of tofu.

1216. **Product Name:** Tofu.
Manufacturer's Name: Kawabata Shoten (Kawabata Co.).
Manufacturer's Address: 433 Broadway, El Centro, California. Phone: 282.
Date of Introduction: 1925. January.

© Copyright Soyinfo Center 2013

New Product–Documentation: Ad (1/6 page) in The Japanese American Directory. 1925. p. S-228. Kawabata Shoten, 433 Broadway, El Centro, California. Owner: Mr. Heitarô Kawabata. No phone. Sells Japanese and Western foods, other goods, and fresh fish. Makes and sells of tofu.

Note: El Centro is about 90 miles east of San Diego, and 10 miles south of Brawley, California.

1217. **Product Name:** Tofu.
Manufacturer's Name: Kawano Tofu-ya (Kawano Tofu Shop).
Manufacturer's Address: 165 South Monterey St., Gilroy, California.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-123. Name is in Japanese only. Address and phone no. are in English. No phone no. given.

1218. Koona Sakana-ten [Corner Fish Shop]. 1925. Corner Fish Market (Ad). In: The Japanese American News. 1925. The Japanese American Directory (*Nichibei Jûshoroku*). No. 21. p. N-199. [Jap]
• ***Summary:*** Ad (1/8 page). Japanese American Directory. 1925, p. N-199. 201 C St. (P.O. Box 126), Marysville, California. Phone: 692-W. Fresh fish. Japanese and Western foods, tofu and vegetables. Owner: Mr. Tadayuki Yokoyobi? Yokohi? Quick delivery. Directory entry p. N-199. Corner 2nd and C St. (P.O. Box 126), Marysville, California. Phone: 692-W. Note: The tofu sold here now is probably made in Marysville by Hamazaka Ryokan & Tofu.

Ad (1/8 page). Japanese American Directory. 1930, p. 206. Koona Sakana Shijo. 217 2nd St. (P.O. Box 1095), Marysville. Phone: 392. Selling fresh fish, meat, Japanese and American groceries, tofu, and other goods. Also finding jobs for free. Owner: Yokotobi. Note: The tofu sold here now is probably still made in Marysville by Iwanaga Ryokan & Tofu. Address: 217 2nd St. (P.O. Box 1095), Marysville, California. Phone: 342.

1219. **Product Name:** Tofu.
Manufacturer's Name: Lafayette Tofu-ya.
Manufacturer's Address: 119 E. Lafayette St., Stockton, California. Phone: 4408-W.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-229. Also 1930. p. 233. Phone has changed: 8319. Also in 1934, p. 219. In Japanese: Lafayette Tofu-ten (Jûjirô Yamaguchi).

The Japanese American Directory. 1941. p. 233. Raheddo Tofu-ten (in characters), Lafayette Tofu, 119 E. Lafayette St. (in English), Stockton, California. Phone: 2-4176. Note: See the 1922 listing for Eto Tofu-ten at this address. They could well be the same company.

1220. **Product Name:** Tofu.
Manufacturer's Name: Matsui Tofu-ten.
Manufacturer's Address: 2416 Grant Ave., Ogden, Utah. Phone: 3098.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. O-19. Company name is in Japanese characters. Address and phone are in English. Owner: Mr. Tanekichi Matsui.

1221. **Product Name:** Tofu.
Manufacturer's Name: Murakami Sakana-ten (Fish Shop).
Manufacturer's Address: 32 Center St., Turlock, California.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/8 page) in Japanese American Directory. 1925. p. N-252. Fresh fish and various kinds of tofu. Owner: Murakami Tomiichirô? Noriichirô? Tomoichirô? etc. Also will help you to find a job / work. Note: Turlock is located in California's Central Valley, south of Modesto and north of Merced.

1222. **Product Name:** Tofu.
Manufacturer's Name: Nakanishi Ryokan (Japanese-style Inn).
Manufacturer's Address: P.O. Box 536, Penryn, California.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/8 page) in Japanese-American Directory. 1925, p. N-193. All in Japanese. Nakanishi Ryokan. Fresh fish and tofu. P.O. Box 536, Penryn, California. Owner: Mr. Tsunegorô Nakanishi. Note: The tofu is probably made fresh by a tofu maker in the same town. Penryn is in Placer County, northeast of Sacramento, near Auburn.

1223. **Product Name:** Tofu.
Manufacturer's Name: Nishimura Tofu-ya.
Manufacturer's Address: P.O. Box 78, Courtland, California.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-210. Also in 1930. p. 216. But the address has changed: P.O. Box 378, Courtland. Also in 1934, p. 206.

1224. **Product Name:** Tofu.
Manufacturer's Name: Okazaki Sengyo-ten (Fresh Fish Shop).
Manufacturer's Address: P.O. Box 107, Auburn, California. Phone: 203J.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/8 page) in Japanese American Directory. 1925, p. N-197. All in Japanese.

© Copyright Soyinfo Center 2013

Okazaki Sengyo-ten. Fresh fish, tofu, Japanese-style inn (*ryokan*). P.O. Box 107, Auburn, California. Phone: 203J.

1225. **Product Name:** Tofu.
Manufacturer's Name: Okino (Umekichi) Sengyo, Tofu-ya [Fresh Fish & Tofu Shop].
Manufacturer's Address: P.O. Box 195, Visalia, California.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-304. Name is in Japanese only: Okino (Umekichi) Sengyo Tofu-ya. Owner's name: Umekichi Okino. English: P.O. Box 195, Visalia, California. No phone. They make and sell tofu, and sell fresh fish.

The Japanese American Directory. 1930. p. 294. Name is in Japanese only: Okino Sengyo Tofu-ten [Fresh Fish and Tofu Shop]. In English: 204 N. East St. (P.O. Box 694), Visalia, California. Also in 1934, p. 259. In Japanese: Okino Sakana-ten, Tofu-ten [Fish and Tofu Shop]. In English: 204 N. East St. No phone number.

1226. **Product Name:** Tofu.
Manufacturer's Name: Owashi Tofu-ya. Also called: Umitsuki-do? (Umezukido?, Kaigetsu-do?).
Manufacturer's Address: 721 Tuna St., Terminal Island, California. Phone: 1368.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. S-136. First directory entry and ad (1/10 page.) Both state: Umitsuki-dô? (Kaigetsu-dô?), 721 Tuna St., Terminal Island, Calif. Phone: 1368. The ad states: Making and selling tofu and aburage. Owner: Mr. Tokumatsu Owashi. Makes and sells Japanese-style confections for weddings and funerals. Second directory entry gives company name as Owashi Tofu-ya; same address and phone.

Note: Terminal Island is in southern California, about 10 miles south of Los Angeles, near Long Beach Harbor.

The Japanese American Directory. 1930. p. S-142. Umezuki Tofu-ya. 249 Cannery St., Terminal Island, California. Phone: 3871. Note: The company name is written in Japanese characters only.

1227. **Product Name:** Tofu.
Manufacturer's Name: Sakuma Tofu Seizo-sho [Tofu Factory].
Manufacturer's Address: 223 W. 1st South St., Salt Lake City, Utah. Phone: W. 7939W.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. O-11. Name is in Japanese only. Address and phone number are in English.

1228. **Product Name:** Tofu, and Agé.
Manufacturer's Name: Sasaki Sakana-ten (Fish Shop).
Manufacturer's Address: P.O. Box 93, Penryn, California. Phone: 7W.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/8 page) in Japanese American Directory. 1925, p. N-193. All in Japanese. Sasaki Sakana-ten (Uo). Fresh fish, tofu, agé, produce, carpentry. P.O. Box 93, Penryn, California. Phone: 7W. Owner: Mr. Sasaki Sukeichi? Yukikazu? Yoshikazu? Akikazu? etc. Note: The tofu made fresh in this shop is probably served (and maybe sold) in the Japanese-style inn in the same town. Penryn is in Placer County, northeast of Sacramento, near Auburn.

1229. **Product Name:** Tofu.
Manufacturer's Name: Selma Tofu-ya.
Manufacturer's Address: 1507 W. Front St., Selma, California.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-290. Name is in Japanese only. Address and phone number are in English.

1230. **Product Name:** Tofu.
Manufacturer's Name: Shirashi Tofu-ya.
Manufacturer's Address: P.O. Box 41, Courtland, California.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. N-210. Also in 1930. p. 216. But address is now P.O. Box 336, Courtland. Note: Courtland is about 15 miles south of Sacramento and 10 miles west of Elk Grove. Also in 1934, p. 206.

1231. **Product Name:** Tofu.
Manufacturer's Name: Teramoto Tofu-ya.
Manufacturer's Address: 423 "I" St., San Diego, California. Phone: 66628.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. S-204. Name is in Japanese only. Address and phone number are in English. Teramoto Tofu-ya, 423 I St., San Diego, California. Phone: 66628. Ad (1/10 page), p. S-209. Teramoto Unsô-ten (Transportation or Shipping Co.). Same address and phone no. Owner: Mr. Sutekichi Teramoto. Making and selling tofu. We deliver quickly, even if your order is small.

1232. **Product Name:** Tofu, Aburaage.
Manufacturer's Name: TF Shokai.
Manufacturer's Address: P.O. Box 43, Del Rey, California.
Date of Introduction: 1925. January.
New Product–Documentation: Ad (1/8 page) in The Japanese American Directory. 1925. p. N-286. TF Shôkai, P.O. Box 43, Del Rey, California. No phone. They sell Japanese- and Western-style foods, other goods, and fresh

fish. They make and sell tofu and aburaage.

Ad (1/8 page) in The Japanese American Directory. 1930. p. 279. They sell Japanese- and Western-style foods and groceries, fresh fish, and meat. They make and sell tofu and aburaage. Owner: Tsuneyoshi Fujimoto (found in residence directory). The phone number is now DEl Rey 1.

1233. **Product Name:** Tofu.
Manufacturer's Name: Vacaville Sakana, Yasai, Tofu-ten (Fish, Vegetables & Tofu Shop).
Manufacturer's Address: P.O. Box 511, Vacaville, California. Phone: 236.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925, p. N-146. Name is in Japanese only. After the company name, in Japanese, is given the names of the two proprietors: Kôshichi Nakagaki and Yoshinosuke Nakagaki. In English: P.O. Box 511. Phone: 236.

1234. **Product Name:** Tofu.
Manufacturer's Name: Watanabe Tofu-ya.
Manufacturer's Address: 176½ 24th St., Ogden, Utah. Phone: 1736.
Date of Introduction: 1925. January.
New Product–Documentation: The Japanese American Directory. 1925. p. O-19. Company name is in Japanese characters. Address and phone are in English. Owner: Tomesaku Watanabe.

The Japanese American Directory. 1930. p. S-288. The address and phone number have changed. R-265½ 24th St. (P.O. Box 473), Ogden, Utah. Phone: 2312. Also in 1934, p. 490. In English: R. 265½ 24th St., Ogden. No P.O. Box or phone.

Hokubei Nenkan–The North American Times Year Book. 1936, p. 289. Watanabe Tofu-ten, R 265½ 24th St., Ogden. Mr. Tomesaku Watanabe. No phone.

The Japanese American Directory. 1941. p. 614. Watanabe (Tomesaku) Tofu-ten (Watanabe Tofu Co.), R-265½ 24th St., P.O. Box 804, Ogden, Utah. Phone: Not listed. Note: There were tofu makers at this address in 1907 and 1911.

1235. Ochse, J.J. 1925. Tropische groenten. Geteelde en in 't wild groeiende gewassen, die door de Indische bevolking worden gegeten [Tropical vegetables: Cultivated and wild plants eaten by the Indonesian people]. Weltevreden: Uitgave en Druk Volkslectuur. 215 p. July. See p. 92-95. Illust. Also listed as series #686. [Dut]
• ***Summary:*** This is the original Dutch-language edition, which was revised in 1931 as *Indische Groenten* and translated into English in 1931 as *Vegetables of the Dutch East Indies.* Ochse lived 1891-1970. After describing the plant, the author notes that there are two varieties of soybeans: one is yellowish brown and the other is black. The first is used to make tempeh and tofu; the second to make kétjap. Very popular soy products in the Indonesian market are tofu and firm tofu (*tahoe* and *takoäh*). Also discusses *tao tjo* (Indonesian-style miso; has a consistency like paste or porridge), tao dji (fermented black soybeans), témpé, and ontjom. The process for making each of these soyfoods is described.

Illustrations show: (1) A young soybean plant with leaves and pods (half size).

(2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Note: This is the earliest document seen (April 2001) that contains the word *takoäh.* Address: Buitenzorg [Bogor], Java.

1236. Carqué, Otto. 1925. Natural foods: The safe way to health. Los Angeles, California: Carqué Pure Food Co., Inc. 359 p. Illust. Index. 20 cm.
• ***Summary:*** This book advocates a natural-food, vegetarian diet, but not necessarily a vegan diet.

Contents: Part I: Fundamental facts about food and health. 1. The old and new conceptions of the cause of disease. 2. Drug medication, vaccination, and serum therapy. 3. Nature's healing factors: Sunlight, fresh air, exercise, rest, water, the importance of natural foods for life and health, why denatured foods (white flour, refined sugar, candies, etc) are injurious. 4. The constituents of food considered in the light of modern physiology and biology: Proteins, carbohydrates, fats and oils, cellulose, fruit acids are organic acids, organic salts, the alkaline or base-forming elements (iron, sodium, calcium, magnesium, potassium, manganese, and aluminum), the acid-forming elements (phosphorus, sulphur, silicon, chlorine, fluorine, iodine, bromine, arsenic), the vitamins.

5. Rational soil culture essential for the production of superior foods. 6. The conservation of vital force (stimulants, narcotics, elimination of waste, quality of foods, prolongation of life, alkaline and acid-forming foods). 7. Why the calorie theory is misleading. 8. Fruit, man's best friend (the fruit of the tree, sulphured and unsulphured fruits). 9. Nuts–Nature's most concentrated foods.

10. Vegetables–Nature's blood purifiers (Great hygienic value of green leaves, proper soil fertilization most essential to vegetable culture, loss of organic salts in cooking, classification of vegetables–5 classes). 11. Cereals and legumes (Cereals falsely called "The staff of life," whole grain products are the best, the great waste of food elements by modern milling processes, legumes–an important food). 12. Milk and dairy products (Milk not a perfect food for adults). 13. Meat–the least essential and most expensive of all foods (the vegetarian alternative).

Part II: Practical dietetics. 14. How to live well on less food. 15. The feeding of infants and children (lactation,

© Copyright Soyinfo Center 2013

almond milk, soy bean milk). 16. The rational preparation of foods. 17. Rational food combinations (importance of simplicity of eating, the mono-diet and its advantages). 18. Simple and well balanced menus for all seasons.

Appendix: Tables and statistics. A1. Analyses showing the amount of sodium, calcium and iron in foods. A2. Amount of food materials necessary to supply one ounce of protein. A3. Amount of calories contained in one pound and one ounce of 200 food products. A4. Average time required for gastric digestion of foods. A5. Annual consumption of sugar, soft drinks, salt, spices, coffee, tobacco, drugs, alcohol, etc., in the United States. A6. Regulations for the enforcement of the Food and Drug Act. Important information about chemical preservatives and artificial colors.

The Preface (and the book) begins: "Two powerful superstitions are impeding the welfare and progress of the human race. The one is the conviction that disease is an entity, a mysterious something that attacks us without warning from the outside, either in the form of germs or as inclemency of weather. The other–perhaps the more harmful of the two–is the belief that for each disease specific remedies must be found, such as drugs, serums, vaccines, glandular extracts, etc., and that, when we are afflicted, we have to submit to a specialist's treatment or even to the affected parts or organs."

The average individual tries "to shift the responsibility for his sins of omission or commission to some imaginary cause, rather than to hold himself accountable for the violation of nature's laws." There is "almost universal ignorance of the fact that disease is merely an effort on the part of nature or the universal life force to restore normal conditions in the organism. Our present system of commercialism has taken advantage of this situation by misleading people through clever advertising to persist in their errors in order to maintain the demand for drugs and serums, proprietary medicines,..."

Chapter 11, "Cereals and Legumes," briefly discusses many types of soyfoods–soy bean sprouts, milk, flour, tofu, soy sauce, and oil (p. 142). Page 196 discusses the use of soy bean milk and almond milk for feeding infants and children.

Chapter 16, titled "The Rational Preparation of Foods," contains a long and detailed section on soy beans (266-71), with subsections on boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts. Home preparation of each is described. Miso, yuba, natto, and hamananatto are also mentioned (p. 268). Soy-related recipes include: Baked soy beans (p. 269). Soy bean loaf. Soy bean croquettes. Soy bean bread (p. 270).

The section titled "Home made cheese" begins: "Man can live well without milk and dairy products, if he makes judicious use of legumes and nuts in various forms, as has been explained in the preceeding chapters, but under the present system og agriculture and production of foodstuffs, many people have to make occasional use of milk products... As the commercial cheese are generally heavily salted, preference should be given to home made cheese... Cottage cheese made without salt is the most wholesome of the cheeses."

Chapter 9 (p. 119-24), about nuts, states: "The making of nut butters is not a difficult process. At present peanuts and almonds are chiefly used for this purpose... The blanching of peanuts and almonds is now done on a large scale by special machinery, and the blanched nuts can be procured in nearly all the larger cities." Break the blanched nuts into small pieces by running them through the Climax Grater or a food chopper. Put them into a moderately hot oven for a few minutes to make them dry and crisp, then run them through a tightly adjusted nut mill to create a "smooth, palatable nut butter." A large table (p. 122) compares the composition of various nuts and nut butters (almond butter, peanut butter) with meat, cheese, eggs, cow butter, and whole wheat bread. "The pecan contains the largest amount of fat, about 70%, closely followed by the hickory nut, brazil nut, filbert and pine nut, which all contain over 60% of fat. The pignolia imported from Spain ranks highest in the amount of protein, containing nearly 34%; the peanut comes next with 29.8%; the butter nut, almond. pistachio, all contain over 20% protein, excelling the best cuts of meat in that respect. The almond does not contain any starch as is, therefore, the nut best suitable for infants, especially in the form of almond milk." Chufa contains 3.5% protein and 31.6% fat.

The section titled "Fruit and nut confections" (p. 212-15) discusses and has recipes for natural candies and confections.

The section titled "How the American people deplete their vitality by their favorite poisons: The tremendous waste of our material wealth" (p. 328-43) discusses (p. 338-43): The amount spent in 1924 on each of 15 "adulterated foods and drinks and of poisonous stimulants and narcotics" ($5,040 million) compared with the amount spent on foods and vegetables ($850 million, or 16.8% as much). Refined sugar. Coffee. Tobacco. Condiments, etc. Alcoholic beverages. Drugs. Regulations for the enforcement of the Food and Drug Act (due to untiring efforts of Dr. Harvey W. Wiley, former chief of the Bureau of Chemistry, USDA). Sodium benzoate and sulphur dioxide. Salt. Saltpeter. Boric acid and borax. Saccharine. Mineral and coal tar dyes. Laxity in enforcement of the Pure Food Law.

On pages 344-47 is information about the Carque Pure Food Company (incorporated 1912) and its founder and owner Otto Carque, including a brief biography of Otto, a list of leading Carque food products, and a full page photo of the company's new home at 729 Seward St., on 1 Oct. 1925 (2 story brick building).

The food products are arranged by groups: Fruits: Sun-dried and dehydrated, without bleaches or preservatives (Black mission figs, white Smyrna-type figs, prunes, dates,

© Copyright Soyinfo Center 2013

olives, raisins, apricots, peaches, pears). Nuts: Fresh, selected and unroasted (almonds, walnuts, Brazil nuts, pecans, pignolias, pistachios, peanuts). Confections: Of assorted fruits, nuts and honey, without sugar, salt, glucose or preservatives (delectables, fruit nuggets, Kandy-Andy). Stamina and laxative foods (Nut-Fruto, Prunola {prunes and olives}, fruit laxative). Nut butters: Ground from whole nuts, uncooked and unsalted (almond, nut cream, peanut). Cereals and products: Made from re-cleaned whole grain (wheat flour, yellow corn meal, brown rice, breakfast food, crackers). Miscellaneous (olive oil, strained honey, raw sugar, fig-cereal breakfast drink {instead of coffee}). Price list and descriptive circulars on request.

Note: This is the earliest English-language document (or book) seen (June 2004) with the term "Natural foods" in the title that also discusses soy. Address: Los Angeles, California.

1237. Firth, Violet Mary. 1925. The soya bean: An appeal to humanitarians. London: C.W. Daniel Co., Graham House, Tudor St., London E.C. 4, England. 55 p. Oct. Reviewed in Russian by N.I. Morosoff in Manchuria Monitor. 1930. No. 5. p. 104-05.

• ***Summary:*** Contents: Part I: An appeal to humanitarians. Introduction. 1. Practical application of idealism. 2. Economic considerations. 3. Milk is not a humane food. 4. The power of humane ideals in commerce. 5. The burden of the animal kingdom. 6. The freedom of the cattle.

Part II: The making of soya milk. 7. The cultivation of the soya bean. 8. Early experiments with soya milk. 9. Process of manufacture. 10. The soya meal [okara]. 11. The soya bean industry. 12. The soya bean in the kitchen. 13. Medical and dietetic aspects. 14. The soya bean in national emergencies.

The foreword begins: "The manufacture of a vegetable milk from the soya bean is a matter in which I was much interested during the war, and I think I may claim to be the first person, in this country at any rate, who succeeded in making a cheese [tofu?] from vegetable casein.

"Shortly after the war [World War I] the company that was making soya milk closed down, the milk was unobtainable, and I lost touch with the matter. During a recent visit to Letchworth, however, I found that the making of soya milk was again in full swing, and I was so impressed with the spirit of service and humane ideals in which the enterprise was being conducted that I suggested to the managing director of the company that if he would assist me with the necessary technical details, I would like to write a little book on the possibilities of the soya bean, and bring to the notice of humanitarians in general the work that has been going on so quietly in this little country town. All information was freely given to me...

"I must express to the Garden City Pure Food Co. my thanks for their assistance and my admiration for the spirit in which their work is being carried on." That company has neither commissioned, nor subsidized this book.

This book is "written in an endeavour to make those who are "earnest for animal welfare realise that the exploitation of our younger brothers can be prevented more effectually from the commercial aspect than by individual abstention from flesh-food..."

"Over a hundred thousand pounds has been spent in England alone in experiments in making milk from the soya bean... The original company closed down during the post-war trade depression, and the wonderful soya milk was unobtainable; the work on the soya bean has been taken up again by a body of people actuated by philanthropic and humanitarian motives, whose names are well known among workers for human and animal welfare.

"The dearly bought secrets of the soya bean must not again be lost to the world..."

Note: The author sometimes writes under the pseudonym of Dion Fortune. Address: Author [England].

1238. Carr, Harry. 1925. The lancer. *Los Angeles Times.* Nov. 26. p. A1.

• ***Summary:*** Thomas Steep has recently wrote a book titled *Chinese Fantastics*, from which the following is summarized. "Starvation: The prodigious physical labor of China is performed on the following pitiful diet: Two cubic inches of bean curd, four walnuts, five peanuts, fifteen roasted beans and twenty melon seeds. This is a typical meal for a coolie."

1239. Rose, Mary Schwartz; MacLeod, Grace. 1925. Maintenance values for the proteins of milk, meat, bread and milk, and soy bean curd. *J. of Biological Chemistry* 66(2):847-67. Dec. [13 ref]

• ***Summary:*** "Eight experiments, each of from 12 to 15 days duration, have been conducted on four young women, to test the relative efficiency of milk, meat, bread and milk, and soy bean curd in maintaining nitrogen equilibrium in the adult human subject."

These experiments, with the above foods forming practically the sole source of protein in the diet, showed that, with an intake of protein of 0.5 gm per kg bodyweight, the nitrogen balance was at almost all times positive. In the case of the soya bean, the fecal nitrogen was 24% of the total nitrogen excreted; in no other case did it amount to more than 10-12%. The diets containing milk, and bread and milk, led on the whole to a larger retention of nitrogen than the meat diets. Address: Dep. of Nutrition, Teachers College, Columbia Univ., New York.

1240. **Product Name:** Tofu.
Manufacturer's Name: Igasaki (Toichi) Tofu.

Manufacturer's Address: Rear 554 South, Honolulu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Masaichi Ishiraki Tofu (Masaichi Ishiraki, proprietor), rear 554 south, Honolulu. 1927 Directory. Address listed as rear 572 south, Honolulu. 1928-29 Directory. Listed as Masaichi Ishizaki Tofu. Not listed 1924, 1930-31.

1242. **Product Name:** Tofu.
Manufacturer's Name: Morioka (Katsuiki) Tofu.
Manufacturer's Address: 1222 N. King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Katsuiki Morioka Tofu (Katsuiki Moreioda, proprietor), 1222 N. King, Honolulu. 1926 Directory. Listed as Matsukichi Morioka Tofu, 1357 N. King. 1927 Directory. Listed as Katsukichi Morioka Tofu. Address same. Residence, 965 Waiakamilo Rd., Honolulu. Not listed 1934-35.

1243. **Product Name:** Tofu.
Manufacturer's Name: Nishimoto (Otoichi? Otokazu? Narikazu?) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Otoichi Nishimoto Tofu (Otoichi Nishimoto, proprietor), Hilo, Island of Hawaii. 1928-29 Directory. Address changed to 19 Nawahi Ln., Hilo.

Hawaiian Japanese Annual & Directory. 1936-37, Island of Hawaii p. 21. Otoichi? Otokazu, Narikazu Nishimoto (from Hiroshima prefecture), tofu maker, Ponahawai St., Hilo, Island of Hawaii.

Not listed 1947-48 in Honolulu City Directory.

1244. **Product Name:** Tofu.
Manufacturer's Name: Okamoto (Daijiro) Tofu.
Manufacturer's Address: 905 Sheridan, Honolulu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Daijiro Okamoto Tofu (Daijiro Okamoto, proprietor), 905 Sheridan, Honolulu. 1927. Address given as rear 905 Sheridan, Honolulu. Not listed 1930-31. 1934-35 Directory. Listed at 1338 College Walk, Honolulu. Not listed 1936-37.

1245. **Product Name:** Tofu.
Manufacturer's Name: Ryozo (Ariyoshi) Tofu.
Manufacturer's Address: 43 N. Pauahi, Honolulu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Ariyoshi Ryozo Tofu (Ariyoshi Ryozo, proprietor), 43 N. Pauahi, Honolulu. Not listed 1927.

1246. **Product Name:** Tofu.
Manufacturer's Name: Sasaki (T.) Tofu.
Manufacturer's Address: 18 N. Kukui, Honolulu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. T. Sasaki Tofu (T. Sasaki, proprietor). 18 N. Kukui, Honolulu. 1926 Directory. Listed as Taka Sasaki Tofu, 1 waikiki 30 S. Kukui, Honolulu. 1927 Directory. Listed as Mrs. Taka Sasaki. Address same. Not listed 1928-29.

1247. **Product Name:** Tofu.
Manufacturer's Name: Yamashita (Etsuzo) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. Etsuzo Yamashita Tofu (Etsuzo Yamashita, proprietor), Hilo, Island of Hawaii. Not listed 1926.

1248. **Product Name:** Tofu.
Manufacturer's Name: Yonamine (E.) Tofu.
Manufacturer's Address: Waipahu, Oahu, Hawaii.
Date of Introduction: 1925.
New Product–Documentation: Honolulu City Directory. 1925. E. Yonomine Tofu (E. Yonomine, proprietor), Waipahu, Honolulu. Not listed 1927.

1261. *Jozogaku Zasshi* (*J. of Brewing, Osaka*). 1926. Shojo: Seimai, daizu, komugi, mugiyasu, ômugi, seishu, shoyu, miso, tsukemono [State of commerce: Prices of rice, soybeans, wheat, rye, barley, refined sake, shoyu, miso, pickles]. 4(1):88-91. Aug. [Jap]
• ***Summary:*** Soybeans are used mainly in making tofu and fermented foods. Gives the price of soybeans at various places in Japan. Likewise gives prices of shoyu and miso at various locations.

1262. Morse, W.J. 1926. The distribution of soybeans in the United States. *Proceedings of the American Soybean Association* 1:132-37. Seventh annual field meeting. Held 9-12 Aug. in Mississippi.
• ***Summary:*** "The soybean, according to our earliest records, was first grown in the United States in 1804 and until about 1880 was considered chiefly as a curious plant from the Orient. Since about 1880, when the soybean was first looked upon as having agricultural possibilities, the crop has greatly increased in acreage, production and utilization.

"Available statistics show that about 500,000 acres of soybeans were grown in 1917 and more than 2,500,000 acres in 1924. The production of seed increased from about 3,000,000 bushels in 1917 to more than 9,500,000 bushels in 1924. The statistics for 1924 also show that about 1,200,000 acres were grown for hay, about 1,000,000 acres for pasturage and silage, and more than 500,000 acres for seed.

"What has been the cause of this marked increase in acreage and utilization of the soybean crop? The development of varieties, adapted to a wide range of conditions and uses, undoubtedly, has been one of the most important factors. The number of varieties has been increased extensively in the past fifteen years. Soybeans vary widely in their adaptation to climate and soil. Some varieties are especially suitable for fertile land, others for less productive land; some for a seed crop, others for forage; some for planting with corn for pasturage or silage, others for planting with sorghum or Sudan grass. One may, however, find a few varieties or even a single variety adapted to the climate of a certain section, which will fill all of the local requirements of the crop.

"Other factors, such as improved methods and greater use of inoculation, improved and more economical methods of planting, culture and harvest, and successful results in extensive feeding trials by experiment stations, without doubt, have played no small part in extending the popularity of the soybean. A careful study of the history of the development of the soybean in the United States shows, however, very clearly that increased acreage and utilization of the crop has followed increased development of varieties.

"At this point–for it fits well into a logical discussion of the adaptability and distribution of the soybean in our country–I wish to pay a brief tribute to a man, who, more than two decades ago, very frequently prophesied that the soybean would, in the not distant future, be one of our major farm crops, especially in the eastern half of the country. I refer to Dr. C.V. Piper of the Office of Forage Crops of the United States Department of Agriculture, who passed away last February. Dr. Piper was responsible for the many hundreds of introductions received from the soybean regions of the Orient. Not only was Dr. Piper interested in the development of new varieties, and he held this of the greatest importance, but he also urged a greater utilization of the soybean, as an oil crop, for human food in various forms, and a more general use for pasturage and forage purposes. We, of the Association, owe much to Dr. Piper, and I know of no greater tribute to the man than to carry on his work and fulfill his prophesy."

"The culture of the soybean is confined at present, almost entirely, to the eastern half of the country. The states, however, bordering the west bank of the Mississippi River are increasing their soybean acreage. The distribution and adaptability of the soybean, perhaps, will be more clearly understood if we draw a line from Canada through the center of North Dakota, South Dakota, Iowa, Kansas, and Oklahoma, which is about the 99th meridian west. Then from the Atlantic Ocean at the northern border of North Carolina let us extend a line west and along the northern borders of Tennessee, Arkansas, Oklahoma, New Mexico, Arizona, and take in the southern third of California. We now have the country divided into four sections, the northeast, southeast, northwest and southwest." There follows a discussion of each of these four sections. Concerning the southwest section:

"In the irrigated districts of California, especially the orange section and the river valleys of Arizona, the soybean has proved a valuable summer cover crop. In California, the Virginia variety has given best results while in Arizona, the Otootan and Laredo are used mainly. Variety tests in eastern

© Copyright Soyinfo Center 2013

New Mexico show that the soybean has possibilities for forage and seed.

"In California and Arizona the soybean seldom develops seed normally, although an excellent growth of forage is produced. This abnormal development of seed is undoubtedly due to the prevalence of extremely hot weather during the period when the seed is forming."

The greatest increase in soybean acreage and utilization has been in the northeastern section of the United States, especially in the Corn Belt area. "In this region the soybean is used mainly for pasturage, hay and ensilage, although considerable quantities of seed have been crushed during the past two or three years for oil and oil meal in the Corn Belt states. Food companies in this section have for several years manufactured special soybean flour products. Such concerns have increased to a considerable extent during the last few years. Soybeans are now being made into breakfast foods, soy flour, soy sauce, bean curd, and special flour preparations for various purposes. Two of the most recent developments are the manufacture of soy sauce and bean curd. Soy sauce, especially, has found a very favorable and extensive market throughout the United States." Address: USDA, Washington, DC.

1263. Zlatarov, Asen. 1926. Die Soja und ihre Verwertung als Nahrungsmittel [The soybean and its use as food]. *Fortschritte der Landwirtschaft* 1(7):543-47. Sept. 1. [8 ref. Ger]

• ***Summary:*** On this document, the writer's name is written "Prof. Dr. Assen Zlataroff."

In Bulgaria as elsewhere in Europe, people have started to plant lots of soybeans. The soybean can serve as a source of healthy and rich nutrition, but also as a new source of income. There is much recent interest in Hungary and Germany.

Tables show: (1) Thirteen nutritional analyses of soybeans planted in Bulgaria between 1917 and 1922. (2) Nutritional analyses of black beans (non-soy), black peas, white beans, white lentils. Garbanzo beans (Chick-peas / chickpeas / *Kichererbsen*). And soybeans (*Soja*). The soybean is low in purines. (3) Soy oil constants (yellow variety, ether extract), including specific weight, saponification number, Reichert-Meissel number, iodine number, Hennersche number. (4) Nutritional composition of Papuda beans in 4 districts of Bulgaria in 1920 and 1921. (5) Weight of distilled water absorbed by 100 gm (800 beans) of soybeans after seven lengths of time ranging from 15 minutes to 12 hours. (6) Nutritional composition of soymilk (*Sojamilch*). (7) Comparative nutritional composition of various mammalian milks: Human milk, cow's milk, buffalo milk, sheep's milk, goat's milk. (8) Nutritional composition of tofu (*Tevu-fou, Sojakäse,* based on previous analyses by Champion and Lhote, Prinsen, and König {both fresh and dry}). He notes that tofu resembles quark. (9) Nutritional composition of soy casein (*Kaseo-Sojain*).

The value of the soybean as food: In China and Japan the soybean is used in large quantities as food. These foods include soymilk, soya cheese (*Sojakäse*), soya casein (*Sojakasein*), soybean meal, natto, miso, shoyu (*Schoyou*), Tao-you, Indonesian-style soy sauce (*Ketjap*), Vietnamese-style miso (*Tuong*), *Kiju-tze*, soya coffee (*Sojakaffee*), soya salad (*Sojasalat*), etc.

The soybean as a vegetable (green vegetable soybeans).

He then describes briefly how to make various soybean food products (based on Li Yu-ying and Grandvoinnet) including soya flour (*Sojamehl*), soy dumplings (*Sojaklösse*), soymilk (*Sojamilch,* discovered by the Chinese philosopher Whai Nain-Tze), tofu (*Sojamehl,* made by coagulation of soymilk; he calls it *Sojamilchquark, Sojakäse, Tevu-fou* and notes that in China it is called "The meat without bones"). As far as taste is concerned, the writer has tasted tofu and he finds that this fresh cheese tastes very nice and the type of cheese made from it (by Li Yu-ying) such as Roquefort, Gruyere, Holländer, etc. are in no way inferior to the renowned real cheeses. Making tofu could be a new industry, which would be a good source of income for the nations where the soybean thrives and conducive to the nutrition of the people. Fresh tofu has many uses in cookery. With eggs it makes a fine omelet, likewise cheese dumplings and sausages. All these products have a fine taste and are very nutritious. In 1921 Dr. Assen Zlatafoff (a nutritionist) and J. Trifoneff wrote (in Bulgarian) a brochure on the soybean, its cultivation, composition, and food value. Address: Sophia Medizinisch-chemisches Institut, Bulgaria.

1264. Associated Press (AP). 1926. 'Sukiyaki' appears chop suey's rival. *Hartford Courant* (*Connecticut*). Sept. 27. p. 8.

• ***Summary:*** "Boston–The American public long ago accepted chop suey, chow mein, and even foo young (with various spellings) but sukiyaki has still to make itself generally known."

Boston [Massachusetts] has one Japanese restaurant (opened within the last 3 months, on the South End) compared with more than 20 that serve Chinese dishes. Ingredients in sukiyaki include "squares of yellow bean cake" [tofu] and some "soy bean sauce." Later the hostess brings "toasted crackercakes with a seaweed leaf wrapped about each as a special delicacy."

1265. Horvath, A.A. 1926. The soybean as human food. *Chinese Economic Monthly* 3(9):392-400. Sept. [Eng]

• ***Summary:*** Contents: Introduction. 1. General ingredients [composition] of the various Manchurian beans. 2. Composition of some Japanese soybeans and of the common American varieties. 3. Value of the soybean as food.

Introduction: "The soybean is a plant of very early cultivation in China. Its use dates back to the beginning of China's agricultural age under the Emperor Shen Nung. It

© Copyright Soyinfo Center 2013

is mentioned in the *Ben Tsao Gang Mu* [*Pen-ts'ao kang-mu*], the ancient materia medica, written by Shen Nung himself in the year 2838 B.C. The celebrated dictionary of Sui Sham describes the plant under the name of *tchouan.* In another ancient dictionary, the *Kouang-ia* [*Guangya*, 230 AD], dating from the time of the Han dynasty, the soybean is called *ta-teou* [*dadou*], or grand pea, and also *sou.* It seems very probable that the names soi, soy, soya, and soja are all derived from the ancient Chinese name *sou.*

Note 1. This brief history of the soybean in China (above) is largely borrowed from Piper and Morse. 1923. *The Soybean.* p. 36-37.

In numerous ancient books the philosopher Hamintze [Lord Liu An of Huai-nan], a prince of the Han dynasty, is given as the inventor of soybean curd. The soybean and the soybean curd (*tofu*) are mentioned in many of the ancient Chinese poems, as for example in the rhymes of the great poet Sou, of the 2nd century: 'The tender jade* gets perfumed by it in the kettle' and 'to boil the pea to milk and the seed to butter' (Li Yu-ying et Grandvoinnet)." (Footnote: *"The poet emphasizes the resemblance of the fresh *tofu* with jade.")

"In 1921 China produced 80 per cent of the world's soybean production, 70 per cent of the latter being harvested in Manchuria. The 1921 crop of soybean in Manchuria was approximately 4,500,000 tons. The total acreage of soybean in the three provinces was 8,000,000 acres, covering 25 per cent of the total cultivated area."

In the section titled "General ingredients of the various Manchurian beans," four long tables give the nutritional composition of some of the roughly 500 different varieties of Manchurian soybeans, including black soybeans. The Chinese names of the varieties are given. Most of the analyses were conducted by the South Manchuria Railway Co. Table 1 gives the names (all are Chinese names), composition (water, fats, and protein) of 26 Chinese soybean varieties. The averages are: Water 8.60%. Fatty substance 19.90%. Protein 42.84%.

Table II gives the composition of 15 soybeans grouped by color, including the Chinese name, place of production, water, protein, fat, carbohydrates, fibrous tissue, "ashy substance," and analyst (incl. Fengtien Experimental Farm, Mantetsu Experimental Farm, and Mantetsu Central Exp. Farm). "Generally speaking, yellow beans are richest in protein and fat, especially the latter, then comes green beans with black beans last.

In Table III the "Kung Chu Ling Experimental Station classified the different kinds of yellow soybeans produced in Manchuria by the colours of navel [hilum] and compared their chemical composition. No significant differences were found. Table IV shows the composition of mixed soybeans stored in Manchuria during 1919 and 1920. A Manchurian grading system is described based on five factors: Shape and size (15 points), weight of 1 *sho* (10 points), lustre (15 points), dryness (25 points), purity (cleanness) (30 points). Soybeans receiving a score of 90-100 points are graded as a Special Class, those with 80-90 points as First Class, and those with 70-80 points as Second Class (Nakao and Usami). This table shows the average composition to be: water 8.5%, fatty substance 18%, protein 40%, soluble non-nitrogenous substance and fibrous tissue 28%, ashy substance 5.5%. The higher grades contain more oil and protein.

In the section titled "Composition of some Japanese soybeans and of the common American varieties," table V (p. 397) gives the composition of four leading Hokkaido soybeans: Tsuru-no-Ko, Kanro, Yoshi-Oka, and Oh-Ya-Gi. The water content averages 16.47%, the protein content ranges from 39.34 to 36.86% (average 37.62%), and the fat content ranges from 19.08 to 17.86% (average 18.66%). Table VI gives the composition of six leading American soybean varieties: Mammoth, Ito San, Haberlandt, Guelph, Midwest, and Kingston. The water content averages 7.74%, the protein content ranges from 36.59 to 32.99% (average 35.00%), and the fat content ranges from 22.72 to 18.96% (average 20.37). Note that the Hokkaido soybeans contain more than twice as much moisture, 7% more protein, and only 91.6% as much fat.

The section titled "The value of the soybean as food," states: "One of the certain evidences that the soybean is making god headway in the Occident is the fact that about 10 years ago [during World War I] the French army replaced a large portion of the meat powder in the army ration pottage by soybean products, and has used it in several forms as part of the regular ration. Germany and Austria also tried to compensate the poor protein diet of their army and population during the Great War by using soybean products."

"The soybean contains a double amount of the protein and of calories present in beefsteak. Therefore, in Peking, where the retail price for soybean in 1925 averaged 4 cents (Mex.) per one pound, half of a pound, costing 2 cents, may provide for an adult the necessary protein minimum, which otherwise would have to be purchased in the form of one pound of meat, costing at least 20 cents. According to Li Yu-ying, author of the well-known monograph (in French), 'Le Soya,' and now connected with the Kai Cheng Bean Products Company in Peking, the market prices for an equivalent of 100 calories in soybean were, in Paris in 1912, thirty times cheaper than for the same 100 calories in beef." In Germany, Ehrhorn (a well-known soybean food specialist, formerly of the Aguma factories in Harburg, Germany) calculates that 500,000 tons of soybean residue [meal and cake] are available every year. Soybean protein in Germany is now 25 times cheaper than beef protein. In China, where undernutrition is found on a large scale and famine is a common occurrence, soybean cake is used mainly as a fertiliser for rice fields and sugar plantations–rather than as a low cost source of protein. Numerous famine relief committees in China "have come to the conclusion that one

© Copyright Soyinfo Center 2013

key to the famine relief problem in China is to stop the waste of precious soybean cake for fertiliser." Note 2. This is the earliest English-language document seen (Nov. 2002) that uses the word "undernutrition."

Reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China).

Note 3. This is the earliest document seen (May 2011) in which Dr. Horvath gives his title as "M.D.

Note 4. This is the earliest document seen (July 2000) that mentions the soybean variety Kanro. Address: M.D., Peking Union Medical College, China.

1266. Salazar, Leopoldo G. 1926. The manufacture and chemical control of some soybean products under Los Baños conditions. *Philippine Agriculturist* 15(4):219-31. Sept. [12 ref]

• ***Summary:*** "The Chinese and Japanese manufacture a large variety of food products from the soybean, among which may be mentioned soy sauce or *toyo*, bean curd or *tokua*, soybean milk, flour, salad oils, and lard substitutes.

"Of these products, the sauce and curd are the most important. To the Americans the sauce is known as *soy sauce*, to the Japanese as *shoyu*, to the Chinese as *ch'au yau*, or drawing oil; to the Filipinos as *toyo*. The curd, cake, or cheese is known as *teou-fu* and *tao-hu* in China; *tofu* in Japan; and *tokua* in the Philippines. Soybean cheese is a misnomer as the product is obtained without any ripening process.

"The objects of this work were: (a) to determine the possibility of preparing toyo [soy sauce] and tokua [tofu] under Los Baños conditions; and (b) to determine the time at which the toyo contains the highest percentage of nitrogen. This work was performed in the laboratory of the Department of Agricultural Chemistry, University of the Philippines, Los Baños, Laguna, from April, 1924, to February, 1925."

A review of the literature shows that in the Philippines, only three prior investigations on this subject have been reported, those of Barrett (1911), Gibbs and Agcaoili (1912), and Gibbs, Agcaoili, and Shilling (1912). A photo shows the hand-turned stone mill and other tools used for making tokua, following the method used by the Chinese in Manila. The residue left after making tofu (okara) is called "sapal," and that left from soy sauce is called "tahuse."

"After 8 weeks of fermentation, the toyo was found to be ready for the first drawing. Analyses showed that the toyo prepared in the laboratory compared favorably in composition, odor, and flavor with the superior grade product of the market."

Note 1. This is the earliest document seen (April 2013) that uses the word "tokua" to refer to tofu.

Note 2. This is the earliest English-language document seen (March 2007) that uses the word "sapal" to refer to okara.

Note 3. This is the earliest English-language document seen (March 2007) that uses the word "tahuse" to refer to the residue left after making soy sauce. Address: College of Agriculture, No. 231, the Philippines.

1267. Wastl, Helene. 1926. Das Sojamehl als Nahrungsmittel [Soy flour as a foodstuff]. *Wiener Medizinische Wochenschrift* 76(41):1209-10, 1213-14. Oct. 9. Reprinted in: L. Berczeller. 1928. Publications on Berczeller's Soy Flour. Vol. I. [4 ref. Ger]

• ***Summary:*** In 1870 a large migration of Chinese into Manchuria began, and from this time the soybean started to become the main crop of Manchuria, which is today the most important place for growing soybeans in the world.

The soybean became known in Europe largely through the efforts of Prof. Haberlandt following the Vienna World Exposition of 1873. Large agronomic trials were undertaken, not only in Austria-Hungary but also in Russia. Trials were conducted successfully in most areas where corn/maize thrives. Nevertheless, the crop did not expand, since there were no suitable conditions for the utilization of soya or even market opportunities for the new crop. But with the development of improved extraction processes for obtaining vegetable oils, since 1908 the soybean has become widely used in Europe (and especially in England) as an oilseed, and imports have grown very rapidly. This growth was so sudden that in the trade report of Gehe & Co. for 1911 it was described as "something that has happened only once in the history of world trade. The imports of this heretofore neglected commodity rose to fabulous heights, and in a very short time it conquered the world market."

The author then discusses the nutritional composition of the soybean and briefly reviews the history of research on its nutritional value, including the work of Osborne and Mendel–which was confirmed by L. Berczeller. "The high biological value of soya protein is also shown by the fact that in East Asia, soya largely replaces animal protein in human diets. The use of the soybean for human nutrition depends (despite its outstanding chemical composition) on how it its technically processed. For centuries, ongoing experiments have been conducted on how best to make soybeans into tasty, nutritious foods." The soybean was used as a vegetable, made into milk, subjected to fermentation processes, used to make a type of cheese [tofu], and even a coffee substitute. Above all, people tried to mill it into a flour or to cook it like European legumes, and these recommendations were repeated uncritically in book after book until the advent of World War I, when they were examined on a large scale over a long time. In 1915 Lüthje [Luethje] wrote that the soybean could not be cooked and used like typical European legumes. People who tried to make soy flour during the war found that, because of the oil in the soybean, the flour quickly became rancid, causing consumers to complain about its bitter taste. So processors tried to make soy flour

© Copyright Soyinfo Center 2013

from defatted soybeans, but this caused a loss in nutritional value. However L. Berczeller, using a process of fractional distillation, succeeded in making whole soy flour which, despite its high fat content, did not become rancid. On a dry-weight basis this soy flour contains 45.50% crude protein and 2.38% fat. A table (p. 1213) shows that it is a less expensive source of calories than any other food. Using prices from June 1926 1,000 calories from whole soy flour cost only 0.19 shillings compared with 0.78 shillings for milk, 0.80 for butter, 1.07 for pork, 1.75 for an egg, and 2.64 for lean beef. The great practical significance of this lies in the use of soy flour in bread in place of all or part of the milk, eggs, and fat.

"Through the use of soya flour it is therefore possible, even for people with a low income, to secure a similar consumption of protein and fat, as is otherwise accessible to only a very small part of the population. Soya makes this possible in East Asia already today for hundreds of millions of people." Address: Physiologischen Institut der Wiener Universtaet (Vienna), Austria.

1268. *Chinese Economic Bulletin.* 1926. Soy industry in Foochow. 9(301):316-17. Nov. 27.

• ***Summary:*** Soy manufacturers in Foochow [pinyin: Fuzhou], the capital of Fukien [pinyin: Fujian] province, "total about 250, including 100 in the city and suburbs and 150 in the surrounding villages. The leading ones are Kwo Pen-yi (Cc = Chinese characters given), Tang Sen-hsing (Cc), and Tung An (Cc), the first two capitalized at upward of $100,000, and the third a little below $50,000. Mr. Kwo is an experienced soy manufacturer of Yuki (Cc), and Mr. Tang of Kwantow (Cc [pinyin: Guantou]). The former started the Foochow branch manufactory at Shangtuwei (Cc), Nantai (Cc), in 1920, and the latter at Tientangchieh (Cc) in 1925. Tung An is the oldest establishment in Foochow, having been operated at Howyangli (Cc), Nantai, by a Chuanchow (Cc) man for about half a century."

"These manufacturers are organized into two guilds: The City Guild (Cc) and the Nantai Guild."

The small manufacturers try to compete with the large manufacturers by offering a better product, but so far they have not been successful.

"Soy is a sauce manufactured from soya beans. The name 'soy' is derived from the Japanese *shoyu*, the Chinese name being *shi yiu* (Cc [for fermented black soybean sauce]) *chiang yiu* (Cc [for soy sauce]). The raw material used, especially by the manufacturers in Kwantow, is the green [soy] bean from Newchwang, sold in Foochow at $10 per 100 catties. The Foochow manufacturers, however, prefer the yellow [soy] beans from Tengchow (Cc), Shantung province, where they are cheaper than the green variety by several hundred cash per hundred catties.

"The method of manufacture is briefly as follows. The beans are first cooked, then mixed with wheat flour and table salt, and put in a slightly closed wooden jar. The contents of the jar are afterward sprinkled with salt solution, and then transferred into a porcelain *kong* [earthenware vessel], in which they are hard pressed. Finally they are heated in the sun: the longer they are exposed to sunlight, the better the taste of the soy produced.

The soy [sauce] produced in Foochow is inferior in quality to the Kwantow product. The general processes of manufacture are practically the same, the only difference being in details, which remain a commercial secret among the manufacturers."

Other reasons for the superiority of Kwantow soy sauce "may be enumerated as follows: (1) Absence of adulterants. Soy [sauce] is generally divided by its color into two kinds, the light color soy and the dark color soy. The former is pure and has a pleasant taste; it is sold at 1,280 cash per catty. The latter is adulterated with molasses, so as to reduce the cost of manufacture; it is therefore much cheaper in price, not exceeding 32 cash per oz.

(2) Longer exposure to the sun. The Foochow manufacturers are less spacious and less sunny than the Kwantow manufactories. The soy in the former is exposed to the sun for eight or nine hours a day, while the soy in the latter is exposed from sunrise to sunset." This partly accounts for the superior quality of the Kwantow soy.

(3) Long period of preservation. Having been prepared, the soy should remain in the sun for a year before being sold. Old soy is better than fresh soy, as old wine is better than new. However, small manufacturers cannot afford to keep their output for such a lengthy period and often sell it after a few months.

"While Tang Sen-hsing and Kwo Pen-yi confine their business to soy, the Tung An also deals in the following: Table salt; chiang [jiang] (Cc) a semi-solid soy, distinguished from *chiang-yiu*, which is a liquid soy; distiller's grain; vinegar; dried bean curd [probably Chinese-style pressed tofu, *doufu-gan*], pickled bean curd [probably fermented tofu]; salt eggs; salt vegetables and melons; prawn oil; samshu; sesame seed oil; salt turnip; &c. Tang Sen-hsing and Kwo Pen-yi are the best soy makers in Foochow, while Tung An produces excellent pickles.

"Soy and pickles in store are kept in porcelain *kongs* or sometimes wooden barrels. Soy to be transported to other cities is packed in glass bottles or bamboo bottles, the former having a capacity between half a catty and two catties, the latter between three catties and ten catties.

"Owing to the increase in the price of salt from $6 to $8 per 10 catties, soy manufacturers in Foochow have raised the price of soy by 16 cash per catty in May. Prices of other products have also been advanced by the following rates. Dried bean curd, from 8 cash to 10 cash a catty. Pickled bean curd, from 20 cash to 24 cash a catty..."

• ***Summary:*** Contents: Soybean oil for food: Refined soybean oil, crude soybean oil. Refined soybean oil: As substitute for salad or frying oil, as substitute for hardened oil or lard (hydrogenation), in oleomargarine and vegetable butters.

Until quite recently, the line between edible oils and industrial oils has been quite clear. "Originally soybean oil was used as an edible oil by the Chinese, but its strange smell has repelled Japanese and Western palates (Sato)." "The advance of science in recent times has quickened the development of methods of refining, deodorizing, decolouring, and hydrogenating oils. As a result, the partition that used to divide food oils from industrial oils has collapsed. Whale oil and fish oil, as well as soybean oil, are now in use in Europe and America as a regular constituent of edible oils and fats."

"The aggregate production of the bean mills in Manchuria is in the region of 200,000 tons of bean oil and over 50 million pieces of bean cake. All the bean mills in Manchuria, excepting the Suzuki Bean Mill, Dairen, which is worked on the so-called extraction system, are worked by the expression system." The process of pressing, however, leaves about 45% of the soybean oil remaining unused in the bean cakes, each of which weighs 61 lb. In Europe, and especially in England, the solvent method is used. In the 'Hanseatische Muhlwerke' [Muehlenwerke], Hamburg, Germany, pressing and extraction methods are combined. Extracted soybean oil generally for ½ to 1 cent per pound less than the expressed oil.

Soybeans contain the highly valuable fat-soluble vitamin. "In 1925 Hornemann showed that if the oil is taken from the beans by pressure, all the fat-soluble vitamin remains in the cake and the oil is free from it... But in case the extraction method is used, the soybean oil contains, according to Hornemann, all the fat-soluble vitamin... Moderate hydrogenation of soybean oil does not destroy the fat-soluble vitamin. Rancidity destroys it.

"Fresh soybean oil has a sweet smell, but, when the impurity is contained in a large quantity, it will emit a disagreeable odour. As time goes by, the change will grow more pronounced... In the case of the temperature being high, the same change occurs more quickly, and the colour of the oil becomes darker, the oil itself tasting also less palatable." Filtered oil is more resistant to undesirable influences. "At the present time the Harbin market includes only the filtered oil produced by the Anglo-Chinese Company. All the other oils are merely such as have settled."

Soybean oil as a substitute for salad or frying oil. "The improved methods of deodorizing and bleaching soybean oil have tended to remove a former prejudice against its use as a table oil. Several firms in Europe and America are packing soybean oil for sale to the retail trade, and it is claimed that a satisfactory market has been found (Piper and Morse)... The Nisshin Oil Mills Company, Ltd., at Yokohama and Dairen, purchased some modern oil refining machines from the U.S.A. in 1921 and a refined bean oil (salad oil) is being made which is claimed by the Japanese to be better in quality than the European or American make, by means of improved scientific methods and special skill... It is said that about 20 tons of the refined bean oil (superior salad oil) is manufactured every day at Dairen. In 1923 the refining of special soybean oil was also successfully begun in Harbin by the Anglo-Chinese Eastern Trading Company, Ltd., which had installed special equipment. The resulting product, known as 'Acetco,' is sold to the local preserve factory, is exported to Transbaikal [Transbaikalia or Zabaikal; a former Russian government located east of Lake Baikal–which is in southern Siberia], which is adjacent to Manchuria, and gradually appears to be conquering the local market as a substitute for the more expensive vegetable oils and animal fats. Acetco salad oil has been used at the Peking Union Medical College Hospital for a year and has been found in quality to be equal to Wesson oil, being at the same time much cheaper" (costing only 60% as much).

Frying oil is widely used in Japan to make "Tempura." "Fried *tofu* especially is made everywhere. Sesame-oil or refined rape-oil was formerly used in Japan for frying purposes but a few years ago the demand for bean-oil began to increase as a substitute for the above mentioned oil. (Footnote: In China refined soybean oil partly replaces the very expensive sesame oil in the diet)." "It is partly because the soybean oil manufactured in Japan cannot compete with that made in Manchuria for purpose of export and, consequently, the Japanese are obliged to extend the market at home."

Concerning lard substitutes: "The commercial lard substitutes consist chiefly of a mixture of lard or 'lard stearine' with 'beef stearine', cotton seed stearine and some vegetable oil... In the United States half of the total amount of all vegetable oils produced in that country is used as substitute for lard. Cotton-seed oil stands first in this respect... In hydrogenation, deodorization is practically complete. Therefore, the product made from cotton-seed oil has no intrinsic superiority over that made from soybean oil. The hydrogenation of soybean oil has tended to remove a former prejudice against its use for the kitchen. In 1918 the consumption of soybean lard substitutes in the United States amounted to over 56 million pounds."

"In oleomargarine and vegetable butters: The industry of butter substitutes owes its origin to experiments made by Mege-Mouries which were worked out to a manufacturing process in Paris in 1870. This industry duly spread to Italy, England, Holland, and other countries in Europe... Cow's milk is sometimes replaced by an emulsion prepared from the kernels of almonds or from soybeans, so that it is possible to prepare a margarine from vegetable products exclusively (Lewkowitsch)."

Note 1. This is one of the most important, original, and

1282. Mallory, Walter H. 1926. China: Land of famine. *American Geographical Society, Special Publication* No. 6. 199 p. See p. 112-14. Foreword by Dr. John H. Finley.
• ***Summary:*** "A striking example of the introduction and utilization of new crops may be seen in the case of the soy bean. Until recent years, beans and bean products have not occupied a place of importance in commerce, although they have been used as an article of food by the Chinese for centuries past. It is chiefly due to experiments of the Japanese that the value of the by-products has been established... Modern Manchuria may be said to have been built on the soy bean." Discusses the merits of soy flour, and the work on its behalf of Dr. A.A. Horvath of the Peking Union Medical College, and by Dr. L. Berczeller, the Hungarian food physiologist. Address: Secretary, China International Famine Relief Commission.

1283. Mayerhofer, Ernst; Pirquet von Cesanatico, C. eds. 1926. Lexikon der Ernaehrungskunde [Dictionary of dietetics]. Vienna, Austria: J. Springer. viii + 1205 p. Illust. 25 cm. [Ger]*
• ***Summary:*** Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu [soybeans], fu [dried wheat gluten cakes], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto–Bohnenkäse, Tofu–Sojatopfen, Tonyu–Sojamilch [soymilk], azuki [small red beans], kwansen-fu, kinako–Sojabohnenmehl, geröstet, amasake [amazake]–unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu–Sojasauce, yuba–eine Bohnenspeise. Note that a number of these terms are Japanese.

Note 1. This is the earliest German-language document seen (Nov. 2005) that mentions amazake, which it calls "amasake."

Note 2. This is the earliest German-language document seen (April 2013) that uses the term *Sojatopfen* to refer to tofu.

Note 3. This is the earliest document seen (Aug. 2002) in any language that uses the term *tonyu* (or tônyû or tonyû) to refer to soymilk.

Note 4. This is the earliest German-language document seen (Nov. 2102) that mentions kinako, which it defines as *Sojabohnenmehl, geröstet.*

1284. Pirtle, Thomas Ross. 1926. History of the dairy industry. Chicago, Illinois: Mojonnier Bros. Co. xii + 645 p. Illust. Portraits. Maps. Index. 24 cm. [355* ref]
• ***Summary:*** The section on the "History of the dairy industry in China" states (p. 539-40): In southern China the people eat mostly rice, but mixed with soybean products. "In northern China wheat bread is largely used instead of rice together

© Copyright Soyinfo Center 2013

with large quantities of soybeans. In fact some authorities claim that the soybean is the most universal article in the Chinese diet, taking all the 300 or more varieties.

"The use of soybeans is as old as history in China. It is said to be a well-balanced food, rich in protein, fats, and carbohydrates, as well as vitamin A and B but lacks in minerals."

"A kind of bean curd or bean cheese is made from these beans. In the manufacture of soybean cheese the beans are ground with water, strained, and the residue [okara] used for hog feed. The liquid substance is like milk in appearance and on coagulation becomes the bean curd, or [when fermented], as it is sometimes called, Chinese cheese [fermented tofu]. There is an enormous consumption of bean cheese in China and in Japan. Still it is not made in factories. Every small town has a bean-curd shop. It must be made fresh each day and resembles cottage cheese. It is pressed into cakes about 5 inches in diameter and about an inch thick and sells at about one cent. American money. The cakes may also be salted and dried and they then resemble cream cheese. Tradition says that it was first made about 164 B.C. When the cheese is prepared with sugar it resembles custard and again when salted it resembles scrambled eggs.

"Soybean milk is in composition not so much unlike cow's milk, and in many places in China it is used as a drink, usually sweetened. Soybean sprouts are made ready for use by cooking them in oil and are relished even by Westerners. The soybean cake is the residue after the expression of the oil or after the making of milk, and is used for animals only. It really has much food value and during the famine in North China in 1920-1921 [in which an estimated 500,000 people died of hunger and related diseases] much of this bean cake was used to save the starving people. From a nutritive standpoint it is supposed to substitute for meat and milk, as the Chinese consume large quantities of bean products and small quantities of meat and milk." Address: USA.

• ***Summary:*** About the Maori diet. "One form of soya bean curd is called *Tofu.* When a mineral salt or acid is added to soya bean milk, coagulation is produced..."

1286. Saito, Akio. 1926. [Chronology of soybeans in Japan, 1900 to 1926, last half of the Meiji period and all of the Taisho period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 12-14. [Jap]
• ***Summary:*** 1901–Crushing of soybeans starts in Japan. Owada Seisakusho of Tsuruga, Fukui prefecture, Japan, starts making soy oil and soybean cakes using the press method (*assaku-ho*).

1901–Nakahara Kota is issued a patent on his process for making dried-frozen tofu indoors in a freezer (*jinko kôri-dofu*). This makes it possible to produce a good-quality product year round. This year there are 453 makers of dried-frozen tofu in Nagano. Nagano prefecture encouraged production of this product during the Russo-Japanese War as a side home industry.

1901–Soybean production in Japan reaches 525,000 tonnes, topping 500,000 tonnes for the first time.

1905–After Japan's victory in the Russo-Japanese War, it is said that maybe, because of the victorious mood, tofu makers start to blow a horn while selling tofu.

1905–At about this time, soybean cake (*daizu kasu*) passes fish cake to become the main fertilizer for crops in Japan.

1905–Shin Sawamura (lived 1865-1931) discovers the main natto bacteria and names it *Bacillus natto* Sawamura.

1906–Neda Tadamasa of Akita prefecture develops a new type of soybean. Named the Akita, it is a cross between Shirosaya and Itoi's Ani.

1907 March–Nisshin Mamekasu is founded (initial capitalization is 3,000,000 yen). The next year its soybean crushing plant in Dairen, Manchuria, starts to operate. In 1918 the company merged with Matsushita Mamekasu to become Nisshin Seiyu K.K.

1908–At about this time the retail price of tofu in Tokyo is 1 *sen.* The average cake of tofu weighs over 100 monme (1 monme = 3.7656 gm or 0.1325 oz), so over 376 gm. In 1982 the average price of tofu is 100 yen per cake and the average cake weighs 300 gm.

1914–The Mogi Saheiji family in Noda starts to sell shoyu in 1-sho bottles (1 *sho* = 1.805 liters or 3.81 pints). Before this time a ceramic sake bottle (*tokkuri*) was used.

1914–Yamada Hikozaburo of Nagano prefecture succeeds in making dried-frozen tofu (*Koya-dofu*) for the first time in the *Shimi-dofu* area.

1915–From this year until 1919, the soybean oil industry in Japan is in a period of prosperity. In 1914 Japan produces 7,105 tonnes of soy oil and 92,325 tonnes of soybean cake. Just 5 years later, in 1919, these figures have risen about 13-fold to 30,658 tonnes of soy oil and 353,288 tonnes of soybean cake. Soybean cake becomes very widely used in Japanese agriculture.

1918–The mayor of Tokyo, Tajiri Inataro, recommends that people eat low-fat soybean cake cooked with rice (*mamekasu meshi*) to protect themselves from the rapidly increasing price of rice; he himself eats this dish every day. Hiroetsu? Takako (a woman educator, lived 1867-1949) cooked soybean cake and rice (*mamekasu gohan*). Dr. Saei Tadasuke (1876-1959, a nutritionist) introduces an inexpensive meal (it costs 3 *sen* 5 *rin* for 5 people) using tofu and fish bones for breakfast and dinner at the Inexpensive But Nutritional Cookery Seminar (*Eiyo Anka Ryori Koshukai*). This year 30-50% of Japanese don't have enough to eat. The demand for beef tendons and okara increases. The

© Copyright Soyinfo Center 2013

price of high-quality meat increases faster than the price of tofu.

1919–Artificially cultured pure-culture natto starts to be used. Hanzawa Jun of Hokkaido University (1879-1972), using this method, invents a new "Sanitary Natto Container" (*Eisei Natto Yoki*) made of thin slabs of wood (*kyogi*). He also founds the "Natto Container Improvement Association" (*Natto Yoki Kairyo-kai*)

1919–Soybean production in Japan reaches 502,200 tonnes, and soybean imports rise to 168,000 tonnes. Production of soybean oil reaches 8,853,600 gallons or 33,573,000 liters, equal to that of rapeseed oil.

1919–A machine or kit for making tofu or soymilk easily at home (*kateiyo tonyu-ki*) is marketed.

1920–Soybean production in Japan reaches a record 559,000 tonnes.

1920–Tsugano Akisaburo of Tokyo invents a quick method for fermenting shoyu (*shoyu sokujo-ho*). By adding salt water to soybean koji to make moromi, he is able to make shoyu in less than 10 days.

1922 April–The oil production department of Suzuki Shokai [which went bankrupt in 1922] becomes independent and founds Hohnen Oil Co., Ltd. (*Hohnen Seiyu*).

1923 Sept.–The Great Kanto / Tokyo Earthquake (*Kanto Daishinsai*) strikes. 70% of the miso factories in the area are burned down, causing a shortage of miso. But miso makers in other parts of Japan use this opportunity to ship their miso to Tokyo, and the people of Tokyo come to realize the good taste of miso made elsewhere in Japan.

1924–Kodama Shizutoshi? (or Shintaro) invents another quick method for fermenting shoyu (*shoyu sokujo-ho*) using acid or alkali to hydrolyze soybeans or soybean cake to make shoyu.

Note: This is the earliest document seen (April 2001) that mentions shoyu made by acid hydrolysis. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

• ***Summary:*** The total area of Japan proper is 147,652 square miles (382,861 square kilometers). Japan's population (as of Oct. 1925) was 59,736,704. A large area of Japan is very mountainous, and it is estimated that the cultivated area is about 6 million hectares. According to Prof. Shimizu of Keio University the population density per square kilometer of cultivated area in Japan is much larger than various European countries. Japan 969. Belgium 394. Italy 305. Netherlands 273. England 226. Germany 195. Switzerland 168. France 108. Spain 90.

In chapter 29, Agriculture, the section titled "Beans, potatoes and sweet potatoes" (p. 449) begins with a graph showing the production (in 1,000 koku; 1 koku = 180 liters) of these crops from 1921 to 1923, inclusive. Soybean production decreased from 4,261 koku in 1921 to 3,434 koku in 1923. The text continues: "Among subsidiary farm crops there is perhaps nothing that plays so important a part in the Japanese kitchen as soy beans. The three daily articles of diet for all classes, viz., soy [sauce], miso and tofu are manufactured with this bean either in part or wholly. The 'tofu' (bean curd) is one of the most popular articles of diet, being cheap and highly nutritious; the 'miso' makes Japanese soup and is used in various other ways. The 'soy' is indispensable in Japanese cooking. Then for extracting oils, as manure, and food for horses beans are equally important. The supply being insufficient, a large quantity comes in from Manchuria and Korea. In Japan, Hokkaido is the principal centre of the production. Red beans [azuki], also very extensively produced in the northern island, are used for making confectionery."

In the section on "Breweries" (p. 512+) the subsection titled "Soy" [meaning shoyu or soy sauce] (p. 514) states: "For soy the prefecture of Chiba, which is contiguous to Tokyo municipality, heads all other places on the list as to output. Parched wheat mixed with salt and beans is a principal ingredient. The process is still far from scientific, requiring about 12 months before the liquid is ready for sale. It is also costly, as it does not much admit labor-saving appliances. To obviate these disadvantages have been tried several patented processes, but most of them have failed. In 1917 the leading soy manufactures of Chiba-ken combined and formed the Noda Soy Co., capital ¥7,000,000 p.u. with capacity of about 250,000 'koku' i.e. about 60 per cent. of the total output of the Prefecture."

A table (p. 514) shows production of sake, beer, and soy from 1919 to 1922 (year ending in March). Production of soy (in 1,000 koku) grew from 2,940 in 1919 to 3,268 in 1922. Address: Prof. at the Waseda Univ. and late of the "Japan Times".

1288. Wagner, Wilhelm. 1926. Die chinesische Landwirtschaft [Chinese agriculture]. Berlin: Paul Parey. xv + 668 p. See p. 311-20. Illust. No index. 25 cm. [214 ref. Ger]

• ***Summary:*** The section on legumes contains a long subsection on the soybean (p. 311-20). Contents: Distribution in China. Types and varieties of soybeans. Chemical composition. Techniques of soybean cultivation. Utilization of soybeans: Chiang (*djang; Bohnensauce* [*like soft miso*]), soy sauce (*djang-yo or djang-yu*), and tofu (*dou-fu; Bohnenkäse*), firm tofu (*dou-fu-gan; getrocknete Bohnenkäsekeks*), yuba (*dou-fu-pi; Bohnenkäsehaut*), frozen tofu (*dung-dou-fu; gefrorener Bohnenkäse*), smooth soymilk curds (*dou-fu-nao; Bohnenkäsegehirn*), soy sauce residue (*djang-yu-dscha; Rueckstände der djang-yu*), tofu residue (*dou-fu-dscha; Rueckstände der dou-fu;* [*okara*]), soybean oil (*dou-yu; Bohnenöl*), soybean cake or meal (*dou-bing; Bohnenkuchen;* the latter two in northeast China). The

© Copyright Soyinfo Center 2013

section on oilseed cakes as fertilizers mentions soybean cake (p. 230). Soybeans are also mentioned as a summer crop in rotation with millets (p. 305).

The section on legumes also discusses (p. 320-21) peas (*Die Wintererbse, Pisum sativum L., Wan-dou*), broad beans (*Die Pferdebohne, Vicia faba L., Tsan-dou or Hu-dou*) and the two types of bush beans which are grown throughout China and distinguished by the color and size of the seeds (*Die Buschbohne; {1} Phaseolus mungo L., Lü-dou,* and {2} *Phaseolus radiatus, Tschi-hsiau-dou* [*chixiaodou*]). The *Lü-dou* is widely prized as a vegetable, often as 5-cm-long beansprouts (dou-ya-dsi), or in parts of the North they are used to make vermicelli (slender noodles).

The section on oilseeds contains subsections on rapeseed, sesame, and peanuts (p. 332-38). The section on textile plants discusses hemp (p. 358-60).

Bray (1981) describes that as "A full and systematic description of Chinese agricultural methods in their ecological and socio-economic context, based on the agronomist author's personal experience and careful questioning of his students at the Sino-German High School in Qingdao." Address: Abteilungsvorsteher bei der Landwirtschafts-Kammer fuer den Regierungsbezirk Wiesbaden in Wiesbaden, Germany. Frueher Dozent fuer Landwirtschaft und Abteilungsvorsteher der Deutsch-Chinesischen Hochschule Tsingtau (China).

1289. Chiu, Yan-Tsz (Chao, En-tz'u). 1927. Studies of the physical and chemical properties of soy bean milk. PhD thesis, Cornell University, Ithaca, New York. iii + 38 p. Feb. In: Library of Congress. Catalog Div. A List of American Doctoral Dissertations Printed in 1912-1932. 1931. [23 ref. Eng]

• ***Summary:*** Contents: Acknowledgement. Introduction. Review of literature. Experimental. Physical properties: Specific gravity and total solids, freezing point and total solids, relation of electrical conductivity and resistance to solids and ash, viscosity and total solids, refractive index of serum and total solids, dialysis and its products, keeping qualities, pH values of soy bean milk.

Chemical properties: General composition as determined by analysis (fat, protein–soluble in water soluble in NaCl solution, carbohydrates, ash), effect of soaking, methods of determining fat, composition of the fat in the milk, character of the fat in the milk, kinds of proteins in milk, composition of the true solution or serum, action of ferments on milk. Biological: General types of organisms that develop in milk, vitamins (from the literature), enzymes (from the literature). Discussion. Summary.

In the acknowledgement, he first thanks Prof. G.W. Cavanaugh for his many valuable suggestions and criticisms. "I also wish to express my thanks to Professor E.M. Chamot, Dr. C.W. Mason and other members of the staff of Instruction of the Department of Chemistry for aid and suggestions they have given."

"Introduction: Soy bean milk, which owes its origin to Wai Nan Tse, a Chinese philosopher who lived before the Christian era, is a very satisfactory form of artificial milk. In China it takes the place of cow's milk which is rather scarce and expensive. It is a common food drink, the majority of Chinese being more accustomed to its use than to animal milk. Although the Cantonese do not drink it, they consume some of its products... It is an important food in China as it is used for infant feeding... Sweetened with sugar, it becomes a palatable drink. It may be eaten as a broth."

The thesis contains 22 tables (not one has a title) showing the results of various tests, including tests with different soybean varieties, effect of soaking time on specific gravity and total solids for different varieties, etc.

It also contains 9 graphs (also untitled), usually showing the data from a table in tabular form. For example, Figure A is a graph of the total solids in soymilk (x axis) vs. the specific gravity of that soymilk (y axis) for two soybean varieties: Black Eyebrow and Manchu.

On page 26 are two photomicrographs, one showing cow's milk, the other showing soy bean milk, each at 400x magnification.

Note 1. The author was born in 1890. In Cantonese, his name is Chiu Yan-Tsz; in Mandarin it is Chao En-tz'u. In pinyin it is Zhao-Enci. The last two characters (his given names) mean grace or blessing + gift.

Note 2. The following interesting line (p. 1) is difficult to interpret: "It is an important food in China as it is used for infant feeding..." Questions: What is the source of this information? It is in the introductory paragraph to the thesis and no source is cited. This idea is never mentioned again in this thesis, nor is any of the author's other 5 scientific articles on soy bean milk in China. The last of these articles (Chiu 1938) states: "In North China soybean milk has been a common food for both adults and children, while in South China only its products (mostly bean curd [tofu]) are used." Is it ever used with infants as the sole source of nutrition? If yes, for how long? If no, with what other foods is it fed, in what proportions, starting at what age, and until what age? Is this use of soy bean milk for infants routinely and widely practiced in China, or only in times of famine? Under normal circumstances, at what age is the soy bean milk introduced in the diet and how long is it continued? Address: Cornell Univ., Ithaca, New York.

1290. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(2):175-92. Feb. [25 footnotes. Eng]

• ***Summary:*** Contents: Soybean cake, soybean meal, and soybean flour for food: Soybean press cake, soybean extraction meal, soybean flour (Berczeller, *Soyama, Aguma, Ehrhorn*), *Sojawurze* (*Suppenwurze,* Maggi cubes), digestibility of soybean flour, value for infants, some medical

© Copyright Soyinfo Center 2013

aspects of the use of soybean flour, soybean flour in diabetes (incl. Sarton).

Concerning soybean extraction meal (p. 177-79): This meal is shipped in bags and traces of benzine are easily removed. The process used at the Suzuki extraction plant in Dairen (the only extraction plant in Manchuria) is described; the solvent is benzine. "A new extraction plant (at the Borodin-Takata Alcohol Factory) is now under construction at Imienpo, in North Manchuria. By the new process, beans are first pulverized, then operated upon with alcohol, for the extraction of the oil content... The owner claims that 'there is no foreign taste left which would make the oil or the bean cakes unsuitable for human food.'" Analyses conducted at the S.M.R. Co. Central Laboratory, Dairen, show that this "bean meal" contains: water 7.90%, protein 57.04%, oil 3.41%, carbohydrates 16.92%, coarse fibre 8.63%, and ash 6.69%.

"The solvent method of extraction, involving the use of benzine or gasoline, is used by many of the large oil mills in European countries, especially England." Mills in the USA do not yet use the solvent method; they use traditional hydraulic and expeller processes. "The new process used by the Hansa Mill at Hamburg (Germany) called the Bollmann process, is so economical that the profits of bean milling can be enormously increased. By this process the beans are first pressed and then extracted. The extracted meal is utilized for the manufacture of a highly valuable soybean flour for food (Footnote: But extracted soybean meal (flour) does not contain any fat soluble vitamin, as shown by Hornemann [1925]). The oil is submitted to refining, during which crude lecithin is extracted. It is purified and sold in a form of pure lecithin.

(Footnote: "The soybean contains 1.64 per cent lecithin (an organic phosphorus compound), the price of which in China is about $18.00 (Mex.) per pound. It shows that the value of the lecithin contained in soybeans is greater than the market price of the beans themselves. Extracted soybean meal is therefore deprived of lecithin, which is a highly valuable food constituent, especially for the nervous system. Ordinary beans (navy beans, etc.) contain only 0.81 per cent lecithin)" (p. 178).

Note 2. This is the earliest English-language document seen (March 2001) that contains the term "crude lecithin."

Page 182 states: "Soybean flour is also utilized in the manufacture of breakfast foods and can be used in the preparation of vegetable milk and bean curd."* (Footnote: *"In the United States some very good breakfast foods and an excellent finely powdered soybean milk powder "Soy Lac" is made by J.A. Chard, Soy Products, 263 W. 12th St., New York City, who has been experimenting for some time with soybeans.)" Note 3. This Soy Lac appears to be the first commercial soymilk made in America.

Berczeller (p. 183-84): "A few years ago the Hungarian food physiologist, Prof. L. Berczeller, elaborated a process for manufacturing a soybean flour containing a large percentage of fat. This does not become bitter if kept for over a year, and has a very pleasant taste. The process is patented in nearly all the countries of the world. Its chemical composition is given in the above table and its food value in a previous chapter. This flour contains the expensive fat-soluble vitamin which is deficient in the food of the white race. It is of yellow colour, has a sweet, agreeable nutty taste, and does not produce obesity, notwithstanding the fact that it contains a high percentage of fat. According to Berczeller, the uses of this soybean flour "O" are as follows:

"1. As roasted flour, with an equal part of wheat flour for soups or vegetables;

"2. For pastry, 10-15 per cent soybean flour is mixed with wheat flour. In this case no eggs or only a few need be added. The soybean flour gives to the dough a beautiful yellow colour;

"3. As an addition to meat, 25-50 per cent of soybean flour can be mixed with chopped meat for meat balls, sausage stuffing, etc.

"4. All sorts of flour dishes can be baked with the addition of soybean flour. The taste of the dishes thus prepared becomes better and the nutritive value higher (besides the economy in butter, eggs and sugar);

"5. The addition of even 5 per cent soybean flour in making wheat bread causes a much longer keeping capacity of the bread in a fresh state, the fat preventing the bread from getting stale;

"6. The soybean flour can be used also on a large scale in the foodstuff industry, and in different ways; e.g., in the manufacture of paste products (as a substitute for eggs), cakes, biscuit products, milk-bread (10-16 per cent soybean flour instead of milk), sausages and pastry products (as a substitute for meat).

"Berczeller's soybean flours can be manufactured with little trouble in rice mills or pea mills, where they are decorticated. Eighty-five per cent of soybean flour can be recovered from soybeans. The residue forms a valuable food for animals. According to Berczeller, the cost of production of soybean flour in a European country is as follows:

"One ton of soybeans: 245 shillings. Ten per cent milling expenses: 25 shillings. Total: 270 shillings. Subtracting the value of the bran: 20 shillings. Cost of 850 kg of soybean flour: 250 shillings. Or one ton costs: 294 shillings.

"According to Berczeller, soybean flour is an ideal concentrated food for soldiers, sailors, tourists, etc., in the form of biscuits, etc., because it furnishes a substitute for animal foodstuffs which spoil easily. Berczeller points out that soybean flour is not a substitute for wheat flour but a natural vegetable complement to wheat flour, and one which can be substituted for expensive animal foodstuffs for lowering the living rates [cost of living] of humanity to a degree that could not be reached either by potatoes, maize, or by intensive farming. Austria and Hungary are planning to

© Copyright Soyinfo Center 2013

start a very intensive utilization of Berczeller's soybean flour. This flour, being cheap and easy to manufacture in native rice mills, may be of great importance to China."

Note 1. This is earliest document seen (May 2010) showing that Dr. A.A. Horvath was aware of the work of Prof. Berczeller, who patented a process for improving the flavor / palatability of soya flour.

Page 185 states, in a discussion of soybean flours: "In Bollmann's process the oil is completely removed from the soybean material and the flour is therefore deprived of both the lecithin and the fat soluble vitamin."

Sojawurze (p. 187-88): "The profit from Ehrhorn's process could be much increased if part of the soybean flour were used for the manufacture of products similar to beef extracts, called in German 'Suppenwurze.' They are able to give to soup the taste and flavour of beef bouillon. They are used extensively in Germany, e.g., the well-known 'Maggi' cubes, and were manufactured in large quantities in pre-War and War time from soybean flour at the Aguma factory under Ehrhorn's supervision."

Reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

1291. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(3):298-309. March. [24 footnotes. Eng]

• ***Summary:*** Contents: Soybean milk for food: Introduction. Preparation of soybean milk. Properties (Yu-P'i is Chinese for yuba; Laxa). Market prices. Composition. Nutritive value. New methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama). Some dietetical advantages and applications of the soybean milk. Condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard). Soybean cake, soybean meal and soybean flour as material for soybean milk. Yu p'i and yu ba (yuba; also fu chu).

"In 1905, Li Yu-ying submitted a paper on the subject [of soybean milk] to the 2nd International Milk Congress in Paris, in which he emphasized that the introduction of soybean milk to Western countries 'will be highly beneficial to public health as well as to the budget of the poor.' Also by those who advocate and urge a vegetarian diet, a very strong case can be made for this Oriental substitute" (p. 298).

According to Prof. Laxa: "Soybean milk, supplemented with lactose and inoculated with a culture of yoghurt [yogurt] bacteria, coagulates at 40º C. in 4 hours and gives a curd-like acid mass" (p. 300).

"Market prices. In Peking soybean milk is sold in small bottles in portions of about 200-220 cc. labeled 'Bean milk, a Chinese product, the most nourishing food, made by...' For such a bottle, delivered daily, the big factories of Peking asked in 1925 $1.00 (Mex.) per month. One liter of such milk costs, therefore, about 15 cts. (Mex.)... A fine soybean milk powder, called *Soy Lac*, has recently been prepared in America by Chard" (p. 300-01). Note: This company (Chard) was first referred to by Piper and Morse in 1916 in *USDA Bulletin* No. 439, "The soy bean, with special reference to its utilization for oil, cake, and other products." Soy Lac is mentioned again by Horvath on p. 307.

A table (p. 302) compares the composition of soymilk made in 3 locations (Tsinanfu, China; Peking, China; and Japan) with that of human, cow, and goat milk. Human milk has the lowest protein content (1.25%) and ash content (0.25%); soymilk has about the same protein content as cow's milk (3.3%) but an ash content (0.40%) which is higher than that of human milk but lower than that of cow's milk. Footnote: "To supplement the deficiency of the soybean milk in mineral constituents [such as calcium], it is recommended by von Noorden and Salomon to add to it the salt mixture of Pirquet, which consists of: sodium chloride, 0.3 gm.; potassium chloride, 1.1 gms.; calcium glycerophosphate, 1.7 gms.; magnesium lactate, 0.5 gm.; ferrum glycerophosphate, 0.1 gm. This mixture is called *Nemsalz.* If diluted in 1 liter of water it gives the same percentage of salts as in women's milk" (p. 302).

"In Germany the Soyama factory (in Frankfurt) manufactures soybean fresh milk (mostly from soybeans), soybean normal cream, and also condensed bean milk and cream. Soyama bean milk looks like cow's milk, contains the same constituents, even in larger amount and in a state of finer dispersion. Only its taste is different. According to Fuerstenberg, Soyama milk can be qualified as a special, very valuable dietetic nutrient. The high lecithin content of this preparation adds to its value too" (p. 306). A table (p. 306, based on the analyses of Dr. G. Popp of Frankfurt) shows the nutritional composition of 6 types of Soyama milk and cream preparations: Normal milk. Milk for diabetics. Milk for baking purposes. Normal cream. Cream for diabetics. Cream extra rich in fat (especially for diabetics). "According to von Noorden and Salomon, Soyama preparations may be kept as long as almond milk and Paranut milk. Soyama milk looks just like cow's milk. By keeping, cream separates and it must be shaken before using" (p. 306).

"In using Soyama milk and cream preparations, v. Noorden confirms the following statement of Fischer (for vegetable milk in general): '1. In the stomach soybean milk gives a much finer flocculent precipitate than does cow's milk, produced by acid or even rennet. 2. The ingestion of soybean milk results in a feebler (smaller) secretion of gastric juice; the period of secretion is also shorter. 3. The period of stay in the stomach of the finely flocculent precipitate of the soybean milk is shorter than that of the casein-fat coagulum of cow's milk. 4. The peristaltic motion of the stomach is less after the ingestion of soybean milk and more coordinated than in the case of cow's milk, as shown by X-ray investigation'" (p. 307).

"On the basis of these observations soybean milk

© Copyright Soyinfo Center 2013

is recommended by v. Noorden in cases of gastric and duodenal ulcer, states of peritoneal irritation, hypersecretory conditions of the stomach, disturbances of the motility of the stomach, uric acid diatheses, kidney disturbances, conditions with edema where a food poor in sodium chloride is required, Basedow's disease, cholecystitis, cirrhosis of the liver, diabetes, and in cases where a very nutritious diet is required" (p. 307).

"Soybean milk powder will undoubtedly have a successful future in the Orient as well as in European countries and the United States. Its great advantage in comparison with cow's milk powders is its cheapness. Soybean milk powder can be easily stored and transported... It is believed that at present some of the commercial milk powders contain an admixture of soybean milk powder" (p. 307-08).

"*Yu P'i* and *Yu Ba* are the Chinese and Japanese names of the pellicula formed on the surface of soybean milk when the latter is gently heated. Good *Yu Ba* has a bright yellow color when properly dried. The best *Yu Ba* is that obtained after the first heating. In repeating the heating of the remaining soybean milk, pellicules of gradually inferior quality and color are obtained. As much as 30 pellicules can be secured from the same portion of soybean milk. In China, a product called *Fu Chu* is manufactured in a way similar to *Yu Ba* (Footnote: See this journal, Vol. VIII, 1926, p. 179). Recently an improved method for the manufacture of *Yu Ba* was patented in Japan, consisting in the use of an electric fan adjusted over the surface of a kettle containing the soybean milk heated to a temperature of 90ºC.

"*Yu Ba* has a great nutritive value, as it contains a high percentage of protein and fat,..."

A table (p. 309) gives the nutritional composition of five types of yuba: Common yuba, Kyoto yuba, Shimada yuba, Peking yuba, and Fu chu.

Note: The values for Fu chu are based on those previously reported by Adolph. Fu chu contains much more water (53.68%) than any of the other four types of yuba; common yuba contains only 21.85% and Peking yuba only 9.15%. So it is either fresh or reconstituted.

"In Japan, Kyoto and Nikko are noted for *Yu Ba. Yu Ba* is in much demand in China and Japan and is used in numerous ways as an essential ingredient in many very palatable dishes. Its price is high and therefore yuba is used only by the rich."

Reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

1292. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(4):415-25. April. [34 footnotes. Eng]

• ***Summary:*** Contents: Soybean curd (tofu) for food: Preparation and types ("The Chinese classical name for *tofu* is *li chi*, probably meaning 'the morning prayer'"), historical, present state (of tofu in China), chemical composition, digestibility, utilization (incl. frozen tofu and fried tofu).

Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

Tofu–Historical (p. 416): "The manufacture of soybean curd (*tofu*) was started in China in 164 B.C., during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. Liu An was a great friend of the Buddhist monks, and it seems quite probable that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration (Adolph). *Tofu* was introduced into Japan from Korea for the first time during the Toyotomi government, and Buddhist priests and some other people used it for their daily food among others before it was generally used in Japan.

Tofu–Utilization (p. 418-19): "Both the composition and the digestibility of *tofu*, therefore, prove it to be a very nutritious food material. In the Orient *tofu* forms a very popular and almost indispensable dietary article for the Buddhist priests, as well as the strict adherents to Buddhism, who eat no animal food [i.e., are vegans]. A common saying in some parts of China terms 'bean milk the poor man's milk, and bean curd the poor man's meat.' *Tofu* is also called 'the meat without the bones.'

Note: This is the earliest English-language document seen (April 2013) that contains the phrase "the meat without the bones" (or a similar phrase containing the words "meat" and "bones"); it is used to refer to tofu, not to soybeans.

In Indo-China the daily consumption of *tofu* by an adult is about 3/4 of a pound. *Tofu* in its various forms is also used very extensively by all classes of Japanese. In the interior of the country where fish cannot be easily obtained, it is a most important source of protein.

"In the Orient *tofu* is eaten in a fresh condition simply with a little *shoyu*, though it is also frequently cooked in soup. Fried *tofu* is also a very popular article of food. Rape-seed oil, sesame oil or soybean oil are generally used in frying.

"*Tofu* may also be prepared for preservation and transportation. For this purpose fresh *tofu* is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and is then dried in an oven. As thus prepared it can be preserved for several years. When the *tofu* is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the *tofu* porous and it may be easily dried. If it is not frozen, it is difficult to dry and the resulting material is dense and horn-like. The *tofu* also cooks very well if cooked in diluted soy sauce and smoked in the same manner as meat. The resulting product forms in the Orient the basis for the manufacture of various 'artificial meat' preparations.*" Footnote: * "In Germany, the Soyama factory prepared

during the Great War [World War I] a meat supplement from soybeans. It was cheaper than beef, contained less carbohydrates and had a nutritive value of about 1500 Calories in 1 kilo."

"In Peking, at the Kai Cheng Bean Products Company, various preparations manufactured from tofu may be purchased, such as different kinds of soybean meat, soybean sausages, etc. The company has established a restaurant in Peking (at 86 Morrison Street, the name is written in Chinese characters) where one can get a Chinese dinner of numerous dishes prepared mostly from soybean products (chicken meat, pork, ham and beef, manufactured from *tofu*). Also discusses Dr. Yamei Kin.

A note at the end of this April issue states: "A reprint of Dr. Horvath's paper in booklet form may be obtained from the Bureau of Economic Information. Price $1, Peking Currency.–Ed." Thus, these six articles were reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

1293. *Wall Street Journal.* 1927. Large increase noted in soy-bean planting: Acreage of 500,000 in 1917 has grown to 2,600,000, principally in the corn belt states. May 26. p. 15.
• ***Summary:*** "Largely increased acreage and production of soybeans in the United States in the last decade indicate that the crop is destined to become of great economic importance." Of the more than 2,600,000 soybean acres last year, about 520,000 acres [20%] were for seed production. Total soybean production last year was 6,517,000 bushels. "No other crop has advanced so rapidly from a position of minor to major importance."

The most dramatic increases in recent years have been in the corn belt states and in a few southern states, according to the United States Department of Agriculture. Illinois, the leading state in soybean acreage, with more than 700,000 acres, is followed by Missouri, North Carolina, Indiana, and Tennessee.

In the future, soybeans will be used increasingly for the production of oil and meal. Soybean oil can be used like almost all other vegetable oils. Oil mills in the major production centers "now crush large quantities of domestic beans, and find ready markets for oil and meal."

Companies making soybean food products have recently increased greatly; the beans can be processed to make breakfast foods, crackers, soy sauce, bean curd, wafers, soy flour, and special flour preparations. Soy sauce is now widely sold in the USA. Soybean oil is increasingly used to make soaps, paints, varnishes, lubricating oils, linoleum, waterproof goods, printing ink, and solid oils [by hydrogenation]. Oil cake, which remains after the oil is extracted from the beans, is a valuable livestock feed.

Note: This is the earliest document seen (April 2013) that contains the term "soybean food products."

The discovery that soybeans can be efficiently harvested using a "combined harvester and thresher" has given addition impetus to soybean production. Its value in crop rotations insures the soybean an increasing role in American agriculture.

1294. Horvath, A.A. 1927. The soybean as human food. Peking and Shanghai, China: Chinese Government Bureau of Economic Information. Booklet Series No. 3. 86 p. May. Reprinted from Chinese Economic Journal, Sept. and Nov. 1926, and Jan. to April 1927. No index. 21 cm. [38 ref]
• ***Summary:*** A very original and important book. Contents: Preface by Macey F. Deming, Tappan New York, from an address at a meeting of the National Soybean Growers', held at Washington, DC, Sept. 1925. Introduction. 1. General ingredients of the various Manchurian beans. 2. Composition of some Japanese soybeans and of the common American varieties. 3. Value of the soybean as food. 4. Soybean oil for food. 5. Refined soybean oil: As substitute for salad or frying oil, as substitute for hardened oil and lard (hydrogenation), in oleomargarine and vegetable butters. 6. Whole soybean as food: Immature or green soybeans, mature or dry soybeans, the digestibility of the boiled soybean seeds, boiled soybeans as a food of predominant importance in China, soybean coffee, soybean chocolate, soybean sprouts.

7. Soybean cake, soybean meal and soybean flour for food: Soybean press cake, soybean extraction meal, soybean flour (Berczeller, Soyama, Aguma, lecithin, Ehrhorn), Sojawurze (Suppenwurze, Maggi cubes), digestibility of soybean flour, value for infants (p. 53, based on the research of Dr. Ruhrah in the USA), some medical aspects of the use of soybean flour, soybean flour in diabetes. 8. Soybean milk for food: Introduction, preparation of soybean milk, properties (incl. inoculation with a culture of yoghurt [yogurt] bacteria to give a curd-like acid mass), market prices, composition, nutritive value, new methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama), some dietetical advantages and applications of the soybean milk, condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard), soybean cake, soybean meal and soybean flour as material for soybean milk, yu p'i and yu ba (yuba; also fu chu).

9. Soybean curd (tofu) for food: Preparation and types (classical name is *li chi*), historical, present state (of tofu in China), chemical composition, digestibility, utilization. 10. Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

On page 9 we read: "An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of 'vegetable milk.' At the present time a factory in New York State is being equipped for this purpose." Address: Peking Union Medical College, China.

1295. Gonzalez, B.M. 1927. Education and agricultural promotion in Japan. IV. Promotion of agriculture. *Philippine Agriculturist* 16(2):67-71. July. [1 ref. Eng]
• ***Summary:*** Contents: Introduction. Intensification of culture. Land reclamation. Land adjustment. Price regulation. Rice conservation. Agricultural experiment stations.

The Central Experiment Station was first organized in 1890 as an experimental farm of the Department of Agriculture. Address: Delegate from the Univ. of the Philippines and the Government of the Philippine Islands to the Third Pan-Pacific Science Congress.

1296. Turner, A. Grenville. 1927. A wonderful bean: Bounteous nature's gift from the East. Manifold uses of the soybean. *Milling* (*Liverpool*) 69(25):695-96, 698. Dec. 17.
• ***Summary:*** Contents: Introduction. How the bean and its oil can be used. The soybean as a seed crop. Methods of oil extraction. Includes uses for the bean and methods of extraction used in the United States. Photos show: (1) Three children playing in a field of soya beans in Natal, South Africa. (2) A modern crushing machine. (3) A massive horizontal-axis granite roller for crushing the beans. (4) A native [Manchurian] bean press, showing cakes in receptacle and logs driven in to press out the oil. Address: England.

1297. **Product Name:** Tofu.
Manufacturer's Name: Hamasaki (K.) Tofu.
Manufacturer's Address: Lihiwai, Hilo, Island of Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. K. Hamasaki Tofu (K. Hamasaki, proprietor). Lihiwai, Hilo. Not listed 1930-31.

1298. **Product Name:** Tofu.
Manufacturer's Name: Kato (Shotaro) Tofu.
Manufacturer's Address: 43 N. Pauahi, Honolulu, Oahu, Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. Shotaro Kato Tofu (Shotaro Kato, proprietor). 43 N. Pauahi, Honolulu. Not listed 1928-29.

1299. **Product Name:** Tofu.
Manufacturer's Name: No (Shin) Tofu.
Manufacturer's Address: 480 N. Kukui, Honolulu, Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. Shin No Tofu (Shin No, proprietor). 480 N. Kukui, Honolulu. Not listed 1928-29.

1300. **Product Name:** Tofu.
Manufacturer's Name: Sawai (Kumekichi) Tofu.
Manufacturer's Address: East Manoa Rd., Honolulu, Oahu, Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. Kumekichi Sawai Tofu (Kumekichi Sawai, proprietor). East Manoa Rd., Honolulu. 1930-31 Directory. Name listed as Kamekichi Sawai. Not listed 1934-35.

Hawaiian Japanese Annual & Directory. 1936-37, p. 160. Kamekichi Sawai (from Hiroshima prefecture), tofu maker, Japanese School, Manoa, Honolulu.

Listed again in 1941-42 Honolulu City directory as Kumekichi Sawai, rear 2801, East Manoa Rd., Honolulu. Not listed 1947-48.

1301. **Product Name:** Tofu.
Manufacturer's Name: Tanoue (Tokunosuke) Tofu.
Manufacturer's Address: 3512 Kaau, Honolulu, Oahu, Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. Tokunosuke Tanouye Tofu (Tokunosuke Tanouye, proprietor). 3512 Kaau, Honolulu. 1930-31 Directory. Address listed as 3516 Kaau, Honolulu. 1934-35 Directory. Listed as Tokunosuke Tanoue Tofu, 3512 Kaau, Honolulu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 179. Tokunosuke Tanoue (from Kumamoto prefecture), tofu maker, 3512 Kaau St., Honolulu.

Not listed 1941-42 Honolulu City Directory.

1302. **Product Name:** Tofu.
Manufacturer's Name: Tojo / Toojoo (Kikuemon) Tofu Manufacturer.
Manufacturer's Address: 2216 S. King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1927.
New Product–Documentation: Honolulu City Directory. 1927. Kikuemon Tojo Tofu Manufacturer (Kikuemon Tojo, proprietor). 2216 S. King, Honolulu. 1934-35 Directory. Changed to Azuma Tojo Tofu. Address same. 1936-37 Directory. Listed as Azuma Tojio Tofu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 197. Azuma (Higashi? To?) Tôjô (from ?), tofu maker and seller of goods, 2216 S. King St., Honolulu.

1947-48 Honolulu City Directory. Address given as 2210 S. King, Honolulu. Not listed 1951.

• ***Summary:*** A brief but good introduction to soybeans and soybean products including soybean meal, soybean flour, soybean oil, bean milk [soymilk], to-fu, frozen to-fu, soy sauce, and mizo [sic, miso] or tsiang [jiang].

"When boiled with gypsum or chlorate of magnesia bean milk curdles, and is known as 'to-fu.' Its constitution varies dependent upon the method of preparation employed. Fresh soy curd contains on the average, 8% protein and 3% fat. 'To-fu' when smoked or fried, owing to loss of water, becomes somewhat allied to meat, thereby substantiating the Chinese proverb that–'to-fu is meat without bones.'"

"Frozen 'to-fu' prepared during the cold season contains up to 50% protein. Bean curd is almost totally assimilated, and may be used in the preparation of a considerable number of European dishes, the recipes for which have been published by the U.S. Department of Agriculture. The Chinese prepare an unlimited number of dishes based upon this comestible, including artificial meat. In order to obtain the specific taste of meat, smoking soybean sauce is used."
Address: Manchuria.

Address: San Francisco, California.

1307. Kellogg, John Harvey. 1927. The new dietetics: A guide to scientific feeding in health and disease. 3rd ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1031 p. See p. 188-93, 322-28. Illust. Index. 24 cm.
• ***Summary:*** This is an encyclopedia of food, diet, and nutrition. Earlier editions were published in 1921 and 1923. The author, a physician and a vegetarian, lists his credentials on the title page: "Fellow of the Royal Society of Medicine of Great Britain, of the American Medical Association, Member of the American Economic Association, and of the National Geographical Society, Member of the Société d'Hygiene of France, Late Member of the Michigan State Board of Health, Editor of "Good Health," Superintendent of the Battle Creek Sanitarium, President of Battle Creek College.

Table XIV (p. 188) lists soy beans as a food rich in lime (calcium), containing 0.46%. Pages 189-93 discuss "Acids and bases of food–The acid alkaline balance." It begins: "As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman, of Columbia University, foodstuffs differ in relation to their acid and basic contents. In certain foods, bases or alkalies predominate, while in others the mineral acids predominate.

"The waste products of the body are predominantly acid; consequently it is desirable that the foodstuffs should be predominantly basic. If acids predominate in the ration, and this condition continues for a considerable period of time, the effect will be to disturb the nice balance between acids and bases which is normally maintained in the body fluids and which is essential for life. A deficiency of alkalies constitutes acidosis.

"It is necessary that the alkalinity of the blood should be constantly maintained as the only means by which the acid wastes of the body which are constantly accumulating as the result of all sorts of vital work may be promptly removed." All flesh foods leave highly acid residues. Eggs are also acidic, though less strongly than meat. Cereals and bread are acidic, though much less so than meats. Milk is slightly alkaline. Most fruits, and all green and root vegetables are strongly basic and tend to alkalinize the tissue fluids... Generally it is better to select foods which afford a large basic margin so as to add to the alkali reserve of the body, which always tends toward diminution, especially in old age. A strongly basic diet is especially indicated in cases of arteriosclerosis and disease of the kidneys, in fevers, in

© Copyright Soyinfo Center 2013

pregnant women, in all forms of acidosis, and in old age...

"At the present time all physiologists are agreed that the highest degree of physical vigor and efficiency may be maintained on a diet which excludes flesh foods and physiologists the world over are unanimous in advising a curtailment rather than an increase in meat consumption."

Table XVI (p. 192-93) is titled "Excess of acid or alkali in one ounce and in 100 calorie portions of common foodstuffs." The Soy bean has an excess of base (alkali), 12.0 units per 100 calories or per 1 ounce.

In the chapter on Legumes, pages 322-28 give a detailed and accurate discussion of the soy bean and various soyfoods, including the history and nutritional composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, and soy bean sprouts. On the first page, Dr. Kellogg states: "The soy is the best of all beans."

In the chapter titled "Infant Feeding," under "Vegetable Milk" (p. 956), Dr. Kellogg states: "The Chinese have for ages made from the soy bean a preparation which so closely resembles the dairy product that it may not inappropriately be called vegetable milk. A much better preparation is made from walnuts, almonds, and even peanuts... Milk prepared from walnuts and almonds is used in China, the Philippines and throughout the Orient, as a food for nurslings for whom a wet nurse can not be provided. This custom prevails extensively in those Asiatic countries in which cow's milk is but little used.

"A nut milk commonly known as 'Malted Nuts' has been made in this country for more than thirty years and has come into extensive use... These plant protein milks render great service especially in the treatment of infants and invalids who are sensitized to cow's milk. They are also valuable resources in the treatment of colitis in infants and in cases in which change of the flora is found difficult, so that the suppression of all animal proteins becomes necessary."

Also discusses quinoa, kaoliang, and the adsuki bean.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word "alkalinize" to refer to making a food more alkaline. Address: Battle Creek, Michigan.

1308. Lovell, Philip M.; Press-Lovell, Leah. 1927. Diet for health by natural methods: Together with health menus and recipes. Complete instructions for the cure of the sick without the use of drugs. Los Angeles, California: The *Times-Mirror* Press. xiii + 428 + [7] p. No index. 21 cm.
• ***Summary:*** Part I: Treatment and diet, by Dr. P.M. Lovell. Part II. The preparation of health foods, by Leah Press-Lovell (recipes, p. 129-428). Some of the recipes in this book first appeared in the "Care of the Body" section of the *Los Angeles Times*, which Dr. Lovell has edited for the past few years. "This is the pioneer health department of any newspaper in the country, undoubtedly the most widely read and unique, in so far as it advocates drugless, natural therapy" (p. 4). "This book is based on vegetarian principles. Meat recipes... are not included." Many reasons for this are given. Meat includes fish and fowl (p. 8-9).

Soy-related: "Soy sauce or shoyu is made from soy beans and can be bought at Japanese stores. It gives a tasty flavor to gravies and to cereals" (p. 134). Chop suey (3 types), each served with "Soy bean sauce" (p. 290-91). Soy gravy (with soy–also called soy sauce or shoyu, p. 305). Chapter 14, "Legumes" (p. 366-70) discusses chick peas (Garvanza), lentils, peanuts, and "Soy beans: Best known in China and India. Rich in oil. Contain almost no starch. Require slow cooking to bring out flavors. Hulls are difficult to digest. Therefore remove them by rubbing through a colander." "About the soy bean: The soy bean is very important in the Orient. When three-fourths grown it makes a nutritious green vegetable [yes] known as 'bean sprouts' [no]. Products of soy beans re soy bean flour, soy bean milk, soy bean cheese (tofu), soy sauce, soy bean oil, sprouts, etc. Soy bean products can be bought at Japanese and Chinese grocery stores." Contains 3 recipes: Soy roll or bread (replace 25% of the whole wheat flour with soy flour in any whole wheat bread recipe). Soy bean porridge (cook 1 cup soy bean flour with 3 cups water for 2 hours in a double boiler. Cool, slice, roll in corn flour and bake with butter or oil to make croquettes). Soy bean croquettes. Soy bean milk (made from soy bean flour, p. 420; also almond milk and cocoanut milk).

Also discusses: Of the general advice given to patients, "the subject of diet occupies the leading position" (p. viii). Agar flakes (vegetable gelatine) are better than animal gelatine (p. 135). Almonds–How to prepare almond milk, cream, and meal (p. 152). Cocoanut–To prepare cocoanut milk. Peanuts–How to prepare raw peanut butter (p. 153). Garvaza [garbanzo] beans and meal (p. 308-09). Nut loaf (Vegetable turkey) (with peanuts, p. 315). Carqué's unfermented whole wheat bread (p. 351). Carqué's unleavened fruit bread (p. 351). Recipes using Graham flour (different from whole wheat flour, p. 356-59).

Ads on the last 7 (unnumbered) pages are for: (1) Lovell Health Offices. (2-3) Lovell's drugless health library (39 titles on diseases and health problems; pocket edition size). (4) Health of the Child, by Dr. Philip M. Lovell. (5) Carqués California Pure Natural Food Products: Fruits–sun-dried and dehydrated without bleaches, fumigants or preservatives (incl. black mission figs), nuts, confections, stamina and laxative foods, nut butters, cereals and products (incl. soy bean flour), miscellaneous. 2004) that gives the address of Cubbison's Cracker Co. as 3419 Pasadena Ave. Address: 1. Dr., drugless practitioner, Health Offices, 238 Chamber of Commerce Bldg., 1151 So. Broadway, Los Angeles, California; 2. His wife. Phone: WEstmore 8275.

1309. Morse, W.J. 1927. Soy-bean output increasing in United States. *Yearbook of Agriculture* (*USDA*) p. 671-73. For the year 1926.
• ***Summary:*** In 1917 less than 500,000 acres in the U.S. were devoted to soy beans for all purposes. From this land about 2,283,000 bushels of seed were produced.

"As an article of food, the use of the soy bean in the United States has been very limited. For many years a few food companies have manufactured special soy-bean flour products. The number of such concerns producing soy-bean food products has increased to a considerable extent during the last few years. Soy beans are now being made into breakfast foods, crackers, wafers, soy sauce, bean curd, soy flour, and special flour preparations for various purposes. One of the most recent developments is the manufacture of soy sauce and bean curd from domestic grown beans. This has been found a most profitable industry in some parts of the Corn Belt, and soy sauce has now a fairly extensive market in the United States." Address: USDA, Washington, DC.

1310. Nadkarni, Krishnarao Mangeshrao. ed. and pub. 1927. The Indian materia medica. 2d ed. Bombay, India: K.M. Nadkarni. 5 + xviii + 1142 + clxix + lxxxviii p. Index. 20 cm.
• ***Summary:*** The body of this book (1142 p.) appears to be titled *The Indian Materia Medica with Ayurvedic, Unami & Home Remedies.* Soybeans are mentioned in three different places, almost as if each was thought to be different plant.

Page 313-14. "305. Dolichos Soja–(English–Soya bean, German–Soja bohne, Bengali–Gari kulaj, Hindi–Bhatwan, Kumaon–Bhut) is a species cultivated in some part of India for its seeds which are eaten and which contain a high percentage of protein and fat."

Page 399: "396. Glycine Soja & G. Hispida are species (English–Soya bean, Hindi–Bhatwan, Bengali–Gari kulay, Kumaon–Bhut, Eastern Terai–Khajuwa) met with on the tropical Himalayas from Kumaon to Sikkim and Khassia and Naga Hills. A decoction of the root is said to possess astringent properties."

Page 803: "886. Soja Hispida or Glycine Soja (English–Soya bean; Soy-bean) has taken the place of meat in the diet of Chinese, Japanese and other Asiatics. Its notable characteristics are its large proportion of assimilable protein and fat, and its lack of starch and small content of sugar. Being so highly nutritious, it is not adapted for use as a side-dish, like ordinary vegetables, but, like meat, supplies a chief food. Among the preparations mentioned as common in China and Japan are 'tofu' resembling cottage cheese; 'Shoyu or Soya' which has been soaked to remove the skin and then boiled and seasoned; 'Miso' or soy-bean milk, prepared by soaking pulverized beans and straining; and 'Natto' obtained by fermenting the boiled beans. The lack of starch gives the beans favour as a diabetic food, and soy-bean meal and soy-bean bread have been prepared. The beans have been also tried as a coffee substitute–(Popular Science Siftings). For more particulars see also Dolichos Soja etc."

