Note. This is the earliest English-language document seen (April 2013) that uses the term "cheese of Asia" to refer to tofu.

"Johanna H. Dwyer, director of the Frances Stern Nutrition Center at the New England Medical Center Hospitals in Boston [Massachusetts], discovered this resistance during a four-year study on soy protein and estrogen levels in women. She couldn't find subjects that were willing to consume enough tofu to make the study valid." So she ended up using a concentrated soy protein in the study. Dr. Dwyer still feels that "tofu is a good part of a healthy diet, even if by itself it doesn't prove to be a magic bullet. And a good diet is one that is low in saturated fat, high in fiber, and rich in fruits and vegetables."

Each of the following common soybean products is defined: Soy milk, tofu, tempeh, miso, soy flour, textured soy protein.

10920. Sax, Irene. 1995. Learning to love tofu. Soy? Moi? Cooking with tofu: Entrées, desserts. *Newsday* (*Long Island, New York*). Aug. 9. Part 2. p. C1, C5. Wednesday.
• ***Summary:*** The article begins: "Let's be honest. Tofu has the texture of firm Jello and the taste of library paste." At Straight from the Heart, a a health food restaurant in Huntington, New York, two favorite tofu dishes are tofu pizza and tofu with fresh organic vegetables; a photo shows these–but the recipes are secret. Recipes are given for: Baked Szechuan tofu. Tofu summer vegetable curry. Tofu braised with wild mushrooms. Tofu oatmeal cookies. Chocolate tofu pie (the writer's favorite). Address: Staff writer.

10921. Demos, Steve. 1995. New developments at White Wave (Interview). *SoyaScan Notes.* Aug. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave is working to take advantage of the huge amount of publicity about soy protein lowering blood cholesterol. He would like to develop soy-based nutraceuticals (a term Steve first heard from Jeffrey Bland several years ago; the new food medicine) or dietary supplements as a sort of bridge to motivate people to move toward healthy foods. The only two motivators are fear and greed; he will use fear since soy is not glamorous enough to use greed. He has talked with FDA attorneys who have made it clear that under NLEA only dietary supplements can make nutritional claims. Yet the line between foods and dietary supplements is very unclear. It largely depends on how the product is positioned and marketed. Garlic is by far the best-selling supplement in the USA. Slim Fast is a dietary supplement. A soy yogurt or a fortified soymilk could also be positioned as a dietary supplement. Shurtleff's comments: Danger of excess protein intake, which is hard on kidneys and can leach calcium from bones (hypercalciuria). Most of the cholesterol-lowering effect of soy protein may be due to the phytoestrogens bonded to it, so we may want to focus on genistein rather than soy protein. Consider a small product like the lactobacillus drink sold in Japan. Sandoz's concept of selling nutrition not food.

Topic #2. Position on the World Wide Web. Steve's mission is to build brand equity. Paul Chasnoff has registered and "locked in" three positions on the World Wide Web: Tofu.com, Soy.com, and WhiteWave.com. These give him control of the on-ramp to the web. It is very cheap and there are no protections at this time. He has just traded beads for Manhattan, for ownership of the key subject headings in the card catalog. If things change, there will probably be a grandfather clause to protect him.

His soymilk should be on the market in a gable-top caton in November. He has not yet proved marketability. He thinks he has found a manufacturer. Pacific Foods refused to sell him base. Protein Technologies International (PTI) is selling a consumer soymilk somewhere.

One big upcoming project is to launch a line entrees in five flavors. The center of the meal will be a starch (such as rice or noodles) with flavored protein over the top. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

10922. Rubin, Rita. 1995. An oats disciple now turns to tofu: Seeking cholesterol salvation in a soyburger. *U.S. News and World Report* 119:73. Aug. 14. [1 ref]
• ***Summary:*** James Anderson, whose former research on fiber has earned him the sobriquet "Dr. Oat Bran," recently published an influential article in the *New England Journal of Medicine.* It showed that consumption of soy protein can lower cholesterol levels. This article summarizes his study, adding that Anderson likes tofu. Last week he recounted

© Copyright Soyinfo Center 2013

that he has enjoyed tofu scramble, tofu stir-fry, tofu and vegetables, and tofu burgers.

10923. Shapiro, Laura; Springen, Karen. 1995. Health: Oh, boy! Pass me the soy! *Newsweek* 126:60. Aug. 14. [1 ref]
• ***Summary:*** "Hippies were right: Tofu really is good for you." A study by Dr. James Anderson published last week in the *New England Journal of Medicine* reported that people who ate soy products significantly lowered their levels of bad cholesterol and slightly raised their levels of "good" cholesterol. Anderson, an endocrinologist at the University of Kentucky, says it would be "great" if Americans consumed about 30 grams of soy protein a day. That's about half the recommended daily allowance of protein for most people, and the equivalent of about 12 ounces of tofu or two soyburgers. Cookbook author Deborah Madison says that soy doesn't deserve its "yecch" reputation. She likes to add one part soy flour to three parts wheat flour when making bread or pancakes, or frying a breaded tofu cutlet. Though tofu has a very mild flavor, the "health results have plenty of zip."

A photo shows two soybeans in a pod, with the caption: "Bean power: In pod."

10924. Burros, Marian. 1995. Fresh tofu: Safe cooks buy carefully. *New York Times.* Aug. 23. p. C1, C8.
• ***Summary:*** "Eight containers of tofu were purchased recently from six corner markets in New York City. Two of the containers were commercially packaged and sealed; six had tofu that was floating in water and required a store employee or a customer to pick it up by hand, with tongs or with a plastic bag. The tofu was analyzed by Certified Analytical Group Inc. of Plainview, Long Island, for the total level of bacteria; for coliform, which is indicative of unsanitary handling and storage conditions; for E. coli, which indicates fecal contamination, and for yersinia, a food-poisoning organism historically associated with tofu.

"None of the samples contained yersinia. Both of the prepackaged containers of tofu–Kinugoshi and Mori Nu brands–had relatively low levels of total bacteria and no E. coli. Mori Nu had a level of coliform high enough to indicate unsanitary conditions... But all the tofu that was floating in water had extremely high levels of total bacteria and very high levels of coliform; four contained E. coli."

"Consumers can protect themselves by buying tofu only in sealed packages and by cooking it at high temperatures, until it reaches 160 degrees internally–in other words very hot." Contains two recipes, incl. Ma-Po bean curd. A photo shows tofu being sold loose from open tubs of water.

10925. Iwata, Masakazu. 1995. Early history of Japanese farming and agriculture in California (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Gary Okihiro says that Dr. Iwata is the foremost expert on Japanese agriculture in California. He was a professor for many years at Biola University, a small Christian religious college in Los Angeles. He has written a book on Japanese farming in America titled *Planted in Good Soil: A History of the Issei in United States Agriculture.* This is a general work. He has seen no evidence or records that mention Japanese issei growing soybeans in the United States. Their main crop was rice. Soybeans are not even mentioned in his book, but on page 297 he notes that soy sauce was imported from Japan to the USA. In his book he discusses in detail the Wakamatsu Tea and Silk Farm Colony, which was established in 1865 in Coloma in the Gold Country near Sacramento. They came with the intent of growing bamboo, tea plants, raising fish, etc. The colony lasted for only 12-18 months, then failed.

He is aware that there were early tofu manufacturers in California and he thinks it is an interesting question to ask where they got their soybeans.

He has a friend named Fred Wada, who lives near him, and whose parents ran an early tofu shop in Fresno. Address: 879 N. Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10926. Iwata, Masakazu. 1995. Re: The pioneering work of Gonshiro Harada (died 1943) with koji, tofu, miso, natto, and okara in California. Letter to William Shurtleff at Soyfoods Center, Aug. 25. 1 p. Typed, with signature.
• ***Summary:*** Mr. Iwata is the author of *Planted in Good Soil: A History of the Issei in United States Agriculture* (1992). Yesterday he contacted Fred Harada, "whose father had a tofu manufacturing establishment in the Fresno area... He is a good source of information. His father, Gonshiro Harada (died 1943), an Issei (first-generation Japanese immigrant to the USA) from Hiroshima Prefecture, was a master koji-maker who learned his trade in Japan. He opened a store in Fresno in the 1920s but went broke during the depression of 1929; he was a creditor unable to collect from credit customers. Subsequently, in 1939, he relocated in Fowler, about 10 miles southeast of Fresno, where he and his wife and family (nine children) established the Harada Tofu Co. and manufactured such foods as tofu, kamaboko, agé, miso, natto, okara, and other related items, peddling them to the Japanese farmers in a broad area of Central California. Of course the company handled vegetables and other grocery goods on their route consisting of several hundred customers.

"Fred indicates that his father was an innovative entrepreneur who made much of his own tofu-making equipment." Fred believes his father got at least some of his soybeans from rice growers in the Colusa region, who grew soybeans as a sideline. "He mentioned that the Koda rice farms in South Los Baños may have had some acreage in this crop."

Fred Harada can be contacted at 637 North 6th Street,

© Copyright Soyinfo Center 2013

Montebello, CA 90640. Phone: 213-721-8455. Best to contact him after 7:00 p.m. Address: 879 North Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10927. Iwata, Masakazu. 1995. Re: Early soybean cultivation by Japanese rice growers in central California around the time of World War I. Letter to William Shurtleff at Soyfoods Center, Aug. 25. 1 p. Typed, with signature.
• ***Summary:*** Yesterday Dr. Iwata contacted Fred Harada, "whose father had a tofu manufacturing establishment in the Fresno area... He is a good source of information... My conjecture would have been that much of the soybeans for the tofu came from abroad, but according to Fred, some of the Japanese rice growers, whose heyday in rice farming was around the time of World War I [1914-1918] in the Colusa region, grew soybeans as a sideline. He mentioned that the Koda rice farms in South Los Baños may have had some acreage in this crop.

"I have a section in my book (*Planted in Good Soil: A History of the Issei in United States Agriculture.* New York: Peter Lang Publishing, 1992) on the Koda farms, utilizing information from interviews and the Keisaburo Koda biography in Japanese (*Koda Keisaburo Den,* 1965), but found no mention of soybean production. You might contact Edward Koda (P.O. Box 6, South Dos Palos, California 93665), the son of the founder, about this. I believe the operation is now in the hands of Ross, the third generation heir.

Fred Harada can be contacted at 637 North 6th Street, Montebello, CA 90640. Phone: 213-721-8455. Best to contact him after 7:00 p.m.

Update: Letter from Dr. Iwata. 1996. Dec. 6. "Most likely the Chinese who arrived in California around the time of the Gold Rush of 1849 introduced soybeans from China." Address: PhD, 879 North Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10928. O'Hara, Pam Smith. 1995. Enjoying soy: There's a growing body of evidence that it's good for us–and a growing array of ways to make it taste good, too. *Miami Herald.* Aug. 31. p. 1E-2E. Food section. [2 ref]
• ***Summary:*** Pam and her best girlfriend were enjoying a Chinese takeout dish, whose main ingredient was tofu. "She offered her 19-year-old son a taste. He chewed it twice. His nostrils flared, his lip curled, and he spit it straight back onto his plate. His one word response: 'Nasty.' Tofu is an acquired taste, no question about that."

Considerable research has shown that the soybean contains isoflavones, which may "help prevent cancer and osteoporosis and ease the symptoms of menopause." Color photos show: (1) Pam Smith O'Hara. (2) A strawberry-tofu shake in a tall glass. Address: The Complete Vegetarian, 107 Seabreeze Ave., Delray Beach, Florida 33483.

10929. Blank, Christine. 1995. Organic soy products: Industry remains optimistic. *Organic Food Business News* (*Altamonte Springs, Florida*) 7(8):5-7. Aug.
• ***Summary:*** "Even though Japanese demand for organic soy is falling this year," new studies proclaiming the health benefits of soy products have sparked optimism among manufacturers for higher sales in the near future. Supply of organic soybeans is now greater than demand as the Japanese, who have been willing to pay premiums for organic soybeans during the past two years, have lost interest.

Terry Tanaka, executive director of Nichii Company of America, Inc. (Jefferson, Iowa) exports 95% of its organic soybean flakes to its parent company in Japan. Tanaka had been planning to ship 140 tons/month of flakes to Japan, but is now shipping only 50 tons/month, due to sagging consumer interest. The company sends its flakes by rail to Seattle, Washington, whence they travel by cargo ship to Japan.

David Singsank is co-owner of American Health and Nutrition in Ann Arbor, Michigan. His company is now selling an organic soy protein product named Manna to wholesalers for use in bulk bins in co-ops and natural food stores. It has a chewy texture and will cost wholesalers $0.75 to $0.90/lb.

When prices skyrocketed last year, some soyfood manufacturers had to raise prices or discontinue products. For example, White Wave in Boulder, Colorado, started using commercial (non-organic) soybeans in two of its products that had been organic last season. Now the company is reported to have switched back to organic ingredients when many of its customers complained. White Wave is said to use at least 95% organic ingredients in its soy products, including tofu, soymilk, and tempeh.

New contract prices are about $14/bushel FOB for cleaned clear hilum soybeans and $19/bushel FOB for Vinton. OCIA (president Tom Harding) is the main certifier of organic soybeans; others include Farm Verified Organic (FVO), Oregon Tilth, and Quality Assurance International. Reciprocity is a major issue for soyfoods manufacturers.

Jan Remak, vice president of marketing at Vitasoy (Brisbane, California) says that Vitasoy soymilk is sold in some major supermarket chains, such as Kroger, Fred Meyer, Lucky, and Ralph's. Address: Staff writer.

10930. **Product Name:** Total Tofu! Maple Tofu Form Box.
Manufacturer's Name: G.E.M. Cultures (Marketer).
Manufacturer's Address: 30301 Sherwood Road, Fort Bragg, CA 95437. Phone: (707) 964-2922.
Date of Introduction: 1995. August.
Ingredients: Sustained harvest maple.
New Product–Documentation: GEM Cultures Catalog. 1996. Jan. 20. p. 4. "These beautifully handmade Tofu Press Boxes are made here in Mendocino County of certified

© Copyright Soyinfo Center 2013

sustained harvest maple, the wood so often used in salad bowls and wooden spoons. The 8 by 5 by 3½-inch size is convenient yet large enough to press 2 pounds of tofu. Also included in Total Tofu is a 3 ounce package of natural nigari, 3 ounces of Terra Alba [naturally occurring calcium sulfate], and a double square of Grade 60 cheesecloth to line the box, directions for how to make tofu and soymilk, and the shipping cost!" Price: $38.50. Note: As of Jan. 1996 this tofu kit does not contain a pressing sack, which is essential for making tofu at home.

Kit sent by Betty Stechmeyer of GEM Cultures. 1996. Feb. 15. The box is indeed beautifully constructed, made of excellent materials and well designed. The nigari comes shrink wrapped. The instructions using one pound of dry soybeans are clear but without illustrations (see illustrations in *The Book of Tofu,* by Shurtleff & Aoyagi).

10931. Minnesota Soybean Research & Promotion Council. 1995. 1995 Cooking with Soy–Recipe contest winners (Leaflet). North Mankato, Minnesota. 6 panels each side. Each panel: 22 x 9.5 cm. Aug.
• ***Summary:*** Recipes are published for the three winners in the tofu category, three winners in the whole soybeans category, and three winners in the soy flour category. The three winning recipes (#1 in each category) were: Stuffed jumbo shells (with firm tofu and turkey). Curried shrimp with vegetables and green soybeans. Soy flour banana bread. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

10932. Mountain Ark Trading Company. 1995. Catalog–September-December 1995 [Mail order]. Fayetteville, Arkansas. 30 p. 27 cm.
• ***Summary:*** Soy-related products in this mail order catalog include: Miso, soy sauce, tempeh, tofu, black soybeans, yellow soybeans, tofu dressings, natto miso. Also: Sea vegetables, amaranth, quinoa, teff, blue corn. The general manager is Nick Masullo. Address: P.O. Box 3170, Fayetteville, Akansas 72702. Phone: 1-800-643-8909.

10933. Newman, Jacqueline M. 1995. Beancurd: History of an ancient protein source. *Flavor & Fortune* 2(2):7, 11, 13. Summer. [5 ref]
Address: Kings Park, New York 11754.

10934. Orthoefer, Frank T.; Liu, Keshun. 1995. Soybeans for food uses. *International Food Marketing & Technology* (*Germany*) 9(4):4-8. Aug. [5 ref]
• ***Summary:*** Contents: Introduction. Traditional soy foods: Soy milk, tofu, toasted whole soybeans and full-fat soy flour ("The toasted flour is often used in rice recipes or for the preparation of flavored bakery snacks. The toasted powder may be mixed with plastic fats and sugar to be used as a filling for confectionery and bakery products"), soybean sprouts, yuba, soy sauce, tempeh, natto, miso. Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soy nutrition: Soy protein, fat and calories, phytochemicals. Food bean market. Summary.

Two "different types of soybeans have emerged: oil beans and food beans. This is particularly true in the US soy market..."

Of the fourteen phytochemicals, seven are present in soybeans. These seven are phytates, isoflavones, carotenoids, coumarins, triterpenes, lignans, and phenolic acids. Phytochemicals have been shown to affect human health as much as vitamins and minerals, and many of them have anti-cancer properties. The discovery of phytochemicals may change how the nutritional value of food is assessed.

The world market for soybeans for food use is estimated at about 1 million metric tons (tonnes). In Japan alone about 830,000 tonnes are made into soyfoods as shown in a pie chart as follows: Tofu (552,000 tonnes, 63.4%), miso (180,000 tonnes, 21.5%), natto (90,000 tonnes, 10.7%), soymilk (10,000 tonnes, 1.2%), soy sauce (5,000 tonnes, 0.6%), and others (22,000 tonnes, 2.6%). In the USA the food bean market is estimated at 50,000 tonnes. Other major markets for food beans are in Korea, China, Taiwan, Hong Kong, Singapore, Malaysia, and Thailand. Food-grade soybeans can be sold by the growers at a premium of 5-20% above the base price. The demand for food beans is increasing steadily. Address: 1. Vice President, R&D, Riceland Foods, Stuttgart, Arkansas; 2. Project Leader, Soy Food Lab., Jacob Hartz Seed Co., Stuttgart, Arkansas.

10935. Quinn, Catherine. 1995. Feast on soy–It's practical and easy. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 3(3):2. Summer. [4 ref]
• ***Summary:*** "Lowering cholesterol levels, possible cancer prevention–good reasons to recommend that our Lipid Research Clinic patients eat more soyfoods. But, resistance can be strong. In short, we've found soyfoods in the current forms lack features familiar to most Americans... We generally find tofu is the most commonly recognized form of soy." Most die-hard soy resisters love tofu in desserts–such as Tofu Chocolate Mousse Pie and Cranberry Tofu Dessert (see *The Soy Connection,* Volume 3, Issue 1). "Many patients are pleasantly surprised with the convenience and taste of tofu lasagna, tofu tortellini and tofu burger casserole mix for chili or meatloaf." Address: M.S., R.D., nutritionist with Washington Univ. School of Medicine, Lipid Research Center, St. Louis, Missouri.

10937. **Product Name:** Tofutti Teddy Fudge Bears: Low Fat Pops (Dairy Free, Frozen).
Manufacturer's Name: Tofutti Brands Inc. (Marketer).
Manufacturer's Address: 50 Jackson Dr. (P.O. Box 786), Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1995. August.
Ingredients: Water, sugar, corn syrup, maltodextrin, soy protein, tofu, cocoa processed with alkali, pure corn oil, guar gum, carob bean gum, carrageenan, vanilla with other natural flavors, soy lecithin, salt.
Wt/Vol., Packaging, Price: 12 x 1.75 fl. oz. bars in paperboard box. Net weight 21 fl. oz. (621 ml).
How Stored: Frozen.
New Product–Documentation: Spot in Vegetarian Journal. 1995. Sept/Oct. Each Teddy Fudge Bar contains 70 calories and one gram of fat without any lactose, animal milk, whey, butterfat, caseinates, or dairy derivatives. Sold at natural food stores.

Tofutti Brands Inc. 1996, May. 1995 Annual Report. p. 1. New products introduced during 1995: Teddy Fudge Pop, an all-natural, low-fat, dairy-free fudge bar targeted towards children. This stick novelty offers consumers the same taste as real fudge bars. Each bar contains only 70 calories and 1 gm of fat.

One sample box of this product with Label generously sent frozen by David Mintz via FedEx priority overnight. 1996. June 4. 7 by 6.75 by 2½ inches. Paperboard box. Brown, white, and yellow on red. Illustrations: One the front panel–A teddy bear eating a pop and wearing a red T-shirt that reads "Tofutti–Eat in good health." Also 3 large pops. On the end panel: A family of teddy bears each wearing a T-shirt eating a pop. "Living dairy free" logo. "Milk free. No butterfat."

10938. **Product Name:** Tofutti Cuties (Snack-Size Soy Ice Cream Sandwiches) [Wild Berry].
Manufacturer's Name: Tofutti Brands Inc. (Marketer).
Manufacturer's Address: 50 Jackson Dr. (P.O. Box 786), Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1995. August.
Ingredients: Filling: Water, high fructose corn sweeteners, corn oil, tofu, soy protein, vanilla with fruit purees, soy lecithin, guar seed gum, carrageenan, beet juice, carob bean gum, salt. Wafer: Enriched bleached flour...
Wt/Vol., Packaging, Price: 8 sandwiches. 12 fl oz plus 16 wafers.
How Stored: Frozen.
New Product–Documentation: Tofutti Brands Inc. 1996, May. 1995 Annual Report. p. 1-3. New products introduced during 1995: During the summer the Company added a Wildberry Cutie to its mini sandwich novelty line. This Cutie has wildberry filling between two chocolate wafers. Half the size of a traditional ice cream sandwich, it offers a portion controlled treat.

One sample box of this product with Label generously sent frozen by David Mintz via FedEx priority overnight. 1996. June 4. 6 by 4 by 2.125 inches. Paperboard carton. Dark blue, light blue, red, brown and pink on white. "No milk. No butterfat. Lactose free. Nondairy frozen dessert." "The wild one."

10939. Vajda, Pavol; Mahoney, Rosemary K. 1995. Request by Alfa Bio sro of Slovakia for VOCA assistance in new product development project. Bratislava, Slovakia. 20 p. 28 cm. [Eng]
• ***Summary:*** VOCA (Volunteers in Overseas Cooperative Assistance) is an American-based organization that assists businesses free of charge outside the USA. Alfa-Bio is requesting 1 volunteer for 2 months starting in mid-October 1995. "Project summary: Alfa-Bio is the first tofu producer in the former Czechoslovakia and continues to be the most successful producer in the Slovak market. They seek assistance on new product development as they plan to introduce second generation tofu-based products into the Slovak market. Products such as: imitation dairy spreads, puddings, etc. They seek the assistance of a VOCA specialist with experience in new product development using tofu, marketing, and a strong overall knowledge of the tofu market."

The owner of this limited liability company is Ing. Jan. Lunter, who is also the general manager. The company is located at Horná 37, Banská Bystrica, Slovakia. Phone: 42-

© Copyright Soyinfo Center 2013

88 242 35. Banska Bystrica is the capital of Middle Slovakia. The company "was established in 1991 with an orientation toward the production and marketing of healthy foods. Their large success in this land of bacon lovers speaks well of the quality of their products and the overall desire of consumers to improve their diets. Currently the company has 100 employees with annual turnover of 50 million Slovak crowns (approximately US$1.3 million)." They currently produce 27 metric tons/month of tofu. The company also runs a retail store and restaurant. The company has four division managers: (1) Director of tofu production; (2) Packaging operations manager; (3) Retail store manager; and (4) Restaurant manager.

The company's sales are primarily to the domestic market, and they dominate the Slovak tofu market. Their competitors tend to be very small companies with limited local markets. Through their tofu products, their restaurant, and retail store, they work to promote the consumption of healthy foods.

The rest of the report concerns project logistics, VOCA and USAID contacts, country history and background, current events (political/social/ economic), agriculture sector (basic statistics, land ownership, state involvement in agriculture, cooperatives, production agriculture, state processing, supply and marketing companies, service infrastructure, VOCA Czechia {VOCA's office in Prague was opened in April 1991}), cultural tips, health care.

Letter (fax) from Sjon Welters of Massachusetts. 1996. April 16. Sjon has decided to accept an offer to do volunteer work with Alfa Bio in Slovakia for 2 weeks. Address: VOCA, Bratislava, Slovakia.

10940. Viavant, Suzi Jenkins. 1995. Recetas de soya [Soya recipes]. Guatemala City, Guatemala: Plenty USA. 28 p. 22 cm. [Spa]

• ***Summary:*** Contents: Introduction. Why soya? Useful advice. Utensils and equipment. Recipes with tempeh (10). Recipes with tofu (14). The first page (unnumbered) states: "This book was developed to help the company Alimentos San Bartolo to introduce soyfoods into the diet of the highlands of Guatemala. It is also designed to teach the reader various methods of preparing delicious dishes using tempeh and tofu." The contributors included Elena and Agostine Xoquic, Yelin and Yatun Reanda, Marion Moore, Alice Hashimoto, and Alimentos de San Bartolo.

Talk with Suzi Jenkins Viavant. 1996. Aug. 15. Plenty USA published this book in Guatemala City, with financial aid from Food for All. It was available in about August 1995. The tofu recipes are based on the very, very firm tofu made by Alimentos San Bartolo in Guatemala. Address: 3967 South 900 E., Apt. 13, Salt Lake City, Utah 84124. Phone: 801-268-2717.

Manufacturer's Name: Wellwide International Ltd. (Importer).
Manufacturer's Address: Room 2905 Wah Yin House, Wah Kwai Estate, Hong Kong. Phone: 852/2549-1173.
Date of Introduction: 1995. August.
New Product–Documentation: Listing in '95-96 Soya Bluebook, p. 100. The company is an importer. Contact Della Leung, Director.

10942. National Research Centre for Soybean. 1995. Classified ad: Sealed tenders are invited from manufacturers / reputed firms / authorised dealers for the supply of Scientific equipments [sic], farm machineries [sic], etc. *Times of India* (*The*) (*Bombay*). Sept. 2. p. 10.

• ***Summary:*** Sixty pieces of equipment are listed, each numbered. For example: 01. Growth chamber... 08. Lab model tofu making machine... 17. Computer with printer... 31. Tractor.

"The tender form, along with details of items with specifications, terms and conditions, can be obtained from the Administrative Officer,..." Address: Khandwa Road, Indore–452 001, Madhya Pradesh.

10943. Barat, Chandri. 1995. Celentano copies Legume line of vegetarian frozen entrees with tofu (Interview). *SoyaScan Notes.* Sept. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** About fifteen years ago Chandri and Gary Barat went to Celentano with an idea for a line of vegetarian frozen entrees with tofu. They worked with Dominic Celentano, Sr., a pioneer in the frozen food industry and the first to put frozen Italian entrees in food stores about 50 years ago. They both admired this hard-working, honest man of integrity, who told them: "A man's handshake is his word. You can have all the paper in the world, but if the good will of the parties isn't involved, it doesn't mean anything." He told them "he would never do a tofu item, and he would never compete against them." Though he is a right-wing conservative who jokingly calls Chandri "Mrs. Lenin," he made a real personal mark on the Barats because of the many values of his they admired.

Before Legume had its first public stock offering, the Barats and their attorneys developed and signed a very professional 30-page legal contract with Celentano; it stated that Celentano would not divulge any of Legume's confidential information, including proprietary formulas, recipes, etc., but it did not contain a "non-compete agreement."

When Dominic's son, Dominic Jr., took over his father's place as head of the company, he decided to try to introduce a low-fat version of the company's traditional Italian frozen entrees to the natural- and health food market. He did this

© Copyright Soyinfo Center 2013

in part because profit margins were decreasing from the big chains like Shop Right, and because he noticed the success Legume was having in this market. The products (Cheese Ravioli, Cheese Lasagna, etc. with white flour and regular cheese) were well accepted and widely distributed. These were purchased by retailers in part because the natural foods industry is losing its identity by buying products that contain white flour, white sugar, etc. Chandri and Gary had no problem with this. But then the son did something that Chandri and Gary feel was unethical, if not treacherous. Even though it did not violate any written agreements, it clearly violated a verbal agreement given with a trusted handshake. In early 1995 Dominic Jr. launched a line named "Celentano Vegetarian Selects" consisting of four vegan frozen entrees with tofu that were very similar to those they had been making–and was still making–under contract for Legume since 1983. The four products were: Manicotti Florentine (resembling Legume's Tofu Manicotti, made by Celentano since Feb. 1983), Stuffed Shells Florentine (resembling Legume's Stuffed Shells Provencale, made by Celentano since Dec. 1983), Lasagne Primavera (resembling Legume's Vegetable Lasagna, made by Celentano since Dec. 1983), and Eggplant Rollettes.

Celentano's introduction of these four products has hurt the sales of Legume's frozen tofu entrees tremendously. Celentano's sells his entrees at prices lower than Legume can afford and he promotes them extensively.

Chandri laments: "It is a very unfortunate situation. We still have a close relationship with the father, Dominic Sr., who loved to mock tofu: "It's just like cardboard. Who would eat it?" When we went to talk to the son, we said, 'Your father swore to us he would never...' The son replied: "My father doesn't have the authority to speak for this business." The son came on with the wife of the mayor of New York City introducing his non-dairy vegetarian line. Celentano even uses tofu made by White Wave, the same manufacturer that has supplied Legume all these years.

The Barats would like to leave Celentano and find a new manufacturer for their products, but that is hard because Celentano is very automated. They are also reluctant to leave as long as the father is alive; but he is in his mid-70s and is not well. Chandri is sure that the son will kick Legume out the day after the father dies. The last time Chandri visited him in his office, "he almost picked me up and threw me out, even though I thought I was being quite polite. He said: 'This is my office, you're in it, and there's the door.'"

Three or four years ago Legume began to private label their Manicotti Florentine for Trader Joe's, and is still on the market and selling very well. They have also made other products for Trader Joe's (Stuffed Shells, Classic Manicotti–without the spinach) but they have come and gone.

Legume's best selling products at present are Vegetable Lasagna, Manicotti Florentine, and the new line of canned products. They also still make Barat Bars (chocolate) but they are a relatively small item. They also have a Veggie Protein Cutlet.

Update: 1996. According to one industry insider the above story does not sound quite right because Dominic and his wife "still run Celentano with an iron hand." Address: P.O. Box 609, Montville, New Jersey 07045. Phone: 201-263-1013.

10944. Weininger, Jean. 1995. Soybeans coming out of their shell: Healthy cuisine. *San Francisco Chronicle.* Sept. 6. Food section. p. 1, 8. [1 ref]
Address: Bay Area writer with a PhD. in nutrition from the Univ. of California at Berkeley.

10945. **Product Name:** Firm Tofu.
Manufacturer's Name: Tofuji.
Manufacturer's Address: 664 "F" St., Fresno, CA 93706. Phone: 209-498-8440.
Date of Introduction: 1995. September.
Ingredients: Certified organic soybeans, water, nigari.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Fujie Robesky calls. 1994. Aug. 9–She says that San Jose Tofu Co. is for sale. She is a microbiologist who wants to change professions. She now owns or works for Hedge Computer Co. 1995 May 16. She is working hard to upgrade the building and equipment; hopes to open in 2 months. Aug. 14. She calls to say she hopes to open by Sept. 1. She bought a building in Chinatown and moved her computer store from nice northwest San Jose to Chinatown. Has been getting lots of media coverage because of moving to Chinatown.

Fujie calls. 1995. Oct. 16–She says she started commercial production on 26 Sept. 1995. The company has only one product, firm tofu, made from certified organic soybeans and nigari. Several articles have been published about her company. Her husband is named Bob. Fujie calls. 1999. July 9. Tofuji is doing well. They now have three products: Regular nigari tofu, and two flavors of soymilk: Vanilla and plain. Their new phone number is 559-696-0838. Website: www.Tofuji.com.

10946. *Bluebook Update* (*Bar Harbor, Maine*). 1995. Bright future forecast for soyfoods: SAA study profiles shopper, provides demographics. 2(3):1, 4. July/Sept. [1 ref]
• ***Summary:*** The first truly in-depth analysis of the U.S. soyfoods consumer has been recently published, commissioned by the Soyfoods Association of America. The 125-page report, replete with tables and graphs, shows that nearly 15 million Americans are presently eating tofu, and 10 million are consuming soy burgers. The study details the uses of soyfoods, provides consumer demographics, and analyzes shopping patterns. Even among non-consumers of soyfoods, awareness is high. The majority of Americans

© Copyright Soyinfo Center 2013

have heard of at least one type of soyfood. The best known is tofu, available at nearly every supermarket in America, and recognized by 75% of those polled. Some 55% are familiar with soymilk and more than 50% have heard of soy burgers. Approximately 80% of soyfoods consumers say that they will continue to eat the same amount or more in the future–which looks bright.

10947. *Bluebook Update* (*Bar Harbor, Maine*). 1995. Clofine products certified organic. 2(3):2. July/Sept.
• ***Summary:*** Clofine Dairy & Food Products, Inc. of Linwood, New Jersey, manufactures full fat soymilk and tofu products which have been certified organic by Oregon Tilth Certified Organics. Clofine also produces low-fat spray-dried tofu and soymilk with both non-organic and organic soybeans. They will continue to provide kosher parve products in both lines. Richard Eluk is Clofine's vice-president.

10948. Fallon, Sally W.; Enig, Mary G. 1995. Soy products for dairy products? Not so fast. *Health Freedom Newsletter* (*Monrovia, California*) 14(5):12-20. Sept. [35 ref]
• ***Summary:*** Contents: Introduction. History of the bean. Fit for human consumption? Marketing the soybean? Processing denatures and dangers remain. Soy formula not the answer. Fabricated soy foods. Cancer preventing or cancer causing? Soy products are not complete. Only fermented soy products are safe. Another look at milk. Processing is the problem [that transforms healthy milk products into unhealthy ones]. Quality dairy products are available. Butter is a healthy food. Homemade formula best for babies. Contains two recipes for homemade formula: Milk based formula (based on unhomogenized raw organic milk plus lactose, cod liver oil, coconut oil, etc.). Milk free formula (based on 3½ cups of homemade broth, made from beef, lamb, chicken, or fish).

This article is written to scare people "who have turned to soy products as substitutes for dairy products," and to sing the praises of natural (fresh, raw, and organic) dairy products. It is loaded with so much incorrect information and false conclusions about soybeans and their alleged dangers to human health that one does not know where to begin in starting to refute them. To take just a few such statements: (1) "The Chinese did not eat the soybean as they did other pulses (legumes) such as the lentil, because the soybean contains large quantities of a number of harmful substances." Fact: The soybean, processed into a host of soyfoods using simple technologies, has been the main legume consumed in China since ancient times. It has long been referred to as "The cow of China."

(2) Trypsin inhibitors in soybeans are "not completely deactivated during ordinary cooking and can produce serious gastric distress, reduced protein digestion and chronic deficiencies in amino acid uptake." Facts: The SoyaScan database contains 386 articles on trypsin inhibitors. When active, these proteins inhibit trypsin, a digestive proteolytic enzyme secreted by the pancreas, which helps us to digest proteins. Fortunately, trypsin inhibitors are almost completely deactivated by the typical cooking of soybeans to make soyfoods. There is no scientific evidence that the small percentage remaining has any adverse effects on human health, digestibility, or amino acid absorption. A considerable body of research, starting in the 1970s, shows that trypsin inhibitors have anti-cancer properties.

(3) "The soybean also contains hemaglutinin [sic, hemagglutinins], a clot promoting substance that causes red blood cells to clump together." Fact: Like trypsin inhibitors, hemagglutinins are inactivated by ordinary cooking and have been a non-issue in the scientific literature for at least 10 years.

(4) Soybeans are high in phytic acids or phytates, which can cause health problems. "Only a long period of fermentation will significantly reduce the phytate content of soybeans." "Oriental children who do not get enough meat and fish to counteract the effects of a high phytate diet, frequently suffer rickets, stunting and other growth... Parents would do well to ask their six-year old boys whether they would prefer to be six-foot-one or five-foot-seven when they grow up, before substituting tofu for eggs, meat, and dairy products." Fact: Phytates and phytic acid are a two-edged sword. They appear to inhibit mineral absorption by forming tight chelates with a variety of polyvalent metals such as calcium, zinc, and iron. By virtue of forming a unique iron chelate, they suppresses iron-catalyzed oxidative reactions and may serve a potent antioxidant function in the preservation of seeds. By the same mechanism, dietary phytic acid may lower the incidence of colonic cancer and protect against other inflammatory bowel diseases. Twelve records in the SoyaScan database show phytic acid to have anticancer activity. In addition, they are one source of dietary phosphorus in the soybean.

(5) Aluminum content of soy formula is 10 times greater than milk-based formula, and 100 times greater than unprocessed milk. Aluminum has a toxic effect on the kidneys of infants, and has been implicated as causing Alzheimer's in adults. Fact: Aluminium is the most abundant metal in the earth's surface. It is harmless to humans except for infants with kidney failure–who should not drink soymilk. There is no solid scientific evidence indicating that aluminum causes Alzheimer's disease; that theory, advocated by a few scientists 10 years ago, is no longer being pursued.

(6) Allergies to soy are almost as common as those to milk. Fact: Roughly 10 to 15 times as many infants are allergic to cow's milk compared to soymilk. Since 1910 soy-based infant formulas have saved the lives of many infants whose mothers could not breast feed and who were allergic to cow's milk

The authors conclude that only traditional fermented soy products such as miso, natto, and tempeh, are safe.

About the authors (autobiographical): Sally W. Fallon, M.A. lives in Washington, DC, with her husband and 4 children. A member of the Price Pottenger Nutrition Foundation Advisory Board, she is a regular contributor to their quarterly journal. Mary Enig, PhD, is an expert in the field of lipid chemistry who has conducted many studies on *trans* fatty acids. She is also well known for a career of anti-hydrogenation and anti-margarine research and writing, with funding from the dairy industry. A large percentage of America's margarine is made from soy oil.

Update: Printout of website named Mercola.com sent to Soyfoods Center by Sjon Welters of Cabot, Vermont. 1998. Nov. 6. The title of this 6-page website is "Avoid soy: Concerns regarding soybeans." On the last page we read: "The above information was abstracted from an article written by Sally Fallon and Mary Enig, PhD. (an international expert renown [sic] in the field of lipid chemistry) for Health Freedom News in September of 1995." Address: 1. M.A.; 2. PhD. Phone: 818-357-2181.

10949. Galaxy Foods Company. 1995. Taste the future! Try our slices (Ad). *Natural Foods Merchandiser.* Sept. p. 20-21.
• ***Summary:*** In this two-page spread color ad, photos show: (1) Three flavors of Soyco Lite & Less Veggy Singles (Swiss Alternative, American Alternative, Mozzarella Alternative). All three are low in fat, made with organic tofu, lactose free, and cholesterol free; (2) Two flavors of Soymage Soy Singles (Mozzarella Alternative, and American Alternative). Both are 100% dairy free and fat free, made with organic tofu; (3) The Lite & Less line of about 16 products; (4) The Soymage line of about 8 products. All are floating against a galaxy (dark starry night).

"New flavor, new texture, and a new name for slices that are literally 'Out of this world!'... No one else in the world is producing individually wrapped slices that are 100% Dairy Free and taste great! Soy Singles are fast becoming the next "Rising Star" on vegan shelves and with Kosher-Pareve buyers throughout the universe." A coupon (introductory slice offer) gives $2 off per case. Address: 2441 Viscount Row, Orlando, Florida 32809.

10950. Lamport, Rick. 1995. Soy to the world. *Granary News* (*Sarasota, Florida*). Sept. p. 1, 3, 10-11, 14-15, 18-19. [1 ref]
• ***Summary:*** A humorous, fun-poking potpourri and overview of soyfoods and some of the new research on their medical benefits. "In reputation, tofu, tempeh, and miso are the Gabor sisters of natural foods, i.e., thought to have bad taste and serve no purpose. But in reality, they are more like the Bridges brothers. They take on many roles and always give an unusually good performance. Pity the poor bean curd. It deserves our consideration, use and approval. Tofu is not really an acquired taste. It is more an acquired texture."

The author then coins some new soy words and phrases–which sound best pronounced with a Yiddish accent: Soyliloquy, psycho-soymatic, Moonlight Soynata, Soyviet Union, soylent majority, soyentific validation, lunasoy, soyonara.

A photo (p. 1) shows the rear end of a "Soyota" [Toyota] automobile bearing the license plate "Tofu Me–Florida Granary."

Champaign, Illinois: American Oil Chemists' Society Press; St. Louis, Missouri: United Soybean Board. viii + 584 p. See p. 117-60. Chap. 8. [96 ref]
• ***Summary:*** Contents: Introduction and definitions: Types of products, history, analysis, handling of soybeans and soy protein products. Full-fat soy flours and grits: Enzyme-active soy flours, toasted full-fat soy flours and grits, extruder-prepared full-fat soy flours. Extracted flake products: White flakes, defatted soy flours and grits, refatted or lecithinated soy flours, soy protein concentrates (aqueous alcohol process, acid leaching process, hot-water leaching process, product characteristics). Soy protein isolates (pH extraction-precipitation, separation by molecular weight, membrane processing, aqueous extraction processing, separation of intact protein bodies, enzyme-modified protein isolates, whipping proteins–3 types). Dietary fiber products: Soy cotyledon fiber, soy hulls. Texturized products: Spun and fiber-type products, extruder-texturized products. Applications of soy food proteins: Functionality, selection of soy protein preparations, meat applications (processed meats, restructured meats, pumped meats, extruder-texturized soy proteins), baking applications, dairy and beverage applications. Other soy products: Dried soy milks and tofus, nut-like soybean products (incl. soybean butter [sic, soynut butter]).

10952. **Product Name:** Mori-Nu Mates Chocolate Pudding & Pie Mix.
Manufacturer's Name: Morinaga Nutritional Foods, Inc.
Manufacturer's Address: 2050 W. 190th St., Suite 110, Torrance, CA 90504. Phone: 310-787-0200.
Date of Introduction: 1995. September.
Wt/Vol., Packaging, Price: 3.75 oz (105 gm).
How Stored: Shelf stable.
New Product–Documentation: Ad (full-page color) in Natural Foods Merchandiser. 1995. Sept. p. 107. "Made for each other. Introducing new Mori-Nu Mates." Blend one packet of this mix with one package of Mori-Nu Lite Tofu to make a rich and creamy, low fat chocolate mousse. Leaflet (glossy color, two panels on each side, each panel: 16 x 10 cm). Sept. 1997. "Low fat, dairy free and delicious. The proof is in the pudding." On the front panel a photo shows three silver spoons, each holding a different color swirl of Mori-Nu Mates combined with Mori-Nu Tofu. On the rear panel are nutrition facts.

10953. Morinaga Nutritional Foods, Inc. 1995. Made for each other. Introducing new Mori-Nu Mates (Ad). *Natural Foods Merchandiser.* Sept. p. 107.

• ***Summary:*** This full-page color ad shows a packet of Mori-Nu Mates Chocolate Pudding & Pie Mix next to a package of Mori-Nu Lite Silken Tofu. "Dairy free. Low fat. All natural. Quick and easy." Blend one packet of this mix with one package of Mori-Nu Lite Tofu to make a rich and creamy, low fat chocolate mousse.

This ad also appeared in the Dec. 1995 issue (p. 65) and in the Jan. 1996 issue (p. 57) of this magazine.

And in the Feb. 1996 issue (p. 29) and the March 1996 issue (p. 37) of *Vegetarian Times* magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10954. **Product Name:** [Breaded Tofu Cutlets (With Garden Herbs, Goat Cheese and Nuts, Salmon and Dill)].
Foreign Name: SOY CroustiSoy (aux Herbes Potagères, Fromage de Chèvre et Noix, au Saumon et à l'Aneth).
Manufacturer's Name: Nutrition & Santé S.A. (Formerly SOY / Société Soy).
Manufacturer's Address: B.P. 33, Z.I. de la Pomme, 31250 Revel (near Toulouse), France. Phone: +33 62 18 72 50.
Date of Introduction: 1995. September.
Ingredients: Garden Herbs: Fresh tofu* 73.5% (water, soybeans), palm oil*, grated bread crumbs*, tapioca, spinach greens*, pot herbs* 1.5% (parsley*, chives*, tarragon*), unrefined sea salt, safflower oil*, natural aromas, garlic*, pepper*, lemon concentrate. * = Organically grown products 89.8%. Certified by Ecocert 31 076 Toulouse Cedex.
Wt/Vol., Packaging, Price: 200 gm paperboard box, 2 cutlets per pack.
How Stored: Refrigerated, store at 4ºC.
Nutrition: Per 100 gm: Calories 213 (885 kJ), protein 10.4 gm, carbohydrate 7.8 gm, lipids/fats 15.6 gm.
New Product–Documentation: Letter from Bernard Storup with 3 Labels. 1995. Sept. 8. This new product is just being introduced now. Paperboard box. 4 by 6 by 1.5 inches. Garden Herbs: Yellow, dark green, brown, white, and black or light green. Color photo of a cutlet on greens on a white plate, and a piece of it on a fork. On the front panel are the Soy logo (white on dark green), and the Nature & Progres organic certification symbol. On two sides are two different "Recycle" symbols/roundels.

soyfoods stop the stork? *Vegetarian Times.* Sept. p. 28. [2 ref]

• ***Summary:*** A report published in the *American Journal of Clinical Nutrition* (Sept. 1994, p. 333-40) showed that women who consumed 25 mg of isoflavones daily (the amount in 2-3 ounces of tofu) experience a 2-5 day increase in the length of their menstrual cycles (e.g. to 30 days from 28 days). "This was actually seen as good news, because the longer the time between periods, the less exposure a woman has to estrogen over the course of a lifetime. It is believed that less exposure to estrogen lowers the risk of ovarian, breast, and endometrial cancer."

"But the study also renewed concerns that isoflavones might interfere with fertility, an idea that has been around since the 1940s, when sheep and cows that grazed on clover high in isoflavones were rendered sterile. As a result some dietitians now recommend that women who are trying to conceive should avoid excessive amounts of soy protein."

But Mark Messina, PhD, and Ken Setchell, PhD (an author of the 1994 study) feel these concerns are unwarranted. Messina notes that countries where soy is a staple–such as Japan and China–have no apparent problems with reproduction. Moreover a generation of vegetarians in the USA have been eating soy regularly yet no fertility problems have been found among them.

Setchell agrees: "The critical issue that some people fail to realize is that although soy lengthens the cycle, it doesn't actually prevent ovulation. There's no effect on progesterone levels, and there is still a normal menstrual cycle."

Both men agree that "as long as a woman still has regular periods, there is no reason to suspect that soy is interfering with conception."

10957. SunRich. 1995. SunRich (Ad). *Soya Bluebook Plus* 1995-96. p. 59.

• ***Summary:*** This one-third page black-and-white ad lists three categories of products: (1) Identity preserved specialty soybeans and grains: IP corn; Food quality soybeans available for soymilk, tofu, tempeh, miso, natto, sprouts, and soy sauce; Shipments available in containers, rail or bulk barge.

(2) Soyamilk powders: Spray-dried soymilk and tofu; Soy/dairy milk.

(3) Sweet Beans: Frozen green soybeans; Podded (*edamame*) or peeled (*mukimame*).

* Certified organic soybeans & products available. Address: P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

10958. **Product Name:** [Nutrisoya Tofu, Soymilk].
Foreign Name: Nutrisoya Tofu–Queso de Soya, Leche de Soya.
Manufacturer's Name: UFIESA–Division of Productos Nutrisoya.
Manufacturer's Address: Factory: Av. de los Restauradores No. 149. Office: C/33 No. 9 A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: (809) 590-3418.
Date of Introduction: 1995. September.
Ingredients: Tofu: 100% leche de soya, vinagre y (Coagulante). Soymilk: Leche de soya, Edulcorante-Azucar crema, especias aromáticas naturales.
How Stored: Refrigerated.
New Product–Documentation: Note: These are the earliest commercial soy products seen in the Dominican Republic. Talk with (call from) Jose Fortunato in New York; he is the partner of Mr. Ubiera. 1997. Feb. 15. Mr. Ubiera wants to order some Spanish-language leaflets. He already has *The Book of Tofu,* which gave him the idea of making tofu in the Dominican Republic. They have been making and selling tofu in the Dominican Republic for about 2 years, starting in August 1995. They make tofu, soymilk, soy yogurt, and a soy salami (from tofu and gluten). Note: L.R. Ubiera, who was born on 20 Jan. 1955 in the Dominican Republic, started this company. He wrote a book titled *Tofu y leche de soya–Alimentos macrobiotics–naturales: Una guia practica para su manufactura en casa.* He also practices and teaches Hatha Yoga.

Letter and leaflets from Leonidas Radhames Ubiera, president of Ufiesa-Nutrisoya. 1997. Jan. 20. "Our company began to operate on September 1, 1995 without experience and too little equipment." Leaflet #1. Green and red on white. "Consuma productos Nutrisoya para su alimentacion una joya. 100% natural. Puros e integrales de soya. Tofu-queso. Leche, lista para tomar ("ready to consume"). Yogourt. Salami. Salichas. Hamburguesa. Chorizo." Leaflet #2. Red, blue, black, and yellow on white. "Productos Nutrisoya. Para su alimentacion una joya. 100% naturales. Recetario especial, platos de tofu (queso)." Gives 5 tofu recipes in Spanish.

Letter from Leonidas Radhames Ubiera. 1997. March 10. Gives the date that each of the company's products were introduced. Tofu and fresh soymilk were both introduced in Sept. 1995. All other products were introduced in 1996. UFIESA is an abbreviation/acronym for Ubiera & Fortunato Import-Export, S.A.

Labels for both products sent by Jose Fortunato. 1997. April 18. 3½ by 3 inches. Self adhesive. (1) Tofu: Blue, red, black, and yellow on white. (2) Soymilk: Light green, red, and black on white.

Note: This is the earliest known commercial soy product made in the Dominican Republic.

10959. **Product Name:** NewMenu VegiBurger.
Manufacturer's Name: Vitasoy (U.S.A.) Inc. (Marketer-Distributor). Made in South San Francisco by Azumaya.
Manufacturer's Address: P.O. Box 552, Brisbane, California 94005. Phone: 1-800-848-2769.
Date of Introduction: 1995. September.

Ingredients: Water, textured soy protein concentrate, tapioca starch, natural flavors (from vegetable sources), soy sauce, dehydrated onions, isolated soy protein, tofu powder (soybeans, magnesium chloride), guar gum (a vegetable gum).
Wt/Vol., Packaging, Price: 6 oz (170 gm).
How Stored: Refrigerated.
New Product–Documentation: Ad (½ page color) in Natural Foods Merchandiser. 1995. Sept. p. 127. "Our fast food has great taste and wholesome nutrition." Large color photos show each product with Label.

Talk with Vitasoy. 1995. Sept. 6. These products are just now starting to appear in stores. They are made by Azumaya in South San Francisco.

Leaflet sent by Vitasoy. 1995. Sept. 8. Lists the ingredients and nutritional composition of the VegiBurger and VegiDogs.

10960. **Product Name:** NewMenu VegiDogs.
Manufacturer's Name: Vitasoy (U.S.A.) Inc. (Marketer-Distributor). Made in South San Francisco by Azumaya.
Manufacturer's Address: P.O. Box 552, Brisbane, California 94005. Phone: 1-800-848-2769.
Date of Introduction: 1995. September.
Ingredients: Water, isolated soy protein, wheat gluten, natural flavors (from vegetable sources), salt, brown rice syrup solids, spice extracts, paprika oleoresin, carrageenan, guar gum (a vegetable gum).
Wt/Vol., Packaging, Price: 8 VegiDogs in a 12 oz pack.
How Stored: Refrigerated.
Nutrition: Per 1.5 oz (1 link): Calories 45, calories from fat 0, total fat 0 gm (0% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 170 mg, otal carbohydrate 1 gm (dietary fiber 0 gm, sugars 0 gm), protein 9 gm.

10961. **Product Name:** NewMenu TofuMate: Mandarin Stirfry, Szechwan Stirfry, Mediterranean Herb, Texas Taco, Breakfast Scramble, and Eggless Salad.
Manufacturer's Name: Vitasoy (U.S.A.) Inc. (Marketer-Distributor). Made in Tualatin, Oregon, by Pacific Foods of Oregon.
Manufacturer's Address: P.O. Box 552, Brisbane, California 94005. Phone: 1-800-848-2769.
Date of Introduction: 1995. September.
Ingredients: Eggless Salad: Maltodextrin, dried vegetables (onions, garlic, carrots, celery), rice flour, salt, spices, turmeric, turmeric extractives, citric acid, malic acid, lemon oil.
Wt/Vol., Packaging, Price: 0.75 to 1.2 oz (21.3 to 34 gm) packet.
How Stored: Shelf stable.
New Product–Documentation: Ad (8½ by 11 inch, page color) in Natural Foods Merchandiser. 1995. Sept. p. 127. "The new taste of tofu: NewMenu TofuMate. International faire in a matter of minutes." Large color photos show the label of each product.

Talk with Vitasoy. 1995. Sept. 6. These products are just now starting to appear in stores. They are made by Pacific Foods of Oregon in Tualatin.

Leaflet sent by Vitasoy. 1995. Sept. 8. Lists the ingredients in each product and the range of nutritional composition of the various mixes.

10962. Vitasoy (U.S.A.) Inc. 1995. The new taste of tofu: NewMenu TofuMate. International faire in a matter of minutes (Ad). *Natural Foods Merchandiser.* Sept. p. 30.
• ***Summary:*** This 8½ by 11 inch color ad shows 6 packages of TofuMate seasoning mixes: Mandarin Stirfry, Szechwan Stirfry, Mediterranean Herb, Texas Taco, Breakfast Scramble, and Eggless Salad. "We all know that tofu is healthy, but what do you do with it? This simple question has plagued consumers for decades. Now NewMenu is proud to offer an array of delicious answers." Address: P.O. Box 552, Brisbane, California 94005. Phone: 1-800-VITASOY.

Diagram of the interactive factors producing the characteristic attributes of miso. 14. Flowchart of tempeh production. Address: Iowa State Univ., Ames, Iowa.

10964. Sims, Calvin. 1995. Argentines beef up with vegetables, fruits and tofu: In a nation of meat eaters, health concerns and a stubborn recession are adding salads and tofu to many people's diet. *Oregonian* (*The*) (*Portland, Oregon*). Oct. 1. p. A3.

• ***Summary:*** To meet the new demand for healthier, less expensive food a growing number of low-cost vegetarian and ethnic restaurants, natural food markets, and salad bars have opened in Argentina. Beef consumption in the country has fallen 12.3% to 140 lb/person in 1994 from 157 lb/person in 1990. By comparison, beef consumption in the USA was 67.5 lb/person in 1994, less than half as much. Yet vegetarians are still considered odd in Argentina, and it is difficult for vegetarians to live there. Address: New York Times News Service.

10965. Zender, Sandra. 1995. Re: Early Japanese tofu companies in Fowler, California. Letter to William Shurtleff at Soyfoods Center, Oct. 11–in reply to inquiry. 2 p. Handwritten.

• ***Summary:*** "I have been unable to provide you with verification that Fowler had tofu factories in the 1930s. I checked old volumes of yearbooks, newspapers, books on Japanese culture in the area, and local historians. According to local historians and long time residents there were three tofu factories in Fowler. The oldest was Watanabe, the next was Harada, and the most recent was Soga. I contacted a Mr. Honda who is in his mid-80s and says Watanabe was before the 1930s. He believes he was about 10 when Harada was in business. [Note: If Mr. Honda is now age 85, he would have been born in 1910, and would have been age 10 in 1920.] Unfortunately these are only anecdotal sources. I will turn this inquiry over to the county reference and history departments to see if the names of these businesses occur in old city directories dating from that time." Address: Librarian, Fowler Branch Library, 119 E. Merced, Fowler, CA 93625. Phone: 209-834-3114.

10966. Elash, A. 1995. Ancient help for the heart [tofu]. *Maclean's* 108:66-67. Oct. 16. *

10967. Pratt, Steven. 1995. Soy sense: The soybean crops up in a variety of medical research. *Chicago Tribune.* Oct. 18. Section 7. p. 3.

• ***Summary:*** "The lowly soybean... could become one of the decades most important health foods." Recent research shows that soy protein can help lower cholesterol levels and may help combat cancer, heart disease, and osteoporosis. Scientists believe this is due to "soy's generous supply of phytochemicals," such as isoflavones, phytic acids, saponins, etc.

Susan Potter at the University of Illinois at Urbana-Champaign, is directing a study to explore: (1) Whether soy protein supplementation will reduce heart disease risk for postmenopausal women who for medical reasons can't take estrogen supplements; (2) Whether eating lots of soy protein will slow the development of osteoporosis, which weakens bones by lowering their density.

Linda Van Horn, a dietitian at Northwestern University Medical Center in Chicago, has been investigating the effects of soy protein on hormone metabolism in premenopausal women. Her research, which monitors 200 women for 15 months, could eventually tie in with breast-cancer prevention. Address: Tribune Staff Writer.

10968. Jenkins, Suzi. 1995. The politics of soyfoods in San Bartolo, Guatemala (Interview). *SoyaScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Alimentos San Bartolo now employs 6 people, 3 or 4 of whom have worked there for 15 years. The plant operates two days a week, Monday and Wednesday. About 65-75% of the products are sold to expatriates, and the remainder are sold to native Guatemalans. The approximate percentage of sales by product are as follows: Tofu 40%, soy ice cream 30%, tempeh 10%, soymilk 10%, soy flour atole (10%; pronounced ah-TOL), and whole soybeans 5%. Yet the soy flour atole probably earns the company more profit than any other product. It is made by roasting whole soybeans, then grinding them, and mixing about 3 parts of this roasted soy flour with 1 part of cornmeal. The product is sold as a dry mix in a plastic bag, and is served by adding several tablespoons to a cup of hot water, like traditional atole. It

© Copyright Soyinfo Center 2013

is expensive, costing about 2½ times as much as an equal weight of white wheat flour. People are willing to pay the price because they have learned that it is an excellent source of protein, and it tastes good. It is consumed by both infants and adults.

In about 1989 or 1990 the situation at the soy dairy in San Bartolo changed dramatically. Plenty Canada came in, took the keys to the building, and installed a new committee as the "board of directors in charge of the company. Then Plenty Canada pulled out and has never returned. Since that time the Dairy has received no outside funding. Local politics became a big part of the daily operations of the business, and there is now an ongoing political struggle. The leadership did not like the former employees and they continue to discriminate against them. Only one member of the workforce is on the committee." Elena and Agostine Xoquic are in pain. For example, Agostine is made to haul 50-100 lb of tofu and ice water on a long route that goes as far away as Guatemala City, changing buses many times, while the much younger and stronger new manager sits with his feet up on the table. The Dairy does not have its own vehicle.

Plenty USA has no control over the new committee. In addition, most of the people living in San Bartolo are jealous of the 6 people who work in the Soy Dairy, so for a number of years they have been boycotting the Dairy and its products. Suzi is inevitably associated with the old regime, even though she is very close to many people in the community. She has visited at least once a year, usually paying her own way, to check in and see how things are going. When she has worked there in recent years, it has usually been as a volunteer. This was one cause of the divorce process she is now in. She lived in Panajachel, an expatriate community about 15 minutes away by car; her daughter went to school there. She has no plans to go back there as a worker, though she would dearly love to if she could find a way to support herself.

She sees the next steps for the Dairy as trying to get the Guatemalan government to support use of the atole in the village school lunch program, and starting a restaurant in San Bartolo. She believes this basic concept or model could be duplicated and succeed elsewhere in Third World countries. She has had offers to go elsewhere in Guatemala, at good pay, to help start soy dairies. Address: 3967 South 900 E., Apt. 13, Salt Lake City, UT 84124. Phone: 801-268-2717.

10969. Hizer, Cynthia. 1995. The versatile vegetarian. The global grain goes gourmet: Rice sprouts new varieties, blends. *Atlanta Journal and Constitution Magazine.* Oct. 26. Food section. p. H4. Thursday. *

• ***Summary:*** This article is mostly about rice. But a prominent sidebar states: For free tofu recipes, send a stamped, self-addressed envelope to William Shurtleff, Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Several hundred requests were fulfilled.

The address of the Vegetarian Society of Georgia is also given.

10970. *SoyaScan Notes.* 1995. Many people are calling Soyfoods Center with a new type of question about soyfoods (Overview). Oct. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since early August there has been a significant increase in the number of people calling or writing Soyfoods Center. This increase was probably caused initially by the front page story in the *New York Times* on Aug. 3 titled "Health benefits from soy protein: Study finds potent weapon in lowering cholesterol," by Natalie Angier.

The callers, most of them women, are now asking a new question: "I'm looking for ways to get more soy into my diet." In addition about 10-12 people are writing each day to request free tofu recipes.

10971. Abate, Gugsa; Gobezie, Abeba. 1995. Soybeans in Ethiopia: A review on historical background, production, and utilization. Paper presented at the Third Bi-Annual SoyAfrica Conference. 18 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. [10 ref]

• ***Summary:*** Contents: Introduction. History of soybeans in Ethiopia. Soybean and its uses in the world: Soybean flour, soybean milk, soybean curd, protein concentrates, protein isolates, soybean oil, soy beverage, soybeans as a vegetable [green immature soybeans], other uses. Nutritional evaluation of soybean. Soybean production in Ethiopia. Climatic condition suitable for soybeans. Uses of soybeans in Ethiopia: Public sector, private sector. Agricultural potential of soybeans. Conclusion.

History in Ethiopia: The first records of soybeans in Ethiopia date back to the 1950s. The years 1956 to 1971 were a trial period for selecting promising varieties and suitable growing areas. During this period, different varieties were tested at the research stations of Debre Zeit, Jimma and Kulumsa of the former Chilalo Agricultural Development Unit [CADU]. About 20 varieties have been introduced for testing from various parts of the world. In 1972 the Ethiopian Nutrition Institute (ENI) initiated a soybean multiplication program starting with imported seeds of different varieties. The seeds were grown under contract by local farmers. Yields were low due to late weeding and negligence in applying the recommended fertilizer. Finally in 1974 ENI, in collaboration with CADU, introduced soybeans to the local farm population. The aim of this program was to replace the soybean flour imported by ENI for Faffa production with flour made from locally grown soybeans, and to introduce this new bean into Ethiopian diets. A grower's manual was even published and distributed to local farmers. A number of recipes were also developed by ENI for use in the popularization of soybean. This activity started in 1972 and

© Copyright Soyinfo Center 2013

continued until mid-1995.

However, all the efforts made to multiply the soybean and bring it to the local people were discontinued because of low acceptability by the farming community. Presently, no community is producing soybean in Ethiopia. In 1974 IAR took over the basic soybean research program; since then it has remained as a research program. Nevertheless, during the early 1990s, the Faffa plant had an arrangement with settled farmers in Assosa to grow and supply soybeans. Also, Health Care Foods has a soybean supply program with private commercial growers. Most important, since 1978, soybean production on a relatively large scale has been undertaken by certain state farms in Ethiopia: Wollege, Gojam, Kaffa, Awassa, Shashemene, and Awash are the major sites of production in Bellessa. Today, there are only two state farms which produce soybeans. These are Wollega, and Gojam-Gonder Agricultural Development Farms. They supply raw soybeans to the Faffa Food Factory, Health Care Food Manufacturers, and Animal Food Processing Organizations of Kaliti, Akaki, Debre Zeit, and Nazareit. Table 2 (p. 8) shows the area and production of soybeans in Ethiopia from 1979-81 to 1992–however the units are unclear.

Today in Ethiopia, soybeans are used in both the public and private sectors. In the public sector, soybeans are used commercially in the manufacture of Faffa, a high-protein weaning food and famine-relief food. Faffa contains 53% wheat, 18% defatted soy flour, 10% chickpeas, 9% skim milk powder, 7% sugar, and 1% iodized salt, vitamins, and minerals. The Faffa Food Factory is the only big user of both imported and domestically produced soybeans. In addition to Faffa, this factory also makes different soy-based blended food products such as Dube, Cerifam, and Famix. Table 3 (p. 10) shows the production of each of these foods (in metric tons = tonnes) from 1988 to 1994. Faffa has decreased from 5,835 tonnes in 1988 to 1,520 tonnes in 1994. Dube has decreased from 5,937 tonnes to 1,109 tonnes. Cerifam has increased from 10.8 to 20.6 tonnes. Famix (which contains full-fat soy flour) has increased from 10.7 tonnes in 1993 to 3,906 tonnes in 1994.