Also mentions *Sesamum indicum* (p. 788-90). Sanskrit.–Tila. English–Gingeli. French–Sesame. German–Sesom [Sesam]. Hindi, Cashmeri, Punjabi & Bengali–Til. Mahrathi & Konkani–Teel. Telugu–Nuvvulu; Guvvulu. Tamil–Ellu. Canarese–Uru-Ellu. Malayali–Karuellu.

The author was born in 1864. A 3rd edition was published in 1955. First published in 1908 under the title "Indian Plants and Drugs." Address: India.

1311. Read, Bernard E.; Liu, Ju-ch'iang. 1927. Flora Sinensis. Series A. Volume 1. Plantae medicinalis Sinensis. 2nd ed. Bibliography of Chinese medicinal plants from the Pen Ts'ao Kang Mu... 1596 A.D. Peking, China: Dept. of Pharmacology, Peking Union Medical College. xi + 106 p. In collaboration with the Peking Laboratory of Natural History. [39 soy ref. Eng; chi]
• ***Summary:*** References related to soybeans are given in the chapter on Leguminosae under the genus *Glycine* on p. A.I.30. References are given for the soybean (*ta tou* or *huang ta to*), the wild soybean (*pai tou*), soy bean sauce (*chiang*), bean curd (*tou fu* [tofu]), bean ferment (*tou huang*), bean relish (*ta tou ch'ih* [fermented black soybeans]), and bean sprouts (*ta tou huang chüan*).

Also discusses kudzu (ko, 1: #372 *"Pueraria hirsuta Schneid."*), which is reported to grow in the provinces of Chihli, Shantung, Kiangsi, Kwangtung, Chekiang and Hupeh. Address: 1. Prof. and Head of; 2. Asst. of. Both: Dep. of Pharmacology, Peking Union Medical College, Peking, China.

1312. Y.W.C.A. 1927. Chinese cook book. Peking: Young Women's Christian Association. 41 p. 23 cm.
• ***Summary:*** In the section on "Soups," (p. 3) is a recipe for Egg soup which calls for "Soy sauce (Chiang yu)" and "1 teaspoon epicurean powder (Ajinomoto powder, a Japanese powder procurable in bottles)."

On the same page, the recipe for Spinach soup calls for "Bean curd diced (1 piece 3 in. square). Add salt and chiang yu to 4 cups of boiling water... Be careful not to break the bean curd by stirring."

A recipe for "Bean curd soup" (p. 6) begins: "Buy *hsin tou fu* (new / fresh bean curd less than 6 hrs. old that has not been pressed into cakes)" [i.e. fresh soymilk curds].

In the chapter on "Meats" (p. 12), the recipe for

© Copyright Soyinfo Center 2013

Shredded beef calls for "Soy sauce" and "Black chiang yu." The recipe for Meat-vegetable dish to be served with Shao ping (p. 14) calls for "Tou Fu Kan (Dry bean curd [pressed tofu], 5 flat cakes, 2 inches in diameter)." The recipe for Spiced mutton (p. 14) calls for 2 tsp. "Soy bean paste."

On pages 39-41 is a "Vocabulary" with three columns: Name in English. Romanization of Chinese name (Wade-Giles) with accents. Name in Chinese characters. Soy related words: Bean curd–tou fu. Bean curd (dry)–tou fu kan. Bean curd pickled–chiang tofu fu. Soy bean paste–hei chiang. Soy bean oil [sic, sauce] (black)–hei chiang yu. Soy sauce–chiang yu. Address: Peking, China.

1313. Horvath, A.A. 1928. Soybean feeding and blood calcium. *Japan Medical World* 8(1):1-5. Jan. 15. [32 ref]
• ***Summary:*** "It is a general belief that soybeans are poor in calcium. This belief is supported by Forbes (1909), Osborne and Mendel (1917), Adolph (1922) and others." Yet various chemical analyses show that the soybean seed contains about 0.25% of calcium oxide, which is higher than most foods, including whole cow's milk. Rabbits were fed a diet of raw yellow soaked soybeans for 4 weeks, and of other soybean preparations ("sprouted soybeans" and "soybean curd" made with calcium sulfate) given for three weeks more. The blood calcium level generally fell. Possible reasons for this are discussed.

"In China the black soybean has been used for feeding animals since ancient times and is thought to be more suitable than the yellow variety. It is known that the black variety contains much less fat than the yellow soybean."

Note: This is the earliest English-language document seen (Jan. 2013) that uses the term "sprouted soybeans" (or "sprouted soybean") to refer to soy sprouts. Address: Dep. of Medicine, Peking Union Medical College, Peking, China.

1314. Houck, Bertha Anne. 1928. Gastronomic adventures. *Los Angeles Times.* May 13. p. K12.
• ***Summary:*** About the many restaurants of foreign-born Americans visited by the writer in Los Angeles. "The last compromise which foreign groups make to the customs of an American city is in their food."

Chinese restaurants are found on San Pedro street, south and east of the Plaza. "A vegetable soup is safe to start with, being a watery, peculiar dish with strange and delightful vegetables and soya bean curd it. Each dish is prepared to be eaten with rice as American eat bread, for soya bean sauce, which is used extensively, is too strong to be pleasant without it."

"Japanese food is similar to Chinese, but, because of the Buddhistic laws against the taking of life, no meat except fish, is eaten. As with the Chinese, soya is the important flavoring. Suimono, a bean-curd soup, a broiled fish and an omelette, or boiled chestnuts and rice, form the typical Japanese dinner." Japanese restaurants are "found in the Japanese section on First street, east of Los Angeles street, or on Weller street, just south of First street."

1315. Grey, Egerton Charles. 1928. The food of Japan. Geneva: League of Nations, Health Organisation. 161 p. May. Index. 24 cm. [82 ref. Eng; fre]
• ***Summary:*** Detailed information and analysis. Contents: Preface. 1. Quantity of food in Japan: Exports, imports, production and consumption of food in Japan in the year 1925. 2. Quality of food in Japan: Definition of quality. 3. Distribution of food in Japan: Natural and artificial distribution. 4. Chemical composition of Japanese foods as consumed: Methods of analysis. 5. Chemical composition of Japanese food as purchased. Appendices: I. Literature relating to the chemical and physical properties of the food of Japan, with list of authors. II. Food materials and the plants and animals serving as sources of food in Japan.

The Preface begins: "This work... was carried out in the Imperial Institute of Nutrition, Tokyo (director, Dr. Tadasu Saiki). It comprises statistical data relating to the food supply of Japan and analytical data derived from the writer's personal examination of the food materials."

Table 7 (p. 25) shows the amounts of major foods consumed in Japan. The percentage of the total food consumed is: Rice 50.83%, barley 10.15%, potatoes 8.63%, wheat 6.63%, soy bean 4.76%, other beans 3.71%, other cereals 3.24%, fish 1.72%, seaweed 1.23%.

On page 54, the author discusses the "Alkalinity of the ash [of foods]. This figure is of considerable importance as indicating the capacity of the food material to produce alkali in the body." On pages 61-111 the author lists the nutritional composition of all major Japanese foods, grouped by food type: 1. Cereals and cereal products. 2. Legumes, pulses, and legume products. 3. Roots, greens, and other vegetables. 4. Mushrooms and seaweeds. 5. Fruits, nuts, and seeds. 6. Vegetable oils. 7. Other vegetable products. 8. Dairy products. 9. Eggs. 10. Meat and animal fat. 11. Fish. 12. Condiments, beverages, etc. The name of each food is given in both English and French, usually with a brief explanation.

In a table (p. 65-69), in category "II. Legumes, pulses, and legume products," the section titled "Fresh legumes" includes (p. 64-65): Edamame (Soy bean in pod) = *Fève de soya en cosse*. The section titled "Dry legumes (pulses)" includes (p. 64-67): Azuki (Small red bean) = *Petit haricot rouge.* Dainagon (Small red bean) = *Petit haricot rouge* Ao daizu (Soy bean [with green seed coat]) = *Fève de soya.* Kuro daizu (Black soy bean) = *Fève de soya noire.* Shiro Daizu (White soy bean) = *Fève de soya blanche.* Rakkasei (Pea nut) = *Pistache de terre.*

The section titled "Bean products" includes (p. 66-69): Aburage (Fried-bean curd) = *Pâte de haricots frite.* Aka miso (Soy-bean paste) = *Pâte de fèves de soya.* Gammodoki (Fried-bean curd) = *Pâte de haricots frite avec mixture d'algues marines.* Kinako (Soy-bean powder) = *Poudre de*

© Copyright Soyinfo Center 2013

fèves de soya. Kori dofu = *Pâte de haricots séchée*. Namaage (Fried-bean curd) = *Pâte de haricots frite.* Natto (Fermented soy bean) = *Fève de soya fermentée.* Sarashian (Red-bean powder) = *Poudre de haricot rouge* [Sarashi-an from azuki beans]. Shiro miso (White soy-bean paste) = *Pâte blanche de fève de soya.* Tofu (Soy-bean curd) = *Pâte de fèves de soya.* Tofu kasu (Soy-bean residue) [okara] = *Déchets de fèves de soya.* To nyu (Soy-bean milk) = *Lait de fève de soya.* Yuba.

Note 1. This is the earliest English-language document seen (April 2013) that contains the word *gammodoki*, which refers to deep-fried tofu burgers, or that contains the word *namaage*, which refers to deep-fried tofu cutlets.

Also: Mushrooms and seaweeds includes (p. 73-75): Arame, Asakusanori [Asakusa nori], aonori, hijiki, kanten, kombu, mozuku, ogonori, tororo kombu, wakame. Fruits, nuts and seeds includes (p. 77): Asanomi (Hemp seed), Goma (sesame, white and black). Vegetable oils includes (p. 79): Daizu yu (Soy bean oil) = *Huile de fève de soya.*

Condiments includes (p. 92-93): Hamana natto [fermented black soybeans]. Kiriboshi (Dried daikon). Misozuke [miso pickles]. Narazuke. Shoyu [soy sauce]. Takuan (Pickled radish). Umeboshi (pickled plum) = *Prune confite.* Beverages includes (p. 92-93): Amazake. Mirin (fermented rice). Sake (Rice wine).

For each food, the following values are given in both English and French: Water, protein (N x 6.25), fat, carbohydrate, ash, calories, alkali value, total nitrogen, water-soluble nitrogen, phosphoric acid (anhydrous), sodium chloride (salt), water-soluble ash, water-insoluble ash, alkalinity due to soda and potash, alkalinity due to lime and magnesia, calcium oxide, ferric oxide, factor for converting to dry food.

Note 2. In Japan, the typical person is well aware of which foods are alkaline (*arukari-sei*) and which are acidic (*san-sei*). The alkaline foods are generally considered more healthful and health-protecting. For the alkaline values given by Grey for many basic Japanese foods, see SoyaScan Notes. 1991. Sept. 20.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term "soy-bean paste" to refer to miso.

Note 4. This is the earliest English-language document seen (June 2009) that uses the term "Edamame" to refer to [green] soy beans in their pods.

Note 5. This is the earliest English-language document seen (April 2013) that uses the term "kori dofu" to refer to dried-frozen tofu.

Note 6. This is the earliest English-language document seen (Dec. 2006) that uses the term "pickled plum" to refer to umeboshi salt plums.

Note 7. This is the earliest English-language document seen (Nov. 2011) that uses the term "Hamana natto" to refer to fermented black soybeans. Address: M.A., D.Sc., F.I.C., M.R.C.S., etc..

1316. Powell, Maude N. 1928. Diet of coolies in Changsha. *Chinese J. of Physiology, Report Series* No. 1. p. 129-33. July. Issue title: Metabolism. [7 ref. Eng; chi]

• ***Summary:*** During May, 1924, the diet of 63 coolies employed by the Hunan-Yale Hospital at Changsha, Hunan, was studied. Table 1 shows the percentage composition of foods used by coolies in Changsha, China. These include: "Yellow bean sprouts (whole)" [soy bean sprouts], and "Soft bean curd" (toufu nao; literally "tofu brains"). The average diet contained 3,008 calories, 67.1 gm protein, 27.2 gm fat, and 604.9 gm carbohydrates. The average weight of the men was 54.66 kg (120 lb). "This would give 55 calories per kg as against 40 calories per kg in the West. The larger intake is believed to be due to the low coefficient of digestibility of rice which constitutes the bulk of the diet." Address: Dep. of Biochemistry, Hunan-Yale College of Medicine, Changsha, China.

1317. Wu, Hsien. 1928. Nutritive value of Chinese foods. *Chinese J. of Physiology, Report Series* No. 1. p. 153-86. July. Issue title: Metabolism. [7 ref. Eng; chi]

• ***Summary:*** The nutritive value of many Chinese foods (water, protein, fat, ash, crude fiber, carbohydrate, calories) is given (with the English name, scientific name, and name in Chinese characters), including the following: wheat gluten, sesame seed (p. 155), yellow soy bean, black soy bean (large or small), green soy bean, soy bean sprout (yellow or green), soy bean flour, soy bean curd, soy bean dregs [okara], bean curd (doufu-gan, boiled in salt and spices and partially dried), oil skin ([yuba], from boiled soy bean milk), bean curd skin ([yuba], dried, or rolled like bamboo), soft bean curd, soy bean milk (p. 156), smoked bean curd, sheet bean curd, fermented bean curd, pickled bean curd, soy bean (fresh) (Characters: hair + bean = mao tou), wild soy bean, red gram bean (red small bean, Phaseolus mungo [azuki bean], p. 157), cucumber pickled in soy bean paste (p. 175).

Condiments: Thick soy bean paste, thin soy bean paste, fermented soy bean, fermented bean (dried), thin soy bean sauce (white), thick soy bean sauce (white), thin soy bean sauce (black), thick soy bean sauce (black), soy bean sauce ("chemical"), sweet flour paste (p. 176).

Table 4 (p. 180) gives the calcium, phosphorus, and iron content of some Chinese foods in percentages of edible portion, including the following: Wheat gluten, job's tear, yellow soy bean, black soy bean, red gram bean [azuki], green soy bean (fresh), soy bean flour, soy bean milk, bean curd (Southern style and Northern style).

Table 5 (p. 182) lists foods as sources of vitamins A, B, C, or D, including the soy bean (an excellent source of vitamin B).

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "doufu-gan" (or "doufu gan") to refer to Chinese-style firm tofu. Address: Dep.

of Biochemistry, Peking Union Medical College, Peking, China.

1318. McCoy, Frank. 1928. Health and diet advice. *Los Angeles Times.* Aug. 8. p. A6.
• ***Summary:*** The section titled "Cheese without pie" notes that cheeses from which the cream [fat] has been partly removed are most easily digested. "Cottage cheese is very wholesome, and is often used by vegetarians as a substitute for meat."

"Even the Japanese, who are too crowded in their picturesque island islands to raise cows, have a kind of cheese [tofu] manufactured in much the regulation manner by souring soy bean milk." Note: Tofu is made by coagulating soy bean milk with a salt (such as magnesium chloride and/or calcium sulfate), not by souring it. Address: Dr., author of "The Fast Way to Health".

1319. Dorsett, P.H.; Morse, W.J. 1928. Agricultural explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon (Log–unpublished). Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished typescript log. Illust. Partially indexed. 28 cm.
• ***Summary:*** Also called the "Log of the Dorsett Morse Expedition to East Asia" and (by the National Archives) "Dorsett-Morse Expedition to the Far East, 1929-31," this is one of the most important documents ever produced on soybeans and soyfoods. Covering the period from late 1928 until 1932, it consists of 17 volumes of typewritten unpublished manuscript plus handwritten notebooks.

The two explorers, who were gone on the expedition for a little more than two years, initially planned to be gone for about three years. They took 3,369 photos of which 95% appear in the report; the original prints are pasted on the pages, each with a number and a caption. The first negative number is #43196 (p. 238) and the last is #46514. The last numbered page of the report is #8818, but most of the index pages are not numbered and some special reports at the end of the main report each start with page 1.

The first quarter of the pages (to about page 2,500) are indexed, using 4 separate indexes. The only original and 2 microfilm copies were at the American Soybean Assoc. (St. Louis, Missouri), however as of Aug. 2011 they are on permanent loan to Rare and Special Collections at the National Agricultural Library (Beltsville, Maryland)–which also has 7 photograph albums that accompany the 7 log books. A list of the missing pages has been compiled. One photocopy of a microfilm copy is at the Soyinfo Center (Lafayette, California). One microfilm copy is at the National Archives in Washington, DC, in Records of the Bureau of Plant Industry, Soils, and Agricultural Engineering, Record Group 54. See: "National Archives Microfilm Publication No. M840. Expedition Reports of the Office of Foreign Seed and Plant Introduction of the Department of Agriculture, 1900–1938." Rolls 16-20, volumes 56-73. These microfilm rolls may also be available for viewing or duplication at one of the various regional branches of the National Archives (e.g. San Bruno, California).

A brief itinerary of the trip is as follows: 1929 Feb. 18–The party of 5 people leaves Washington, DC, for Los Angeles by train. It consists of Morse, his wife Edna, their daughter Margaret (age 7), Dorsett, and his daughter-in-law Ruth (Bobbie; the widow of Dorsett's son, she served as Dorsett's secretary and general helper).

March 1–They sail from San Francisco to Yokohama on the S.S. *President Grant* of the Dollar Steamship Lines. March 29–Arrive in Yokohama, proceed directly to Tokyo, establish headquarters with rooms at the Imperial Hotel, and hire an interpreter, Mr. Suyetake, who works with them for the next 2 years. May 21–The Morses go to Hokkaido, the Dorsetts to Kyoto, by sleeper train. Morse returns to Tokyo.

Aug. 17–The entire party arrives in Hokkaido and establishes headquarters in Sapporo to study soybeans. Oct. 8–Leave Hokkaido for the Northeast Provinces, then arrive in Tokyo on Oct. 15. Oct. 22–Arrive in Keijo (Seoul), Korea, then take many side trips. Note: 1929 Oct. 29–Great Depression begins in USA with stock market crash. Dec. 8–Return to Japan via Kyushu, then to Tokyo to study soyfoods. They buy and photograph many!

1930 April 1–Travel by steamer to Dairen, Manchuria, where they set up headquarters. Dorsett very sick from April 11 to June 11; taken to a Japanese hospital in Dairen, he almost dies of double pneumonia. Morse does the work of both men and does not inform USDA of Dorsett's critical condition. June 24–Morse takes a quick trip to northern Korea, via Mukden and Antung (Tan-Tung), to look for Zoysia grass.

July 1–Returns to Manchuria via Mukden. July 21. Dorsetts leave for Peking by train; Morses and Mr. Suyetake stay in Dairen. Aug. 21–Morse party travels to northern Korea, staying in Heijo (Pyongyang / P'yongyang); takes a 4-day side trip to Seoul. Sept. 28–Morse returns to Dairen, Manchuria.

Oct. 19–Morse party leaves Dairen, arriving in Peking the next day. Nov. 9–Morse party returns to Dairen. Nov. 30–Morse arrives in Harbin, north Manchuria, then passing through Mukden, returns to Dairen. Dec. 18–Morses leave Dairen for Japan, passing through Kobe on Dec. 21 and arrive in Tokyo on Dec. 23.

1931 Jan. 12–Travel to Kyoto, Himeiji, and Tatsuno Shoyu. Jan. 16–Visit Okazaki and Hatcho miso. Jan. 17–Return to Tokyo. Feb. 17–Morse party leaves Tokyo by boat for the USA, arriving in San Francisco on March 4. March 15–Dorsett party leaves Peking for Tientsin, Shanghai, and Hankow. March 27. Dorsetts sail from Shanghai to San Francisco.

© Copyright Soyinfo Center 2013

Note 1. The title of this report is puzzling since the expedition never went to Taiwan, Singapore, Java, Sumatra, or Ceylon. It was proposed several times that they visit these places, but the plans did not work out.

Note 2. This is the earliest log (unpublished) seen (Oct. 2001) that mentions soy. Address: Agricultural Explorers, USDA, Washington, DC.

1320. Ohki, Shinzo. 1928. Re: Introducing William J. Morse to Noda Shoyu Co. Letter to Mr. Shinzaburo Mogi of Noda Shoyu at 133 Onden, Aoyama, Tokyo, Nov. 2. 2 p. Typed, without signature (carbon copy). Typed. Bound in Log of Dorsett Morse Expedition to East Asia, p. 51-52. [Eng]
• ***Summary:*** "This is to introduce you to Dr. [sic] W.J. Morse of the Bureau of Plant Industry, U.S. Department of Agriculture. Dr. Morse has been investigating soybeans for a number of years and has written a book entitled 'Soybeans with Dr. Piper' [sic, 'The Soybean'], which book I presented to you before you left the United States... I wish you would direct him to Noda Shoyu Company and show him the wonderful plant your company is operating... He also wishes to visit some company manufacturing Tofu."

Note: Mr. Ohki's company makes fermented, Japanese-style shoyu in Indiana. On the next page (p. 52) of the Log, in a similar letter to Noda Shoyu Company in Noda, Japan (with the same date, translated from Japanese into English), Mr. Ohki notes: "When I visited your factory in 1917, I was greatly impressed by the magnitude of your plant, as well as the improved machineries [sic] you are using."

Note: This is the earliest document seen (Sept. 2011) concerning the Dorsett-Morse Expedition to East Asia. Address: Oriental Show-You Company, Brewers-Packers-Distributors, Columbia City, Indiana.

1321. **Product Name:** Tofu, and Agé.
Manufacturer's Name: Tofu-ya.
Manufacturer's Address: 437 5th Ave. between Island Ave. and J Streets, San Diego, California.
Date of Introduction: 1928.
New Product–Documentation: Talk with Haruki Koba, former owner of Oriental Groceries. 1989. Oct. 25. In the early 1920s, before the War, there was a tofu shop in San Diego on 5th Street between Island and J Streets, very close to where Mr. Koba used to make tofu, near where the Nanking restaurant is now. It was run by Mr. Himaka. He made tofu and agé there until World War II broke out. He had a son, Mich Himaka, who now works for the *San Diego Union* newspaper (Phone: 619-299-3131). But there were others before Mr. Himaka; he bought the tofu business from somebody else, who used to make tofu there before him. Haruki was born in Coronado (southern California) in 1920 and he recalls eating tofu when he was small. "I think every community with even a small Japanese population had someone making tofu: Los Angeles, Gardena, El Centro, Calexico, Imperial Valley. I think most of those shops were run by the family and did nothing but make tofu. I remember one cake cost 10 cents in those days." He does not know any particular company names but they would probably start with the family name, such as Himaka Tofu Shop.

Talk with Osa Himaka, Chosuke's son (Phone: 619-276-1856). 1989. Oct. 26. He was born in 1922 and he thinks his father and mother (Chosuke and Zazuye) started the business when he was about 6 years old. His father bought the business in a rental building from another tofu maker, whose name Osa does not remember. It was named Tofu-ya (written only in Japanese characters) and he did not change the name. The business continued until the night of 7 Dec. 1941 when Mr. Himaka was taken forcefully from his home. The family was placed in an internment camp until evacuation in April 1942. It was not re-started. The family made tofu, agé, and konnyaku. Neither of Osa's parents are now living. He has no articles about the company but he does have a photo of the family taken in front of the shop. He thinks there was also a Japanese run tofu shop in San Pedro at about that time.

1322. **Product Name:** Doufu (in Chinese): Fresh Soy Bean Cakes (in English).
Manufacturer's Name: Wo Chong Co.
Manufacturer's Address: 720 Jackson St., San Francisco, California. Phone: 415-431-5666.
Date of Introduction: 1928.
How Stored: Refrigerated.
New Product–Documentation: San Francisco City Directory. 1948-49. First listing for Wo Chong (Mandarin Cafe), grocery, 720 Jackson. No earlier listing in 1939, 1943, 1945-46; 1953 listing: Wo Chong Co. Bean cakes. 720 Jackson.

Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. 835 Pacific Ave., San Francisco, CA 94133. Tel. 415-982-6137 or 0660. Loetterle. 1977. California Living. April 17. p. 40. Address: 1001 16th St.

Labels. 1978, undated. The product with the psychedelic orange, purple and white label is named "fresh soy bean cakes" in English (an unusual name) and Doufu in Chinese characters. 4 cakes weigh 12 oz. Company owner is Walter W. Louie.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. 1001 16th St. San Francisco, CA 94107. Phone: 415-431-5666. Owner: Walter W. Louie.

Talk with Walter Louie. 1984. He says the company was founded in 1928.

Leviton. 1983. Soyfoods. Summer. p. 35. Jack Mizono of Azumaya recalls that Wo Chong opened in 1945.

Talk with Walter Louie. 1989. Dec. 4. Wo Chong was started by his grandfather, Gin Louie, at 720 Jackson St. The company still has a retail outlet there. He is not sure of the

© Copyright Soyinfo Center 2013

starting date but he heard it was 1928 from his grandfather, whom he knew. Walter, who was born in 1931, clearly remembers that the company existed and made tofu when he was a young boy. He officially took over the company in 1948, but was actively involved in 1947. It moved to 835 Pacific Ave. in San Francisco, CA 94133 in 1961-62, then to the present location (1001 16th Street, San Francisco, California 94107) in 1975. He thinks he has a very old lease, of which he will send me a copy.

1323. **Product Name:** Fresh Tofu (Sui-dofu in Chinese).
Manufacturer's Name: Wo Chong Co.
Manufacturer's Address: 835 Pacific Ave., San Francisco, CA 94133.
Date of Introduction: 1928.
Ingredients: Soy beans, water and 1/10 of 1% calcium sulphate.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314.

Label. 1978. 5 by 4.5 inches. Plastic film. Psychedelic blue, dark green, and lichen green on clear film. Note: This is Japanese style regular tofu, probably not silken tofu. Loetterle. 1977. California Living. April 17. p. 40. Address: 1001 16th St. Labels.

1324. **Product Name:** Fresh Soy Bean Cakes.
Manufacturer's Name: Wo Chong Co.
Manufacturer's Address: 835 Pacific Ave., San Francisco, CA 94133.
Date of Introduction: 1928.
Ingredients: Soy beans, water and 1/10 of 1% calcium sulphate.
Wt/Vol., Packaging, Price: 12 oz.
How Stored: Refrigerated.
New Product–Documentation: Label. 1978. 5 by 4.5 inches. Plastic film. Orange, purple and white on clear plastic. Chinese characters: Doufu. Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. Loetterle. 1977. California Living. April 17. p. 40. Address: 1001 16th St. Labels. 1978, undated.

1325. Ducceschi, V. 1928. La soja e l'alimentazione nazionale [Soya and the Italian national diet]. Milano, Italy: Francesco Vallardi. x + 246 p. (Biblioteca Encyclopedia Vallardi). [117 ref. Ita]
• ***Summary:*** Contents: 1. Introduction. 2. Natural history of the soybean. 3. Chemical composition of soybean seeds. 4. Biological value of the nutrients contained in soybean seeds. 5. Foods furnished by the soybean and their digestibility: Whole soybeans, soy oil, whole soy flour, bread made with soy flour, pasta, soy milk and cheese (Il latte ed il formaggio di soja [tofu]), fermented products (sauces; natto, miso, koji, soy sauce {called *shoyou* or *soyou* in Japanese, *tsiang-yeou* in Chinese}). 6. Medical and therapeutic applications of the soybean. 7. The economic problem of soybeans. 8. Conclusion.

Note 1. This is the earliest Italian-language document seen (April 2012) that uses the words *shoyou, soyou,* or *tsiang-yeou* to refer to soy sauce.

Note 2. This book's large bibliography contains more errors than any other soy-related bibliography ever seen. Address: University of Padova, Italy.

1326. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1928. Nichibei jûshoroku [The Japanese American directory. No 24]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

1327. Maliareffsky, G.I. 1928. [Bean milk and curd]. *Vestnik Manchzhurii* (*Manchuria Monitor*) No. 6. p. 21-23. English ed.; p. 83-91 Russian edition. Data supplied by Manchuria Railway S-ty. [3 ref. Eng; rus]
• ***Summary:*** Detailed descriptions, based on personal observations, of how soymilk, tofu, and yuba are made and used in Harbin and Fuchiatien. Nigari (*lu-shui*) is used as the tofu coagulant. Four methods can be used to preserve tofu: salting, drying, freezing, and steaming. Unpressed soymilk curds are called to-fu-na-erh and are sold in the streets of Fuchiatien for 1 copper per middle-sized cup. The grinding of soybeans to make tofu is done using a stone mill, driven by a donkey. The soymilk is separated from the fiber by filtration through a cloth and pressing before heating. "The ground mass remaining in the cloth after the filtration has been performed forms a very good nourishment for pigs, which are usually kept to make use of such refuses at every mill." Tou-fu-p'i (yuba) is removed repeatedly from the 2.5 foot diameter cauldron while the milk is heated for 90 minutes. A cauldron containing about 2 gallons of soymilk may be skimmed 30 times, the first skim being the best. The yuba is sold. After the milk is boiled, some of it is sold, but most is used to make tofu.

Note: This is the 2nd earliest Russian-language document seen (Oct. 2012) that mentions yuba, which it calls "Tou-fu-pi" and "yuba." Address: Harbin, Manchuria.

1328. Tao, L.K. [Tao Menghe]. 1928. Livelihood in Peking: an analysis of the budgets of sixty families. Peking: Social Research Department, China Foundation for the Promotion of Education and Culture. 158 + xxii p. Series: Social Research Publications, Monograph No. III. Facsimile edition reprinted in 1982 by Garland Publ. Co. (New York).
• ***Summary:*** Appendix V is an 8-page table titled "Total quantity and fuel value of food consumed by twelve elementary school teacher families in one month." The

© Copyright Soyinfo Center 2013

section on "Vegetables" (p. xvii) mentions numerous soybean products, with both the English-language name and Chinese characters, including:

Bean-curd (*dou fu*) [firm tofu]

Bean-curd, green, fresh (*ma dou fu*).

Bean-curd, preserved (*chou dou fu*) [stinky tofu].

Bean-curd, smoked (*dou fu gan*) [smoked tofu].

Bean-curd, smoked, thin (*dou fu si*) [smoked tofu noodles].

Bean-curd, lamina (*qian zhang*) [pressed tofu sheets].

Bean, lamina (*fen pi*) (made from mung beans).

Bean-curd, cheese (*jiang dou fu*) [a type of fermented; tofu preserved in Chinese jiang].

Bean-curd, green, dried (*ge xi dou fu*).

Note: We have never heard of two of these types of tofu before: (1) Bean-curd, green, fresh (*ma dou fu*). (2) Bean-curd, green, dried (*ge xi dou fu*). From the name and context they appear to be made from soybeans. Address: Formerly Prof. of Sociology, National Univ., Peking, China.

1329. Sherman, Hartley Embrey. 1929. Relative vitamin A content of four Oriental foods. *Philippine J. of Science* 38(1):1-7. Jan.

• ***Summary:*** One of these four foods is "Yellow soy-bean curd (the precipitated proteins of the yellow soy bean)." The local names are "Tou fu (Chinese) [Peking dialect] and utao (Filipino)." The research was done using white albino rats. "Bean curd has only a moderate amount of vitamin A." Address: Peking Union Medical College and Bureau of Science, Manila, the Philippines.

1330. Sherman, Hartley Embrey. 1929. Relative content of water-soluble vitamin B in thirty Oriental foods. *Philippine J. of Science* 38(1):9-36. Jan. [1 ref]

• ***Summary:*** The following are plentiful sources of vitamin B: Yellow soy bean (*huang tou*). Yellow soy-bean sprout (*huang tou ya*). Green soy bean [dry] (*ch'ing tou*). Green soy-bean sprout (*ch'ing tou ya*). Soy-bean curd (*tou fou*). Address: Of the Laboratories of Food Chemistry, Peking Union Medical College, Peking, China, and the Bureau of Science, Manila.

1331. Dorsett, P.H.; Morse, W.J. 1929. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• ***Summary:*** Pages 1009-10 (14 May 1929, Tokyo). "Copied from Mr. Morse's diary. In the afternoon we went to Matsuzakaya store to look over bean products and as a result we secured seventeen different soybean products. We found that they had 20 different forms of miso, a product which we think may have possible value at home."

Page 1053 (16 May 1929, Tokyo, Japan). A photo shows a natural sized picture of a small wooden box of miso. The Japanese name is given but is illegible.

Page 1054. "Natural sized picture of a small wooden box of miso. Native name: "Kansai miso." It is made in the Kansai district [the Kyoto-Osaka area] and is used in making miso soups (neg. #43659).

Page 1068. Photo of a "small wooden box of 'Edomiso' [Edo miso] which is made in the Tokyo District. Miso which is quite salty is used in making soups. In the city, miso soup is used for breakfast, which in the country miso soup is used for lunch and supper."

Page 1070. Photo of a small wooden box of "Shiromiso" [shiro miso], meaning white miso. "This form contains rice and is used in making miso soup."

Page 1202 (26 May 1929, Sapporo, Japan). Mr. Morse visited the Hokkaido Agricultural Experiment Station at Kotoni. Mr. Takatsugo Abiko explained that "The soybeans grown in Hokkaido are used entirely for food purposes such as natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans."

Page 2004 (29 July 1929). Morse visited the Saitama Experiment Station at Urawa, Saitama prefecture. Met Mr. Tadashi Hashigawa, who is in charge of the soybean work of this prefecture, which is third in soybean acreage in the Japanese Empire. His main work is developing varieties to be used for making soy sauce, tofu, miso, and natto. This station grows about 50 varieties, nearly all yellow-seeded and medium in size.

Page 2445-46 (19 Sept. 1929). Visited the Tokachi Branch Experiment Station in Hokkaido. Met Mr. Seiji Kawase and Yoshio Fujine. 60% of the crops grown in Hokkaido are legumes; of these, field beans are first, followed by soybeans, then field peas. The Tokachi district is very well adapted to soybean culture. There are five grades of soybeans plus a special grade for beans that will be used for soy sauce, miso, etc. Of the 1,837,325 bushels of soybeans produced in Hokkaido, 58% is exported [to outside of Hokkaido] and 42% is consumed in Hokkaido as follows: Miso 9%, soy sauce 9%, seeding 6%, tofu and other products 18%. In 1923 Hokkaido was Japan's leading soybean producing region with 17% of the nation's production, followed by Ibaragi [Ibaraki] 5%, Saitama 5%, Nagano 4%, Kumamoto 4%, Aomori 4%, Niigata 4%, etc. Address: Agricultural Explorers, USDA, Washington, DC.

1332. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean products replace dairy products. May 15. p. 78-79.

• ***Summary:*** "For many years we have been warned that the increase of disease among cattle would put an element of danger into dairy products. This set us to studying foods that contain the essential elements of dairy foods with [sic, without] this objectionable feature." Describes the post-

© Copyright Soyinfo Center 2013

graduate work with soybeans done by two of the school's teachers, Miss Frances Dittes (Peabody College, Nashville) and Prof. P.A. Webber (Michigan State Agricultural College, Lansing).

"It is intensely interesting to those who are looking for something to replace dairy products, to see the products of the soy-bean cheese is delicious and capable of many variations in the dietary. One of the latest articles sampled is a loaf of yeast bread in which soy-bean milk was used instead of water. The bread is fine of grain, sweet, light, and with a toothsome crust that will appeal to the taste of the most fastidious."

"The soy-bean with nuts will supply every thing we have been obtaining from milk and flesh foods. And the danger that lurks in the products of diseased animals is entirely eliminated by the use of soy-bean products.

"There is a future for soy-bean products. We expect to see hundreds of our people demonstrating the value of these foods. This is a real missionary work for which Madison is preparing."

1333. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean recipes. May 15. p. 79.
• ***Summary:*** The following recipes were developed by Miss Frances Dittes: Soy-bean milk. Soy-bean cheese. Soy-bean omelet (from whole sieved soybeans and eggs). Soy-bean in tomato sauce. Cream of soy-bean soup. Soy-bean salad.

1334. Dorsett, P.H.; Morse, W.J. 1929. Tofu and other soybean products in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• ***Summary:*** Page 1051, 1056 (16 May 1929). Tokyo, Japan. A photo shows: "Nearly natural sized picture of a package of dried bean curd or tofu. Native name is 'Koya tofu.' The fresh bean curd is first frozen and then dried. This dried form of curd is used in general cooking with vegetables and meats." The front label on the rectangular package is attractive (neg. #43661).

Page 1057. A photo shows: "Section of a large bamboo culm [the round, hollow stem] which has been transformed into a package for holding (for sale commercially) vegetable pickles. The handle is of kudzu vine. The stopper is of cedar [*hinoki*], *Cryptomeria japonica* (neg. #43662).

Page 1059. "Slightly larger than natural sized picture [photo] of a package of roasted soybeans imbedded in very small rice flour cakes. Beside the package are some of the beans in the rice cakes. This article of food is known as "Mame taro" [as written on the label]. The skin of the bean is dyed green. These are eaten as confections and may be had at all confectionary stores" (neg. #43664).

Page 1060. "Natural sized picture of rice flour cakes in which are imbedded small black seeded soybeans. Native name is 'Mameiri abura age kaki mochi.' Meaning roasted beans on fried rice cakes" (neg. #43665).

Page 1064. Two packages of mungbean noodles or vermicelli obtained from the Matsuzakaya Department Store. The vermicelli is known in Japanese as 'Tomen'" [sic, Harusame] (neg. #43669).

Page 1065. "Natural sized picture [photo] of a sample of sugared soybeans (native name 'Sato Daidzu') and of a sample of roasted soybeans (native name 'Nori-mame' or daidzu) over which, during the last stage of roasting, finely cut [nori] seaweed is scattered. Both products are used as confections and are to be had at all confectionary stores" (neg. #43670).

Page 1067. "Natural sized picture of roasted soy beans imbedded in very small rice flour cakes. The skins of the beans are dyed green" (neg. #43672).

Pages 1201-02 (26 May 1929). While visiting the Hokkaido Agricultural Experiment Station at Kotoni, Sapporo, Mr. Morse notes: "The soybeans grown in Hokkaido are used entirely for food purposes, such as natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans." Address: Agricultural Explorers, USDA, Washington, DC.

1335. Dorsett, P.H.; Morse, W.J. 1929. Natto in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.
• ***Summary:*** Page 1179 and 1180 (25 May 1929). Sapporo, Japan. "Copied from Mr. Morse's diary:..." "After our visit

© Copyright Soyinfo Center 2013

with Dr. Ito we went to the Natto Laboratory of which Dr. [Jun] Hanzawa is in charge. We were given bulletins regarding the history, making and varieties of Natto, and served bottles of different sizes of Nattokin [Natto bacteria] (liquid pure culture) for the making of different kinds of Natto. We were then shown the various forms of Natto and taken through the various rooms and given detailed information on the various steps involved in the production of natto."

Page 1202 (26 May 1929). Sapporo, Japan. Mr. Morse visited the Hokkaido Agricultural Experiment Station at Kotoni. Mr. Takatsugo Abiko explained that "The soybeans grown in Hokkaido are used entirely for food purposes such as Natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans."

Pages 2003 and 2004 (29 July 1929). A letter from Mr. Ryerson dated 3 June 1929 noted that at least some of the colored motion pictures were good. "He wrote as follows: 'The last material received from Vitacolor was a great improvement. The azalea scenes were gorgeous.'"

"We were deeply grieved to note in the same letter the following paragraph concerning Dr. Galloway: 'Dr. Galloway has had to give up and go home. He will be leaving for a cooler section within a week. His nerves have gone back on him and he is facing the same siege that he had 10 years ago, much to the regret of all of us.'"

Mr. Morse added: "A visit was first made to the Saitama Experiment Station located at Urawa, Saitama Prefecture. We met here Mr. Tadashi Hashigawa, Agricultural Engineer, who is in charge of the soybean work of the Saitama Prefecture, which is the third in acreage of soybeans in the Japanese Empire. The work with soybeans consists mainly of developing varieties for seed to be used in making soy sauce, tofu, miso, and natto. This station is growing about 50 varieties nearly all yellow-seeded sorts with seed of medium size. In looking over these varieties in the trial grounds we found some very excellent varieties that no doubt will have value in the United States from southern Virginia southward. Especially North Carolina, Tennessee, and the upper delta of Mississippi. Mr. Hashigawa promised to send us samples of seed of all the varieties being grown at the station."

Page 3341 (24 Dec. 1929). "Today Morse and Suyetake went to call upon soy sauce and natto manufacturers for the purpose of getting acquainted and also if possible arrange for getting still and motion pictures of their plants, equipment and operations."

Page 3479 (8 Jan. 1930). Tokyo, Japan. *Soja max.* soybean. Photo of: "Three specimens of 'String Natto' [itohiki natto], one package (made of rice straw) unopened; one opened; and the natto without the package. These were purchased at a Natto factory, Tokyo, Jan. 6, 1930. The [rice-straw] packages are 15 inches long and 2½ inches wide. String natto is eaten after having mixed it with a mustard paste" (neg. #44739).

Note: This is the earliest English-language document seen (Jan. 2012) that uses the term "String Natto" to refer to natto or *itohiki natto*, or that uses the word "string" in connection with natto.

Pages 3925, 3929 (18 Feb. 1930). "It is one year ago today since we left Washington for Japan... We have found much of interest in connection with our special line of work, much more even than we expected, and therefore the time has passed all too quickly..."

"Morse and Suyetake searched for soybean products today, and were successful in bringing in a collection of two dozen things slightly or entirely different from those previously secured."

Page 3929. Photo shows: "Small triangular packages, one as purchased, the other unwrapped. They contain string Natto. The native name is 'Hygienic Miyako Natto.' There is at one side a small triangular paper containing dried mustard; this is inclosed [sic] with the Natto. Purchased in Tokyo, Feb. 16, 1930. Soybean dish measures 3 inches across" (neg. #44937).

Pages 6822-23 (22 Dec. 1930). Kyoto, Japan. Mr. Morse's notes. At the Imperial Agricultural College they met Isawo Namikawa, Professor of Horticulture, who said that Kyoto is noted for several special soy products such as white miso, soy sauce, and natto.

Page 6937 (10 Jan. 1931). Tokyo. Notes by Mr. Morse. Spent most of the day in the Shinjuku district looking up soybean products. "More String Natto in rice straw packages was observed in this section than any we have visited." Address: Agricultural Explorers, USDA, Washington, DC.

1336. Morse, W.J. 1929. Japan travel notes, April 5 to May 17. Handwritten manuscript. 27 p. Unpublished manuscript.
• ***Summary:*** Morse wrote these notes by hand in ink, early in the trip to East Asia, in a personal unlined notebook that was about 9 cm (3.62 inches) wide and 14.5 cm (5.75 inches) high. Most of the pages are unnumbered, no date or place is given for many of the entries, and the handwriting is occasionally faded or hard to read.

The purpose of this notebook and how Morse used it is unclear. These may have been his field notes that he used each evening as the basis for his official typewritten USDA trip report. Or was this a personal diary in which he kept personal observations that would not become part of the official report? This seems less likely.

This is apparently the first notebook in a series of many that Morse wrote. He kept the notebook after the trip and in April 1986 his daughter, Mrs. Walter A. Thalman (22 Interlaken Dr., Eastchester, New York 10709), who kindly photocopied it for Soyfoods Center.

Here are some quotations: "After a few minutes, we were served tea and cigarettes. Dr. Anda told us where the soybean work is being conducted. The soybeans are grown mostly in northeastern Japan, and specially on the island of

© Copyright Soyinfo Center 2013

Hokkaido where considerable breeding work is being done. At the Imperial Station in Tokyo, much chemical work is being done in the study of the manufacture of shoyu sauce and miso.

"After a visit to the Exper. Station we went to Ueno Park to visit and look over the cherry trees. The trees are in bud and should be in full bloom in about one week. Many of the trees are very large and quite old."

Food show: The International Food Show was being held in the large building in the park [Ueno]. A small admission fee was charged. The show lasts from April...

"Soybean products: The manufacture of shoyu or soy sauce was shown in several different booths. In one booth, samples of soy sauce made by the various soy manufacturers was shown in various sized bottles and kegs. In another booth, the ingredients used and the method of manufacture were shown. Large yellow soybeans were shown, a bottle of wheat, a bottle or jar of the rice ferment [sic, wheat ferment, koji], the product consisting of roasted wheat, cooked soybeans, after addition of the ferment. Then a jar of the product after the addition of salt and water, and curing for a certain length of time [shoyu moromi]. Then a jar of the sauce was shown which was pressed out of the preceding jar. The cake or ___ which was left after pressing out the liquid was shown.

"Tofu or bean curd: The different materials used in the manufacture of bean curd were shown. 1st were shown a bushel tub of large yellow soybeans (sample sent to Washington as coming from the national food show). 2nd was shown the beans soaking in water. 3rd was shown the bean milk. 4th was shown a jar of magnesium sulfate water used in precipitating the protein of the tofu milk (as it is called in Japan)... salts in precipitating the protein. Then were shown the blocks of tofu or bean curd. Many kinds of bean curd are made, depending on the amount of pressing. The soaking of beans in warm water or longer soaking in cold water. The amount of the water added in making the bean milk. Tofu is not made in large factories, but in small factories or stores scattered throughout the city. Small dealers or hucksters with the two tubs one at each end of a pole slung over their shoulder. Tofu (blocks) are in these tubs and the huckster has his route passing along blowing a horn which has a peculiar sound. He also passes back in alleys to his customers, leaving his tubs on the street. He cuts off from the slabs of bean curd whatever amount his customer desires."

"Buddha's Birthday. Hibiya Park, Tokyo. April 8, 1929." "... it is quite generally agreed that the Buddha was born in the sixth century B.C. The birthday is known as Hanamatsuri or Floral Festival..." Address: USDA, Washington, DC.

1337. Senior Minister of Cuba in London, Subsecretario de Agricultura, Comercio, Y Trabaja. 1929. Re: All the nutrition that we need is found in the soybean. Letter to Sr. Director de la Estacion Experimental Agronomica, Santiago de las Vegas, Cuba, June 11. 1 p. [Spa]*

• ***Summary:*** This letter, which begins with the heading *"Todo el alimento que nosotros necessitamos en la soya,"* discusses Dr. James L. North of England, fresh soymilk, dry soymilk, soybean meal for use in bread, soy cheese, soy coffee substitute, and soy oil.

This letter is located in file #363 in the archives, INIFAT, Santiago de las Vegas, Cuba. Address: London, England.

1338. *Madison Survey* (*Madison, Tennessee*). 1929. Soy-bean recipes. June 19. p. 98-99.

• ***Summary:*** Describes how to make "soy-bean cheese" (also called "soy cheese," i.e. tofu) at home using lactic acid as a coagulant, plus the following recipes: Savory loaf (with soy-bean cheese). Soy-bean loaf (with soy cheese). Lentil-soy loaf (with soy-bean puree). Vegetable roast (with soy-bean puree). Jellied soy salad (with soy cheese). Tomato soy salad (with "soy curd").

Page 1929. "The same man shown in picture #44094 placing a piece of bean curd which he has just sold, into a vessel of water. We have a motion picture of this" (neg. #44095).

Page 2335-37 (4 Sept. 1929). Tokyo. "We were out this morning at 4:00 a.m. and visited a tofu and soybean curd factory. We spent a most interesting 2½ hours observing the various operations. The soybeans are put to soak about 5:00 p.m. the day before they are to be used, and about 4:00 a.m. the" next day "they are ground. This is accomplished by means of a special apparatus which grinds the beans very fine while a small stream of water is running on the beans in the chopper.

"It looks as though they grind about half a bushel of beans for each batch of curd. After grinding it is put into a large open kettle and brought to a foaming boil. The foaming mass is stirred down several times. In one of the foaming processes a small amount of mustard [rapeseed] oil and some kind of flour (we were unable to learn what kind) is sprinkled over the foaming mass and while foaming, about two gallons of water (cold) is added to the mixture. It is then strained through a bolting cloth sack into another receptacle in which there is two bolting cloth bags. A rather light pressure is applied to the first bag of solid matter and after it is drained for a time, 15 or 20 minutes, the solid portion is put back into the kettle, a little water is added, and it is again put into the bolting cloth bag and the liquid portion pressed out into the other two bolting cloth bags.

"The solid portion is then put to one side and later utilized in other food products or for cattle feeding period."

Page 2336. "To the white liquid bean milk, which by the way is pretty good, about a gallon and a half of water, to which has been added a solution–we could not learn the proportions because of its being a trade secret–three cups, we should say (guessing) about a quart of a solution of sulphate of magnesia [sic, magnesium, i.e., magnesium sulphate] is added to the soybean milk. The solution is added slowly and well distributed through the hot bean milk. By rule of thumb the operator tests with his ladle the coagulation of the milk and just before it is finished he adds about a teacup of the sulphate of magnesia solution to the mixture. He then places a bamboo or wicker basket in the tub and dips off all the liquid (whey) that he can.

"Nearby, which has been previously fixed, is a false bottom box about 12 inches wide, 24 inches long, and 6 inches deep. There is an addition [wooden frame] of about 2 inches added to [the height of] the first box and over the whole a piece of bolting cloth is placed. The curd in the large tub is carefully transferred by means of a ladle from the tub to the box, which is large enough to hold the batch. The liquid is gradually pressed out by rather light weight and in a short time the 2 inches added height to the box is taken away. The bolting cloth is then laid back and with a flat broad knife the rough edge around the sides and ends are sliced off and placed in a row along the center. The cloth is then folded back smoothly and a board and weights are placed on the box of curd. In about half an hour this box of curd is cut through into squares something like 6 inch bricks. The box and contents is lifted off and placed upside down in cool water. It is readily slipped out of the box and the bolting cloth is removed. These blocks of curd [tofu] can then be disposed of as is or can be cut into still smaller squares.

"Another operation in this establishment is the frying of the curd.

"We watched them cut 1- by 6- by 6-inch blocks up for frying in deep fat (Mustard oil). Some of the 1 by 6 by 6 inches were cut into three pieces each about 1 by 2 by 6 inches and these in turn were split in two to make two pieces each about ¼-inch by 2 by 6 inches. Other 1 by 6 by 6-inch pieces were cut into squares about 1 by 2 by 2 inches and these were split. They used two frying kettles and transferred the curd from the first to the second, cooking it about half done in the first and completing the cooking in the second.

We tried some of this hot tofu (curd) with a little soy sauce and found it quite good.

"This concern works up five bushels of soybeans daily into curd and tofu.

"About 6:30 a.m. we went out to 23rd street and walked through the farmers open market."

Page 2371 (8 Sept. 1929). Tokyo. "Soybean harvest in Hokkaido is supposed to begin about September 15th so from now on we plan to spend the greater part of our remaining time in this region, in the field..." We leave tomorrow morning and "expect to be away about a week."

Page 2693-95 (18 Oct. 1929). Left Ueno station in Tokyo en route to Kagemori in the mountains, where we hope to see soybeans and get motion and still pictures of their harvesting in that region. We arrived at Kagemori at 10:45 and conferred with the village committee who advised that we were about two weeks too early to see the harvesting of soybeans."

bean curd man, slicing and laying bean curd on a bamboo rack for pressing." Kagemori (neg. #44392 and #44393).

Page 2696. Photos: (1) A Japanese farmer bending over in a field, pulling up soybean plants. "This is the way they are harvested in this region, and putting them in small piles, roots up." (2) The same man "has just finished setting up a small shock of soybeans and is on his way to pull up more" (negs. #44394-95). Address: Agricultural Explorers, USDA, Washington, DC.

1341. Morse, W.J. 1929. Letter from Dr. [sic] Morse. Tokyo, Japan, July 20, 1929. *Proceedings of the American Soybean Association* 2:50-52. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.

• ***Summary:*** This letter from W.J. Morse was read before the 1929 convention of the American Soybean Association at Guelph, Ontario, Canada. This is the first annual ASA meeting he has missed. He begins with a brief description of the "Oriental Agricultural Exploration Expedition" headed by Mr. P.H. Dorsett and himself. They plan to study soybeans in Japan first. "The largest soybean section is the Island of Hokkaido which has an acreage of 215,212 [planted to soybeans] and produces 3,184,245 bushels of beans" [yield = 14.8 bushels/acre].

"On our arrival and after establishing headquarters in Tokyo, we first began to look up varieties which we might send back to the United States for the 1929 planting. We succeeded in packing up about 100 lots which are now growing in the variety plots at Arlington Farm [Virginia]. In hunting out this seed, we were very much surprised to find the soybeans listed with the garden beans and as garden beans. For the most part these are grown as green vegetable beans. These sorts are black, brown, greenish yellow, and yellow seeded varieties of early, medium, and late types. Some of the yellow seeded varieties are listed as most suitable for bean curd, soy sauce, miso, natto, and confectionery purposes, such as sweet bean paste, candied beans, roasted beans (like our peanuts), and sugared beans."

Note 1. Azuki beans, rather than soybeans, are usually used to make "sweet bean paste" in Japan.

"It is amazing, the extent to which the soybean is used for food in Japan. Whether or not it can be used in the United States in all of the ways used here is extremely doubtful, that is for human food." There is no doubt that American soybeans will be used mostly to produce oil and oil meal. "It may interest you to know that the beans produced in Japan

© Copyright Soyinfo Center 2013

are used entirely for human food, green manure, and planting purposes. The grain varieties have seed of higher quality than those produced in Manchuria and are not used for oil and oil meal production as [are] the beans of Manchuria. The great soybean oil and meal production of the Orient is confined almost entirely to Manchuria.

"Another thing which surprised us greatly was the extent to which soybeans are used for green manure purposes in the rice paddies." The plants are turned under in the mud after water has been run into the paddies.

"Another extensive use of the soybean is for bean curd, or tofu, which is manufactured only... in small shops scattered about the cities and country villages. This curd is used in many ways, being the meat of the poorer classes. It is used, however, quite generally in making bean-curd soup [miso soup with tofu] which is sometimes served at breakfast and nearly always at supper. The bean curd is peddled about from house to house by men with two tubs suspended from a bamboo pole over their shoulders. The sound of the little horn of the bean curd man as he announces his coming has become quite a familiar sound to our ears as we go along the streets or hear him pass under our office windows.

"Soy sauce is manufactured on a very large scale and is universally used by the Japanese, rich and poor. We have had the pleasure of visiting the large experimental laboratory of an experiment station given wholly to soy sauce and saké experiments. In Hokkaido we visited a soy sauce factory, the buildings of which covered several acres. In one of the curing vat buildings where the mash is allowed to cure for about 18 months, we counted ninety large vats.

"Soybeans are used to a very considerable extent for confectionery purposes. The large black, brown, and green seeded varieties are used in making sweet bean paste which is put up in small thin slabs and then done up in very attractive packages. Roasted beans, similar to our roasted peanuts, may be found at nearly all confectionery stores. Roasted beans are also sugar coated and others are sprinkled with small pieces of sea-weed during the roasting, which gives an appearance of mottled beans (rather a familiar sight to our mid-west farmers). Then, there are the candied beans, that is, beans which have been boiled in syrup.

"Miso and natto are two forms of bean foods in which the beans are first cooked and then treated with certain bacteria [sic, microorganisms]. Miso is used largely in soups which are consumed at breakfast. Both of these foods are quite largely used.

"Other products used for food are roasted soybean flour, soybean vermicelli, pickled green beans in the pod, yuba–the film produced by boiling soybean milk, and dried frozen bean curd."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "dried frozen bean curd" to refer to dried-frozen tofu.

Note 3. This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted soybean flour."

"Another surprising thing is the very extensive use of the soybean as a green vegetable bean. As early as May, small bundles of plants with full grown pods were seen on the market. At the present time the market is virtually flooded with bundles of plants with full grown pods, the seeds of which are also full grown. The pods are boiled in salt water and the beans eaten from the pods.

"During the past two weeks we have visited large sections near Tokyo where soybeans are grown for green vegetable purposes. The beans are grown in rows 2 feet apart and in 95 per cent of the cases there are other crops planted between the bean rows, such as early cabbage, onions, lilies (for the edible bulbs), late varieties of soybeans, late plantings of soybeans, and other early truck crops." Address: USDA, Washington, DC.

1342. *Madison Survey* (*Madison, Tennessee*). 1929. Practical uses for the soybean. Sept. 4. p. 141-42.
• ***Summary:*** "From the pamphlet just coming from the press giving soybean recipes, we select this week the following instruction on salads. That readers are interested in soybean products is evident from the letter of inquiry received. Soybean cheese as used by the Madison Sanitarium is a popular dish and the many uses of the soybean curd make it a valuable addition to the dietary."

There follows a section titled "How to make a perfect salad" with 8 recipes for soy cheese [tofu]: Tomato, pineapple, cheese salad (with ½ cup grated soy cheese). Jellied soy salad (with 2 cups grated soy cheese). Waldorf cheese salad (with ½ cup grated soy cheese). Raisin and soy cheese salad (with equal parts grated soy cheese, seeded raisins, and chopped apple). Almond and salad (with "2/3 grated soy curd" and 1/3 ground blanched almonds). Sliced fruit and cheese salad (with orange, pineapple, raisins, and soy cheese). Tomato and soy salad ("Make a soy dressing by softening the soy curd with mayonnaise"). Pineapple and cheese salad (with pineapple, celery, grated soy cheese, and pecans).

1343. Nouelle, Georges. 1929. Le soja: Les produits coloniales [The soybean: Colonial products]. *Annales Coloniales* (*Les*) 30(137):1. Sept. 17. [2 ref. Fre]
• ***Summary:*** This is basically a good review of the literature, with no new information. It discusses the history, cultivation, and utilization of soybeans as human food, animal feed and in industry, with some emphasis on utilization.

For a long time, it has been considered in Europe as an object for botanical studies.

The milestone dates in its history are:

1779–The first cultural trials at the Museum of Natural History [Paris].

1868–Experiments are undertaken by the Society of

© Copyright Soyinfo Center 2013

Horticulture of the Côte-d'Or.

1880–Soybean seeds are sold by the house of Vilmorin [a seed company].

1888 [sic]–Introduction of soybeans into the United States, where it is adopted for the feeding of animals.

1906–Use of soybean in English oil mills, to make up for the shortage of cottonseed oil.

1908–Creation at Paris by Mr. Li-Yu-Ying of a research laboratory, later expanded into a factory named the *Caséo-Sojaïne* [soy casein factory = tofu factory].

The soybean is adapted to various climates and can be cultivated as far north as the haricot bean. It resists the cold better than the latter and is very tolerant of drought.

It is said that it grows from the Equator to 60º latitude. It is cultivated in China and from Manchuria large amounts are exported to China, Japan, Formosa, Korea, Indo-China and Siam.

In the Americas, it is cultivated in the United States. In Europe. it is cultivated in France in the area around Etampes, in several provinces of Italy, and in Russia.

In Oceania, it is grown in Philippines, Java, and Borneo.

In Africa, trials have been conducted in Algeria and Tunisia, as well as in the British colonies of southern Africa.

In 1908 about 100,000 metric tons were exported from China to Europe, of which 69,200 went to Great Britain and 21,390 to France. In 1909 England purchased 400,000 metric tons for its oil mills.

The soybean can be used profitably in crop rotations to add nitrogen to the soil for subsequent crops.

It is also widely used as a feed for animals.

For human food, it can be used in various forms, especially in the form of mil and of flour.

Soymilk (*Le lait de soja*), known in China before the Christian era, is obtained as follows: a brief description is given, including the process used at *Caséo-Sojaïne.*

Soymilk bears some resemblance to animal milk and it has analogous properties. It can be coagulated to make soy cheese (*fromage de soja* [tofu]). This is done in China and Japan using the water from salt marshes [nigari], or calcium sulfate (*plâtre*) or sour soymilk (*lait aigri*). At *Caséo-Sojaïne* it is made using a mechanized process, which ensures complete hygiene and uses pure coagulant solutions which leave no taste of bitterness.

They have also been able to make cheeses that resemble European cheeses, fermented or not.

Soymilk, like animal milk, can be concentrated, dried and reduced to a powder. Or it can be fermented to make kefir or yogurt (*Kéfir ou Yoghourt*). The cost of making it renders its use very economical.

Soy flour is obtained in the same way as wheat flour, by grind the seed–preferably dehulled. It is a very rich food which contains 4 times as much protein and 20 times as much oil as typical wheat flour. From it one can make bread (notably a diabetic bread using the formula of Dr. Menudier, 1890). By mixing it with wheat flour one can make biscuits that are easy to digest and have a long shelf life, or cakes, pâtes, etc.

From the seeds one can extract an oil which the Chinese presently use in their cuisine, and the English use to make margarine or soap. The cake remaining after oil extraction makes an excellent animal feed.

The soybean can also be consumed as a vegetable [green vegetable soybeans]. Its digestibility varies with the means of preparation. It is recommended to boil it (after soaking) in water to which had been added a pinch of sodium bicarbonate [baking soda]. Soy sprouts give salads a very agreeable taste. The Chinese make a bouillon base which can replace the bouillon from meat. And fresh soybeans can be prepared like peas. The Japanese and Chinese make soy sauce, using a complicated process, of which certain types are appreciated in England.

Finally, it can be used in confectionery in the form of a confection similar to *crème de marron*, or in the form of chocolate (with sugar and cocoa butter added). Grilled soybeans are served in certain European countries in place of coffee.

In addition to its alimentary uses, the soybean is used to make candles, paints, and *sojalithe* as an insulator for electrical devices.

The soybean is thus suited for numerous and diverse uses. It would be desirable to develop its culture in our colonies and even in France itself in places where it can be acclimatized. Address: Député de Saône-et-Loire, vice président de la Commission des Colonies, membre de la Commission des Mines.

1344. *Chinese Economic Journal.* 1929. Soya beans and bean oil industry in Manchuria. 5(3):791-805. Sept.

• ***Summary:*** "According to their order of importance, the agricultural products of Manchuria are as follows: soya beans, *kaoliang* millet, corn, wheat, barley, rice, buckwheat, hemp, tobacco, cotton, sugar beets and other minor crops."

The yellow bean (*Huang Tou*) is by far the most common, growing in abundance in North and South Manchuria. When the hilum and seed scar is colored white, it is called *Pai Mei* (meaning white eyebrow) *Huang Tou.* When the hilum is golden hued, it is called *Chin Huang tou.* The seed of this variety is almost globular. When the hilum is black, it is called *Hei Chi Tou* or black belly. All the three varieties produce oil and fat, the first two named being specially good for the preparation of bean-curd [tofu], one of the most palatable vegetable dishes of the Chinese.

"The green bean (*Ch'ing Tou*) has two varieties. When the seed is green and the cotyledon is yellow, it is called *Pi Ch'ing Tou.* It is said that this variety yields more legumine in the preparation of bean curd than the two varieties of the yellow bean, but of inferior quality. When the seed, the epidermis and the cotyledon are all green, it is called *Ch'ing*

© Copyright Soyinfo Center 2013

Tou. The hilum of this variety is generally tawny or black.

"The black bean (Hei Tou or Wu Tou) has three varieties: When the epidermis is black and the inside green, it is called *Ta Wu Tou.* It yields oil or fat, and when boiled with millet or rice it is used for food. When the epidermis is black and the inside yellow and of much smaller size, it is known as *Hsiao Wu Tou.* It yields oil, and is used for horse feed, and the refuse for pig feed. When the epidermis is black and the inside yellow, the bean assuming a flattened and elliptical shape, it is called *Pien Wu Tou,* and is used for horse feed, and when pickled for human food."

"Yellow or green soya beans are used in the manufacture of bean curd, a product of universal consumption in China. The by-product, bean milk, which is highly nutritious, is drunk as milk by many Chinese in the morning. The bean-curd skin [yuba], or the scum of the bean milk, is used for culinary purposes, and is greatly relished on the table."

"The most important product of the beans is bean oil, which has contributed in no small measure to the prosperity of Manchuria. It has attracted foreign capital, and the annual export of oil is enormous. there are altogether more than 300 bean oil mills in South and North Manchuria, including steam mills and oil-fashion, small plants. In Dairen there are 60 bean oil mills, of which only two are Japanese owned, the rest being Chinese. While other manufacturing industries have passed into Japanese hands with the acquisition of the Leased Territory of Kwantung. Chinese still retain a firm hold on the bean oil industry. Harbin has about 50 oil mills, two of which belong to Russians, the rest being entirely operated by Chinese. Other centers like Mukden, Antung, Newchwang and cities along the Chinese Eastern Railway, the South Manchuria Railway and fourteen other railways have bean oil mills in varying numbers, which go to make the total number of 300 oil mills. Beans harvested in the C.E.R. and the S.M.R. regions and even in the remote hinterland where only mule carts can go, are finally transported to various destinations in freight cars. Each car contains 52,000 catties of beans, which can produce about 5 thousand catties of oil and 1,000 bean cakes, every cake weighing 46½ catties. The 50 oil mills in Harbin consume annually about 490,000 tons of beans, valued at $35,000,000."

"The steam oil-mill and the old-fashioned mill differ from each other in mechanical equipment and in the number of presses employed. The old-fashioned mill has only one or two presses, while the steam mill has over twenty press machines. The largest having as many as a hundred. The screw press much in use in the former mill consists of a primitive wedge, that is now being replaced by the metal screw. The screw is turned by hand by the man in charge of the machine. In modern steam mills a steam pump operates a hydraulic press that puts great pressure on the prepared beans underneath. As the hydraulic presses are of larger dimensions, the cakes produced are greater in diameter and thickness than those made from screw presses."

1345. *Madison Survey* (*Madison, Tennessee*). 1929. Soybean products. 11(42):168-69. Oct. 23. [1 ref]
• ***Summary:*** Discusses a report on the calcium content of soybeans and tofu presented by Miss Frances Dittes at the annual meeting of the American Home Economics Association, and quoted in the October issue of the *Journal of Home Economics.* Last year Miss Dittes wrote her thesis on this subject while studying at George Peabody College for Teachers. She made three types of soybean curd using calcium sulfate, lactic acid, and rennet as coagulants, then measured their calcium content. All were low in calcium, although that made with rennet had the highest calcium content. "It is concluded that soybean curd in the dietary should be supplemented by foods rich in calcium."

Dr. Bailey at New Haven, Connecticut, found that soybean curd had no starch and no significant amounts of sugars. "This means that the soybean curd is a food eminently fitted for use by patients suffering from diabetes."

1346. Dittes, Frances L. 1929. The calcium content of soybean cheese (Abstract). *J. of Home Economics* 21(10):779. Oct.
• ***Summary:*** "Three types of soybean curd made by using calcium sulfate, lactic acid, and rennet, respectively, as coagulants, were analyzed for calcium by the Shohl modification of the McCrudden method. The three methods of making the curd produced cheeses of good texture, color, and flavor. All were low in calcium, varying from 0.003 to 0.005 per cent calculated as CaO [calcium oxide = lime]. The rennet curd had the highest calcium content. It is concluded that soybean curd in the dietary should be supplemented by foods rich in calcium." Address: George Peabody College for Teachers [Nashville, Tennessee].

1347. Lovell, John H. 1929. Soy bean as a honey plant. *Gleanings in Bee Culture* 57(10):646-48. Oct.
• ***Summary:*** The soy bean "belongs to the same family as the pea, bean, and clovers, plants which produce their seeds in a legume or pod."

"Up to the present time it has been cultivated chiefly as a hay or forage crop; but, with our population increasing twenty times faster than the food production, it must soon become important as a food for the human race.

"Soy beans, before they have fully ripened, may be shelled and used as a green vegetable like green peas. A few hills might well be planted in every garden. They may also be canned and used in winter, or they may be sprouted and the sprouts used like asparagus tips, to which, however, they are much inferior. The dried beans when cooked also make a palatable dish, and more than 100,000 bushels are packed annually by American canning factories. As the seeds are used as a substitute for coffee, soy bean is often called coffee

© Copyright Soyinfo Center 2013

berry."

"By boiling the crushed beans in water a vegetable milk may be obtained, which may be used in making cakes and custards... From the milk a curd or cheese [tofu] is prepared, which is on sale in the Chinese markets of America. This may be flavored with fruits and jams and made into puddings, and used for sandwiches and luncheon novelties.

"But of all the preparations made from the soy bean, none is more widely distributed or better known than soy sauce, a dark brown liquid which in odor and taste resembles a good meat extract. In Japan alone the annual production is more than 2,000,000 barrels. While it is largely consumed by the Chinese and Japanese it has been introduced into both Europe and America and may be purchased at all Chinese markets."

There is conflicting evidence as to whether or not soybean flowers are a source of sugar-rich nectar from which bees make honey. The soy bean plants "grown in my garden, had small inconspicuous flowers, with the corolla hardly visible. They were odorless and apparently nectarless and wholly unattractive to bees. Plants under glass from which all insects were excluded formed pods in great abundance which were well filled with large seeds. The soy bean is self-fertile and not dependent on bees for pollination.

"The flowers, the young leaves, and the stems are densely hairy as can be seen in the illustration [photo], but the older leaves are smoother. The specific name *hispida* was evidently selected because of the roughness of the stems. But this coating of hairs is not sufficient to defend the plants from insect attack."

"If it is honeydew which is stored by the bees from soy bean, then the erratic, scattering and infrequent reports of honey flows would be fully explained." Note: Honeydew is a sugar-rich sticky substance, secreted by aphids and some scale insects as they feed on plant sap.

"Therefore without more reliable evidence than is at present available, the writer does not think that soybean should be ranked as a honey plant."

A photo shows the upper part of a soy bean plant with stems, leaves, and blossoms. Address: Waldboro, Maine.

1348. Dorsett, P.H.; Morse, W.J. 1929. Soybean sprouts in Chosen (Korea) (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. • ***Summary:*** Page 2977 (15 Nov. 1929). "This has been the 'gala' day of our trip thus far. This morning we went out to the Experiment Station [near Shariin] to meet Dr. Takahashi." They secured about 20 samples of soybeans and a sample of soybean sprouts.

Page 2998. Heijo (P'yongyang). Photo: A nearby view of a vessel of mungbean sprouts on left, soybean sprouts in the middle, and curd [tofu] on the right (neg. #44589).

Page 3002 (18 Nov. 1929). Heijo. Two good photos of soybean sprouts in earthenware vessels.

Page 3369 (31 Dec. 1929). "1,003 samples of soybeans secured from the Suigen Agricultural Experiment Station." "One of the most interesting is a very small seeded yellow sort, the seed being about the size of a mung bean. This is the smallest seeded variety of soybean we have ever seen and it should prove valuable as a bean for sprouting."

Page 5950 (27 Sept. 1930). In Heijo (North Korea), Morse visited Korean Farmers' Market. A photo shows a "Korean woman buying soybean sprouts from Korean farm woman on Farmers' Market Day" (neg. #54904). Address: Agricultural Explorers, USDA, Washington, DC.

1349. **Product Name:** La Sierra Soy Cheese (With Pimiento).
Manufacturer's Name: La Sierra Industries.
Manufacturer's Address: Arlington, California.
Date of Introduction: 1929. November.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Los Angeles City Directories. 1928-29. For both these years Theo. A. Van Gundy is a teacher in City School. Resides in San Gabriel. Riverside City Directories. 1926-1951. No listing for Van Gundy or La Sierra Foods. Yet only in 1951 is La Sierra College listed. Ad in Health magazine. 1934. 1(3):30. June. "La Sierra Soybean Products: Perfect Protein, High Alkaline Ash, Low Starch." The first product on the list is "Soy Cheese." Note: This is the earliest known commercial tofu product to be named "Soy Cheese."

Ad in Dorothea Van Gundy. 1936. La Sierra Recipes. p. 46.

Two interviews with and two letters from Charlotte Van Gundy Holmes. 1981. In the fall of 1928 (probably not in 1927 as reported by Jones in 1963), T.A. Van Gundy moved to La Sierra (now a suburb of Riverside) and started La Sierra Industries. He soon developed a line of eleven soyfoods. The first eight of these were probably on the market by late 1929. One of the products was Soy Cheese (canned tofu, with pimiento added to prevent graying after canning). This was the company's second best selling product in the early 1930s.

1350. *Gazette* (*Indiana, Pennsylvania*). 1929. Soybeans.
• ***Summary:*** This article seems to be based on a USDA press report of early 1929: "W.J. Morse, forage-crop specialist, Bureau of Plant Industry, U.S. Department of Agriculture, who has been in Japan for several months collecting new varieties of soybeans, reports that to date he has collected more than 5,000 lots, representing every type of soybeans grown in Japan."

© Copyright Soyinfo Center 2013

"Samples from every lot of seed collected by Mr. Morse will be planted at the United States experiment farm at Arlington, Va. [Virginia], this spring, and when the seed is harvested tests will be made for oil content. In this way it is hoped that selections may be made which will ultimately develop into varieties with a wide range of oil content.

"Mr. Morse writes that the Japanese use the soybean in a number of ways in their diet. They grind the beans and make flour, they serve the green beans as we would green lima beans, and they cook the dried beans in a manner similar to navy beans. Besides this, they make soy sauce, soybean curd [tofu], beverages, and bean sprouts from the soybean. He believes that the use of soybeans as a human food in this country will increase steadily.

"Mr. Morse is now spending the winter in Tokio [sic], studying the Japanese methods of utilizing soybeans. While he expects soybeans to grow in favor as a feed for livestock and food for people, he feels that the largest future development of the crop in the United States will be in the utilization of the oil and meal in industry.

"Samples of the seed collected in Japan will be sent to some of the State experiment stations for trial, but will not be available for distribution to individuals."

1351. **Product Name:** Tofu.
Manufacturer's Name: Kuwasaki (Mrs. Mitsu) Tofu.
Manufacturer's Address: 480 N. Kukui, Honolulu, Oahu, Hawaii.
Date of Introduction: 1929.
New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1928-29. Mrs. Mitsu Kuwasaki, proprietor. Not listed 1924, or 1930-31. Note that this location is next to the future location of Turomatsu Gono Tofu in 1931.

1352. **Product Name:** Tofu.
Manufacturer's Name: Nakamoto (Kensho) Tofu.
Manufacturer's Address: Rear 672 S. King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1929.
New Product–Documentation: Honolulu City Directory. 1928-29. Kensho Nakamoto Tofu (Kensho Nakamoto, proprietor). Rear 672 S. King, Honolulu. 1930-31. Address listed as rear 674 S. King, Honolulu. Not listed 1934-35.

Hawaiian Japanese Annual & Directory. 1936-37, p. 125. Takaaki Nakamoto (from Okinawa prefecture), tofu maker, 672 S. King St., Honolulu.

1353. **Product Name:** Tofu.
Manufacturer's Name: Sakai (Tahaji) Tofu.
Manufacturer's Address: 43 N. Pauahi, Honolulu, Oahu, Hawaii.
Date of Introduction: 1929.
New Product–Documentation: Honolulu City Directory. 1928-29. Tahaji Sakai Tofu (Tahaji Sakai, proprietor). 43 N Pauahi, Honolulu. Not listed 1930-31.

1354. **Product Name:** Tofu.
Manufacturer's Name: Sasaki (Mrs. Taka) Tofu.
Manufacturer's Address: 32 S. Kukui, Honolulu, Oahu, Hawaii.
Date of Introduction: 1929.
New Product–Documentation: Honolulu City Directory. 1928-29. Mrs. Taka Sasaki Tofu (Mrs. Taka Sasaki, proprietor). 32 S. Kukui, Honolulu. Not listed 1930-31. Note that this later becomes the location for Nihachi Matsushima Tofu in 1931.

1355. **Product Name:** Tofu.
Manufacturer's Name: Tanaka (Tanekichi) Tofu.
Manufacturer's Address: Mooheau, Hilo, Island of Hawaii.
Date of Introduction: 1929.
New Product–Documentation: Honolulu City Directory. 1928-29. Tanekichi Tanaka Tofu (Tanekichi Tanaka, proprietor). Mooheau, Hilo. Not listed 1934-35. 1936-37 Directory. Listed again. Same name/address.

1357. Ferrée, Christian Johan; Tussaud, J.T. 1929. The soya bean and the new soya flour. London: William Heinemann (Medical Books) Ltd. xi + 79 p. Illust. No index. 22 cm. Revised translation from the Dutch by C.J. Ferree and J.T. Tussaud of Die Sojaboon en Duurzaam Sojameel. [29 ref]
• ***Summary:*** Contents: Foreword, by Sir Wm. Arbuthnot Lane, President of The New Health Society. Preface, by C.J. Ferrée (London). 1. Introduction. Literature. Name of the plant. Origin. Botanical particulars. Assimilative power of the soya plant. Inoculation. Soil requirements. Production and cost. 2. General ingredients of the various Manchurian beans. Composition. The value of soya protein. Vitamin in

© Copyright Soyinfo Center 2013

the soya bean. Digestibility of the soya bean and its products. 3. Use in China and Japan: Bean sauce, soy, or shoyu, Chinese chiang (paste), tou-fu or beancurd, beans consumed as a table vegetable, bean refuse and bean cake are used as a fertiliser and for fattening hogs, bean oil is used as an illuminant (where it has not been superseded by kerosene), as a substitute for lard in cooking, and as a lubricant for greasing axles and parts of native machinery, miso and natto. First imports into Europe. Exports during the last five years from China and Japan. Imports during the last five years into Europe and America. The increasing rate of its cultivation. Manchuria–Production. Estimate of the world's production of the soya bean. London the principal market. Future importance.

4. America. Australia. South Africa. Other British possessions and protectorates. Java (Dutch East Indies). Europe. 5. Unsuccessful experiments with soya flour. Ordinary soya flour. Extracted soya flour. Dr. L. Berczeller's discovery. The new soya flour. Comparison with other cereal flour and other foods. Comparison in price with other cereal flour and other foods. Comparison in price of soya protein compared with other cereal foods. Comparative analysis of cereals. 6. Soya milk. Vegetable casein. Lecithin. 7. Increase in food value. Savings. Industrial application in foodstuffs. The importance of Dr. L. Berczeller's soya flour for the food industry. Soya flour and the food laws. Uses of soya flour in: Bread, pastry, cake, biscuits, confectionery, sausages, infant foods and food for invalids, cocoa, chocolate, soup cubes, pudding flour. Uses in the kitchen. Soya flour recipes (for flour made using the Berczeller process), soya flour for diabetics, recipes for diabetics.

The Preface states: "In the following pages the writer has endeavoured to give an account of the numerous uses to which the soya bean has so far been put, and to visualise its future service to humanity through the means of a totally new and practical process by which this legume... may in future be used as an important article of food for general consumption throughout every quarter of the globe.

"In compiling the details relative to the soya bean flour, with which this brief summary principally deals, he trusts that he has succeeded in giving sufficient data to enable the reader to fully realise its value as a staple food from the economic point of view, as well as from the more domestic standpoint, so that the important fact may be fully realised that a new foodstuff of a very valuable nature... has now been brought within the reach of all nations to serve them in a most practical manner as an economic article of food."

The book includes statistics on the imports and exports from 1923 to 1927 of "soya beans, soya oil, and soya cake in various countries including China, Japan, England, France, Germany, Holland, Norway, Denmark, Sweden, and USA.

The "new soya flour" is that developed by Dr. Berczeller. This book repeatedly praises that flour. "A few years ago Dr. Laszlo Berczeller, a Hungarian physiologist in Vienna, succeeded scientifically in finding a method which enables us to prepare from the soya bean a digestible and pleasantly flavoured flour without detracting from its nutritive value, and this method entirely succeeds in preserving all the good qualities contained in the bean itself. Physiological experts and analysts withhold no praise, as the following extracts will show: -" There follow words of praise from: (1) Dr. Alfred Schwicker, M.P., Royal Hungarian State Institute, Central Depot for Experimental Chemistry. (2) Dr. Stefan Weisser, King's Counsellor, Royal Veterinary Physiological Experimental Station, Budapest. (3) Prof. A. Durig., The Physiological Institute, University of Vienna.

Marakujew (1928) estimates the production of soya beans in "Manchuria at 6 million tons at the utmost, the production of the whole of China at 16 million tons, and he is led to this figure by the conclusions of the Economic Bureau of the South Manchuria Railway, which estimates that the Manchurian crop in 1927 amounted to 37.1 million kobu (5.88 million English tons), of which 2.6 million tons originated from South Manchuria, 3.3 million tons from North Manchuria" (p. 32). A table (p. 33) gives estimated world production of soya beans from 1923 to 1929 (6.6 million tons, forecast). The leading producers in 1929 (in million tons) are: China 5.250. Japan 0.580. USA 0.250. Java and Dutch East Indies 0.120. Other Asiatic countries 0.400. A soya milk factory was recently established in Denmark (p. 54). Although this book contains a bibliography of 29 references, most are very incomplete.

Photos show: (1) A soybean plant with roots, pods, and leaves. (4) Nodules growing on soybean roots. (5) One pod and seed each from inoculated and uninoculated soybean plants. (7) An immense field of soya beans in Manchuria. (8) Soya beans awaiting shipment, in house-shaped stacks under tarps, at Dairen. (13) Seeds of the most important varieties of soya beans now grown in the United States. (10) Two horses and a farmer cultivating a field of soybeans. (11) Harvesting soya beans. (12) Well selected, clean soybean seeds.

A map (frontispiece) shows where soybeans are cultivated worldwide. An illustration (facing p. 2) shows "Shen-Nung. Emperor [of China] in 2838 Before Christ, called 'The Heavenly Farmer.' Reproduced from a print in a Vienna museum."

One bar chart compares the nutritional composition of soya flour with that of cereals and animal products, and other foodstuffs (p. 13), another compares the calories (p. 46), and a third compares the cost of 1,000 calories (p. 48). Marakujew (probably spelled Marakiev or Marakuyev), in "The Export of Manchurian Soya Beans and its Finance" (1928, in Russian, probably an article rather than a book) "estimates the production of Manchuria at 6 million tons at the utmost, the production of the whole of China at 16 million tons, and he is led to this conclusion by the Economic Bureau of the South Manchuria Railway, which estimates that the Manchurian crop in 1927 amounted to

© Copyright Soyinfo Center 2013

37.1 million kobu (5.88 million English tons), of which 2.6 million tons originated from South Manchuria, 3.3 million tons from North Manchuria. According to the calculations of this bureau, the home consumption of North Manchuria is something like 40 of the production, viz., 1.3 million tons; the remaining 2 million tons are for export. The exports of South Manchuria were estimated at 1 million tons" (p. 32). Address: London.

1359. Mitchell, Harold Hanson; Hamilton, Tom Sherman. 1929. The biochemistry of the amino acids. New York, NY: The Chemical Catalog Company, Inc. 619 p. Illust. 24 cm. Series: American Chemical Society monograph no. 48. [6 soy ref]
• ***Summary:*** In this work, the concept of the biological value of proteins was first developed to take into account the qualitative differences existing among proteins, since it measures the amount of absorbed nitrogen actually utilized by the body.

Table 9 (p. 182) gives the content of various amino acids (as percentage of total nitrogen) in the protein of beans, nuts, and oil-bearing seeds. References are given for each value. For soy there are four proteins. (1) Glycinin. Nitrogen content 16.94. Arginine 15.3. Histidine 2.4, Lysine 10.3. Tryptophane 1.3. Cystine 0.8. The other three proteins are: (2) Soluble in dilute alkali. (3) Soybean casein. (4) Frozen soybean casein. Other beans in the table are: Adzuki, lima, navy, Georgia velvet bean, Chinese velvet bean, and mung bean.

Table 12, titled "The determination of the basic amino acids (arginine, histidine, lysine, cystine) of certain and food materials according to the method of an Slyke" (p. 190). Soybean, cow pea, jack bean, peanut, and hemp seed are included.

In Chapter 10, "Nutritive value of proteins and the protein value of foods in nutrition" (p. 503+) soy-related subjects are mentioned on pages 520 (soybean curd), 525 (nitrogen balance studies), 527-29 (experiments on the nutritive value of protein for growth), 535 (nitrogen balance studies to determine biological value), 552 (supplementary relations with corn, or supplementation), 554 (for lactation). Most of these experiments have been described previously in this database. Address: Div. of Animal Nutrition, Univ. of Illinois, Urbana.

1360. Oregon Bureau of Labor. comp. 1929. Census: Japanese population in Oregon. October 1, 1928. Salem, Oregon: Oregon Bureau of Labor.
• ***Summary:*** The names are listed alphabetically, and grouped together under the head of household.

Ota–Saizo (husband), 86½ N. 5th, Portland. Sex: Male. Married or single: Married. Occupation: Food Mfgr. [Manufacturer]. Born in: Japan. Date of birth: April 13, 1881. [??] March, 1905.

Ota, Shina (wife). Female. Married. Japan. Jan. 31, 1895. June 1913.

Ota, Matsuno (daughter). Female. Single. Born in Portland, Oregon. Date of birth: July 23, 1916. Address: Salem, Oregon.

1361. Sprecher von Bernegg, Andreas. 1929. Tropische und subtropische Weltwirtschaftspflanzen; ihre Geschichte, Kultur und volkswirtschaftliche Bedeutung. II. Teil: Oelpflanzen [Tropical and subtropical plants in international commerce; their history, cultivation, and economic significance. Vol. II. Oilseeds]. Stuttgart: Verlag von Ferdinand Enke. See vol. 2, p. 128-70. Illust. Index. 25 cm. [48 ref. Ger]
• ***Summary:*** The soybean (p. 128-70). Contents: Introduction. Name, place of origin and history. Description of the plant: Systematic, morphology, varieties, selection. General conditions for growth: Climate, soil. Cultivation of the plant: Planting, care. Harvest and storage. Composition and products. Utilization: As a fodder plant, as a coffee substitute, industrial non-food uses, as a food (as a green vegetable, soy sprouts, soy chocolate, soymilk, casein, tofu and soybean quark {*tofu oder Sojabohnenquark*}, natto {*Buddhistenkäse*}, hamananatto, yuba, miso, shoyu or soy sauce {*Sojasauce*}). Production and trade.

Concerning green vegetable soybeans, the author states: "Three-quarter ripe soybean seeds yield a good, green vegetable (*Dreiviertelreife Sojabohnen geben ein gutes, gruenes Gemuese*)."

Note. This is the earliest German-language document seen (April 2013) that uses the term *Sojabohnenquark* to refer to tofu. Address: PhD, Titularprofessor an der Eidgenoessischen Technischen Hochschule, Zurich, Switzerland.

1362. **Product Name:** Tofu.
Manufacturer's Name: Matsuda Tofu-ya.
Manufacturer's Address: 76 Japanese Alley, Sacramento, California. Phone: MAin 8837.
Date of Introduction: 1930. January.
New Product–Documentation: The Japanese American Directory. 1930. p. 170. Also in 1932, p. 169. The phone is now Main 1725-W. Also in 1934, p. 172. Also in 1937, p. 169. The phone is now MAin 8837. Also in 1938, p. 190. Also in 1939, p. 189. Also in 1940, p. 189. Also in 1941, p. 189.

Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.
• ***Summary:*** Page 3469 (8 Jan. 1930). Tokyo, Japan. "Worked at the office until about 10 or 10:30 then took our camera and went out to get pictures and information about Tofu, soybean curd.

"We visited a place not more than half a dozen blocks from the Sankaido Building and got a nice lot of information about making tofu. Also secured a few pretty good pictures.

An elderly Japanese lady fried (or seared as we would say) the cakes about 3 by 9 by ½ to ¼ of an inch in thickness, over a charcoal fire [to make grilled tofu or *yakidofu*] on the street or side walk in front of their house.

"Detailed information about the making of this tofu will be found in the special report on soybeans and soybean products, which will be a special report added at the end of our exploration work.

"We saw for the first time fried Tofu which had had chopped carrots added to it [ganmodoki]. We had not prior to this known of vegetables of any kind being added to or mixed with the bean curd or Tofu before frying.

Pages 3470 to 3471. Photos show: (1) "Soja max. Tofu, bean curd. Tokyo, Japan. A nearby view of an elderly Japanese lady frying Tofu on the street. Children and Mr. W.J. Morse are looking on." (2) An elderly Japanese lady frying or searing Tofu. To the right, children are watching the operation, and so are Mr. Morse and Suyetake, in the background. (3) "A fairly nearby view of an old Japanese lady fanning a charcoal fire over which she is frying or searing tofu." (4) "Cakes of soybean curd piled upon bamboo strip supporters [arranged on bamboo mats] and weighted to express the surplus moisture before frying. A metal two prong piece [skewer] is run through each to handle them with" (negatives #44714 to #44717).

Pages 3472 to 3473. Tofu in Tokyo. Photos show: (1) "A fairly nearby of an old Japanese lady turning the cakes of Tofu she is frying [sic, grilling] over a charcoal fire." Note 1. The rectangular charcoal brazier appears to be about 14 inches long, 8 inches wide, and 8 inches deep. This is the same old Japanese lady described on pages 3470-3471. (2-3) "An old Japanese lady fanning a charcoal fire and frying [grilling] Tofu on the street, not far from the Sankaido Building.

(4) A nearby view of five large cakes of skewered tofu being grilled on a brazier over a charcoal fire. (negs. #44718 to #44721).

Page 3476. "Oblong piece of fresh soybean curd which had been toasted over a charcoal fire... This is used in soups and also cooked with vegetable mixtures. Purchased from a bean curd factory, Tokyo, Jan. 8. The piece is 7½ inches long and 2½ inches wide" (neg. #44736).

Page 3477. "*Phaseolus angularis.* Adsuki bean. Packages of adsuki bean flour purchased in a store, Tokyo, December 24, 1929. This is a sweet flour used in making sweet bean soup. Package 3 1/8 inches long; 1½ inches wide. D. & M. #3100 (neg. #44737).

Page 3478. Soybean. This soybean product is sold in tubs from Tokyo small stores, and is known as 'Gomoku Mame.' It consists of a mixture of five cooked products, namely: soybeans, lotus root, fish sausage, seaweed and burdock roots." Purchased at a small grocery stand in Tokyo, Jan. 6. "It is eaten just as it is. Product is on bamboo leaf which measures 8 inches long and 5 inches wide" (neg. #44738).

Page 3481 (8 Jan. 1930). "Fried soybean curd cakes. The round cake (D. & M. #3096) is known as 'Ganmodoki,' and is fresh bean curd mixed with chopped carrots. The cakes are fried in mustard [rapeseed] oil until brown and sell for three sen each. Each cake is 4½ inches in diameter and 3/8 inch thick. The oblong cake (D. & M. #3097) is known as 'Aburage.' It is a fresh bean curd mixed with chopped carrots

Page 3542. Bean curd factory. View showing stone mill for grinding soaked soybeans into a mash for making soybean milk and bean curd. Above the hopper is a small round tank of water from which flows into the hopper of beans, a small stream of water while the beans are being ground" (neg. #44766).

Page 3543. Soybean curd factory. View showing the furnace and boiler where the ground bean mash [*gô*] is boiled in making soybean milk. To the left of the furnace is the wooden tub into which the milk is strained, and where the magnesium sulphate solution is added to form the bean curd. To the extreme left is the partitioned rectangular box into which the bean curd is dipped and pressed into blocks" (neg. #44767).

Page 3544. "View inside soybean curd factory showing in background stone mill for grinding the beans; on the right the oblong charcoal fire box for roasting blocks of the fresh bean curd; and in the foreground and on the left stacks of blocks of bean curd ready to be roasted. The tub in the center is where the blocks of bean curd are placed" (neg. #44768).

Page 3545. "Inside the bean curd factory showing a stack of oblong blocks of fresh bean curd with long handled forks [skewers with several prongs] in one end. These blocks are ready to slightly roast over a charcoal fire" (neg. #44769). Address: Agricultural Explorers, USDA, Washington, DC.

1365. Morse, W.J. 1930. Re: Soybean products collected. Trip to Manchuria and China. Letter to Dr. E.A. Hollowell, Office of Forage Crops, USDA, Washington, DC, Jan. 12. 2 p. Typed, with signature on USDA letterhead.

• ***Summary:*** "Dear Holly: I have your letter of December 16 with reference to the soybean products and the more I collect over here the less inclined I am to loan them out... In my last such experience, I fitted up a soybean product exhibit for some sort of health food show in New York City and I never did get it back although we had considerable correspondence about it. As I recall I even took it up with the Secretary [of Agriculture] because they wanted it for a permanent exhibit and so I was out a nice exhibit which it took me considerable time to get up. After that I would not let anything go out unless I had several products of the same kind but it cured me of fixing up exhibits for any one or letting out products or pictures that I could not easily duplicate.

"Therefore, even with Dr. Burlison I do not know of any of the products we have in the office that I care to let out..."

"Last week we visited a large soy sauce factory [almost certainly Kikkoman] at Noda-Machi, about a three hours'

© Copyright Soyinfo Center 2013

run from Tokio... They use twenty thousands of bushels of soybeans annually and the same amount of wheat."

"I was rather anxious about the work but as you state if the Arlington [Farm in Virginia] work can be arranged, you and Lee can hold things until I return. I think that this can be arranged so that Lee will not be over-loaded with the work now on hand and the new introductions we are sending in...

"Dorsett is making pictures of the various [soybean] products as they are collected and making pictures that can not be beat.

"The beancurd, miso and natto factories are mighty interesting and we are getting lots of good data and pictures as well as samples of the varieties of beans used. The beancurd factories are only small places but they are very numerous and each has its own way of making the curd."

Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–General Correspondence, 1905-29. Box 93–Morse-Napier. Folder–Morse, W.J.-#4 F.C.I.

• ***Summary:*** Page 36-37. "Pioneers of tofu and konnyaku production in America. A person named Chieto HIRATA, who lived in Sacramento, California, imported konnyaku from Japan. He came to the USA in about 1891. He is one of the old timers who transmigrated Hawaii. A native of Hiroshima prefecture in Japan, he was very clever and business-minded. In 1893 his wife began a company making konnyaku in Sacramento, California. Shortly after that she started making tofu.

"Footnotes: (1). Mr. Hirata is presently engaged in business in Korea. (2) Since the Chinese were the most skilled in making tofu, only recently [in the last 20 years] have Japanese started specializing in its production. There are many who claim to be the first; I am afraid of making any errors."

1370. Shen, Chennen. 1930. The importance of soybean. *China Critic* (*The*) = *Chung-kuo Ping-lun Chuo Pao* (*Shanghai*) 3(18):416-19. May 1. [Eng]
• ***Summary:*** Contents: Introduction. Domestic consumption of soybeans. Foreign consumption of soybeans. Future prospects.

Soybean, called yellow bean in China, is "cultivated in all parts of the country, but most abundantly in Manchuria. While in 1913 the export of soybean amounted only to about ten percent of the total export and ranked next to silk and tea in importance, it has in sixteen years increased five times in value, risen to twenty percent of the total export and taken the premier place in our export trade! No other commodity has ever experienced such an overwhelming prosperity in such a short time in the history of China."

"Everybody knows that we Chinese live on rice and wheat. But not everybody realizes that we live just as much on soybeans. The soybean is consumed in large quantities by the northerners as well as by the southerners. Its numerous forms of preparations are common articles of food found in every household. Recent scientific investigations have shown that the soybean satisfies a particular requirement in the Chinese dietary."

The human body is like a machine. It needs carbohydrates and fats for fuel and motive power, and protein for repairing worn-out parts. A table compares the nutritional composition of soybean, rice and wheat. "It is evident that soybean is entirely different from either wheat or rice. Whereas wheat and rice supply carbohydrates in the form of starch, soybean is mainly the source of protein. It is interesting to note that the poorer class of people in China consumes very little meat but seems to have sufficient amount of protein. Remembering that every Chinese takes a large amount of soybeans in various forms of preparation, we can readily understand how the protein requirement is satisfied. As soybean contains more than twice as much protein as does any meat and is much cheaper, we can satisfy our protein requirement at one-tenth of the cost of meat."

Exact data regarding soybean production in China are lacking. "The Manchurian crop is more accurately estimated at 5,200,000 tons [probably metric tons] in 1928. The production of soybean in all other provinces has been estimated at 2,000,000 tons by Horvath and 10,000,000 tons by Marakujew [in Russian]. The total exports of soybeans, soybean oil and soybean cake is about 3,500,000 tons, leaving 3,750,000 to 11,750,000 tons for domestic consumption. The consumption per capita is thus 20 to 65 lbs. per year. These two figures at least represent the two extremes. Marakujew's figure is probably nearer to the actual. These 65 lbs. of soybean are used: -"

1. As soybean oil. 2. As soybean milk, "a very popular drink in China," "which is to the Chinese as cow's milk is to the Westerners." The process for making this milk is described briefly and a table compares its nutritional composition with human milk and cow's milk. The

© Copyright Soyinfo Center 2013

composition of the three are "very similar. One of the products of "soybean milk is the pellicula (Cc = Chinese characters given) (doufu-pi [yuba]) which is a thin sheet coagulated on the surface of the milk when it is heated. It is especially rich in protein and fat and used as a table delicacy."

"4. As soybean curd (Cc: doufu), one of "the most universal preparations" of the soybean. "It is relished by the poor as well as the rich. When a coagulating agent like gypsum is added to the bean milk, a thick mass separates out." "It is very similar to meat in chemical composition." A table compares the composition (only protein, fat, and carbohydrate on an "as is" basis) of soybean curd, beefsteak, pork chops, and eggs. "Although the protein content of 'tofu' is only half of that of meats, we see the economy of it even if we have to use a double quantity of it. The solid bean curd (Cc: doufu gan) is more like meat as it contains less water than 'tofu' and is also extensively used in China.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "solid bean curd" to refer to Chinese-style pressed tofu.

"4. As soy sauce, another popular soybean preparation..." "Other fermentation products like the fermented soybeans (Cc: douchi) and the fermented 'tofu' (Cc: furu) serve similar purposes." Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the term "fermented soybeans" to refer to these Chinese-style "fermented black soybeans."

"5. As a vegetable. Cooked [green vegetable] beans are also used by the Chinese but not very extensively. Experience has taught us that the cooked whole beans are not so digestible as 'tofu' or other preparations. However, soybean sprouts, obtained by germination in water, are highly digestible and contains the antiscorbutic vitamin C, which is lacking in the original seed."

"The chief demand for soybean in foreign countries is for the oil and the bean cake." The oil is used for either edible or technical [industrial] purposes and the cake is used as a fertilizer or as cattle feed. "The soybean owes its popularity to its resemblance to cottonseed oil which is widely used in making soap, lard [substitutes] and oleomargarine. The first shipment to Europe was attempted by Japanese in 1908. It was warmly received..."

"Due to its peculiar smell, the raw soybean oil is rarely used in western countries for cooking. But now it is possible to refine this oil and render it entirely palatable to the western taste. It has been put on the market as salad and cooking oils. By the process of hydrogenation, the liquid oil can be transformed into a solid fat, which is an excellent substitute for animal lard" [or butter].

"Thus we see that in a period of twenty years, soybean has extended its usefulness from the Chinese dietary into industries of world-wide importance and is now one of the most valuable agricultural products not only of China but of the whole world."

"In Germany and Denmark artificial milk is regularly manufactured from soybean and sold on a commercial scale. Soybean milk powder is also being manufactured.

"The soybean curd has also a good future, as it can be used to make meat substitutes. Artificial meat has been prepared by a German soybean factory.

"The biggest possibility in the popularization of soybean as a food is the soybean flour. From the bio-chemical point of view, white bread made from the wheat flour is deficient in protein and vitamins. Therefore a substance like soybean should be a valuable addition to the wheat flour. In fact, half a dozen kinds of soybean flour are already on the market in Europe and America."

"The phenomenal rise of the soybean as a universal article is not a matter of accident: It is the result of years of intensive scientific research. We should be thankful that we Chinese are not only the biggest consumer but also the biggest producer of this valuable article. But in the face of keen competition at the present time, we should look out lest this leguminous seed should fall into the same pit as did our silkworm and the tea plant. Up to the present we have been benefited by the researches of foreign countries and also the laboratories of the South Manchuria Railway and the Chinese Eastern Railway, whose immediate interests are not purely Chinese. Are we going to lead the world in soybean production? The future is by no means bright. Already the Chinese soybean oil mills are suffering due to their out-of-date equipment and inefficient process. America is rapidly increasing the acreage for soybean planting. When the American soybean crop is big enough to supply herself and other countries, China will have a difficult battle to fight. China should take an active part in studying and widening the usefulness of soybean as a food and as an industrial raw material."

1371. Dorsett, P.H.; Morse, W.J. 1930. Tofu in Manchuria (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• ***Summary:*** Page 4620 (2 May 1930). Hsiungyaocheng, Manchuria. "Kaoliang, millet and corn are the principal crops grown in this region with soybeans planted between the hills of corn. At this time most of the crops have been planted with the exception of the soybeans. This crop is planted between the hills of corn (which are about 42 inches apart) when the corn plants are 5-6 inches high, about the first week in June. Peanuts are grown quite extensively in the lowlands where sandy soil predominates.

"This station is testing about sixty (60) varieties of soybeans under the direction of Mr. Hisatake. About 90%

© Copyright Soyinfo Center 2013

of the soybeans planted in this vicinity consist of a greenish yellow variety called 'Te-cha-chin' which is used for oil and also utilized by the farmers for bean curd, miso, and other food purposes. Only about 10% of the beans planted are yellow seeded varieties, the principal one of which is called 'Ho-an-tou.'" Address: Agricultural Explorers, USDA, Washington, DC.

1372. Morse, W.J. 1930. Utilizacion de la soya [Utilization of soya]. *Cuba* (*Santiago de las Vegas*). *Estacion Experimental Agronomica, Circular* No. 69. 40 p. May. Translation by Emma L. Sena of USDA Farmers' Bulletin 1617. [Spa]

• ***Summary:*** In the introduction, Ing. Francisco B. Cruz, Director of the Agronomic Experimental Station, E.C., praises an imported soy oil named "Aceite comestible de Soya." A full-page ad for this product (just before p. 36), apparently with the brand name Excelsior, is also shown.

Contents: Introduction. Soybeans for human food: Dried beans (*Los frijoles secos.* Also used as a substitute for coffee or like roasted peanuts), green or vegetable beans (*Los frijoles verdes*), soybean flour (*harina de soya*), soybean oil (*aceite de soya*), soy sauce (*salsa de soya*), soybean sprouts (*vastagos de soya*), soybean vegetable milk (*leche vegetal de soya.* Also mentions the residue [okara]), soybean curd [tofu] (*cuajada de soya*).

Note 1. This is the earliest Spanish-language document seen (Jan. 2013) that uses the term *vastagos de soya* to refer to soy sprouts.

Note 2. This is the earliest Spanish-language document seen (April 2013) that uses the term *cuajada de soya* refer to tofu.

Soybeans for livestock (*la soya para el ganado*)*:* For swine, dairy cattle, beef cattle, sheep, poultry. Soybeans for oil: Methods of processing beans for oil, utilization of soybean oil. Soybean meal: Soybean meal for human food, soybean meal for stock feed, for swine, for dairy cattle, for beef cattle, for poultry. Soybean meal as a fertilizer. Miscellaneous uses of soybean meal. Soybeans for hay: Soybean hay for dairy cattle, for beef cattle, for horses and mules, for sheep, for swine, for poultry. Soybeans for pasturage: Swine, sheep, or poultry on soybean pasturage. Soybeans for silage. Soybeans for soilage [green crops for feeding confined animals; a term first used in 1928]. Soybeans for soil improvement. Soybean straw: Feeding value, and fertilizing value of soybean straw.

Address: USDA, Washington, DC.

1373. *Wall Street Journal.* 1930. Pepper and salt. June 25. p. 2.

• ***Summary:*** "Parisian members of the Societe d'Acclimatation make an annual tour of the world while remaining in the French capital. Once a year the organization gives a luncheon composed of exotic dishes, in order to permit untraveled members to taste the foods of far places... A recent luncheon began with Chinese sausage, composed of pork and soy bean cheese perfumed with attar of roses."

Note: "Soy bean cheese" probably refers to tofu, rather than to fermented tofu.

1374. Wong, Nellie Choy. 1930. The story of chop suey. *Christian Science Monitor.* July 25. p. 6.

• ***Summary:*** The true story of the origin of chop suey, which is seasoned with "soy-bean sauce." It was originated in the USA by the chef of Minister Li Yuan Hung when Minister Li was Minister in America. In Cantonese, "chop" means a mixture of everything and suey means "small."

Note: According to the *Oxford English Dictionary,* the term "chop suey" first appeared in English in 1888.

• ***Summary:*** Page 5431 and 5432 (13 Aug. 1930). "We visited an open street market in the northwestern part of the city this morning." Vegetables include: (1) "Soybeans in the pod, quite abundant." Also: "Pea sprouts. Soybean sprouts." "In the afternoon we went to the Temple of Heaven grounds and got more seed..."

Page 5434. Vegetable market scene. Hei Tan Pai Lou, Peking. Cucumbers, eggplants, soybeans,... displayed on the ground for sale" (neg. #45540). At the same market, photo of bean curd. "This Chinese bean curd looks firmer than the Japanese curd" (neg. #45541).

Page 5435. "Peiping. Square cakes of brown bean curd. The cakes of white curd are put into cold soy sauce and when the combination is brought to a boil the cakes are of a brown color" (neg. #45543).

Pages 5436 and 5437. Four photos taken in an open-air show: "Southern soybean curd, Peiping. This curd appears quite firmer than the ordinary curd. The curd, that is the grain, appears to be finer and is considered much better than ordinary curd. It also sells for more money." (2) "White and brown cakes of soybean curd in a Chinese market." (3) "To the left is a pile of shredded soybean curd, on the right a pile of the sheets of curd from which the shredded curd is made" (negs. #45544-46). Note: Pressed tofu sheets are called (in Wade-Giles transliteration) *pai-yeh* or *ch'ien-chang p'i.* Pinyin: *Qian zang pi.* Tofu is pressed into very thin sheets that look like a 6-to-12-inch square of canvas.

Page 5455 and 5456. Letter dated 14 Aug. 1930 written by P.H. Dorsett in Peiping to W.J. Morse. c/o Yamato Hotel, Dairen, Manchuria. "Yesterday we visited an open street fruit

© Copyright Soyinfo Center 2013

and vegetable market which extends for several blocks along Chien-men [Chienmen] Street. It was surely an interesting experience. We saw bean curd at quite a number of stands, also soy sauce. The curd was in several different forms. The white, in somewhat thinner and smaller pieces, small pieces in different forms fried, also round and square brown cakes which they call dry curd [*doufu-gan*]. It is not really dry but is pressed much dryer than the ordinary curd and can readily be handled without breaking, The brown color, we learned, is the result of putting the curd in cold soy sauce and bringing the sauce to a boil."

Pages 5779 and 5780 (18 Aug. 1930). Letter from Mr. W.J. Morse in Dairen, Manchuria, to Mr. P.H. Dorsett, c/o U.S. Legation, Peiping, China. "Today by mail I sent you all of the negatives of pictures that I have taken up to date. The negatives were sent in two lots–one of the 3¼ by 4¼ and the other of the panoramas. Tomorrow I will send you the field reports to date which may be destroyed after they are copied in the report.

"I am planning to go to Korea for two to three weeks in the very near future to complete our movie story of the soybeans as well as the still picture story. We lack the connecting links–scenes of varieties, fields, methods of culture and harvesting–and I hope to get these if possible in a short time to complete the whole soybean story of Korea. I also desire to get some data on the growing varieties for you will recall that we did not see the beans growing at all. The Manchurian maturing season soon will be here and again I want to take notes on varieties and make a complete story of the Manchurian soybean. You can rest assured that I am going to collect all possible data, seed and products of the crop. I trust that my allotment holds out for I do not want to miss anything."

"I regretted very much to learn of Dr. Harvey Wiley's death [on 30 June 1930] as I knew him very well. Several years ago he came to see me about soybeans for his dairy farms up at Bluemount [Note: After leaving government in 1912, Wiley raised dairy cows became head of the laboratories at *Good Housekeeping* magazine]. I started him with the Virginia as a silage bean and it was a great success. He became quite a soybean man and occasionally came around to talk soybeans with me.

"Your comments on the bean-curd at the Chinese market are very interesting and I hope to be able to see some of these different things when I come down to [China] some time this fall. I doubt if I will find anywhere in the Orient such a collection of products as we picked up in Japan last year. You will note in the field reports being sent you that lately we have stumbled across a few new products and we are always on the lookout for new ones." Address: Agricultural Explorers, USDA, Washington, DC.

1376. Dorsett, P.H.; Morse, W.J. 1930. Tofu in Heijo, Chosen [Pyongyang, North Korea] (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• ***Summary:*** Page 5658 and 5659 (30 Aug. 1930). Heijo. "In the morning we went to the Grain Inspection Office where we met the grain inspectors and went with them to the grain storage and shipping yard of a Korean grain merchant along the Daido [Taedong] River. Two hundred bags of soybeans were to be inspected and graded for shipment to the Main Island... At least 80% of the beans were found to have brown germs indicating either poor storage or curing of the beans. The inspectors refused to pass the seed in any grade. The merchant had expected 3rd or 4th grade and had sold the seed to an exporter in Chinnampo [Namp'o, the port city for Pyongyang].

"The following items on the inspectors cards were used in grading soybeans: 1. Koku. 2. Dirt or stones. 3. Trash–pods, stems, etc. 4. Rotten seed. 5. Immature seed. 6. Insect injured. 7. Broken seed. 8. Per cent total. 9. Remarks.

"As some boats were loading soybeans for shipment to Chinnampo we were able to secure still and movie pictures of inspection and landing of the small Korean boats.

After lunch we visited a grain market... We obtained nine samples among which were the largest yellow and green seed varieties [of soybeans] we have come across. These varieties are said to be used by the Koreans in making their own miso and soy sauce.

"In a small market place, we found jars of mung bean sprouts and dishes of bean curd at nearly every vegetable stand. Several stands had dishes of boiled mung bean sprouts, a product we have not seen before in our work.

Four photos (p. 5659-5661) show: "View of weighing bags of soybeans during inspection and grading in the storage and grading yard of the Korean grain merchant along the Daido River (negs. #45699-702). Then 3 more similar photos are on pages 5662 and 5663.

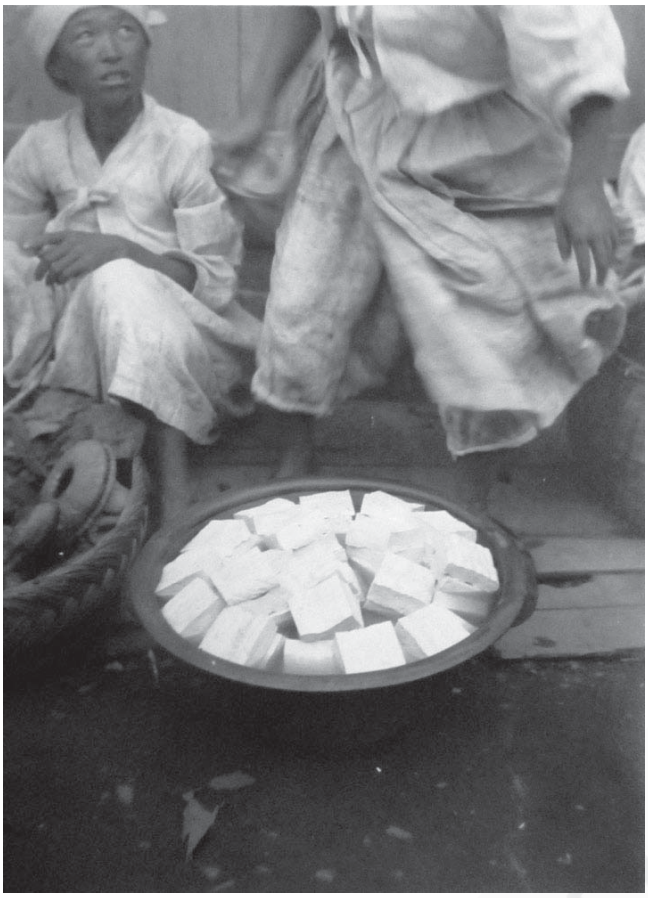
Page 5661. A photo (see next page) shows: "Soja max. Soybean. Heijo, Chosen. Small blocks of fresh soybean curd sold by Korean women in a Korean market" (neg. #45703).

Page 5751 (6 Sept. 1930). Heijo, Chosen. W.J. Morse's notes. We visited the office of the Heian Nando Prefecture Grain Inspection Service... The earliest [soy] beans were said to be grown around Junsen and harvest will begin between the 15th and 20th of this month. Crops are in excellent condition and above average yields will be obtained. Junsen is the center of a large soybean grain producing region and the inspector advised that we should by all means visit the Junsen section.

"It was learned that market day was being held on the outskirts of the city, so we went to look over the products."

"At some of the small lunch stands scattered about

© Copyright Soyinfo Center 2013



the grounds, mung bean and soybean foods were being cooked and sold. Mung beans as batter cakes with chopped vegetables and fried soybean curd were the chief foods.

Page 5754. A photo shows: "Frying small blocks of bean curd on piece of sheet iron at small open lunch stand on Korean Market Day" (neg. #45752). Address: Agricultural Explorers, USDA, Washington, DC.

1377. *New York Times.* 1930. Large demand for soybean is quickly created here: An old Oriental product is turned to many uses in the Western markets. Sept. 21. Section 9. p. 13.
• ***Summary:*** Food uses of soybeans are increasing, as in recent years attention has turned from the stalk to the seed. Soybeans are being used by "persons [such as diabetics] requiring a low starch diet. Either green or dried, boiled or baked, the beans may be eaten as a vegetable or made into soup, and special varieties have been developed that are easy to cook." In the Orient they are made into an emulsion similar to milk and into various kinds of vegetable cheeses. "In the West this milk has been produced in the form of a powder, usable in making bread and cake, milk chocolate and custards, and in creaming vegetables. A curd obtained from it has been canned and put on the market."

1378. Kellogg, John Harvey. 1930. Soybeans as human food. Paper presented to the American Soybeans Grower's Association, Sept. 11. 20 p.
• ***Summary:*** Dr. Kellogg shows that he has an excellent knowledge of the world literature on soybeans and soyfoods, much of which he summarizes in this speech. "Many years ago (1899), the United States Department of Agriculture, called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited to the purpose. At that time the soybean was not grown to any extent in this country, I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution of the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have since been made and consumed. But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats." The author discusses his belief that primitive man subsisted wholly upon plant products (i.e. ate a vegan diet "according to Prof. Elliot of Oxford University, Prof. Ami of Montreal, and other distinguished paleontologists"), and the nutritional value of soybeans and their basic-ash quality. "All meats yield a highly acid ash. The excess of acid in these foods produces a lowering of the alkalinity of the blood and tissue fluids when they are freely used, a condition which is known as acidosis." He also discusses soya sauce (which is now being manufactured in the USA), miso (which like soy sauce has a flavor resembling that of the osmazomes found in meat and meat sauces), roasted soy nuts (resembling roasted peanuts), pressure cooking whole soybeans, adding soy meal (flour) to breads, soymilk being distributed in bottles in parts of China and Japan, soy cheese [tofu], and the many health benefits of soy milk described in the medical literature, the many health problems caused by consuming flesh foods.

"Von Noorden, the world famous German physician, has demonstrated that the soy bean is of very great service in changing the intestinal flora." Note 1. This is the earliest document seen (June 2003) concerning soy and changing the intestinal flora. It is also the earliest document seen (June 2003) that uses the phrase "changing the intestinal flora" in connection with soy.

"In spite of the frantic efforts of vested interests to promote the uneconomic live-stock industry, it will no doubt gradually disappear as a true science of agriculture is developed and the country becomes more densely populated. The conversion of vegetable into animal protein by feeding to steers and pigs, is one of the most wasteful of all human activities. Armsby has shown that 100 pounds of digestible vegetable protein are required to produce 3 pounds of meat protein..."

Discusses Stefansson's absurd so-called meat-eating experiment, which was really a publicity stunt. Stefansson took no more than 20% of his calories in the form of lean or muscle meat. The rest of his diet was fat. "Excessive meat

© Copyright Soyinfo Center 2013

consumption is one of the begetting sins of the people of this country. Our per capita meat consumption is 5 ounces per day, just 5 times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardiest and most industrious of workers."

"Thanks to the efforts of our efficient Plant Introduction Bureau, the soybean is beginning to get a start toward recognition and appreciation in this country; but it is evident that a plant possessed of such superlative values and such astonishing versatility and adaptability should receive far more serious attention than has heretofore been given it by the agriculturalists of this country... There can be no doubt that it is destined to play a large part in the feeding of America's millions..."

Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term "soy nuts" or the term "roasted soy nuts" to refer to soynuts. Address: Battle Creek, Michigan.

1379. Morse, W.J. 1930. La utilizacion de la soja en diversas industrias [The utilization of soya in various industries]. *Hacienda* (*La*) (*Buffalo, New York*) 25:298-301. July; 25:347-49. Aug; 25:394-96. Sept. [1 ref. Spa]
• ***Summary:*** This is a translation of USDA Farmers' Bulletin 1617, but with excellent new illustrations. Contents: Introduction. Soybeans in the human diet: Whole dry soybeans, green vegetable soybeans, soy flour, soy oil, soy sauce, soy milk, tofu (*cuajada de soja*). Soybeans in the feeding of domestic animals. Soy oil: Extraction, use. Soybean cake: as a human food, as a livestock feed, as a fertilizer. The value of soybean forage. Soybean in silage. Soya as green forage. Soybeans for the improvement of soils. Soybean straw.

This article contains many interesting photos: 1. A man with a hand turned stone mill in China grinding soybeans to make soymilk. 2. Soybean cakes stacked and partly covered with tarpaulins at a port in Manchuria. 3. Earthenware vats used for making soy sauce in a courtyard in China. 4. Steamed soybeans being cooled to make miso in Japan. 5. Soybeans intercropped with corn. 6. Manchurians outside a soy oil factory in Dairen. The equipment was installed by the French Oil Mill Machinery Co. 7. Carrying round soybean cakes in a cart at the same factory. 8. A soybean mill at Yokohama, Japan. 9. An Anderson Expeller for the extraction of soy oil. 10. A tractor pulling rotary disks for cultivating soybeans in the USA. 11. Harvesting soybeans with a tractor in the USA. 12. A tractor pulling a harvester-thresher combine in the USA. Address: USDA, Washington, DC.

1380. Morse, W.J. 1930. Soybeans in the Orient. *Proceedings of the American Soybean Association* 3:96-100. Eleventh annual field meeting. Held 10-12 Sept. 1930 in Illinois.
• ***Summary:*** This letter (which appears on pages 5196 to 5199 of the unpublished Dorsett-Morse Log) was written by William Morse on 20 July 1930 from Dairen, Manchuria, to Dr. W.L. Burlison, President of the American Soybean Growers Assoc. at the University of Illinois. It describes the travels of Dorsett and Morse as agricultural explorers for the USDA, studying soybeans and soyfoods, in Manchuria, Japan (Hokkaido and Tokyo), and Korea (Seoul).

"It is recalled that last season the use of the soybean as a green vegetable was described. Throughout the season, it was found that the green vegetable was a very popular food with the Japanese from one end of the Japanese Empire to the other. The vegetable soybean is classed as a garden bean and as such is extensively grown by the Japanese truck farmers."

The authors were in Hokkaido from mid-August until early October, and they visited all the principal soybean sections. "The Obihiro station in the eastern part of the island [of Hokkaido] is conducting the most extensive work in breeding and variety testing. We succeeded in collecting a very large number of varieties and selections of this northern region as well as information on culture, harvesting, threshing, insect pests, and diseases. To supplement this material, we obtained a large number of still and motion pictures of very interesting scenes of the Hokkaido soybean industry."

They arrived in Korea on 20 Oct. 1929 and established headquarters at Keijo (Seoul). "We found Korea to be a most interesting country and different from anything we had seen in Japan. One of the most amazing things was the extent to which soybeans are grown. Almost equally amazing was the large number of native Korean soybean varieties we found in the various sections and at the experiment stations. At the Suigen Experiment Station, they have more than one thousand native Korean varieties and selections under test. The authorities were very generous and gave us samples of each. In addition to this collection, we obtained a few hundred samples from Korean farmers, grain merchants on village market days and from village and city grain dealers. The Korean Department of Agriculture added about 300 samples to our collection by obtaining seed of the principal varieties from the village agricultural societies in each of the prefectures of Korea.

"Altho the Koreans do not use the soybean as extensively for food as do the Japanese, considerable quantities are used and in quite different ways. The beans are used principally boiled with other grains such as millet or kaoliang. They are also used in making miso and soy sauce, but these products are made quite differently from those of Japan or China. Soybean sprouts are found very abundantly in all of the markets and at all of the small food stores. The beans produced in Korea are for the most part excellent quality and are largely shipped to Japan for the manufacture of miso, soy sauce, bean curd, and natto. Soybeans when soaked with chopped millet or kaoliang straw are used

© Copyright Soyinfo Center 2013

universally for feeding oxen and cows, the common work animals of Korea.

"We left Korea about the first week of December [1929] for our Tokyo headquarters and collected seed samples and products as we went along. From the latter part of December until the latter part of March, we put in full time collecting soybean products and learning of their use and manufacture. We succeeded in collecting a large number of interesting products, as the Japanese use the soybean very extensively in their daily diet. In the making of cakes, candies, and numerous other confections, the roasted soybean is used in a similar manner to the peanut in America. Of course, soy sauce, miso, bean curd, and natto are the principal soybean products and the ones most extensively used. As an example of the large use of miso, which is used as a breakfast soup with vegetables and also in preserving fish, vegetables, and meat, we visited three large miso factories in the Tokyo district and found that each produced about one million pounds of miso yearly. In addition to these three large factories, there were numerous small factories scattered thrughout the same district.

"As the planting time was approaching in Manchuria, we left Tokyo the latter part of March and arrived in Dairen, Manchuria, the first of April... This country is the real land of the soybean and Dairen, the real city of the soybean. In 1929, 29.2 percent of the total cultivated area of Manchuria was devoted to the growing of soybeans, producing more than 178,000,000 bushels of seed, thus leading all other crops in acreage and production. The Port of Dairen handles about eighty (80) percent of the exports of beans, bean cake, and bean oil.

Note: This is the earliest document seen (Aug. 2011) that uses the term "land of the soybean" in connection with or to refer to Manchuria.

"The planting season for soybeans in Manchuria begins about the first of May and extends to about the 25th of May in some northern sections. We, therefore, had an opportunity before the planting season, to study the methods of grading, storage and transportation of [soy] beans, bean cake and bean oil in the oil mills. The storage yards and warehouse yards of the South Manchurian Railway cover several hundred acres and the immense quantities of bags of beans and bean cakes stored in the open storage yards and in the warehouses are well worth seeing..."

"We had rather expected to find a large number of products made from beans, bean cake, and bean oil but our findings thus far have been very meager. The oil is used in the manufacture of soaps, paints, lard substitutes, and salad oils, but only a very few factories are engaged in producing these products. The beans are used chiefly for oil and oil cake, but during the last three or four years, the demand of European mills for beans has had a serious effect, not only on the Dairen soybean oil mills, but also on the oil mills throughout North and South Manchuria. In Dairen, at the present time, only about forty-five soybean mills are active during the crushing season, whereas four years ago there were about ninety. The oil cakes are for the most part shipped to the Japanese Islands for feed and fertilizer (chiefly fertilizer), to China and the East Indies for fertilizer, and to America and Europe for cattle and poultry feed."

"Our experience in the field up to the present time has been the study of methods of planting and cultivation practiced in different sections of North and South Manchuria."

"We have collected quite a large number of seed samples during our travels thus far in Manchuria and have obtained some very interesting types. It may interest the members to know that we have visited Yingkou (Newchwang), the source of the Virginia and Wilson varieties... At the Kunchuling Experiment Station, more than one thousand varieties and selections have been tested but at the present time only five hundred are under test. The Manchurian varieties do not succeed in the Japanese Islands or Korea and neither do the Japanese varieties succeed in Manchuria or Korea..."

"With this letter we are sending some lantern slides illustrating various scenes of the soybean industry in oriental countries... With best wishes for a most interesting and successful 1930 meeting."

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term "vegetable soybeans" (not preceded by the word "green") to refer to green vegetable soybeans.

Note 2. This letter was reprinted in *Soybean Digest* (April 1945, p. 11-12). Address: USDA, Washington, DC.

Page 6268 (bottom). Peiping. "Most of the baskets contain a greater or less amount of sprouted soybeans; they show in three baskets."

Page 6275. A photo shows: "Soja max. Fried soybean curd. Peiping [Beijing], China. Between 3/4 and life sized picture. Small squares of fresh bean curd are fried in deep fat (sesame oil). Sometimes several of these fried squares are strung on pieces of grass. D. & M. #7256 (neg. #46125).

Page 6276. "Almost life sized picture. Round and oblong pieces of fresh bean curd fried in soybean sauce for 5 hours. The cakes are dark reddish brown. Chinese name 'Toufu kan' [doufu-gan] meaning 'dry bean curd'" (neg. #46126).

Page 6277. "Peiping, China. Life sized picture. Small squares of bean curd that have been boiled in soy sauce for 5 hours. Cakes are dark reddish brown" (neg. #46127).

Page 6280 (25 Oct. 1930). Peiping, China. "In the forenoon we went to the bean sprouting place of Mr. Chang Tzu Hsien, in the southwestern part of the city. His sprouting house or room is just back of the large public well where water is pumped by coolies and sold to big wheel-barrow men for a few coppers per load. Mr. Hsien sprouts mung beans, yellow and green soybeans; about six days are required to sprout the beans. He uses large earthen bowls are wide shallow jars, about two feet at the bottom, three feet on top and 16 to 20 inches deep, in which to sprout the beans.

"About 1 peck of dry beans are required to make one of the above vessels full of sprouts. Green soybeans are grown and sold with shorter sprouts than either the yellow soy or mung beans. We were told that the best beans for sprouting come from the Kalgan region [Zhangjiakou, a city in Heibei province of North China, adjacent to Beijing to the southeast], but that on account of the price he cannot afford to use these and so he gets his stock from the southeast of Peiping [Beijing].

"The beans are first soaked overnight in hot water and then put into vessels and sprinkled two or three times a day with cold water.

"Mung bean sprouts sell for two cents Mex. per cattie. Yellow soybean sprouts for three and one-half cents per cattie. Green soybean sprouts sell for four cents per cattie.

We next went to the Chi Shun Hung Co., 8 Lien Hua Ssu Street, Peiping, soybean curd and milk manufactory where we spent some little time getting information and pictures.

"Mr. Hao produces both dry and fried curd and milk. He

© Copyright Soyinfo Center 2013

sells soybean milk in about 10 ounce bottles at 1.00 Mex. per bottle, one bottle each day, delivered to his customers. He makes square and round cakes of soybean curd. The are from one-half to three-quarters of an inch thick and about three inches in diameter. These are called dry curd because most of the water is pressed out. They also fry these cakes in soybean oil.

"Mr. Hao also told us that the soybeans from the Kalgan region make the best curd, but that on account of their expense he cannot afford to use them, and buys his from local growers in the vicinity of Peiping.

"In the afternoon we finished up the nearby pictures of soybean products and then took the negatives made in the field and at the hotel to the Hartung Photo Shop to be developed and printed."

Page 6282. Peiping, China. "Wheel cart with baskets used by the peddler of sprouts of mung beans and soybeans" (neg. #46132). "Side view of wheel cart and baskets used by the peddlers of sprouts of soybeans and mung beans" (neg. #46133).

Page 6283. "Small grass baskets or forms for shaping fresh bean curd into small round cakes and then from which excess water is pressed out" (neg. #46134). "Small grass basket forms used in shaping small round cakes of soybean curd for pressing out moisture and the cakes are then fried in soy sauce" (neg. #46135).

Page 6284. "Basket of square and round cakes of fresh soybean curd from which excess water has been pressed. These cakes are now fried in soy sauce for five hours" (neg. #46136). "Tub of bean mash [okara] left after straining out the soybean milk which is used in the manufacture of bean curd" (neg. #46137).

Note: This is the earliest English-language document seen (July 2011) that uses the term "bean mash" to refer to okara.

Page 6288 (27 Oct. 1930). P.H. Dorsett's notes in Peiping. "Early this morning we visited the mung bean sprouting of Mr. Chang, at 66 Pei Yang Shih Kou, Peiping. This gentleman uses tubs in which to sprout his mung beans. The tubs are 12-14 inches across, 24 inches long, and 18-20 inches in height, with about eight small holes in the bottom for draining off surplus water..." The process is described and photos given.

Page 6289. "In the afternoon we called on the establishment of Mr. Chiang who makes what is locally known as 'Southern bean curd.' He uses yellow soybeans. The milk is boiled three times. This curd seems quite different from that ordinarily seen."

Page 6792 (14 Dec. 1930). Peiping en route to Kalgan, China. P.H. Dorsett's notes. "Owing to the fact that when the Morses were in Peiping in November, and Morse, Suyetake, Liu and I, while looking up soybean products, learned that the best soy and mung beans for use in sprouting and making bean vermicelli come from the Kalgan region, we thought it worth while to go there for a collection of soybeans, mung beans and other legumes." Address: Agricultural Explorers, USDA, Washington, DC.

1383. Hepburn, Joseph S.; Sohn, Keum Sung. 1930. Do fu: An Oriental food. *American J. of Pharmacy* 102(10):570. Oct.

• ***Summary:*** "The Oriental food, known as *do fu* in Chinese and *doo pu* in Korean, is a soy bean preparation." The beans are soaked in cold water, then ground with the water. "The resulting mass is filtered through a coarse linen bag. The white, milky filtrate is heated in a vessel, with occasional stirring, until it begins to foam. Then a saturated solution of sodium chloride is added until coagulation is complete..."

A sample of *do fu*, purchased in the 'Chinatown' of Philadelphia [Pennsylvania], was found to have the following percentage composition: Total solids: 13.37%. Moisture: 86.63%. Ether extract: 4.65%. Crude fiber: None. Crude protein: 4.22%. Ash: 0.59%. Nitrogen-free extractives: 3.91%.

Note: This is the earliest English-language document seen (Oct. 2003) that uses the term "milky filtrate" to refer to soymilk. Address: John Clifford English Laboratories of Physics and Chemistry; Hahnemann Medical College and Hospital of Philadelphia.

1384. Pian, Jina Hsueh-chin. 1930. Biological value of the proteins of mung bean, peanut and bean curd. *Chinese J. of Physiology* 4(4):431-36. Oct. [4 ref. Eng; chi]

• ***Summary:*** "The biological values of the proteins of mung bean, peanut and soy bean curd are 58, 59 and 65% respectively. The coefficient of digestibility [nitrogen absorbed/nitrogen intake] of mung bean, peanut and soy bean curd are 86, 95 and 96% respectively." Address: Dep. of Biochemistry, Peiping Union Medical College, Peiping.

1385. Dorsett, P.H. 1930. Re: Research, money, and departure plans (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Nov. 20. Unpublished log.

• ***Summary:*** Pages 6488 to 6491. This letter dated Nov. 20 is from P.H. Dorsett in Peiping, China, to Mr. Knowles A. Ryerson, Principal Horticulturist, In Charge Foreign Plant Introduction, Bureau of Plant Industry, USDA, Washington, DC. "Dear Mr. Ryerson:..."

"Morse arrived in Peiping October 20th and I did my best to show him about the country and the interesting things in the city, especially soy beans and bean curd establishments, bean vermicelli, sprouting and washing places. He picked up a lot of interesting facts and data, and

© Copyright Soyinfo Center 2013

saw much of interest and value concerning his research work relative to soybeans and their utilization."

Page 6489. "The Morses, with their Japanese interpreter Mr. Suyetake, who by the way is a mighty nice young fellow and has been of very great assistance to the Expedition, left Peiping November 9th on their return trip to Dairen."

Morse, when here, was not able to say definitely when he would be ready to return home. "His is a most fascinating and interesting problem, and I can well understand that he is extremely anxious to get all the information he possibly can concerning the soybean enterprise in its native home.

Page 6491. "We figure that the present allotment of $5000, for the Peking contingent will be sufficient to cover the additional expenses incurred in this work and return Dorsett to Washington.

"It is feared. however, that the allotment of $5000 for the work of the Manchurian contingent may not be sufficient to enable Morse to round up his research work with soybeans as he would like and return to the States.

"In case additional funds are necessary to enable the Manchurian contingent to wind up its work there in good shape (which perhaps at most will not exceed $1000.) cannot be raised there, please let me know and I will see if I can arrange to help Morse out with sufficient funds to enable him to remain and wind up his foreign investigations as he would like." Address: Agricultural Explorer, USDA, Washington, DC.

1386. Dorsett, P.H.; Morse, W.J. 1930. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• ***Summary:*** Page 6820 (21 Dec. 1930, Kobe, Japan. Mr. Morse's notes). "Mr. Saito at Dairen had advised us that there were many places in Kobe where meat was preserved in soybean miso." Had no difficulty in finding three such places, where "we found the men busy in packing meat in white miso. In the Kobe and Kyoto districts white miso is manufactured quite extensively. Small meat shops are the only establishments putting up the miso-preserved meat. For this product beef is used and white miso. Small slices of beef about the size of the palm of the hand and about ¼ inch thick are placed on a layer of miso (about ¼ inch thick), then a layer of miso and another layer of meat. About 1½ pounds of beef are packed with miso in each tub which sells for two yen. The meat is best after being preserved in miso about 7-10 days and does not keep well after two weeks except in rather cold weather. Miso preserved meat is always boiled. White miso is always used for preserving fish and meat (beef) while red miso is used for preserving vegetables, the red miso being considered too salty for meat. Several meat shops were visited and we always found the same products and same methods of preserving the beef. Apparently this product is very popular in the Kobe district. At one of the shops we were advised that there are some miso-meat preserving places in the Tokyo district." Photo: Small tubs of miso preserved meat displayed in front of a meat shop in Kobe.

Pages 6822-23 (22 Dec. 1930, Kyoto, Mr. Morse's notes). At the Imperial Agricultural College they met Isawo Namikawa, Professor of Horticulture, who said that Kyoto is noted for several special soy products such as white miso, soy sauce, and natto. Kyoto soy sauce is lighter in color, not so heavy, and not quite as salty as soy sauce made in other parts of Japan. "In looking around Kyoto in our little spare time we saw no places where meat is preserved in miso."

Pages 6931-32 (7 Jan. 1931). Morse went to the Imperial Department of Agriculture in Tokyo and met the director, Mr. A. Manabe, who provided information, statistics, and recent publications on soybean acreage, production, utilization, and industries in Japan, Chosen [Korea], and Taiwan. These are the most complete yet received. Mr. Manabe stated that soybean acreage and production is gradually decreasing in Japan proper. This is due mainly to the increased acreage of more intensive farming, especially truck crops and rice. However the acreage of soybeans for green manuring purposes is increasing rapidly, especially in the southern half of the main Island and Kyushu Island.

Japan proper produces more than 2,500,000 koku of soybeans but uses over 7,500,000 koku; the difference is imported from Chosen and Manchuria. The soybeans imported from Manchuria are "are of much lower quality than beans from Japan proper and Chosen and are used primarily for the manufacture of soy sauce, miso, bean oil and bean cake. The beans from Japan proper and Chosen are utilized primarily for food, such as bean curd (Tofu), confections, flour and green vegetable beans. The following table gives the ratio in percent of soybean utilization in Japan:

Miso 22.7%. Soy sauce 22.7%. Bean oil and bean cake 21.6%. Bean curd [tofu] 15.4%. Green vegetable beans 0.8%. All other food uses 6.0%. Feeding purposes 6.2%. Green manure 2.5%. For planting [seed] 1.6%. Miscellaneous uses (other than food) 0.5%. Note: These figures total 100%. Thus, 22.7% of the soybeans used in Japan are used to make miso, 22.7% are used to make soy sauce, 21.6% are crushed to make soybean oil and cake, etc.

Page 6937 (10 Jan. 1931, Tokyo, Notes by Mr. Morse). Spent most of the day in the Shinjuku district looking up soybean products. "More String Natto in rice straw packages was observed in this section than any we have visited. At the stores we found considerable quantities of fish preserved in white miso and also fish preserved in sake mash. The latter is said to keep much longer than the miso preserved fish and if it keeps long enough might afford a good article of export

© Copyright Soyinfo Center 2013

to the United States, for undoubtedly it would prove far less harmful than some of the products [alcohol] now used in violation of the 18th amendment... Nearly all food stores carried a variety of vegetables preserved in red miso."

Page 6943 (12 Jan. 1931, Kobe). Visited a large miso meat preserving place that packs 5,000 to 6,000 tubs of miso preserved meat yearly. The proprietor said that about 3,000,000 tubs are sold each year in the Kobe district. The small tubs, costing 70 sen each, hold about 2 pounds of beef. The Kobe district is noted for its fine quality of beef. Photos (p. 6946-47) show these small flat tubs.

Page 6945-46 (13 Jan. 1931). Kyoto, Japan. Visited a large miso factory, where both red and white miso are made. White miso is manufactured quite extensively in the Kyoto and Kobe districts; it keeps only about 1 month in the summer, but about 3 months in the winter. A table shows the most famous forms of miso made in Japan: Sendai miso–red. Kanto miso–red. Okazaki miso–black. Country miso–red. Kinzanji miso–red. White miso–white.

Pages 7003-04 (19 Jan. 1931). Tokyo, Japan. Morse's notes. "At evening supper we had for dinner beef preserved in white miso. After broiling, the flavor of the meat reminded one of that of the sugar cured hams of the Southern States. The meat had been cured just eight days and was well flavored through."

Page 7116 (29 Jan. 1931). In a letter to Dorsett in Peking, Morse states that the broiled, miso preserved beef was "delicious" and tasted like ham. "I also had some white miso preserved fish. Although it was good, I did not care nearly so much for it as I did the beef." Address: Agricultural Explorers, USDA, Washington, DC.

1387. **Product Name:** Tofu, Agé.
Manufacturer's Name: Asahi Shokai.
Manufacturer's Address: 221 S. Clarement St., San Mateo, California. Phone: MAteo 1157.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 101. A ¼ page ad at the bottom left of this page states in Japanese: Asahi Shôten. They sell Japanese and Western groceries, fresh fish and vegetables; they make tofu and agé. Owner: Mr. Hiroaki Tsukushi. Also in 1934, p. 102. Phone has changed to 1197. Ad (¼ page), p. 102. All in Japanese except address. Asahi Shôkai. Direct import. Japanese and Western foods and goods, fresh fish, shredded dried bonito flakes (*hana katsuo*). Making tofu. Owner: Mr. Yukichi Urabe.

1388. **Product Name:** Tofu.
Manufacturer's Name: Endo Ryokan [Japanese-style Inn].
Manufacturer's Address: P.O. Box 91, Guadalupe, California. Phone: 12M.
Date of Introduction: 1930.
New Product–Documentation: Ad (1/10 page) in The Japanese American Directory. 1930. p. S-210. Making and selling tofu. Owner: Mr. Kinosuke Endo. He also helps people to find jobs free of charge. Note: Guadalupe is in Santa Barbara County, in southern California.

1389. **Product Name:** Tofu.
Manufacturer's Name: Fujimoto Tofu-ya, Kashima (Room for Rent).
Manufacturer's Address: 639 Main St., Colusa, California.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 215.

1390. **Product Name:** Tofu.
Manufacturer's Name: Fujisan Sengyo Tofu-ten [Fresh Fish and Tofu Shop].
Manufacturer's Address: 1624 Ave. B, Scottsbluff, Nebraska. Phone: 752.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-306. Note: Scottsbluff is the largest city in Scotts Bluff County, in far western Nebraska. Note: This is the earliest known commercial soy product made in Nebraska.

1391. **Product Name:** Tofu.
Manufacturer's Name: Hamazaka Tofu-ten.
Manufacturer's Address: 2319 S. Cotner Ave., West Los Angeles, California. Phone: W.L.A. 33707.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-161.

1392. **Product Name:** Tofu.
Manufacturer's Name: Hirose Tofu-ten.
Manufacturer's Address: P.O. Box 812, Vacaville, California. Phone: 236.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930, p. 155.

1393. **Product Name:** Tofu.
Manufacturer's Name: Hop Hing.
Manufacturer's Address: Doyer St., New York City, New York.
Date of Introduction: 1930.
How Stored: Refrigerated.
New Product–Documentation: Talk with Wun-hong Eng, formerly of Fong-On. 1992. Feb. 17 and 23. This was the oldest tofu manufacturing company he knows of in New York City. This company was started 3 years before Fong-On by a Mr. Liu. Mr. Liu's brother-in-law and Mr. Eng's father started Fong On. The company was located in a basement on Doyer St.; it might have been 15 Doyer St. or 17 Doyer

© Copyright Soyinfo Center 2013

St.–something like that. Hop Hing was sold right after World War II to somebody else, but that person went out of business. It has since been owned by 3-4 different people.

By early 1981 the company (located at 4 Bowery St., New York, NY 10013) had been renamed Sun Hop Hing, which means "New Hop Hing" or "New United Success." The company is now owned by Raymond Tse, who bought the company about 10 years ago and who is famous for killing a man (with 18 bullets) who tried to extort money from him. A jury acquitted him, finding him innocent. The company is now in Queens. Phone: 718-458-8000.

1394. **Product Name:** Tofu.
Manufacturer's Name: Kitamura Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: MAin 2162-J.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 170.

1395. **Product Name:** Tofu.
Manufacturer's Name: Komatsu Sakana-ten, Tofu.
Manufacturer's Address: 2416 Grant Ave. (P.O. Box 669), Ogden, Utah. Phone: 1142.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-288. Note: The structure of this company name is very unusual; the word "ten" (shop) is usually at the end of the name. Also in 1934, p. 490. Address (in English) has changed: 2473 Grant Ave. (P.O. Box 669). No phone number.

Hokubei Nenkan–The North American Times Year Book. 1936, p. 289. Komatsu Gyorui oyobi Tofu-ten (Komatsu Various Fish and Tofu Shop). 2473 Grant Ave., Itarô Komatsu.

1396. **Product Name:** Tofu.
Manufacturer's Name: Kotobuki Yu oyobi Tofu-ten [Bath House and Tofu Shop].
Manufacturer's Address: 708 Oxnard Blvd., Oxnard, California.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-191. A 1/10 page ad (p. S-192) states: Kotobuki Yu [Bath House], Mr. Hatsuzo Yoshida, Japanese style bath and selling tofu. Gives the same address.

1397. **Product Name:** Tofu.
Manufacturer's Name: Miyazaki Tofu-ten.
Manufacturer's Address: Rt. A, Box 153, Santa Clara, California. Phone: Santa Clara 22-J-1.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 111. Also in 1934, p. 112. Address has changed: Rt. 1, Box 602, Santa Clara.

1398. **Product Name:** Tofu.
Manufacturer's Name: Morimune Tofu-ten.
Manufacturer's Address: 138 Main St., Watsonville, California.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1925. p. N-127. Name is in Japanese only. The person's given name may be Sôichi. In English: 138 Main St. Phone: 841. Also in 1930 directory, p. 131. Address: 129-A Main St., Watsonville, California. Also in 1934 directory, p. 131. Address has changed: 129-A Main St. No phone number.

1399. **Product Name:** Tofu.
Manufacturer's Name: Moriuchi Tofu-sho.
Manufacturer's Address: 1613 Buchanan St., San Francisco, California. Phone: WEst 2157.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 18. Also in 1932, p. 17. Also in 1934, p. 20; Ad (1/8 page; Tofu, aburaage, konnyaku, Ito-konnyaku). Note: Hayashi Tofu-ten formerly made tofu at this address and phone number.

1400. **Product Name:** Tofu.
Manufacturer's Name: Murakami Tofu-ten.
Manufacturer's Address: 608 7th St., Modesto, California. Phone: 894.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 254.

1401. **Product Name:** Tofu.
Manufacturer's Name: Nakagawa Tofu-ten.
Manufacturer's Address: 111 First St., Hood River, Oregon.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-325. No phone.

1402. **Product Name:** Tofu.
Manufacturer's Name: Nakamura (Seijiro) Tofu Seizo-sho.
Manufacturer's Address: P.O. Box 83, Ely, Nevada.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-273. No phone.

1403. **Product Name:** Tofu.
Manufacturer's Name: Ni (?) Tofu Seizo-sho.
Manufacturer's Address: 140 W. 1st S. St., Salt Lake City, Utah. Phone: WAs 6942.
Date of Introduction: 1930.

© Copyright Soyinfo Center 2013

New Product–Documentation: The Japanese American Directory. 1930. p. S-279.

1404. **Product Name:** Tofu.
Manufacturer's Name: Okumura Sakana, Niku, Tofu-ten [Fish, Meat & Tofu Co.].
Manufacturer's Address: Rt. 2, Box 38-B, Gardena, California. Phone: 443.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-127. Also in 1934, p. 360. Name is now written (in Japanese): Okumura Gyoniku [Fish meat] Tofu-ten.

1405. **Product Name:** Tofu.
Manufacturer's Name: Sakai Shoten.
Manufacturer's Address: 641 Villa St., Mountain View, California. Phone: Mt. View 4221.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 109. A 1/8 page ad at the bottom center of this page (all in Japanese) states that Sakai Shôten makes and sells tofu, and also sells groceries. Also in 1934, p. 109. Ad (1/8 page), p. 109. Sells groceries. Also makes and sells tofu.

1406. **Product Name:** Tofu.
Manufacturer's Name: Sakaji Tofu, Sakana-ten [Tofu and Fish Shop].
Manufacturer's Address: 818 W. Main St., Santa Maria, California. Phone: 483-R.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-201. A 1/10 page ad (p. S-202) gives the same address and phone number. The company name is given as Sakaji Tofu, Sengyo-ten [Tofu and Fresh Fish Shop]. Owner: Mr. Shinmatsu Sakaji. Also billiards.

1407. **Product Name:** Tofu.
Manufacturer's Name: Sakamura (or Samura?) Tofu-ya.
Manufacturer's Address: 1411 4th St., Sacramento, California. Phone: MAin 4432-J.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 170. Company name is in Japanese: Sakamura or Samura. In English: 1411 4th St., Sacramento. Phone: Main 4432-J. Also in 1934, p. 172. Name is now Sakamura.

1408. **Product Name:** Tofu.
Manufacturer's Name: Suehiro Tofu Seizo-sho.
Manufacturer's Address: 1525½ Geary St., San Francisco, California. Phone: FIllmore 4477.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 18. Also in 1932. p. 17. Note: Murakami Konnyaku, Tofu Seizô-sho formerly made tofu at this address.

1409. **Product Name:** Tofu.
Manufacturer's Name: Sutaa [Star] Tofu-sho.
Manufacturer's Address: Rt. 2, Box 505-J, Long Beach, California.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-166. Sutaa Tofu-sho (in characters). No phone. Also 1934, p. 396. In Japanese: Sutaa Tofu-ten (new name).

The Japanese American Directory. 1941. p. 403. Sutaa Tofu-ten (in characters), Star Tofu Factory, Rt. 2, Box 505 (in English), Long Beach, California. Phone: MEnlo 471-44.

Manufacturer's Address: 216 N. Main St., Lodi, California. Phone: 894.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 249.

1415. **Product Name:** Tofu.
Manufacturer's Name: Watanabe Tofu-ya.
Manufacturer's Address: 2106 L St., Bakersfield, California. Phone: 1203-R.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 300.

1416. **Product Name:** Tofu.
Manufacturer's Name: Yamamoto Sengyo (Fresh Fish), Tofu.
Manufacturer's Address: P.O. Box 185, San Juan Bautista, California. Phone: 28-J.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 129.

1417. **Product Name:** Tofu.
Manufacturer's Name: Yanase Tofu-ya.
Manufacturer's Address: 553 N. Mt. Vernon Ave., San Bernardino, California. Phone: 245-38.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. S-216.

1418. **Product Name:** Tofu.
Manufacturer's Name: Yoshimura Tofu Seizo-sho.
Manufacturer's Address: P.O. Box 552, Delano, California. Phone: 243.
Date of Introduction: 1930.
New Product–Documentation: The Japanese American Directory. 1930. p. 298. A 1/10 page ad (p. 299, entirely in characters) gives the company name as Yoshimura Sengyo narabini Tofu Seizô-sho [Fresh Fish and Tofu Manufacturing Co.], with the same address and phone number. "We deliver tofu and fresh fish very fast." Also in 1934 directory, p. 265. In Japanese: Yoshimura Sengyo [Fresh Fish], Tofu-ten.

1419. Asahi Co. (The). 1930. Direct importer. Selling Japanese and Western foods (Ad). In: The Japanese American News. 1930. The Japanese American Directory (*Nichibei Jûshoroku*). No. 26. p. S-240. [Jap; Eng]
• ***Summary:*** Ad (¼ page). The top ¼ of this ad is in English. Also sells groceries, dry goods, fresh fish, meat, tofu, shoes, cosmetics, seeds, fertilizer, Japanese and Western hardware. Note: There is no indication that Asahi Shôkai makes the tofu it sells. Also in 1934, p. 459. Ad (¼ page). Similar to 1930 ad. Address: 149 8th St. (at E St.), Brawley, California. Phone: 233.

1420. **Product Name:** Tofu.
Manufacturer's Name: Azumaya Tofu Seizo-sho (Azumaya Co.).
Manufacturer's Address: 1636 Post St., San Francisco, California. Phone: WEst 3708.
Date of Introduction: 1930. January.
Ingredients: -
Wt/Vol., Packaging, Price: -
How Stored: Refrigerated.
New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 51. Azumaya Shoten, 1636 Post St., San Francisco. Phone: West 3708. The directory listing (under the category "Miscellaneous foodstuffs / *Zatsu shokuryo-hin"*) describes the company as a maker of Japanese pickles (*tsukemono seizô-sho*). The heading of Azumaya's display ad reads "Japanese pickles. Vegetables. Foodstuffs. (*Tsukemono-rui. Yasai-rui. Shokuryo-rui*). Tofu is not mentioned. Three other companies are listed in this category: Takasugi Tofu Mfg. Co., Ariake Konnyaku Mfg. Co., and Kinmon Kamaboko Mfg. Co.

Stockton City Directories. 1933-1957. No listing for Azumaya. San Francisco City Directories. 1935-1966. By 1927 these directories were listing Japanese and Chinese businesses and individuals.

The Japanese American Directory. 1930. p. 18. Azumaya Tofu Seizô-sho (Azumaya Co.), 1636 Post St. Phone: WEst 3708. Also in 1932, p. 17. Also in 1934, p. 20; Ad (1/8 page, p. 20. Western and Oriental foods).

Note: This is the earliest document seen (March 2013) which states that Azumaya was making tofu as early as 1930.

Also in 1936, p. 34. Also in 1937, p. 8. Also in 1938, p. 8. Also in 1939, p. 7. Also in 1940. p. 7. Azumaya Tofu Seizô-sho (Azumaya Co.), 1636 Post St. Phone: WEst 3708. Also listed in the 1941 Directory (p. 7), but now the address is 1606-A Geary St. Phone: WEst 3708.

Entry in Nichi Bei Times. 1948. Evacuation-Resettlement Report. Directory of manufacturers, p. 2 (top left). In Japanese: Azumaya Tofu Seizosho. In English: Azumaya Co.,1606-A Geary St. Phone: JO. 7-0227.

Hokubei Mainichi Year Book. 1951, p. 38. Azumaya Tofu Seizô-sho, Azumaya Co., 1606A Geary St., San Francisco. Phone: JO 7-0227. Ad (1/8 page), p. 38. Mizono brothers. Sells aburage, konnyaku, and tofu, wholesale.

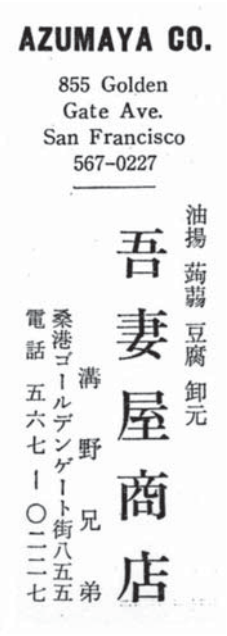
Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 16. Under "Food Products; Grocers-Whsle." In Japanese: Azumaya Tofu Seizô-sho. In English: Azumaya Co., 1606-A Geary St., San Francisco. Phone: JO 7-0227.

San Francisco City Directory. 1957. This is the earliest listing seen for Azumaya in a Caucasian-published San Francisco City Directory. It read: Azumaya Co. (Geo. and

© Copyright Soyinfo Center 2013

Jack Mizono). Baker. 1602½ Geary. In 1958 the occupation changed to "Bakers, wholesale." The 1960 listing showed a change of address: "Azumaya Co. (Jack, Geo and William I Mizono). Bakery. 855 Golden Gate Ave." But the company was not listed under Bakers of Baked Goods. The same listing appeared in 1966.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 26. Vertical 1/8 page ad. Top one-third of ad is in English:



"Azumaya Co., 855 Golden Gate Ave., San Francisco. 567-0227 [phone]. In Japanese: Azumaya Shôten, Mizono brothers. Aburage, konnyaku, and tofu wholesale. (Directory entry, p. 36 under "Food Products"). In the personal / residential directory (p. 92) is a listing for Mizono, Isamu. 152 8th St., San Francisco. None of the other Mizono brothers are listed.

Takai. 1971. Tofu Shops in America. 95 Boutwell. Uses 600 kg/day of soybeans. 4 employees. Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. 95 Boutwell.

Loetterle. 1977. California Living. April 17. p. 40. Says the company started in January 1937.

Label. 1978, dated. 4.5 by 4 inches. Red and light blue on clear film. The product is now called "Tofu. Soy Bean Cake." "No preservatives added." A cartoon of a bean says, "Hi! I'm Li'l Soy."

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. Azumaya Inc., 95 Boutwell, San Francisco 94124. Phone: 415-467-1955. Owner: William or Jack Mizono; one of America's largest factories; since 1937.

Soya Bluebook. 1980. p. 55. 95 Boutwell St., San Francisco, CA 94124; 1981. p. 70. Address: 1575 Burke Ave., San Francisco, CA 94124.

Interview with Jack Mizono. 1983. Says the company may have started as early as 1920 in San Francisco. Details of the founding are unknown, but it had three successive Japanese owners before the third, Mr. Sakamaki, sold it to the two Mizono brothers (George and Jack) on 17 Feb. 1937. At that time, the tofu plant was located in a basement at 1636 Post Street between Bush and Laguna Streets. The Mizonos ran Azumaya as a family business and built it into a thriving enterprise. In the late 1960s they got their tofu into the first non-Oriental chain of food stores, the Berkeley Co-op system. In about 1970 they became the first company to have their tofu sold in American supermarket chains, Safeway (distributed by Japan Foods) and Lucky (shipped direct). By the late 1970s they were in Alpha Beta, Albertsons, Raley's, and other major West Coast Chains. Sales of $60,000 in 1969 jumped more than 16-fold in the next 8 years to $1,000,000 in 1977, when they were using 1,600 to 2,400 lb/day of soybeans to make tofu. In 1980 Azumaya moved into a huge new modern factory. By 1982, the second largest tofu maker in the Western world after Hinode in Los Angeles, they produced about 110,000 lb/week of tofu. The owners are now listed as Bill or Jack Mizono. FIND/SVP. 1981, May. "The tofu market: Overview of a high-potential industry." p. 66. The company now makes about 15,000 to 17,000 lb/day of tofu. They are America's second largest manufacturer, after Hinode. New label. 1986. Regular (Japanese Style) Tofu.

Interview with George and Bill Mizono. 1989. Oct. 31. During the first year of ownership in 1937 Azumaya made bulk tofu, yaki-dofu, ganmodoki, and agé.

Letter from County Clerk of the Superior Court of San Francisco. 1989. Nov. 19. At the request of William Shurtleff, Maura Ramirez searched for the name Azumaya in the indexes of the fictitious name records and business license records for the years from 1920 to 1937. No record was found.

1421. Buck, John Lossing. 1930. Chinese farm economy: A study of 2866 farms in seventeen localities and seven provinces in China. Chicago, Illinois: University of Chicago Press. xii + 476 p. Illust. Index. 24 cm. Published for the Univ. of Nanking and the China Council of the Institute of Pacific Relations.

• ***Summary:*** Packed with carefully collected and analyzed statistics about soybeans and other major crops in China, often on a province by province basis. Also contains 39 excellent photos plus several maps. Contents: 1. Introduction: Method and scope of study, regional conditions, definition of terms ("Soybeans are the yellow soybeans unless otherwise designated." "Vermicelli made from green (mung) bean, *Phaseolus aureus*). 2. Farm layout and land utilization. 3. The year's farm business. 4. The best size of farm business. 5. Farm ownership and tenancy. 6. Crops (incl. soybeans, alfalfa, broad beans, buckwheat,

© Copyright Soyinfo Center 2013

corn, cowpeas, hemp, kaoliang, millet (broom, foxtail, proso), peanuts, rapeseed, red beans [azuki], sesame, wheat). 7. Livestock and fertility maintenance. 8. Farm labor. 9. The family farm and population. 10. Food consumption. 11. Standard of living. 12. Conclusion. Appendixes: I. Relation of farm size to 30 variables. II. Gross correlation of coefficients. III. Amount of crop hectares devoted to various crops. IV. Schedules.

Concerning food consumption: "Fats for cooking are exclusively vegetable oils and little even of these are used in the country districts... The most common oils are made from sesame seeds, soybeans, and rapeseed" (p. 357). Tables (p. 358-61) give the chemical composition and caloric value of food products consumed in China; incl. red beans, yellow soybeans, black soybeans, and soybean curd [tofu]. Chinese farm households receive 89.8% of their energy (calories) from seeds and their products, 1% from animal products, and 0.2% from sugar. "Soybeans provide proteins and are a good substitute for milk" (p. 364-65). "Soybeans are a good source of protein, but the proportion of protein from these is small for most localities" (p. 373). "The low standard of living of farmers in China is reflected in almost every aspect of the farmer's life." There are two main reasons for this: population density and lack of education (p. 420). "The farmhouse in China lacks comfort, beauty, and even the elements of sanitation necessary for health and well-being. Diet, while remarkable in containing many of the elements needed for health and strength, lacks variety mainly in fruits and vegetables, particularly in North China. The direct utilization of grains and to a certain extent of soybeans, however, is probably a more economical procedure than the western way of using so much food largely through animals" (p. 424-25).

Note: The famous American novelist Pearl Sydenstricker Buck married this man in 1917; they were divorced in 1934. Address: Prof. of Farm Management, College of Agriculture and Forestry, The Univ. of Nanjing, Nanjing, China.

1422. Capus, Guillaume. 1930. Les produits coloniaux d'origine végétale [Colonial products of vegetable origin]. Paris: Larose. 499 p. See p. 80-83. 26 cm. [Fre]
• ***Summary:*** The soybean (*soja*) is mentioned on 11 pages in this book: p. 1, 74, 78 80-83, 420, 484. 488, 496.

Contents: Introduction. Uses of the soybean (industrial uses and food uses): oil, cake, soymilk, tofu, fermented tofu, sauce, coffee substitute, green vegetable soybeans, whole dry soybeans, soy flour used to make bread for diabetics. The leaves and stems make an excellent green forage. Finally, in the USA, the soybean is cultivated as a forage plant, for use as silage, and also as green manure to enrich the soil for other plants.

Capus Guillaume lived 1857-1931. Address: Doctor of Science, former Director General of Agriculture in Indochina.

1423. **Product Name:** Tofu.
Manufacturer's Name: Iwanaga Ryokan narabini Tofu [Japanese-style Inn and Tofu Shop].
Manufacturer's Address: 218 1st St., Marysville, California. Phone: 1341.
Date of Introduction: 1930. January.
New Product–Documentation: Ad (1/8 page) in Japanese American Directory. 1930. p. 210. 2nd from left. Entirely in Japanese. 218 1st St., Marysville, California. Phone: 1341. Making and selling tofu. Owner: Mr. Torao Iwanaga. Note: This inn, founded in 1925, is under new ownership.

1424. **Product Name:** Tofu.
Manufacturer's Name: Iwanaga Ryokan narabini Tofu [Japanese-style Inn and Tofu].
Manufacturer's Address: 218 1st St., Marysville, California. Phone: 1341.
Date of Introduction: 1930. January.
New Product–Documentation: Ad (1/8 page) in The Japanese American News. 1930. p. 210. Making and selling tofu. Owner: Mr. Torao Iwanaga.

1425. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1930. Nichibei jûshoroku [The Japanese American directory. No 26]. San Francisco, California: Nichi-Bei Shinbunsha. 765+ p. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** Most entries in this directory give the company name in Japanese characters, followed by the address and phone number (if any) in English. There are many smaller, vertical ads on the lower half of quite a few directory pages, usually for a company listed on that page. Most are either mostly or entirely in Japanese.

Contents: Ads (full- or half-page, in Japanese and English, p. A-1 to A-34). Table of contents of Japanese businesses in San Francisco, organized by type of business (p. 3). Directory of northern California (in Japanese and English, p. 3-394). Table of contents of Japanese businesses in Los Angeles, organized by type of business (S-19). Directory of Los Angeles, Southern California, and all other U.S. states (p. S-1 to S-340).

On the front cover (which is mostly in English and is at the "back" of the book) is an illustration of the dome of city hall. In the center, vertically in Japanese characters is written *Nichibei Shinbun-sha.* The many directory listings for soyfoods manufacturers and ads for soy-related companies are each given separately. Address: Ellis Street, San Francisco, California.

1426. **Product Name:** Tofu.
Manufacturer's Name: Kashiwagi Shoten.
Manufacturer's Address: P.O. Box 455, Loomis, California.
Date of Introduction: 1930. January.

© Copyright Soyinfo Center 2013

New Product–Documentation: Ad (1/8 page) in The Japanese American News. 1930. p. 200. Selling groceries, dry goods, fresh fish, making tofu. Owner: Mr. Fukumatsu Kashiwagi.

1427. Kato Shoten. 1930. [Selling all Japanese and Western foods, fresh fish, fresh produce, tofu (Ad)]. In: The Japanese American News. 1930. The Japanese American Directory (*Nichibei Jûshoroku*). No. 26. p. 194. [Jap]
• ***Summary:*** Ad (1/8 page). All in Japanese. Owner: Mr. Heisaburo Kato. Address: P.O. Box 131, Florin, California. Phone: MAin 7F23.

1428. Maruyama Shoten. 1930. Selling groceries, tofu, fresh fish (Ad). In: The Japanese American News. 1930. The Japanese American Directory (*Nichibei Jûshoroku*). No. 26. p. 90. [Jap]
• ***Summary:*** Ad (1/8 page). All in Japanese. Since 1909, various tofu makers have been located at this address in Alameda. Yet there is no indication that Maruyama makes the tofu that they sell. It may be made in nearby Oakland. Also in 1934, p. 89. Phone is now ALameda 5608-J. Again, 1/8 page ad says they sell tofu, but does not say they make it. Also sells fresh fish. Retail and street vendor. Address: 1620 Park St., Alameda, California. Phone: ALameda 3321J.

1429. Polk's Portland (Oregon) city directory. 1930. Portland, Oregon: R.L. Polk & Co., Inc. See p. 1232, 1234.

Note 1. This is actually the Ota Tofu Co. See *Nichi-Bei Nenkan.* Saizo's wife is Shina [not Shino].

Note 2. On page 1254: "Ota R chaimn [chairman] C&W Lbr Co. Home Linnton." Address: Portland, Oregon.

1430. Watson, Ernest. 1930. The principal articles of Chinese commerce (import and export) with a description of the origin, appearance, characteristics, and general properties of each commodity; an account of the methods of preparation or manufacture; together with various tests, etc., by means of which the different products may be readily identified. 2nd ed. Shanghai, China: Statistical Dept., Inspectorate General of Customs; sold by Kelly & Walsh [etc.]. ix + 630 p. Illust. Index. 28 cm. The Maritime Customs. II. Special Series No. 38.
• ***Summary:*** The first edition was published in 1923. There are sections on "bean oil" (*tou-yu*), the residual meal from the extraction process (*tou-ping fên*), and cakes (*tou-ping;* p. 85-86), soya beans (p. 320-21) including yellow, black, and green varieties, beancurd [tofu], bean milk (tou-fu-chiang), bean sauce (see soy sauce), and bean vermicelli. The latter product, named *fên-ssu, tou-fên-ssu, hsi-t'iao-mien,* or *kua-mien,* is a "famous vermicelli made in the Chefoo district from [soy] beans, most of which are originally imported from Manchuria. It is exported in great quantities from Chefoo to Hongkong, South China, and the Straits Settlements, and forms a favourite and very nutritious food."

Soy or chiang-yu (p. 538) is the name for a "sauce made in China from the soya bean (*Soja hispida*). In preparing it, a quantity of beans are slowly boiled, an equal quantity of coarsely ground wheat or barley being added. The mixture, after being allowed to ferment for some time, is put into a jar with an equal amount of salt, a few aromatics, and three times as much boiling water as there were beans at first; the whole is then allowed to stand for several weeks exposed to the sun, after which the liquor, which constitutes the soy, is separated by pressing and straining the mass. The finished product is afterward packed into jars or bottles ready for market."

"Soy is thin and, in colour, very dark brown or almost black; it becomes brighter and clearer on being kept, has an agreeable salty flavour, and produces a yellowish froth when even slightly shaken. It is much used by the Chinese as a sauce and condiment, as it creates an appetite and is supposed to counteract the injurious properties of contaminated food; it is also used in medicine as an application for burns, scalds, eczema, leprous sores, etc. Soy is often exported from China to foreign countries, where it is extensively used in the manufacture of many European sauces."

"Wheat gluten (*mien-chin*) is prepared in China by washing starch and is used as a nutritious food. The Chinese also prepare "dextrin" (*mai-ch'ao*) from wheat, using it chiefly as a medicine, and considering it to be very nutritious, antifebrile, and quieting..." Address: Tariff Expert, Chinese Maritime Customs.

1431. *Los Angeles Times.* 1931. Why import soy? We can grow this bean to perfection. Jan. 11. p. J6.
• ***Summary:*** This article seems to be based on: Morse, W.J. 1927. "Soy beans: Culture and varieties." *USDA Farmers' Bulletin* No. 1520. 34 p. April. It begins: "Californians are accustomed to thinking of the soy bean as a cover crop. It is interesting to note that in its native land, Manchuria, this use of the soy bean is of small importance." There the soy bean is used mainly as a food product; only the by-products, such as bean cake and straw, are used as fertilizer.

Food products include a paste [jiang], fermented for about 2½ months, soy [sauce], bean curd [tofu], dry bean curd cakes, bean curd wafers, flour, and "milk." The expressed oil is used locally mainly for illumination [in lamps]. The better grades are used for cooking and the poorer grades for lubricating, for making printer's ink and varnish, and "as a waterproofing material in the manufacture of cloth, paper umbrellas, and lanterns.

The bean cake is used to fatten pigs and cattle. In Japan, the cake is used as a fertilizer for mulberry trees and rice fields. "In Manchuria the cake is crushed and mixed with oil

© Copyright Soyinfo Center 2013

and arsenic and placed on the roots of trees to poison insect pests." This insecticide is used to kill the pests that injure the wild trees where silkworms live.

The soy bean was grown in the United States as early as 1804, but only as a curiosity. In Europe it was mentioned as early as 1790. The soy bean first became known worldwide during the war between Russia and Japan [1904-05]. During the war, the may troops quartered in Manchuria created a large demand for soybeans as food. Local farmers increased their acreage. But after the war they found they had a surplus that was for too great for the demand in the local market or the Orient. The price dropped and a trial shipment was sent to London. The timing was perfect, since English vegetable oil mills were running part time because of a small crop of cottonseed and the failure of linseed in the USA and the Argentine. For the rest of that season, the English mills ran full time on soy beans.

1432. Morse, W.J. 1931. Re: Sayonara. Outline for part of a "special report" on soybeans in the Orient (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Feb. 16. Unpublished log.

• ***Summary:*** Pages 7231 and 7232. Letter dated 16 Feb. 1931 from Mr. W.J. Morse, c/o American Consulate, Tokyo, to Mr. P.H. Dorsett, c/o Wagons-Lite Hotel [Wagons Lit Hotel, or *Grand Hotel des Wagons-Lits*], Peiping, China.

"Our last night in Japan and this is my 'Sayonara' letter in the Orient. Two years tomorrow or rather day after tomorrow we left Washington, DC, and embarked on agricultural exploration work. After two years I agree with the words I often heard you say:

"It's a great life"–if you don't weaken. Morse quotes the entire poem.

Note: This poem was created by cartoonist Gene Burns and syndicated by the *New York Evening Telegram* from 1915 to 1919; the phrase became a rallying cry for American soldiers during World War I.

"At odd times I have been raking over the accumulation of data collected in Japan, Korea, Hokkaido and Manchuria and written up tentative outlines which I want to revise somewhat going back [to the USA]. I am enclosing a copy of the one on Manchuria which you may glance over to see the kind of data I have been collecting. It is not for the report (quarterly) but merely an outline for separate reports and I thought you might be interested. I may have gotten myself in 'Dutch' [in trouble] getting so detailed information on the soybean in the soybean country of the world (and where they look on America as their soybean enemy), but I secured it here, there and everywhere."

Note 1. The "Agricultural Report on Manchuria" mentioned above was finished by Morse in 1932 and titled "Soybeans–Manchuria." It contains 181 pages (28 cm = 8½ x 11 inches), 174 numbered photos with excellent captions, and 28 tables. Typewritten, but never published, it was attached to the end of this long log. A detailed description is given. This report on Manchuria is probably only a part of the "special report" referred to on pages 3230, 3497, 3555, and 6196 of this main report, since that "special report" promised to contain detailed information on the processes used to make different soyfoods such as miso, shoyu, yuba, and tofu. Morse apparently was never able to find the time or will to write the complete "special report," however this part of it is very detailed, useful, and impressive.

Note 2. Talk with Knowles A. Ryerson. 1983. Aug. 28. W.J. Morse definitely did not write the entire special soybean report he intended to after returning from his trip to the Orient. Why? He got swept up in the growth of the U.S. soybean production and processing industries and had no one to help him with his work during the Great Depression. He was swamped! Address: Agricultural Explorer, USDA, Washington, DC.

1433. Given, Meta. 1931. Quick cooking is secret of Chinese dishes: This tells about Oriental culinary methods. *Chicago Daily Tribune.* Feb. 27. p. 17.

• ***Summary:*** Typical Chinese foods include [mung] bean sprouts, and soy bean products of various kinds. "Soy sauce, which is made from the soy bean, is an indispensable flavoring or seasoning with the Chinese. They also obtain from soy beans a curd [tofu] that looks very much like our cottage cheese." A photo shows Mrs. James Loo in her kitchen.

1434. United States Department of Agriculture (USDA), Office of Information, Press Service. 1931. U.S. plant explorer collects new soybean varieties in Orient (News release). Washington, DC. 2 p. March 28.

• ***Summary:*** "After a two-year search for new varieties of soybeans in Japan, Korea, and Manchuria, Wm. J. Morse of the U.S. Department of Agriculture has returned from the Orient with a collection of about 4,000 lots of seed and more than 300 samples of products made from soybeans.

"Mr. Morse, who is in charge of soybean investigations for the Bureau of Plant Industry, hopes that some of the many varieties represented in his collection will meet the needs of the wide range of industries using soybeans in this country."

Note: This is the earliest document seen (Aug. 2011) stating that W.J. Morse is "in charge of soybean investigations" (or "head of soybean investigations" or "director of soybean investigations") at USDA.

"Oil manufacturers, he says, want soybeans with high oil content, whereas farmers who feed hogs want low oil content. Packers discriminate against hogs fed or pastured

© Copyright Soyinfo Center 2013

on soybeans because of the soft pork which results from the oil. Few varieties of soybean grown on a large scale in this country have an oil content less than 15 per cent or more than 20 per cent. Some of those grown in Manchuria, however, run as high as 22 per cent in oil...

"The manufactured products in Mr. Morse's collection range from high-quality oils to beans specially treated to drive devils away during certain religious festivals [*mame-maki* at *Setsubun*].

"'Next to rice,' he says, 'the soybean is the principal food crop in the Far East, and it is the principal source of protein in the Oriental diet. No one variety is adapted to all parts of the Orient, nor is any one variety suited to all the many uses to which the beans are put. For instance, certain varieties are grown solely for oil, those that thrive in Manchuria being noteworthy for their high oil content. Other varieties are planted with a view to making soy sauce, a condiment already in favor in the United States, bean curd, used by Buddhists as a meat substitute, or miso, a common ingredient of Japanese soups. Some varieties are grown to provide a green vegetable that is to the eastern table what green peas are to the western table. Part of the crop in certain sections is roasted for use as a coffee substitute or in confections where it answers the same purpose as peanuts in American candy and cakes.'

"The beans were gathered from a wide territory varying greatly in climate and in cultural conditions. As soon as they reached Washington [DC] they were sent to the experiment farm at Arlington, Virginia, for observation and quarantine. When it has been determined that they harbor no insect pests or plant diseases the beans will be grouped and sent to the department's field stations, each group to the section best suited to its growing requirements, and planted. Recommendations for their ultimate introduction into the United States will depend on the results of these field tests. If they do as well here as in their native fields, Mr. Morse says, some of these new introductions will probably become staple sorts here." Address: Washington, DC.

1435. Tihon, L. 1931. A propos d'une variété nouvelle de soja O-too-ton [Concerning a new variety of soybean, O-too-ton]. *Bulletin Agricole du Congo Belge* 22(1):120-23. March. [Fre]

• ***Summary:*** "The management of the plantations has sent us, in the chemical laboratory [at Leopoldville, Belgian Congo], a rather important sample of seeds of the soybean variety O-too-ton [Otootan], recently introduced from Atlanta, Georgia, USA, to the botanical garden at Eala. At the time of a former shipment of two other varieties, we have pointed out in the report of our studies (10 October 1928) the interest in this legume and given some generalities concerning its cultivation and possibilities for various uses." Tables compare O-too-ton with the former two varieties (Jaune [yellow] and Violette) in terms of size, weight, chemical composition, and mineral content. A detailed analysis of the oil of the yellow soybean is given.

The author then discusses the physiological value of the soybean and its by-products. It contains about twice as much protein as locally-consumed beans and much more oil. It can therefore help in improving the diet of the indigenous people, which is deficient in protein (*albuminoides*). It is also a rich source of vitamin E and other key nutrients. As noted in the author's previous report, the people of East Asia use the soybean to make a milk, a curded milk (probably tofu), and various fermented foods such as miso and soy sauce. Various studies have shown the milk to be very nutritious and digestible.

"The information given above has been, in large part, extracted from the *Bulletin de la Société d'Hygiène alimentaire et d'Alimentation rationalle de l'homme* (Vol. 18, no. 1, 1930)."

Note: This is the earliest document seen (Aug. 2003) stating that vitamin E is found in soybeans. Address: Director, Laboratoire de Chimie, Leopoldville [Congo Belge].

1436. McCoy, Frank. 1931. Health and diet advice: The Oriental vegetable meat. *Los Angeles Times.* April 7. p. A6.

• ***Summary:*** For centuries Chinese and Japanese have been living on a diet that contains very little meat. They have been able to do this by using the soy bean to supply a large amount of the protein in their diets. "This bean is superior to all other dried beans inasmuch as it contains little or no starch and a very large amount of balanced protein." A table shows the high food value of soy bean flour by comparing its composition with that of spring wheat and lean beef. Soy beans almost always contain less than 2% starch, "the mature beans having no starch. This is one of the reasons why soy bean flour is often preferred over other flours in the diet of those suffering with diabetes." It is not possible to make bread of "entire soy bean flour" because it tends to agglutinate instead of forming a paste.

"The Chinese make a kind of cheese [tofu] of the soy curd which closely resembles our cheese in appearance and food value, but has an entirely different flavor. The Japanese prepare a vegetable milk by grinding the soaked beans and boiling thirty minutes in three times their bulk of water and then straining. This milk compares favorably with cow's milk and is often used for feeding infants."

Soy beans tend not to cause flatulence "because they do not contain much of the hemicelluloses which are abundant in other beans. The carbohydrates of the soy bean seem to be much more digestible."

Also from soy beans the Japanese manufacture a sauce known as shoyu. "This is made by mixing cooked and ground soy beans with salted water and inoculating the mixture with a rice ferment. The sauce tastes a good deal like a salty meat extract."

© Copyright Soyinfo Center 2013

There follows a recipe for making soy bean muffins using soy bean flour, baking powder, salt, egg, and milk. No wheat flour is used. Address: Dr., author of "The Fast Way to Health".

1437. Horvath, A.A. 1931. The soy bean as human food. *Industrial and Engineering Chemistry, News Edition* 9(9):136. May 10.
• ***Summary:*** Contents: Historical background. Properties and uses. Growing interest in soy bean preparations in different countries. Soya foundation proposed.

This article begins: "The soy bean is a plant of early cultivation in China. Its use dates back to the beginning of China's agricultural age under the Emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu*, the ancient 'Materia Medica' written in the year 2838 B.C. This bean is remarkable for its richness in oil (average 20 per cent), protein (average 40 per cent), and ash (average 5.5 per cent), and the almost complete absence of starch.

"Since time immemorial the soy bean has been the most universal article in the Chinese dietary. It is also extensively used for food in Korea, Japan, Indo-China, the Philippine Islands, the Dutch Indies, Siam, and India. The Chinese make practically no use of dairy products, and the bulk of the people consume a very meagre amount of meat. Yet, in spite of this, they have lived for centuries on what appears to be a remarkably well-balanced diet by the use of the soy bean."

Also discusses: Soy bean milk, tofu, fried tofu ("called in China 'the meat without the bones'"), miso, chiang, Worcestershire sauce ("liquid soy sauce... when spiced, is sold under the label 'Worcestershire sauce.'"), W.J. Morse of the USDA, soy bean foods in Europe, Prof. Berczeller, and work at the Physiological Institute of the University of Vienna under Prof. Durig and Dr. Wastl.

"In Russia, the soy bean is fondly called 'our young revolutionary Chinese ally.' 'Plant soy beans and you plant meat, milk, egg omelets,' is the newspaper cry. Efforts have been made all year to introduce soy bean dishes to restaurants and homes. A Soy Institute was recently organized in Moscow, as well as a special exhibition of soy foods at which 130 varieties of soy dishes, including cutlets, pastry, salads, candy, and beef, were shown. A dinner, prepared entirely of soy beans, was served to representatives of trade unions, factories, Red Army, and the Soviet press. The food was unanimously declared excellent...

"Soya foundation proposed: There are reasons to expect that the United States will become the leader in introducing the soy bean in the daily diet of the white race. An important step should be the establishment of a soya foundation in order to promote the creation of a national soya food research institute." Address: Health Section, Bureau of Mines, Pittsburg, Pennsylvania.

1438. Wong, Nellie Choy. 1931. Two unique Chinese meals. *Christian Science Monitor.* Aug. 28. p. 10.
• ***Summary:*** The meals are a light luncheon and a dinner. The luncheon includes a recipe for "Chow mein, Cantonese style," which is seasoned with "1 tablespoonful of soy-bean sauce." The six-course dinner has "Course One–Soy-bean curd soup." The ingredients include "2 squares soy-bean curd" and "2 teaspoonfuls of soy-bean sauce." Two other dinner recipes are also seasoned with soy-bean sauce.

1439. McCoy, Frank. 1931. Health and diet advice: Cheese in place of meat. *Los Angeles Times.* Oct. 5. p. A6.
• ***Summary:*** "Even the Japanese, who are too crowded in their picturesque islands to raise cows, have a kind of cheese [tofu] manufactured in much the regulation manner by souring soy bean milk." Address: Dr., author of "The Fast Way to Health".

1440. Horvath, A.A. 1931. The soybean. *Co-operative Manager and Farmer* 21(2):38-40. Oct. Address delivered at the laboratory of the Harshaw Chemical Co., Cleveland, Ohio. 21 May 1931. [2 ref]
• ***Summary:*** "The following address was delivered by Dr. A.A. Horvath at the laboratory of The Harshaw Chemical Company, 1945 East 97th St., Cleveland, Ohio, May 24th, 1931.

"Twelve years ago [i.e., in about 1919] I had the good fortune to go to China and my first impression was that Occidentals have a number of things to teach the Chinese, but I have found that we have more to learn from them than we have to teach them. If we consider what nation was able to preserve its national character and its independence for a long period of time we must come to the conclusion that really the Chinese nation is the only nation which exists after 5,000 years. So we have to learn from the Chinese how to live and how to live in a reasonable way. China has suffered not once but many times from severe economic depressions but has recovered from them and I think we must pay more attention to the way the Chinese live and what they are using as food."

"During the Civil War in this country, soybeans were roasted and used by the Southerners. They were called 'coffee beans'... Soybean flour is used in ice cream. It is said that manufacturers are using it for the same reasons,– better taste, more smooth and better keeping qualities. (See article in Journal of Confectioners and the Ice Cream World of August, 1930)." Prof. Abel of Johns Hopkins found soy sauce stimulated digestion of carbohydrates.

"The soybean is peculiar for its richness in phosphorus and also richness in a certain substance, lecithin. This lecithin is an organic compound of phosphorus and belongs to a group of lipoids. Soybean contains around 1.6 per cent lecithin. This substance is one of the constituents of egg yolk and is the one which gives it its high value. It is a necessary constituent for the building up of the nervous

© Copyright Soyinfo Center 2013

system of human beings. Dr. Levine, of the Rockefeller Institute in New York, found that in soybean there is cephalin, a constituent of the human brain, and so we have two particular substances, which are used as material for the building of our nervous system."

The Chinese soak soybeans overnight and then grind them between millstones, to get a cream. This cream is filtered through cheesecloth, then diluted with water and boiled. "They get a milk such as almond milk which is made from sweet almonds. Soybean milk contains oil and protein necessary to emulsification.

"This soybean milk has been used in China since time immemorial and in the streets of Peking one can see men carrying bottles labeled similar to our milk here. This soybean milk, if kept at room temperature for hours, will turn acid and coagulate. Curds are formed exactly as curds are formed in ordinary milk. But the Chinese cheese [tofu] is made not by turning the milk acid but by curding it in a special way. They use the mother liquid from sea water after table salt manufacture [nigari] or a little plaster of paris" [calcium sulfate].

1441. Webber, P.A. 1931. Facts concerning the soybean. *Madison Survey* (*Madison, Tennessee*). Nov. 18. p. 177-78; Nov. 25. p. 181-82.

• ***Summary:*** "The soy bean is the only seed, as far as we know, which contains both the water soluble and the fat soluble vitamins."

"In 1917 during the World War, a special committee appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soy bean. Shortly afterwards, soy bean in the form of flour was manufactured and this has been on the market now for some time. The entire soy bean ground into flour contains double the amount of protein and calories present in beefsteak."

"The soy bean is also very rich in lecithin. It has been clearly shown the soybean oil contains fat soluble vitamins A, D, and E."

A soybean milk can be prepared "in the same way as almond milk... Many tests have been made in the pediatrics departments of various universities in the United States showing that soybean milk can be used as the only source of protein in the nutrition of young infants." Also gives details on tofu. "In the Orient, 'tofu' forms a very popular and almost indispensable dietary article. This 'tofu' can be used in many different dishes, taking the place of meat or eggs. It is delightful as a constituent of roasts, omelets, etc."

"In Russia the soybean is taking prominence in the dietary of the people there. 'Plant soybeans and you plant meat, milk, egg omelets,' is the newspaper cry. A Soy Institute was recently organized in Moscow as well as a special exhibition of soy foods at which one hundred thirty varieties of soy dishes, including cutlets, pastry, salads, candy, and beef were shown. There is every reason to believe that the United States will become the leaders in introducing the soybean in the daily diet of the white race."

"The following are a few of the ways in which it is being prepared and used in the United States at the present time: Soybean flour is being used by large bakeries as a constituent of bread, rolls, pastry for pies, cakes, etc. Baby foods are coming on the market containing certain percentages of soybean milk. Chocolate malted milk containing a good per cent of soybean products is now manufactured and sold by several companies. For some time, manufacturers of diabetic foods have been placing on the market productions made largely from the soybean. The soy sauce, otherwise known as Oriental 'Shoyu' has been popularized by the Chinese chop suey restaurants, and is now being used in many dishes made in the home. The bean curd is being canned and manufactured in various other ways and sold on the market. Powdered soybean milk has become a commercial product."

"For several years the Health Food Department of the Nashville Agricultural Normal Institute has been experimenting with this most interesting legume, and is now offering two basic products which may be used in many nutritious and appetizing dishes: the soy cheese and soybean flour. These two products have been used in scores of recipes tested out at the Madison Rural Sanitarium, the Nashville Vegetarian Cafeteria, and other health food places. Just recently several different recipes for the use of soybean flour bread, rolls, and cakes have been perfected. These with other recipes, will be sent free to those who inquire for them."

"A move to substitute vegetable proteins for animal proteins is a move in the right direction, and there is no plant so promising as the soybean. A soybean research foundation has been suggested. Large space at the coming World's Fair in Chicago [Illinois] will do much to bring this important but neglected food to the attention of the American people."

Note: This article was reprinted as a little 8-page booklet (15 x 9 cm, undated) by T.A. Van Gundy of La Sierra Industries. This shows that Van Gundy was aware of the pioneering work of Madison Foods at an early date. On the last page of the booklet is the following paragraph which does not appear in P.A. Webber's original article: "For some time the founders of La Sierra Industries, Arlington, California, have been experimenting with this most interesting legume and are now prepared to offer a number of products which may be used in many nutritious and appetizing dishes: canned soys, soy soup, soy flour, soy cheese, soyco (a coffee substitute), smoein (vegetable smoked meat), soy breakfast food and soy-loaf." What a shame that this little booklet is not dated! At least we know it was printed after November 1931. Address: PhD, Madison, Tennessee.

1442. *Argus* (*The*) (*Melbourne, Victoria, Australia*). 1931. A Chinese dinner. Dec. 12. p. 8.

© Copyright Soyinfo Center 2013

• ***Summary:*** "Last week were published directions given by Nellie Choy Wong in the 'Christian Science Monitor' for the preparation of a Chinese light luncheon. The following are her directions for preparing a Chinese dinner. The ingredients may be bought at Chinese shops in Melbourne: -

"Course One.–Soy-bean Curd Soup.

"Course Two.–Mung Chi...

There follows a recipe for "Soy-bean curd soup" that includes "2 squares of soybean curd." "Season with soy-bean sauce, salt, and pepper to taste."

Note: This is the earliest document seen (Oct. 2009) stating that soybean curd [tofu] is available in Australia. That strongly implies that it was also being made in Australia, probably in the area of Melbourne, primarily for the Chinese community living there.

1443. Dittes, Frances L. 1931. The soybean as human food. *Madison Survey* (*Madison, Tennessee*). Dec. 9. p. 189-90; Dec. 16. p. 193-94. [3 ref]

• ***Summary:*** This paper was presented by Miss Dittes at the 20th annual meeting of the Tennessee Academy of Science, held 27-28 Nov. 1931 at George Peabody College for Teachers, Nashville, Tennessee. It summarizes scientific research on the subject. "In 1917 during the World War, a special committee appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soybean."

"At present there is a great interest in soybean preparations throughout the world. In this country the leading forces are the Bureau of Home Economics, and W.J. Morse, of the United States Department of Agriculture. The famous Austrian, Professor Haberlandt, wrote about fifty years ago that the time would come when soybeans would play an important role in human dietary."

"An important step being studied at the present time is the establishment of a soya foundation in order to promote the creation of a National Soya Food Research Institute." Address: Madison Sanitarium Dietitian and Prof. of Home Economics, Madison College, -.

1444. Morse, W.J. 1931. Utilization of soybeans and soybean products in Oriental countries. *J. of the American Society of Agronomy* 23(12):1067. Dec. Presented as part of Symposium on Soybeans. Leader: W.J. Morse.

• ***Summary:*** Manchuria, the largest soybean-producing country in the world, had a production of more than 5,000,000 tons of which more than 400,000 tons were used for food, 253,000 tons for feed, and 225,000 tons for seed. The remainder, more than 4,000,000 tons, was used in the production of oil and oil meal and for export. Japan in 1929 used over 39,000,000 bushels of soybeans of which only 13,000,000 bushels were grown in Japan proper, the difference being imported from Manchuria and Korea. The following shows the various ways in which this large amount of beans was utilized by the Japanese people: Miso, 22.7%; soy sauce, 22.7%; soybean oil and oil cake, 21.5%; bean curd, 15.4%; confections [roasted whole soy flour], 6.1%; forage, 6.2%; green vegetable beans, 0.8%; green manure, 2.5%; seed, 1.6%; miscellaneous, 0.5%.

Note: This is the earliest document seen (Oct. 2001) that gives industry or market statistics on green vegetable soybeans by geographical region. Address: USDA, Washington, DC.

1454. Ochse, J.J. 1931. Vegetables of the Dutch East Indies. Buitenzorg (Bogor), Java: Archipel Drukkerij. xxxvi + 1005 p. See p. 366, 389-93, 398, 407-08, 732, 943-71. An entirely revised and greatly enlarged second edition of his Tropische Groenten (1925). Translated by Mr. C.A. Backer. Illust. 25 cm. Index. [10 ref. Eng]
• ***Summary:*** This translation (by Mr. C.A. Backer, the reputed ex-Botanist for the flora of Java) of Ochse's classic "may be taken as an entirely revised and much enlarged second edition of *'Tropische Groenten'* (Tropical Vegetables), which booklet was published in July 1925." The author, a Dutchman who confined his research to Java and Madoera, described the tempeh-making process in detail, saying that the mold used was *Aspergillus oryzae* and that it was obtained from a former batch of tempeh.

Page 366 discusses ontjom (témpé boongkil in Javanese), tetèmpè, and dagè, all made from peanuts. Page 372 notes that the pigeon pea (*Cajanus cajan*) can be used to make témpé bosok.

Pages 389-93 discuss the soya bean, which has various names in local languages. Malay: Katjang djepoon or Kedele. Javanese: Dekeman or Dekenan, Dele, Demekan, Gadele, Kedele, Kedoongsool, or Dangsool. Sundanese: Kadele, Katjang booloo, Katjang djepoon, Katjang kadele. Madura: Kadhele, Kadhellee, or Kedeleh. A description of the plant is given.

Illustrations show: (1) A young soybean plant with leaves and pods (half size). (2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Soybeans come in two main forms: Light yellowish-brown seeds, and black seeds. The latter are used to make *ketjap* (Indonesian soy sauce). "Of the ripe seeds *pélas* (Jav.) is made, by mixing them with grated young coconut [coconut], salt, and other ingredients. The mixture is wrapped in a banana leaf and steamed.

"The seeds can also be roasted and afterwards pounded. The *boobook, boobook delé* or *boobookan* (Jav.) is eaten in the shape of powder, usually with the addition of lombok and other ingredients."

Note 1. This is the earliest English-language document seen (Nov. 2012) that mentions Indonesian roasted soy flour, which it calls *boobook, boobook delé* or *boobookan.* As of Nov. 2012 this roasted soy flour is usually called *bubuk*

© Copyright Soyinfo Center 2013

kedele or *bubuk kedelai.*

"The seeds are mixed with a porridge of rice-meal and water and afterwards fried in coco-nut oil. This dish is called *rempeyek* (Jav.). It consists of brown slices in which the black *kedele*-seeds are scattered. *Rempeyek* is eaten either as a delicacy or with the rice table. "Témpé [tempeh, p. 391] is a much used product. In East- and Central-Java it takes the same place as the ontjom in West-Java. It is prepared in much the same way as *ontjom,* and the reaction is brought about by the same fungus, *Rhizopus Oryzae,* Went et Prinsen Geerligs, which is transmitted by *ragi.* The seeds are cooked and, after they have cooled, put in a basket. By stirring, rubbing and even by treading, coupled with repeated washing with fresh water, one tries to remove the testa [seed coat / hull] from the seeds. When this has been done, the seeds are put on hurdles (*sasak*) covered with banana- or waroo-leaves. Now the so-called *beeang,* i.e. rests of the fungus used for a former batch, is sprinkled over them and the mass is turned over on other sasaks. The *témpé*-cakes treated in this way are kept indoors and after two or three days the fungus has spread sufficiently for giving a light grey colour to the cakes, which then are soft and dry and ready for use. They are sold on the markets either cut into small pieces or divided at pleasure, according to the amount of money the buyer wishes to spend. *Témpé* is used, fried, in the *sayor* or prepared with all sorts of ingredients.

"Other products for the native market are *tahoo* [tofu] and *takoäh* [pressed tofu; Chinese: doufugan]. Both are eaten either boiled or cut into small slices, fried and added to *gado-gado* or, lombok rawit being added, as a side dish.

"For the preparation of *tahoo* or *takoäh* the seeds are soaked, ground fine, boiled and pressed through a cloth. The juice which is pressed out is mixed with salt, vinegar, coco-nut milk or with unburned gypsum (so-called *batoo tao*), imported from China. By this treatment a white gelatinous mass is formed, which, after cooling, can be cut into pieces."

"Wet *tahoo* does not keep well for a long time. For this reason it is soon made into *takoäh.* For this purpose the *tahoo* is cut into pieces, folded in pieces of cloth, pressed in order to remove part of the water and next boiled in a decoction of koonir [turmeric]. The product obtained in this way has an intense yellow color and is a much relished delicacy, especially with lombok rawit [fiery dwarf chilies]."

Taotjo [Indonesian-style miso] is a porridge made of soybeans and rice meal. The soybeans are soaked, dehulled (the testa removed), cooked, and left to cool. Then they are mixed with the meal of rice (regular or glutinous), which has been previously roasted. "The porridge obtained in this way is poured on winnows (*tampah* [winnowing trays]) covered with waroo-leaves, sprinkled with *ragi* or *beeang,* probably of *Aspergillus Wentii,* Wehmer, and covered with leaves. The filled tampahs are piled on each other and left alone till the cakes are very mouldy. Then they are dried in the sun, soaked in brine and mixed with sirup of *arèn* [sugar palm] and with *tapè* [*tapai;* a sweet fermented cake] of rice or glutinous rice. Next the porridge is placed out of doors. After the seeds have become soft by this treatment, which takes three or four weeks, the *taotjo* is ready for use.

"*Taotjo* must be boiled, otherwise the smell is to strong. It is eaten with cooked or raw vegetables. It is used for dressing some dishes of meat or fish, whilst it is also a material of which diverse side dishes are made."

Note 2. This is the earliest English-language document seen (March 2009) that uses the word "taotjo" to refer to Indonesian-style miso.

"According to De Bie (1901), *tao djee* [*tao dji; doushi, douchi*] is *taotjo* alternating with layers of cooked whole *kadelè*-seeds. This stuff is put into a pot or basin with some salt and boiled arèn-sugar. The mass is left to itself during a few days till the *taotjo* has become pervaded by the salt and the sugar and has assumed a uniformly brown colour. Note 3. *Tao djee* [*doushi*] is fermented black soybeans, which are not the same as *Taotjo* [Indonesian-style miso]. De Bie (1901) seems to have made a mistake.

"Of the black *kadelè*-seeds *soya* [soy sauce] is made, exclusively by the Chinese and the natives. First the seeds are cooked in a strong solution of salt. After diverse manipulations the cooked seeds are mixed with arèn-sugar and so-called soya-condiments and the mixture is concentrated till the salt begins to crystallize. By diluting this product with more or less water one obtains the diverse qualities of *kètjap* or *soya* found in commerce."

The "Pemimpin Pengoesaha tanah" of 15 Jan. 1915 lists various ingredients that can be used with black soybeans in making ketjap. "Young seedlings, obtained, like *taogè* [*taugé,* bean sprouts], by fermenting, are called *ketjambah kedele;* they are cooked and eaten as *petjel* (Jav.) with the rice (*ganteng,* Jav.)"

"Finally young leaves of *Kadele* can be eaten, raw or steamed, as *lalab.*

Page 398 describes *dagè* and *témpé bengook* made from these seeds of the velvet bean (*Mucuna pruriens*). Roasted tempeh are also discussed.

Pages 407-08 states that the seeds of the *Katjang oji* (rice bean) can be used for the preparation of tempeh.

Pages 414-15 state that, when they have no soybeans, the Chinese use mung beans (*Katjang eedjo*) to make tofu and takoah, but they are most widely used to make mung bean sprouts (*taogè*).

Page 634 mentions témpé bosok (overripe tempeh) made with the foul-smelling bruised leaves of the plant *Paederia foetida.* Page 732 also mentions overripe tempeh.

Note 4. This is the earliest English-language document seen (Dec. 1998) which contains detailed information about tempeh, or which refers to tempeh as "témpé."

Note 5. This is the earliest English-language document seen (April 2013) that uses the word "tahoo" or the word "takoäh" to refer to tofu. Address: Buitenzorg (Bogor), Java,

Indonesia.

1455. Ochse, J.J. 1931. Indische Groenten [Vegetables of the Dutch East Indies]. Buitenzorg (Bogor), Java: Department Landbouw. 1005 p. See p. 388-92. Index. Illust. 27 cm. [10 ref. Dut]

• ***Summary:*** For details, see the English-language translation, also published in 1931.

Under soybean utilization, the following food products are discussed in detail on pages 390-92: Tempeh (*tèmpè*), tofu (*tahoe*) and firm tofu (*takoä*), Indonesian-style miso (*taotjo*), fermented black soybeans (*tao dji*), and Indonesian-style soy sauce (*kètjap*). "Témpé is a much used product. In East- and Central-Java it takes the same place as the ontjom in West-Java. It is prepared in much the same way as *ontjom*, the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by *ragi."*

On pages 943-970 is an alphabetical "List of Vernacular Names of Objects, Properties or Actions." For example: Kedele oongaran (p. 390, Jav.) is a soybean plantation on a sawah, immediately following the paddy [rice] harvest. Kedele apeetan (p. 390, Jav.) is the second harvest of the year or the second plantation in the same year of Kedele (soybeans; Glycine Soja). Address: Buitenzorg (Bogor), Java.

• ***Summary:*** Includes a recipe for tofu (*fromage de soja*).

1457. Takenobu, Yoshitaro. ed. 1931. Kenkyusha's new Japanese-English dictionary. 2nd ed. Tokyo: Kenkyusha. iv + 2280 p. 19 cm. Title also in Japanese: *Shin Wa-Ei Daijiten.*

• ***Summary:*** Food words that are not related to soy:

akameshi: see sekihan.

amanatto: sugared red beans [a very popular snack of cooked azuki beans coated with sugar].

ama-zake: sweet liquor (made from fermented rice).

an: bean jam. [an no haitte iru]: stuffed with bean jam. [an o ireru]: to stuff (a cake) with bean-jam. [an ni kurumu]: to cover (a cake) with bean-jam.

anko: bean-jam = an.

anko: not listed.

azuki: a red bean; an India bean. [azuki-iro no]: reddish brown, russet. [azuki meshi] = sekihan.

beni-shôga: not listed.

goma: a sesame; a gingelly (plant); *Sesamum orientale;* a sesame seed. [goma abura]: gingelly oil. [goma-suri]: a flatterer, a toady, a sycophant. [goma o suru]: to pound sesame seeds; to flatter.

gomashio: not listed.

kaiseki: not listed (at least not using modern characters).

kaisô: seaweeds, marine plants; algae.

kombu: a tangle; a tang; a devil's apron. *Laminaria.*

konbu: not listed.

mochi: rice-cake. [mochi-tsuki]: rice-cake making. [mochi o tsuku]: pound boiled [glutinous] for rice-cake. [mochi ni tsuku]: cannot manage (handle); do not know what to do with. [mochitsuki saichû-datta]: we were in the middle of pounding [rice to make] mochi. [mochi wa mochi-ya]: Every man has his forte = Every man to his trade.

nankin-mame: a groundnut; a peanut; a monkey nut.

nori: laver, sloke. [hoshi (ajitsuke) nori]: dried (seasoned) laver.

okowa: not listed.

sekihan: rice boiled together with red beans [azuki beans].

sembei: a cracknel [of wheaten flour]; a rice-cracker; a wafer.

senbei: not listed.

shiruko: red-bean soup with rice cake. [shiruko-ya]: a *shiruko* shop.

shôjin (3): abstinence from animal food; religious abstinence; lenten fare; vegetable diet; maigre food. [shôjin ryôri]: a vegetable diet. [Nihon no sôryo wa taitei shôjin o suru]: Most of Japanese priests are vegetarians. [Uchi de wa kinyôbi wa shôjin de gozaimasu]: At my home we eat vegetarian meals on Friday.

soramame: A broad bean; a horse bean; a straight bean.

wakame: *Undaria pinnatifida.*

zôni: rice-cake boiled with vegetables. [zôni on iwau]: take the New Year's breakfast of rice cakes boiled with vegetables [to celebrate New Year's Day with zoni (mochi soup)]. Address: General editor, Japan.

1458. Takenobu, Yoshitaro. ed. 1931. Kenkyusha's new Japanese-English dictionary. 2nd ed. Tokyo: Kenkyusha. iv + 2280 p. 19 cm. Title also in Japanese: *Shin Wa-Ei Daijiten.* [Eng; jap]

• ***Summary:*** The first edition of this dictionary (titled *Takenobu's Japanese-English Dictionary*) was published in 1918. In 1931, Kenkyusha undertook a major revision in the dictionary by expanding upon former entries and adding newer ones. The British diplomat George Sansom, who later became a renowned historian of Japan, was a major contributor to and editor of this 2nd edition.

Soy related words:

abura[a]ge = aburaage or aburage: fried bean-curd. [Tonbi ni aburaage o sarawareta yôni]: with a stupid look of surprise. [literally, as when a kite {a bird of prey} snatches away your aburaage]. This is the earliest English-language document seen (April 2013) that uses the word *aburaage* to refer to deep-fried tofu pouches.

atsuage: not listed.

age [tôfu]: fried bean-curd.

© Copyright Soyinfo Center 2013

ama-miso: not listed.
Daitokuji-natto: not listed.
daizu: a soya (soy) bean. [daizu kasu]: a [soy] bean cake [a co-product of soy bean oil].
daizu abura: not listed.
dengaku: baked bean-curd daubed with miso. [dengaku-zashi ni sareru]: to be transfixed; be pierced through (with a spear).
eda-mame: green soy-beans.
ganmo: not listed.
ganmodoki: not listed.
Hamana-natto: not listed.
Hama-natto: not listed.
hiryozu: not listed.
[inari-zushi]: a kind of 'sushi' (fried bean-curd stuffed with boiled rice).
kinugoshi no: strained through silk cloth [no mention of tofu].
kogori-dôfu: not listed.
koi-kuchi [shoyu]: not listed.
kôji: malt (mugi); yeast; leaven (kôbo); [kôji-ya]: a maltster [a maker of kôji]. [kôji ni suru]: [to] malt.
kôri-dôfu: frozen bean-curds.
kuro-mame: a black soy-bean.
miso (chomiryô = seasoning): bean paste; miso.
[miso shiru]: miso soup.
[miso o kakeru]: to put miso on (some food); (shuppai suru): to make a mess (sad work) of it; put one's foot in it.
[]: mash the miso.
[]: to speak meanly of (a person); speak of (a person) in the most disparaging terms; say everything bad about (a person); denounce scathingly (roundly).
[]: a pretty mess you have made of it. [miso mo kuso mo isshoni suru]: his ideas are confused; He confuses one thing with another. [miso no miso kusaki wa, jô miso ni arazu]: The secret of art lies in concealing art [Akiko never heard this saying].
misokoshi: a miso strainer. [misokoshi de mizu o sukuu]: weave a rope of sand; attempt impossibilities [literally, to try to scoop up water with a miso strainer].
miso-mame: a soja (soy) bean.
miso-zuke: anything pickled in miso.
momen: cotton [no mention of tofu].
nama-age: not listed.
nattô: fermented soy-beans.
nigari: bittern, brine. [nori no tsukudani]: laver boiled down in soy [sauce].
oboro: not listed.
okabe: not listed.
okara: not listed.
saishikomi [shoyu]: not listed.
shimi-dôfu: not listed.
shiro-shoyu: not listed.
shitaji: soy [shitaji sosogi]: a soy pot [soy sauce dispenser].
shôyu: soy [sauce].
suki-yaki: sukiyaki: slices of beef cooked *à la japonaise.* Note: Grilled tofu is an essential ingredient in sukiyaki but is not mentioned in the definition.
tamari: (a kind of) soy.
tôfu: bean-curds; tôfu.
[tofu itcho]: a piece (cake) of bean-curds.
[tofu-ya]: a bean-curds dealer (seller).
[kare ni iken shita totte, tôfu ni kasugai da]: advice to him is like water sliding off a duck's back. It is a mere waste of words (It is just as well to pour water into a sieve) to advise him.
[tofu-ya e ni ri, saka-ya e san ri to iu tokoro da]: there is no human habitation within five miles of the place. [It's out in the boondocks].
unohana: (1) Flowers of the *Deutzia scabra.* (2) [tofu no kara]: bean-curd refuse.
usukuchi shoyu: not listed.
yaki-dôfu: broiled bean-curd.
yuba: dried bean-curds [sic, the film that forms atop soymilk when it is heated].
Note: This is the earliest English-language document seen (April 2013) that uses the term "broiled bean curd" to refer to grilled tofu. Address: General editor, Japan.

1459. Woodhead, Henry George Wandesforde. 1931. China year book. Shanghai, China: North China Daily News & Herald. xiv + 728 p.
• ***Summary:*** In Chapter 7 is a long section on "Soy-beans and products" (p. 133-37), which includes: History of the soybean in China and Europe, the different types of soy-beans, bean cake and bean oil are the other main articles of trade, overview of exports, graph (p. 135) of exports (in piculs) from all of China in 1927, 1928, and 1929, Manchuria's soy-bean crop in 1929 divided into South Manchuria and North Manchuria (production in the latter region is 50% larger than in South Manchuria), tables showing export of beans, bean meal and cake (in piculs and Hk. taels) in 1928 and 1929; the main types exported in 1929 are (in million piculs, in descending order of predominance): Yellow [soy] beans 41.015 Bean cake [soy] 18.715. Read beans [azuki?] 1.274. Broad beans 1.165. Bean meal [soy] 0.654. Green [small = mung] beans 0.564. Green [soy] beans 0.347. Black [soy] beans 0.261. White beans 0.218.

Li Yu-ying is mentioned in three places: Page 454 (left column), under Academia Sinica: "In May, 1927, Dr. Ts'ai Yuan-p'ei, Mr. Li Yu-ying and Mr. Chang Jen-chieh–all veteran Kuomintang leaders–were commissioned by the Nationalist Government to draw up plans for the establishment of a National Central Academy for Scientific Research." The various organs of the Academia Sinica are "in the three cultural centres of Nanking, Shanghai, and Peking."

© Copyright Soyinfo Center 2013

Page 584 (both): Li is listed as a member of the Central Supervisory Committee, and of the Central Political Council.

Page 626 (right), a biography of Li states: "Courtesy name: Shih-tseng. Born 1882; native of Kaoyang, Chihli. Studied in France and established first beancurd [tofu] factory at Paris; associated with Wu Chih-hui, Wang Chao-ming, Ts'ai Yuan-p'ei and other revolutionary leaders. One of the most influential Kuomintang's 'Elder Statesmen.' 1919, dean, law department, Peking National University. 1928, chairman, Peking branch, Kuomintang Central Political Council. Member, Kuomintang Central Supervisory Committee, since 1924. Member, Kuomintang Central Political Council, since 1926. Aug. 1928 to Nov. 1930, president Peking National University. President, Franco-Chinese University, Peking, since 1925." Address: C.B.E., China.

1460. Yang, Ximeng; Tao, Menghe. 1931. A study of the standard of living of working families in Shanghai. Peiping: Institute of Social Research. 86 + lvi p. See p. xxxii. 23 cm. Series: Social Research Publications, Monograph No. III. Facsimile edition reprinted in 1982 by Garland Publ. Co. (New York). [40 ref]

• ***Summary:*** Note 1. On the title page, the authors' names are given as Simon Yang and L.K. Tao.

Contents: Part I: General results. Part II: Statistical tables.

In Part I, section IX is titled "The standard of living food" (p. 47-55). The 2nd most important type of food, after "(a) Cereals and products" is "(b) Legumes and products," which states (p. 48): "Of beans, the young soy bean (Chinese characters: mao dou) formed the principal kind, but among the bean products, bean sprouts, bean curds of various makes and mung bean starch were consumed in considerable quantities."

Page 49: "(g) Fat and oil: Bean oil [soy] formed the most important article in this class, of which the average consumption was 4.78 catties (2.8 kg) per family per month. Lard, the second in order, lagged far behind..."

"(h) Condiments: Salt and soy sauce were the principal articles of this class."

Page 50: Whereas rice accounts of 44.6% of total expenses, legumes and products account for only 7.6%. More rice and legume statistics appear on page 53.

In Part II, "Statistical tables," six long tables mention soy as follows: I. "Average quantity of and expenditure for the principal articles purchased per family per month, by income groups" (p. ii-iii): Yellow soy bean sprouts, 0.15 expenditures. Soy bean curd, 0.26. Sheet bean curd, 0.18 [pressed tofu sheets, pai-yeh or ch'ien-chang]. Bean curd, fried, 0.10. Bean curd, dried [doufu gan] 0.16. Soy bean oil, 1.19. Soy bean sauce 0.38.

II. "Average quantity of and expenditure for the principal articles purchased per family in each of the twelve months under investigation (p. viii-xxx): There are entries for: Yellow soy bean sprouts, 1.87 annual expenses. Soy bean curd, 3.14. Sheet bean curd, 2.15. Bean curd, fried, 1.19. Bean curd, dried [doufu gan] 1.95. Yellow soy bean, 0.38. Young soy beans with pods [mao dou, edamame], 0.81.

III. "Average quantity of and expenditure for the "other" articles of food purchased per family in a year" (p. xxxii, xxxvii). Bean curd, fermented, odorous, 0.05 annual expense [ch'ou toufu]. Soy bean milk, 0.17. Fried beans, with salt, 0.21. Fermented bean curd, fried, 0.05. Bean curd skin, 0.02. Bean curd, fermented, with fragrant malt, 0.05. Bean curd, frozen, <0.005 [tung-toufu, ping-toufu]. Bean curd skin, cooked in skein forms, <0.005. Dried bean curd, fried, 0.005. Bean curd, fermented, 0.6. Soft bean curd, 0.05. Soy bean dregs, 0.02 [okara?]. Sheet bean curd, in skein [netlike] forms, > 0.005. Soy bean paste, 0.01.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the word "odorous" or the term "Bean curd, fermented, odorous" to refer to *ch'ou toufu*.

VI. "Average quantity and fuel value of food consumed per family in a year" (p. l-li). This table has 6 columns. (1) Classes and articles of food. (2) Quantity, total (grams). (3) Quantity of protein, grams. (4) Quantity of fat, grams. (5) Quantity of carbohydrates, grams. (6) Fuel value, calories. Note 2. For soy products we will give only the quantity / amount purchased each year per person in grams. Yellow soy bean sprouts, 34,229. Soy bean curd, 55,080. Sheet bean curd 8,34. Bean curd, fried, 6,163. Bean curd, dried, 13,218. Yellow soy bean, 2,407. Mung bean sprouts, 15,257. Note 3. The weight of mung bean sprouts purchased was less than half (44.5%) the weight of yellow soy bean sprouts purchased. Young soy beans with pods, 7,180. Bean curd, fermented, odorous, 364. Soy bean milk, 6,963.

At the end of the book is a very interesting bibliography of the best books on China's economic and social development, divided into these periods: China during the interregnum [Republic of China] (1912-1949). Modern Chinese economy: The late imperial period (late 19th and early 20th centuries), the agrarian economy, foreign trade and investment, 20th century economic development, labor and the economy. The wartime economy and postwar problems.

Note 4. This book would have been much more useful if the Chinese names of these foods (in both Chinese characters, and transliterated) had been given. We are unsure of the exact identity of: (1) Fried beans with salt. Are these salted, oil-roasted soybeans? (2) Bean curd fermented with fragrant malt vs. bean curd, fermented, odorous. Address: China.

1461. La Sierra Industries. 1931? La Sierra soy bean products (Leaflet). Arlington, California. LSI. 3 panels each side. Each panel: 22 x 9 cm. Undated. [2 ref]

• ***Summary:*** Gives a 6-7 line description of each of the

© Copyright Soyinfo Center 2013

following products prepared by the company in Arlington: Soy Beans (canned, plain or with tomato sauce), Soy-Co, Soy Flour, Mamenoka [roasted soy flour], Soy Milk, Soy Cheese, Soy Loaf, Soy Bologna, Soy Sandwich Spread, Smoein, Soy Bean Butter [soynut butter], Soy Bean Breakfast Food.

"Smoein is a smoked vegetable protein made from legumes which have been toasted and smoked in the old fashioned way, giving the flavor of smoked meats. It is an excellent seasoning for soups, gravies, entrees, eggs and any food in which a smoked flavor is desirable.

"Soy Bean Butter is similar to peanut butter, however it does not contain any nuts. It may be served plain or mixed with water to dilute. A delicious spread is made by mixing equal parts of honey and soy bean butter." Note 1. This product is almost surely soynut butter. If so, this is the earliest English-language document seen (Dec. 2012) that uses the term "soy bean butter" to refer to soynut butter.

Note 2. This is the earliest published document seen (Sept. 2000) related to T.A. Van Gundy or his company, La Sierra Foods. Note 3. This is the earliest English-language publication seen (April 2013) that uses the term "Soy Cheese" to refer to tofu. T.A. Van Gundy coined and later frequently used the term "soy cheese" to refer to tofu.

Note 4. This is the earliest English-language document seen (Nov. 2012) that uses the word "Mamenoka" to refer to roasted soybean flour. It is a variation on or misspelling of the Japanese term *mame no ko* meaning "flour of [soy] bean."

Note 5. This is the earliest English-language document seen (Nov. 2012) that uses the word "toasted" in connection with roasted soy flour. Address: Arlington, California.

1462. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1932/01. Nichibei jûshoroku [The Japanese American directory. No 28]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

1463. **Product Name:** Tofu.
Manufacturer's Name: Nagahama Tofu-ten.
Manufacturer's Address: 1421 Kern St., Fresno, California. Phone: 2-2960.
Date of Introduction: 1932. January.
New Product–Documentation: The Japanese American Directory. 1932. p. 257. Note: Kawamoto Tofu-ya made tofu at this address in 1926. We do not yet know what happened from 1927 to 1931. Also in 1934, p. 239. Also in 1936, p. 286. Also in 1937, p. 248. Also in 1938, p. 272. Also in 1939, p. 271. Also in 1940, p. 271.

The Japanese American Directory. 1941. p. 257. Nagahama Tofu-ten (in characters), Nagahama Tofu Shop, 1421 Kern St. (in English), Fresno, California. Phone: 28-232. Residence (p. 275): Z. Nagahama, 1421 Kern St. Note: Nakaoka Tofu-ten was at this address in 1930.

Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Dec. 4. He has heard from Japanese-American old-timers living in Fresno that there was a tofu shop named Nagahama located in Fresno after World War II.

Letter from A.M. Araki. 1990. Dec. 31. "I came to the USA in Aug. 1920. At that time in Fresno there were two tofu shops in Japantown: Yokota Tofu-ten, and Nakaoka Tofu-ten. The owner of Nakaoka Tofu-ten died in about 1922, so the company was taken over by Mr. Zenkichi Nagahama, who renamed it Nagahama Tofu-ten, and ran it for about 20 years until 1942."

1464. **Product Name:** Tofu.
Manufacturer's Name: Sakumura Tofu-ya.
Manufacturer's Address: 1411 4th St., Sacramento, California. Phone: Main 4432-J.
Date of Introduction: 1932. January.
New Product–Documentation: The Japanese American Directory. 1932, p. 169. Note: In 1920 (p. 158) there was a company with this same name making tofu at 74 Japanese Alley in Sacramento. Phone: Main 2162-J. It is unclear whether there is any relationship between these two companies. Also in 1937, p. 173. Also in 1938, p. 190.

1465. **Product Name:** Tofu.
Manufacturer's Name: Yamasaki Tofu-ya.
Manufacturer's Address: 74 Japanese Alley, Sacramento, California. Phone: Main 2162.
Date of Introduction: 1932. January.
New Product–Documentation: The Japanese American Directory. 1932. p. 169. Company name is in Japanese: Yamasaki or Yamazaki. In English: 74 Japanese Alley, Sacramento. Phone: Main 2162. Note: Kitamura Tofu-ya was at this address in 1930. Also in 1934, p. 172.

Also in 1937, p. 173. Also in 1938, p. 190. Also in 1939, p. 189. Also in 1940, p. 187. Also in 1941, p. 189.

1466. **Product Name:** Tofu.
Manufacturer's Name: Yoshizato Tofu-ten.
Manufacturer's Address: 635 North 6th Street, San Jose, California.
Date of Introduction: 1932. January.
New Product–Documentation: The Japanese American Directory. 1932. p. 111. No phone. Also in 1936, p. 139. The phone is now BAllard 7365. Also in 1937, p. 110. Also in 1938, p. 119. Also in 1939, p. 120. Also in 1940, p. 117.

Shin Sekai-sha. 1940. *Zaibei Nippon-jin Kan* (*Directory*

of Japanese in the USA). p. 116-17. In the 1922 directory another tofu company (the pronunciation of whose named is not known) was listed at this address.

The Japanese American Directory. 1941. p. 120. Yoshizato Tofu-ten, 635 N. 6th St. Phone: Ballard 7365.

1467. Hansen, J.E. 1932. A variety of foods from the soybean. *Madison Survey* (*Madison, Tennessee*). Jan. 27. p. 15. [1 ref]
• ***Summary:*** "Were our readers visiting the Madison Food Factory, they would be surprised to learn of the many ways in which the soybean is used. Bread, crackers, milk, and cheese are made from this important bean. The flour is ground on the hammer mill in the factory... Roasts, bean loaf, and croquettes are made from it. Ice cream made from the soybean is delicious." Address: Madison College, Tennessee.

1468. Ch'en, Shen-Chao; Adolph, William H. 1932. Bone building potency of soy bean diets. *Chinese J. of Physiology* 6(1):59-62. Jan. [6 ref. Eng; chi]
• ***Summary:*** "Read before the Fifth Annual Meeting of the Chinese Physiological Society... at Peiping, February 16-18, 1931.

"In connection with our interest in the use of soy bean milk in nutrition, experiments were projected for the purpose of evaluating the bone building properties of soy bean product and comparing them with cows' milk."

Cow's milk, soy bean milk, and soy bean curd (tofu) were added to a rachitic diet. Cow's milk was shown to be decidedly superior to soy bean milk in preventing rickets. Cow's milk itself does not rank high as an anti-rachitic food. Thus soy bean milk, when used in infant feeding, should be amply supplemented with both calcium and vitamin D. Soy bean milk seems to be slightly superior to soy bean curd in bone-building capacity. Address: Dep. of Chemistry, Yenching Univ., Peiping, China.

1469. André, E.; Hou, Kia-wo (Hu, Chia-mo). 1932. Sur la présence d'une oxydase des lipides ou lipoxydase dans la graine de soja, *Glycine soja* Lieb. [On the presence of a lipid/lipoid oxydase or lipoxydase in the soy bean]. *Comptes Rendus des Seances de l'Academie des Sciences* (*Paris*) 194(7):645-47. Feb. 15. (Chem. Abst. 26:3004). [Fre]
• ***Summary:*** The authors coin the term "lipoxydase" [in French] based on comparing the composition of oil extracted from soy flour, tofu, and okara. Exposure to the air of the unboiled residue from the preparation of soya-bean "milk" causes an increase in density and acetate value and a decrease in iodine value of the ethyl ether extract as compared with the corresponding values for the boiled material. This is believed to indicate the presence of a lipid oxidase.

Note: This is the earliest document seen (July 2003) that mentions "lipoxydase" (or "lipoxidase"), an enzyme which was first reported in soybeans. Address: France.