Table 4 (p. 11) shows the factory's annual consumption of both defatted and full-fat soy flour from 1988 to 1994. Use of defatted soy flour (all imported from the Netherlands) decreased from 1,407 tonnes in 1988 to 376.8 tonnes in 1994. Consumption of full-fat soy flour (locally processed) increased from 0.1 tonnes in 1988 to 684.7 tonnes in 1994. The factory's maximum demand for soybean is estimated to be about 4,000 tonnes/year if it works at full capacity. ENI has developed recipes using soy flour in traditional Ethiopian dishes for the purpose of introducing soy to communities. These dishes are: Injera (fermented, flat pancake), wot & allichas (sauces served with injera), kitta (unleavened bread), dabbo (leavened bread), dabokolo (snack food), and porridge. At its experimental kitchen, ENI has also been testing soy milk and tofu, and the results have been disseminated to home agents to teach people in the communities how to make soymilk and tofu at home.

Private sector: With the advent of the New Economic Policy, private industries are now flourishing in every sector of the economy. A supplement producer named Health Care Food Manufacturers Pvt. Ltd. Co. began to use soybeans in 1993 in the form of full-fat soya flour in all of its supplementary food mixtures. Its production capacity is now 15 tonnes/shift. In Ethiopia, most people, especially members of the Ethiopian Orthodox Church, consume diets free of animal products during their fasting period. The total number of fasting days amounts to 110-150 days/year, but can reach 220 days for priests and monks. Thus soy-based meat and dairy alternatives can serve as good alternatives for these people while they are fasting. Ethiopia should encourage soybean production. Address: Ethiopian Health and Nutrition Research Inst., Addis Ababa, Ethiopia.

10972. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self.* Oct. p. 148-151, 204. [1 ref]

• ***Summary:*** The subtitle continues: "Okay. One more time. Scientists are telling us they've found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!"

"Soy may be so effective that it actually crosses the line from nutritional to medicinal."

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol." It also notes that: (1) "Genistein, a powerful natural chemical unique to soy," may stop the growth of cancer cells. (2) The natural estrogens in soybeans may "help alleviate postmenopausal symptoms." In Japan, where soy is typically eaten daily, there is no word for "hot flashes."

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled "15 delicious ways to add soy to your diet," gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

• ***Summary:*** One of the most surprising discoveries of modern medicine is that enzymes in the liver "can take the most powerful and dangerous chemicals, and, in an instant, render them totally harmless and show them to the door." It takes certain foods to boost or activate these enzymes, which eliminate toxic chemicals in two steps. In phase 1, an enzyme in the liver cell grabs hold of a toxic molecule and attaches oxygen to it. In phase 2, a second enzyme hooks the toxic molecule onto a carrier molecule, such as glutathione, which carries it away via the urine or feces.

The key is to have plenty of phase 2 enzymes. According to Dr. Paul Talalay of Johns Hopkins University, one of the best sources natural chemicals that cause the liver cells create large amounts of these enzymes is broccoli and other cruciferous plants, such as white cabbage, Brussels sprouts, cauliflower, and kale. "Soybean products, such as tofu, tempeh, and soy milk, also contain natural compounds that stimulate your body to make more of these helpful phase 2 enzymes, which may be part of the reason why Asian countries have especially low cancer rates." Address: M.D.

10974. Bloyd-Peshkin, Sharon. 1995. A labor of love: A group of vegetarians has spent two dozen years trying to change the world one acre at a time. *Vegetarian Times.* Oct. p. 66-73, 75.

• ***Summary:*** The Farm is a back-to-the land vegetarian community located about 75 miles southwest of Nashville, Tennessee. They have "spent a quarter century quietly pursuing what have become major trends of the 1990s... In the food business they are on the forefront of healthful eating. They produce tofu, tempeh, and soymilk;... publish vegetarian cookbooks; and run a vegetarian mail-order business that sells hard-to-find vegetarian foods. They've been instrumental in introducing soyfoods to the United States, as well as using them to assist people in developing nations." Their experiment in communal living began in 1971, but they began to come together at Stephen Gaskin's Monday Night Class, a course in the Experimental College at San Francisco State University, where love, tolerance, and compassion were the main tenets. In 1969 Gaskin went on a speaking tour of liberal churches across the country and invited along any members of the class who cared to join him. Seven months and 7,000 miles later a caravan of 300 people in school buses returned to San Francisco. In 1971 the caravan again hit the road, bound for Tennessee. hey rented a tract of land in Lewis County, one of the poorest in the state, and began farming. Others could join if they agreed not to smoke cigarettes, drink alcohol, eat meat, use weapons, or be violent in any way. If they decided to stay, they had to turn over all of their money and property to the community bank–except for tools, musical instruments, and clothes. Now they were part of a community dedicated to living a spiritually meaningful life.

Several years later a 1,000 acre tract of land became available next door to the land the community was renting. They purchased it for $70/acre and began to build a village and a soy dairy. For the first 10 years they had no running water and only battery-powered lighting. Now 10,000 hippies a year came to visit, and some stayed. When 750 more acres of land adjacent to the original farm came on the market, the community quickly bought it.

"But the Farm members' mission was more than just to build a community: They wanted to save the world. With its own basic needs for food and shelter barely met, the Farm sent volunteers to help with disaster relief after an Alabama tornado in 1974. This was the beginning of Plenty, the Farm's charitable relief and development agency. When an earthquake hit Guatemala in 1976 [Feb. 4], Plenty sent a construction crew to help rebuild the homes of poor Mayans... They also found a strain of soybeans that thrived in the local soil, and helped build a soy dairy that still produces tofu, soymilk, and soy ice cream. After the experience in Guatemala, Plenty made soy technology a regular part of its strategy for assisting people in developing countries. Other relief agencies have followed Plenty's lead, discovering that raising soybeans for soyfoods is one of the surest routes out of starvation and into self-sufficiency."

In 1978, after a few years of terrible financial losses, the Farm decided to keep its agricultural operations small scale and organic. By 1980 the population of the Farm had risen to about 1,500 and resources were stretched thin. The population of the Farm began to decline. There was a shift from the idealism of the 1970s to the materialism of the 1980s. The grumbling and discontent escalated, as did the Farm's debt of $1.2 million owed to local banks and merchants. In 1983, after much research and soul searching, the board decided the Farm should cease being a commune and become a cooperative instead. Members would still own the land in common but they would earn and spend their own money. "Food and medical care would no longer be free, and members would pay monthly dues in order to pay off the community's debt and maintain community property, such as roads and utilities. All adult members would ratify each year's budget and decide other major issues affecting the community.

"In the wake of this metamorphosis, known as the Changeover, more people left; by 1986 only 400 residents remained... Many of the people who left were bitter, feeling they had put everything into the community and were left

© Copyright Soyinfo Center 2013

with nothing." To pay its debts, the Farm sold off some of its communal assets, including Ice Bean, a nondairy ice cream. After 3 years, the Farm was debt free, and local businesses were thriving.

"The soy dairy, begun in order to feed thousands of hungry hippies, has been revived as the Farm Soy Company by founding residents Barbara and Tom Elliott, who today churn out 1,600 pounds of tofu and 10 to 15 gallons of soymilk daily with the help of two part-time employees and cleaning help from four teenagers. The Tempeh Lab, which pioneered U.S. production of this soyfood in 1974, is now owned by Cynthia Bates, who provides tempeh culture to individuals and businesses that make tempeh worldwide. Mushroompeople, owned by Frank Michaels," grows and sells shiitake mushrooms.

"The community's Book Publishing Company, which pays a staff of seven full-time and four part-time Farm members, has made these foods and vegetarian cooking accessible to the mainstream. The company also publishes information on midwifery and the nutritional aspects of a vegetarian diet. The Mail Order Catalog, owned by Cynthia and Bob Holzapfel, is a source of vegetarian foods that are difficult to obtain outside of major metropolitan areas."

Today the Farm owns its land outright and has about 185 residents, about half of them teenagers–who provide living proof that a vegan diet is healthy for children.

10975. Gabriel, John. 1995. A Plenty volunteer in Nicaragua writes. *Plenty Bulletin* (*Summertown, Tennessee*) 11(3):4. Fall. [1 ref]

• ***Summary:*** After studying Spanish full-time in Guatemala for 5 weeks, John and his wife Charlotte arrived in Managua in mid-April 1994. They worked with Soynica's leaf protein concentrate facility near Granada, Nicaragua, and the future Nutrem Soy Shop. He and Charlotte spent 2½ months helping to clean and paint the Nutrem shop, supervising and doing electrical and plumbing work, designing and making various pieces of equipment and fixtures. Charlotte also began training the crew to make tempeh and new varieties of tofu.

Chuck Haren and Casta Calderon (Plenty soy technicians) arrived one day before John and Charlotte were to return to the USA, "and at the perfect time to do some serious training of the three-person crew in tofu production. Chuck also put together the walk-in cooler." Charlotte and John returned to Managua at the beginning of October and worked there for the next 2½ months on the Nutrem Soy shop. They left in mid-December to travel and study Spanish for 5 weeks in Guatemala, then returned again at the beginning of February, 1995, and spent most of the next two months working at Nutrem. Rita, a Swiss volunteer, worked with Zaraya, the manager.

10976. Iderabdullah, Bisi. 1995. Letter from the Director of Imani House, Liberia. *Plenty Bulletin* (*Summertown, Tennessee*) 11(3):3. Fall.

• ***Summary:*** "As a vegetarian in Brooklyn I learned to make tofu and made limited use of soy products. When our family moved to Liberia I only saw soybeans when I went to a company that made animal feed, and it was made into pellets and exported. Many of the foods we had come to love and depend on were just not available... When the war and famine came to Liberia in 1989 our family decided that we must find a way to help and enrich the diets of the people here as quickly as possible, especially the children... We founded Imani House as a Liberian NGO to assist victims of the civil war. When I was able to leave for New York and began to solicit help for Liberia, I got on the phone and called soyfoods factories to no avail. Finally I found the number for The Farm... I got Plenty on the phone and the next thing I knew I was in Nigeria with Chuck Heran learning about the local uses of soyfoods for human consumption at the International Institute of Tropical Agriculture, IITA. I was very excited and on our trip back to Liberia we found that the World Food program (WFP) had imported soybeans and people hated them and were literally throwing them away. Chuck and I bought some and began our first demonstration and taste test here in Liberia in the village of Duazon with a population of about 250 persons. Milk, nuts, fritters and gravy were well received by all, especially the children. Since that time Imani House has been trying to improve our soybean growing programs, and Plenty is sending a soy technician to help with that. [Ignatius Longville of St. Lucia in the eastern Caribbean is in Liberia until the end of November–ed.] The suffering continues, but we are doing what we think is right in agriculture–farming for improved nutrition with the outlook of including soybeans in the diets of every child and adult." A photo shows a soy cooking demonstration in Monrovia, Liberia.

Note: Bisi can be contacted c/o Mahmoud Iderabdullah, UNDP/Monrovia, P.O. Box 1608 Grand Central Station, New York, NY 10163-1608. Address: Director, Imani House, Liberia.

cheddar sauce. Pot Pie Style (New)–Potatoes, onions, peas, carrots and organic tofu. Broccoli & Cheddar Style–Tender broccoli in a creamy tofu cheddar sauce. Address: Palo Alto, California. Phone: 415-327-1444.

10978. Osho, Sidi M. 1995. Developed soybean technologies for household small-scale and industrial levels. Paper presented at the Third Bi-Annual SoyAfrica Conference. 32 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma.

• ***Summary:*** Contents: Introduction. Soybean food options and technology: Use of soybean at house level, soybean beverages and ice cream, soybean based baby foods and breakfast cereals, weaning / baby food, extrusion cooking (IITA concept), other advantages of extrusion processing. Impact of soybean utilization project. Conclusion.

Tables: (1) Chemical composition of soy milk from seven milk processors: IITA, IAR&T, Jomatex, Tella Food Industries, Mini Opic milk, Samalic Industries, Milk man, Deagbo Industries. The protein content ranges from 3.01% (Deagbo) to 4.99% (Milk man). (2) Proximate composition of some baby food manufactured by Nigerian companies. Those containing soy are Nutrend, Babeena, Golden Morn, Mama Joy, and Joy Vita; their average price in 1994 is 87 Naira. Non-soy (mostly imported) are SMA, Similac, Nan, and Nan; their average price is 192 Naira–more than twice as expensive. (3) Yield and quality of soy oil and affected by processing temperature. (4) Nutrient composition of selected soy flours from the extruder and the screw press. (5) Physico-chemical characteristics of crude, partially and fully refined soy oil.

(6) Forty nine soybean products that are being processed and marketed by companies in Nigeria (Feb. 1994): In Lagos: Lisabi Foods Soy custard, Smallette Sogi, Glaxo Nigeria "Babeena" baby food, Nestle Foods "Nutrend" baby food and "Golden Morn" breakfast food, Goodings Health Goods "Nutrela" texturized vegetable protein, Niger Dock Soymilk, Al-Bahamas Baba Ogi, Odichie Bakery Soybread, Buckingham Ltd. Mama Joy baby food. In Oyo: Milkman Soy milk, Deagbo Industries Soyvita (beverages), Tella Food Industries Soymilk.

(7) Summary of number of markets and retail sale outlets for soybean (seeds & flour) in Ibadan, Nigeria. Gives figures collected by IAR&T for January each year from 1987 (2 markets, 4 retailers, price 1.50 Naira/kg) to 1994 (64 markets, 1,017 retailers, price 20.00 Naira/kg) to 1994.

Abstract: "Protein deficiency is still a major problem in Africa particularly among the low income group. Soybean has tremendous potential for alleviating protein energy malnutrition in root crops / cereal based African diets via soybean based industries. This paper discusses the soybean technologies available for household, small scale, and industrial level."

In African diets, almost 60% of the proteins comes from cereal grains. Soybeans can be used in traditional recipes and foods in a wide variety of forms including whole soybeans, soymilk, tofu, soy splits (split soybeans), soy flour (raw and heat-treated), soy paste (cooked soybeans ground to a paste), soymilk residue (okara), etc. Traditional Nigerian dishes that were found to benefit from addition of soy are *moinmoin, akara, kuni, fufu, eba, etc.* Soy milk, soy yogurt, and soy ice cream have become readily acceptable and available in Nigerian markets.

"Conclusion: The future of soybean looks bright in Africa. With increasing demand and the increasing costs of protein foods, soybean offers one of the best solutions for improving human nutrition in Africa; particularly the problem of protein energy malnutrition. There is need for more research and training in the area of soybean processing and utilization." Address: Food Technologist and Coordinator, Soybean Utilization Project, International Inst. of Tropical Agriculture (IITA), Oyo Road, PMB 5320, Ibadan, Nigeria. Phone: 234 2 241 2626.

10979. Paine, Heather. 1995. Processing trends in Europe. Paper presented at the Third Bi-Annual SoyAfrica Conference. 14 p. + 11 p. of tables, charts, and graphs. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. [10 ref]

• ***Summary:*** Contents: Introduction. History and production. The benefits of soya: Nutrition, functional properties. Products & applications: oil-based products (soya bean oil, soya lecithin), soya protein products (full-fat soya flours, defatted soya flours, soya concentrates, soya isolates), soya fibre products (incl. soy bran), whole soybean products or soya foods (soya milk or drink, tofu, yuba, soya sauce, miso, tempeh, natto). Trends and problems: Growing market for soy protein ingredients, U.S. soyfoods market, soymilk sales, problems of quality and image and legislation. Address: Editor, Soyfoods, England.

10980. *Plenty Bulletin* (*Summertown, Tennessee*). 1995. La soya continua, Guatemala, 1995. 11(3):1-2. Fall.

• ***Summary:*** "In the summer of 1995, with funding provided by Food for All, Onaway Trust, and Plenty donors, Suzi Jenkins returned to Solola in the highlands of Guatemala to work again with her Mayan friends. The soy dairy she helped develop in 1980 looks the same as when she left fifteen years ago. Most of the staff are people she and Laurie Praskin trained. Many of the little kids that once lined up eagerly at the dairy window for soy ice cream are now parents. This time the program Suzi directed was somewhat different in format, but the purposes were the same–to increase the use of soyfoods in Guatemala and to develop a market for the products of Alimentos San Bartolo (ASB). To do this, Suzi would focus on three tasks–holding cooking classes in Mayan cooking classes in Mayan communities around Solola and San Bartolo teaching methods of preparing foods

© Copyright Soyinfo Center 2013

using tofu and tempeh, holding similar cooking classes at restaurants which are now, or will be, purchasing products from ASB, and, finally, creating and publishing a cookbook of recipes from the cooking classes. Assisting the program were two volunteers, Steve Karian and Jennifer Relin of Tufts University School of Nutrition, and Elena Paula Xoquic and Micaela Coj of San Bartolo... Thirty five cooking classes were held, and two thousand copies of the cookbook were printed. One immediate result of Suzi's work has been an increase in sales of soy products at ASB, both to individuals and stores. ASB now maintains its own store on the square in Solola."

Photos show: (1) A soy foods cooking class in San Bartolo. (2) Mayan kids sitting on a bench, enjoying the results of a cooking class. (3) Micaela Coq, a Mayan woman, leads a soy foods cooking class near Solola. (4) Mayan women showing a strong enthusiasm for soyfoods. (5) Agostine Xoquic cleans soybean grinding stones at Alimentos San Bartolo (ASB). These are the same stones originally installed in 1980. (6) A Mayan woman making tofu at ASB. (6) Marcelino Cortez is the new manager of ASB.

THANKSGIVING 1995

Tofurky™

The Delicious, Vegetarian Holiday Alternative

Searching for a hearty and satisfying vegetarian centerpiece for your holiday feast? Look no further — ***Tofurky*** is here! This original and delicious creation of Hans and Rhonda Wrobel of The Higher Taste has developed an enthusiastic and loyal group of fans throughout the Portland metropolitan area. Now for the first time, we are offering this product to a regional audience on a limited basis for all those seeking a healthy, meatless meal for the holidays.

Tofurkys consist of seasoned organic tofu filled with a hearty stuffing of cranberries, walnuts and herbed organic bread crumbs. Each ***Tofurky*** is honey basted and prebaked to a golden brown perfection. The tender, baked tofu can be sliced easily into attractive, pie shaped wedges. In addition, each ***Tofurky*** comes with 4-3 ounce "Drumettes" made by Turtle Island Foods of Hood River, Oregon. These dark fillets are made from grated organic tempeh, tvp, wild rice, carrots and seasonings carved into a drumstick shape! Covered with our own Chanterelle-Nutritional Yeast Gravy (recipe included in every box), this gourmet creation will give your vegetarian guests the satisfying meal they deserve.

Best of all, because ***Tofurkys*** are prebaked, they are ready to serve in less than an hour's prep time. So this holiday season spend the day with your family and friends and then celebrate the earth's abundance with this fabulous, cholesterol free feast. Make this your easiest and tastiest holiday ever!

Tofurky is available on a special order basis from this store. Ask store personnel for an order form today!

1995 CHRISTMAS

Tofurky™

with Drumettes and Gravy
A Delicious Vegetarian Holiday Feast!

WHAT IS TOFURKY? Tofurky is a pre-baked vegetarian roast. It consists of three parts: stuffed tofu roast, tempeh drumettes and mouth watering golden gravy. Each Tofurky is 100% vegan, easy to serve and is the perfect main course for any holiday gathering.

HOW DO WE MAKE IT? We season tofu, fill it with a hearty stuffing of cranberries, walnuts and seasoned organic bread cubes. Tofurky is then hand sculpted, basted with a ginger-tamari sauce and pre-baked to a golden brown perfection.

HOW ABOUT THE TEMPEH DRUMETTES? Included in your Tofurky are eight Drumettes, a dark filet made of grated organic tempeh, tvp (textured vegetable protein), wild rice, cranberries and carrots, seasoned and carved into yummy shaped drumsticks.

IS THERE MORE? To top it off, we've included a Golden Mushroom Gravy packet. This meatless gravy is the perfect rich, full flavored Tofurky topping.

HOW MANY DOES IT SERVE? Tofurkys include 1 three pound stuffed tofu roast, 8 tempeh drumettes and 16 ounces of golden gravy. Tofurky heats up in less than an hour and will easily feed 8 hungry adults.

IS TOFURKY HEALTHY? Not only is our Tofurky delicious, it's also good for you! Filled with organic ingredients, dairy free, high in protein, zero cholesterol, nutritious and kids love it, too.

WHO MAKES TOFURKY? Tofurky is a joint effort between two natural foods manufacturers from the Pacific Northwest — The Higher Taste of Portland and Turtle Island Foods of Hood River, Oregon.

WHERE CAN I BUY IT? Tofurky is available by special order through your local natural foods store or call the numbers below.

filled with a herbed, whole wheat bread crumb" stuffing. "The tender tofu slices can be cut into 8 generous servings."

Press release. 1996. Oct. 20. "Will that be turkey or Tofurky."

Box with Label sent by Seth Tibbott. 1996. Nov. 6. The outer box is 13¼ by 10½ by 3¼ inches. Printed red on cardboard color. New weight: 5 lb 15 oz. "The original Tofurky: A delicious vegetarian feast. 100% vegan. Cooks in minutes. Serves 8. Keep frozen or refrigerated. 1% of all sales from this product to Farm Sanctuary Adopt a Turkey Program." The inner box is white. The label is printed black on white. Net weight: 2 lbs. 12 oz. On the label are printed two logos and addresses, and a UPC. The Higher Taste, 2402 SE Belmont Ave., Portland, Oregon 97214. Turtle Island Foods, Inc., PO Box 176, Hood River, Oregon 97031. Vegetarian Journal. 1996. Nov/Dec. p. 8. "Tofurky."

Dinner with Bob & Pattie Gerner to test and give feedback on Tofurky 97. 1997. May 10. A delicious sliceable roast, made mostly of gluten and tofu, may replace the former marinated baked tofu. The roast ingredients are: Water, vital wheat gluten, organic tofu, natural vegetarian seasoning, wild rice blend, shoyu soy sauce, fresh onions, granulated garlic, tomato sauce, molasses, sea salt.

Talk with Seth in early 1997. He sold 800 Tofurky in 1995 and 4,000 in 1996.

10984. United Soybean Board. 1995. The absolutely astounding supermarket soybean search. Chesterfield, Missouri: USB. 6 panels. 28 cm.

• ***Summary:*** This colorful, six-panel foldout contains a panoramic 4½-panel illustration of the inside of a modern supermarket. Each of the aisles and sections are marked. Additional signs show the many places that soy appears in the store.

The bottom half of the first page states: "Ever since the famous American chemist George Washington Carver began exploring the mysteries of this little legume near the turn of the century, the growth in food and technical uses for soybeans has been nothing short of astronomical. Today, every aisle of your local supermarket contains soybean products, and we're not just talking tofu. Take a look at the astounding number of products containing soybeans at the Super Duper Food Store in Anytown, USA."

A sidebar explains four symbols for marking foods made from whole soybeans (circle) or containing soy oil, soy lecithin, and soy protein or soybean meal. For example (moving from left to right): Margarine & spreads. Tofu. Tofu ice cream. Peanut butter (with soy oil). Desserts and Mixes (with soy oil). "Super Soy–Oh Boy" (Soymilk end display, by the case). Cooking oils. Mayonnaise, Salad dressing. New Chips Asoy! Sauces. A sign reading "Think soy." Soya Snax. Soy Joy (in the refrigerated drinks section).

One full page, titled "Believe It," gives a detailed alphabetical listing of 76 categories supermarket items that contain soy, and what type they contain. For example: "Cosmetics: Soybean oil. Crackers: Soybean oil, soybean oil shortening. Croutons: Soybean oil. Diet drinks: Soybean oil, soy lecithin, soy protein isolate." Also included are: Soy sauce. Soy nuts. Tofu. Not mentioned: Miso. Soymilk. Meat alternatives. Address: 16305 Swingley Ridge Dr. #110, Chesterfield, Missouri 63017.

10985. United Soybean Board. 1995. Introducing the soy-a-mid: How soybeans fit into the eating plan described in the USDA's Food Guide Pyramid (Brochure). Chesterfield, Missouri: USB. 6 p. 29 cm.

• ***Summary:*** This food pyramid emphasizes dairy products (the "Milk, Yogurt and Cheese Group") and meats (the "Meat, Fish, Poultry, Dry Beans, Eggs & Nuts Group"), plus products made with soybean oil. "Right now you're probably eating a ½ cup's worth of soybeans every day without even realizing it."

"Plant foods in the Meat Group, such as beans, peas, lentils and nuts, provide protein, but this protein is not 'complete.' Animal protein is 'complete,' that is, it contains all of the eight amino acids required for proper nutrition. Plant proteins–*with the exception of soybeans*–need to be combined with grains or animal proteins to provide all the eight amino acids. Soybeans and soybean products, such as tofu and soybean flours, are one of the few plant protein sources that contain complete protein.

Soybeans belong to "The Pod Squad–legumes," which are not easily classified into one food group. "The soybean is something of a nutritional superstar, even among members of the Pod Squad... New medical research suggests that certain non-nutritive components in soybeans may work to reduce the risk of cancer. Many foods that come from soybeans are derived from the various components of the bean... Soy protein is extracted from the bean to be used in a host of manufactured foods form surimi to pancake mixes. Foods derived from whole soybeans, such as tofu and tempeh, are used as a primary protein source in many Asian countries. Tofu is also a good source of calcium in Asian diets where milk and milk products are seldom consumed. In fact, a Food Guide Pyramid in China or Japan would see tofu playing a major role in the third tier of the diagram.

"'Think Soybeans'–Whether you're spreading soybean margarine on your pancakes fortified with soybean flour, or experimenting with tofu in your stir-fry, remember that soybeans are a versatile food that can play an important role in your personal food guide pyramid."

An excellent illustration shows a whole soybean, divided like a pie chart into its major macronutrients. Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

10986. United Soybean Board. 1995. Soybeans: How a little bean becomes an ingredient in thousands of products from margarine to tofu to chicken feed (Brochure). Chesterfield,

© Copyright Soyinfo Center 2013

Missouri: USB. 12 panels + poster. Each panel: 23 x 10 cm.
• ***Summary:*** This attractive color publication is folded so that the first 12 panels are a brochure. However when fully unfolded, a large color poster appears. The brochure notes: In 1992/93 the USA produced 51% of the world's soybeans. An early history of the soybean in the USA [full of errors]. America livestock (including poultry) consume about 22.5 million tons of soybean meal a year. How soybeans are grown. Composition of the soybean. Foods made from soybeans: Edamame, miso, natto, soy milk, soy sauce, tempeh, tofu or soybean curd, full fat flour. Photos (each incorrect) in the brochure show: "1904: The famous American chemist George Washington Carver discovers that soybeans are a valuable source of protein and oil. 1920s: Combines first used to harvest soybeans. 1922: First U.S. soybean processing plant opens. 1929: Soybean pioneer William J. Morse spends two years in China, gathering more than 10,000 soybean varieties for U.S. researchers to study. 1940: Henry Ford takes an ax to a Ford car body to demonstrate the strength of the soybean plastic he has developed."

The color poster (16 by 27 inches) is a cartoon showing how soybeans are processed into various products, including full fat flakes, crude and degummed soybean oil, soy concentrates, soy isolates, soy flours, and defatted soy flakes. A soybean utilization/processing diagram at the bottom of the poster shows 137 different products that can be made from the soybean, including 33 whole soybean products ("Traditional soyfoods" incl. tofu, soymilk, miso, tempeh, soy sauce, natto), 33 soybean meal products (26 edible uses + 7 feed uses), and 71 soy oil products (13 edible uses, 19 industrial uses, and 18 applications for lecithin). The seven types of lecithin applications are: Emulsifying agent (4 applications), nutritional (medical use, dietary use), anti-spattering agent (in margarine manufacture), stabilizing agent (in shortening), anti-foam agent (yeast manufacture, alcohol manufacture), dispersing agent (in paint, ink, and rubber manufacture, and in insecticides), and wetting agent (in cosmetics, paint pigments, and calf milk replacers).

Accompanying the brochure/poster is a note pad with the same slogan across the top of each sheet: "Soybeans–Designed for life." Across the bottom is written: "United Soybean Board–Investing check-off dollars." Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

10987. Voisin, Jean-Luc. 1995. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma.
• ***Summary:*** Contents: Foreword. The existing plants. Dairylike foods in Africa–The weak points: The soyfood itself, and the size of the project. The best "compromise": The end products, the size of the plant and investment. Feasibility of a soy yoghurt plant–an example. Conclusion.

During the last 20 years the author has spent most of his time in the study and establishment of more than 30 food processing plants for the private sector throughout Africa (mainly for the milk, fruit, and soya industries) from the smallest (US$100,000 investment) up to the biggest (more than US$15 million) on behalf of small European companies and multinationals. In 1987, while visiting dairy plants in Nigeria, he noticed that all but one had been forced to stop operations because of lack of powdered milk–whose price had quadrupled from $0.50/kg to $2.00/kg within a very short time. Today the price is about $3.00/kg.

At this time he realized that powdered soymilk could be used in place of powdered cow's milk, so he worked with a French company to design and manufacture a soya milk processing machine (named Agrolactor) which made 250 liters/hour of soymilk. They tried to promote this machine in Africa. The first one used commercially was installed in Nigeria in 1990; since then they have installed 7 other plants throughout Africa. The demand for soya processing is steadily increasing, however during the past 5 years these projects have faced many difficulties.

The seven existing plants (with the company name in parentheses) are: (1) 1989–Congo (Agricongo). This was the first project to use the Agrolactor. Agricongo used the machine for research and development. They sold it this year (1995) to a dairy plant in Brazzaville for soy yogurt production. (2) 1990–Lagos, Nigeria (Uncle Soyo): A private Indian investor. After 3 extensions and an aggressive marketing policy, this company was selling more than 300,000 units per day of soydrinks (pouches), soy yogurt, and ice cream. After very good results and profitability, the plant has now been moved to India. (3) 1992–Ivory Coast (Cebon): This plant had planned to process pineapple juice and soy drinks, but in the end only pineapple juice was commercially successful. (4) 1993–Burundi (Vispe): This Italian NGO is still working in Bujumbura, producing soy milk and baked goods. (5) 1994–Cape Verde (*República de Cabo Verde*) (Benali): A private company is producing soydrinks and fruit juices (from imported concentrate); today 80% is from fruit. Note: This is the earliest document seen (Aug. 2009) concerning soybeans in Cape Verde. This document contains the earliest date seen for soybeans in Cape Verde (1994) (one of two documents). The source of these soybeans was France (See Duchatel 1997). Even earlier, sometime between Sept. 1946 and 30 June 1960, the Cape Verde Islands received 1 shipment of 2,007 lb of Multi-Purpose Food.

(6) 1995–Cairo, Egypt (Sesco): This private company, in a joint venture with Actimonde, is manufacturing soy yogurt. After 3 months of production the break-even point has already been reached (50% of normal capacity, i.e. 20,000 cups/day). (7) 1995–Nigeria: A second plant in Suleja (50 km from Abuja) was installed for a parastatal company; the soydrinks are expected to be launched this month.

© Copyright Soyinfo Center 2013

The end products: European soyfoods companies are now very creative in research & development. During the last 2-3 years many new products, with better taste and packaging, have been introduced to European food stores, including supermarkets. The author estimates that the sales of the 7 French, Belgian, and Swiss soyfoods companies he knows have increased by approximately 30% every year since 1990! Four groups of products have been the most successful in Europe: 1. Soymilk, packaged in aseptic long-life cartons and sometimes mixed with flavors or fruit juice. 2. The dessert products–soy yogurt (Soyourt) and ice cream. 3. Tofu burger. 4. The dried products–biscuits and energy bars. For the African market, consumer taste tests conducted in 12 countries show that the most acceptable product is soy yogurt, which is very close to the traditional sour milk consumed by many African people. Dried products (energy bars) are also well accepted, and they are easily distributed and stored. Soymilk (whether flavored or plain) is not appreciated and tofu is too sophisticated at present.

In Africa, up until now, all of the soyfoods projects known by the author, have been developed on a relatively small scale with an investment of less than $1 million. Because this size plant involves too many problems, it is now believed that a plant with an investment of approximately $2 million represents the best compromise between production capacity, the market possibilities, profitability, and management capability. An example of the cost breakdown for a soy yogurt plant on this scale is given.

Conclusion: There is no doubt today that dairylike soyfoods are becoming one of the most interesting solutions to nutritional problems facing the growing populations of Africa. In order to realize this potential, the food industry must develop technologies and end products suites to the purchasing power and tastes of African consumers. Those products must be followed up by a strong marketing program. For the success of such medium- and small-scale commercial ventures, it is important that linkages be established between the private investors, NGO's, and International Organizations. 10988. Ribbens, Bob. 1995. Traditional Foods Cooperative was changed to Earth Fire Products Co. in Feb. 1994 (Interview). *SoyaScan Notes.* Nov. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The change in name was accompanied by a change in ownership and structure–from a cooperative (which was a corporation) to a non-stock corporation. Bob made the change to reorganize the company's decision-making process. It was sort of like a bankruptcy. Prior to the change, Bob was funding the company but other people were running it. They didn't want to include him in the decisions. When he asked them to put up as much risk as he was putting up, as long as they wanted to make the decisions, they decided they didn't want to do that. They made an agreement about reducing risk on a new product, but they didn't keep their side of the agreement and ran down cash funds by a large amount. Bob is now owner. The stock is not owned by the workers. None of the former workers are with the business any more. There have been many changes during the last 6 months.

Bob Mandel and Cindy Wiar made the first products, tofu and tempeh, on their own in May 1984. Bob Ribbens thinks that the date of Nov. 1986 is too early for seitan; he thinks the introduction date should be 1989. He never saw tempeh on sale in the community before 1989. In 1989 they decided to stop making tofu and tempeh commercially, and to switch to making seitan and miso. The meeting for interested people too place in 1988, not in 1989. The organization formalized in the summer of 1989.

Bob's company presently has the following products on the market: Long-term barley miso (started selling in Feb. 1995). Seitan in 14 oz retail and 5 lb bulk pack. Brown rice miso, Kickapoo chutney, mellow white miso. They plant to start selling their mellow barley miso at a local co-op this month (Nov. 1995). They also plan to introduce a barbecue seitan. They also sell miso by mail order. They no longer make tofu or tempeh–those markets are too competitive. Address: P.O. Box 92 (Corner of Grove and North Railroad Streets), Gays Mills, Wisconsin 54631. Phone: 1-800-267-6918.

10989. Haren, Chuck. 1995. Soyfoods, Soynica, and Nutrem Soy Shop in Nicaragua (Interview). *SoyaScan Notes.* Nov. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Nutrem Soy Shop started making and selling small amounts of soyfoods in Managua, Nicaragua, in about June or July 1994. They are managed by *Soynica* (*Organizacion Soya de Nicaragua*), an organization of women working to improve the lot of children and women in the barrios of Managua by providing nutrition and health education and by supplementing the nutritional needs of more than 4,000 children and 500-600 pregnant and nursing mothers. Nutrem is in the process of introducing fresh soyfoods to the marketing sector in Managua. They are also teaching their people how to make these foods on a very small scale. Even when John Gabriel was working to prepare the shop for opening, his wife Charlotte was teaching women how to make tempeh. Plenty USA helped them obtain a grant from the InterAmerican Foundation, to purchase equipment for the plant and pay for people the first year; Chuck is sure this grant money has run out, but they may have had follow-up grants. There will be a big program there soon with Soynica as the center of it; the Belgians or the Austrians are going to fund it. It will include extruders (such as the InstaPro) to make dry products. Chuck thinks several more

© Copyright Soyinfo Center 2013

years will be required before Nutrem can stand on its own; less time would be required if they were just a food business, rather than an educational center with a broad program. The women of Soynica have been making and selling soyfood products for a long time, and helping different women in the barrios on a micro-business scale. Nutrem is an educational center as well as a small producer of foods.

Nutrem now makes small amounts of the following soy products: Tofu, tempeh, soymilk, soy ice cream, and okara croquettes (a mixture of okara, tofu, flour, herbs, and spices). John does not know how many people are employed by Nutrem; it is owned, managed and operated by women, though they may have some technical help from men.

Nutrem's soy products are sold at about 7 different very small health food stores in Managua; some of these shops focus on herbs and one is macrobiotic. The products are consumed almost entirely by Nicaraguans, not by foreigners. Nutrem has started to sell a little tofu to hospitals. Some of the Soynica women take home soy products made at the shop and sell them in their neighborhoods. Some of these women have micro-businesses in their homes. They will make soyfoods at home with several neighbors in the morning, then sell these fresh in the neighborhood.

Luci Morren, a former Belgian nun, has long been a spearhead for the program. Plenty met her in Chiapas, Mexico, when the Guatemalans fled in the early 1980s. She has been in Nicaragua since about 1981. Casta, Chuck's wife, was the administrator of Soynica; Luci is now the vice president; she was the president. Soynica has a paid staff of about 25 women and a board of directors, which includes people from the Nicaragua National University, a woman judge, etc. Soynica is a group of people who were Sandinistas during the 1980s; they were trying to maintain good nutrition in the country and were teaching people how to use soybeans. Some people in the government didn't like this since the soybeans had to be imported from the USA, but when they started getting the soybeans from Mexico and Brazil, and showed the importance of their work, the government let them continue. Soynica was formed and registered in 1988-89 shortly before the election of Violetta Chamorro in Feb. 1990. Chuck estimates that Soynica has at least 500 members and volunteers. Their most important is *olla communales* or communal eating pots. While educating people in the barrios about nutrition and soyfoods, they organized local groups into which they selected the most needy children and pregnant and nursing mothers. Six mornings a week Soynica offers these people a nutrition supplementation program in the form of an extra meal from the communal pot. Some of the soyfoods made at Nutrem may go into these communal pots. Nicaragua's economy is in pretty bad shape.

Nutrem was not the first tofu shop in Nicaragua. Before Chuck arrived in Nicaragua in 1990, he thinks there was a small tofu shop at the Ben Linder house–or perhaps somewhere else. There is another group named Tonali (pronounced toe-nah-LEE), a women's cooperative which Chuck helped in starting to make soyfoods; they have a bakery in Managua where in about 1992 they started making and selling tofu and soymilk. They also used the okara in their breads.

For details, write Luci Morren, Soynica, ERP-05, Managua, Nicaragua. To phone Nicaragua, where the time is 2 hours later than California: 011 +505-2-73360. Address: 3625 South 1st St. #110, Austin, Texas 78704. Phone: 512-912-1429.

10990. Buskirk, Audrey Van. 1995. A different drumstick. *Willamette Week* (*Oregon*). Nov. 10.
• ***Summary:*** "Only in Oregon... Two Oregon vegetarian outlets joined forces to produce Tofurky. The 'bird,' created by The Higher Taste, a Portland vegetarian caterer, is made with seasoned organic tofu, filled with a stuffing of cranberries, walnuts and bread crumbs, basted with a honey, ginger and tamari sauce and baked until golden. It comes with four 'dark meat drumettes' made by Hood River's Turtle Island Foods, a soy foods manufacturer, with grated organic tempeh, wild rice and carrots shaped into drumsticks. Think this sounds great? Awful? Taste it for yourself this Saturday, Nov. 11, between 11 and 4 pm, at Food Front, 2375 NW Thurman St."

A large cartoon shows a mother serving a turkey on a platter to her husband and son, seated–with knives and forks upraised–at the table.

10991. Timberman, Polly. 1995. Soy be it! Tofurky provides a holiday feast for vegetarians. So what if its flat? There's a stuffed creation just waiting for vegetarians to add the gravy and cranberry sauce. *Hood River News* (*Oregon*). Nov. 15. IIA. Kaleidoscope section.
• ***Summary:*** Tofurky is a joint venture between Portland's The Higher Taste (a vegetarian sandwich maker and caterer) and Hood River's Turtle Island Foods (a soy-foods manufacturer whose primary product is tempeh). Formerly located in Husum, Washington, Turtle Island later moved to the Graf building in Hood River's Diamond complex.

Vegetarians now have a centerpiece for their Thanksgiving dinner. "Looking for a way to make this happen, [Seth Tibbott, president of] Turtle Island, scouted its customers. The company found that Hans and Rhonda Wrobel of The Higher Taste had developed a product, Tofurky, that had been marketed in Portland to a growing band of followers for the past two years. Turtle Island added its own touch, several tempeh drumettes, and is marketing the Tofurky package to stores. Two sizes are available." "Six thousand drumettes were formed in Portland last week for inclusion in Tofurky packages. Directions are included for a mushroom gravy that Tibbott says pulls the whole thing together."

A sidebar titled "Why vegetarian?" discusses the ethical, world hunger, nutritional, and other reasons people choose this diet. Note: This is the earliest article seen that mentions Tofurky.

10992. Gordon, Jonathan. 1995. Work with soyfoods in England and Australia (Interview). *SoyaScan Notes.* Nov. 16. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Jonathan's PhD thesis was titled "Improved lactic fermentation of soymilk for the preparation of soya bean curd," a subject closely related to soy yogurt. He submitted this thesis in 1992 at the University of Strathclyde [Glasgow, Scotland], working under Brian Wood. When he was midway through writing his thesis, he won a *Monbusho* [Ministry of Education] scholarship to Japan. Just as he was preparing to go, he and his wife had a baby and he decided not to go. Prior to that the University of Strathclyde had applied for a patent on the process he discovered in his thesis. When he didn't go to Japan, the university did not finish the patent application process. Its present status is unclear. He discovered how to do a lactic fermentation of soymilk that gave a good, low pH in a reasonable period of time. Brian Wood was an expert in lactic acid fermentations; he developed a 6-week miso and soy sauce process which he sold to Nestle. He was very unhappy with the outcome of this sale, because Nestle shut him out of involvement with the company. He expected to be actively involved with the company.

Jonathan's interest in tofu goes back to the late 1970s. A native of England, he spent two years (1979-1981) at Findhorn, a spiritual community in Scotland, where he first heard of tofu and he helped to make tofu once a week. Jonathan thinks that Jacques (a French Canadian) started the tofu operation in Findhorn, before Jonathan arrived. Jacques and Allen (British) were making tofu in 1979 when Jonathan was there. Each Thursday after dinner they would take over the kitchen and make about 30-40 lb of tofu, which was served in the communal dining room the next day. Jonathan left Findhorn in March 1981 and arrived in Australia in about July or August 1981. He traveled in Australia with a girlfriend (Karen James of California, who had just finished a professorship at UCLA) and they lived together at the Homeland Foundation in Upper Thora, Bellingen, New South Wales, where they made tofu with other members of the community. Karen also made tempeh. Upper Thora is a little town in the Bellingen (pronounced BEL-ing-un) valley. Some community members had already been making tofu for a long time before he arrived; the tofu company was a completely established local business, with customers and delivery routes, when he arrived. They made about 300 lb/week of tofu and delivered it themselves to nearby communities in insulated cold boxes (called "Eskis," short for Eskimos) in a van. Homeland was also making tempeh at the time, but Jonathan was not a tempeh maker. He left Australia in 1982 to return to England.

In 1982 Jonathan became the foreman and tofu maker for The Regular Tofu Company (RTC) Ltd. in England, owned by John Holt. Jonathan was not with RTC when it started. John Holt was a "Premmie," a disciple of Guru Maraji, the young guru from India. His tofu shop was located in a house adjacent to the Premmie community house or ashram. He converted the small community kitchen (about 14 feet square) into a tofu shop. It had 2 cauldrons and a grinder. This was John Holt's private business; it was not a source of food and income for the Premmie community. John had a family at the time and he employed Premmies to do his work. At this time the tofu was made in a caldron. Guru Maraji came to that part of England many times. Leicester is one of the "Asian centers" of England; it has the largest immigrant population of any city in the country and there were 2 or 3 "Premmie" houses there. Maraji has a large Indian following, in addition to his Western disciples.

Jonathan also helped John Holt design his new factory in at Hayhill Industrial Estate (Unit 25, Sileby Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England). into which Holt moved in about 1984. John Holt lived in Sileby, the town adjacent to Barrow Upon Soar.

Note: This company began making tofu in Dec. 1981 at 75 Chandos St., Leicester, LE2 1BU, England. In June 1984 (now located at 16 The Halcroft, Syston, Leicester, England LE7 8LD) they introduced 4 soy products under the Soyboy brand. John Holt had venture capital in the business, but they weren't getting a sufficient return on their money so John had to sell the company to another rather small company named something like Rainbow (they were making soup and burger dry mixes), which later sold it to Haldane.

Jonathan probably has John Holt's home address in Leicestershire. After Holt sold his business, he bought a franchise in a restaurant business (something like a pancake house) in Northampton or Nottingham, England. Jonathan has heard of Michael Cole of Manchester, but he does not know whether or not Michael ever worked for John Holt. Cole won the Entrepreneur Award of something like £50,000, and that enabled him to build a factory. In the early days only two companies in England were distributing semi-nationally–John Holt's and Michael Cole's. Address: Director of Operations, White Wave Inc., Boulder, Colorado. Phone: 303-443-3917.

10994. Lorenzen, Jerry. 1995. Breeding soybeans for food uses. Interest in tofu (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jerry is a soybean geneticist. He develops soybean lines used for making tofu and natto, and also

© Copyright Soyinfo Center 2013

develops commercial soybeans. Over half of his work is breeding soybeans for food uses. A lot of his work is trying to incorporate the right protein and oil contents, along with agronomic characteristics. Jerry graduated from Iowa State University. While in high school, he worked at Pioneer Hi-Bred's production facility at Reinbeck, Iowa. In college he worked as an intern for the Asgrow experimental station in Ames, Iowa. There he learned a lot of his breeding techniques and philosophies on soybean breeding. His interest in the benefits of soybeans for human nutrition grew out of his interest in their benefits for animal nutrition. He grew to believe that soy would someday come to be widely used in human diets. He has two kids and he wanted to find ways to include tofu in their diets. He wanted to find ways that they would like tofu.

In the early 1980s, he started his own soybean breeding company in Fremont, Iowa. He has his own crossing and selection programs. He believes that there is a very bright future for soybeans and tofu. One of his goals is to incorporate more soy into the typical American's diet. Bee-Lor Inc. believes that many nutritional benefits come from including soy as part of the diet–even if you don't change your tastes or the way you eat. He and his partner and good friend Tim Beeler met while working for the Ralston Purina Co. in the area of hog and cattle feeds. Tim left Ralston in about 1986 to start a specialty meat shop with his brothers in Des Moines, Iowa. Jerry left in 1989 to focus on his soybean breeding business. Tim made a very popular, high-quality bratwurst using lean pork and the best ingredients an old family recipe. Jerry approached Tim with the idea of creating a hot dog-type bratwurst product that contained tofu, as a way of introducing tofu into mainstream America. Jerry said: "The first time I want people to taste tofu is in something that they are used to eating." Then their first impression of tofu will be a good one and they will say, "Hey, tofu tastes good." But tofu is a tough sell in the Midwest. Jerry loves tofu, and likes to eat it just like it is. He even gets a craving for tofu at times. Address: Vice-President, Bee-Lor Inc., 103 North Third St., Oskaloosa, Iowa 52577. Phone: 515-673-1930.

10996. Lang, Paul. 1995. Natural Products, Inc. in Grinnell, Iowa: History, products, and competition (Interview). *SoyaScan Notes.* Nov. 27 and 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul started making soy products in Grinnell, Iowa, in August 1995. His family, which owns a 3,000 acre farm there, also now owns this business. They hope to use it as a way of adding value to the soybeans they grow. They do not presently make the roasted soy fiber or the enzyme active soy fiber shown in their ad in *Soya Bluebook Plus.* These two products were basically unground soy hulls, and some bagel companies used them. Some American bakers buy soy hulls to add dietary fiber to their baked goods. He cannot begin to compete with Fibrim made by Ralston Purina. The oil crushers is his area are dumping semi loads of soy fiber on the market for about $0.05 to $0.08 per pound. Paul's family bought a Cargill animal feed mill in Grinnell; it was worth $700,000 (for just the buildings) but Cargill had abandoned it, so they were able to buy it for $52,000. Paul is very interested in identity-preserved soybeans and he has 34 different bins to keep each variety separate. He thinks the future of soyfoods lies in identity preservation. For example, he now uses a low-flatulence soybean to make his soy flour–and his is the only company doing this.

Clofine, located just outside of New York City, buys Paul's products (both enzyme active and inactive roasted whole soy flours) and re-sells them. They are almost like a broker. Using a patented process, Clofine slurries the enzyme active (raw) flour with water (probably hot water) then spray dries it, under high pressure through a small orifice. Ed Pedrick helped to develop this method. After that, Paul does not know how the product is processed, and how they get from soy flour to "spray-dried tofu." He does not know if any coagulant is added, and what is the justification for calling it tofu. He views it as simply a water-soluble soybean flour, with a low PDI. It will hold up in suspension when mixed with water to make soymilk. Paul also sells to Devansoy, where Mr. Pedrick now works full time and makes the same spray-dried product. Devansoy sells the product both under their own trademark and as a raw material for use by other food processors. Both Clofine and Devansoy sell these spray-dried products for about $1.35 per pound; they buy the flour from Paul for about $0.35/pound. If Paul developed a very finely ground soy flour, he could probably take away that market. They sell the roasted flour to bakers in New York City.

In terms of particle size, the smallest is flour, then meal, then grits, then granulers [he coined this phrase], then splits. The big crushers such as ADM and Cargill sell fairly coarse "grits." Generically, the grits go to bagel companies–and he does not know why. The granulers and splits are not presently being sold. His main products are the enzyme active full fat flour, and the lightly roasted inactivated full-fat flour. Paul is working closely with the American Institute of Baking (AIB). Paul also sees a huge potential export market. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa

10997. Lang, Paul. 1995. Roasting and milling full-fat soy flour (Interview). *SoyaScan Notes.* Nov. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Natural Products Inc. dry roasts whole soy flour to five different degrees of darkness. He basically custom roasts for each customer, to get exactly the color and other characteristics they need. The most popular of these is the lightly roasted soy flour, which has a light creamy, beige color; it is not dark-roasted like kinako. This is one of the few light-colored full-fat soy flours on the market that is processed with dry heat. Yet when the beans come out of the roaster, their outside looks dark. When applied to soy flour, "roasted" implies that the product was processed with dry heat, whereas "toasted" implies steamed with moist heat. Paul runs PDI, trypsin, and urease tests to be sure that he is roasting sufficiently. The main buyers of this product are American bakers, who want the flour to be no darker than it has to be. Getting this exact degree of roasting is more of an art than a science.

Paul also makes a "chocolate roast," but he has signed an agreement not to advertise it. Only one company presently uses this product and they don't want anyone else in the industry to know that they are using a $0.35/lb product rather than a $1.35/lb product–the so-called "spray-dried tofu powder" that has become the subject of controversy. Paul thinks that "spray-dried tofu powder is a big hoax that will be going by the wayside." In most applications, Paul's roasted soy flour, roasted to the desired degree, will work just as well for only 26% the cost. He has saved one company over $100,000 in one week. Yet Paul does not really come out ahead, because he also sells the soy flour to the people who make the "spray-dried tofu powder."

Koreans in America mix a dark-roasted soy flour with honey and make it into a traditional drink, which they consume only in hot weather. Paul does not know what this drink is called, but he will try to find out.

Paul's roasting process is unique. First, he uses a continuous process. Second, he uses a roasting medium (such as salt or sand), which is confidential. He bought his patent and equipment from HiPro Food Products Co, owned by Bob Olsen and Bob Cross, in Minnesota. The man who invented Cheerios sold out to General Mills; he had an idea for a roaster and spent about 12 years trying to perfect it. Three years ago the inventor of Cheerios died and the brains behind the idea, the engineer, got cancer. Olsen and Cross were both in their upper '70s and they had a great little roasting system but they didn't develop the market. The patent is 17 years old and it expired one month after Paul bought the company. The process has changed so much over the years that reading the original patent would give almost no idea of the current process. Paul believes the secret to his success lies in making an inactivated flour, with no beany flavor, that keeps its creamy color. Paul built a separate building that houses his roaster; nobody sees it (though a photo appeared in *Bluebook Update,* Oct/Dec. 1995, p. 4). The original patent used gas with salt as the medium; now they use electricity and a different medium. His process is totally unique.

One of Paul's options is to go into the business of selling roasters. He has had a request to sell one company five roasters for $2 million–and his company is presently only worth $500,000. But at this stage he wants to focus on making soy flour. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

Glossary. 2. Nutrition recommendations.

This book contains a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, miso, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus wheat gluten, seitan, rice milk, sea vegetables, adzuki beans (p. 66, 162), quinoa, amaranth, macrobiotics, phytochemicals, plant estrogens found in tofu and other soy products (p. 75; they may contribute to positive calcium balance and have a protective effect on the bone health of Chinese and Japanese women), dietary fiber.

Talk with Vesanto Melina. 1996. July 22. This book was originally published in Canada in May 1994 by Macmillan Canada in Toronto. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

11003. Morinaga Nutritional Foods, Inc. 1995. Made for each other. I want low fat. I want dairy-free. And I want chocolate (Ad). *Vegetarian Times.* Nov. p. 66.
• ***Summary:*** This full-page color ad shows a packet of Mori-Nu Mates Chocolate Pudding & Pie Mix next to a package of Mori-Nu Lite Silken Tofu. On the left side of the ad, standing is a lovely, slim, long-haired Japanese-American lady dressed in a tight black skirt. Her head is thrown slightly back and she half laughs, half smiles, while she eats with a silver spoon from a little glass bowl of Mori-Nu Chocolate Dream Pudding tofu dessert that she holds in her right hand. The mix is sweetened with Sucanat. "Indulge your taste for chocolate without guilt."

This ad also appeared in the Jan. 1996 issue (p. 29) of this magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11004. *Soyafoods* (*ASA, Europe*). 1995. U.S. soyfoods sales approach $1.4 billion. 6(3):2. Autumn.
• ***Summary:*** Sales of soyfoods in the USA have increased more than 350% in the past decade, with more than 2,000 new soyfood products introduced, according to a report commissioned by the Soyfoods Association of America. Sales for 1995 are expected to be $1.4 billion. The report found that nearly 15 million Americans are currently eating tofu, and 10 million are consuming soy burgers. Most people who buy soyfoods also consume poultry and fish.

11005. **Product Name:** Tofutti Better Than Cream Cheese: Imitation Cream Cheese (Non-Dairy) [Wild Berry].
Manufacturer's Name: Tofutti Brands Inc. (Marketer-Distributor).
Manufacturer's Address: 50 Jackson Dr., Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1995. November.
Ingredients: Water, partially hydrogenated soybean oil, tofu, isolated soy protein, corn oil, corn sweeteners, fruit purees, salt, guar seed gum, carob bean gum, mono and diglycerides, carrageenan, natural flavor, potassium sorbate (added as a preservative).
Wt/Vol., Packaging, Price: 8 oz plastic tub.
How Stored: Refrigerated.
Nutrition: Per 1 oz. 8 servings per container: Calories 80, protein 1 gm, carbohydrate 1 gm, fat 8 gm, sodium 200 mg, cholesterol 0 mg.
New Product–Documentation: Sample of this product with Label generously sent refrigerated by David Mintz via FedEx priority overnight. 1996. June 4. 4½ inches diameter. Red, purple, and blue on white. "No dairy. No cholesterol. No lactose. No butterfat." Soyfoods Center product evaluation: Flavor: Fairly good, but unusual for cream cheese. Texture: Excellent.

© Copyright Soyinfo Center 2013

11006. **Product Name:** Tree of Life Ready Ground Tofu [Savory Garlic, or Hot & Spicy].
Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).
Manufacturer's Address: St. Augustine, FL 32084.
Date of Introduction: 1995. November.
Ingredients: Incl. tofu.
How Stored: Refrigerated.
New Product–Documentation: Spot with photo in NFM's New Product Review. 1995. Winter. p. 3. "Tree of Life" has introduced two new flavors to its Ready Ground Tofu line of "vegetarian hamburger substitutes." The product works well in many different recipes including lasagna, burritos, and stuffed peppers.

11007. **Product Name:** Bulk Vacuum-Packed Tofu.
Manufacturer's Name: Twin Oaks Community Foods.
Manufacturer's Address: Route 4, Box 169, Louisa, Virginia 23093. Phone: 703-894-4112.
Date of Introduction: 1995. November.
Wt/Vol., Packaging, Price: 12 lb vacuum packed.
How Stored: Refrigerated.
New Product–Documentation: Talk with Jon Kessler. 1996. Jan. 24. Twin Oaks Community Foods started selling vacuum packed bulk tofu in about Nov. 1995, and now all their tofu is sold in this form, mostly to food stores. They use an Ultra-Vac vacuum packaging machine. They give a shelf life of 40 days, but realistically it is more like 50 days. Their production now averages 2,500 lb/week.

11008. *University of California, Berkeley Wellness Letter.* 1995. Oy, soy: here comes the hype. 12(2):1-2. Nov.
• ***Summary:*** This is an excellent critique of the article by Dr. James Anderson on the ability of soy protein to lower blood cholesterol, published in the *New England Journal of Medicine* (3 Aug. 1995, p. 276-82). Some recent news reports would make you think that soy was a "magic bullet." However there is a danger it may go the way of oat bran. "Remember oat bran? The rise and fall of oat bran was a textbook case in how *not* to think about nutrition." Interestingly Dr. Anderson, an expert on fiber, was a leading proponent of oat bran in the 1980s and the author of a similar meta-analysis on oats.

In short, the Anderson study "found that substituting soy protein (in a wide variety of forms) for some or all animal protein resulted in an average drop of 9% in total blood cholesterol, and a 13% drop in LDL ("bad") cholesterol. There was no significant effect on HDL ("good") cholesterol, which is a plus, since HDL usually fall when the total number drops." But there were some serious problems in the study: (1) Anderson's analysis raises more questions than it answers. This is not new research, but rather a meta-analysis of previous studies on soy protein. The meta-analysis can be a powerful tool, however this one is flawed. The main problem is that the focus supposedly is soy *protein,* yet the 38 studies analyzed actually used a wide range of compounds: various kinds of isolated soy protein and textured soy protein. Some of the soy compounds were 95% protein, some much less. Some diets contained everything in the soybean, including fiber and certain potent phytochemicals, such as isoflavones.

"In other words, we still don't know if soy protein itself lowers cholesterol, as claimed." Part of the effect may be due to the soluble fiber, which is well known to lower blood cholesterol and is found in many plant foods besides soybeans. "What's needed is a study that feeds highly purified soy protein (just the amino acids) to humans–and it hasn't been done. Such a study, using rats, found that the isolated soy protein did *not* significantly lower cholesterol, compared to animal protein. In light of this, don't be surprised if next week the headlines read 'Soy protein does *not* lower cholesterol after all."

(2) Not everyone would benefit, even if soy protein does prove effective. Most of the reported drop in cholesterol (and LDL) occurred in people with very high levels (over 335 mg/dl), which dropped by 20% on the soy-based diet.

(3) A person would have to eat a lot of soy protein. The above results were obtained when people ate an average of 47 grams of soy protein a day. Eating only 25 gm a day cut the drop in half. One cup of soymilk has 4 to 10 gm of protein; 4 ounces of tofu has 8 to 13 gm; 3 ounces of soy burger contains 18 gm. So to get 47 gm of soy protein you would have to drink about 7 cups of soymilk or 1 pound of firm tofu.

(4) Adding soy to a poor diet won't do the trick. In nearly all the studies, soy protein replaced half or even all of the animal protein, which is usually high in fat and dietary cholesterol.

(5) Not all soy products are equally effective in lowering blood cholesterol. In addition, some contain lots of fat (albeit unsaturated) and calories. Some foods claiming to contain soy actually contain little of it. "Even those that contain the same amount of soy protein often have very different levels of fiber and/or other phytochemicals, and may have very different effects on cholesterol."

11009. Vitasoy International Holdings Ltd. 1995. Interim report 1995. New Territories, Hong Kong. 14 panels. Nov. 29. 21 cm. [Eng; Chi]
• ***Summary:*** For the six months ended 30 Sept. 1995, sales (turnover) were HK$750.2 million, up 14.4% over the same period last year. Operating profit was $77,370, up 9.5%. Earnings per share rose to 13.3 cents, up 8.1%. In Hong Kong, which contributed 70% of the group turnover, sales were up 14%, but sales of soymilk products in this market are stagnant.

In North America, the company's second biggest market,

© Copyright Soyinfo Center 2013

sales showed a 9% increase, to be in excess of HK$128 million. Sales of pasta and tofu were particularly strong. "This market benefits from the strong brand recognition among Hong Kong immigrants, an example being the strong sales increase of Traditional Vitasoy Soyamilk in Canada."

In China, the Shenzhen facility is now fully operational and this contributed to a robust sales increase of 63%. The Shenzhen has already started to make a small contribution to Group profits in its second year of operation.

11010. Stephens, Jerry L.; Schmidt, Natalia. 1995. Re: Interest in making and eventually marketing soyfoods. Involvement in activities in the Former Soviet Union, especially Russia and Uzbekistan. Letter to William Shurtleff at Soyfoods Center, Dec. 4. 1 p. Typed, with signature. [1 ref]

• ***Summary:*** Jerry and his wife Natalia have a beginner's interest in learning as much as they can about making and marketing soyfoods. They have read *The Book of Tofu,* by Shurtleff and Aoyagi, which they obtained from their local library. "At this time we don't know enough to even begin to guess where this will lead. But, we are both very adventurous, entrepreneurially inclined and determined to find a way.

"Also, as Natalia told you, we are both involved in various activities in countries of the Former Soviet Union. This includes both Russia and Uzbekistan." Address: 8139 Flintwood Court, Charleston, South Carolina 29406. Phone: 803-572-2687.

11011. Ledvinka, Ferro. 1995. Introducing macrobiotics and soyfoods to Italy (Interview). *SoyaScan Notes.* Dec. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ferro was a pioneer of macrobiotics in Italy. In the process he also helped to introduce soyfoods, especially to Florence. He first learned about macrobiotics when he read a book on macrobiotics in Italy. He started eating a macrobiotic diet. In Rome there was a macrobiotic center founded and run by Marquesa Parvolo, who had been cured of leukemia or a blood disease by George Ohsawa several years before. In 1971 he heard a lecture at this center in Rome by Rob Dobrin, who gave him Michio Kushi's address in Boston, Massachusetts. In the summer of 1972 he traveled to Boston to study macrobiotics, and there he learned how to make tofu and seitan. After leaving the USA, he returned to Italy, living in Rome. From there he worked to spread macrobiotic food and philosophy to all major Italian cities.

In Jan. 1977 Ferro went to Japan to work with Mr. Kazama at Mitoku, exporting macrobiotic foods to Italy and other European countries. The first Italian company to order these foods (including Japanese miso and tamari) was ProBios in Florence. They were followed by two Italian Macrobiotic Centers, located in Rome and Milan. In Oct. Ferro left Japan, returned to Italy, lived in Rome for a while, then moved to Florence, where he established the pioneering Fondazione Est-Ouest at via de Serragli 4, in Florence. This was a combination macrobiotic restaurant and macrobiotic study center. Ferro also worked for a while with ProBios. He taught various people to make tofu, seitan, and tempeh–but none of the restaurant customers would buy or eat these strange new foods. So Ferro decided to fry them and serve them as a snack, free of charge, before each meal. A Tuscan proverb says that "Even a slipper, if fried, tastes good." In this way people in Florence started to eat these new foods. The restaurant made and served these foods from about 1982 to 1985. Then people who were working in the restaurant moved to another place, became independent, and they started a small food factory named Soyalab. The founder of Soyalab, Matteo Iacovelli, is now the chairman of the Kushi Institute in Milan. Another person who helped a lot on the way was Alfredo Ingannamorte. These people learned how to make tofu and tempeh in Boston. Alfredo studied at the Kushi house in Becket. Matteo worked at a macrobiotic restaurant (Open Sesame) in Brookline Village. Address: Via Pellicceria 6, 50123 Firenze (Florence), Italy. Phone: 055-827 274.

11012. Huang, H.T. (Hsing-Tsung). 1995. Early history of soybeans and soyfoods in China (Interview). *SoyaScan Notes.* Dec. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The early *jiang* in China was made from meat or fish. The *jiang* used by Confucius was almost surely made from meat and fish. Many of the ancient books were annotated during the Han dynasty in an attempt to explain the meaning of certain words and passages. A very eminent scholar in the late Han dynasty (about 100 A.D.), talking about events in roughly 500 B.C., said that the *jiang* used by Confucius was made from meat and fish.