1470. Manners, Marian. 1932. Today's menu. *Los Angeles Times.* March 14. p. A7.

Over de beteekenis van de sojaboon als handelsproduct [On the commercial significance of the soybean as a commodity]. *Landbouw* (*Buitenzorg, Java*) 7(9):571-96. March. English-language summary, p. 743-74. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeeling Landbouw. p. 5-30, 177-78. [1 ref. Dut; eng]
• ***Summary:*** "Annually Java requires considerable quantities of the soybean, about one half of which is imported... On Java the soybean is used principally for the preparation of soy sauce (*soja of ketjap*), tahoe, tempe, and taotjo (various dietary preparations). Our investigations have proven that the Java-grown soybean can be used for making ketjap, tahoe and tempe just as effectively as the imported soybean. In western Java the manufacturers of soy prefer the imported article, those in central and eastern Java prefer the home-grown bean. This preference, which must be attributed chiefly to habit and conservatism, is also partially to be ascribed to the fact that in western Java but little of this article is grown, whilst in central and eastern Java the production is much more considerable, which causes the former region to be more dependent upon the imported article than the latter districts. For the preparation of tahoe a certain preference is indeed shown for the imported bean, in view of the greater keeping properties of the article prepared therefrom; nevertheless, the soybean grown on Java is also widely used for that purpose. The same holds good for the preparation of tempe, where the imported article is preferred chiefly on account of its larger size. Generally speaking, the imported kinds of soybean are preferred for the preparation of tahoe and tempe because they satisfy to a greater extent the demands of the manufacturers, and also because they are readily obtainable. Taotjo, however, is practically exclusively prepared from the imported bean.

"The general conclusion is that the imported soybean can be replaced, if not entirely, at a rate to a very great extent by the soybean grown on Java, thus indicating that the furtherance of its cultivation in this country can only be of advantage...

"The principal import harbours are Semarang [Central Java], Sourabaia [Surabaya], Tandjong Priok, Tjilatjap, and Cheribon." Address: 1. fd. Hoofd van Afdeeling Handel te Buitenzorg; 2. Vakkundig Ambtenaar bij de Afdeeling Handel, Java.

1472. Concepcion, Isabelo. 1932. The greater significance of soy bean in the Filipino dietary. *J. of the Philippine Islands Medical Association* 12(3):97-106. March. [9 ref]
• ***Summary:*** "Read in the Symposium on Nutrition... Manila Medical Society on January 25, 1932." The Philippine diet is considered deficient in animal protein, calcium, vitamins (especially thiamine, leading to beriberi), and fat. One of the foods which can help solve these nutritional problems "and which is available in large quantities in this country is the soy bean (*Glycine max*), or what is commonly known as Chinese *balatong.* Since time immemorial this article of food has been well known in this country but people have not sufficiently taken advantage of its good dietary qualities... Dr. Manuel L. Roxas, Director of the Bureau of Plant Industry, says 'soy beans are grown in large quantities in Batangas [on the southern tip of the main Philippine island of Luzon] and will grow almost anywhere in the Philippines. The green pods are harvested in October and November and the dried seeds may be had in bulk in December and January.' Statistics show that the production of soy beans in the Philippines increased from 2,481 tons in 1921 to 4,218 tons in 1930, and importations from 1924 to 1930 gave a recorded increase of 4,657 tons. These figures indicate that consumption of soy beans has grown faster than production. They also clearly indicate a growing appreciation of the soy bean in this country. I am convinced, however, that greater efforts toward its popularization among the laity should be exerted, so that we might make it one of our staple foodstuffs."

Tofu is shown to be a good source of minerals, especially calcium. A diagram from Piper and Morse (1923) shows the various ways in which the plants and seeds of soy beans are utilized. A detailed discussion of the value of soy flour and soy milk is given. "The introduction of soy-bean flour as a constituent of bread, muffins, macaroni, biscuits, crackers, etc. not only is desirable but also will diminish tremendously our importations of flour, which are increasing every year."

"Compared with cow's milk, soy-bean milk has in its favor the following points: (1) Soy bean milk can be produced with less contamination; (2) it is free from infection by tuberculosis; (3) its casein breaks down much more readily than the casein of cow's milk and does not form curds in the stomach in the same degree; (4) it is much cheaper than cow's milk. At the present market price the cost of a liter of soy-bean milk is only 0.03 pesos compared with 0.30 pesos for either fresh or artificial milk."

"With a well-laid-out campaign to promote the intelligent use of soy beans, it is probable that inside of ten years the food and population problem will be well out of the way for centuries to come." Address: Dep. of Physiology and Biochemistry, College of Medicine, Univ. of the Philippines.

1473. Donath, W.F. 1932. De voedingswaarde der sojaboon en enkele daaruit bereide specifiek Indische voedingsmiddelen [The nutritive value of soybeans and some specifically East Indian foods prepared from them]. *Landbouw* (*Buitenzorg, Java*) 7(9):705-40. March. English-language summary, p. 759-61. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeeling Landbouw. p. 139-74, 193-95. [48 ref. Dut; eng]
• ***Summary:*** Discusses the composition of the soybean. "In contrast with Manchuria, where it is a common article of diet, the soybean is rarely used as such in these parts; but by means of various operations, among which is the action of certain fungi, several products are prepared from it.

"These products, such as *tempe kedele, taotjo, tahoe, taokoan* and *ketjap* are important items in the native diet. Except for the last mentioned, the preparation of these products is such that the albumins are preserved practically intact, so that, especially in tempe, as we were able to point out, the biological albumin value is very high...

"Soymeal, which is prepared by removing the husks and then pounding what is left, has the drawback that it tastes somewhat bitter and, in consequence of the high percentage of fat, soon becomes rancid... Berczeller, however, seems to have succeeded in obtaining an improved soy meal...

"Finally, in discussing the importance for the native diet of these beans and the products prepared from them, the author arrives at the conclusion that it is especially the albumins that are important, the people being practically vegetarian and these foods being, in addition, rich in carbohydrates.

"Thus the author expresses his approval of the fact that of late years the *Department of Agriculture, Industry and Commerce* has advocated the growing of the soybean and the consumption of the products prepared therefrom."

Note 1. This is the earliest English-language document seen (the summary) (Sept. 2005) that contains the word "soymeal," which apparently refers to whole (full-fat) soybean flour.

Note 2. This is the earliest document seen (April 2001) that contains the word *taokoan.* Address: Hoofd van het Analyselaboratorium te Buitenzorg, Java.

1474. *Times* (*London*). 1932. Famine camps in China: Yangtze flood victims. The living among the dead. April 6. p. 15, col. 6.
• ***Summary:*** From a correspondent at Hankow. Last summer floods in southern China "devastated areas larger than England and rendered destitute at least 10,000,000 people." But the situation is still desperate.

The section titled "Relief work" states: "Everyone is baffled by the inequalities of the situation... All round the camps there are sellers of food–oranges and peanuts, bean curd, fish, and meat." Some groups of people enjoyed fairly good meals, while others ate rice husks and dry grass. "I was

© Copyright Soyinfo Center 2013

amazed at the passive acceptance of misery." A map shows the area between Shanghai and Hankow.

1475. Dugard, Jean. 1932. La valeur alimentaire et industrielle du soja [The food and industrial value of soya]. *Genie Civil* (*Le*) 100(17):419-20. April 23. [3 ref. Fre]
• ***Summary:*** Contents: Introduction. *USDA Farmers' Bulletin* No. 1617, by W.J. Morse. Botanical characteristics of the soybean. Composition and food value of the soybean. Products derived from soya eaten by humans: Tofu, soy oil, shoyu [soy sauce] (called "soy" in English), soy flour, soy sprouts, miso, natto. The use of soya as forage. Industrial uses of soy oil and cake. The soybean in western Europe: Hansamuehle in Hamburg, Germany; Englehardt & Cie. in Frankfurt, Germany (making powdered soymilk, soy caseine, soy lecithin, etc.); Soybean cake used for animal feed in England, Denmark, Holland, Sweden, and–above all–in Germany, where more than 2 million tons/year are consumed.

1476. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times.* April 24. p. I20. Sunday magazine.
• ***Summary:*** In the section titled "Soy bean" (p. 21) the following letter is reprinted in full: "Torrance, California. Dear Dr. Lovell. In the health section of the Los Angeles Times Magazine several weeks ago I read an article about soy beans.

"As a Japanese farmer I raised and used soy beans for many years but since coming to this country I have not seen soy beans grown. I believe this is too bad, as I believe soy beans are a valuable crop.

"For many centuries the people in Japan used this product for their main supply of protein. They also used it for nitrogen for their lands.

"Contrary to common belief, the Japanese have not used much fish for their diet and no animal meat at all, for Buddhism does not recommend its followers to kill and eat their fellow animals.

"Many due to Buddhism or the difficulty in transporting fresh fish, did not use much fish. The only thing they could depend upon for the protein was a cake made of soy beans, called tofu. We also make a sauce of the soy beans [soy sauce].

"In the Orient this is a staple crop. The farmers raise it as one of the rotating crops. I should really like to see more soy beans raised here but on account of the lack of popular usage there is not much demand for them.

"Could you give me more information about the use of this product which would appeal to the popular taste? I would appreciate it very much.

"Sincerely yours, Tatsuo Inouje [Inouye].

Lovell responds that, as he has stated before, 80% of the people worldwide are "vegetarians, either by religion or economic necessity." The Japanese are a progressive race. What they have accomplished during the past 70-80 years is "a miracle of the century. Yet they have done it essentially on a vegetarian diet."

The soy bean has replaced animal protein for the Japanese and for most followers of Buddhists and Confucianism. "It is the roast beef of the Orient. It contains twice as much protein as the richest of meats. It is a very fine food indeed. The health food stores are slowly building up a sale for it. Recently I ran across a soy bean bread. I believe the average health food store can procure it." Address: N.D. [Naturopathic Doctor].

1477. Cruz, Aurelio O.; West, Augustus P. 1932. Composition of Philippine soy beans and soy-bean oil. *Philippine J. of Science* 48(1):77-88. May. [32 ref]
• ***Summary:*** In 1930 the Philippines produced 4,218 tons of soybeans. In 1911 O.W. Barrett, Chief of the Division of Experiment Stations, Philippine Bureau of Agriculture, strongly encouraged the Philippine Agriculturist to "to take up soy bean culture in earnest." But 20 years "after this advice was given we find the Philippines are producing an annual yield of only a few thousand tons of soy beans although, as shown by experiments, this is a very suitable and appropriate crop for this country. With this idea in view," in 1931 staff members of the Philippine Bureau of Science wrote various newspaper articles to popularize soybeans and gave a display of food products made from soy beans at carnival in Manila.

A short survey of the nutritional factors of soy beans is given. The Philippine beans are rich in fats (20%), proteins (39.1%), and carbohydrates (24.96%). The oil had iodine value 128.4, saponification value 193.3, unsaponifiable matter 1.0%, unsaturated fatty acids (corrected) 81.5% (iodine value 151.3), saturated fatty acids (corrected) 12.65%. The composition of the fatty acids is given as: (α-)linolenic 2.1%, linoleic 53.0%, oleic 30.1%, palmitic 8.9%, stearic 3.8%, and arachidic 0.6%. Address: Bureau of Science, Manila.

1478. Williams, Edward Thomas. 1932. China yesterday and to-day. 5th ed., revised. New York, NY: Thomas Y. Crowell Co. xxiv + 743 p. Illust. (plates). Portraits. Map. Index. 22 cm. Previous editions were 1923, 1927, 1929. [369* ref]
• ***Summary:*** This remarkable, sympathetic and very comprehensive book has been revised to May 1932. The author has lived for many years in China, starting before the downfall of the Manchu Dynasty, and for 35 years has had close association with Chinese affairs. The 1st edition was published in 1923. While focusing on the Era of Reform (1902-1911) and the period of the Chinese Republic, established on 1 Jan. 1912 by Sun Yat-sen, the book contains many interesting features and appendixes, including a chronology of "Important dates in Chinese history" (p. 673-680a), and a lengthy bibliography.

© Copyright Soyinfo Center 2013

In Chapter 8, "The Craftsman," the section titled "Bean curd" states (p. 174-75): "I stopped at a neighboring door to watch a great, lazy-looking water buffalo turning a heavy mill-stone grinding beans. In a shop down the street the bean flour was being cooked, mixed with a little gypsum and turmeric to curdle it. The cooked paste, wrapped in cloths, was placed in a cheese press from which, after it should be properly solidified, it would be taken, cut into small cakes, and exposed for sale. It is the cheese of the Chinese and a very popular article of diet, rightly so, indeed, in a land where meat is too dear a luxury to be the daily food of the poor. There are several varieties of this bean-curd; one known as the 'stinking bean-curd' rivals the choicest cheeses of Europe in odor.

"At an oil-mill another variety of [soy] beans was being ground and pressed for its oil. The refuse finds a ready sale for fertilizing purpose. Vegetable oils are in great demand in China for culinary and other domestic purposes, animal fats not being abundant enough to supply the need. Besides [soy] beans, cotton-seed, rape-seed, peanuts, a variety of tea, or camellia seed, hemp-seed, sesamum, seed of the castor oil plant and nuts of the wood-oil tree are all used for this purpose. The oils of the cotton, rape, beans, hemp and peanut are all used in cooking, and the bean and rape-seed oils are also used for lamps [illumination]. The lamp of the poor man is merely a shallow cup with a spout at one side, like the classic lamp of ancient Rome. A piece of rush pith is placed in it for a wick. The soja bean is used for making soy, the common sauce of the rich and poor alike. It is said to have been suggested to the English [for] the manufacture of their Worcestershire and other sauces."

Note: This is also the earliest English-language document seen (Oct. 2011) that contains the term "stinking bean-curd." Address: Agassiz Prof. of Oriental Languages and Literature, Univ. of California, Berkeley, California; Formerly American Chargé d'Affaires, Peking, China; Recently Chief of the Div. of Far Eastern Affairs, Dep. of State (U.S.).

1479. Krauss, F.G. 1932. Soybeans, their culture and uses in Hawaii. *Hawaii Agricultural College, Extension Service, Agricultural Notes* No. 24. 4 p. June 21.
• ***Summary:*** Contents: Introduction. Cultural methods. Fertilization. Inoculation. Time to plant. Distances to plant and rate of seeding. Varieties. Harvesting. Soy beans for soil improvement.

"The soy bean is destined to become an important supplementary crop in Hawaii's increasingly diversified agriculture." "As human food, the soy bean may be cooked either green or dried like snap or shell beans, and as such offer possibilities for canning commercially. The mature seeds are also ground into culinary meals and bolted for flour. The Orientals utilize vast quantities of soy beans for the manufacture of a number of nutritious and highly-priced foodstuffs, including the well-known tofu, miso, and soy sauce. The Japanese of Hawaii import about $70,000 worth of the beans annually from Japan for the above purposes, the manufacture of which could be greatly extended if the soy bean were grown locally. A considerable amount of soy bean cake meal is also imported for poultry and dairy stock feeding. It is estimated that Hawaii could consume to advantage at least a half million dollars worth of soy bean products annually if the crop were grown extensively enough."

1480. Adolph, Wm. H.; Chen, Shen-Chao. 1932. The utilization of calcium in soy bean diets. *J. of Nutrition* 5(4):379-85. July. [10 ref]
• ***Summary:*** "A dairy industry in China is essentially non-existent and at present is economically impossible. Moreover, the cost of raw milk, or of imported milk, either in tins or in the form of dried powder, is far beyond the reach of the average purse. The dangers of calcium of calcium deficiency are somewhat mitigated by the fact that breast feeding is continued till the infant is three or four years old, but for the remainder of the growth period and for the entire period of adult maintenance the individual is dependent upon calcium derived from vegetable sources. A very considerable amount of this calcium is supplied by soy bean products. Soy bean curd (soy bean cheese) would seem to have filled, in part, the place which milk has occupied in the Occident. Recent years have seen an extended use of the closely related food product, soy bean milk, which has been successfully applied to infant feeding."

Using the method of metabolic balance in experiments with human subjects, the authors reported good utilization of the calcium in soybean curd. They also found cows' milk and soya bean to be equally effective sources of calcium for Chinese adults. The attainment of a calcium equilibrium was facilitated by increasing the protein intake. Address: Dep. of Chemistry, Yenching Univ., Peiping, China.

1481. Laird, Clinton N. 1932. Bean curd as a sole source of nourishment. *Lingnan Science Journal* 11(3):469. July.
• ***Summary:*** "In the period between 1921 and 1924 several experiments were conducted in which bean curd or to-fu, made from soya beans, was used as the food..." for rats. "The animals grew well, but in most cases developed intestinal trouble largely as a result of the absence of roughage. The does [females] died when about seven months old, but the bucks lived longer... There was no reproduction."

A "yellow dye is obtained by extracting with water the seeds of *Gardenia jasminoides* Ellis (or *Gardenia florida* Linn), which grows wild in this part of China. The dye has been used for staining bean curd and cakes for a long time, is mentioned in the Chinese Pharmacopoeia, and was used as a dye for cloth before synthetic dyestuffs were imported."

1482. Adolph, William H.; Kao, Hsueh-chung. 1932. Hemoglobin-building properties of soy bean products. *Chinese J. of Physiology* 6(3):257-63. Aug. [5 ref. Eng; chi]
• ***Summary:*** "Our attention was recently directed to a statement that soy bean cheese (soy bean curd) has been regarded by the Chinese as a cure for anemia... Examination of the mineral constituents of the soy bean, and also of soy bean cheese and soy bean milk, has revealed the fact that these materials all contain decided amounts of both copper and iron."

Soya-bean products had a curative action on rats rendered anemic by an exclusive diet of cows' milk. Analyses of these products indicated an appreciable iron and copper content. The rate of recovery appeared to be approximately proportional to the iron and copper content of the ingested food, but it could not be said that the soya-bean products owed their curative activity to the presence of these metals.

Note: *Webster's Dictionary* defines anemia (derived from New Latin, via the Greek *anaimia* = bloodlessness), a word first used in 1807, as "1a: a condition in which the blood is deficient in red blood cells, in hemoglobin, or in total volume; b: Ischemia. 2: lack of vitality." Address: Dep. of Chemistry, Yenching Univ., Peiping, China.

1483. Horvath, A.A. 1932. El frijol "Soya" como alimento nacional [The soybean as a national food]. *Revista de Agricultura, Comercio y Trabajo* (*Cuba*) 14(3):43-56. Sept. [Spa]
• ***Summary:*** This is a translation of Horvath 1927, "The Soybean as Human Food." Address: Peking Union Medical College, China.

1484. **Product Name:** Vigorost (Fibrous-Textured Canned Meatless Steak). Renamed Vigoroast by 1965.
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal Institute, Madison, Tennessee.
Date of Introduction: 1932. September.
Ingredients: Wheat gluten, firm tofu and/or okara, whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: 14 and 20 oz cans.
How Stored: Shelf stable.
Nutrition: Protein 19.4%, fat 8.6%, carbohydrates 12.3%, ash 2.1%.
New Product–Documentation: Madison Survey. 1932. Sept. 14. p. 140. Dec. 7. p. 179. For entrees, sandwiches, salads. Madison Health Messenger. V. 49-2. p. 5. Gray. 1936. All About the Soya Bean. p. 123.

Madison Survey. 1937. "The soy bean marches on." April 21. p. 59-60.

Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Vigorost is one of five basic food products made and sold by Madison Foods. Taylor. 1944. The Soy Cook Book. p. 201.

Note from Sam Yoshimura. 1981. March 19. When Sam attended Madison College from 1937-1943 Vigorost was made from wheat gluten, soy cheese [tofu], and seasonings.

Note 1. This is the earliest known commercial soy product that is a meat alternative resembling beef; it uses tofu and/or okara.

Note 2. This the second earliest meatlike product seen, made by a Seventh-day Adventist food company, that contains gluten.

1485. La Sierra Industries. 1932. Soy bean (Ad). *Los Angeles Times.* Nov. 6. p. J20.
• ***Summary:*** This small, square ad reads: "One of the most perfect foods on the market today. Perfect in protein and practically free from starch, with an Alkaline Reaction.

"Soy bean products are offered in twelve different varieties: Soy-Co Breakfast Beverage [soy coffee], Soy Milk, Cheese [tofu], Butter, Bologna, Loaf, Spread, and Others.

"On sale at health food stores. Manufactured by the La Sierra Industries. 'Packers of superior foods.'" Address: Arlington, California.

1486. *Madison Survey* (*Madison, Tennessee*). 1932. The food factory. Dec. 7. p. 179-80.
• ***Summary:*** "For many years, as one of the campus industries at Madison, a health food factory has been operated. It has furnished foods for the college cafeteria, for the sanitarium diet kitchen, and for the Nashville Vegetarian Cafeteria, and has sold much to the outside trade. Recently more than usual interest is being shown in health foods. Quotations from a few letters written by those representing and those using our food in other places will be of interest to many of the Survey readers."

Popular products include Vigorost, Soy Cheese [tofu], Soybean Dixie Fruit Crackers, and Soy Bread.

Dr. E.A. Ruddiman, in charge of Soy Bean Research at the Henry Ford Laboratory in Dearborn, Michigan, wrote that he took home the samples of Vigorost and Soy Cheese and enjoyed them very much; his wife made some croquettes from the Soy Cheese.

Dr. A.A. Horvath of the Bureau of Mines in Pittsburgh, Pennsylvania, ordered 12 small cans of soy cheese. "Dr. Horvath is an expert on the soy bean and our correspondence with him is most interesting.

"Dr. Harvey Holmes of the Severance Chemical Laboratory, Oberlin College [Ohio], writes: 'I am very anxious to try the "tofu" (soy cheese) and learn the various ways of serving it. I would like to obtain a sample of the Soybean Dixie Fruit Crackers.'"

1487. **Product Name:** Soy Cheese (Tofu).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Nashville Agricultural Normal

Louvain, Belgium: Librairie Universitaire. Vol. 2, 796 p. See p. 306-07. 25 cm. [Fre]
• ***Summary:*** The author classifies the soybean among the leguminous forage plants, among starchy (*féculentes*) plants, and among oilseeds. "Soybean seeds have a nutritive value for humans greater than that of all other seeds, except peanuts." The peoples of East Asia prepare soybeans and their flour in 100 different ways, many of which are now also known in Europe. The Chinese make from soybeans an artificial milk and a cheese [tofu]. Soy flour is easy to digest and can be mixed with wheat in making bread and pastries. The soybean is used in the production of so-called "English sauces" [such as Worcestershire], which are widely consumed in Europe and America. Finally, soybeans are imported into Europe at the rate of 600,000 tonnes/year and the oil is used to make soap and margarine. Address: Prof. à l'Univ. de Louvain, Directeur général de l'Agriculture au Ministère des Colonies.

1489. André, E.; Hou, Kia-wo (Hu, Chia-mo). 1932. [On the presence of fat oxidase or lipoxidase in the soy bean]. *Kuo Li Peiping Yen Chiu Yuan Yuan Wu Hui Pao* (*Bulletin of the National Academy of Peiping*) 3(4):1-4. (Chem. Abst. 29:4094). [Chi]*

• ***Summary:*** The biological value of non-salty miso and low-salt miso is 73.2 and 70.7 respectively, compared with casein which has a biological value of 80.1.

1491. Abadal, D. Jose; Soroa, Jose Maria. 1932. Cultivo y aplicaciones de la soja [Cultivation and applications of the soybean]. Madrid: Patronato Central para la Proteccion de Animales y Plantas. 44 p. Illust. [Spa]
• ***Summary:*** Contents: Introduction (preliminary notes). Part I: Cultivation and applications of soya. Chart of utilization of the soybean seed. Agronomic notes and details on soybean cultivation. Part II: Soya as a food. Nutritional value, soya as a vegetable (green vegetable soybeans; *Soja, como verdura*), soy sauce (*salsa de soja*), soymilk (*leche*), condensed soymilk (*leche concentrada / condensada*), powdered soymilk (*leche en polvo*), fermented soymilk (*leche fermentada*), soy cheese (*queso de soja*) [tofu], soy casein (*caseina de soja*), soy flour (*harina de soja*), soy bread (*pan de soja*), Soyolk (soy flour made by Dr. Berczeller), whole-grain soy bread (*pan integral*), soy flour tablets (*comprimidos*), pastries, biscuits, puddings, etc. (*pasteles, bizcichos, puddings*), soy oil (*aceite de soja*), fermented soy products (*productos de la soja fermentada: natto, miso, shoyu*), confectionery products (*productos de confiteria*), chocolate (*chocolate*), coffee (*café*), soy ferments/enzymes (*fermentos de soja*), products made by Caséo-Sojaïne (*Caseo-Sojaina de Paris*). Soy as a livestock food. Appendix.

"As early as 1918 a Spanish public official, Don Julio de Palencia, the Spanish Consul in Shanghai, sent the State Department (*Ministeria de Estado*) a magnificent report specifying the great attention that representatives of the principal countries of the world were giving to this crop [the soya bean], and the relevance that it would have in the agricultural economy of the future. What a pity that Spain has been the only civilized country to ignore the study of the soya bean and its exploitation on a large scale" [p. 5].

"Finally we must make public our thanks to the spokesmen of this foundation/board (*Patronato*) for the special work they have done in writing this booklet: Don José Maria de Soroa, secretary of the Special School for Agricultural Engineers (*Escuela Especial de Ingenieros Agrónomos*), and Dr. Don José Abadal, chief of the Bureau for the Inspection of Pharmaceutical Services of the Ministry of War (*Negociado de la Inspección de Servicios Farmaceuticos del Ministerio de la Guerra*)" [p. 6].

"In 1917 the Spanish Consul in Shanghai, Don Julio Palencia, sent to the State Department a study on cultivation of soya, proposing that tests be done to acclimatize this valuable crop to our country.

"In Motril and later at the southern agricultural station of Malaga, the agricultural engineer D. Arsenio Rueda has been cultivating soya for the past 10 years [i.e. since 1923] in plots of 5 ares [1 are = 100 square meters], obtaining 60 liters (each liter weighing 780 gm) in each one.

"The white as well as the black varieties give good results, though the white ones do best. The seeds have been distributed to farmers who have noticed that, even though at first the goats that were given them as food rejected them, after a few days of getting used to this grain preferred them to such an extent that one must avoid growing this plant near the herd's path lest the herd be attracted and devour it all.

"Although soya is a legume which draws many nutrients out of the soil (*esquilmante*), it has according to Mr. Rueda, sufficient interest since it allows usage of terrains where field beans cannot be used due to the invasion of the pest called *Orobanche speciosa*, commonly called 'Jopo.' This parasite

© Copyright Soyinfo Center 2013

does not attack soya...

"Besides the quoted trials, it has been more than 25 years since soy has been grown in Spain with success due to the interest and zeal that in their patriotic work, the agricultural engineer Mr. Eduardo Noriega undertook with his partner, Mr. Ortiz, on the farm of 'Jerez.'

"He was successful during many years using the yellow and black varieties, later on also cultivating it in the Spanish central region.

"We think it useful also to state in writing the following data about soy grown by Dr. D. Jose Abadal in Lerida during the years of 1925-1926.

"The experiment was done only out of curiosity, with the intention of seeing if it could be grown in said province. Japanese seeds of the hirsute soy variety, yellow seed, used as food for diabetes, were used. The planting was done in a garden with seeds that had been soaked for ten hours, with no more care or fertilizers than those used for all the existing plants of that garden. The terrain of course was one of easy irrigation and located in Lerida where it is very hot all during the summer.

"This brief essay demonstrates that soy can be grown in irrigated terrain in very hot places and with little care.

"Fifteen years ago, the agricultural Engineer D. Jesus Andreu, in the province of Pontevedra [in the northwest corner of Spain, just north of Portugal, bordering the Atlantic ocean], did some tests with good results on growing soy as a forage plant.

"We also have news, though not concrete, of other successful tests done in the provinces of Madrid and Toledo." Address: 1. T.C. Farmaceutico Militar; 2. Ingeniero Agronomo e Ingeniero Sanitario, Spain.

1492. Au, Man Sing. comp. 1932. Chinese cookery. Honolulu, Hawaii: Creart Publications. 46 p. Index. 21 cm.
• ***Summary:*** Subtitle on cover: "Genuine Chinese dishes you can prepare in your kitchen." Chapter 1, "The nine-course dinner," states (p. 7): "A small plate is used to hold soyu [shoyu] or Chinese sauce. A morsel of food is picked up in the chopsticks, dipped into the sauce and then put into the mouth."

The section titled "Seasonings and gravies" (p. 10) notes: "Chinese sauce or soyu, used instead of salt, adds zest and delicacy."

"Bean sauce, which is mashed preserved white beans, comes in white and red varieties. The white sauce is salty, while the red has a sweet taste. Both give meat that strange 'aging' taste."

"Tou-see, a preserved and cured Chinese black bean [soybean], tones down the strong smell and taste of deep ocean fish when used with it."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Tou-see" or the term "preserved and cured Chinese black bean" to refer to fermented black soybeans.

On pages 33-34 is a section titled "Bean curd."

1493. Heibonsha. 1932. Dai hyakka jiten [Japanese encyclopedia]. Tokyo: Heibonsha. 15 vols. [Jap]
• ***Summary:*** For roasted soybeans (irimamé), see Vol. 1, p. 1025. For green vegetable soybeans (Edamamé) see Vol. 2, p. 237. For soynuts and mamé-maki, see Vol. 4, p. 899. For tofu, see Vol. 9, p. 284-85. For soymilk, see Vol. 9, p. 1169. Address: Tokyo, Japan.

1494. Kellogg, John Harvey. 1932. How to have good health through biologic living. Battle Creek, Michigan: Modern Medicine Publishing Co. vii + 498 p. See p. 88-89, 209-10. 21 cm.
• ***Summary:*** For Dr. Kellogg, biologic living includes a vegetarian diet (which includes dairy products and eggs). A section titled "The soy bean and the peanut, high quality proteins" (p. 88-89) states: "The soy bean and the peanut are notable exceptions to other legumes. Their proteins are of the same high quality as those of eggs and milk."

The next section, titled "Proteins of animal origin" (p. 89) starts by noting that animal proteins are "of the complete or balanced sort." It concludes: "Lean meat is protein more or les saturated with blood and with a small admixture of fat. Such fat may constitute as much as one-half or more of fat meats. Meat contains uric acid urea, and other waste products. Newburgh has shown that toxic products constitute about one-fourth of lean meat solids."

A section titled "Soy milk" (p. 209-10) notes: "Soy milk is in some respects superior to cow's milk and its use in this country should be encouraged. Three quarts of excellent milk may be made from a pound of soy beans and the food value of the residue [okara] will be greater than that of a pound of beefsteak. A pound of wheat and a pound of soy beans will supply energy sufficient for a laboring man, and at a cost of less then three cents a day. Soy milk protein is of the superior quality necessary to supplement that of cereals and is of the basic or alkaline-ash type, and so corrects the acid-ash effects of cereal proteins.

"Soy milk is of special value in helping to change the intestinal flora. A very superior quality of acidophilus milk may be prepared from it*." (Footnote: *"For information, address Battle Creek Diet Service, Battle Creek, Michigan.").

"To fu [tofu], a curd prepared from soy milk, in China and Japan serves as the basis for a great number of meat-like and most delicious dishes."

Note 1. This is the earliest document seen (Sept. 2012) that mentions an "acidophilus milk" made from soy milk or that discusses Dr. Kellogg's work with it (one of two documents).

Note 2. This is the earliest English-language document seen (June 2002) that uses the term "animal origin" in connection with vegetarianism. Address: Battle Creek,

Michigan.

1495. Orosa, Maria Y. 1932. Soybeans as a component of a balanced diet and how to prepare them. *Manila* (*Philippines*) *Bureau of Science, Popular Bulletin* No. 13. 53 p. [16 ref]
• ***Summary:*** Contents: Introduction. The cooking of soy beans (89 Filipino recipes, p. 7-35), incl. roasted soy beans, soy-bean soups etc.–most recipes use whole soybeans, but quite a few use tofu (*tokua*), soy sauce (*toyo*), soy-bean flour, or soy-bean milk, and a few use *tahuri* (brine fermented tofu) or soy-bean sprouts. Some common foods made from soy beans and methods of preparing them (p. 35-53): Soy-bean milk, condensed soy-bean milk, soy-bean milk powder, soy-bean casein, soy-bean curd (tofu; *tokua* or *toqua*). *Tahuri* or *tahuli* (fermented tofu). Frozen tofu. Bean curd brains or *tofu nao.* Dry bean curd or *topu khan* (tofu-kan, dipped in burnt millet sauce and rubbed with fine salt). Fragrant dry bean curd. Thousand folds (thin layers of fresh tofu pressed in cheesecloth. "On standing, the thousand folds mold and develop a meatlike flavor. This is fried in sesame oil and served in place of meat"). Fried bean curd. Soy sauce (called by the Chinese "ch'au yau," or drawing oil; or "pak yau" or white oil; by the Japanese "shoyu"; and the Filipinos, "toyo"). Natto. Hamanatto (p. 49). Yuba. Miso. Soy-bean flour. Soy-bean oil (used in the manufacture of lard and butter substitutes; also in paints, printing inks, etc.). Soy-bean meal. Soy-bean coffee. Soy-bean sprouts.

Note 1. This is the earliest English-language document seen (Oct. 2008) that uses the term "soy-bean casein" (or "soy bean casein" or "soybean casein"), probably to refer to soybean protein.

"When and by whom the soy bean was first introduced into the Philippines, no one can ascertain. The Filipino people have long known some important soy-bean preparations, such as soy sauce, or 'toyo,' bean curd, or 'tokua,' fermented bean curd or 'tahuri,' not knowing that they were prepared from this bean. The seed is known in some parts of the Philippines, where it is grown, as 'utao.'"

"The main object of this pamphlet is to encourage the Filipino people to use more soy beans, and preparations made from them as food" (p. 3-4).

"Soy beans are grown in some parts of the Philippines. According to Doctor Roxas, Director of the Bureau of Plant Industry, 2,481 tons were grown in Batangas in 1921 and 4,218 tons, in 1930. However, the importation of soy beans in 1924 was 4,657 tons. Doctor Roxas says that soybeans can be grown in all parts of the Philippines" (p. 6). "Immature soy beans may be cooked in the same way as lima beans (*patani*)" (p. 7).

"The soy-bean curd was first produced by Whai Nain Tze, before the Christian Era and was introduced into Japan from China by the Buddhists. It was introduced into the Philippines by the Chinese and has become a very popular food in Manila and in places where there are Chinese who manufacture it for sale. 'Tokua' on account of its high fat, protein, and mineral content, is called by the Chinese as 'meat without bone,' or 'the poor man's meat.'" The Chinese use burnt gypsum (about 1.5% by weight) as a coagulant. In some cases, the curds are wrapped in individual pieces of fine cheesecloth about the size of a small handkerchief, then pressed lightly for a few minutes. They are "unwrapped, spread on shallow bamboo trays (*bilao*) and partially dried at room temperature. Then they are dipped in a weak solution of turmeric to coat the outside in light yellow coloring. Some manufacturers soak the small cakes of curd in brine solution for a short time, then dip them in a solution of burnt sugar or molasses and bake them slightly before putting them on the market." 100 gm of dry soybeans typically yield 350 gm of tofu (*tokua*) (p. 41).

The section titled "'Tahuri' or 'Tahuli'" begins with 2 paragraphs and ends with a table very similar to those from Gibbs and Agcaoili (1912): "'Tahuri' is manufactured in China and exported to the Philippines in large stone jars or in small tin cans. There are some 'tokua' manufacturers in Manila that manufacture 'tahuri' for local consumption. Those that are imported from China are preserved in strong brine solution and the cakes are broken during the shipment so the liquid becomes like a thick emulsion containing pieces of the cured curd." It then contains a new paragraph: "In Manila, the Chinese method of manufacture is to pack the large pieces of soy-bean curd, about 5 inches long, 4 inches wide, and 2.5 inches thick, with much crude salt, in empty gasoline cans. The curd is allowed to cure for a period of several months. During the curing period the bean curd changes from white to a brownish yellow color and develops a peculiar salty flavor to which the Chinese and many Filipinos are educated" (p. 42). Note 2. No information about a fermentation microorganism or process is given.

"The bean curd brains known to many Filipinos as 'tojo' is the unpressed soy-bean curd. The method of making 'tojo' is almost the same as the method used in making 'tokua', only that a smaller amount of the coagulating agent is used, and the very soft but solid mass formed is left undisturbed in the wooden container until used. The Chinese used to peddle this preparation in a wooden pail-shaped container, through different parts of Manila, but on account of the Philippine Health Service regulations, this product is now sold in the markets only. / "The 'tojo' is served with a few tablespoonfuls of medium thick brown-sugar syrup, which gives it flavor, the 'tojo' being almost tasteless. Sometimes it is eaten with sweet oil, sauce, and vinegar, or with finely cut meat and spices." (p. 43).

Note 3. This is the earliest English-language document seen (April 2013) that contains the term "tojo" which is used to refer to unpressed curds made from soymilk.

"Dry bean curd: The fresh bean curd when dipped in burnt millet-sugar sauce and rubbed with fine salt will keep longer than the 'tokua' and is called 'topu khan.' This

© Copyright Soyinfo Center 2013

preparation is usually eaten is soups."

Fragrant dry bean curd or *hsiang khan* ("fragrant dry") has the consistency of smoked sausage. "It is made by subjecting the fresh bean curd to great pressure, which eliminates much of the water content. The pieces of semidry curd are soaked in a weak brine solution in which is dissolved burnt millet-sugar and to which is added powdered spices. The curd is then dried to hardness. This preparation keeps indefinitely and is used in soup making and in vegetable dishes" (p. 43).

Note 4. Cruz and West (1932, p. 78) state that as part of a campaign by the Bureau of Science to encourage the Filipino people to use more soy beans, Miss Orosa "has made excellent cakes, cookies, puddings, sauces, soups, custards, ice cream, and other tasty preparations from Philippine soy beans."

Note 5. The author pioneered the branch of the branch of the Home Extension Service in which home demonstrators helped women in solving their home problems. She started the organization as a food preservation unit under the Bureau of Science in 1923, starting with six home demonstrators that she herself trained. That group became the forerunner of the Home Extension Service in the Philippines. For details on her work see: In: A Half Century of Philippine Agriculture. Manila, Philippines: Liwayway Publishing. p. 236-37.

Note 6. This is the earliest English-language document seen (Nov. 2003) that contains the word "meatlike." Address: Chief, Div. of Food Preservation, Bureau of Science, Manila.

1496. Searle, Townley. 1932. Strange newes from China: A first Chinese cookery book. With 101 rare and choice Chinese recipes and decorations by the author. London: Alexander Ouseley, Ltd. 231 p. Illust. 22 cm.
• ***Summary:*** Page 83 states that "'Chow' means 'fry,' 'Too Foo' is 'Bean Curd,' and the 'Chop Suey,' although not real Chinese (see Encyclopedia) stands for almost any mixed dish." Soy-related recipes in include: Tou fu hah chi tong–Bean curd and prawn soup (p. 92; The author states: "In trying this recipe we used tinned prawns: Beneath the trade-mark of the tin was the following warning against infringement: 'If any man imitate this mark, may his sons be thieves and his daughters prostitutes.'"). Tou fu yuk ming tong–Bean curd and meat soup (p. 93). Tou fu gai pin tong–Bean curd and sliced chicken soup (p. 95).

On pages 108-09 are the names and prices of many Chinese foodstuffs, including Chinese soya sauce (1 lb. or 3 lb. net)–$0.25 or $0.45 per jug, Chinese bean sauce–$0.15 per can, Chinese red bean curd [fermented tofu]–$0.18 per can, Dried Chinese beanstick [yuba]–$0.22 per lb., Chinese bean cheese [fermented tofu]–$0.50 per jar, Chinese bean cake [tofu]–$0.30 per can.

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "Chinese beanstick" or the term "Dried Chinese beanstick" to refer to dried yuba sticks.

The Encyclopedia (p. 215-17) contains descriptions or definitions of the following: Chop Suey ("an American 'Pidgin English' term originally coined in San Francisco..."). Tou foo (see Bean curd). Soya bean–*Glycine hispida* ("One of the most valuable foods in the world." "Flour made from the soya bean has immense value as a foodstuff as it contains the only plant albumen which is equal in value to the very much more expensive animal albumen. The Chinese soak the beans in water, then roast them and eat them in much the same way as peanuts." "It is claimed that the soya bean will soon become the chief food of the civilised world as it contains a large proportion of protein which is as valuable as the casein in milk..." "The best way to cook the soya is undoubtedly by means of a pressure-cooker..."). Bean sprouts ("come from the seeds of the soya and can be used as green vegetables all the year round." Describes how to make them). Bean curd ("It is of about the same consistency as ordinary thick cream cheese and is ordinarily used fried with vegetables etc. in lard and in omelettes etc.").

1497. Winton, Andrew Lincoln; Winton, Kate Barber. 1932. The structure and composition of foods: Vol. I. Cereals, starch, oil seeds, nuts, oils, forage plants. New York, NY: John Wiley and Sons; London: Chapman & Hall, Ltd. xiv + 710 p. See p. 512-24. Illust. Index. 24 cm. [67 soy footnotes]
• ***Summary:*** Volume 1 of this 4-volume set contains 274 superb illustrations by the authors. The book is divided into three parts: I. Cereals. II. Oil seeds. III. Forage plants.

In the chapter on "Seeds of the pea family (Leguminosæ)" (p. 497+) the section titled "Soy bean" (p. 512-24) has the following contents: Scientific and common names. Introduction. Macroscopic structure. Microscopic structure: Spermoderm, hilum cushion, endosperm, embryo (palisade cells, oxalate crystals, starch, aleurone grains and fat), chief structural characters. Chemical composition: Changes in composition during growth, soy bean cake, meal, and flour, proteins, carbohydrates, phosphorus-organic compounds, saponins, enzymes, mineral constituents, minor mineral constituents.

The chapter begins: "A native of the Far East, the soy bean has been cultivated since the dawn of civilization in China and Japan, where the seeds furnish millions of human beings with food. From the seeds are prepared soy cheeses (tofu, natto, miso [sic, none of these three are "soy cheeses"]), soy milk, and soy sauce, the latter being used in chop suey. Because of the absence of starch in many varieties soy bean flour has come into use in the Occident as a diabetic food. Soy bean oil is of growing industrial importance."

An illustration by Winton (p. 512; Source: Winton 1906, p. 248) shows the outer portion of the soy bean seed in cross section, with each of the layers (X 160 magnification).

In the introductory section on "Forage legumes," soy beans are discussed under the following headings (p. 642-

© Copyright Soyinfo Center 2013

45): Comparative macroscopic structure, comparative microscopic structure (table), comparative chemical composition of green fodder (p. 644) and of hay (p. 645). The section titled "Soy bean" (as forage plant, p. 666-67) has the following composition: Introduction. Macroscopic structure. Microscopic structure: Stem, petiole, petiolule, leaf, stipule, flower, chief structural characters. Chemical composition (values from Pellet, Schwackhöfer, and Haskins for: Total ash, potassium oxide, sodium oxide, calcium oxide, magnesium oxide, ferric oxide, phosphoric acid, sulfur trioxide, silicon dioxide, and chlorine).

Note: This is the earliest English-language document seen (Jan. 2004) that uses the word "petiolule" in describing the soybean plant.

This book also discusses: Lecithin (p. 8, 14). Kudzu starch (*Pueraria hirsuta* Schneider, p. 37). Gluten (p. 57-59, 72-73, 199-200, 211-25). Coix (Job's tears, p. 100-04). Hemp seed (p. 413-21). Almond (p. 476-85). Peanut (p. 497-512, 642-43, 663-66). Linseed (p. 525-35). Sesame seed (p. 598-605). Alfalfa (p. 642-43, 646-59).

Note: Andrew L. Winton lived 1864-1946. Kate Grace Barber Winton was born in 1882. Address: 1. Sometime state and federal chemist; 2. Sometime state and federal microscopist.

1498. *Commerce and Finance.* 1933. Jap and the bean-stalk. 22(6):147. Feb. 8.

• ***Summary:*** Discusses the soy bean in East Asia, soy bean oil, soy bean milk ("fed to thousands of Chinese and Japanese babies"), tofu, soy bean coffee, and soy bean flour. "It is not generally known that the soya bean was used during the American Civil War as a coffee substitute."

"Soya bean flour is a concentrated food... In soups it resembles beef extract; one of the most famous European brands of soup cubes has a soya bean base.

"For troops in the field the bean is almost indispensable. Soya bean oil is used in the manufacture of explosives. Bean soups, curd, flour, meal and coffee can be a field diet in themselves. Many a city besieged by bandits has survived on stores of bean cake originally intended as fertilizer." Note: This is the earliest English-language document seen (June 2008) which states that bandits survived on soybeans–in this case bean cake in a besieged city.

1499. L'Heureux, L. 1933. Le soja [Soya]. *Congo: Revue Generale de la Colonie Belge* 1(2):214-36. Feb.; 1(3):365-83. March. (Bulletin de l'Office Colonial, Bruxelles). [14 ref. Fre; eng+]

• ***Summary:*** This early publication on soyfoods in Africa describes food uses and methods of preparing soymilk, in both condensed and powdered forms. Tunisia was a French protectorate from 1881 to 1956, when it became independent. France grew soybeans there, apparently at about the same time it started growing them in Algeria (p. 214).

At the exposition of Nanking in 1910 some 400 varieties of soybeans were assembled (p. 214).

In 1908 the firm of Mitsui was the first to try to transport, by sea, soybean seeds from Dairen to Liverpool. It was the beginning of a new industry in England (Liverpool and Hull), in Germany, Denmark (Copenhagen), and Holland (Rotterdam & Amsterdam).

A former Belgian missionary in Jehol (West Mongolia), Father De Preter (*Le T.R.P. Fl. De Preter, Supérieur de la Maison des Pères de Scheut à Yvoir*) has corresponded with the author about soybeans, tofu, and soybean cake in that city. Soybeans are not cultivated on the best soils, which are reserved for wheat. One of his colleagues at Jehol, Father Cyr. De Puydt has worked to improve the soybean crop (p. 219).

Father De Preter has often helped in making tofu (*fromage de soja*), using magnesium chloride as a coagulant. If one uses calcium sulfate, the tofu is softer and the taste seems better. Father de Puydt has improved the manufacture of tofu by using magnesium salts (probably Epsom salts) in place of magnesium chloride. The tofu is eaten after being boiled in water or fried in fat. It is best when fresh. In winter, it is allowed to freeze [frozen tofu in northeast China] so that it can be kept for a long time; it becomes spongelike. But fresh tofu has a special aftertaste to which the European palate finds it difficult to get accustomed. This taste does not come from the coagulant but from the soybeans. When one eats more than two pieces of tofu in succession, one experiences indigestion. It does not produce gas like the beans. Notes that the factory of the Caséo-Sojaïne near Paris, of which Mr. Li Yu-ying is the director, makes tofu and various tofu products. Cooked with eggs, tofu makes an excellent omelet. Cooked with the juice of meat, it takes on entirely that flavor. It can be used to make patés or smoked. Use firm tofu and cook in a mixture of 4:1 water to soy sauce. Then smoke it like meat. This can, for example, replace ham or bacon in an omelet. Tofu paté has much the same consistency and taste as paté de foi gras. Thus, there are many ways that tofu can replace meat (p. 221-24).

Using caséine or légumine of soymilk, the French pioneered industrial soy protein isolates in 1911 (see Beltzer). They were used in various glues, and in coating paper (p. 224-25).

The margarine industry employs only the finest quality oils. Soy oil was not introduced to margarine manufacture in Europe until about 12 years ago [i.e., 1921], but it has rapidly taken an important place on account of its good properties and low cost. Describes how to make synthetic rubber from soy oil. One of the main uses of soy oil in Europe is in making soaps. Some is also used to make explosives. Mr. Tihon is the distinguished director of the Laboratory of Industry and Commerce at Leopoldville, Belgian Congo (p. 227-28).

© Copyright Soyinfo Center 2013

Soybean cake (*Tourteau*)*:* Father de Preter in Jehol has assured me that soybean cake is used there to nourish and fatten beasts. For horses, this cake has a surprising effect. If a horse, returning from a trip lean and exhausted, is put on a regimen of soybean cake, it will return to normal in 15 days (p. 230).

Just like the oil, the cake is more and more in demand in Europe, and in certain countries the effect of soybeans on the economy is quite remarkable. Until about 30 years ago, Denmark was a super producer of wheat. But Dutch products were defeated by the lower prices of American goods. Aided by soybeans, the Danes were able to expand their livestock. Soybeans are now imported, the oil is extracted and used to make margarine, while the cake is used to feed livestock–some 18.5 million heads in 1926, not including poultry The result has been the development of an enormous trade in animal products, butter, cheese, ham, bacon, lard, eggs and even livestock–all accounting for about 70% of Danish exports. Holland is in a similar position (p. 230-31).

In 1912 the "Dairen Mill Owners Association" was founded, By June 1923 all but 7 of the mills in Dairen were members of the association. The oil in the Suzuki mill is extracted using benzine solvent, the most modern method. 32 of the mills, mostly owned by Japanese, use hydraulic presses, while those owned by the Chinese generally use hand-turned screw presses (p. 231-32).

A large table (p. 323) shows exports of soybean seeds, cake, and oil from the ports of Dairen, Newchwang, Vladivostok, and total, from 1908 to 1917. During this time, because of Manchurian mills, the amount of seed decreased, while the exports of cake and meal increased.

Condiments: Shoyu (*shoyou*) is the main one. Several processes for making soy sauce are described in detail. Lea & Perrins Worcestershire Sauce is nothing but a highly seasoned soy sauce (p. 234).

Continued (p. 365): Mr. L. L'Heureux is director of the chemical service of the Belgian Congo. Let's see what the soybean is doing in the Congo. M. Tihon of Leopoldville, said in an interesting report titled *A propos du soja hispida:* Encountered 30 years ago [i.e., about 1903] at Stanleyville by commander Lemaitre, it figured in the collection of the botanical garden of Eala and was the object of experiments at Sankuru in 1914-15 (p. 365).

In this report, Tihon analyzed 3 varieties of soybeans from the plantations of Eala. The soybean would be good for all our [Belgian] colonies; it could replace meat and be used in the rations of black workers (p. 366-67).

Soymilk: Describes how to prepare it and its properties. According to Prof. Laxa of Prague, fresh soymilk has an acid reaction. Mentions the work of Li Yu-ying. Notes that by adding lactose and a bacterial culture, Yogourth [yogurt] can be made from soymilk (p. 370).

In Peking, soymilk is sold in small bottles of 200-220 cc carrying the title *Lait de pois–Un produit chinois. La nurriture la plus nourrissante. Préparé par* ___. In 1925 one bottle of soymilk daily cost 1 dollar Mex per month. In 1919 in Shanghai, Peking and Dairen, Chinese companies furnished hospitals and private individuals 8-10 oz of concentrated soymilk in bottles (p. 371-72).

A table (p. 373) compares the composition of 3 types of soymilk with mother's milk, cow's milk, and goat's milk; all but the cow's milk (87.00%) contain 90.71% water. The soymilks are: (1) From Tsinan fu, China. (2) From Peking, China. 3. From Japan. The soymilk from Peking was low in fat, so yuba had probably first been removed from it (p. 372).

In China, soymilk is habitually drunk sweetened with sugar. Li Yu-ying reports that one of his parents was nourished from birth with soymilk and for 37 years he has always been in excellent health (p. 374).

A new method for making soymilk. In 1916 Prof. Laxa of Prague develop a method for making soymilk in homes in Europe. The cost of a liter of soymilk in Prague in 1916 was estimated by Laxa as being about 40 centimes if it was homemade. Before the war, there was in London a soymilk factory which intended to place its products regularly on the market. Plans were made to construct two other plants, one in Manchester and one in Liverpool. The synthetic milk syndicate launched a soymilk on the market that was adapted to European tastes. The syndicate's factory, established in Liverpool, used the method of F. Goessel to make 100 liters of soymilk using the following formula (which is given). A Dutch patent (No. 2122 of Sept. 1917) and a Japanese patent (No. 28346) are also cited (p. 375-77).

A table shows the composition of 6 types of Soyama soymilk according to the analyses of Dr. G. Popp of Frankfurt. The protein ranges from 2.5% to 3.77%. Normal soy cream contained 11.5% fat, whereas that which was extra rich for diabetics contained 30% fat. It is very difficult to tell the difference between tea, coffee or chocolate to which one has added Soyama soy cream compared with regular dairy cream (p. 379).

In using the Soyama milk and cream, von Noorden confirms the following statement of Fischer, who studied vegetable milks in general: 1. In the stomach, soymilk gives a flocculent precipitate which is finer [smaller clumps] than that produced by cow's milk. 2. The digestion of soymilk requires only a weak secretion of gastric juice; the period of secretion is therefore short. 3. The time that soymilk protein resides in the stomach is shorter than that of cow's milk protein. 4. The peristaltic action of the stomach is less after ingestion of soymilk and better coordinated. Therefore, based on these observations, von Noorden recommended soymilk over cow's milk (p. 380).

Hatmaker made powdered soymilk. A table shows its composition, as analyzed by a laboratory in Paris (p. 380).

Yu P'i and Yu Ba are the Chinese and Japanese names of yuba, respectively. Recently a new method for making yuba has been patented in Japan. It consists in the use of an

© Copyright Soyinfo Center 2013

electric ventilator [or fan] placed above the surface of the cooking pot containing soymilk that is not heated above 90ºC. A table (based on analyses of the Tokyo Laboratory of Hygiene, of Embrey, and of Adolph) then gives the nutritional composition of 5 types of yuba, including Fu Chu (dried yuba sticks) which (surprisingly) contain 53.68% water.

Note: Maybe this Fu Chu was either fresh or reconstituted yuba. Address: Directeur du Service Chimique du Congo Belge.

1500. **Product Name:** Doufu, Fried Tofu, Firm Tofu.
Manufacturer's Name: Fong-On.
Manufacturer's Address: 43 Mott St., New York, NY.
Date of Introduction: 1933. June.
New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 397. Fon-On, 46 Mott St., New York, NY 10013. Phone: 212-962-5196. Owner: Unknown.

Talk with Kevin Chan. 1989. Nov. 16. His grandfather started this shop in 1933 at 43 Mott St., across the street from its present location. His grandfather made tofu, fried tofu, and soymilk. He did not make extra firm tofu. That product was introduced in 1966. Then they moved to 46 Mott St. in 1968.

Talk with Wun-hong ENG. 1992. Feb. 17. He is retired, age 65, living at 180 Park Row, Apt. 4B, New York City, NY 10038. Phone: 212-267-6972. Kevin Chan is his son. Mr. Eng's father, Bing-sun Eng, and his partner Tao-yee KOK, both founded Fong-On on 29 June 1933–the same year the movie King Kong came out. They both came to America from the Toisan district of Kwangtung province, near Canton. The man who taught his father to make tofu was Mr. Law (or Lo), a 70-year-old Chinese seaman (and good friend of his father's) who jumped ship and worked in restaurants in New York. The seaman advised Bing-sun Eng to open a tofu factory in New York and taught him how to make tofu in New York City in 1933. A large photo of Bing-sun Eng still hangs on the wall at Fong-On in New York City.

Eun-hong Eng came to America from Hong Kong when he was 9 years old. He immigrated through Canada (since he had fake immigration papers), then came directly to the USA. He first started to work at Fong-On in 1945, after serving in the U.S. Army World War II. He (or his shop) was the first that he knows of to use steam to cook the soybean slurry in making tofu.

A photo (sent to Soyfoods Center by Kevin Chan) shows Fong-on ENG seated in the middle of three chairs with his three grandsons, from left to right: Paul Chan (seated), Kymong Chan (standing), and Kevin Chan (seated).

Gonzalez-Pando, Miguel. ed. 1996. "Greater Miami: The spirit of Cuban enterprise." Fort Lauderdale, Florida: Copperfield Publications, Inc. This book (p. 168) discusses Fully, Inc. a soyfoods company in Miami, Florida. The founder, Manny Wong, married Silvia Cok, also a Cuban-Chinese whose father had been a Chinese businessman in Havana, in the grocery business. "Upon arriving in New York in 1960, Silvia's father joined his relatives in a tofu (bean curd) [manufacturing] business which had been established back in 1933." During the 1980s, as "demand for more healthful foods grew, Fully opened another subsidiary, Fon-On for Florida. This is a spin-off of Manny's father-in-law's tofu business in New York. Fon-On of Florida manufactures 'soy products'–mainly soy milk and currently five kinds of tofu:..."

Talk with *New York Times* reporter (who speaks and reads Chinese) who is at the plant. 2008. Feb. 2. The two Chinese characters in the company name are *Hong-An* which mean "everlasting peace."

Talk with Wun-hong ENG. 2011. Feb. 3. Fong-on YEE was born on Dec. 9; the year is unknown. He was a twin. "At a time of hardship in the Toisan district of Kwantung province, his father sold him, when he was 4 years old, to the ENG family (to the boy's grandmother) for 40 ounces of silver. She had no sons, so, as happened quite often, she burchased a son to carry on the family name. The boy was renamed Bing-sun ENG. After he was married and had two children, he left in China on May 9 and traveled to Cuba, where he arrived on Sept. 9; there he lived and worked for two years. He won the lottery sweepstakes ticket and 4 months later he went back to China. A year later, on 19 Sept. 1925, Wun-hong ENG was born. Then Bing-sun ENG smuggled himself into the United States (with two relatives), hiding on a ladder inside inside the water tank; it was very cold and cost him $200. He arrived in New York. Three partners started a tofu company which they named it Fong On, then they asked him to become a partner; he suddenly remembered that that was his original name at birth, and so he agreed to join. Each of the four partners each put up $80. Rice, in those days sold for $2.25 for 100 lb. retail, and soybeans were only $4.00. The soybeans used to make their tofu were grown in Norfolk, Virginia, and New Jersey. Wun-hong ENG was born in China. The business was successful and Mr. ENG periodically sent money home to China. His home phone is 212-267-6972. Kevin Chan died 2 years ago. Monty Chan is his 2nd son.

Talk with Monty Chan. 2011. Feb. 3. How did Monty's father, Wun-hong ENG, get to America from China? A gentleman that Monty's grandfather (Fong-on ENG) knew, had a son surnamed Chan who was scheduled to travel to America. But for some reason it didn't work out. So the gentleman offered to sell Monty's grandfather the immigration papers. Monty's father and the gentleman's son were about the same age. In this way Monty's father arrived in the USA–but with the surname Chan! That is why Monty and his two brothers still have the surname Chan. In about 1966 Monty's father went to court and legally had

© Copyright Soyinfo Center 2013

his surname changed from Chan to Eng. But, in practice, it is very difficult for a grown man to change his surname. So Monty decided to make ENG his middle name. All Monty's friends know him as Monty Chan. He is a retired New York City detective; his colleagues know him as Monty Eng Chan. His pension comes to Monty Eng Chan. All of his daughters have "Eng" as their middle name and "Chan" as their surname.

Monty's father, Wun-hong ENG ran the tofu company on Mott St. for about 30 years, from about 1946 (after he got back for serving in the U.S. military) to 1975. It is not so important that the child born in China return to China at the end of his life to be buried in the family place. In the USA (as in China) the Chinese family associations typically buy large cemetery plots so that all members with the same family name can be buried together. Monty's parents have already purchased plots in New York City for him and his brothers.

Monty still works occasionally at the family tofu shop. But it is hard to see how the tofu shop will continue. There are no sons who want to take over the business or even to work there.

1501. *Boletin de Agricultura y Trabajo* (*Nicaragua Ministerio de Agricultura y Trabajo*). 1933. Soya o soja (Soja Híspida Moench) [Soya or soja]. 5(48):19-20. June. 2nd Series. [Spa]

• ***Summary:*** Contents: Introduction and history of the soybean ("it is also called 'soya'"), with its extension in the United States. Climate. Soil. Fertilizer. Inoculation. Varieties widely cultivated in the USA (Biloxi, Peking, Virginia and Wilson Five for hay and ensilage. Ito-San, Manchu, Mandarin, and Tokio [Tokyo] for seed. Hahto for use as a food legume at the table {*legumbre de mesa*}). Uses of the plant: Green manure, forage, pasture (*pastaderos*), hay, green forage. Food products made from the seeds: Flour, oil, soy sauce, cooked whole soybeans, coffee substitutes, soups, soybean roasts or steaks (*soyas asadas*), porridge or mush, soymilk (*leche vegetal*), condensed soymilk, fresh soymilk, casein, confections, soy cheese (tofu; fresh, dry, smoked, or fermented; *queso fresco, seco, ahumado, fermentado*).

Food products: Dry soybeans (*semillas secas*) are used to make soy sauce (*salsa de soja*), cooked soybeans (*sojas cocidas*), coffee substitutes (*sustitutos del cafe*), soups (*sopas*), roasted soybeans (*soyas asadas*), porridge / pap (*gacha*), vegetable milk [soymilk] (*leche vegetal*), condensed milk (*leche condensada*), fresh milk (*leche fresca*), casein (*caseina*), confections or sweets (*dulces*), and soy cheese ([tofu] fresh, dried, smoked, or fermented {*fresco, seco, ahumado, fermentado*}), and green vegetable soybeans (*semillas verdes*) are cooked and canned or served in salads. Enemies of the soybean.

Note 1. This is the earliest document seen (Feb. 2009) concerning soybeans in connection with (but not yet in) Nicaragua.

Note 2. This is the earliest Spanish-language document seen (Oct. 2011) that mentions fermented tofu, which it calls *queso fermentado.*

Note 3. This is the earliest Spanish-language document seen (Oct. 2011) that mentions roasted soybeans / soynuts, which it calls *soyas asadas.*

Note 4. This is the earliest Spanish-language document seen (June 2009) that uses the term *semillas verdes* to refer to green vegetable soybeans.

1502. USDA Bureau of Home Economics. 1933. Nutritive value of soybean and soybean products (Leaflet). Washington, DC. 2 p. June 10. [5 ref]

• ***Summary:*** Table 1 gives the nutritional composition and fuel value of soybeans and soybean products: Green shelled soybeans, soybean sprouts, dry whole seed soybeans or whole ground meal, soybean flour (sifted, from the whole bean, from the press cake), soybean curd or cheese (fresh), soybean milk, soy sauce. Includes recipes for: Whole wheat bread with soybean flour, and White bread made with soybean flour. Mentions that Soyex Co., Inc., was at 60 John St., New York City, on 5 May 1931; An analysis of their flour made from whole soya beans is given.

Note: This is the earliest English-language document seen (June 2009) that uses the term "Green shelled soybeans" to refer to shelled green vegetable soybeans. Address: Washington, DC.

1503. Sayer, M. Wynne. 1933. Soybean (Glycine hispida Maxim.). *Agriculture and Live-stock in India* 3(5):470-74. Sept. [10 ref]

• ***Summary:*** Contents: Introduction and history. Economic importance of the soybean. Cultivation. Green fodder for cattle. Green manure. Standard varieties of soybean of the Pusa Farm.

"Green Fodder for cattle: The soybean has been tested here [on the Pusa Farm] for a number of years against other important leguminous crops such as meth (*Phaseolus aconitifolius*), cowpeas, and guar. The results of 12 years trials from 1917-18 to 1928-29 are given below." Soybeans yielded 1,166 lb/acre of grain and 7,453 lb/acre of "green stuff."

Note: This article contains the following sentences and phrases which are of linguistic interest: "Soybean is a monsoon crop" (p. 470). "... by growing soybean mixed with maize..." "Soybean has been tested here for yield" (p. 471). "In India, soybean is considered one of the best fodder crops" (p. 472). "Soybean occupies an important place in the grazing cycle." In standard American or British English, the word "soybean," in each of these examples, would be preceded by the word "the." Address: Offg. Imperial Agriculturist.

1504. Belen'kii, D.E.; Popova, N.N. 1933. [Soy cheese]. *Russian Patent* 32,908. Oct. 31. (Chem. Abst. 28:3808). [Rus]*

• ***Summary:*** Soymilk is heated to 90ºC. Whey obtained during preparation of sour-milk soy cheese is added to it. After curding, the curds and whey are separated in the usual way. Note: This is one of the earliest records seen concerning the use of soured whey as a coagulant for tofu.

1505. Iwamura, Iwao. 1933. Biochemical studies on miso, fermented soybean paste. I. *Bulletin of the Agricultural Chemical Society of Japan* 9(7-9):118-31. Bound in the back of Nippon Nogei Kagaku Kaishi (J. of the Agricultural Chemical Society of Japan). [Eng]

• ***Summary:*** The author conducted experiments with Sendaimiso, then with Shiromiso, Yedomiso, Inakamiso, and Hatchomiso. Miso protein, when added to a rice diet, has a high supplementary value. It has a somewhat higher supplementary value than "kôridôfu (frozen soy-bean curd)" but somewhat lower than fish protein.

Note 1. This is the earliest English-language document seen (March 2009) that uses the term "soybean paste" to refer to miso, or that mentions Sendaimiso, Yedomiso, Inakamiso, or Hatchomiso (spelled that way).

Note 2. This is the earliest English-language document seen (April 2013) that uses the term *kôridôfu* to refer to dried-frozen tofu. Address: Agricultural Chemical Lab., Tokyo Imperial Univ., Komaba, Tokyo, Japan.

1506. Miller, Carey D. 1933. Japanese foods commonly used in Hawaii. *Hawaii Agricultural Experiment Station, Bulletin* No. 68. 43 p. Nov. See p. 1-10, 28-43. [18 ref]

• ***Summary:*** Contents (p. 1-10): Introduction. Soybean products. Edamame (green soybeans). Tofu (soybean curd). Kirazu (tofu residue) [okara]. Tonyu (soybean "milk"). Aburage (fried soybean curd). Miso (fermented rice and soybeans). Natto (fermented soybeans). Shoyu (soybean sauce). Koji (fermented rice). Pages 24-15: Kinoko (mushrooms). Fu (gluten cakes). Goma (sesame seeds).

Pages 28-43 (Ingredients and nutritional composition of prepared foods or recipes): Miso soup with tofu. Miso soup with wakame. Miso soup with daikon. Miso soup with milk. Tofu soup with lemon. Tofu shoyu soup. String bean shirae [shira-ae] (with tofu and miso). Carrot shirai. Konnyaku shirai. Eggplant with miso. Green onions with miso. Fish cakes with miso. Sesame seed sauce for vegetables (with shoyu). Nishime (with shoyu). Nigome (with aburage and shoyu). Kirazu with vegetables (with okara, aburage, shoyu). Noodles (somen or udon, with shoyu). Vinegar sauce for sushi. Inari-sushi (with aburage and shoyu). Maki-sushi. Appendix: Composition of some Japanese foods used in Japan.

Concerning edamame: "The Japanese use several varieties of fresh green soybeans. In Honolulu whole plants are purchased from the vegetable market. The pods are removed from the plants, placed in boiling salted water, and boiled for about 25 minutes. They are then drained and cooled, and the beans are kept in the pods until eaten. Often children eat them out of bags as they would candy. The fresh green soybeans appear to be an excellent food. They are good sources of calcium, phosphorus, and iron, yield a basic ash, and, as compared with other fresh vegetables and fruit, have a remarkably high protein content. Vitamin tests in progress at the nutrition laboratory of the Hawaii Agricultural Experiment Station show that the cooked beans are very good sources of vitamins A, B, and G. The more general use of green soybeans should be encouraged in the home, and their consumption may be increased by selling them in school cafeterias."

Concerning Kirazu (tofu residue): "Kirazu, or the residue of the soybeans left when tofu is made, has a crude fiber content of 3 to 4 percent, contains 4 to 5 percent of the protein of the beans, more than 1 percent of the fat, and 5 to 6 percent of the carbohydrate. Only a small part of kirazu is used for human food in Hawaii, by far the greater part being used as hog feed. Kirazu, however, is a utilizable, inexpensive food and might be more generally used than it is... Kirazu is used in combination with vegetables, or with fish, or dried shrimp, and seasonings."

Concerning natto: Describes the process for making natto on a commercial scale in Honolulu. After cooking (without soaking) for about 8 hours in a large iron kettle, the "beans are thoroughly drained and placed on paper plates covered with wax paper. The plates are stacked one above another in large wooden boxes, covered with rice straw mats, and kept at a temperature of approximately 30ºC. for 35 to 36 hours, when the product is ready for use... The fermented product is covered with a gray, slimy substance that forms strings or threads when the beans are pulled apart, indicating good quality... Although no molds or yeasts are added to the cooked soybeans, O.N. Allen, of the botany department of the University of Hawaii, who examined several samples of fresh natto from Honolulu, found 2 molds, 4 bacteria, and an aspergillus present. The enzymes of some of these organisms probably caused the conversion of a small part of the protein to simpler substances."

Concerning Inari-sushi (p. 37): The "ingredients required for this dish are rice, water, salt, aburage, carrots, mushrooms, string beans, gobo, flaked bonito, water, sugar, shoyu, and vinegar sauce." A detailed recipe is given.

Photos show the following (each food accompanied by its Japanese name written in both Chinese characters and *katakana*)*:* Edamame, in the pods on the plant, and shelled in a dish. Tofu kasu [okara] on a plate. Tofu on a dish. Soymilk in a glass. Three triangles of aburage on a dish. Miso on a dish. Natto in a white rectangular commercial paper tray about 3½ by 6 by 1 inch deep. Koji on a plate.

Note 1. This is the earliest English-language document

© Copyright Soyinfo Center 2013

seen (June 2009) that uses the term "fresh green soybeans" to refer to green vegetable soybeans.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kirazu* to refer to okara.

Note 3. This is the earliest document seen (July 2003) that mentions commercial natto production in Hawaii.

Note 4. This is the earliest English-language document seen (Jan. 2012) that uses the word "strings" or "threads" in connection with natto. Address: Specialist in Nutrition, Honolulu.

1507. Crane, Helen R. 1933. The story of the soya. *Scientific American* 149:270-72. Dec.

• ***Summary:*** The article begins: "During the Civil War the Union soldiers were fed a coffee which they did not like very well. It tasted 'so-so' but it failed to whip them on and keep them awake as did the coffee they had back home. No one bothered to tell them it was soybean coffee, and if they had been told what it was, the news probably would have meant nothing to them, for few people in this part of the world had ever heard of the soybean in that time." This "Civil War coffee" was "brought back by some of our traders to the East..."

"Time went on and then, in 1915 a shortage of cottonseed in the South coincided with a surplus of North Carolina's soybeans that were being cultivated for live-stock. The Department of Agriculture began to dream dreams of an American soy-oil. Had not the Orient been using this oil for thousands of years in making lacquers, varnishes, paints, soaps, printing-inks, candles, waterproofing, and all such?"

Americans discovered that soybean "oil could be extracted by grinding the beans and then placing them in some chemical solvent such as benzol, naphtha, or ether. The solvent was later evaporated, distilled, and used over again..." The Orientals have made comparatively "little use of soy meal for animal feed."

"It was not until as recently as 1917, when conditions brought on by the World War forced the Department of Agriculture to search for a cheap source of proteins for human consumption, that the soy bean was 'discovered' as a real food. More than 400 different recipes exist in Chinese cook-books, some of them dating back to about 3000 B.C., but we Americans did not find them. Our scientists went to work directly on the bean itself–although they may have accepted ideas from the Orient of using it as a flour, a curd, milk, oil, and meal."

"Our food experts, too, have taken with enthusiasm to this new 'almost perfect food... it fills a crying need in our dietary,' they say, and they add that, '... for some strange reason, our knowledge of foods has lagged far behind our other technical accomplishments and we have only just begun to realize the deficiencies of our present foods... the soya will be come a very important accessory.'"

"Soy-milk, which is prepared in a similar manner to almond-milk, is reported by several of our universities to be suitable for use as the only source of proteins in the diet of babies, as well as being adequate for promoting normal growth in children. It is further stated in these reports that invariably better results are obtained from its use in such cases than from cow's milk."

"As for the cheese, or curds, they do not appeal greatly to Occidental taste at first. They seem a trifle strong in flavor and are sponge-like in consistency, but it is prophesized [prophesied] that they will undoubtedly come to be looked upon as the delicacy they are considered to be in the Orient. These curds, prepared in an infinite number of ways, may appear in one form as the 'meat' course, in another as the salad, and in still another as the dessert."

"Flour is now an important product from the soy, and is being manufactured in various parts of the country by the ton. It is used for making breads, cakes, and pastries. To diabetic patients and others in need of a starch-free diet it comes as a blessing, as well as adding a very palatable and nutritious item to the pantry list of any housewife."

"'Ice Cream by the Mile' is the title of an article, to be published soon, which tells the story of the development of a new and better process for making that frozen delicacy."

Photos show: (1) A field of Oo-too-ton [Otootan] soybeans in Orangeburg County, South Carolina. (2) William Morse of the USDA holding a round soybean cake made by pressing the oil from the beans. (3) Laredo soybeans cocked up in the field for curing in White County, Arkansas. (4) A soybean plant growing taller than a man, with corn, in South Carolina; they are used for soil building and "hogging down."

Note 1. This is the earliest document seen (Jan. 2000), published in the USA, that uses the term "the soya" as a noun.

Note: This is the earliest English-language document seen (Sept. 2006) contains the term "soy-oil." It is used as a noun.

1508. Carqué, Otto. 1933. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• ***Summary:*** This manual of food reform discusses the importance of a simple vegetarian diet of natural foods, sunlight and sunbaths, fresh air, pure water, exercise and rest. Also talks about acid and alkaline foods, the influence of mind on health, the failure of synthetic foods, why refined sugar is injurious, the dietetic value of sea plants, table salt is unnecessary and harmful, fruit is man's best food, sulphured and unsulphured fruits, nut butters, food preparation, and the treatment of disease.

The germ theory of disease has not been proven since potentially harmful germs are omnipresent yet often fail

© Copyright Soyinfo Center 2013

to harm healthy individuals (Pasteur was a chemist and laboratory worker, not a physician. Germ action is always secondary; "when germs invade a living organism it is a sign that the organism is enervated and its chemistry perverted." p. 114-15).

The section titled "Fruit and nut confections" (p. 133-35) begins: "Fruit and nut confections made without refined sugar and glucose should take the place of candies." These "sweet-meats"... "should be the only kind of confections allowed to growing children, which have a natural craving for sweets." Recipes include stuffed dates, date caramels, nut fruitose, carob confection, raisin-nut balls, and honey cocoanut balls. For Nut fruitose: Mix dates, figs, raisins, almonds and walnuts. "Run through a food chopper twice. Press the mixture into a flat pan in a layer about 1 inch thick, let stand overnight, and cut into convenient sizes." Note: Carque was a pioneer in the development of healthy, natural treats. The last recipe could be considered a forerunner of the less-healthful "nutrition bar" of the 1990s.

The next section, titled "Nuts and nut butters," states that "salting and roasting greatly impair the nutritive value of nuts and prevent their proper assimilation. The proteins become coagulated by roasting, and the fats split into glycerine and free fatty acids, while the vitamins are destroyed. Nut butters made from salted nuts should, therefore, have no place in our dietary." Rather, the peanuts or almonds should be blanched (scalded or parboiled in water or steam). "Since few people, on account of defective teeth, can masticate nuts well enough to be acted upon by the digestive juices, the mechanical emulsification of nuts by means of nut butter mills is quite dispensable."

The section titled "Melba toast" and "Melbettes" (p. 156) states: "These are delicious dextrinized whole wheat products made by the Cubbison Cracker Co., Los Angeles." Melbettes are also made from whole rye. "Calavo Melba Toast is another tasty whole wheat product; it contains the natural fruit fat of the California Avocado or Alligator Pear as shortening."

The section titled "Natural whole rice" (p. 156) notes: "Whole rice, also called brown rice, contains the bran, cuticle, and germ of the cereal. In milling nothing has been removed but the husk and dirt."

The section titled "The Soy Bean, a Remarkable Food" (p. 158-61) discusses boiled soy beans, soy bean milk, tofu ("it is called by the Chinese 'the meat without a bone...' Other preparations of the soy bean, which are but little known in this country, are *natto, hamananatto* [*hamanatto*], *Yuba* and *Miso*. The principal use of miso, which is a slightly [sic] fermented mixture of soy beans and rice or barley, is for making soups and for cooking vegetables"), soy sauce, soy bean sprouts, and various recipes. Under "Ready made soy bean products" (p. 161) we read: "As the preparation of the soy bean in the average household is often not convenient, the author has arranged to supply the following products at reasonable prices: Canned Soy Beans, Soy Bean Spread, Soy Bean Stew, Soy Bean Loaf, Soy Vegetable Onion Soup, Soy Bean Vegetable Bologna, Soy Bean Tasty Lunch, to which others will be added in the course of time. These products have met with ready approval, as they fill a long felt want for tasty, nutritious and wholesome vegetable protein foods to substitute meat and dairy products."

The author's signature appears at the end of the Preface. Address: Los Angeles, California.

1509. Hou, Kia-wo (Hu, Chia-mo). 1933. Contribution à l'étude de l'action des ferments de la graine de soja sur les lipides [Contribution to the study of the action of soybean enzymes on soybean lipids]. PhD thesis, Faculte des Sciences, Paris. 76 p. Printed as a book by Les Presses Modernes, Paris. No index. 28 cm. [92 ref. Fre]

• ***Summary:*** Contents: Introduction. 1. The soybean from botanical, agricultural, chemical, physiological, and biochemical viewpoints. 2. Soy-based food and industrial products. 3. Study of the transformations undergone by lipids in the production of soymilk and tofu. 4. The existence of oxidative ferments of lipids or "lipoxydases" in soybean seeds and in common beans. 5. Study of soybean lipoxydase. 6. Comparative study of normal soy oil and that oxidized by soy lipoxydase. 7. The action of soy lipoxydase on various other animal and vegetable oils (non-drying, semi-drying, drying, from marine animals, from terrestrial animals). 8. Gas-volumetric studies concerning the action of lipoxydase. Conclusion. Bibliography.

In the book, the author (who is from Kirin [later called Jilin], Manchuria) pays homage to Gabriel Bertrand (his "president of thesis") and his "maitres" Richard Fosse (a professor) and Emile Andre.

In the Introduction we read: "It was right after the first foreign threats that a group of young Chinese decided to come to Europe to study under the patronage of the Franco-Chinese Society for Education (Société Franco-Chinoise d'Education) in order to acquire the new knowledge which would better allow us to assure the defense of our country. Let us render a just homage to the founders of this society: Tsai Yuen-Pei, Li Yu-Ying, Painlevé and Herriot... At the time of my return to China 4 years ago (i.e. 1929) it was thanks to the recommendations of Doyen Maige and of professors Pelabon, Pariselle and Fosse that I was able to find a good welcome near to Presidents Li Yu-Ying and Li Shou-Hua, and to obtain a grant / scholarship from the Academie Nationale de Peiping which had just been created at this time... My thanks go also to the address of presidents Li Yu-Ying and Li Shou-Hua for the aid and encouragement which they have so well accorded me.

This study has as its point of departure a study of the transformations which are undergone by the lipids in soybeans in the production of soy milk and cheese [tofu]. That study, conducted under the direction of Emile Andre,

© Copyright Soyinfo Center 2013

was published (with Andre as the primary author) in 2 articles in 1932 in the *Comptes Rendus des Seances de l'Academie des Sciences* (*Paris*). Address: Paris.

1510. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1933. Nichibei jûshoroku [The Japanese American directory. No 29]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

1511. Kincaid, Zoë. 1933. Tokyo vignettes. Tokyo & Osaka: The Sanseido Co., Ltd. [8] + 284 p. See p. 101. Illust. No index. 23 cm.
• ***Summary:*** Page 2: When the author is at her home in Tokyo: "Into the morning's routine comes the call of the bean-curd seller, announcing to every household that he is at hand to supply its wants;..."

Page 67: "My hostess served me with soba... which the farmer had made himself, together with relish of seaweed, and soy [sauce] of their own manufacture."

Pages 100-103: At the Kwannon Temple in Tokyo, seven old women sell soaked or sprouted beans and rice for a few small coins, and the visitors to the temple throw the food to the birds. "Well the doves know the ways of their benefactors, and divine prospective distributors of largess, for they watch with bright eyes for the bean scattering and fly from all directions to be in on the banquet! The charge for the contents of one bean tray is two sen."

Page 209: "For breakfast there is soup made from slightly fermented beans, miso, thick with vegetables, tasty and hot. Later the tofu vendor runs thorough the streets calling out that he has white bean curd to sell."

Page 212: Among the ingredients of oden were "fried bean curd." Address: Tokyo, Japan.

1512. Morgan, Evan. 1933. Tao–The great luminant: Essays from Huai Nan Tzu. With introductory articles, notes, analyses. Shanghai, China: Kelly & Walsh Ltd. xlv + 291 p. Foreword by John C. Ferguson, Ph.D.
• ***Summary:*** Dr. Morgan "has the reward of giving to our western world the first adequate translation of the work of Liu An, the unhappy and ill-fated Prince of Huai Nan" (Foreword, p. iv). This book contains eight of the original 21 essays in the *Huai Nan Tzu.*

"The *Tao Te Ching* is hard to understand. But a study of it is fruitful. It is conceded that Lao Tzu must have been one of the most original thinkers of China." Unfortunately there are no good translations of the *Tao Te Ching.* "The best two are those of Dr. James Legge and Mr. Spurgeon Medhurst. But often they contain passages as vague as the original! The meaning does not shine out from the words" (Preface, by Evan Morgan, p. v-vi).

Note: Tofu is not mentioned. Address: Hon. D.D., Univ. of Wales, Order of the Double Dragon.

1513. Morse, W.J. 1933. Soybeans now a major crop in United States; Few grown before 1898. *Yearbook of Agriculture* (*USDA*) p. 198-205. For the year 1933.
• ***Summary:*** Contents: Variety adaptation. Variety utilization (incl. bean curd, bean milk, soy sauce, miso (bean paste), bean sprouts, green vegetable beans, bean flour, roasted beans, bean confections [made using roasted whole soy flour], beverages, oil and meal, special fermented bean products). Soybean oil and meal industry. Soybean meal. Soybean oil. Soybeans for human food. Soybeans as an export crop.

"Variety adaptation: The Virginia, Laredo, Manchu, and Biloxi have a greater range than most other varieties. The Virginia, Mansoy, and Harbinsoy varieties excel on the less productive types of soil, while on better soils the Mansoy and Harbinsoy give inferior results.

"Since the Department of Agriculture began to introduce soybean varieties more than 7,000 samples of beans have been collected from Japan, Chosen [Korea], Manchuria, China, Taiwan (Formosa), Java [in today's Indonesia], Sumatra, and India. There are more than 2,000 distinct types in this large collection, ranging from 75 to more than 200 days in reaching maturity. At present about 40 varieties are generally grown in the United States."

"In Japan, where the soybean is used extensively as a green vegetable, more than 60 varieties, ranging in maturity from 75 to 160 days and differing in flavor, are grown solely for this purpose. The soybean in used in the United States primarily as forage, being preserved either as hay or silage, or cut and fed green as soilage, and is also pastured extensively with hogs and sheep."

"Soybeans for human food: In Asiatic countries the soybean is grown primarily for the beans, which are used largely in the manufacture of numerous food products that supply the principal source of protein in the Asiatic diet as that in the diet of western people is furnished chiefly by meat and dairy products. "Oriental people use very few dairy and meat products, yet for many centuries they have lived on an apparently well-balanced diet of which the protein is derived largely from the soybean.

"The most commonly used soybean foods in the Orient are soy sauce, miso or bean paste, bean curd, bean milk, bean flour, roasted-bean confections, green-vegetable beans, bean sprouts, roasted bean flour, boiled beans (with rice, millet, or sorghum), coffee substitute, and health drinks made from roasted soybeans.

"In the United States the soybean and its products have attracted attention as an article of food at various times, but only within the last three or four years have there been any extensive investigations along this line by commercial interests. Soybean flour, made by grinding either the whole bean (preferably yellow-seed varieties) or the press cake

© Copyright Soyinfo Center 2013

after the oil has been removed from the beans, is finding increasing favor in the manufacture of various products, such as malted milk, macaroni, vermicelli, spaghetti, noodles, crackers, cookies, ice-cream cones, breakfast foods, health foods, diabetic foods, and infant foods. Within the last year several large baking companies have began using 15 to 20 per cent of soybean flour in making bread and cakes." Address: Bureau of Plant Industry, Washington, DC.

1514. Polk's Portland [Oregon] city directory. 1933. Portland, Oregon: R.L. Polk & Co., Inc. *
• ***Summary:*** Ohta Saizo. Wholesale baker. 86½ 5th St. North. Address: Portland, Oregon.

1515. Wong, Nellie C. 1933. Chinese dishes for foreign homes: A revised and enlarged edition of the popular "Chinese Recipes." London: Kegan Paul, Trench, Trubner & Co. Ltd. xii + 98 p. Illust. 19 x 13 cm. Handsewn on exterior. Printed in Shanghai.
• ***Summary:*** This book contains 86 recipes. The Explanatory Notes (p. vii) begin: "Soy bean sauce and ginger are universally used in China for seasoning. Soy bean sauce in many instances takes the place of salt. Names and addresses of suppliers of Chinese foodstuffs in New York and London are given. Soy-related recipes include: Bean curd soup (p. 8). Shia-mi tao-fu (Fried shrimps with bean curd and soy bean sauce, p. 51). Soy bean sauce is also used to season Lobster chop suey, and Shrimp chop suey (p. 68-69).

A 1932 edition of this book was published in Shanghai by Kelly and Walsh, Ltd. (xii + 87 p.; 19 cm).

1517. Madison Food Co. 1933? Madison soy cheese. Madison, Tennessee. 6 p. Undated.
• ***Summary:*** Contains a brief introduction to tofu with 8 American-style tofu recipes. "The principal protein of the Soybean is much like the protein casein of milk, and when the bean is properly treated a milk quite comparable in appearance, taste, and food value can be manufactured from it. From this milk, when allowed to become acid, or when a slight amount of a precipitating agent is added, a cheese can be prepared in consistency much like cottage cheese. This vegetable cheese (tofu) has been one of the principal articles of diet in the Orient for many centuries.

"In order that the people of America may have this most important food as an article of diet, a method of manufacturing and preserving has been perfected at the Madison Food Factory.

"For several years it has been used as a daily article of diet in the Madison Rural Sanitarium, Nashville Vegetarian Cafeteria, and many other Good Health places. It has proven its value as a diabetic food, and as a splendid meat substitute."

Tofu recipes include: Soy cheese salad. Stuffed egg with soy cheese. Tomato soy sandwich. Soy sandwich filling. Soy croquettes. Soy cheese loaf. Soybean omelet. Soybean cutlets.

On the back panel is a list of "Health foods manufactured and distributed by Madison (Sanitarium) Food Company, Madison, Tennessee: Nut Meat, Vigorost, Peanut Butter, Fruit Sticks, Sterilized Bran, Psyllium Seed, Cereal Drink, Soy Flour, Soybeans (Dry), Malta (Malt Syrup), Soy Fruit Crackers, Soybeans (Canned with Tomato Sauce), Madison 3 Minute Breakfast Wheat, Sanitarium Baked Beans, Steamed Whole Wheat, Malted Breakfast Crisps, Whole Wheat Fruit Crackers, Sweetened Whole Wheat Crackers, Soybeans (Canned Plain), Soy Cheese (Bean Curd), Madison Fruit Candy, Regulose (composed of Lactose and Dextrine). Write for descriptive literature."

Note 1. The company is now named "Madison Food Company."

Note 2. Many of Madison's publications about its foods are undated; this makes it very difficult to determine when a specific food was first made and sold commercially. Address: Tennessee.

1518. **Product Name:** Tofu.
Manufacturer's Name: Aramaki Tofu-ten.
Manufacturer's Address: 151 Main St., Watsonville, California.
Date of Introduction: 1934. January.
New Product–Documentation: The Japanese American Directory. 1934. p. 132. Name is in Japanese only. In English: 151 Main St. No phone number.

1519. **Product Name:** Aburaage.
Manufacturer's Name: Hinode Tofu-ya.
Manufacturer's Address: 339 7th St., Oakland, California. Phone: GLencourt 7297.
Date of Introduction: 1934. January.
New Product–Documentation: The Japanese American Directory. 1934. p. 68; Ad (1/8 page), p. 72. All in Japanese. Original tofu maker. Tofu, aburaage, ito-konnyaku, and goldfish.

1520. **Product Name:** Tofu.
Manufacturer's Name: Hokubei Tofu-ya.

1532. **Product Name:** Tofu.
Manufacturer's Name: Tanaka Tofu Seizo-sho (Tanaka Tofu).
Manufacturer's Address: 885 3rd Ave., New York City, New York. Phone: Plaza 3-5218.
Date of Introduction: 1934. January.
New Product–Documentation: The Japanese American Directory. 1934, p. 552. In Japanese: Tanaka Tofu Seizô-sho. In English: 885 3rd Ave., New York City, New York. Phone: Plaza 3-5218.

Also in 1941, p. 645. No phone prefixes are given for New York City. Under "Residence," the only Tanaka listed in New York City (p. 653) is S. Tanaka, 243 E. 58th St., Manhattan. Phone: EL. 5-8163.

Note: New York City's earliest Japanese tofu maker was Tanaka (K.) & Company, 326 Amsterdam Ave. (on Manhattan's west side). We do not know whether or not these two companies are related.

1533. **Product Name:** Tofu.
Manufacturer's Name: Terasawa Ryokan Sakana-ten (Japanese-style Inn and Fish Shop).
Manufacturer's Address: P.O. Box 63, Alvarado, California. Phone: 37.
Date of Introduction: 1934. January.
New Product–Documentation: The Japanese American Directory. 1934, p. 96. Name is in Japanese only. Address and phone number are in English. Phone: 37. Ad (1/8 page) p. 96. All in Japanese. Terasawa Sengyo-ten. Fresh fish and tofu.

1534. *News and Observer* (*Raleigh, North Carolina*). 1934. Food products from soy beans: Chemist from Washington makes interesting demonstration in Belhaven [North Carolina]. Jan. 21. Sunday morning.
• ***Summary:*** Belhaven, January 20, 1934. Dr. Jethro Kloss, expert food chemist from Washington, DC, gave a demonstration of food products that can be made from soy beans to a packed and enthusiastic crowd in Belhaven's City Hall Tuesday. He came to Belhaven at the invitation of F.P. Latham, Beufort County's master farmer.

"In 1932, Mr. Latham went to Washington, D.C. to a National Soy Bean Convention and witnessed Dr. Kloss making milk, cheese, buns, cakes, pies, vegetable roasts, butter, salad dressings and even a very healthyful medicinal liniment from soy beans. Mr. Latham's community is a great soy bean country and he immediately had a vision of Dr. Kloss visiting his community and showing it his experiments with soy beans. After 2 years, that vision at last has materialized and the people in Hyde County and Belhaven communities not only saw and tasted delicious foods made from the soy bean, but Dr. Kloss showed them how the products can be made in any home kitchen at a nominal cost."

"Dr. Kloss's little granddaughter came to Belhaven with him. She is 4 years old and 100% perfect. She never has drunk any other milk than soy bean milk.

"Dr. Kloss says there is no limit to the delicious foods that can be made from the soy bean. He is now working on a book of recipes made from soy bean products. He uses the Mammoth Yellow soy bean for most of his products. He became interested in the soy bean food products in searching for a food for diabetics."

1535. *Algemeen Landbouw Weekblad voor Nederlandsch-Indie.* 1934. De sojaboon bij de voeding der Chineezen [The soybean as food of the Chinese]. 18(38):615-17. March 17. [Dut]

1536. Howell, G.C.L. 1934. The soy bean: A dietary revolution in China. *China Journal* 20(3):140-46. March.
• ***Summary:*** A Chinese proverb states that "Bean-milk is the poor man's milk, bean-curd is the poor man's meat." The Chinese "use practically no dairy products and the bulk of the nation eats little meat. The meat consumption of China is estimated at about 20 grams per head per day, as against 149 grams in the United States of America, 130 in Great Britain, 92 in France, 29 in Italy, and 25 in Japan." But the author contends that the Chinese have never learned to make sanitary products which keep well. "The flour, oil, and milk made in China quickly become rancid and unpalatable." Thus China is starving in the midst of plenty. No country in the world has had less benefit from the soy bean as treated by modern methods as that of its origin. In northern China, soy flour is used in a ratio of 2 or 3 to 8 with millet flour to make wo-tou steamed bread, and in a ratio of 1:5 with wheat flour to make man-tou steamed bread. A modern factory, such as the Aguma Works in Germany, could be established in China to make these products on a large scale at low cost. High quality soy-fortified macaroni, rice flour, soy oil and soya milk should also be produced. "Research has done its work. And China only awaits the pioneer, a commercial man, who will use the discoveries of science on a commercial scale. His coming is certain. The time of his coming rests on the knees of the gods."

1537. *Miami Daily News.* 1934. Food products of soy bean urged for daily table use: Milk, cheese, roasts, bread and other preparations made from herb claimed to have high nutritive values. April 8. Sport section. p. 5. Sunday. Facsimile printed in Back to Eden by Jethro Kloss, 1982 ed.
• ***Summary:*** Two photos by Rinc above the article show: (1) A small insert portrait of Dr. Jethro Kloss. (2) His daughter, Mrs. Harry C. Engelhardt, standing next to her daughter, Joyce, age 5. The caption states that "Dr. Jethro Kloss is devoting his life to the dissemination of knowledge pertaining to soy bean milk." Both his daughter and

© Copyright Soyinfo Center 2013

granddaughter were raised on this milk."

"Dr. Kloss prides himself on having once been a 'farmer.' He is credited with having spent a fortune in philanthropic work, the greater part having gone toward introducing a bean which he feels is destined to eventually revolutionize the economic structure of this country and become of incalculable value in time of war.

"Approximately 6,000 persons recently heard Dr. Kloss in Bayfront park explain how he apparently performs miracles when he transmutes beans into 24 or more different foods which in addition to being delectable also retain various life-giving elements usually attributed to cow's milk...

"He exhibited 21 articles made from soy beans and invited the public to taste them. These were soy bean milk, bread, pie, cakes, buns, cookies, roast, buttermilk, coffee, cottage cheese, cream cheese, yellow cheese, soy bean sauce, pancakes, broth, butter, 'mashed potatoes,' mayonnaise, soy bean roast not like that from meat, ice cream, sprouted beans. None of these contained white flour nor cane sugar, making such foods especially valuable for diabetics. Soy bean foods are also recommended for arthritis.

"He advocates the teaching of edible food preparation from soy beans as part of school curriculum and drew a parallel tending to show how the government spends millions to spread hog and other stock-feeding knowledge while almost ignoring the phases which would create well-fed humans.

"Dr. Kloss pointed out that he was merely in this country revealing something which for centuries had been common knowledge throughout the Orient... He quoted Dr. S. [sic, A.] Horvath of the Rockefeller institute as one of the world's leading authorities who said: 'The Chinese nation exists today because of the use of the soy bean as a food.'"

A sidebar at the lower left of the article shows another portrait photo of Dr. Kloss and announces: "By the request of thousands who heard Dr. Kloss speak in Bayfront Park, he has consented to give further instructions in the preparation of the wonderful Soy Bean Products.

"He will give two food demonstrations in the Miami School of Applied Arts, 406 N.E. 2nd Ave., Monday afternoon at 2:30 and Monday evening at 8, April 9.

"Dr. Kloss makes more delicious table foods from soy bean than any one else known. The soy bean is a complete food, and is highly alkaline. Following is a partial list of the foods he makes:

"Soy bean milk, soy bean buttermilk, cottage cheese, ice cream, bread, buns, pies, cake, cookies, roast, coffee, pancakes, butter [probably soynut butter], mayonnaise, broth. These foods do not contain any cane sugar or other harmful ingredients. They are most economical, simple to prepare, and very healthful and inexpensive. The use of the articles would mean a great saving of money, and preserving of health. They must be seen and tasted to be appreciated."

Note 1. This is the earliest document seen (March 2000) that mentions soy mayonnaise.

Note 2. This is the earliest document seen (March 2007) that mentions a "cream cheese" or "yellow cheese" made from soy beans (one of two documents).

Note 3. This is the earliest document seen (March 2007) that mentions Jethro Kloss' work with soy bean ice cream.

Note 4. As of Nov. 1990 the *Miami Daily News* no longer exists. Its name was changed to the *Miami News*, it was owned by Cox, and it went out of business in about 1988. Back issues would probably be available at the Univ. of Miami.

Note 5. This is the second earliest document seen (March 2007) that uses the word "miracles" (or "miracle" or "miraculous") in connection with soy beans. Address: Florida.

1538. Adolph, W.H.; Kao, Hsueh-chung. 1934. The biological availability of soybean carbohydrate. *J. of Nutrition* 7(4):395-406. April. [26 ref. Eng]

• ***Summary:*** Approximately 40% of the carbohydrate in soybean is utilizable by rats. The three soy materials investigated were ground yellow soybean (Peking variety), fat-free soybean (the meal "was defatted in a Soxhlet apparatus"), fat-free soybean curd (soybean cheese, which is essentially soybean protein–glycinin). The four methods used to estimate the biological availability of soybean carbohydrate give values ranging from 27 to 50 for the fraction of total carbohydrate used by the animal body. Experiments with phlorhizinized rates gave a utilization coefficient of 38%, which was "somewhat higher than the figure obtained by in vitro digestion with taka-diastase."

Note: This is the earliest English-language document seen (April 2004) that contains the word "defatted." Address: Dep. of Chemistry, Yenching Univ., Peiping, China.

1539. Come and see: The wonders of the 20th century (Poster). 1934. Dr. Jethro Kloss, 500-44th St., N.W., Miami, Florida. 1 p.

• ***Summary:*** By special request Dr. [Jethro] Kloss is giving two more free lectures and food demonstrations at the Miami School of Applied Arts, 406 N.E. 2d Avenue, Monday, April 9, in the afternoon and evening. Following is a list of food Dr. Kloss prepares from the soybean. They do not contain any cane sugar, white flour, or other harmful ingredients: Soy bean milk, bread, buns, pies, cakes, roast, buttermilk, ice cream, jelly, sauce, cream cheese, cottage cheese, yellow cheese, coffee, pancakes, broth, mashed potatoes, mayonnaise, butter.

"Learn to make this alkaline milk from soybeans, it taste's [sic] better than other milks, and has a better analysis than cow's milk, or goat's milk. Dr. Kloss will show a table of comparative analysis prepared for him by Dr. LeClerc, Senior Chemist of the Government. This milk can be made in

© Copyright Soyinfo Center 2013

any home, and costs less than 2 cents per quart... Dr. Kloss' ice cream made from the soybean milk is as delicious as any on the market, and very inexpensive and healthy. Learn to make these products in your own kitchens."

Note: This is the earliest document seen (March 2007) that mentions a "cream cheese" made from soybeans (one of two documents). This cream cheese was developed by Jethro Kloss. Address: 500 44th St., N.W., Miami, Florida. Phone: Edgewater 1128-J.

1540. **Product Name:** Loma Linda Smoteen, and Smotone.
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1934. April.
New Product–Documentation: Ad in Health (Mountain View, California). 1934. April. 1(1):33. "The Way to Health. Loma Linda Foods. Carefully Consider Your Diet." The text reads: "Build a nonstimulating diet... Proteena and Nuteena, Smotone and Smoteen–to be used like meat."

1541. Morris, H.T. 1934. Story of soybeans. *Flour & Feed.* 34(11):9. April; 34(12):9. May.
• ***Summary:*** This two-part article begins with the [probably mythical] story of the A.E. Staley Company's role in pioneering the soybean industry in America. The soybean first came to America in 1804. Then, about a half century ago [i.e. about 1884], "a missionary, returning to his home in America, brought with him some peculiar looking beans. These, by chance, fell into the hands of an observant chap [A.E. Staley] who was a tiller of the soil. Upon being told that these beans were the main crop of the Orient and furnished sustenance to both man and beast, the observer planted the seed and from actual experience saw that it enriched the ground and that livestock relished the beans and hay. Little did he realize that half a century later his intimate knowledge of the soybean would perhaps be a factor in shaping the destiny of the industry.

"The farms of Illinois had been worked overtime. The ground had been 'corned to death.'" The observer "began to preach 'diversify with soybeans.' He was so sincere and intent that this gospel should be spread that through the Staley company [which he owned] a promotional department was created. This staff had one specific job–that of selling the farmers on the possibilities of soybeans. In conjunction with the Staley company, soybean trains were operated throughout the country–stopping at all stations and demonstrating soybeans and soybean products.

"From a comparatively few fields, the seed took root." "Ten years ago, the Staley company built its first crushing plant with sufficient capacity to more than take care of all beans offered for sale. Prospects of an adequate supply of raw material, an organization, an up-to-date crushing plant and oil refinery, all called for action, as there had to be an outlet for the finished product. The same method of introducing soybeans was applied to soybean products" such as soybean oil meal.

A portrait photo shows "A.E. Staley, Sr., Founder of A.E. Staley Mfg. Co., Decatur, Illinois."

Note: This is the earliest document seen (April 2001) that tells the story of A.E. Staley first obtaining soybeans from a missionary. The story gets embellished each time it is retold during the years ahead. See especially: Staley. 1947. *The Wonder Bean.*

Part two of this article discusses: Soybean oil meal. Poultry rations. Milling methods. The writings of Dr. A. Horvath. Soybean milk, tofu, and soy sauce in China. Address: Staley Sales Corp.

1542. Morse, W.J. 1934. Utilizacion de las habas soya [Utilization of soybeans]. *Revista de Agricultura, Comercio y Trabajo* (*Cuba*) 14(52):77-90. April. [Spa]
• ***Summary:*** Contents: Introduction. Soybeans for human food: Dried beans, coffee substitute, toasted soybeans, fresh green or vegetable beans (*Habas frescas o legumbres*), soybean flour, soy sprouts (*retoños tiernos*), soy sauce, soybean vegetable milk, tofu (*cuajada o queso de habas soya*), soy oil. Soybeans for livestock: Soybeans for hay, for pasture, for ensilage, for fresh forage, for grain. Soybeans for oil. Soybean flour and cake. Soybeans for soil improvement. Address: USDA, Washington, DC, USA.

1543. Torres Herrera, José M. 1934. El haba soya, su cultivo y beneficio [The soybean, its culture and benefits]. *Boletin Agricola* (*Medellin, Colombia*) 8(189):1180-92. April. [Spa]
• ***Summary:*** Contents: Introduction. Climatological conditions. Soils appropriate for this crop. Inoculation with bacteria. Preparation of the soil. Soya in crop rotations. Sowing the seeds. The work of cultivation. Calculation of the cost of production for 6,400 square meters (Data taken from the Palmira Agricultural Experiment Station, Bulletin No. 1; the cost is $0.45 per arroba = ca. 25 lb). Soybean varieties ("Agriculturists interested in planting this crop which has no equal, can obtain seeds free of charge from the Pamira [sic, Palmira] Agricultural Experiment Station or the Antioquia Agricultural Society [Sociedad Antioqueña de Agricultores, Colombia]"). Production of seeds. Yields of various varieties. Harvesting and threshing of the grain. The uses of soya (*la soya*).

Utilization of the plant and seeds of the soybean (*de las habas soyas*)*:* I. The plants as hay, pasture, green forage, ensilage, green manure. II. The seeds as: 1. Whole dry soybeans (*habas secas*, for making infant foods, flour, soup, butter, diabetic foods and breads, cooked whole soybeans, confections, health foods (*alimentos para sano*)*:* soymilk, soybean roasts or steaks, soy sprouts. Breakfast foods: Vegetable curd or cheese (*cuajada o queso vegetal*), soy sauce, malted milk, soy coffee cakes, flour, livestock feed). 2. Green vegetable soybeans (*habas verdes*). 3. Soy flour

© Copyright Soyinfo Center 2013

(*harina de habas*). 4. Soy oil (*aceite de habas*).

Soya as human food. The composition of various legumes. Soy flour. Soy oil. Soy milk (*leche de soya*)*:* Nutritional comparison of soy milk and cow's milk, powdered soymilk, fermented soymilk, tofu (*queso soya*), soy casein (*Caseína*).

Whole dry soybeans: Roasted soybeans (*habas tostadas*), soy coffee (*café de soya*), soy chocolate (*chocolate de soya*). Green-seeded soybeans (*habas soyas verdes o legumbres*)*:* Soy sprouts, soy sauces. Edelsoya (soy flour made by Berczeller).

The value of soy forage. Soybeans in mixtures with other crops. Green manure. The concept of Dr. Uribe Echeverri, minister in Brazil.

Page 1180 states: "Climatological conditions. The soybean is suited to the temperate zones but it can become acclimatized to warmer climates and it has succeeded at the agricultural experiment stations of Valle de Cuaca and of Tolima and in various regions of the Intendencia del Chocó. It is probable that some varieties from England and from the north of Canada can acclimatize themselves in good conditions in our cold lands.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Colombia, or the cultivation of soybeans in Colombia. Note 2. No mention is made of soya in Nicaragua.

Note 3. This is the earliest Spanish-language document seen (Dec. 2012) that uses the term *habas tostados* to refer to soynuts.

Note 4 This is the earliest Spanish-language document seen (June 2009) that uses the term *habas verdes* to refer to green vegetable soybeans. Address: Agrónomo Nacional de la Intendencia del Chocó [Colombia].

1544. La Sierra Industries. 1934. La Sierra soy bean products: Perfect protein, high alkaline ash, low starch (Ad). *Health* (*Mountain View, California*) 1(3):30. June.
• ***Summary:*** "Add variety and new flavors to your menu with the following foods–soy cheese [tofu], soy milk, soy butter [like a soynut butter, non-hydrogenated], sandwich spread, canned soy beans, soy breakfast food, soy flour (raw), Mamenoka, Smoein, Soy-Co (beverage), soy oil, soy noodles, soy loaf.

"Low in price. Ask your health food store or grocer, or write to La Sierra Industries."

Note 1. This is the earliest document seen (June 2001) that advertises or markets tofu.

Note 2. This is the earliest dated publication seen (Sept. 2000) concerning La Sierra Foods and soy.

Note 3. This is the earliest English-language document seen (Dec. 2012) that uses the term "soy butter" to refer to soynut butter. Address: Arlington, California.

1545. Van Gundy, Dorothea. 1934. Soy beans: The new thing in foods. *Health* (*Mountain View, California*) 1(3):13, 30. June. [3 ref]
• ***Summary:*** Just below the subtitle is written: "Soy beans are going to revolutionize humanity"–Dr. A.A. Horvath. This article discusses: Nutritional value of soybeans, soybeans as a source of "complete protein" (which, when taken alone, will furnish all the essential elements for proper nutrition in sufficient quantities so there will be no impairment in growth or maintenance), soybeans for those who are seeking wholesome vegetable proteins to substitute for animal proteins, soy-bean flour (all cereals yield an acid ash, but soy flour is high in alkaline ash), whole soy beans (baked or pressure cooked), soy milk, and soy cheese or soy curd ("The Oriental people call it *tofu*, and make great use of it in their diets").

Soy beans "may be brought into the diet in almost any of the courses from soup to nuts, even entering the dessert course, for pumpkin pie made from soy milk with a crust made from soy flour is most delicious. Soy cookies are very nutritious as well as tasty.

"This unique food of the Orient is fast becoming Westernized, for all who study foods and nutrition are recognizing the value of the soy bean. Its high percentage of complete protein, its low starch content, its high alkaline ash, its valuable mineral and vitamin content, and its great versatility predestine this food to become an important and valuable addition to the American bill of fare." Address: Dietitian, California.

1546. Christian Science Monitor Bureau. 1934. Chicago finds that soy bean, made up into savory dishes, rivals noted Boston article. *Chicago News*. Aug. 18.
• ***Summary:*** For the text of this article, see the *Christian Science Monitor* of 18 Aug. 1934.

1547. *Christian Science Monitor.* 1934. Chicago finds that soy bean, made up into savory dishes, rivals noted Boston article. 26(223):1. Aug. 18. Central edition.
• ***Summary:*** This article was written after Henry Ford's gala soybean banquet at the Chicago World's Fair. "Chicago. Aug. 18–Please pass the soy bean salad. Oh won't you have some soy bean soup?" "This soy bean cake is delicious, but after the soy bean croquettes, soy bean apple pie and soy bean coffee you know, one isn't really hungry.

"Remarks like these were heard here last night at a dinner in which the humble soy bean made its social debut. The hosts were the Ford exposition staff who have been exhibiting growing soy beans at the World's Fair all summer and who thought it about time to prove their claims about soy beans being excellent food for people.

"As the dinner advanced some 30 guests who had arrived in a state of anxious expectation, not at all sure they were going to be able to eat their way through the five courses, relaxed and began to enjoy themselves. The soy

© Copyright Soyinfo Center 2013

bean appetizers, which included celery stalks stuffed with soy-bean cheese [tofu], set the pace for an excellent dinner in which every dish and drink was made wholly or in part of the little legume.

"No meat was served and it was not missed. The dish which took the place of the usual roast was soy bean croquettes. The hosts had obligingly furnished the guests with typewritten receipts of the foods they were eating so they were able to find out just how the croquettes were made... The man who was responsible for the menu, as well as for most of the recipes, was here to face the guests. He is Dr. A. E. Ruddimer [sic, Dr. E.A. Ruddiman], now chief chemist for the Ford Motor Company, but as one time desk-mate of Mr. Henry Ford's in a little country school in Michigan...

"Soy-bean meals are really only a side line for Dr. Ruddimer [Ruddiman]. He has been greatly interested in perfecting the salted soy bean and in developing synthetic milk from the legume, but the important part of his work, in Mr. Ford's scheme of things, he says, is the discovery of industrial uses for the bean.

"The Ford Company now makes 20 automobile parts and all of its car body enamel out of soy beans. Fortunately none of the parts or enamel got mixed up in the meal last night, which Dr. Ruddimen [sic, Ruddiman] had cooked in Dearborn with the aid of the Ford cafeteria staff to whom he gave much credit. It was brought here ready to serve in automobiles."

Note 1. This exact article was also published in the *Chicago News* on the same day. Note 2. No mention is made of Jan Willemse. Address: Special to the Christian Science Monitor Bureau, Boston, Massachusetts.

1548. *Chicago Herald and Examiner.* 1934. Soy beans good any way! Aug. 24. p. 11.
• ***Summary:*** A photo shows 3 men seated in chairs eating from plates. The caption reads: "Testimony–These gentlemen dining in the executive lounge of the Ford exhibit at the [Chicago] world's fair seem to be delighted with their soy bean dinner. They are left to right: Dr. A.E. [sic, E.A.] Ruddiman, Ford Motor Company food chemist who developed the soy bean recipes. C.V. Gregory, editor of *Prairie Farmer,* and Fred Black, manager of the Ford exhibit. The dinner consisted of soy bean croquettes, buttered green soya beans, pineapple ring with soy bean cheese [tofu] and dressing, and soy bean bread buttered with soy bean relish."

Note the statement that Dr. Ruddiman developed the soy bean recipes; no mention is made of them having been developed by Jan Willemse, as he later claimed.

1549. Ford Motor Co. 1934. Menu of dinner served at Ford Exhibit, Century of Progress, August 17, 1934. Dearborn, Michigan. 1 p.
• ***Summary:*** "Tomato juice seasoned with soy bean sauce. Salted soy beans. Celery stuffed with soy bean cheese. Puree of soy bean. Soy bean cracker. Soy bean croquettes with tomato sauce. Buttered green soy beans. Pineapple ring with soy bean cheese [tofu] and soy bean dressing. Soy bean bread with soy bean relish. Soy bean buscuit [sic, biscuit] with soy bean butter. Apple pie (soy bean crust). Cocoa with soy bean milk. Soy bean coffee. Assorted soy bean cookies. Soy bean cakes. Assorted soy bean candy."

Note 1. No mention is made of soy ice cream being served at this meal in Aug. 1934. Yet shortly thereafter, and definitely by Aug. 1935 soy ice cream for dessert was served at similar meals in the pine-panelled dining room in the Ford Engineering Laboratory (Strother 1961).

Note 2. A 1936 recipe book published by the Edison Institute describes how to make "Soy bean butter: Mix hydrogenated soy oil with salt, coloring matter and diacetyl to color and taste." Thus this product is similar to today's soy margarine.

Note 3. This is the earliest menu seen on which soyfoods appear prominently. Address: Dearborn, Michigan.

1550. *Oil and Soap.* 1934. The world's fair and the Oil and Soap Chemists. 11(9):194-95. Sept.
• ***Summary:*** "In the scientific exhibits of the World's Fair of 1934 the soy bean, as a source of basic materials, is occupying a prominent place because of the bean's variety of economic appeals. Three exhibits in which soy beans are shown as an oil source susceptible of great development are those of the Ford Motor Company, the University of Illinois and the Sherwin-Williams Company. In the latter soy bean oil appears as a paint base with some limitations.

"Dealing with the soy bean as an agricultural product the University of Illinois exhibit in the Food and Agricultural Building shows the possibilities of this plant as a profitable crop. In the past year, 4,350,000 bushels were produced in the state...

"The University exhibit includes samples of jars of various grades of soy oil which may be used in hard and liquid soaps. There are also exhibits of varieties of soy beans and of soy bean flours and bakery goods made from them.

"Henry Ford has been a consistent advocate of soy beans as a farm crop as part of his program for the industrialized farm, in which the farmer will have a variety of ways of turning his crop into money. In the Ford exhibit at the Fair the Ford 'Industrialized Barn' is surrounded on two sides by plots in which soy beans are growing as demonstration of the vigor and productiveness of the plants.

"The barn is the original Ford homestead barn built in 1863 near what is now the city of Dearborn, Michigan. The building was taken up and transported to the Fair, partly for its sentimental interest and partly as a demonstration of how a farmer may transpose his old home barn into an industrial unit. A soy bean processing plant is built around the interior of the barn, the engine being outside.

© Copyright Soyinfo Center 2013

"Units of the oil extractor are of simple design and made chiefly of standard piping and sheet metal that any mechanic could put together. The crushing rolls and a few accessories are the only parts that need be purchased.

"Oil extraction operation in this plant is by solvent. The beans are taken from storage in dry sheds, tempered to 12 per cent moisture content, then gravity fed to a series of five rolls between which they are progressively reduced to flakes of minimum thinness. The flaked beans are then passed by conveyor through a counter current of solvent, gasoline being used in the exhibit. The gasoline is distilled out of the solvent-oil solution and re-used. Flakes come through the process reduced to 2 per cent oil. The solvent is steamed out of the flakes, they are dried and ready for further conversion into food or industrial products. A paper concerning soy bean oil extraction is scheduled for the morning of Oct. 11 of the A.O.C.S. [American Oil Chemists' Society] meeting.

"A soy food exhibit in the Ford barn shows soy flours, cheese, milk, butter, sprouts, salad dressing and various bakery goods. Dinners have been served at the Ford exhibit at which a number of guests have sat down to meals of which the entire menu was contrived from soy beans in various disguises. Plastic uses of the soy bean also are shown. Light switch assemblies are molded in a demonstration operation. Gear shift knobs and other small parts are exhibited. The entire exhibit is a forceful educational effort in which Henry Ford's campaign to urge the raising of crops that will provide the farmer winter employment as manufacturer is centered on the soy bean."

A photo at the bottom of p. 195 bears the caption: "This crude barn, originally built 71 years ago on the farm of Henry Ford's father at Dearborn demonstrates to the World's Fair visitors what has been called 'Henry Ford's solution to the Farm Problem."

1551. Torres Herrera, José M. 1934. El haba soya, su cultivo y beneficio [The soybean, its culture and benefits]. *Boletin de Agricultura y Trabajo* (*Nicaragua Ministerio de Agricultura y Trabajo*) 6(54):24-26. Aug.; 6(55):6-8. Sept.; 6(56-57):6-12. Oct/Nov. 3a Epoca. [Spa]

• ***Summary:*** The article begins with the following: "In previous editions of this bulletin we inserted various articles concerning the cultivation of soya; however, given the large importance of this legume, we decided to reprint this article by José M. Torres Herrera from the *Boletín Agrícola* of Medellín, Colombia" [April 1934. 8(189):1180-92]. The soybean variety Brazilian Yellow can be obtained in Sao Paulo for 10 cents gold at the most" (i.e., it is inexpensive).

Contents: Part I. Introduction. Climatological conditions for different varieties. Soils appropriate for this crop. Inoculation with bacteria. Preparation of the soil. Soya in crop rotations.

Part II. Sowing the seeds. The work of cultivation. Calculation of the cost of production for 6,400 square meters (Data taken from the Palmira Agricultural Experiment Station, Bulletin No. 1; the cost is $0.45 per arroba = ca. 25 lb). Soybean varieties ("Agriculturists interested in planting this crop which has no equal, can obtain seeds free of charge from the Pamira [sic, Palmira] Agricultural Experiment Station or the Antioquia Agricultural Society [Sociedad Antioqueña de Agricultores, Colombia]"). Production of seeds. Yields of various varieties.

Part III. Harvesting and threshing of the grain. The uses of soya (*la soya*). Utilization of the plant and seeds of the soybean (*de las habas soyas*)*:* The plants as hay, pasture, green forage, ensilage, green manure. The seeds as whole dry soybeans (*habas secas*, for making infant foods, flour, soup, butter, diabetic foods and breads, cooked whole soybeans, confections, health foods [alimentos para sano]: soymilk, soybean roasts or steaks, soy sprouts. Breakfast foods: Vegetable curd or cheese [cuajada o queso vegetal], soy sauce, malted milk, soy coffee cakes, flour, livestock feed), green vegetable soybeans (*habas verdes*), soy flour (*harina de habas*), soy oil (*aceite de habas*). Soya as human food. The composition of various legumes. Soy flour. Soy oil. Soy milk (*leche de soya*)*:* Nutritional comparison of soy milk and cow's milk, powdered soymilk, fermented soymilk, tofu (*queso soya*), soy casein (*Caseína*). Whole dry soybeans: Roasted soybeans (*habas tostadas*), soy coffee (*café de soya*), soy chocolate (*chocolate de soya*). Green-seeded soybeans (*habas soyas verdes o legumbres*)*:* Soy sprouts, soy sauces. Edelsoya (soy flour made by Berczeller). The value of soy forage. Soybeans in mixtures with other crops. Green manure. The concept of Dr. Uribe Echeverri, minister in Brazil.

Note: No mention is made of soya in Nicaragua. Address: Agrónomo Nacional de la Intendencia del Chocó [Colombia].

1552. Carqué, Otto. 1934. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 2nd ed. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• ***Summary:*** This so-called 2nd edition is identical to the first edition (1933) except that: (1) Two lines on the 2nd page of the Preface have been moved to the first page; both pages are unnumbered. (2) Two paragraphs, titled "Preface to the second edition" have been added to the end of the Preface and dated "November, 1934." The author's signature again appears at the end of the Preface.

Note: The first 5,000 copies were exhausted in about a year. Address: Los Angeles, California.

1553. Yamaguchi, H.S.K.; Garis, Frederic de; Sakai, Atsuharu. 1934-1950. We Japanese: Being descriptions of many of the customs, manners, ceremonies, festivals, arts and crafts of the Japanese, besides numerous other subjects.

© Copyright Soyinfo Center 2013

Yokohama, Japan: Yamagata Press. 592 p. 889 illust. Index. 21 cm.
• ***Summary:*** "Written with great style, this work brings traditional Japan to life in a way that no contemporary guide book can, explaining all the curious features of daily life in Japan." This is a combination of 3 books. Book I (p. 1-183), written by Frederic de Garis for H.S.K. Yamaguchi, was first published in Dec. 1934. Book II (p. 183-375), written by Atsuharu Sakai for H.S.K. Yamaguchi, in June 1937. Book III (p. 377-592), with the same authorship as Book II, was first published in June 1949. All contain entertaining information on Japanese culture and foods.

They discuss: Red rice (*sekihan*, with azuki beans, p. 36). The Broken Needles Mass or Hari-Kuyo (p. 160, needles are stuck into tofu on Feb. 8 or Dec. 8), Sukiyaki (p. 264-66, incl. its origin and history), sembei (p. 267, senbei or rice crackers, incl. shoyu), Miso or bean-paste (p. 269-70), Shoyu or Japanese soy (p. 271-73, incl. Kikkoman, Higeta, Yamasa, Kagi-Yamasa, and Marukin logos and wooden kegs), Sekihan and hot water (p. 292, azuki beans as part of a taboo for Japanese girls), Setsubun or Bean-Throwing Ceremony (p. 554-55, mame-maki held on setsubun).

Note: This is the earliest English-language document seen (March 2009) that uses the term "bean-paste" (not preceded by the word "soy" or "soya") to refer to miso. Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

1554. **Product Name:** Loma Linda VegeCheese (Or Vege-Cheese; Canned Tofu with Pimiento).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: Loma Linda, California.
Date of Introduction: 1934.
Ingredients: In 1971: Soybeans, soy oil, peanuts, pimiento, salt.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Interview with Charlotte Van Gundy Holmes. 1981. Recalls that this tofu product appeared in 1933-34. Wholesale price list. 1944. Loma Linda was still making tofu in 1961.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "VegeCheese (Loma Linda)."

1555. Wang, Bangchun. 1934. Dou fu pe yang ji [Basics of culturing tofu]. *Ke Xue* (*Science*) 18(3):338-344. [Chi]* Address: China.

1556. Adachi, Isamu; Sakurai, Shigeru. 1934. Nihon shokumotsu-shi [History of Japanese foods]. Tokyo: Yuzankaku. 480 p. [Jap]
• ***Summary:*** This is the best book seen on the history of Japanese foods. The following soyfoods are discussed: Firm tofu, soymilk and okara (p. 290-91; discusses the *Teikun Orai* by Iseno Teijo, tofu-kan, tofu-jiru = soymilk, setsurun-sai = okara), yuba (p. 336), shoyu and tofu (p. 370-71), unohana (okara, p. 377), tofu and natto (p. 382-83).

1557. Blunden, Edmund Charles. 1934. The mind's eye: Essays. London: Jonathan Cape. 284 p. See p. 108-09. No index. 21 cm. Life and Letters series, no. 80.
• ***Summary:*** This book is divided into 4 parts. Part two, "Japan," contains essays written during the 1920s and 1930s; most have been previously published in periodicals. The chapter titled "On some humorous prints by Hiroshige" (written in 1926), contains a description of two apprentices, one from a "fried-*tofu* shop" and one a fishmonger's boy, fighting each other in the street. One boy hits the other on the nose, while his opponent pulls out a handful of his hair. But "whichever wins, both have lost, for a dog is slinking away with the fishmonger's *bonito*, and two hawks have raided the *tofu.*" Address: [Sussex, England].

1558. Polk's Portland [Oregon] city directory. 1934. Portland, Oregon: R.L. Polk & Co., Inc. *
• ***Summary:*** Ohta Saizo. Wholesale baker. 86½ 5th St. North. Address: Portland, Oregon.

1559. Shanghai Bureau of Social Affairs. 1934. Standard of living of Shanghai laborers. Shanghai, China: Shanghai, Bureau of social affairs, the city government of greater Shanghai; Chung Hwa Book Co., Ltd. xi + 186 p. See p. 111. 24 cm.
• ***Summary:*** A table (p. 111) includes: "Yellow soy bean sprouts... Fried bean curd... Green bean sprouts... Bean lamina... Dried mung bean starch in strips. Bean curd skin... Yellow bean... Broad bean."

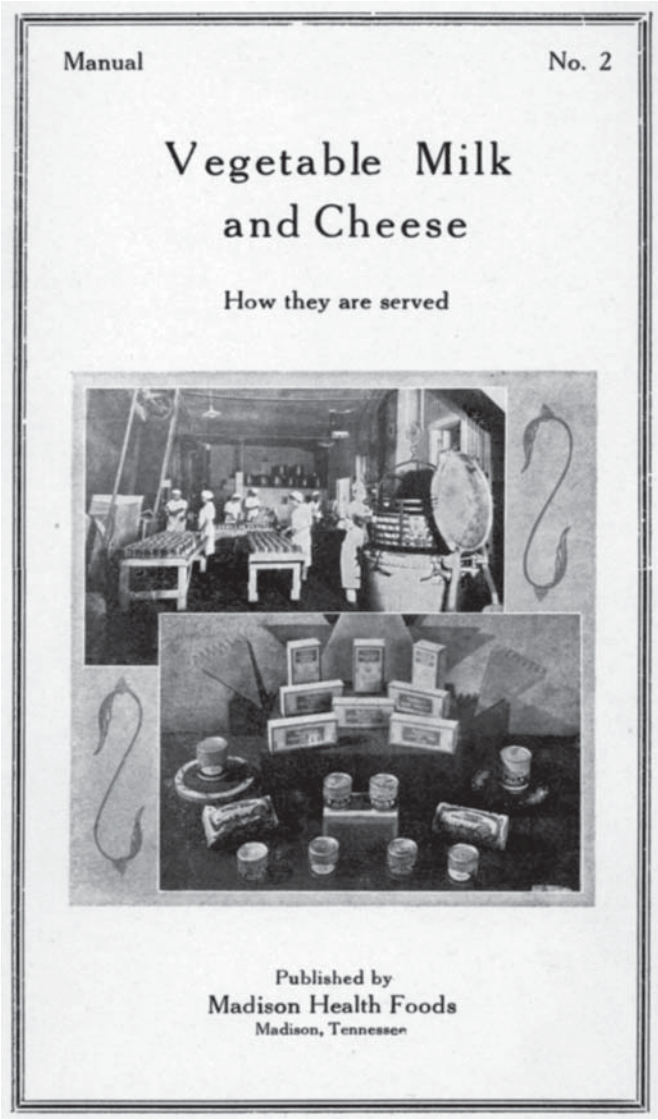
1560. Yamaguchi, H.S.K.; Garis, Frederic de. 1934. Oddities in Japan. "Believe It or Not." Memorial services. Broken Needles Mass (Hari-Kuyo) (Document part). In: H.S.K. Yamaguchi. 1934. We Japanese. Yokohama, Japan: Yamagata Press. 592 p. See p. 160. Book I.
• ***Summary:*** "Yearly, on December 8th, but more generally on February 8th, services for broken needles are held in many girls' schools, and in some private homes, to comfort the spirits of needles broken during the year–the needle being regarded as a living thing whose body has been sacrificed in service. An altar consisting of two or three steps is set up. In front of it is the Sacred Staff and Rope, *gohei* (cut-paper strips) being suspended from it. On the top step offerings of cake and fruit are placed. On the second step is a plate on which is a cube of *tofu* (bean-curd)–a jelly like substance–into which the broken and crooked needles are thrust, the idea being to give the needles a soft rest after their hard work. Sewing accessories are displayed on the lowest step. In a Buddhist school a sutra is read to calm the spirit of the needles. In Tokyo, the *tofu*, with its needles, is offered to a Awashima shrine: at Asakusa, Shimo-Kitazawa, and

© Copyright Soyinfo Center 2013

elsewhere.

"The ceremony, or ones nearly similar, is one of the traditional services observed by girls in Japan, which, with some lapses, can be traced back for about 1600 years to the time of Emperor Nintoku, and the Awashima shrines of the land are chosen for the offerings because it is said that the main Awashima Shrine, in the province of Kii (Wakayama) is dedicated to Emperor Nintoku." Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

1561. Madison Health Foods. 1934? Vegetable milk and cheese. How they are served. Manual No. 2. Madison, Tennessee. 21 p. Undated. 22 cm.



• ***Summary:*** Contents: Introduction. Composition of the soybean. Soybean–A food for infants. Salads: How to make a perfect salad (20 recipes, including 11 with soy cheese [tofu] and 7 with grated soy cheese): Tomato, pineapple, cheese salad (with grated soy cheese). Jellied soy salad (with grated soy cheese). Waldorf cheese salad (with grated soy cheese). Raisin and soy cheese salad (with grated soy cheese). Almond and soy salad (with grated soy cheese). Sliced fruit and cheese salad (with soy cheese). Soy peach salad (with grated soy cheese). Tomato and soy salad (with soy cheese). Baked apple with soy sauce (with grated soy cheese). Pineapple and cheese salad (with grated soy cheese). Apple, carrot and soy salad (with grated soy cheese). Soybean salad (with whole soybeans). Soybean sprout salad (with soybeans sprouted until the sprouts are about 2 inches long). Cold sliced curd (with thin-sliced soy cheese). Potato soy salad (with grated soy cheese). Stuffed egg with soy cheese. Vegetable soy salad (with grated soy cheese). Cheese, cantaloupe, and tomato salad (with grated soy cheese). Mock chicken salad (with grated soy cheese). Pea soy salad (with grated soy cheese).

Sandwiches (9 recipes, incl. 5 with soy cheese and 4 with grated soy cheese; one recipe uses Vegex). Cooked vegetable dishes with soy cheese (40 recipes, all use soy cheese except 2 which use soybean puree). Other soy dishes (3 recipes). Desserts (1 recipe for Soy cream custard, with soy milk). Diabetic foods (4 recipes, each using soy meal [flour]). Soups (5 recipes, using soybeans, grated soy cheese, and soy milk or soybean milk). Breakfast dishes (4 recipes, using canned soybeans, soy meal, or grated soy cheese).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "grated soy cheese" to refer to grated tofu.

On the last page (inside rear cover) are listed "Products for sale by Madison Health Foods Inc. (Madison, Tennessee): Soy cheese, 14 or 30 oz. Soy beans, 14 or 30 oz. Soy milk, 14 or 30 oz. Soy meal, 5 or 10 lb. Also many other health products. Write for information and prices."

Two photos on the cover show: (1) Students at work inside the Madison food factory, with two long tables and a retort cooker. (2) Various food products made by the company.

Note 2. Although this booklet is undated, the two photos on the cover appear in the *Madison Survey* issue of 14 March 1934 (p. 31). Address: Madison, Tennessee.

1562. White, William C. 1935. The Japanese in America: A close-up. Citizens or aliens, it is hard for them to join in the life of the country. *New York Times.* Jan. 6. p. SM9.

• ***Summary:*** Begins by describing "Little Tokyo," the Japanese section of Los Angeles–which is just 3 blocks from the main business section of Los Angeles. Includes a description of the chrysanthemum festival, drug, stores, newspapers, and restaurants which "serve hamburgers and hot dogs as well as soya bean curd [tofu] and rice."

About 135,000 Japanese live in America, and 97,000 of those (72%) live in California. Only about 6,000 live in New York. More than 45,000 live in or near Los Angeles, where they are considered a problem. They live by themselves

© Copyright Soyinfo Center 2013

in certain sections and have no social contacts with white Americans–except that their children attend public schools.

Significant numbers of Japanese began to arrive in California after 1880. By 1910 more than 80,000 had entered as immigrants. The 1906 "gentleman's agreement" stopped almost all Japanese immigration and the Congressional act of 1924 stopped it entirely. But all Japanese born in the USA (*nisei*) are American citizens, and this latter group now slightly outnumbers those immigrants born in Japan [*issei*]–who are barred by law from becoming naturalized citizens.

The average age of the *issei* in America is less than 45, yet they are prevented by law from owning land in most Western states. "The laws which prohibit marriages between any two races apply to them." Children offer one way of getting around the land laws. The parents simply buy land and register their children as the legal owners. Unlike German immigrants, for example, they make little effort to assimilate, yet they also take care of themselves and rarely appear on charity rolls.

The feeling in California against Japanese is based primarily on two issues: (1) They are believed (incorrectly) to have a high birth rate, which could lead to the "yellow peril." (2) They can live more simply than whites and therefore "undersell the whites" in goods and labor. There is growing conflict between Japanese-American youth, educated in American schools and often wanting to become part of American culture, and their parents–who want to keep Japanese culture alive.

"Within recent weeks there have been terroristic raids on Japanese families settled around Phoenix, Arizona. There have been similar affairs at various times in California. There have been night riders, occasional bombs. Part of the Arizona terror is directed at the fact that the Japanese, 750 of them, half of them born in this country and therefore American citizens, are making a living on land where white farmers, settlers from Oklahoma and Texas, have failed."

Note 1. See also interview: Tadano, Mary; Tadano, Michiko. 2002 "History of Showa Shoyu Brewing Co.: Sept. 17.

Note 2. This is the earliest document seen (Feb. 2012) that concerns the Tadano family (later makers of soy sauce) near Phoenix, Arizona–however it does not mention the family by name.

1563. Ralston Purina Co. 1935. Soybeans: A cash crop. St. Louis, Missouri. 10 p. Prepared by E.F. Johnson. Jan. 23 cm. • ***Summary:*** This booklet (also prepared by E.F. Johnson) is somewhat similar to that titled "Soybeans for beginners," published by Ralston Purina in March 1934. Contents: Map of the Midwest showing the company's soybean processing plants in St. Louis, Missouri, Lafayette, Indiana, and Circleville, Ohio. "Our soybean mills located to serve you best." Introductory message from J.H. Caldwell, Vice-President of Ralston Purina Co. (15 Jan. 1935, St. Louis, Missouri). Soybeans–A cash crop: Introduction, three outstanding reasons for great interest in soybeans this year (1) Year-round cash market now established. (2) Chinch bugs leave soybean alone. (3) Soybeans can be planted on corn-reduction acres. Established markets necessary for expansion. Soybeans are an easy crop to grow: Seedbed preparation most important operation (weeds, stand, yield), a simple prescription for a good seed bed. Varieties recommended for commercial production (Dunfield, Manchu, Illini), recommended new varieties (Mandell, Scioto, Manchuria, Mukden. Note: Virginia, Wilson, Ebony, Pekwa and Kingwa are not recommended due to low oil content and less attractive meal). Growing soybeans commercially: Inoculation, solid or row seeding, rate of seeding, date of seeding, don't plant too deep, cultivation. Harvesting: Combine method recommended, grain binders used in many sections, mowing machine and windrower preferred by some growers, use regular grain separator for threshing. Yield of grain ("Soybeans will yield from 20 to 40 bushels to the acre... Yields of 40 to 45 bushels per acre are not uncommon in Illinois"). Storing and marketing soybeans: Sell through your local elevator, value of meal and oil determines price of soybeans. Future outlook for soybeans in U.S.: Introduction, increased acreage next year anticipated, wide diversity of use of soybean products: Flour, soybean oil meal, soybean oil, other uses (milk, cheese [tofu] bean sprouts, flavoring sauce, substitutes for coffee and peanuts). Using soybeans to check chinch bug movement. A soybean program. Ad: Use the products that make a market for your soybeans: "Three Purina soybean processing plants are located in the heart of the Soy Belt..." Soybean oil meal is used in Purina Chows.

Photos show: (1) E.F. Johnson (facing p. 1). (2) The 7-story Purina Mills plant at Circleville, Ohio, "complete with new modern soybean processing machinery" (p. 6). Purina Mills plants at Lafayette, Indiana, and St. Louis, Missouri (p. 7).

"Future outlook for soybeans in U.S.: Previous to 1934, 4,000,000 bushels was the largest amount of soybeans to be processed from a single crop. At least 9,000,000 and possibly 10,000,000 bushels of the 1934 crop will be processed into meal and oil... We predicted last year that the reduction in cotton-seed meal through the passage of the Bankhead Bill would result in a big increase in demand for soybean meal and in higher prices on soybeans. Both of these predictions have already been proven. The big increase in soybean meal this year still is far short of supplying the loss in cottonseed meal." Address: St. Louis, Missouri.

1564. Monnier, Emile. 1935. Les préparations à base de graines de soja dans l'alimentation des Annamites

© Copyright Soyinfo Center 2013

[Preparations based on soybeans in the diet of the Annamites (of Central Vietnam)]. *Bulletin Economique de l'Indochine* (*Hanoi*) 38:66-86. Jan/Feb. Also in Annales de Medecine et de Pharmacie Coloniales (1935) 33. p. 34-57. [11 ref. Fre]
• ***Summary:*** An excellent, very precise and detailed discussion of the subject. Contents: Introduction, botany of the plant, nutritional composition, and utilization. Soymilk (used to make tofu–*le fromage de soja–dau-phu*). Tonkin soy sauce (*La sauce de soja = dau-tu'o'ng.* It is made by fermentation of a mixture of glutinous rice and roasted soybeans {*graines de soja grillées*}. It is made on a family level. It corresponds roughly to Japanese shoyu and Chinese soy sauce (*téou-yeou*). Describes exactly how it is made). Soy cream [yuba] (*La crème de soja = dau-phu-chuc;* [dried yuba sticks]). It comes in the form of sheets.

Note. This is the 2nd earliest French-language document seen (Dec. 2012) that mentions roasted soybeans, which it calls *graines de soja grillées.* Address: Chef du Laboratoire de Chimie de l'Institut Pasteur, Hanoi.

1565. MacConkey, C.A. 1935. Soybeans. Ottawa, Canada: Div. of Research Information, National Research Council, Ottawa. 93 p. March. 28 cm. [152 ref]
• ***Summary:*** A very important and interesting book. In 1932 the first two sections of this report were prepared; in 1934 the third section was added in order to bring it up to date. Contents: Summary of Part I. Summary of Part II. Summary of Part III. Part I (p. 14): Cultivation, utilization and trade. Introduction. Cultivation: Varieties, differences, maturity, hardiness, color of bean, climate, soil, seeding, harvesting. Production of oil and cake. Applications: Introduction, the plant (forage, hay, pasturage, silage, soilage, straw, soil improvement and fertilizer), the bean (grain, flour, soy sauce, bean curd [tofu], vegetable beans, other uses), the cake (cattle feed, flour, fertilizer, other uses), the oil (general, the soap industry, the paint and varnish industry, the food industry). The soybean industry in the United States: Importance of the crop, history and development (incl. Henry Ford who is said to have 10,000 acres under cultivation), standards (classes of soybeans), production of oil and cake, consumption of soybean oil, export trade in soybeans. Statistics of world trade: Beans (production, exports, imports [statistics, pre-war average {1909-13} + 1926-1931 for Germany, Japan, Denmark, UK and British Empire countries, Dutch East Indies, Sweden, Italy, Formosa, and Holland], consumption [net imports], prices), oil (production, exports, imports, consumption, prices), cake (production, exports and imports). Statistics of the German oil seed industry: Oil seeds in Germany [by far the world's largest soybean importing country and largest European producer of soybean oil] (imports and exports), vegetable oils (production, consumption and value), oil cake and meal (production, imports, exports, consumption and relative values), soybean experiment stations in Germany.

Part II (p. 56): Development in Canada. The difference between growing soybeans for forage and for seed. Present status of soybean cultivation in Canada. The future for soybeans on the Prairies. Extent of Canadian Experimentation. Varieties suitable for Canada. The climates of Manchuria and Canada. Planning the development of soybeans in Canada. Consumption of vegetable oils in Canada by industries. Consumption of oil cakes in Canada. Firms engaged in the soybean industry in Canada. Casein in Canada.

Part III (p. 69): Survey of the Literature, 1931-34. Cultivation. Green manure. Breeding. Germination of seeds. Diseases and parasites. Soil. Manufacture of oil cake. Composition of the soybean. Properties and composition of soybean oil. Feedstuffs. Edible products. Detection in food (e.g. detection of soybeans in wheat flour, pasta, meat products, etc.). Inedible products. Economics. Table (p. 79-80)–Imports of soy products into Canada: Soy sauces (1931-1933), edible peanut and soyabean oil, peanut and soyabean oil for the manufacture of soap and peanut oil for canning fish, soybeans, soyabean cake and soyabean meal for use exclusively in the manufacture of cattle food and of fertilizers. References (102). Other references (Nos. 103-117). References not consulted (35).

The section titled "Development in Canada" (p. 56-62) states: "Soybeans are at present being grown for seed on a commercial scale in southern Ontario, chiefly in Kent and Essex Counties [the Niagara Peninsula]. Prior to 1931 the acreage under soybeans was about 1000 or 1500. The efforts of persons interested in establishing oil mills increased this to about 5000 in 1931 and to 6000 or 7000 in 1932. The average yield of seed has been about 23 bushels per acre, which is quite equal to yields in the U.S., while another variety, the A.K., has yielded at the rate of nearly 40 bushels per acre during a six-year test at Harrow, Ontario."

"T.B. Macaulay, President of the Sun Life Assurance Company of Canada has been experimenting for a number of years on the growing of soybeans in the hopes of being able to make the western farmer more free from his dependence on wheat, and believes that he is near to discovering suitable varieties...

"A statement appearing in the *Montreal Financial Times* (Nov. 18, 1932) reports that a number of varieties introduced from Urbana [Illinois] and tried in various parts of Alberta made an excellent growth of forage...

"The work being carried out at T.B. Macaulay's experiment farm at Hudson Heights, Quebec, is particularly worthy of mention. Here the testing of varieties has been in progress for 8 years. Mr. Macaulay's method of approaching the problem consists in obtaining samples of hitherto untried varieties from the most northerly regions where soybeans grow and the earliest varieties from Asia and elsewhere... Mr. Macaulay has a new variety which he calls Toyanaga. It matures 5 days to a week earlier than the variety called

© Copyright Soyinfo Center 2013

Manchu, which is being grown to a small extent in southern Ontario."

"Varieties suitable for Canada: Besides O.A.C. 211 which is the one outstanding variety that has shown itself suitable for cultivation in Canada albeit only in southern Ontario, a number of other varieties have been tried and experimented with such as Mandarin, Manchu, Wisconsin Black, Quebec 92, Quebec 537, Early Yellow, Early Brown, and Manitoba Brown, but none of these have been very satisfactory."

Table 29 (p. 60) gives a summary of current (1932) Canadian experiments with soybeans: Ontario Agricultural College (Guelph), grown for 39 years (i.e. since 1893), tested 125 varieties. Dominion Experimental Farms (Ottawa and Harrow, Ontario), 9 years, 100 varieties. Macdonald College (Quebec), 20 years, 16 varieties. Manitoba Agricultural College (Winnipeg), 10 years, 12 varieties. University of Alberta, Edmonton, 3 years, 7 varieties. Brooks (Canadian Pacific Railway Irrigation Experimental Station, Alberta), unknown number of years and varieties. Pointe Platin (Quebec, by J. deLothinière [deLothiniere]), unknown number of years and varieties. Hudson Heights (Quebec, by T.B. Macaulay), 8 years, 100 varieties. University of Saskatchewan, 10 years, 25 varieties.

Page 65 lists "Firms Engaged in the Soybean Industry in Canada." The Soy Bean Oil and Meal Co-operative Company of Canada, Ltd., Chatham, Ontario; Canadian Soyabeans Ltd., Milton, Ontario; The Vitone Co., Hamilton, Ontario; Dominion Soya Industries, 355, Place Royale, Montreal, Quebec.

Note 1. This is the earliest document seen (Jan. 2010) that mentions Dominion Soya Industry, Ltd. (Montreal, Quebec, Canada) in connection with soybeans.

Table 33 (p. 67) gives "Consumption of oilseed cake and meal in Canada" for the calendar years 1926 to 1931. Figures (taken from *Trade in Canada*) are given for cottonseed, linseed, palm nut, soya and total. Consumption of soya cake and meal (in tons) were: 200 in 1926 (0.6% of total); 680 in 1927; 560 in 1928; 1,560 in 1929 (5.0% of the total); 1,190 in 1930; and 2,500 in 1931. The value in dollars role from $8,000 in 1926 to about $50,000 in 1931. Apparently all of this soyabean cake and meal was imported.

Note 2. This is the earliest English-language document seen (Dec. 2005) that uses the term "soyabean meal" to refer to ground, defatted soybeans. Address: Div. of Research Information, National Research Council, Canada.

1566. *Los Angeles Times.* 1935. Foreign "atmosphere" and fine food at home: Novel cafes discovered. April 25. p. B5.
• ***Summary:*** In the Japanese quarters of Los Angeles, several cafes specialize in sukiyaki–the "national dish that Americans know best. At one of the best, a Japanese girl, wearing a kimono, escorts you into a private room, separated by sliding panels in the true oriental fashion.

At one end of the table is a glowing brazier, surrounded by platters of sukiyaki ingredients. "Soon the pungent odor of soy bean sauce pervades the atmosphere as a dainty Japanese maid mixes the beef, soy bean cakes [tofu, probably grilled tofu], bamboo shoots, Japanese horse-radish, green onion, etc., in the brazier." Warm saki [sake] is served soon after the food. The girls will be more than happy, if encouraged, to return after the meal to play Japanese music on their peculiar stringed instrument.

Note. This is the earliest English-language document seen (April 2013) that uses the term "soy bean cakes" to refer to regular tofu or to grilled tofu.

1567. Dittes, Frances Linda. 1935. Food for life: The art and science of preparing food. Madison, Tennessee: Associated Lecturers, Inc. xii + 332 p. Spring. Recipe index. 23 cm.
• ***Summary:*** This early Seventh-day Adventist vegetarian cookbook contains more soyfoods recipes that any published up to this time. The author, a soyfoods pioneer born in 1891, first attended Madison College in 1910 and joined the faculty in 1912. She did her graduate work in nutrition, specializing in soyfoods nutrition, at George Peabody College for Teachers (in Nashville, Tennessee), from which she received her MA degree in 1929. This book was printed by the "Rural School Press" (Madison College's school press) and published in the spring of 1935.

Contents: Part I: Food and nutrition. Milk. The acid-base balance. Fruit acids. Balancing the food. Measuring food values. Menu planning. The art and science of food preparation (preceded by this quotation: "Food will be the medicine of the future"–Harvey W. Wiley). Food combinations. Condiments. Suggestions for flavoring. Garnishings. Measurements. Part II: Recipes (listed by recipe type such as breads {some recipes call for Crisco shortening}, soups, salads, desserts, etc.). One chapter titled "Dishes to take the place of flesh foods" (p. 149-65) contains many interesting recipes such as: Preparation of gluten. Gluten pot pie. Gluten loaf. Glutose (with 5 cups ground cooked gluten, plus potatoes, eggs, and cream). Cold sliced Nut Meat or Vigorost (Nut Meat is sold in 2-lb cans, Vigorost in 14 oz cans). Peanut roast. Chow mein (with soy cheese or Nut Meat). Boiled peanuts. Soy-related recipes are given below. Another chapter is "Nutritive value of the soy bean. Soy bean dishes" (p. 166-86).

Appendixes: A. Classification of carbohydrates. B. Canning. C. Sample menus. D. 100 calorie portions of foods. E. Approximate servings and values of a few common foodstuffs. F. Protein, calcium, phosphorus, and iron in 100 calories of food material. G. Ash constituents of foods in percentage of edible portion.

The author uses the term "soy cheese" to refer to tofu. Soy-related recipes include: Soy bread (20% soy flour and 80% white wheat flour; p. 96). Soy gems (18-20 muffins using soy flour; p. 108). Tomato-soy sandwich (with grated

© Copyright Soyinfo Center 2013

soy cheese; p. 114). Soy noodle soup (with grated soy cheese browned in butter; p. 122). Jellied soy salad (with grated soy cheese; p. 138). Potato soy salad (with grated soy cheese; p. 138). Tomato and soy salad (with soy cheese). Waldorf soy cheese salad (with grated soy cheese; p. 139). Lentil-soy loaf (with soy bean puree; p. 157). Savory soy loaf (with soy cheese). Soy souffle (with grated soy cheese browned in butter; p. 159). To fu chi (deep-fried soy cheese stuffed with rice and seasoned with soy sauce). Soy gravy (with 3 parts soy flour and 2 parts white wheat flour).

The chapter titled "Nutritive Value of the Soy Bean" (p. 167-86) discusses the general nutritional composition, then gives details on protein, fats (including lecithin), minerals (including tofu made with magnesium chloride or calcium sulphate). Recipes are given for: Cooked soy beans. Soy milk (after soaking 1 lb of Mammoth variety soy beans overnight in water, "Wash several times in hot water to remove undesirable taste."). Soy milk no. 2. Soy acidophilus milk. Soy bean cheese [tofu, curded with calcium sulphate]. Soy bean cake [okara] loaf. Browned soy cheese. Green soy beans. Escalloped green soy beans. Dried soy beans. Baked soy beans. Soy beans southern style. Roasted soy beans. Soy beans in tomato sauce. Chop suey (with soy cheese). Sauce (with soy sauce). Soy bean omelet. Lentil soy bean loaf (with soy bean puree). Soy bean loaf. Soy bean pie (with soy bean pulp). Soy bean meat. * = made with soy bean flour. Soy bean muffins*. Soy muffins*. Soy biscuits*. Soy bread*. Soy nut bread*. Escalloped onions with soy cheese. Baked rice with soy cheese. Escalloped potatoes with soy cheese. Spaghetti and soy cheese. Stuffed pepper with soy cheese. + = with soy cheese. Left-over croquettes+. Soy croquettes+. Soy cheese with rice. Stuffed baked potato with soy cheese. Soy fritters+. Soy cutlets+. Savory soy loaf+. Spanish chop suey+. Soy souffle (with grated soy cheese browned in butter). Cream of soy soup. Soy noodle soup+. Soy soup+. # = made with soy milk. Soy cream of tomato soup#. Soy cream of pea soup#. Soy cream custard#. Jellied soy salad+. Waldorf cheese salad+. Potato soy salad+. Stuffed egg with soy cheese. Soy bean salad. Soy bean sprout salad. Soy Vegex sandwich+. Tomato-soy sandwich+. Egg and soy sandwich+. Soy and cucumber sandwich+. Celery and soy sandwich+. Banana soy sandwich+. Scrambled egg and soy cheese sandwich. Diabetic crackers (with soy meal). Diabetic pie crust (with soy meal). Diabetic soy bean mush*.

Vegetables: Soy cheese sauce (with grated soy cheese and soy sauce, p. 195). Steamed cucumbers with soy cheese (grated, p. 201). Escalloped onion with soy cheese (p. 204). Spinach with soy cheese sauce (and Vegex, p. 207).

Desserts (p. 215-36), Cakes (p. 237-53), Pies (p. 255-60), Cookies (p. 261-68), and Ice creams and sherbets (p. 269-74). Some of these sweet recipes use agar-agar, gelatin, Malta (malt syrup), Health Koko, and Crisco. Some desserts call for 1-2 cups sugar per 4 servings and 1 pound of sugar is used in an icing for pound cake (p. 242). No soy is used in any sweet recipes. Note: It is surprising that Ms. Dittes and Madison had not discovered the use of tofu or soymilk in ice creams, other desserts, or dressings. Nor is peanut butter mentioned.

The chapter titled "Milk" (p. 17-21) states: "Since milk is an important food constituent, especially for children, those responsible for planning dietaries should see that each child has one quart of clean milk or its equivalent each day; adults, about one pint... *Grade A* is a raw milk from cows free from disease, having a bacteria count of not more than 100,000 per cubic centimeter at the time of delivery. *Grade B* must be pasteurized and the bacteria count must not exceed 1,000,000 per cubic centimeter. It must also come from cows free from disease." All other milk is Grade C.

The chapter titled "The acid base balance" (p. 23-24) states: "Most foods when burned in the body leave an ash in addition to the carbonic acid which is thrown off by the lungs. This ash may be either alkaline, neutral, or acid in reaction. The principal base-forming (alkaline) elements are calcium, potassium, magnesium, and sodium, while the chief acid-forming elements in foods are sulfur, phosphorus, and chlorine... A neutral or slightly alkaline condition will produce a feeling of buoyancy, health, vigor, and clear mental activity... In general, all fruits and vegetables (with a few exceptions) are potent in producing alkaline ash. Meat, eggs, breads, and cereals are acid-formers."

The chapter titled "Condiments" (p. 51-52) states: "Spices, such as mustard, ginger, pepper, horseradish, curry, and cloves, are among the most irritating of the seasonings used. It would be better if these exciting substances were not added to the food... Vinegar contains acetic acid which is burned in the body with difficulty. Citric acid as found in the lemon juice is more easily oxidized in the tissues. Lemon juice, therefore, makes a good substitute for vinegar, both as to ease of oxidation and flavor." Address: Director, Food and Nutrition, Nashville Agricultural Normal Inst., Madison Rural Sanitarium and Hospital, Madison, Tennessee.

1568. Gay, H. 1935. La culture et les usages du soja [The cultivation and uses of the soybean]. *Revue de Botanique Appliquee & d'Agriculture Tropicale* 15(165):309-24. May; 15(166):447-53. June. [15 ref. Fre]

• ***Summary:*** Contents: Introduction. Geographical area and climatic requirements. The plant and its varieties: Taxonomy, anatomy, physiology. Soybean cultivation: Place in the crop rotation, preparation of the soil, manure and fertilizer, sowing (the seeds, time of sowing, details of sowing), vegetation and the points of [crop] maintenance / management, harvest (of seeds, of forage), grain storage, yields (of seeds in kg/ha {3,500 in Manchuria, 2,700 in China, 1,700 in France, 1,200 in Japan}, of forage in quintals/ha {in America they range from 163 to 168}), enemies. Note: 1 quintal = 100 kg.

Technology of soya: Soymilk (production, properties, uses), soy cheeses (*Fromages de soja*, called "tofu" in Asia),

© Copyright Soyinfo Center 2013

soy oil and cake, soy flour and products made from it (bread, rusks {*biscottes*}, cakes, and pancakes {*galettes*}). Soya as livestock feed: Soya forage, soya hay, soymilk for calves, soybeans seeds and cake.

Economic data: Hectares planted to soya in 1929-30: Northern China and Manchuria (11,800,000), USA (500,000), Japan and Korea (400,000), Russia (300,000), Sunda or Soenda Isles (100,000 ha);

Note: The *Iles de la Sonde* are the islands of the Malay Archipelago divided into two groups: (1) Greater Sunda Islands, comprising Java, Sumatra, Borneo, Celebes, and adjacent islands; (2) Lesser Sunda Islands, comprising the chain of islands east of Bali to and including Alor and Timor, but not Wetar.

Exports of soya from China in 1929-30 (in tons): To Japan 1,700,000, to Europe 1,500,000, to southern China 600,000, to the Netherlands Indies [Indonesia] 100,000, to other countries 100,000. Address: France.

1569. *Hygeia.* 1935. Questions and Answers: Soy bean milk. 13:466. May. [2 ref]
• ***Summary:*** Dr. A.A. Horvath describes how to prepare soy bean milk, and bean curd (tofu).

1570. Chamberlin, William Henry. 1935. A tale of two capitals: Tokyo and Moscow compared–II. *Christian Science Monitor.* June 12. p. 16.
• ***Summary:*** The "Japanese enjoy fish, rice, beancurd in various combinations and preparations..."

1571. Kennedy, L.W. 1935. The soybean... A new American. *Purdue Agriculturist* (*Indiana*) 29(9):83, 86. June.
• ***Summary:*** "This article was written with the aid of material taken from an undergraduate thesis submitted by E.A. Johnson, '34 [class of 1934]. Products of the soybean are rapidly becoming more important to agriculture and various manufacturing industries of the nation." Soybean oil meal is an important livestock feed for cattle, hogs, sheep, and poultry. It is also "used extensively in the making of glue, water paints, fertilizer, celluloid substitutes, [plastic] gear shift knobs, etc. Breakfast food, diabetic food, infant food, macaroni, crackers, bean curd, soy sauce, vegetable casein, and meat substitute are popular in the list of foods made from soybean oil meal. The meal possesses a nut-like flavor and lends itself well to be used as human food."

Crude soy bean oil is dark brown in color and has a "beany" odor. It is largely refined to make special oils for use as paints, varnishes, glycerine, enamel, the waterproofing of cloth, fabrics, papers, and sandpapers, the making of oilcloth, shade cloth, rubber substitutes, printers ink, lubricants, hard and soft soaps, insecticides, foundry core oil, and lighting fuels. The food products, salads, edible oils, and lard and butter substitutes are also prepared by a commercial process from soybean oil. In 1930 about 6,000,000 pounds of soybean oil, or one-sixth of the domestic crop, were used in the preparation of edible products.

Note: This is the earliest document seen (Sept. 2001) concerning the use of soybean oil in insecticides or other crop-protecting chemicals (pesticides).

"A new auto body finish from soybean oil is the result of experiments made by the Ford Motor Company of Detroit, Michigan."

Also discusses "the vegetable soybean" which can serve as a supplement to the garden pea or lima bean. "In China vegetable soybeans have long been used as a delicacy on the table. They may be used green, or canned, or made into salads."

"Dried soybeans serve as a good substitute for coffee and peanuts when properly roasted and prepared. The dried beans are also used in preparing soy sauce, boiled beans, baked beans, breakfast food, soaps, and vegetable milk. From the vegetable milk, meat substitutes, infant food, confections, cheese, and fresh, dried, condensed, and fermented bean curd is prepared. Soybean milk has not received serious consideration in this country, but it has been successfully used as a food for growing infants in China." Address: Class of 1936.

1572. Lager, Mildred. 1935. Food facts. Los Angeles, California: House of Better Living. 228 + 10 p. No index. 23 cm. [34 ref]
• ***Summary:*** Contents: 1. Purpose of food. 2. Classes of food. 3. Natural foods are best. 4. Acid-alkaline balance. 5. Minerals. 6. Vitamins. 7. Proteins. 8. Carbohydrates. 9. Fats. 10. Fruits. 11. Vegetables. 12. Beverages. 13. Better cooking. 14. Food combinations. 15. The mental side of health. 16. What is the "House of Better Living."

Pages 67-68 contain a very positive section on soy beans and foods made from them, including whole soybeans, "curd cheese, resembling cottage cheese [tofu], and soy bean milk... Other soy food products are soy butter [no description is given; this is probably soynut butter from T.A. Van Gundy's La Sierra Foods, but it could be margarine made from soy oil], soy loaf (combined with gluten), soy sandwich spread, soy bologna, soy oil, soy sauce, soy ready-to-serve breakfast foods, coffee substitute, as well as soy flour. Soy flour is yellow and fluffy, and can be used in all baking... Soy macaroni, noodles, spaghetti, bread, and pancake flour are also on the market. Soy beans are also sugar coated for candy and toasted as peanuts. They are a wonderful food for animals and have been used in that way in this country for years. Today the governments of Europe and America are devoting a great deal of attention to the soy bean as human food and the next few years will see an increased consumption, as well as many new soy products."

Page 75 contains a nutritional analysis of soy beans.

In the chapter on Acid-alkaline balance (p. 22-25), foods with the most acid ash are egg yolk and oysters, followed by

© Copyright Soyinfo Center 2013

eggs, most fish and meats. Foods with the most alkaline ash are lima beans, string beans, dried beans, spinach, raisins, figs, dates, and dried milk, followed by soy beans, soy bean tea, and most vegetables. The author believes that one should keep an alkaline balance in the body. Sleep is a great alkalinizer.

The subsection titled "Lima beans: states: "Dr. Sansum of Santa Barbara was instrumental in having lima bean flour made, and Bill Baker of Ojai, California pioneered this field, developing the original lima bean bread and lima bean pancake flour."

This is not a vegetarian book. Meat and dairy products are discussed at length, and their consumption is not discouraged. However this is the earliest book seen that uses the term "natural foods" prominently–in this case as a chapter title.

Also discusses (see index for page numbers): Acidophilus milk, alfalfa (alfalfa tea has alkaline ash, p. 35), almonds, almond oil, aluminum, avocado, bran, carob beans, chufas, cottonseed, cottonseed oil, garbanzas, kephir, lentils, lima beans, linseed, margarine / oleomargarine, olive oil, olives, palm oil, palm kernel oil, peanuts, peanut oil, rape seed oil, sago, sesame oil.

Note 1. This is the earliest document seen (Sept. 2009) concerning Mildred Lager and soy.

Note 2. This is the 2nd earliest document seen (July 2005) that mentions a food or drink product ("alfalfa tea") made from alfalfa. This is also the earliest English-language document seen (July 2005) that contains the term "alfalfa tea." It was used for its alkaline ash. Address: House of Better Living, 1207 West 6th St., Los Angeles, California. Phone: Mutual 2085.

1573. Morse, W.J. 1935. Soybeans: Ancient and modern uses. *Proceedings of the American Soybean Association* p. 34-35, 37. 15th annual meeting. Held 21-22 Aug. 1935 at Evansville and 23 Aug. at Lafayette, Indiana. [1 ref]
• ***Summary:*** The soybean "was sown yearly with great ceremony by the Emperors of China and poets in the ages before the Christian Era extolled the virtues of the soybean in its services to humanity.

"The soybean was included in the 2nd class of drugs and was regarded as having many medicinal virtues. We learn from a materia medica written about 452 A.D. that the soybean was not poisonous but was a specific remedy for proper functioning of the heart, liver, kidneys, stomach and bowels. It was also used as a remedy for constipation, as a stimulant for the lungs, eradication of poison from the system, improving the complexion by cleaning the skin of various impurities, and stimulating the growth and appearance of the hair. We also find that the fresh or green bean was used as a remedy for the following: Dropsical affections, gastric fever, paralysis, bladder trouble, improper circulation of the blood, catarrh or improper flowing of the fluids of the vital organs, heart, liver, kidneys, stomach and bowels, chills and poisoning from eating aconite. Further, it is learned that when the bean was cooked in a powder or meal-like form, the taste was sweet and good and was a remedy for gastritis, fevers, tumorous swellings, paralysis, inability to digest grain foods, and abdominal dropsy. The yellow soybean was used to increase lung power, make the body plump, and beautify the complexion. The beans were also cooked until they were of an oily consistency, mixed with hog's fat and taken in the form of pills in order to fatten and increase the strength of the body, and as a remedy for hoarseness. The soybean was said to have a cooling effect on the human system. If the beans were boiled into a liquid form and eaten, they eradicated all poison from the system and cured gastric fever, paralysis, pains, and bladder troubles. Bean or soy sauce was considered an antidote for poison caused by eating fish, fresh meat, vegetables, mushrooms, etc. It was also said to cure poison from bites of worms, insects, and bee stings. The yellow, green, and white varieties were regarded as valuable foods for the use of mankind. The black beans were used for food and it was also customary when taking a long journey to feed the horse black beans in order to make it strong. In addition to the use of the beans, many references are made on value of bean sauce, bean milk, bean curd, and bean sprouts for various diseases and other bodily ailments. The stems and leaves of the young bean plants were boiled and eaten by the farming people. No mention is found of the use of bean oil so it is concluded the crushing of beans for oil occurred at a much later date.

"In reviewing the old records, it is most interesting to find that many of the ways in which the ancient Chinese used the soybean as a remedy for human ills are now being found applicable to the same ailments by scientific research in America and Europe." Address: Bureau of Plant Industry, USDA, Washington, DC.

1574. United Press (UP). 1935. Chinese pawnshop takes wives for collateral. *Los Angeles Times.* Sept. 15. p. 35.
• ***Summary:*** "Tientsin [China], Sept. 14 (U.P.)" At a new kind of pawnshop, the master of the house (who may need quick cash for his narcotics habit) can hock his wife or wives. "Suppose, for example, that Wang, the beancurd seller, wants a few pieces of silver to jingle, all he need do is place Mme. Wang in pawn at one of the several such pawnshops which recently sprang into existence in this metropolis."

1575. Bombay Presidency Baby and Health Week Association. 1935. Pamphlet No. 7. Bombay, India. *
• ***Summary:*** Discusses the introduction of the soybean to Europe by Kaempfer in 1712 and by Haberlandt from 1873. Soybean botany, regions of adaptation, and nutritional composition and value. Utilization of soybeans in diabetic diets, as whole dry soybeans, and for the production of soya

© Copyright Soyinfo Center 2013

bean coffee, soya bean milk, soya bean flour, and tofu.

"The soya bean is one of the most important articles of diet. It contains far more protein than any grain or pulse seed known so far. It has as much as 40 per cent. protein, i.e. twice as much as pulses and beans, three times as much as wheat, and five times as much as rice. Its proteins are of high biological value, as they contain all the important amino-acids... In fact, the protein of soya bean is similar to that found in cow's milk and animal foods... It is a boon to vegetarians, as its protein resembles animal protein. Soya bean oil contains a large amount of Lecithin and Vitamin A & D, and in this respect it resembles butter. Lecithin of soya bean is identical with that of yolk of eggs.

"Soya bean is one of the few seeds containing three Vitamins A, B & D, which are indispensable in a staple food consumed by mankind."

Note: Mohandas K. (Mahatma) Gandhi reproduced this pamphlet in the 28 September 1935 issue of his popular periodical *Harijan.* Address: Bombay, India.

1576. La Sierra Industries. 1935. Soy bean products, "La Sierra Brand": Complete protein, low starch, high alkaline ash (Ad). *Health* (*Mountain View, California*) 2(9):31. Sept.
• ***Summary:*** Ad for canned soybeans (plain with tomato sauce), soy loaf, soy spread, soy bologna, soy breakfast food, soymilk, soy cheese [tofu], soy butter [like a soynut butter, non-hydrogenated], Soy-Co (beverage), Smoein (flavor), soy flour (raw), soy flour (processed). No Mamenoka, noodles, or oil. Address: Box 203, Arlington, California.

1577. R.A.L. 1935. Les produits dérivés du soja [Products derived from soybeans]. *Bulletin des Matieres Grasses* (*Paris*) 19(9):232-40. Sept. (Institut Colonial de Marseille). Summarized in Bulletin Economique de l'Indochine (Hanoi) 38:830. [4 ref. Fre]
• ***Summary:*** This is a excerpt from an article said to be published in the *Revue des Produits Chimiques.* However, after a long search, we cannot find the original. So here is the contents of this excerpt:

Uses of soya. Soymilk. Soy caseine (*La Caséine de soja*), defatted soybean oil cakes (*les torteaux deshuilés*), vegetable caseine (*caséine végétale*) as made in Vietnam. Industrial, food and feed applications of the soybean and the products derived from it (... *des produits dérives*)*:* Shoyu or soy sauce, green vegetable soybeans, soy flour (free of starch, which is good for in diabetic diets), use as an incomparable forage plant, soymilk for humans or young animals (it is free of tuberculosis bacteria), powdered soymilk, a type of cheese called tofu (which can be fermented, dried, salted, or smoked), soy oil (for food or industrial uses–such as paints, varnish, lubricants, printing inks, candles, and oilcloth), hydrogenated soy oil, soybean cakes (which make excellent animal feed). Address: Ingénieur chimiste ICMp, Licencié ès Sciences, France.

1578. *Agriculture et Elevage au Congo Belge.* 1935. Le lait de soja [Soymilk]. 9(11):170-71. Nov. [1 ref. Fre]
• ***Summary:*** Gives the conclusions obtained in a study of soybean milk by Dr. Lucie Yeu, who set out to find if it were suitable in infant feeding. She conducted her research at the Centre d'Hygiène infantile Paul-Marquet [in Neuilly, near Paris], under the direction of Mr. Marcel Maillet.

Dr. Yeu concluded the following: Soymilk has been used for a long time as a food in the manufacture of tofu or "vegetable cheeses" (*fromages végétaux*). It has been studied in France since 1880, but its application in infant dietetics has only begun very recently. This "vegetable milk" (*lait végétal*) approaches animal milks on the whole in its physical properties and its qualitative composition. For example, in comparison with cow's milk, it has a lower content of fats, sugars, and calcium. It contains no chlorine or sodium. So when administering it to infants, some corrections must be made in its composition. Soymilk was generally well accepted and well tolerated by the 100 infants that she studied. To assure satisfactory growth as often as possible, it is sufficient to add normal nutrients or dyspeptics, but after a relatively short time, the infant has more difficulty accepting it and the weight graph becomes irregular. And in an important number of cases, the soymilk causes erythema of the buttocks to such an extent that its use must be discontinued. Erythema is abnormal redness of the skin due to capillary congestion. Soymilk, in the way it has been used by Dr. Yeu, cannot replace cow's milk in raising normal infants. In the case of dyspeptic infants, digestive problems are often improved but not in any consistent way. Soymilk works best with infants who are intolerant to cow's milk or have rank / fetid dyspepsia (with an offensive smell).

1579. *Harijan.* 1935. More about soya beans. 3(46):366-68. Dec. 28. [1 ref]
• ***Summary:*** Mahadev Desai introduces the article by stating, "A friend who is now in America has brought together the following article information about soya beans collected by him from books and various institutions." Much of the information apparently came from the Bureau of Home Economics, Washington, DC. Under the subtitle "Soybean and soybean products for table use," it discusses the nutritional composition of soybeans, green soybeans and their varieties (including Hahto and Easy Cook [Easycook], with 3 recipes including ones for salted soya beans [soy nuts], and whole dry soybeans used in soup), soybean sprouts, soybean flour, soya bean sauce, soya bean milk, and soya bean cheese (to fu). Details of how each food is prepared are also given. Continued in Harijan on 4 Jan. 1936. Address: India.

Manufacturer's Address: Olaa, Island of Hawaii.
Date of Introduction: 1935.
New Product–Documentation: Honolulu City Directory. 1934-35. Bunpei Yoshizawa Tofu (Bunpei Yoshizawa, proprietor). Olaa. Not listed 1947-48.

1593. Burkill, I.H. 1935. A dictionary of the economic products of the Malay Peninsula. 2 vols. Published for the Malay Government by Crown Agents, London. 2,400 p. See p. 1080-86.
• ***Summary:*** These two densely-written volumes might be described as updates to the works of Sir George Watt. In the Malay peninsula, the soy bean is generally known as *Kachang bulu rimau* or *Kachang jepun* [the Japan bean]. In Java it is called *Kachang kedele, Dele, Gadele, Dekeman,* or *Dekenan;* in Sundanese, *Kachang bulu, Kachang jepun,* or *Kedele;* in Sumatra, *Kachang rimau* or *Kachang ramang;* and in Siam, *Tua luang* or *Tua praluang* [accents are included by Burkill].

"The word 'soy' came from a Japanese name for this plant, through the Dutch, who made it [the word 'soy'] known to Europeans. The first account was a result of the residence of their embassy surgeon, Kaempfer, in Japan, in 1691 and 1692; the second of the long service of their merchant, his contemporary, Rumpf, in Amboina."

The soy bean "is frequently cultivated in Siam, and seems to be a familiar plant in Kelantan [a state of Malaysia bounded on the north by Thailand]. Repeated experiments have been made with it elsewhere in Malaya; the Chinese, indeed, continually make them, usually without success, their failure being conspicuous when any available seed is used, instead of seed of races known to stand more or less tropical conditions. In 1918 advantage was taken of experiments in the Philippine Islands, to try, in Singapore, races which succeeded there and grew well. Races from the warmer parts of the United States were on trial in Selangor [Malaysia] in 1922. In 1924 a Chinese race was successfully grown by settlers in villages in the southern parts of Pahang [a state of Malaysia, bounded on the north by Kelantan and Trengganu].

"The soy bean has long been cultivated in Java, and in recent times this cultivation has become almost universal except at the western end of the island, where the climate is most uniformly humid. Probably it came to Java from India, for the name by which it is most known is Tamil and the seed is flattened as are North Indian races, while the Manchurian races have round seeds."

Note: Roxburgh (1832), in discussing the earliest known date for cultivation of soybeans in India states: "Reared in the Honourable Company's Botanic garden [across the Hooghly / Hugli River from Calcutta] from seeds received from the Moluccas [in today's Indonesia] in 1798.

"In Java a soy crop immediately follows rice, and this was the rotation apparently which Spring found the Chinese to use in Pahang."

The seed of the soy bean is rich source of nutrients. It "replaces meat very largely among the Chinese; and as rations for Japanese troops has played a large part." Because the ripe seed contains little or no starch, it is widely used in diabetic diets. "A kind of artificial milk can be made from the seed, and is in common use in Japan and China... This milk has only three-quarters of the full nutritive value of cow's milk." Soy-bean coffee, made from roasted soy beans, "is sold regularly in Japan, and into the coffee can be put

© Copyright Soyinfo Center 2013

soy-bean milk. The Chinese germinate the beans and eat the seedlings.

Legumin, or vegetable casein is best made commercially from defatted soy beans. The casein is precipitated from the milky fluid [soymilk] by calcium sulphate. "The liquor is strained through muslin, and the precipitate treated with soda lye, which dissolves the casein; filtering gets rid of the impurities and acetic acid precipitates the casein from the filtrate in a more or less pure state. This casein is fit for use in all the industrial processes for which casein from cow's milk is used."

Soy beans can also be fermented to make témpé or "flavourings used in small quantities to make uninteresting dishes appetizing... Témpé is a food product made in Java from soy beans. It occupies a very important place in the diets of those who live in central and east Java." Detailed descriptions are given of two methods of preparation. (1) Initially, the seeds are parboiled then left soaking in water for 2-3 days. The "mush" [sic, cooked beans] is spread upon frames in flat cakes and inoculated with the fungus *Aspergillus oryzae* by the addition of some of the previous preparation. The cakes are wrapped in banana leaves; (2) This method requires greater care and time. "Meanwhile, a preparation of the fungus has been made in a somewhat elaborate manner, as follows: a portion of an older preparation is wrapped in a rather young teak leaf freely punctured with holes; this preparation is allowed to dry for two days, during which the fungus spreads to the teak leaf. Next, the soy-kernel mush [sic, the cooked soybeans] being ready, the teak leaf is emptied of its contents and sprinkled over the mush in order to convey the fungus. The mush is now put up in packets in banana leaves, heaped together, and covered up for twenty-four hours, after which it is exposed again to the air and cooled; the packets are then ready for sale." Note: This is the second English-language work to contain information about tempeh.

"The Chinese, throughout their own country and those domiciled in Malaysia, make a yet greater variety of preparations. Chief among these is teou-fu [tofu, usually precipitated with imported calcium sulphate]. "The 'teo-fu' does not keep well in a moist state, but can be treated for preservation. First, the cakes are colored yellow by a solution of turmeric or Gardenia flowers, then they are wrapped in cotton cloth and submitted to pressure. Thus made drier, they keep better. The use of this preparation is spreading."

The Chinese also make tao-cho and soy kechap (each fermented with an *Aspergillus* mould). K. Heyne describes how kechap is made in Java using black soy beans, hibiscus leaves, and *Aspergillus oryzae* mold. Finally the sauce is boiled with Arenga sugar, star anise, and other flavourings until the solution is so thick that the salt begins to crystallize.

Large amounts of soy-bean oil ("kachang oil" [perhaps soy sauce]) are imported to Malaya. "In the East [East Asia] it is used chiefly as food, but has other uses such as lubricating, varnish-making, making printer's inks, waterproof goods (Chinese umbrellas and lamps) and also for illumination. A process was patented 20 years ago for making artificial rubber, starting with soy oil. Note: Burkill was a British authority on the flora of southern and southeastern Asia.

"Criminal use: The hairs on the pods seem to be capable of causing a certain amount of irritation within the digestive tract. Gimlette (Malay Poisons, ed. of 1929 p. 169) records a case of administration of them with food in a criminal attempt to poison. He calls them a substitute for bamboo hairs in such circumstances.

"Joss-sticks: Ash of the stem, mixed with resin of *Canarium*, is said to make joss-sticks in Indo-China (Crevost and Lemarié, Cat. Prod. Indochine, 1917 p. 106)."

1594. Dittes, Frances L. 1935. The biological availability of cystine found in soybean cheese. *George Peabody College for Teachers, Abstract of Contribution to Education* No. 165. 36 p. Summary of PhD thesis, Dep. of Home Economics. [38 ref]

• ***Summary:*** Contents: 1. Introduction: Brief historical sketch of previous research on the soybean, the problem. 2. Experimental: General method, basal diet, materials used. 3. Discussion. 4. Summary and conclusions.

Contains many tables, most related to the growth of rats. Figures show (1) Average weight gain curves of rats receiving diets containing 18, 12 and 9 per cent soybean curd as the sole source of protein plus different amounts of cystine. (2) Average weight gain curves of rats receiving diets containing 18 per cent casein; 9, 12, 18, 24, and 30 per cent soybean curd as the sole source of protein. Address: Ph.D., Madison, Tennessee.

1595. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1935. Nichibei jûshoroku [The Japanese American directory. No 31]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

1596. Morphy, Marcelle. comp. and ed. 1935. Recipes of all nations. New York, NY: William H. Wise & Company. 824 p. 22 cm. Index at the end of each nation.

• ***Summary:*** Contains recipes from 18-20 nations–each with a thumb cut or thumb index or cut-in index. Soy is mentioned frequently in the chapter on Japan (p. 751-69). "One sauce reigns supreme in Japan–*Shoyu*, which replaces salt in many dishes and which is used in the cooking of almost everything: soup, fish, poultry, meat, and vegetables. It is the popular condiment with cold fish or meat and is added to salad dressing. It is made from the Soya bean seeds, wheat, and pure salt, and has a pleasant and distinctive flavor, unlike that of any of our European bottled sauces."

© Copyright Soyinfo Center 2013

Soy-related recipes include: Nan yoy kow yook (Broiled pork steamed with Chinese cheese [fermented tofu], p. 737). Misoshiru (miso soup with tofu and miso, p. 755). Misozuke (fish with red or white bean curd and red or white miso, p. 758). Seki han (with azuki beans, p. 759). Suki yaki [Sukiyaki] (beef and vegetables, with tofu and shoyu, p. 761). Yokan (Japanese cakes with azuki beans, p. 762). Misso (miso, homemade with soya beans, malt, and salt, p. 763). Tofu (dried bean curd, p. 763).

Miso is said to be made as follows: "The proportions are 1 bushel of Soya beans, 1 bushel of malt, and 3 bushels of salt. The beans are squeezed and mixed with the malt and salt and kept in a cask for 6 months to mature."

Concerning tofu: "Cubes of tofu are frequently mentioned in Japanese recipes. Tofu is made by soaking the dry beans in water for a day, pounding them in a stone mortar, straining into square molds and mixing with brine. They are then boiled till they become hard and firm." Address: Countess.

1597. Sia, Mary Li (Mrs. Richard H.P. Sia). 1935. Chinese chopsticks: A manual of Chinese cookery and guide to Peiping restaurants. Peiping, China: Printed by Peiping Chronicle. Published by the author. x + 106 p. 20 x 25 cm.
• ***Summary:*** Contains 100 recipes. The names of dishes, restaurants, and their addresses are in English and Chinese (with Cc = Chinese characters given). A recipe (p. 37) for "Steamed fish with black salted soy beans" (Cc tou ch'ih) calls for "1 T. [tablespoon] black salted soy beans, 1 small piece ginger, chopped, 1 piece garlic, chopped." The instructions read: "Clean and smear fish with wine, salt, sugar and soy sauce mixture (which includes wine, salt, and sugar). Place on deep plate. Cover fish with black salted soy beans, onion, ginger, garlic and lard. Steam for 20 minutes."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Black salted soy beans" to refer to fermented black soybeans.

Tofu recipes: Bean curd and shrimp egg (p. 1). Bean curd and prawns (p. 30). Bean curd, eggs and chicken blood (p. 57).

Among Mutton Restaurants the Tung Lai Shun (p. 99) offers Huo-kuo (Hot Pots), including "Tou-fu (Bean Curd)... per plate .06."

A full page menu (p. 100) for Vegetarian shen lung fan chuan (Cc). The price is $6.00 per table; the price of each of the 12 dishes is also given.

A full page "List of foodstuffs" (p. 101) gives for each English name, Chinese name (in characters), Chinese name (in Wade-Giles romanization). Soy-related foods include: Bean curd (tou fu). Black salted soy bean (tou ch'ih).

1598. van Veen, A.G. 1935. Het B-1 gehalte van voedingsmiddelen [The vitamin B-1 content of foods]. *Geneeskundig Tijdschrift voor Nederlandsch Indie* 75(25):2050-64. [25 ref. Dut; eng]
• ***Summary:*** The vitamin B-1 (anti beri-beri) content in International Units of soybeans (*sojaboonen* or *katjang kedelee;* high), soy tempeh (*tempe kedelee* "prepared by means of fungi from soy-beans;" moderate), and tofu (*tahoe;* low) is given. Address: Geneeskundig Laboratorium, Batavia (Jakarta, Indonesia).

1599. **Product Name:** Tofu.
Manufacturer's Name: Fukei Tofu Mfg.
Manufacturer's Address: N.W. Davis (between 3rd and 4th Ave.), Portland, Oregon.
Date of Introduction: 1935?
How Stored: Refrigerated.
New Product–Documentation: Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America.* Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. The map of the old Japanese district of Portland, Oregon, at the front of the book (unnumbered pages) shows 90 Japanese businesses. "Fukei Tofu Mfg." is located is on N.W. Davis between 3rd Ave. and 4th Ave. Mfg. Page 780 states this map is from the 1920s. However a librarian from Portland says this map is from 1935.

1600. Kingsley, Ellen J. 1935? Soybean and soybean products for table use. Washington, DC: Bureau of Home Economics, USDA. 17 p. Undated. Mimeographed unpublished manuscript. *
• ***Summary:*** How to use: Green soybeans, dried soybeans, soybean sprouts, soybean flour, soybean milk, soybean curd [tofu], and soybean mash [okara]. Includes recipes.

Note: A stamp shows that this undated publication was received by USDA's National Agricultural Library on 1 Nov. 1935.

1601. **Product Name:** Tofu.
Manufacturer's Name: Taira Tofu Mfg.
Manufacturer's Address: Market St. (near 15th S.), Tacoma, Washington.
Date of Introduction: 1935?
New Product–Documentation: Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America.* Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. The map of the old Japanese district of Tacoma, Washington, at the front of the book (unnumbered pages) shows Taira Tofu Mfg. Page 780 states this map is from the 1920s. However a librarian from Portland says this map is from 1935.

1602. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1936/01. Nichibei jûshoroku [The Japanese American directory. No 32]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

1603. **Product Name:** Tofu.
Manufacturer's Name: Murota Tofu Seizo-sho (Murota Tofu Factory).
Manufacturer's Address: 284 5th Street, Oakland, California. Phone: TEmplebar 5970.
Date of Introduction: 1936. January.
New Product–Documentation: The Japanese American Directory. 1936. p. 86. Also in 1937, p. 59. Also in 1938, p. 64. Also in 1939, p. 62. Also in 1940, p. 60.

The Japanese American Directory. 1941. p. 60. Listed in the category "Food Products." Phone number is now TEmplebar 5974.

1604. **Product Name:** Tofu.
Manufacturer's Name: Nomura Tofu-ten.
Manufacturer's Address: 226 Jackson St., San Jose, California.
Date of Introduction: 1936. January.
New Product–Documentation: The Japanese American Directory. 1936, p. 139. Also in 1937, p. 110. Also in 1938, p. 119. Also in 1939, p. 120. Also in 1940, p. 117. Also in 1941. p. 120. Phone still not listed.

Talk with Kenny Nozaki. 1988. Aug. 25. San Jose Tofu Company was started in 1946 by his uncle, Yoshizo Nozaki, and a Mr. Taira at the present location. Before them, there was one tofu company run by Japanese Americans, located where the Dobashi Market (which started big in 1954) now is in San Jose, but they closed before World War II. Talk with Kenny Nozaki. 1989. Dec. 5. He thinks that this company was only in business for a few years. It was run by elderly people and located on Jackson Street about where the Tsugaru restaurant was/is. When World War II started, they quit and went back to Japan.

1605. **Product Name:** Tofu.
Manufacturer's Name: Umino Tofu Seizo-sho (Umino Tofu Mfg.)
Manufacturer's Address: 1613 Buchanan St., San Francisco, California. Phone: WEst 2157.
Date of Introduction: 1936. January.
New Product–Documentation: The Japanese American Directory. 1936. p. 34. Note: Formerly Moriuchi Tofu-ten made tofu at this address and phone number. Also in 1937. p. 8 (directory). Also in 1938. p. 8. Also in 1939. p. 7. Also in 1940. p. 7. Umino Tofu Seizô-sho (Umino Tofu Mfg.), 1613 Buchanan St. Owned by Kichizo Umino. Listed under the category Food Products Manufacturers. Also in 1941, p. 7.

Talk with Jack and George Mizono. 1989. Nov. 1. At the time that Mr. Mizono bought Azumaya, there was one other Japanese tofu company in San Francisco. Mr. Mizono loved tofu and he always used to buy his tofu there before he bought Azumaya. The daughter currently lives in San Francisco near Jack, and he sees her once in a while. He does not know her name or address. They original owners had a very difficult time because one daughter was very bright, but they had twins that were retarded and they both died right after the war. The father and mother were very hard working people. This company was owned at one time by a Mr. Hayashi (George thinks that was his name). She sold it to Mr. Umino, who was a farmer in Pescadero before he moved to San Francisco. After the sale, Mr. Hayashi moved to Stockton. He was a good friend of Saichi Mizono.

1606. Morse, W.J. 1936. Re: Evaporated soy milk, soybean varieties, and green vegetable soybeans. Letter to Dr. John Harvey Kellogg, The Miami-Battle Creek, Miami Springs (Miami), Florida, March 26. 2 p. Typed, with signature.
• ***Summary:*** "I have your letter of March 9 and with reference to the Bansei soybean, I will say that we will try to spare you as many pounds as possible." There are no longer large sources of either the Chusei or Bansei soybean in this country at present... we obtained the seed from The Yamato Seed Co., Tokyo, Japan. The Bansei was obtained from them under the name *Bansei O Sayada Mame* [probably *Bansei O Saya Eda Mame*] and the Chusei under the name *Chusei O Saya Eda Mame."*

Note: In Japanese, *Bansei* and *Chusei* mean "late grower or late development" and "medium grower or medium development" respectively. *O Saya* means "large pod." *Eda Mamé*–pronounced ay-dah-MAH-may–means "green vegetable soybean."

"The sample of seed which you enclosed is the Tokyo variety and has been grown in this country for many years. During the past two or three years it has increased to a considerable extent especially in North Carolina, Tennessee, and Mississippi. It is not imported from Japan. All of the seed which is in this country was grown in the states mentioned above. It may interest you to know that in North China and southern Manchuria this light, greenish yellow bean is used in the manufacture of bean milk and bean curd. I am quite sure that you will have no difficulty in obtaining almost any quantity of Tokyo through North Carolina growers and seed dealers... In North Carolina and Virginia you can obtain the Tokyo through the following: T.W. Wood & Sons, Richmond, Virginia, Geo. Tait & Sons, Norfolk, Virginia, The Buxton White Seed Co., Elizabeth City, North

© Copyright Soyinfo Center 2013

Carolina, and F.P. Latham, Belhaven, North Carolina."

"Mr. J.H. Strawser of the Washington Sanitarium, Takoma Park, Maryland, sent me one of the nicest samples of evaporated soy milk that I have ever seen... I understand that Dr. Miller, who is associated with the Missionary College and now stationed in China, has one or two factories producing this soy milk powder. While Mr. Strawser was experimenting with the milk I understood that the soy milk was evaporated through the regular process used in evaporating cow's milk."

"The Seaboard Airline Railway, at its experimental farm near Hamilton, North Carolina, has been testing some of our green vegetable soybean varieties. Last year they froze some of the beans and have been sending samples to various places. From all reports it is evident that the frozen bean is a most excellent food product."

Note: This is the earliest document seen (March 2001) concerning the work of a small Seventh-day Adventist food company (the Washington Sanitarium, Takoma Park, Maryland) with soyfoods. Address: Senior Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, USDA, Washington, DC.

1607. Khankhoje, Pandurang. 1936. El frijol soya, Glycine hispida, Max [The soybean]. *Campesino* (*El*) (*Mexico*) 1(7):14-15. March. Revista Mensual. [Spa]

• ***Summary:*** "In Mexico, various experiments for the introduction of the soybean were made starting in 1911. There were repeated sporadically, always with poor results, until the years from 1928 to 1932 and 1933 when in Chapingo and Jalapa, the acclimatization of five varieties was achieved. In the following years, seeds from these 5 varieties were grown and matured in the experimental fields of the Biotechnical Institute (*Instituto Biotécnico*). The varieties Virginia and Laredo also did well there; it was hoped they would soon produced seeds suited for each of our climates."

Also discusses the importance, utilization (as oil, cheese [tofu], shoyu, and flour), and cultivation of the soybean. A photo shows two Laredo variety soybean plants and one Virginia variety soybean plant.

Note: This is the earliest document seen (Feb. 2009) concerning the cultivation of soybeans in Mexico or Central America (one of two documents). This document contains the second earliest date seen for soybeans in Mexico (1911), and the earliest date seen for the cultivation of soybeans in Mexico (1911) or Central America. The source of these soybeans is unknown. Note, however, that soybeans may well have been cultivated in Mexico as early as 1874 (see Carriere 1880). Address: Ingeniero, Jefe de la Oficina de Genetica, Ecologia y Botanica, Dirrecion de Agricultura, San Jacinto, D.F [Mexico City, Mexico].

1608. Guy, Ruth A. 1936. The diets of nursing mothers and young women in Peiping. *Chinese Medical Journal* 50:440. April. *

• ***Summary:*** Dr. Guy has found little evidence that Peiping women have ever used soybean milk to feed their children. She notes that though the drink was available through street vendors, it was generally drunk by "old people in place of tea." Home preparation was difficult and laborious, and therefore avoided. Address: 1. M.D., First Health Station, Peiping Municipality, China.

1609. Morse, W.J. 1936. Soybean introductions named in January 1936 (Leaflet). Washington, DC: USDA, Bureau of Plant Industry, Div. of Forage Crops and Diseases. 2 p. April 7.

• ***Summary:*** A table (p. 1-2) lists the following 25 soybean varieties, sorted by F.P.I. numbers. For four varieties, the FC (forage crop) number is given in parentheses after the F.P.I. number: Georgian, Palmetto, Monetta, Creole, Waseda, Osaya, Chusei (FC 19976), Chame (FC 19977), Higan (FC 19978), Sousei (FC 19979), Goku, Rokusum [Rokusun], Fuji, Bansei, Shiro, Hakote, Sato [black seeded], Kura [black], Kanro, Hokkaido, Hiro, Toku, Jogun, Suru, Nanda.

For each variety the following information is given: F.P.I. Nos., seed color, days to maturity, use, and states grown (such as southern, north and north central, etc.). Use codes: G = Grain. F = Forage. G.V. = Green vegetable. D.B. = Dry edible bean. Color codes: S.Y. = Straw yellow. O.Y. = Olive yellow. Gr. = Green. Bl. = Black. Br. = Brown. Note: Black soybean varieties are Sato, Kura, and Hiro.

An attached page, titled "Soybeans named in January, 1936," by W.J. Morse, lists 21 soybean varieties in a 3-column table, along with the F.P.I. numbers and (in some cases) the FC [forage crop] number in parentheses. All of these varieties appear among the 25 varieties listed above.

Note 1. This is the earliest document seen (June 2009) that mentions the following soybean varieties: Chame, Fuji, Goku, Hakote, Higan, Hiro, Hokkaido, Jogun, Kanro (in USA), Kura, Nanda, Osaya, Sato, Shiro, Sousei, Suru, Toku, and Waseda.

Note 2. This is the earliest document seen in which soybeans are classified by use as "green vegetable" or "dry edible bean" or both. The difference between the two is not explained. Eight varieties are classified as "green vegetable" only: Chame, Hakote, Hiro, Kura, Nanda, Sato, Sousei, and Waseda. Twelve varieties are classified as both: Bansei, Chusei, Fuji, Higan, Hokkaido, Jogun, Kanro, Osaya, Rokusun, Shiro, Suru, and Toku. No varieties are classified only as "dry edible bean." By "dry edible bean" Morse apparently means that this variety is suited to be made into various types of food. The next year, in the 1937 *USDA Yearbook of Agriculture* Morse and Cartter, in an article titled "Improvement in Soybeans" state (p. 1163): "Experiments by commercial firms have shown that these varieties are superior to commercial varieties for the manufacture of

© Copyright Soyinfo Center 2013

food products, such as bean flour, roasted beans, bean milk [soymilk], and bean curd [tofu].” Address: Div. of Forage Crops & Diseases, Bureau of Plant Industry, USDA [Washington, DC].

1610. *Agricultor Venezolano* (*El*) (*Ministerio de Agricultura y Cria, Caracas*). 1936. El cultivo de la “soya” [The cultivation the soybean]. 1(1):24. May. [1 ref. Spa]
• ***Summary:*** A short paragraph at the top of the article states: We have translated the monthly bulletin of the Royal Bank of Canada [actually The Royal Bank of Canada Monthly Letter, April 1936] which discusses the extraordinary importance acquired recently by the soybean, an agricultural product whose cultivation is being tested in Venezuela. The intensification of this crop in our country can come to signify a new and important source of national wealth.

The article begins: “To many people, the soybean has an oriental flavour; they know it as the basic ingredient in some of the most famous English meat sauces [Worcestershire, etc.] and have heard that it is an important Manchurian export. Against this background it is something of a surprise to learn from the *Wall Street Journal* of February 17, 1936, that in the previous year it had become, from the viewpoint of cash return to the farmers, the fourth most important cereal crop in the United States. The crop of 1934 was about 50 per cent larger than that of 1933 and the crop of 1935 was doubled that of 1934.”

The many uses of the soybean are discussed, including soybean flour (with and without the original oil content of the seed), soybean milk, butter, cheese [tofu], and coffee. Among industrial uses, in 1934, 10 million lb of soybean oil were used by the paint industry in the USA. “In varnish and lacquers soybean oil is the principal base. The Ford car is finished with a soybean lacquer and the Ford Company is erecting a $5,000,000 plant in Detroit [Michigan] to make soybean products. In soaps, glues, linoleums and rubber substitutes, the ingredients of the soybean have come to be of predominant importance.”

1611. Cheng, Libin T.; Hartman, R.J. 1936. Studies on soy-bean proteins. I. A new method of preparing soy-bean proteins. *J. of the Chinese Chemical Society* 4(3):149-51. May. (Chem. Abst. 30:8420). [2 ref. Eng]
• ***Summary:*** “A new method of preparing whole soy-bean protein was found.” Soaked and well hydrated soy beans were ground with water, then the milky extract was squeezed out. The protein was precipitated at 37ºC and pH 5 with acetic acid. The protein was purified with water and methyl alcohol successively. Address: 1. Dep. of Physiological Chemistry, Biological Lab., Science Society of China, Nanking; 2. Lab. of Colloidal Chemistry, Indiana Univ., Bloomington, Indiana.

1622. Breedlove, L.B. 1936. Soy bean–The magic plant: Source of manifold foods for man, woman, and child. Article VIII. *Chicago J. of Commerce and La Salle Street Journal.* June 18. p. 12.

• ***Summary:*** Contents: Introduction (experiments on the diet of prisoners; the scientific knowledge of foods in relation to life and work). Removing bitter taste. Composition of soy flours. The count in amino acids.

One table shows the average composition of five types soy bean flours made from: (1) whole soybeans, (2) high fat content cake, (3) medium fat content cake, (4) low fat content cake, (5) solvent extracted cake. Flour made from whole soybeans contains 20.45% fat and 36.63% protein. Flour made from solvent extracted cake contains 1.58% fat and 68.74% protein. A second table gives the "Composition of the principal protein of various grains," as follows: Barley (hordein). Oats (glutelin, gliaden). Rice (globulin, glutelin). Rye (gliaden, glutelin). Wheat (glutin, gliadin, glutenin, leucosin). Soybean (glycinin). Navy bean (phaseolin).

A large diagram titled "Uses of the soy bean," shows 91 different uses. For example: The plants can be used for green manure, forage, pasture, or soiling. The beans can be used to make meal, oil, dried beans, and green beans. The oil can be used to make 13 different non-food industrial products plus food products and lecithin. These food products include butter substitute, lard substitute, edible oils, and salad oils. Lecithin is used in leather tanning, candy manufacture, medicines, and as an emulsifier. The dried beans can be made into 9 foods and beverages plus stock feed. The "vegetable milk" can be made into bean curd (which can be used fresh, dried, smoked, or fermented), "condensed soy milk, canned soy milk, fresh soy milk, soy milk powder, and soy casein." The casein can be made into "paper sizing, paints, textile dressing, waterproofing for textiles, drugs, or synthetic wool." Green beans can be used as a green vegetable, canned, or in salads.

"History indicates that the Chinese because of the soy bean were first among racial groups to have a well-balanced diet, and being better nourished, they were for centuries able consistently to drive off the barbarians.

"Western nations took little interest in diet other than that which grew up in the customs born out of trial and error methods. For more than one hundred years after experiments on prisoners began, the whole matter was looked upon as one of economy for the state and it was not until Carl von Voit laid down seventy years ago, his famous dictum, i.e., a man doing little work should have daily 118 grams of proteins, 500 grams of carbohydrates and 56 grams of fat, that any interest in a diet providing sufficient nutrition became manifest."

Note 1. This is the earliest English-language document seen (Aug. 2003) with the term "soy casein" to refer to isolated soy protein products.

Note 2. This is the earliest English-language document seen (Dec. 2004) that uses the term "synthetic wool" to refer to spun soy protein fiber used like a textile fiber (such as wool). Address: Staff member, Chicago Journal of Commerce.

1623. Breedlove, L.B. 1936. Soy bean–The magic plant: Source of manifold foods for man, woman, and child. Article X. *Chicago J. of Commerce and La Salle Street Journal.* June 23. p. 11.

• ***Summary:*** Introduction and composition of "soy milk" (also called vegetable milk and soya milk). Producing soy bean milk (method of Max Adler). Food for diabetics. Curd base for many dishes (To Fu). American soya sauce superior.

"Soy bean milk is now produced, on a factory basis, in this country by five companies, of which three offer the soy milk in powdered form."

"The addition of magnesium or calcium salts or lactic acid to soy milk when hot, precipitates out a good part of the protein, forming a grayish white curd, leaving a yellow water liquid [whey]. This curd, after being drained and pressed, is the product known as 'To Fu,' which is an extensive article of diet among oriental, and also forms the basis for numerous fermented, smoked and dried cheeses in China and Japan. In all of the large cities of this country having a large oriental population such curd, made fresh each day, may be found in the food stores which cater to such populations.

Such cheeses or curds have not yet appealed to the occidental taste. They seem too strong in flavor and are of a sponge-like consistency... With the newer methods of conditioning the beans, it seems quite likely that the curds–not unlike cottage cheese–may be more palatable to the western taste.

"On the oriental table these curds, prepared in an infinite number of ways–it is said that most any self-respecting oriental chef knows at least 500 recipes–may appear in one form for an appetizer, in another form as the 'meat' course, in another as the salad, and in still another as the dessert."

"American soya sauce superior: Soya sauce, used extensively by oriental peoples in cooking, as a relish or condiment to increase the flavor of all dishes and as an aid to food assimilation, is made by crushing and grinding a mixture of cooked [soy] beans and pulverized barley, inoculating with a culture known as rice ferment and leaving in vats for six to eighteen months to ferment. The juice is then drained and filtered, salt and spices added.

"The recipe for this dark-brown liquid, used on chop suey and other typical dishes, has been a closely guarded secret handed down for generations in a limited number of Chinese families. However, within the last few years, the chemists of one American firm [Oriental Show-You Company, Columbia City, Indiana] discovered a more satisfactory recipe and the output of this factory, making the sauce from domestic beans, has so captured the market in this country among the oriental reared citizens that imports

© Copyright Soyinfo Center 2013

of the sauce have been greatly reduced."

"Until very recently, when methods were found to remove the bitter taste, very little soy bean oil was used in this country for edible purposes. When properly treated, however, soy bean oil may serve in any one of the three important uses–either in lard substitutes, in margarin [margarine], or in cooking oils." Address: Staff member, Chicago Journal of Commerce.

1624. *Madison Survey* (*Madison, Tennessee*). 1936. Among the industries at Madison. 18(29):113-16. July 15.
• ***Summary:*** Madison stresses its industries not simply because they are a source of revenue for students. "If every student who enters this college were financially able to meet expenses with cash, still Madison would operate its industrial centers because they constitute one of the outstanding features of the educational system Madison fosters. Why? Madison is preparing men and women to fill places of responsibility in needy fields, in hard and trying places. It turns out to the world men and women capable of doing things worthwhile for the community in which they locate. Not all of these are by any means white-collar jobs. Labor itself is educational. Labor is needed to develop the whole man."

The Madison Printing Department prints all of the packages and labels for Madison Foods. Photos show the following products in paperboard boxes with labels: Date Stix, Fruit Stix, Breakfast Crisps, Bran Wafers, Thin-Things, Soy-Koff, Whole Wheat Wafers, and Minute Wheat. Labels for Vigorost and Kreme O'Soy [bread] are also pictured.

"One of the latest printing jobs is three thousand display units to accompany samples of Fruit Stix, Date Stix, Breakfast Crisps, and Soy-Koff."

"Kreme O'Soy Bread adds quality to every lunch and meal. You will enjoy its rich creamy nut-like flavor. Use it freely for toast, sandwiches, fillings, puddings, etc.

"Madison Kreme O'Soy Flour is used in this bread to reduce the starch content, to impart the creamy nut-like flavor, and to alkalinize the bread. Kreme O'Soy Flour is a rich food–a complete protein–containing only a trace of starch." Other products noted are Nut-Meat, Soy Beans with Tomato Sauce, and Soy Cheese.

1625. Monnier, Emile. 1936. La graine de soja: Les préparations à base de graines de soja dans l'alimentation des Annamites [The soybean seed: Preparations based on soybeans in the diet of the Annamites (of Central Vietnam)]. Marseille, France: Imprimerie Ant. Ged. 106 p. 24 cm. [91 ref. Fre]
• ***Summary:*** The title pages states that this is the published version of the author's PhD thesis at the Mixed Faculty of General and Colonial Medicine, and of Pharmacy at Marseille. The thesis was presented and defended before the Faculty of Medicine of Marseille on 10 July 1936 to obtain the degree of Doctor of Pharmacy. The author was born on 19 Nov. 1905, at Sarzeau (Morbihan); he is a *Licencié ès Sciences, Pharmacien-Capitaine des Troupes Coloniales.*

Contents: 1. Introduction. 2. The soybean: Historical summary and overview. Soybean botany, the production of soya; its cultivation in Indochina, soybean commerce and trade, chemical composition of the soybean seed (analysis of soybeans from Tonkin), the chemical constituents of the soybean seed, soy oil, food use of soya in Europe, industrial uses of soya, soya in therapeutics and dietetics. 3. Soy-based food preparations from Indochina: Soymilk, the fermentation and preservation of soymilk, tofu (*dâu-phù*), soy sauce, yuba (La crème de soja, *dâu-phù-chuc*). 4. Conclusion.

1626. **Product Name:** Health Breads, Cookies, Date Bars, Soy Bean Sprouts, Soy Oil, Soy Milk, Soy Cheese, Soy Flour.
Manufacturer's Name: Soybean Health Products Company.
Manufacturer's Address: Oakland, California.
Date of Introduction: 1936. July.
New Product–Documentation: L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "Soybean Health Products Company, Oakland, California: Health breads, cookies, date bars, etc.; soy bean sprouts, soy oil, soy milk, soy cheese, soy flour."

1627. Takata, Ryôhei. 1936. Daizu seihin no eiyô gakuteki kenkyû. I. Kôri-dôfu tanpakushitsu no eiyô-ka [Research on soyfoods nutrition. I. Nutritional value of the protein in dried-frozen tofu]. *Jozogaku Zasshi* (*J. of Brewing, Osaka*) 14(7):549-53. [3 ref. Jap]

1628. Brewster, Clara M. 1936. The Soya bean: A four-star food. *Horizon* (*Tempo Books, New York City*) 1(3):9, 26-27. Aug.
• ***Summary:*** "Like the Fountain of Youth, the Perfect Food is a myth. There is, however, a well-nigh ideal substitute. It is 5,000 years old, yet fully appreciated only so recently that it can well be called the food of tomorrow. This food is the Soya bean–a four-star tiny seed, with one star for its exceptionally fine and healthful chemical composition, one star for its cheapness, one star for its taste, and the final star for its adaptability, which makes it a blessing to every health-minded housewife!

"In the Orient, the Soya bean takes the place of meat, eggs, milk, cheese, butter and wheat. Over its supply wars have been fought. On a diet of it entire races have been nourished and thrived. To approximately half the population of the world, it is food and drink day in and day out.

"And it is no wonder. An analysis of the chemical composition of the Soya bean shows that it is composed of 40% protein, 20% fat, and the rest is balanced carbohydrates

© Copyright Soyinfo Center 2013

and minerals. Also, research has shown that the Soya bean contains all the vitamins, both the fat-soluble and the water-soluble."

"The Soya bean is a complete vegetable protein containing all of the amino acids in assimilable form; one pound of Soya beans equals the protein value of two pounds of beef, which is much more expensive. Also, quite the opposite of meat, which is highly acid forming, the Soya bean is alkaline, possessing more than twenty times the alkalinity of cow's milk."

From Soya beans we can make Soya bean milk, oil, "a perfect substitute for lard and other kinds of indigestible shortening," a substitute for fresh butter (when the lard substitute is colored with a bit of carrot juice and seasoned with a little Nu-Vege-Sal), a delicious flour (good for use in pancakes, soups, etc.), toasted soya bean (which resemble peanuts in flavor and texture), coffee substitutes and chocolate substitutes (from toasted soya beans–alkaline in reaction and minus all harmful stimulants), toasted soya flour (which has a nut-like flavor), sprouted soya beans, green vegetable beans (picked when the plant is three quarters ripe; they are easy to shell after boiling in the pods for five minutes), tofu (one of the most popular foods made by the Chinese from soya beans, it is a cheese resembling our cottage cheese but pressed into cakes), the curds used to make soya cheese (use in salads or other recipes calling for cottage cheese).

"There are 250 varieties of soya beans. Recipes are given for: Soya beans a la Hauser (boiled whole dry soybeans, seasoned with Nu-Vege-Sal and made into a casserole). Raw soya bean salad (with sprouted soya beans). Soya milk. Clabbered soya milk ("The pulp [okara] strained out of the milk may be used in a multitude of ways..."). Mock oyster patties (with 1 cup soya pulp). Soya muffins (with 2 cups toasted Soya Flour). Soya waffles (with soya flour). Soya fiddle sticks (with soya flour, raw sugar, dates, and nuts). Soya flour fruit cake. Soya sand tarts (with soya flour).

Note 1. Nu-Vege-Sal ("Nutrofied salt") is made by Modern Health Products (Milwaukee, Wisconsin), which has a full-page ad in each issue and also makes Swiss Kriss (natural herbal laxative), Sym (formerly called "Slim"), Vitana (ripe banana food), Santay Swiss Teas, Santay Meatless Bouillon, Sea Greens ("sea vegetables" in tablet form), Sipp (drink instead of coffee), and Aydee Vitamin Tablets.

Note 2. This stylish, spiral bound, quarterly magazine, edited by Bengamin Gayelord Hauser, began publication in early 1936. It is published by Tempo Books (580 Fifth Ave., New York City), the publisher of Hauser's many books with titles like *Eat and Grow Beautiful, Food Science and Health, Harmonized Food Selection, New Health Cookery, Types and Temperaments, Dictionary of Foods, Child Feeding* (written for mothers), *Health Day* (*Gesundheitstag*), *Here's How To Be Healthy* (sensational "health cocktails"). Focusing on "Health, beauty, vitality," it emphasizes that all are related to a good diet. Hauser (whose full-page, dapper photo appears near the front of issue no. 1) "has been called into consultation by the world's most beautiful women, stars of the stage, screen and opera; and for the past two summers he has been Dietetic Director of Elizabeth Arden's exclusive 'Siesta' in Maine." Hauser appears to advocate a vegetarian diet (though he does not say so); he makes no mention of meat, fish or poultry in the text or recipes in the first four issues.

1629. Associated Press (AP). 1936. A vegetable wonder. *Advertiser* (*Montgomery, Alabama*). Sept. 8.
• ***Summary:*** "The soy bean is an immigrant from China... In Detroit, Mr. Ford is building a $5,000,000 plant to make soy bean products. He finishes all his cars with soy bean lacquer [paint].

"The soy bean is also being canned for human consumption. So versatile is this remarkable vegetable that there is soy bean milk, butter, cheese, coffee, breakfast foods, and macaroni on the market. It is remarkable because of a complete absence of starch and a high protein content. In soy bean flour the protein runs from 37 to 40 per cent, and has a high nutrition value."

Note: A cartoon on the same page tells the life story of George Washington Carver. "George worked his way through college. He extracted an oil from peanuts which has been used in treating infantile paralysis. Now, Dr. George Washington Carver, whose parents were slaves, is a great scientist–one of the few Americans to become a member of the Royal Society of Arts, London."

1630. Nippu JiJi-sha (The Nippu Jiji). comp. 1936. Hawai nenkan [Hawaiian Japanese annual and directory (1936-1937)]. Honolulu, Hawaii: Nippu JiJi-sha (The Nippu Jiji). [Jap]
• ***Summary:*** This directory, which is mostly in Japanese characters with very little English or romanization. It is read from back to front. Unlike all other directories of Japanese in the USA, this one does not give any business names. Rather it (Part II) is a directory of Japanese living in the Hawaiian Islands; for each person it gives, in Japanese, his or her name, prefecture of origin in Japan (e.g., from Hiroshima-ken; *-ken* means prefecture), and occupation in Hawaii. Thus, there are many entries for the occupation of "tofu maker." But it is not clear how we should interpret this. In 1936-37 Hawaii, a territory of the United States, was in the midst of the Great Depression. Tofu makers in Japan have traditionally lived under the same roof where they made tofu. In Honolulu (on Oahu) there are 20 entries for "Tofu maker," one for "Tofu merchant," and one for "Tofu shop" (p. 222). Many of the addresses given for tofu makers were probably the addresses of their tofu shops. Although we

© Copyright Soyinfo Center 2013

cannot be sure, we will assume that each tofu maker owned and operated his or her own tofu shop. There were probably 18-21 Japanese-owned tofu shops in Honolulu in 1936-37.

In smaller towns outside Honolulu (on both Oahu and the other islands), many of which were quite distant from any other town, its seems even more likely that the address of the tofu maker was also the address of his tofu shop; we will assume that it was.

We have one other powerful tool for analysis–86 existing records in this database for the names and addresses of tofu shops in Honolulu from 1923 to 1984. We have tried to match up those names and/or addresses to the names and addresses given in this 1936-37 Hawaiian directory in order to link a name here with an existing shop.

Contents: Four unnumbered pages of ads. Fold-out maps of Honolulu and of the Hawaiian Islands. Pages 1-7: Table of contents. 12 unnumbered pages of monochrome photos.

Part I: Pages 1-274: Overview of economy of Honolulu. Geography, history, population and occupations, elections, military, law, jails, budget, taxes, sanitation, industries, fishery, airline industry, construction industry, import / export, banks and financial institutions, insurance industry, air time, radio, transportation, postal ad telephone information, religions, churches, athletics / sports, literature, entertainment. Organizations on various islands: Honolulu, Oahu, Hawaii, Maui, Kauai, Molokai, Lanai. Newspapers and magazines (Honolulu), list of people who died last year, information about regulations and laws, Japanese council members on various islands, holidays, time, phone rates, gas and water prices, Japanese holidays, Japanese year names, etc.

Part II: Directory of Japanese in Hawaii. Honolulu (p. 1-228). Island of Oahu (p. 1-54). Island of Maui (p. 1-52). Islands of Lanai and Molokai (p. 1-8). Island of Kauai (p. 1-44). Island of Hawaii (the big island, p. 1-96). Kona and Kau, on the Island of Hawaii (p. 1-20). Publication information (p. 21). Hotel ads on p. 22-24. Address: 920-928 Nuuanu St., Honolulu, Territory of Hawaii.

1631. Fors, Alberto J. 1936. El frijol soya, materia prima para la produccion de aceite [The soybean, raw material for the production of oil]. *Revista de Agricultura* (*Cuba*) 19(8-9):64-66. Aug/Sept. [Spa]

• ***Summary:*** Briefly describes the importance of the soybean as a raw material for the production of oil. At the end of the article are listed the products obtained from the soybean. These include 24 food products (incl. refined soy flour, refined soy oil, chocolate and cocoa with soya, sausages with soy flour, soy bread, soy macaroni, gluten flour and soy casein, soy lard (*mantecado de soya* = shortening), foods for children and diabetics, oleomargarine, soy sprouts (*retoños de soya*), soy cheese (*queso de soya* = tofu), biscuits made with soy cream, La-Choy soy sauce, soya bouillon, low-fat soy mayonnaise, soymilk), 6 concentrated feeds for domestic animals, and 14 industrial soy products (incl. paints, enamels, linoleum, glycerine, varnish, artificial adhesive rubber, candles, lubricants).

The article begins: "The soybean (*el frijol soya*) is a bush which grows to a height of, at most, 3½ feet, but its industrial possibilities and its agricultural worth are gigantic. One cannot explain why the cultivation of this plant in Cuba is still at the test stage. During the past year of 1935, the United States harvested not less than 24 million quintales [1 quintal = 100 pounds] of this bean. The soybean also does well in our climate and in the majority of our soils, with the advantage over the black bean that two crops per year can be harvested.

"We are importing for our consumption about 6 million kg of oil extracted from this bean which, with some industrial products derived from the same, represent an annual expenditure which approximates, on average, one million pesos. The soybean is not a future possibility: it is money in the hand of those who plant it. Cuba has oil extraction plants which can process all the soybeans we can harvest. Why don't you plant soya? Not only do we import large quantities of soy oil, for we are large consumers of oils and fats, but we also bring in concentrated feeds for milk cows, chickens, and various other substances derived from the soybean." The article ends with these words written in large letters: Plant soybeans! Address: Propagaganda de la Inspeccion Provinical de Agricultura de la Habana. A Cargo de Ingeniero A.J. Fors.

1632. Smith, Wesley. 1936. The march of finance: Trading in soy bean futures spotlights latest arrival in farm commodity king row. *Los Angeles Times.* Oct. 6. p. A18.

• ***Summary:*** Yesterday, trading in soy bean futures started on the Chicago Board of Trade. The soy bean has risen dramatically from a minor product on American farms to the "fourth most important cereal crop" in terms of cash returns to farmers last year. It is a "story of the romance of American agriculture and industry."

In 1909 the value of the soy bean crop in the USA was only $17,000. In 1919 the value was $1,085,000–a 64-fold increase in only 10 years. In 1935, the value had risen to $35,000,000. An estimated 600,000 American farmers grown soy beans; the harvested acreage in 1935 was 5,211,000 acres compared with less than 500,000 acres in 1917. In 1935 some 39,637,000 bushels were produced, compared to 5,131,000 in 1925.

Many new industrial uses of soy beans have been developed; it is used to make high-grade paints, soaps, as a binder for foundry cores, celluloid, candles, printing ink, glycerin, linoleum, rubber substitutes, lecithin, and many other products.

A range of foods are now being made and marketed in America: Soy bean flour (with or without the original oil content of the seed), soy bean milk, butter, cheese, coffee,

© Copyright Soyinfo Center 2013

biscuits, bread foods and macaroni. The beans themselves are canned.

"The soy bean cake, which is the residue when the oil has been extracted from the bean, is one of the most satisfactory types of fertilizer."

1633. Chamberlin, William Henry. 1936. Youth to improve living in Japan's poorest area: Courses for youthful farmers help to develop Tohoku. *Christian Science Monitor.* Oct. 21. p. 5.
• ***Summary:*** "... the customary simple Japanese breakfast of rice, beancurd soup and pickles..." A map shows northern Japan, including Hokkaido.

1634. Hermano, A.J. 1936. Soybeans a national food for Filipinos. *Agricultural Life* (*Exponent of Philippine Agriculture and Allied Industries*) 3(9-10):21-23. Sept/Oct.
• ***Summary:*** Rice is the chief staple food of the Filipinos. But the local diet would be improved by the addition of soybeans and their products. In April 1934 the Nutrition Research Laboratory, Bureau of Science, began to manufacture soybean milk. The method is described, the milk was used with good results in experiments with school children in Paco. Presently 8 liters/day of soybean milk are prepared for the Tondo and San Nicolas Community Health Social Centers.

The article concludes: "Various soybean products, like 'tokua' [tofu], 'toyo' or sauce, 'tahore' 'toho' 'tohu' and other products made by the Chinese are prepared in rather simple ways and could be easily made by the Filipinos."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the word "tahore" which probably refers to fermented tofu. Address: Chief, Nutrition Research Lab., Bureau of Science [Manila, Philippines].

1635. *Nature's Path to Health* (*Melbourne, Australia*). 1936. Remarkable dietary properties of the soybean. Nov. 15. p. 8.
• ***Summary:*** Gives a brief history of the soybean and an overview of its nutritional benefits. "For 5,000 years the Soy Bean has replaced meat, eggs, and milk in the diet of millions of vegetarian Chinese. It has also been used for food in Japan, Indo-China, Siam and India. The Chinese make practically no use of dairy products, and use very little meat, yet they have lived for centuries in a state of prolific vigor on what appears to be a remarkably well-balanced diet by the use of the Soy Bean." Mentions soy bean flour and soy bean curd.

"Dresden, Germany–Dr. Ragnar Berg, famed city hospital food scientist, who wrote the Dictionary of Foods, recently conducted fundamental researches on protein requirements and found that Soy Beans are a splendid source of protein."

"Due to its content of lecithin and phosphorus, the Soy Bean is a nerve and brain food which is especially valuable in cases of neurasthenia for increasing nerve and brain energy."

1636. Russell, Lindsay. 1936. Beneficent soybean. *New York Times.* Dec. 6. Section 4. p. 8.
• ***Summary:*** Russell believes that "John Havens, a miller in Beaufort County, was the first to bring the soybean to North Carolina, and the experiments of August Heckscher resulted in bringing the soybean to the attention of the Midwest." Note 1. Russell (who is probably wrong) does not say when Havens first brought soybeans to North Carolina or from whom he obtained his soybeans. Note 2. The city of Washington is the capital of Beaufort County, in eastern North Carolina on the Pamlico River. The Havens Oil Co. in Washington, North Carolina, first crushed soybeans in 1916 (C.B. Williams, Dec. 1916; E.G. Funk, 1949).

Although the soybean originated in China, "it remained for Japan to vastly extend the use of the soy bean and introduce it to the world... In 1905 Japan turned the South Manchurian Railway into a Department of Agriculture and started a drive to develop the soy bean..." Also mentions tofu (also called "milk curd") and "mesu" (probably miso) "a six-month ferment and substitute for lactic acid milk." Address: Wilmington, North Carolina.

1637. Slawson, H.H. 1936. Baby's milk from beans: Glowing news story of the soybean that staggers imagination. *Hoard's Dairyman* 81(24):631, 649. Dec. 25.
• ***Summary:*** "To the average Chinese in that cowless country, the taste of cow's milk is said to be 'well nigh intolerable.' The big news for the dairyman, however, lies in the fact that soybean milk is now being produced in this country on a commercial basis. And there is further news in the fact that soybean flour is being promoted as a substitute for milk in the making of bread, pastries, and other foods, which recipes have heretofore called for milk. And there is yet further news in the third fact that soybean casein, made from soybean milk, is being employed as a substitute for casein obtained from cow's milk and used by the paint, paper, textile, and adhesives industries."

"One Tsinan [soy] milk factory had a daily output of 250 bottles and patrons could get one bottle delivered daily for $1 (Mex.) per month." No soymilk brand names are given.

The Chinese make a cheese, called tofu, by coagulating the soymilk. "To this product the rich poetic fancy of the Oriental has given the classic name 'Li chi,' or 'the morning prayer,' which suggests the early morning hours devoted to its manufacture... The importance of this cheese in the Chinese diet can be inferred from the oft-repeated saying that soybean cheese is 'the poor man's meat,' just as the soybean milk is 'the poor man's milk.'"

Soybean casein is now competing with cow's milk casein. "How far the invasion has proceeded can be inferred from statistics furnished by a Detroit [Michigan] automobile

© Copyright Soyinfo Center 2013

manufacturer [Henry Ford]. In 1936 he used the entire output of over 61,500 acres of soybeans for use in his cars, including paints and such plastic parts as gears, distributor termina plates, and other accessories. For the plastic frame of the rear window alone 144,000 bushels of soybeans were required. All of the plastic parts might possibly have been made from milk."

1638. *Agricultor Venezolano* (*El*) (*Ministerio de Agricultura y Cria, Caracas*). 1936. La soya: Alimento, abono, y material de gran valor industrial [Soya: Food, fertilizer, and material of great industrial value]. 1(8):15-16. Dec. [Spa]
• ***Summary:*** Soya is a species of plant closely related to the french bean (*caráota*) in its needs during cultivation and its basic nature. A large number of varieties have excellent flavor and nutritional value, and can be used in many different applications. Because the soybean is a legume, its seeds are rich in protein and very nutritious.