The soybean was not an important crop in China until the early Han, say 200 to 300 B.C. The soybean is mentioned in the *Book of Odes,* which is the most ancient and most reliable of Chinese books, not as a crop but as a plant that people gathered from the wild. Then is are a series of books that were traditions of the Chou dynasty; these were codified and gathered by about 300 B.C., but in them there are not many references to the soybean. However by the time of the Western (Former) Han (206 B.C. to 8 A.D.) there were references in the literature to cartloads and big urns of *jiang* [Chinese-style miso]; *shi* (fermented fermented black soybeans) was also mentioned many times in the literature. Both these foods had become commodities.

Soy is also found in the Han Tomb No. 1 at Ma-wang-tui (pronounced "ma-wang-DUI"), a big archaeological find

© Copyright Soyinfo Center 2013

in China. A woman ruler was buried here in about 165 B.C. with all the 5-6 major grains, including wheat, barley, rice, 2 kinds of millet, soybean (*shu*), and hemp. Also found in the tomb were several seasonings including "soy sauce (*jiang*), *shi* ('salted darkened beans'), and leaven (*qu*)."

The earliest reference to pasteurization in China concerns pasteurization of wine, around the 11th century, long before the Japanese were pasteurizing shoyu before shipping it to Holland. He is not aware of any early reference to the Chinese pasteurizing soy sauce, but he will look again. However soy sauce is so highly salted that it does not require pasteurization, whereas wine does. The wine was filled into to earthenware jars with a small mouth, which was covered with cloth or leaves, then sealed with mud.

Dr. Huang will travel to China next month (to Foochow, capital of Fujian province) and he hopes to see some of the existing traditional fermentation processes. Soymilk was not an important traditional food in China, but it was becoming important when he traveled there in the 1940s with Dr. Joseph Needham. When they visited northern China, early in the morning people would have a huge iron wok of hot soymilk, which they sold for breakfast. Joseph liked the soymilk with bits of *youtiao* (deep-fried bread sticks; W.-G. *yu t'iao*).

One of the chapters in Dr. Huang's book deals with nutrition in China. The Chinese diet is said to be lacking in calcium. It is well know that for calcium to be absorbed, you need lactose, and the ability to tolerate lactose. Thus, it would be surprising to find higher bioavailability of the calcium in soymilk or tofu. Before the time of Confucius (551-479 B.C.) the Chinese at a lot more animal products than they do now, but the agricultural system developed with the emphasis on grains, less emphasis on animal products, and no emphasis on milk–probably because of the lactose intolerance of the Chinese people. Thus, the Chinese never developed a dairy industry. Mongols are not as lactose tolerant as northern Europeans, but they are heavily dependant on animal milks as a source of food. They get around this problem by converting animal milk into yogurt. This fermentation converts the lactose to lactic acid, which both solves the lactose intolerance problem and extends the life of the product by lowering the pH.

Another interesting problem: Europeans are the only ones who make true cheese, using rennet. The Mongolians and all the pastoral people in Asia rely on various animal milks, including horse's milk to make koumiss, and they even make a type of cheese that is sort of like cottage cheese, coagulated by acid. Dr. Huang thinks the discovery of rennet is one of those major, accidental discoveries that is very rare. If you wash an animal stomach carefully before using it to store milk, that will wash all the rennet away. Another such major discovery is the Chinese discovery of *chu* or koji. Address: 309 Yoakum Parkway #403, Alexandria, Virginia 22304.

11013. **Product Name:** Beeler Maple Sausage Patty.
Manufacturer's Name: Bee-Lor Inc.
Manufacturer's Address: 103 North Third St., Oskaloosa, IA 52577. Phone: 515-673-1930.
Date of Introduction: 1995. December.
Ingredients: Incl. beef and tofu.
How Stored: Frozen.
New Product–Documentation: Rick Jost. 1995. Des Moines Register. July 17. "First brats, now burgers–tofu firm grows." Tim Beeler (president) and Jerry Lorenzen (vice-president) of Bee-Lor Inc. are now developing the Beeler Burger, a frozen combination of tofu and beef.

11014. Davis, Susan K. 1995. Bite into the tofu market. *Soybean Digest.* Dec. p. 18j, 18l.
• ***Summary:*** Some U.S. soybean farmers (such as Peter Yoder of London, Ohio) are earning good money by growing food-grade soybeans for the Japanese tofu market. They pay careful attention to harvesting and handling, reduce split, and have no cracked beans. The beans are usually shipped to Japan in containers just used to ship Japanese goods (such as auto parts) to the USA. This is a very difficult market to break into; once you do you must work hard to stay there and build brand equity, according to Gunner [Gunnar] Lynum, head of Strategic Marketing Development in Kankakee, Illinois. Machinery and labor costs are much higher, and you need special handling and/or packaging, plus extra marketing time. Premiums of up to 50% above standard prices are available to farmers who grow soybeans organically for the Japanese organic tofu market, according to Yoshiko Kojima, a consultant to the American Soybean Association.

The top ten tips for growing soybeans for tofu use are: Grow clear hilum beans. Be sure the protein is above 45% on a dry weight basis. Keep the oil low (18%). Keep the sucrose level high. Plant Vinton 81 or Beeson 80, or the new FG1 or FG2. Don't use artificial drying. Have uniform large-size soybeans. Keep these soybeans identity preserved, separate from other soybeans. Ship only soybeans with good eye appeal. Clean the soybeans of dirt and weed stains. Color photos show: A tofu shake with tofu cubes and sliced strawberries. A tofu chocolate cream pie.

11015. **Product Name:** Tofu Balls with Organic Spaghetti (Vegetarian).
Manufacturer's Name: Gloria's Kitchen.
Manufacturer's Address: P.O. Box 2071, Burlingame, CA 94011-2071. Phone: 650-579-0638.
Date of Introduction: 1995. December.
Ingredients: Organic* spaghetti noodles (organic* semolina wheat flour, water), textured vegetable protein (soybean flour), tofu, bread crumbs, parsley, shiitake mushrooms, organic* carrots, celery, onion, sea salt, expeller pressed canola oil, sauce (tomatoes, tomato puree, calery, organic*

carrots, filtered water, stewed tomatoes, extra virgin olive oil, garlic), natural herbs and spices.
Wt/Vol., Packaging, Price: 12 oz (340 gm) paperboard box. Retails for $4.39 (1999/04, Lafayette, California).
How Stored: Frozen.
New Product–Documentation: Product with Label purchased at Open Sesame, Lafayette, California. 1999. April 20. 7.25 by 5.25 by 1.75 inch paperboard box. Red, white, black, green, and yellow. Large photo of the prepared product, showing the balls, tomato sauce, and spaghetti. Front panel text: "Vegetarian. Vegan. All natural. Low fat. Microwave or conventional oven." Back panel: "The Gloria story–who's cooking in the melting pot. As a vegetarian and ethnic food lover, I have always found it difficult to find quick, healthy nutritional entrees. It seemed like the only place I could find good vegetarian food was in restaurants..."

Talk with company representative. 1999. April 23. Gloria Shih started this company in late 1995. During 1996 they introduced 14 products, and by 1997 they had 27 products, including 20 entrees and 7 soups. Soyfoods Center taste test: Fair. These meatlike balls contain very little tofu; perhaps they should be called "Soy Balls."

11016. **Product Name:** Veggie Won-Ton in Hot & Sour Sauce.
Manufacturer's Name: Gloria's Kitchen.
Manufacturer's Address: P.O. Box 2071, Burlingame, CA 94011-2071. Phone: 650-579-0638.
Date of Introduction: 1995. December.
How Stored: Frozen.
New Product–Documentation: Letter (fax) with date sent by Gloria's Kitchen. 1999. June 21. This product was introduced in Dec. 1995.

11017. **Product Name:** Spicy Thai Tofu Spinach with Peanut Sauce.
Manufacturer's Name: Gloria's Kitchen.
Manufacturer's Address: P.O. Box 2071, Burlingame, CA 94011-2071. Phone: 650-579-0638.
Date of Introduction: 1995. December.
How Stored: Frozen.
New Product–Documentation: Letter (fax) with date sent by Gloria's Kitchen. 1999. June 21. This product was introduced in Dec. 1995.

11018. *Korea Times* (*Los Angeles edition*). 1995. [Pulmuone tofu sweeps Korean-American market: Captures 80% of Hinoichi market share. Tofu dessert under development and pushing into general market]. Dec. [Kor]

11019. *Ontario Soybean Growers' Marketing Board Newsletter.* 1995. Profiles: W.G. Thompson & Sons Ltd., white hilum soybeans and Ontario's railroad system. Dec. p. 7.
• ***Summary:*** John O'Brien, Manager of W.G. Thompson & Sons Ltd., predicts that premiums for white hilum soybeans will virtually disappear within five years. Instead, more soybean growers will be locking in premiums by growing special varieties that companies such as Thompsons will contract and ship for specific Asian customers. "Thompsons, a $300 million a year family-owned business with 300 employees, has already earned a name in special quality crops. From its 14 Ontario elevators, the company works with farmers on 75,000 to 100,000 acres of contract crops each year, with over half that acreage going to soybeans."

White hilum soybeans have become just another commodity in Ontario, says Wes Thompson Jr. The future lies in going the next step, in sitting down with customers and finding out exactly what they want in a soybean, and then producing and shipping those soybeans for them as part of a long-term relationship. Thompsons is already contracting specific varieties for exclusive delivery to individual Pacific Rim makers of tofu, miso, and natto. At Pain Court, the company is also installing a high-tech sorting line that will enable it to sort for shape and color, and to completely eliminate foreign material. At the same time, Thompsons isn't getting out of the huge and profitable crush market. To prove that, it is playing a leading role in the campaign to save Ontario's rural rail network. Thompson's Hyland Seeds Division sold 14 private and 8 SeCan (public) varieties in 1995; it expects to sell 24 private and only 4 SeCan varieties in 1996. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11020. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Vocational training in soymilk production and use started in India. 4(4):1. Oct/Dec.
• ***Summary:*** "Manav Vikas Parishad [MVP] of Ghaziabad in collaboration with the Government Polytechnic College and the SoyaCow Centre has developed a short course to train unemployed youths in the production and utilization of soymilk, tofu and okara.

"Thirty students were registered in this first ever vocational training course and were awarded Certificates by the College.

"In a recent visit to MVP, Dr. R.P. Gupta from Canada, was shown the SoyaCow facility by MVP manager, Mr. S.B. Srivastava, and was introduced to some students from the course. They appeared to be knowledgeable about soymilk production and very excited about the training. MVP regularly runs an SC20 system and profitably sells soymilk, tofu, okara, and related products in the local market. It provides sustained employment to a few persons [making these soyfood products]. The products are accepted well in the local market."

© Copyright Soyinfo Center 2013

"Dr. R.K. Sharma, Manager of the SoyaCow Centre in India, is responsible for providing interested students with all the help needed to write business plans and complete other formalities to secure loans. He will also assist in the purchase of soymilk equipment from SSP, as well as in the equipment installation, and soymilk production and marketing."

A photo shows an Indian woman standing behind MVP's SoyaCow, which is used for vocational training.

11021. **Product Name:** Tofutti Tortellini (Nondairy, Frozen).
Manufacturer's Name: Tofutti Brands Inc. (Marketer).
Manufacturer's Address: 50 Jackson Dr. (P.O. Box 786), Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1995. December.
Ingredients: Dough mixture: Enriched extra fancy durum flour (niacin ferrous sulfate, thiamin mononitrate, riboflavin), water, egg whites, flour enrichment (wheat starch, ferric orthophosphate, niacinamide talc, tricalcium phosphate). Filling: Tofutti Better Than Cream Cheese (water, partially hydrogenated soybean oil, tofu, isolated soy protein, corn oil, corn sweeteners, salt, guar seed gum, mono- and diglycerides, carrageenan, natural flavor), cracker meal (bleached wheat flour), natural spices, salt.
Wt/Vol., Packaging, Price: 15 oz (425 gm) stand-up plastic bag.
How Stored: Frozen.

New Product–Documentation: Tofutti Brands Inc. 1996, May. 1995 Annual Report. p. 1-3. New products introduced during 1995: These are bite-sized frozen pasta filled with Tofutti Better than Cream Cheese; sold in 15 oz bags for supermarkets and 10 lb boxes for institutions. Introduced in Dec. 1995.

Sample bag of this product with Label generously sent frozen by David Mintz via FedEx priority overnight. 1996. June 4. 5.75 by 8.5 inches. Plastic bag. Red, green, black, and white. Front panel text: "Filled with a tempting tofu blend–'tastes better than cheese.'"

11024. Albert's Tofuhaus. 1995. The white side of life... bittet zu Tisch! [The white side of life... invites you to the table (Leaflet)]. Lautersheim, West Germany. 2 panels each side. Each panel: 21 x 10.5 cm. [Ger]
• ***Summary:*** Contains recipes (and 4 color photos) for using the company's tofu products in entrees, main dishes, and desserts. Printed with purple and green ink on gray paper. Address: Hauptstrasse 13, 67308 Lautersheim, West Germany. Phone: 06351-43718.

11025. **Product Name:** Combo Tofu.
Manufacturer's Name: Binh Minh Tofu Manufacturing.
Manufacturer's Address: 1180 Tully Rd., Unit B., San Jose, CA 95122. Phone: 408-279-3655.
Date of Introduction: 1995.
How Stored: Refrigerated.
New Product–Documentation: Talk with Binh Tran, owner and founder. 1996. May 28. He is a Vietnamese-American. This is a combination of ten different ingredients, marinated in a sauce.

11026. **Product Name:** Tofu Puffs, Silken Tofu, Soymilk Curds (Tofu Hua), and Yuba.
Manufacturer's Name: China Tofu.
Manufacturer's Address: 3222 Whipple Rd., Union City, CA 94587. Phone: 510-489-7288.
Date of Introduction: 1995.
How Stored: Refrigerated.
New Product–Documentation: Talk with Diana Lin, wife of Bo Ming Lin, one of the two owners of the company. The four products shown above were introduced in about 1995.

11027. **Product Name:** [Tofu Spread for Bread (Herb, Smoked, or Paprika)].
Foreign Name: Tofu-Brotaufstrich (Kraeuter, Raeucher, Paprika).
Manufacturer's Name: Christian Nagel Tofu-Manufaktur.
Manufacturer's Address: Osdorfer Landstrasse 4, D-2000 Hamburg 52, West Germany. Phone: 040/89 49 37.
Date of Introduction: 1995.
Wt/Vol., Packaging, Price: 125 gm.
New Product–Documentation: Labels (for all 3 products) brought by Albert Hess of Albert's Tofuhaus. 1995. March 11.

11028. Hirose, K.; Tajima, K.; Hamajima, N.; Inoue, M.; Takezaki, T.; Kuroisha, T.; Yoshida, M.; Todudome, S. 1995. A large-scale, hospital-based case-control study of risk factors of breast cancers according to menopausal status. *Japanese J. of Cancer Research* (*Gann*) 86:146. *
• ***Summary:*** This study in Japan found that in premenopausal women (but not postmenopausal women) the consumption of tofu 3 or more times per week was associated with a statistically significant decreased risk of breast cancer (of approximately 20%), in comparison with the consumption of tofu less than three times per week.

11029. Kohyama, Kaoru; Sano, Yoh; Doi, Etsuhiro. 1995. Rheological characteristics and gelation mechanism of tofu (Soybean curd). *J. of Agricultural and Food Chemistry* 43(7):1808-12. *

11030. **Product Name:** Rising Sun Tofu.
Manufacturer's Name: Olive Tree Works.
Manufacturer's Address: 6713 New Hampshire Ave., Takoma Park, MD 20912. Phone: 301-270-5110.
Date of Introduction: 1995.
How Stored: Refrigerated.
New Product–Documentation: Talk with Yaron Semititsky of Olive Tree, Inc. 1997. July 24. Their fourth soy product, Rising Sun Tofu, was launched in 1995. It is similar to Savory Tofu but with East Asian seasonings, such as ginger and soy sauce.

11031. Rice, M.M.; Graves, A.B.; Larson, E.B. 1995. Estrogen replacement therapy and cognition: Role of phytoestrogens (Abstract). *Gerontologist* 35:169 (Abst.). *
• ***Summary:*** Some research, and certainly anecdotal reports from both women and physicians, point to the influence of estrogens in memory and cognitive function (CF). Thomas B. Clarkson (DVM of Wake Forest Univ. School of Medicine, Winston-Salem, North Carolina) has spoken of an interesting study on Japanese-American women, age 65 or older, living in King County, Washington state. It found that those women who took estrogen and ate tofu less than three times per week had better CF than non-estrogen users. But estrogen users who ate tofu more than 3 times per week lost estrogen's protective effect on cognition. This study raises the concern that soy may interfere with the effects of estrogen in the brain.

11032. **Product Name:** [Tofu].
Foreign Name: Tofu.
Manufacturer's Name: Sra. Jane Garbutt.
Manufacturer's Address: Capilerilla, Pitres 18414, Granada, Spain.
Date of Introduction: 1995.
New Product–Documentation: Letter from Jane Garbutt. 1996. Jan. 7. She is a community scale producer of tofu in the Alpujarra (Sierra Nevada) of Spain. She owns and frequently uses *The Book of Tofu* and *Tofu & Soymilk Production.*

11033. Tezuka, M.; Ono, T.; Itoh, T. 1995. [About tofu and soymilk] *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*)

42(?):556-61. Month? [Jap; eng]*

11034. **Product Name:** Tofu Snack Sticks (Organic Alder Smoked) [Original, BBQ, Spicy BBQ].
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1995.
Ingredients: Original: Tofu (filtered water, organic* soybeans, magnesium chloride), soy sauce (water, organic soybeans*, organic wheat, salt*), water, lemon, distilled vinegar, garlic and kelp, natural hardwood smoke. * = Grown in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 5 oz. vacuum pack.
How Stored: Refrigerated.
New Product–Documentation: Four Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in June 1995. One label (Original) is from 1995: 3.75 by 2.38 inches. Self adhesive. Brown and green, or brown and red, or brown and yellow on gold-beige. Illustration shows a tofu shop on stilts near the ocean with a tree arching overhead. Label from 1995: "Snack' Fu" (trademark). "Real country smokin.' No 'flavors' added." "With whole, organic, GMO-free soybeans." Three labels are from Aug. 2002. Their size is identical and design quite similar.

11035. **Product Name:** Royal Thai Baked Tofu.
Manufacturer's Name: Wildwood Natural Foods of Santa Cruz, Inc.
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1995.
Ingredients: 1998: Wildwood Tofu (filtered water, organic soybeans grown in accordance with the California Organic Foods Act of 1990, nigari {magnesium chloride, a natural firming agent}), soy sauce, lemon juice, fruitrim (fruit juic, natural grain dextrins), rice wine, garlic, ginger, brown rice syrup, cilantro, sesame oil, peanut oil, jalapeño peppers, cayenne pepper, red curry paste, lemon grass.
Wt/Vol., Packaging, Price: 10.5 oz. Retails for $3.49.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1995, and made at Wildwood's plant in Santa Cruz.

11036. **Product Name:** Baba Ganooj.
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 135 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1995.
Ingredients: Eggplant, sesame tahini, lemon juice, garlic, parsley, salt, olive oil.
Wt/Vol., Packaging, Price: 7 oz plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1995, and made at Wildwood's plant in Fairfax. On the front label (brown on beige) is a silhouette of a wild wood of trees, plus a few flying birds, against the sky. On the back label are ingredients, nutrition facts and the company's two addresses in Santa Cruz and Fairfax, California.

11037. **Product Name:** Low Fat Hummus.
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 135 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1995.
Ingredients: Organic garbanzo beans (grown in accordance with the California Organic Foods Act of 1990), water, sesame tahini, lemon juice, garlic, salt, parsley, scallions, guar gum, citric acid.
Wt/Vol., Packaging, Price: 12 oz (340 gm) plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1995, and made at Wildwood's plant in Fairfax. On the front label (black and orange on beige) is a silhouette of a wild wood of trees, plus a few flying birds, against the sky. On the back label are ingredients, nutrition facts and the company's two addresses in Santa Cruz and Fairfax, California.

11038. Albert's Tofuhaus. 1995. The white side of life... und seine Vielfalt! [The white side of life–and its diversity!]. Lautersheim, West Germany. 10 p. Manufacturer's catalog and price list. 28 cm. [Ger]
• ***Summary:*** Contents: Listing of products by category. Description of individual products by category, with prices, weights, and order number. Map and ordering information.

The products and their categories are: Tofu products (natural, smoked, marinaded, etc.), fried products, spreads for breads, pasteten, salads, sauces, grilled products (hot dogs, made by Viana), products made from wheat (tempeh, seitan, skewered seitan, made by Viana), pasta products, full-fat soy flour. On the cover is a cake of tofu, with a laughing face and two arms held out to the sides. The company logo is adapted from *The Book of Tofu* by Shurtleff & Aoyagi.

Two sheets of the company's letterhead are enclosed in the catalog. Address: Hauptstrasse 13, 67308 Lautersheim, West Germany. Phone: 06351-43718.

11039. Albert's Tofuhaus. 1995. The white side of life... Tofu! [The white side of life–Tofu! (Leaflet)]. Lautersheim, West Germany. 3 panels each side. Each panel: 21 x 11 cm. [Ger]
• ***Summary:*** Contents: A nice history of the company, with 5 photos of its equipment. Overview of tofu products. Map and ordering information. Address: Hauptstrasse 13, 67308 Lautersheim, West Germany. Phone: 06351-43718.

© Copyright Soyinfo Center 2013

11040. Albert's Tofuhaus. 1995. Tofu! Tradition, Frische & Qualitaet [Tofu! Tradition, freshness & quality (Leaflet)]. Lautersheim, West Germany. 3 panels each side. Each panel: 21 x 10 cm. [Ger]
• ***Summary:*** Contains a brief history of the company, with a description of what tofu is, and how they make it, and its great diversity. Address: Hauptstrasse 13, 67308 Lautersheim, West Germany. Phone: 06351-43718.

11041. Alexander, Victoria; Harris, Genevieve; Dyson, Sharon. 1995. A taste of Australia: the Bathers Pavilion cookbook. Berkeley, California: Ten Speed Press. xiii + 122 p. See p. 36, 72, 78. Illust. (color, incl. photos by Rodney Weidland). 27 cm.
• ***Summary:*** Bathers Pavilion is a restaurant fronting the beach in Sydney, New South Wales, Australia. "Thick, sweet soy sauce (kecap manis) is mentioned on pages 36, 72-73, and 78-79. In the headnotes to the recipe for "Marinated pork fillet with peanut sauce" we read (p. 72): "Kecap manis is a thick, sweet soy sauce from Indonesia. It is sweetened with palm sugar and flavoured with star anise and salam leaves (a little like bay leaves). Do not substitute for kecap manis as no other soy sauce will produce the same results."

Tofu is mentioned on pages 18, 30, and 45.

On pages 78-79 is a recipe for "Venison, tamarind and tempe hot pot," whose headnote begins: "Tempe is made from the remaining soy bean solids after they have been pressed to make soy milk. The solids are then compressed and fermented. Tempe has a wonderful nutty flavour..." Note: This is a description of okara tempe; most tempe is made from whole, dehulled soybeans rather than from okara.

The word "soy" is used to refer to soy sauce on pages 30 (light soy sauce), 42 (Japanese soy sauce), 43, and 52 (dark soy sauce). Address: 1. Owner, The Bathers' Pavilion.

11042. American Institute for Cancer Research. 1995. Taking a closer look at phytochemicals: New cancer research. 1759 R Street, N.W., Washington, DC 20069. 12 panels. 20 cm. [5 ref]
• ***Summary:*** Contains extensive information on isoflavones and soyfoods, including brief interviews with Stephen Barnes, PhD and Mark Messina, PhD. "Tofu, soy milk, and other foods made from soybeans are rich in isoflavones, which may inhibit cancer cell growth and division under some conditions. Since cancer is the result of the cell growth process gone awry, isoflavones may provide a means for switching off the unusual growth." Contains an illustration of packages of soy milk and tofu. Address: Washington, DC.

11043. Beversdorf, W.D.; Buzzell, R.I.; Ablett, G.R.; Voldeng, H.D. 1995. Soybean. In: A.E. Slinkard and Douglas R. Knott, eds. 1995. Harvest of Gold: The History of Field Crop Breeding in Canada. Saskatoon, Saskatchewan: University Extension Press, Univ. of Saskatchewan. ix + 367 p. See p. 153-66. Chap. 13. [14 ref]
• ***Summary:*** An outstanding history of soybean breeding and production in Canada. Contents: Introduction. Evolution of the soybean crop in Canada. Early breeding efforts. The emergence of soybean as a significant Canadian crop (1940-70). The modern soybean breeding era [1970 on]. Current breeding objectives and methods.

Before 1930, soybeans were "grown primarily for annual forage production when traditional forage crops failed to survive Ontario winters." The appearance of two short-lived soybean crushing facilities in southwestern Ontario [at Milton in about 1930 and Chatham by April 1933] aided the transition of soybeans from a fodder crop to a grain legume crop.

"Evolution of Canada's soybean crop since 1949 reflects the expertise of soybean producers, dramatic improvement in production technology, improved and earlier maturing cultivars, improved domestic processing capacity and significant export market development."

"Soybean in Canada was born in the vision of C.A. Zavitz, arguably a man 50 years ahead of his time. Zavitz, who was head of the Field Crop Department of the Ontario Agricultural College (OAC) meticulously evaluated and selected soybean introductions for both fodder and grain production for 30 years (Zavitz 1927)."

"In 1893, Zavitz planted the first Canadian soybean crop, probably as a replacement for a field pea that failed to establish that year." Over the years, "Zavitz and two of his colleagues W.J. Squirrel and A.E. Whiteside, evaluated about 100 soybean introductions from the Orient [East Asia] via the United States and Japan for forage and grain production (Zavitz 1927)."

Early soybean breeding in Canada (before 1920) primarily involved the meticulous separation and selection of pure lines from heterogeneous seed introductions. "For example, Zavitz selected and evaluated 34 lines from nearly 10,000 plants from the Habaro cultivar obtained from the" USDA in 1909 (Zavitz 1927).

In 1923 A.E. Matthews and F.W. Dimmock of the Central Experimental Farm (CEF [part of the Dominion Experimental Farms]) conducted a soybean trial at the Harrow Research Station (HRS). "Dimmock continued soybean testing at Harrow until 1929, when Casper Owen took over (Ward 1978)."

The pioneering work of Zavitz (OAC), Dimmock (CEF) and Owen (HRS) to identify and develop soybean varieties adapted to southern Canada created "a base of soybean germplasm and technical knowledge that would support evolution of the soybean crop during and after" World War II.

During and after the war, the main soybean breeders in Canada were C.W. Owen at HRS and F. Dimmock at CEF. Varieties released after 1940 were mainly the result of

© Copyright Soyinfo Center 2013

pollinations among earlier selections from plant introduction and of pedigree selection procedures (Bernard et al. 1988).

The rapid growth in Canadian soybean production in mid-1940s can be attributed to: A large growth in the demand for oil and protein during the war, the appearance of Victory Mills Ltd. in Toronto, improved varieties, promotion and extension efforts by Ivan M. Roberts (of the Field Husbandry Dept. of OAC in 1948 but agronomist for Victory Mills by 1953), and improved inoculant produced by the Microbiology Dept. of OAC. From the 1940s until the late 1970s nearly all of Canada's soybeans were produced in five southwestern Ontario counties: Elgin, Essex (incl. Pelee Island in the middle of Lake Erie; a southernmost point in Canada), Kent, Lambton, and Middlesex (see map near front of book).

Key soybean varieties of the period 1940-1970 are shown in Table 3. One key variety was Harosoy, released by HRS in 1951. Other key soybean breeders were Baldur Stefansson (from 1952) at the University of Manitoba that lead to Portage and Altona. G.E. Jones (from 1953) at OAC that led to Vansoy. John Giesbrecht (from 1959) at Morden (southern Manitoba) that led to Morsoy. A.A. Hildebrand was a pathologist who pioneered early research on phytophthora root rot; he worked with Owen to establish a program of disease resistance breeding at Harrow.

The 1960s: In 1961 Dimmock retired from CEF and was replaced by Lorne Donovan as an adjunct to his corn breeding program. In 1963 Owen retired from HRS and was replaced by R.I. Buzzell. Very early maturing introductions came from Sven Holmberg of Sweden. "Holmberg's material proved to be significant germplasm for Canadian soybeans. He derived it from crosses involving Manchurian and northern Japanese germplasm selected under the cool short-season environments (58º30'N) of Fiskeby, Sweden (Tanner 1973)."

Harosoy 63 dominated Canadian soybean production by the late 1960s. During this decade "two Ontario counties (Essex and Kent) produced nearly two-thirds of the Canadian soybean crop."

In 1974 H. Voldeng took over the soybean breeding program at CEF. In 1976 W. Beversdorf joined the University of Guelph with split responsibilities in soybean and field bean breeding and genetics. In 1982 G. Ablett initiated a soybean breeding program at the Ridgetown College of Agricultural Technology (RCAT). In 1976 CEF released Maple Arrow, a milestone cultivar, with parentage that included a Holmberg line. Maple Arrow, which was well adapted to the short-season areas of Ontario, combined with the higher prices of the early 1970s, sparked a soybean expansion northward and eastward.

The last two sections of this chapter are the longest and most detailed.

Figures show: (1) Graph of soybean production in Canada, 1945-1991. (2) Average yield of soybeans in Canada, 1938-1992.

Tables: (1) Early soybean selections and evaluation (OAC No. 211, Mandarin, Habaro No. 20405, Early Yellow). For each is given: Average height (inches), green fodder production (tons / acre). Yield of grain (lbs / acre). Source: Zavitz 1927.

(2) Early Canadian soybean cultivars (OAC 211 {released 1923}, A.K. (Harrow) {1933}, Mandarin (Ottawa) {1934}, Kabott {1937}, Pagoda {1939}, Goldsoy {1938}). For each is given: Source (pedigree, e.g., Habaro). Institution (e.g., OAC). Year licensed or released (1923-1939). (3) Canadian soybean cultivars of 1940-1970 (Harman {released 1943}, Capital {1944}, Manchu (Montreal) {1944}, Harly {1951}, Harosoy {1951}, Acme {1953}, Comet {1953}, Hardome {1953}, Crest {1957}, Merit {1959}, Portage {1964}, Altona {1966}, Harwood {1970}, Vansoy {1970}). For each is given: Pedigree, institution, year.

(3A) Public and private breeding of soybeans, Canada and USA, 1973-1992. The impact of privately funded soybean breeding programs has increased steadily since 1973, when the first privately bred variety was registered in Canada. This "private" variety was bred by N.R. Bradner in the USA and introduced to Canada by St. Clair Grain and Feed (a division of Maple Leaf Mills Ltd.). In 1973 in Canada there were 170 acres of privately bred soybean seed compared with 14,181 acres developed by publicly funded breeders. In 1982 the figures were 6,066 and 27,354 respectively. In 1987 the figures were 28,148 and 29,960 respectively. And in 1992 the figures were 43,004 acres private and 26,727 acres public. In this 20-year period, 120 private soybean varieties and 51 public varieties were registered. 27% of the private varieties and 81% of the public varieties came from U.S. breeding programs.

(4) Typical breeding cycle in the University of Guelph breeding program. Columns: Year and season, activity, location. The typical cycle is about 8 years. (5) Canadian soybean breeding programs (1991): Columns: Organization (public sector and private sector). Breeder (6 + 5 = 11 breeders in both sectors).

The Ontario Soybean Growers' Marketing Board identified export opportunities for both large-seeded yellow hilum cultivars (for tofu and miso) and small-seeded cultivars (natto type) in Pacific Rim markets. "The first natto-type emerged from CEF [Central Experimental Farm, Ottawa] in 1981, six years after D. Durksen of Continental Grain Company reported the potential export opportunity for small-seeded soybean to Japan. King Grain (N.R. Bradner) and CEF (Harvey Voldeng) each released three additional natto-type cultivars (Nattoking 86, Nattoking 87, Nattoking 88, Canatto, Nattosan and TNS) during the 1980s" (p. 8-9). Address: 1. Ciba Seeds, Greensboro, North Carolina; 2. Agriculture and Agri-Food Canada Research Station, Harrow, Ontario; 3. Ridgetown College of Agricultural Technology, Ridgetown, Ontario; 4. Agriculture and Agri-

11045. Grogan, Bryanna Clark. 1995. The (almost) no-fat holiday cookbook: Festive vegetarian recipes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 cm. [26 ref]
• ***Summary:*** This low-fat vegan cookbook, containing a wealth of soy-related recipes, features 18 menus for celebrating holidays from around the world. Address: Denman Island, east of Vancouver, British Columbia, Canada.

11046. Hagler, Louise. 1995. Lighten up! Tasty, low-fat, low-calorie vegetarian cuisine. Summertown, Tennessee: The Book Publishing Co. 160 p. Illust. Index. 23 cm.
• ***Summary:*** This is a vegan cookbook containing over 130 easy-to-prepare recipes, including many soyfoods recipes: about 26 tofu recipes, 5 tempeh recipes, 7 textured vegetable protein recipes, and 3 miso recipes, plus recipes using wheat gluten and quinoa.

Contents: Introduction. Snacks and appetizers: Dips and spreads, salsas, finger foods, fresh juices. Salads and dressings: Salads as a main dish, light salads, salad dressings, sauces and pestos. Soups: Main dish soups, light soups. Mainly beans. Mainly grains. Mainly pasta. Mainly tofu, tempeh and: Textured vegetable protein. Vegetables: Greens of all kinds, spring and summer vegetables, fall and winter vegetables. Lighter sweet things: Lighter pies, cakes, tarts and cookies, lighter sweet toppings, fruit treats.

A color photo on the rear cover shows "Louise Hagler, best-selling author and editor of *Tofu Cookery, Tofu Quick and Easy,* and the original *Farm Vegetarian Cookbook,* has been a creative vegetarian since 1969." Address: Summertown, Tennessee.

11047. Harlan, Jack R. 1995. The living fields: Our agricultural heritage. Cambridge, England, and New York, NY: Cambridge University Press. xi + 271 p. Illust. Index. 24 cm. [231 ref]
• ***Summary:*** In Chapter 6, "The Far East" (p. 144-172), a map (p. 145) shows early Neolithic sites in China, P'ei-li-kiang and related cultures, south Chinese Neolithic sites, and the distribution of loess of different depths. The end of the Pleistocene and start of the Holocene in China was, as elsewhere, a dynamic time. On the loess terraces of north China, the Mesolithic / Neolithic threshold was crossed around the middle of the 7th millennium B.C. The earliest known Neolithic culture of the region is the P'ei-li-kiang; it is now well known from some 40 sites in Henan and other provinces in northern China. Neolithic cultures were based on millets in the north and on rice in the south, during the period 6500 and 5000 B.C.

"Among the earliest compilations of Chinese literature is the *Book of Odes* (*Shih-Ching*), an assemblage of fragments from the eleventh century to the middle of the sixth century BC. Botanically, it is the most informative of on the early literatures and mentions about 150 plants, as compared to 55 in Egyptian literature, 83 in the Bible and 63 in Homer (Ho 1969). In the Odes, panicum millet is mentioned 27 times, the mulberry 20 times, and *Artemisia* is mentioned 19 times with 10 varieties.

"The soybean was first mentioned in 664 BC in connection with a tribute paid to the Chou by the Shan-Jung, the mountain Jung tribe." Note: The source of this information and the date 664 BC is: Ho, Ping-ti. 1975. *The Cradle of the East.* Chicago, Illinois: University of Chicago Press. p. 78-79. In the section titled "The crops," the soybean is discussed (p. 151-52).

In Chapter 8, "Some traditional techniques," the section on "Processing" (p. 235) describes how soybeans are made into tofu, with okara remaining. The author used to make his own. "Hand-turn rotary querns were devised primarily in Asia and these were probably the prototypes for water and wind mills that came in about Roman times" (p. 234).

The big picture: From the start of the Holocene, about 10,000 years ago, people around the world were moving in the direction of food production. "This could have been the result of post Pleistocene adjustments. With the extinction of most of the Pleistocene fauna, humans had to change their way of living. All over the world people turned their attention to smaller game, a greater variety of both plants and animals in the diet, smaller, more refined and more efficient stone tools, a greater emphasis on food plants, etc. These trends seemed to have pushed on of their own momentum toward the cultivation of plants and the domestication of animals."

Table 9.1 (p. 242) lists the world's 30 leading food crops in terms of estimated edible dry matter (million metric tons). The top 5 are: Wheat (468), maize (429), rice (330), barley (160), and soybean (88). These top 5 are all annuals.

Table 9.2 (p. 243) shows that cereals comprise 72.35% of world food production, roots and tubers 6.86%, pulses 6.35%, all meat, milk and eggs 6.0%, sugar 5%, and oil 3%.

This book is filled with interesting information and fascinating stories: Dogs as domesticated wolves (p. 48). Meetings in 1930 and 1932 at the Harlan home in Washington, DC, between Harlan's father and Nikolai Ivanovich Vavilov (a brilliant, charismatic, intense, and very curious man) and the written code they developed. Vavilov was eventually declared an enemy of the people, taken to prison, and executed by starvation. The dark, malevolent cloud of Lysenko–who took his place–was looming over him, with Stalin in the background. By 1978 he had been "rehabilitated" and the Vavilov Institute of Plant Industry (VIR) was created at St. Petersburg, with his office as a

© Copyright Soyinfo Center 2013

sort of shrine. Vavilov was in charge from 1920 to 1940 and pursued a vigorous program of germplasm collection, evaluation, and utilization. His "centers of origin" concept captured the scientific world, but it has not withstood the test of time. Scientists now treat each crop separately and consider origins on an ecological basis (p. 50-54).

Harlan has visited more than 80 countries and introduced to the USA more than 15,000 accessions, mostly for the USDA. His home base was initially at Oklahoma State University, later at the University of Illinois at Champaign. Address: Prof. Emeritus Plant Genetics, Agronomy Dep., Univ. of Illinois.

11048. Herbst, Sharon Tyler. ed. 1995. The new food lover's companion: Comprehensive definitions of over 4000 food, wine, and culinary terms. 2nd ed. Hauppauge, New York: Barrons. xvi + 715 p. 18 cm. 1st ed. published 1990. Barron's Cooking Guide. [325* ref]
• ***Summary:*** This carefully researched and well written dictionary of food terms also contains 21 useful appendixes and a good bibliography. All enquiries should be directed to: Barron's Educational Series Inc., 250 Wireless Blvd., Hauppauge, New York 11778.

Soy and related entries can be found under the following headings: Adzuki bean (also azuki), agedashi, cheese–imitation cheese (generally includes tofu and lecithin), fermented black beans (also called Chinese black beans and salty black beans), flour–gluten flour, kecap manis / ketjap manis, kudzu, milk (see soy milk), miso, natto, okara, queso fresco (also called queso blanco), quinoa, seitan, shoyu (Japanese for soy sauce), soybean, soybean oil, soy flour, soy milk, soy pea (see soybean), soy sauce (light soy sauce, dark soy sauce, Chinese black soy, tamari), tempe or tempeh, tofu (also called soybean curd and bean curd).

11049. Hsiung, Ping-chen. 1995. To nurse the young: Breastfeeding and infant feeding in late Imperial China. *J. of Family History* 20(3):217-238. *
• ***Summary:*** As sources, the author uses medical texts and family records. Practical examples from medical case records, and biographical and family documents, reveal people's real experience with breastfeeding and infant feeding. Address: Inst. of Modern History, Academia Sinica, Taipei, Taiwan.

11050. Kirchner, Bharti. 1995. The bold vegetarian: 150 inspired international recipes. New York, NY: HarperPerennial. xii + 286 p. Illust. (by Barbara Balch). Index. 24 cm.
• ***Summary:*** The author, a woman, draws on her Indian background for seasonings, but has been strongly influenced by her home in North America and world travels. The index contains 6 entries for tofu, 4 for tempeh, and 2 for miso–plus 1 for Soy-glazed napa cabbage (from Japan, with low-sodium soy sauce, p. 114-15). Address: Seattle, Washington.

11051. Mindell, Earl. 1995. Earl Mindell's soy miracle cookbook: 70 simple, tasty ways to add soy protein to your diet. New York, NY: Simon & Schuster. A Fireside Book. 91 p. No Index. 22 cm.
• ***Summary:*** The title page states that the recipes in this book were previously published in *Earl Mindell's Soy Miracle* (1995). At the end of each recipes is the source. Many of the recipes were developed by Judith Eaton, M.S., R.R., and Karen Lefkowitz, M.S., who have been tofu advocates for many years. "Judith and Karen run Nutrition Services, a consulting firm in Pomona, New York.

Contents: Salads. Spreads, dressings and sauces. Soups. Main dishes. Breads and breakfasts. Desserts.

The main soyfoods used–in descending order of predominance–are: Tofu (in 47 recipes). Soymilk (13, incl. Vitasoy and Edensoy). Tempeh (8). Texturized soy protein (3). Soy flour (3). Natural Touch okara patties (2) Miso (1). Soy sauce is used here and there as a seasoning.

Note: This is not a vegetarian cookbook. Ground beef, chicken, crabmeat etc. are used in a relative small proportion of the recipes. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

11052. Nakano, Makiko; Smith, Kazuko. 1995. Makiko's diary: a merchant wife in 1910 Kyoto. Translated with Introduction and Notes by Kazuko Smith. Stanford, California: Stanford University Press. xii + 256 p. With introduction and notes by Kazuko Smith. Illust. Maps. Index. 24 cm. [100+* ref]
• ***Summary:*** This diary was written by Makiko Nakano (1890-1978). A somewhat blurry photo of her (taken ca. 1910) faces the title page. Sample pages from her actual diary are shown occasionally (see p. 56). She is married and her parents also both live in Kyoto. Tofu and miso were a regular part of her family's diet.

Jan. 1 [1910] (p. 57). Jan. 1. New Year's day. Black [soy] beans (*kuromame*) are served for lunch.

Feb. 1 (p. 81): "Because it was a cold night with a howling wind outside, I decided it would be a good chance to make frozen tofu. I took the tofu I bought for this purpose out onto the big roof, poured hot water over it, and left it there overnight. It was bitter cold. I thought my ears were going to freeze." Endnote (p. 82): "5. *Kôya-dôfu* or *shimi-dôfu.* Freezing coarsens the tofu, which then takes on a distinctive flavor when cooked in a mixture of soy sauce and sugar."

"The family custom was to serve the same menu on the first day of each month." That menu was miso soup. salad of grated radish and carrots, and broiled mackerel."

Feb. 2. As soon as she awoke in the morning, she thought about the tofu she had left outside the previous night.

© Copyright Soyinfo Center 2013

She hurried up to the roof in spite of the cold. "It was frozen solid. In fact it was so thoroughly frozen and stuck to the board that pouring hot water over it did not help much to loosen it." She was finally able to dislodge it by pounding it with a hammer for some time. She cooked it with *katsuo-dashi* right away and served it to her husband for breakfast. He complained about it (p. 82).

On Feb. 2 she again put out tofu on the roof to freeze. First thing next morning she rushed up to se it. "It was beautiful! I soaked it in hot water first, then cooked it in soy sauce, *sake,* and sugar. It was perfect and he liked it! My experiment was a success."

Note: This is the earliest English-language document seen (April 2013) that uses the term *shimi-dôfu* to refer to dried-frozen tofu.

Kôya-dôfu is mentioned on page 93. Regular tofu is mentioned on pages 10, 24, 25, 60, 68, 87, 89, 93, 117, 227. Soy sauce is mentioned on pages 82, 83, 225, and 252. Miso is mentioned on about 21 different pages (see index). Address: Kyoto, Japan.

11053. National Dairy Council. 1995. The all-American guide to calcium-rich foods. Rosemont, Illinois. 8 panels. 23 cm.

• ***Summary:*** "It is very difficult to get all the calcium you need without eating Milk Group foods." The five most concentrated sources of calcium are: (1) Yogurt, plain, nonfat (1 cup): 452 mg. (2) Tofu, with calcium sulfate (½ cup): 434 mg. (3) Yogurt, plain, lowfat (1 cup): 415 mg. (4) Cheese, Swiss (1½ oz): 408 mg. (5) Milkshake, chocolate (1 fl oz): 319 mg.

"Calcium supplements: There are a wide variety of calcium supplements on the market... There are no benefits from taking more than your RDA for calcium. In fact, high doses of calcium may interfere with the absorption of other nutrients, like iron. The National Academy of Sciences recommends that individuals do not consume more than 1,000 milligrams of calcium per day from supplements." Address: Rosemont, Illinois.

11054. Northrup, Christiane. 1995. Heal your symptoms naturally. Potomac, Maryland: Phillips Publishing Inc. 18 p. 28 cm.

• ***Summary:*** In the section titled "Natural healing for menopause" (p. 1-3) Dr. Northrup advises women to take natural progesterone, since their body stops producing its own progesterone during menopause. This supplement provides relief from both hot flashes and mood swings for many women. "For two weeks out of every month, use a little progesterone cream on the soft areas of your skin, changing sites often... Another form of natural progesterone is plant progesterone. There are many sources. The most common are soy foods and yams (not sweet potatoes)." Also take a safe form of estrogen–estriol. It can be applied as a vaginal cream and may protect against breast cancer. "Natural estrogens such as estriol have been in use for over 50 years, and are considered generic. Although these natural hormones aren't very common in the U.S., estriol is one of the more popular estrogens in Europe." To find a U.S. source call the Women's International Pharmacy at 1-800-279-5708.

"Natural plant hormones with estrogen-like effects are found in soy products, such as soy milk, tofu and miso, in addition to cashews, peanuts, oats, corn, wheat, apples and almonds. Japanese women go through menopause more easily than American women, partly because their diet is so high in the natural estrogens found in soy products. (Note: If you still have your uterus, never take estrogen of any kind without balancing it with progesterone.)"

In the section titled "Natural healing for breast cancer" (p. 6-7) notes that you can lower your risk through diet. "Eat soy products, You can also protect your breasts with tofu. A study published in the September 1994 issue of the *American Journal of Clinical Nutrition* demonstrated that women who ate 60 grams of soy protein per day (about 2 ounces) had changes in the estrogen levels that were similar to the effects of tamoxifen–an antiestrogen drug that is undergoing study as a possible prophylactic agent in women who are at high risk for breast cancer.

"The effects of soy protein on hormonal levels are thought to be from estrogen-like substances in soybeans called isoflavones. These behave like partial estrogen agonists/antagonists, which means they help increase the effects of estrogen in women who have estrogen levels that are too low, while helping to decrease the effects of estrogen in women whose estrogen levels are too high.

"While we're waiting for more research on the subject, I'd recommend adding soy protein to your diet regularly. In addition to tofu, soy protein is found in tempeh, miso and natto. These products are sold in many grocery stores and in almost all health food stores." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

11055. Pankey, Susan M. 1995. Why the brown bean was blue: The story of a soybean frown turned upside down. 2nd ed. Nebraska: Nebraska Foundation for Agricultural Awareness. 32 p. Illust. by Libby Mortensen. No index. 23 cm. 1st ed. 1992.

• ***Summary:*** This is a children's book, written in rhyming verse, about the many things that can be made from soybeans. The soybean is "blue" (unhappy) because people don't understand all the great things that it can do. From soybeans we can make soybean oil, mayonnaise, margarine, soap and shampoo, insecticides, varnish and paint, lecithin (used in medicines and chocolate bars), soy flour, hot dogs, soy sauce, tofu, soybean meal for livestock feeds, soy ink, glue.

Also describes how soybeans are grown and crushed to yield soybean oil and meal. This edition is printed with

© Copyright Soyinfo Center 2013

soy ink on recycled paper. Both the first edition (1992) and this second edition were published by the same Nebraska Foundation for Agricultural Awareness with funding from the Nebraska Soybean Board. Project coordinated by Ellen Hellerich, Nebraska Agriculture in the Classroom (Lincoln, Nebraska). Address: Upstate New York.

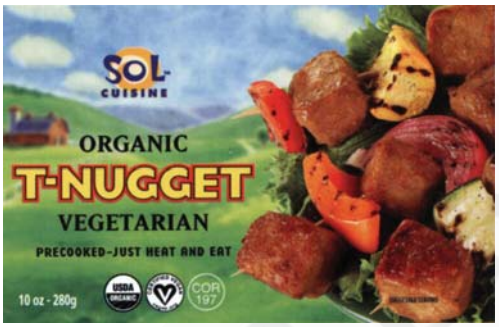
11056. Pelosi, Bruno; Christmann, Volker; Aepli, Beatrice. 1995. Vegetarisch kochen mit Tofu. 2., vollst. ueberarb. Ausg. [Vegetarian cooking with tofu. 2nd ed., completely revised]. Kuettigen / Aarau, Switzerland: Midena Verlag. 104 p. Illust. (color photos). 22 cm. [Ger]*
• ***Summary:*** Previously published under the title *Fantasievolle Sojakueche.*

11057. Plenty International. 1995. From the global kitchen: A collection of vegetarian recipes. Summertown, Tennessee: The Book Publishing Company. 124 p. Illust. (57 photos). Index. 21 x 18 cm.
• ***Summary:*** Contents: Foreword, by Virginia & Mark Messina. Introduction. Local ingredients–Cooking tools. Description of uncommon ingredients. Recipe notes: Flours (incl. soy flour), tofu, grating tofu and tempeh, replacing okara with grated tofu or tempeh, cooking, breaking and dehulling soybeans, hand mills and blenders. 1. North America: The Bronx, Native Americans (Oglala Lakota people at Pine Ridge Reservation in South Dakota), recipes (main dishes, salad, breads, desserts). 2. The Caribbean: Introduction (Jamaica, Dominica), recipes. 3. Central America: Introduction (Belize, Guatemala, Nicaragua, Casta Calderon's first experience with soy foods in Nicaragua), recipes. Africa: Introduction (Lesotho, Liberia), recipes. Sri Lanka: Introduction, recipes.

This remarkable, first-of-its-kind book by Plenty International tells the story of the pioneering work they have done over a period of several decades to introduce soyfoods to the Third World. The many vegetarian recipes in each section (each containing at least one soy ingredient, and based mostly on traditional soyfoods) are innovative and well adapted to that region. The 51 black-and-white photos, plus 6 color photos on the front and rear covers, add joy and a human face to the book. Much of the text is by Chuck Haren. Address: P.O. Box 394, Summertown, Tennessee 38483. Phone: (615) 964-4864.

11058. Sass, Lorna J. 1995. Lorna Sass' complete vegetarian kitchen: Where good flavors and good health meet. New York, NY: Hearst Books. xiv + 492 p. Index. 26 cm. [35+* ref]
• ***Summary:*** First published in 1992 as *An Ecological Kitchen: Healthy Meals for You and the Planet* (William Morrow–which see). This innovative vegan cookbook offers 250 cholesterol-free recipes. It features a complete glossary of wholesome ingredients for stocking the vegan pantry (no meat, dairy, or eggs). Address: New York City.

11059. Sol Cuisine. 1995. Organic T-Nugget (Vegetarian Tofu Nuggets). Mississauga, Ontario, Canada. [Eng; Fre]



• ***Summary:*** Leaflet (printed in 2004) sent by Lorraine Guardino of Sol Cuisine. 2013. March 11. A small color photo shows the front of panel of this product's package. It weighed 10 oz, 280 gm. "Cubed, marinated and baked. Wheat & gluten free. Certified organic. Kosher."

E-mail from Lorraine Guardino (in reply to a request for more information about this product). 2013. March 14. "Tofu Nuggets: First made for our own Vegetarian Restaurant. 1995 or 96 (uncertain). Then added to our foodservice offering (only had a very few customers) Put into small see through packages in about 1996 and sold through the small retail section of our restaurant. Continued making on a small scale until approximately 2006. Sold only in the Toronto area. Very labor intensive product to make. Cube tofu, marinate, coat and bake, cool and package. The name never changed.

"Mysterious customer story: We were contacted by a chef (cannot remember his name) who had heard about our tofu nuggets and wanted to try them. He was in Los Angeles and I sent a sample to the airport. He picked them up there. Would not say who they were for. He began ordering a small case every couple of months (approx. 10 lbs). I packed with ice packs and took to the airport (cannot remember any address, I believe I just dropped them at the cargo area). The only thing he every told me was that he did not want anyone to know who they were for. We all thought that was very interesting and it was clear money was not an issue. (They were a nice product when cooked properly they were outstanding. However, a lot of people would over heat etc...)." Address: Mississauga, Ontario, Canada. Phone: 905-502-8500.

11060. Weil, Andrew. 1995. Spontaneous healing: How to discover and enhance your body's natural ability to maintain and heal itself. New York, NY: Alfred Knopf / Ballantine Books. viii + 309 p. Index. 21 cm. [75 endnotes]
• ***Summary:*** This superb, landmark book, which provides a positive alternative to the American medical system, was written by an articulate, practicing physician (a graduate of Harvard Medical School in Massachusetts), and was

© Copyright Soyinfo Center 2013

No. 1 on *The New York Times* bestsellers list. Dr. Weil advocates "integrative medicine," which takes the best from conventional / standard medicine and alternative / wholistic medicine. He also urges individuals to take responsibility for their own health by living and eating in a way that supports that body's natural healing ability.

Dr. Weil strongly recommends soyfoods. In the chapter titled "A healing diet" Dr. Weil recommends a near vegetarian diet, but he recommends consumption of fish (p. 147-48) as a very healthy source of protein, although he cautions that many may be contaminated.

In the section on "Soybeans" (p. 149) he notes that they contain much more protein than other beans, plus significant amounts of polyunsaturated fat. Soy protein can be transformed into a remarkable variety of foods, including "facsimiles of animal foods" [meat and dairy alternatives]. "There may be great health benefits to soy that are just coming to light. They contain a group of chemicals called phytoestrogens that may offer significant protection against prostate cancer in men and estrogenically driven diseases in women, including breast cancer, endometriosis, fibrocystic breast disease, and uterine fibroids, as well as the discomforts of menopause. Low incidence of these conditions among Japanese women may be due to their high consumption of soy foods, especially tofu." At the end of this section he makes two basic recommendations for changing your diet "in a direction that favors spontaneous healing." (1) "Eat less protein." (2) "Begin to replace animal protein in the diet with fish and soy protein." This will "both reduce your exposure to toxins and other harmful elements in meats, poultry, and milk and gain the benefits of health-promoting components of fish and soybeans." At the end of this chapter (p. 153) he gives a brief nine-point summary of his recommendations for a healing diet, including "Try to replace animal protein foods with fish and soyfoods."

In the chapter titled "An eight-week program for optimal healing power," Dr. Weil includes many specific recommendations for soyfoods (p. 212-17). For each week, their are recommendations in four areas: Projects, diet, exercise, and mental / spiritual.

In the section on "Men's health problems" (p. 260), he advocates increased consumption of soyfoods; "their phytoestrogens might protect the prostate from the unbalanced effect of male sex hormones." In the section on "Women's health problems" (p. 265-66), he again advocates increased consumption of soyfoods "for their protective phytoestrogens." Address: M.D., Director, Program in Integrative Medicine, Univ. of Arizona, Tucson.

11061. Wibisono, Djoko; Wong, David. 1995. The food of Singapore: authentic recipes from the Manhattan of the East. Boston, Massachusetts and Singapore: Periplus. 120 p. See p. 104. Introduction by Lee Geok Boi. Illust. (color by Luca Invernizzi Tettoni). Map. Index. 20 x 23 cm.

• ***Summary:*** In the section on "Poultry," the recipe for "Duck in fragrant soy sauce" (p. 104) has a headnote which begins: "A Teochew favorite sometimes made with goose, this is a simple but very tasty way of simmering duck in soy sauce flavored with 'black' spices (cinnamon, star anise and cloves)." The ingredients include: "4 cups light soy sauce. 3 tablespoons black soy sauce."

Note 1. This is the earliest English-language document seen (April 2012) that contains the term "fragrant soy sauce," which refers to a kitchen preparation rather than to a commercial product."

Note 2. Teochew food, from southern China, is characterized by steaming, light soups and fish dishes (p. 15).

Bean curd is mentioned on pages 10, 27, 48 (dried bean curd), 52 (firm bean curd), 66, 68.

Black soy sauce is mentioned on pages 14, 33, 39, 42, 52, 58, 64, 72, 82, 86, 98, 102, 104. Note: This appears to be a commercial product.

Deep-fried beancurd (*tau foo pok*) is mentioned on page 27.

Note 3. This is the earliest English-language document seen (April 2013) that contains the term *tau foo pok.*

Fermented bean curd (*nam yee*) is mentioned on page 27.

Soy sauce is mentioned throughout this book, including "light soy sauce" (which is saltier and paler than the dark black variety), "sweet soy sauce" (Indonesian, p. 33 [probably *kecap manis*]), and "black soy sauce."

Yellow bean sauce is mentioned on page 32. Address: 1. Executive Chef; 2. Chef responsible for Chinese cuisine. Both: The Beaufort Sentosa, Singapore.

11062. Zedong, Mao; Schram, Stuart R.; Hodes, Nancy Jane. 1995. Mao's road to power: Revolutionary writings 1912-1949. Volume III. From the Jinggangshan to the establishment of the Jiangxi Soviets, July 1927–December 1930. Armonk, New York; London: M.E. Sharpe. lxxvi + 771 p. See p. 323. 24 cm. [400+* ref]

• ***Summary:*** In the section titled "Xunwu investigation (May 1930, p. 296-419) we read (p. 323): Dried bean curd roll [lit., curd bamboo] [sic, dried yuba roll]. This is made of thin sheets of bean curd [sic, yuba] rolled into tubes. One *jin* costs 2 *mao* and several *fen;* annual sales are 40 to 50 *jin.* It comes from Xingning.

"*Doufumei* [lit., bean curd mold]. This is fermented bean curd that comes from Mei xian. It is made from three items: soybean milk, taro, and flour. It is not made the way the dried bean curd [*doufu-gan;* pressed tofu] used by the common people is made."

Bean curd [tofu] is mentioned on pages 184 ("Spoiled bean curd is not spoiled bean curd"), 335-36 (section titled "Bean curd"), 347.

Soybean is mentioned on pages 318 (soybean business), 323 (soybean milk used in Doufumei), 336 (soybean residue

© Copyright Soyinfo Center 2013

[okara]), 343 (yellow soybean sprout). Address: China.

11063. **Product Name:** [Spicy Hot Tofu Hot Dogs].
Foreign Name: Tofu Knacker–Picoso.
Manufacturer's Name: Albert's Tofuhaus.
Manufacturer's Address: Hauptstrasse 13, D-6719 Lautersheim, West Germany. Phone: 06351-43718.
Date of Introduction: 1995?
How Stored: Shelf stable.
New Product–Documentation: Label brought by Albert Hess of Albert's Tofuhaus. 1995. March 11. 2.5 by 4 inches. White and black on green. An illustration shows a large personified cake of tofu, with smiling face and arms held out. This product is made for Albert by Viana.

11064. **Product Name:** [Orgal Soy Drink Powder, Sweet Cakes of Maize and Rice with Soya, Soya Medallions (Baked, Organic), Organic Soy Fiber Drink].
Foreign Name: Orgal Bebida de Soja, Galleta Dulce de Maiz y Arroz Inflado con Soja, Medallones de Soja (100% Orgánico), Bebida de Fibra de Soja Orgánica (100% Orgánico).
Manufacturer's Name: Alimentaria Rosco S.A.
Manufacturer's Address: Buenos Aires, Argentina. Phone: 54 2477 497136.
Date of Introduction: 1995?
Ingredients: Water, organically grown soybeans, strawberry pulp, rice, sugar, pectin, lactic acid bacteria (*fermentos lácticos*), strawberry essence (*esencia de frutillas*).
Wt/Vol., Packaging, Price: 200 gm plastic yogurt cup.
How Stored: Refrigerated.
New Product–Documentation: Visit with Carlos Planes at Soyinfo Center in Lafayette, California. 2012. Feb. 23. Carlos brought an original sell sheet for these products (4 panels, each 8.25 by 6 inches). On each panel is a description plus a photo of and recipes for each product. Carlos says they used to make a tofu with 3 months shelf life at room temperature.

11065. **Product Name:** Tofu, Soymilk.
Manufacturer's Name: Din Ho Foods, Inc.
Manufacturer's Address: 5475 Rotterman St., Montreal, QUE H4P 1J3, Canada. Phone: 514-735-9503 or 9502.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. This company makes tofu and soymilk.

11066. **Product Name:** Tofu, Soymilk.
Manufacturer's Name: Les Aliments Fontaine Santé.
Manufacturer's Address: St.-Laurent St. 4560, QUE H4M 2N5, Canada. Phone: 514-956-7730.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. This company makes spreads using tofu, hummous, tahini, etc. The owner is Mr. Di Savioz.

11067. **Product Name:** [Soy Sprouts, Tofu, Soymilk].
Foreign Name: Germes de haricot (Chop suey), Tofu, Boisson de Soja.
Manufacturer's Name: Les Aliments Panda Foods Inc.
Manufacturer's Address: 4800 St.- Ambroise, Suite 110-111, Montreal QUE H4C 3N8, Canada. Phone: 514-846-0824.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. The name of the owner / director is Vinh Sieu Tran.

11068. Missouri Soybean Merchandising Council. 1995? Soybeans–Good food for good health. Jefferson City, Missouri. 12 p. Each panel ranges in size from 7.5 x 9.5 cm to 14 x 9.5 cm. Undated.
• ***Summary:*** Printed with green soy ink on white paper, each page of this little booklet is a different height to serve as a sort of tab index. Contents: Good nutrition. Heart disease. Cancer prevention. Other diseases: Osteoporosis, diabetes. Adding soyfoods to your diet is not as hard as you might think: Soymilk, tofu, isolated soy protein, soy flour, whole soybeans.

The information in this brochure is based on "The Simple Soybean and Your Health," by Mark Messina, PhD and Virginia Messina, RD. Though it was developed by the Missouri Soybean Merchandising Council (Susie Oberdahlhoff), any state soybean board could order copies with its name, address, and phone number printed on the back. Address: Missouri. Phone: 507-388-1635.

11069. **Product Name:** [Tofu, Soymilk].
Manufacturer's Name: Super Marché Sun Hing.
Manufacturer's Address: 1050 Boul. St. Laurent, Montreal QUE H2Z 1J5, Canada. Phone: 514-866-8110.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1.

11070. United Soybean Board. 1995? Introducing a soy-a-mid: How soybeans fit into the eating plan described in the USDA's Food Guide Pyramid (Leaflet). St. Louis, Missouri. 3 panels each side. Each panel: 28 x 21 cm. Undated. [1 ref]
• ***Summary:*** This attractive and elaborate fold-out color leaflet consists of 6 panels, each 8½ by 11 inches. Contains a color reproduction of the USDA Food Guide Pyramid.

"The soybean: A food group unto itself." "Foods derived from whole soybeans, such as tofu and tempeh, are used as a primary protein source in many Asian countries. Tofu is also a good source of calcium in Asian diets where milk and

© Copyright Soyinfo Center 2013

milk products are seldom consumed. In fact, a Food Guide Pyramid in China or Japan would see tofu playing a major role in the third tier of the diagram [in the Vegetable Group].

"Think soybeans: Whether you're spreading soybean margarine on your pancakes fortified with soy flour, or experimenting with tofu in your stir fry, remember that soybeans are a versatile food that can play an important role in your personal food guide pyramid." Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 31 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1995?
Wt/Vol., Packaging, Price: 12.5 oz. Retails for $1.99.
How Stored: Refrigerated.
New Product–Documentation: Wildwood Natural Foods price list. 1995. Jan. 9.

11072. Olgeirson, Ian. 1996. Boulder tofu company expanding product line: White Wave hopes boomers guzzle soy milk. *Denver Business Journal*. Jan. 4. p. 3A, 17A.
• ***Summary:*** White Wave got its first big break almost 20 years ago when a King Soopers' buyer agreed to stock its products in two stores on a trial basis. "If the tofu did well in the Boulder markets, King Soopers pledged to put White Wave in all of its Colorado outlets. 'Every morning we delivered tofu to the stores,' said president and founder Steve Demos,' and every afternoon I sent my employees out to buy up the remaining stock... Demos [age 46] may not adhere to such guerilla marketing tactics anymore, but the charismatic titan of tofu hasn't lost his zest for the natural foods business... Demos has built his company into the nation's largest industrial seller of tofu, making 150,000 pounds a week on the Boulder factory."

Now he's "preparing to launch a soy milk product called Silk and a line of vegetarian entrees aimed at turning White Wave into the Dannon Yogurt of the soy by-product world. 'I will be called a heretic and then I will be called a genius,' Demos said.