Other types of soybeans exist which produce large amounts of foliage for use as forage for cattle or as green manure.

In the latter case, the plants are plowed under so that they enrich the soil at the same time they improve its physical condition by increasing its porosity and its ability to retain humidity / water during droughts.

Edible varieties have a reputation among many for their good flavor. From their seeds you can make soy flour or soymilk. From the soymilk you can make a cheese [tofu], or various drinks and dishes. Breads and cakes are also widely enjoyed, and have excellent nutritional value. Some varieties are very rich in oil, and from them we can extract oil for either food use or industrial uses. The residue left after extracting the oil can serve as a concentrated feed for pigs, dairy cows, and other animals.

The Ministry of Agriculture and Husbandry has, for a long time, distributed different varieties of soybean seeds, whose adaptability to Venezuela has been verified with certainty. Anyone who wishes to obtain soybean seeds of these varieties should contact the Ministry; they will be sent at once. Likewise, anyone with questions related to soya, such as varieties, methods of planting and cultivation, uses as forage, green manure or human food can contact the Ministry of Agriculture for reliable answers.

Photos show: (1) Two soybean pods, one unopened and the other open with 3 seeds showing. (2) Two large fields of soybean plants growing, apparently in Venezuela.

Note 1. This article states that soybeans have long been distributed in Venezuela by the Ministry of Agriculture and Husbandry, which strongly implies that the soybean has been cultivated in Venezuela. If it has, this would be the earliest document seen (May 2009) concerning the cultivation of soybeans in Venezuela.

Note 2. This periodical began publication in May 1936; 28 cm. From 1937 to 1961 this same ministry published another agricultural periodical titled *Memorias y Cuentas.*

1639. Glassmann, B.; Gologorskaja, S. 1936. Verdauungsversuche an Milch und Sojanaehrpraeparaten [Digestibility experiments on milk and soyfoods (soy sour cream, soy "quarg," and tofu)]. *Zeitschrift fuer Untersuchung der Nahrungs- und Genussmittel* 72(5-6):450-52. Nov/Dec. (Chem. Abst. 31[16]:5886). [2 ref. Ger]
• ***Summary:*** Artificial digestion experiments were made with soy sour cream (*Sojasauerrahm* or *Sojamilchrahm*), soy quarg (*Sojaquarg*), tofu (*Sojaeiweiss* = soy protein (*Tophu*)), sour cream from cow's milk, and 'quarq' from cow's milk. (1) To make soy sour cream, sterile soymilk is cultured with lactic acid bacteria for 18 hours at 35ºC, and the resulting product is homogenized by whipping or beating (*durch Schlagen*). (2) To make soy quarg, soymilk is brought to a boil, allowed to cool to 42ºC, inoculated with *Streptococcus acidi lactici*, then allowed to stand at 40ºC for 8 hours. The resulting quarg is pressed. (3) To make tofu, soybean flour or meal (*Sojamehl*) in a vat or tub is slowly stirred with water for 30-45 minutes. The mass is then poured into a sieve to separate the milk from the residue. The milk, in a kettle with an automatic stirring device, is heated to 95ºC, then curded with calcium chloride. The protein curds are pressed.

The digestibility of the soy sour cream was 2-3 times greater than that of the sour cream from cow's milk, but the digestibilities of the other products were about the same. Without the addition of some material to better the flavor, the soy preparations would be difficult to use.

The nomenclature *Sojasauerrahm* is erroneous. The product must be designated as *Sojasauermilch, "Sojaprostokwascha."*

Note 1. Sojaquarg is a unique and interesting product which resembles tofu, except that the coagulation is done by a microorganism with which warm soymilk is inoculated. This is the earliest German document seen (April 2013) is which the word *quarg* is used to refer to tofu.

Note 2. This is the earliest German-language document seen that uses the word "Sojanaehrpraeparaten" in the title to mean "Soyfoods."

Note 3. This is the earliest document seen in any language that contains the term "soy sour cream" or any product resembling sour cream made from soy. Address: Laboratorium des Troustes "Koopchartsch" in Odessa.

1640. Au, Man Sing. comp. and ed. 1936. The Chinese cook book: Covering the entire field of Chinese cookery in the Chinese order of serving. From nuts to soup. Reading, Pennsylvania: Culinary Arts Press. 47 p. See p. 39-40, back cover. Illust. by Warren G. Troutman. 24 cm.
• ***Summary:*** Compiled and edited for the American cook. The index is on p. 12-13. "A small plate is used to hold soyu [sic] or Chinese [soy] sauce. A morsel of food is picked up in the chopsticks, dipped into the sauce, and then put into the

© Copyright Soyinfo Center 2013

mouth" (p. 14).

Seasonings and gravies (p. 16-17). "The whole secret of what makes Chinese dishes unusually savory is the special seasoning and appetizing gravy. Items used for seasoning may be purchased in Chinese shops. Chinese sauce or soyu, used instead of salt, adds zest and delicacy." Chinese gravy calls for "Chinese sauce" as an ingredient. Soyu beef tongue (p. 32). Soyu chicken (p. 34).

The section titled "Bean sprouts" (p. 38-39) states: "The thing that gives your teeth that crisp, crunchy fel in so many Chinese dishes is the bean sprouts.

"It is a delicacy among the Chinese, who name it 'teeth cabbage,' probably because it is so crisp the molars like to crunch it.

"It is tremendously popular because of its great number of uses. It makes a fine additional feature to such dishes as chop suey, fried noodles, omelets, soups and so on." Following a detailed description of how "To raise sprouts" at home using Chinese "sprout beans," are 8 recipes for using bean sprouts.

The section titled "Bean curd–Tofu" (p. 39-40) states: "There are three forms of tofu, to be found almost daily in Chinatown shops. First, the Sai-Tofu–water tofu, which is a watery custard. Second, the Slab Tofu, which comes in a block about three inches square and half an inch thick. Third, the Yau-Tofu [deep-fried tofu], which is bean curd, cooked in hot boiling oil, much like the way doughnuts are made."

Tofu recipes: Pork hash tofu. Dried oyster tofu. Tofu far [fah = flowers]: "This is extra fine custard tofu." Not always found in grocery stores, "it may be ordered from the tofu maker. Fill six cups with tofu-far. Melt Chinese brown sugar into syrup and pour over the custard." Pork tofu. Soyu tofu. Tofu soup. Mullet tofu. Chop suey tofu. Bean sprout tofu. Fried tofu ("Brown one dozen slabs of tofu in frying pan").

• ***Summary:*** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on "Soya bean oil" we read (p. 75): "In England, the bean oil trade is carried on by the following firms:–The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

"The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

"The Premier Oil Extracting Mills, Ltd., Hull.

"Messrs. Wray Sanderson & Co., Hull.

"The Medina Refinery Ltd., Deptford, London.

"Messrs. J. Bibby & Sons Ltd., Liverpool.

"The Erith Oil Works Ltd., Erith" [Kent].

The first addendum, titled "Soybean products exhibited by the American Soybean Association" (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp. (Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois–home office, Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina

© Copyright Soyinfo Center 2013

chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protena all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department of Agriculture (Washington, D.C.). Page 120 adds: "The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A." Note 1. Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which makes different kinds of diabetic breads." The following recipes are then given; * = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish*. White sponge pudding*. Shortbread*. Madeira cake*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "soya bean sprouts" to refer to these sprouts. Address: M.D. (Scotch physician) England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

1644. Hindmarsh, Albert Edward. 1936. The basis of Japanese foreign policy. Cambridge, Massachusetts: Harvard University Press. x + 265 p. See p. 169. 22 cm. [100+* ref]
• ***Summary:*** Page 169: In Japan "the necessities of life are relatively low in price and existence is simple. The laborer's diet of rice, fish, and soya bean curd [tofu] comes easily and directly from the soil and sea, and his yen is relatively more effective than our dollar. 'A Japanese worker can live just as happily and comfortably as an American workman who receives six times his wage" (Eldridge 1934).

The excellent chapter on Japan's problem of population pressure contains two very interesting graphs (p. 46-47). The first shows the number of births and deaths each year from 1877 to 1932. The difference between the two is the "natural increase" in population, which was largest from 1918 to 1932, as deaths decreased steadily and births rose dramatically.

The second shows the "Rate of population increase in Japan proper" from 1873 to 1929. This rate showed a general increase from 5 in 1873 to about 14 in 1911–but with sudden, sharp decreases as follows: From cholera in about 1879, 1887, and 1891. From the Russo-Japanese War in 1904 and 1905 (Japan won). And (the biggest decrease of all) from influenza in 1918 (the international Spanish Flu pandemic, which killed an estimated 390,000 Japanese). Address: Asst. Dean of Harvard College, Instructor and Tutor, Dep. of Government, Harvard Univ., Asst. Prof. of International Law, Fletcher School of Law and Diplomacy.

1645. Institut International d'Agriculture (International Institute of Agriculture). 1936. Le soja dans le monde [The soybean in various countries of the world]. Rome, Italy: Imprimerie de la Chambre des Deputes, Charles Colombo. viii + 282 p. Bibliography, p. 276-82. No index. 25 cm. [90 ref. Fre]
• ***Summary:*** A superb early work, containing extensive original information, looking at developments with soybeans and soyfoods country by country, worldwide. Contents. Preface (p. 1). A. Culture of soy (*soja;* p. 4): 1. Botanical description, selection, classification of the varieties. 2. Culture properly said. 3. Enemies and illnesses.

4. Culture in the various countries: 4a. The Americas (p. 38): Antigua, Argentina, Bermuda, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, USA (gives details on all varieties grown, and describes production, history, varieties, and cultural practices in North Carolina, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Missouri, New York, Ohio, West Virginia, Wisconsin, Conclusion), Guadeloupe, Guatemala, British Guiana, Dutch Guiana, British Honduras [Belize], Jamaica, Barbados, Martinique, Mexico, Montserrat, Peru, Puerto Rico, El Salvador, Trinidad and Tobago, Uruguay.

4b. Europe (p. 101): Germany, the Danubian countries, Austria, Spain, France, Great Britain, Hungary, Italy, Netherlands, Poland, Romania, Switzerland, Czechoslovakia, Turkey, USSR.

4c. Asia (p. 128): Ceylon, China and Manchuria, Cyprus, Federated States of Malaysia, British India (incl. Punjab, Bihar and Orissa, Burma, Berar, Madras Presidency, Bombay Presidency, Bengal (incl. Nepal, Bhutan, Sikkim, and the district of Darjeeling), Assam, North-West Frontier Province, United Provinces), Netherlands Indies, Indochina (incl. Tonkin, Annam, Laos, Cambodia, and Cochinchine), Japan, Palestine, Siam.

4d. Africa (p. 146): French West Africa, Algeria, Belgian

© Copyright Soyinfo Center 2013

Congo, Cyrenaica, Egypt, Eritrea, Madagascar, Morocco, Mauritius (Ile Maurice), Reunion (Réunion), Rhodesia, Anglo-Egyptian Sudan, Tripolitania, Tunisia, Union of South Africa.

4e. Oceania (p. 153): Australia, Fiji Islands, Hawaii, New Caledonia, New Zealand, Philippines.

B. Utilization of soya (p. 158): 1. The soybean in human nutrition and in industry: Whole soybeans, chart of the uses of whole soybeans, use of soya in the green state (green vegetable soybeans), soy sauce (*dau-tuong* of the Annamites, or *toyo*, named shoyu by the Japanese, or *chau-yau* or *chiang yoo* by the Chinese), condiments and sauces based on soya in the Netherlands Indies (*tempe, ontjom, tempemori* and *tempe kedele* [various types of tempeh and onchom, p. 168-70]), *tao tjo* [Indonesian-style miso], *tao dji* [fermented black soybeans], *ketjap, ketiap benteng* [Indonesian-style soy sauce], soymilk (*le lait de soja*), yuba (*crème de lait de soja*), tofu (*le fromage de soja*) and fermented tofu (*des fromages fermentés*, made by Li Yu-ying near Paris), soymilk casein (*caséine du lait de soja*, for industrial use, including vegetable albumin, or galalithe [galalith]" [isolated soy protein], and artificial wool), soy lecithin (*lécithine de soja*), soy flour (*la farine de soja*, incl. soy bread, soy pastries, and soy cocoa).

Note 1. This is the earliest document seen (Sept. 2010) that uses the term *benteng ketiap benteng* to refer to an Indonesian-style soy sauce.

2. Soy oil (p. 194): Food uses, industrial uses (including soaps, products resembling petroleum, paints, varnishes, linoleum, and artificial rubber), extraction, directory of U.S. manufacturers of materials and equipment for soybean processing, directory of U.S. and Canadian manufacturers of food products based on soya (*produits alimentaires à base de soja*, p. 205-06), directory of U.S. manufacturers of industrial soy products (p. 206-07).

3. Soybean in the feeding of domestic animals (p. 207): Forage, hay, silage, pasture, soybean seeds, the minerals in soybeans, soya as a feed for dairy cows, cattle, buffaloes, sheep, hogs, horses and mules, poultry.

4. Use of soya as fertilizer (p. 257). C. The trade of soya and of its by-products (p. 363): Production of soybeans in the principal countries, economic importance of soybean culture in the USA, soybean trade/commerce including tables of the major importers and exporters, and amounts traded annually in 1931-1934, price of soybeans, cost of production.

List by region and country of people and organizations that responded to a questionnaire sent by IIA (p. 273-76). Bibliography of main publications consulted, listed by region and country of publication.

Reunion (*Ile de la Réunion*)*:* "The soybean (Le Soja) is only cultivated as an experimental crop, on a few square meters at the agronomic station" (p. 148).

Fiji (*Iles Fidji*)*:* Soybean cultivation is not yet practiced in this colony; however soybean seeds are currently being imported in order to conduct a trial.

New Caledonia: In 1928 soybean cultivation was introduced to New Caledonia.

Note 2. This is the earliest document seen (Dec. 2007) concerning soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Morocco, New Caledonia, Palestine, Peru, or Réunion, or the cultivation of soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Mexico, the Middle East. Morocco, New Caledonia, Palestine, Peru, or Réunion. It is also the earliest document seen (Dec. 2007) concerning soybeans in connection with (but not yet in) Cyprus; it is stated that soybeans are not grown on the island of Cyprus. Soybean culture is not practiced in the Italian colonies of Eritrea (Erythrée, now part of Ethiopia) or Cyrenaica (Cyrénaïque, now part of Libya).

Note 3. This document contains the earliest date seen for soybeans in Bhutan, New Caledonia, or Réunion, or the cultivation of soybeans in New Caledonia (1928), or Bhutan or Réunion (1936) (One of two documents).

Note 4. This is the earliest French-language document seen (Sept. 2011) that mentions tempeh, which it calls "tempe" (p. 168). It notes that, in general, the indigenous people of the Netherlands Indies use soybeans mainly to make *tempe*, a product which, throughout central and eastern Java, takes the place reserved for *ontjom* in western Java. Tempeh is found in two forms: either in large flat cakes which are cut at the time of sale into small square morsels, or wrapped in folded banana leaves. A detailed description of the preparation of each of these two types of tempeh is given as well as another type of tempe, called *tempemori*, which is made with soybeans and coconut presscake.

Soybean culture is not known to be practiced in the following countries or colonies: Antigua, Barbados, British Honduras (renamed Belize in about 1975), Trinidad and Tobago. Address: Rome, Italy.

1646. James, Grace. 1936. Japan: recollections and impressions. London: George Allen & Unwin Ltd. 285 p. See p. 140, 155. Illust. No index. 22 cm.

• ***Summary:*** This book has three parts: I. Reflections of Tokyo (1885-1895). II. Japan revisited 1934. III. Impressions and conclusions. The author's father was an officer of the British Navy. She was born in Japan.

In Part II, Chapter 6, titled "Otsuka San," refers to Miss Shiwo Otsuka, who gave her Japanese lessons. "... I knew from the significance of his long-drawn cries if it was the *tofu* (bean curd) seller, the flower-seller, the scissors-grinder, the pipe-cleaner, or the gold-fish vendor, who was coming down our lane" (p. 140).

"*O Sushi* consists of cold boiled rice, delicately flavored with *shôyu* or vinegar and with various additions, such as shreds of [pickled] ginger, chopped pickled melon or

© Copyright Soyinfo Center 2013

cucumber, or fragments of raw fish. The honourable *Sushi* is made up into rolls or balls convenient for handling and covered with edible wrapping. *Inari Sushi...*" "... a thin coating of *abura tofu* (oiled bean curd) and *nori maki,* as their name denotes, are wound in seaweed" (p. 154-55).

1647. Polk's Portland (Oregon) city directory. 1936. Portland, Oregon: R.L. Polk & Co., Inc. See p. 976, 1942.
• ***Summary:*** "Ohta Saizo whol baker 322 NW 5th av."

Bakers–Wholesale (p. 1942): "Ohta Saizo 322 NW 5th av."

Note 1. This is actually the Ota Tofu Co. See *Nichi-Bei Nenkan.* Address: Portland, Oregon.

1648. Read, Bernard E. 1936. Chinese medicinal plants from the "Pen ts'ao kang mu" of 1596. 3rd edition of a botanical, chemical and pharmacological reference list. Peking, China: Peking Natural History Bulletin. Sales Agent: The French Bookstore. xvi + 391 p. See p. 114-18. Index of romanized Chinese plant names. Index of common English plant names–Foreign names are in italics. Index of Latin plant names. 27 cm. [180*+ ref]
• ***Summary:*** This book is largely one huge table (p. 1-288) titled "Chinese medicinal plants." It has seven columns: (1) Latin name. (2) Chinese name. (3) Part used. (4) Constituents. (5) Habitat. (6) References (highly abbreviated). (7) Remarks.

Contents: Introduction in Chinese. Introduction to the third edition (Shanghai 1935). Provincial abbreviations. Abbreviations for parts of plants. Bibliographical abbreviations (journals and books). Secondary references helpful to a study of Chinese materia medica. Comparative table of Western, Japanese, and Chinese dates (1868-1935). Table of classes, general, and species for which references are listed.

References related to soybeans are subdivided as follows (p. 114-18, 256): Soybeans, black variety (var. *nigra;* the fresh hulls used in medicine are known as *Ta Tou P'i*). Soybean sprouts, black variety (Ta Tou Huang Chüan). Bean relish, black variety (Ta Tou Ch'ih). Bean ferment, black variety (Tou Huang ["bean yellow"]; Natto in Japanese [sic]). Yellow soybean (Glycine soja S. et Z., var. flava; Huang Ta Tou). Soybean oil (Tou Yu). Soybean sauce, yellow variety (Chiang Yu; thick or thin). Soybean paste (Chiang). Bean curd, yellow variety (Tou Fu). White soybean (Glycine soja, S. et Z., var. alba). Soy sauce made with wheat flour (p. 256).

References for azuki beans (red mung bean, P. mungo, L. var. subtrilobata, Fr. et Sav. [HN. Br.]) are given on page 122. References for wheat gluten (Mien Chin) are given on page 256.

This book is largely a list of references relating to plants listed in the Pen Ta'ao Kang Mu. It is not a translation or summary of the latter work.

Note: This is the earliest English-language document seen (Jan. 2002) that uses the term "the fresh hulls" to refer to soy bran. Address: PhD, Head of the Div. of Physiological Sciences, Henry Lester Inst. of Medical Research, Shanghai, China.

1649. Rouest, Leon; Guerpel, Henry de. 1936. Le soja français et ses applications agricoles et industrielles [The French soybean: Its agricultural and industrial applications]. Chateauroux, France: G. Langlois. xxiii + 99 p. 28 cm. [42 ref. Fre]
• ***Summary:*** Contents: Preface, by L Brétignière (Prof. at Grignon, Member of the Academy of Agriculture). Preface to the first edition, by Louis Forest (1921). Introduction to this new edition: Soviet Russia and the soybean (*le Soja;* includes the story of Rouest's stay in the Northern Caucasus, Russia, from 1930 to 1933), Germany and Poland take up the soya question, the canons [guns] of Germany versus the Manchurian soybean, a secret contract to provide the weapons of war, organization of a Polish bank in Manchuria, Germany cultivates soybeans in Romania and Bulgaria in preparation for the war, France and the cultivation of soybeans.

1. What is soja? 2. History of the propagation of soja: Introduction of the soybean into France and Europe, the soybean is cultivated in central Europe, in Austria, in 1875, in France the soybean is the object of numerous trials from 1876 to 1881, its cultivation worldwide, the study and acclimatization of soya become generalized.

3. Botanical characters of the soybean: And the varieties of soybeans. 4. Chinese varieties: The soybean in China, the production of soya in China in 1916 and 1917, production of soya in the Far East during the year 1928, exportation of soya from the Far East to Europe.

5. Japanese varieties: The soybean in Japan, varieties of soya from Indochina and from other Asian countries. 6. The soybean in America: American varieties, cultivation of soybeans in Ohio, selection of soya using pure lines in Connecticut.

7. The soybean in Europe: Italy, Russia, France, French climatic zones for the cultivation of Soja hispida, the Atlantic zone, the continental zone, the Mediterranean zone and climate, can the soybean be cultivated in all the French climates including those in the north, northeast, and northwest, speedy production of soybeans in view of agricultural production and of the creation of early varieties for the regions in north and northeast France.

8. Instruction for growing soja in France. 9. Soja in Manchuria. 10. Soja seeds. 11. Selection of soja. 12. Varieties of soja. 13. Different ways of planting soya seeds. 14. Soy yield. 15. Nitrogen fixation in soya seeds. 16. Tilling and preparing the earth. 17. Soja fodder. 18. Soja, striking and improving. 19. Harvesting soja grain. 20. Soja oil. 21. Soja oil-cake for animal feeding. 22. Vegetable milk, soja

© Copyright Soyinfo Center 2013

milk and industrial casein.

23. Soja in human food: Soy flour and its applications, soy bread with wheat, nutritional composition of soja compared to dry legumes, soy viewed as a dry legume to replace meat, comparative production of nutritive elements among the various legumes used for human food, comparative value in calories of the usual foods and of soja, preparation of soy soups and meals in compressed tubes, what varieties of soy can serve the special needs of human nutrition, Sojenta, potatoes stuffed with soy, force meat balls (*boulettes*) of rice and soy, bread of rice and soy, pudding of soy and rice, soy sprouts and their food value, fresh soy sprouts in a salad, soy sprouts with vegetables, soy preserves and confections, soy chocolate, soy coffee, soybeans conserved in containers, soy with smoked fish, soup with soy vegetable meat, soymilk soup, omelet with smoked soy vegetable ham, green soy sprouts, soy cake, soy force-meat fritters.

24. The utilization of soja in the Far East: Vegetable cheese (tofu), soy-based condiments, Japanese natto (2 types), Japanese miso, Chinese miso, soy sauce (*soyou* or *schoziou*), making soy sauce in Kwantung, China, making soy sauce in Japan, koji or molded rice.

25. The culture of soja in North Africa (Rouest has varieties that would grow and yield well in the French colonies of Tunisia, Algeria, and Morocco). 26. Opinions of some authors on soja. Conclusions. Bibliography on soja.

A small photo on the "Dedication" page shows Léon Rouest (born in Paris on 11 Nov. 1872).

Concerning soy in Russia (USSR) (p. 52-53): In Russia, the soybean has been known for quite a long time, specially in the Ukraine and Bessarabia, but it was never grown over a large area, and was given a back seat (low priority) in agriculture until after the revolution of 1917. It was not until 1926-27 that cultural trials were conducted on farms in the state of Northern Caucasus (*d'Etat du Caucase du Nord*). In the regions of Rostov-on-Don (*Rostow-sur-Don; Rostov-na-Donu*), Eisk (near Krasnodar), Stavropol, Prim-Koumsk, Yessentuki / Essentuki in the Kuban and Kuban River area of the North Caucasus region of southern Russia, the yields were 11 to 16 quintals.

In 1927 there were 600 ha planted to soybeans, increasing to 17,000 in 1928, in the *kolkhoz* (collective) farms or the *sovkhoz* (state owned) farms.

In 1929-1930 and until 1932-1933 there were very laudable / praiseworthy efforts to propagate soybeans in favorable regions, especially in the North Caucasus, but the soils of this region, although they are very rich and well suited to soybeans are also very rich in bad weeds and the results obtained up to the present do not seem favorable. As I said earlier, the soybean is a technical plant of the intensive cultivation type. It is very well suited to the soil and climate of Russia, but it is less well suited to the indolent character of people who are accustomed to cultivating only small parcels and who are suddenly, through collectivization, thrown into cultivating immense fields. In spite of the remarkable efforts at mechanization, the peasants who submit to collectivization and who do not yet understand it very well, the cultivation of soybeans does not assume the importance hoped for (p. 52).

Note: This is Rouest's first book about soy since 1930. Address: France.

1650. Tezuka, Kaneko. 1936. Japanese food. Tokyo: Maruzen Co. Ltd. 84 p. See p. 28. 20 Cm. Half-title: Tourist Library: 14. [Eng]

• ***Summary:*** The chapter titled "Common everyday food" (p. 22+) notes that the three breakfast dishes are boiled rice, *misoshiru* (bean-paste soup [miso soup]), and *kô-no-mono* (pickles). With them are served "shell-fish *tsukudani* (foods boiled down in soy [sauce]), *shiokonbu* (the laminaria boiled in brine and soy), *nori* (laver), *nimame* (boiled beans [soy]), various kinds of bean-paste [miso] dishes, pickled plums [umeboshi], etc." A brief description of how to make miso and miso soup is given (p. 24). Under "Dinner dishes" we read: The most simple of foods is bean-curd." Fresh raw fish, "cut into shining thin slices (*sashimi*) is served with fresh grated radish or horse radish, and eaten dipped in vinegar or soy."

The section titled "How Bean-curd is Made" (p. 28) states: "Tôfu (bean-curd) is made by soaking soy beans in water, mashing them, straining the mass through cloth and solidifying with the addition of magnesium chloride. It is a very nutritive food. The mush left over after straining *tôfu* is called *u-no-hana* (deutzia flowers) [okara] and is used in cooking vegetables." A photo shows a "Vendor cutting bean-curd."

A photo (p. 64) shows a hall full of Buddhist priests dining at Soji-ji temple, Tsurumi, Japan. In Japan, March 24 and Sept. 24 are national holidays–Spring and Autumn Worship of the Imperial Ancestors. To worship all the Imperial Ancestors, the people hang out the Japanese flag and "to honor the spirits of their own ancestors, make *Inari-zushi* (vinegar-spiced rice wrapped in fried bean-curd) and *botan-mochi* (boiled rice slightly kneaded and covered with [azuki] bean jam). They offer these to the spirits of the dead by placing them before the Buddhist altar in the home and sending them to the family temple and the homes of relatives."

The chapter titled "Japanese Cakes" notes that the two basic types are *higashi* (dried cake) and *namagashi* (undried cake). "*Namagashi* is made of [azuki] bean-jam for the most part. Bean-jam is just like a cream made of red beans and sugar. *Namagashi* is divided into *yôkan* and others." Yôkan is made of bean-jam gelled with agar (Japanese isinglass). A photo (p. 83) shows a bean-jam factory and show case of products.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the word "mush," or the term *u-no-hana,* or the term "deutzia flowers" to refer to okara.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term "bean-paste" to refer to miso.

Note 4. This is the earliest English-language document seen (March 2006) that uses the term "bean jam" (or "bean-jam") to refer to sweet azuki bean paste [*azuki-an*]. Address: Prof., Japan.

1651. The people's tribune. 1936. Shanghai: China United Press. See p. 420. *

• ***Summary:*** Page 420: "... aniseed bean, cold jellied meat, fried beancurd, and spiced blue fish." "Whenever I come back, I laugh at myself," he said with a slight smile, his cigarette held in one hand, and a cup of wine in the other. "When I was young and saw an insect at rest,..."

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried beancurd."

1652. Van Gundy, Dorothea. 1936. La Sierra recipes. Campus and Maitland, Ontario, California: Published by the author. 47 p. 19 cm.

• ***Summary:*** Most (but not all) of the recipes in this book call for soy-based ingredients. Contents: Dedication. "This book is lovingly dedicated to the memory of my father." Foreword: "Due to the increase of disease in the animal kingdom, the diet should be as free as possible from these elements, including meat, eggs, and milk." Approximate composition for La Sierra Products: Soy butter [soynut butter] (27.6% protein, 47.1% fats). Soy breakfast food. Soy flour. Cooked soy beans. Soy loaf. Milk. Bean sprouts. Soy cheese [tofu]. Soy spread. Soy bologna. Dry soy beans.

1. The soy bean as a human food: Nutritional value, varieties of soy beans, flour, soy milk, soy milk from flour, soy milk from raw beans, soy cream (made by homogenizing / blending equal parts of soy milk and soy oil or other vegetable oil), soy cheese, soy bean sprouts, soy sauce.

2. Soups: Incl. Soyament bouillon. Many use Soyament (Soy Sauce), soy milk, or soy cream. 3. Entrees. Recipes incl. Soy croquettes (with Soy Bean Pulp and Smoein). Walnut Loaf (with Smoein and soy milk). Soy protose (with soy butter and Mamenoko flour). Gluten patties (with Smoein). Soy cheese with tomato sauce. Soy cheese croquettes. Soy cheese and Soyament sauce. Baked macaroni with La Sierra Vegetable Bologna. Soy loaf. Soy loaf a la king. Baked soy noodles. Chow mein (with La Sierra Soy Cheese). Lentil patties (with Smoein).

4. Sauces and gravies: Many use soy milk, Smoein, or soy sauce. 5. Vegetables. Incl. Creamed vegetables (with soy milk). 6. Salads and salad dressings. Soy recipes include: Carrot and soy cheese. Tomato and soy cheese. Pineapple and soy cheese. Stuffed celery (with soy cheese). Soy loaf salad. Cabbage and banana salad (with soy mayonnaise). Head lettuce (with soy butter dressing). Salad dressing (uses soy milk in place of eggs). Soy mayonnaise [Note: This is the earliest recipe seen for a soy mayonnaise]. Tomato mayonnaise (tomato juice beaten into soy mayonnaise). Thousand island dressing (with soy mayonnaise). Parsley and olive dressing (with soy mayonnaise; uses ¼ cup chopped olives, not olive oil). Soy cream dressing. Soy butter dressing [with soynut butter]. Cream golden dressing (with soy cream). French dressing (with soy oil or any vegetable oil).

7. Desserts. * = with soy milk. + = with soy cream. Cream rice pudding*. Rice pudding+. Blanc mange*+ [Blancmange]. Orange cream pudding+. Lemon fluff+. Fruit fluff+. Cream tapioca*+. Frozen pudding*+. Vanilla Ice Cream*+. Almond cream [Almond ice cream] (incl. 1 cup chopped almonds)*+. Strawberry sherbet+. Raspberry sherbet+. Butterscotch chiffon pie+. Lemon pie+. Banana cream pie*+. Pumpkin pie without eggs*. Soy pastry with soy flour. Soy cookies+.

8. Bread: Soy bread (with 4 cups entire wheat flour and 1 cup soy flour). Entire wheat bread (with 2 cups soy milk). Entire wheat sticks (with 3 parts wheat flour and 1 part soy flour). Corn meal crisps (with 4 parts corn meal, 3 parts wheat flour, and 1 part soy flour). Short cake (with 2 parts soy milk, 5 parts wheat flour, 1 part soy flour). Waffles (with 12 parts wheat flour, 2 parts soy flour, and 7 parts soy milk).

9. Sandwiches: Soy bean filling. Vegetable bologna. Soy delight filling (with soy[nut] butter). Soy cheese and raisin sandwiches. Soy butter (soynut butter thinned with tomato juice). Soy butter and honey. Soy cheese and olive [chopped green olives]. Soy spread [Made by La Sierra]. Sandwich salad (with many soy possibilities).

10. Beverages: "A very fine coffee substitute is made [by La Sierra] from the Soy Bean, and tastes remarkably like Coffee. It is particularly fine from an alkaline standpoint, and is particularly excellent to be used in connection with high alkaline diets." Soy-co (Beverage) Add 1 rounding teaspoon to 1 cup of water. "Percolate or boil until desired strength. Serve plain or with Soy Cream." Also delicious iced. Soy-co (Made with soy milk). Soy milk shake. Soy banana drink. Mamenoko drink (uses 3 tablespoons Mamenoko, which is processed soy flour). Soyament cocktail ("A very refreshing beverage may be made by using 1 to 2 tablespoons Soyament sauce to 1 cup of water").

11. Healthful confections: Beanut brittle (2 cups each soy Beanuts and brown sugar). Victoria fudge (with soymilk).

Use of soy beans in the diet: Outline for 3 meals. Suggestion for 3 days' menus, using soy products.

La Sierra Industries manufactures the following 14 foods from soy beans: Canned soy beans, plain or with tomato sauce. Soy loaf. Soy vegetable bologna. Soy milk. Soy breakfast food. Soy butter [like peanut butter]. Soy-co

© Copyright Soyinfo Center 2013

(beverage) [coffee substitute]. Smoein (smoked meat flavor). Soy spread. Soy flour, raw and processed. Soy beanuts (parched soy beans).

Soyament brand bean sauce. This soya bean sauce is "prepared from soya beans by splitting up the bean protein by a special process which thoroughly decomposes it into Amino Acids. A number of Amino Acids, each possessing a sweet taste, is the most remarkable feature of the Soyament Sauce and makes it different from many of the so-called soy sauces... On sale at all grocery stores or write to Soya Bean Products Co., 3522 East Third St., Los Angeles."

In the section on "Soy milk" (p. 8) is a long quotation from Dr. [Walter] Siegmeister: "So well has the Soy bean served as a source of vegetable milk, that the records tend to show that it has proven superior to cow's milk in certain important respects. The most marked of these is the almost complete absence of rickets in China, which is quite probable in view of the fact that not only is the Soy bean rich in Vitamin D, but also in Calcium and Phosphorous, the chief requirements for healthy bone development."

Note: This is the earliest document seen (Dec. 2003) that mentions a soy-based shake. It is also the earliest English-language document seen (Dec. 2003) that uses the term "Milk Shake" to refer to a non-dairy soy milk shake or that contains the term "Soy Milk Shake" (p. 41). The recipe with that title states: "Soy Milk may be mixed with any of the fruit juices and beaten with a small amount of chipped ice. It fluffs up and is very palatable. Soy Milk and orange juice combine splendidly." Address: Dietitian, Box 203, Ontario, California.

1653. Jones Grain Mill. 1936? Natural foods: Catalog, recipes, information. Los Angeles, California. 74 p. Undated. 22 cm.

• ***Summary:*** On the cover is a white mill behind a mill wheel (unrealistic) on a mill pond. Contents: Foreword. Health recipes: Cereals (incl. Soy bean or Mamenoke {Mamenoka, Mamenoko} breakfast cereal), breakfast cakes (incl. soy hot cakes with soy milk and Mamenoka flour, soy waffles, soy bean griddle cakes), desserts, breads (incl. soy bean flour gems, whole wheat bread), candies. Vital information: Vitamins and minerals essential to life.

Price list (prices are given for each item listed on pages 46-72): Alberty products, Alvita products, Battle Creek Sanitarium Health Foods [Michigan] (p. 47-48), beverages–coffee substitutes (Loma Linda Breakfast Cup, Soyco {soy bean coffee}, Javex {soy bean}, Carque's Soy Bean Coffee), books (by Dr. Benjamin Gayelord Hauser, Paul C. Bragg, Mrs. Alberty, Martin W. Pretorius, Otto Carque, Clark Irvine, Dr. Harry Finkel), Dr. Paul Bragg products, Jones Grain Mill Bakery (operated by Alberty Specialty Bakers), Burbank products, Carque's products, crackers and toast (Cubbison's bulk or packaged), honey, jams & jellies, juices (fruit & vegetable), KAL products, kelp products (products of the sea, incl. sea lettuce, dulse, Parkelp), Kovac products, Loma Linda Foods (Soy products: Soy beans–plain, tomato, or tomato and Proteena, Soy milk–8½ oz, No. 1, or No. 2, Soy Mince sandwich spread), macaroni & noodles (incl. soy bean macaroni, soy bean noodles), meat substitutes (incl. Simoein [Smoein], Soy loaf, Alfa Soy Spread, Soy Mince) McCollum products, maple syrup and candies, Martin Pretorius products, nuts and butters, Nature Ade products, Nutro Links (Santay, Swiss, Hauser), oils, olives, Radiance products, salts (vegetable, vegetized, and vegetablized), salad dressing and mayonnaise (made with lemon and vegetable oil), health sugars and sugar substitutes, seeds, soya bean products, teas.

The price list of "Soya bean products" (p. 72) reads as follows: "Breakfast Cereal with Carob Flour ([and soya beans] tastes like Grape Nuts), pkg., 25¢. Breakfast Cereal (prepared [with soya beans]), pkg., 25¢. Soya bean flakes, pkg., 30¢. Soya bean grits, pkg., 25¢. Soya bean bread, lb. loaf, 14¢. Soya bean melba toast, lb., 30¢. Soya bean wafers, lb., 40¢. Soya bean cookies (sweetened with dextrose), doz., 15¢. Soya bean coffee cakes (sweetened with honey), each, 5¢. Soya beans cooked: Soya beans (plain cooked), No. 2 can, 13¢. Imported soya beans from Manchuria, lb., 10¢. Pre-cooked soya beans (easily prepared in 30 minutes), lb., 15¢. Soya beans with tomatoes (ready to serve), No. 2 can, 15¢. Cooked soya beans with Proteena, No. 2 can, 15¢. Other soya bean products: Non-fattening [sic] soya bean oil (for all cooking purposes), pint, 40¢. Soya bean coffee, lb., 25¢. Soya bean flour, lb., 10¢; 3 lbs., 25¢. Dextrinized soya bean flour, lb., 15¢. Soya bean milk flour, lb., 60¢. Soya bean candy (with pure chocolate and Dextrose), lb., 50¢. Soya bean sandwich spread, 25¢. Soy sauce, 20¢. Soya bean loaf, No. 2 can, 25¢. Soya bean milk, No. 2 can, 15¢. Soya bean cheese (made from soya bean milk), lb., 30¢. Soya bean mince, 8-oz. can, 25¢. Soya bean spaghetti, lb., 25¢. Soya bean macaroni, lb., 25¢. Soya bean noodles, lb., 25¢. Soy beverage (Cocoalette), 10¢.

Ads include: Hollywood Cup (p. 20). Otto Carque Co. (Glendale, California, p. 30). Loma Linda Foods (p. 33, sells soy wafers, three styles of soy beans, liquid soy milk, soy mince). Vita-Pekan (p. 46, formula includes soya bean as a major ingredient). Alberty dried brewers yeast (p. 50). Kovac Laboratories (p. 67). Cubbison (p. 73, incl. Soya Toast, Soya Cookies, Soya Gluten Crackers).

Note: This catalog was probably published in 1933, since the company's location in Beverly Hills is not mentioned; it opened in 1934. Moreover, the book titled *Vital Facts about Foods,* by Otto Carque was first published in 1933. Address: 322 So. Hill St. and 504 So. Broadway. Both: Los Angeles, California.

1654. **Product Name:** Tow Foo (Canned).
Manufacturer's Name: Tow Foo Packing Co. Renamed Chinese Canning Co. by 1936.
Manufacturer's Address: 2129 Archer Ave., Chicago,

1661. Holmes, Marie. 1937. Cooking chat: Artistic dishes delight Occidental when dining in Japanese manner. *Toronto Daily Star* (*Canada*). May 20. p. 36.
• ***Summary:*** Several weeks ago, the writer was served a complete, authentic Japanese meal at a Japanese restaurant in New York City. Sukiyaki was cooked at her table. Over the simmering vegetables, the waiter poured "some soy or shoyu sauce,..." Floating in her delicious soup was "a little flower of pink bean curd, and a slice or two of white mushroom." She finds that Japanese food is the most artistic in the world, and artistically served. "Since modern hostesses are turning more and more to dishes of other countries and, in fact, placing before their guests whole foreign menus," now is a good time to start learning about the dishes of Japan. The recipes for a Japanese menu are given, including: Beef sukiyaki (with "¼ cup soy sauce" and "1 square piece bean curd") prepared in a frying pan. Japanese directions for Miyako sukiyaki (seasoned with "shoyu sauce").

A small portrait photo shows Marie Holmes.

1662. Alwines, C.W.D. 1937. The soya bean (Letter to the editor). *Tropical Agriculturist* (*Ceylon*) 88:304-05. May.
• ***Summary:*** "When in charge of the Balance Diet Experiment at St. Patrick's Boarding House last year, I was anxious to get a quantity of these beans, to see how much they would cost in a daily diet and whether they could go to make palatable dishes. Enquiries from [sic, to] the Department of Agriculture elicited the information that these beans were not grown in Ceylon. The Market Commissioner gave the address of a Colombo firm that sold the beans. A trial order was placed. The cost however militated against the regular use of these beans." A small quantity of yellow soybeans was roasted and ground. "To all intents and purposes the powder passed off as coffee. That was the easiest way of preparing the bean as food." The beans were passed three times through a flour mill to obtain a fine, golden flour, almost like gram flour. "The flour was used to make bread, buns, tarts and a cake. These were very tasty." One part of soya was mixed with two parts of [wheat flour] dough to make bread and buns... The nutty flavour as eliminated by a liberal addition of butter, sugar and essence of vanilla. The number of eggs uses was less" since soya flour contains 20% at. Rotti, Vadai, and other indigenous dishes were also tried.

"Undaunted by the fact that Soya Bean was not grown in Ceylon, an attempt was made to grow it at Paranthan and at St. Patrick's Boarding House gardens. The variety tried belonged to the black group (with flat black seed)." They grew well and the flour tasted good in the dishes described above. "An attempt to make Soya Bean milk and curds is contemplated." Address: St. Patrick's College, Jaffna, Ceylon.

1663. Megee, C.R. 1937. Soybean production in Michigan. *Michigan Agricultural Experiment Station, Circular Bulletin* No. 161. 14 p. June.
• ***Summary:*** Contents: History, adaptation, and uses. A high protein emergency or annual hay crop. Digestible nutrients and feeding value per acre of soybeans and other Michigan crops. Soybean oil meal. A supplementary protein feed. Soybeans for silage. A cash crop. Soybeans as a soil improving crop. Cultural practices: Varieties, time of planting, rate and methods of planting, inoculation. cultivation, harvesting for hay, harvesting for seed, threshing, storage of soybean seed. Industrial and commercial uses of soybeans: Soybean oil, soybean oil meal, dried beans, for human food.

"As early as 1902 and for 20 years afterwards, E.E. Evans of West Branch, Michigan, took an active part in introducing, breeding, and distributing varieties of soybeans. The Ogemaw is an introduction of Mr. Evans and is the result of a cross between his No. 6 Early Black and Dwarf Brown. Since 1918 the Michigan Agricultural Experiment Station has conducted numerous variety tests for both hay and seed production at East Lansing and at various points over the state" (p. 3).

Table 4, titled "Soybean variety adaptation" (p. 10) lists the following: Manchu, Ito San, Mandarin (Canada), OAC 211 (Ontario), Dunfield, Illini (Illinois), Mandell (Indiana), Sciota (Ohio), Cayuga (New York), Ogemaw (Early Michigan), Wisconsin Early Black, Virginia, Wilson, and Mammoth Yellow. For each variety is given the name, maturity, seed color, and adaptation. "The Manchu is the leading general-purpose variety for hay, seed, and commercial uses in Michigan."

Under "Industrial and commercial uses of soybeans," a table shows 10 industrial and food uses of soybean oil, 15 industrial and food uses of soybean oil meal (incl. diabetic foods, flour, crackers, soy milk, bean curd [tofu], soy sauce), and 12 industrial and food uses of dried beans (incl. roasted beans, coffee substitutes, soups, baked beans, boiled beans). "When soybeans are to be used as a green vegetable, the Easycook and Hahto are preferred because of their milder flavor." Address: Section of Farm Crops, East Lansing.

1664. Voellmig, Gertrude. 1937. Modern science discovers the soy bean as very nearly perfect food: New leaflet on soy bean now ready. *Detroit News.* Aug. 29. Home and Society section. p. 14, col. 4.
• ***Summary:*** "The Detroit News Household Department receives so many requests from readers for information about soy beans" that they have compiled a table and leaflet (with 21 recipes). It has been grown in China since 2800 B.C. [sic]. Readers want to know why it is recommended so highly by doctors for special diets. Now grown in the United States, it is used in industry and to make the steering gear of cars. "But did you know that this bean comes nearer to being a complete food for humans than any other known product?"

© Copyright Soyinfo Center 2013

The beans are often served green in the pods. First the pods are dipped in boiling water for 1-2 minutes, then the beans can easily be pressed out of the pods. The mature beans can be made into milk, and the milk into cheese [tofu]. Soy bean butter is similar to peanut butter. Many U.S. margarines are made from soy bean oil. "Salted Soyas," toasted and salted, make a fine tid-bit [tidbit] after dinner. "The most commonly known soy bean product is the flour." If 5-10% of the wheat flour is replaced by soy flour in the recipe for any bread or baked good, the result will be more tender and last longer.

Three photos, titled "This product has many uses as a food," show: (1) Jars of: Soy bean–Salted Soya. Soy beans–Mature, pressure cooked. Soy beans with carrots. Soy bean–Green. (2) Jars of: Soy bean cheese. Soy bean milk. Soy bean cheese with pimento. Soy bean butter, Soy bean sprouts. (3) A loaf of Soy bean bread–25% bean flour. A jar of Soy bean flour–Not processed.

Of the 5,000 varieties, only about 10 are grown in the USA to any great extent. "Mammoth Yellow is one of the few preferred for food stuffs because it does not have a strong flavor."

Gives many reasons that soy beans are very important in the diet, 6 reasons why the "soy bean is an excellent food stuff," a listing of industrial uses, plus two recipes. Address: Asst. Household Editor, The Detroit News.

1665. League of Nations Health Organization–Bandoeng Conference. 1937. Report of the Intergovernmental Conference of Far-Eastern Countries on Rural Hygiene. *International Conference of Far Eastern Countries on Rural Hygiene* (*Preparatory Papers*) Vol. 3, page 74-76. Held 3-13 Aug. 1937 at Bandoeng, Java. Published 8 Sept. 1937. Official No. C.H. 1235.

• ***Summary:*** In Chapter 4, titled "Nutrition," section I discusses "Composition of food and methods of its preparation." The soya bean and its uses in French Indo-China (today's Vietnam) are discussed on pages 75-76. "Apart from rice an maize, one of the most important food crops in that Far East is the soya bean (*Glycine hispida*). This bean is rich in proteins and fatty matter, but has a very low carbohydrate content. Eaten in its natural state as a vegetable, or better still, in the form of a variety of appetising preparations in which the casein is partly disintegrated, the soya bean makes good the deficiency of fatty and nitrogenous matter in the native diet, which consists almost entirely of the rice carbohydrates.

"Its chief derivatives are nuoc-dâu, or soya milk; dâu-phu, a fresh soya cheese obtained by precipitating the casein of soya milk; dâu-tuong, or soya sauce, which is often used instead of nuoc-mam, especially in Tongking; and dâu-phu-chuc, or soya cream [yuba].

"Soya milk is a yellowish-white liquid with a slight smell of burnt bread and a peculiar flavor greatly appreciated by the Annamites. It is prepared by peeling the beans, pounding them in water, straining, and boiling up the resulting liquid.

"Soya cheese [tofu] appears in trade in the form of faintly yellowish-white rectangular cakes, weighing about 150 grammes each. Ten kg. of soya beans will produce 100 liters of milk, which in turn yield 300 cakes, or 45 kg., of cheese. This very cheap product, of which several thousand kilogrammes are sold every day in the Hanoi market alone, is eaten either raw with salad, or stewed with vegetables, or fried in oil.

"Soya sauce, or dâu-tuong, is a preparation obtained by fermenting a mixture of glutinous rice [*Oryzae sativa glutinosa*, called 'nêp' by the Annamites] and roasted soya beans. It is a condiment both salty and sweet, which frequently replaces nuoc-mam, a relatively dear food, especially in regions distant from the sea.

"Dâu-tuong is commonly found in commerce in the form of a heterogeneous mixture, consisting of a liquid (nuoc-tuong) in which floats a somewhat coarse paste called tuong-cai, made of incompletely powdered soya beans.

"Dâu-phu-chuc is prepared by drying the skin that forms on the surface of soya milk after prolonged heating. It is sold in shiny, pale yellow, crinkly sheets, and smells like cow's milk. It is a food rich in proteins and fatty matter, and is consumed by the Annamites in small pieces, either in soup, or in pork, beef, or chicken stew."

Note: This is the earliest English-language document seen (Dec. 2012) that uses the term "roasted soya beans" to refer to soynuts. Address: Geneva, Switzerland.

1666. Morse, W.J. 1937. Soybean variety studies of the United States Department of Agriculture. *Proceedings of the American Soybean Association* p. 16-18. 17th annual meeting. Held 14-16 Sept. at Urbana, Illinois.

• ***Summary:*** "One of the outstanding results of soybean improvement work in the United States has been, the realization of the importance of varietal adaptation... Varietal adaptation is obviously the reason why practically every locality in the soybean regions of the Orient has its own local varieties... Of the large number of introductions obtained from Asia, the same variety rarely has been secured a second time unless introduced from the same locality... Before numerous introductions were made by the Department, beginning in 1898, there were not more than eight varieties of soybeans grown in this country, and the culture of these varieties was confined to limited areas in a few states... Seed samples were obtained through consuls, missionaries, seedsmen, government agencies, and foreign explorers until by 1909 we had 175 varieties; by 1913, 427 varieties; by 1919, 629 varieties, by 1925, 1133 varieties, and at the present time more than 2,500 distinct types. Since 1989 the Department of Agriculture has made more than 10,000 introductions of soybeans from China, Manchuria, Japan, Chosen [Korea], Java, Sumatra, Siberia, and India. This large

© Copyright Soyinfo Center 2013

collection, ranging in time of maturity from 75 to 200 or more days, has show wide differences in adaptation to soil and climatic conditions..."

After preliminary testing at Arlington Farm, Virginia, the introductions are sent to various experiment stations for cooperative studies...

"The soybean has been used chiefly as a forage crop in the United States and for many years breeding work tended largely toward the development of varieties for hay, silage, and pasture. With the rapid development during the past few years of the soybean for oil, food and industrial purposes, acreage for bean production has increased greatly. The improvement and development of varieties adapted to a wide range of conditions and uses undoubtedly has been one of the most important factors in increased acreage and seed production."

"Extensive cooperative investigations with more than 3,000 introductions and selections of soybeans have been carried on during the last three or four years with experiment stations and special cooperators in 44 states and the insular possessions, Hawaii and Puerto Rico. Many of these selections gave outstanding results when compared with standard varieties in different sections and are being increased for more extensive field tests. Several of the varieties in different sections were found especially suitable for use as green shelled beans, dry edible beans, or beans of high oil and protein content, as commercial beans.

"In 1936, more than 5,000 individual soybean plant selections from introductions and natural hybrids were under test at Arlington Farm. Although improvement work at Arlington has been largely plant selection, some hybridization work has been started, especially with the wild soybean and the most promising cultivated types. Oil and protein studies have been conducted along with the breeding work, analyses being made of introductions grown in the same and under different environmental conditions. An extensive series of varieties, introductions and selections at Arlington Farm ranged from 12 to 26 per cent oil and from 28 to 50 per cent protein... In view of the interest in soybean oil for paint purposes, studies were conducted to show the range in iodine number. The results of these investigations showed a range from 118 to 143 for domestic varieties and 155 for the wild soybean.

"The increasing use of soybeans for food has resulted in a demand for varieties especially suited for various food purposes. Extensive cooperative cooking experiments with the Bureau of Home Economics of the Department of Agriculture and with several state experiment stations have shown considerable variation in flavor and cooking quality in both the green and dry beans of edible varieties from the Orient. The most promising of these have been named and distributed to special cooperators by several state experiment stations. Some of these varieties are especially valuable as green shelled beans, flour, dry edible beans, roasted salted beans [soynuts], bean curd, bean milk, and bean sprouts." Address: Bureau of Plant Industry, USDA, Washington, DC.

1667. *Chicago J. of Commerce and La Salle Street Journal.* 1937. Ice cream, milk from soy beans: Tennessee scientists start new industry. Oct. 13. p. 9, col. 8.
• ***Summary:*** In a small group of buildings located a few miles from Nashville, a small group of chemical and agricultural scientists are doing "big things with the soy bean..."

It all started some 25 years ago when some agricultural chemists at the small, self-supporting the Nashville Agricultural Normal Institute started experimenting with the soy bean, then used mainly as forage.

Today, in a small group of buildings housing the 3-month old industry, E.M. Bisalski, his staff of assistants, and Dr. Philip Chen (a research chemist from China) are making "milk, meat, coffee, and automobile accessories from the vegetable."

Chen says there was soy bean milk in China 3,000 years ago, yet it has taken the scientists about 25 years to "neutralize the bean flavor and approximate that of the cow." Experiments in the institute laboratory showed that many generations of rats living exclusively on soy bean milk grew strong and produced prolific offspring. The scientists believe that the "bean milk can be produced more cheaply than dairy milk and that it can be produced under conditions of chemical sterility, almost germ free."

Having developed good milk, the group next "sought to compete with cattle as food producers in the form of beef.

"A product called soy-burger has been produced. It tastes like hamburger.

"The scientists have made ice cream and buttermilk and even chocolate flavored milk. They also have a cheese [probably tofu] which is said to be the closest thing to pure protein known to chemistry. It tastes like Swiss cheese but costs only a fraction as much."

Note: This is the earliest document seen (Jan. 2007) concerning a meatless burger made from soy. This is also the earliest English-language document seen (Jan. 2007) that contains the term "soy-burger."

1668. *Agricultor Venezolano* (*El*) (*Ministerio de Agricultura y Cria, Caracas*). 1937. Consultorio agricola [Agricultural information bureau]. 2(18):62-63. Oct. [Spa]
• ***Summary:*** One of the sections, by Bartolomé Valero, dated July 1937, is about soymilk (*Leche vegetal de soya*) and tofu (*Queso de habas de soya, ou cuajada de soya*). Describes briefly how each is made.

1669. *Madison Survey* (*Madison, Tennessee*). 1937. Manufacture of foods. Nov. 10. p. 167.

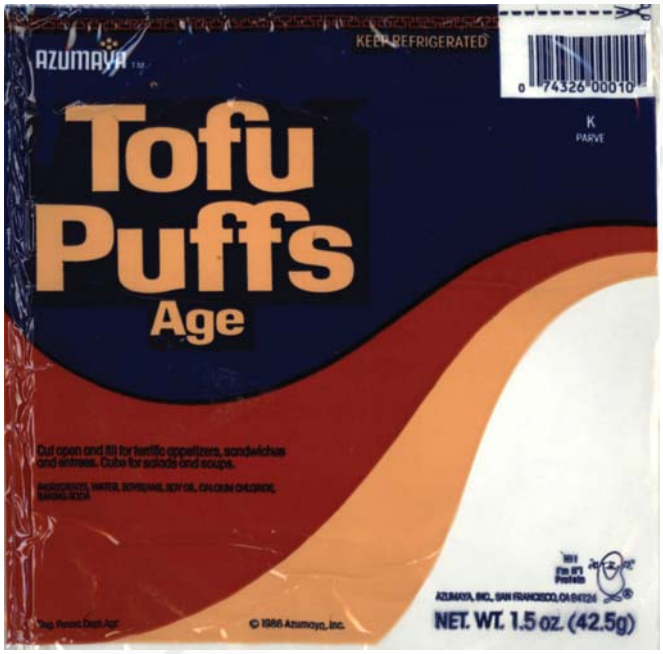
plays an important part. Among the products it is placing on the market are crackers of various composition; foods to use in place of meat, such as, Vigorost, Soy Cheese, Soybeans canned with Tomato; a beverage to take the place of coffee called Soy-Koff. Kreme O'Soy Milk, plain and chocolate, is also on the market in cans."

1670. **Product Name:** Tofu.
Manufacturer's Name: Abe (Junzo) Tofu.
Manufacturer's Address: Haleiwa, P.O. Waialua, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 38. Junzô Abe (from Fukushima prefecture), tofu maker, Haleiwa, Waialua P.O., Oahu.

1671. **Product Name:** Agé: Fried Soybean Puffs.
Manufacturer's Name: Azumaya.
Manufacturer's Address: 1636 Post St. between Buchanan and Laguna, San Francisco, CA 94124.
Date of Introduction: 1937.
Ingredients: Water, soybeans, soy oil, calcium chloride, baking soda (1986).
Wt/Vol., Packaging, Price: 1.5 oz (42.5 gm) in poly pouch.
How Stored: Refrigerated.



New Product–Documentation: Hokubei Mainichi Year Book. 1951, p. 38. Azumaya Tofu Seizô-sho, Azumaya Co., 1606A Geary St., San Francisco. Phone: JO 7-0227. Ad (1/8 page), p. 38. Mizono brothers. Sells aburage, konnyaku, and tofu, wholesale.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 26. Vertical 1/8 page ad. Top one-third of ad is in English: "Azumaya Co., 855 Golden Gate Ave., San Francisco. 567-0227 [phone]. In Japanese: Azumaya Shôten, Mizono brothers. Aburage, konnyaku, and tofu wholesale.

Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 191. The authors call this product "Agé Puffs" and state that they are prepared at most Japanese tofu shops in the United States. Unlike Japanese agé they stay puffed up, even after they cool. "Three Agé Puffs (weighing a total of 1½ ounces) are often sold in plastic bags under such names as Fried Soybean Cakes, Fried Tofu, or simply Agé. Each puff is meant to be slit open at one end. Unlike Japanese agé, these puffs are not easily opened into flat sheets.

Label. Undated. 6.5 inches square. Plastic. Red, yellow, brown and white on clear plastic. The product is now called "Fried Soybean Puffs. Age." Serving suggestions given. "Hi! I'm li'l soy," bean logo.

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 194. The authors call this unique product "Deep-fried tofu puffs" and give a description of the process with 2 illustrations. "Firm tofu prepared as for tofu pouches and containing an expanding agent, is cut into small bars, each about 3 inches long and ½ inch square. These are then deep fried (using converted doughnut deep-fryers) in 2 temperatures of cottonseed oil (120ºC and 176ºC) for 8 to 10 minutes. They are pressed under the hot oil with a pressing screen and turned with 20-inch-long chopsticks. The final puffs look like golden brown sausages about 2 inches in diameter and 4 inches long. Unlike pouches, however, puffs remain in their expanded state [stay puffed up] even after they cool; they are hollow inside and somewhat chewy.

Label. 1986, dated. 7 inches square. Blue, reddish brown, beige, and white. Azumaya logo with 4 circles over the "Y." Little bean logo saying "Hi! I'm li'l Protein." "Cut open and fill for terrific appetizers, sandwiches and entrees. Cube for salads and soups."

Interview with George Mizono. 1989. Oct. 31. During the first year of ownership in 1937 Azumaya made bulk tofu, yaki-dofu, ganmodoki, and agé. One of George's customers was a man who made sushi. He said, "If you can perfect an agé that is hollow inside and stays puffed up, I'll order it from you." George recalls, "So in 1937, for about 6 months, I fooled around trying different things, and then I hit it, quite by accident. They key was in the cooking process. Uncooked soybean puree was mixed with the partially cooked puree before frying. Also, the timing of the frying was very critical." An expanding agent (probably sodium bicarbonate) was later added.

1672. **Product Name:** Tofu.
Manufacturer's Name: Gomoto (Mrs. Michi) Tofu.
Manufacturer's Address: 1338 College Walk, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory.

1936-37. Mrs. Michi Gomoto Tofu (Mrs. Michi Gomoto, proprietor). 1338 College Walk, Honolulu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 23. Kunimoto? Gômoto (from Hiroshima prefecture), tofu maker, 1338 College Walk, Honolulu. Note: The tofu maker's first name could also be pronounced Satomoto? or Akimoto? Not listed 1941-42.

1673. **Product Name:** Tofu.
Manufacturer's Name: Hirakawa (Jugoro) Tofu.
Manufacturer's Address: Lanai City, Lanai Island, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Lanai p. 41. Jûgorô Hirakawa (from Kumamoto prefecture), tofu maker, Lanai City, Lanai Island, Hawaiian Islands.

1674. **Product Name:** Tofu.
Manufacturer's Name: Ideguchi (Yasuki) Tofu.
Manufacturer's Address: 1357 North King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory. 1936-37. Yasuki Ideguchi Tofu (Yasuki Ideguchi, proprietor). 1357 N. King.

Hawaiian Japanese Annual & Directory. 1936-37, p. 42. Yasoyoshi Ideguchi (from Kumamoto prefecture), tofu maker, 1347 N. King St. (new address), Honolulu. Not listed 1937-38.

1675. **Product Name:** Tofu.
Manufacturer's Name: Ikezaki (Moichi) Tofu.
Manufacturer's Address: 32 South Kukui, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory. 1936-37. Moichi Ikezaki Tofu (Moichi Ikezaki, proprietor). 32 S Kukui, Honolulu. Not listed 1937-38. 1947-48 Directory. Listed as Moichi Ikezaki Tofu, 24 S. Kukui, Honolulu. Residence same. Not listed 1955.

1676. **Product Name:** Tofu.
Manufacturer's Name: Ito (Kiyota) Tofu.
Manufacturer's Address: 3 Kaumakapili Lane, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. 46. Kiyota Ito (from Niigata prefecture), tofu maker, 3 Kaumakapili Lane, Honolulu.

1677. **Product Name:** Tofu.
Manufacturer's Name: Iwasaki (Chiyo) Tofu.
Manufacturer's Address: Alupeka, Hanamaulu, Lihue, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 12. Chiyo Iwasaki (from Hiroshima prefecture), tofu maker, Alupeka, Hanamaulu, Lihue, Kauai, Hawaiian Islands.

1678. **Product Name:** Tofu.
Manufacturer's Name: Kamishita (M.) Tofu.
Manufacturer's Address: Waimea, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1936-37. M. Kamishita Tofu (M. Kamishita, proprietor). Waimea, Kauai. Not listed 1947-48.

1679. **Product Name:** Tofu.
Manufacturer's Name: Kikuchi (Genshiro) Tofu.
Manufacturer's Address: Piikoi & Vineyard Streets, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. 46. Genshirô Kikuchi (from Niigata prefecture), tofu maker, Piikoi & Vineyard Sts., Honolulu.

1680. **Product Name:** Tofu.
Manufacturer's Name: KOHATSU? / ONAMIZU? (Tadashi? Musashi?) Tofu.
Manufacturer's Address: Lawai, Koloa, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 24. Tadashi? (or Musashi?) KOHATSU? ONAMIZU? (from Okinawa prefecture), tofu maker, Lawai, Koloa, Kauai, Hawaii.

1681. **Product Name:** Tofu.
Manufacturer's Name: Kureya? / Goya? (Kishin? Yoshimasa?) Tofu.
Manufacturer's Address: Wahiawa, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 29. Kishin? (Yoshimasa?) KUREYA? / GOYA? (from Okinawa prefecture), tofu maker, Wahiawa, Oahu.

1682. **Product Name:** Tofu.
Manufacturer's Name: Kwai Ing Hong Tofu.
Manufacturer's Address: 18 North Kukui, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory. 1936-37. Kwai Ing Hong Tofu (Kwai Hong, proprietor). 18 N Kukui, Honolulu. Not listed 1941-42.

1683. **Product Name:** Tofu.
Manufacturer's Name: Matsushima (Jinpachi) Tofu.

Manufacturer's Address: 30 S. Kukui St., Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. 95. Jinpachi Matsushima (from Hiroshima prefecture), tofu maker, 30 S. Kukui St., Honolulu.

1684. **Product Name:** Tofu.
Manufacturer's Name: Matsuura (Tokuo) Tofu.
Manufacturer's Address: Waialua, P.O. Waialua, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 42. Matsuura Tokuo (from Fukuoka prefecture), tofu maker, Waialua, P.O. Waialua, Oahu.

1685. **Product Name:** Tofu.
Manufacturer's Name: Miyadaira (Yoshikityo) Tofu.
Manufacturer's Address: Pearl City, Wahiawa, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 7. Yoshikiyo Miyadaira (from Okinawa prefecture), tofu maker, Pearl City, Wahiawa, Oahu.

1686. **Product Name:** Tofu.
Manufacturer's Name: Morinaka (Mamoru) Tofu.
Manufacturer's Address: Haleiwa, P.O. Waialua, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 39. Mamoru Morinaka (from ?), tofu maker, Haleiwa, P.O. Waialua, Oahu.

1687. **Product Name:** Tofu.
Manufacturer's Name: Muraoka (Sonjuro) Tofu.
Manufacturer's Address: Kapaa, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 6. Sonjûrô Muraoka (from ?), tofu maker, Kapaa, Kauai, Hawaiian Islands.

1688. **Product Name:** Tofu.
Manufacturer's Name: Nago? / Meigo? (Sanyoshi? Mira? Sanra? Sabuyoshi?) Tofu.
Manufacturer's Address: Kapaa Heights, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 10. NAGO? / MEIGO? (Sanyoshi? Mira? Sanra? Sabuyoshi?) (from Okinawa prefecture), tofu maker, Kapaa Heights, Kauai, Hawaiian Islands.

1689. **Product Name:** Tofu.
Manufacturer's Name: Nakamura (Shokichi) Tofu.
Manufacturer's Address: Paia Camp, Paia, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 38. Shôkichi Nakamura (from Hiroshima prefecture), tofu maker, Paia Camp, Paia, Maui.

1690. **Product Name:** Tofu.
Manufacturer's Name: Nakasone (Taro) Tofu.
Manufacturer's Address: Makawao, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 47. Tarô Nakasone (from Okinawa prefecture), tofu maker, Makawao, Maui.

1691. **Product Name:** Tofu.
Manufacturer's Name: Nonaka (Mrs. Kikuye) Tofu.
Manufacturer's Address: 920 Kapahulu Ave., Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory. 1936-37. Mrs. Kikuye Nonaka Tofu (Mrs. Kikuye Nonaka, proprietor). 920 Kapahulu Ave., Honolulu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 134. Isaburo Nonaka (from Fukuoka prefecture), tofu merchant (not maker), 920 Kapahulu Rd., Honolulu.

Not listed 1941-42 Honolulu City Directory.

1692. **Product Name:** Tofu.
Manufacturer's Name: Okuyama (Munenao) Tofu.
Manufacturer's Address: Waikapu, Wailuku, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 18. Munenao Okuyama (from Yamanashi prefecture), tofu maker, Waikapu, Wailuku, Maui. On this same page is listed: Iwatarô Ohta / Ota (from Hiroshima prefecture), tofu and meat merchant, Box 568 Waikapu, Wailuku, Maui.

1693. **Product Name:** Tofu.
Manufacturer's Name: Omura / Ohmura (Riu) Tofu.
Manufacturer's Address: Waimea, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 38. Riu Omura / Ohmura (from Hiroshima prefecture), tofu maker, Waimea, Kauai, Hawaii.

1694. **Product Name:** Tofu.
Manufacturer's Name: Shimaura (Eisaku) Tofu.
Manufacturer's Address: Wahiawa, Oahu, Hawaii.

© Copyright Soyinfo Center 2013

Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 33. Eisaku Shimaura (from Kumamoto prefecture), tofu maker, Wahiawa, Oahu.

1695. **Product Name:** Tofu.
Manufacturer's Name: Shiroyama (Iyose) Tofu.
Manufacturer's Address: Kealakekua, Kona, Island of Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kona, Island of Hawaii p. 6. Iyose Shiroyama (from Hiroshima prefecture), tofu maker, Kealakekua, Kona, Island of Hawaii.

1696. **Product Name:** Tofu.
Manufacturer's Name: SHITANO? / SHITAYA? (Namie) Tofu.
Manufacturer's Address: Port Allen, Eleele, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 31. Namie SHITAHO? / SHITAYA? (from Ehime prefecture), tofu maker, Port Allen, Eleele, Kauai, Hawaii.

1697. **Product Name:** Tofu.
Manufacturer's Name: TAKAFUJI? / TAKTO? (Heihachiro) Tofu.
Manufacturer's Address: Papaikou, Island of Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Island of Hawaii p. 47. Heihachirô TAKAFUJI? TAKATO? (from Nagano prefecture), tofu maker, Papaikou, Island of Hawaii.

1698. **Product Name:** Tofu.
Manufacturer's Name: Takami (Ryuichi) Tofu.
Manufacturer's Address: Pali Luluku, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 51. Ryûichi Takami (from Hiroshima prefecture), tofu maker, Pali Luluku, Oahu.

1699. **Product Name:** Tofu.
Manufacturer's Name: Takashima (Sen) Tofu.
Manufacturer's Address: Puukoli, Lahaina, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 1. Sen Takashima (from Chiba prefecture), tofu maker, Puukoli, Lahaina, Maui.

1700. **Product Name:** Tofu.
Manufacturer's Name: Tatsuta (Seikichi? Masakichi?) Tofu.
Manufacturer's Address: Mountain View, Island of Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Island of Hawaii p. 86. Seikichi? (or Masakichi?) Tatsuta (from Hiroshima prefecture), tofu maker, Mountain View, Island of Hawaii.

1701. **Product Name:** Tofu.
Manufacturer's Name: Teruya (Tadao) Tofu.
Manufacturer's Address: Lower Camp 3, Sprecklesville, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 33. Tadao Teruya (from Okinawa prefecture), bath house and tofu shop (!), Lower Camp 3, Sprecklesville, Maui.

1702. **Product Name:** Tofu.
Manufacturer's Name: Uda (Yoshito) Tofu.
Manufacturer's Address: Waikapu, Wailuku, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 16 and 20. Yoshito Uda (from Kumamoto prefecture), tofu maker, Waikapu, Wailuku, Maui.

1703. **Product Name:** Tofu.
Manufacturer's Name: Uehara (Kiyoyoshi) Tofu.
Manufacturer's Address: Lahaina, Maui, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Maui p. 6. Kiyoyoshi Uehara (from Chiba prefecture), tofu maker, Lahaina, Maui.

1704. **Product Name:** Tofu.
Manufacturer's Name: Ushijima (Takehachi) Tofu.
Manufacturer's Address: Ponahawai St., Box 1247, Hilo, Island of Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Island of Hawaii p. 32. Takehachi Ushijima (from Kumamoto prefecture), tofu maker, Ponahawai St., Box 1247, Hilo, Island of Hawaii.

1705. **Product Name:** Tofu.
Manufacturer's Name: Uyeda / Ueda (Mrs. Haruko) Tofu.
Manufacturer's Address: Rear 1031 Aala, Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Honolulu City Directory. 1936-37. Mrs. Haruko Uyeda Tofu (Mrs. Haruko Uyeda,

proprietor). Rear 1031 Aala, Honolulu.

Hawaiian Japanese Annual & Directory. 1936-37, p. 201. Kanichi Ueda (from Hiroshima prefecture), tofu maker, 1031 Aala St., Honolulu.

Not listed 1941-42 Honolulu City Directory. Note that tofu has been made at this exact address since 1923. The manufacturers were H. Iwanaga Daufu (started 1923), and Shoshiro or Shima Kanehori Tofu Manufacturer (1926). She later (probably in 1939) sold this company to Mr. and Mrs. Shokin Yamauchi, who renamed it Aala Tofu Co. As of 1988, Aala Tofu Co. still exists.

1706. **Product Name:** Tofu.
Manufacturer's Name: Wakahiro (Seiichi) Tofu.
Manufacturer's Address: 907 Sheridan St., Honolulu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. 206. Seiichi Wakahiro (from Yamaguchi prefecture), tofu maker, 907 Sheridan St., Honolulu.

1707. **Product Name:** Tofu.
Manufacturer's Name: Watanabe (Ushimatsu) Tofu.
Manufacturer's Address: Waipahu, Oahu, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Oahu p. 11. Ushimatsu Watanabe (from Chiba prefecture), tofu maker, Waipahu, Oahu.

1708. **Product Name:** Tofu.
Manufacturer's Name: Yamamoto (Sadashichi) Tofu.
Manufacturer's Address: Makaweli, Kauai, Hawaii.
Date of Introduction: 1937.
New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 35. Sadashichi Yamamoto (from Hiroshima prefecture), tofu maker, Makaweli, Kauai, Hawaii.

1709. **Product Name:** Tofu, Yaki-dofu (Grilled Tofu), and Ganmodoki (Fried Tofu Patties).
Manufacturer's Name: Azumaya Tofu Seizo-sho (Azumaya Co.).
Manufacturer's Address: 1636 Post St. between Buchanan and Laguna, San Francisco, CA 94124. Phone: 415-285-8500.
Date of Introduction: 1937. January.
Ingredients: Soy beans, water, calcium sulfate.
Wt/Vol., Packaging, Price: 21 oz.
How Stored: Refrigerated.
New Product–Documentation: Interview with George and Bill Mizono. 1989. Oct. 31. During the first year of ownership in 1937 Azumaya made bulk tofu, yaki-dofu, ganmodoki, and agé.

Note: This is the earliest record seen (July 2011) showing Azumaya making types of tofu other than regular tofu.

1710. Bordas, Jean. 1937. Le soja et son rôle alimentaire [The soybean and its role as a food]. Paris: Hermann & Cie. 36 p. 24 cm. Series: Actualités Scientifiques et Industrielles, No. 557. [24 ref. Fre]
• ***Summary:*** Contents: Introduction. 1. Botanical characteristics and principal varieties. 2. Chemical composition of soya. 3. Alimentary physiology and the nutritional uses of soya: Seeds (energy value, protein, vitamins, use as a milk substitute), forage. 4. Different uses of soya: Agricultural, industrial (oil, casein, sterol), as human food (sprouts, tofu, fermented tofu, shoyu, miso, tuong of Annam, roasted soy coffee, soy bread for diabetics, the future of soya). 5. The economics of soya: Production, imports, exports. Conclusions. Address: Director, Station d'Agronomie et de Pathologie vegetale d'Avignon, France.

1711. Hommel, Rudolf P. 1937. China at work: An illustrated record of the primitive industries of China's masses, whose life is toil, and thus an account of Chinese civilization. New York, NY: The John Day Co. Published for The Bucks County Historical Society (Doylestown, Pennsylvania). x + 366 p. See p. 85-94, 102-09. Illust. Index. 28 cm. Reprinted in 1969 by MIT Press, Cambridge, Mass. [15 ref]
• ***Summary:*** In the chapter on "Food" is a long section titled "Oil making" (p. 85-91) which shows in great detail and with many illustrations how rapeseed oil is made. Photos show: (Fig. 130) Hand cradle for bolting flour used at a Chinese grist-mill. (131) Bolting flour. (132) Undercut water wheel of a Chinese rice polishing mill. (133) An oil-mill with a large circular trough (4 feet in radius), in which the heavy roller stone crushes the seeds. The roller or millstone, which revolves around a central post, is 5 inches thick and 4 feet 9 inches in diameter. A sketch shows the framework connecting the millstone and the central post. (135) A trough scraper of a Chinese oil-mill. (136) Two wooden shovels for clearing the seed-troughs in the mill. (137) Cylinder or basket for holding the crushed seeds under pressure in a Chinese oil press. (138) Chinese oil press; seen lying on top is a stone hammer with wooden handle for driving wedges. (139) Chinese oil press in action. (140) Oil mill press. (141) Swing pole for driving the wedges. (142) Chinese oil press with the wedges driven home.

The next two sections (p. 102-09) are about querns (hand-turned grinding stones) and utilization of the soy bean–with emphasis on bean curd [tofu].

The soy bean is used to make oil ("Its odor is not very pleasant but this is of no consequence to the Chinese people"), sprouts (a "savoury vegetable"), bean relish ("prepared with salt and spices" [probably soybean jiang]), soy or bean sauce (soy sauce, "an excellent condiment."

© Copyright Soyinfo Center 2013

If lightly shaken in glass vessel it "covers the sides with a bright yellowish-brown froth. Soy is exported in large quantities to India and Europe, and finds its way into many foreign condiments and table sauces" [such as Worcestershire]). "Perhaps the most extensive use of the bean is for making bean curd."

There follows a very detailed and accurate description of how bean curd is made on a home scale in China–illustrated by photos. He has seen it practiced in various places in Chekiang and Kiangsi. "It is usually a household manufacture, the people making it for their own consumption." Figures / photos no. 160 to 163 were taken at Se Aw, Chekiang.

"In Kiangsi the making of bean curd is often a special industry or trade and the people buy the cakes from the dealer, who makes them in large quantities. A larger press, Fig. 164, is then used." Details of the process for making this commercial tofu are then given–except that he failed to include the step in which the soymilk is coagulated.

The section "Notes on bean curd" (p. 108-09) states that dairy products are entirely absent from the Chinese diet; the soy bean and its products take their place.

"It was a rare instinct which led the Chinese to the utilization of the legumin or vegetable casein which the soy bean yields so abundantly. Here our food experts should take a hint and inquire why the soy-bean is only used for forage in America, while in China its products come next in importance to rice. I recall in this connection the efforts made some years ago by Mr. Hudson Maxim to interest his fellow-countrymen in this valuable food. He would buttonhole any new arrival at the Chemists' Club in New York who carelessly betrayed his ignorance of this eastern legume, deliver a lecture about the importance of the soy-bean and follow it up by sending samples, canned and in the dry, with the earnest appeal to try it and be convinced" (p. 109).

More photos show: (157) Bottom stone of a Chinese stone quern (pronounced "kwern"). (158) Upper stone of a Chinese quern. (159) Chinese quern with a handle attached, resting on two horizontal wooden supports, and with a large woven basket below. (160) Quern for wet-grinding used in making bean curd. Quern rests on two v-shaped horizontal wooden supports, with a wooden barrel below it. (161) Barrel used in making bean curd. (162) Three parts of the press used for pressing curds into tofu. (163) Frame for holding the curd, and a masher (9 inches long). (164) Large press for making bean curd. (165) Chinese wine press constructed like the bean curd press. (166) Chinese rope-clutch press–used mainly for pressing tobacco or in the paper-making industry. Address: Richlandtown, Pennsylvania.

1712. Kale, F.S. 1937. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. 2nd ed. Baroda State, India: Baroda State Press. xxx + 375 p. Illust. (35 leaves of plates, described in a separate record). Index. 22 cm. 2nd ed. 1937. [66 ref]

• ***Summary:*** Contents: 1. Deficiencies in the Indian diet and soya bean as a means to rectify them. 2. History of the origin and growth of soya bean: Derivation of the word soya bean, origin of soya bean, literature, primitive man and soya bean, name of the plant, home of soya bean and its expansion, varieties of soya bean, the culture of soya bean is very remote (It "has been the chief article of diet in China for over 7,000 years."), reference of soya bean in old Chinese records, how and when soya bean became known to Europeans, soya bean in England (from 1890; J.L. North and Henry Ford), soya bean in France (from 1739), soya bean in Italy, soya bean in other countries of Europe, soya bean in United States of America, India and soya bean.

3. The use of soya bean: Importance of soya bean, dietetic importance, industrial importance, agricultural importance (Russia, Mussolini in Italy), medical importance, soya bean is alkalising in its effect ("Soya bean milk as well as its flour is used in foods for invalids and infants, like Nestle's food"), longevity and soya bean.

4. World trade in soya bean: Imports to Europe, production of soya bean in Manchuria (58% in North Manchuria), exports from Manchuria, oil and cake industry in Manchuria, soya bean production in Japan, in America, in Africa, in Australia, in Europe, in Java, in India, in other British possessions, estimate of world production of the soya bean, the desirability of the expansion of soya bean cultivation, imports and exports of soybeans, soya bean oil, and soya cake–1913-1927: Denmark, Holland, United States, Great Britain, Japan, France, Russia, China, Germany, Norway, Korea. Source: International Institute of Agriculture, Bureau of Statistics, 1921, p. 420-21. A table (p. 38) shows statistics for world production of soybeans "as estimated by the leading firm of London soya bean dealers" for various years from 1923 to 1929. This includes individual statistics each year for China [incl. Manchuria], Japan, and USA. The world totals in tons are: 3,095,000 (for 1923-25). 3,397,000 (for 1926). 4,325,000 (for 1927). 6,000,000 (for 1928), and 6,570,000 (for 1929; incl. China 5,250,000; Japan 550,000; USA 250,000; Java & Dutch East Indies 120,000; Other Asiatic countries & Africa 400,000).

5. Botany of the soya bean plant. 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean. 9. Cultivation of soya bean in India. 10. The constituents of soya bean. 11. Soya bean milk. 12. Soya bean flour. 13. Industrial uses of soya bean. 14. Enriching soil by addition of nitrogen and use of soya bean as fodder. 15. Food requirement of the human body. 16. European and American soya bean recipes. 17. Diabetic dishes, Mahatma Gandhi's experiments at Magan Wadi and opinion of scientists on soya bean. 18. Chinese and Japanese soya bean dishes: Toffu [tofu] or soya bean curd: Digestibility, utilization,

toffu khan, toffu nao [doufu nao], tze toffu (fried bean curd), chien chang toffu (thousand folds), hsiang khan, kori toffu (frozen toffu), preservation of toffu. Natto. Tokio natto and Kyoto natto etc. Hamanan natto [Hamanatto]. Yuba. Misso [miso]. Soya sauce. Soya bean confectionery. Roasted beans (Chinese).

19. Indian soya bean dishes: Hindustani dishes, Moglai dishes, Gujarati dishes, Maharashtrian dishes, Bengali dishes, Goa dishes, Tanjore dishes. Appendixes. 1. Acreage of soya bean in Manchuria during the last 5 years. 2. Total figures of export during last 5 years. 3. Bibliography. 4. Some opinions about the first edition of this book.

The preface begins (p. iii): "This little book is written in response to innumerable inquiries I have had from time to time after the inauguration of the plantation ceremony of Soya Beans at the State Agricultural Experimental Station by H.H. the Maharaja Gaekwar of Baroda in November 1933.

"A few months after this a food exhibition was held in Baroda where many Soya Bean dishes–Indian, European and Chinese–were exhibited. The leading papers and journals all over the country spoke in very glowing terms about the Soya Bean dishes that were exhibited... Later on at the request of Messrs. Mitsui Bussan Kaisha Ltd., a leading Japanese Firm in Bombay, a Soya Bean Exhibition and Restaurant were run in the Japanese village at the H.O.H. fete. So keen was the interest and enthusiasm evinced by the cosmopolitan public of Bombay that seats in the restaurant had to be reserved in advance. The presence of H.E. the Governor and Lady Brabourne and many Indian princes was an additional evidence of the ever growing popularity of the tasty Soya Bean dishes served there.

"At the closing of the H.O.H. fete many prominent people of Bombay requested me to continue the restaurant at a convenient place in the city, and asked me to open soya-bean milk centres for the children of the poor who could not afford to buy cow's milk. Many were ready to finance any scheme that I would propose, but unfortunately my time was not my own as I had to attend to my duties in the State and could not take advantage of their generous offer.

"The Departments of Agriculture of the various provinces of India as well as many Indian States asked me to supply them with literature regarding the cultivation and the uses of this most useful bean. The Department of Commerce and Industry of the Government of Bombay inquired if I could furnish them with information about the machinery for the extraction of Soya-bean milk. Letters of inquiries from private individuals kept pouring in daily from all parts of India. All this has induced me to undertake the preparation and the publication of this book...

"From the number of experiments carried on in the Baroda territories and outside it, I feel sure that the Indian soil is most suitable for the cultivation of soya bean...

"The leading thought of the day in India is, 'Village uplift,' and 'Rural reconstruction.'

"Baroda, 7th January 1936, F.S.K. (p. iv)

"Preface to the Second Edition: I feel grateful to the public for having given such a hearty reception to the first edition of my book. It is running into a second edition within a year...

"Now, Soya Bean Bakeries and Restaurants have been started in the city of Bombay and in many other towns in India, and Soya Bean products are exhibited in almost all the exhibitions...

"I feel highly thankful to His Highness the Maharaja of Baroda who gave me an opportunity last year of visiting Russia, where I have seen that seven to ten per cent. of Soya Bean flour was being added to the wheat flour in order to enhance the nutritive value of the bread. The Soya Research Institute at Moscow is making researches into the nutritive, industrial and economical values of Soya Bean. I have seen there the actual working of the Soya-bean milk extracting plant. They make casein out of Soya-bean milk. Soya-bean cream is sold in the market.

"I visited the dietetic clinics in England, France, Germany, Austria and other European countries, where doctors prescribe Soya Bean bread for diabetic patients. In Russia, rickets and consumption are treated by Soyolk extracted out of Soya Bean...

"France is growing Soya Bean on côlt de jura [sic, Côte d'Azur, on the Mediterranean?]. In England, through the efforts of Mr. J.L. North, Soya Bean is realised as a field crop for the last two years.

"Paris, 3rd April 1937. F.S.K. (p. ix)." Address: Food Survey Officer, Baroda State, India.

1713. Kale, F.S. 1937. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. 2nd ed. Chapter 9. Cultivation of soya bean in India (Document part). Baroda State, India: Baroda State Press. xxx + 375 p. See p. 79-111.
• ***Summary:*** Contents: Experiments in Baroda State (1934 and 1935) (p. 79-83): In June 1934, 15 lbs. of good seed was acquired by F.S. Kale, the Officer in Charge, Food Survey Department, Baroda state. Describes: Preparatory tillage, sowing on July 12, germination, interculturing [hoeing], gap filling, pod formation, ripening of pods on Sept. 26, harvesting, thrashing (by beating of sticks), yield (167 lb of seed total), cost of cultivation, net profit, and net profit per acre (in rupees). Experiment of 1935, using acclimatized seed from last year's crop. The germination rate increased to 95% from 60% in 1934. The average number of pods per plant increased to 130 from 110. The yield doubled (given in maunds and seers). Signed: Hargovind Bavabhai Patel. Food Surveyor's remarks.

Cultivation of soya bean in Surveys Nos. 199-212, supervised by Ranchhod Raghav Baria, head man of the village, Kerianagas, Amreli District, Gujarat (p. 83-85): The seed was given to 16-17 farmers; some intercropped it with cotton and others with Bajri [pearl millet]. After sowing,

© Copyright Soyinfo Center 2013

the soya bean was attacked by a beetle and so about 1/3 of the seed was spoiled. After 15 days only half the crop had survived. When pod formation began, crows and parrots began to attack the plants; half the pods were spoiled or damaged by them. Then the monsoons brought less rain than usual. The growth of both cotton and bajri was clearly aided by the soya bean. Food surveyor's remarks: "We are very hopeful that this part of Gujarat will be very well suited for soya bean crop."

Experiments of 1934 at the Baroda Agricultural Experiment Station. Soya bean–fodder type (p. 86-90): Two varieties of soya beans were planted in 1934: Poona greenish white, and Poona yellowish white, both brought from Poona Agricultural College. Both were planted on July 3, flowered on Sept. 28 and 29 respectively, pod formation on Oct. 20 and 15 respectively, both harvested on Dec. 4. A photo shows one plant that had more than 500 pods. Description of varieties. For Poona greenish white: Preparation of the soil, cultivation, ripening, harvesting (using a sickle), how to cure it for hay, the yield (900 lb per acre of seed, or 3-4 tons per acre of green crop). "We have given the green fodder to the bullocks on the farm and it seems that they relish it much and they put on more fat and seemed to be healthy and strong. The plants when uprooted showed the growth of big nodules on the roots. For Poona yellowish white, the seed yield was 460 lb per acre and the yield of green matter was only about 75% as much. Mammoth Yellow soya beans from Baroda contained 41.1% protein and 9.9% moisture; the same soya beans from Manchuria contained 38.5% protein and 9.7% moisture.

Dep. of Agriculture, Central Provinces and Berar (p. 90-94): Soya bean ("In this province the Agriculture Department started some preliminary work on this crop as early as 1911. A collection of different varieties from foreign countries was made and grown on the Nagpur farm. Particular attention was given to acclimatize it and to obtain suitable high-yielding early strains, possessing at the same time a satisfactory percentage of oil. The work continued for some years but the results obtained were not satisfactory as none of the varieties were acclimatized. Further work was, therefore, dropped and the growing of Soya beans did not make any headway.

"In 1927, the Botanical station started the investigation of fodder supplies, and in this connection a large number of leguminous crops including Soya beans were tested. Of the Soya beans, two varieties, viz., Java black and Wilson early, were tested and gave encouraging results as regards their yield of green fodder" per acre (the sum of two cuttings)):

In a table of 7 crops: #1. Alysicarpus rugosus (Shevra) 20,105 lb per acre. #2. Glycine hispida (Soya bean Java black) 12,505 lb per acre. #4. Glycine hispida (Soya bean Wilson early) 11,905 lb per acre.

In recent years, tests of seed production have also been carried out on soybean. "A large number of fresh varieties from Kalimpong (Bengal), Kuala Lumpur (Federated Malay States), Barberton ([Ohio] USA) and Leningrad, etc. were obtained and tested. Of these, three white seeded and one black seeded varieties gave promising results as regards their adaptability, earliness and yield." An analysis (see table) of their chemical composition shows "that these selected strains are about 1½ times more nutritious than *mung* and *urid* and also contain a high percentage of oil" [12.8 to 15.2% compared with 0.73 to 1.46%].

"With a view to test its taste and other cooking qualities, the selected and acclimatized varieties were distributed for trial in small quantities amongst garden servants and some officials in Craddock Town, Nagpur. Their report shows that the soya bean is quite palatable and does not suffer from bad taste on account of the high percentage of oil. When ground into flour it can be mixed with wheat flour to make *chapatis*, *puris*, *kachoris*, fritters (*bhajias*) and other Indian preparations. One drawback, however, which has been noticed, is that it does not very well mix with [absorb] water in the preparation of 'dal' like other pulses."

The biggest problem is that India conservative farmers "take a long time to add a new crop to those already grown, unless they can be persuaded that the crop will bring them more profit per acre."

Soya beans in Berar, by Mr. R.R. Dokras, B.A., LL.B., Chandur, Berar (p. 94-98): Improves soils ("It is of great value to persons who must abstain from meat and thus is a great help to the vegetarian population of the country"). Can be grown in Berar ("all over on a profitable commercial basis"). My experience ("growing soya bean from 1931 to 1934). A helpful crop. Best cattle feed.

Imperial Department of Agriculture of India, by Mr. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 98-101): Summarizes the strengths and weakness of the crop. "3. In India it is generally used as green vegetables, *dal* and *sattoo.*" "4. Experts in India and outside are unanimously of the opinion that extension of soya bean cultivation is of great economic value as human food, cattle food and as seed of commercial interest in various industries."

"The only drawback is that there is no ready market for its disposal in India as the people of this country are generally ignorant of its valuable properties–an ignorance which can only be removed with the advancement of scientific knowledge and propaganda among the people."

Soya Bean (*Glycine hispida* Maxim), by M. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 101-07): Introduction: "The soya bean... is cultivated extensively throughout India, chiefly in the north Indian tract which extends from the Punjab to the Khasia and Manipur Hills and Burma. It is also grown on the slopes of the Himalayas up to an altitude of 6,000 feet" (Duthie 1905, Watt 1890). Economic importance of the soya bean: "The bean is much appreciated as human

© Copyright Soyinfo Center 2013

food on account of its protein and vitamin contents of high physiological value... It occupies a position next to rice in China and Japan. Various preparations such as *Tofu* (Soy-cheese), *Miso* (Soy-paste), *Shoyu* (Soy-sauce), etc. are made from the bean and widely used in those countries... In India it is used in various forms such as *sattu, atta* and *dal*. Cultivation of fodder-type soya-bean. Green fodder for cattle: At Pusa farm, cattle are grazed on soya bean in November. Green manure. Standard varieties of soya bean on the Pusa Farm: A table shows 10 varieties from 1917-1923, with the yield of each. The varieties: Local (Pusa), Nepali twining, Riceland, Barchet, Black early, Black late, Yellow hilum brown (highest yield, 1127.9 lb/acre), Chocolate (#2 highest yield, 1026.5 lb/acre), Assam, Barmeli. Chemical composition (table) of Yellow, Chocolate, and Black early.

Soya bean, by R.R. Rao Bahadur D. Ananda Rao Garu, B.Sc., Director of Agriculture, Madras (p. 107-08): "Soya bean is under trial from 1932 in the Research stations Aduturai, Maruteru, Hagari, Nandyal and Samalkota. The two varieties of Soya bean from Burma *viz.* Behrum and Pengypi have done well and the trials are being continued.

Soya bean, by K.S. Kulkarny, Professor of Agriculture, Agricultural College, Poona (p. 108-09). Gives basic information about cultivation of soya bean.

Soya bean, by H.H. Stewart, Esquire, I.A.S., Director of Agriculture, Punjab (p. 109-110): "The area under soya bean crop in this province is practically nil. The crop has been tried on a few experimental farms of the Agricultural Department, where it yielded 12 to 16 maunds of seed per acre."

Soya bean, by the Superintendent of Agriculture, Darjeeling, Kalimpong (p. 110-11) [as of Sept. 2010 Darjeeling and Kalimpong are neighboring towns in the Indian state of West Bengal]: "Soya bean is cultivated chiefly as a secondary crop in rotation after maize or on the Alis or ridges of the paddy fields. The approximate 5 years' average under this crop in the Darjeeling District is about 200 acres; but in the neighbouring independent States, such as Sikkim, Bhutan and Nepal the approximate average is 750 to 800 acres. The average yield for 5 years would be about 7,500 to 8,000 maunds and there are 6 or 7 varieties of soya beans grown in and around this district." The crop is grown mainly for seed and human consumption, also as a green-manuring crop in Tea Estates. Address: Paris, France; Formerly: Food Survey Officer, Baroda State, India.

1714. Morse, W.J.; Cartter, J.L. 1937. Improvement in soybeans. *Yearbook of Agriculture* (*USDA*) p. 1154-89. For the year 1937. [67 ref]

• ***Summary:*** Contents: History of the soybean. World distribution and production. Utilization of the soybean (with chart). Improvement of soybean varieties. Methods in breeding: Natural and artificial crossing, mutations. Inheritance studies and cytology: Plant characters (flower, stem, pubescence, and foliage; height of plant and maturity; pod-bearing habit and pod characters; sterility, growth habit), seed characters (color of seed coat, hilum, and cotyledon; other seed characters), yield of seed. Disease resistance. Identification of genes and chromosomes. Selected references on genetics of the soybean. Appendix: 1. Workers identified with soybean improvement: United, States, foreign countries. 2. List of soybean genes (table). 3. Linkage of soybean characters (table). 4. Soybean varieties: Origin and varietal characteristics (table listing 101 named soybean varieties; for each is given the place and date of introduction or origin, days to mature, flower color, pubescence color, and seed characters {coat color, germ color, hilum color, seeds per pod, seeds per pound}, uses {dry-edible beans, forage, green-vegetable beans, grain}).

The section titled "History of the Soybean" states: "The early history of the soybean is lost in obscurity. Ancient Chinese literature, however, reveals, that it was extensively cultivated and highly valued as a food for centuries before written records were kept. It was one of the grains planted by Hou Tsi, a god of agriculture. The first record of the plant is contained in a materia medica describing the plants of China, written by Emperor Sheng Nung [sic, Shen Nung] in 2838 B.C. The crop is repeatedly mentioned in later records and it was considered the most important cultivated legume and one of the five sacred grains essential to the existence of Chinese civilization. Seed of the plant was sown yearly with great ceremony by the Emperors of China, and poets extolled its virtues. The records of methods of culture, varieties for different purposes, and numerous uses indicate that the soybean was perhaps one of the oldest crops grown by man."

Note 1. This is the earliest English-language document seen (June 2003) which states that: (1) The soybean was one of the "five sacred grains." (2) "The early history of the soybean is lost in obscurity." (3) The soybean was planted at an early date by "Hou Tsi, a god of agriculture." (4) The "soybean was perhaps one of the oldest crops grown by man." It is also the earliest document seen (June 209) in which William Morse mentions the mythical Chinese emperor "Sheng Nung" in connection with soybeans.

More broadly, this entire story linking Shen Nung with the earliest written record of the soybean, is completely incorrect. Yet because the story was written by Morse (highly regarded as America's leading authority on the soybean) in a USDA publication, it has unfortunately been repeated, and this source cited, again and again down to the present day (see Hymowitz 1970; Hymowitz and Shurtleff 2005).

Note 2. This is the earliest document seen (June 2003) in which the emperor's name is spelled "Sheng Nung."

Note 3. This is the earliest document seen (July 2007) in which William Morse tries to write an early history of the soybean in China. Unfortunately, he does not cite his sources.

The section titled "Improvement of soybean varieties"

© Copyright Soyinfo Center 2013

states: “In the United States, more than 50 percent of the acreage devoted to soybeans is used for forage and pasture; breeding work, therefore, has tended largely toward the development of varieties for hay, silage, and pasture. The development of such varieties as Virginia, Laredo, Otootan, Wisconsin Black, Manchu, Wilson-Five, Kingwa, Peking, and Ebony by selection from introductions has been the principal factor in the increased use and acreage.

“Beginning with 1929, the use of soybean seed by oil mills has led to a demand for yellow-seeded varieties of high oil content. Agronomists and plant breeders have attempted to meet this demand by making large numbers of selections from foreign introductions and locally grown varieties and by analyzing these for oil content. This has brought about the development of several superior oil varieties and has resulted in a large increase in production of beans for milling purposes. The most popular of these varieties are Illini, Dunfield, Mukden, Mandell, Scioto, Mansoy, Manchu, Mamredo, Delsta, and Mandarin. Results of analyses with more than 1,000 selections and varieties have shown a range of from 12 to 26 percent in oil content. From studies of the oil content of varieties grown in a given locality, it seems possible, from the breeding standpoint, to produce varieties high or low in oil, at least within the known ranges of variation exhibited by common varieties.” (p. 1161-62).

Soybean varieties that have excellent flavor and become soft in less than 2 hours of cooking include Easycook, Bansei, Rokusun, Jogun, Chusei, and Sousei. These are “now in the hands of growers and seedsmen. Experiments by commercial firms have shown that these varieties are superior to commercial varieties for the manufacture of food products, such as bean flour, roasted beans, bean milk, and bean curd [tofu].

“In Japan, certain varieties of soybeans were found that were used solely as green shelled beans. Ranging in maturity from 75 to 170 days, many of these introductions, and selections from them, have been found especially promising for the various sections of the United States. The vegetable soybean offers an excellent food of high nutritional value, especially in the fall when other green beans are lacking and in sections where the Mexican bean beetle prohibits the growing of garden beans. As a result of selection, cooking tests, and adaptation studies, eight green vegetable varieties–Hahto, Kura, Kanro, Hokkaido, Higan, Chusei, Sousei, and Jogun–have been introduced in various sections of the country” (p. 1163).

Photos show: (1) “The late Charles Vancouver Piper, agronomist, United States Department of Agriculture, 1902-26. Pioneer in the introduction and development of soybean varieties for United States conditions.” (2) “Storage yard of a Chinese grain merchant near Kungchuling, Manchuria. More than 80 osier bins, each holding four cartloads of soybeans, were in this yard.” (3) A Manchurian farmer and how he harvests, threshes and cleans soybeans by methods learned from his ancestors; comparison with modern U.S. machine harvesting. (4) “Millions of soybean oil cakes are stored in warehouses in Manchuria awaiting shipment to Japan, Chosen, China, and the East Indies, where they are used for fertilizing purposes and for cattle feed.” A person looks up at the towering stacks. (5) Coolies loading large sacks of soybeans on a freighter for shipment to the oil mills of Europe. One man has hoisted a huge sack onto his back. (6) Five Manchurian farmers who have been awarded certificates and prizes for producing high-quality soybeans. (7) Twenty seeds of a natural soybean hybrid showing peculiar types of coloration. (8) Illustration (line drawing) of a soybean flower and its parts enlarged. Front view, side view, parts of the corolla (standard, wing, one of the keel petals), stamens, pistil. (9) A. Stems and pods of fasciated soybean plants; B. Determinate pod-bearing type; C. Indeterminate pod-bearing type. 10. Chromosome chart showing four groups of linked genes in soybeans.

A table (p. 1157) shows: “Increase in production of soybeans over an 11-year period, 1924-25 to 1935-36, inclusive, in the principal producing countries of the world” (Manchuria, Chosen [Korea], Japan, United States, Netherland India).

Soybean seed size (p. 1177): “The range in size of soybean seed varies according to the variety, each variety having its own typical seed size. Varieties and introductions tested at the Arlington Experiment Farm ranged in average weight of 100 seeds from about 4 grams for the smallest to about 40 grams for the largest.” Address: 1. Senior Agronomist; 2. Assoc. Agronomist. Both: Div. of Forage Crops and Diseases, Bureau of Plant Industry [USDA, Washington, DC].

1715. Woertge, Karl Heinz. 1937. Entwicklung und weltwirtschaftliche Bedeutung der Sojabohnenerzeugung und -verarbeitung [Development and international economic significance of soybean production and processing]. Thesis, Friedrich Alexander University, Erlangen, Coburg, Germany. 119 p. 28 cm. [112 ref. Ger]

• ***Summary:*** Contents: Foreword. Part I: History and culture of the soybean. 1. History, natural requirements and technology of soybean production; chemical composition of the soybean. 2. Occurrence of the soybean and methods of production in various countries: Asia (Manchuria and China, Japan, Korea, Formosa, Dutch East Indies, other Asian countries incl. British India, Cochin China, Ceylon), America, Europe (Southeast Europe, Austria, USSR, France, Italy, England, Poland, Switzerland, Czechoslovakia, Germany), Africa and Australia.

Part II. Scale and global economic significance of soybean production in the main producing areas. 1. General overview of world soybean production: Production for seeds, for fodders. 2. Scale of soybean production in the main producing areas: Asia (Manchuria, Japan, Korea, Formosa,

© Copyright Soyinfo Center 2013

Dutch East Indies [Java and Madura/Madoera]), America, Europe (Southeast Europe, USSR).

Part III. Development and global economic significance of soybean processing. 1. Soybean processing possibilities: A. Processing soybeans to make foods: Asia (general, methods used in China and Japan to make vegetable-type soybeans and salads, koji, soymilk, shoyu [soy sauce], miso, natto, tofu, methods used in the Dutch East Indies), Europe (general overview, preparation of soybean meal, soymilk, coffee- and chocolate substitutes). B. The soybean as an oilseed: General, methods of obtaining the oil (in Asia, Europe, USA), use of soy oil (as human food, other). C. Obtaining lecithin from the soybean. D. Use of soybean press-cake for livestock feed. E. Use of the soybean meal for fertilizer. 2. World trade in soybeans, soy oil and soybean cake/meal (*Sojakuchen/Sojaschrot*)*:* World trade in soybeans (Manchuria, Asia, Europe, USA), world trade in soy oil, world trade in soybean meal.

Closing remarks: The state of the world soybean market with special consideration for the current German conditions. Appendixes and tables. Address: Nuerenberg, Germany.

1716. Yamaguchi, H.S.K.; Sakai, Atsuharu. 1937. Sukiyaki: How "sukiyaki" is served. Origin of "sukiyaki" (Document part). In: H.S.K. Yamaguchi. 1937. We Japanese. Yokohama, Japan: Yamagata Press. 592 p. See p. 264-66. Book II.
• ***Summary:*** To create the Japanese atmosphere at the Sukiyaki party, the guests must sit on cushions on the floor. For a party of four guests, a circular table is best, with the charcoal brazier (on which a *nabé* is set) or electric cooker in the middle. On plates surrounding the *nabé* are the ingredients required for the meal: Tender beef, thinly sliced. Cut leeks and often some onions mixed with the leeks. "Now comes the highly nutritious bean-curd known as *tofu* in Japan. This is very light and digestible, and of great value in Japanese soups and other dishes." *Konnyaku,* a gelatin-like vegetable, is cut into strings (*shirataki*) that look like silvery spaghetti. Japanese doctors say that *konnyaku* has considerable medicinal value.

"As seasoning the Japanese usually put a little of what is called *Ajinomoto,* along with a little soup stock. This *Ajinomoto* is one of the most marvelous seasonings in the world, recognized even by the French as superior to their *sel de celeri,* in which French chefs have so much faith. It ought to be better known to housewives throughout the world. Housewives travelling make inquiries about it and buy quantities in Japan to take home.

"Now come two important liquids. The first, *shoyu* or *soy,* is indispensable. It is the Oriental sauce which is the basis of almost all sauces in the world, with the difference, however that whereas so many Western sauces are strongly spiced and therefore too piquant, and consequently harmful to delicate stomachs, the Japanese *shoyu* is a natural soy bean-sauce, highly nutritious and an irresistible appetizer." Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

1717. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1938/01. Nichibei jûshoroku [The Japanese American directory. No 34]. San Francisco, California: Nichi-Bei Shinbunsha. 671 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** One of many of these directories owned by the Library of Congress. Address: Ellis Street, San Francisco, California.

1718. *American Cookery* (*Formerly The Boston Cooking School Magazine*). 1938. Queries and answers: Soy bean curd. 42(9):564-66. April.
• ***Summary:*** "Query No. 5886. 'In your February I noticed a recipe for soy bean milk that referred to one for soy bean curd. Will you now please supply me with that recipe?'"

Ans: "The following recipe is quoted from the Bureau of Home Economics. To make soy bean curd with vinegar, heat four quarts of soy bean milk, add two cups of vinegar and stir until will mixed. Let stand a few minutes. Put in a cheesecloth bag and dip the bag of curd in cool water several times to wash away the excess acid. Drain for about an hour and press out the remaining liquid. Season with salt and pack rightly into a dampened mould. Cover and store in a cold place until firm enough to cut.

"To make soy bean curd by fermentation, keep the milk in a warm place overnight, or until it forms a curd. Stir to break the curd. Add an equal amount of water heated almost to boiling and let stand ten minutes. Pour into a cheesecloth bag and drain for several hours. Press out the remaining liquid. Season with salt and pack into a dampened mould. Cover and store in a cold place." Address: 221 Columbus Ave., Boston, Massachusetts.

1719. Iwamoto, Kunitarô. 1938. Tôfu seizô kôtei-chû ni okeru bitamin B-1 no shôchô ni tsuite [On changes in vitamin B-1 during tofu manufacture]. *Jozogaku Zasshi* (*J. of Brewing, Osaka*) 16(4):314-17. [7 ref. Jap]
Address: Naimushô Eisei Shikenjô, Japan.

1720. Horvath, A.A. 1938. The nutritional value of soybeans. *American J. of Digestive Diseases* 5(3):177-83. May. Earlier edition in Deutsche Medizinische Wochenschrift. 19:733. 1937. Amaral 1958. [114 ref]
• ***Summary:*** Contents: Introduction. Composition and properties. Nutritive value. Conclusions. This article contains a good review of the literature, with 114 references. Individual foods discussed include: Fresh soybean curd, smoked soybean curd, frozen soybean curd, soybean milk, soybean milk powder ("mostly nothing but a finely ground soya flour..."), soybean flour, soy acidophilus milk, immature green soybeans, boiled mature soybeans, soya bread.

"In the Orient soybean curd (tofu) has been in daily use since times immemorial, and is called 'the meat without the

© Copyright Soyinfo Center 2013

bones,' as it serves as a food rich in protein."

"The low basal metabolism of the orientals was to a certain extent attributed to their being vegetarians, and the basal metabolism was accepted as a measure of efficiency of a nation until recent studies showed the basal metabolism of the Maya Indians to be about 5 per cent above that of the white race" (Shattuck & Benedict 1931, p. 518).

"It has been shown that while alkalinization of a human being by the administration of sodium salts (bicarbonate or citrate) is followed by a retention of water amounting to one Kilo [kg] and greater perspiration during exercise, the alkalinization by the corresponding potassium salts results in a one Kilo loss of water by the body and a marked reduction in perspiration during exercise (H. Dennig, 1937). The deficiency of the soybean ash in sodium and the large excess of potassium places the soybean in the latter class of alkalizing agents."

"Besides bread and bakery products (such as coffee cake and doughnuts) the other main outlets for soya flour are for the manufacture of crackers (only solvent extracted soya flour gives a product that will keep indefinitely), pancake flour, cocoa-malt mixes, baby foods, chocolate puddings, ice cream powders, macaroni products, and sausages*. (Footnote: * Mostly meal flours are used today for sausages. Since sausages containing a substantial amount of soya flour can be sold at a reduced price, this may provide the packing industry of our country with a means of expanding the consumption of meat").

Note: This is the earliest English-language document seen (June 2009) that uses the term "immature green soybeans" to refer to green vegetable soybeans. Address: Chemist, Agric. Exp. Station, Newark, Delaware.

1721. *Madison Health Messenger* (*Madison, Tennessee*). 1938. Soy bean milk, coffee, meat, and cereal. 1(1):1, 4, 6. Spring.

• ***Summary:*** "More versatile than any other food is the soy bean. Previously used as stock feed, it has gradually won its way into many wholesome foods that are distinctly different, yet palatable and reasonable.

"Madison Foods, in conjunction with Madison College, has spent years in experimental research developing soy bean foods. Dr. Philip S. Chen, Professor of Chemistry at Madison College, a native of China who received his doctorate degree in chemistry at Michigan State College, together with Dr. Frances L. Dittes, Professor of Nutrition at Madison College, whose doctorate degree is also in the field of Chemistry and Nutrition, have successfully exploited the ancient bean, discovering its versatility as is evidenced by the possibilities of its use as milk, coffee substitute, meat substitute, breakfast cereal, flour, etc."

Kreme O'Soy Milk is the only homogenized soy bean milk on the market to date; it is made of soy beans, added soy bean oil, dextrose, and organic calcium. Zoy-Koff is an alkaline coffee substitute made from soy beans and grains. Kreme O'Soy Crisps is Madison's new ready-to-eat alkaline breakfast cereal. It is made of whole soy bean flour, whole wheat, and malt.