Sheryl Lamb, a sales manager with Mountain People's Warehouse, anticipates a tremendous demand for Silk and for the line of vegetarian entrees called Full Moon Cafe. Demos' primary goal is to establish brand equity for White Wave. A photo shows Demos, dressed casually, leaning against a tree.

11073. Kushi Macrobiotics Corp. 1996. Kushi Cuisine order form. Stamford, Connecticut. 2 p. Revision #3. Jan. 19.
• ***Summary:*** This 1-page (back-to-back) photocopied order form lists 26 meals, seasonings, and snacks, which range in price from $4.39 to $0.99. Soy-related items include: Buckwheat noodles (soba style) + soy-ginger sauce (4 servings, $4.39). Quick brown rice + red azuki beans & onions (4 servings, $2.59). Instant miso soup + garden & sea vegetables + shiitake mushrooms (12 servings, $3.99). Instant chicken-free vegetarian noodle soup + tofu & mushrooms (6 servings, $3.99). Traditional premium (shoyu style) soy sauce (10 oz, $2.99). Wheat-free premium (tamari style) soy sauce (10 oz, $3.59). Postage for $0 to $10.00 is $4.95. Address: P.O. Box 1434, Stamford, Connecticut 06904. Phone: 1-800-200-4184.

11074. Burros, Marian. 1996. Readers write in about fat, pesticides, and safety of tofu: Eating well. *New York Times*. Jan. 24. p. C6. [1 ref]
• ***Summary:*** The author buys and uses only packaged tofu, and believes it is safe to use uncooked.

11075. Fuchs, Victor R. 1996. The tofu triangle. *Wall Street Journal*. Jan. 26. p. A10.
Address: Prof. emeritus, Stanford Univ., and the immediate past president of the American Economic Assoc.

11076. Zibart, Eve. 1996. The very fertile vegan field. *Washington Post*. Jan. 26. p. N24. Weekend section.
• ***Summary:*** The article begins: "It's not unusual anymore for non-vegetarians to eat at such green hot spots as the Health Zone, Food for Thought or Planet X (which is turning into the caterer-of-choice for veggie and vegan alternative rock types). Likewise, its easier and easier for vegetarians to find foods they like at new nutrition-conscious restaurants such as Felix, Greenwood, etc.–as well as at mainstream spots.

Today, more and more restaurants are offering vegan dishes, which contain no animal products whatsoever. A vegan diet precludes not only meat, poultry and seafood, but dairy products, eggs, butter, lard and other animal fats, cream sauces, cheese, etc. Yet that still leaves plenty of room for fine dining.

Most Asian cuisines (except Korean and Filipino) limit the use of dairy products and eggs. Malik, a downtown Thai restaurant, has a dozen vegetarian / vegan entrees, "including several featuring that heart-healthy favorite tofu" in various sauces such as red curry, black bean sauce, and peanut curry.

The Vegetable Garden in Rockville is the only wholly vegan Chinese restaurant in the area, although most Chinese eating place have a good variety of choices. The key words are "mock" and "Buddha." Mock chicken and mock pork are nicknames for tofu and other soy-based meat alternatives. The word "pork" sometimes refers to seasoned tempeh dishes. Since Buddhists are also vegans, correctly labeled "Buddhist delights" contain no animal products.

Most Japanese restaurants offer hot or cold tofu and "lightly salted soybean pods called edamame."

Ends with a directory of ten restaurants in the Washington, DC, area that offer a good selection of vegetarian or vegan dishes.

It contained technical articles with titles such as: "Evaluation of soybeans for tofu processing." Address: Chatham, Ontario, Canada.

11080. **Product Name:** D'Alterio Healthy Cuisine (All are organic with Tofu): Cheese Ravioli Pergolese, Cheese Tortellini Bologna, Pasta Shells Genovese, Pasta Shells Veneto, or Pasta Fagioli Tuscany.
Manufacturer's Name: D'Alterio Foods Corp.
Manufacturer's Address: 109-18 Northern Blvd., Corona, New York 11368. Phone: 718-779-4770.
Date of Introduction: 1996. January.
Ingredients: Cheese Ravioli Pergolese: Tomatoes*, durum flour*, water, low fat ricotta cheese (skim milk, milk, vinegar, salt, vegetable gums), onions, broccoli, corn kernels, zucchini, red bell peppers, mushrooms, organic tofu (well water, soybeans*, magnesium chloride–a natural coagulant), basil, dried pineapple, canola oil*, imported Parmesan cheese (part skim milk, cheese culture, salt, enzymes), garlic, sea salt, extra virgin olive oil*, spices, vegetable gums, parsley. * = Organically grown.
Wt/Vol., Packaging, Price: 11 oz. (312 gm). Retails for $3.49.
How Stored: Frozen.
New Product–Documentation: Spot in Frozen Food Age. 1996. Jan. p. 48. "Organic frozens are enjoying healthy growth." The section on "D'Alterio Foods" states that this company, of Corona, New York, "has rolled out six pasta dinners and two soups under the D'Alterio Healthy Cuisine Label."

Article in Frozen Food Age. 1996. Sept. "We become what we eat–Healthy Frozen Foods." Guido Marchitelli has spent 55 years developing food products and more than 20 years in food research, for Buitoni Foods and Lipton Tea, and now as the R&D chef for D'Alteria Foods Corp., Corona, New York. In 1995 he won the "Gold Medal" chef of the year award from the Chefs de Cuisine Association of America. He has recently played an instrumental role in D'Alterio's introduction of a premium line of frozen organic Italian foods.

Leaflet (8½ by 11 inch, color–blue and red on yellow) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1997. Sept. "Healthy Cuisine. Low fat, natural Italian. You've tried all the rest–Now go for the best." On the front is a color photo showing eight packaged organic frozen entrees. Five of these contain tofu. On the back is a nutritional analysis of each product. The front of each box shows the following: Cheese Ravioli Pergolese: Filled with ricotta, corn, tofu, and Parmigiano cheese. Cheese Tortellini Bologna: Filled with ricotta, corn, tofu, and Parmigiano cheese. Pasta Shells Genovese: Filled with ricotta, corn, and tofu. Pasta Shells Veneto: Filled with ricotta, broccoli, and tofu. Pasta Fagioli Tuscany: Filled with tofu and Jerusalem artichoke.

Talk with Alberto Olavarria of D'Alterio. 1998. Feb. 17. These products were introduced in March 1996 at the Natural Products Expo at Anaheim. The company started in 1972. The address has always been 109-18 Northern Blvd., Corona, New York 11368. Phone: 718-779-4770. Alberto also sends: (1) Product description and ingredient statements; (2) D'Alterio Healthy Cuisine–Products data sheet–incl. nutrition facts on each product.

information. Address: Fort Bragg, California. Phone: 707-964-2922.

11082. Golbitz, Peter. 1996. Meat alternative sales sizzling: Consumer concern about fat intake and the environmental consequences of meat products is prompting the rising sale of meat alternatives. *Natural Foods Merchandiser.* Jan. p. 26.
• ***Summary:*** A graph shows retail sales of meat alternatives in million dollars from 1985 to 1995, and projected to 1999–based on a two recent reports by Soyatech Inc. (contains data to 1994) and Packaged Facts. Sales have grown from $44 million in 1985 to $94 million in 1990, to $180 million in 1995, to a project $376 million in 1999.

Since the early 1990s, the market for meat alternatives has not only continued rapid growth but has now shown health signs of segmentation and product differentiation. One leading veggie burger company promotes its product as "soy free and delicious." Others flag soya content by using the word "tofu" in their product name.

According to a report published recently by the Soyfoods Association of America (SAA), 78% of Americans have heard of tofu, 57% have heard of soy burgers, and 46% are aware of soy hot dogs. The study concludes that this widespread awareness is due to tofu being available in nearly every supermarket and the fact that 77% of consumers purchase tofu in these stores.

Perhaps the most amazing findings in the SAA study are that an estimated 26 million Americans consume soyfoods and 15 million people eat tofu five times or more a year, making it the most popular soyfood in America (not including soy sauce which is a condiment). Soyburgers were the second most popular, having been consumed by 6% of the U.S. population during the past year.

The SAA study also found that consumers who enjoy one type of soyfood are more likely to use another type. For example, nearly 70% of consumers who consumed soyburgers stated that they also ate tofu. Address: President of Soyatech Inc., Bar Harbor, Maine.

11083. INTSOY. 1996. Soybean processing and utilization. June 4-28, 1996. An international training program (Brochure). Urbana, Illinois. 12 panels. 22 x 10 cm each.
• ***Summary:*** Contents: Basic topics to be presented in the 1996 course are the same as for the 1995 course. Professional opportunities. Cost and travel information (the course costs $4,300 plus an estimated $1,600 for room, board, and other local living expenses. INTSOY is unable to offer scholarships). This is the 16th offering of the training program. Some 170 persons from 26 countries have attended the course. Danny Erickson is the training officer in charge. Address: International Soybean Program, Univ. of Illinois, 169 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

11084. Lai, Benny. 1996. Dah Chong Hong–A pioneer in using Ontario soybeans. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*) 9(1):2. Jan.
• ***Summary:*** In the mid-1970s Mr. Lai was working in the Food and Edible Oil Dept. of Dah Chong Hong's head office in Hong Kong. He and co-workers imported 800 bags of Ontario special quality white hilum soybeans into Hong Kong for testing. They distributed the soybeans to more than 30 manufacturers of soybean curds, tofu, soy milk, soy sauce, and other soy products. "The quality was considered not very terrific by most end-users, in terms of 'yield' when manufacturing the soy products, but was acceptable." To further explore development of this imported product, Mr. Lai and Mr. Chi-bun Leung flew to Canada, where they were warmly welcomed and treated Dah Chong Hong's as pioneers. "Since that time Dah Chong Hong has imported Ontario soybeans for the Hong Kong market continuously every month now for more than 20 years. The overall quality of Ontario soybeans has improved over the years, and the quantity has been growing from only one or two containers per month in the mid-1970s, to hundreds of containers per month presently."

In 1984 Dah Chong Hong (Canada) Ltd., a wholly owned subsidiary of the head office in Hong Kong, was established in Vancouver, British Columbia, Canada. "One of our goals is to export more Canadian soybeans to many countries in Asia." The address in BC is: 4211 No. 3 Road, Richmond, BC V6X 2C3. Phone: 604-273-8222. Fax: 604-273-9222. Address: President, Dah Chong Hong (Canada) Ltd., 4211 No. 3 Road, Richmond, BC V6X 2C3, Canada. Phone: 604-273-8222.

11085. Lark, Susan M. 1996. The estrogen decision: Self help book. Revised & updated. Berkeley, California: Celestial Arts. 313 p. Illust. Index. 22 x 22 cm. [256* ref]
• ***Summary:*** This excellent, well-researched, and easy to understand book is "A complete guide to relief from menopausal symptoms through hormonal replacement and alternative therapies." It is divided into two parts: I. Hormone replacement therapy: Is it for you? (Chapters 1-9). II. Alternatives to hormone replacement therapy (Chapters 10-17).

Soybeans, soyfoods, and vegetarianism are discussed in many parts of this book. Women in the USA who do not suffer from hot flashes tend to eat a more vegetarian diet high in plant estrogens (p. 68). Nondairy soy yogurt made with live acidophilus cultures is an excellent food for preventing vaginal infections (vaginitis), urinary tract infections, and for menopausal women in general; this delicious food is sold at many health food stores (p. 84-86).

In Chapter 10, titled "Dietary principles of menopause relief," is a section on "Foods that ease menopausal symptoms." A long subsection titled "Beans and peas

© Copyright Soyinfo Center 2013

(Legumes)" (p. 124-26) starts by noting that "Soybean-based products actually help reduce and prevent menopausal symptoms. Soybeans are loaded with natural plant or phytoestrogens, called bioflavonoids." It goes on to discuss the reasons for these benefits, with scientific documentation. Soybean oil is also a good source of essential fatty acids (p. 128-29).

Chapter 11, titled "Menus, meal plans, and recipes," calls for use of soyfoods and other legumes in place of red meats, poultry, and dairy products (p. 163-67); tofu and soymilk are used in many menus and at least 14 recipes.

Chapter 12, titled "Vitamins, minerals & essential fatty acids," contains sections on the benefits of bioflavonoids, which are found in soybeans, for relieving menopausal symptoms, such as heavy and irregular bleeding (p. 172), hot flashes, night sweats, vaginal and bladder atrophy (p. 174-75), menopause-related emotional symptoms and insomnia (p. 177-79, also vitamin E found in soy oil). Omega-3 fatty acids, also found in soybeans, can help reduce one's risk of heart disease (p. 188).

Chapter 13, "Herbs for menopause," notes that estrogen and progesterone are widely synthesized from soybeans, which contain a preformed steroidal nucleus.

One problem with this book for more serious students is that the bibliography is completely disconnected from the text. One cannot easily go from a statement in the text to its source in the bibliography. Address: M.D., 101 First St., Suite 441, Los Altos, California 94022. Phone: 415-941-5905.

11086. Ma, C.Y.; Buzzell, R.I.; Jessop, D.B.; Buttery, B.R. 1996. Evaluation of soybeans for tofu processing. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 1(1):1-2. Jan.

• ***Summary:*** Contents: Introduction. Tofu yields and texture. Flow properties of soymilk. 11S / 7S globulin ratio. Correlation among soymilk and tofu variables. Conclusions.

In this study, eight Ontario, five USA, and two Japanese soybean cultivars covering a wide range of protein content were evaluated for their tofu processing properties, using glucono delta lactone as a coagulant. Table 1, titled "Characteristics of soymilk and tofu prepared from 15 soybean varieties," lists the following varieties (in descending order of soymilk protein; a water to dry matter ratio of 7 was used in making soymilk and tofu): BARC-6, AC Proteus, Proto, Harovinton, Raiden, Enrei, HP202, Secord, TK-89, Kanrich, RCAT Calico, Maple Arrow, RCAT Angora, Grande. This table contains the following vertical columns: Soybean protein (highest was BARC-6 at 53.4% on moisture-free basis), soymilk protein (highest was 6.1% from AC Proteus), soymilk yield (highest was 5.7 kg/kg from Maple Arrow), tofu yield (highest was 4.6 kg/kg from Harovinton and Raiden), tofu firmness (highest was 0.42 N/mm from Enrei), tofu rigidity (highest was 1680 G', Pa from Maple Arrow), soymilk viscosity (highest was 7.73 from BARC-6), and soymilk 11S/7S (highest was 5.44 from Secord; It has been reported that soybeans with a high 11S/7S ratio will produce firmer tofu).

Conclusion: "Results show that Canadian tofu varieties such as Harovinton have excellent tofu processing properties (yields, textures, etc.) comparable to or exceeding those of Enrei, a Japanese tofu variety." Address: 1. Centre for Food & Animal Research, Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada; 2-4. Harrow Research Centre, Agriculture & Agri-Food Canada, Harrow, Ontario.

11087. McCord, Holly. 1996. Savor the new white-hot superfood. Way, way beyond the usual tofu: 7 easy, tasty ways to get "soying." *Prevention* (*Emmaus, Pennsylvania*). Jan. p. 79-83.

• ***Summary:*** The article begins: "Finally, soy's so hot it's smokin'! After years of neglect, mounting studies now suggest that soy foods help us dodge the big ones–heart disease and breast and prostate cancer. Maybe even osteoporosis... But in the United States, where we grow half the world's soybeans and then feed 'em mostly to chickens, the idea of soy for dinner somehow doesn't cut it. Fear of tofu–a white, spongy, soybean curd that most of us don't have a clue how to cook with–runs deep.

"If this describes you, relax! We've discovered seven surprisingly gentle ways to get you started with soy. They're all delicious and supereasy–foods even soybean sissies can relate to." 1. Pour soy milk on your cereal. 2. Whip up tofu blender smoothies (using Mori-Nu Silken Lite Firm Tofu–aseptic pack). 3. Make chocolate pudding no one can resist (using Mori-Nu Silken Lite Extra Firm Tofu). 4. Add "Sweet Beans" [green vegetable soybeans] to your repertoire. 5. Indulge in healthy Sloppy Joes (add TVP to a can of Sloppy Joe sauce and serve on a bun). 6. Go Nutlettes! The only ready to eat soy breakfast cereal made from a TVP you don't rehydrate. Order by phone from Dixie USA, Inc. 1-800-347-3494. 7. Drink soy protein beverages (such as Take Care. Order by phone from Nutritious Foods, Inc., 1-800-445-3350).

A sidebar discusses why soy is white-hot: Soy protein lowers high cholesterol. Soy isoflavones may beat breast and prostate cancer. Because soy protein causes less calcium excretion from the body than does animal protein, it may reduce osteoporosis. "Also, soy isoflavones may help slow down bone loss after menopause and relieve symptoms such as night sweats and hot flashes." Address: R.D.

11088. Napier, Kristine. 1996. The one food that could save your life: Long a favorite of vegetarians, the soybean is now touted as a potent cholesterol cutter. Why its not just another dietary fad. *Good Housekeeping.* Jan. p. 101-02.

• ***Summary:*** This article begins with a summary of the meta-analysis by Dr. James Anderson of Kentucky, published in

© Copyright Soyinfo Center 2013

the *New England Journal of Medicine* (Aug. 3), showing that soy protein can lower blood cholesterol. Contains two recipes: Hearty pasta & vegetables (with textured soy protein), and Thai tofu stir-fry. A sidebar titled "Where's the soy?," gives a brief description of tofu, tempeh, isolated soy protein, soy flour, soya powder, textured soy protein (TSP), and soy milk. Address: R.D.

11089. *Soybean Quarterly* (*Nebraska Soybean Board, Lincoln, Nebraska*). 1996. New research: Soyfoods consumers are just like you. 2(1):4.
• ***Summary:*** A new study available from the Soyfoods Association of America shows: (1) Urbanites under age 60 on the East and West coasts of the USA are the best soyfoods customers. (2) Soy users are not strict vegetarians; most list fish and chicken as red meat alternatives. (3) Among 26 million soy consumers, 6 million plan to use soyfoods more in the future. (4) Although most eat soyfoods infrequently, consumers would like to try new soyfoods. (5) While value-sensitive soy consumers want lower prices, experienced soy users actually see cost savings when preparing soyfoods. (6) Tofu users want new recipes (besides stir-frys) while soymilk and soy-meat users are concerned more with cost than variety.

11090. Soyfoods Center archival collections, from the 1600s ongoing. 1996. Lafayette, California. [6313 ref]
• ***Summary:*** As of 1 Jan. 1996 the Soyfoods Center Archives contains 6,313 unpublished archival documents–mainly correspondence, interviews, photographs, and unpublished manuscripts relating chiefly to the history of soybeans and soyfoods, and to a lesser extent, the history of vegetarianism and natural foods.

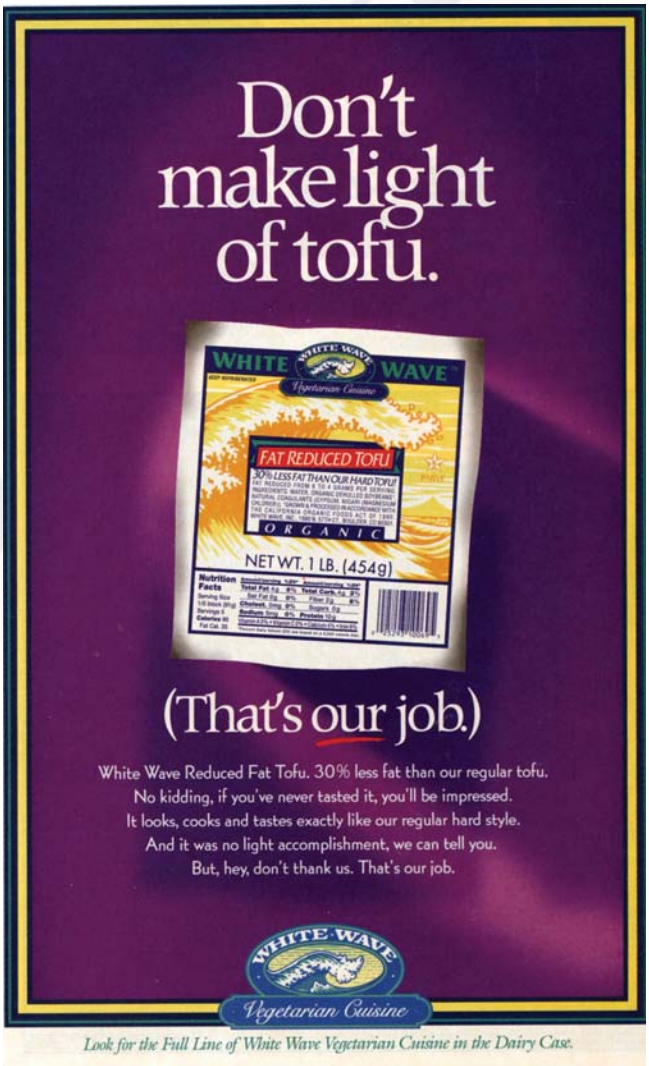
Main subject areas include: early history of soybeans and soyfoods; modern soy protein products; soyfoods industry and market; industrial utilization of soybeans; soy pioneers in the U.S., Europe, and worldwide; major U.S. soybean crushers; Seventh-day Adventists worldwide; pioneer U.S. soy protein companies; pioneer U.S. natural food companies and distributors; soybeans, soyfoods, Third World nations, and world hunger; nutritional and medicinal value of soybeans and soyfoods; and soybean production, trade, and marketing.

Document level access is available through the repository's SoyaScan information retrieval system.

Most important specific subject areas: Miso, natural foods, Seventh-day Adventists, soy sauce, soybean, soybean industry, soybean products, soyfoods, soyfoods industry, soymilk, tempeh, tofu, vegetarianism. Address: P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

11091. **Product Name:** Okara–Calcium Sulfate Extra Firm Tofu.
Manufacturer's Name: Twin Oaks Community Foods.
Manufacturer's Address: Route 4, Box 169, Louisa, Virginia 23093. Phone: 703-894-4112.
Date of Introduction: 1996. January.
Wt/Vol., Packaging, Price: 12 pound pouches, in bulk.
How Stored: Refrigerated.
New Product–Documentation: Letter from Jon Kessler. 1996. Jan. 29. "I am just starting this at one local store. It sautées in the pan to a nice crispness. Better nutritionally, especially if you lack calcium." The product is sold in bulk in 12 pound pouches.

11092. White Wave, Inc. 1996. Don't make light of tofu. (That's our job.) (Ad). *Vegetarian Times.* Jan. p. 59.



• ***Summary:*** This beautiful ½-page color ad shows a package of White Wave's Fat Reduced Tofu against the background of various shades of royal purple. The text reads: "White Wave Reduced Fat Tofu. 30% less fat than our regular tofu. No kidding, if you've never tasted it, you'll be impressed. It looks, cooks and tastes exactly like our regular hard style. And it was no light accomplishment, we can tell you. But,

hey, don't thank us. That's our job." At the bottom is the White Wave Vegetarian Cuisine logo. "Look for the full line of White Wave Vegetarian Cuisine in the dairy case."

This ad also appeared in the March 1996 issue (p. 10) of this magazine. Address: 6123 E. Arapahoe Rd., Boulder, Colorado 80303. Phone: 303-443-3470.

11093. Manfredi, Steve. 1996. Soybean made simple. *Financial Review* (*Sydney, Australia*). Feb. 2. p. 11. Weekend.
• ***Summary:*** The writer, Tami Ohnui (a specialist soybean grower) and Kei Fukui (an excellent Japanese cook) explain very briefly how to make fermented black bean sauce, soy sauce, fermented black beans (*shi*), tofu, fermented tofu, and edamamé.

11094. *SoyaScan Notes.* 1996. New soymilk manufacturer in America! Cathay Industrial in Los Angeles, California (Overview). Feb. 7-9. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Shoan Yamauchi bought a brand new building in early 1995 for his son Jon, who has a background in food science and technology, and who started Cathay Industrial in this building at 2121 East 8th St., Los Angeles, California 90021. Phone: 213-623-8126. House Foods needed more space to make tofu so they sold their soymilk manufacturing equipment to Cathay, and in Feb. or March 1995 Cathay began to make the soymilk used in Westbrae Malteds. Cathay also soon began to make soymilk (for use as a beverage) for Wy Ky Foods and for AFC–both companies run by Chinese-Americans. They have always made only soymilk; they do not make any tofu. However they do have their own brand of Cathay Tofu, which is made for them by House Foods & Yamauchi, and which their Cathay Distributing Co. distributes. Boon Nakornratana, a native of Thailand, worked for Mr. Yamauchi for almost 20 years. When Mr. Yamauchi bought this new building, Boon came here with Jon Yamauchi. Mr. Shoan Yamauchi is now semi-retired. He visits Cathay about once a week, and visits House Foods & Yamauchi 3-4 times a week.

Note: Westbrae's soymilk is now made in 3 different locations. Cathay Industrial makes only the soymilk used in Westbrae Malteds. For the past 3 years, part of Westbrae's soymilk has been made by Bill Bolduc and packaged by White Knight, a Tetra Brik packager in Grand Rapids, Michigan. The rest has been made and packaged by Pacific Foods of Tualatin, Oregon.

Update: Feb. 27. Nancy Knudsen, whose father owns the juice company, has started her own company named Healthy Harvest. She is talking with Cathay about making a soy & rice beverage for her.

11095. Bratt, Heidi Mae. 1996. A new pyramid diet for the planet: Healthy Asian diet pyramid. *New York Post.* Feb. 28. New York Woman section. p. 33.
• ***Summary:*** About the Asian Diet Pyramid, which it shows and compares with the FDA's Food Guide Pyramid. Contains a sidebar titled "Soy facts" and a recipe for Barbecued tofu. "Soy" is specifically mentioned in the Asian Diet Pyramid.

11096. SSP Private Limited. 1996. Display ad: Earn Rs. 500/- to Rs. 1,500/- per day. Take advantage of Canadian technology. "Soya Cow" machine for soya milk / soya paneer production. *Times of India* (*The*) (*Bombay*). Feb. 28. p. 22.
• ***Summary:*** "Produce 30 litres/hour soya milk (without beany off flavour) and produce 2.0 kg/hour sweets and other products, or produce 7.0 kg/hours soya paneer from soya milk. Space requirement: 5 square metres. Electrical requirement: 1.0 H.P. [horsepower] (220 volt single phase). Price: Rs. 1.0 lakh [100,000 rupees] + taxes.

A photo shows the "Soya Cow" equipment. Address: 19, DLF, Industrial Area–II, 13/4 Mathura Road, Faridabad–121003, Haryana, India. Phone: 0129 27 5441, 7442, 7730.

11097. Connolly, Maureen. 1996. Have you had your tofu today? For the health-conscience, soy has become the superfood du jour. Is it all it's cracked up to be or the next incarnation of oat bran? *Women's Sports and Fitness* 18:62-63. Jan/Feb. [3 ref]
• ***Summary:*** Studies show that soy can reduce your risk of coronary disease. A 1990 study by the National Cancer Institute identified five anticarcinogens present in soybeans. As little as 25 gm/day of soy protein can be beneficial to health, and many soy products are now on the market. The author talks about "soy's new celebrity" and asks her readers "why not try tofu?"

A sidebar titled "A smorgasbord of soy" (p. 63) gives a brief description of the following soy products: Isolated soy protein, miso, soybeans, soy flour, soy milk, tempeh, textured soy protein (TSP), and tofu. Address: New Jersey.

11098. Hagler, Louise. 1996. Soyfoods cookery: Your road to better health. Summertown, Tennessee: The Book Publishing Co. 160 p. Illust. Index. 21 cm. Introduction by Mark and Virginia Messina.
• ***Summary:*** Contents: Foreword, by Louise Hagler. Introduction, by Mark Messina and Virginia Messina: Introduction, soybeans–a powerhouse of nutrition, soy and cancer (soybeans–a phytochemical factory, genistein and non-hormone cancers, soy and cancer treatment, isoflavones in the diet), soyfoods and heart disease–beyond cholesterol, soyfoods and bone health, soyfoods and kidney disease, menopause, perspective on soyfoods, about the Messinas. Basic soyfoods (glossary): Whole soybeans, fresh green soybeans, soymilk, okara (soy pulp), soymilk powder, soy protein concentrates, soy protein isolates, tofu, freeze-dried

tofu, tempeh, textured vegetable protein, miso, soy flour or grits, yuba or bean curd stick or sheet, natto, soy sauce, soy oil, soy lecithin, convenience soyfoods (frozen soyburgers, frozen tamales and burritos, frozen soy hot dogs or wieners, frozen fat-free soy ground meat replacement, frozen soy pizza, tempeh burgers, frozen tofu lasagne, stuffed shells, manicotti, tortellini or ravioli, frozen soy breakfast links or "sausages" or tempeh "bacon," "ground" tofu, meatless chili mixes, meatless burger mixes, soy "cheeses," eggless soy mayonnaise, tofu salad dressings, soy ice creams, frozen pot pies, frozen pocket breads, instant miso soup, eggless soy cake, quick bread, pancake and waffle mixes, liquid soy coffee creamer, smoked or baked tofu). Feeding babies and children soyfoods. Breakfast, brunch & bread. Whole soybeans. Sauces, spreads, dips & dressings. Soup & salad. Main dishes. Desserts. Drinks & yogurt.

No dairy products or eggs are used; honey is called for in some recipes. Optional microwave instructions are sometimes included. Address: Summertown, Tennessee. Phone: 615-964-3571.

11099. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 9: Soyfoods & nutrients (Leaflet). Lebanon, Indiana: Indiana Soybean Development Council. 2 p. Front and back. 28 cm.

• ***Summary:*** Contents: Introduction. Macronutrients in soybeans: Protein, fat, fiber. Micronutrients in soyfoods: Calcium, iron, other. A table shows the nutrient content of the following soyfoods: Soybeans (½ cup, cooked). Tempeh (½ cup). Textured soy protein (½ cup cooked). Soynuts (¼ cup). Tofu (½ cup). Soy flour, defatted (¼ cup). Soy milk, plain (1 cup). For each food the following are given: Calories, protein, carbohydrate, fat, saturated fat, niacin, vitamin B-6, folic acid, calcium, iron, magnesium, copper, zinc.

Note: One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council. Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

11100. Ornish, Dean. 1996. Everyday cooking with Dr. Dean Ornish: 150 easy low-fat high-flavor recipes. New York, NY: HarperCollins Publishers. xix + 344 p. Index. 24 cm. [6 ref]

• ***Summary:*** This is Dr. Ornish's 4th book. Recommends low-fat vegetarian meals. Organized into 45 seasonal menus with "recipes that use inexpensive, commonly found ingredients and follow easy time-saving steps."

The opening chapter, "Choices made easy," has the following contents: Why I wrote this book (in response to thousands of letters he receives each year). Delicious and nutritious. Low fat, high flavor (He has commissioned some of America's most celebrated chefs to work within his guidelines and see what they can create. Dr. Ornish and his team have "trained the chefs at the White House, Camp David, the Navy Mess, and on *Air Force One* who cook for President and Mrs. Clinton. We've learned what works"). Beyond heart disease (to improving the quality of your life right now; you will feel so much better!). Good nutrition is easy (If you drink, limit it to one drink per day. "Reducing salt is a good idea for everyone, but its most important if you have high blood pressure, kidney disease, or heart failure") The Life Choice Program ("which also includes moderate exercise, stress management training (stretching, breathing, meditation, visualization, and relaxation techniques), smoking cessation, and psychosocial support... this is a diet and lifestyle program based on (1) the joy of life, not the fear of death, and (2) choice, not coercion"). Why a plant-based diet? ("Cholesterol is found only in animal products, which also tend to be high in saturated fats"). Eat more complex carbohydrates, weigh less. Why 10 percent fat? (recommends 10% of calories from fat. The average American diet has about 40% of its calories from fat. You can eat nonfat dairy, egg whites, but no added oil). Why so little cholesterol? (Your dietary requirement for cholesterol is zero). What is the cause? (His program addresses the cause of the problem rather than trying to get rid of the symptoms). Big changes are easier than small ones (First, you fell so much better so quickly. Second, your palate adjusts quickly so that you prefer low-fat foods. Fat is an acquired taste, not one of the four basic tastes).

Soy related recipes: Vegetable broth ("Experiment with salad dressings made with soft tofu or nonfat yogurt," p. 18-19). Roasted onions (For heightened taste, use soy sauce, Japanese miso, etc., p. 22). Supermarket tips and traps ("Tofu is sometimes in the produce section, sometimes in the dairy case." Take it from the dairy case if you have a choice; the colder temperature keeps tofu fresher, p. 35). Miscellaneous ("Soymilk in aseptic cartons has a long shelf life before its opened. Use it as a cholesterol-free alternative to nonfat cow's milk," p. 39). How to cook legumes (Soybeans contain about twice as much protein as other beans and are a good source of omega-3 fatty acids. Their protein is complete protein, and has been show to lower blood cholesterol levels. For smart ways to incorporate more soy foods into your diet, see p. 313. Two servings a day {½ cup each} from the legume group are ideal, p. 41). Section on "Meat substitutes" (p. 56-57) mentions soy protein, wheat gluten, tofu, etc. "One of the most popular meat substitutes is Textured Vegetable Protein, or TVP." It is made from defatted soy flour and is sold in various flavors and shapes. "The Boca Burger 'No Fat Original' used in some recipes in this book is made from defatted soy protein..." The section on Miso (p. 57) notes that it "adds nutty flavor to soups, stews, and dressings." The section on tofu (p. 58) describes the many types, their uses and nutritional value. Creamy coleslaw (with "Creamy tofu dressing," p. 164-65).

The section on "Commonly asked questions about the

© Copyright Soyinfo Center 2013

Reversal Diet" (p. 306+) has a subsection titled "Since soy products are high in fat, how much can I have?" which begins (p. 313): "Soybean products have no cholesterol and supply essential fatty acids and are an exception to the guideline of no more than 3 grams of fat per serving. However use good judgment... a good rule of thumb is to stay within 4 ounces tofu or 2 cups soy milk per day. Soy milk–the rich creamy product of soybeans ground with water–is an excellent cholesterol-free alternative to cow's milk. It is available plain and flavored, in a range of fat contents."

"Will I get enough protein on the Reversal Diet?" (p. 314-15) begins: "Americans tend to be overly concerned about getting enough protein. In fact, meat eaters tend to get too much. Eating too much protein, especially animal protein, can increase your risk of cancer, diabetes, and heart disease... and may lead to osteoporosis."

"Where do I get protein on the Reversal Diet?" (p. 315) begins: "The body's protein requirement is about 50 grams per day for women and about 60 grams for men." "Good sources include beans and peas, including soy milk and tofu."

On the same page under "combining proteins": "(The soybean is the only plant food with enough of all the essential amino acids to be considered a complete protein)."

The recipes in this book were developed by Janet Fletcher, Jean-Marc Fullsack, and Helen Roe. The Boca Burger is called for in many recipes (p. 57, 177-78, 194-95, 237-38). Address: M.D., President and Director, Preventive Medicine Research Inst., 900 Bridgeway, Suite One, Sausalito, California 94965; Asst. Clinical Prof. of Medicine, School of Medicine, Univ. of California, San Francisco. Phone: 415-332-2525.

11101. Quincannon, Jane. 1996. Sensei Muramoto: A gentle man. *Macrobiotics Today* (*Oroville, California*). Jan/Feb. p. 27-28.

• ***Summary:*** "Sensei" is the Japanese word for teacher. The writer studied and worked with Noboru Muramoto. "This scholarly and energetic man was quiet, humble, and one of the least arrogant persons I have ever known. And the hardest working. Sensei was up at dawn each day to write, study history, science or economics, to weigh grams of Chinese herbs for his teas, to clean his sea salt, produce traditionally fermented foods, and tend his vast garden. His vitality and commitment was inspiring.

"At age 15, Noboro Muramoto met George Ohsawa, the founder of the modern macrobiotic movement, after reading the senior teacher's books on healing. As Sensei tells it, 'I had a very bad condition, was overweight, with Vitamin B deficiency, eye trouble, and always tired. I went to the doctor, got treatment, but never got better. I found George Ohsawa's book. It is amazing what kinds of diseases can be cured just by food.'

"'Immediately I decided to try this diet: Brown rice, miso soup, a pickle–very simple food. Soon I got well. Since that time, I never forgot this diet. At George Ohsawa's classes I learned directly from him, a very interesting person. His subjects were almost always philosophy and principles. I had a great interest in the healing power of food. I was his last student, for a short time, but I still received a big influence.'"

Muramoto "Sensei met Herman and Cornellia Aihara shortly after the 1966 death of George Ohsawa. He first met Michio and Aveline Kushi in 1971, when he was invited to lecture in New York City."

"In 1972, Sensei moved to San Francisco to create, with the Aiharas, the Herb Tea Company" [Rising Sun / Herb-T Company].

"In 1983, Sensei Muramoto, with Lino Stanchich, created Great Life Products Company, in order to manufacture and distribute high quality macrobiotic foods made from his special sea salt. Lino and I had the privilege of working with Sensei for three years making varieties of miso and its by-product, tamari, along with barrels of pickled umeboshi plums made with home-grown shiso leaves. Students came to our school, Asunaro, in the hills of Southern California, to study traditional food production and receive Sensei's information and enjoyable teachings... Sensei's dream has been that every macrobiotic household produce such foods as miso, umeboshi, tamari, shoyu, as well as mochi, tofu, tempeh, tekka and other healing, delicious condiments. To that goal he dedicated his life."

"Sensei named his school Asunaro, which is translated from the Japanese to mean 'Tomorrow is perfect.'" "And work he did, up until the last day of this lifetime."

A photo shows Muramoto sensei standing in front of a blackboard, outdoors, at one of the G.O.M.F. French Meadows summer camps. Address: New Jersey.

11102. Stacy, Michelle. 1996. Can soy save your life? Michelle Stacy separates hype from hope. *Food & Wine.* Feb. p. 88-94, 96. [1 ref]

• ***Summary:*** This story is based on the study by Dr. James Anderson in the *New England Journal of Medicine* (Aug. 1995). "In its cholesterol-busting guise, soy bears an eerie resemblance to another unglamorous food: oat bran."

"A growing body of evidence suggests that it [soy] may help prevent certain cancers, slow calcium loss from bones and moderate symptoms of menopause. Many of these effects, researchers posit, are due to natural substances in soy called isoflavones, which resemble the hormone estrogen and may replicate the many protective effects of estrogen without any of its drawbacks."

But many marketers, including Ronald Paul (president of Technomics, a food-consulting firm in Chicago) believe that soy has a bad image. "It's going to be a marketing challenge to change the public's view of it. I always like to

© Copyright Soyinfo Center 2013

say that if you can make the kiwi a success you can make anything a success." Will companies start to promote their products by advertising on the package "Excellent source of soy!"? Another obstacle to acceptance for some people that tofu reminds them of the health-food era of the 1960s.

Photos show the following packaged soyfoods, each with a brief description: Edamame, soy sauce, soy milk, soy flour, miso, tempeh, roasted soybean powder, tofu. Contains the following recipes, each accompanied by a color photo: Grilled tofu salad. Miso-carrot dressing. Tempeh sandwiches. Chili con tofu. Miso-clam soup. Fried tofu with mushroom gravy. Miso-stuffed chicken. Silken tofu in ginger syrup. A full-page color photo shows green vegetable soybeans in and around one large pod. Small photos show most of the recipes, plus a field of soybeans, and a farmer holding a young soybean plant. Address: Author of *Consumed: Why Americans Love, Hate, and Fear Food* (Simon & Schuster).

11103. The Mail Order Catalog. Spring-summer 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

11104. Golbitz, Peter. 1996. Nasoya tofu production grows with the growing interest in soyfoods (Interview). *SoyaScan Notes.* March 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jerry Maynard of Nasoya said that Nasoya has just had the two best months, back to back, for tofu production in the company's history. One big impetus to growth was the widespread publicity generated by the article by Dr. James Anderson in the *New England Journal of Medicine* on 3 Aug. 1995 stating that soy protein can help reduce cholesterol and reduce risk of heart attacks. In one month Nasoya sold over one million dollars worth of tofu. Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

11105. Smith, Michelle. 1996. Re: Membership letter for Soyfoods Association of America. Letter to William Shurtleff at Soyfoods Center, March 6. 3 p. Typed, with signature on letterhead.
• ***Summary:*** The letter begins: "The demand for soyfoods continues to rise and the top certainly isn't in sight." Discusses two main marketing projects undertaken by SAA in 1995: A 125+-page market study titled *A Consumer Profile of the Soyfoods Shopper,* and preparations for National Soyfoods Month in April 1996. "The concept of Soyfoods Month has been carefully researched and developed over the past year by a special committee of representatives from Archer Daniels Midland, Vitasoy, Nasoya, the American Soybean Association, and our public relations firm, the Shelton Foley Group."

What's in store for 1996? Programs that promote soyfoods to a broader, mass market audience. SAA exhibit at the American Dietetic Association Annual Meeting for the third year in a row. "We are pursuing opportunities to exhibit soyfoods at supermarket, foodservice, and restaurant trade shows. Our public relations firm will continue to aggressively target the natural foods and mass media trade."

There are three member categories with a range of dues: Producers and marketers: $3,000 to $250. Suppliers: $450. Industrial/professional: $350. Address: P.O. Box 3179, Walnut Creek, California 94598. Phone: 510-935-9764.

11106. Hizer, Cynthia. 1996. The versatile vegetarian: Welcome to 'Tofu 101' soybean standby, supermarket staples a good mix. *Atlanta Journal-Constitution.* March 7. p. H.03.

11107. Macdonald, Bruce. 1996. New developments at Macrobiotic Company of America (MCOA). Acquisition of Mountain Ark Trading Co. in Fayetteville, Arkansas (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bruce's Macrobiotic Company of America (MCOA) used to sell tofu kits to Mountain Ark but then they stopped re-ordering because they planned to sell the company. When Mountain Ark was under the stewardship of Frank Head and others they were macrobiotic oriented. But 3½ years ago Frank sold the company to Ozark Cooperative Warehouse in Fayetteville. "There wasn't a person in that organization that ever had a bowl of miso soup in their life–I don't think. So they began to steer the company away from macrobiotics toward a mainstream natural food company. One of the first things they did was to put in a line of tomato products. So their macrobiotic customers began to run away."

MCOA acquired Mountain Ark on 1 Feb. 1996. Bruce purchased the company name, toll-free phone number, and mailing list of 5,700 customers. He did not purchase any of their inventory. The company is now located at 799 Old Leicester Highway, Asheville, North Carolina 28806–at MCOA. Phone: 1-800-643-8909. Bruce plans to carry the tofu kit on a regular basis–though it sells slowly. The kit is imported from Japan. The cost changes with each container

© Copyright Soyinfo Center 2013

imported. It retails for about $20-25.00. In Oct. 1993, Mountain Ark sold the kit for $36.99 + $4.95 shipping.

The innovation of this whole scenario is that, over the last 10 years or so, all of the companies that were involved with macrobiotics either went bankrupt or ran away from it. When Bruce took over MCOA 3 years ago he changed its direction and went headlong into becoming the largest variety supplier of macrobiotic foods on the planet. The company started to grow–even in the big natural foods stores–such as Fresh Fields. Macrobiotic foods is the most misunderstood category in the health food industry. For the big stores he printed up a best-seller list of 200 items that could be put in a "macrobiotics section." Now Bruce is in the process of putting macrobiotic sections in all the Fresh Fields stores. "Because we import direct then distribute direct to retail stores, we are able to offer them prices on these foods that are 25-30% less than a normal distributor. The old way of doing business was, for example, Eden Foods imports it, marks it up 30 or 35%, and sells it to Cornucopia, who marks it up 25-30% and sells it to the store." His wholesale and retail catalogs have a great selection of foods. The only difference is that the retail prices are 10% higher. These low retail markups give a real break to macrobiotic consumers. MCOA also provides information by phone.

Note: MCOA is owned equally by Muso Shokuhin of Japan and by Bruce Macdonald. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

11108. Mountain Ark Trading Co.; Macrobiotic Company of America. 1996. The "new" Mountain Ark consumer direct catalog–spring 1996 [Mail order]. 799 Old Leicester Hwy., Asheville, NC 28806. 37 p. March 15. 28 cm.

• ***Summary:*** This is a very comprehensive mail order catalog, with an excellent index, for macrobiotic whole foods, specialty cookware, cookbooks and books on natural healing, futons, furniture, etc. Soy-related products include: Aduki beans–precooked, amaranth, amazaki concentrate, amazaki [amazake] pickles, arame (sea vegetable), barley malt, black soybeans, brown rice malt, brown rice syrup, cookbooks, dulse (sea vegetable), fu (dried wheat gluten), green nori flakes, hamanatto, hijiki, Hokkaido azuki beans, Hokkaido black soybeans, Japanese plums (*umeboshi*), jinenjo soba, Job's tears, kamut, kanten bars, kelp granules, kinako, kombu cha, kuzu, miso, mochi, natto miso, natto starter spores, nigari, nori, quinoa, sea palm–California, seaweed sesame shake, seaweed cookbook, seitan, shoyu, soy sauce, tamari, tofu making kit, tofu–dried, wakame. Many of these products are imported from Japan.

Bruce Macdonald of Macrobiotic Company of America acquired the company from Frank Head of Fayetteville, Arkansas, on 1 Feb. 1996. The entire catalog can be viewed on the Internet at http://www.mountainark.com. Address: Asheville, North Carolina. Phone: 1-800-643-8909.

11109. Demos, Steve. 1996. New developments with Silk–refrigerated fresh soymilk in a Pure Pak carton (Interview). *SoyaScan Notes.* March 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On Monday, March 18, on the Today Show, the famous television program did a special with *Good Housekeeping* magazine on what happens if your child comes home and announces that he or she is now a vegetarian. They are interviewing the nutritionist for *Good Housekeeping* who had spread out all the products she was recommending in the basic food groups, and there with the Kraft Macaroni and Cheese was White Wave's Silk–for 90 to 120 seconds on national TV. It was unbelievable. It looked great. The product has been out 60 days and its already on national TV. "I said, 'Lift your eyes up to a bigger horizon.' I realized that I'm not really selling a beverage. Rather I'm selling a nutritional, functional complement to breakfast. That is totally different." This could be a new category. "What happens if I find a giant behemoth to dance with and I convince one of these missionaries that this is a real market opportunity out there. I can't educate them. The only people that can are the large corporations who are looking for strategic things that they believe will work. If a cereal company picked up this idea a really believed in it–amazing what we could do and how fast it could occur. I've already got the Today Show showing our product next to Kraft.

Steve just returned from the big Silk Soiree at the Natural Products Expo at Anaheim. It was a great event. One thousand people attended the dance and party. White Wave fed 1,500 people at the industry reception and ran out of food in an hour and a half. The response was extremely positive.

Steve has developed a creative way of introducing food buyers (mainly for retailer chains) to Silk–via the Silk Breakfast. The goal is to absolutely convince buyers to put this product on the shelf under White Wave's terms and conditions. He sends them breakfast by Fed Ex overnight with a blue ice pack in it. It comes in a wicker basket lined with shredded straw as is found in the bottom of Easter baskets. In that they place a Fiesta ceramic bowl, and in it a napkin, a nice spoon. On the right is an empty carton of Silk. At the front are two Tupperware containers, one containing Silk, and the other fruit. In the bowl is cereal, and the bowl is covered with a piece of wax paper with a rubber band around it. The crowning touch is a rose with a flower-water stem. The opening letter begins: "I'm so sorry I can't be there, but I'd like to treat you to breakfast... While you're enjoying the food, please read this letter. We'll call you in 2 hours." In some cases Steve would arrive while the person was just finishing the breakfast. He would say: "How was breakfast and do we have anything to talk about?" It went over very well. The key is not the gift but the creativity–when you breathe life into every aspect of a product.

One of the investigative shows on NBC-TV about

© Copyright Soyinfo Center 2013

2 months ago said that of all the tofu brands they tested from the New York market, the only ones they could recommend were Nasoya and White Wave. The others had microbiological problems. White Wave pasteurizes its tofu after it is packaged–its the only way to get shelf life beyond 21 days. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11110. Skiff, James. 1996. Troubles at LongLife Foods in Perham, Minnesota (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** LongLife Foods is in a financial squeeze with an uncertain future. Jim is no longer actively involved with the company, though he is still on the board of directors and still has his money in the company. He is now trying to resign from the board. Jim originally raised all of the money to start the company; Shichi presented himself as an accomplished tofu maker–which, it turns out, he was not. Shichi has taken control of the company and is trying to raise money. The funds he thought he was going to get from Japan never materialized. He does not have the money to buy Jim out. It is a strange situation. Shichi wants to make the best quality Japanese-style (soft) tofu–even if that is not what the market wants. Jim's has stepped back, knowing that his only hope is if the company somehow succeeds.

Jim is looking to start a new company and has been in touch with William Roach of Kyoto Food Corp. in Terre Haute, Indiana. He would like to make firm tofu, plus perhaps egg roll wrappers, wonton skins, and wheat gluten. He has a building (28,000 square feet) in southern Minnesota. Jim formerly worked with Foremost, in their dairy division, specializing in international management. He spent much time out in the Pacific Basin. Address: Perham, Minnesota 56573. Phone: 218-346-5159.

11111. Skiff, James. 1996. New developments with tofu and soybeans in North Dakota (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A very interesting and active man, and an expert on tofu, is Dr. Sam K.C. Chang, Associate Professor in the Food and Nutrition Department, North Dakota State University, Fargo, North Dakota. Sam originally came from Taiwan and he has many strong contacts there. He is doing research on soybean varieties best suited for tofu, has a tofu pilot plant obtained from the Taiwan Tofu Makers Assoc., and has a number of Taiwanese students, including one who has graduated and is now producing tofu at Nasoya. Sam does lots of work for the North Dakota Soybean Association. He also breeds soybeans for food use, and the Sinner Brothers both support his research and grow out the soybeans that he breeds.

Plenty of soybeans are grown in the Red River Valley area of North Dakota, which has red soil–some of the best in the USA. The Sinner Brothers are one of the big growers, with more than 2,000 acres in soybeans. Their soybean variety is Proto, which is not as large as most Japanese varieties but a little larger than typical U.S. varieties. It has a beige hilum, which makes tofu less white than is ideal. The protein level is not as high as desired for tofu. Sam Chang has been experimenting with Proto soybeans in his tofu plant and labs. The 2-3 Sinner brothers are part of a company named Sinner Bros. and Bresnahan (P.O. Box 549, Casselton, ND 58012. Phone: 701-347-4900). Casselton, where they have both their farmland and office, is a small town 15 miles directly west of Fargo. Bob Sinner markets and exports lots of Proto soybeans (along with beef) to Japan, where they are used mostly in foods.

The Sinner family is one of the most important in agriculture in North Dakota. Bob's father, George Sinner, was governor of North Dakota for several terms and was recently a nominee for U.S. Secretary of Agriculture. Dan Glickman of Kansas won the job in Feb. 1995 but George Sinner was one of the top 2 or 3 people under consideration.

Update: 1997. Dec. 8. Jim will soon be meeting with Bob Sinner, who does not own a soybean cleaning plant. Jim would like to work with him, to clean his soybeans as part of a larger program of offering non-GMO soybeans. The Sinners now grow soybeans in North Dakota, South Dakota, Minnesota, Michigan, and New York. Next year they will add production in Nebraska and perhaps one other state. Bob apparently has two big customers in Japan; both are large tofu manufacturers. Most of the beans Bob sells are not organic–because organic soybeans are now too expensive and too scarce. Jim will talk to him about marketing his soybeans as GMO-free. Address: Perham, Minnesota 56573. Phone: 218-346-5159.

11112. Michaels, Daniel. 1996. Poles find tofu duck, other health foods hard to swallow: Food fight pits blood sausage against meatless tripe; 'One boiled dish a day.' *Wall Street Journal, European Edition.* March 27. p. 1, 7.
• ***Summary:*** Hilarious! The novel idea of healthy living is gradually catching on in Poland, especially among the younger generation of skate-boarding kids who equate healthy with hip. And they are starting to eat soy burgers, "Slavic Tofu," and other soyfoods, and to become vegetarians. But the diet of most Poles over age 30 is terrible, with lots of fatty sausages and other meats, which may be why they die at a younger age, have more heart attacks, and are in poorer health than most Europeans. And things are getting worse since market-oriented reforms put meat back in once-empty butcher shops. Address: Staff reporter.

11113. Nance-Kivell, Greg. 1996. Re: New developments at EarthStar (formerly Chinese Farmhouse Tofu). Letter (fax) to William Shurtleff at Soyfoods Center, March 28 and April 2. 3 p. Typed, with signature on letterhead.

© Copyright Soyinfo Center 2013

• ***Summary:*** "In Jan. 1991 the Challenge Foundation (a nonprofit organisation working with the disabled) bought a small tofu business called Chinese Farmhouse." It consisted of a plant with one 100 liter gas cooker, two 80-liter round coagulation tubs, one hydraulic press, two 10 kg pressing trays, and a wall-mounted ratchet pressing system.

"A small group of two supervisors and five staff (disabled) made about 60 kg of tofu per day, on a good day, for 3-4 days per week, and cleaned on remaining days. The Foundation had no idea of food manufacturing, but thought that a hands-on manufacturing plant might be suitable for this group of workers. They became alarmed when overheads, establishment and staff costs made the venture non-viable. Workers are paid award-based wages–indexed to the level of disability.

Starting in late 1991, Greg was asked to help, two days a week, as a consultant. They bought more equipment and employed more staff. Sales increased to a break-even point at about 700 kg/week (3,000 kg/month). The overwork fatigue set in and production dropped. Products include: Tofu (hard, organic), tofu (herbed), soya yogurt (3 fruit flavours), soya mayonnaise, and dressings (4 flavours).

At present they are developing an ice cream and related products based on soy yoghurt, and are looking at tamari and shoyu production from whey and okara. Don McCallum is the factory manager.

Enclosed is a label for EarthStar certified organic tofu (750 gm). Note: The letter of 2 April 1996 was handwritten on letterhead with signature–in reply to 7 questions that Shurtleff faxed to Greg about the first letter. Address: Consultant Food Technologist, EarthStar, 5 Kay Street, Murwillumbah (P.O. Box 654), Murwillumbah, NSW 2484, Australia. Phone: (066) 72 5931.

11114. Reichl, Ruth. 1996. Adventurous Asian cuisine. *New York Times.* March 29. p. C1.
• ***Summary:*** To dine on real Asian food, look for real Asian restaurants. They are easy to find. "As New York's Asian population has grown larger and more affluent, the demand for authentic Asian food has grown. Hundreds of New York restaurants now cater to a clientele with no need for menus written in English and no desire for food translated into American.

Until the Immigration and Nationality Act of 1965 (also called Hart-Celler Act, signed into law on Oct. 3 by President Lyndon Johnson; it became law on 1 July 1968), which increased Asian immigration to the United States, "most Chinese food in America was a bad parody of Cantonese cooking." But since then, we have increasingly had the opportunity to sample the real thing.

Shanghainese cuisine includes "mock duck made of tofu."

Taiwan: To eat in Taiwan helps to understand the many cultures that have passed through this island. In the 1600s, settlers from Fukien [Fujian] arrived from the mainland, bringing their food with them. The Japanese occupied the island for 50 years (1895-1945) leaving their mark in the form of sushi, sake, and a unique lightness. Finally the Kuomintang came to the island (1949 to present), bringing people from all of China's provinces. "Modern Taiwanese food blends all of these influences."

Only a few restaurants in New York serve authentic Taiwanese food. "David's Taiwanese Gourmet in Elmhurst [Queens] serves typical Taiwanese dishes like... fried fermented bean curd (a definite love or hate proposition)."

11115. Dixie USA, Inc. 1996. Beef (not!) / fat (not!)–Official newsletter: A Dixie Diner's Club publication and catalog [Mail order]. Houston, Texas. 32 p.
• ***Summary:*** This is Volume 2, issue 1. The cover states: "Real food for real people: Your source for–Low fat, low-calorie tasty soyfoods! Super new exciting recipes, everything from soup to nuts the DDC way! Economical new soy products to help your family easily get the protective benefits of daily soy! Spotlight on new Crème It! tofu powder and Beanut Butter! Sugar (Not!) diabetic and sugar-restrictive foods."

Talk with consumer service person at Dixie USA. The person behind this publication is Brenda Oswalt, President of Dixie USA. She lives in Houston (phone: 713-688-4993). Dixie USA was in the emergency medical business for about 20 years. They branched out into soy about 2 years ago. Address: P.O. Box 55549 (7800 Amelia), Houston, Texas 77255. Phone: 1-800-347-3494.

11116. *Food for Thought* (*Hinoichi Tofu, Los Angeles, California*). 1996. Hinoichi turns 50 in grand style [in 1997]. First edition. p. 1. [Eng]
• ***Summary:*** "Hinoichi just gets better with time. Hinoichi long known for its leadership in bringing tofu to American consumers, first opened its doors in Los Angeles in 1947. Next year, as Hinoichi celebrates its first anniversary in business, it will open a brand new production plant. House Foods of America, marketer of the Hinoichi brand, has announced the new plant will be located in Garden Grove, California, and will feature state-of-the-art equipment. Hinoichi will be ready to meet America's growing tofu needs into the 21st century."

Note: This 4-page newsletter (8½ by 11 inches) also contains the following: Tofu–The joy of soy: Past, present and future. Bring salt intake down by spicing up your diet. Phascinating [sic] phytochemicals. Tofu: The right food for any diet. Two clip and save recipes. Two coupons for Hinoichi Tofu: 25¢ off. On account of your bones. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

11117. Holden McClure Marketing. 1996. Steve Demos, President, White Wave, Inc.: Profile 1996. (Leaflet). Boulder,

Colorado. 1 p. Single sided. 28 cm. March.
• ***Summary:*** Leaflet (8½ by 11 inch, printed black on blue) sent by Patricia Smith from Natural Products Expo West. 1996. March. "What do you call a man who started a company in a bucket 18 years ago [1977] and grew it into an $8 million business..." A nice, humorous but accurate profile. Address: Boulder, Colorado 80301. Phone: 303-449-2526.

11118. *SoyaScan Notes.* 1996. A simple prediction for the future of soybeans, isoflavones, and genistein (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1. Soy isoflavones and genistein will soon be available commercially in America. They will probably not be sold in a concentrated form, as supplements, because of the legal risk the manufacturer would face if someone overdosed. Therefore they will probably be sold as a food ingredient, to be added in carefully calculated doses to popular healthy foods such as tofu, soymilk, or soy yogurt– as well as similar non-soy foods. The amount of total isoflavones and of genistein will appear on the package, along with some mention of their protective effects.

2. Within 5-10 years there will be an RDA for the most important phytochemicals (including soy isoflavones or genistein), just as there are today for vitamins and minerals. 3. This will expand the focus of the RDAs from preventing nutritional deficiencies to preventing disease and promoting good health. 4. The next step in the evolution of the RDA will be to find the optimum doses of certain vitamins and perhaps phytochemicals for promoting good health.

11119. **Product Name:** Baked Tofu [Sesame Peanut Thai Style, Snack'n Savory, Oriental Style, Italian Style, Mexican Style].
Manufacturer's Name: White Wave, Inc.
Manufacturer's Address: 1990 N. 57th Ct., Boulder, CO 80301. Phone: 303-443-3470.
Date of Introduction: 1996. March.
Ingredients: Thai: Tofu (water, soybeans, nigari {magnesium chloride}, gypsum), soy sauce (water, soybeans, wheat, salt), granulated garlic, granulated onion, sesame oil, sesame seeds, peanuts, spices.
Wt/Vol., Packaging, Price: 8 oz (227 gm) plastic container.
How Stored: Refrigerated or frozen.
New Product–Documentation: Ad (½ page, color) in Vegetarian Times. 1996 Feb. p. 13. "Tofu with an attitude: Packed with flavor. And ready for action." Features a package of "White Wave Baked Tofu: Sesame Peanut Thai Style."

Leaflet of White Wave products. 1996. March. The product names are given as "Snack'n Savory Tofu (TM)" and a line of International Baked Tofu: "Oriental-style, Italian-Style, Thai-Style, and Mexican Style."

Leaflet (20.5 x 13.5 cm, glossy color) sent by White Wave. 1997. June "Tofu with an attitude." On the front is a

color photo of the front of the package. On the rear: Names and ingredients in each of five types of White Wave Baked Tofu.

11120. White Wave, Inc. 1996. White Wave products–as of 3/96: Featured in White Wave Vegetarian Cuisine Centers (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm. March.
• ***Summary:*** Leaflet (8½ by 11 inch, printed black on blue) sent by Patricia Smith from Natural Products Expo West. 1996. March. Lists all of White Wave's products, grouped by category, as of March 1996.

Tofu (reduced fat, hard style, soft style).

Baked tofu: "Snack'n Savory Tofu (TM)" and a line of International Baked Tofu: "Oriental-style, Italian-Style, Thai-Style, and Mexican Style."

"Tempeh: Original Soy Tempeh, Soy Rice Tempeh, Five Grain Tempeh, Wild Rice Tempeh, Sea Veggie Tempeh.

"Veggie Burgers: Prime Burger, Chick'n Burger, Veggie Life Burger, Tempeh Burger, Teriyaki Tempeh Burger, Lemon Broil Tempeh.

"Dairyless (TM) Soy Yogurt: Raspberry, Key Lime,

© Copyright Soyinfo Center 2013

Strawberry, Lemon, Blueberry, Banana Strawberry, Peach, Vanilla, Lemon-Kiwi, Apricot-Mango, Organic Plain in 6 oz. and Quarts.

"Dairyless Soy Beverage: White Wave *Silk.*

"Sandwich Slices: Turkey-Style Sandwich Slices, Chicken-Style Sandwich Slices, Roast Beef-Style Sandwich Slices, Bologna-Style Sandwich Slices, Pastrami-Style Sandwich Slices.

"Meat Substitutes: Meatless Veggie Franks, Meatless Jumbo Franks, Meatless Veggie Links.

"Seitan: Traditionally Seasoned Seitan, Vegetarian Fajita Strips, Vegetarian Philly Steak Slices, "Meat of Wheat" (TM) Chicken Style Wheat Meat, Meat of Wheat Grilled Burgers Wheat Meat, Meat of Wheat Sausage Style Wheat Meat, Meat of Wheat Beyond Chicken Patties, Meat of Wheat Beyond Turkey, Meat of Wheat Beyond Roast Beef.

"Heat & Serve: Vegetarian Sloppy Joe.

Soy A Melt Soy Cheese: Cheddar Style Soy A Melt, Fat Free Cheddar Style Soy A Melt, Mozzarella Style Soy A Melt, Fat Free Mozzarella Style Soy A Melt, Garlic Herb Style Soy A Melt, Monterey Jack Style Soy A Melt."

Note 1. A new, very similar list was issued in June 1996. "Chicken-style Seitan" had been added, and 3 Meat of Wheat products and one flavor of Soy A Melt (Monterey Jack) had been discontinued.

Note 2. A new, less similar list was issued in Sept. 1998– after sales of Silk soymilk were skyrocketing. The following had been discontinued:

"Veggie Burgers: Prime Burger, Chick'n Burger, Veggie Life Burger, Teriyaki Tempeh Burger.

"Sandwich Slices: Roast Beef-Style Sandwich Slices, Bologna-Style Sandwich Slices.

"Meat Substitutes (all): Meatless Veggie Franks, Meatless Jumbo Franks, Meatless Veggie Links.

"Seitan: All 6 Wheat of Meat products were discontinued but Vegetarian Sloppy Joe had been moved in from the "Heat & Serve" category (which then disappeared).

Four types of tofu were added: Extra Firm Style, Tidal Wave (firm), Hard Water Pack, Hard Vacuum Pack. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

11121. Bloch, Hannah; Mondi, L.; Nash, J.M.; Smilgis, M. 1996. The man's cancer: Prostate cancer is reaching epidemic levels in the United States. *Time.* April 1. p. 58-65. *

• ***Summary:*** Both genetics and environment seem to influence prostate cancer. Black Americans have a 37% higher risk of contracting the disease than whites. In countries such as China and Japan, where diets are low in fat and high in vegetables, the incidence of prostate cancer is extremely low. But prostate-cancer rates for first- and second-generation Japanese are considerably higher than in Japan. This suggests an environmental factor, probably the change to a Western diet.

Researchers at Sloan-Kettering have found that tumors grow more rapidly in mice fed a high-fat diet than those on a low-fat diet. And when the mice on high-fat diets are switched to low-fat ones, the growth of their tumors slows.

Dr. Milken, a physician in Santa Monica, California, who works with prostate-cancer patients, serves only non-fat, vegetarian meals, prepared by a private dietitian. A typical lunch might contain a tofu egg-sandwich (the "egg" is actually tofu with mustard and spices), a soy-based drink, and Egg McNothing (a fat-free crumpet with soy cheese, vegetarian bacon, and scrambled egg whites).

"Why all the tofu and soy? Milken points to tests showing that soy products reduce tumors in rats."

11122. Day, Charles E. 1996. Commercial development by Audax of soy isoflavone products (Interview). *SoyaScan Notes.* April 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Charles worked for Upjohn for many years and from them he learned how to do research and to make drugs. He first got interested in soybeans in 1993 when he happened to read the now famous article titled "Genistein, a dietary-derived inhibitor of *in vitro* angiogenesis," by Fotsis, Adlercreutz, and others published in the April 1993 issue of the *Proceedings of the American Academy of Sciences* (90:2690-94). Both of his parents, who lived in Kentucky, had been stricken with cancer and he was trying to help them. He had set up a laboratory nearby, and he immediately tried to extract genistein from soybeans in this lab. But he simply couldn't make the quantities he needed. By the time he had a little pilot plant set up, it was too late. His father died in July 1993 and his mother died in October 1993, the same week he had enough genistein to give to her.

As far as Charles knows, his is the only company extracting isoflavones from soybeans. His is a small, family-owned business (the employees are himself, his wife, his son, and one new outside person), but he believes it has great potential for growth. ADM keeps saying they are going to. He has had several meetings and discussions with all of the ADM executives in charge of that division. A plane load of them have come to Kentucky to visit him, and his team has gone to Decatur, Illinois, to meet with them several times. He does not know what ADM is thinking and why they are not moving forward in this area. They would have no trouble developing a good, large-scale process for extracting and purifying the various soy isoflavones. He has also talked to some other big soy processors. One reason for their hesitation is the fear of a big lawsuit, if someone overdoses and gets sick.

Charles hesitated to move forward with his manufacturing plans for fear that if ADM started extracting isoflavones, he would not be able to compete. Then a company came to Charles and said they wanted it so badly

© Copyright Soyinfo Center 2013

they were willing to buy it at virtually any price and wanted to sign a contract on the spot. That company was Natus, owned by Dr. Stephen Holt.

One of Charles' major concerns is the regulatory aspects of introducing such a product. With the passage of the Dietary Supplements Health Education Act (DSHEA, pronounced duh-SHEE-uh, also called the Hatch Act, after Senator Orrin Hatch, Republican of Utah) in 15 Oct. 1994, the whole world of nutraceuticals was revolutionized. This Act made it much easier to sell dietary supplements without FDA approval. It essentially put the burden of proof on the FDA. The actual language of the Act makes "amazing reading. The Act is a watershed event for the health food industry in the USA. "If the soybean isoflavones are handled correctly (and I am not divulging exactly what that means), the regulatory and safety issues will be greatly minimized. It becomes feasible to make and market the product. A company's risk is diminished, for example, by appropriate use of warning statements.

Audax is fully booked at this point. He has more orders than he can handle. Up to this time, he has been making only pilot plant quantities. If all goes well, Audax will be making commercial quantities within the next 4 months. At that time he will be looking for new customers. Their first product will be Genistone, which is a soy extract; approximately 50% of the content of the product is soy isoflavones. Of those isoflavones, approximately 80% contain genistin. It will be sold as a dry powder and sell for about $2,000 per kg of isoflavone content. At his price, the 25 mg of total isoflavones in a typical serving of tofu would be worth about $0.05 (5 cents). He feels that this price can drop quite a bit if he is processing hundreds of tons a day of defatted soybean meal. He thinks he will have the capacity to do that, because he is now working with a large, local soybean crusher.

His main plan for marketing the product is to sell it to food processors who would add it to food products (such as soy yogurt or tofu) at levels with valuable biological benefits; he does not plan to sell it as a supplement to avoid the risks of people overdosing. One problem with adding soy isoflavones to other products is that they have a bitter flavor. However since very small amounts will be added to foods, they may not be noticeable in the final product.

He is using defatted soybean meal as his starting material from which to extract the soy isoflavones. Thus he is using the protein fraction of the soybean rather than the lipid fraction (incl. soy molasses). Isoflavones are closely bound with proteins. The reason he is not using the lipid fraction or soy molasses is proprietary. He has noticed that his by-product (defatted soybean flour containing no isoflavones) has a better taste than most soy flour (and maybe better stability) and he is looking for ways to sell it as a value-added product. He is currently adding it to chicken feed.

If you look at all the isoflavones in the whole soybean, 50-60% is daidzin. But genistein has the greatest biological activity. So he set out to make a product that is rich in genistin. However his product, Genistone, contains genistin as its largest constituent. This is because genistin is hydrolyzed in the gut to genistein, which is then absorbed into the bloodstream.

Charles believes that genistein, at a high enough dose, can stop the growth of cancer in humans. There is scientific evidence that genistein has cytotoxic activity at a high enough dose; all the major anti-cancer medicines (chemotherapeutic agents) these days are cytotoxins. Put in the right place, they kill both cancer- and non-cancer cells. Genistein has some other properties that make it attractive therapeutically; at a very low dose, it may stop the growth of cancer without killing the cancer cells. This dose is roughly that obtained by eating 6 servings of tofu per day. There is also some evidence of anti-metastatic activity, i.e. it may prevent the cancer from metastasizing, or spreading to other parts of the body–at much lower doses than the cytotoxic activity.

Soy isoflavones have some very potent biological activities. They are an inhibitor of a group of cell transduction proteins called the protein tyrosine kinases, which modify cell division, cell signalling mechanisms, etc. At a high dose (e.g. ten times the desirable dose) there could be some problems. Look at the market for estrogen replacement therapy. Estrogens are great; they do everything that genistein does except they cause cancer instead of preventing it. Genistein does all the things that estrogens do and it prevents cancer. About 6 months ago Merck introduced a drug named Fosamax that prevents osteoporosis and increases bone density. They billed it as one of their big blockbuster drugs for the future, with sales projected at $1.5 billion a year. It was selling very well, but just last week Merck sent out a "Dear doctor" letter to 150,000 physicians notifying them that one serious side effect was extreme abdominal pain. 36 women have been hospitalized. Sales have started to drop.

What will prevent companies like ADM, Merck, or Sandoz/Novartis from competing with Audax? Nothing.

Talk with Steve Buchheim, marketing manager for soy applications at ADM. 1998. March 6. Steve thinks that Audax never brought their product to market because they were unable to get the soy solids they needed. It was NOT because of any problems or potential problems related to the FDA or regulation. Address: Director of Research, Audax, Inc., 1385 Bear Creek Road, Leitchfield, Kentucky 42754. Phone: 502-242-3791.

11123. Palm Beach Post Syndicate. 1996. United Kingdom Cattlemen's Association dinner (Cartoon). *Tacoma News Tribune* (*Washington*). April 1.

• ***Summary:*** Five large men with small heads are seated at the head table, with plates and glasses in front of each. The man in the center is raising his spoon to his mouth; on it rests

• ***Summary:*** A large photo shows a Korean women standing in front of a blackboard on which Korean characters are written.

11125. Fletcher, Janet. 1996. Tofu company's daily grind–and soaking, heating and pressing [Azumaya]. *San Francisco Chronicle.* April 24. Food section. p. 1.
• ***Summary:*** The food section of this issue is devoted largely to tofu. Azumaya, a 50-year-old San Francisco food company, transforms 11,000 pounds of soybeans each day into different types of tofu. The process is described. A photo shows curds of tofu being poured automatically into a cloth-lined forming box on a roller conveyor. Address: Chronicle staff writer.

11126. Saekel, Karola. 1996. Tallying the tofu. *San Francisco Chronicle.* April 24. Food section. p. 2, col. 5.
• ***Summary:*** This article gives the results of a special taste panel which rated the flavor and texture of ten brands of tofu sold in the San Francisco Bay Area. The article begins: "Thanks to better nutrition information and the availability of good and easy recipes, tofu has escaped from its niche as a strictly ethnic and/or health fanatics' food and found its way into many Western kitchens."

The rankings: 1. Trader Joe's tofu (19 oz, $0.89 = $0.75/lb!). 2. Hinoichi (14 oz, $1.09). 3. Wo Chong (14 oz, $0.79). 4. Global Protein Foods (12 oz, $1.89). 5. Golden Gate (19 oz, $1.63). 6. Soy Deli (made by Quong Hop & Co., 12 oz, $0.99 to $1.39). 7. Mori-Nu (shelf-stable, 10.5 oz, $0.85 to $1.29). 8. Kikkoman (shelf-stable, 10.5 oz, $1.29). 9. Azumaya (14 oz, $0.98 to $1.19). 10. Wildwood Natural Foods (16 oz, $1.39 to $1.59).

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term "health fanatics" (or "health fanatic"). Address: Chronicle staff writer.

11127. Spieler, Marlena. 1996. Tofu transformations: Mild-mannered bean curd becomes quick-change artist. *San Francisco Chronicle.* April 24. Food section. p. 1, 5.
• ***Summary:*** In a box above the masthead on the front page of this issue of the Chronicle, is written "Love affair with tofu." The food section of this issue is devoted largely to tofu, and this is the lead article. "Tofu and I go way back. But like all good relationships, this one took a while to blossom into love. In the days when Birkenstocks were chic (the first time around) you could find tofu, but eating it was an ordeal. The dishes were nutritionally correct but seldom delicious. So I ignored tofu and hoped that, along with those clumpy sandals, it would go away.

But over the years, as study after study showed the health benefits of eating soybeans, tofu–one of the easiest, most accessible ways to eat soybeans–could not be ignored." From a friend just returned from Japan, she discovered she liked tofu and the way it made her feel. "It is in vegetarian dishes, however, that tofu shines. At the vegetarian Chinese restaurant Vegi Food, on Clement Street in San Francisco, almost everything comes with tofu in one form or another." She describes many good ways to serve tofu. A large sidebar (p. 1), titled "Quick and easy ideas for adding tofu to your life, gives recipe ideas: Tofu pesto. Tofu, tomatoes and olive plate with nicoise flavors. Tofu and black bean tortas. Super-simple tofu bowl. Mexican tofu and vegetable simmer. Stir-fried cabbage and black mushrooms with tofu and hoisin sauce. Curry tofu in vegetable masala. Sicilian tofu-coffee sweet.

Page 5 contains many enticing full tofu recipes. One sidebar (p. 5) titled "Preparation techniques for a firm, dense texture," describes: Fried tofu. Broiled and dry-baked tofu. Flavored, grilled tofu. Pressed tofu. A second sidebar (p. 5) titled "The many faces of tofu," describes fresh tofu, fried tofu, marinated tofu, and smoked tofu. Photos show tofu dishes from Millennium restaurant. Address: Bay Area food writer; Special to The Chronicle.

11128. Esposito, Andi. 1996. Nationwide tofu boom has Nasoya Foods working round-the-clock. *Sunday Telegram* (*Worcester, Massachusetts*). April 28. Business section.
• ***Summary:*** Every minute a 36-pound block of tofu slides off the Nasoya production line. It is cut into 1-pound cakes, packed in plastic tubs, bathed with artesian well water, sealed, and pasteurized. The processing lines are now working 24 hours a day, six days a week. The 28,000 square foot factory and its 68 employees are so busy that there is barely room to install the sealing equipment just arrived from Japan. The administrative staff has had to move across the street. It was only 6-7 years ago that Nasoya made tofu on one shift, 3 days a week. But production has risen 20 percent in just the last 12 months, according to Frederick B. Ceconi, plant manager. Today the plant makes 12 million pounds of tofu a year. It is sold at more than 3,000 grocery stores, and more than 60% of the sales are to mainstream supermarkets. The company, which was purchased in 1990 by Hong Kong-based Vitasoy, needs a new building.

The latest tofu boom dates from the publication of an article by Dr. James Anderson in the Aug. 3, 1995 issue of the *New England Journal of Medicine.* He reported that soy protein can lower serum cholesterol levels, providing protection against heart disease. Address: Business Editor.

11129. Alam, M.S.; Chaudhury, E.H. 1996. Soybean utilization in Bangladesh. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 92-95. [6 ref]
• ***Summary:*** Contents: Abstract. Introduction. Utilization and consumption. Conclusion.

"In Bangladesh soybean is not a major oilseed crop but production and utilization have increased in recent years. A government action plan was undertaken for large scale cultivation and product utilization through a Crop Diversification Programme. The main idea of the programme is to alleviate protein calorie malnutrition from cereal-based diets in Bangladesh."

Most of the soybean grown in Bangladesh is used as feed by the poultry and cultivated fish industries. Some soyfood products, such as "soybread, soybiscuit, soyflour, soysauce, noodles, chanachur and tofu," as well as some confectionery beverages, have started to be prepared by some private food companies and are already on the market.

Cultivation of soybean in Bangladesh started when a non-government organization (NGO) named Mennonite Central Committee began demonstrations with farmers in the early 1970s. Research [other than that conducted by MCC] started in 1975 when a Coordinated Soybean Research Project was undertaken by the Bangladesh Agricultural Research Council (BARC).

Fig. 1 shows approximate soybean acreage in Bangladesh (1975-1993). This acreage has increased steadily from less than 100 acres in 1975 to about 2,200 acres in 1988; then it jumped suddenly to about 4,700 acres in 1989, increasing to about 6,200 acres in 1993.

There is presently in Bangladesh a high interest in soybean production and utilization, although utilization has been a problem in the past. "The general human food use is limited, due mostly to food taboos."

Most people in Bangladesh consume soybean oil in their daily dishes because of its high quality and low price compared to traditional mustardseed oil. Soybeans grown in Bangladesh do not have their oil extracted. They are used for feed and food. Address: Oilseed Research Centre, Bangladesh Agricultural Research Inst., Joydebpur, Gazipur 1701, Bangladesh.

11130. Ali, Nawab. 1996. Indian soybean industry-recent trends and development. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 78-82. [10 ref]
• ***Summary:*** Content: Abstract. Introduction. Processing of soybean. Food industry. Livestock feed. Industrial applications. R&D efforts and entrepreneurship development. Product promotion and policy issues.

During 1993-94 soybean production in India was 3.9 million tonnes [metric tons]; it is expected to be over 4 million tonnes in 1995-96. There are now in India 154 soybean solvent extraction plants (with a total installed capacity of 13.5 million tonnes of soybeans per year), 60 soyfood manufacturing units, 30 companies dealing with soy-related equipment, and 15 organizations and agencies involved in soybean trade. "Soyproducts" such as oil and protein foods have entered the market and been accepted because of the health and economic benefits. The demand for soyproducts is increasing and this makes the future of the soybean industry in India look bright.

In India the soybean has added US$ 500 million a year to the nation's foreign exchange, and it has increased the supply of edible oils by 0.6 million tonnes per year. In addition, it has brought prosperity to soybean farmers. Today, the soybean is India's 3rd most important oilseed crop after groundnuts and rape / mustard, contributing 18% to the total oilseed production of 22 million tonnes. India is now almost self-reliant in edible oil and soybean has played a significant role in this important development.

Tables: (1) Traditional and non-traditional soyproducts in India. (2) State by state soybean oil extraction plants in India and their installed capacity. (3) Type, number, and installed capacity of Indian soyfoods manufacturing units (1995), in descending order of the number of units. 20 units make texturised soy protein / flour, TSP (soynuggets); Installed capacity 120,000 tonnes / year. 10 units make soymilk; capacity 500 tonnes / year. 6 units make Soypaneer (tofu); capacity 1,000 tonnes / year. 5 units make soyflour, flakes, and grits; capacity 20,000 tonnes / year. 5 units make soy-fortified baked products; capacity 1,000 tonnes / year. 5 units make soylecithin; capacity 2,000 tonnes / year–etc. Address: Project Director, Soybean Processing & Utilization Centre, Central Inst. of Agricultural Engineering, Nabi Bagh, Berasia Road, Bhopal–462 038, India.

• ***Summary:*** The first international conference of this type was held in Jilin, China, in 1990. Contents: Foreword, by Dr. Saipin Maneepun, Chairman, Scientific Committee. Scientific committee (13 members plus 2 secretaries). Executive summary, by Alastair Hicks. Keynote address. Part I: Crop technology related to processing (2 plenary papers, 2 regular papers, and 13 poster sessions). Part II: Post-production systems (1 plenary paper, 4 regular papers, and 2 poster sessions). Part III: Food processing technology (1 plenary paper, 7 regular papers, and 21 poster sessions). Part IV: Food science and nutrition (1 plenary papers, 5 regular papers, and 7 poster sessions). Part V: Tempe (6 regular papers, and 1 poster session). Part VI: Feed technology (2 plenary papers, and 7 regular papers). Part VII: Marketing technology (1 plenary paper, and 2 regular papers). Part VIII: Industrial technology (1 plenary paper, 4 regular papers, and 5 poster sessions).

This conference was organized by the Department of Agricultural Extension, Ministry of Agriculture and Cooperatives, Thailand. In collaboration with Institute of Food Research and Product Development, Kasetsart Univ., Thailand. Supported by FAO, American Soybean Association, and United Soybean Board.

On the rear cover, below a logo of an orange soybean superimposed on a globe inside a yellow square, is written: "Soybeans and soyfoods: Green, clean and healthy." Address: Bangkok, Thailand.

11133. Chung, Woo Kyung; Kim, Yong Ho. 1996. Functional properties and composition of tofu flours. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Address: Soybean researchers, National Crop Experiment Station, RDA, Suwon, Rep. of Korea.

11134. Goulart, Frances Sheridan. 1996. Oh, soy! *Fit* (*New York*). March/April. p. 77-79.
• ***Summary:*** On the section titled "A nutritional wonder," the authors notes that soymilk has 15 times more iron than dairy milk, 50% less fat, and no cholesterol. Tofu is one of the two best sources of calcium (yogurt is the other) recommended by the Osteoporosis Foundation for meeting adult calcium needs (1,000 mg/daily). One 4-oz. serving of tofu provides twice as much calcium as one cup of plain yogurt. Soybeans provide the antioxidant vitamins A and E.

A sidebar titled "Your soy shopping list" gives brief definitions of tofu, tempeh, miso, natto, soy milk, soy cheese, soy sauce, and textured vegetable protein (TVP). Address: Connecticut.

Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 391-94. [15 ref]
• ***Summary:*** Contents: Introduction. Nutritive value of tempe: Overview, tempe and infective diarrhea, hypocholesterolemic effect, inhibition of fatty acid peroxidation.

Throughout Indonesia tempe is consumed by people of low as well as high socio-economic level. Tens of thousands of tempe makers produce tempe at home using 10-150 kg of soybeans daily. The largest tempeh maker uses 2 metric tons of soybeans daily. Producers are united in the Koperasi Produsen Tempe Tahu Indonesia (KOPTI; Cooperatives of Producers of Tempeh and Tofu in Indonesia).

"In the future more people are expected to consume tempe because there has been training in tempe technology by the Nutrition Research and Development Center in Bogor in 1986 and 1990." The two training workshops "were sponsored by the United National University and attended by 22 fellows from 10 countries in Asia and Africa." Address: Nutrition Research and Development Centre, Bogor, Indonesia.

11139. **Product Name:** Local Tofu's Veggy Dip.
Manufacturer's Name: Local Tofu.
Manufacturer's Address: 307 Route 59, West Nyack, NY 10994-2033. Phone: 914-358-2309.
Date of Introduction: 1996. April.
Ingredients: Tofu, tamari, canola oil, lemon juice, cider vinegar, herbs, spices.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Sam Weinreb. 1996. May 21. 3½ inch diameter. Yellowish-orange on dark green. "Adds flavor to virtue." Talk with Sam Weinreb, founder and owner of Local Tofu. 1996. May 27. This product was launched in April 1996. It is like a Tofu Mayonnaise, sold in an 8 oz tub, refrigerated.

11140. Ma, C.Y.; Buzzell, R.I.; Jessop, D.B.; Butterly, B.R. 1996. Evaluation of soybeans for tofu processing. In: Alex Buchanan, ed. 1996. • ***Summary:*** Contents: Abstract. Introduction. Materials and methods: Research was conducted to incorporate soybeans, on a household scale, into traditional root and tuber crops

© Copyright Soyinfo Center 2013

(e.g., cassava), cereals (e.g., maize, sorghum, millet, rice), developed appropriate processing techniques for making tofu and soy tempe [tempeh] based products, used an extruder to develop commercial products containing soy, disseminated the technologies developed to rural households and small-scale companies.

Results and discussion: A good example of how soybean has improved nutritional values is by fortification of cassava and gari, quality and acceptability of local soft cheese (*warankashi,* made by coagulating cow's milk with an aqueous extract from the leaves of the sodom apple (*Calotropis procera*)), and soybean curd (tofu), tempe is a nutritious Oriental food.

Tables: (1) Nutrient composition of local gari and fortified soybean gari. Four columns. (a) Nutrients. (b) Control gari. (c) 75% cassava + 25% soybean milk residue [okara]. (d) 75% cassava + 25% whole soybean paste.

(2) Sensory evaluation of soygari compared with local gari. Gari fortified with okara (overall acceptability 6.7) was almost as well accepted as traditional gari (6.8).

(3) Chemical composition of local cheese (warankashi) and soybean curd (tofu).

(4) Sensory evaluation scores for warankashi (overall acceptability 6.4) and tofu (5.0).

(5) Chemical composition of tempe-fortified maize based weaning foods (dry weight basis).

"Conclusion: Through aid from the International Development Research Centre (IDRC) Canada, the International Institute of Tropical Agriculture (IITA) is collaborating with national programs in Nigeria and recently Ghana, Cote d'Ivoire and Benin to develop household and small-scale processing techniques for soybean. The project is also planning to extend coverage to other African countries. The future of soybeans looks bright in Africa." Address: International Inst. of Tropical Agriculture, Oyo Rd., PMB 5320, Ibadan, Nigeria.

• ***Summary:*** Contents: Abstract. Background. Tempe production and marketing system. Tempe industry products. Challenges and future of tempe industry.

Originally tempeh was made only in a limited area in Central and East Java. Today, there are more than 93,000 home industry units recorded as tempe makers throughout Indonesia; they employ more than 265,000 workers.

Tempe makers often employ a number of tempe vendors–often friends or relatives–to distribute and sell their products–either finished tempe or half-fermented tempe. Under this system, job seekers can enter the market quickly and easily with almost no experience or capital. This has helped tempe production to expand quickly.

The fact that tempe makers require water and produce waste can create difficulties in dense urban settings. This problem first arose in the mid-1970s as tempe makers migrated into big cities such as Jakarta, and it caused them to organize themselves and to attract government attention. By early 1980, makers of soyfoods, especially tempe and tofu, began to organize cooperatives of tempe and tofu producers,

© Copyright Soyinfo Center 2013

starting in the big cities. Today there are 111 primary cooperative societies (KOPTI) organized by tempe and tofu makers; these have joined into a National Federation of Tempe and Tofu Producer Cooperatives (GAKOPTI).

In Indonesia there are only few large tempeh manufacturers. The largest production capacity reported so far is less than 3,000 kg of soybeans per day, while the average capacity is 50-200 kg of soybeans per day. Address: Faculty of Industry Technology, Parahyangan Catholic Univ., Jalan Gunung Mas c-11, Bandung 40142, Indonesia.

11147. Tamang, Jyoti Prakash. 1996. Fermented soybean products in India. In: Alex Buchanan, ed. 1996. • ***Summary:*** Contents: Abstract. Introduction. Indigenous fermented soybean food: Kinema, hawaijar. Modified fermented soybean food: Soy-idli (a rice-based breakfast food in south India), soy-dhokla (a wheat-based snack in west India), soy rabadi (a butter milk staple of west India). Non-fermented soybean products: Green [vegetable] soybeans (a snack in north-eastern India), roasted soybean [soynuts] (a snack throughout India), soybean chutney (a condiment / pickle made from whole soybeans in north-eastern India). Commercially available soybean foods: Soymilk, soypaneer [tofu], soysuji / soy-suji (a snack in Central India), soy fortified biscuit (using soyflour).

Kinema and hawaijar are similar to natto of Japan and thua-nao of Thailand; the principal microorganism in both is *Bacillus subtilis.* Two strains were selected to give the best quality kinema. The main determinants of quality are high viscosity, long sticky strings, and solubilized protein. The optimum fermentation is for 20 hours at 40ºC. "The optimized process can be promoted to popularize more consumption of fermented soybean products as a sustainable supply of low-cost nutritious foods."

Kinema is consumed in eastern Nepal, "in the Darjeeling hills of West Bengal, Sikkim and north-eastern hills of India as a meat substitute in the local diet."

"The preparation of hawaijar is similar to kinema except the wrapping materials used are leaves of the fig plant (*Ficus hispida* L.) and the fermentation time is prolonged for 3-4 days.

To make soybean chutney, whole dried soybeans are soaked, deep-fried in vegetable oil, then mixed with salt and chilies. This chutney is then consumed like a pickle with boiled rice.

Soypaneer is a very good substitute for traditional dairy paneer, a semi-soft mild-flavoured fresh cheese, which is significantly more expensive than its soy counterpart. Soypaneer is deep fried, mixed with vegetarian curry, and sometimes used to make paneer pakoda [pakora], a local recipe.

Note: A pakora is a fritter–any kind of food coated in batter and deep fried.

Soysuji can be used to replace up to half of the wheat suji in the preparation of traditional Indian recipes.

"Cereal-based Indian diets are generally deficient in protein and calories. The protein intake in the local diet is not enough due to high prices of meat and dairy products as well as religious taboos."

Tables: (1) Soybean-based foods in India. The four columns are: Four types of products and 12 specific product names. Substrate (whole soybean, soybean-rice, etc.). Use (breakfast, snack, etc.). Consumption area. (2) Chemical composition of kinema (two types with very different composition).

Fig. 1 (p. 194) is a flow sheet of the traditional method of preparing kinema in a Sikkim village. After cooking and draining, the soybeans are crushed lightly by a wooden pestle. Firewood ash may be added. Wrap the soybeans in fern leaves, and ferment for 1-3 days to make kinema. Fry to make curry or soup. Address: Microbiology Lab., Dep. of Botany, Sikkim Government College, Gangtok 737 102, Sikkim, India.

Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 450-53.

• ***Summary:*** "The Soybean Development Program (SDP) was launched by the Philippine Council for Agriculture, Forestry and Natural Resources Research and Development (PCARRD)–Department of Science and Technology (DOST) in 1983 and later renamed as the Accelerated Soybean Production and Utilization Programme (ASPUP)." The goal of the program is to contribute to community development and improved nutrition.

Lists ASPUP's four main goals related to vertical integration of soybean production and small-scale soybean processing of soybeans for food and animal feed in six regions of the Philippines (in Luzon and in Mindanao) where soybean is grown.

A second list shows six strategies used by ASPUP to attain these goals. The last strategy reads: "(6) Create new markets and promote the use of soybean-based food products like ice cream, soy curd [tofu], soy cheese, soya milk, soy burgers and others as part of the daily diet." Address: National Program Leader, Accelerated Soybean Production

© Copyright Soyinfo Center 2013

and Utilization Programme (ASPUP) and Supervising Science Research Specialist, Crops Research Div., Philippine Council for Agriculture, Forestry and Natural Resources Research and Development (PCARRD), Los Baños, Laguna, Philippines.

11149. Tyler, Jim; Neville, Jan. 1996. Wellspring Natural Food Co. Mail order catalog. Amherst, Massachusetts: Wellspring. 32 p. 28 cm.
• ***Summary:*** This is the first issue of this catalog, and Wellspring started in 1996. Soy-related products include: Miso, shoyu, black soybeans (from Hokkaido, Japan), yellow soybeans (organic), azuki beans, snow-dried tofu, kuzu, miso ramen, kinako, natto miso chutney, tekka miso, soymilk, and amasake.

Jim has been a macrobiotic teacher and counselor since 1975-76 and Jennifer was a chef at the Kushi Institute. Main competitors include Gold Mine and other such companies. This catalog is service oriented, easy to use, and more than 80% of the products have lower prices than the competition. Address: P.O. Box 2473, Amherst, Massachusetts 01004. Phone: 1-800-578-5301.

11150. Lang, Paul. 1996. St. Peter Creamery and Agronico (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul does not know what happened to St. Peter Creamery. Note: St. Peter Creamery of St. Peter, Minnesota, introduced Soy Supreme Spray-Dried Soymilk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985.

Paul tried phoning the company several years ago but there was no answer. He tried to figure out what happened but with no results. Try contacting Allan Routh (rhymes with "south") who is the brains behind SunRich, which is mainly a marketing group. Allan is on the board of the Soyfoods Association, and has an ad in the 1995 Soya Bluebook Plus (p. 59, 134). Paul is almost certain that SunRich gets its spray-drying done by Zumbro. Paul does not know who makes SunRich's soymilk.

Agronico (run by Mike Vincent) is basically out of business. Paul has heard (within the last week) that Agronico is being taken over by Honeymead, and they plan to make TVP. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

11151. Routh, Allan. 1996. SunRich, soymilk, Davisco, St. Peter Creamery, Prosource, and Northern Milk Products in Alexandria, Minnesota (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Allan (whose surname rhymes with "south") is CEO and one of the owners of SunRich. His company manufactures both liquid and spray-dried soymilk at a plant in Alexandria, Minnesota. They own this plant as part of a joint venture with Northern Milk Products. The company in Alexandria is named Northern Milk Products, but in the '95-'96 Soya Bluebook Plus the company name is given as Prosource, Inc. (P.O. Box 1058, 601 Third Ave. West, Alexandria, MN 56308. Phone: 612-763-2470). Sales are handled through SunRich.

Question: What happened to St. Peter Creamery, of St. Peter, Minnesota?; they introduced Soy Supreme Spray-Dried Soymilk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985. Answer: Allan used to be part of the soy process with St. Peter Creamery (located in St. Peter, Minnesota), which was owned by the Davis family and which is no longer in business. The Davis family also owned LeSeur Cheese and Lake Norden Creamery; all these companies (including St. Peter Creamery) are now named Davisco. Stan Davis, the main man, is now retired, but his sons and grandsons are involved. The soy part of the business (the Oberg Division of St. Peter Creamery) was a joint venture between St. Peter and Ed Oberg, and Lou Osterbur. Dr. E.B. Oberg had some patents when he was at Carnation. These patents were only part of the complex, which included "know-how" and process subtleties that made the product taste so good. Like every spray-drier and custom spray-dried in Minnesota and the Midwest, St. Peter was an old dairy plant and a custom processor. This sort of plant used to belong to coops, then individuals would buy them. St. Peter installed its own soymilk. They made soymilk from whole soybeans, then spray-dried it. Soymilk ceased being made at St. Peter in about 1989 because St. Peter decided they wanted to go a different direction and soymilk sales weren't really taking off. The soymilk equipment was partially moved to Northern Milk Products in Alexandria, Minnesota–located about 150 miles northwest of St. Peter. More precisely, they reconstructed a soymilk line in Alexandria that they thought was a little better than what they had at St. Peter. Allan has been with Minnesota Waxy (which started as a corn company) from the early days. Minnesota Waxy purchased the process from Oberg and Osterbur, and Northern Milk owned the physical plant.

Now Allan's joint venture company makes Soy Supreme, which used to be St. Peter Creamery's main soymilk product, made at their plant. But when the general manager at St. Peter, Dennis Anderson, decided to go into business for himself, he bought 3-4 plants–one of which was in Alexandria. So they moved the process to his plant in Alexandria. Basically the same technology that was used to make Soy Supreme (a dry product) is now also being used to make a liquid product, but Allan thinks his company has made significant improvements compared to E.B. Oberg's product.

SunRich is not really company with its own retail products. They sell foods to food manufacturers. They supply Westbrae with soymilk. They have made most of Westbrae's soymilk for a while–a number of tankers each week. They

© Copyright Soyinfo Center 2013

also have other soymilk clients. Most of their spray drying of soymilk is done in the neighboring town of Bertha, but they also have two spray driers in Alexandria. Northern also processes some milk products in Alexandria, and they do some specific separations on oats for customers like Quaker Oats. Zumbro, which is a similar company to Northern Milk in Alexandria, does not spray dry the milk made in Alexandria. Dennis Anderson is still in Alexandria.

Minnesota Waxy (recently renamed SunRich) has always been a specialty grain company. Initially their main product was waxy starch corn, which contains an all amylopectin starch; it has a much larger starch molecule than regular amylose starch or common corn starch. Waxy starch is used in many food applications, such as those that must be freeze-thaw stable, or products that must hold more flavor that is more available. It has many desired functional properties, and can be used to strip cholesterol from eggs. They also grow about 800,000 bushels of specialty, identity preserved soybeans per year, representing about 30% of their total specialty grain business. The soybeans are sold to soyfood manufacturers in both Japan and the USA. All of their corn and soybean production is contracted with farmers. SunRich is a corporation that has about 200 farmer shareholders; it is not a co-op. They have been in business for almost 20 years, and now they contract with a lot of non-shareholder farmers as well all over the Midwest. About 5% of SunRich's business is in organically grown crops, especially soybeans, and they are emphasizing it more and more.

Talk with Allan Routh of SunRich. 1997. April 18. He used to work with Davisco (St. Peter Creamery) making soymilk solids, but that was years ago. They have been out of that business for 5 years or more. Northern Milk Products is now named Northern Food and Dairy; it is owned by Dennis Anderson in Alexandria, Minnesota. Allan now jointly processes a lot of soy solids products with them. Prosource is one individual who works out of Northern Foods and Dairy; he does processing up there too. Allan's products are doing well. "Our biggest struggle is just to get big enough to support them." Address: CEO, SunRich Inc., P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

11152. Mio, Art. 1996. Update on Morinaga Nutritional Foods (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** During Morinaga's last fiscal year (ended in March 1996), sales of Mori-Nu Tofu rose 20%. One reason for this was the introduction of Mori-Nu Lite tofu to supermarkets. Morinaga has tried to sell the Lite to supers in a shipper, which is a cardboard display that stands on the floor and holds 24 cases. With the shipper, the store must buy one case of Lite Firm and one case of Lite Extra Firm. But most supers don't allow shippers and don't like having to buy two cases.

Morinaga's biggest market is still the Asian-American market, which grew 50% last year. About 4 years ago Morinaga introduced their tofu in a Chinese-language carton; it usually sells well at Chinese New Year. The Chinese label is priced lower to suit the price-conscious Chinese-American consumer. Last year the Chinese label accounted for about 25% of the company's sales.

In supermarkets, Mori-Nu Regular (3 SKUs) accounts for 65% of sales and Lite (2 SKUs) accounts for 35%. In natural food stores Mori-Nu Regular accounts for about 52% of sales and Lite about 48%. Mori-Nu Soft is by far the slowest seller.

Northern California is Morinaga's biggest market and Safeway is Morinaga's best account in America. Mori-Nu tofu is usually sold in the produce section; in the Los Angeles area Hinoichi, the biggest competitor, is sold refrigerated.

Morinaga will add a genistein statement to its new 12 ounce package which will be filled in Oregon. The paper will be made in the USA.

Update from Art Mio. 1996. July 25. Morinaga recently purchased scanner data from Lucky, which is a major account. The data showed that 80% of the tofu sold by Lucky is made by Azumaya and 20% is made by Morinaga. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8636.

11153. Mio, Art. 1996. Selling tofu in the produce section of supermarkets (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The produce section of a supermarket operates on completely different rules from the rest of the store; there might as well be a brick wall separating produce from the store. In the produce section: (1) There are different margins; (2) There are traditionally no slotting allowances; and (3) There is less rigid allocation of space. The grocery section, by contrast, is characterized by rigid merchandising governed by schematics (schematic diagrams) which specify the exact number of facings, on which shelf each will appear, etc. Art believes that it is largely for the above reasons that most tofu companies have fought so hard to stay in the produce section, even though the temperature is often unsafe, being higher than 4ºC which is required for a "potentially hazardous food."

One of the new trends in the produce section is "pre-cuts," or pre-cut vegetables and fruits, which could change some of the rules. Mori-Nu tofu is usually sold in the produce section; in the Los Angeles area Hinoichi, the biggest competitor, is sold refrigerated. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504.

11154. Sheehan, Daniel M. 1996. More about phytoestrogens

© Copyright Soyinfo Center 2013

and isoflavones from soybeans (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Sheehan heard from a colleague in Canada that the soy protein isolates used in infant formulas in Canada have most of the phytoestrogens removed. The source of that information was Mr. Marshall Marcus of Protein Technologies International.

People use terms such as phytoestrogens or isoflavones differently depending on their background and orientation. For example, people interested mostly in biological activity tend to use the term "phytoestrogens," whereas those interested mostly in chemical structure tend to use the term "isoflavones." Additional terms include "flavonoids" (pronounced FLAY-vuh-noids, which refers to a large class of chemicals), and "isoflavonoids" (which are isomers of the flavonoids). "Genistein" and "daidzein" are what chemists call "trivial names." Real chemists provide the actual name of the chemical structure. Note: The first isoflavone found in tempeh was 6,7,4'-trihydroxyisoflavone.

Not all isoflavones are phytoestrogens; only some have biological activity as estrogens, and most of them are inactive. Genistin is just a conjugated genistein. The conjugated forms such as genistin and daidzin are not biologically active, as such; the glucoside linkage must be cleaved by intestinal bacteria before they become biologically active. Biologists usually use the term "prohormones" to refer chemical substances such as daidzin or genistin; they are precursors of hormones that require metabolic action before they become active. So when we eat a soyfood such as tofu, the biologically inactive prohormones are converted to active hormones in our digestive system. On the other hand, equol has estrogenic activity, but it is a metabolite of genistein. Of the three major conjugated forms in soybeans, daidzin, genistin, and equal, all of the digested forms have biological activity. Address: Dep. of Health and Human Services, Food and Drug Administration, National Center for Toxicological Research, Div. of Reproductive and Developmental Toxicology, Jefferson, Arkansas 72079-9502, and Dep. of Biochemistry, Univ. of Arkansas for Medical Sciences, Little Rock, AR 72205. Phone: 501-543-7561.

11155. D'Aguilar, Marlon. 1996. New developments at Country Farmhouse Soya Products (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center. [Eng]
• ***Summary:*** Marlon started making and selling tofu in 1985. He started teaching himself the processes in 1983-84. He believes that Country Farmhouse Soya Products was the first company to make tofu commercially in Jamaica. *Tofu and Soymilk Production* and *The Book of Tofu* by Shurtleff and Aoyagi helped him out somewhat over the years. In the beginning he gave away a lot of tofu "to get our people to know it. Our people have always liked it. Our Soy Scream Ice Cream, launched in about 1985, is our favorite product. It was made using hand-cranked wooden buckets. It is still sold in both soft serve and hard packs." Marlon has launched about 10 soy products since 1985–Tofu, Soy Scream Ice Cream, Mayonnaise (based on soymilk and sold to the foodservice), soy ice cream sandwich, soy flour, soy burgers (launched in about 1987 and renamed Veg Middles in about 1994), soymilk (made to order only).

Right now he is working on expanding the company, but it is difficult because of limited finances and resources. The vision is still high and open. Country Farmhouse Lifeline is the parent association and a community operation; Country Farmhouse Soya Products is an offshoot, and a limited liability company. "We went into soyfoods as part of a whole social program named Country Farmhouse Lifeline, which is a local community program whereby local people get together to shape their lives and bring about sustainable life. It was not started just as a business. Our wider program involves alternative sources of energy and more sustainable living." Marlon has worked with Plenty USA and they have helped him mostly with contacts, plus some technical advice–Not much help with product development. There are no other companies now making soyfoods in Jamaica. One company named Nature Treats started in about 1993, but they went out of business about 2 years later; she is trying to sell him her equipment. He is a Rastafarian, and the Lifeline was spun out of that concept–not so much from the religious perspective but from a social and cultural perspective. Most Rastafarians are vegetarians and his interest in tofu and soyfoods grows in part out of his interest in vegetarianism. They have used the okara and whey from their company to generate energy (methane) that is run back into the plant–though it is not established now.

Talk with Annie Liu from Miami, Florida. 1999. Feb. 16. The tofu made by Country Farmhouse is very hard. In Jamaica, there is a dish named Solomonogondi, that is traditionally made with pickled mackerel; Country Farmhouse makes a vegetarian version with tofu–that is delicious. Their ice cream is also delicious. Address: Affiliate of the Country Farmhouse Lifeline, 12 Faulkner Ave., Duhaney Park, Kingston 20, Jamaica. Phone: 809-933-4617.

11156. Chang, Sam Kow-Ching. 1996. Re: Research on soybeans for making tofu. Letter to William Shurtleff at Soyfoods Center, May 29. 1 p. Handwritten.
• ***Summary:*** During the past 4 years, Dr. Chang's laboratory has been very active in tofu research, particularly in developing methodologies for evaluating which soybean varieties are best suited for making tofu and natto. They have compared tofu making using small (120 gm), medium (500 gm), and large (35 kg) methods. Approximately 10 scientific papers based on this research have been presented at various meetings. Some of them will appear in refereed journals in the near future. Most of their studies are concerned with

© Copyright Soyinfo Center 2013

what physical and chemical factors make a soybean suited for making tofu. They have an automated tofu machine imported from Taiwan for their tofu research. This may be the first such machine in a U.S. university.

During the past 4 years, Dr. Chang has visited more than 20 tofu and natto factories in Taiwan, Japan, China, and the USA. "I am very interested in promoting soyfoods in the United States." Address: Assoc. Prof. and Food Science Coordinator, Dep. of Food and Nutrition, North Dakota State Univ., Fargo, ND 58105. Phone: 701-231-7485.

11157. DeAngelis, Lissa; Siple, Molly. 1996. Recipes for change: Gourmet wholefood cooking for health and vitality at menopause. New York, NY: Dutton Signet. A Div. of Penguin Books USA Inc. xvi + 400 p. May. Index. 25 cm. [34* ref]

• ***Summary:*** In the upper right corner of the front cover we read: "Feel great without hormone replacement therapy!" This is a book, with a natural foods and macrobiotic slant, about using foods in place of hormone therapy to help deal with nine problems that occur around the time menopause: Premenstrual syndrome, hot flashes, fatigue, heart palpitations, memory lapses, mood swings, irritability and depression, weight gain, waning interest in sexuality, hypothyroidism. All menu suggestions are divided into two choices: Vegetarian and non-vegetarian (but with many vegetarian dishes). Pages 4-5 note that science has found active ingredients in foods that promote good health during menopause. Soybeans and soy products are "rich in phytohormones... sometimes called phytoestrogens." Four types of food are "off the menu" = should not be consumed: Refined sugars, caffeine and coffee, processed oils, and refined white flour and refined grains. The subsection titled "Phytohormones" (p. 16) lists ten foods, including tofu and brown rice, as good sources. The benefits of phytohormones and soyfoods are also discussed in the section on "Breast cancer" (p. 55-56).

Soy-related recipes include: Miso soup (p. 90). Bean basics (p. 120-23). Tofu teriyaki with vegetables (p. 123-24). Tempeh, green beans, and carrots with mustard sauce (p. 132-33). Tempeh slices for sandwiches (p. 148-49). Tofu alfredo sauce (p. 303).

The recipes also call for: Adzuki beans, almond butter and tahini, almond milk, kudzu, and plums (umeboshi). The last page is titled "About the authors." Photos of Lissa DeAngelis and Molly Siple appear on the inside rear dust jacket. Address: 1. Private nutrition consultant, North Edison, New Jersey; former Assoc. Director of the Natural Gourmet Cookery School in New York City for 10 years; 2. Registered Dietitian, Los Angeles, California.

11158. Ichikawa, Takashi. 1996. Seikôhô no chakusô: Kanai Noritoshi no bijinesu rinen to shoku no nichibei-shi [The concept of the frontal attack: Noritoshi Kanai's business theory and U.S.-Japan food history]. Tokyo: Sangokan. 254 p. Illust. No index. 20 cm. [Jap]

• ***Summary:*** This is a very interesting history of Mr. Noritoshi Kanai and Mutual Trading Co. in Los Angeles, which he built into a very successful enterprise. Address: President, Mutual Trading Co., 431 Crocker Ave., Los Angeles 90013.

11159. Kuhn, Mary Ellen. 1996. Soy in the spotlight: Disease-fighting benefits may change the image of the once-lowly bean. *Food Processing* (*Chicago*). May. p. 52-53, 55, 58.

• ***Summary:*** This is a cover story; on the cover is written: "Unlocking the secrets of soy," with four large color photos. The article begins: "What a difference a couple of decades make." Twenty or 30 years ago, most foodservice operators and consumers used soy with hesitation, sometimes scornful comments. "Today, however, the once-maligned soy protein has a much better image, thanks to a fast-mounting stack of research data suggesting it may help prevent and treat high blood cholesterol, cancer, osteoporosis, and symptoms of menopause." And this good news has begun to reach health and nutrition professionals. With better products on the market, "soyfoods marketers may soon be dealing with a new generation of mainstream consumers who–far from spurning soy-based products–actively seek them out.

"Much of the current soy research is focused on isoflavones, a unique class of phytoestrogens or plant hormones found primarily in soy protein." The main soy isoflavone is genistein. Now soyfoods manufacturers are starting to take isoflavone content into consideration when they formulate, label, and promote their products. The isoflavone content of unprocessed soybeans can vary considerably among varieties, years, and place of harvest. Heat treatment does not appear to significantly reduce isoflavone content, but an alcohol wash (used with most soy protein concentrates and isolated soy proteins) removes most isoflavones in the product. The well-known Supro brand of isolated soy proteins are not subject to an alcohol wash, which helps preserve their isoflavone content.

Rick McKelvey, president of the Soyfoods Association of America, has attended the American Dietetic Association show for the past two years. Last year, most of the questions he heard were: "What is this soy stuff that I'm hearing about?" This year's questions concerned the level of isoflavones in specific products. "This shows how far we've come in the bast year," he observes.

ADM, which could easily extract isoflavones from soybeans and sell them has decided not to do so. Jerry Weigel, PhD, who is ADM's vice president of corporate nutrition and regulatory affairs thinks it is probably not legal to sell isoflavones because they do not have GRAS (Generally Recognized as Safe) status or food additive status. Few soyfoods marketers are presently publicizing the

© Copyright Soyinfo Center 2013

isoflavone or genistein content of their products or making specific health or disease-prevention claims.

William Helferich, PhD, an associate professor at Michigan State University's Department of Food Science and Human Nutrition, has been studying dietary phytoestrogens in laboratory animals for 3 years. He has found that "genistein can stimulate estrogen-responsive breast cancer-cell growth in cultured cells and in animals implanted with these cells. He believes that women at risk for estrogen-dependent forms of breast cancer should not consume high levels of phytoestrogens." Most researchers are concerned about consumers taking isoflavone supplements or pills. Yet such products are now on the market and they acknowledge that some consumers will be attracted to them, instead of simply increasing the level of soyfoods in their diet, eating a healthful, balanced diet, and living and healthy lifestyle. Photos show: A jar of Morningstar Farms Roasted Soy Butter (soynut butter) which will be introduced this spring. Jan Remak, president of marketing for Vitasoy U.S.A.

One sidebar, titled "Probing the soy/health connection," discusses the research of Dr. James Anderson and Mark Messina, PhD. "Scientists theorize that phytoestrogens in soy might help compensate for the loss of hormonal estrogen women experience at menopause."

Another sidebar, "Boom times for the bean," notes that starting soon after the research study by Dr. James Anderson was published in August 1995, many soyfoods companies experienced a substantial increase in sales. Peter Golbitz notes that "After years of steady 10% to 15% annual growth, soyfood sales have soared by about 30% in the past year... Many marketers of meat and dairy analogs are reporting sales increases of more than 100%." A 1995 study by the Soyfoods Association of America found that 75% of Americans have heard of tofu, 55% of soymilk, and 50% of soy burgers. Golbitz adds that in Australia, where soymilk based on soy protein isolates is widely available, per capita soymilk consumption is at least three times what it is in the USA. Vitasoy has adopted a niche-market approach to selling its soymilk; it adjusts the amount beany taste according to the taste preferences of each market. Address: Senior Editor.

11160. Lightlife Foods, Inc. 1996. We don't just make the best vegetarian hot dog in the world–We make all three of them (Ad). *Vegetarian Times.* May. p. 24.
• ***Summary:*** A full-page color ad. The three products are: (1) Tofu pups. (2) Smart Dogs. (3) Wonderdogs–For kids only.

The company says it was inspired in 1982 to create "America's best and favorite hot dog–Tofu Pups."

This ad also appeared in the June issue, p. 12. Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001.

11161. **Product Name:** Vegetarian Request: French Country Stew, Moroccan Lentil Stew, Tuscan White Bean Stew, Penne Pasta Bolognese, Thai Tofu, Vegetable Croquette Dinner, Traditional "Meatloaf" Dinner.
Manufacturer's Name: Lightlife Foods, Inc.
Manufacturer's Address: P.O. Box 870, Greenfield, MA 01302. Phone: 1-800-274-6001.
Date of Introduction: 1996. May.
Ingredients: No. 5–Thai Tofu- With garden peas and peanut sauce over pasta.
Wt/Vol., Packaging, Price: 12 oz paperboard box.
How Stored: Frozen.
New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo at Baltimore, Maryland. 1996. Oct. One the front is a color photo of each product. On the rear is given for each: Ingredients. Nutritional information. UPC. Units per case. Shelf life frozen. The following contain soy or seitan: 1. Seitan. 4. Soy protein concentrate and isolate. 5. Tofu and soy sauce. 6. Soy sauce. 7. Soy protein concentrate, soy sauce, and [vegetarian] worcestershire sauce.

These products were first sold commercially in May 1996.

11162. Messina, Mark; Messina, Virginia. 1996. The dietitian's guide to vegetarian diets: Issues and applications. Gaithersberg, Maryland: Aspen Publishers, Inc. xi + 511 p. Index. 24 cm. [1939 ref]
• ***Summary:*** Contents: Preface. Acknowledgments. Part I: An overview of vegetarian diet. 1. Demographics and definitions: History of vegetarianism, profile of vegetarians, types of vegetarian diets. 2. Health consequences of vegetarian diets: Differences in dietary components of vegetarian and nonvegetarian diets, cardiovascular disease, hypertension, cancer, diabetes, obesity, kidney disease, renal stones, gallstones, diverticular disease, other conditions, the dairy connection, phytochemicals, conclusion.

Part II: Vegetarian nutrition. 3. Protein: A historical perspective on protein, protein requirements, vegetarian diets and protein digestibility, assessing protein quality, plant proteins and nitrogen balance, protein complementarity, conclusion. 4. Calcium: Osteoporosis, calcium and osteoporosis, calcium absorption and the RDA, calcium excretion, bone health of vegetarians, meeting the calcium RDA on plant-based diets, plant sources of calcium, other factors that affect bone health/fracture rate, conclusion. 5. Minerals: Iron, zinc, selenium, copper, magnesium, phosphorus, manganese, iodine, sodium, chloride, potassium, fluoride, chromium, molybdenum. 6. Vitamins: Vitamin B_{12} (cobalamin), riboflavin, vitamin D, vitamin B_6, vitamin B_1 (thiamin), niacin, folate, biotin, pantothenic acid, vitamin C (ascorbic acid), vitamin A, vitamin E, vitamin K. 7. Food guides for vegetarians: A history of food guides, developing food guides for vegetarians, vegetarian food guides, appendix 7-A–food guides for vegetarians (food guide for lacto-ovo vegetarians and vegans, the 1-2-3-4-5 vegetarian

© Copyright Soyinfo Center 2013

food guide, American Dietetic Association's vegetarian food guide, the vegetarian food pyramid, the vegetarian food pyramid, macrobiotic food guide).

Part III: Vegetarian diets throughout the life cycle. 8. Pregnancy and lactation: Weight gain and calorie needs in pregnancy, weight gain in pregnant vegetarians, meeting nutrient needs of pregnancy on a vegetarian diet, meal-planning guidelines, adolescent pregnancy, potential complications of pregnancy, common conditions of pregnancy, vegetarians and lactation, appendix 8-A–food guides for pregnant and breast feeding vegetarians (food guide I, food guide II). 9. Vegetarian diets in infancy: Growth in vegetarian infants, vegetarian diets during the first six months of infancy, solid foods for vegetarian infants, comparison of sample menu plans for 9-month old vegan and omnivore infants, potential concerns in infant feeding, macrobiotic diets in infancy, fatty acids in the diet of vegetarian infants, conclusion. 10. Preschool and school-age children: Growth of vegetarian children, diets of vegetarian children, protein, fat, calcium, vitamin D, vitamin B_{12}, iron, zinc, guidelines for meal planning for vegetarian children, milk in the diets of vegetarian children, counseling parents of vegetarian children, vegetarian diets for school-age children, school lunch, bag lunch, appendix 10-A–meal-planning guidelines for children (other food guides). 11. Vegetarian diets for adolescents: Growth of vegetarian adolescents, nutrient needs of vegetarian adolescents, meal-planning guidelines for vegetarian adolescents, eating disorders. 12. Vegetarian diets for older people: Dietary status of older vegetarians, nutrient needs of older vegetarians, meal planning for older people.

Part IV: Practical applications for counseling vegetarians. 13. Counseling vegetarian clients: Dietary assessment, counseling clients to plan menus based on vegetarian food guides, vegetarian diets as dietary therapy, reducing fat in vegetarian diets, reducing food costs on vegetarian diets. 14. Diabetes: Diet therapy for diabetes, vegetarians and diabetes, the diabetic exchange lists, appendix 14-A–exchange lists for meal planning. 15. Vegetarian diets for athletes: Vegetarian diets and athletic performance, nutrition needs of athletes, risks of amenorrhea in female vegetarians and female vegetarian athletes. 16. Vegetarian food preparation: Preparing grains, preparing beans, using tofu, using textured vegetable protein, using egg substitutes, cooking with sweeteners.

Glossary of vegetarian foods. Resources on vegetarian diet: Vegetarian resources for dietitians, resources for vegetarian clients, on-line services, mail-order vegetarian foods.

Appendixes. A. Fiber, cholesterol, and macronutrient intakes of adult vegetarians and nonvegetarians. B. Lipid levels in adult vegetarians and nonvegetarians. C. Blood pressure of adult vegetarians and nonvegetarians. D. Anthropometric data of female adult vegetarians and nonvegetarians. E. Anthropometric data of male adult vegetarians and nonvegetarians. F. Intake ratios of N-6 to N-3 fatty acids on vegetarian and non-vegetarian diets. G. Protein, calcium, phosphorus, sodium and potassium intakes of adult vegetarians and nonvegetarians. H. Iron intake and status of vegetarians and nonvegetarians. I. Mineral intake of adult vegetarians and nonvegetarians. J. Water soluble vitamin intake of adult vegetarians and nonvegetarians. K. Fat soluble vitamin intake of adult vegetarians and nonvegetarians. L. Fiber, cholesterol, and macronutrient intakes of vegetarian and nonvegetarian school-age children and teenagers. M. Water soluble vitamin intakes of vegetarian and nonvegetarian school-aged children and teenagers. N. Fat soluble vitamin intake of vegetarian and nonvegetarian school-aged children and teenagers. O. Mineral intake of vegetarian and nonvegetarian school-aged children and teenagers. P. Fiber, cholesterol, and macronutrient intakes of elderly vegetarians and nonvegetarians. Q. Water soluble vitamin intake of elderly vegetarians and nonvegetarians. R. Mineral intake of elderly vegetarians and nonvegetarians.

The information on vitamin K is excellent and extensive (despite one small error): Table 6-12 (p. 197) gives the vitamin K content of selected foods. The content of soybean oil is 77 micrograms per tablespoon (not milligrams as stated). Other rich sources are (per ½ cup cooked): Lentils (261 mcg), kale (179 mcg), spinach (141), broccoli (119). The source of these statistics is: USDA Provisional table on vitamin K content of foods. 1994. Hyattsville, Maryland: USDA.

Index listings for individual soyfoods: Tofu: p. 38-82, 392. Tempeh: p. 391. Soymilk: p. 214-15, 284-85, 391. Miso: p. 389. Soy cheese, soy flour, soy yogurt, soybeans, soynuts, Take Care (fortified soy protein beverage sold in powdered form), tamari: p. 391 (Glossary of vegetarian foods). Address: 1. PhD; 2. MPH, RD. 11163. Ohio Soybean Council / Soy Ohio. 1996. Creative cooking with soy. Columbus, Ohio. 20 p. May. 24 cm. • ***Summary:*** This attractive cookbooklet contains many large color photos on thick glossy paper. The recipes are: Heartland burgers (with TVP). Golden baked beans (with 2 cups cooked soybeans). Creamy tomato soup (with soy milk, silken tofu, and soy oil). Chicken raspberry salad (with silken tofu in the sauce, and reduced sodium soy sauce). Easy day vegetable lasagna (with silken tofu). All-American twice-baked potatoes (with silken tofu). Primo veggie pasta (with silken tofu in the sauce). Oatmeal bread (with soy milk and soy flour). Better bran muffin (with soy milk and soy flour). Super crunchy caramel corn (with soy margarine). Fruit smoothie (with silken tofu). Sweetheart cinnamon rolls (with silken tofu and lite soy margarine). Chocolate

© Copyright Soyinfo Center 2013

silk dessert (with silken tofu and soy margarine). Buckeye surprise (with silken tofu and soy margarine). The last two pages are "Working with soyfoods" (soy flour, soy oil, tofu), and "Soyfoods resources" (a directory of organizations, books, and web sites providing information about soyfoods and nutrition).

Talk with Kelly Ollwine, executive secretary for the Ohio Soybean Council. 1996. June 7. This booklet, published in May 1996, was developed by Jim Kapp of Yoder, Sullivan & Kapp, a consulting firm in Columbus, Ohio. He also developed another such book titled "Cooking American Favorites with Soy," published in 1994.

Talk with Jim Kapp. 1996. June 7. The recipes in both these books were developed by two Ohio home economists, Connie Cahill and Melody Leidheiser. Address: P.O. Box 479, Columbus, Ohio 43216-0479.

11164. Raymond, Jennifer. 1996. The peaceful palate: Fine vegetarian cuisine. Revised ed. Calistoga, California: Heart & Soul Publications. 159 p. Illust. Index. 28 cm. [5 ref]
• ***Summary:*** A vegan cookbook, with a substantial section on vegan nutrition. Contains 11 tofu recipes and 1 recipe for tempeh sandwich.

Contents: Acknowledgements. Introduction (most Americans eat too much protein and far to much fat). Choosing food for optimum health. Protein. Calcium. Protein myths and facts. Putting fat in its place. Cutting the fat. Dairy products and eggs (why each is cruel to animals; soy and rice milks are excellent alternatives to cow's milk; tofu can be scrambled in place of eggs. Five good books about factory farming. Contact information for three organizations "working to end the horrors of factory farming"). A note about sweeteners. Coking dried beans. Equipping your kitchen. Stocking your pantry for healthful eating. What to eat when you don't eat meat. Foods which may be new to you [glossary] (includes aseptically packaged tofu, barley malt, low-sodium soy sauce, mirin, miso, Nayonaise {eggless, dairyless, cholesterol-free mayonnaise}, non-dairy frozen dessert, non-dairy yogurt, reduced-fat tofu, rice milk, rice syrup, seitan, silken tofu, soy milk, Spectrum Natural Spread {similar to soft margarine but made without hydrogenated fats}, tempeh, textured vegetable protein {TVP}).

"Until he extends the circle of his compassion to all living things, man will not himself find peace"–Albert Schweitzer.

Recipes: Breakfasts. Breads. Sandwiches. Salads & salad dressings, etc. A portrait photo (p. 159) shows Jennifer Raymond. "She works as a chef and nutrition specialist with Dean Ornish, M.D. in his 'Open your heart program,' teaching patients how a delicious, easily prepared vegetarian diet can reverse heart disease." "Her first cookbook, *The Best of Jenny's Kitchen,* was published by Avon books in 1981 and was followed closely by her television series *Cooking Naturally!* Jennifer lives in Calistoga, California, with her husband Stephen Avis and their five dogs."

The tofu and tempeh recipes are: Scrambled tofu (p. 27). Missing egg sandwich (p. 42). Tempeh salad sandwich (p. 44). Tofu, lettuce & tomato sandwich (TLT, p. 45). Broiled tofu (p. 48). Pasta with creamy tofu (p. 109). Lasagna (with tofu, p. 113). Tofu burgers (p. 125). Tofu croquettes (p. 126). Tofu pot pie (p. 127). Tofu cream frosting (p. 148). Tofu cheesecake (p. 150).

Talk with Jennifer Raymond. 1996. May 30. The new enlarged edition was available on 2 May 1996. There are new recipes and with each recipe is a nutritional analysis. The book is still available from the author, as well as nationwide because it is distributed by The Book Publishing Company in Summertown, Tennessee. She is now working closely with Dr. Dean Ornish, and adds: "He is at the center of where things are happening related to vegetarianism, diet, and health. His work has had a more profound impact on the way that the medical profession and people in general view vegetarianism than that of almost any other person. It has allowed vegetarianism to turn a really big corner." Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

11165. Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: September 15-18, 1996. Brussels Conference Center, Brussels–Belgium. 1996. American Soybean Assoc., Rue du Commerce 20-22 Box 4, 1010 Brussels, Belgium. 23 p. 30 cm.
• ***Summary:*** The cover of this attractive booklet has dark green ink on natural beige paper, with a square photo of soybeans in the middle. Contents: Invitation from the chairperson. The Second International Symposium On the Role of Soy in Preventing and Treating Chronic Disease: agenda. Satellite Symposium: agenda. Important deadlines and addresses. Instructions for abstracts. General information. Introducing Belgium and Brussels. Registration. Hotel accommodation. Social program. Symposium registration form. Hotel accommodation form. Social program form.

This symposium is being organized by Mark Messina, PhD (Chairman, USA), Roger Leysen, PhD (Secretary, Belgium), and Koen Descheemaeker, PhD (Scientific coordinator, Belgium). The international scientific advisory board consists of 12 members: Herman Adlercreutz, M.D. (Finland); Guiseppe D'Amico, M.D. (Italy); Stephen Barnes, PhD (USA); John Erdman, PhD (USA); Bernard Guy-Grand, M.D. (France); Takemichi Kanazawa, M.D. (Japan); Jean-Michel Lecerf, M.D. (France); Erik Muls, M.D. (Belgium); Marcel Roberfroid, PhD (Belgium); Risto Santti, M.D. (Finland); Cesare Sirtori, M.D. (Italy); Kurt Widhalm, M.D. (Austria).

Tentative agenda: Sunday, Sept. 15. Welcome and opening remarks. Overview of diet and cancer.

© Copyright Soyinfo Center 2013

Biotechnology of the soybean. Monday, Sept. 16. Soy and kidney function. Soy and bone health. Soy and heart disease: Hypocholesterolemic effects of soy (basic, mechanisms). Tuesday, Sept. 17. Soy and heart disease: Effects of independent cholesterol reduction. Soy and cancer: Animal studies, soybean anticarcinogens / anticancer mechanisms. Wednesday, Sept. 18. Soy and cancer: Human studies. Hormonal effects of soy.

Satellite symposium: A special satellite symposium will be held on Thursday, September 19, at the Sheraton Hotel, Place Rogier, Brussels; it will focus on two areas. The morning session on "Current understanding of soy and infant health" has been organized to better understand the effects of soy protein formula in infants and soyfoods in infants and young children–with particular emphasis on soybean isoflavones. The afternoon session on "Soybean isoflavones: measurement, levels in foods, and pharmacokinetics," will focus on isoflavone absorption and metabolism, and methodology for quantifying isoflavones in food and biological matrices.

The cost of both symposia, including lunches but hotel accommodations, for a non-student paid before Aug. 1 is about $439.

Sponsors contributing more than $15,000: Alpro natural soyfoods, American Soybean Association, Protein Technologies International, Nebraska Soybean Board, Sojaxa (The French Association for Soyfoods Promotion–Active members: Alpro, Nutrition et Soja, Sojasun, Sojinal), U.S. Foreign Agricultural Service, United Soybean Board, Ohio Soybean Board, Central Soya, ADM, Wyeth Nutrition International, Indiana Soybean Development Council.

Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, American Institute for Cancer Research, Monsanto Company, Ontario Soybean Growers' Marketing Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, Michigan Soybean Promotion Committee, Indiana Soybean Development Council, Morinaga Nutritional Foods, Inc., and Functional Foods for Health Program. Address: Brussels, Belgium.