Foods made by Madison Foods that contain soy as an ingredient, described in this first issue are: Soy-Koff (with photo of front of package in front of Mr. Hubert Henken, assistant production manager of Madison Foods, from Albia, Iowa, and a "strict vegetarian"). Thin Things (a new soy wafer). Date-Stix (a natural sweet, with Kreme O' Soy Flour). Fruit Stix (a soy flour biscuit). Breakfast Crisps / Kreme O'Soy Crisps (with photo of front of package). Soyburger Loaf. Soy Beans (in 5 oz, 14 oz and 30 oz cans, with tomato sauce or plain). Soy Cheese [Tofu]. Vigorost ("Madison's finest protein food representing the 'steak' of its variety." A photo shows Vigorost sliced and ready to serve on a platter). Kreme O'Soy Flour. Kreme O'Soy Milk.

Note: This is the earliest document seen (Jan. 2013) that contains the word "Soyburger" (spelled as one word, regardless of capitalization) or the term "Soyburger Loaf."

1722. *Christian Science Monitor.* 1938. Rice Japanese food mainstay. June 8. p. 6.

• ***Summary:*** "The regular accompaniment to rice at the morning meal consists of beancurd soup and a very bitter pickled plum [*umeboshi*] as an appetizer, with perhaps some seaweed. Fish, vegetables, pickles, and beancurd are supplementary dishes at other meals. But rice is the central item in the Japanese menu." A photo shows two peasants treading a crude waterwheel that irrigates a rice field near Osaka.

1723. Guy, Ruth A.; Yeh, K.S. 1938. Peking diets. *Chinese Medical Journal* 54(3):201-22. Sept. [20 ref]

• ***Summary:*** Two distinct types of diets are eaten in Peking. Whole cereal-legume diets tend to be eaten by the poor, whereas milled cereal-meat diets are eaten by the rich. "Both, at their best, are excellent," as can be seen from the tables of composition or from "the ultimate test, the health and vigor and reproductive performance of the people who eat them." Both include fresh vegetables. The diet in Table 2 is entirely vegetarian. "A little meat is usually eaten three or four times a year at festival times, but it cannot be considered nutritionally significant. The great bulk of the rural population of North China eat it,..."

There are, however, a number of modifications in these two basic diets which render them highly unsatisfactory. In the first, lower-class, diet, extreme poverty leads to a reduction or omission of the vegetables and even of the yellow maize and soya bean. Or, the social prestige conferred by the use of milled [polished] cereals sometimes leads to a deficiency of vitamin B-1. The second, rich diet, is often rendered unsatisfactory with respect to protein and vitamin B-1, and with respect to vitamins A and C, by reductions in

© Copyright Soyinfo Center 2013

the amount of pork and leafy vegetables, respectively.

Contents: Composition of common foods. Whole cereal-legume diets. Milled cereal-meat diets. Distortions in whole cereal-soybean diets. Distortions in milled cereal-meat diets.

Mixed flour, which are sold in the Peking market, vary considerably in composition. "Some shops say they mix corn eight parts with soybean two parts (called *pang tzu mien*), millet five parts with soybean five parts (called *hsiao mi mien*). Other shops say the mixtures are: corn nine parts and soybean one part, or millet six corn nine parts and soybean one part. "The latter have been chosen as more probably true because of the higher price of soybeans. In any case no measurements are made, both cereal grain and soybeans being put into the mill and ground together."

Soyfoods whose composition is given in the tables are: Soybean meal [flour]. Ground mixture of 9 parts maize and 1 part soybean meal (*pang tzu mien*). Ground mixture of 6 parts millet and 4 parts soybean meal (*hsiao mi mien*). Soybean curd (tou fu). Soybean sauce.

Tables: (1) Composition of common foods. (2) Whole cereal-soybean diet (excellent; vegetarian). (3) Milled cereal-meat diet (excellent). (4) Whole cereal-soybean diet (deficient; vitamin C absent, vitamin A low, calcium low). (5) Milled cereal-meat diet (deficient; vitamin A absent, vitamin C absent, calcium very low). (6) Whole cereal-soybean diet (deficient in calories, protein, calcium, phosphorus, vitamin C). (7) Milled cereal-meat diet (deficient; vitamin B-1 low, protein of poor quality, calories low). (8) Milled cereal-meat diet (deficient; calcium low, vitamin A very low, vitamin C low). (9) Milled cereal-meat diet (deficient; vitamin B-1 low). Address: 1. M.D., Dep. of Public Health, Peiping Union, Medical College, China.

1724. Kung, Lan-Chen; Yeh, Hui-Lan; Adolph, William H. 1938. The availability of calcium in vegetable food materials. *Chinese J. of Physiology* 13(3):307-15. Sept. [14 ref. Eng; chi]

• ***Summary:*** "Cow's milk is not a common item of food in China and a study of the Chinese dietary makes it evident that vegetable food materials, especially leaf vegetables, constitute the principal source of calcium supply. It has been suggested that the calcium intake might be conveniently enhanced by increasing the proportion of leaf vegetables in the diet.

"The calcium of milk has been shown in numerous experiments to be almost completely utilized by the body; there is however conflicting evidence as to the extent to which calcium from vegetable sources is utilized. Using the method of metabolic balance in experiments with human subjects... Adolph and Chen (1932) feeding soybean curd report good utilization of the calcium in these materials." Lower calcium retention is reported from spinach and kale, probably due to their high oxalate content.

In this experiment nine of the most commonly used leaf vegetables in north China were fed to rats. Soybeans sprouts, *Laminaria* [kombu, a sea vegetable], and white turnip were also fed, since they were "common items in the dietary" with a high calcium content. The rats retained 53-62% of the calcium in the soybean sprouts; this was slightly lower than that of the others materials tested. The calcium of most vegetables examined was well utilized.

Note: This research was aided by a grant from the Rockefeller Foundation. Address: Dep. of Chemistry, Yenching Univ., Peiping.

1725. Lyman, J.F. 1938. The soybean as food for man. *Proceedings of the American Soybean Association* p. 25-30. 18th annual meeting. Held 12-14 Sept. at Wooster and Columbus, Ohio.

• ***Summary:*** "The Chinese and other Eastern peoples have solved the problem of food seasoning without the use of meat. They have found that a meaty flavor can be obtained from the soybean through a fermentation process. Soy sauce is to the Chinese what gravy is to the American. Even more important is soy sauce in China because the use of food flavors and condiments in that country is much more restricted than with us. The Chinese have simple tastes. Soy sauce, salt and pepper are the only food flavors commonly used by them.

"While the chemist has made but little study of food flavors and the physiologist has done but little also, enough is known of the problem so that soy sauce can be made by chemical methods as well as by the ancient fermentation process. The chief meaty-like taste of soy sauce is known to be the salt of an amino acid, mono-sodium-glutamate. This salt is now manufactured for use as a condiment. The process involves the disintegration of the soybean of other protein, preferably wheat gluten, with hydrochloric acid. A mixture of about 20 amino acids is obtained among which mono-sodium-glutamate makes up about one-fifth in the case of soybean protein and two-fifths in the case of wheat gluten.

"The mono-sodium-glutamate can be crystallized from the mixture by adjusting the acidity to pH 3.2, or the mixture can be neutralized to a desired acidity and used without refining just as soy sauce is used" (p. 25).

"In Japan mono-sodium-glutamate of good purity is sold at a wholesale price of about two dollars a pound under the name Ajinomoto" (p. 26).

A diagram (p. 28) shows "Some possible food products from the soybean," including sprouts, soybean milk, soybean curd, soybean cheese, soy sauce, meat sauce, meal, flour (for use in breakfast cereal, bread, sausage, meat loaves, or ice cream), refined oil (for use in lard substitutes), crude oil (for us in margarine or dressing), and lecithin (an anti oxidant or emulsifier). Address: Dep. of Agricultural Chemistry, Ohio State Univ.

1726. Morse, W.J. 1938. Edible varieties of soybeans.

© Copyright Soyinfo Center 2013

Proceedings of the American Soybean Association p. 30-33. 18th annual meeting. Held 12-14 Sept. at Wooster and Columbus, Ohio.

• ***Summary:*** "Although the soybean had attracted attention at various times as an article of food in the United States, it was not until the World War [World War I], when a cheap source of protein was being sought, that the soybean was really considered seriously as an article of diet for Americans. The dried beans were prepared in many ways but owing to the time required for cooking, the peculiar taste, and improper methods of processing, soybean products were not generally accepted. During this period cooking tests were conducted with all of the varieties and introductions then available in an attempt to find varieties lacking the unpleasant bean taste and which would cook quickly. Only two such varieties were found–the Easycook and Hahto. Some progress was made in getting people to eat these varieties..."

"Oriental varieties of soybeans are distinguished not only according to seed and plant characters but also according to use, such as for curd [tofu], sprouts, green vegetables, roasted beans, and numerous other food products. Attempts to obtain suitable edible varieties from oriental countries through correspondence met with but little success. During agricultural exploration work in the Orient from 1929 to 1931, many varieties of soybeans were found in Japan and Chosen [Korea] which were used solely as green shelled or dry edible beans. These edible types, ranging in maturity from 75 to 145 days, have been under test for the past six years at various experiment stations throughout the United States." In addition, "extensive investigations of the cooking qualities and composition of the green shelled and dry edible beans have been made by various Departments of Home Economics. Many of these varieties were judged much superior to the commercial varieties in flavor, texture, and ease of cooking. Moreover, tests indicate that the flour from most of the edible varieties has a better flavor than the available commercial soybean flours... Thirty-one of the varieties introduced as edible beans have been found sufficiently promising to be assigned varietal names, shown in table 1, and have been distributed into those regions to which they seem especially adapted. Although the supply of seed of these varieties at present is quite limited, seed stocks are being increased rapidly at several experiment stations and by various growers to meet the growing demand for edible soybeans... Both the green (immature) and dry beans contain much more fat and protein and less carbohydrates than other leguminous seeds. Few naturally occurring foods are as rich in protein as soybeans... The soybean is also a good source of some of the mineral elements, containing more calcium and phosphorus than any of the cereals and excelling most foods as a source of available iron. Because of the alkaline elements in soybeans, they belong to the class of alkali-forming foods.

Table 1, titled "Characteristics of edible varieties of soybeans" (p. 32) lists the following 31 varieties: Agate, Aoda, Bansei, Chame, Chusei, Easycook, Fuji, Funk Delicious, Goku (the smallest bean in this table; 3,216 seeds/lb), Haberlandt, Hahto (the second largest bean; 1,250 seeds/lb), Hakote, Higan, Hiro, Hokkaido (the largest bean; 1,232 seeds/lb), Imperial, Jogun, Kanro, Kura, Nanda, Osaya, Rokusun, Sato, Shiro, Sioux (the next to smallest bean in this table; 3,000 seeds/lb), Sousei, Suru, Toku, Tokyo, Waseda, Willomi. For each variety the table shows: F.P.I. number, number of days to ripen, seed color (green, straw yellow, olive yellow, brown, black), hilum color (brown, black, pale), seeds per pound, oil content and protein content (% on moisture-free basis), and use (green vegetable, or dry edible).

"Some commercial concerns are now canning the green beans and at the Illinois Agricultural Experiment Station attempts to preserve green soybeans with freezing storage methods have been very successful.

"Extensive nutritional studies revealing the unique dietary value of the soybean and its products during recent years have had much to do with the rapid and growing popularity of the soybean as a food."

Note: This is the earliest document seen (July 2004) that mentions the soybean varieties Aoda or Sioux. Address: Bureau of Plant Industry, USDA, Washington, DC.

1727. George, S.E. 1938. New industries: The versatile soya bean. *Nature's Path to Health* (*Melbourne, Australia*). Oct. 1. p. 17, 38.

• ***Summary:*** Discusses utilization of soya beans throughout the world to make soya bean oil and meal, industrial products (glycerine, paints, soaps, linoleum, rubber substitute, printing inks, explosives, etc.), bean-milk, bean-curds or tofu, salted bean-curd (resembles Roquefort cheese), coffee substitutes (sold today in America and Europe), soya bean flour, and beef-like extracts for use in soups ("one of the most famous European brands of soup-cubes has a soya-bean base"). "Sacks of [soya] beans make excellent substitutes for sandbags [in wartime], as was proved in the recent Manchurian struggle. Buddhists in China use bean-curd [probably yuba], shaped in molds, to make many products that resemble animal products: fish with sauces, a whole chicken swimming in a golden chicken soup. A number of other products made from soya beans are listed. Discusses the work of the Ford Motor Co. with growing and using soybeans in England and the USA.

A cartoon shows a figure of "The Versatile Soya Bean" smiling and dancing with hands on hips.

Note 1. This is the earliest document seen (April 2003) that mentions a meat alternative which is described as an alternative to fish or seafood. Address: Australia.

1728. Woodruff, Sybil. 1938. Soybean products as competitors of dairy products. *National Butter and Cheese Journal* 29(20):30-31. Oct. 25. Summarized by W.V.P. in J.

© Copyright Soyinfo Center 2013

of Dairy Science (1939) 22:A16.
• ***Summary:*** Discusses food uses of soybeans and the nutritive value of soybeans. Predicts that food use of soybean oil and soybean protein will probably increase. Relatively little soybean oil is used in salad oils, margarines, and shortenings which are sold at retail to consumers because of "problems of flavor which may arise. These three soybean oil products are sold rather to wholesale manufacturers of other food products with an expectation of a rapid turnover. It is a fact admitted frankly by soybean oil chemists that refined oil may undergo a 'reversion' of flavor on standing even after hydrogenation, which restricts its salability as food. The cause and means of preventing this unpleasant flavor, described by some as 'fishy' are not yet understood but are the subject of considerable research in the industry at present."

Soybean oil suddenly jumped to prominence as an edible oil in about 1935-36. Margarines and shortenings made from soybean oil both compete with the dairy industry.

A table shows factory consumption of soybean oil for food and industrial uses from 1932 to 1936. Use in lard compounds and vegetable shortenings jumped from 4,889,000 lb in 1932 to 113,897,000 lb in 1936. Use in margarine jumped from 3,000 lb in 1932 to 14,262,000 lb in 1936. Use in other edible products increased from 180,000 lb in 1932 to 21,598 lb in 1936. Thus total food uses skyrocketed from 5,072,000 lb in 1932 to 149,757,000 lb in 1936–a 30-fold increase in only 5 years. Total industrial uses of soybean oil increased steadily from 19,039,000 lb in 1932 to 25,847,000 lb in 1936. In 1935 food uses first exceeded industrial uses.

Soy flour is being used extensively in the sausage industry. "The grits are being added to bread and other bakery goods. Home use of soybean flour is at present almost non-existent" except where small amounts are used as a substitute for wheat flour in cases of allergies, or as a low-carbohydrate in special [diabetic] diets. "At present it is not available on the retail market except in food specialty shops at fancy prices.

"Soybean oil and flour are at present the only manufactured food products of any importance." Address: Dep. of Home Economics, Univ. of Illinois.

1729. Schroeder, Franz. 1938. Die Sojabohne, ihre wirtschaftliche Bedeutung und ihre Verwertung fuer die menschliche Ernaehrung [The soybean, its economic significance and its use as human food]. *Ernaehrung* (*Die*) 3(9):245-57. Sept.; 3(10):281-93. Oct. [61 ref. Ger]
• ***Summary:*** Adaptations of soybeans to Western food habits are discussed in detail. Page 89 mentions efforts to commercialize and popularize the use of soy flour (*Sojamehl*), for example the little Edelsoja Cookbook from the New Edelsoja Co. in Berlin (*das kleine Edelsoja-Kochbuch der Neuen Edelsoja-Gesellschaft in Berlin*) and the Edelsoja Cookbook from the Edel Soja Workshop in Lübeck (*das Edelsoja-Kochbuch des Edel-Soja-Praktikums in Lübeck*). Address: Oberregierungsrat und Mitglied des Reichsgesundheitsamts i. R., Wilhelmshoeher Strasse 3, Berlin-Friedenau, Germany.

1730. Whiteman, Elizabeth Fuller; Keyt, Ellen Kingsley. 1938. Soybeans for the table. *USDA Leaflet* No. 166. 6 p. Oct.
• ***Summary:*** Contents: Introduction. Food value of soybeans and their products. Soybeans as a green vegetable. Dry soybeans (Recipes: Soybean casserole, Chile con carne with soybeans. Soybean souffle. Salted soybeans). Soybean sprouts. Soybean milk and "mash" [okara] (Recipes: Soybean milk sour. Soybean macaroons (with cooked soybean mash)). Soybean curd (Recipes: Vegetable chowder with soybean curd. Chop suey with soybean curd and bean sprouts). Soybean flour (Recipes: Soybean flour muffins. Soybean nut bread. Soybean piecrust).

Concerning "Soybean sprouts" (p. 4): "Soybeans, like mung beans, can be sprouted in a flower pot, a sink strainer, or any container that has holes in it for drainage and can be covered. Be sure the container is large enough, for the beans swell to at least six times their original bulk as they sprout. Soak overnight, and next morning put the beans in the container, cover, and leave them in a warm place. Flood with lukewarm water at least four or five times each day during the sprouting period. In 4 to 6 days the sprouts will be 2 to 3 inches long. Then they should be kept in a cool place, just as any fresh vegetable.

"Bean sprouts are a good addition to raw salads or to omelet, souffle, meat stew, or fricassee. The sprouts are very tender and to hold their crispness should not be added to hot mixtures until a few minutes before serving. They are also often used with soybean curd and vegetables in chop suey (p. 6)."

Concerning "Soybean 'milk' and mash" (p. 4-5): "Soybean 'milk,' though not the equal of cow's milk in food value, may be used like it as a beverage or in cooking. It is of value in diets for persons allergic to cow's milk, but in infant feeding must be properly supplemented.

"Of the varieties of soybeans tested, the best to use for making milk are Bansei, Hokkaido, Haberlandt, Mammoth Yellow, Dixie, and Rokusun. The milk may be made by either of two methods.

"Method 1.–Wash the dry soybeans and soak overnight. Remove the skins and grind the beans very fine. Put the ground beans in a cheesecloth bag, in a bowl of lukewarm water, using 3 quarts of water to each pound of dry beans. Work thoroughly with the hands for 5 to 10 minutes. Wring the bag of pulp until dry. Boil the milk on a low fire for 30 minutes, stirring frequently to prevent scorching. Add sugar and salt to taste. Keep in a cold place.

"Method 2.–After washing the dry soybeans, let them

© Copyright Soyinfo Center 2013

dry thoroughly. Crack them; then grind them fine. To each pound of beans add 3 quarts of water, and soak for 2 hours. Boil for 20 minutes, stirring constantly; then strain through cheesecloth. Add sugar and salt to taste. Keep in a cold place.

"The creamy white soybean milk can be used in practically any recipe calling for milk. For instance it may serve as one of the chief ingredients in a creamed vegetable soup, or with eggs in custard, or in cocoa or other hot beverages.

"The ground bean pulp or mash has very little flavor, but may be used for its nutritive value in combination with foods of more pronounced flavors. It spoils quickly, however, and should be heated to prevent it from souring.

"To cook soybean pulp or mash, put the desired amount of mash into the top part of a double boiler. Add one-half teaspoon of salt to each pint of mash. If the mash is too dry, moisten it with soybean milk. Stir occasionally and cook for about an hour or until the raw soybean flavor is gone. Keep in a covered jar in a cold place. The cooked mash makes an inexpensive ingredient in the macaroon type of cooky [cookie]." There follows recipes for "Soybean milk soup" and "Soybean macaroons."

Note: This is the earliest English-language document seen (May 2011) that uses the term "soybean mash" to refer to whole soybeans than have been cooked, then mashed or ground to a paste. Address: 1. Junior home economics specialist; 2. Junior scientific aide.

1731. Chiu, Yan-Tsz. 1938. Analyses of Chinese foods. *Chinese Medical Journal* 54(5):435-41. Nov. [9 ref. Eng]
• ***Summary:*** "Soybean milk: My first problem is to study the manufacture and properties of soybean milk to be used as a substitute for cow's milk, which is too expensive for poorer children. In North China soybean milk has been a common food for both adults and children, while in South China only its products (mostly bean curd) are used. Ten years ago the manager of a local department store introduced bean milk as a beverage to take the place of soda water. But many people do not like it because of its unpleasant taste. It is found that the unpleasant odor of bean milk can be eliminated by washing the beans thoroughly and then soaking them in a large volume of water."

Table 1 gives a nutritional analysis of 4 types of soybean milk (including a condensed soybean milk with cocoa), human milk, goat's milk, and various types of cow's milk (condensed, evaporated, fresh, and powdered).

"Condensed soybean milk can be used to make a very cheap ice cream. Dean Koo and the writer have made for the first time several quarts of soybean milk ice cream which contains 60 per cent condensed soybean milk, 30 per cent cream (having 40 per cent butter fat) and 10 per cent cow's milk, with 5 per cent fat. The condensed soybean milk contains about 52 per cent water. 0.3 per cent gelatin is added. Flavored with lemon or vanilla or chocolate it has a good taste."

Note: This is the earliest English-language document seen (March 2007) that uses the term "soybean milk ice cream" to refer to soy ice cream. Address: Prof. of Chemistry, Lingnan Univ., Canton, China.

1732. **Product Name:** Soymilk, Tofu-Pimiento Spread, Okara Spread, and Gluten Cutlets.
Manufacturer's Name: Miller's Soy Foods.
Manufacturer's Address: Utica, New York. Washington, DC.
Date of Introduction: 1938.
Wt/Vol., Packaging, Price: Soymik: Bottled. Gluten products: Canned.
New Product–Documentation: Herbert P. Ford. 1958. *The Life Story of Dr. Harry W. Miller.* p. 131. "In 1939 Dr. Miller returned to the United States having been so thoroughly convinced that soymilk was destined to have world-wide acceptance... His son, Harry Willis Miller, Jr. had returned preceding his father and had started a small soy milk plant in Utica, New York, where he made and bottled soy milk and also made and canned some of the protein foods out of wheat gluten for which they had developed recipes. This plant was later moved to Mt. Vernon, Ohio, after they started the soybean plant at Mt. Vernon."

Interview with Willis Miller. 1981. After he returned to the USA from Shanghai, Willis started this company, named Miller's Soy Foods, in Utica in 1938. Later that year he moved it to Washington, D.C. and was successfully making and marketing canned soymilk, tofu used in a tofu-pimiento spread, okara spreads, and gluten cutlets. When Dr. Miller returned to the U.S. he suggested that he and his son go into business together. Willis liked the idea.

1733. **Product Name:** Tofu.
Manufacturer's Name: Morinaka (J.M.) Tofu.
Manufacturer's Address: Waialua, Honolulu, Oahu, Hawaii.
Date of Introduction: 1938.
New Product–Documentation: Honolulu City Directory. 1937-38. J.M. Morinaka Tofu (J.M. Morinaka, proprietor). Waialua, Honolulu. Not listed 1941-42.

1734. **Product Name:** Tofu.
Manufacturer's Name: Murai (Yasaburo) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.
Date of Introduction: 1938.
New Product–Documentation: Honolulu City Directory. 1937-38. Yasaburo Murai Tofu (Yasaburo Murai, proprietor). Hilo, Island of Hawaii. Not listed 1941-42.

1735. **Product Name:** Tofu.
Manufacturer's Name: Shijma (B.U.) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.

Date of Introduction: 1938.
New Product–Documentation: Honolulu City Directory. 1937-38. B.U. Shijma Tofu (B.U. Shijma, proprietor). Hilo, Island of Hawaii. Not listed 1941-42.

1736. Abreu Velho, H. de L.; Gossweiler, John. 1938. A soja [The soybean]. Luanda, Angola: Imprensa Nacional. 48 p. (Conselho de defesa da producao e do comercio). [8 ref. Por]
• ***Summary:*** Cover title: Soja; o que os agricultores devem saber sobre a sua cultura (Soya: What farmers must know about its culture). In the section titled "Possibilities for soybean culture in Angola," it is noted: "Although on a relatively small scale, some soybean trials have been conducted in Angola. At the Experimental Station of Algodao, in Catete, some soybean trials were conducted in 1929 and 1930 with a yellow variety, with the intent of studying the crop for use in rotation with cotton and with maize (corn). The sowing went well and the germination was rapid and uniform, but none of the plants grew to a height of more than 30 cm (1 foot)."

At the experiment station of *Policultura Planáltica at Bié*, from 1928 to 1931, the soybean was one of the crops tested for use as a green manure. A summary of the results was given by the station's director in the *Boletim da Direcçao dos Serviços de Agricultura e Comércio*, volume 4, numbers 12-15, 1931. A long extract from that Bulletin concerning the soybean is given, focusing on the year 1930.

Soybean trials have also been conducted at the Station for the Reproduction and Improvement of Seeds and Plants (*Estaçao de Reproduçao e Melhoramento de Sementes e Plantas*) at Planalto de Malanje, since the beginning of 1935.

This publication also contains a long section on food uses of the soybean, including soy flour (*farinha de soja*), soy milk (*leite de soja*), tofu (*queijo de soja; queijo duro*), soy sauce (*Shoju, Soyu, Shoyu, tao yu*), and soy oil (*óleo de soja*). In Austria and America, and also in the Orient, soybean seeds are roasted, ground, and used as a substitute for coffee (*substituto de café*).

Note 1. This document contains the earliest date seen for soybeans in Angola, or the cultivation of soybeans in Angola (1928). One source of these soybeans was France.

Note 2. This is the earliest Portuguese-language document seen (Nov. 2012) that refers to soy coffee, which it calls *substituto de café* (a substitute for coffee).

Note 3. This is the earliest Portuguese-language document seen (Oct. 2003) that mentions soymilk, which it calls *leite de soja*. As of Oct. 2003 *leite de soja* is the modern Portuguese term for soymilk.

Note 4. This is the earliest Portuguese-language document seen (April 2013) that uses the word *queijo de soja* or the word *queijo duro* refer to tofu.

Note 5. This is the earliest Portuguese-language document seen (Sept. 2006) that mentions soy oil, which it calls *óleo de soja*.

Note 6. This is the earliest Portuguese-language document seen (April 2012) that uses the word *Shoju* or the word *Soyu* or the word *Shoyu* or the term *tao yu* to refer to soy sauce. Address: Angola.

1737. Balzli, Hans. 1938. Kleine Soja-Fibel. Geschichte, Anbau und Verwertung einer einzigartigen Nutzpflanze [A little soybean primer. History, culture, and utilization of a unique useful plant]. Zurich and Leipzig: Albert Mueller Verlag. 88 p. Index. 16 cm. [26 ref. Ger]
• ***Summary:*** Contents: Foreword. Economic questions. Botanical. Historical. Chemical composition of the soybean seed. Utilization in East Asia: Koji, miso, shoyu, soymilk, yuba, tofu (*Sojakäse*, like Quark), soy oil and press-cake. Utilization in Europe and America: As fertilizer and feed, as food (soy flour, roasted soybeans, soy coffee, green vegetable soybeans (*den jungen Sojakern... wie junge gruene Erbse*), soy sprouts), and industrial products (incl. "soybean steel," an invention of Henry Ford). Medicinal significance. Cultivation and yield. Epilogue. Bibliography. Author-subject index.

In the chapter on History (p. 24), the author notes: "The poet Johann Heinrich Voss (lived 1751-1826) once said: 'Young Calcuttans... with your sharp soy sauce from Jakarta (*Junge Kalkuten... mit scharfer batavischer Soja*).' Then he adds to that the observation: 'Soy sauce (*Soja*) is a powerful sauce, which is prepared from soybeans (*Sojafasele*), Dolichos Soja, which originate in the East Indies and are subject to fermentation, together with brine and spice.'"

Balzli continues on page 25: "The *Deutsche Woerterbuch der Naturgeschichte* (German Dictionary of Natural History) contained in the *Allgemeinen Polyglotten-Lexikon der Naturgeschichte* (General Multilingual Encyclopedia of Natural History) by Philipp Andreas Nemnich (1793) contains the entry: 'Sojablume. Dolichos soja.' (Soya flower. Dolichos soja)."

"In the world-famous work *Geist der Kochkunst* (Spirit of the Culinary Art), the art historian C.F. von Rumohr (lived 1785-1843) also mentions soya in the second edition (1832, p. 155) and conjectures that the Garum sauce of the Romans was an imitation of the East Indian sauce (Sulze) made from soybeans (Soja)."

Page 29 reports that "During the war of 1870 (*des siebziger Krieges*, in which Bismarck of Germany defeated Napoleon III of France) the German head artillery man, O. Wehrman, saw in the botanical garden of Montigny-les-Metz a plant that was unknown to him. It was the soybean. He took 4-5 seeds with him and planted them in early 1872 on his property / estate near Meissen (in Sachsen/Saxony, near Dresden in today's Germany). He harvested 80 to 100 seeds, with which he continued his investigations successfully for some years" [Note: Haberlandt (1878, p. 5) tells this same story].

On page 57 the author uses the term "Sojaspeisen" to

refer to soyfoods. Address: Switzerland.

1738. Bush, Lewis William; Kagami, Yoshiyuki. 1938. Japanalia: reference book to things Japanese. London: John Gifford, Ltd. xx + 193 p. Illust. Maps. Index. 20 cm.
• ***Summary:*** This little encyclopedia begins with an outline of Japanese history (p. xi-xx). Under Agriculture–rice (p. 3-4): Other cereals grown in Japan include barley, wheat, rye, oats, the soy-bean (*Daizu*) used chiefly for making [soy] sauce, and the small red bean (*Azuki*).

Under Festivals and holidays–February (48): "About the 3rd of 4th *Setsubun* (Bean-Throwing Rite) the last day of winter according to old lunar calendar. On this night a religious rite called *Tsuina*, or driving away the evil spirits and calling in fortune is held at many temples and shrines, and people scatter [soy] beans, one for each year of their age over the rooms of their houses shouting *'Fukuwa uchi, oni wa soto'* (Welcome good luck, out with demons!)."

September 1st. *Ni-hyaku-tô-ka*, 210th day from *Setsubun.* Rice harvesting begins.

Under Food–rice (p. 59) soy sauce is mentioned.

In the front of the book is a map of "Old Japan" and in the rear a map of "Modern Japan."

1739. Fairchild, David. 1938. The world was my garden: Travels of a plant explorer. New York, NY: Charles Scribner's Sons. xiv + 494 p. Assisted by Elizabeth and Alfred Kay. Illust. Index. 25 cm.
• ***Summary:*** This wonderful book, an autobiography of David Fairchild, also tells the story of the early days of the USDA and its Section of Foreign Seed and Plant Introduction, and of the pioneering work with plant introduction to the United States. It contains about 207 black-and-white photos, mostly taken by the author. One of these (p. 472A) shows Howard P. Dorsett (standing) and David Fairchild (seated), who "spent twenty happy years in close association, trying to increase the number and improve through introductions the quality of the fruits and vegetables of the United States."

Contents: 1. Background. 2. Kansas. 3. I enter government service. 4. I meet Barbour Lathrop and reach Naples [Italy]. 5. Breslau, Berlin, and Bonn [Germany]. 6. Java ho! 7. The Lathrop-Fairchild odyssey begins. 8. The Cannibal Isles (Incl. Hawaiian islands). 9. American interlude (in 1897 his father resigned as president of Kansas State College of Agriculture after the wave of Populism engulfed the college). 10. The West Indies and South America. 11. Cotton in Egypt. 12. Across the Java Sea. 13. From Finland to Dalmatia. 14. Land of the Pharaohs. 15. Malta, Tunis, Algiers, and Spain. 16. England, America, and west to the Orient once more. 17. The Persian Gulf and Bagdad [Baghdad. Note: Iraq was established in 1921 out of former Turkish territory]. 18. A glimpse of Saïgon [Saigon] and a long stay in Japan. 19. I visit Luther Burbank and circumnavigate Africa. 20. I meet Alexander Graham Bell. 21. A grand tour of these United States. 22. Mostly personal. 23. Washington, Madeira, and "In the Woods." 24. Baddeck, Nova Scotia. 25. Mostly aviation. 26. Lacquer and wild wheat. 27. Aaron Aaronsohn and Joseph Rock. 28. More plants, introduction gardens, and Mr. Bell. 29. Florida in 1912. 30. Monsters of the backyard. 31. The flowering cherry trees are planted in Washington. 32. Quarantine increases and war [World War I] begins. 33. Seeds from Afghanistan. 34. The plains of Canada. 35. The war and dried vegetables. 36. The Allison Armour expeditions. 37. Aloha.

In 1889 Beverly T. Galloway, head of USDA's Division of Plant Pathology, brought David Fairchild, age 19, to Washington, DC, to join five plant pathologists who were working in attic rooms of the old red brick department building. P. Howard Dorsett, Galloway's Wisconsin classmate, soon joined the group. Soon shy and scholarly Walter T. Swingle, Fairchild's Kansas State classmate and close friend since their student days in Germany, arrived with his growing library of agricultural references in 5 or 6 languages. Seeking an opportunity to learn about the flora of foreign countries, Fairchild accepted a Smithsonian fellowship to study entomology in Naples, Italy, and resigned from the USDA. Fairchild's pioneering work with plant introduction traces its roots back to late 1893. On board a ship, the young plant pathologist met Barbour Lathrop, a wealthy San Francisco gentleman who later took him on an extended tour of the Pacific and showed him fruits, grains, and ornamental plants that could be valuable in America. In 1895 Lathrop gave Fairchild the money to begin his study of the plant treasures of the tropics. Returning to the USA in 1897 (with Mr. Lathrop), after an absence of 4 years, David Fairchild knew exactly what he wanted to do with his life. He visited his parents in Manhattan, Kansas, and learned that a wave of "Populism" (resembling Bolshevism) had caused his father to resign as president of the college (p. 105). In August 1897 he reached Washington, DC–without a job. James Wilson, the Secretary of Agriculture, firmly believed that "what agriculture needed most was more knowledge." "The idea of plant introduction as a government activity was germinating in other minds besides Lathrop's and mine" (p. 106). Secretary Wilson's first act after taking office had been to send N.E. Hansen to Russia in search of cold-resistant cereal grains and fruits for America's great plains. Swingle has recently presented a paper on introducing subtropical plants to Florida.

Fairchild and Swingle conceived a plan to divert $20,000 dollars of the funds appropriated for the wasteful Congressional Seed Distribution Service (which was already spending several hundred thousand dollars a year) in order to finance a section for the specific purpose of introducing new, useful, and carefully selected crops into the United States. He enthusiastically presented the idea to Secretary Wilson, who approved the plan and asked him to organize

© Copyright Soyinfo Center 2013

the new Foreign Seed and Plant Introduction Section (p. 107). Housed on the fifth floor under the eaves of the old Department of Agriculture building and staffed by one teenage secretary, it became a reality when Congress passed the revised appropriation bill in July, 1898.

"In 1899, all that existed of the Department of Agriculture was housed in an ugly old building with a mansard roof topping its red-brick walls. It was situated in a park south of Pennsylvania Avenue, just beyond one of the most disreputable quarters of the city" (p. 18).

In 1916 David and Marian Fairchild purchased a piece of property located in Coconut Grove on Biscayne Bay, Florida; they named it The Kampong. On the property was a very old stone barn, a huge stone entrance gate, and many fine old tropical trees (p. 452-53, 456A, 472C). A Kampong is a Malay word (first used in English in 1844) meaning "a native hamlet or village in a Malay-speaking country."

Good photos show: (1-4) Members of the USDA Section of Plant Pathology taken in the early 1890s: Walter T. Swingle, Joseph James, David Fairchild, Theodore Holm, Beverly T. Galloway, Merton B. Waite, and P. Howard Dorsett (p. 26A-B). (5) Barbour Lathrop and David Fairchild in the cabin of a boat, off Sumatra, Christmas, 1895. (6) The uniform of a worker at Mr. Suzuki's nursery in Tokyo, Japan. The back is decorated with large Chinese characters. (5) Fermentation vats with conical bamboo covers in a soy sauce factory at Ichang (I-ch'ang or Yichang), a city in west Hupeh / Hubei province in Central China (p. 256F, probably taken by Frank N. Meyer in 1917). (6) page shows "A prolific Soy Bean plant ripe for harvest" and loaded with pods (p. 256F). (7) David Fairchild (seated) and Howard Dorsett (standing), each in two-piece suits, by at a desk, examining various fruits (p. 472A). Address: USDA.

1740. Fairchild, David. 1938. A long stay in Japan: Encounters with soy beans, tofu, soy sauce, and green soy beans in the pods (Document part). In: D. Fairchild. 1938. The World Was My Garden: Travels of a Plant Explorer. New York, NY: Charles Scribner's Sons. xiv + 494 p. See p. 258-59, 327-28. Assisted by Elizabeth and Alfred Kay.

• ***Summary:*** In 1902 at Kusafuka, Japan, Fairchild visited the home of Mr. Tsuboi. He had "considerable difficulty digesting the raw fish and seaweed, but became very fond of the egg dishes, the bean cheese or 'tofu,' and the universal soy sauce... But the dish which I afterward served in Washington [DC] was a delicate variety of the soy bean. The young, flat, rather hairy pods–much smaller than the lima bean–are boiled in salted water and served in the pod in a little lacquer bowls. I enjoyed opening the pods and taking out the delicate green beans, which have a pleasant, nutty flavor. Some Americans complain that it takes too long to empty the pods, and of course there is no reply to such an objection" (p. 258).

Japanese "cuisine is conspicuous for the absence of gravies, for which they substitute a sauce made from the soy bean by a complicated process of fermentation. Almost every meal includes boiled rice, often served with delicate, soy bean curds [tofu]... and pretty bits of colored soy bean candy" (p. 259).

Note: This is the earliest English-language document seen (April 2013) that uses the terms "soy bean curds" to refer to tofu.

"From Mr. Tsuboi's delightful home, we journeyed to a branch experiment station at Anjo where there were fields of the chief agricultural crops of the country. The soy beans particularly interested me, as in 1898 I had imported both beans and some soil from a Tokyo soy bean field. Waite [Merton B. Waite, of the USDA Section of Plant Pathology] and I discovered that root nodules could be induced on soy bean plants by growing them in Japanese soil, but, when they are grown on new soil, they will not develop the nodules unless the soil is inoculated. In Virginia, Maine, Michigan, and Kansas, a general interest in the soy bean and its possibilities had developed among the experiment station workers, although it was only used as cattle food.

"I hope that a book will be written describing the vast soy bean industry which has developed in America since those early beginnings, and the important part played by the varieties introduced by Frank Meyer and later by W.J. Morse and P.H. Dorsett. Morse has devoted the best years of his life to a careful and penetrating study of the soy bean, and he should receive the full measure of credit for his contributions to an industry now measured by millions of acres under culture in America each year" (p. 259).

After Fairchild was married, he and his wife, Marian, started a garden by their home in Maryland, about 10 miles outside of Washington, DC. A delightful Japanese peasant boy names Mori served as their gardener. In the garden: "We grew soy-beans as a vegetable and had to endure the criticism that they took too long to shell (p. 327-28).

A photos show: Mr. Tsuboi, an authority on bamboo, enjoying his dwarf plants in charming porcelain bowls and trays (p. 256D). A prolific soy bean plant with many hairy pods (p. 256F). Address: USDA.

1741. Fiene, F.; Blumenthal, Saul. 1938. Handbook of food manufacture: A handbook of practical food information... New York, NY: Chemical Publishing Co. vi + 603 p. See p. 89. Index. 24 cm.

• ***Summary:*** This book contains many commercial scale formulas / recipes. Chapter 2, "Description of raw materials," includes brief descriptions of "corn oil (maize oil), cottonseed oil, arachis oil (also called peanut, ground nut, and earth nut oil), sesame oil (gingli oil, teel oil), soy bean oil, and rape oil" (p. 70-71).

Chapter 3, "Milk and milk products," includes subsections titled "Infants' milk, synthetic" (a recipe for a dry mix in which "Soya bean powder, 125 g." is the main

© Copyright Soyinfo Center 2013

ingredient), “Soya bean vegetable milk” and “Soya bean curd” (p. 89). Concerning the milk: “Soya bean meal after the oil is extracted or whole soya bean meal may be utilized quite as well as the whole bean. The milk can be used successfully in numerous preparations, such as breads and cakes, in creaming vegetables, in milk chocolate, and in custards. After separating the liquid from the solid material, the residue is still very rich in nutritive substances and can be dried and used for cattle feed or made into flour for human food.”

Note: This is the earliest English-language document seen (May 2008) that uses the term “Soya bean vegetable milk” to refer to soymilk.

Concerning the curd: “This curd, after being drained or pressed, represents bean curd of [sic, or] tofu, which is extensively eaten and forms the basis of numerous fermented, smoked, and dried cheeses in China and Japan... In many cities of the United States having a large oriental population fresh bean curd may be found in Chinese and Japanese markets.”

Chapter 5, on canned foods, notes in the section titled “Dried beans” (p. 126) that “Soya” beans sold in cans.

Chapter 17, on “Bread” contains two formulas (p. 378-79) for “Soya bean flour bread,” the first containing 260 lb. wheat flour, 65 lb. “Soya flour,” etc., and the second containing 25 lb. “Whole soya flour,” 25 lb “Whole wheat flour,” etc. The straight dough method is used.

Chapter 23, titled “Health foods” begins (p. 445): “Natural and vitamin-laden health-building foods and drinks are essential for healthy muscles, nerves, glands, and for the growth and maintenance of a healthy, vigorous, and sound mind.” The best diets are those containing plenty of fresh foods and juices. “Nuts and soya beans are good substitutes for meats, fish, eggs, and sea foods.” A section in this chapter on the “Soy bean” begins (p. 447): “The soy bean is justly entitled to be called the king of the legumes. Not only because it is lowest in starch but also because, firstly, it is the most complete and best protein for both growing children and adults and, secondly, because of its unusually high mineral content being quite high in alkaline potassium, calcium, and magnesium... it is an alkaline food.”

Formulas for health foods include (p. 454-55): “Health dry cereals” (six formulas, two if which contain “Soy bean middlings” [medium size soy grits, probably made by cracking whole soybeans]). Coffee substitutes and health drinks (three formulas, the 3rd containing only 75 oz. roasted whole wheat and 25 oz. roasted soy bean middlings). The next health-food subsection, titled “Flour, meals, etc.” states (p. 455): “Soy bean flour, with or without a high percentage of fat, is used to make bread, biscuits, noodles, mayonnaise, candy, etc.”

Chapter 24, “Acid-forming and alkali-forming foods,” states: “When foods yielding an acid ash predominate in the diet, a condition of acidosis may result unless the resulting constituents are neutralized with alkaline ash foods.”

Next come two lists: (1) “Acid-forming foods, starting with those foods having the least amount of acid-forming ash.” The foods with the *most* acid-forming ash are: 1. White bread. 2. Cheese. 3. Meat, chicken. 4. Fish, haddock. 5. Meat, venison. 6. Meat, beef, lean. 7. Meat, veal.

(2) “Alkali-forming foods, starting with those foods having the least amount of alkali-forming ash.” The foods with the *most* alkali-forming ash are: 1. Soy bean. 2. Olives. 3. Beans, lima, dried. 4. Linseed oil meal. 5. Spinach. 6. Raisins. 7. Beans, dried. 8. Almonds. Address: 1. PhD, Food Research Chemist; 2. B.S., Consulting Food Chemist and Director of Shirley Labs., New York City.

1742. Hauser’s (Mrs.) Food Products Co. 1938. Mrs. Hauser’s recipe book: Soya formulas for better nutrition. Los Angeles, California. 32 p. 24 cm.

• ***Summary:*** The cover of this booklet is light blue on beige. Contents: The purpose of this book. The nutritional marvel–*Soy or Soya Beans “Soya max.”* Soya Bean high lights. Analysis of Soya Bean Flour. Soy Bean facts. Soya briefs. Hot and cold food stuffs. Eat relaxing alkaline foods. Breathe correctly. Five day efficiency diet. The water we drink. Practical “low carbohydrate” diets. Soups. Drinks. Salad dressing. Bread–biscuits–muffins. Meat substitutes. Recipes to be used when preparing Mrs. Hauser’s paste goods. Cakes. Cookies. A good breakfast for health. Desserts. Sandwiches. Miscellaneous (incl. Baked delight {with ground Soya Nuts}, Tofu or Soya Bean Cheese {made from soya milk curded with lemon juice or citric acid}). About vitamins: Vitamin A, B, C, D, E, G. Soya beans are a good source of vitamin G. Foods and their minerals. Soya beans are rich in copper, iron, phosphorus, and calcium. Food which are alkaline: Incl. soya beans.

The types of soyfoods called for in these recipes include: Mrs. Hauser’s “Soy” Sauce. “Soy” Brand Elbow Macaroni (p. 18-19). “Soy” Brand Hot Cake and Waffle Flour. “Soy” Brand Macaroni. “Soy” Brand Noodles. “Soy” Brand Spaghetti. Soya bean flour (also called “Soya flour”–by far the most common ingredient called for). Soya bean mush (p. 25). Soya beans (canned or cooked). Soya milk. Soya nuts (p. 15-16). Soya oil.

The booklet ends with these words (p. 32): “A liberal use of the Soya Bean and Soya Bean Products in the average diet is a very distinct aid in the digestion of meats, poultry, fish, and, in fact, all animal foods. (Recipes of this nature will be given in future publications.)”

Note 1. Many of the recipes call for “Mrs. Hauser’s Sea Salt.” Note 2. Mrs. Hauser is apparently not related to Gayelord Hauser, who is also in the health foods business in Los Angeles. Address: 4617 Melrose Ave., Los Angeles, California.

1743. Hayashi, Yasushige. 1938. Zuihitsu: Tôfu no kara

© Copyright Soyinfo Center 2013

[Essays: Okara, the "shell" of tofu]. Tokyo: Modaan Nihon-sha. 310 p. 19 cm. [Jap]
• ***Summary:*** Essays and thoughts on various subjects, including okara and tofu. The title is taken from the title of the first essay.

1744. Low, Henry. 1938. Cook at home in Chinese. New York, NY: Macmillan. [xiii] + 274 p. Foreword by Lin Yutang. 21 cm.
• ***Summary:*** The names of recipes and ingredients in this cookbook are in Cantonese. The Preface begins with an old Chinese saying:

"To be born in Soo Chow,
"To be clothed in Hangchow,
"To be fed in Kwanchow."

It suggests that the food of Kwanchow [Guangzhou, Kuang-chou, formerly Canton] is well known to be the best in China. "Only within the last few years has the American public realized the deliciousness of Chinese foods, prepared in the original Chinese style." It is not necessary to keep a large number of Chinese ingredients on hand in order to enjoy these recipes. "If gourmet powder (*mei jing* [*MSG*]), soy sauce (*see yeou* [*fermented black soybean sauce*]), black beans (*dow see* [*fermented black soybeans*]), brown bean sauce (*mien see*), and black sauce (*gee yeou*) are added to the ordinary household supply they will see one through quite well." "The author has had forty years of cooking experience and is considered an authority on real Chinese food." Note 1. Most recipes call for 1-2 teaspoons "gourmet powder" (*mei jing* [MSG]). Some recipes call for bean sprouts, but it is not clear from what kind of beans they are sprouted; probably mung beans.

A "Glossary of ingredients" (p. 5-18) lists the major ones called for in this book, with the Chinese name romanized in Cantonese and the Chinese characters for each. Soy-related ingredients are: Beans, black (*dow see*). Cheese, Chinese (*foo yu*) [fermented tofu]. Cheese, red (*nom yu*) [red fermented tofu]. Curds, bean (*dow foo*).

Note 2. This is the earliest English-language document seen (April 2013) that uses the term *dow foo* to refer to Chinese-style tofu.

Curds, bean, dried (*tiem jook* [*sweet yuba*]). Sauce, black [black bean sauce; see p. 162. It appears to be a commercial product] (*gee yeou*). Sauce, brown bean (*mien see*). Sauce, soy (*see yeou*).

Note 3. This is the earliest English-language document seen (Oct. 2012) that uses the term *tiem jook* to refer to what is probably sweet yuba–called *ama-yuba* in Japanese.

Note 4. This is the earliest English-language document seen (Oct. 2011) that uses the term "nom yu" to refer to fermented tofu.

Soy-related recipes: Bean curd soup (Dow foo tong, with "2 bean curds (dow foo)," p. 27). Bean curd and hairy melon soup (Jeat kuar tong, p. 27). Bean curd and mushroom soup (Dow foo tso koo tong, p. 28). Chinese okra and bean curd soup (Sing kuar dow foo tong, p. 29-30). Snails with black beans (Chow tien lor, p. 67). Sea bass with black beans (Dow see yu, with "4 teaspoons black beans (dow see). 1 piece green ginger, 2 cloves garlic." "Soak black beans until soft, then add ginger and garlic. Crush until fine." Later the crushed mixture is added to the other ingredients and all are brought to a boil, p. 74).

Note 5. This use of fermented black beans, with garlic and/or ginger, to make a sauce in the kitchen would, in later recipes, be given a standardized name: "black bean sauce." But in this book, Low uses the term "black bean sauce" (p. 162) to refer to a somewhat different commercial sauce.

Sea bass and vegetables with black beans (Sy wu yu, p. 75). Fried fish with bean curds (Dow foo yu, p. 76). Steamed fish with bean curds (Dow foo jing yu, p. 76-77). Smelts with brown bean sauce (Jui suut yu, p. 84). Sturgeon with bean curds (Mun leung dun, p. 84-85). Crab meat with bean curds [and soy sauce] (Dow foo hai, p. 90). Shrimps with bean curds (Dow foo gee ha, p. 99).

Boiled chicken with soy sauce (See yeou gai, p. 107-08). Duck with soy sauce (Tung tze op, p. 141). Squab with soy sauce (Tung tse gop, p. 156-57). Beef with bean curds (Dow foo ngow yuk, with "4 bean curds {dow foo}" and "½ teaspoon black bean sauce {gee yeou}," p. 162). Roast pork with bean curds and oyster sauce (Tar sheou ho yow dow foo, p. 172). Pork with bean curds (Dow foo chow gee yuk, p. 172). Pork with lotus root and red cheese (Leen gnow nom yu gee yuk, p. 179-180). Steamed spareribs with black beans (Chow pii yuk, p. 187-88). Scrambled eggs with bean curds (Dow foo chow don, p. 199-200). Spinach with Chinese cheese (Chow bor choy foo yu, p. 209).

The chapter titled "Cheese" (p. 221-23) has only one entry and no recipes: "Chinese cheese (foo yu). The Chinese do not serve their cheese as a separate course at the end of the meal as Americans do, but see it as a main course. It is eaten with hot rice. This cheese (foo yu), strictly speaking, is not a cheese at all because it contains no milk. It is the bean curd (dow foo) aged in Chinese wine. The flavor is marked, and a taste for it is easily acquired by cheese-lovers."

The author has an entire chapter titled "Chow mein" (p. 243-52). Plain chow mein is almost the same as Chicken chow mein, but with ½ cup less chicken. Fried noodles in called "Jow mein." Chow mein Cantonese is one of the most popular luncheon dishes among the Chinese. Recipes are given for Beef chow mein, Chicken chow mein, Lobster chow mein, Shrimp chow mein.

Another entire chapter (p. 253-62) is devoted to "Chop suey, including Plain, Chicago, Mixed vegetable, Mushroom, Beef, Pineapple, etc."; none of these recipes call for rice or noodles.

1745. Miege, M.E. 1938. Les cultures complémentaires au Maroc [Complementary crops in Morocco]. French

© Copyright Soyinfo Center 2013

Morocco: Service de l'Agriculture et de la Colonisation. 339 p. Preface by J. Lefevre. Illust. Index. 22 cm. [10 ref. Fre]
• ***Summary:*** Miège considered the extension of any crop as subordinate to the utilization of varieties that withstood drought and were high yielding. Within irrigated zones, the soybean furnished yields of 14,000 to 16,000 kg/ha of excellent green forage. But the seed yield was very small, usually not exceeding 1,000 kg/ha when unirrigated. That would not make the crop financially viable.

On the other hand, the bean can be used to make a great variety of preparations: transformed into flour, into milk, into cheese [tofu], or consumed green, dried, or grilled [roasted], it enters into the daily feeding of several millions of human beings, for whom it represents a very rich food, as it contains, on average, 38 to 40% proteins, 16 to 22% lipids, and 14 to 15% carbohydrates.

In Morocco, this legume has so far, only been used on a small scale as forage or green manure; however, they are beginning to use the beans, boiled or ground into flour, to raise calves and baby pigs, as well as to make oil (in Casablanca).

Note: "Complementary" in this sense means alternative, secondary or additional to the main or primary crops. It could also mean a source of protein and/or oil to make up for a shortage of traditional protein and/or oil sources.

Also discusses: Peanuts (p. 20-25; 5 refs). Sesame (p. 52-55; 1 ref). Address: Director, Center for Agronomic Research, French Morocco (Directeur du Centre de Recherches Agronomiques du Maroc).

1746. Montagné, Prosper. 1938. Larousse gastronomique [Larousse gastronomique]. Paris: Librairie Larousse. 1087 p. See p. 989-90. [Fre]
• ***Summary:*** The following are defined under *"Soja ou Soya":* Introduction. Tofu (*fromage de soja*), soymilk, (*lait de soja*), soy sauce (*sauce ou extrait de soja*), soy meat (*viande de soja; viande végétale*). The soy meat, which resembles smoked ham, is said to be very complicated to make, requiring industrial equipment. An illustration (p. 990) shows a soybean plant, including enlarged insets of the flowers and pods.

Note: This is the earliest French-language document seen (Nov. 2003) that uses the term *viande de soja* or *viande végétale* to refer to meat alternatives. Address: France.

1747. Platt, B.S.; Gin, S.Y. 1938. Chinese methods of infant feeding and nursing. *Archives of Disease in Childhood* 13:343-54. [14 ref]
• ***Summary:*** Page 345 mentions a number of foods that are believed by Chinese to promote lactation in nursing mothers. At the end of this paragraph it is stated: "Another preparation that is sometimes used is the 'milk' prepared from the soya bean with powdered walnut added."

Page 347 shows a graph of the foods fed to 390 infants after introduction of solid foods while nursing continued. Rice was by far the most widely fed, followed by Chinese red dates (Chinese jujubes). Soy bean milk was one of the least frequently fed foods. The weaning diet was studied in 305 Chinese infants. Only one case was seen where soya bean milk was fed. Guy (1936), a woman pediatrician in Peking, found that "soya bean 'milk' is never used in infant feeding; a hot weak solution sold in the streets of Peiping is taken by old people as a beverage. At a recent conference of nutrition experts in the Far East, it was recorded (Bandoeng Conference, 1937) that soya bean milk had little in common with mammalian milk beyond a white colour. A soft bean curd may, however, be used with advantage (Platt, 1936) in a mixture for weaning purposes." Address: Dep. of Medicine, Henry Lester Inst. of Medical Research, Shanghai, China.

1748. Sia, Mary Li (Mrs. Richard H.P. Sia). 1938. Chinese chopsticks: A manual of Chinese cookery and guide to Peking restaurants. 2nd ed. Peking, China: Peking International Women's Club. xvii + 144 + 6 p. Frontispiece. Illust. Index. 19 cm. [Eng; chi]
• ***Summary:*** Tofu recipes: Bean curd and shrimp egg (p. 1). Stewed pork with red bean curd and pork (with "1 large piece of red bean curd" [red fermented tofu], p. 28). Stewed spare ribs (with "2 T. [tablespoons] preserved red bean curd," p. 30). Bean curd and prawns (p. 45). Bean curd, eggs and chicken blood (p. 77). Oxtail Soup (with black beans) (p. 81).

The "List of foodstuffs" (p. 130-36) mentions: Bean curd, Bean Curd dry, and Bean curd preserved.

A recipe (p. 52) for "Steamed fish with black salted soy beans" (Cc = Chinese characters given) (tou ch'ih) calls for "1 T. [tablespoon] black salted soy beans, 1 small piece ginger, chopped, 1 piece garlic, chopped."

Note: This 2nd edition has a lovely cover. The names of dishes, restaurants, and their addresses are in English and Chinese.

1749. Silva Cortes, Cesar. comp. 1938. El poroto soya [The soybean]. Santiago, Chile: Ediciones Ercilla. 87 p. Illust. Index. 19 cm (Colleccion Manuales Ercilla). [Spa]
• ***Summary:*** Contents: Introduction: General outline off its importance and use, composition of various legumes, general characteristics of the meal (*harina*), oil, lecithin, cake and other derivatives of the soybean (*poroto soya*). Part I: Cultivation of the soybean. 1. Botanical characteristics of the plant: Leaf, flowers, pods, seeds, roots and nodules. 2. Varieties and desired characteristics: Various varieties, those most suited to Chile, characteristics of other varieties. 3. Cultivation of soybeans: Climate, the soil and its preparation, fertilizers, inoculation of the seeds, planting, cultivation, harvest, diseases, enemies, and their cures.

Part II: Utilization of the soybean. 1. Generalities: Applications of the plant and its seeds. Summary of the uses.

© Copyright Soyinfo Center 2013

2. Soy oil and its derivatives: Extraction of the oil, edible oil, industrial uses of the oil, soya phosphatides and lecithin (*Fosfáticos y lecitina de soya*), soybean cake, commercial enzymes. 3. Soybeans in human nutrition: Green vegetable soybeans (*porotos verdes*) and whole dry soybeans, soy sprouts (*vástagos de soya*), soy flour (*harina de soya*), nutritive and caloric value, types of flour, bread with soy flour, doughs (*pastas*) and biscuits, sausages with soy flour, soymilk (*leche vegetal de soya*), soybean curd (*cuajada de soya* [tofu]). 4. Soya for livestock: Soybean straw, soybean pasture (*pasto*), soya for silage, soybean hay, soybean hay for animals to be slaughtered, soy meal (*harina de soya*) for various animals.

A table (p. 19-20) lists soybean varieties suited for different uses: For hay: Barchet, Chiquita, Goshen Prolific, Laredo, Old Dominion, Otootan, Virginia. For green forage: Dixie, Easycook, Hahto, Hollybrook, Mammoth Brown, Mammoth Yellow, Southern Prolific, Tarheel Black, Tokio. For silage: Biloxi, Mammoth Brown, Mammoth Yellow, Tarheel Black, Tokio. For beans (oil, cakes, flour, etc.): Biloxi, Chiquita, Dixie, Hollybrook, Mammoth Yellow, Southern Prolific, Tokio, Ito San, Dunfield, Illini, Manchu.

Varieties most suited to Chile (p. 20): About 27 varieties have been tested at various locations in Chile. Those which gave the best results were Ito San, Dunfield, Illini, and Manchu. Ito San gave good results from Aconcagua to Bío-Bío. It performed especially well at Maule, Ñuble, and Bío-Bío. Dunfield and Illini gave very good results in Curicó and Talca. Manchu, which matures a little later than Ito San and Dunfield, is very appropriate for the Central Zone.

Note 1. This is the earliest document seen (July 1998; one of two documents) that uses the word *"poroto"* or *"porotos"* in connection with soybeans.

Note 2. This is the earliest Spanish-language document seen (June 2009) that uses the term *porotos verdes* to refer to green vegetable soybeans.

Note 3. This is the earliest Spanish-language document seen that uses the word *"lecitina"* to refer to lecithin, or the term *Fosfáticos y lecitina de soya* to refer to phosphatides and soy lecithin.

1750. Simonds, William Adams. 1938. Henry Ford and Greenfield Village. New York, NY: Frederick A. Stokes Co. xiv + 268 p. Illust. No index. 20 cm.

• ***Summary:*** In chapter 9, titled "Industry and Agriculture," Henry Ford's work with soybeans is discussed on pages 230-35. Ford developed plastics using soybeans. "The cost of one pound of soybean molding material has as yet proved higher than that of a pound of steel, but the polishing and finishing of the steel makes the cost of its finished part somewhat greater than that of the finished plastic. When a molded plastic part replaces one of steel, weight is decreased with consequent reduction in gasoline consumption.

"Two years before experiments with the soybean in its relation to industry were commenced, the bean was the subject of another definite line of research in the food and diet laboratory maintained by the Company in the rear of the Engineering Laboratory directed by Mr. Ford's old seatmate, Dr. Edsel Ruddiman... Many will doubtless recall the howl of laughter that went up when Mr. Ford informed a reporter one day of his belief that synthetic milk could be produced. Nevertheless, milk has been produced from the soybean in the Ford laboratories and elsewhere. It is even better than cows' milk for certain infants' cases, where skin afflictions make use of the latter undesirable...

"When Dr. Victor Heiser, author of 'An American Doctor's Odyssey,' visited Greenfield Village he told me of the wide use of soybean milk among the Filipinos, and how the addition of a little oil of banana had made it much more palatable...

"With this milk soybean cheese, similar to cottage cheese except in flavor, may be made. While somewhat insipid in taste, the cheese proves very useful when mixed in salads, sandwich spreads, croquettes with a food having a strong flavor. The whole bean has many food uses, among them soups, baked beans, salads, and canning. As the flavor of the soya is slightly stronger than that of the ordinary bean, onions and tomatoes are often used to cover it. The process of canning the green soybean was first demonstrated under Dr. Ruddiman's direction. Production of soybeans in 1935 totaled 590 cans; and in 1936 it reached 1,000."

Defatted soybean flour "finds a ready market among visitors at the Village. It is used in many common baked goods such as bread, rolls, muffins, biscuits, cakes, cookies, and so on... Another product that has proved popular with visitors is the salted soya, put up in small packages like nuts. In preparing these, the bean is soaked in water for a time, then roasted in hot soya oil. The salt is added to taste." Lecithin can be used to make a "chocolate sauce and coating for soybean candies, with which the Ford men have done much experimenting.

"As a practical demonstration of the possibilities of the soybean in a variety of foods, a dinner was served one August evening in 1934 at the Ford exhibit in the Chicago Century of Progress Fair. Every dish on the menu was comprised, in part at least, of the legume. Following was the list [of 15 dishes served].

"Tomato juice seasoned with soybean sauce. Salted soybeans. Celery stuffed with soybean cheese. Purée of soybean. Soybean crackers. Soybean croquettes with tomato sauce. Buttered green soybeans. Pineapple ring with soybean cheese [tofu] and soybean dressing. Soybean bread with soybean butter. Apple pie (soybean crust). Cocoa with soybean milk. Soybean coffee. Assorted soybean cookies. Soybean cakes. Assorted soybean candy."

Note 1. This is the earliest English-language document seen (Dec. 2012) that uses the term "soybean butter." It is not clear whether this was a soynut butter (made from roasted

© Copyright Soyinfo Center 2013

soybeans and resembling peanut butter) or whether it was made with hydrogenated soybean oil and resembled dairy butter.

Note 2. The listing and spelling of the items in this menu differs slightly from the original menu of 17 Aug. 1934.

Note 3. No mention is made of soy ice cream being served at this meal in Aug. 1934. Yet shortly thereafter, and definitely by Aug. 1935 soy ice cream for dessert was served at similar meals in the pine-paneled dining room in the Ford Engineering Laboratory (Strother 1961).

Chapter 10, titled "Little Factories," discusses Ford's rural industries, including the mills at Saline, Tecumseh, Milan, and Ypsilanti. At Tecumseh, in the heart of soybean country, the Hayden Mills, after its restoration, "was used for cleaning and sacking soybeans for seed, preparing them for distribution to neighboring farmers in the spring." At "the village of Saline where the Chicago pike crosses the Saline River a few miles north of the soybean farms..." the old Shuyler mill and its dam were restored. "The fall of 1936 also found workmen busy at the town of Milan east of the soybean area..."

An excellent panoramic view of and guide to Greenfield Village are shown inside the front cover and on the facing page. #11 is a "soybean extraction plant." Address: Dearborn, Michigan.

1751. Edison Institute. 1938? Recipes for soy bean foods. Dearborn, Michigan: Edison Institute. 19 p. Undated.
• ***Summary:*** This undated booklet begins with 1½ pages of nutritional information about soy beans and recipes containing them. "Fresh green soy beans contain about 10% of protein compared with 7% in green lima beans or green peas. The varieties Willomi and Rokusun "are preferred because they do not have such a strong taste." Many of the 58 recipes are based on soy flour, e.g. soy-bran bread, steamed soy bean bread, cinnamon buns, muffins, waffles, lady fingers, apple sauce cake, soy bean "paste," doughnuts, etc. A number of others use cooked whole soybeans (soy loaf, chile con carne [chili], baked beans, salad) or ground soy beans (soup). More unique recipes include: Soy loaf (with "soy cheese" [tofu], p. 9). Cheese croquettes (with soy bean cheese and soy milk, p. 9). Green soy beans (p. 10). Scalloped green soy beans. Omelette (with tofu, p. 10). Salad (with tofu, p. 11). Salad soy bean sprouts (p. 11). Sandwich spread (with "soy nut butter," p. 12). Honey soy bean icebox cookies (with soy bean butter or Crisco [shortening], p. 14). Brittle cookies (with soy bean flour and roasted soy beans, p. 14). Coconut balls (with roasted soy beans, p. 15). Soy bean custard (with soy bean milk, p. 18). Candy-milk chocolate clusters (with freshly roasted soy beans, p. 18). Candy-roast soy brittle (with fresh roasted soy beans, p. 18).

The last page (p. 19) gives basic recipes for: Cooked soy beans. Green soy beans. Soy bean milk. Soy bean cheese [tofu], coagulated with dilute acetic acid or vinegar; salt to taste. Roasted soy beans. Soy bean nut butter. Soy bean butter.

"Roasted soy beans: Soak beans in water 3 or 5 hours. Drain off water and roast beans for 9 to 11 minutes in deep, purified soy oil or Wesson oil heated to about 325ºF. Drain and sprinkle with powdered salt."

"Soy bean nut butter: Grind about 2½ cups of roasted soy beans and mix with about 2 tbsp. of purified soy oil or salad oil.

Soy bean butter: Mix hydrogenated soy oil with salt, coloring matter and diacetyl to color and taste.

Note 1. Robert Boyer stated in an interview in the 1980s that this booklet was published in the mid-1930s, and the recipes were developed mostly by Dr. Edsel Ruddiman. However mention of the varieties Willomi and Rokusun makes it more likely that this booklet was published after mid-1938.

Note 2. This is the earliest English-language document seen (Nov. 2012) that uses the term "soy nut butter" or the term "soy bean nut butter" to refer to soynut butter. Address: Dearborn, Michigan.

1756. Pynaert, L. 1939. Le Soja au Congo Belge [The soybean in the Belgian Congo]. *Revue Internationale des Produits Coloniaux et du Materiel Colonial* 14(158):61-65. Feb. Summary in Revue de Botanique Appliquee (1939) 19:233. [3 ref. Fre]

• ***Summary:*** Contents: Preface. Soybean yields obtained in the Belgian Congo. The utilization of soya in Europe: Dry seeds (whole dry soybeans), soy sauce, soymilk, yuba, tofu, soymilk casein, soy lecithin, soy flour and chocolate, soy oil. Net cost. In short, Pynaert describes all the basic types of soyfoods and encourages their introduction to the Congo.

Yields: "In 1915 the agronomist Mestdagh made it known that at the end of an experiment well conducted at Lusambo in the district of Sankuru [Belgian Congo], he had harvested 1,472 kg/ha of a light yellow variety of soybean, and 1,786 kg/ha of a black variety.

"The agronomist J.B.H. Lejeune, who worked in the Congo for nearly 20 years, recently furnished information of great interest on the subject of the soybean cultivation which he had undertaken in the colony as well as in Rwanda-Urundi.

"In 1922 he cultivated a yellow soybean which he had obtained from Vilmorin-Andrieux & Co. in Paris under the name of Mammoth Yellow. He obtained yields ranging from 500 to 1,500 kg/ha.

"In 1926 the same agronomist introduced the black soybean O-Too-Ton [Otootan] cultivated in Georgia. This variety adapted itself remarkably well to the conditions of the Eala milieu and gave soybean yields of 1,000 to 2,000 kg/ha.

"In 1927 trials were recorded at four stations in Rwanda-Burundi, a country of higher altitude with conditions that are very different from those forested central Africa.

"At Lusunyu, which enjoys a temperate climate, the yields of a variety of O-Too-Ton varied from 90-540 kg/ha during a 4 month cycle. At Bugarama, in a much warmer climate, the average yield of seeds was 556 kg/ha. At Kisozi the variety O-Too-Ton gave yields of 100 to 400 kg/ha. A variety named Biloxi furnished a yield of more than 500 kg/ha. At Rubona, still in Rwanda-Urundi, the following seed yields were obtained from 1931 to 1935. Biloxi: 300 to 652 kg/ha. O-Too-Ton: 150 to 1,300 kg/ha. Eala Yellow (Jaune d'Eala): 214 to 261 kg/ha." Also discusses yields at: Kisozi from seeds introduced by Mr. Lejeune; at the Agronomic Station at Yangambi, near Stanleyville, from 1937; at Nioka in Upper Ituri (*Haut-Ituri;* Ituri is a district in the oriental province of the Belgian Congo) where yields are 450-500 kg/ha in poor soil but 700-800 kg/ha in good soil, and even up to 1,000 kg/ha; it is concluded that indigenous crops will probably not give yields of greater than 400-500 kg/ha.

This document contains the earliest date seen for soybeans in Ruanda-Urundi, or the cultivation of soybeans in Ruanda-Urundi (1927) (one of two documents). Address: Directeur du Jardin Colonial de Laeken (Belgium).

1757. Nakae, Tadashi. 1939. Aminosan chomiryo seizo ni kansuru kenkyu. Dai 14 ho. Tanpakushitsu genryo toshite no koridofu kezurikuzu [Research on making amino acid seasoning. XIV. The crumbs from trimming dried frozen tofu as a protein source]. *Jozogaku Zasshi* (*J. of Brewing, Osaka*) 17(3):182-84. March 15. [Jap]*

Address: Japan.

1758. *Ford News* (*Dearborn, Michigan*). 1939. Soy bean recipes. 19(3):69. March.

• ***Summary:*** Henry Ford tried unceasingly during the decade after 1934 to develop palatable foods and popularize recipes based on soybeans. Recipes shown here, include nut bread and waffles (each made with soy bean flour), soy loaf and croquettes (each made with "soy cheese" [tofu]), and salad (made with boiled soy beans).

1759. Reitlinger, Gerald. 1939. South of the clouds: A winter ride through Yün-nan. London: Faber and Faber. 327 p. March. Illust. Index. 23 cm.

• ***Summary:*** Yunnan is a province in southwestern China. The northwest tip borders on Tibet, while the long western side borders on Burma. The capital is Kunming.

A breakfast of several courses "included a dish of *toh fu* [tofu], a curd or junket made from cattle-beans [sic, soybeans]. Bean-curd is eaten all over southern China and may be tasted in Cantonese restaurants in London. The Yün-nan kind has a sly [slight?] taste of burnt milk,..." (p. 64).

At the start of Chapter 6, they are apparently in western Yunnan (p. 114-15). "We were into their country, extending north up the Mekong and Yangtze to independent Tibet.

"The place was full of bright copper bowls of a dark-green viscous substance like engine lubricant. but it was made from the universal substance, bean-curd, which we had been trying to like for some days. We watched the people in the shop cut it up in this slices like noodles and fry them without any oil or fat. One of the chief joys of travel is to eat everything. I found it had a burnt taste like a bad caramel custard. In the higher parts of Yün-nan bean-curd does all the work of barley or millet flour, including cakes, macaroni, porridge, bread, and soup. This is great ingenuity, but it is very nasty. There is one variant of bean curd which I shall never try. It is cut into white squares and grows a downy beard of mildew all over it. At first sight it looks like Turkish delight." Note: It is a type of fermented tofu.

"The landlord had set out a table in the courtyard at which Ho was entertained as an honored guest on butter-tea and bean curd" (p. 184).

Suahn is a fat, fluted bulb, certainly of the tulip family,

© Copyright Soyinfo Center 2013

pickled in sweet vinegar and tasting of garlic... *Suahn* was eaten with *lu fu'an*, another by-product of bean-curd; the curd was set into a kind of butter and was mashed with hot red peppers and other herbs; the taste of the two together is so extraordinary that one can imagine oneself dining out on one of the rings of Saturn" (p. 197-98).

At the rear of the book is a fold-out map that shows the route traveled.

1760. Coulter, Francis C. 1939. The soy bean: Important plant. *Bean-Bag* (*The*) (*Lansing, Michigan*) 21(11-12):9-11. April/May.
• ***Summary:*** From Seed World: An overview. Contents: Introduction (Engelbert Kaempfer). Introduction to America (by Admiral Perry). The soybean at home (in China; tofu, oil, meal, Ford Motor Co., industrial uses). The garden soy ("the garden soybean" is edible green soybeans).

1761. Chang, Chang-Ying. 1939. Mineral contents of Chinese foods. *Chinese J. of Physiology* 14(2):133-45. June. [12 ref. Eng; chi]
• ***Summary:*** "The mineral contents of a number of Chinese foods have been determined for the use of the metabolic ward in Peiping Union Medical College Hospital in connection with certain studies on acid-base balance." It has been found that the mineral content of food varies greatly with the season and locality. Nevertheless, the accompanying table is given with the hope that it may serve as a guide in such studies.

A table (p. 135) gives mineral values (in mg per 100 gm) for the following foods: Soy bean, yellow (huangdou). Soy bean sprout. Soy bean curd (southern style; nan-doufu). Soy bean curd (northern style; hoku-doufu). Soy bean, black.

Values are given for the following minerals: Calcium, magnesium, potassium, sodium, phosphorus, chlorine, sulfur, and iron. Address: Dep. of Biochemistry, Peiping Union Medical College, Peiping.

1762. *American Cookery* (*Formerly The Boston Cooking School Magazine*). 1939. Peking diets. 44(1):55. June/July. *
• ***Summary:*** Diets in Peking may be classified into two main types, according to an article by Guy and Yeh in the *Chinese Medical Journal*. "The diet consumed by the poorer classes consists chiefly of maize and millet, soya bean and vegetables. The diet of those living at a higher economic level includes the milled cereals, chiefly wheat and rice, with pork, soya bean curd and vegetables."

1763. Borth, Christy L. 1939. Pioneers of plenty: The story of chemurgy. Indianapolis, Indiana and New York: Bobbs-Merrill. 303 p. Portraits. 22 cm.
• ***Summary:*** Soy is discussed at length (usually in connection with Henry Ford Sr. and Edsel A. Ruddiman) on p. 22, 40, 42, 202-06, 208-11. Henry Ford is also discussed on p. 21-22, 30, 69, 76-77, 118, 144, 246.

"A few years ago, Henry Ford was ridiculed when he said the time would come when most of an automobile would be grown on the farm. Since then, Ford chemists have perfected processes whereby soy beans are converted into plastic substitutes for automobile parts formerly made of metal. Ford Chemist Russell Hudson McCarroll estimated that the use of plastics for interior window moldings alone would increase that company's use of farm-grown metal-substitutes twenty-five million pounds annually." (p. 21-22).

"Dearborn was selected as the [first chemurgic] conference site because it was the home of Henry Ford, an industrialist who had demonstrated his understanding of the meaning of the farm problem, and because there were, in near-by Edison Institute, working exhibits of the processing equipment which Ford researchers had developed to convert soy beans into some thirty industrial products." (p. 40).

At the chemurgic conference Russell Hudson McCarroll, a Ford chemist, described how soy beans are converted into raw materials for industrial use. "From the bean oil Ford chemists make a lacquer which is claimed to be superior to the pyroxylin paints usually used in coating metals. From the residue of meal after extraction of oil, Ford chemists make plastic parts for automobiles, these farm-derived parts being substitutes either for metals formerly mined or for rubber formerly imported." (p. 42).

Chapter 10, titled "Ford links farm and factory" (p. 200-12) is about Henry Ford, chemurgy, and soy beans. "Do you recall the gibes that greeted his [Henry Ford's] prediction that man would one day find a substitute for the cow, as revolutionary as the automobile which displaced the horse? It was very funny when the cartoonists and columnists leaped upon it gleefully–but it may not be so fantastic as it once seemed.

"Let's investigate it.

"Come now to the foot of Elm Street, in Dearborn, to a rejuvenated farmhouse whose homelike exterior masks a modern laboratory."

"Follow the truant chemurgists inside and meet Ford's boyhood companion, Dr. Edsel a. Ruddiman, the food-chemist whose services were enlisted by his old deskmate. In the back room, once a farm kitchen, is an electric refrigerator, filled with food made from soy beans. Milk, butter and cheese–the latter, fresh, dried, smoked and fermented–are there, soy-bean products all. In the pantry are breakfast foods, macaroni, salad oils, crackers, diabetic foods, infant foods, flour, bouillon cubes, soups, confections, coffee substitutes, sauces, gravies and beef substitutes–all produced from the soy" (p. 202-03).

A wonder bean indeed!" "During the World War [I], when Germany faced famine, German chemists extracted from the soy the glutamic acid which became the basis of the 'beef-tea' that kept patients alive in hospitals." The soy bean "gets into Heinz and Lea & Perrins' sauces and into

© Copyright Soyinfo Center 2013

oleomargarine" (p. 203).

A full-page photo (between pages 206 and 207) shows Irénée du Pont and Henry Ford talking and enjoying a meal together at a table.

1764. Yang, E.F.; Dju, M.Y. 1939. Total and phytic acid phosphorus in foods. *Chinese J. of Physiology* 14(4):473-78. Dec. [8 ref. Eng; chi]
• ***Summary:*** Table 3 (p. 475) shows the phytin phosphorus in legumes, pulses, and legume products. The are columns for the legume product name, moisture, total phosphorus, phytin phosphorus, and phytin phosphorus as a percentage of total phosphorus. Soy products include (with total phosphorus in mg/100 gm and phytin phosphorus in mg/100 gm): Soybean (484, 213), fresh soybean [green vegetable soybean] (835, 298), soybean curd [tofu] (623, 314), soybean curd cake [pressed tofu] (604, 431), fried soybean curd (355, 309), soybean curd sheet [pressed tofu sheets] (618, 318), soybean milk clot [yuba] (750, 342).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soybean milk clot" to refer to yuba. Address: Div. of Physiological Sciences, Henry Lester Inst. of Medical Research, Shanghai, China.

1765. Yang, E.F.; Dju, M.Y. 1939. The total and available iron in vegetable foods. *Chinese J. of Physiology* 14(4):479-87. Dec. [13 ref. Eng; chi]
• ***Summary:*** Fifty-six kinds of local foodstuffs are analyzed for their total and available iron contents. The name in English and in Chinese characters is given for each. Soybeans: Moisture 15.7%, total iron 8.5 mg/100 gm, ionizable iron 7.5 mg/100 gm. Percent of total iron ionizable: 88%.

Soybean curd [tofu]: Moisture 85.5%, total iron 6.9 mg/100 gm, ionizable iron 4.5 mg/100 gm. Percent of total iron ionizable: 65%.

Soybean curd cake [doufu-gan; firm tofu]: Moisture 65.5%, total iron 4.3 mg/100 gm, ionizable iron 2.85 mg/100 gm. Percent of total iron ionizable: 66%.

Soybean curd, fried [yu-doufu; fried tofu]: Moisture 55.5%, total iron 6.3 mg/100 gm, ionizable iron 4.6 mg/100 gm. Percent of total iron ionizable: 73%.

Soybean curd sheet [pai-yeh; pressed tofu sheets]: Moisture 45.2%, total iron 6.8 mg/100 gm, ionizable iron 3.6 mg/100 gm. Percent of total iron ionizable: 53%.

Soybean milk clot [yuba]: Moisture 4.9%, total iron 6.3 mg/100 gm, ionizable iron 2.5 mg/100 gm. Percent of total iron ionizable: 40%.

Soybean, sprouted [soybean sprouts]: Moisture 83.3%, total iron 8.3 mg/100 gm, ionizable iron 3.7 mg/100 gm. Percent of total iron ionizable: 45%.

Also discusses (p. 483): Cowpea pod, green. Flat bean, pod. Horse bean, dried. Horse bean, sprouted. Mung bean sprout. Mung bean starch sheet. Mung bean starch strip. Peanut. Address: Div. of Physiological Sciences, Henry Lester Inst. of Medical Research, Shanghai.

1766. **Product Name:** Cheze-O-Soy (Seasoned Tofu. Sometimes Advertised as Soy Cheese, or spelled Chez-O-Soy or Ches-O-Zoy after 1953).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1939.
Ingredients: Coagulated soybean proteins, seasonings.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 26.7%, fat 10.8%, carbohydrates 0.12%, ash 0.71%, calories 204/100 gm.
New Product–Documentation: Ad in House of Better Living. 1940. May. p. 4. "Soy Cheese." Madison Health Messenger. V. 49-2. p. 5.

William C. Sandborn. 1953. The History of Madison College (PhD thesis, George Peabody College for Teachers, Tennessee). p. 124 states that Ches-O-Zoy is made at the Madison food factory.

Soybean Blue Book. 1954. p. 106. Spelled Chez-O-Soy from 1954 on. Address: Madison College, Tennessee. Also listed in 1965, but business name is now Nutrition International Corp, Box 415, Madison, TN 37115. Last listing was 1972. Letter from Sam Yoshimura. 1981. Feb. 20. Contained 26.7% protein.

Note: This is the earliest known seasoned or flavored tofu product sold in the Western world.

1767. **Product Name:** Tofu, and Fried Tofu.
Manufacturer's Name: Paris Tofu.
Manufacturer's Address: 237 Powell St., Vancouver, BC, Canada.
Date of Introduction: 1939.
New Product–Documentation: Talk with Peter Joe, owner of Sunrise Market Ltd., Vancouver. 1993. March 18. He has just talked with Joe Kwok Dong, whose father, Joe Gon Fung, started this tofu company at 237 Powell St. in Vancouver in 1939. Joe Kwok Dong, who is now in his late '70s and lives in Vancouver, went to college in the USA and speaks fairly good English (Phone: 604-327-8037). Peter Joe now runs this same company, which is presently named Sunrise Market Ltd. Concerning the company name: Joe Gong Fung went to Montreal, Quebec, and was taken by the fact that many French-speaking people he met there liked tofu. So he decided to give the company a French name. At that time there were very few Chinese in Vancouver, or in Canada. So he wanted to give the company a non-Chinese name. The company made both firm Chinese-style tofu and deep-fried tofu. Initially, the company got its soybeans from the Seattle area; its calcium sulfate coagulant was imported from China. When World War II started, the company

© Copyright Soyinfo Center 2013

was no longer able to import from China, so it purchased Plaster of Paris locally and burned it to make food grade calcium sulfate. One of the company's early employees was named Joe Lai Nam. The company was apparently not well managed as a business in the early years and was not making much money, so Joe Lai Nam took over as owner and manager. He moved the company to 378 Powell St. in about 1954-55. He ran the company for about a year, but his health began to fail. So in about 1955 Peter Joe's father, Leslie Joe, took over the company at 378 Powell St.

Note: This is the earliest known commercial soy product made by the company that became Sunrise Market Ltd. (later Sunrise Soya Foods).

1768. Soetisna, Mas. 1939. Kedelé mas Toegoemoeljo [The yellow soybean of Toegoemoeljo]. *Kolonisatie Bulletin* 6:9-11. [Ind]
• ***Summary:*** In the author's name, the term "Mas" may be a Javanese title, of lower rank than Raden. "Toegoemoeljo" (presently spelled Tugumulyo) is a place name but it can also be translated as "Column/Pillar of Glory," in Javanese culture refers to the manifestation of the highest level of happiness. The document tells about yellow soybeans from this place. Address: Adjunct-landbouwconsultent di Loeboek Linggau.

1769. Univ. of Illinois, Dept. of Home Economics and Education. 1939. Ways of using soybeans as food. *HEE* No. 224. 12 p. Mimeographed. Revised in 1943 by E.C. Faulkner. 17 p.
Address: Urbana, Illinois.

1770. **Product Name:** Tofu.
Manufacturer's Name: Yamauchi (Shoan) Tofu. By 1955 it had become Aala Tofu Factory.
Manufacturer's Address: Rear 1031 Aala, Honolulu, Oahu, Hawaii.
Date of Introduction: 1939.
New Product–Documentation: Honolulu City Directory. 1941-42. Shoan Yamauchi Tofu. Rear 1031 Aala, Honolulu. Note: Sutro library in San Francisco has the following city directories from this period: 1934-39, 1941/42, 1947-49. In the 1947-48 Directory, address is given as 1031c Aala, Honolulu. 1951 Directory. Name listed as Shojin Yamauchi Tofu. 1953 Directory. Address listed as rear 1031 Aala. 1954 Directory. Address listed as 1031c Aala. Not listed 1955. Note that 1031 Aala was the former location for at least 3 other tofu manufacturers: H. Iwanaga (founded 1923), Shima Kanehori (1926), and Haruko Uyeda (1937).

Talk with Shoan Yamauchi. 1982. June 29. The Hinode Tofu Company traces its roots back to Hawaii to the Ueda Tofu Co., which may have started as early as 1900? In 1939 Mr. and Mrs. Shokin Yamauchi bought Ueda Tofu Co. and renamed it Aala Tofu Co. Mrs. Yamauchi and her two sons, Shoan and Shojin, ran the family business successfully. In September 1947 Shoan's brother, Shojin, took over the family business, Aala Tofu Co., from their father, Shokin, in Hawaii.

Talk with Mr. and Mrs. Shoan Yamauchi in Los Angeles. 1988. Oct. 23. They both recall that the business was never named "Shoan Yamauchi Tofu." It was named Aala Tofu shortly before or after the Yamauchi family bought it from Mrs. Ueda.

1771. A handbook of Philippine agriculture. 1939. Manila, Philippines: College of Agriculture, University of the Philippines. vii + 803 p. No index. 18 cm.
• ***Summary:*** On the title page: "Issued in commemoration of the thirtieth Anniversary." The University of the Philippines was founded in 1908. The Foreword (by L.B. Uichanco, Dean, College of Agriculture) states that its College of Agriculture opened on 14 June 1909, at which time "scientific Philippine agriculture was virtually nonexistent." The idea for the book originated with the former dean of the College of Agriculture, Dr. B.M. Gonzalez, before he was appointed president of the University of the Philippines. Soybeans and soyfoods are discussed extensively.

"Coffee adulterants" (p. 104), commonly mixed with ground coffee, include roasted ground corn, soybean, peanut, mungo, cashew, and sometimes ipil-ipil (*Leucaena glauca*).

In Chapter 1, "Field crops" is a long section titled "Peanut, soybean, cowpea" (p. 132-43). Contents of "Culture of soybean" (p. 134-41): Varieties. Preparation of the land. Planting. Cultivation. Harvesting and threshing. Yield. Green and yellow seeds of Ami soybean. Soybean sprouts. How to prepare–Soybean coffee, soybean cake [dessert, with baking powder], soybean milk, "tao-si" (salted soybean [fermented black soybeans]; Method furnished by Superintendent of the Davao Penal Colony), "toyo" or soy sauce.

Note: This is the earliest document, and the earliest English-language document seen (Jan. 2012) that mentions fermented black soybeans from the Philippines, or that uses the term "tao-si" to refer to this type of salted, fermented soybean food.

The section titled "Method of preparing 'tao-si'" (p. 139-40) gives a full-page description of making tao-si on a small commercial scale–as follows: Wash dry soybean seeds and soak in clean water overnight. In the morning, remove the water. Transfer the soaked soybean seeds into a pot containing fresh clean water; boil until beans are soft. Remove boiled beans from the pot and place in shallow baskets to drain the excess water; allow them to cool. Dry beans in the shade for about one-half hour or one hour in the sun. For every 2½ petroleum cans of boiled soybeans, add 1-2 kg of wheat flour. Stir the mixture until beans are thoroughly coated with flour, then dust over about ½ kg of yellow fungus known as *Aspergillus oryzae;* thoroughly stir again. Cover open mouth of basket with a piece of abaca

© Copyright Soyinfo Center 2013

cloth or clean Manila paper and place in a dark room to allow the fungus to incubate. After 2-3 days the mixture will be thoroughly covered with a thick growth of yellow fungus and is now ready for salting. Transfer mixture into an earthen jar (*tapayan*), and to every 2½ petroleum cans of it, add 16 kg of native salt dissolved in two petroleum cans of water. Sun the jar for five days to facilitate curing, then move jar into a shed for further fermentation. "The 'tao-si' is ready for use after two months, but the longer it is left to cure, the better the quality becomes."

The two main kinds of insecticides in 1939 (p. 223-31) were stomach poisons (which kill when eaten; incl. lead arsenate, calcium arsenate, Paris green) and contact poisons (incl. concentrated tobacco decoction, as in Black Leaf "40").

"Diseases of beans and other legumes (p. 319+) include downy mildew of soybean and rust of soybean.

A table (p. 448) gives the content of five vitamins found in various feeds incl. soybean seeds, soybean leaves, soybean meal, peanut meal, and peanut seeds.

"Leguminous silage" includes that from cowpea, soybean, and mungo [mung bean] (*Phaseolus aureus*). Tables give: (1) The "Average digestible nutrients in feeds" incl. soybean (p. 459, 462).

(2) The "Nutritive value of foods" incl. seaweeds (ara-rosip, *Gracilaria crassa*, p. 534), mungo sprouts (p. 536), green soybeans (p. 537), seguidilla or kalamismis (*Psophocarpus tetragonolobus*, fresh and sun-dried seeds, p. 538), soy products (p. 538-39) incl. soy sauce (toyo, Superior {Senkee and Co.}, Commercial), soy milk–boiled, soy residue (sapal), soy residue after second drawing of toyo, soy curd (toqua [tofu]).

(3) "Foods as sources of minerals" (calcium, phosphorus, iron; p. 580-81), incl. miso or soybean mush, soybeans–baked flour, soybeans–baked sprouts, soy curd or toqua, soy sauce or toyo (four brands: Solo, Great Eastern, Violin, Rooster), tahuri or soybean curd preserved in strong brine solution (solid portion).

(4) "Foods as sources of vitamins" (p. 593-94) incl. bean–asparagus or cigarillas (*Psophocarpus tetragonolobus*), bean–mungo (in pods or sprouts), bean–soy (dry, green, or leaves), peanut butter, seaweed, sesame (p. 601). Address: Manila, Philippines.

1772. Abend, Hallett. 1939. Chaos in Asia. New York, NY: I. Washburn, Inc. 313 p. See p. 29. Illust. (map). 22 cm.
• ***Summary:*** Chapter 2, "How Japan carries on" (p. 26+) is about conditions inside Japan, since the Manchurian "incident" of 7 July 1937, as it fights a war in China. Gasoline is rationed to 12 gallons/month. Gaiety is strictly banned and dance halls are closed. Taxes are high and the country's gold reserves have been exhausted. Wages are sky-high and the "pinch of the unofficial American and British boycotts of Japanese-made goods is making itself felt." In short, the island nation is in dire straits.

"The Army is so much better fed, these days, than the civilians that Japanese informants say a marked change is noticeable in all the conscripts before they have been three months in uniform. They fill out, they broaden, their color improves, their eyes have new luster. For the conscripts get meat once each day, they are fed eggs, they are given raw fish in plenty, and they get all the nourishing soya bean curd that they can eat." Address: Author of books on East Asia.

1773. Embree, John Fee. 1939. Suye Mura, a Japanese village. Chicago, Illinois: University of Chicago Press. xxxi + 354 p. Index. 21 cm. Reprinted in 1964 with new Foreword.
• ***Summary:*** This is the earliest known detailed anthropological study of Japanese village life. John Embree is a pioneer anthropologist who lived (with his wife) in the remote mountain Japanese farming village of Suye Mura in Kumamoto prefecture (on Japan's southern island of Kyushu) from Aug. 1935 to Dec. 1936. Mr. Toshio Sano, a graduate of Tokyo Language School, lived with Embree and acted as his interpreter and translator.

Soybeans and soyfoods (particularly tofu) are discussed throughout the book.

Page 41: "Tôfu (soy-bean curd) is prepared in the *mura* by several *tôfu*-makers and sold to the rest of the villagers. It is made by grinding soybeans in a stone quern. It is eaten a great deal in soup and is used as a cheap substitute for fish at some social gatherings.

"The diet is largely vegetarian, though fish and occasionally chicken accompany a banquet. Plenty of proteins are available in the many foods made of soy beans, especially the soy-bean soup (*miso-shiru*), soy-bean sauce (*shôyu*), and soy-bean curd cake (*tôfu*) (see Table 1).

Pages 42-43: Table 1, titled "Agricultural products by season," has four columns for each of the four seasons. Azuki beans and sasage are harvested in summer and autumn; soy beans and sesame seed in autumn. Note: Edamame is not mentioned.

"Page 45: "Pigs are raised for outside sale by most of the *tôfu* makers. A piglet is bought for 5 yen from some city broker, fed on *tôfu* waste [okara] and general garbage (very scanty in a farmer's house) for about a year, after which time the broker comes back and buys the grown pig for from 15 to 20 yen." The "villagers never think of eating pig meat themselves." "Some people make flour at home on revolving grind-stones (*hikiusu*), similar to those used in making the bean-curd *tôfu*.

A photo (facing p. 52) shows the front of a local *tôfu* shop (Kakui), with two ladies seated on the low wooden platform. The caption reads: "This woman makes *tôfu* daily. Her shop carries a few tinned goods, some candy, beer, geta, thongs, etc. It is a favorite gathering-place for people to sit about and talk."

© Copyright Soyinfo Center 2013

Page 53: "Some widows and farmers' wives, usually of the poorer families, make *tôfu* as a means of increasing the family income. Such a family has only a little farmland, otherwise the wife would not have the time to devote every morning to making and selling *tôfu.*" "Each *buraku* [village, community] has a *tôfu* maker." Sometimes the wives of fishermen make *tôfu.*

Pages 60-61. In the *yakuba* (village office) there are frequent parties. Two man, paid as messengers, go to buy *tôfu* for these parties.

Page 115: On Kwannon Day, a party is held and a square of *tôfu* is served with *shôchû* to each person present. Tofu is also served at other types of parties and sometimes taken as a gift (p. 118, 122, 124, 128, 147).

Page 160: The author identifies six social classes in this village. Small shopkeepers and *tôfu* makers belong to the 4th class, the "lower middle."

Page 241: Of the Seven Gods, Daikoku and Ebisu are the patron saints of shopkeepers and *tôfu* makers.

Page 254: Inari is the god of crops, especially of rice. "People always refer to Inari as *Oinarisan* (Honorable Inari)."

Pages 292-93. "The eleventh month" of the lunar calendar. On the 15th day is the old Ichifusa Shrine Day. On the evening of the 14th day, *tôfu* is roasted on special bamboo sticks in the fire pit. This preparation, called *dengaku* is made in honor of Otakesan (Ichifusa Shrine).

Page 315: Most *tôfu* makers specialize in doing just that, but some shopkeepers also make *tôfu.*

Page 318: Household expenses. Most miso is made at home. Tofu and other goods purchased at local stores may be paid for with rice instead of money.

1774. Kloss, Jethro. 1939. Back to Eden: A book on herbal remedies for disease, and other natural methods of healing. 1st ed. [Washington, DC]: Published by the author. vii + 667 + [25] p. Illust. Portrait. Index. 21 cm.

• ***Summary:*** This treasury of herbal lore and vegan cookbook (it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes. Contents: Foreword. 1. Personal experiences. 2. Soil. 3. History of medicine. 4. Fresh air and exercise. 5. Fasting. 6. Effects of devitaminized, adulterated foods on the body. 7. Fruit diet. 8. Meat-eating. 9. Foods. 10. Diet. 11. Aluminum utensils. 12. Cooking under steam pressure. 13. Disease of animals. 14. History of water cure. 15. Water. 16. Water-effects and treatment. 17. Water-its effect in sickness. 18. Baths. 19. Compresses and fomentations. 20. Massage. 21. High enemas. 22. Nursing. 23. Fruits. 24. The eliminating diet. 25. Minerals found in the body. 26. Herbs. 27. Medical trees. 28. Tonics. 29. Herbs (Their description and use in treating disease). 30. Definitions of medicinal properties of herbs. 31. Herbs indicated for specific diseases. 32. Directions for use of non-poisonous herbs. 33. Treatment of disease. 34. Food preparations of various kinds. 35. Oranges. 36. Potatoes; gathering and preserving of herbs.

The Foreword states: "This book contains tried, safe, and inexpensive remedies for the prevention of disease and sickness, remedies which are the result of my own practical experience of nearly forty years." "No matter how many germs get into the body, if the blood stream is clean and the blood corpuscles are in a healthy condition, you will be safe. Everyone comes in contact with many kinds of germ, but these organisms will not harm you or cause you sickness and death unless they have a place in which to propagate themselves." Sickness and illness are "caused by violating the laws of nature and health. "If then they would resort to simple means and follow the basic laws of health that they have been neglecting–proper diet, use of pure water, fresh air, sunshine, rest, and nature's remedies, herbs, etc., nature would restore the body to its original health." "God has provided a remedy for every disease that might afflict us." "The fundamental principle of true healing consists of a return to natural habits of living."

Virtually all of the information on soybeans and soyfoods is in chapter 34, "Food Preparations of Various Kinds" (p. 582-633). First come two sections of text: "The nutritional value of the soybean" (p. 582-84; "Taken from an address delivered by Dr. J.A. LeClerc, before the annual meeting of the American Soybean Association. Sept. 15, 1936"). "Uses of the soybean for industrial purposes" (p. 585).

Then comes an introduction soy-related recipes (p. 585-87): "The knowledge of the value of the soybean here in America is one of the greatest things that was ever launched in the food line in the history of the nation, and at this time of great poverty [the Great Depression], want, and disease, it is the most important thing that could be given the people." "Soybean milk can be made from soybeans at home for less than two cents a quart." Soybean milk "is not only a good food, but a real medicine." It is easily digested and highly alkaline. "I have experimented with soybeans for fifteen years [since about 1924] and have produced a fine, acceptable soybean milk as well as many other soybean products." "I use soybeans in more than fifty dishes."

Then come recipes (p. 587+): Soybean cheese (fermented soybean milk, peanut butter, and tomato puree, p. 587). Soybean cream cheese (from fermented soybean milk, p. 588). Nut cheese no. 1 (fermented soybean milk, peanut butter, and soybean butter {see p. 613}, p. 588). Nut cheese no. 2 (raw peanut butter, ground oatmeal flour, water and salt [no soy], p. 589). Nut milk (made with raw peanut butter and cow's milk [no soy], p. 590). Canned soybeans (p. 592). Soybeans and rice (with sprouted soybeans). Baked beans with tomato sauce (incl. soybeans, p. 593; "Soybeans are, no doubt, the best of all beans, but the flavor is not as pleasant. This can be overcome by using various seasonings,

© Copyright Soyinfo Center 2013

such as tomato sauce, a little onion, and celery). Vegetable protein (wheat gluten seasoned with soy sauce, p. 597). Nut loaf (seasoned with soy sauce). Kloss' granola (with soybean milk and soybean mash [okara], p. 599). Baked rice (natural brown rice baked in soybean milk, p. 600). Soybean coffee plus 2 recipes for Cereal coffee based on rye or wheat bran [real coffee with caffeine is not included]. Soybean broth (with soybean milk and oatmeal, p. 604-05). Oatmeal broth (with soybean milk). Soybean buttermilk (fermented, p. 605-06; "Buttermilk is an excellent article of diet for everyday use, but is especially beneficial in malnutrition, tuberculosis, toxic conditions, and intestinal infections. Soybean buttermilk has the advantage of producing an alkaline effect and is more nourishing than ordinary buttermilk. It is rich in minerals and very palatable. More nourishing than yogurt buttermilk used under various names."). Soybean cheese (fermented soybean milk, raw peanut butter, and tomato puree). Soybean cottage cheese (fermented soybean milk, p. 608). Soybeans and rice (with sprouted soybeans, p. 608-09). To sprout soybeans, lentils, or grains (p. 609). Soy patties (with soybean pulp [probably ground soybeans, not okara] and soy sauce). Gluten patties (seasoned with soy sauce, p. 610). Soybean loaf. Soybean cottage cheese loaf. Soybean milk. Soybean milk no. 2 (made from "soy meal, p. 611). How to curd [soybean] milk (p. 612). Soybean jelly (soybean milk jelled with agar-agar flakes and sweetened with malt sugar). Soybean butter (made with 1 cup water, 2 tablespoons soybean flour, and 2 cups soybean oil, p. 613). Soybean cream (blend rich soybean milk and soybean oil). Soybean ice cream (made with 2 quarts rich soybean milk, 2 lbs. malt sugar, ½ pint soybean butter or soybean mayonnaise, and 1 tbsp. agar-agar). The yolk of an egg (made with soybean flour, p. 614). Pancakes (with cornmeal and soybean mash [okara]). Tomato soup (with soybean flour, soybean flour, soymilk, and/or soy sauce, Savita, or Vegex, p. 618). Cream of tomato soup (with soybean milk, p. 620). Cream of celery soup. Cream of lentil soup. Vegetable oyster soup (with rich soy milk, p. 622). Eggplant soup (with soybean milk). Cream of spinach soup. Potato soup. Soybean gravy. French toast (made with soybean bread soaked in soybean milk, p. 624). Soy oil mayonnaise (with soy oil and finely ground soy flour, p. 628). Vanilla sauce (with soybean cream, p. 632). Vegetable gelatin (with agar-agar and soybean cream dressing, p. 632). Orange jelly (with soybean cream). Strawberry jelly (with soybean cream). Rice pudding (cooked in soy cream, p. 633). Cream tapioca (with soy cream and soybean milk). Soybean bread no. 1 (with whole wheat flour, soybean mash or soybean flour, p. 648). Soybean bread no. 2. Soybean buns or cinnamon rolls (with soybean meal, p. 650). Cornmeal gems (with soybean milk, p. 651). Oatmeal or soybean gems (with soybean meal). Soybean gems (with soybean mash [okara] out of which soybean milk has been washed, p. 652). Pones (with soybean milk). Beaten biscuit (with soybean milk). Unleavened pie crust (with soybean flour or mash, p. 655). Raised pie crust (p. 656). Soybean pumpkin pie (p. 656). Fig marmalade pie (with soybean milk, p. 657). Mashed potatoes (with rich soybean milk, p. 666).

This book does not call for the use of dairy milk or eggs. Concerning cow's milk, Kloss states (p. 75): "Cow's milk is not suited for human consumption. Half the invalids in the world suffer from dyspepsia, and milk should not be taken. Milk causes constipation, biliousness, coated tongue, headache, and these are the symptoms of intestinal auto-intoxication. Soybean milk and nut milks are excellent substitutes, and have practically the same analysis, and the danger of disease is removed." A recipe on page 614 uses a mixture of soybean flour and soya bean oil as a substitute for the yolk of an egg.

This book contains the same detailed information on the possible dangers of aluminum cooking utensils found in the 1935 edition.

Ads on unnumbered pages in the rear include: (1) Dominion Herbal College, Vancouver, BC, Canada. (2) "Horta" Pure Vegetable Extract. "Of strong aromatic meat flavor, though made from leguminous materials only." F. Behrend, Inc., New York, NY. Established 1886. (3) Old-fashioned Quaker mill. No. 4 Quaker City Mill. Ad: Enterprise No. 69, Hand Mill. A.W. Straub Co., Philadelphia, Pennsylvania. (4) Nature's Original Food Co., Falmouth, Virginia. "Nuts, grains, fruits and vegetables are Nature's original foods for men. Animal flesh has been substituted. If you want health, don't use it. "Try our [canned vegetarian] meats–see the difference." Meatose. Vegetose. To-Meta. Note: This latter company was almost certainly founded and is owned by Jethro Kloss.

According to Doris Gardiner (Oct. 1990), the original book (of which she and her aunt each have copies) has a green hard cover. The first printing was probably done by a Mr. Brunck, who worked for the College Print Shop in Takoma Park, Maryland. She thinks Jethro self-published the book. He paid for the printing and sold the books himself. Jethro and his wife moved to Coalmont, Tennessee. There they lived with the Hiatt family, and Mr. Hyatt, owner of Longview Press (renamed The Message Press by 1964) became the book's first legitimate publisher. His wife died in 1944. Jethro died in 1946 at age 83. The page numbers from the 1939 edition are unchanged in later editions.

Note 1. This is the earliest English-language document seen (March 2007) that uses the term "Soybean cream cheese" to refer to soy cream cheese.

Note 2. This is the earliest English-language document seen (May 2011) that uses the term "soybean mash" to refer to okara. Address: Washington, DC.

1775. Matagrin, Am. 1939. Le soja et les industries du soja: Produits alimentaires, huile de soja, lécithine végétale, caséine végétale [Soya and soya industries: Food products,

© Copyright Soyinfo Center 2013

soy oil, vegetable lecithin, and vegetable casein]. Paris: Gauthier-Villars. x + 390 p. Illust. 18 cm. [300 ref. Fre]
• ***Summary:*** Contents: Introduction. 1. The agricultural, industrial, and commercial history of soya: Asiatic origins and propagation in Europe, soya in America (its cultivation and industries), soya in Europe, Asia, Africa, and Oceania (1936) (1. Admission of soya in the agriculture and industry of European nations (p. 35): Soya in France, soy industry and commerce in central and northern Europe {England, Germany, Holland, Denmark, Sweden, Poland, Austria and Hungary, Switzerland}, penetration of soya into southern Europe {Iberian peninsula, Italy, Balkan countries of Dalmatia, Istria, Yugoslavia, Greece (p. 47), Bulgaria, Romania, Ukraine}, the grandeur and decadence of soya in Russia. 2. Soya in modern Asia (p. 51): China and Manchuria, Japan, Korea, Formosa, French Indochina {Tonkin, Cambodia, Cochin China}, the British and Dutch Indies {Siam, Assam, Bengal, Burma, Ceylon, India, Straits Settlements [later Singapore] / Malacca}, western Asia {Turkestan, Persia (p. 57)}. 3. Soya in Africa and Australia (p. 57-58): South Africa, Rhodesia, Nigeria, Gold Coast [later Ghana], Cote d'Ivoire, Dahomey, Togo, Algeria, Tunisia, Morocco, Egypt, Australia {Queensland, New South Wales, Victoria}, Tasmania, New Zealand, not yet in British New Guinea [later Papua New Guinea], Philippines, Java).

2. The botany and agronomy of soya: The plant, its names, its botanical characteristics, its varieties (original and created by selection), the cultivation of soya.

3. The general chemistry of soya: Chemical composition of the plant, structure and chemical composition of the beans.

4. Using soya in soyfoods and soyfood products: Whole soybeans (whole green, dry, sprouted, roasted and salted {*soja á l'état vert, fève de soja sèche, fève grillée, fève salée de soja, fèves de soja salées,* p. 166-67}, soynut butter {*un mélange rappelant les beurres végétaux*}, soy coffee, soy confections {*confiture de soja*}, soy chocolate, soy sprouts {*fèves de soja germées, germes de fèves de soja*}), soymilk and tofu (*le lait et le fromage de soja;* soymilk cream, concentrated soymilk, soymilk powder / powdered soymilk, fermented soymilk {*lait fermenté, yoghurt, kéfir, koumys,* p. 189}, fermented tofu {*fromages de soja*}), okara (*pulpe résiduaire de la préparation du lait de soja*), fermented soy products (solid, paste, and liquid condiments; natto, miso, and shoyu [soy sauce]; kiu-tsee and lactic ferments), soy flour and bread.

5. The soy oil industry and products derived from it: Extraction and refining of soy oil, properties and use of soy oil.

6. The vegetable lecithin industry: Extraction of vegetable lecithin, properties and use of vegetable lecithin.

7. The vegetable casein industries and plastic materials based on soya: Soybean cakes and flours from which the oil has been removed, use of such cakes and flours, in the crude state, as a raw material for plastics, manufacture and use of vegetable protein, soybean cellulose for artificial silk, soya furfural and furfuraldehyde (phenolic resins). Conclusion: How to launch soya industries in France. Important terms. A bibliography appears at the end of each chapter.

Note 1. This is the earliest French-language document seen that uses the terms *Fève grillée, fève salée de soja,* or *fèves de soja salées,* "roasted soy beans" to refer to soynuts.

Note 2. This is the earliest French-language document seen (April 2005) that mentions soynut butter, which it calls *un mélange rappelant les beurres végétaux.*

Summary: Matagrin wrote two previous books: *Manuel du Savonnier* (Paris, no date given) and *L'Industrie des Produits chimiques et ses Travailleurs* (Paris, 1925).

Francis G. Beltzer, a practical chemist, became a major force in visualizing new industrial uses for the soybean in the West. By contrast, Li and Grandvoinnet (1912) paid little attention to soy oil in their book, devoting only 3 pages out of 150 to the subject, and only ½ page to industrial uses, while largely ignoring lecithin. These two books had a great influence on soy in France and they nicely complement each other (p. vi).

The Soybean, by Piper & Morse (1923), was published in both New York and London. Horvath was a Russo-American chemist. Italians who made important contributions to the soybean were professors Bottari, Mattei, Panatelli, and Tito Poggi (p. vii).

Leon Rouest, French the agronomist, wrote an important book titled *Le soja français et ses applications agricoles et industrielles* (Chateauroux 1936). Since 1920 he has devoted himself to the culture of soybeans and to the selection of acclimatized varieties. He was director of the Laboratory of Soja in the north Caucasus from 1930 to 1935, and in 1921 he had already published a book, *Le soja et son lait végétal.* His new (1936) book benefitted from the collaboration of Henry de Guerpel, an agricultural engineer and mayor of Percy-en-Auge, who was also an indefatigable prophet of soybeans in France, until his untimely death in Jan. 1937.

Anyone in the world can order (from the U.S. Government Printing Office in Washington, DC) the many U.S. publications about soybeans from the USDA or state agricultural experiment stations. These substantial works are based on careful research and enriched with numerous tables and photos–a fine example of the key role that governments can play in introducing and popularizing soya. Recently J.A. LeClerc (of USDA's Bureau of Chemistry and Soils) said the soybean has become a naturalized American (p. viii).

More than a century ago lord Byron wrote *Beppo,* the first Western poem on soy. It was an account of a carnival at Venice, Italy, in 1818. He advised the tourists to bring "Ketchup, Soy [sauce], Chili-vinegar."

Maurice Druel was one of the young engineers who worked with competence to launch a soy industry in France (p. x).

© Copyright Soyinfo Center 2013

For an early chronology of soybeans and soyfoods in France (1856+, see pages 8-12). 1857-58: Lechaume planted soybeans at Vitry-sur-Seine and got encouraging results. A report by the National Society for Acclimatization declared: "The acclimatization of the soybean is complete."