11166. Unicurd Food Co. (Pte.) Ltd. 1996. Removal notice (Postcard). Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. 4 p. [Chi; Eng]
• ***Summary:*** This 3½ by 6-inch 4-panel card, printed black and red on white, announces that Unicurd Food Co. will move its operations (offices and plant) to 18, Senoko South Road, Singapore 758089. Phone: (65) 759 2855. Fax: (65) 759-5411. A photo on the front of the card shows the front of the 2-story building. A map inside shows the new location. The old address was: Ang Mo Kio Industrial Park #3, Block 6020 No. 156, Singapore 2056.

Note: According to *Ontario Soybean Growers' Marketing Board Newsletter* (June 1996, p. 3). Unicurd now has the largest tofu plant in Singapore. The guest of honor at the grand opening was Noble Villenueve, Ontario Minister of Agriculture, Food & Rural Affairs. Address: Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

11167. Messina, Mark J. 1996. Thoughts on pills containing soy isoflavones, and the use of soy in place of estrogen replacement therapy (ERT) (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** What does Mark think about all the pills containing soy isoflavones (such as genistein, often in the form of "soy germ" from SoyLife / Schouten) that are starting to flood the market. They could cause serious problems. In the most recent issue of the *Soy Connection,* Mark has written about these pills. Recently Laurent Leduc of Schouten USA Inc. in Minnesota (phone: 612-920-7700) hired Mark to speak to ten employees at Nature's Way, because they are coming out with the pills. He made a video of the speech to be used by their sales people. Laurent may hire Mark to go to the Netherlands or Germany after the Brussels symposium to give a presentation there as well. If a major company offered Mark a year-long, lucrative contract to give one speech every two weeks to promote one such pill containing genistein, he definitely would not accept it. If he told people the truth, they would ask him to stop mentioning all the negative aspects.

Another problem with these pills, besides the philosophical one, is that the concentration of genistein is really tiny; its all daidzein and glycitein. Of the 20 mg per pill of soy isoflavones, only about 2 mg are genistein, because the composition of isoflavones in the hypocotyl [sprout] is different from that in the rest of the soybean. So if you're buying the pills because you want genistein, you must take 10 pills a day to get enough genistein to matter, whereas if you think just in terms of isoflavones, two pills is enough. From an anticancer perspective, most researchers are focusing on genistein. Some 600 papers have been published in the last 2 years on genistein; there were probably 50 or less on daidzein. Mark manually goes through *Current Contents* periodically, but now actually gets no more than about 50 genistein papers a year, because they are quite similar, and usually involve *in vitro* studies (in test tubes and petri dishes), whereas animal studies are needed.

If a company were to introduce concentrated genistein as a commercial product, Mark believes there is the potential for significant damage to the soyfoods industry and the image of soy. Mark thinks the idea of "adding genistein to this and that is absolutely insane."

Concerning the use of soy for estrogen replacement therapy, this is complex. ERT does raise a woman's risk for breast cancer. But taking soy may not eliminate that risk in postmenopausal women. However ERT has several major benefits; it decreases heart disease risk by 50% and

© Copyright Soyinfo Center 2013

fracture rate (osteoporosis) by 50% as well. So if a woman wants to just relieve hot flashes, night sweats, etc. and is not concerned about cardiovascular disease and osteoporosis, then Mark would suggest that she try soy; if it works, good. But if the woman and is concerned about cardiovascular disease and osteoporosis, then Mark cannot recommend soy over ERT. We just don't know enough about soy in these areas.

When you look at all the studies from a very objective viewpoint, Mark just doesn't see what people find so exciting about soy in many respects at this point. It is very intriguing because of what the isoflavones may do; they were hypothesized to do all sorts of different things and soy has so much of the isoflavones, especially a food like tofu–which is the only place a typical consumer can get enough isoflavones except for these pills. So in conclusion, Mark strongly that soyfoods can and should be a very important part of a healthy vegetarian diet. But perhaps one can get the same effects on a Mediterranean diet in terms of lipid profile and cancer risks.

It is becoming extremely difficult for Mark to present his soy lectures to dietitians which the United Soybean Board (USB) has hired him to do for the past year. He is not greatly disappointed that they dropped him because of a chapter that appears in his and Ginny's new book *The Vegetarian Way* that talks about animal rights.

Hans Diehl is a Seventh-day Adventist and a vegan who is setting up what he calls the CHIPS Program, an integrated approach to health, in various cities across America. Now a main center of his activity is in Kalamazoo, Michigan. Twice a year he goes there, works with the local hospital and restaurants, gives 4-week intensive programs of smoking cessation, weight loss, diet change, exercise, etc. It's really great and he tries to get the whole town involved. Mark speaks with him from time to time, last time to about 500 people. He sold a lot of books. Mark's thing is to say "Soy is good and vegetarianism is good," but he is increasingly aware of the complexity of the argument. For example, he does not feel that small amounts of meat or white rice are bad for the health of other people. This type of honesty bothers many other vegetarians, who usually do not have a strong scientific background.

Mark will soon start editing a peer-reviewed journal on vegetarianism to be published in England and targeted to health professionals. Unfortunately the subscription price will be very expensive, beyond what many dietitians could afford. This will give him a valuable and prestigious affiliation, bring in editors fees of about $2,000 a year, and could lead to speaking invitations. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

11168. Reed, M.H. 1996. In Pleasantville, serenity and sushi. *New York Times.* June 16. p. WC15.

• ***Summary:*** This is a review of the Japanese restaurant Hanada Sushi in Pleasantville, New York. Recommended dishes include: Seaweed salad, agedofu, and seafood teriyaki.

"Outstanding too was agedofu bathed in a gingery sauce, the silken tofu cube fried quickly and topped with broad shavings of bonito."

11169. Rose, Richard. 1996. Sharon's Finest's best-selling products (Interview). *SoyaScan Notes.* June 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** TofuRella (in cheddar flavor, with casein) is the company's best-selling product, followed by Zero-FatRella (Tofu-Based Cheese Alternative with Casein), then HempRella (made with hemp seeds and casein; soy free). There are 5 flavors of TofuRella and 2 flavors of TofuRella slices, plus 3 flavors of Zero-FatRella.

VeganRella (which contains no casein) is also doing very well; it is now America's best-selling vegan cheese alternative. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11170. *SoyaScan FactSheet.* 1996. Non-dairy products (alternatives to dairy products), which are good tasting and widely available (Overview). June 22. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** About 30 million Americans are lactose intolerant. Between 4% and 6% of infants develop allergies to the proteins in one or more foods, with cow's milk being the most allergenic. And many other people have moral or philosophical objections to drinking milk (e.g. widespread use of antibiotics, use of genetically engineered Bovine Growth Hormone [rBGH, made by Monsanto], the suffering of calves when forcefully removed from their mother, etc.). Until quite recently, these people had to live without dairy products, but now that has all changed–thanks to soyfoods, which are widely available and usually quite delicious.

Foods marked with one asterisk (*) are sold at most natural food stores and some health food stores and supermarkets (look in your Yellow Pages at "Health & Diet Food Products–Retail"). Foods marked with two asterisks are also sold at most supermarkets.

If you use dairy alternatives regularly, you can save money by making them yourself: See the index of *The Book of Tofu* by Shurtleff & Aoyagi (Ballantine Books edition) for carefully tested, home-scale recipes for soymilk, soy ice cream, soy yogurt (from soymilk or from tofu), tofu, cream cheese, sour cream, whipped cream (from tofu or soymilk), tangy tofu cottage cheese, tofu icing, frozen-banana tofu shake, soymilk kefir, soy mayonnaise (from tofu or soymilk),

Soymilk* is the most popular type of dairy alternative. It is sold in many flavors, often fortified with calcium, vitamin D, antioxidants, etc. in quarts and half gallons. It costs about

© Copyright Soyinfo Center 2013

1.7 times as much as milk (so if a quart cow's milk costs $1.00, a quart of soymilk will cost about $1.70). Popular brands: Edensoy, Westbrae, Westsoy, Vitasoy, So-Yum, Silk, and Pacific Foods. For a tasty soymilk shake, try Westbrae Malteds. Rice Dream is a delicious non-dairy rice milk and also an ice cream; both products are made by Imagine Foods. Many other brands of rice beverage (some of whose quality we think is not as good) are also available.

Soy ice cream* is sold in an outrageous variety of flavors and forms. Hard-pack pints are the most popular, followed by soft-serve, ice cream sandwiches, etc. Popular brands: Tofutti, Living Rightly, Sweet Nothings (fat free), and Ice Bean. Rice Dream is a delicious rice-based non-dairy ice cream.

Soy yogurt* is sold in typical small yogurt cups, in a wide variety of flavors. The most popular brand is White Wave Dairyless. Try their Lemon-Kiwi flavor! Most soy yogurts are fermented/cultured with live cultures, but some are like a parfait (not fermented) made by blending silken tofu, fruits, and a sweetener.

Tofu**, the world's most popular soyfood, is now sold at very reasonable prices in most supermarkets across America. It makes an excellent replacement for cheese in many dishes where the cheese is not required to melt: Salads, sandwiches, in Lasagna for the ricotta cheese, etc. You can also use tofu to make your own soy yogurts and ice creams at home.

Soy cream cheese*. These products, based on tofu, are delicious and moderately priced. Our favorite brand is Tofutti Better than Cream Cheese, which comes in flavors such as Garlic & Herb, French Onion, Herbs & Chives, Plain, Wildberry, or Smoked Salmon. Some bagel shops (such as Noah's Bagels in Northern California) sell this product. VeganRella Cream Cheese (in plain & onion & dill flavors) uses more natural ingredients (no hydrogenated oils, or mono- or diglycerides).

Soy sour cream*. Again, this product is based on tofu. Our favorite brand is Tofutti Sour Supreme–Better than Sour Cream.

Soy cheese* is our least favorite dairy alternative. Most brands contain *casein* (the protein from cow's milk), which allows them to melt, but which also (technically) disqualifies them from being a truly non-dairy product. A few brands are truly non-dairy but they melt in a sort of thick puddle. Top brands with casein: Soya Kaas, TofuRella, Zero-FatRella, HempRella (soy free), and AlmondRella (soy free). Top brands without casein: VeganRella (2 flavors), Soymage.

Soy-based infant formula. Available at most pharmacies and many supermarkets, this is a carefully formulated and regulated product designed to meet the critical needs of infants when served as the sole source of nutrition. It is widely fed to infants who are allergic to cow's milk. But note that 15% to 50% of infants with cow's milk allergy will also develop allergies to soy protein. Soy protein was recently ranked 11th among foods in terms of allergenicity; animal proteins such as milk and eggs remain the most allergenic foods.

Whip Topping**. Sold as "non-dairy whip topping" at most supermarkets, as far as we know, these all contain casein or sodium caseinate from cow's milk. Leading brands: CoolWhip.

For more information on non-dairy products on the World Wide Web, go to http://www.rella.com. This website is produced by Sharon's Finest in California.

11171. Harvest Direct, Inc. 1996. Harvest Direct: Food you can live with [mail order catalog]. Knoxville, Tennessee. 16 p. 27 x 16 cm.

• ***Summary:*** Contents: Salad dressings. Meals in a minute (Fantastic Foods). Ground meat alternatives (Protean–The versatile replacement for ground meat, Harvest Direct). Soups, spices, condiments. TVP. Ribs, tofu & tofu meals (Fantastic Foods, Mori-Nu, Arrowhead Mills). Meat Alternatives (Worthington Foods, Fantastic Foods). Soup & meal cups. Beans & Beano. Pasta & sauces. Breads & baked goods. Substitutes for sugar, eggs & fat. Dairy alternatives. Baby foods. Glassware. Gift baskets.

On the cover are nine round, dark brown patties arranged in a circle on a blue and white plate. In the center is a sliced red grapefruit, with a strawberry at its center, blueberries scattered around the periphery, and one sprig of celery. Address: P.O. Box 988, Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

11172. House Foods America Corporation. 1996. Report 1996. Tokyo, Japan. 14 p. 28 cm. [Eng]

• ***Summary:*** A colorful English-language annual report. Contents: Corporate philosophy. Financial highlights. To our shareholders, from Kunihiko Otsuka, President (June 1996). Product information. Overseas activities (with world map). Domestic company facilities (with map). Balance sheet. Income statement / appropriation. Of retained earnings. Board of directors. Company history.

For the ear ended March 31, 1996, the following are in U.S. dollars: Sales: $1,713 million (down from the peak in 1994). Net income (profit): $75.12 million (down from 1994 and 1995). Net income per share: $0.659 (down from the peak in 1994). Company history: 1913 Nov. 13–Company founded by Seisuke Urakami, the first president, who started Urakami Shoten as an enterprise dealing in herbal medicine supplies in Osaka, Japan. 1926–Production and sales of curry began. 1947–The business was incorporated under the name Urakami Ryoshoku Kogyosho, Ltd., with an initial capital of ¥197,500. 1949–Firm name was changed to House Curry Urakami Shoten Ltd. 1954–Tokyo office opened. 1960–Firm name was changed to House Food Industrial Co., Ltd. (*House Shokuhin Kogyo*). Indian curry introduced. 1963–Vermont curry introduced. 1971–Stock first listed on both

© Copyright Soyinfo Center 2013

Tokyo and Osaka Stock Exchanges. 1973–Introduced House Hontofu, an instant tofu to be made at home by adding GDL to powdered soymilk. 1981–Los Angeles office established. 1983–Curry House restaurant specializing in curry opened in Los Angeles. 1983–Purchased a share of a tofu company in Los Angeles, renamed House Foods & Yamauchi, Inc. 1993–Firm name was changed to House Foods Corporation.

Note: On 2 April 1997 House Foods Corporation was selling for about $12 per share; the minimum purchase was 1,000 shares. Address: 5-11, Nihonbashi Honcho 2-chome, Chuo-ku, Tokyo 103, Japan. Phone: (03) 3243-1231.

11173. Jacobi, Dana. 1996. The soy of cooking: Throw out your old ideas about soy–These innovative recipes bring out the delicate, sophisticated flavor of soy. *Natural Health.* May/June. p. 76-81, 138-44.
• ***Summary:*** Contents: Introduction (incl. health benefits and isoflavones). Soy, the next generation. Soymilk: Cooking tips, how to buy. Tempeh: Cooking tips, how to buy. Fresh green soybeans: Cooking tips, how to buy. Soy meats: Cooking tips, how to buy. Newfangled tofu: Cooking tips, how to buy. Recipes include: Soymilk smoothie. Thai salad with savory tofu. Garlic tempeh croutons. Green soybeans with pickled cabbage and ginger. Barbecued beans and tempeh bacon or tofu franks. Chili with black soybeans. Chocolate pote de crème.

A sidebar discusses: Powdered soymilk, soycheeses, soy sour cream, soy yogurt, soy-based cream cheese, margarine substitute (Spectrum Spread containing canola oil and soy isolate). Address: Food writer, New York, NY.

11174. Kuhn, Mary Ellen. 1996. Courting crossover vegetarian consumers: Sales of meat, dairy alternatives skyrocket as companies boost taste appeal. *Food Processing* (*Chicago*) 57(6):26, 31-32. June.
• ***Summary:*** Crossover consumers (also called semi-vegetarians or transitional eaters) are those who are not vegetarians but who are reducing their intake of animal products for a variety of reasons. To reach this market, meat and dairy alternatives must taste good.

A sidebar titled "Bringing macrobiotics to the masses," shows and discusses the Kushi Cuisine line of 25 products. Address: Senior Editor.

11175. Lambrecht, Hillary S.; Nielsen, S.S.; Liska, B.J.; Nielsen, N.C. 1996. Effect of soybean storage on tofu and soymilk production. *J. of Food Quality* 19(3):189-202. June. [22 ref]
• ***Summary:*** Century 84 and Century -L2L3 (lacking lipoxygenase isozymes 2 and 3), near isogenic soybean varieties, were stored at five temperatures and relative humidities for up to 3 months. Soybean storage above 25ºC and 50% relative humidity adversely affected the quality of the resulting soymilk (reduced pH and solids content) and tofu (decreased yield and moisture content, gave a darker color). Century -L2L3 soybeans were more resistant to changes during adverse storage than were Century 84 soybeans. Address: 1-3. Dep. of Food Science, 1160 Smith Hall, Purdue Univ., West Lafayette, Indiana 47907. Phone: (317) 494-8328.

11176. Nasoya Foods, Inc. 1996. Nasoya Vegi-Dressing: Smooth, creamy dressings without cholesterol and 100% dairy free! Sensational! (Ad). *Vegetarian Times.* June. p. 85.
• ***Summary:*** This attractive full-page color ad (see next page) shows Nasoya Vegi-Dressings in newly designed labels and bottles in the following flavors: Sesame garlic, Creamy dill, Thousand island, Garden herb, and Creamy Italian. The dressings are placed on a table with a light purple table cloth. One bottle is being poured over a freshly-made salad. Address: 23 Jytek Dr., Leominster, Massachusetts 01453. Phone: 800-808-2325.

11177. **Product Name:** [Meatless Salami, Salchicah Sausages, Hamburger, and Chorizo Spicy Sausages].
Foreign Name: Salami Especial de Soya, Salchicahs, Hamburguesa, Chorizo de Soya.
Manufacturer's Name: UFIESA–Division of Productos Nutrisoya.
Manufacturer's Address: Factory: Av. de los Restauradores No. 149. Office: C/33 No. 9 A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: (809) 590-3418.
Date of Introduction: 1996. June.
Ingredients: Salami: 60% tofu, 30% gluten, 7% oats, 2% flaked corn, 1% binders and natural spices. Chorizo: Exactly the same ingredients as Salami.
How Stored: Refrigerated.
New Product–Documentation: Letter and leaflets from Leonidas Radhames Ubiera, president of Ufiesa-Nutrisoya. 1997. Jan. 20. "Our company began to operate on September 1, 1995 without experience and too little equipment." Leaflet #1. Green and red on white. "Consuma productos Nutrisoya para su alimentacion una joya. 100% natural. Puros e integrales de soya. Tofu-queso. Leche, lista para tomar. Yogourt. Salami. Salichas. Hamburguesa. Chorizo."

Letter from Leonidas Radhames Ubiera. 1997. March 10. Gives the date that each of the company's products were introduced, and basic ingredients. These four products were introduced in June 1996. The first 3 are made from tofu and gluten. The chorizo is made from 85% tofu, 10% gluten, and 5% other ingredients. UFIESA is an abbreviation/acronym for Ubiera & Fortunato Import-Export, S.A. Talk with José Fortunato in New York. 1997. April 15. These four meatless products are all ready to heat and serve; they are not dry mixes.

Labels for Salami and Chorizo sent by Jose Fortunato. 1997. April 18. 3½ by 3 inches. Self adhesive.

11178. Washam, Cynthia. 1996. The incredible, edible soybean: Soy, doctors, say, can help prevent cancer and heart disease, and even lower blood cholesterol. *E: The Environmental Magazine.* June. [4 ref]
• ***Summary:*** "Step aside, beta carotene. Take a back seat, complex carbos. The hottest new nutrients are 'isoflavones,' natural compounds credited with preventing everything from heart disease and cancer to osteoporosis and hot flashes. The principal source of isoflavones? Foods made with soybeans, such as soy milk, soy burgers, and tofu." Address: 2425 N.E. Gardner Lane, Jensen Beach, Florida 34957.

11179. Garrett, Jim. 1996. Contaminated tofu made by company in San Francisco Chinatown in 1978-79 (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In about 1978-79 a tofu manufacturing company in San Francisco Chinatown was sued by the District Attorney's office for making and selling contaminated tofu. Maria Rivera, Jim's wife, handled the case. The tofu was contaminated with rat feces, etc. Maria's office no longer has records of this case; the District Attorney's office probably once had the records but now almost surely no longer has them. A county or state health agency might have them. Address: 734 Los Palos Dr., Lafayette, California 94549. Phone: 284-7396.

11180. Messina, Mark J. 1996. Thoughts on the nutritional value of soybeans (Interview). *SoyaScan Notes.* July 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The negative article by Fallon and Enig titled "Soy products for dairy products? Not so fast" has generated a unusually large amount of attention, given how poor the article is and what a minor magazine it was published in. Gary Null wanted Mark to appear on his show just to rebut it. The soybean would probably be better nutritionally if it didn't contain phytates and trypsin inhibitors (other than the Bowman-Birk inhibitor). Phytates do inhibit zinc and iron absorption, and this is important; calcium inhibition is not much of a problem. The soybean plant stores much of its phosphorus in the form of phytates. Of the trypsin inhibitors, most of the focus has been on the Bowman-Birk inhibitor (BBI) as having possible anticancer activity. BBI inhibits both trypsin and chymotrypsin. The other trypsin inhibitors (such as the Kunitz) are not hypothesized to have anticancer activity. Dr. Walter Troll and Dr. Ann Kennedy have been the leaders in research in this field. Ann Kennedy, who is now doing most of the work with BBI, will be speaking at the international soy symposium in Brussels this September. Mark thinks that BBI does have anticancer activity, and that it has a lot of potential as a chemopreventive agent. But he wonders if there is enough BBI remaining in typical soyfoods (such as tofu) to exert benefits but not so much as to exert adverse effects. Ann Kennedy is very smart and a very interesting person to talk with. Mark often asks her about the practical significance of her findings concerning BBI. One serving of tofu has something like 10% of the BBI required to reduce cancer risk.

Mark thinks that Steve Barnes unquestionably is the most knowledgeable person in the USA on isoflavones and phytoestrogens. But the many exciting findings is this area must be divided into those of academic interest and those of practical importance. When Mark looks at the epidemiological data, what he finds most exciting is that all these studies showing soy's protective effect, show that one serving of a soy product (usually tofu) is enough. Mark thinks that if there really is a protective effect against cancer, it is either because of isoflavones or some other substance we are not yet aware of. Whatever it is must be very potent and very unique. Mark does not think the effect is due to a combination of substances in tofu, or to a total lifestyle which happens to include tofu. With cancer research, we already have grounds for a hypothesis, some animal data, and plausible biological mechanisms. So the next step is to show that soy actually has a protective effect in humans.

Flatulence factors might seem like a good candidate for removal, but recent research has shown that they might have benefits. They are more a social than a nutritional problem. Japanese animal studies using oligo sugars [oligosaccharides] indicate that they may help reduce colon cancer risk and promote longevity by stimulating the bifidobacteria. A lot of interesting hypotheses concerning these sugars are waiting to be tested. No single food can be all things to all people, and the source of all nutrients.

Mark is not personally excited by the cholesterol-lowering properties of soy protein. It applies only to a small group of people with very high cholesterol levels and one must eat too much soy to experience modest results. In the Framingham study, 50% of the heart attacks occurred in people with serum cholesterol below 240, and 20% had below 200. 150 is very low; Mark's was 177 last time he had it measured, which puts him close to syndrome x. Genetics plays a big role. If we find that soy inhibits cholesterol oxidation, or stimulates vasodilation, or inhibits platelet aggregation, then we are on to something important. This could be very relevant to the 37 million Americans whose cholesterol level is above 240, which is considered high. PTI (Protein Technologies International) sees those 37 million Americans as a huge potential market for its product Take Care. In the Framingham study, the really solid data showing a relationship between blood cholesterol and heart attacks, applies only to a small group of men, ages 35-54. There is no connection in women or in older men. Several years ago, Mark read two long and very well-done reviews on blood cholesterol and heart disease in excellent peer-reviewed journals, he came to think that the cholesterol hypothesis has more holes in it than Swiss cheese. For example, vegetarian women do hot have a decreased risk of heart

© Copyright Soyinfo Center 2013

disease compared to non-vegetarian women. This is probably because estrogen is so strongly protective.

Implicit in the word "phytochemicals" is some beneficial effect–even though most phytochemicals are a two-edged sword, with both benefits and disadvantages. Thus the oligosaccharides in the soybean (which are biologically active and cause flatulence) should probably not be called a type of phytochemical; Mark is not sure whether or not they actually supply calories and are therefore nutritive substances. If they do supply calories, they are not "non-nutritive" as phytochemicals must be. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

11181. Mio, Art. 1996. Morinaga is sponsoring coverage of the 1996 Summer Olympic Games, held in Atlanta, Georgia, on KNBR radio (Interview). *SoyaScan Notes.* July 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga is one of several sponsors of these radio broadcasts. The radio message states: "This Olympic update is brought to you by Mori-Nu Tofu..." This advertising is connected to a one-month sales promotion with Lucky supermarkets which started at the end of May. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504.

11182. Chambers, Norm. 1996. Growing and selling low-lipoxygenase soybeans in Iowa for making improved tofu and soymilk (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Please begin by reading the July 1996 interview on this subject with Dr. Walt Fehr of Iowa State University. Norman and John Chambers, a father and son team, refer to the soybeans that they grow under license from Iowa State University in various ways: "low lipoxygenase soybeans," "low lipo (pronounced LAI-po) beans," "Laura beans," and 2001 beans. They grow these mostly under contract with end users, so each company or person who wants some places a firm order in the spring before planting time and receives the special soybeans in about September. Last year they grew about 50 acres of these special soybeans, with a yield of about 50 metric tons cleaned. Since 1 metric ton = 2,204.6 lb and a bushel of soybeans weighs 60 lb, there are 36.74 bushels in a metric ton, and 50 acres would yield about 1,837 bushels. The price last year was $13.00 per bushel FOB Iowa. They are sold in 30 kg (66 lb) bags. Fairview Farms always grows somewhat more than the amount contracted for; they presently have 107 bags and about 425 bushels unbagged in the bins available for sale.

All of their customers for these special soybeans are overseas. From last year's crop they sent one container to Slovakia (to Alfa Bio), one to Singapore, and one to Japan (*Taishi Shokuhin*). They did not sell any in the USA. Address: Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198. Fax: 515-583-2192.

11183. Fehr, Walter R. 1996. Commercial sources of and information on soybeans specially bred to be low in lipoxygenase and to give tofu and soymilk with little or no "beany" flavor (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** There are 3 lipoxygenase enzymes in soybeans that cause beany flavors. Iowa State has developed several soybean varieties that lack lipoxygenase-2 (L-2), the most active lipoxygenase enzyme. These are now commercially available; Dr. Fehr thinks that the best and most widely tested of these is IA2011. Varieties that lack two, or all three lipoxygenase enzymes are also under development. Dr. Fehr has made tofu and soymilk using the soybean lacking L-2 and found that these products have no detectable beany flavor. To order these varieties, contact any of the suppliers, such as Norman and John Chambers (father & son team), Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198 (office) or 515-583-2330 (home). Fax: 515-583-2192. They grow these varieties themselves and subcontract the rest out to farmers in the area. Fairview Farms has many Japanese customers; Dr. Fehr does not know if they have any U.S. customers. For a complete list of licensees for the lipoxygenase-free soybean varieties, contact Julie Gustafson at Iowa State University, phone 515-294-9442. This fall Iowa State will be releasing seed of a "triple null" variety with L-1, L-2, and L-3 all missing.

Roughly 6-10 studies have been published (mainly by Nielsen at Purdue Univ. (Indiana), Hymowitz at Univ. of Illinois, and Dr. Kitamura at Tsukuba, Japan) where these soybeans have been used on a laboratory scale to make tofu and soymilk, and the flavor of those products were compared with similar products made from typical soybeans. Japanese consumers do not particularly favor the absence of the lipoxygenase enzyme; they like tofu and soymilk with some (but not a lot of) so-called "beany" flavor. As far as Dr. Fehr knows, no one has ever tested these soybeans lacking lipoxygenase on American consumers–but the information system is very closed and confidential. Dr. Fehr's group has not published anything on lipoxygenase, although they have research underway.

A world leader in this area Dr. Kitamura at the National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305, Japan. His group developed the genotype (named something like Kyushu) which is absent of any of the 3 known lipoxygenase enzymes, then he shared this variety with U.S. soybean breeders working on this problem. Dr. Kitamura has a series of excellent of papers on this subject, but he has "not found a home for his special soybean in terms of the consumer market." Nor has anyone found any customers for the soybean from Iowa State missing L-2 enzyme. Address: Dep. of Agronomy, Iowa State Univ.,

Ames, Iowa. Phone: 515-294-6865.

11184. Funaki, Junko; Yano, Midori; Hayabuchi, Hitomi; Arai, Soichi. 1996. Tôfu misozuke no jukusei katei ni okeru tanpakushitsu no bunkai [Studies on tofu-misozuke prepared in Fukuoka prefecture. I. Proteolysis of tofu-misozuke during ripening]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of Japanese Society for Food Science and Technology*) 43(5):546-51. July 30. [20 ref]
• ***Summary:*** Tofu-misozuke, a food indigenous to the Fukuoka district of Japan, develops a cheese-like taste and softness during ripening. These changes are caused by the proteolytic digestion of proteins in the tofu during ripening. Address: 1-3. Faculty of Human Environmental Science, Fukuoka Women's Univ., 1-1-1 Kasumigaoka, Higashi-ku, Fukuoka 813, Japan.

11185. Beeley, Robert A. 1996. A brief history of Dixie USA and the company philosophy (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Forty some years ago, Robert started out with a burning interest in emergency medicine. This continued into the Air Force, where he was in the medical corps, teaching for the American Heart Association, etc. About 20 years ago he started Dixie USA as an emergency medical supply company. The company has done very well and Robert is still in that business, but it is tapering off for many reasons, none the least of which is the consolidation in the medical industry, etc.

About 15 years ago Brenda Oswalt, joined the company as an equal partner with Robert–primarily for her artistic, writing, and publishing skills. She was raised a Seventh-day Adventist and was trained at the Cordon Bleu in France as a chef. About 2-3 years ago they saw the handwriting on the wall as far as the medical part of their business is concerned, so they said: We've been treating these poor people all this time, why don't we start trying to help prevent their problems." One thing led to another and now they are very much into the preventive food business by mail order. They kept the same company, Dixie USA, but now have two product lines and two catalogs. But their approach is quite different from most others who are in the so-called health food business. They have a couple of key rules: (1) "If it doesn't taste excellent, we will not get involved with it." People should enjoy eating and shouldn't have to look at it as some kind of task they have to endure. Meal time should be an enjoyable time with family and friends–a glass of wine if you want. (2) "Once a week you can go out and blow the whole thing if you want to. Eat a big steak if you must. We're trying to tell people that you can have a healthier lifestyle and still enjoy life. Splurging one day a week won't hurt you at all. Eating soy the next day will help you flush out whatever toxins are left in there. We're very pragmatic people here.

They have developed a lot of their own recipes and today they have almost new 10,000 customers on their food mailing list. After they started the company, Mark Messina's book, *The Simple Soybean and Your Health* was quite influential in focusing their interests on soy. Dixie USA now sells quite a few of Mark's books. Brenda talks with Mark at length about once a week, sharing information. Fat Not! Crème It (Soy Powder) is a tofu powder made by Clofine. Brenda developed a great recipe for using it and now it is one of the company's best sellers. They also sell Mori-Nu Tofu. Beef (not!) is ADM TVP. Address: Chairman, Dixie USA Inc., P.O. Box 55549, Houston, Texas 77255. Phone: 713-688-4993 or 1-800-233-3668.

11186. Kessler, Jon. 1996. Re: Report on visit to Scandinavian Soya Company in Denmark. Letter to William Shurtleff at Soyfoods Center, July. 1 p. Typed, without signature.
• ***Summary:*** This company is located at Larsbjoernstrade 20, 1454 Copenhagen, Denmark. Phone: 45 4738 0494 (or 02-859-669). Owner/manager: Thomas Andersen. "I visited in the first week of April, 1996. At the time, Thomas Andersen and one worker were making 500 kg of soy products on each of their 2 or 3 production days per week, for an average of about 1,000 kg/week.

"Their product line is Plain Extra Firm Tofu (*Fersk Tofu*), Marinated Tofu (*Marineret Tofu*) and Smoked Tofu (*Røget Tofu*). They also make a small amount of Seitan (*Fersk Seitan*). Their products are all pasteurized and have a 42 day shelf life. They also have 300 gram size packaging.

"They are currently using all Takai equipment. They have a large boiler, their most costly piece of equipment. They also have a stone grinder, pressure cooker, roller extractor, 100 liter square curding barrel (often used for sausage in US), and 3 ratcheting presses. They use the filter material instead of cheesecloth. The table is knee high to lessen lifting. They usually cool the tofu in water and pack and pasteurize the following day. They use the water-filled tubs for packaging, and have a semi-automatic sealing machine. They have one pasteurizing tank to do all 500 kilos at a time. They have a smoker outside the shop. The process basically makes a baked tofu product with a much lower water content than plain tofu.

"I tried all their tofu and found it to be excellent quality. I introduced some non-vegetarian Danish friends I was visiting to the smoked tofu and they thought it was excellent as well.

"Thomas Andersen said he has successfully made tofu sausages with cellulose casing and smoked them in his smoker. He has not sold them due to his limited supply of capital and labor. Costs are much higher in Denmark for everything than in the US."

Note: For a history of Thomas Andersen's pioneering work with soyfoods in Denmark, see our SoyaScan interview

with him on 24 May 1990. At the time he was founder and manager of Urten's Tofu in Soeborg, Denmark. Address: Twin Oaks Community Foods, 138 Twin Oaks Road, Louisa, Virginia 23093. Phone: 540-894-5126.

11187. Kessler, Jon. 1996. Re: Report on visit to Viana Naturkost in Germany. Letter to William Shurtleff at Soyfoods Center, July. 1 p. Typed, without signature.
• ***Summary:*** This company is located at Willi-Graf Str. 88, 53881 Euskirchen- Kuchenheim, Germany. Phone: 02251-94460. Fax: 02251-944625. Owner/manager: Bernd Drosihn. "I visited on April 8, 1996. They have a very extensive product line, as described in their 'Price list and Information' booklet. 5 types of flavored tofu, all extra firm, kebobs, canned seitan, spring rolls, deep fried burgers and croquets, spread and salads, as well a few sausages. They have a quite automated shop. Production is currently around 8000 kg a week.

"Tofu equipment: Beans soaked (and tofu cooled) in square roller bins. They have a vertical stone grinder, a pressure cooker/roller extractor system, with a carousel curding machine designed by Bernd Drosihn and custom manufactured locally. He said he got the idea from a Takai or Kawanishi brochure, but that his machine is sturdier. The soymilk is curded in barrels on the carousel, the amount of curds in each barrel is just right to fill one forming box. The carousel is at a height that allows the curds to be poured into the box and the box is then slid under the pneumatic press. The tofu is cut with a metal grid that fits the forming box, and the cut tofu is then cooled and packaged in a Dixie Union/Multivac film to film vacuum packaging machine. I figured 2 to 4 people would pack tofu by placing the pieces on the conveyor.

"Other products equipment: I saw a filling machine for their line of spreads in jars, a pasteurizing/sterilizing box, jar capping machine which puts the lid on the jar, applies steam and closes the lid to create a vacuum. They also have an automated burger forming machine, then conveyor drops the burgers into the deep fryer.

"They use a real smoker for their smoked food.

"Market outlook: They have some competition from a large company in the Netherlands, Heuschen-Schrouff of Landgraaf. This company makes tofu more cheaply than Viana could package water, and has the non-organic market in Western Europe pretty much sown up. However, with a large line of 2nd generation products, and a growing market the outlook is pretty good.

"Product quality: I found their plain tofu to be excellent extra firm nigari tofu. Smoked and marinated tofu I also found to be excellent. Deep fried products including burgers were ok (some of their tofu is deep fried as well). Of the spreads the flavor was excellent, in many, though perhaps high in fats. I liked their flavored tofu, but think they could use stronger flavors." Address: Twin Oaks Community Foods, 138 Twin Oaks Road, Louisa, Virginia 23093. Phone: 540-894-5126.

11188. Kessler, Jon. 1996. Re: Report on visit to Alfa Bio in Slovakia. Letter to William Shurtleff at Soyfoods Center, July. 2 p. Typed, without signature.
• ***Summary:*** This company is located in Banska Bystrica, Slovakia. Phone: 004288 761 863 or 862. Fax: 004288 763 675. Owner/manager: Jan Lunter. "I visited Alfa Bio around April 15, 1996. They are now making about 7,000 kg of tofu per week. They make regular firm plain tofu, smoked tofu, marinated tofu, and have just started using a large and expensive sausage stuffer to package okara. They plan to package *tresca* (a local fish salad–not sure if theirs is fish flavored or actually has fish), spaghetti, as well as tofu eventually. They currently make four spreads–parsley, dill, prepared peppers and vegetable.

"Equipment: As much as possible it seems they have fabricated equipment themselves due to limited capital and high cost of equipment from outside the country. They have a gas-fired boiler, 4 large bean bins in shop for soaking, with an inverted pyramid cone at the bottom. They were in the process of installing an auger to move the bean to the grinder–disintegrator type–when I visited. The slurry is heated in 3 pressure cookers that are set up in line to produce a continuous flow of slurry. The slurry is separated in a centrifuge designed by Jan Lunter, with some kind of squeezing mechanism. He said it took 1 year to perfect. The resulting soymilk is curded in round rolling barrels, pressed in three part boxes (the standard sides, base and lid) using filter fabric. The presses are lever presses. They had about 6 to 8. They press about 5 minutes. The tofu is cooled in rolling bins which are then rolled to a pair of pouch-type vacuum packaging machines from the Netherlands. The packaged tofu is weighed and labeled with its weight and date at a different station.

"Product quality: They do not use organic soybeans, and use a mix of calcium chloride and some other curding agents. The tofu is perhaps a bit softer than nigari tofu, not as sweet and slightly crumbly. They were trying to get the tofu to bend when you take a thin slice from a 16 oz. block (as a nearby Austrian maker did) and theirs breaks. Their marinated tofu is excellent. Smoked was good too. They were not yet making the 'tresca' and spaghetti products in their sausage-type casing, and I did to have a chance to sample the okara.

"Market outlook: They are rightly concerned about possible shipments of tofu from Heuschen-Schrouff coming in from the Netherlands. Their price is fairly high and the Dutch company would be competitive probably. I think the Heuschen-Schrouff quality was a bit better as well, though they could probably improve by either pressing a bit more and/or changing coagulants. They might save a lot of labor if they are successful in using their stuffer to package tofu. I was impressed at the rapidity of their growth in sales.

© Copyright Soyinfo Center 2013

Slovakia seems to be very accepting of soy protein–I noticed a lot of TVP/TSP in many restaurants as well as markets. Perhaps this is due to both the affordability of soy protein as well as availability of alternatives, both now and in the past. Another advantage is that Slovakians are not used to prepared foods and expect to spend some time in flavoring and preparing their foods at home." Address: Twin Oaks Community Foods, 138 Twin Oaks Road, Louisa, Virginia 23093. Phone: 540-894-5126.

11189. Kessler, Jon. 1996. Re: Report on sampling of Heuschen-Schrouff tofu in the Netherlands. Letter to William Shurtleff at Soyfoods Center, July. 1 p. Typed, without signature.
• ***Summary:*** "While in the Netherlands I sampled some tofu made by Heuschen-Schrouff. This tofu was quite affordable, retailing for the equivalent of $1.20/18 oz. in a mainstream supermarket. It had an extra firm texture, perhaps slightly 'rubbery'. The flavor of the plain tofu was very slightly calcium sulphate. The tofu was packed in a water filled tray, but it was very tightly packed, so not much water was needed. The tofu was a rectangular shape (like the label sent 'Lin Tahoe') and the large side of the tofu was cut, the small side pressed (not sure if all small sides or not)." Address: Twin Oaks Community Foods, 138 Twin Oaks Road, Louisa, Virginia 23093. Phone: 540-894-5126.

11190. Lightlife Foods, Inc. 1996. Take a number (Ad). *Vegetarian Times.* July. p. 9.
• ***Summary:*** A full-page color ad... "Or two, or seven! Whether you're a devout vegetarian or simply trying to cut back on meat, you'll love the delicious flavors and hearty helpings of new Vegetarian Request meals from Lightlife." This full-page color ad shows the line of seven "Vegetarian Request" frozen meatless meals recently introduced by Lightlife. At the lower right of the ad is Lightlife's new registered service mark "Live long–travel light," and their toll-free phone number.

Talk with Lisa of Lightlife. 1996. June 26. These products were available in retail stores in May, and should be available nationwide by August. Most of the products contain either soy or wheat gluten.

This ad also appeared in the Sept. issue (p. 15), Oct. issue (rear cover), Nov. issue (p. 59) of Vegetarian Times. Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001.

11191. Nasoya Foods, Inc. 1996. Nasoya Tofu: Today's natural choice... (Ad). *Vegetarian Times.* July. p. 25.
• ***Summary:*** This full-page color ad shows colorful packages of the four varieties of Nasoya 100% organic tofu (made with well water) across the bottom: Extra Firm, Silken, Soft, and Firm. Across the top are three prepared tofu dishes: Tofu cubes wrapped in a tortilla, a blue bowl of creamy tofu dip. and skewered, grilled kabobs with tofu cubes. "The subtle nut-like flavor of Nasoya Tofu is achieved by the use of an authentic, time-honored recipe using organically grown soybeans and artesian well water." Address: 23 Jytek Dr., Leominster, Massachusetts 01453.

11192. Natural lifestyle magazine and mail-order market: Spring-summer '96. 1996. Asheville, North Carolina: Natural Lifestyle Supplies. 63 p. Catalog. 28 cm.
• ***Summary:*** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream, soymilk, Westbrae Malteds, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka [miso], organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. Address: 1. Dep. of Agro-Bioscience, Faculty of Agriculture, Iwate Univ. Ueda 3-18-8, Morioka, Japan.

11194. *Soybean Quarterly* (*Nebraska Soybean Board, Lincoln, Nebraska*). 1996. Soy reduces effects of osteoporosis. 2(3):2.
• ***Summary:*** Research indicates that consuming soy as part of a healthful diet may be one way to low risk of osteoporosis. This disease affects 15 to 20 million Americans, especially women. "High protein diets are associated with an increased loss of calcium in the urine. When it comes to protecting bone health, decreasing loss of calcium from the bones may be more important than consuming more calcium. Soy protein offers excellent quality protein, with less calcium loss compared to the same amounts of animal protein.

"Estrogen replacement therapy may reduce the risk of bone fractures by 50 percent." Soybeans and most soyfoods are a unique source of isoflavones, which mimic estrogens and may help promote bone health. In animal studies, isoflavones have been found to inhibit bone fracture and stimulate bone formation.

Many soyfoods, especially calcium-set tofu and calcium-fortified soymilk, but also soybeans, textured vegetable protein, and tempeh are good sources of calcium that are well absorbed by the body.

11195. Straus, Karen Cope. 1996. Soy: It's what's for dinner. We all need to get more soy into our diets, and its easier than you think to add it to foods you eat daily. *Vegetarian Times.* July. p. 82-84. [1 ref]

11196. Takai Tofu & Soymilk Equipment Company. 1996. Catalog of small and medium-scale equipment. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 8 p. 30 cm.
• ***Summary:*** This is a new edition of this catalog, printed with brown ink on glossy white paper. Across the top of the first page is written "The world's leading supplier of tofu & soymilk equipment."

Page 1 states: "During the 1960s and 1970s Takai gained a great deal of experience exporting our equipment to large and small Japanese- and Chinese-run manufacturers of tofu and soymilk in the United States, Europe and Southeast Asia. Then in early 1977, with the rapid growth of interest in soyfood products in the West, we began to work closely with William Shurtleff, author of *The Book of Tofu* and *Tofu & Soymilk Production,* to develop our first- and the world's first–English-language catalog, which appeared in August 1977. Since that time we have become the world's leading supplier of tofu and soymilk equipment. We have sold our equipment to hundreds of new and established companies worldwide, and we are constantly upgrading our equipment materials and quality (as with stainless steel) to meet the highest standards. To give you the widest possible choice of the best equipment available, we also include a number of items produced by other well-known Japanese manufacturers." Address: Ishikawa-ken, Japan. Phone: +81 76 294 1712.

11197. **Product Name:** Tofutti Cookies (Nondairy) [Peanut Butter, Oatmeal Raisin, Chocolate Chip, Fig Bars].
Manufacturer's Name: Tofutti Brands Inc. (Marketer).
Manufacturer's Address: 50 Jackson Dr. (P.O. Box 786), Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1996. July.
Wt/Vol., Packaging, Price: 16 oz package.
How Stored: Shelf stable.
New Product–Documentation: Tofutti Brands Inc. 1997, May. 1996 Annual Report. p. 2-3. New products introduced during 1996: Introduced in the summer, this is the company's first non-frozen, non-refrigerated product line. "Like all Tofutti products, they are completely dairy and cholesterol free."

11198. Vitasoy International Holdings Ltd. 1996. Annual report 1995/96. New Territories, Hong Kong. 104 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1996, group turnover (sales) was HK$1,301 million, up 4% over the previous year. Of these sales, 70% came from Hong Kong, 19.6% from North America, and 10.5% from the rest of the world. Operating profit was down dramatically due to a big recall crisis which cost HK$79.9 million. Earnings per share were 6.0 cents, down 75%. Dividends for the year were 9.6 cents, the same as the previous year.

Chairman's statement: A crisis contained: Because of the "sour-taste" crisis, the Group decided to suspend temporarily operations at its plants in Hong Kong and China and to recall all Tetra Pak products from the markets in Hong Kong and Macau. These actions were in line with our policy of always putting our consumers' interests first" (p. 6).

"In North America, the Group continued the trend set in the first half and turnover grew by 10% for the year. The overall consumption of tofu has significantly increased due to newly published medical evidence–and public awareness–of the health benefits of soya protein and its effect on cholesterol reduction" (p. 7).

In the section on "Markets" (p. 8) is more detail on the North American market, where "the Group achieved sales of HK$25 million, representing an increase of 10% over the previous year. Despite unexpected sales shortfalls in beverage, the net operating profit of the Group in North America jumped 14%.

"Tofu products were the largest contributor, accounting for 40% of turnover. Tofu also realized the healthiest growth of over 17%. This was followed by beverages which made up about 39% of the region's total sales. Owing to order backlogs, sales were hardest hit in the Canadian traditional markets, resulting in reduced sales of almost 25%. The Hong Kong recall had little impact on the North American Vitasoy soyamilk sales in terms of consumer confidence.

"Secondary line products made up 11% of the region's turnover, representing a 16% increase. The dressings line comprised about 5% of total revenues, representing a 12% growth, while two new product lines under the Newmenu brand, Tofu Mate seasoning and Meat Analog, contributed an additional few percent to sales." Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

11199. McReynolds, Thomas. 1996. Re: Two major new books on soyfoods to be published soon by southern California authors. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 5–in reply to inquiry. 3 p. Typed, without signature on letterhead.
• ***Summary:*** Patricia Greenberg is the author of what Tom believes will be a major soyfoods cookbook, which is scheduled to be published by Random House. It has no working title yet [but Patricia is considering "The Joy of Soy." The book will contain about 175 recipes and will be published in 1997]. Patricia is a teacher at The Learning Annex in Los Angeles, a well known and well-connected gourmet chef, and a nutrition educator as well. "More importantly to me, she is a Mori-Nu fan. My company (Mirage Fine Foods, Inc.) will retain her to head up a seminar on soyfoods for the master chefs in the Southern California area."

The other author, Akasha [Akasha Khalsa of Beverly

© Copyright Soyinfo Center 2013

Hills, a blue-eyed Sikh who wears a turban] is the "chef to the stars." Morinaga has retained her to be the author of *Tofu Temptations,* a Mori-Nu cookbook to be released in the spring of 1997. "She is a major culinary force and counts Michael Jackson and other deep-pocket celebrities [incl. Barbara Streisand, Al Pacino, Penny Marshall] (who could afford *anyone*) as her regular clients. She has created fifty recipes built around Mori-Nu exclusively and they are in a word–Fabulous!"

Note: Two more soyfoods cookbooks are expected out in 1996. (1) *Soy of cooking: Easy-to-make vegetarian, low-fat, fat-free, and antioxidant-rich gourmet recipes,* by Marie Oser (Chronimed Publishing in Minneapolis, Minnesota; due in Oct. 1996). (2) Soy! 75 delicious ways to enjoy nature's miracle food, by Dana Jacobi (Prima Publishing in Sacramento, California; due in Oct. 1996). Address: Marketing Director, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

11200. Liu, Keshun. 1996. Availability of special soybean varieties bred for food uses (Interview). *SoyaScan Notes.* Aug. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jacob Hartz Seed Company has a special program breeding soybeans for food uses. The four uses on which they focus most are (in descending order of importance): Tofu, natto, soy sprouts, and soy oil (the soybeans are high in stearic acid, a saturated fatty acid, so they require less hydrogenation). Hartz currently has a large supply of each of these types ready for sale. Any potential buyer should contact Keith Thompson, who is in charge of sales and marketing. Address: Project Leader, Soyfood Lab., Jacob Hartz Seed Co. Inc., 901 N. Park Ave., Stuttgart, Arkansas 72160. Phone: 800-932-7333.

11201. *Rafu Shimpo* (*Los Angeles, California*). 1996. Tofu Festival stirs up delights today and tomorrow. Aug. 9. Page 1. [Eng]
• ***Summary:*** The second annual Tofu Festival, sponsored by the Little Tokyo Service Center, will take place this weekend in Los Angeles. It will be part of the 57th Nisei Week Japanese Festival taking place at the Japanese American Cultural and Community Center Plaza in Little Tokyo. More than 20 restaurants and food providers will be serving their tofu specialties this year. Photos show Patricia Greenberg (author of *The Whole Soy Cookbook,* to be published by Random House in Jan. 1998), and Andy Nakano, owner of Jozu restaurant. A brief bio of each is given.

11202. *Rafu Shimpo* (*Los Angeles, California*). 1996. Taste of Little Tokyo: Tofu makes good at Festival. Aug. 12. [Eng]
• ***Summary:*** More than 10,000 individuals attended this weekend's Nissei Week activities. The inaugural LA Tofu Festival, organized by the Little Tokyo Service Center (LTSC), was a big hit with people of all ages and races. "This year was a beginning. Next year we will see it expanding into a major fundraiser for the LTSC," said Bill Watanabe, executive director of the LTSC. For more information about the LTSC call 213-680-3729. Photos show: Young Japanese-Americans eating tofu dishes. Bill Watanabe and Osamu Torii in front of a Hinoichi Tofu booth. Tofu cookbooks.

11203. *Rafu Shimpo* (*Los Angeles, California*). 1996. Ichi nichi roku-sen cho [In one day, 6,000 cakes of tofu served]. Aug. 12. p. 17. [Jap]
• ***Summary:*** The inaugural LA [Los Angeles] Tofu Festival, organized by the Little Tokyo Service Center (LTSC), was a big hit with people of all ages and races.

11204. Ferrebee, Carol. 1996. Business is booming at Nasoya (Interview). *SoyaScan Notes.* Aug. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In late 1995 Nasoya had its first million-dollar month. Currently they are making about 200,000 lb/month of tofu. They have now added a third shift and are working around the clock. Cleanup takes place at the same time the third shift is making tofu. John Paino is now retired and lives about 40 minutes away in Concord. He sold his shares shortly before the recent boom began, but he got a good deal and is happy. Jerry Maynard has been moved back to California, where he is director at Azumaya. Fred Eaton, who has an accounting background, has taken his place as president of Nasoya. Nasoya is considered the best performer when compared with Azumaya.

Nasoya continues to use only organic soybeans for making all its soy products. One of its brands is sold to the ethnic market on the East Coast; these consumers get organic tofu even though they may not especially want it. Nasoya is thinking of switching to non-organic beans for this brand to lower costs. Address: Quality Assurance Manager, Nasoya Foods, Inc., 23 Jytek Park, Leominster, Massachusetts, 01453. Phone: 508-537-0713.

11205. Santacruz, Nestor. 1996. Re: Hoping to work with soyfoods in Colombia. Letter to William Shurtleff at Soyfoods Center, Aug. 13. 1 p. Typed, with signature.
• ***Summary:*** They recently ordered books from Soyfoods Center. "Situation in Colombia is critical but there are conditions and receptivity for your message. We are deeply touched and identified with your efforts for a better world. Please, let us join them and try to do the best we can in our community.

"We are a couple, Nestor and Cecilia Santacruz, 40 and 46 years old. We studied chemistry in the National University of Colombia. Have worked in the industry in animal and human nutrition. Our first approach to a vegetarian diet was 4 years ago, here in Bogota, through a small restaurant that is also a school, run by a very small

© Copyright Soyinfo Center 2013

group of Colombians but inspired by an Oriental couple, Mr. Tomio Kikuchi and his wife, who lived in Brazil 40 years ago. We became familiar with cereals, vegetables, and soyfoods (tofu, miso). And our life changed since then.

"We are interested in working with you to establish a branch of the Soyfoods Center in Colombia so, please send us information and an application form." Address: Carrera 9 # 86-26 Apto. 503, Santafe de Bogota D.C., Colombia. Phone: 57 1 610 1210.

11206. Hizer, Cynthia. 1996. The versatile vegetarian: Veggie hot dogs hit home run in taste league. *Atlanta Constitution* (*Georgia*). Aug. 29. p. H14. Food section.
• ***Summary:*** In March, the Vegetarian Society of Georgia held a "Feel Good Festival" with a series of tastings. Hot dogs were tasted "as is"–without adding ketchup, mustard, relish, or bun. Here are the winners, in descending order of preference (i.e., with the favorites listed first): 1. Yves Veggie Cuisine vegetarian frank. This wiener was also designated best veggie dog by *Self* magazine and the *San Francisco Chronicle* last year. 2. Yves Veggie Cuisine tofu frank. 3. Natural Touch vegetarian frank. 4. Light Life Wonder Dog. 5. Soy Boy Not Dogs. 6. Light Life Smart Dog (fat free). 7. Light Life Tofu Pups ("This has been the leader in sales for years and, in fact, was the first vegetarian hot dog to be served at Candlestick Park"). 8. Wholesome and Hearty Garden Dog (Made with wheat gluten, no soy). Address: Georgia.

11207. Adams, Sean. 1996. Sorting look-alike soybeans: Genetic fingerprinting aids plant variety protection. *Agricultural Research* 44(8):12-13. Aug.
• ***Summary:*** "A few years ago, breeders at Northrup King Co. produced a new soybean ideal for making tofu.

"Called S16-60, the new variety had about 40 percent protein when dried–perfect for producing the fermented curd [sic, regular tofu is not fermented] popular in vegetarian salads and cooked foods."

When Northrup King applied for a "plant variety protection certificate–similar to a patent for plant," the USDA plant examiner, who reviews such applications, found as part of his routine database check that this variety was "virtually identical to another Northrup King soybean called B117, which had received a certificate in the 1980s and was parent of S16-60." Now the burden fell on Northrup King to show specific differences between the two varieties.

Enter Perry B. Cregan, as USDA geneticist who worked for the Agricultural Research Service and who has been developing genetic maps for soybeans. Cregan had "developed a unique fingerprint for each variety using genetic markers called simple sequence repeats (SSR's). These markers are repeating patterns of the four basic units of the genetic code that make up DNA, or deoxyribonucleic acid."

These fingerprints showed that there were several differences in the DNA, or genetic code, of the two soybean varieties. The certificate was issued. Address: ARS.

11208. Galaxy Foods Company. 1996. Annual report 1996. Orlando, Florida.
• ***Summary:*** Sales in 1996 were $3,950,455–down 16.8% from 1995. Net loss was $3,282,58–not as bad as the $5,013,578 loss in 1995.

At the top of the cover is written: "In 1972, Angelo Morini, Galaxy founder and president, became the first in the world to market healthy cheese (formägg)." An attached mission statement reads: "Galaxy invented healthy cheese products free from cholesterol, saturated fat and lactose and introduced them to the world in 1972."

Galaxy now has five rice-based cheese alternatives: Rice Chunk in Cheddar and Mozzarella flavors. Rice Slice in Mozzarella and American flavors. And Rice Parmesan (grated, in a jar). All five are "Soy free."

Page 5 states: "Galaxy's numerous accomplishments in innovation include: 1. The first dairy free individually wrapped cheese slices. 2. The first rice based line of cheese products. 3. The largest line of pareve kosher cheese products. 4. The first meat free line of meat flavored deli cuts. 5. The first individually wrapped cheese slices made with organic tofu. 6. The largest line of lactose free cheese and cheese related products. 7. The first complete line of salad bar cheddar products. 8. The first complete 'Lite Bakery' product line." Photos (p. 3-5) shows all of the company's products. Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

11209. Little Tokyo Service Center. 1996. The four seasons of tofu cookbook. Los Angeles, California. xiii + 82 p. Illust. No index. 14 x 22 cm. Spiral bound.
• ***Summary:*** Contents: Tofu: A 2,000-year-old health food miracle. History of tofu in China, Japan, and the West. Tofu tidbits: Q & A. Glossary (of Japanese ingredients). Spring menu: Appetizers, salads, side dishes, main dishes, desserts (a heart symbol = vegetarian recipe; of the 16 spring recipes, 13 are vegetarian). Summer menu. Autumn menu. Winter menu. On the rear cover is a full-page ad for Hinoichi tofu by House Foods America Corporation. The last page lists the names of companies participating in the 1996 L.A. Tofu Festival, incl. Beverly Soon Tofu Restaurant.

Talk with Margaret Endo. 1997. March 7. This cookbook was compiled for the Los Angeles Tofu Festival in August 1996 by the staff of the Little Tokyo Service Center (LTSC; from recipes they contributed and tested), published in English, and sold at the festival. Proceeds from sale of the cookbook benefit the LTSC's Nikkei Family Counseling Program and Emergency Caregivers Program to help the victims of domestic violence and their children. Address: Little Tokyo Service Center (Resource Development Center),

11211. McCord, Holly; Yeykal, Teresa A. 1996. Menopause naturally: Got hot flashes? get soy! *Prevention* (*Emmaus, Pennsylvania*). Aug. p. 65-70. [1 ref]
• ***Summary:*** About 75% of American post-menopausal women experience hot flashes and night sweats, along with sleep disturbances and mood swings. Until now, the only antidote for these unpleasant symptoms has been hormone-replacement therapy (HRT), a prescription medicine the replace the estrogen that women's bodies start making less of. But recently researchers have found that the foods made from the soybean may offer a practical alternative.

"The trail of evidence linking soy with a hot-flash-free menopause starts in Asia." There isn't even a word for hot flash in Japanese. Sherwood Gorbach, M.D., at Tufts University School of Medicine, in Boston, Massachusetts, was one of the first to suggest that the reason for this may lie in the Asian diet, which is rich in soyfoods that contain isoflavones–a natural plant form of estrogen. In one day, a typical Asian woman–who eats about a quarter pound of soyfoods–may be getting 30 to 50 milligrams of isoflavones from her food.

Three clinical studies are now under way to see if and how soy isoflavones work to relieve menopausal symptoms. At Bowman Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Gregory Burke, MD, heads a study of 240 women over age 45 experiencing hot flashes or night sweats. Every day for 2 years the women will drink an 8-ounce soy beverage containing either 1 mg, 34 mg, or 50 mg of isoflavones without knowing which level of isoflavones they're receiving. Researchers will see if more isoflavones relieve their menopausal symptoms or anxiety or mood swings.

Two studies at Tufts University, in Dr. Gorbach's department, are following 60 women with hot flashes. For 3 months, these women will eat either two specially designed almond- or chocolate-flavored soy breakfast bars that each contain 20 mg isoflavones (for a daily total of 40 mg isoflavones) or two placebo bars without isoflavones. Researchers will track the women's reports of hot flashes and night sweats, and their levels of estrogen and other hormones. Though these studies have not been completed, preliminary data look promising says Dr. Gorbach.

A table (p. 67) shows the amount of isoflavones (in mg) in a typical serving of various soyfoods. In descending order: Nutlettes breakfast cereal* (½ cup): 122 mg isoflavones + 140 calories. Beef(Not) textured soy protein granules* (¼ cup dry): 62 mg + 70 calories. Roasted soy nuts (¼ cup): 60 mg + 195 calories. Tempeh (½ cup): 35 mg + 165 calories. Low-fat tofu (½ cup): 35 mg + 54-75 calories. Regular tofu (½ cup): 35 mg + 105-120 calories. Take Care High Protein beverage powder (Protein Technologies International; 2 scoops): 35 mg + 100-130 calories. Regular soymilk (1 cup): 30 mg + 130-150 calories. * = Available from Dixie USA, 1-800-347-3494.

Even if this research doesn't show positive results, other studies show that soy lowers cholesterol and may prevent breast cancer and osteoporosis. "A serving of soy every day could turn out to be a good bet," says Dr. Gorbach. Researchers recommend consuming in the range of 30-50 mg/day of isoflavones. More than 100 mg/day could be harmful, so its is best to get your isoflavones from food instead of pills. Contains two recipes: Creamsicle Cooler (shake with soft tofu; 35 mg of isoflavones). Southwestern Skillet (with Beef(Not); 62 mg of isoflavones).

11212. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Profile: Harcan Kingsoya Co. Ltd. Aug. p. 7.
• ***Summary:*** Harcan Kingsoya began operations Canada in 1991, in Scarborough. The company was formed by Bernard Leung, Michael Cheung, and a Chinese soyfoods manufacturer in the People's Republic of China. The company's first and main product is soya sauce. They also produce tofu, soymilk, and "dried soybean curd." In the future they also plan to produce "veggie-food" products such as burgers, sausage, and ham. Harcan products are marketed under the Veg-A-King and VAK brand names. The company's market was originally Europe, but now they are shipping to local supermarket chains and wholesalers in Ontario. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11213. **Product Name:** Oh, my dog! (Meatless Hot Dogs).
Manufacturer's Name: Quong Hop & Co. (Exclusive distributor).
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1996. August.
Ingredients: Water, soy protein isolate, wheat gluten, tofu (water, organic soybeans*, magnesium chloride), yeast extract, brown rice, syrup solids, wheat starch, canola oil, wheat germ, mustard powder, salt, beet powder, nutritional yeast, rice syrup, grape juice concentrate, natural flavors,

carrageenan, spices. * = Grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 9.5 oz (275 gm) vacuum pack. Retails for $2.99 (1998/92, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 1 link (46 gm): Calories 60, calories from fat 10, total fat 1 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 360 mg (15%), total carbohydrate 2 gm (dietary fiber 0 gm, sugars 1 gm), protein 10 gm. Iron 6%, calcium 2%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Bob Gerner of Berkeley Natural Grocer. 1996. Sept. 3. About one month ago Quong Hop introduced this meatless hot dog. He thinks it is the best-tasting one on the market.

Product with Label purchased at Safeway Supermarket in Lafayette, California. 1998. Feb. 15. Red, blue, and brown on white. A line drawing shows a brown dog standing on its hind feet. "Perishable. Keep refrigerated." Back panel: "Three ways to enjoy! Steam for 3 minutes, or barbecue for 4 to 5 minutes over a medium flame, or microwave for 2 minutes in a little water."

11214. Wang, Huei-Ju; Murphy, Patricia A. 1996. Mass balance study of isoflavones during soybean processing. *J. of Agricultural and Food Chemistry* 44(8):2377-83. Aug. [45 ref]
• ***Summary:*** Discusses: Soybeans (Vinton 81, 1992), soybeans, (Vinton 81, 1993), soybean flour, products made in the lab–Tempeh, soymilk, okara, tofu (momen or cotton, $CaSo_4$ coagulant), whey, soy protein isolate, defatted soy flour, daidzein, genistein, glycitein. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, IA 50011.

11215. Gerner, Bob. 1996. Update on Vitasoy soymilk and Silk (made by White Wave), seen from a natural food retailer's perspective (Interview). *SoyaScan Notes.* Sept. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bob still sells Vitasoy soymilk products if he can get them. For the last 4-6 weeks Vitasoy products have been unavailable and off the market. Vitasoy was Bob's best-selling brand of soymilk, but the shelf has recently been empty. They are just starting to come in now, in small amounts–but no discounts are yet available and Bob cannot get the small sizes yet, only the liters. Starting about 3 months ago, distributors stopped discounting Vitasoy products, no matter how many cases a retailer ordered. Apparently they knew the supply was going to dry up.

Bob was never notified of a recall of Vitasoy products and he does not recall ever having returned any products to them. Bob uses Vanilla Vitasoy regularly to make French toast at his home; he likes it's dessert-like taste and has not noticed any problems with sour taste. Note: According to a Vitasoy employee, Vitasoy USA was unable to get any soymilk from Hong Kong for 3 months. They ran out and were unable to fill orders for a long time. They re-allocated (rationed) a lot of product to minimize the problem. Many people at Vitasoy USA now think (with the benefit of hindsight) that the decision to recall was made too quickly; if they had waited 12-24 hours, they would have realized that a huge recall was not necessary.

White Wave's refrigerated soymilk, Silk, is selling fairly well–but nothing spectacular. He tends to run out of the half-gallon sizes, which he prices below his ordinary markup. The quarts move more slowly than the half gallons. There are several reasons that Silk does not sell well: (1) The price is too high; (2) It is a new product with new packaging (gable-top carton like dairy milk); many people have not seen it or tried it; (3) Many people are not used to going to the refrigerator for their soymilk; they buy unrefrigerated aseptic cartons off the grocery shelves. Bob puts Silk in the refrigerator next to his other fresh soymilks (like Yo-Soy from Wildwood Natural Foods); this is four doors away from the dairy milk section. For pouring over cereal or as a beverage, Bob prefers the taste of Silk to Vitasoy–which is more thick and sweet. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

11216. Mio, Art. 1996. Morinaga sells five types Mori-Nu tofu in two sizes by mail order with a toll-free phone number (Interview). *SoyaScan Notes.* Sept. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Because Morinaga makes long-life, aseptically packaged tofu, they are able to sell it by mail order. Their five types of silken tofu each have an unrefrigerated shelf life of about 9 months and contain no preservatives. Their toll-free number is 1-800-669-8638 in southern California. Customers should either have a credit card ready (Visa or Master Card) or prepay by check. Most Mori-Nu tofu is sold by the case (24 x 10½ ounce cartons) but it is also available in 6-packs.

Regular tofu (in soft, firm, or extra firm textures) presently sells for $32.00 per case, including shipping. Lite (contains only 1% fat by weight = 1 gm of fat per 100 gm of tofu) tofu (in firm or extra firm textures) sells for $38.00 per case, including shipping. Address: National Sales Manager, Morinaga Nutritional Foods, Inc., 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

11217. *SoyaScan Notes.* 1996. The top five tofu manufacturers in the USA (Overview). Sept. 17. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This ranking is based on educated guesses and discussions with industry insiders, but it is not based on solid research data. In descending order of pounds produced per month: 1. Nasoya (Leominster, Massachusetts; Owned

© Copyright Soyinfo Center 2013

by Vitasoy). 2. Azumaya (South San Francisco, California; owned by Vitasoy). 3. House Foods America Corp. (Hinoichi; Los Angeles, California and Japan). 4. Morinaga (Japan and Torrance, California). 5. White Wave (Boulder, Colorado).

11218. Gaiser, Klaus. 1996. Re: Update on work with seitan and tofu in Germany. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 21. 3 p. Typed, with signature on letterhead. [Ger]

• ***Summary:*** Klaus founded Topas GmbH in April 1993. Originally the name stood for TO-fu + PA-sta, but after late 1996, as Klaus developed more and more seitan products, it came to mean TO-fu + PA-sta + S-eitan. Klaus sold his company Yamato Tofuhaus [in April 1989] to a firm named Huegli. With the money from the sale he purchased a 300-year old oak-framed farmhouse (with a 2,000 liter fountain in the old vault cellar) for himself, his wife, and 5 children. For the next three years he stayed on to manage Yamato Tofuhaus, but by the end of 1992 he found the work unsatisfying so he left and decided to start another health food business of his own. In the meantime, Huegli bought Heiler, Germany's biggest reform food wholesale company. Heiler was also dealing with tofu, so together Huegli and Heiler sold quite a lot of tofu and tofu products–about 2 metric tons per week of tofu convenience foods by 1992 and maybe another ton of tofu and tofu-varieties such as smoked tofu. Nowadays their annual sales are not that high; Klaus has no exact statistics, but he would estimate they are about two-thirds of 1992 levels.

In early 1995 Klaus tried to find a place for his company in the tofu market again, but her soon realized his place had been taken. "The German health food market was and is so flooded with tofu products that you just have to come with a real big bang to awaken any interest of the retail shop owners in a new tofu product. They just don't see any reason for selling the 23rd variety of tofu-burger and the 17th variety of tofu-spread."

Klaus then remembered an old recipe that used wheat gluten. He saves each and every product development experiment in his computer and has about 800 by now. The gluten was colored with red fermented rice (*beni-koji,* made with *Monascus purpureus*) and thus was very meat-like. In fact, when spiced, it so resembled a sausage that he first thought it was too daring to offer such a product to vegetarians. This product turned out to be the basis for his new business. He called it "Wheaty" and started selling it as a cold cut in late 1995. Since that time, monthly sales have gone up and up. "A mere joy." He could sell much more if he had enough money for costly advertisements, etc. Now his company is selling seven products, based mostly on seitan, with some tofu. Other companies are now starting to try to imitate his most successful product, Wheaty. Klaus believes that seitan has a very bright future in Germany, yet in a new form. The traditional lumps of gluten cooked in soy sauce have not been able to electrify large portions of the population. So Klaus has "re-invented seitan" to resemble familiar German meat products. "And this is the most effective way to convince a greater number of 'normal' people of the value of a vegetarian diet."

One serious problem is that red-fermented rice made with *Monascus purpureus* is not allowed as a food ingredient in Germany; there was a recent ruling by a German court of law. Moreover, as a food coloring, it is classified as a "food additive" so it needs an "E-number" from EC bureaucracy in Brussels, Belgium,–which it has not yet gotten. This is a pity, since it is the only natural heat-resistant meat color, as well as an excellent flavor enhancer, source of vitamin B, and cholesterol reducer. If it were legal, it could be made by Karl Selg-Mann, who is Germany's only manufacturer of soy sauce and miso.

Talk with Klaus by phone. 1996. Sept. 21. He presently does not own a factory; he finds other food companies to make his products. Klaus speaks almost perfect English. He hitch-hiked in England and Scotland in 1975, then lived for a year in China in 1976, arriving 3 days after Mao Tsedong died [Note: Mao died in Sept. 1976]. The BNN (*Bundesverband Naturkost und Naturwaren*), a German organization promoting organic foods, has established regulations concerning wheat gluten; originally they said it could only be made from whole wheat. But they found that was too expansive so now they allow the use of 10% by weight of vital wheat gluten. Address: Founder and owner, Topas GmbH, Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/25515. Fax: 07473/8320.

11219. Guy, Camille. 1996. Frankenfood on menu: Compliments to the prof–Are we the unwitting guinea pigs for genetically re-designed food? *New Zealand Herald.* Sept. 24.

• ***Summary:*** "New Zealand consumers will be eating genetically modified food by Christmas... As the first shipments of a Roundup-resistant soybean crop leave America, food campaigners warn that the beans will go into so many foodstuffs that few will avoid eating them. They say the beans carry health and environmental risks.

"Our Ministry for the Environment, attempting to discover just who will be bringing Roundup Ready beans into the country, says there is no New Zealand precedent for monitoring what as been dubbed 'Frankenfood.'"

To date, no New Zealand company has sought or obtained permission to import genetically engineered soybeans, yet American agricultural authorities say that these soybeans comprise up to 5% of this season's harvest and cannot be separated from traditional unmodified soybeans."

The soybeans have been genetically engineered by Monsanto so that farmers can spray Roundup weed killer

© Copyright Soyinfo Center 2013

(also made and sold by Monsanto) on the soybean crop without damaging–selectively killing only the weeds.

Last year over 350,000 kg of soybeans and 49 million kg of soyflour were imported to New Zealand. Some of these soybeans go into self-proclaimed soy foods like tofu and soy milk.

11220. *Los Angeles Times.* 1996. A modest tofu proposal: We give bean curd a new name, a new look and new all-American recipes. The complete tofu make-over. Introducing Protini–The other white "meat." Sept. 26. p. H1.
• ***Summary:*** This is the cover page to a long section on tofu. Most of the page is devoted to a large, color, imaginary ad for tofu (renamed Protini) in an aseptic box. Across the top of the ad we read: "Forget what you think you know about the ingredient formerly known as tofu." Protini is "now available in Tuscan Herb, Southwest Salsa, and Classic White." In the lower left corner is a large photo of tofu slices, arranged in a star pattern, atop a stir-fry.

11221. Ochoa, Laurie. 1996. Team Protini. *Los Angeles Times.* Sept. 26. p. H8.
• ***Summary:*** "Are toll-free hotlines, slick packaging and new bean curd products enough to push tofu into the mainstream? The advertising and marketing experts we talked to said definitely not. What tofu needs, they said, is a complete makeover.

"We decided to take the tofu challenge. First on the agenda: Get rid of the name." During several meetings they considered and rejected eleven other names, including Le Tofu, Soy Toy, Soy Bueno, Soyfu, Soy Cream, Soy Cheese, Bean Cheese, Frosted Mini Soy, Soy Newtons, Soya Lee Cheesecake, and Gee, I Can't Believe It's Not Pork. Finally they chose an Italian name–Protini: The Other White "Meat." Why? We "think it captures the meatiness of tofu, with a little Italian thrown in, because, heck, its trendy." Then they designed a new package with trendy lettering and colors, and came up with some new flavors. Contains a lengthy, complex recipe for Southwest tofu salad with salsa vinaigrette. Part of the recipe is chili-rubbed tofu. Address: Times food editor.

11222. Sheridan, Margaret. 1996. Is tofu ready for the big leagues? *Los Angeles Times.* Sept. 26. p. H8, H10, H11.
• ***Summary:*** The article begins: "Tofu, the spongy off-white soybean cake that spells B-O-R-I-N-G for so many people, is about to get a marketing makeover. Slick packaging, toll-free consumer hotlines, new products, and a blitz of cookbooks created by chefs rather than earnest vegetarian activists are some of the strategies tofu companies plan to use to bring tofu into the mainstream." A number of second generation tofu products found in supermarkets, and forthcoming cookbooks are listed.

"But some advertising and marketing professionals say that's not enough." The author talks with many such people who dislike tofu for various reasons: "Tofu is a joke... Tofu is a sissy. Bland, white, boring. It needs to take a stand. Become something. And that name! Its terrible." "Tofu goes against the American palate... Very little in American food, except baby food or gelatin, has that texture. Even buying tofu is alien. What else do you buy floating in water? And Americans love convenience. Bean curd is anything but. It's not an open-and-eat product." "I buy tofu but it just sits there, floating in my refrigerator. It makes me feel stupid and guilty. What do you do with it? I end up tossing it out." Hinoichi is America's largest tofu manufacturer. In March 1997 the company plans to move from its present 50,000 square foot plant in Los Angeles to a facility three times that size in Garden Grove. Harry Tanikawa, Hinoichi sales manager, notes that tofu and soy have been helped by good research and press from the medical community. He adds: "When you see fast-food places such as Panda Express in the shopping malls adding more tofu items to the menu, when you can buy a tofu hot dog at Dodger Stadium, you know tofu has arrived." Note: Dodger Stadium is a major league baseball park in Los Angeles.

Worthington Foods has experienced a sales rush in meat alternatives; the category went from nothing four years ago to $150 million a year. The company's best-selling items, sold under the Morningstar Farms brand, are breakfast patties, sausage links, garden burgers, and spicy black bean burgers–according to Don Burke, executive vice president of sales and marketing. The people who buy Worthington products are "the masses, people who want to cut down a little on meat and saturated fat. Most are aging baby boomers who want taste, convenience, and a health benefit."

Tofu "recipes for the mainstream" include: Red flannel hash. Mushroom scrambler. Tofu-stuffed French toast. Tofu slaw. Tofu citrus shake. Tofu cheesecake (p. H11).

The article ends with two sidebars: 16 "Tofu do's and don'ts." Soy food: Its many looks (p. H11)–Defines different soyfoods: Tempeh, miso, textured vegetable protein (TVP), soy milk, soy flour, soy cheese, soy sauce, tamari. Address: Times staff/food writer.

11223. Sheridan, Margaret. 1996. Learning to love tofu. *Los Angeles Times.* Sept. 26. p. H8.
• ***Summary:*** Mary Felando is registered dietitian, who runs an outpatient program on diet and exercise for former cardiac patients. Unable to find tofu recipes to fit the needs of her patients, she developed her own. Six years later, many of her students from Cedar-Sinai Preventive and Rehabilitative Cardiac Center hold recipe competitions.

Three women who are writing tofu cookbooks are Dana Jacobi of New York, and Marie Oser and Patricia Greenberg of Los Angeles. All three authors believe the time is right for mainstreaming tofu. Jacobi (who was raised a vegetarian) was also selected to develop and write tofu recipes for a new edition of the 65-year-old American classic, *The Joy of*

© Copyright Soyinfo Center 2013

Cooking, to be published in 1997 by Simon & Schuster. The project editor is Maria Guarnaschelli. The 1975 edition of "Joy" included a recipe for homemade tofu.

"Cookbooks and vegetarian food magazines have used tofu for years, but Jacobi was unimpressed with the recipes. 'It was earnest hippie food,' she says. 'The writers had morals but the recipes had no taste. They were rich and heavy. Tofu became associated with bad taste. It was unfair.'" Address: Times staff/food writer.

11224. Horaczynski, H. 1996. Re: Soyfoods companies in Poland. Letter to William Shurtleff at Soyfoods Center, Sept. 27–in reply to inquiry. 3 p. Typed, with signature. [Eng]
• ***Summary:*** Contains the name, address, and phone number of 10 soyfoods companies in Poland, and 5 importers of soybeans or soybean meal. Products made by these companies are sold in most cities with a population of 200,000 or more; typically there are at least 2 small retail shops in such cities.

In general, soyfoods in Poland are made of either dry [textured] soybean flour (called on the labels Soymeat or Soyprotein) or they are tofu (made by three Polish companies) with different additives. Address: ul. Gleboka 8/41, 20-612 Lublin, Poland.

11225. Skiff, James. 1996. Negotiations with ProSoya of Canada (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is working for a man named Howard Weiner (pronounced WEE-ner), who owns a company named Shared Ventures, which is a venture capital company that invests in food processing operations. Howard is now especially interested in soymilk and related products. Howard, whose family made their money originally (many years ago) by developing the dried egg business, is skilled at putting together new companies and joint ventures. Jim (often with Howard) has been negotiating all summer with ProSoya of Vancouver, BC, Canada, in the hope of starting a soymilk company in Minnesota using ProSoya technology. Jim and Howard (who flew to Vancouver twice) were hoping to get exclusive rights to use the ProSoya technology in the USA, to establish an initial plant in Marshall, Minnesota, and then to develop regional plants round the USA. About 3 weeks ago Jim and Howard pulled out of the negotiations, very frustrated.

When Jim first talked with Lorne Broten in Vancouver, they discussed that ProSoya's contribution might be valued at $500,000 or a little more. They next time Jim talked with him, ProSoya's contribution was being valued at roughly $1 million. Then Jim and Howard went to Vancouver; they met Lorne, then were soon negotiating with Jerry Duncan of ProSoya; he is a newcomer to the company who is trying to put together business deals for ProSoya. He was apparently formerly in dairy sales and marketing for a company such as DairyFresh or some other company in that part of Canada; he is said to own part of ProSoya.

ProSoya has taken the position that they will not sell or license their equipment; they are only willing to participate as an equal partner in joint ventures. They offer to provide the soymilk equipment and know-how; the partner must provide the land, capital, personnel, and any additional equipment (as for packaging tofu). At the time Jim withdrew from the negotiations, he calculated that his side was expected to contribute about $3.5 million. The catch is that ProSoya retained the right to take back the equipment and withdraw from the joint venture at any time. Jim was frustrated at not being able to talk with Raj Gupta; he was told that Raj Gupta is no longer involved in the joint-ventures company but he has signed agreements whereby they control the company and equipment, and now he receives a royalty on the equipment he invented. The proposed joint venture would have paid a royalty to Gupta based on the production volume of the plant.

Jim has seen ProSoya's equipment operating in Vancouver several times and he thinks that he can improve a little on the equipment and a lot on the product. See comments on White Wave's Silk in a separate interview. In Vancouver, Jim tasted ProSoya's soymilk, yogurt, and tofu. He was very impressed with each of these products. The soymilk products made by ProSoya in Vancouver were very bland, with almost no beany taste. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

11226. *ASA Today* (*St. Louis, Missouri*). 1996. ASA/Japan hosts 40th anniversary celebration. 2(10):1-2. Sept.
• ***Summary:*** An estimated 175 "Soycomplex Leaders" from throughout Japan attended the ASA [American Soybean Association] /Japan 40th Anniversary celebration in Tokyo, according to ASA/Japan Country Director Kent Nelson. In 1946 ASA started activities in Japan as a member of the Japanese American Soybean Institute (JASI), which included the Japan Oilseed Processors Association (JOPA), the Japan Oil and Fat Importers & Exporters Assoc. (JOFIEA), and the Japanese tofu, soy sauce, and miso associations.

A photo shows ASA Executive Officer George M. Strayer and Mrs. Strayer in October 1955 leaving Waterloo, Iowa, enroute to Japan on a trade mission.

One sidebar (p. 2) titled "Meeting Japan's needs now and in the future," states: Japan imports 97% of its soybeans. Nearly 25% of Japan's imported soybeans are used for food. Japan is projected to import its 5 billionth bushel of soybeans from the USA in the second half of the year 2000. "Japan remains the top single country market in the world (soymeal included) and is expected to remain the largest export market for US producers into the year 2000."

A second sidebar (p. 1) titled "ASA/Japan celebrates 40th anniversary," notes that in 1956, Japan imported

© Copyright Soyinfo Center 2013

536,000 metric tons of US soybeans. In 1995 Japan imported eight times that amount, over 4 million metric tons. This fall a unified trade team composed of JOPA processors and JOFIEA importers will meet with ASA and United Soybean Board leaders in St. Louis, Missouri, to discuss short, medium, and long-term goals.

11227. Clofine Dairy & Food Products. 1996. Classified ad: Specialty ingredients: Taking tofu to its next level! *Bluebook Update* (*Bar Harbor, Maine*) 3(3):7. July/Sept.
• ***Summary:*** Using a fresh soymilk base and a proprietary process, Clofine has developed "Spray Dried Soymilk & Tofu Powders to perform and offer high isoflavone content. Available in lowfat, kosher-parve, and organic. Contact Richard Eluk..." Address: 1407 New Road, Linwood, New Jersey 08221. Phone: 609-653-1000.

11228. Franklin, Deborah. 1996. The healthiest women in the world [in Okinawa]. *Health.* Sept. p. 56-63.
• ***Summary:*** On average, American men now live to be 72, and American women 79. Not as good as the Japanese, where the ages are 76 and 83 respectively. But women in Okinawa live, on average, to age 84–longer than women in any other country or region of the world. Okinawa was annexed by Japan in 1879 and today it is a full-fledged Japanese state (the equivalent of a U.S. state). What is their secret? Kazuhiko Taira, a gerontologist at the University of the Ryukyus in Okinawa, thinks that much of it has to do with the Okinawan diet. In Okinawa there is a saying that "food is medicine." Traditionally Okinawans have eaten three times more meat (especially pork) than Japanese mainlanders, 50% more tofu, and–very important–40% less salt. In the decades before 1960, mainland Japanese adults typically consumed 6-9 bowls of miso soup each day, plus a few small servings of salty pickled vegetables and/or seaweed–all sources of salt. Yukio Yamori, who (for the last 15 years) has studied links between diet and longevity notes that Okinawans eat quite a bit of tofu and other soy products which are particularly rich in isoflavonoids–estrogen-like compounds that may reduce one's risk of osteoporosis. His "most recent study, of post-menopausal women in Japan and Hawaii, showed that women who consumed the most soy had the densest bones." This might explain why elderly Japanese–and especially Okinawan–women suffer far fewer bone fractures than American women, even though the Japanese consume much less calcium.

Another important key to a long and healthy life in Okinawa is *yuimaru,* a word written with the Japanese characters for "circle" and "connection." It expresses that sense of belonging and connectedness and feeling needed, which makes elderly people look forward to each new day. In Okinawa, the elderly are greatly respected. Address: Staff writer.

11229. Hastings, Carl. 1996. Soybean products in human foods. Paper presented at Regional Workshop on Soybean Processing and Utilization for Central America and the Caribbean. 4 p. Held Sept. 15-18 in Jamaica.
• ***Summary:*** Contents: Introduction. Soy sprouts. Whole soybeans: Cooked green beans, cooked soybeans, roasted or deep fat cooked soybeans (soy nuts–salted, flavored, etc., candy coated, salad topping, bakery ingredient or topping, soynut butter, soy coffee) fermented soybeans (tempeh–*Rhizopus,* natto–*Bacillus,* hamanatto–*Aspergillus*). Cereal blends: CSM (Corn-Soy-Milk), WSB (Wheat-Soy-Blend), other (bulgur, oat, sorghum grits).

Refined soy oil: Solvent extracted, physically extracted, uses, lecithin. Soy protein: Soy flour (full fat, defatted), concentrates, isolates, textured, uses. Hulls. Soy fiber. Soy milk: Liquid, powder, uses (plain, flavored, fortified, blends, instant formula, nutritional beverages, tofu, soy cheese, frozen desserts, yogurt, soymilk film {yuba}). Soy sauce. Soy paste (miso). Soy pulp (okara). Address: Reliv, Inc., Chesterfield, Missouri.

11230. **Product Name:** Firm Tofu, Mushroom Tofu, Soymilk.
Manufacturer's Name: Hung Vuong Tofu #2.
Manufacturer's Address: 4138 Monterey Road, San Jose, CA 95111. Phone: 408-229-9255.
Date of Introduction: 1996. September.
New Product–Documentation: Talk with Lieu Ta of San Jose, California. 1997. Aug. 19. This company is run by a Vietnamese-American family, with which she is associated. They started making tofu and soymilk on 10 Sept. 1996. The manager, Scott Truong, is the only one at the factory who speaks English. They also make vegetarian foods.

11231. Nutrisoya Inc. 1996. Classified ad: Bulk soymilk. *Bluebook Update* (*Bar Harbor, Maine*) 3(3):7. July/Sept.
• ***Summary:*** "Nutrisoya Inc. is Canada's leading soymilk and tofu manufacturer." In January 1996 the company launched its new line of aseptic packaged soymilk, "Nutrisoy Premium Lite." Recently they have upgraded their production facility and can now supply up to 3,000 liters/hour of organic soymilk. Contact Nick Feldman. Address: 4050 Pinard, St.-Hyacinthe, QUE J2S 8K4, Canada. Phone: 514-796-4261.

11232. Pulmuone U.S.A. Inc. 1996. Pulmuone (Catalog). South Gate, California. 16 p. 28 cm.
• ***Summary:*** This is a very attractive, full-color catalog describing the company and its products. Contents: Cover (with a green photo of Korean countryside). Bring nature to your life: a message from Pulmuone. "Pulmuone begins with nature. We strive to bring nature to your door steps. Our job is a process to create a balance between nature and technology. The most advanced technology is applied in developing our products. Seek the balance. Taste our

© Copyright Soyinfo Center 2013

promise." Tofu: Good as meat without the fat (3 tofu products). Pasta from Asia? Instant noodle, fresh noodle, dried noodle. Authentic taste from home: Tea, soybean paste (6 types of Korean-style miso), oil and vinegar, organic beans and grains [brown rice, sweet brown rice, whole barley, pressed barley, soy bean, black [soy] bean, kidney bean], mineral water. Health food: What if you don't have time to eat the right food? Multi-complex health supplements, diet supplements, concentrated health supplements. Cosmetic: Isslin skin care program. About Pulmuone. Important dates in the history of Pulmuone: May 1981–Pulmuone Organic Foods founded (direct distribution of Organic farm products). Oct. 1982–Pulmuone Fermented Foods founded. April 1983–Pulmuone Fermented Foods opens production facility in Pochun (begins production of supplementary foods). May 1987–Pulmuone Kimchi Museum opens. May 1988–Pulmuone R&D Center opens. Jan. 1989–Pulmuone Scientific Committee founded, Dietary Life Research Center opens. Jan. 1990–Doan Soybean Past Plant opens. Jan. 1991–Pulmuone USA Inc. founded. June 1991–Doan Noodle Plant opens. Sept. 1992–Doan Supplementary Foods GMP Plant opens. Aug. 1993–Korean-Chinese joint venture, Ilsongjung Foods Ltd. founded. June 1995–Tofu Plant opens in U.S.A.

"Pulmuone was founded in 1981 with forty employees. It has grown to become a multi-national company of 2,000 employees with annual sales volume of $250 million.

"The secret to their success lies in their uncompromising commitment for better foods and better life.

"Pulmuone's 'Research and Development Center' opened in 1988 to continue the search for more advanced technology in ensuring the quality of food and life. Together with 'Pulmuone Science Committee' organized with the outstanding scholars in the field, our challenge to science and technology for the future will be succeeded."

Photos show: Sliced and packaged tofu (p. 4-5). Six varieties of Korean soybean paste (p. 9). The outside of Pulmuone's tofu plant at South Gate, California (p. 14). A tofu production line in the USA plant (p. 15).

Letter from John Sim, marketing director of Pulmuone. 1997. June 17. This brochure was printed in September 1996. Concerning the statement that Pulmuone uses only organic materials: "Pulmuone Tofu manufactured here in the U.S. is made from Vinton 81 soybeans from Minnesota. Products such as bean paste are manufactured in Korea using only certified organic soybeans." Address: 4585 Firestone Blvd., South Gate, California 90280. Phone: 213-564-3000.

11233. Reilly, Lee; Rattenbury, Jeanne. 1996. Raw tofu is an oxymoron. *Vegetarian Times.* Sept. p. 28.
• ***Summary:*** All tofu is cooked before its packaged. A color photo shows a square cake of tofu on a white plate.

11234. The Mail Order Catalog. Fall-winter 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

11235. Stein, Jill. 1996. Possible tofu link to Alzheimer's disease. *New Zealand Doctor.* Oct. 2. [2 ref]
• ***Summary:*** "Contrary to what might be expected, men who consume consistently high levels of tofu in mid-life appear to be at increased risk of Alzheimer's disease (AD) in late life.

"This finding follows research by a group from the National Institutes of Health and the University of Hawaii."

"'We know that, in addition to their superior nutrient content, soybean foods may contain significant amount of isoflavone molecules that can alter the metabolism of brain cells sensitive to normal to oestrogens,' chief of the Asia-Pacific Office of Epidemiology, Demography and Biometry Program at the National Institute on Aging, Lon White says.

'"We worry that these molecules, which may have other important health benefits, could have an adverse impact on brain aging.'"

11236. Gaiser, Klaus. 1996. Re: Brief history of Topas and its products. Letter (fax) to William Shurtleff at Soyfoods Center, Oct. 10. 3 p. Typed, with signature on letterhead. [Ger]
• ***Summary:*** Klaus founded Topas GmbH in April 1993, but did not really start to sell tofu products until September of that year. At that time he sold to Heiler (A Reform food wholesaler, purchased by Huegli in 1990): 4 kinds of Tofu Burgers (Oriental, Pikant, mit Gartengemuese, mit Sauerkraut), two kinds of Tofu Rolls (actually sausages; Natur, mit Kräutern), 5 kinds of Tofu Pastete, and 3 kinds of Tofu Spreads. To Huegli he sold: 3 kinds of that stone-hard, dry Tofu-Pastete (in 1.5 kg blocks; mit Broccoli, Gärtnerinnen Art {with Broccoli, carrots, and peas}, and Holsteiner Art), as well as 3 kinds of Tofu Burgers (mit Linsen {lentils}, Oriental {because of some curry}, and piquant {similar to Oriental}; all came in large packages of about 40 pieces per package). He had to re-develop all of these, because they had been on the market before, but the supplier suddenly stopped supplying them and he had left

© Copyright Soyinfo Center 2013

that firm by the end of 1992; by the spring/summer of 1993 he was ready for competition with Heiler/Huegli. He made a big mistake thinking his future lay in supplying Huegli/Heiler with the products they needed instead of starting to build up his own brand name and fame in the market.

Klaus did not make any of these products himself; He found a company to produce them for him (which was not easy) and after having taught the staff there how to make everything, he just bought all the products and sold them to Huegli and Heiler. But for reasons that are confidential, this arrangement did not work out.

So starting in early 1995 he tried again to sell tofu products under the Topas label to the health food market. He introduced two types of tofu pouches, tofu cold cuts, and a blend of tofu spreads. Only the last product survived. Finally he realized that the real opportunity lay in making meat alternatives from seitan. Address: Founder and owner, Topas GmbH, Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/25515. Fax: 07473/8320.

11237. Spence, Paddy. 1996. SPINS (Spence Information Services) is a new company providing information about the natural products industry to manufacturers (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** SPINS started providing information in Jan. 1996. Their sources of this information are: (1) Natural product distributors, including United Naturals but not including Tree of Life (the biggest such distributor). These distributors account for about 20-30% of all U.S. natural product sales. (2) A.C. Neilson's HomeScan Panel, with a population designed to mirror the U.S. census.

They provide information only to manufacturers. It is provided on a bi-monthly basis–every two months, down to the UPC level = the individual product or item level. This information, aggregated for the USA costs $1,500 per category. One such category is non-dairy beverages (soymilk, rice milk, almond milk). Others include meat substitutes, and cheese alternatives. One of their clients is Vitasoy (USA) Inc.

Talk with Richard Rose of Sharon's Finest. 1997. March 16. The 6-7 distributors from which they now receive information represent well over half of the natural foods market. Richard uses the bar-chart information to say to retail buyers: "Sharon's Finest is No. 1 in unit sales, but you carry only one of our 17 SKUs. Tofu-Rella is now the best-selling cheese alternative in terms of unit sales (but Soya Kaas is No. 1 in dollar sales). This product is in the top ten and you don't even carry it." Address: President, SPINS, San Francisco, California. Phone: 415-284-0546.

11238. Hizer, Cynthia. 1996. The versatile vegetarian: Making tofu an endeavor that's well worth the effort. *Atlanta Journal-Constitution.* Oct. 17. p. H.14.

• ***Summary:*** A detailed description of making 32 ounces tofu at home from 1½ cups of dry soybeans and nigari coagulant. She recommends buying a tofu-making kit if you plan to make tofu repeatedly. If you have the time, homemade tofu is a bargain. For 2 pounds of soybeans, Cynthia spent 33 cents on organically grown soybeans at a natural foods store. By comparison, commercial tofu in her area retails for about $1.39 for 16 ounces. For that price, she could make about 8 pounds of tofu.

"To start my tofu, I turned first to the best book on the subject, 'The Book of Tofu,' by William Shurtleff and Akiko Aoyagi (Autumn Press, $7.95)."

Then she got a lesson from Louise Blume of Cleremont, Hall County, Georgia, who has been making tofu at home for 25 years. Louise said it was very easy to make and she loved it.

11239. Johnston, Cathy. 1996. Health-food maker seeks to buy former shrimp plant. *Sun* (*Lowell, Massachusetts*). Oct. 24. p. 7, 9.

• ***Summary:*** Nasoya Foods Inc. of Leominster, Massachusetts, "a producer of soy-based health food products, is working to buy the former New England Shrimp Co. building in Ayer, Massachusetts, located about 7 miles northeast of Leominster, and a slightly smaller town than Leominster. According to Nasoya president Fred Eaton, the 125,000 square foot building (located at One New England Way off Westford Road) would serve as a new, expanded headquarters and manufacturing plant, and will bring 77 jobs to Ayer. The company expects to add another 175 new positions during the next 3-5 years. The shrimp company was foreclosed upon by lenders after the federal government shut it down in 1992 for selling tainted shrimp. The FDIC, which now owns the building, auctioned it off in a sealed bid process on 25 Sept. 1996. Nasoya, the top bidder, has until Nov. 25 to complete the deal.

Nasoya was founded in 1978, as a tofu manufacturer located in a barn in Leominster. In 1984, 6 years later, as tofu production topped 25,000 lb/week, Nasoya outgrew the barn and moved into its current 30,000 square foot processing facility on Jytek Drive in Leominster. By 1987 Nasoya was producing more than 60,000 lb/week of tofu. In 1990 Nasoya was acquired by Vitasoy (USA) Inc. The former shrimp plant, with about 4.2 times the square footage of Nasoya's present plant, would give Nasoya the space to expand its current operations as well as to install a new line for making Vitasoy soymilk.

Nasoya's revenues grew 16% and 22% during the last two years respectively. The company is projecting a 24% sales growth this year.

Note 1. Nasoya's fiscal year runs from April 1 to March 31. So "this year" will end on 31 March 1997.

Note 2. Talk with Nasoya representative. 1997. Jan. 13. Nasoya purchased the plant in Ayer on 18 December 1996

© Copyright Soyinfo Center 2013

and expects to be making tofu in the plant by about June of this year. They will operate two plants for a while, and hope to have finished phasing out the present plant in Leominster by the end of 1997. Nasoya uses only organic soybeans so they do not anticipate any problems in answering questions about using genetically modified soybeans. They have not yet prepared any documents to answer consumer questions on this subject.

Note 3. Talk with Nasoya representative. 1997. Oct. 1. The first Vitasoy soymilk started to be shipped from the plant in Ayer in mid-September 1997. The offices have now been moved to Ayer from Leominster. All tofu is still being made at the plant in Leominster.

Note 4. A label from the Azumaya tofu made in South San Francisco, California, shows that "glucono delta lactone" is now being used, with calcium sulfate, as a coagulant. Address: Sun Correspondent.

11240. Yap, Livingston George. 1996. The tofu market in Florida (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** LEASA Industries is the largest tofu manufacturer in Florida. The company makes about 2,000 lb/day of tofu, five days a week, or 10,000 lb/week. Sales are growing steadily. One fairly large competitor is Marjon Specialty Foods in St. Petersburg, Florida, but George thinks that they do not make their own tofu. Fully, Inc. in Miami (run by Manny Wong) has been making tofu since 1986; they make tofu only for the Chinese market. Address: Owner, LEASA Industries Co. Inc., 2450 N.W. 76th St., Miami, FL 33147. Phone: 305-696-0651.

11241. *Better Homes and Gardens.* 1996. The benevolent bean: Cancer fighter, cholesterol cutter, and more–There's a whole lot of nutrition in this unassuming little soybean. 74(10):76, 78. Oct.
• ***Summary:*** This article is in the "Good food / Good health" section. Contents: Introduction. How much soy? ("Just a few ounces of soyfoods every day allow you to reap any of its health benefits"). Food for a healthy heart. Fight cancer, too. Stronger bones, cooler hot flashes. Adding soy to your diet: Tofu–from firm to silky, soy milk–plain or flavored, soy flour–for baking, whole soybeans fresh and dry.

"With Mary Hubbard, Registered Dietitian and PhD in education, She teaches at Grossmont College in California..." Color photos show: (1) A pod containing 3 dry soybeans, held in a person's fingers. (2) Dry soybeans, tofu cubes, soy flour, soy oil in a cruet, and a stick of soy margarine.

11242. Fantastic Foods, Inc. 1996. Healthy meals for a hectic world. Petaluma, California. 7 panels each side. Each panel: 13 x 7 cm.
• ***Summary:*** This little full-color leaflet (accordion folded) gives an introduction to each of Fantastic Foods product lines, including Tofu Helpers, Vegetarian Entrees, and Hearty Soups.

A full-color 1-page leaflet (8½ by 11 inches, double-sided) with the same title presents much the same information in a different format. The title on the back is "With Fantastic Foods... You can have it all! Great taste. Wide variety. Wholesome." Address: 1250 North McDowell Blvd., Petaluma, California 94954. Phone: 707-778-7801.

11243. Jacobi, Dana. 1996. The natural kitchen: Soy! 75 delicious ways to enjoy nature's miracle food. Rocklin, California: Prima Publishing. xii + 244 p. Oct. Index. 22 cm. Series: The natural kitchen. [16 ref]
• ***Summary:*** Contents: Preface. Acknowledgments. Introduction: Soy and health. All about soyfoods: Traditional soyfoods (tofu, miso, tempeh, soy sauce, soymilk), other Asian soyfoods (okara, yuba, kinako, natto), second-generation soyfoods (soy dairy products, soy deli foods, textured vegetable protein {TVP}, textured soy protein {TSP}, soy isolate (isolated soy protein)), more soy choices (fresh soybeans, dried black soybeans, soy flour, soy grits, soy flakes, soy nuts), cooking with soyfoods (tofu {pressing, freezing, marinating, sautéing and pan-crisping, frying, braising, pureeing, parboiling, storing and handling tofu}, miso, tempeh, soymilk, other soy dairy foods), cook's notes (herbs, spices and flavorings, nuts, oils, produce, stock, sweeteners).

Soups, appetizers, and first courses. Main dishes. Pasta and light dishes. Side dishes and sauces. Salads, burgers, and kebabs. Desserts. Breakfast and beverages. Mail order sources.

The Preface states: "If you are new to soy, you will find descriptions of soyfoods, from tofu to soymilk... If you already cook with soyfoods, the approximately 75 recipes in this book and their variations will expand your repertoire. These recipes will take you across lines that people who cook with soy rarely approach. The dishes bring familiar and satisfying textures along with flavors that are full and deep. Whether ethnic or classic, they are dishes with verve and elegance." The author first tasted tofu, with her parents, in 1953, "at the precocious age of eight," at The Great Shanghai on 125th St. in Manhattan, New York City. Address: Food writer, New York, NY.

11244. Messina-Hirsch, Caren. 1996. Home improvement–Incorporating soy products into family meals. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 4(4):3. Fall.
• ***Summary:*** On what look like 3x5 inch recipe cards are recipes for: Spaghetti sauce (with "4 cups cooked, ground soybeans"). Nice rice bake (with "1¼ cups textured soy granules"). Strawberry banana shake (with "One 1.5 oz. package of silken/soft tofu"). Address: R.D.

11245. Morinaga Nutritional Foods, Inc. 1996. Finally... a cabinet member you can trust (Ad). *Vegetarian Times.* Oct. p. 25.
• ***Summary:*** This full-page color ad shows 6 cartons of Mori-Nu Tofu and Mori-Nu Mates Chocolate Pudding & Pie Mix on a shelf in a kitchen cabinet or cupboard. "Stock your cupboard with Mori-Nu Silken Tofu–the tofu you can trust to stay "first day fresh" without refrigeration. Our modern aseptic* package guarantees Mori-Nu's freshness without preservatives or irradiation... Finally–a tofu you can trust. Mori-Nu. The low-fat tofu in the long-life package."

* = "aseptic packaging: Voted #1 food science innovation by the Institute of Food Technologists because it increases nutrient retention and flavor while protecting against bacterial contaminations."

Talk with Art Mio of Morinaga. 1996. Nov. 8. Tofu in the pantry shows its lack of need of refrigeration.

This ad also appeared in the Dec. 1996 issue (p. 23) of this magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11246. Nasoya Foods, Inc. 1996. News from Nasoya. Our delicious Nayonaise is now also available fat free! (Ad). *Natural Foods Merchandiser.* Oct. p. 123.
• ***Summary:*** This half-page color ad shows one jar of new Nasoya Fat Free Nayonaise: Vegi-dressing & spread next to a jar of regular Nasoya Nayonaise (which contains 70% less fat than mayonnaise). To the right of the two jars is a subway sandwich and two bowls full of diced vegetables. "Visit us at our Web site: http://www.nasoya.com." Address: Leominster, Massachusetts. Phone: 1-800-229-TOFU (8638).

11247. Nasoya Foods, Inc. 1996. Legalize tofu (Memorabilia–Button with safety pin on back). Leominster, Massachusetts.
• ***Summary:*** This metal button, 2¼ inches in diameter, is meant to be worn on one's shirt. The word "Legalize" is written in red above the word "Tofu," which is in black–both on a glossy white background. The button was brought to Soyfoods Center in April 1997 by Patricia Smith who picked it up at the Nasoya Foods booth at the Natural Products Expo in Anaheim.

Talk with Amy Towle, marketing manager at Nasoya. 1997. April 16. This button is just a joke–sort of making fun of tofu to catch people's attention. Bob DeCosta in marketing came up with the idea. The button was first introduced at the Produce Marketing Association (PMA) show in Oct. 1996.

Note: The PMA is America's biggest produce association (as for supermarket produce buyers), and their 5 day show each year is the biggest of its type in the world.

Note: This is the earliest memorabilia–button with safety pin on back–seen (Oct. 2001) that mentions soy. Address: 23 Jytek Park, Leominster, Massachusetts, 01453. Phone: 508-537-0713.

• ***Summary:*** This is a very nice gourmet vegan cookbook with 16 full-page color photos. Contents: Dedication. Notice: Consult a health care professional. Grateful acknowledgment to. Foreword, by Neal D. Barnard, M.D. Preface, by Marie Oser. Introduction, by Suzanne Havala. Soyfood for thought. A healthy kitchen. The soyfoods pantry (short definitions of generic and brand-name soy products). A quick guide to ingredients. Substitutions. Spices: The variety of kitchen life. Techniques.

Recipes: Sensational starters. Soups, stews, and salads. Bountiful breads. Exceptional Entrées. Soyful sides. Pizza and pasta. Delectable desserts.

Resource guide (Names and addresses of 23 companies selling soy and soy-related ingredients). Recommended reading (15 books). Bibliography (40 journal articles). Address: Agoura Hills, California 91391. Phone: 818-707-7353.

11249. *Plenty Bulletin* (*Summertown, Tennessee*). 1996. Plenty and The Farm present the Sixth Annual Harvest Festival in Summertown, Tennessee. 12(3):2-3. Fall.
• ***Summary:*** The Harvest Festival took place on 27-29 Sept. 1996. Among the 12 photos are: (2) Vegetarian cookbook author Louise Hagler introducing some new recipes to willing testers. (2) Community founder, Stephen Gaskin, speaking into a microphone, reflecting on the first 25 years. (3) Two members of a Farm youth group named Tofu Nation playing acoustic guitars.

11250. SPINS Distributor Information. 1996. Top eight brands. Packaged cheese alternatives ranked by unit sales. Total U.S. [natural food stores]–Sept/Oct. 1996. San Francisco, California. 1 p. Unpublished typescript. 28 cm.
• ***Summary:*** Sharon's Finest (80,000 units, 30.5% share of total units sold). Soya Kaas (75,000, 27.9%). Soyco (65,000, 24.5%). Lisanatti (16,000, 7.2%). Soymage (12,000, 5.9%). White Wave (4,000, 2.3%). Nu Tofu (3,000, 1.4%). Wholesome & Hearty (1,000, 0.2%).

Note: These figures apply only to the natural and health food markets. Address: SPINS (Spence Information Services), San Francisco, California.

11251. Straus, Karen Cope. 1996. Let the eating begin: Readers from across the country and Canada tell us their picks for gold and silver in the olympics of vegetarian restaurants. *Vegetarian Times.* Oct. p. 62-72. [1 ref]
• ***Summary:*** On the first page are listed the "Winners by region," the top two vegetarian restaurants in each of 5

© Copyright Soyinfo Center 2013

regions: West, Midwest, South, East, and North (Canada). On page 64 are listed favorite vegetarian restaurants in 21 states and Canada. The states with the most listings are California (17), New York (8), Pennsylvania (6), and Canada (5). Favorite recipes from various restaurants are given, including: Layered tofu supreme (Kung Food, San Diego). Jamaican-style curried tofu and mixed vegetables (Woodstock Vital Foods, Woodstock, New York). Tofu rancheros (Seva Restaurant, Ann Arbor, Michigan). Address: Food editor.

11252. SunRich. 1996. Soya food ingredients. Soybeans for: (Leaflet). Hope, Minnesota. 3 p. 28 cm.
• ***Summary:*** These two closely related leaflets are in black ink on a red letterhead. The first leaflet states that SunRich offers "specialty soybeans... for specific soyafood uses: Consistency. Quality. Identity preserved." "Our extensive grower base enables us to contract produce soybeans for your special needs. Specific varieties with reduced antinutritional factors (lipoxygenases, trypsin inhibitor enzymes and oligosaccharides, stachyose and raffinose) available."

"Soyamilk powders: For ingredient or beverage use." A table describes soya beverage powders, spray-dried soymilk, spray-dried tofu powder, soy/dairy milk replacers.

"Sweet Beans–Frozen green soybeans–Podded [in the pods] (Edamame) or peeled (Mukimame). Certified organic soybeans and products available."

The second leaflet states: "Tofu varieties–Vinton, Beeson. Soymilk–Yellow or white hila. Sized over 6.7 mm round. Natto–Sized through a 5.5 mm round. Miso–Yellow hila. High soluble sugars. Boiling soybeans–Edamame varieties, yellow or black seed coats, high soluble sugar. Sized over 7.5 mm round screen. Frozen green soybeans. Edamame, mukimame. New varieties and types–High soluble sugars, high protein content, specific fatty acids. Grower base of 500 growers in Minnesota, Iowa, Wisconsin, South Dakota. Produce specific varieties for customers–Container lots, bagged, bulk. Bulk barge. Organic or conventional." Address: P.O. Box 128, Hope, Minnesota 56046-0128. Phone: (507) 451-3316.

11253. United Soybean Board. 1996. National report on consumer attitudes about nutrition. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This report, commissioned by USB, was conducted by a an independent research firm. It included telephone interviews with 1,000 consumers and primary household shoppers of all ages throughout the USA. They were asked a series of up to 23 questions. The standard margin of error for the study is ±3.2%.

Popularity of soy products: A bar chart shows the following, listed in descending order of popularity. The first number indicates the percentage of the population who are familiar with each product; the second number indicates the percentage of those who are familiar with the product that have tried it. Tofu–76% of Americans are familiar with tofu, and 53% of these have tried tofu. Veggie burger–69% /53%. Soybean oil–65% / 28%. Soy milk–58%–35%. Infant formula [soy-based]–53% / 36%. Soy protein–42% / 32%. Soy flour–41% / 30%. Miso–17% / 58%. Tempeh 14%–45%.

"How healthy are soy products? 40% of the population acknowledge that soy has positive health attributes. Half of those believe soy is a high protein source. 13% of the respondents cited soy as an option for lactose intolerance, 13% as a low fat food and 11% as a cholesterol reducer."

Consumer concern and confusion about nutrition terms: Trans fatty acids–37% of the population are familiar with the term; 38% of those who are familiar are concerned about trans fatty acids; 51% of those who are familiar are confused about trans fatty acids. Hydrogenation: 36% are familiar, 39% of those are concerned, and 46% of those are confused. Address: 190 Quuen Anne North, Seattle, Washington 98109. Phone: 1-800-TALK-SOY.

11254. **Product Name:** Veggie Pizza Pepperoni.
Manufacturer's Name: Yves Fine Foods, Inc., a subsidiary of Yves Veggie Cuisine, Inc.
Manufacturer's Address: 1638 Derwent Way, Delta (Vancouver) V3M 6R9, B.C., Canada. Phone: 604-251-1345.
Date of Introduction: 1996. October.
Ingredients: Oct. 1996: Water, wheat gluten, soy protein isolate, spices, tofu (water, organic soy beans, magnesium chloride), yeast extract, salt, mustard powder, evaporated cane juice, wheat starch, rice starch, beet powder, guar gum, natural liquid smoke, carrageenan.
Wt/Vol., Packaging, Price: 155 gm.
How Stored: Refrigerated.
New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo East. 1996. Oct. On the front is a large color photo of "Veggie Pizza Pepperoni: A new generation of pizza toppings."

On the rear: "Fat free–No cholesterol. No nitrates." Detailed nutrition facts. And ingredients. Yves Veggie Cuisine, Inc. is now located at Delta (Vancouver), B.C., Canada V3M 6R9. Phone: 604-525-1345.

Spot in Vegetarian Journal. 1997. Nov/Dec. p. 15. "Veggie Pepperoni. Yves Veggie Cuisine has introduced Veggie Pizza Pepperoni, a fat-free vegetarian pepperoni topping for pizzas."

11255. **Product Name:** Jumbo Veggie Dog (Meatless).
Manufacturer's Name: Yves Veggie Cuisine, Inc.
Manufacturer's Address: Delta (Vancouver), B.C., Canada V3M 6R9. Phone: (604) 525-1345.
Date of Introduction: 1996. October.
Ingredients: Water, wheat gluten, soy protein isolate,

tofu (water, organic soybeans, magnesium chloride), yeast extract, Sucanat (granulated sugar cane juice), mustard powder, wheat starch, garlic powder, onion powder, salt, paprika, rice flour, beet powder, carrageenan, natural flavors, natural liquid smoke, spices.
How Stored: Refrigerated.
New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1996. Oct. On the front is a large color photo. "Make room for the hot & spicy Jumbo Veggie Dog (It's big!)."

On the rear: "Fat free–No cholesterol. No nitrates." Detailed nutrition facts. Ingredients.

Label sent by Yves Fine Foods, comb-bound in "Yves Veggie Cuisine US Packaging." 1998. March. There are now two flavors: Hot & Spicy, and regular. Both are in a 15.9 oz (450 gm) package.

11256. Tibbott, Seth. 1996. History of Tofurky (Interview). *SoyaScan Notes.* Nov. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** King Harvest Natural Foods was a vegetarian sandwich company, deli, and juice shop in Portland, Oregon. They made a fresh "Tofurkey Sandwich"–which was just tofu, slightly browned, maybe marinated in some turkey-like seasoning, with some trimmings. In 1980, when Seth started delivering his tempeh to stores in Portland, he first saw this sandwich, which he enjoyed eating in Portland-area stores. That was when he first heard the word "Tofurkey." In about 1982-83 King Harvest discontinued their Tofurkey Sandwich; they never made it again, though they are still in business making other sandwiches and food products.

The ancestor of Tofurky was created in 1991 by Hans and Rhonda Wrobel of The Higher Taste–one of Seth's customers–a caterer and food manufacturer in Portland, Oregon, with a little deli; they make tempeh & lettuce sandwiches and tofu sandwiches. They started making a vegetarian stuffed Tofu Roast with gravy for their customers at Thanksgiving. They sold about 30 units the first year, 1991, largely to a local audience–including Seth. It was tofu in a pie pan with stuffing in the middle, then another layer of tofu on top. It was basted and baked, and tasted good–but it sold for $30. Seth saw this as a meat alternative that had potential at Thanksgiving. The vegetarian recipes for making mock turkey are too long and complicated for the typical cook.

Seth wanted to use the name "Tofurky" (which he coined) for his new product idea. But before he did, he called the folks at King Harvest and asked them if they had a trademark on or any other rights to the name. They said "No." He then asked them for permission to use that name. They said "Fine–"No problem"–in part because they hadn't made the product for more than ten years.

In October 1995 Turtle Island, together with The Higher

Tofurky™

A Delicious Vegetarian Holiday Feast

Whether you are seeking to offer a meatless option for a portion of your holiday table or are planning a complete vegan feast, we think Tofurky will satisfy and amaze all who try it.

WHAT IS TOFURKY™? Tofurky™ is a pre-baked vegetarian feast designed to be the delicious centerpiece of your holiday meal. It consists of four parts: 2 pounds Organic, Specially Seasoned, Baked Tofu; 8 Hearty Tempeh Drumettes; 15 oz. Heavenly Golden Mushroom Gravy; and 1½ pounds Moist Cranberry-Walnut Stuffing. Each Tofurky™ is 100% vegan, cooks in less than 30 minutes and tastes FABULOUS!

HOW DO WE MAKE IT? We season Premium Island Spring Extra Firm Tofu with a special flavor blend made with all natural, vegetarian ingredients. Then we marinate and bake the tofu to golden perfection. The taste is unique and speaks to taste buds you never knew existed! There is nothing remotely similar to this anywhere on the market.

HOW ABOUT THE TEMPEH DRUMETTES? Included in your Tofurky™ are the unique Drumettes, a dark filet made of grated organic tempeh, tvp (textured vegetable protein), organic wild rice, cranberries and carrots, seasoned and carved into yummy shaped drumsticks.

IS THERE MORE? To tie together the two distinct flavors of the Baked Tofu and Tempeh Drumettes, we have added

Taste (in an informal and unwritten joint venture), introduced the first "Tofurky." Higher Taste made the product's centerpiece, a dome-shaped layer of marinated tofu with a whole wheat stuffing inside. Seth had been developing a

© Copyright Soyinfo Center 2013

tempeh burger that tasted more like turkey than burgers, so he got a drumstick form (Holomatic) and started making tempeh drumsticks. He added four of these to the Higher Taste Tofu Roast, and included a recipe for Nutritional Yeast Gravy. Turtle Island, which had good distribution for its tempeh, was responsible for marketing the product. Seth test marketed it as a frozen product in 24 natural food stores and co-ops on the West Coast; it retailed for $24.99 to $27.99 and weighed 3 lb 12 oz. There as also a 2 lb 4 oz size. Seth sent out some press releases and product attracted extensive local media coverage. No products were sold by mail order. Most natural food stores (such as Nature's), to which Seth introduced the product enthusiastically, predicted that it would never sell. But Seth had a strong belief in it. Somebody at the Puget Consumers Co-op (PCC) in Seattle, Washington, took the product, even though they doubted it would do well. Then "it caught fire" at the PCC's seven upscale stores in Seattle. They had to install a special telephone line–a Tofurky Hotline–for all the Tofurky special orders they were getting. Turtle Island did demos in PCC stores which further stoked the demand. After Thanksgiving, Turtle Island was flooded with calls and letters ("fan mail") from happy customers who said things like "Wow! I've been waiting 20 years for this." Usually food manufacturers only hear from customers when they are upset. "The customers believed in the product more than the savvy retailers–who had completely missed this niche." Feedback cards were included in every product, and this feedback indicated that the gravy (originally created by The Farm in Summertown, Tennessee, but greatly improved on by Seth) was what made the product delicious, but consumers wanted the gravy itself–not just the recipe–included with the product. In 1995 about 800 Tofurkys were sold, mostly at Thanksgiving but some at Christmas (with gravy).

Realizing that the product had real potential, Seth contacted a lawyer and registered "Tofurky" as a trademark. This year (1996) the tofu is made by Island Spring in Vashon, Washington. When extra firm tofu was seasoned then baked, it froze quite well. The tofu is sent out in 8-oz blocks (each 3½ by 5 by 3/4 inches)–not in the shape of a turkey or drumsticks. The drumettes are a little spicier, and come with cranberries, wild rice, carrots. This year the product is frozen but they are also test marketing it refrigerated. Several West Coast distributors carry the product. Now the whole package weighs 5 lb 15 oz; the wholesale price is $24.95 to $25.60, so it retails for about $33-$36. Last week, Seth sent out 50 press releases to print, radio, and TV sources. This year (1996) more than 800 have been sold already, and Seth expects total sales to reach 2,000 to 3,000. The 1996 ingredients in the Golden Mushroom gravy are: Water, nutritional yeast, expeller pressed canola oil, unbleached flour, chopped fresh mushrooms, diced onion, shoyu, herbs, spices, non-dairy lactic acid culture. Note: This gravy is delicious! Note: The following number of Tofurkys were sold: 800 in 1995, 4,000 in 1996, 15,000 in 1997, 45,000 in 1998, and an estimated 55,000 to 59,000 in 1999.

Who coined the word Tofurky? Seth didn't, though he was the first to spell it in that way, without an "e"–for two reasons: First, it was the right number of letter for a phone number. And second, he spelled it wrong the first time he wrote it and then kept repeating his mistake. Most people who hear the word for the first time spell it "Tofurkey" so Seth has had to purchase a second Internet domain name spelled "Tofurkey.com." Seth was also the first to register the name (by any spelling) as a trademark.

But at least four other people and groups probably coined the word "Tofurkey" before Seth coined "Tofurky." (1) Jeremiah Ridenour believes that he coined it many years ago. (2) Peter Golbitz sent Seth a photo showing him with long hair and some Tofurky he made. (3) King Harvest Natural Foods in Portland, Oregon (see above). (4) A group of Rastafarians, black from inner-city Tacoma, Washington, had developed a very delicious barbecued tempeh, so Seth was exploring a co-packer arrangement.

After the first Tofurky season, when they heard on the news that Seth made Tofurky, they sent him a flaming e-mail saying it was bad karma for him to rip them off because they had invented the word "Tofurkey." They refused to shake Seth's hand. They now took him to be the white devil, so he left under that cloud. Jeremiah and Peter were friendly about it, but Jeremiah likes to joke with Seth about how Seth owes him several million dollars in royalties for use of his name "Tofurky." Seth now sometimes jokingly calls his business "Tofurky Island."

Leaflet (glossy color, 21.5 x 9.2 cm) sent by Patricia Smith from Natural Products Expo West. 1997. March. "Tofurky: A delicious vegetarian holiday feast." Explains Tofurky using a question and answer format. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: 541-386-7766 OF.

11257. *SoyaScan Notes.* 1996. Vitasoy changes text on front panel of two Azumaya Tofu products (Overview). Nov. 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following text, in large red letters, has been added to the front panel (lower left corner) of Azumaya's extra firm Chinese style tofu: "Rich in Soy Protein." A consumer service representative at Vitasoy in San Francisco says this change was made in Oct. 1996, for marketing purposes.

On the front panel of Azumaya's firm Japanese style tofu (lower left corner) is a red heart with a white check through it, and the words: "American Heart Association. This product meets American Heart Association guidelines for healthy people over age two when used as part of a balanced diet." At Safeway supermarket in Lafayette, California, both 14-ounce products retail for $1.19.

By 1978 Azumaya had on the front panel (lower left

© Copyright Soyinfo Center 2013

corner) of its tofu package a little cartoon bean character who said: "Hi! I'm Li'l Soy." By 1986 this message had changed to: "Hi! I'm Li'l Protein," and as of Nov. 1996 the latter message and cartoon still appear on Azumaya Silken Tofu–Kinugoshi Soybean Cake." Now the cartoon character no longer appears.

Azumaya is now also distributing a recipe pad, with a recipe for Tofu Pumpkin Pie, and a $0.55-off coupon.

11258. Associated Press (AP). 1996. Soybean protein may relieve hot flashes. *Marin Independent Journal* (*Novato, California*). Nov. 11. p. A4.
• ***Summary:*** The article begins: "New Orleans–Eat tofu for hot flashes? The idea is not as weird as it sounds. At the American Heart Association's annual scientific meeting yesterday, researchers discussed the growing evidence that soybean protein–commonly found in tofu–may indeed relieve the miseries of the change of life."

Dr. Gregory Burke, of Bowman-Gray School of Medicine in Winston-Salem, North Carolina, is investigating the effects of soy on menopause. His study involved 43 women, ages 45-55, who experienced at least one bout of hot flashes or night sweating daily. For 6 weeks they added 20 grams of powdered soy protein into their diets, mixing it with their orange juice or sprinkling it on cereal. For another 6 weeks they did the same with powdered carbohydrate, but they did not know which was which. While using the soy protein, the women reported significantly less intense symptoms–although they occurred just as frequently. Experts believe that the active ingredients in soy protein are phytoestrogens–the plant form of the female hormone estrogen. Human estrogen is widely used to relieve the effects of menopause–although some women are reluctant to take it because of side effects.

Burke plans another study in which larger doses of soy protein will be tried on 240 women. A recent study at the University of Manchester in England suggested that soy can reduce the frequency of the hot flashes as well.

11259. *Detroit News.* 1996. New Orleans–Tofu may ease hot flashes of menopause, study says. Nov. 11. p. S-2, col. 2. *

11260. Zibart, Eve. 1996. The joy of soy. *Washington Post.* Nov. 15. p. N26. Weekend section.
• ***Summary:*** The article begins: "The more nutritionists look into soy products, the more they like them. Diets including soy allegedly head off several types of cancer, osteoporosis, high cholesterol levels and heart disease." Soyfoods are easily digested and could be a good bet for folks getting over the flu or winter whatever. Soyfoods are fairly high in calcium, so they can help replace dairy products in vegan and lactose-intolerant regimes.

Discusses the various soyfoods and restaurants that serve them in the Washington, DC, area: Edamame (a bowl of boiled and salted soybeans in the pods) at Tachibana in McLean. Tofu in the hot pot at Tin Yang in Adams-Morgan. Fried white tofu with red chili sauce at Rabieng in Baileys Crossroads.

The most widely available forms of soy are tofu and tempeh. "Tofu is among the best non-meat sources of protein, and relatively low-fat..." Tofu is much less expensive than other protein foods, which making dining a bargain as well as healthful.

"To understand the real versatility of soy products, however, it's worth visiting the Vegetable Garden in Rockville, which... is beginning to get national attention from magazines that follow healthful eating. Its menu follows strict Buddhist rules, so there are no dairy products, garlic or onions," and, of course, no meat, poultry, fish, shellfish or eggs.

Ends with a directory of four restaurants in the Washington, DC, area, that feature soy: Harmony Cafe, Ivy's Place, The Vegetable Garden, and The Feed Bag.

11261. Hill, Allan R. 1996. New continuous protein or tofu process and equipment developed in Canada (Interview). *SoyaScan Notes.* Nov. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Highland Equipment Co. and Agri-Food Canada have a joint venture which has developed a process and equipment for making protein or tofu using a continuous process. Allan is the project coordinator. The basic steps in the process are as follows: Make liquid soymilk with a high protein content. Denature the soymilk protein by adding natural chemicals (not through heating) to precipitate the protein. Pasteurize using a high-temperature short time (HTST) heating process to lower the bacterial count with the required range. Run into a holding tube, so that it goes from a flow pattern into a laminar flow. Run into a coagulation tube system, where acid is injected into the flow after the product goes into a manifold; this changes it from a laminar to another type of flow, allowing the coagulant to mix in uniformly and completely. Run into a conveyance system and then into either of two packaging systems: (1) Pump bulk soymilk curds are through a standard auger hopper into 30 lb (5 gallon) plastic pails for food processing companies; (2) Run into an in-line static mixer to homogenize the product, then pump through an extrusion device (a stainless steel box) which forms it into cakes for retail sale. The process can make either regular or silken tofu.

The federal government of Canada holds the patents on the process and equipment, and the patent numbers are presently confidential. His company is part of the "Team Canada" group going to Seoul (Korea), Manila (Philippines), and Bangkok (Thailand) this coming January. He plans to talk with heads of soybean companies in Asia about licensing this process and technology. He thinks the equipment would be too expensive to ship overseas–even in 40-foot

© Copyright Soyinfo Center 2013

containers. It would be less expensive to have the equipment manufactured in the country of the licensee.

This process was largely developed at the Harrow Research Center in Ontario by Doug Jessop. It was developed originally for making continuous-process ricotta cheese.

The smallest commercial plant they sell will produce 2.6 million kg/year, working 8 hours/day and 5 days/week. This works out to be 1,250 kg/hour. They also have plants that make 2,500, 5,000, and 10,000 kg/hour. They will be able to deliver plants in the second quarter of 1977. They have built and tested one lab-scale plant that makes 250 liters/hour. Doug Jessop says that the finished product is definitely tofu.

Update: Talk with Margaret Vokes, Director-International. 1998. Jan. 5. Allan R. Hill is no longer with the company, whose name is now Highland Equipment Limited, 136 The East Mall, Toronto, Ontario M8Z 5V5, Canada. Phone: 416-236-9610. Fax: 9611. They have made and sold one system for ricotta cheese and are in negotiations with two tofu manufacturers. Address: JV Project Coordinator, Highland Equipment Co. Ltd., 645 Woodbine Ave., Toronto, ONT M4E 2J3 Canada. Phone: 416-698-0806.

11262. *Time.* 1996. Health report: The good news. Nov. 25. p. 23. [1 ref]
• ***Summary:*** This short article begins: "Women of a certain age may want to cultivate a taste for tofu." Research shows that hot flashes during menopause are less severe in women who eat soy protein daily. The soybean contains phytoestrogens, which resemble the female hormone estrogen that is widely prescribed symptoms of menopause. In Japan, where diets are rich in soy products, "hot flashes are so rare that there is no common word for them."

11263. Himelstein, Vicky. 1996. Amazing tofu diet to beat hot flashes: And here's how to make 'tasteless' health food really delicious. *Star.* Nov. 26. p. 1, 33.
• ***Summary:*** *Star* is a popular tabloid newspaper, sold at supermarket checkout stands, featuring sensational stories and celebrities. On the cover is a color photo of TV star Roseanne in a large rectangle. The text reads: "Roseanne's holiday diet: Eat what you want and lose weight, plus Tofu diet to beat hot flashes."

This article, based on an Associated Press story, begins: "If you're in the throes of menopause and suffer from uncomfortable hot flashes, take heart. You may be able to beat the heat by simply adding tofu to your diet. Startling new research reveals that tofu, a soybean-rich food, can cool the miseries of menopause fast, which may be the reason Asian women–whose diets are rich in soy–suffer fewer, less severe hot flashes and night sweating than American Women."