1859–Setback for the first tests by Vilmorin with Chinese beans that were too late, but success by Dr. Turrel in le Var.

1862-69–Success of Mme. Delisse, in Gironde.

Then the Franco-Prussian war arrested these tests, so the center of interest moved to central Europe. The world exposition of Vienna in 1873 and Haberlandt. In his book one finds the first analyses of the seed by Steuf, of the cake by Woelker / Voelker, the results of texts by Berndt on oil extraction (p. 9).

Podolie is in the Ukraine.

Of Haberlandt's 148 trials in 1877, only 12 failed for lack of warmth. Much new agronomic information was accumulated.

Back in France: 1874-80–Society of Horticulture d'Etampes (Seine-et-Oise) grew a yellow Chinese variety which succeeded. This "soja d'Etampes" was studied intensively from the chemical and agronomic points of view by Lechartier and various authors. A doctor from the region prepared, for his personal use, a vegetable cheese (tofu). But the grain did not find buyers so its cultivation did not spread. There now remain only 2 or 3 innovators to cultivate soybeans and on 5-10 acres maximum. But Chinese soybeans mature in the region of Paris, as in 1879 at Marseille.

1880–While the tests of Boursier in l'Oise have succeeded. and while Olivier-Lecq, ardent propagator of soybeans, distributed 100 kg to farmers in the north, the national Society of Acclimatization organized cultural trials all over France. Results were obtained in each of the regions, some with record yields. The general objection of the farmers was the difficulty found in using the soybean as a legume (it was too hard) or to find buyers.

As Paillieux said so well: "Our point of departure has not been happy one; the soybean has been presented simply as a new legume" (p. 10).

The German successes in soybean cultivation were studied by Wein in 1881 (p. 10).

In the 1880s there was a big growth of interest in vegetarian diets in Europe. Compare this with the USA (p. 11).

Li Yu-ying: After his 1905 speech, in 1908, he created a laboratory for studies, which soon founded the factory La Caseo-Sojaine at Vallees, near Colombes (Seine), administered by a French-Chinese company. This establishment made soyfoods using imported soybeans, especially tofu (p. 12).

Dr. Bloch of France recommended thin sheets of pressed tofu as a reserve ration for troops.

Lever Bros. soap works used lots of soy oil in Britain (p. 12).

The British did some cultural trials in India, Burma, Siam (Thailand), and South Africa.

Japan, in effect, annexed Korea in 1895.

It was only after 1905 that soybean tests took place, first in Guyana, where the soybean matured easily.

Soybeans were grown for forage more in the South of USA than in the north. Continued. Address: France.

1776. The epicure in China: Eight complete Chinese epicurean dinners. 1939. San Francisco, California: The Colt Press. 64 p. 12 x 15 cm.

• ***Summary:*** Contains 42 recipes. On page 54 is a recipe for "Roast Pork with Bean Curds (Dow foo Chow Gee Yuk)." The first ingredient is "4 bean curds." The cook is instructed to "Cut each bean curd into about 4 pieces." Address: San Francisco.

1777. Woodhead, Henry George Wandesforde. 1939. China year book. China: North China Daily News & Herald. xxiv + 663 p. Index. 22 cm.

• ***Summary:*** Li Yu-ying is mentioned on page 187 (left column): "Courtesy name: Shih-tseng. Born 1882; native of Kaoyang, Hopei. One of the Kuomintang's 'elder statesmen.' Studied in France and established first bean-curd [tofu] factory at Paris. 1928, chairman, Peiping branch, Kuomintang Central Political Council. Member, Kuomintang Central Supervisory Committee, since 1924. Director, Peiping Research Academy, since 1929."

Note: On pages xiii to xxiv is an interesting "Calendar for the year–January to December–of major events in Chinese and world history," arranged by day of the month rather than chronologically. For example: January (first month; 11th + 12th moon). 27th day. "Great opium burning at Shanghai 1919. Japan repudiated Central Government 1938." Address: C.B.E.

1778. **Product Name:** Tofu, Agé, Miso, Natto, Okara.
Manufacturer's Name: Harada Tofu, Zakka-ten.
Manufacturer's Address: P.O. Box 180, Fowler, California.
Date of Introduction: 1939?
New Product–Documentation: The Japanese American Directory. 1941. p. 283. Harada (Gonshiro) Tofu-ya (in Japanese). Harada, G., P.O. Box 180 (in English), Fowler, California. Phone: Not listed. This listing is in the "Residence" section, so the owner's first name is Gonshiro.

Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Dec. 4. He has heard from Japanese-American old-timers living in Fresno that there were two tofu shops in Fowler before World War II. Fowler is located about 10 miles southeast of Fresno.

Letter from Masakazu Iwata of Montebello, California. 1995. In 1939 Gonshiro Harada (died 1943), an Issei (first-

© Copyright Soyinfo Center 2013

generation Japanese immigrant to the USA) relocated from Fresno to Fowler, about 10 miles southeast of Fresno. There he and his wife and family (nine children) established the Harada Tofu Co. and manufactured such foods as tofu, kamaboko, agé, miso, natto, okara, and other related items, peddling them to the Japanese farmers in a broad area of Central California.

Note: This is the 4th earliest known commercial natto made in the United States.

1779. **Product Name:** Tofu.
Manufacturer's Name: Tokubo Tofu.
Manufacturer's Address: 943 E Street, Fresno, CA 93706.
Date of Introduction: 1939?
New Product–Documentation: Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Nov. 28. He thinks this company became Hashimoto Tofu. It was run by a Mr. Tokubo.

1780. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1940/01. Nichibei jûshoroku [The Japanese American directory. No 36]. San Francisco, California: Nichi-Bei Shinbunsha; The Japanese American News. 688 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** On p. 7, under "Food products manufacturers," are listings (name, address, phone no.) in San Francisco for: Azumaya Co., Fujimoto Co., Umino Tofu Mfg., and Norio Co. On the facing page is a full-page ad for Fujimoto Co., importers, manufacturers & exporters, 246 Front St., San Francisco. The company makes miso, koji, and pickled salmon (*sake tsukemono*). They sell tofu ingredients (presumably soybeans and nigari). Address: 350 Ellis Street, San Francisco.

1781. **Product Name:** Tofu.
Manufacturer's Name: Jitsumyo Meat Co.
Manufacturer's Address: 1408 Kern St., Fresno, California. Phone: 22-531.
Date of Introduction: 1940. January.
New Product–Documentation: The Japanese American Directory. 1240. p. 270. Fish, meat and tofu shop. Jitsumyo Meat Co.

1782. Macheboeuf, Michel; Reiss, Charlotte. 1940. Documentation sur les graines de soja et leur utilisation pour l'alimentation de l'homme et des animaux, suivie de quelques considerations sur l'importance industrielle du soja [Documentation on soybeans and their utilization as a food for humans and animals, according to some considerations of the industrial importance of soya]. Paris: Ministère de l'Education Nationale, Centre National de la Recherche Scientifique, Section de la Recherche Appliquée. 48 p. Unpublished typescript. Jan. 30 cm. [200+ ref. Fre]
• ***Summary:*** Contents: Introduction. Chemical composition of soybean seeds: Proteins, nutritional value of the proteins, lipids, phosphatides, sugars, sterols, enzymes, minerals, vitamins. Soy flour. Soybean cake. The role of soya as a food. Some physiological effects of soya. Feed for cattle. Feed for pigs. Feed for sheep. Feed for birds. Experiments on animal feeding. General considerations on the feeding value of soya for animals. The soybean as human food. Various culinary preparations based on soya: Soy sauce, fermented soy beverages, soy sprouts, tofu, soymilk, soy bread or soy and wheat bread, soy oils and hydrogenated soy oil products, soy coffee, summary. Brief survey of industrial utilization of soybeans: Oil for preserving fish, cake for fertilizer, oil for foundry use, lubricants, plastics incl. sojalithe, other uses of soy proteins, glue, paint emulsions, artificial textiles, paints and varnishes, interior enamel, soaps, petroleum substitutes, explosives. Note: The extensive bibliography is full of errors. Address: 13, Quai d'Orsay, Paris (7eme), France. Phone: Invalides: 45-95 & 45-96.

1783. McRostie, G.P.; Laughland, J. 1940. Soybeans in Ontario. *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb.
• ***Summary:*** Contents: Introduction. The plant. Uses: Hay, seed, straw, soybean meal, soiling crop, ensilage, soil improvement, soybean oil, other products. Feeding value. Climatic adaptation. Place in rotation. Culture: Soil, preparation of seed bed, manure and fertilizers, seed selection, inoculation, dates of seeding, methods and rates of seeding, depth of seeding, seasonal care, harvesting for hay or seed, threshing, storing. Varieties. Description of varieties: Manitoba Brown (Brown, Ogemaw), Kabott (From Mr. R.R. Kabalkin in Manchuria), Mandarin, Cayuga, Minsoy, Hudson Heights (Hudson; a selection by T.B. Macaulay of Hudson Heights, Quebec), O.A.C. No. 211 (selected from the Habaro variety), Goldsoy, Quebec No. 92, Manchu, Illini. Soybeans in mixtures (with grains and grasses). Enemies of the soybean.

Concerning other food products (p. 3): "Soybean flour, which is made into bread, cakes and muffins, due to its very low percentage of starch, is of especial value as a diabetic food. Soybean milk, curd [tofu] and breakfast foods are products of this bean. Lecithin, a complex fatty material containing phosphorus and nitrogen, is also obtained from the soybean and is used in candy making. Green soybeans (probably green vegetable soybeans), dried beans and bean sprouts are used in many ways for the table."

Concerning varieties (p. 9): "Both Manitoba Brown and Brown are varieties which have been selected from Ogemaw which was introduced by E.E. Evans, West Branch, Michigan, 1902, as a supposed cross between Early Black and Dwarf Brown varieties. The Manitoba Brown is an early selection made at the University of Manitoba. All three are similar in appearance and may be described as follows: seed colour brown, medium to large in size, hilum chocolate;

© Copyright Soyinfo Center 2013

plant short, erect, bushy; flower purple. They are very early varieties suitable for seed and may be successfully grown in northern districts."

Concerning enemies (p. 12): "In Japan, according to reports, there are many destructive diseases which attack the soybean. In the United States, no pest has assumed any great economic importance, but there have been some losses due to rabbits, woodchucks, root rot, cowpea wilt and caterpillars. Forty-three years of experiments at the Ontario Agricultural College have shown little loss due to fungus and bacterial diseases, but some parts of Ontario have reported that groundhogs show a preference for this crop. This comparative freedom from plant enemies is a favourable factor in promotion of soybean culture in Ontario."

Note: This is the earliest document seen (Sept. 2004) that mentions the soybean variety Kabott. Address: 1. PhD, Prof. and Head of Dep.; 2. B.S.A., Extension specialist. Both: Dep. of Field Husbandry, Ontario Agricultural College, Guelph, Ontario, Canada.

1784. Lager, Mildred. 1940. Summer foods for health. *Madison Health Messenger* (*Madison, Tennessee*) 2(3B):1-4. Undated.

• ***Summary:*** A large photo shows Miss Lager, next to a KFAC microphone. For 6½ years she has been broadcasting over the radio four times a week on station KFAC is Los Angeles. "She is the founder of the House of Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living."

She writes that now is a good time "to cut down on rich foods and the acid-forming foods, using instead the alkaline-forming foods and the bulk foods for the natural eliminative effects... With a liberal intake of the alkaline-forming foods, one may be assured of the natural alkalizers which neutralize body acids and in this way assist in the protection of health... Acid wastes produce fatigue; alkaline-forming foods neutralize the acid wastes to restore the normal body tone and stamina.

"The summer diet must necessarily contain adequate complete proteins, for protein foods are necessary for cell repair and growth... A lack of protein may cause retarded growth, lack of vigor, and poor appetite... The vegetable proteins are nuts, soy beans, legumes, and in general they are found in all vegetables. The proteins of nuts and soy beans are classed as complete proteins and are therefore especially desirable. The animal proteins are acid-forming, whereas the vegetable proteins are alkaline-forming. Animal proteins are also more putrefactive than vegetable proteins. The soy bean and nuts can be used in a great many tasty ways."

Among the many recipes for summer the following include soyfoods: Cocktails–Soy milk and carrot ("Soy milk is a fine, alkaline, soft food. Excellent for those with sore conditions of the digestive tube)." Protein salads–Soy bean salad. Soy cheese [tofu] tomato salad. Mock shrimp salad (with Zoyburger). Entrees–Soy cheese cutlets. Zoyburger and mushroom sauce. Mock turkey legs (with Vigorost as the main ingredient). Broiled Vigorost with ripe olive sauce. Platter of cold cuts (Vigorost and Zoyburger). Hot Zoyburger sandwich. Stake-Lets (canned) for picnic dinner. Alkaline breakfast food–Wheatasoy. Alkaline beverage–Zoy-Koff (coffee substitute). Soy bean milk (Kreme O'Soy). Complete protein foods: Zoyburger, Vigorost, Stake-Lets, Not-Meat (made with unroasted peanut meal and seasoning), Soy Cheese, and Soy Beans. A brief description, nutritional analysis, and price is given for each product. "None of the Madison Foods contain animal products." A portrait photo shows Mildred Lager next to a KFAC radio microphone. The caption states that for 6½ years Miss Lager been broadcasting over the radio in Los Angeles. "She is the founder of the House for Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living. Miss Lager is the author of *Food Facts.*"

Note 1. This is the earliest document seen (June 2007) that mentions or gives a recipe for a soy-based meatless turkey. Vigorost, a meatless / vegetarian roast introduced by Madison Foods in 1932, used wheat gluten and tofu as its two main ingredients.

Note 2. This is the earliest English-language document seen (Jan. 2007) that contains the word "Zoyburger," an early, popular vegetarian burger in the United States.

Although this issue is not dated, it contains the reprint a current article published in March 1940.

1785. *Madison Health Messenger* (*Madison, Tennessee*). 1940. Price list [of products made by Madison Foods] (Ad). 2(3B):5. Undated.

• ***Summary:*** Breakfast cereal: Wheatasoy (9 oz).

Beverages: Zoy-Koff (No caffein [caffeine]; 12 oz.). Kreme O'Soy Milk (plain, liquid, 15 oz and 29 oz; chocolate, liquid, 29 oz). Crackers: Thin-Things ** (5 oz). Whole wheat wafers ** (5 oz). Bran wafers ** (6½ oz).

Canned protein foods (used in place of meat): Zoyburger (14 oz, 30 oz). Stake-Lets (14 oz, 30 oz). Not-Meat (5 oz, 14 oz, 30 oz). Vigorost (5 oz, 14 oz, 30 oz). Soy cheese [tofu] seasoned (5 oz, 14 oz, 30 oz). Soy Beans with Tomato (5 oz, 14 oz, 30 oz). Kreme O'Soys, plain (14 oz).

Flour: Kreme O'Soy Flour (2 lbs, 5 lbs).

Note: Asterisks in the printed list indicate that all products except Whole wheat wafers, bran wafers, and Not-Meat are "Soy Bean Foods." ** = Wheat germ added.

Although this issue is not dated, it contains the reprint of a current article published in March 1940.

1786. Madison Foods. 1940. Satisfying meatless entrees (Ad). *House of Better Living* (*Newsletter, Los Angeles*) 11(53):4. May.

© Copyright Soyinfo Center 2013

• ***Summary:*** "Soyburger. Stake-lets. Vigorost. Not-meat. Soy cheese [tofu]. These foods have been designed by a group of experts in the field of nutrition to adequately take the place of meat.

"Get a free copy of the *Madison Health Messenger,* for complete list of foods and recipes." Address: Madison College, Tennessee.

1787. Hayward, J.W.; Hayward, Mrs. J.W. 1940. Little soybean who are you? *Proceedings of the American Soybean Association* p. 6. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.
• ***Summary:*** This poem, written and submitted by Dr. and Mrs. J.W. Hayward reads: "Little Soybean who are you / From far off China where you grew? / I am wheels to steer your cars, / I make cups to hold cigars. / I make doggies nice and fat / And glue and feathers on your hat. / I am very good to eat, / I am cheese and milk and meat. / I am soap to wash your dishes, / I am oil to fry your fishes, / I am paint to trim your houses, / I am buttons on your blouses. / You can eat me from the pod, / I put pep back in the sod. / If by chance you're diabetic / The things I do are just prophetic. / I'm most everything you've seen / And still I'm just a little bean." Address: 1. PhD.

1788. A.C. 1940. La culture de la fève soja [Cultivation of the soybean]. *Croix* (*La*) (*Paris*). Sept. 7. p. 2, col. 2. [Fre]
• ***Summary:*** Would this not be the moment to introduce into France the cultivation of this Oriental legume?

For 5,000 years the soybean has constituted a substantial prepared dish for the Chinese, and for the last 30 years its renown has become international. It has been exported in bulk and in sacks from all the ports of Manchuria and mainly from Dairen, the terminus of the "South Manchuria Railway." Among the farm products sent from Manchuria, whose value is about $500 million a year, the soybean occupies by far the first place.

The Japanese are also interested in this crop. Millions of immigrants from the provinces of Shantung and Zhili (Chili, Chihli; dissolved in 1928) come to harvest it.

In their laboratories at Dairen, Japanese chemists have discovered numerous ways of utilizing the soybean: not only for feeding man and beast, but it can also be used for making soap, cheese [tofu], varnish and paints, ink for printing, enamel, linoleum, explosives and motor fuels, and lubricants. It is made into bread; the flour is used in Italy for macaroni as well as for biscuits. An exquisite table oil is extracted from the soybean. Some flavors in a bowl of soup give the aroma and the taste if true bouillon. Japan must nourish a constantly increasing population with the products of its old, exhausted fields. The waste products from the soybeans [i.e., from pressing out the oil], pressed into large cakes, make an excellent fertilizer and contribute largely to the solution of the problem. The Japanese continue their research into obtaining a more abundant harvest and improving the soybean oil.

I believe that the soybean is cultivated in Ireland. Why is the cultivation of this modern manna not introduced into France?

Note: Amazing that by Sept. 1940 the writer is unaware of all the work since 1855 to introduce the soybean to France!

1789. Balzli, Jean. 1940. La culture du soja "magique" et sa contribution au redressement de la France [The cultivation of the "magical" soybean and its contribution to the recovery of France]. *L'Eclaireur de Nice et du Sud-Est.* Sept. 17. Later published Revue Internationale du Soja, March 1941, p. 41-45. [1 ref. Fre]
• ***Summary:*** Includes a discussion of uses for human foods, including defatted soy flour, soy coffee, soy chocolate, Worcestershire sauce, soymilk, tofu, and soy sprouts. Other uses include lecithin and industrial uses of soy oil and soy proteins.

1790. McBride, Gordon W. 1940. What's happening with soybeans? *Food Industries* 12(10):55-57. Oct.
• ***Summary:*** "Greatly increased production, with accompanying increase in soybean oil output and wider utilization of other soybean products, is influencing all food industries." Discusses, with many statistics, the utilization of soybeans in the USA, including the amount used for oil (crude and refined; nonfood and food), meal, industrial proteins, and foods. An interesting table on page 56 states that the following foods are made from soybean meal: bean powder, bean curd, soy sauce, soy milk, breakfast food, invalid foods, soy flour, infant foods, ice cream, baked goods, macaroni, and sausage. Whole soybeans are used to make sprouts, cooked beans, soy sauce, confections, breakfast foods, meat substitutes, and coffee substitutes. Either whole soybeans or soy flour are used to make "fresh vegetable milk," which can be further processed to make condensed milk, dried milk, confections, cheese, or casein.

"In addition to the increasing quantities of soybeans that are brought to the market as a fresh green vegetable, larger quantities of the green beans are being canned each year. One unofficial estimate placed the 1939 pack at 15,000 cases (24 one-pound cans each)."

A photo shows the soybean products plant of Archer-Daniels-Midland Co. recently erected at Decatur, Illinois. Address: Chemical Engineer, Washington, DC.

1791. **Product Name:** Yum (Bologna-Like Canned Meatless Loaf with Tofu).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1940. November.

© Copyright Soyinfo Center 2013

Ingredients: Soybeans, gluten, soy cheese [tofu], whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: No. 2 can. 20 oz.
How Stored: Shelf stable.
Nutrition: Protein 19.1%, fat 11.1%, carbohydrates 11.5%, ash 2.5%, calories 221/100 gm.
New Product–Documentation: Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1940. Nov. p. 428. "Yum, a new food." "For years Madison Laboratories have been experimenting with this new food to make it very tasty and yet being ever careful not to season it to the point of limiting its appeal to those who like the very spicy foods... Compounded from wheat gluten, soy beans, nut meal and vegetable seasonings, this new food... is right on the front row of body-building protein foods." Gives two recipes: Yum meatless balls. Breaded Yum cutlet. "Free: the *Madison Health Messenger* with new health news, soy bean information, new recipes, charts, etc. Obtain from your health food store or write to: Madison Foods, Madison College, Tennessee."

Madison Health Messenger. V. 49-2. p. 5. Can be used hot or cold. Taylor. 1944. The Soy Cook Book. p. 201.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Yum contains 16.00% protein, 5.20% fat, and 11.26% carbohydrate. Not listed in the 1965 *Diet Manual.*

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 162. Lists the ingredients in "Yum (Madison)." The ingredients are now: Wheat protein [wheat gluten], processed soybean, peanuts, soya flour, rolled oats, soy sauce, vegetable oil, tomato puree, onions, yeast extract, salt, garlic, MSG, hydrolyzed vegetable protein, sage.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned product resembling cold cuts, made from wheat [protein] soy, and peanuts. It can also be used in salads or sandwiches. Now made by Worthington Foods.

1792. Read, Bernard E.; Wagner, W. 1940. Shanghai vegetables. *China Journal* (*The*) 33(5):206-20. Nov.; 33(6):259-71. Dec.
• ***Summary:*** In the "Science" department, the Introduction begins: "Recent advances in the science of nutrition show the great need for more so called Protective Foods in the diet. This term refers to those things which are rich in essential vitamins and minerals."

In section 2, "The Legumes" (p. 210+), the first two entries are: (1) The soybean. Latin names. Chinese name: (Cc = Chinese characters given), Ta Dou. "The yellow, black and green varieties are common in China and marketed from Manchuria, Tsingtao and Shanghai. The young soybean in the pod is a common article of diet in Shanghai, Chinese name, Cc. Shanghai: *Mau Deu;* Peking, *Mao tou.* Followed by: season, price, nutritive value, and a recipe.

(2) Soybean sprouts. Chinese name, Cc. Shanghai: *Waung Deu Nga;* Peking, *Huang Tou Ya.* Followed by: season, price, how to make, nutritive value, and serving suggestions.

"There are very many other soybean preparations of high nutritional value well worth adding to the diet. Soybean sauce (soy) with added spices is the basis of such things as Worcester [Worcestershire] sauce. Beancurd is really a king of junket containing good digestible protein, it can be added to soups or stews. Made fresh daily... A dry cake is made [pressed tofu], also spiced, pickled, fried and fermented. The latter is just like a kind of strong cheese." Soybean milk is made by "grinding the [soy] bean with water, one part of bean to about 9 of water.

Photos (on unnumbered pages, against a black background, with a small cm ruler show): (1) Four young soybean pods with beans inside. Four soybean sprouts 8-10 cm long.

Also discusses many other edible Chinese legumes. Address: 1. Henry Lester Inst. of Medical Research; 2. Public Health Dep., Shanghai Municipal Council.

1793. *Wall Street Journal.* 1940. Wall Street scene. Dec. 12. p. 4.
• ***Summary:*** Washington Food Market, which is getting a face life, sells all kinds of foods. The owner of one restaurant is Chinese; a metropolitan newspaper shows his picture and describes his special recipes. "Soy bean cheese [tofu], we notice. Darn clever these soy beans, good for anything from cheese to most parts of a Ford car."

1794. **Product Name:** Miller's Soya Curd. Renamed Miller's Soya Cheese.
Manufacturer's Name: International Nutrition Laboratory.
Manufacturer's Address: Mt. Vernon, Ohio.
Date of Introduction: 1940.
New Product–Documentation: International Nutrition Laboratory. 1940? "Miller's Soy Bean Foods." Undated 12-page leaflet. "3. Miller's Soya Curd: This delicate protein food is made by coagulating Miller's Soya Lac with lactic acid and then blending this soft curd with tomato puree, pimento and Soya Sauce. It is a pleasing protein addition to salads, or for spreading crackers and sandwiches."

Note. This is the earliest English-language document seen (April 2013) that uses the term "Soya Curd" to refer to tofu.

Ad in *Soybean Digest.* 1942. Sept. p. 16. "Miller's Soya Products."

1795. Carqué, Otto. 1940. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 4th ed. Glendale, California: Natural Brands, Inc. 239 p. 23 cm. Revisions and supplements by Mrs. Lillian R. Carqué.

© Copyright Soyinfo Center 2013

• ***Summary:*** This manual of food reform discusses the importance of a simple vegetarian diet, fresh air, pure water, exercise, and rest. Also discusses acid and alkaline foods, the treatment of disease, and food preparation. The author lived 1867-1935.

The nutritional value of soy beans is discussed briefly on pages 113, 145, 153, 162, and 174. The section titled "The Soy Bean, a Remarkable Food" (p. 176-78) describes and discusses boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts; recipes for Baked soy beans, Soy bean loaf, and Soy bean bread are given. A table (p. 221) gives the average chemical composition of various legumes, including soy beans. Address: Los Angeles.

1796. Matagrin, Am. 1940. La culture du soja: Avec des notions sur l'histoire, l'intérêt économique, la composition, les emplois agricoles, alimentaires et industriels de la fève asiatique [Cultivation of soya: With notes on the history, economic interest, composition, and agricultural, food, and industrial uses of the Asiatic bean]. Chindrieux (Savoie dept.), France: Published by the author. 125 p. 22 cm. [17 ref. Fre]

• ***Summary:*** Contents: Introduction: The soybean and its seed, historical summary of the culture and use of soybeans, economic questions–the soybean worldwide and in France. I. The climatic and agrological preferences of the soybean and its needs for fertilizers (organic, chemical, or microbiological). II. Methods and cultural styles for soybeans: the seed, the plant, and its evolution. III. The soybean harvest: Methods, yields, storage, how to select the seeds. Conclusion: Agricultural, food, medicinal, and industrial uses of soybeans: 1. Agricultural uses: Fertilizer and livestock feed. 2. Food uses (p. 108-18): As a vegetable, sprouts, flour, milk (incl. tofu, condensed milk, and fermented milk), fermented products, roasted (as a coffee substitute), oil (incl. margarine and vegetable butter), lecithin, and edible casein (purified soy protein). 3. Medicinal uses (p. 118). 4. Industrial uses: the oil, soaps, industrial proteins.

Note: Matagrin has written previous books: The industry of chemical products and its workers (1925), In the country of the sun (1927, a novel with Felix Vial), The soap-maker's manual (1938), and The soybean and its industries (1939). Address: Anc. Professeur et Bibliothecaire Scientifique, Conseil en Chimie appliquee, Savoie, France.

1797. Piedallu, André. 1940. Produisons du soja [Let's produce soybeans]. *Gouvernement General de l'Algerie. Direction de la Production Agricole. Documents et Renseignements Agricoles. Bulletin* No. 19. 4 p. [Fre]

• ***Summary:*** Describes the basics of cultivation: Soil, culture, fertilization, sowing for forage or seeds, time of planting, harvest, threshing, yield (forage and seeds), composition of the seeds compared with wheat and beef. Products made from soybeans: Flour for diabetics, oil, lecithin, paints and varnishes, soymilk, tofu, artificial wool, soybean cake for feeds, soy sprouts, roasted soy coffee that is popular in Switzerland and Italy, soy oil mixed with hydrogenated fish oils is used in Germany to make margarines. Address: Pharmacien Lieutenant-Colonel, Docteur es-Sciences, Ingenieur Chimiste.

1798. Sampaio, Sebastiao C. 1940. Soja [Soybeans]. Sao Paulo, Brazil: Tipografia Brasil, Rothschild Loureiro & Cia, Ltda. 43 p. Secretaria da Agricultura, Industria e Comercio do Estado de Sao Paulo. [20 ref. Por]

• ***Summary:*** Contents: Introduction: Soya. Botanical description. Varieties. Composition of the plant. Culture/cultivation. Enemies and pests. Improvement of the seeds: Improving the oil (*óleo dos graos de soja*), improving the cake and flour, other improvements. Commerce and trade.

This general book draws heavily on U.S. publications, including Piper and Morse, 1923. The section titled "other improvements" (p. 38-39) briefly mentions many food uses of soybeans, including vegetable-type soybeans (Easycook and Hahto), green vegetable soybeans (*Quando verdes... elas constituem ótimo legume verde = when green... they constitute an excellent green vegetable*), sprouted seeds (*sementes germinadas*), soy flour, soymilk (*leite de soja*), soy casein, soy cheese (*queijos e requeijoes*) [tofu], shoyu, and miso. The Japanese colony in Sao Paulo makes shoyu in commercial quantities.

Note 1. This is the earliest Portuguese-language document seen (June 2009) that mentions green vegetable soybeans, which it describes as shown above.

Note 2. This is the earliest Portuguese-language document seen (Sept. 2006) that uses the term *óleo dos graos de soja* to refer to soybean oil.

Note 3. This is the earliest Portuguese-language document seen (Jan. 2013) that mentions sprouted soybeans, which it calls *sementes germinadas.*

Note 4. This is the earliest Portuguese-language document seen (April 2013) that uses the term *queijos e requeijoes* to refer to tofu. Address: 3a Seccao Tecnica do Departamento do Fomento da Producao Vegetal, Sao Paulo, Brazil.

1799. White, Julius Gilbert. 1940. Abundant health: A digest of the "Learn-how-to-be-well" lectures. Madison College, Tennessee: Published by the author. ix + 317 p. Illust. 28 cm. [soy ref]

• ***Summary:*** Advocates vegetarian diet. Note that Madison College is a Seventh-day Adventist college and sanitarium. One section, titled "The Soy Bean–The Wonder Food," introduces the many benefits of soybeans, discusses their low cost, and describes (in fairly specific terms, but without recipes), how to use soybeans in baking, as cooked or canned beans, in commercial "meat substitutes," as soybean milk

© Copyright Soyinfo Center 2013

(good for those with allergies to cow's milk), as cheese (tofu), as greens (soybean sprouts), or in commercial "coffee substitutes." Note: The author lived 1878-1955. Address: Madison, Tennessee.

1800. Chéron, E.P. 1940? Le Soja: Culture et récoltes. Ses applications alimentaires, industrielles et thérapeutiques. Son avenir. Recettes gastronomiques et culinaires. 5e édition. Provendes au Soja [The soybean: Cultivation and harvest. Its food, industrial and therapeutic applications. Its future. Gastronomic and culinary recipes. Uses as fodder]. Sanguilles, Indre département, France: Comptoir Agricole de Centre. 48 p. Undated. Illust. (many photos). No index. 21 cm. [10 ref. Fre]

• ***Summary:*** Contents: Introduction. 1. Study of the botany and composition of the plant: its cultivation and vegetation.

2. Study of the seed; food and industrial applications. Soymilk, condensed and powdered soymilk, fermented soymilk (kefir, yogurt), okara (*résidus de laiterie de Soja*), Ajimoto [sic, Ajinomoto], soy cheeses / tofu (*fromages de soja*), applications of soy legumine in industry: vegetable wool and rayon, soy oil, sterol, soy flour, soy germ flour (farine de germe de Soja), soy coffee (Soféрur / Sofepur, Grillsoy), feed for animals, soymilk for animals, soybeans as feed for adult animals, conclusion. Appendix to the first edition: the soybean, a complete food, a medicinal food, a food for infants. Recipes for soy cuisine. Soy industries: making soy oil, lecithin, plastic materials, soybean cake: refining, neutralization, deodorization, decoloration, properties of soy oil, use of soy oil in France. The by-products of soy oil: lecithin, its properties, food uses, industrial uses. Soy casein, substitute textiles and plastic materials based on soy. Use of soy for raising young animals.

Note 1. A previous edition may have been titled: *Le Soja: Son histoire, sa culture, ses applications industrielles et alimentaires.*

Note 2. On page 1 the author's enlarged title is given as *Président du Syndicat National des Producteurs, des Amis et des Techniciens du Soja por la propagation du Soja en France et en Afrique du Nord.* Address: Président du Syndicat National des Producteurs de Soja en France et aux Colonies, France.

1801. International Nutrition Laboratory. 1940? Miller's soy bean foods (Brochure). Mt. Vernon, Ohio: International Nutrition Laboratory. 12 panels. Each panel: 19 x 10 cm. Undated.

• ***Summary:*** A description (probably written by Dr. Harry W. Miller) of each of the following foods is given: 1. Miller's Soya Lac: A liquid milk packed in 13 oz. and 30 oz cans. It is available in both natural and chocolate flavors. 2. Miller's Soy-A-Malt: A spray-dried powder available in both natural and chocolate flavors, packed in 1-pound cans, which make 1 gallon of "vegetable milk." 3. Miller's Soya Curd: "This delicate protein food is made by coagulating Miller's Soya Lac with lactic acid and then blending this soft curd with tomato puree, pimento and Soya Sauce. It is a pleasing protein addition to salads, or for spreading crackers and sandwiches."

4. Miller's Mien Jing: Wheat "gluten, or cereal protein, is the basic food element in Miller's Mien Jing. Mien Jing is the Oriental name meaning processed gluten. A high protein wheat flour is washed free of starch, and small slices of the remaining gluten are processed with fresh vegetables and soya sauce, making a highly nutritious food, quite meat-like in taste. This gluten food was first introduced into this country by us, and our Mien Jing, or gluten cutlets, has the genuine flavors that have popularized this food in the Orient... It requires only a little cooking to make Mien Jing into many savory dishes, such as stews, croquettes, entrees, and also Oriental dishes such as Chow Mien and Chop Suey."

5. Miller's Soya Sauce: "Produced in South China where the finest soya sauce is made, insuring a pure and highly concentrated product. It should be used in flavoring all protein dishes where a meat-like flavor is desired." 6. Miller's Soya Loaf: "Made from especially selected high protein edible soya beans, low in fat and carbohydrates. This food will be found to be a very pleasing entree that can be served as it comes from the can, or made into appetizing roasts, pot-pies, sandwiches, and other meat substitute dishes."

7. Miller's Soya Spread: This canned product can facilitate the making of tasty and nutritious sandwiches. 8. Miller's Whole Soya Bean Flour: This flour "is not made from oil extracted 'bean cake,' but fresh selected edible soya beans are ground to produce this rich golden flour. Wheat flour is classed among the acid foods while soya bean flour is strongly alkaline... One part of Soya Flour will neutralize the acidity of four parts of wheat flour." 9. Miller's Green Soya Beans: These delicious canned green beans "are an abundant source of Vitamins A, B, and G, and a splendid source of calcium, phosphorus and iron... rich in protein, they can be served just as they come from the can. They make a splendid addition to a vegetable salad. They combine well with many of the vegetables in cooking. Surprise your family and friends by serving this new food.

10. Miller's Giant Soya Beans: These soy beans are high in protein (43.18%) and low in fat (18.7%). "Miller's soy beans are processed so that the nutlike flavor is brought out and they are rendered entirely digestible. The eating of the soy bean creates an alkaline reserve so necessary for the healthful functioning of the body." 11. Miller's Soya Beans with Tomato Sauce: Edible soy beans are canned with tomato puree and malt. "This is truly a treat for the picnic lunch."

This brochure contains 8 recipes using Miller's products. Three panels discuss the "Dietetic advantages of the soy bean;" across the bottom is written in large letters

© Copyright Soyinfo Center 2013

"Alkalinize with Miller's Soy Bean Foods." These panels note of the soya bean: "So highly does it stand in the list of foods from the vegetable kingdom that the International Nutrition Laboratory is devoting 95% of its effort to the output of foods made from the soya bean." Edible Soy Beans are a remarkable food, a complete protein with adequate calcium for optimum metabolism, a ready alkalinizer, rich in Lecithin and Cephalin–the nerve foods, and "The only vegetable protein that is biologically able to substitute for animal protein... It is indeed unfortunate that so little interest has been aroused here in America in the culture of the so-called vegetable or edible type of soy beans... The International Nutrition Laboratory uses only these edible beans for canning and food manufacture.

"This institution now located at Mount Vernon, Ohio, first began its work in Shanghai, China, where extensive nutrition experiments were carried out in the feeding of infants, children and adults on soya milk. It operated a Soya Bean Dairy, providing daily milk distribution of plain and chocolate soya milk to thousands of persons. But as this plant was practically demolished during the recent war in the Orient, it was organized again in 1939 in Mount Vernon, Ohio as the International Nutrition Laboratory, and is producing from the edible soya bean all the valuable foods described in this folder."

Another panel describes the "Advantages of vegetable milk." Large letters across the bottom state: "Alkalinize with Miller's soy bean foods."

Note: This is the earliest document seen (April 2002) with the term "soy bean foods" in the title. Address: Mt. Vernon, Ohio.

1802. **Product Name:** Tofu.
Manufacturer's Name: Amano Tofu-ten (Amano Tofu-ya).
Manufacturer's Address: 704 21st St., Bakersfield, California. Phone: 3610.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 148. Amano Tofu-ten (in characters), Amano Tofu-ya. No phone. Residence (p. 302). S. Amano, 704 21st St.

1803. **Product Name:** Tofu.
Manufacturer's Name: Asano Norikane Tofu-ten.
Manufacturer's Address: P.O. Box 277, Walnut Grove, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 230. Asano Norikane Tofu-ten (in characters), J. Norikane. No phone. Note: See entry for 1975–Norikane Tofu Shop.

1804. **Product Name:** Tofu.
Manufacturer's Name: Fujimoto Sakana, Tofu-ten (Fujimoto Fish, Tofu Market).
Manufacturer's Address: 616 W. Main St., Santa Maria, California. Phone: 968.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 500. On this same page is a 1/16th page ad for "Fujimoto Fish Market" (in English) and *Fujimoto Sengyo* [*Fresh Fish*], *Tofu-ten* (in characters). Owner: Yumatsu Fujimoto. His residence is given as 818 W. Main St.

Note 1. Santa Maria is in southern California, northwest of Los Angeles, between San Luis Obispo and Santa Barbara.

Note 2. We cannot be sure from this entry that Fujimoto was a tofu manufacturer (although it probably was). However in 1978 there was a tofu manufacturer (of unknown name and address) in Santa Maria.

1805. Fujimoto Shokai. 1941. Fujimoto Co.: Importers, manufacturers & exporters (Ad). In: The Japanese American News Inc. 1941. The Japanese American Directory (*Nichibei Jûshoroku*). No. 37. p. 6. [Eng; jap]
• ***Summary:*** Ad (full page). The top 1/5 of this ad is in English. They make Kanemasa brand miso, koji, and Japanese-style pickles (*tsukemono*). They sell raw materials for making tofu (presumably whole soybeans and one or more coagulants) and also sake. Address: 246 Front St., San Francisco, California. Phone: EXbrook 1756.

1806. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1941/01. Nichibei jûshoroku [The Japanese American directory. No 37]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). 720 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap]
• ***Summary:*** Contents: Ads (in Japanese and English, p. A-1 to A-22). Directory of Japanese embassy, consulates, and legations in the USA and Latin America (in Japanese and English, p. A-22). Key addresses in Japan (in Japanese, p. A-23 to A-27). Index to the 1941 Japanese American Directory, by nation (USA and Latin America), and within nation by state, then by city (p. A-28 to A-31). One-page ad for Kirin Beer (p. A-32).

Directory by nation (USA and Latin America), and within nation by state, then by city (p. 1 to 686). There are many smaller ads on the lower half of quite a few directory pages, for a company listed on that page. For cities having many Japanese businesses (such as San Francisco and Los Angeles), a table of contents to the business in that city, organized alphabetically by type of business, is given in Japanese on the first page concerning that city (For example, Shokuhin seizô-sho = food manufacturers). Between pages 303 and 305 are 6 pages of ads (B-1 to B-6) for Japanese American companies located in Los Angeles. Publisher / publishing information (p. 686). A (in Japanese and English, p. 687-688 + inside rear cover and rear cover). On the front cover (which is mostly in English and is at the "back" of the

© Copyright Soyinfo Center 2013

book) is an illustration of the Golden Gate Bridge, below which are America and Japanese flags with an illustration of the dome of city hall between them. In the center, vertically in Japanese characters is written *Nichibei Shinbun-sha.*

Note 1. Within each city, all businesses are listed under basic bold headings (in both Japanese and English) such as Food Products Manufacturers (where most soyfoods manufacturers are listed), Importers & Exporters, Importers & Groceries, Brewery, Rice Mill, Farm Produce Buyers, Seeds and Fertilizer Cos., Insurance Agents, etc. For each entry / listing is given the company name, address, and phone number; the company name is given in both Japanese characters and English (romanized), whereas the address and phone number are only in English. The last bold heading in each city is Residence; all people of Japanese ancestry are listed alphabetically by family name. For each person is given his or her name, address, and phone number. The full name is given in Japanese characters; the family name plus the first letter of the first name is given in English (romanized).

Note 2. For each major city, a table of telephone number prefixes is given on the first page for that city. For San Francisco, for example: AT = ATwater, BA = Bayview. CH = China. These are useful when dialing long distance using an operator. The many directory listings for soyfoods manufacturers and ads for soy-related companies are each given separately.

Note: We can find no entries for soyfoods makers in Latin America or other U.S. states. Address: 650 Ellis Street, San Francisco, California.

1807. **Product Name:** Tofu.
Manufacturer's Name: Kawakita Shoten (Y. Kawkita Co. / Kawakita Store).
Manufacturer's Address: 127-133 Heffernan, Calexico, California. Phone: 767.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 533. The directory entry states: Kawakita Store, 127 Heffernan St., Calexico, California. Phone: 768. Note: El Centro is about 90 miles east of San Diego, right on the border between the USA and Mexico, between El Centro and Mexicali.

A 1/6 page ad at the bottom of p. 533 is titled "Y. Kawakita Co." At the top of the ad it states in English: "General merchandise, 127-133 Heffernan Ave., Calexico, California." Below that, in characters, it explains that this Japanese and Western grocery store, owned by Mr. Yasaburo Kawakita, sells fresh fish, aburage, and various types of tofu.

1808. **Product Name:** Tofu.
Manufacturer's Name: Kurihara Tofu-ten (Kurihara Tofu Co.).
Manufacturer's Address: 725 Oxnard Blvd., Oxnard, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 485. Kurihara Tofu-ten (in characters), Kurihara Tofu Co. (in English). No phone. Note: Oxnard is in southern California, west of Los Angeles, between Santa Barbara and Thousand Oaks.

1809. **Product Name:** Tofu.
Manufacturer's Name: Matsubara Sakana Tofu-ten (Matsubara Fish [& Tofu]).
Manufacturer's Address: 550 W. Valley Blvd., El Monte, California. Phone: BUdlong 86367.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 476. Matsubara Sakana Tofu-ten (in characters), Matsubara Fish [& Tofu] (in English).

1810. **Product Name:** Tofu.
Manufacturer's Name: Morikawa Tofu, Sakana-ten (Morikawa Tofu, Fish).
Manufacturer's Address: P.O. Box 225, Brawley, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 485. Phone: Not listed. A 1/10 page ad (p. S-245, entirely in characters) gives the same address. But the company name is given as Morikawa Sengyo-ten [Fresh Fish Shop]. Making and selling tofu. Owner: Mr. Seiroku Morikawa. Note: Brawley is about 90 miles east of San Diego, California, and about 10 miles southeast of the lower tip of the Salton Sea.

1811. **Product Name:** Tofu.
Manufacturer's Name: Okumura Tofu Seizo-sho (Okumura Tofu Mfg. Co.).
Manufacturer's Address: P.O. Box 124, Stanton, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 485. Okumura Tofu Seizô-sho (in characters), Okumura Tofu Mfg. Co. (in English). No phone. Note: Stanton is in western Orange County, California, about 40 miles southeast of Los Angeles.

1812. **Product Name:** Tofu.
Manufacturer's Name: Sasaki Tofu-ten.
Manufacturer's Address: P.O. Box 223, Florin, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 207. No phone.

1813. **Product Name:** Tofu.
Manufacturer's Name: Shimizu (Tamegoro) Sakana, Tofu-

ten (Shimizu Fish & Tofu Co.).
Manufacturer's Address: 2473 Grant Ave., Ogden, Utah. Phone: 1783-W.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 614.

1814. **Product Name:** Tofu.
Manufacturer's Name: Shusho Tofu-ten (Shusho Tofu-ya).
Manufacturer's Address: P.O. Box 195, Isleton, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 233. Shusho Tofu-ten (in characters), Shusho Tofu-ya (in English). No phone.

1815. **Product Name:** Tofu.
Manufacturer's Name: Star Tofu Seizo-sho (Star Tofu).
Manufacturer's Address: 927 Redondo Beach Blvd., Gardena, California.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 403. Star Tofu Seizô-sho (in characters), Star Tofu (in English). No phone.

1816. **Product Name:** Tofu.
Manufacturer's Name: Tanimoto Tofu-ten (Tanimoto Tofu).
Manufacturer's Address: 216 N. Main St., Lodi, California. Phone: 894.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 257. Tanimoto Tofu-ten (in characters), Tanimoto Tofu (in English).

1817. **Product Name:** Tofu.
Manufacturer's Name: Toya Tofu-ten.
Manufacturer's Address: 131 Lake St., Salinas, California. Phone: 3189.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 148.

1818. **Product Name:** Tofu.
Manufacturer's Name: Western Tofu Seizo-sho (Western Tofu Co.).
Manufacturer's Address: Rt. 1, Box 315, Gardena, California. Phone: MEnlo 4-2217.
Date of Introduction: 1941. January.
New Product–Documentation: The Japanese American Directory. 1941. p. 403.

1819. Turner, Grace. 1941. Real Chinese food is delicious food: Pearl Buck, authority on China, talks of the art of cooking there–and gives rare recipes. *Los Angeles Times.* Jan. 12. p. H14. Sunday. This Week magazine.
• ***Summary:*** In private life, Pearl Buck is now Mrs. Richard J. Walsh, at home on a farm which she and her husband own in Pennsylvania. He is president of a New York publishing company, and she is "chairman" of the China Emergency Relief Committee. "The Chinese have known for centuries that soybeans are good food. Out of soybean curd, for instance, they make a kind of cheese... Most cooking in North China is done with soybean oil, but in South China it is done with peanut oil." Soy sauce is called for in one of the recipes.

By Schroeder: Reddish brown dry, Yellowish brown dry, Tumida pallida yellow. By König: Tumida castanea brown, Tumida astrospermal [sic, atrosperma] black.

Appendix C. (1) Composition of soybeans (maximum and minimum) compared with four other legumes. (2) Composition of soybeans and beef compared. (3) Composition of soy flour and wheat flour compared. Address: Director General of the Association Technique Africaine.

1826. Concepcion, Isabelo. 1941. Significance of soy bean in the dietary of Filipinos. *Acta Medica Philippina* 2(4):479-95. April/June. Read before the Sixth Pacific Science Congress, San Francisco, California, July 24 to Aug. 12, 1939. [28 ref]
• ***Summary:*** Contents: Introduction. Composition and nutritive value. Supplementary value of soy bean (to a rice-based diet). Forms of soy bean used in Philippines: Soy bean curd or "tokua," fermented bean curd or "tahuri," soy bean curd brain or "tojo" (served with a little thick brown sugar syrup), soybean with shaved ice or "mongo con hielo," soy bean flour, soy bean milk. Deficiencies of Filipino diet. Effects of improper food. The need for a campaign to popularize soy bean products. Conclusions.

"Soy bean is grown in many parts of the Philippines where it is known as 'utao' and also as Chinese 'Balatong.' It is grown in large quantities in Batangas Province. The green pods are harvested in October and November and the dried seeds may be had in bulk in December and January. Just when soy bean was first cultivated in the Philippines is not known. For years casual plantings have been made but it is only in comparatively recent years that the cultivation has been seriously considered as an agricultural industry. Statistics indicate that consumption of soy bean in the Philippines has grown faster than production. They also show a growing appreciation of soy bean in the Philippines."

Soy bean with shaved ice "is a very popular soy bean mixture introduced by the Japanese but now sold in nearly all refreshment parlors all over the Philippines. The preparation consists of a mixture of boiled red mongo and soy bean mixed with cream, brown sugar and ice shavings. This form of soy bean mixture is more nourishing than any other preparation just described on account of its cream and sugar content."

The consumption of soy bean products in the Philippines "does not amount to very much. The reason for this apparent neglect is the general lack of sufficient information. It is desirable that the government should initiate the necessary campaign to inform the people regarding the valuable nutritive properties of soy bean. Although the Bureau of Science since 1931 has been carrying a demonstration campaign to teach the public the different methods of cooking soy bean with the aim of popularizing its use among the masses, its efforts so far have not yielded the expected results. Another reason is the lack of a central body in the Philippines that can coordinate all the nutrition work to be carried out in that country. Furthermore, there is lacking a definite long range policy for the betterment of nutrition...

"The popularization among the masses of soy bean and soy bean products like soy bean curd, soy bean flour, and soy bean milk should be undertaken along with a more intensive campaign about its nutritive value carried on in the different schools all over the Philippines."

Note 1. In section titled "Fermented bean curd or 'Tahuri'" (4 paragraphs and 1 table), the text is a combination of that first presented by Gibbs and Agcaoili (1912) and Orosa (1932). Although the word "fermented" is used here to describe *tahuri* for the first time, no information about a fermentation microorganism or process is given.

Note 2. This is one of the earliest English-language documents seen (Sept. 2006) that uses the term "Soy bean" in a new way–as a singular noun, like corn or wheat, not

© Copyright Soyinfo Center 2013

preceded by "the." Examples: "Soy bean is grown in many parts of the Philippines..." "... campaign to teach the public the different methods of cooking soy bean with the aim of popularizing its use among the masses,..." Address: Dep. of Physiology and Biochemistry, College of Medicine, Univ. of the Philippines.

1827. Morse, W.J. 1941. Shanghaied... a super food. *Soybean Digest.* July. p. 4-5, 10. [10 ref]
• ***Summary:*** The super food is green vegetable soybeans from edible soybeans. "Attempts to secure seed of these food varieties from oriental countries through correspondence met with little success, due to the fact that the edible types were classified under another name than the soybean. During agricultural exploration work in the Orient from 1929 to 1931, many varieties of soybeans were found in Japan and Chosen [Korea] which were used solely as green vegetables or dry edible beans." These varieties have been under test for the past 8-9 years at various agricultural experiment stations throughout the United States.

A table shows 42 "edible varieties of soybeans classified according to maturity." Very early (100 days or less): Agate, Sioux. Early (101-110 days): Bansei, Chusei, Etum, Giant Green, Goku, Kanro, Kanum, Sac, Tastee, Waseda, Yellow Marvel. Medium Early (111-120 days): Fuji, Hakote, Hiro, Hokkaido, Jogun, Kura, Osaya, Sato, Shiro, Sousei, Suru, Toku, Willomi, Wolverine. Medium (121-130 days): Chame, Emperor, Funk Delicious, Illington, Imperial. Medium late (131-140 days): Aoda, Easycook, Hahto, Higan, Rokusun. Late (141 or more days): Green, and Black, Jackson, Jefferson, Nanda, Seminole.

"Most of these edible types have been found to be much superior to the commercial varieties in flavor, texture, and ease of cooking. Moreover, tests have indicated that the flour made from edible types has a better flavor than that made from commercial varieties. Some of the edible types have also been judged to be superior to commercial types in the manufacture of bean milk, roasted beans and other food products...

"One of the most promising uses of edible varieties of soybeans is as a green shelled bean and for this purpose the pods should be picked when the beans have reached the full size but are still green and succulent. The green beans resemble young, tender Lima beans and have a rich, distinctive and delicious flavor... The usual oriental way of cooking green soybeans is to boil the pods in water flavored with soy sauce or salt and serve them to be eaten from the pod."

In America, "Several commercial concerns have canned large packs of green soybeans, which have become quite popular."

Photos show: 1. Soybeans sprouts pushing up out of spherical earthenware pots at a market in East Asia. 2. A woman selling "soybean curd" ("the 'boneless meat' of millions of Oriental people") in a Korean market. 3. "In place of candy between meals, Japanese children often carry about a small bag of cooked [green] vegetable soybeans, break open the pods and lick the salty beans out with their tongues." 4. Roasted soybeans, which are used extensively in candies in Japan. 5. Portrait of William Morse. 6. Green vegetable soybeans (in the pods on plants, or shelled) being sold in a Korean farmers market. 7. "This Japanese farm girl has just pulled an armful of green vegetable soybean plants to prepare for market." 8. A Korean peddler with a large pack of green vegetable soybeans on his back.

Note: This is the earliest document seen (June 2009) that mentions the soybean varieties Etum, Green and Black, Jackson, Jefferson, Kanum, Sac, Seminole, Tastee, Wolverine, or Yellow Marvel. Address: USDA Bureau of Plant Industry, Washington, DC.

1828. *Soybean Digest.* 1941. Hawaiians make many soybean foods. July. p. 8-9.
• ***Summary:*** Carey D. Miller, nutrition specialist at the Hawaii Agricultural Experiment Station, has described a large number of the soybean foods that Hawaiians make in Bulletin No. 68 of the Hawaii Station, "Japanese Foods Commonly Used in Hawaii" (1933). These foods include: Edamame (Green Soybeans; "The whole pod of the fresh green beans is placed in boiling salted water and cooked for about 25 minutes"), Tofu (Soybean Curd, incl. the residue known as "kirazu"), Aburage (Fried Soybean Curd), Miso, and Shoyu. A brief description is given of how each is made. Photos show: Three triangles of aburage on a dish. A dish of tôfu kasu (okara or kirazu).

Note: This is the earliest English-language document seen (Sept. 2011) with the term "soybean foods" in the title.

1829. Ukil, A.C. 1941. Soya bean as a component of balanced diet. *Science and Culture* (*Calcutta*) 7(1):49-53. July; 7(2):111-16. Aug. [3 ref]
• ***Summary:*** This article is largely a summary of: Orosa, Maria Y. 1932. "Soybeans as a component of a balanced diet and how to prepare them." *Manila* (*Philippines*) *Bureau of Science, Popular Bulletin* No. 13. 53 p.

It begins: "In view of the interest recently created in the value of the soya bean to make up for the deficiency of protein in the diet of starch-consuming agricultural populations of countries lacking a sufficient supply of high quality proteins like milk, fish, meat and eggs in their diet and in view of its extensive use in China, Japan, the Philippines, U.S.A. and more recently the German army, the following..."

"Although isolated attempts [have been made and] are being made in India to cultivate the bean, no systematic efforts have yet been made to encourage its use on a sufficiently large scale for commercial purposes and to supplement the food resources of the country... Soya bean is

© Copyright Soyinfo Center 2013

not only much more nourishing but has many more uses than *dal."*

Foods discussed (in July) include: Soya-bean flour, soya-bean milk (regular or condensed), coffee made from roasted soya beans, soya bean sprouts (a table shows they are much more nutritious than mung bean sprouts), soya bean oil, soya bean casein, soya bean curd [tofu].

August issue: "Some common foods and their methods of preparation:" Soya sauce (using koji, based on Groff 1919). Soya-bean flour. The cooking of soya beans (immature [green vegetable soybeans] and mature). Some food recipes with soya beans: Of the 22 recipes given, 17 call for boiled whole soya-beans, 2 for roasted soya-beans [dry roasted, soy nuts], one for soya-bean flour (Angel cake), and 3 for soya-bean milk (two puddings and a custard). Address: Member, Sanitary Board, Bengal [India].

1830. Wolverine: New U.S. domestic soybean variety. Large-seeded and/or vegetable-type soybean. 1941. Seed color: Yellow (straw), hilum pale to light brown.
• ***Summary:*** Sources: Morse, W.J. 1941. "Shanghaied... a super food." *Soybean Digest.* July. p. 4-5, 10. See p. 5. Wolverine is a medium early variety, maturing in 111-120 days.

• ***Summary:*** What is the soybean? It is a legume which was cultivated for more than 5,000 years in the Celestial Empire, which has the important characteristic of being a food of major value as a source of protein, and which can provide a large quantity of derivative foods, forage, and industrial products.

In the Soviet Union there is a Soy Institute (*el Instituto de la Soya*), which is continually experimenting with new soybean varieties.

A table gives the chemical composition of whole soy flour–which contains 38% protein and 22.5% vegetable oil. The soybean is also a source of many other nutrients, including vitamins and minerals. It is also a source of milk, called soymilk (*leche de soya*), which can be made at home from soybeans. There is no danger of tuberculosis in soymilk as there is in cow's milk. Discusses various published experiments feeding soymilk to infants, and gives the chemical composition of Soybee and Sobee, two soy-based infant formulas. There follows one paragraph on each of the following foods: Soy cheese or tofu (*el queso de soya or teo-fu*). Soy sauce or shoyu (*la salsa de soya o shoyu*). Soybean puree (*el puré de soya;* made from dehulled, ground soybeans, boiled for a long time). Soy cottage cheese and butter. Soy oil and lecithin. Soy coffee and chocolate. Soy bread (bread enriched with 10-20% soy flour; good in diabetic diets). Soymilk: A table compares the chemical composition of mother's milk, cow's milk, and soymilk. Address: Dr.

• ***Summary:*** Contents: Botanical description: Introduction, the plant's needs, varieties. Soybean cultivation in Europe: Introduction (for some countries preferred early, medium, and late varieties are listed), France, Great Britain, Hungary, Poland (selection has been done at the Wilna experiment station using varieties imported from Hungary and Czechoslovakia), Romania (About 30,000 ha are devoted to soybeans, primarily in Bessarabia [Besarabia], Dobrouja [Dobrudja, Dobrogea], Bukovina [Bucovina], Walachia or Wallachia or Valachia [now called Muntenia, a fertile belt across southern Romania], and Moldavia. Most of these varieties came from Austria), Switzerland, USSR (the main soybean regions are all warm ones–the Caucasus, Ukraine, and Transcaucasia). Soybean cultivation in America. Soybean cultivation in Africa (especially in South Africa, mainly for forage in the Natal and Transvaal). Soybean cultivation in Asia: China and Manchuria, Malaysia, British Indies, Dutch Indies, Indochina, Japan. Soybean cultivation in Oceania (mainly Philippines).

Cultivation: Crop rotation, inoculation, planting and propagation, maintenance and manuring the land, harvest, seed storage, yield, selection of varieties. Soybean utilization: As human food (dry soybeans, soy sauce, soy flour, soymilk, tofu, soy oil), industrial uses (soy oil, refining and use, soymilk casein). Soya as a fertilizer: Green manure, or soybean cakes. Soya as a feed for domestic animals: Green forage, hay, silage, pasture, seeds, cakes. Soybean cultivation in the Belgian Congo. Soybean trade.

In the Congo various soybean trials have been undertaken since 1936 at the stations of the National Institute for Agronomic Study of the Belgian Congo (l'Institut National pour l'Etude agronomique du Congo Belge). Numerous varieties from the USA and Manchuria have been tested. Address: Directeur au Ministere des Colonies, Professeur a l'Institut Agronomique de Gembloux [Belgium].

1840. Saris, John. 1941. The first voyage of the English to Japan. Transcribed and collated by Takanobu Otsuka. Tokyo: Toyo Bunko. xxxii + 266 p. 26 cm. Supplementary volume. [3 ref]

• ***Summary:*** A transcription of the original manuscript, which was published in a facsimile edition in 1940. The original manuscript has the title: *The first voyage of the English to the islands of Japan.*

On 29 Aug. 1613, while in Japan (near Shizuoka), Saris wrote: "Of Henns they haue greate store, as likewise of Deere, both redd and fallowe wilde bores, hares Goates Kyne etc. Of theese they haue plentie, butter they make none, Neither will they eate any Milke, because theie hould it to be as bloode, nor tame beasts."

Note 1. The word transcribed from the original manuscript as "Cheese" by Satow in 1900 is transcribed here by the Japanese as "theese."

Note 2. John Saris died in 1646.

1841. Quail, Betty. 1942. Vary your menus with Chinese foods: While their cooking techniques are different from ours, we can adapt some of their vegetables to our advantage. *Los Angeles Times.* March 29. p. F5.

• ***Summary:*** The Chinese, our old friends and new allies [in World War II] have long used soybeans as a staple in their diet. But in America, until recently, they were grown solely as a forage crop. "Fresh green soybeans rank higher in food value than any of our common table beans..." Dried soybeans

© Copyright Soyinfo Center 2013

contain about 12 times as much fat as other beans. Today soybean flour and bread are widely available in American food stores.

"The Chinese, however, were not content with just beans. They set to work with the skill of alchemists and accomplished some surprising results. They sprouted the dried beans..." to yield bean sprouts, now starting to be sold in American markets. Then they made a milk out of crushed soybeans and turned it into bean curd. Cut it into squares and try adding it to an omelet, to hard-cooked eggs, or meat loaf. It may also be seasoned and be used as a stuffing for tomatoes, celery, or green pepper rings for salad. Soybean milk can be substituted for cow's milk. And of course there is "soy sauce, or mandarin sauce." Unfortunately most Americans limit its use to those "half-caste dishes, chop suey and chow mein. As a matter for fact, this dark brown seasoning should have a place of honor on every American pantry shelf..." Like all good seasonings, it brings out the best in other foods, remaining in the background, "completing a dish while claiming no recognition for itself." A photo shows bean curd.

1843. Ladejinsky, W.; Rossiter, Fred J. 1942. Food situation in far eastern and southeastern Asia. *Foreign Agriculture* 6(4):147-64. April.
• ***Summary:*** Rice is the most important food product in all of the countries except North China and Manchuria. Following the Japanese invasion of 1931, soybean production dropped, declining 38% by 1934. Between 1935 and 1939 agricultural output increased once again, though it did not attain previous levels. Then beginning in 1939, a new decline in agricultural production set in. This coincided with the establishment of a stringent control over all aspects of Manchurian agricultural economy in order to enable Japan to get a large supply of foodstuffs as soon as possible and for as little as possible. Because of the opposition of the Manchurian farmers to this scheme, the shortage of both human and animal labor, and not altogether favorable climatic conditions–the soybean crop was reduced from 157 million bushels in 1938 to 145 million bushels in 1939 and in 1940 and 1941 to an estimated 125 and 115 million bushels, respectively. The net effect of reduced production has been a sharp decline in agricultural exports.

Since soybeans and soybean products constitute Manchuria's leading export crop, the exported volume of these products is especially revealing. In 1939-40 (October-September) Manchuria exported 25 million bushels of soybeans, 775,000 short tons of beans cake, and 150 million pounds of bean oil, as compared with 77 million bushels, 1.1 million short tons, and 220 million pounds of soybeans, cake, and oil, respectively, the previous year.

This decline in Manchurian soybean exports affected Japan's food supplies adversely. Aside from the direct use of soybeans for food, probably the most important soybean product from the viewpoint of diet is bean curd [tofu], one of the main sources of protein for the great majority of the Japanese urban population. In 1939-40 Japan was able to get 41 million bushels of soybeans (including cake and meal), against 58 million the previous year. In 1940-41 Japan increased its soybean takings to 48 million bushels, but it was much below the planned record import volume of 84 million bushels. Address: Office of Foreign Agricultural Relations [USDA].

• ***Summary:*** Project: Minidoka (Gooding). Assembly area: Pacific International Exposition Ground. Gender: Male. Race: Japanese. Birth year: 1881 [so he was about age 61]. Birth place: Japan, southern region. Year of first arrival in US: 1905. Arrived where: Oregon. Language: Speak, read and write Japanese. No. of years schooling in Japan: 8; elementary school years 1-8. Education degree: None. Total time in Japan: 20 years. No. of times in Japan: 3–not attending school. Ages while in Japan: 0-9, 10-19, 20 and over. Alien Registration Number: Has A.R. but not S.S. [Social Security] Number and has not attended Japanese language school. Religion: Not available. Primary occupation: Hotel and restaurant managers. File number: 50310082084. Father's birth location: Japan. Spouse: Japanese.

Note: "Camp Minidoka was located near Hunt, Idaho, 20 miles northeast of Twin Falls. In August 1942 the government began transporting Japanese-Americans to the camp via train. Most Minidoka residents came from Seattle [Washington] and Portland and were given notice only one week before being forced to move. Ten thousand people (making Minidoka Idaho's eighth largest city) were interned in tar-paper barracks that had no insulation, running water, or interior walls, and that were heated by coal-burning stoves. Barbed wire, guard towers, armed guards, and watch dogs secured the 950 acre site" (Source: farrit.lili.org).

1847. *Soybean Digest.* 1942. Soybeans and people... Aug. p. 9.

• ***Summary:*** The Iowa Experiment Station is working on better ways to shell "green soys." "No need for bossy: If you wish to make your own butter, milk, and cheese, here are some recipes to help you, from the Edison Institute, Dearborn, Michigan." Contains 3 short recipes: Soy bean milk. Soy bean cheese (tofu, coagulated with dilute acetic acid or vinegar). Soy bean butter (like peanut butter). A photo shows a woman cooking green soybeans in a glass pot on an electric stove. The beans should be precooked before freezing.

1848. Davis, Adelle. 1942. Vitality through planned nutrition. New York, NY: The Macmillan Co. xii + 524 p. Sept. Illust. Index. 22 cm.

• ***Summary:*** This book is written for young people. Soybeans and their nutritional value are discussed throughout. "Dedicated to the high-school student who appreciates both the immediate and the future values of full health."

Of the 23 amino acids, all but 10 can be made by the body. These ten are called "essential amino acids" and must be obtained from food. Protein foods "containing all ten of the essential amino acids in generous amounts are called complete proteins, or proteins of high biologic value." "The proteins of eggs and milk have the highest value." The proteins in glandular meats (liver, kidney, etc.) rank second

© Copyright Soyinfo Center 2013

in value. “Proteins from nuts, soybeans, wheat, especially wheat germ, and cottonseed flour and meal are complete proteins” (p. 58-59).

“Proteins and vegetarianism. Many thousands of people in the world, particularly the Eskimos, Laplanders, and nomad tribes, eat little or no proteins from vegetable sources. Other thousands eat only vegetable proteins, because of poverty or religious scruples, such as the millions of people in India and China. Races which have a high animal-protein intake appear to have excellent physiques and virility and a capacity for endurance which far surpasses the energy and physiques of those eating only vegetable proteins.

“When the complete proteins of wheat, soybean, cottonseed, peanuts, and other nuts are eaten, and the diet is planned with utmost care, it is possible to supply the body with sufficient amounts of the essential amino acids. Some of the world’s leading athletes have been vegetarians. If milk and eggs are generously added to an otherwise vegetarian diet, it can be made adequate in proteins though it is likely to be deficient in iron. There is no argument against a person’s being a vegetarian, except that unless he is trained in nutrition, he is likely to become an unhealthy vegetarian.” (p. 67, 71).

Many vegetable proteins, such as those in soybeans and other legumes, are not well digested unless heated (p. 69). Boys age 13-15 require 85 gm/day of protein, increasing to 100 gm/day for boys age 16-20. Adult women need 60 gm/day and adult men need 70 gm/day (p. 70).

Soybeans (and soy flour) are a good source of B-complex vitamins, including thiamin (p. 160), niacin (p. 186-87), pyridoxin [pyrodoxine] (incl. soybean oil; p. 193), pantothenic acid (p. 194). Since vitamins of the B complex cannot be stored in the body, “the daily diet must be carefully planned if full health is to be maintained.” “Buy only wheat breads and cereals with 100 per cent whole grain marked on the labels. Use wheat-germ breads... and soybean bread whenever possible.” Also blackstrap molasses and brewers’ yeast. “Use soybeans, baked or in a loaf or patties, as meat substitutes... Cultivate a taste for liver, brain, kidney, heart and sweetbreads and use them more frequently than other types of meat (p. 208-09).

“Salted peanuts and roasted soybeans are ideal candy substitutes which build rather than destroy health. Both are excellent sources of vitamins of the B complex” (p. 210).

Wheat germ is the richest natural source of vitamin E, which is “also found in cottonseed oil, corn oil, sesame oil, soybean oil, and peanut oil” (p. 286-87). There are at least three forms of vitamin E, which are called the vitamin-E complex: alpha-, beta, and gamma-tocopherol. “Alpha-tocopherol is the most active and has been made in the laboratory.”

Calcium: “Many Oriental races obtain their calcium principally from soybeans and soybean curds [tofu], which form a staple food.”

Note: This is the earliest English-language document seen (April 2013) that uses the term “soybean curds” to refer to tofu.

Bones are used as a major source of calcium by Eskimos, Africans, and (formerly) American Indians. Adults should consume at least 750 mg/day of calcium, the amount found in 3 glasses of milk (p. 312-15). “Another vegetable which is rich in calcium is the soybean, a food all too little used in America. Soybean flour is fourteen times richer in calcium than refined wheat flour, and baked soybeans are many times richer in calcium than baked navy beans. Every person should learn to enjoy this highly nutritious food and make it an important part of his diet.” (p. 319).

In Chapter 29, The functions of the blood” (p. 328-30), Davis discusses the effect of acid and alkali, but in a much different way than former health food advocates. She does not advocate alkaline foods, but shows how the body keeps its fluids near neutrality, or very slightly alkaline. “Soybeans are extremely rich in iron, of which 80 per cent reaches the blood. In a mixed diet as a whole, only about 50 per cent of the iron in foods is available” (p. 340).

Iodine is necessary to prevent goiter. “Since early times, the eating of seaweed has been known to affect goiter favorably” (p. 350). Salt (sodium chloride) is essential to good health. In very hot weather and dry air, so much can be lost through perspiration that death results. “Death due to salt deficiency occurred during the first years of work at Boulder Dam... In milder forms, a lack of salt causes heat cramps or heat stroke,” which is “accompanied by nausea, dizziness, general exhaustion, and muscular cramps in the legs, back, and abdomen. Without salt, the more water drunk, the worse the condition becomes.” “During very hot weather salty foods such as salted peanuts, popcorn, or soybeans, salty cheeses, or potato chips should be kept near the drinking water” (p. 367).

The section titled “Your body’s requirements” (p. 386-89) lists 8 food groups or foods that are the best sources of required nutrients. These include: “7. One serving of meat, fowl, fish, eggs, or a meat substitute such as baked navy beans or soybeans,...”

“Dried fruits should be the main candy substitute... Other health-building candy substitutes are unsweetened chocolate, salted peanuts or soybeans, chocolate-covered peanuts, and cracker jack made with black molasses” (p. 400-01).

A table (p. 484-85) gives the nutritional composition of soybeans: (1) dried, cooked; (2) dried, uncooked. Address: A.B., M.S., consulting nutritionist, Los Angeles, California.

1849. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1942. Daily output of 500 tofu planned for Poston III. 4(32):1. Oct. 2.

• ***Summary:*** Five hundred tofu a day for the tables of Poston III dining halls will soon become an actuality, it was declared

© Copyright Soyinfo Center 2013

yesterday by the food industry, Sim Togaseki, who revealed that half of warehouse 320 will be occupied as a production plant for this Japanese food under the management of Ray Hara.

"The large scope of this undertaking alone was indicated by the quantity of material to be used, which included 500 gallons of water daily.

"The tofu production, however, is but the first step in the industrial production of various Japanese foodstuffs. On the proposed list were the manufacture of such material as noodles, shoyu, etc.

"An advisory council of experienced business men is working on the industrial project."

Note: The Poston War Relocation Center, located in Yuma County (now in La Paz County) of southwestern Arizona, was the largest (in terms of area) of the ten American internment camps operated by the War Relocation Authority during World War II.

"The Center was composed of three separate camps arranged in a chain from north to south at a distance of three miles from each other. Internees named the camps Roasten, Toastin, and Dustin, based on their desert locations. The Colorado River was approximately 3 miles (4.8 km) to the west, outside of the camp perimeter.

"Poston was built on the Colorado River Indian Reservation, over the objections of the Tribal Council, who refused to be a part of doing to others what had been done to their tribe. However, officials of the Bureau of Indian Affairs overrode the Council, seeing the opportunity to bring in improvements and develop agricultural land on the War Department budget and with thousands of 'volunteers,' which would remain after the war and aid the Reservation's permanent population.

"The combined peak population of the Poston camps was 17,814, mostly from Southern California. At the time Poston was the third largest 'city' in Arizona. It was built by Del Webb who would later become famous building Sun City, Arizona, and other retirement communities" (Source: Wikipedia, Poston War Relocation Center, 12 April 2011).

1850. *Poston Press Bulletin* (*Poston Internment Center, Arizona*). 1942. Tofu equipment arrives for Poston III. 5(6):1. Oct. 13.
• ***Summary:*** "Arrival of tofu manufacturing equipment early last week signalizes [sic, signals] a concrete step toward production of Japanese subsistence goods in Poston III. This was accomplished despite the serious situation existing in way of shortages and priorities in regard to metal equipment of any type.

"Full cooperation from the administration, maintenance, construction and supplies departments is going to make this project possible. Barring unforeseen obstacles, production of tofu should commence by the end of this month. We hope to produce enough tofu to supply each mess hall at least once a week. When production is in full swing the project will employ ten men.

"This week should see the arrival of the mango [sic] beans, basic substance for tofu, and also the butane tank which is to supply the fuel.

"Other Japanese foods for production are miso, moyashi, and noodles."

1851. *Poston Press Bulletin* (*Poston Internment Center, Arizona*). 1942. Steps for tofu production near completion. 6(17):5. Oct. 24.
• ***Summary:*** "Preparations for tofu manufacturing moved into the final stages at Poston III today with the arrival of ten sacks of soy beans from Los Angeles. Five of the sacks contained yellow and five contained green soy beans. Tofu makers headed by Ray Hara and including Ted Yamada, Mr. Koga and Mr. Okino examined the beans and commented that they seemed to be of a pretty fine grade.

"Commencing this morning the Industrial Staff of Poston III assisted the Tofu men to make the brick foundation for the butane burner. Supervising the construction was Mr. T. Yutani, general research and survey chairman."

1852. *Scientific American.* 1942. Miracle beans: Long called "The Cow of China," the soybean is now invading almost every field of endeavor. 167(5):216-18. Nov.
• ***Summary:*** This article begins: "America in general has just begun to 'discover' the widely varied possibilities of the soybean. Henry Ford makes steering wheels of it, midwestern farmers look on it as a promising money crop, diet and health practitioners are starry-eyed about its protein, calcium, and iron content... the little bean is a capital meat substitute; that coffee, cheese, candy, salad oil, lubricating oil, printer's ink and celluloid and glue, airplane bodies and rubber substitutes are made from it. It's good for cattle–good for dog food and linoleum and paint and rayon panties, good for explosives, good for building bone and muscle in fighting men. It's a fine forage crop and, like alfalfa, it will enrich the soil.

"But five years from now, when the present war has made the soybean as familiar an institution in America life as cellophane and synthetic rubber, it will be well to remember that the 'discovery' of today was known to the Chinese thousands of years before the birth of Christ. The emperor Shen Nung speaks of it in his "Materia Medica," written in 2838 B.C. Whole ages before this... a legend was current which had been handed down in northern China and Manchuria to the present day, telling how man first became acquainted with the soybean.

"A caravan of merchants, says the legend, was homeward-bound, loaded with gold after a successful trading expedition, when it was attacked by bandits. Taking shelter in an easily defended ravine, the traders held off the

© Copyright Soyinfo Center 2013

attackers for several days until their food ran low. Starvation threatened–until one of the servants returned to camp with a sack of beans he had found on a vine-like plant which the animals were eating. They mashed up these beans to a paste with a little water and baked them–and on this crude biscuit the famished men regained enough strength to hold off the attackers until help arrived.

"The Chinese have looked on the soybean as their staff of life for ages." Many have never tasted milk except that from the soybean, which costs one-fourth as much as cows milk. "Long it has been called the Cow of China. The Orient uses the bean not so much as a vegetable as for making cheese [tofu], [soy] sauce, bread, and meat substitutes. For thousands of years it has been the basic protein food in Manchuria, China, Korea, Japan, and the Malay Peninsula.

"Soybeans first came to America in 1804 on a clipper ship whose Yankee master had ordered several bags tossed in the hold in case his provisions ran low."

William J. Morse, now senior agronomist at the USDA, worked for 34 years "with the quiet fervor of a missionary to bring the miracle bean prominently into the agriculture of this country."

In 1929 some 9 million bushes of soybeans were grown in the USA, increasing to 91 million bushels in 1939. The soybean is now America's fourth largest cash grain crop; "we grow as much as Manchuria. The cow of China has become a hundred-million-dollar American industry.

More than 75% of America's soybean oil goes into food products; most of the rest goes into paint, lacquers, and soaps. About 95% of the soybean meal is fed to livestock; the remaining 5% is used to make plastics, flour for baking, glue, fertilizer, dog food, breakfast cereals, macaroni, baby foods, reducing diets, and diabetic foods.

Discusses (at great length) the work of Henry Ford and Robert Boyer with soybeans, including soy fiber (which has the potential to replace wool), Ford's suit made of 25% soybean fiber, plastic parts in cars, the car of the future with a plastic body over a tubular steel framework (it will weigh only 85% as much as 1942 models did), and his solvent extraction system.

Note: This is the earliest document seen (Dec. 2011) with the term "Cow of China," referring to the soybean, in the title.

1853. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1942. Unit II tofu industry delayed by lack of construction material. 8(8):7. Dec. 22.
• ***Summary:*** "Lack of essential construction material and machinery has been retarding the opening of the tofu manufacturing business, it was stated yesterday by E. Sakaguchi and John Nakamura of the Poston II Industries Committee."

1854. *Granada Pioneer* (*Camp Amache / Granada Internment Center, Granada, Colorado*). 1942. Tofu merchant arrives here. 1(18):3. Dec. 24.
• ***Summary:*** "George T. Nagamoto of Swink, Colorado, arrived here to renew his contract with this center to supply tofu for the next three months.

"Nagamoto, a pioneer seed merchant, has been doing business in Swink for many years. At present his business is limited to wholesale and retail distribution of koji, miso, shoyu, age, and tofu,"

1855. Stanley, Louise. 1942. Studies of Bureau of Home Economics (on soybeans). *Soybean Digest.* Dec. p. 4, 10.
• ***Summary:*** "During the last war an effort to promote the wider use of soybeans was unsuccessful because the vegetable varieties were not generally grown and processed products from the other varieties were on the market to a limited extent. Soys were grown then largely as a forage crop and used in animal feeding.

"The earlier work of the Bureau on soybeans was undertaken in cooperation with the Bureau of Plant Industry. We tested the vegetable varieties–those most satisfactory as a green vegetable–those that were easily cooked as dried beans and did not have the beany flavor characteristic of many varieties.

"The green vegetable soys are too little known and used. They have good flavor and food value, being good sources of efficient protein, calcium, vitamins A, C, thiamine, riboflavin and probably a fair source of other members of the B complex.

"Satisfactory methods of preparing and using soybean milk, the curd, and the mash were worked out and the varieties most satisfactory for this use determined. Home methods were worked out for sprouting the dried beans." A photo shows Dr. Louise Stanley. Address: Chief, Bureau of Homes Economics, Washington, DC.

1856. **Product Name:** ViM-eat Soy-Nut-Loaf (Vegetarian Meat).
Manufacturer's Name: Butler Food Co.
Manufacturer's Address: P.O. Box 4, Cedar Lake, MI.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8- or 16-oz can.
New Product–Documentation: Manufacturer's catalog. 1942. In 8- or 16-oz cans. "Appeals to those who like the meat flavors. Soy-Nut-Loaf is a highly nutrient [sic] food, containing a complete protein. It can be prepared in many delicious ways: in stews, roasts, vegetable pies, hash, and sandwiches. It is also tasty just as it comes from the can." Recipes are given: Soy-Nut Steak with onions. Macaroni with Soy-Nut-Loaf. Savory Soy-Nut-Loaf.

1857. **Product Name:** ViM-eat Soy-Nut-Cheese (Vegetarian Meat).
Manufacturer's Name: Butler Food Co.

Manufacturer's Address: P.O. Box 4, Cedar Lake, MI.
Date of Introduction: 1942.
Wt/Vol., Packaging, Price: 8- or 16-oz can.
New Product–Documentation: Manufacturer's catalog. In 8- or 16-oz cans. "A highly nutritious food which can be used in a variety of palatable dishes. Rich in protein and fat. Easily digested." Two recipes are given, including Soy-Nut-Cheese croquettes.

1858. **Product Name:** Tofu.
Manufacturer's Name: Haitsuka (Shigeo) Tofu.
Manufacturer's Address: 2131 N. King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1942.
New Product–Documentation: Honolulu City Directory. 1941-42. Shigeo Haitsuka Tofu (Shigeo Haitsuka, proprietor). 2131 N King, Honolulu. Not listed 1947-48.

1859. **Product Name:** Tofu.
Manufacturer's Name: Kaku (Tatsuo) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.
Date of Introduction: 1942.
New Product–Documentation: Honolulu City Directory. 1941-42. Tatsuo Kaku Tofu (Tatsuo Kaku, proprietor). Hilo, Island of Hawaii. Not listed 1947-48. Hawaii, Maui, Kauai Island Directory. 1954. Listed as Tatsuo Kaku Tofu, 28 Nawahi Lane, Hilo, Island of Hawaii. Not listed 1957.

1860. **Product Name:** Tofu.
Manufacturer's Name: Kiyonaga (Kumaki) Tofu.
Manufacturer's Address: 975 Akepo Lane, Honolulu, Oahu, Hawaii.
Date of Introduction: 1942.
New Product–Documentation: Honolulu City Directory. 1941-42. Kumaki Kiyonaga Tofu (Kiyonaga Kumaki, proprietor). 975 Akepo Lane, Honolulu. Not listed 1947-48.

1861. **Product Name:** Tofu.
Manufacturer's Name: Oshiro (Tokusuke) Tofu.
Manufacturer's Address: Hilo, Island of Hawaii.
Date of Introduction: 1942.
New Product–Documentation: Honolulu City Directory. 1941-42. Tokusuke Oshiro Tofu (Tokusuke Oshiro, proprietor). Hilo, Island of Hawaii. Not listed 1947-48.

1862. Poupart, Roméo. 1942. Étude de la fermentation du lait protidique de gourgane en vue de son utilisation dans l'alimentation [Study of the fermentation of protein-rich milk of the broad bean / small garden bean / Windsor bean, in view of its utilization in foods]. MSc thesis, University of Montreal. 55 leaves. [Fre]*
• ***Summary:*** This milk can be used to make tofu. Gourgane is also called *fève des marais* (broad bean). Address: Dep. of Chemistry.

1863. Giraud-Gilliet, J. 1942. Le soja, aliment d'avenir: manière de le cultiver; 2 à 300 façons de le consommer [Soya, food of the future: How to cultivate it; 200-300 ways to consume it]. Saigon: Imprimerie de C. Ardin. 285 p. Index. [Fre]
• ***Summary:*** Contents: Dedication. Introduction. Part I: Summary study of soya (the soybean): Its cultivation. 1. The nature of soya: Its area of expansion. 2. Cultivation of soya: Soil, manure & fertilizer, seeds. 3. Interest in soya: Its richness in nutritive elements and comparison with other foods. Various possibilities for utilization: therapeutic uses for hygiene and diseases (vegetarian diet, diabetes, beriberi, diseases of the nervous system, anemia, slimming, milk diet), agricultural uses for fixation of nitrogen in the soil and as a fertilizer, use in the feeding of animals (green forage, dry forage, soybean cake, flour, seeds, germinated seeds, straw and pods, soymilk, milk), industrial utilization (soybean oil and its derivatives, glycerine, soy casein), use as human food (whole dry soybeans, soy sprouts, soybeans mashed or ground after they are cooked, soybeans cracked or crushed before they are cooked, fermented soybeans, soymilk, soymilk derivatives / foods made from soymilk {tofu / *dâu-phu*, yuba / *tao hu ky*, dry yuba rolls / *phu chuc*, beverages}, edible oil), utilization for social work (drops of milk, bowls of soya, inexpensive restaurants, battle against malnutrition and degeneration, for school gardens, pagodas, waste lands).

Part II: The main soyfood products and how to prepare them at home. 1. Soymilk, soymilk curds (*tau hu hoa*), small white cheeses (*petits fromages blancs* {*dâu-hu miêng*}), folded sheets of yellow yuba (*feuille jaune plissée de crème de soja* {*dâu-hu ky vang*}), white sheets of yuba (*feuille blanche unie* {*dâu-hu ky trang*}), dried or smoked yuba (*plaquettes séchées ou fumées* {*dâu-hu ky ngot*}), fermented tofu–like cream cheese (*fromages fermentées: cancoillotte comtoise au soja*). 2. Soy flour: Roasted soy flour, soy bread, sojenta (soy polenta), pasta (soy vermicelli and vermicelli of mung beans {*dâu xanh*} or *song than*). 3. Soy condiments. Solid condiments: natto and douchi (*taotché*), condiments that are pastes: miso and doujiang (*tao tjiung*) and koji [sic, not a paste but used to make miso, doujiang, shoyu, and jiang-you], liquid condiments: shoyu, jiang-you (*tsiang yeou*), (*tao yu*), ketjap (Indonesian soy sauce), Vietnamese soy sauce (*tuong*).

Part III: Recipes. 1. Introduction: Essential recommendations, the cookery of the poor, comparative cuisine, general recipes. 2. Soups and paps. 3. Hors d'oeuvres and salads. 4. Vegetables. 5. Meat, fish and egg dishes. 6. Breakfasts, sweets, and desserts.

Conclusion. Appendix. Errata. Address: Administrateur des S.C. de l'Indochine; Vietnam.

1864. Lager, Mildred. 1942. Soy bean recipes: 150 ways to use soy beans as meat, milk, cheese, & bread. Los Angeles,

© Copyright Soyinfo Center 2013

California: House of Better Living. 43 p. Index. 21 cm.
• ***Summary:*** Contents: History of the soy bean. Food value. Analysis. Comparison with other legumes. Ash analysis. Soy beans in low starch diet. Alkaline in ash. Recipes: Green beans. Dry beans. Meat substitutes. Soy milk. Soy cheese. Soy butter [soynut butter]. Salads. Salad dressings. Soy spreads. Soy cereal. Soy macaroni, spaghetti and noodles. Soy bread and muffins. Waffles and pancakes. Cakes and cookies. Candies. Beverages. Toasted soy beans. Bean sprouts.

"Alkaline in ash: Soy beans have one great advantage over many proteins especially the meat proteins, in that they are alkaline in their chemical reaction or ash. This applies to the soy bean itself and to the other 100% soy bean products. The alkalinity will naturally be less in products where soy beans are mixed with acid ash foods."

A small portrait photo (p. 1) shows Ms. Lager and notes: "I want to acknowledge the aid received from Madison College, Tennessee; Loma Linda Food Company, El Molino Mills, Penna Soya Products Company, and from the many friends who gave me suggestions and recipes." Address: 3477 West 6th St., Los Angeles, California.

1866. Lin, Yutang. ed. 1942. The wisdom of China and India. New York, NY: Random House. xiii + 1104 p. No index. 24 cm.
• ***Summary:*** "Translations of a wide collection of fables, tales, poems, and excerpts from sacred books introduce the Westerner to the spiritual and cultural wealth of the Orient."

In "Part Two: The wisdom of China" is a section titled "Six chapters of a floating life," by Shen Fu (Translated by Lin Yutang); it is an autobiographical novel. Shen Fu lived 1763-1825, during the Qing dynasty, in Suzhou (in today's central eastern China).

Page 980: Yün is the wife of the author; they deeply love one another. "To this Yün replied: 'One eats bean-curd because it is so cheap and it goes with dry rice as well as with congee."

"You yourself eat garlic, for instance, and I have tried to eat it with you. I won't compel you to eat stinking bean-curd, but cucumber is really very nice, if you hold your breath while eating."

"Yün also prepared pickled bean-curd mixed with sesame seed oil and sugar, which I found also to be a delicacy. We then mixed pickled cucumber with pickled bean-curd and called the mixture 'the double-flavoured gravy.' I said I could not understand why I disliked it at first and began to love it so now. 'If you are in love with a thing, you will forget its ugliness,' said Yün."

1867. Löbbe, Henrique. 1942. Cultura da soja no Brasil. 6a ed. [Culture of soybeans in Brazil. 6th ed.]. Rio de Janeiro, Brazil: Serviço de Informaçao Agrícola, Ministerio da Agricultura. 35 p. 23 cm. 4th edition, 1939, 33 p.; 7th ed., 1945, 74 p. [Por]
• ***Summary:*** Contents: History (in East Asia, Europe, and the USA). Markets. Soybean trials in Brazil (from March 1921 at Campo de Sementes de Sao Simao). Letter dated 28 Sept. 1926 from W.J. Morse of the USDA to Dr. Henrique Lobbe (after Lobbe's visit with Morse to Arlington Farm [Virginia], Morse sent Lobbe one ounce each of 51 varieties of named American soybeans, plus 17 varieties of cowpeas). Table showing the 48 varieties of soybeans tested at Sao Simao in 1927, with the dates of planting, germination, flowering, maturation, and harvest, days to maturity, resistance to pests (*vagens*), height of the plant, and yield (in grams). Botanical description. Nomenclature (in Brazil the soybean is called "soja," "feijao China," "ervilha oleaginosa do Japao," "feijao Japones," and "fava da Mandchúria"). Varieties (divided into 5 groups from very early [80-90 days] to late [130-150 days]). Green manure. Climate and soil. Chart showing products of the soybean (from Piper & Morse, *The Soybean* 1923). Preparation of the soil. Inoculation with bacteria. Sowing. Chemical fertilizer. Things to be careful of during cultivation. Diseases and pests. Harvest and yield. Cost of cultivation. Use as forage. Chemical composition of the seeds. Oil. Cake. Use as a food for humans: Hahto and Easycook, soy sauce, soymilk and tofu (*leite e queijo de soja*), use in diabetic diets, soy flour. Address: Brazil.

1868. Mouriquand, Georges. 1942. Vitamins et carences alimentaires [Vitamins and food deficiencies]. Paris, France: Albin Michel. 462 p. Illust. Index. 20 cm. Series: Sciences for Today (*Sciences d'Ajourd'hui.* [Fre]
• ***Summary:*** This book was published during World War II. Because the Germans looted France of food and other valuables, the French were suffering from malnutrition. Efforts were made on many fronts to grow soybeans in France; long experience had shown that certain varieties

© Copyright Soyinfo Center 2013

grew and yielded well in the southern and eastern parts of the country. Moreover, soybeans were not subject to requisition by Germany, which did requisition meat dairy products, wheat, potatoes, wines, etc. It had long been well known that the soybean contained exceptional nutritional value, especially as a source of high-quality, low-cost protein. Yet Prof. Mouriquand regrets that habitual ways of eating and thinking are making the French slow to adopt soyfoods into their diet, where they could do immense service to the population. Even though he is a distinguished professor of medicine, Prof. Mourisand he does not hesitate to give his all and to cultivate soybeans (either he or someone in his family) as an experimental home crop–as shown in photographs.

The section on Flours for infants and young children (from 6 months to 6 years; p. 325-28) notes that France's Minister of Health and the Family demanded that the Commission on Food, under the Consultative Committee of Hygiene for France set aside flour, to be sold a low prices, for infants and young children. A table shows that these flours include both soy flour (*Farine de soja*) and defatted soybean cake. The introduction of soy into the diet raises the content of protein and oil in the diet. Our trials show–contrary to what some may believe–that soy does not give any "bad taste" to the flour and that that the infants accept and digest perfectly any of the flours shown in the table if they are presented in the form of a pap with milk. Our study also shows that toasting the flours renders them even more savory and more digestible.

The section on Soy and nutritional balance (p. 407-10) states that there are now major deficiencies of protein and fat in the French diet. Yet men such as Bordas and Matagrin have written extensively about the soybean. Now is the time we must heed their words. The soybean contains about 40% protein and 18-20% vegetable oil; this oil is one of the main oils used by the Germans. One kg of soybeans has about the sane nutritional value as 6 liters of milk or 500 gm of meat. And soy contains vitamins A, B, and D. The people of southern France should be growing their own soybeans. The soybean can also be made into chocolate, or roasted soy flour can be added to cocoa powder to enrich it with protein, calories and vitamins–and to lower its price. Soybeans can also be use to make soymilk, tofu (fromage de soja), etc. Various authors have recommended a mixture such as the following for infants and young children: Soy flour 5-8 gm. Rice cream 10 gm. Malt 2 gm. Sugar 5 gm. Water 80 gm; it is well accepted and well digested.

Facing page 368 is a photo of soybean plants in a field at Saint-Rambert l'Ile-Barbe in the department of Rhone near Lyon. Photo by Ed. Mouriquand, Sept. 1941.

Facing page 369 is a photo of a single mature, dry soybean plant, planted in May, pods reached maturity on 15-30 Sept. 1941. Photo by Ed. Mouriquand, Sept. 1941. Address: Professeur à la faculté de Médecine de Lyon. Membre correspondant de l'Académie de Médecine, France.

1869. Rotondi, Pietro. 1942. Vegetarian cookery. Los Angeles, California: Willing Publishing Co. 151 p. Recipe index. 23 cm. 2nd edition 1948 (150 p.).

• ***Summary:*** This book, dedicated "To Humanity," is basically a vegan cookbook–except for the use of a little honey. It uses no dairy products or eggs, and views a raw food diet as the ideal–although many recipes call for cooking. Following the dedication is this quote: "The human body is the temple of God and as real as God himself, because He dwells in it..."

Under "Substitutions" (p. 21) the author notes that "Soy milk may be substituted for cow's milk..." Under "For the infant" we read: "Advice to the mother–Almond milk is the most perfect and ideal food for the infant both in nutritional value and digestibility." Soy sauce (p. 70-71, etc.), Savita, and Vegex are widely called for a seasonings. The soy-related recipes in this book seem extremely original and innovative; they include: Baked lima beans (with soy bean milk, p. 58). French-fried onions (with soy bean milk, p. 61). Peas cooked with potatoes and soy bean milk (p. 67). Whole wheat or barley chowder (with soy bean milk, p. 68). Ripe olive croquettes (with soy milk, p. 71). Vegetable hamburgers (with soy bean milk, p. 72). Carrot loaf I (with soy milk, p. 73). Tofu (fried in flour breading, p. 74). Tofu loaf (baked, p. 74). Tofu omelet (p. 74). Tofu and garbanza [garbanzo] beans (p. 75). Gluten steak (with 1 cup soy sauce, p. 75). Chop suey (with [mung] bean sprouts and soy sauce, p. 78). Savory lima patties (with soy bean bread, p. 85). Soy bean loaf (with cooked and ground soybeans, p. 85). Soy gravy (with soy milk and soy sauce, p. 87-88). Wholewheat bread and rolls (p. 89-92; many call for the use of soy milk). Tofu cake I (like a baked cheesecake with shredded coconut, lemon, and agar, but no crust, p. 99). Tofu cake II (like a cheesecake with a wholewheat or graham cracker crust, p. 99). Note: This is the earliest document seen (Oct. 2003) that mentions a tofu cheesecake, and the earliest recipe seen (Oct. 2003) for a tofu cheesecake.

"All Bran" muffins (with brand and soy milk, p. 112). Soy wheat germ muffins (with soy pastry flour, p. 113). Corn meal muffins (with soy milk, p. 113-14). Soy bean chocolate frosting (with "2 squares soy bean chocolate," p. 116). Soy bean chocolate date pudding (with 5 oz "soy bean chocolate" and 1 tablespoon soy bean milk, p. 120). Rice pudding deluxe (with 1 quart soy milk, p. 121). Soy bean chocolate ice cream (with 1/3 pound soy bean chocolate and a pint coconut milk, p. 127). Fruit ice cream, Maple sugar candy, Maple fudge (each with soy milk, p. 129). Soy bean chocolate fudge (with 1 cup "grated soy bean chocolate" and 3 tablespoons soy milk). Peanut butter fudge (with soy milk, p. 130). Soy bean chocolate caramels (with 3 squares soy bean chocolate and ½ cup "soy milk," p. 131).

On pages 141-43 are two charts: (1) Alkaline, acid and

© Copyright Soyinfo Center 2013

neutral foods (soy beans [dried or fresh], soy bean bread, and soy bean milk are listed as having an alkaline ash, whereas flesh foods, eggs, cheese, and most nuts are listed as having an alkaline ash). (2) Vegetable protein vs. animal protein. Divides various foods that are high in protein content into vegetable and animal, then ranks them in descending order of protein content. Included in the vegetable protein are: 1. (highest) Soy bean flour 39.5%, 4. soy beans 34.0%. The highest ranked animal product is dried beef 39.2%. The average protein content of 26 vegetable foods is 25.89%, compared with 21.79% for 26 animal foods.

The author, a chiropractor, died in about 1986 in a fire at about age 92. A videotape of him has been produced by the Rotondi foundation in Los Angeles.

Note: This is the earliest English-language document seen (Jan. 2007) that contains the term "Vegetable hamburgers" (or "Vegetable hamburger"). Address: Los Angeles, California.

1870. Satow, Ernest Mason; Masakata, Ishibashi. comps. 1942. An English-Japanese dictionary of the spoken language. Revised by E.M. Hobart-Hampden, G.M.C. and Harold G. Parlett. South Pasadena, California: P.D. and Ione Perkins. ix + 1530 + 20 p. See p. 1232. 20 cm.
• ***Summary:*** The entry for "Bean" (*mame*) includes (p. 125-26): "broad bean(s) (*vicia faba*)" = sora mame; ketsu-mame (vulgar). "French bean(s)" = ingen-mame. "Indian bean(s)" = adzusa. "parched bean(s)" = iri-mame. "small red bean(s) (*phaseolus subtrilobatus*)" = adzuki; shôdzu (with 2 Chinese characters = 2 Cc). "soya bean(s)," soy = daidzu (2 Cc). "sugared bean(s) = ama-nattô.

The entry for "Beancurd" (*tôfu*) (2 Cc) states (p. 126): "served in hot water" = yudôfu. "baked" = yaki-dôfu. baked and "smeared with sweetened miso" = dengaku (2 Cc); dengaku-dôfu. (Note: Hachihai-dôfu is–cut small and stewed in a sauce of 4 parts water, 2 parts sake, and 2 parts soy [sauce]). "fried" = abura-age, aburaage.

Beanpaste, n. an.

The entry for "Rice" states (p. 1142-43): (the riceplant) = ine; (raw grain rice) = kome; (cooked rice) = meshi, gohan (2 Cc); gozen (2 Cc); o mamma (child's word)... "glutinous rice" = mochi-gome. "glutinous rice and red beans" = o-sekihan (2 cc); kowa-meshi (given in Japan as a return for wedding); "new rice" = shimmai [shinmai]. "rice and red beans (eaten in Japan on the 1st, 15th and 28th day of each month and on birthdays, and supposed to be productive of good luck)" = aka no meshi; aka no gohan. "rice and tea"... = kigara-cha, or kigara-meshi, is rice boiled with a little soy and now generally given instead if cha-meshi. "uncleaned rice (husked but not polished) = gemmai [genmai]. "Rice-cake" = mochi; o kachin; ammo (child's word).

The entry for "Sauce" states (p. 1176): kake-shiru; (of wheat, beans, salt) miso; shôyu (2 Cc).

The entry for "Sieve" (*furui*) states (p. 1232): "a memory like a sieve" = *misokoshi-mimi.* "a hair sieve" = kinugoshi.

Note: The word "kinugoshi," in this sense, appears to have nothing to do with kinugoshi tofu.

The entry for "Soup" states (p. 1264): soppu; (o) tsuyu; shiru; (flavored with soy) sui-mono;... (made with miso) o tsuke; miso-shiru; o-mi-o-tsuke (used only by women).

The entry for "Soy" (shôyu) (2 Cc) states (p. 1265): "o shitaji" (used by women). "soy pourer" = shôyu-tsugi; shôyu-sashi.

Soy-bean, n. daidzu (2 Cc). black soybean, kuro-mame; kuro-daidzu.

Words *not* listed: kinako, kinugoshi tofu, yuba. Address: 1. Japanese Secretary to H.M. Legation at Yedo; 2. Imperial Japanese Foreign Office.

1871. Takenobu, Yoshitaro. ed. 1942. Kenkyusha's new Japanese-English dictionary. Cambridge, Massachusetts: Harvard University Press. iv + 2280 p. 24 cm. American edition. Reproduced by a photolithographic process from the 82nd printing of 1939." Title also in Japanese: *Shin Wa-Ei Daijiten.* [Eng; jap]
• ***Summary:*** "The present war has necessitated the publication in the United States of a new edition of Kenkyusha's Japanese-English Dictionary because this country is cut off from the former source of supply of the dictionary and because the demand and need for all Japanese dictionaries has greatly increased. To meet this need, the Department of Far Eastern Languages of Harvard University has undertaken the project of publishing in the United States this dictionary as well as other essential Chinese and Japanese dictionaries, and the Rockefeller Foundation has supplied the necessary funds for the enterprise.

"This American edition of the dictionary has been reproduced by a photolithographic process from the eighty-second printing of 1939. No changes have been made in this edition except to increase slightly the size of the print and the book."

The very first page, titled *Kaisetsu* ("explanation"), shows the Japanese syllabary and the romanization of each.

Near the end are two appendixes: (1) Pages 2264-74: *Saishin-go oyobi gairai-go ichiran* [List of most recent words and foreign words]. (2) Pages 2275-80: *Chugai hikaku nenpyo* [List of Japanese emperors and era names, with Japanese years and Western calendar years–starting with the first legendary emperor Jimmu (660-585 BC)].

The content of this pirated American edition is basically the same as that of Kenkyusha's 1931 second edition of this dictionary. Address: General editor, Japan.

1872. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1943. Indy. dept. expected tofu production within fortnight. 9(9):3. Jan. 16.
• ***Summary:*** "The much anticipated tofu production for Unit

© Copyright Soyinfo Center 2013

I has reached its stage of reality with the arrival of equipment according to Hank Miwa, project supervisor.

"The production has been estimated for 700 cakes per day with crew of 13 workers; factory is equipped with 3 caldrons and 2 mill grinders. Due to hard water conditions and chlorination, the department has purchased a water softener to insure fine quality and texture. Tomoji Wada, formerly of Terminal Island will serve as head technician who, according to information, has been considered as an expert in the production.

"Factory is located west of the garnishing factory with a structure 75' x 26' which is currently undergoing final touch."

1873. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1943. First tofu produced by Poston industry. 9(10):1. Jan. 19.
• ***Summary:*** "Fulfilling a dream since the organizing of the Industrial Department of Poston III, the first tofu was produced yesterday under the supervision of Ray Hara and his staff."

1874. *Rohwer Outpost* (*The*) (*Rohwer Internment Center, Rohwer, Arkansas*). 1943. Center to get tofu: Long-awaited tofu factory will commence operation in November. 3(33):1. Jan. 23.
• ***Summary:*** "On about Nov. 15, Center residents will be able to cut the long-awaited-for tofu to be manufactured at the local Tofu factory in Block 42, announced J. Yamaguchi, who is in charge."

"With a crew of 12, the factory will be managed by Yamaguchi who operated the Lafayette Tofu company in Stockton, Calif. for 13 years until evacuation.

"Production of miso will be delayed and announcement will be made when ready, reported G. Miyano who is in charge of the Miso factory which will also be in Mess hall 42."

1875. Holt, Jane. 1943. News of food: Soy beans, the source of oil, flour, milk and cereals, winning 'terrific' popularity. *New York Times.* Jan. 27. p. 16.6.
• ***Summary:*** "The wallflower became the belle of the ball. That, figuratively, is the American history of the soy bean." Several decades ago the soybean was considered fit only for fodder, but now it is found, in one form or another, "on the best of dinner tables."

Soy flour is creamy yellow in color and lighter in texture than wheat flour. It may be used for baking muffins, soft cookies, or bread. In one Manhattan department store, soy flour is sold in 1-pound tins for $0.30 each. Dried soybeans (or "dried soys") are sold in New York City shops for about $0.10 per pound.

Although the canning of soy beans has been ruled out for the duration of the war, some tins are still available. "Giant green beans, those not fully ripe, are sold in six-ounce containers for 18 cents, and a one-pound four-ounce tin of the mature soys costs a quarter [$0.25]. The fresh green variety does not seem to be available at the moment.

Soybean milk is sold in a Manhattan store–$0.20 for a 14 oz tin. The curd is also sold in tins–$0.30 for 13 ounces.

Soybeans are also converted to breakfast cereals. One that recently arrived on the market, made solely from soy beans, "looks and tastes very much like chopped nuts. It is ready to serve with milk or cream, or to use in place of nuts as garnish for cakes and cookies. An eight-ounce package, which holds more cereal than you may suspect, costs a quarter [$0.25]... Various soy cereals have been compounded and set forth as coffee substitutes."

1876. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1943. Tofu production to be doubled soon. 9(20):5. Feb. 2.
• ***Summary:*** "The Unit III tofu production will be doubled when an additional mixer pot now being built in is completed. At present there is only one pot and approximately 200 cakes daily or half of the required production can be produced.

"Last week every Mess hall should have had their first share of Poston made tofu.

"Credit should be given to Ray Okamoto, manager of the tofu factory and his five assistents [sic, assistants] for the excellent tofu which has been turned out.

"To make a batch of 35 cakes, two hours of continuous labor are required."

Note: This is the earliest document seen (July 2011) that mentions actual large scale tofu production in any Japanese internment camp during World War II.

1877. *Topaz Times* (*Topaz Internment Center, Topaz, Utah*). 1943. To manufacture soy bean cakes [tofu] for Topazans. 2(39):2. Feb. 16.
• ***Summary:*** "Pursuant to suggestions voiced by a number of residents that soy bean cake ("tofu") be included in the diet of the Topazans, it was announced by Brandon Watson, chief project steward, that 50 (?) tons of soy beans were procured for the commissary. The Army quartermaster corps has assured the Project of 40 tons of the highly nutritious beans.

"Ten thousand pounds of soy beans will be allowed each month for the 8,500 people of Topaz as long as the supply lasts, Watson added."

1878. Carver, George. W.; Curtis, Austin W., Jr. 1943. The peanut. *Tuskegee Institute Experiment Station, Bulletin* No. 44. 14 p. Feb.
• ***Summary:*** Note: Page 1 states: "This bulletin was in the process of being prepared before Dr. George W. Carver's death on January 5, 1943."

Contents: Introduction. Fertilizing. Selecting seed. Planting. Protecting the seed, Cultivating. Harvesting.

© Copyright Soyinfo Center 2013

Marketing. Grading. Cleaning. Shelling. Roasting in the shell. Salted peanuts. Blanching. Peanut butter. Peanut butter mills. Food value. In candy. Peanut oil. Oil extracting (hydraulic press vs. expeller press). Refining of oil. Analysis and physical constants of peanut oil. Iodine number–89 to 96. Saponification value–186.6–188.4. Titer test 30., 5-32.0º. Smoke point 450-470º Fahrenheit. Diesel fuel. Peanut meal. Peanut flour (incl. nutritional analysis). Peanut hulls. Uses for peanut oil. Additional uses [of the peanut], including peanut "milk," peanut cheese–made "by keeping the 'milk' in a warm place until the curd is formed, which would require overnight, or by the addition of vinegar to the 'milk.' After the curd has been formed it is placed in cheese cloth and allowed to drain. After the liquid has been removed the curd is seasoned with salt and stored in a cool place or cooked immediately.

"The residue resulting from the preparation of the 'milk' or curd can be used in the making of meat substitutes, and in flavoring paste.

"Peanut sprouts are also a very wholesome adjunct to the diet." Address: 1. Director of the Station (1896-1943), Tuskegee Institute, Alabama; 2. Director.

1879. *Topaz Times* (*Topaz Internment Center, Topaz, Utah*). 1943. Topaz kitchen to get tofu. 2(56):2. March 8.
• ***Summary:*** "The steward's department is at present making arrangements for the manufacture of tofu with the coöperation [cooperation] of the Public Works department, it was announced. Equipment for this process will either be made here or sent from the coast.

"Plans call for the use of steam from hospital generators,... It is anticipated that tofu will be served in all dining halls soon."

Note: Topaz was the name of the Japanese internment camp in Utah during World War II. Each of the ten camps was intended to be self-sufficient.

1880. *Manzanar Free Press* (*Manzanar Internment Camp, California*). 1943. Manufacturing and industrial. 3(23):7. March 20.
• ***Summary:*** "'Shoyu,' or soy sauce, a necessary commodity of the Japanese began production in November to supply the center and other centers in the future. Since production began, 2000 gallons per month has been the total but since January this has been increased to 5,000 gallons. Foreman of this project is Nobutaro Nakamura."

Production of bean sprouts [the type of seeds used is not mentioned; probably mung] began in late October. Production now averages 1,600 pounds a week. The foreman is Shigeji Tomita.

A project to make "tofu" is being contemplated, with Henry Toda as foreman. Also a project to make "miso."

Note: This "Special Anniversary Edition," 18 pages long, summarizes the events at the Manzanar center / camp during the past year.

1881. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1943. Tofu manufacture contemplated here. 2(35):3. March 23.
• ***Summary:*** "Equipment to manufacture tofu is being sought by the Mess Division, stated Harold E. Keadle, supervisor.

"It as disclosed that Manzanar and Poston had been making 'tofu' and 'shoyu' for some time."

Note: The Gila River camp, located 30 miles southeast of Phoenix, was located on the Gila River Indian Reservation–over the strong objections of the reservation's American Indian government. The camp opened in July 1942 and had a maximum population of 13,348.

1882. *Denson Tribune* (*Jerome Internment Center, Denson, Arkansas*). 1943. Manufacturing of 'tofu' to start here. 1(9):4. March 30.
• ***Summary:*** "Manufacturing of 'tofu,' or soy bean cake, and 'miso, or soy bean curd [sic] is expected to get underway within a week.