The article then summarizes a study by Dr. Gregory Burke, of Bowman Gray School of Medicine in Winston-Salem, North Carolina. Investigating the effects of soy on menopause, his 6-week study involved 43 women, ages 45-55. Tofu contains "phytoestrogen–the plant form of the female hormone estrogen." The Star adds: "Doctors are recommending that women eat tofu–a custard-like extract from soybeans–and drink soy milk. The challenge is now for cooks to make tofu taste good. 'Tofu is a white spongy cube that's very bland when you eat it raw,' says Star nutritionist Ann Newswanger. 'But it's cholesterol free, and absorbs flavor from other ingredients. The possibilities are endless–have it for meals and in desserts." Three recipes are given: Tofu raspberry mousse. Poppy seed dressing. Spicy tofu stir-fry with vegetables.

11264. Berkoff, Nancy. 1996. Turkeyless Tetrazzini: With our feather-free version of this post-Thanksgiving classic, vegetarians needn't feel left out when it comes to leftovers. *Vegetarian Times.* Nov. p. 30-32.
• ***Summary:*** Main ingredients in this dish include extra-firm tofu or smoked tofu and cooked spaghetti. Soymilk is used in the sauce. The vegetarian version contains only 79% as many calories, 65% as much fat, 10% as much cholesterol, 27% as much sodium, and 50% more fiber.

11265. **Product Name:** [Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soysages].
Foreign Name: Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soychicha.
Manufacturer's Name: Organica-ecotienda.
Manufacturer's Address: Xicotencatl 653-18, Col. Centro, Veracruz, VER 91700, Mexico. Phone: 29-31-30-83.
Date of Introduction: 1996. November.
New Product–Documentation: Letter and form filled out by Pat Hayward. 2000. Aug. 25. This company, managed by Pat Hayward and Claudia Gutierrez, makes and sells the above five soyfood products, which they introduced in Nov. 1997. Production of each in kg/month is as follows: Tofu 50. Tempeh 2. Soymilk 40. Soyshakes/Smoothies 40. Soychicha 10.

11266. Pulmuone U.S.A. Inc. 1996. Update on Pulmuone (Brochure). South Gate, California. 3 p. 28 cm.
• ***Summary:*** This 3-page black-and-white brochure was inserted into the color Pulmunoe catalog in June 1997. Contents: Background. Situation analysis. Pulmuone's future. Why Pulmuone tofu for the general market? Sales and trade promotions. Distribution. Media plan. "Background: The success of Pulmuone in Korea stems from the original philosophy of naturally produced foods with respects to mother nature. This corporate culture is prominent in its employees and product line. From delivery personnel to the board of directors, Pulmuone identity is imbedded in the corporate and personal lives of all employees.

"In 1991, Pulmuone's dedication expanded across the

© Copyright Soyinfo Center 2013

Atlantic Ocean to the United States. Pulmuone had a far reaching dream to provide Korean Americans with natural ethnic products they could not find in the U.S. Pulmuone bean paste [miso] and pepper paste were the first products to come into the U.S. and minerals and supplemental foods followed thereafter. Then in June of 1995, Pulmuone opened its first tofu plant in South Gate, California.

"Thus began the history of Pulmuone USA.

"Situation Analysis: Currently, Pulmuone USA holds 70% of Korean tofu market. A market held for over 3 decades by a single Japanese company in the U.S., Pulmuone boldly and aggressively captured the Korean American market within 14 months. Once Pulmuone tofu was introduced to the market, Korean Americans immediately recognized the superior quality of Pulmuone Tofu over other brands.

"Pulmuone has also enjoyed success in the Japanese American market within a short span of time. Pulmuone currently produces private label tofu for Marukai, which is a very popular wholesale type market amongst the Japanese Americans. In the past, they carried two of the most popular brands, Hinoichi and Aloha. However, within a 3 month period, Marukai brand tofu sold both brands by a ratio of 3 to 1.

"We have a state of the art facility with complete automation. Our current production rate is 20,000 pounds of tofu per day running at single shift.

"Pulmuone Tofu's obvious superior qualities are attributed to the following: 1. Use of highest quality pure Vinton 81 soybeans; Vinton 81 soybeans are 30% more expensive than regular soy beans. 2. Quick Chill System for optimum freshness and flavor. 3. Lower pasteurization temperature without compromising taste or shelf stability. 4. Complete Manufacturing Plant Sanitation System on a daily basis."

The company has scheduled advertisements in *Vegetarian Times, Los Angeles Times Magazine* (in Korean), and *Super Market Business* for late 1996 and early 1997.

Letter from John Sim, marketing director of Pulmuone. 1997. June 17. This insert was printed on 17 Nov. 1996. Address: 4585 Firestone Blvd., South Gate, California 90280. Phone: 213-564-3000.

11267. Clarke (Shearer), Maya. 1996. Re: Work with soyfoods for Plenty Canada in Sri Lanka and the Caribbean. Letter (fax) to William Shurtleff at Soyfoods Center, Dec. 1. 2 p.

• ***Summary:*** Her company is working with another company to develop a product that contains green vegetable soybeans. She is interested in starting a branch of the Soyfoods Center in Ontario. Maya worked for Plenty Canada for many years. She was part of the first team that went to Sri Lanka to conduct a feasibility study for CIDA; her title was Nutrition Consultant. Then she was field director at St. Lucia from 1985 until 1992. During that time (her name was Maya Shearer) she corresponded with Soyfoods Center. She also worked in Dominica, St. Vincent, Barbados, Haiti, Jamaica, and Guatemala on soyfoods projects. Her particular area of expertise is recipe development.

Plenty Canada's Caribbean projects were turned over to local management in 1992 and she returned to Canada; she no longer works for Canada. She worked as a community worker and taught cooking workshops until last year when she and three other women started Sun & Sky Foods. She still acts as a resource person and teaches classes at the University of Western Ontario on tofu, beans, legumes, and vegetarian nutrition. She also works as a food consultant. Sun & Sky Foods produces a line of bean soup mixes an cornbreads which they currently sell throughout the province of Ontario. Address: Sun & Sky Foods, 859 Dundas St. E., London, ONT N5W 2Z8. Phone: 519-432-6916.

11268. Fisher, Sydney; Theno, David. 1996. Why should the tofu industry pay careful attention to the outbreaks of *E. coli* strain O157:H7 in Odwalla fresh apple juice and Jack in the Box hamburgers? (Interview). *SoyaScan Notes.* Dec. 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Tofu alert: The Kroger supermarket chain in the Midwest has just adopted a new policy that all tofu it sells must be pasteurized. This is probably due to fear of food poisoning from the bacterium *Escherichia coli,* strain O157:H7 (pronounced Oh-157-H7).

Sydney Fisher is Director of Communications for Odwalla: On 30 Oct. 1996 Odwalla received a call from the Seattle King County Department of Health saying there was a strong possibility of an epidemiological link between Odwalla's unpasteurized apple juice and a small outbreak of an especially virulent strain of *Escherichia coli,* strain O157:H7. Many people in and around Seattle, Washington, became very sick, probably from drinking fresh (unpasteurized) Odwalla apple juice that had been contaminated with this strain of *E. coli.* One person died (a 16-month old baby in Colorado) and 66 people in Colorado, Washington, and California got sick; many of them went to a hospital. This strain of *E. coli* seems to strike young children under the age of 5 and the elderly. Odwalla has decided to flash-pasteurize only its apple juice–which is sold as is (single strength) and in 13 other Odwalla products. Odwalla sells about 25 different products in all. The flash pasteurization preserves the great taste and most of the nutrients. It guarantees a kill of the harmful pathogens, such as *E. coli.* Odwalla has also instituted in its production procedures what is called a HACCP (pronounced HAS-sip) plan, which is a hazard analysis critical control points. It is like building lines of defense into a production process to guarantee a safe product. They also test a sampling of products at an in-house lab. However this strain of *E. coli* is very hard to detect, because it is so virulent; only a small

© Copyright Soyinfo Center 2013

number of cells will make a person sick. Odwalla has done many "thermal death time" studies at various laboratories and they go well beyond the minimum needed to kill *E. coli.* Apple juice is an acidic environment and pathogens ordinarily do not live in such environments. But this strain of *E. coli* is called an "emerging pathogen." Scientists have much to learn about this bacterium, which is mutating and changing very rapidly to adapt to new environments. No one knows where it will turn up next. This same strain of *E. coli* was the culprit in the outbreak at the Jack-in-the-Box restaurant in Seattle several years ago. *E. coli* O157 lives in the intestines of cattle and feral animals such as deer. Because a piece of fruit on the ground in a cattle pasture could become infected, Odwalla specifies that all of its apples must be picked directly from the tree, never off the ground.

There are many promising new and emerging technologies that are alternatives to flash pasteurization–such as electric pulses. Odwalla is investigating these alternatives.

David Theno is a bacteriologist and food safety expert at Jack-in-the-Box headquarters in San Diego: *E. coli* strain O157:H7, which is found in undercooked meats, was the cause of the outbreak at Jack-in-the-Box in Seattle in January 1993; 4 children died (from kidney failure) and 700 people became ill. Tofu is a prime target for this bacterium, especially tofu stored in the produce section. 0157:H7 is unusually potent because it is infective at such low levels–as low as 10 individual cells, which would be an allowable level for most bacteria in a surgical operating room. Typically it would take thousands or even millions of Salmonella bacteria to cause and infection that creates acute symptoms. So today, anyone dealing with raw protein foods, must be aware of and deal effectively with this bacterium. 0157 infections have a a very high secondary infection rate. The primary infection is when you eat the food and get sick. The secondary infection is when a child eats the food and gets sick. Then as you care for the child (as at a day-care center), you get sick from physical contact with the child–and many of the other kids in the day-care center also get sick. Because of outbreak and tragic aftermath in Seattle, "Jack-in-the-Box probably runs the most aggressive food safety program in the restaurant industry today, and conceivably in the entire food industry." *E. coli* O157 infections are the leading cause of hemolytic uremic syndrome (HUS = kidney failure) in children.

A good expert specializing in this bacterium and protein foods, and doing a lot of work with protein food industries, is Dr. Nick Nickelsen of Red Mesa Microbiology, San Antonio, Texas. Phone: 512-292-6360. Another is Dan Bernard of the National Food Processing Assoc. in Washington, DC. Phone: 202-639-5983.

William Shurtleff of Soyfoods Center: How could all this affect the tofu industry?

1. Other food retailers may follow the lead of Kroger in requiring that all of the tofu they sell must be pasteurized.

2. New virulent strains of *E. coli* could turn up in tofu that has not been adequately heat treated; if any one were to die from eating that tofu it would be a disaster for the entire tofu industry.

3. Tofu manufacturers that already pasteurize their tofu may want to review their process to check that the temperature-time combination is sufficient to kill emerging strains of *E. coli* and other potential pathogens.

4. Tofu makes that do not pasteurize (especially smaller companies) may face the difficult choice between adding a pasteurization process (the equipment and energy for heating and cooling large amounts of water are quite expensive) and losing important accounts.

5. Since 23 May 1984 tofu has been defined by the U.S. Food and Drug Administration (FDA) Center for Food Safety and Applied Nutrition, Retail Food Protection Branch as a "potentially hazardous food" which must be kept refrigerated at 45ºF (7.2ºC) or below. Many food retailers store tofu in the produce section where the temperature averages about 50ºF. Because of the new *E. coli* threat, both the FDA and food retailers may begin to crack down on tofu stored above 45ºF. For details see the book *Tofu as a Potentially Hazardous Food: Crisis or Opportunity?,* by Shurtleff and Aoyagi (1989). Address: 1. Director of Communications, Odwalla, Inc., Half Moon Bay, California; 2. Bacteriologist and food safety expert, Jack in the Box Headquarters, San Diego, California. Phone: 415-726-1888.

11269. Kimbel, David. 1996. The Kroger supermarket chain in the Midwest has just started requiring pasteurized tofu. Present tofu production (Interview). *SoyaScan Notes.* Dec. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Kroger's concern comes after a major incident on 30 Oct. 1996 when many people in and around Seattle, Washington, became very sick from drinking fresh (unpasteurized) Odwalla apple juice that had been contaminated with *Escherichia coli* strain 0157:H7; see 1996 interview with Sydney Fisher of Odwalla.

Kroger has decided that all fruit juices they sell, as well as tofu, must be pasteurized. This is hard on small tofu companies. David wants to know if there are any standards for pasteurized tofu. William Shurtleff thinks there are not.

The book *Tofu & Soymilk Production,* by Shurtleff and Aoyagi states (p. 113), that in 1979 Hinoichi in Los Angeles, California, pasteurized tofu as follows: "Tofu and sterilized hot water at 87ºC (189ºF) are heat sealed with film in a tub, placed in a conveyorized heating tank under water at 85ºF for 50 minutes, then placed in chilled water in a conveyorized cooler at 1 to 2ºC for 50 minutes, packed in ice in boxes, and placed in a walk-in cooler. The typical shelf life is at least 3 weeks."

David now makes about 10,000 lb/week of tofu. He sells it in 10 states and Puerto Rico. Roughly 85% is sold

© Copyright Soyinfo Center 2013

to supermarkets and the rest to Chinese restaurants. He also makes mung bean and alfalfa sprouts–but no soy sprouts. Address: Chieko Tofu, Inc., 2450 Beekman Ave., Cincinnati, Ohio 45214. Phone: 513-471-3300.

11270. *SoyaScan Notes.* 1996. Chronology of major soy-related events and trends during 1996 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 15–Silk, America's first soymilk sold refrigerated in a typical milk carton (gable-top, Pure-Pak) is introduced by White Wave of Boulder, Colorado. It is made in Canada, formulated in California, then shipped to White Wave in tanker trucks.

Sept.–Monsanto's Roundup Ready transgenic (genetically engineered) soybeans are harvested from an estimated 1.2 million acres of U.S. farmland. They begin to enter into the food supply–unlabeled. There is a great outcry in Europe (especially in England and Germany) by consumers over loss of freedom of choice concerning food–but hardly a peep from the USA.

1996 Sept. 15-18–The Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, is held in Brussels, Belgium, and organized by Mark Messina, PhD.

1996 Oct. 30–Odwalla, a fresh juice manufacturer and distributor, is informed that their unpasteurized apple juice may be contaminated with an especially virulent strain of *E. coli* strain O157:H7 (pronounced Oh-157-H7). Odwalla immediately initiated a recall, but one baby died and 66 people in 3 states got sick. Three years earlier, in January 1993, a similar but more severe outbreak had occurred at Jack-in-the-Box in Seattle, Washington; 4 children died (from kidney failure) and 700 people became ill–from eating undercooked hamburgers. These two incidents may have major implications for the soyfoods industry–since unpasteurized tofu is a prime target for *E. coli* contamination. The first big consequence was seen when Kroger, a major supermarket chain in the Midwest, announced in late 1996, that it would no longer sell unpasteurized tofu.

There is growing interest in the health benefits of the phytochemicals in soybeans–especially genistein. Four areas of potential benefits have been identified, and they are in a "horse race" as scientists investigate more deeply: 1. Relief of risk of cardiovascular disease, especially heart disease. 2. Relief of menopausal symptoms. 3. Improvement of bone health and relief of risk of osteoporosis. 4. Relief of cancer risk of some sites–especially prostate cancer. But most media have tended to hype these health benefits, far beyond what the science justifies.

During the past year or two, Soyfoods Center has been receiving a growing number of calls from people who ask "How can I get more soy into my diet?" Never before have we heard people ask a question like this. These people have heard about the many health benefits of consuming soyfoods regularly but they don't know what foods would suit their tastes and diet.

This year, for the first time, the state soybean associations and boards take the lead (passing the Soyfoods Association of America) in promoting soyfoods in America. The leading states are Illinois, Indiana, Michigan, Minnesota, and Missouri.

This year (1996), the Chemopreventive Branch of the National Cancer Institute concluded that genistein (the primary isoflavone in soybeans) was one of four plant compounds with superior anticancer activity.

Also this year there was a rapid rise of interest in and sales of meat alternatives.

11271. Duncan, Lindsey. 1996. Overcoming *Candida albicans. Conscious Choice* (*Chicago*). Nov/Dec. p. 38-39.
• ***Summary:*** The author (a man) states incorrectly that tofu is a fermented food. "*Candidiasis* is a yeast/fungal infection caused by the toxins given off in abundance by the common yeast *Candida albicans*... It thrives on sugar, yeast, breads, alcohol and food molds found in cheese, grapes, mushrooms, and fermented foods (vinegar, tamari sauce, tofu, etc.)... Candida's main home is in the intestines." It is often caused by the use of systemic antibiotics.

Note: Candidiasis can often be cured by eliminating all sweets and fruits from the diet, taking acidophilus supplements, and using non-dairy protein sources–of which tofu is one of the best. A respected book on the subject is *The Yeast Connection* by Crook. Address: CN, Founder, Home Nutrition Clinic, 1431 7th St., Santa Monica, California 90401. Phone: 310-576-3606.

11272. Golbitz, Peter. 1996. Soyfoods take root in the Caribbean: Basic food needs spur growth of a new industry. *Bluebook Update* (*Bar Harbor, Maine*) 3(4):4-5. Oct/Dec.
• ***Summary:*** Dominican Republic: In August, the Mexico City office of the American Soybean Association sponsored a conference in the Dominican Republic titled "The Importance of Using Soy Protein in the Treatment of Chronic Disease." Two companies are now making soyfoods in the Dominican Republic and working to increase awareness of their value. Engela Estévez, founder of Saluvid S.A., makes a variety of meat alternatives from textured soy protein.; she presents seminars, has written a book titled "112 Recipes with Soya, The Vegetable of a Thousand Uses," and has helped to establish a foundation named FundaSoya to educate consumers. Mr. L.R. Ubiera, founder of Nutrisoya in 1996, makes fresh soymilk and tofu as well as several meat alternatives; he has written and published a book titled "Tofu y Leche de Soya, a Practical Guide for Home Preparation."

Cuba: A summary of the history of soyfoods in Cuba, including recent developments, was extracted from a report by William Shurtleff after his visit to Cuba in Jan. 1996.

A photo shows a soybean harvester in Cuba, donated

by Global Exchange. It arrived in the spring, just in time to help with this year's soybean harvest. From left to right: The harvester's mechanic. The director of the INIFAT station where the soybeans will be grown. Segundo Panas of ECAP (A Friends-of-Cuba organization). Pam Montanaro of Global Exchange in San Francisco, California. Tomas Guzman of INIFAT, director of the Cuban soybean production project.

11273. Hager, Stacy. 1996. What the heck are tofu and tempeh? Here's a dictionary of healthy soyfoods. *Soybean Digest.* Dec. p. 14-15. In "Soyfoods Special Report" section.
• ***Summary:*** Gives a brief description of tofu, tempeh, textured soy protein (TSP), isolated soy protein, soy milk, soy flour, green vegetable soybeans, and roasted soy nuts. The article begins: "No, tofu's not a martial arts method, tempeh's not an Arizona city, and TSP isn't an abbreviation for teaspoon."

11274. Holin, Fae. 1996. Getting sneaky with soy: How to use tofu without a family strike. *Soybean Digest.* Dec. p. 23, 27. In "Soyfoods Special Report" section.
• ***Summary:*** Describes how registered dietitian Anne Patterson slowly introduced tofu to her family, starting with desserts. She and her husband, Jim, own corn and soybean acreage in Illinois. Jim "doesn't really like to see white tofu," so Anne always disguises it–as by putting it in lasagna in place of ricotta cheese, or in other baked or main dishes to reduce the amount of oil or eggs used. She notes that the new lite or low-fat tofus are excellent. Also describes how to use tempeh, soy flour, soy beverage (soy milk) and TSP (TVP). Her family also likes the commercial soy burgers now widely sold in mainstream grocery stores.

Contains recipes for: Strawberry tofu fruit dip. Tofu basil pasta sauce on fettuccine.

11275. Holin, Fae. 1996. Cooking with soy is 'pure' fun: Contest winner stays away from processed foods. *Soybean Digest.* Dec. p. 26-27. In "Soyfoods Special Report" section.
• ***Summary:*** Janice Tolbert of Wolverton, Minnesota, started adding tofu, soy flour, and wheat germ to her recipes 3-4 years ago. She started cooking "healthy" because she and her husband Paul were not feeling well and felt they were eating too much processed foods. They grow 300 acres of soybeans, wheat, and barley–and now they no longer feel sluggish after a meal. She substituted tofu for meat, and used it in her own recipes place of cottage cheese or ricotta cheese. She took her tofu dishes to church potlucks and family gatherings "and nobody ever picks up that tofu is in there."

"Two of her three recipes that won places in the Minnesota Soybean Association's 1995 Cooking with Soy recipe contest are available at right." They are: Stuffed jumbo shells. Janice's harvest bread.

11276. House Foods America Corporation. 1996. Hinoichi products (Leaflet). Los Angeles, California. 1 p. Single sided. 28 cm.
• ***Summary:*** This single-sided leaflet (8½ by 11 inches) shows a photo and gives a brief description of each of the company's products, which fall into four categories: (1) Tofu: Regular tofu, 19 oz, water pack. Shelf life, refrigerated: 34 days. Regular tofu, 14 oz. Soft tofu (kinugoshi), 14 oz. Extra soft tofu, 14 oz. Firm tofu, 19 oz or 14 oz. Yaki tofu (broiled tofu), 9 oz. (Japanese label only)

(2) Age: Agé French fried tofu pouches, 6 pack (1.5 oz each). Oagesan 4-pack tofu pouches (1.1 oz each; Japanese label). Atsuage tofu cutlet (5 oz, Japanese label). Jumbo atsuage tofu cutlet (9 oz, Japanese label). Tofu fritter, large (Ganmodoki, 3 = 2.5 oz.). Tofu fritter, small (Ganmodoki, 8 = 2.5 oz.).

(3) Konnyaku: 6 products, incl. 3 Shirataki yam noodle [thin konnyaku noodles].

Natto: Natto fermented soybeans, 4 oz. Mamekozo natto fermented soybeans, 5.4 oz.

A separate but similar sheet shows foods made in Japan by House Foods and sold by House Foods America Corporation. These include Mabo Tofu Sauce (Medium hot or hot), Wasabi (horse radish paste), *Shichimi togarashi* (red pepper mix), *rayu* (hot sesame oil), *Mugicha* (barley tea), stew mixes (beef or cream), and several curry sauces. Address: 526 Stanford Ave., Los Angeles, California 90013. Phone: (213) 624-3615.

11277. **Product Name:** Tofu.
Manufacturer's Name: Inoshi.
Manufacturer's Address: Facing Hotel Dieu Hospital main entrance, M.L. Center Building, 1st floor, Hotel Dieu Region, Achrafieh, Beirut, Lebanon. Phone: 03/667678.
Date of Introduction: 1996. December.
Ingredients: Soybeans, nigari.
Wt/Vol., Packaging, Price: 350 gm in glass jar. Retails for $5.00.
How Stored: Refrigerated.
New Product–Documentation: Letter from Helen Marale Emmian. 1997. Aug. 27. "I have an enterprise in Lebanon dealing in mainly preparing tofu and macrobiotic ready healthy food. I am residing for two months in the USA and would like to receive your full product range, price indication, and possibilities of cooperation." Helen's present temporary address is: 287 W. Mariposa, Altadena, California 91001. Phone: 626-794-6144.

Talk with Helen, who is visiting Altadena, by phone. 1997. Aug. 31. Helen, who is Lebanese-Armenian, is the first person to make tofu commercially in Lebanon. She has a holistic macrobiotic center named Inoshi in East Beirut (on the Christian side), Lebanon. She started the Center in August 1996. Inoshi (sic, *inochi*) means "life" in Japanese. About 6-7 months ago she began to make tofu and sell it at a macrobiotic food store in the same building as her center.

© Copyright Soyinfo Center 2013

This M.L. Center Building faces the main entrance of the well-known Hotel Dieu Hospital. She obtained organically grown soybeans from a friend of hers, named Odette Aghajanian, who is Lebanese and who imported them, along with other foods (including tempeh) from France, to sell at her shop named Macrodette, one floor up in the same building as Helen's center. There is a refrigerator at Macrodette and Helen started to sell her tofu there. Helen first learned how to make tofu from Odette–who herself learned how at a macrobiotic center in France where she used to live. Then Helen bought *The Book of Tofu,* by Shurtleff and Aoyagi, and began to improve her tofumaking skills. Then she began to sell her tofu at Coin De Regime, a "diet shop" which sells organic, macrobiotic, low-fat and diet health foods. Shortly before she came to California, she started to put her tofu in a two supermarkets: Abella's Superstore in East Beirut (a new business, it imports many macrobiotic and Japanese foods) and Smith's Supermarket in West Beirut. She uses nigari as the coagulant and sells the tofu in 350 gm cakes in glass jars. She makes about 4 kg (8.8 lb) of tofu a week. The handmade label is in English. She puts the tofu in the jar, adds boiling water, seals the jar, then immerses the jar in boiling water to get a 2-week shelf life. She has never seen a commercial tofu shop. Presently, the only soy product Helen makes is tofu. Her tofu yield is low and she would like to learn how to improve it. She would also like to learn how to make tempeh and natto. Both Helen's parents and her husband are Armenian; her father was born in Armenia and her mother in Cyprus. She speaks Armenian at home with her husband and child, but was educated in English. She also speaks Arabic and French–the two official languages of Lebanon. Note: This is the earliest known commercial soy product made in Lebanon.

11278. McLain, Jennifer. 1996. *Egg*ceptional eggnog: Eggnog without eggs? It's possible and its good. *Vegetarian Times.* Dec. p. 22, 24.
• ***Summary:*** This article was originally run in the December 1994 issue of Vegetarian Times. The recipe is based on silken tofu. The editors note: "We receive more requests for vegan or lo-fat eggnog than for any other holiday recipe."

11279. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Japan Tofu Association. Dec. p. 3.
• ***Summary:*** "In October, Ontario hosted a group of processors from Japan who were interested in buying Ontario soybeans for use in tofu production.

"The visiting delegation toured the Eastern Cereal & Oilseed Research Centre (Ottawa), where Dr. Harvey Voldeng and his colleagues are working on short season tofu varieties. The group also visited a grain facility in Quebec, the Greenhouse & Processing Crops Research Centre (Harrow), where Dr. Dick Buzzell and his colleagues are producing tofu in the lab, looking at tofu texture, firmness and carbohydrates. The Japanese group also observed the processing and cleaning of soybeans at several Ontario grain elevators.

"In Chatham, over forty people gathered to meet with this very important delegation. The Honourable Noble Villeneuve, Minister of Ontario Agriculture, Food & Rural Affairs, spoke to the group on the value of the Japanese tofu market. Having visited Japan last April, he knows first-hand the huge potential for Ontario soybeans in Japan." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11280. *Plenty Bulletin* (*Summertown, Tennessee*). 1996. 1996–The year in review: Alimentos San Bartolo (ASB). 12(4):2. Winter.
• ***Summary:*** "A recent grant to Plenty from Food for All will be used to improve the ability of ASB's staff to distribute nutritious, fresh meals and packaged foods among Mayan families living in and visiting Solola. The grant provides for the purchase of a truck to deliver ASB's soy products to the cities and towns in central Guatemala. Currently deliveries are made via the public buses. It also provides for the purchase of a new refrigerator and ice cream machine and the installation of a phone at ASB's office.

"Plenty will contribute the cost of hiring a small business and soy foods specialist who will work directly with ASB's manager and staff to enhance their personnel, financial management and marketing skills. ASB will absorb the costs of continuing the food processing and nutrition education workshops for low income families living in and near Solola and promoting the use of ASB products among its commercial clients."

A photo shows two Mayan women, in traditional clothing, making tofu at Alimentos San Bartolo.

In Belize, several Mayan villages want to grow soybeans as a protein source and cash crop (p. 1).

11281. Pulmuone. 1996. Pool-mooo-one: The sooner you learn to pronounce it, the better for all of us (Ad). *Vegetarian Times.* Dec. p. 33.
• ***Summary:*** This full-page color ad shows the head of a cow against a green field. Along a 1-inch-high white strip at the bottom is written: "Polmuone Tofu: The alternative, humane protein." http://www.pulmuones.com. A small color photo shows a package of their tofu.

Note: Pulmuone (pronounced PUL-mu-wun) is the largest natural foods manufacturer in Korea. Address: South Gate, California.

11282. *Soybean Digest.* 1996. Soyfoods special report: Working the miracle crop into your family's diet (Section of articles). Dec. p. 13-17, 20, 23, 26-27.
• ***Summary:*** On page 4, editor Syl Marking, introduces this special section of articles and cover story by noting: "Cooking with Soy: *Soybean Digest* is plowing new ground

© Copyright Soyinfo Center 2013

again. It's our first-ever special report on cooking with soy (see p. 13). Take some time to not only read it but have the cook in your family try some of the recipes. Its another way to utilize the crop you grow. Let us hear from you–whether you like it or not. If you like it, we'll do it again next December.

On the cover, a full-page color photo shows a mother (Karen Johnson of Minnesota in Christmas colors) with two kids in the kitchen cutting rolled-out gingerbread dough with a cookie cutter. The caption (p. 3) states that she "slipped a little soy flour into the gingerbread dough." At the front of the table are packages of Westsoy Low Fat Soy Drink and Arrowhead Mills Soy Flour, plus an unlabeled 1-pound plastic bag full of yellow soybeans.

This special section begins with a 1-page introduction to six articles which follow; each of these is cited separately. The introduction asks: "But why should healthy, meat- or pasta-and-cheese loving people want to the spoil the flavor of their favorite foods? You shouldn't–and won't–have to. Foods containing soy are tasty as well as healthful.

"Say you want to reduce your fat intake. Or need to increase the amount of fiber your consuming. Studies in Japan, China and the U.S. show that eating as little as one serving of soyfoods a day cuts the risk of some types of cancer by 40-50%.

"You're already eating soy–just look at the product labels of the foods you eat daily... You may want to replace regular milk with some soy milk in the next batch of cookies you make. As you become more adventurous, cut out some of the ricotta or cottage cheese in next week's lasagna and sneak in a little tofu." A color photo shows a little boy and girl about to eat gingerbread cookies fortified with soy flour.

11283. *Soybean Digest.* 1996. More on soyfoods. Dec. p. 20. In "Soyfoods Special Report" section.
• ***Summary:*** "Looking for more soy recipes or health information? Start with your state's soybean association. Most offer free soy information, cookbooks or recipes. Publishing companies offering books on soyfoods include:" The Book Publishing Co. (Summertown, Tennessee), Avery Publishing Group (Garden City Park, New Jersey), Prima Publishing (Rocklin, California).

A sidebar (developed by the Minnesota Soybean Association) titled "Guide to modifying recipes" shows eleven substitutions that "can reduce calories, total fat, saturated fat and cholesterol." For example: For 1 cup milk substitute 1 cup fortified soy milk. For 1 cup fruit yogurt substitute 1 cup soft silken tofu + fruit, blended. For 1 egg substitute 1 tablespoon soy flour + 1 tablespoon water or one 2-inch square of tofu. For 1 cup ricotta cheese substitute 1 cup firm tofu, mashed. You can replace up to ¼ of the flour in baked goods with soy flour.

11284. **Product Name:** Tofutti Italian Style Cannoli (Chocolate Coated and Filled with Better than Cream Cheese).
Manufacturer's Name: Tofutti Brands Inc. (Marketer).
Manufacturer's Address: 50 Jackson Dr. (P.O. Box 786), Cranford, NJ 07016. Phone: 201-272-2400.
Date of Introduction: 1996. December.
How Stored: Shelf stable.
New Product–Documentation: Tofutti Brands Inc. 1997, May. 1996 Annual Report. p. 2-3. New products introduced during 1996: Introduced in December, this product is filled with the Company's non-dairy Better than Cream Cheese, and features a chocolate covered cannoli shell. The Cannoli are available in retail and bulk boxes.

11285. *Vegetarian Times.* 1996. Soy–Humble bean; rich benefits. Dec. p. 20-21.
• ***Summary:*** This is a summary of several of the more important studies presented in September at the International Soy Symposium in Brussels. Soy and cholesterol: Dr. James Anderson reported that people who eat generous amounts of soy protein may lower their risk of heart disease, because soy significantly decreases LDL ("bad") cholesterol, which can block arteries and even seep into blood vessels, causing atherosclerosis or thrombosis. "Other dietary changes, such as increasing fiber and decreasing saturated fat intake, can also help to lower LDL cholesterol. But unlike most other foods, soy can also raise HDL ("good") cholesterol levels. Good cholesterol gobbles up the bad cholesterol that accumulates along artery walls." Moreover, phytochemicals in soy can prevent the oxidation of bad cholesterol. Oxidation makes arteries clog more easily. Eating as little as 1¼ cup of tofu or tempeh a day could reduce blood cholesterol by about 10%.

Women's cholesterol and bone health: Susan Potter of the University of Illinois reported that soy protein lowers blood cholesterol in post-menopausal women, but the effects went beyond those of a low-fat diet. After the 6-month cholesterol study, those women who ate soy protein had a significantly greater bone mineral content and density. Potter found "actual increases in bone density" among the women who ate soy. The researchers believe that this important increase is caused by two isoflavones in soy, genistein and daidzein, which have properties similar to those of the hormone estrogen. "Estrogen supplements are often prescribed to women after menopause as a way to prevent osteoporosis."

Prostate cancer: Several studies have shown that the soy isoflavone genistein inhibits the growth of human prostate cancer cells in the laboratory. This research prompted Dr. Stephen Barnes and other scientists at the University of Alabama to launch a pilot study to see if eating soy can prevent prostate cancer in elderly men with a genetic risk for prostate cancer. Results are expected by the spring of 1997.

cancer: A debate rages."

11286. **Product Name:** [Tofu Slices: With Wheat Gluten (Herbed, Spinach Flavored)].
Foreign Name: Tofu Affettato (Alle Erbe, Agli Spinaci)–Alimento Derivato dalla Soja.
Manufacturer's Name: Biolab.
Manufacturer's Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.
Date of Introduction: 1996.
Ingredients: Herbed: Soybeans (*fagioli di soja*), wheat gluten (*glutine di frumento*) rosemary (*rosmarino*), parsley (*prezzemolo*), oregano (*origano*), grated bread crumbs, nigari–*cloruro di magnesio*, water.
Wt/Vol., Packaging, Price: 160 gm (2 slices weighing 80 gm in each of 2 packs) vacuum packed separately, side by side.
How Stored: Refrigerated.
New Product–Documentation: Label and letter sent by Maura Ghiraldini and owner Massimo Santinelli. 1998. Dec. 5. This new (Dec. 1998) label (3½ by 5 inches) has the same pastel background for all tofu products–a stylized view of the sea and sky, with mountains on both sides and rolling hills in the foreground. At the top left is a smiling sun. Text: "Organically grown (*prodotti dalla agricoltura biologica*)." "Ready in 5 minutes (*Pronto in 5 minuti*)." Refrigerate at 4ºC. A small symbol shows a person recycling the container. "These two products also contain vital wheat gluten." Two earlier labels (6 by 3.75 inches) shows black text on a wavy pastel background.

11287. **Product Name:** [Tofu Slices: With Wheat Gluten (Plus Olives and Capers)].
Foreign Name: Trancio di Tofu Affettato (Alle Olive e Capperi)–Alimento Derivato dalla Soja.
Manufacturer's Name: Biolab.
Manufacturer's Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.
Date of Introduction: 1996.
Ingredients: Soybeans (*fagioli di soja*), wheat gluten (*glutine di frumento*) olives 5%, capers 3%, dried grated bread, nigari (*cloruro di magnesio*), oregano, salt, water.
Wt/Vol., Packaging, Price: 200 gm (1 slice weighing 100 gm in each of 2 packs) vacuum packed separately, side by side.
How Stored: Refrigerated.
New Product–Documentation: Label and letter sent by Maura Ghiraldini and owner Massimo Santinelli. 1998. Dec. 5. This new (Dec. 1998) label (3½ by 5 inches) has the same pastel background for all tofu products–a stylized view of the sea and sky, with mountains on both sides and rolling hills in the foreground. 11288. **Product Name:** [Tofu].
Manufacturer's Name: Centro Ecobiotico do Brasil Ltda.
Manufacturer's Address: Rua Apolinario Correa da Silva, 30 Conejo / CEP 28620, Nova Friburgo, RJ, Brazil.
Date of Introduction: 1996.
New Product–Documentation: Letter (fax) from Yoshinori Ito of Takai Tofu & Soymilk Equipment Co. 1996. April 24. Names and addresses of new tofu shops in countries where tofu is not well known.

11289. **Product Name:** [Tofu].
Manufacturer's Name: Defontaine s.n.c.
Manufacturer's Address: di Mattiello R. & Congedo A, Via Torreselle 24, 36061 Bassano del Grappa (Vicenza), Italy.
Date of Introduction: 1996.
New Product–Documentation: Letter (fax) from Yoshinori Ito of Takai Tofu & Soymilk Equipment Co. 1996. April 24. Names and addresses of new tofu shops in countries where tofu is not well known.

11290. **Product Name:** Fat Not! Crème It (Soy Powder).
Manufacturer's Name: Dixie USA, Inc. (Marketer-Distributor).
Manufacturer's Address: P.O. Box 55549, Houston, TX 77255. Phone: 1-800-347-3494.
Date of Introduction: 1996.
Wt/Vol., Packaging, Price: 8 oz package or 2 lb cannister.
How Stored: Shelf stable.
New Product–Documentation: Dixie Diner's Club Official Newsletter and Catalog. 1996. Jan. Vol. 2, issue 1, p. 3. Add water to make soy milk without a blender. Or use like cream in hot chocolate. The 8 oz package (equal to 8½ boxes of tofu) sells for $3.99 plus at least $4.99 postage. The 2-lb canister (equal to 34 boxes of tofu) sells for $12.49 plus at least $4.99 postage. A color photo shows the 2-lb canister. Many recipes using the product are given. The name of the manufacturer is not given.

Talk Robert A. Beeley, chairman of Dixie USA. 1996. July 31. Fat Not! Crème It (Soy Powder) is a tofu powder made by Clofine. Brenda developed a great recipe for using it and now it is one of the company's best sellers.

11292. **Product Name:** [Tofu].
Foreign Name: Tofu.
Manufacturer's Name: Soya, Vida y Nutrición S.A. de C.V.
Manufacturer's Address: Calle del Marmara y Av. Rio Lempa No. 44, Colonia Jardines de Guadelupe, La Libertad, Antiguo Cuscatlan, San Salvador, El Salvador.
Date of Introduction: 1996.
New Product–Documentation: Letter (fax) from Yoshinori Ito of Takai Tofu & Soymilk Equipment Co. 1996. April 24. Names and addresses of new tofu shops in countries where tofu is not well known. Mr. Bruno Claeys is Technical Director.

11293. **Product Name:** Tonzu Organic Tofu [Natural].
Manufacturer's Name: The Organic Soy Company, Ltd.
Manufacturer's Address: Unit A, 2 Corban Ave., Henderson, Waitakere City, Auckland 0612, New Zealand.
Date of Introduction: 1996.
Ingredients: Certified organic soybeans (guaranteed to be non-genetically modified), filtered water, natural coagulant nigari (511).
Wt/Vol., Packaging, Price: 275 gm, vacuum packed inside paperboard box.
How Stored: Refrigerate at 4ºC or less.
New Product–Documentation: Label sent by Elizabeth Chalmers, owner. 2007. Jan. 22. The product was introduced by this company in 1996, but it was first sold in this paperboard box in 2001. They started using the Tonzu brand name in 2002. Color photo of snowy mountains beyond a deep green valley, on deep blue background. Superb label design. GE [Genetically Engineered] Free logo. Certified Organic logo.

11294. **Product Name:** Tofu.
Manufacturer's Name: Tofu Shop Ltd.
Manufacturer's Address: 89 Dominion Road, Mt. Eden, Auckland, New Zealand.
Date of Introduction: 1996.
New Product–Documentation: Letter (fax) from Yoshinori Ito of Takai Tofu & Soymilk Equipment Co. 1996. April 24. Names and addresses of new tofu shops in countries where tofu is not well known. Mr. Ron Hoy Fong is the owner.

11295. **Product Name:** [Tofu & Seitan Sausage].
Foreign Name: Brat-Knacky.
Manufacturer's Name: Topas GmbH (Product Developer-Marketer).
Manufacturer's Address: Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/25515. Fax: 07473/8320.
Date of Introduction: 1996.
Ingredients: Incl. tofu, seitan.
How Stored: Refrigerated.
New Product–Documentation: Letter (fax) from Klaus Gaiser, founder of Topas. 1996. Sept. 21. This is a sausage to be fried or grilled, made from tofu and seitan.

11296. **Product Name:** [Ravioli with Tofu-Mushroom Filling].
Foreign Name: Minis.
Manufacturer's Name: Topas GmbH (Product Developer-Marketer).
Manufacturer's Address: Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/25515. Fax: 07473/8320.
Date of Introduction: 1996.
Ingredients: Incl. tofu.
How Stored: Refrigerated.
New Product–Documentation: Letter (fax) from Klaus Gaiser, founder of Topas. 1996. Sept. 21.

Suzano, Sao Paulo, Brazil. Her first and most influential cooking teacher was her mother, a master of various kinds of Oriental cooking. As a teenager, she studied Western cooking at a cooking school in her hometown. In addition to *Delightful Tofu Cooking* she has published three other cookbooks: *Delightful Thai Cooking, Delightful Brazilian Cooking,* and *Delightful Vietnamese Cooking...*

"In addition to writing cookbooks, Ms. Ang has been a cooking instructor for the University of Washington's Experimental College. She also frequently teaches courses through the Puget Consumers' Co-op and other cooking schools in the Seattle area. She offers courses in tofu cooking... Moreover, she is an avid organic gardener and an accomplished batik painter.

"Ms. Ang lives in Seattle with her husband, Donald Richard Bissonnette, and two sons, Alex and André." A small black-and-white photo on the rear cover shows Eng Tie Ang. Address: Seattle, Washington.

11300. Chen, J.D.; Xu, Hong. 1996. Historical development of Chinese dietary patterns and nutrition from the ancient to the modern society. *World Review of Nutrition and Dietetics* 79:133-53. [23 ref]
• ***Summary:*** During the Han and Tang dynasties (206 BC to 907 AD) people in China started to pay attention to vegetarian food and to use vegetable oil. "Bean products, such as bean curd, were already used in recipes" (p. 136).

A famous saying has been handed down from ancient times: "Breakfast should be eaten well, lunch must be in one's fill, and food for dinner should be little."

Generally people eat porridge or millet gruel as the main food for breakfast; with it they eat soybean milk, salted vegetables, eggs (boiled or fried), and deep-fried twisted dough sticks. For lunch and dinner, salt or soy sauce were often added during cooking.

The soybean is mentioned on page 148. Address: 1. Research Div. of Sports Nutrition and Biochemistry, Inst. of Sports Medicine, Beijing Medical Univ.; 2. Dep. of Sports Medicine, Beijing Univ. of Physical Education. Both: Beijing, China.

11301. Gelles, Carol. 1996. 1,000 vegetarian recipes. New York, NY: MacMillan. [vii] + 598 p. Index. 24 cm.
• ***Summary:*** In the Introduction, a section titled "Soy products" (p. 17-18) includes brief definitions of soybeans, bean curd (tofu), miso, seitan, soy flour, soy milk, soy nuts, soy sauce and tamari, soy sprouts, tempeh, and textured vegetable protein (TVP).

In the chapter on "Entrees" is a section (p. 217-27) is titled: "Tofu, tempeh, seitan, and textured vegetable protein (TVP)."

The index contains 20 entries for tofu, 5 each for tempeh and soybeans, 4 for textured vegetable protein (TVP), 3 for seitan, and 1 for miso.

A table (p. 14) gives the time to cook various types of beans (that have been soaked overnight, the soak water discarded, and fresh water added) in a pot or saucepan (not in a pressure cooker); the adzuki bean takes the shortest time (45 to 90 minutes) while the soybean takes by far the longest time (2½ to 3½ hours [which is not nearly long enough]). Herein lies one key reason that Asians strongly prefer soyfoods to whole soybeans. Address: Author, food stylist and recipe tester, New York City.

11302. Gonzalez-Pando, Miguel. ed. 1996. Greater Miami: The spirit of Cuban enterprise. Fort Lauderdale, Florida: Copperfield Publications, Inc. See p. 168. [Eng]
• ***Summary:*** On page 168 is the story of Fully, Inc. run by Manny Wong, whose biography is also given. This company was started in Cuba in 1947 by Cesar Wong; that's when he and his family began making sprouts in Havana's produce market. In 1960 they came to Miami and soon established themselves in the restaurant field. His son, Manny Wong, attended college in New York and majored in business. After graduation he married Silvia Cok, also a Cuban-Chinese whose father had been a Chinese businessman in Havana, in the grocery business. "Upon arriving in New York in 1960, Silvia's father joined his relatives in a tofu (bean curd) [manufacturing] business which had been established back in 1933."

In 1978 Manny and his bride moved back to Miami, where he launched Fully, Inc. with his brother-in-law Dennis Marr. In Chinese "Fully" is composed of the two characters *ful* meaning "rich" and *ly* [*lei*] meaning "profit." They started as an Oriental food wholesale company, handling most of the items used in Chinese cooking.

In 1981, with demand for sprouts growing dramatically, Manny and Dennis founded Fully Bean Sprouts Farm Company. They grow mainly [mung] beans sprouts and soy sprouts.

During the 1980s, as "demand for more healthful foods grew, Fully opened another subsidiary, Fon-On for Florida. This is a spin-off of Manny's father-in-law's tofu business in New York. Fon-On of Florida manufactures 'soy products'– mainly soy milk and currently five kinds of tofu: Oriental, Soft, Firm, Silk, and Pudding." Photos show: Manny Wong with his wife and three children in late 1994. Various packaged soy products made by Fully including soy sprouts, soy milk, pudding, tofu. Address: Florida.

11303. Hinman, Bobbie. 1996. The meatless gourmet: Easy lowfat favorites. Prima Publishing, P.O. Box 1260, Rocklin, CA 95677. 502 p. Illust. by Vonnie Winslow Crist. Illust. Index. 22 cm.
• ***Summary:*** The section titled "All about tofu" (p. 16-17) contains an introduction, nutritional information, description of three different types of tofu (medium, firm, silken), how to store tofu, and freezing tofu.

© Copyright Soyinfo Center 2013

Tofu appears in a large number of recipes in this book, and Mori-Nu Tofu is mentioned for specifically (p. 17, 38). For tofu sour cream see p. 77. Soybeans are mentioned once (p. 16)–as is soy sauce (p. 475). Address: Delaware. Phone: 916-786-0426.

11304. Hosking, Richard. 1996. A dictionary of Japanese food: Ingredients & culture. Boston, Rutland, Vermont, Tokyo: Tuttle Publishing. 239 p. Illust. by Richard C. Parker. Index. 21 cm. [16 ref]

• ***Summary:*** This appears to be the same as the original 1972 edition. An excellent, accurate book. The basic entry for each word is given under its Japanese name (thus *daizu* rather than soybeans). Each entry includes the Japanese term in kana (usually hiragana) and (usually) kanji (Chinese characters). One hundred small illustrations are very helpful.

Here is a short example: "dengaku (hiragana, kanji) a preparation in which food such as eggplant, taro, konnyaku, or tofu are dressed with a sweetened miso topping and grilled on skewers. Fish *dengaku* is called *gyoden."*

An example of a longer entry is "yuba (hiragana, kanji) soy-milk skin. A specialty of Kyoto, this skin that is formed when soy milk (tônyu, 2 Chinese characters) is heated is not only delicious, but highly nutritious, being the richest source of protein known (over 52%). It is also high in natural sugars (12%) and polyunsaturated fats (24%) and therefore very high in energy. It is eaten both fresh and dried, being added to soups and used as a skin to roll up such things as cucumber and burdock. Nearly all yuba is made in Kyoto and it is fairly expensive. Much use is made of yuba in shojin ryôri."

Seventeen appendices (p. 197-235) give detailed discussions of the following important Japanese foods and related items: Chopsticks. Katsuobushi. The kitchen and its utensils. Kombu. The meal. Miso. Saké. Salt. Sansai. Soy sauce. Sushi. Tea. The tea ceremony. Umami and flavor (incl. MSG). Vegetarianism (incl. Buddhism, shôjin ryôri, and fucha ryôri). Wasabi. Wasanbon sugar.

The author has lived in Japan since 1973. He holds an M.A. degree from Cambridge Univ. Address: Prof. of Sociology and English, Hiroshima Shudo Univ., Japan.

[Ger]*

11306. Mai, Pham. 1996. The best of Vietnamese and Thai cooking: Favorite recipes from the Lemon Grass Restaurant and Cafes. Rocklin, California: Prima Publishing. xii + 274 p. Illust. (Some color photos). Index. 24 cm.

• ***Summary:*** The author's family name is "Mai" and her given name is "Pham." She prefers to write and say her name, Asian style (and as in American phone books), with her family name first.

The book is dedicated with a free-verse poem to her father, Xuan Pham, and her mother Thom Vo. Born in Vietnam and raised for ten years in Bangkok, Thailand (where her father was the Vietnamese military attaché to Thailand) Mai Pham (like her sister Denise, and her two brothers) was brought up with food as the center of her family and universe. She came to the U.S. with her family in 1975. "One minute we were in the comfort of our home in Saigon, and the next we were fleeing our country with just the clothes on our backs. After graduating from the University of Maryland with a degree in Journalism in three years, she pursued a career in broadcast journalism. At age 16 she hosted a radio show for American GIs. At age 18 she managed to talk ABC News into giving her her first break as a television reporter. In 1983 she "landed a reporting job as the first Vietnamese-born television journalist in the United States." Just a few years earlier she had been living in a refugee's quagmire. After several years of reporting, she went to work in public relations and then as a speech writer for the governor of California.

When she met her husband-to-be, Trong, her life again changed dramatically. He was a scientist turned entrepreneur who had founded the successful La Bou bakery / cafe chain in Sacramento, California. Trong convinced her to open a restaurant with him. "He talked about the incredible excitement and satisfaction of taking a simple idea and turning it into a successful business. Inspired by his success and encouraged by his infectious enthusiasm, she decided to go for it. So in 1998, with practically no experience in the food industry, a do-or-die kind of commitment, and a strong belief in their unique concept, the two young people opened the Lemon Grass Restaurant. Mai Pham had found a way to express her passion for cooking. Vowing to share with Sacramento the best of Vietnams and Tahi Foods, she worked day and night to adapt to a restaurant setting the recipes handed down from her mother and grandmother (p. x-xiii).

Today, in addition to being chef and owner of the award-winning Lemon Grass Restaurants and Lemon Grass Cafes in Sacramento, California, Mai teaches Southeast Asian cooking. She is married to Trong Nguyen, founder of the Northern California-based La Bou Bakery / Cafe chain and "the biggest cheerleader behind this and almost every major project I have encountered."

As she got deep into her research and reflected on her own experiences, she "became convinced that Vietnamese- and Thai-style cooking could be a healthful alternative to a modern Western diet. The typical Asian diet consists mainly of carbohydrates, vegetables, fish, and very little red meat. To stay full, we eat large portions of inexpensive foods such as rice and noodles and lots of greens, many of which grow

© Copyright Soyinfo Center 2013

in the wild. Meat is served only in garnish-size portions.

Often they enjoyed a typical meal-in-one dish. Vietnamese cooking is influenced by Chinese, Indian, French, and Thai cookery, but is more delicate in its execution. For example, a Vietnamese stir-fry is less greasy than its Chinese counterpart. Instead of salt or soy sauce, Vietnamese cooks season almost every dish with *nuoc mam,* or fish sauce [its Thai counterpart is *nam pla*] (p. 4-5). Almost all meals are planned around rice.

Basic ingredients related to soy: (1) Bean sauce: Made of fermented soy beans, water, and salt, it comes in a chunky form with whole soybeans or as a purée. The author prefers the chunky variety sold in jars by Koon Chun. (2) Hoisin sauce: Made from soybean purée, sugar and caramel sauce. Never serve it strait. Try Koon Chun. (3) Soy sauce: Each brand is different and she uses them all. Kikkoman all-purpose Japanese. Golden Mountain light Thai-style. Sweet soy sauce made from dark soy and caramel, to give a rich, dark color. Chinese-style dark soy sauce containing molasses. Flavored soy sauces such a mushroom or onion, sold in small glass bottles. "Make sure the mouth of the bottle is wiped clean after each use."

Sauce recipes include: Hoisin-peanut sauce (p. 35). Cilantro-lime soy sauce (p. 36).

Chapter 7, titled "Those four days: vegetables" (p. 155-77) begins: "Walk into the Lemongrass kitchen and if it happens to be the 1st 14th, 15th, or 30th day of the lunar month, chances are you will find many of our staff eating vegetarian. By abstaining from meat on those sacred days, they are reaffirming their belief in the teachings of Buddha and rededicating their commitment to a life free of indulgence, greed, and conflict." As a child Mai Pham looked forward to those four days because if her grandmother, a devout Buddhist, happened to be visiting, her mother would prepare a sumptuous vegetarian meal for all to enjoy together. One favorite was vegetarian spring rolls, which were no less tasty than their meat counterpart. The family's favorite sweet and sour soup, usually served with shrimp or fresh catfish, was prepared with fresh pineapple, tofu, cabbage, bean sprouts, and chopped saw-leaf herb. Actually, Mai Pham has always preferred the vegetarian version.

When Lemon Grass Restaurant first opened there was only one vegetarian dish on the menu. Now the menu features an entire vegetarian section, with entrees, salad rolls, spring rolls, etc. "To enhance flavor and texture, sometimes a simple ingredient such as tofu is first fried then simmered before being added to the finished dish. Because of the skill required for this specialized cooking, temples–where the monks and nuns eat a strict meatless diet year-round–are known to have the best vegetarian food." In Vietnam, vegetarianism is observed for religious rather than for health or other reasons.

Recipes: Vegetarian fisherman's soup (with "¼ pound extra firm tofu, cubed (fried or plain)"). Vegetarian spring rolls (with "½ pound extra firm tofu, drained and mashed with the back of a fork"). Su Co's delight (with "¼ pound extra firm tofu, drained and cut into 1-inch cubes"). Water spinach and cabbage in garlic-bean sauce (with 1½ tablespoons bean sauce").

Flat noodles with chicken and Chinese broccoli (with 1 tablespoon fermented whole yellow soybeans, p. 180-81. Called *rad na,* this dish "gets its distinctive flavor from the fermented yellow beans. In Bangkok, you can find this dish on practically every street corner and even in hotels"). Steamed striped bass with black beans, ginger, and green onions (with "1 tablespoon drained Chinese-style fermented whole black [soy] beans, chopped," p. 219). Address: Chef and owner, Lemon Grass Restaurant and Cafe, Sacramento, California.

11307. Mendelson, Anne. 1996. Stand facing the stove: The story of the women who gave America *The Joy of Cooking.* New York, NY: Henry Holt and Co., Inc. xviii + 474 p. Illust. Index. 24 cm. [86 + 774 endnotes]

• ***Summary:*** An excellent biography of Irma Starkloff Rombauer and her daughter Marion Rombauer Becker and a richly detailed piece of American social history. Irma Louise Starkloff was born on 30 Oct. 1877 in St. Louis, Missouri, the daughter of Max von Starkloff (M.D.) and Emma Kuhlmann. She grew up in comfort at Carondelet (a part of St. Louis) in a family of strong German ancestry and liberal political convictions. Irma lived almost all her life in St. Louis. In 1930, during the Great Depression, Irma Rombauer's husband committed suicide. To help pay the bills, she decided to write a cookbook. *The Joy of Cooking: A Compilation of Reliable Recipes with a Casual Culinary Chat* was initially self-published in 1931 as a vanity book (the author pays the publisher, not vice versa); Irma was age 54, a complete amateur with no known qualifications for writing or publishing a cookbook.

But *Joy* went on to sell 14 million copies over 60 years, and to become the most influential American cook book of all time. While it has no claim to be the best-selling cookbook in American history, it is probably the best-selling trade cookbook–one published by an ordinary publisher and sold through retail bookstores. But in terms of total sales it falls well behind *The Better Homes and Gardens Cookbook,* which gets wide distribution through its parent magazine, and *The Betty Crocker Cookbook,* which benefits from the research and marketing prowess of General Mills. The latter two are, of course, the work of committees.

The crucial factor in *Joy's* unexpected success was Rombauer's lively voice as an unpretentious beginner. She treated her readers as close friends, as "an amateur addressing amateurs." America's home cooks were desperate to learn the basics in simple English they could understand. Yet they also enjoyed Rombauer's firm opinions and strong personality.

The information on *Joy's* copyright page is of little help in understanding the major stages in the book's history. Seven editions mark genuine stages in the book's development: The original privately published (1931). The first Bobbs-Merrill edition (1936). The popular wartime edition (1943). The first Rombauer-Becker edition (1951). The unauthorized edition (1962). The first authorized prepared by Marion Becker (1963–sometimes mistakenly called the 1964 ed.). And Marion's last revision (1975). Note: A supposed 1942 edition is a pure phantom.

The mother and daughter who wrote this superb book were very different people, and each put her own stamp on the book. Irma, the mother who began the work, "loved stardom as much as Marion Rombauer Becker, her eventual collaborator and successor, loved privacy" (p. 1). Marion developed a deep and abiding interest in natural foods and organic gardening, in compost and manure. She also grew up during the era when scientists discovered that micronutrients or trace elements (such as all vitamins and many new minerals) played an essential role in human health. This led many (including Marion, starting in 1939 or 1940) to criticize refined and overly processed foods–such as white flour, white rice, etc.–and to advocate a return to natural, whole foods, including raw foods such as fresh fruits and some fresh vegetables. This awareness began during the 1920s and 1930s, when canned fruits, vegetables, and juices were seen as a triumph of modern food science. It was most widespread in California, "a hotbed of health-food cults." On several trips to the West Coast during the 1930s, Irma visited California, where she saw juice bars and restaurants that were replacing sugar with honey and vinegar (p. 260-61).

By 1948, when Marion agreed to work seriously with her mother on *Joy,* it was understood that the "culinary priorities laid down in earlier editions would be drastically arranged. *Let's Cook it Right* [by Adelle Davis] was a concrete influence."

Marion, with her zeal and love of learning, became deeply interested in nutrition, health, and the relationship between diet and health.

The first Rombauer-Becker edition, which appeared in 1951, gave much more attention to grains, cereals, and flours, while lamenting the ills of "modern processing." Brown rice was preferred to white as "richer in taste and a far better buy nutritionally." Marion also "contributed one of the earliest recipes for bean curd ("soybean cheese") in any American cookbook" (on p. 192). The 1951 edition introduced mainstream readers to ideas generally "seen as the sole territory of health cranks" (p. 268).

Irma died in 1962. Marion suffered increasingly from allergies and sometimes had difficulty breathing. Knowing that that the 1975 edition of *Joy* would be her last, she approached it with special care. It was a heady time, for parts of radical / counterculture ideas about natural foods and health had been adopted into mainstream American culture. Young visionaries, who rejected the offerings of supermarkets, were starting natural food stores nationwide. Ralph Nader (one of Marion's heroes) was denouncing harmful food additives and corporate junk foods. By 1975 Marion realized that "beliefs like hers on the relationship between food and health, land use, and good citizenship looked like very sensible ideas to a large spectrum of the American public. She was emboldened to direct *Joy* more emphatically to issues she had first noticed decades before" (p. 395). She commented on "chickens fed in batteries, pigs an cattle concentrated in feed lots," the fact that "many of our lakes and estuaries have become nearly incapable of supporting life," the "galaxy of pollutants such as viruses, nitrates, heavy metals, pesticides, and asbestos and other carcinogens" in our drinking water.

The new 1975 edition became an immediate best-seller, with 236,000 copies sold in 1975 and 334,000 in 1976. She was eager to make the text as accurate as possible. If someone pointed out an error, "she was not insulted but appreciative. When the soybean-product experts Akiko Aoyagi and William Shurtleff wrote to explain that the directions for homemade soy milk and bean curd were seriously muddled, Marion, grateful for this sign of the seriousness with which her work was taken, conscientiously sent in the necessary changes in time for the printing of August 1976." There are 8 glossy pages of photos, mostly of the two authors, their spouses and children. Address: Freelance journalist, New Jersey.

11308. Nguyen, Loan; Nguyen, Hoai; Do, Viet Hung. 1996. Tu' dien món an Viet Nam [Dictionary of Vietnamese dishes]. Hanoi, Vietnam: Van Hoa Thong Tin [Culture and Information Publishing House]. 931 p. Illust. Index. 21 cm. [Vie]*

• ***Summary:*** Includes four gourmet tofu recipes: Fried tofu with lemon grass. Tofu roll with corn. Sweet and sour breaded tofu. Steamed tofu with meat. Address: Vietnam.

11309. South Dakota Soybean Research & Promotion Council. 1996. Soyfoods: A healthy profile. Sioux Falls, South Dakota. 33 p. Illust. No index. 23 cm. [1 ref]

• ***Summary:*** This is an original and colorful soyfoods cookbook, with many full-page color photos of prepared recipes. Near the bottom of the front cover: "As technology advances, science is discovering that unique compounds found in soyfoods help prevent or even treat some of society's most serious diseases." Contents: Health benefits of soyfoods: Heart disease, cancer prevention, osteoporosis, diabetes, kidney health, menopause. Incorporating soy into your diet. Nutritional benefits of soyfoods: Phytochemicals, phytoestrogens, protein, fiber. Guide to modifying recipes: A one-to-one substitution of soyfoods for animal products and white flour. The diabetic exchange list. Recipes (p. 4-31). Introducing soy into your diet: Buying and storing tofu,

types of tofu, tips on using tofu, textured soy protein (TSP), isolated soy protein, soy flour, soy milk, tempeh.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996. It was later reprinted by the Nebraska Soybean Board, with their Nebraska logo on the back. Address: 3801 S. Western Ave., Suite #105, Sioux Falls, South Dakota 57105. Phone: (605) 330-9942.

11310. Spahn, Mark; Hadamitzky, Wolfgang; Fujie-Winter, Kimiko. 1996. Kanji jukugo jiten The Kanji dictionary. Rutland, Vermont; Tokyo, Japan: Charles E. Tuttle. xviii + 1748 p. See p. 666, 667, 787, 1391. 24 cm. [Eng; Jap]

• ***Summary:*** On page 666, under the character *tô* or *zu,* meaning bean or pea or (as prefix) miniature, are the following (with diacritics) related to soybeans: tônyû–soybean milk.

"mame(no)ko–soybean flour [*kinako* or "roasted soy flour"].

"tôfu–tofu, bean curd.

"mamema(ki)–bean-scattering ceremony [using soybeans].

"daizu–soybean.

"kôridôfu–frozen tofu.

"yakkodôfu–tofu cut into cubes.

"edamame–green soybeans.

"i(ri)mame–parched / popped beans.

"nattô–fermented soybeans.

"kuromame–black soybean.

"yudôfu–boiled tofu.

"ya(ki)dôfu–broiled tofu.

"nimame–boiled beans [usually soybeans].

"i(ri)dôfu–bean curd boiled dry and seasoned.

"shiomame–salted beans.

"mitsumame–boiled beans with molasses.

kôyadôfu–frozen tofu.

Also: "amanattô–adzuki-bean candy.

"nankinmame–peanuts.

On page 667, under the character *mi* or *aji,* meaning taste or flavor, are miso–miso (fermented soybean paste).

miso shiru–miso soup.

On page 787, under the character *kô, ô, ki* or *ko,* meaning yellow is: ki(na)ko–soybean flour.

On page 1391, under the character for *fun, kona,* or *ko* meaning flour or powder are: "mame(no)ko–soybean flour.

"ki(na)ko–soybean flour.

On the cover: "Over 47,000 Japanese character compounds." "Find any compound using any of its component characters."

A brief biography of the three authors, with photos of Spahn and Hadamitzky, appears on [unnumbered] p. 1750.

11311. Tamaki, Mary. 1996. The tofu handbook. Inglewood, California: Grass Roots Graphics. 194 p. Index. 22 cm. [11 ref]

• ***Summary:*** This attractive book, which is largely a tofu cookbook, is printed (photocopied 25 at a time at home) on white "confetti" paper (fairly expensive, from Fox River Paper) with flecks of color randomly dispersed on each page, bound with a black comb binding, and dedicated to the memory of the author's grandma, Umeno Fujino. Proceeds from the sale of the book will be used to develop projects by independent artists sponsored by Simone Records of Inglewood, California.

Contents: Introducing tofu. Nutritional analysis of tofu. Using tofu: Types of tofu, pressing tofu, storing tofu, freezing tofu, drying tofu. Making tofu: Ingredients and equipment, method. Dips and appetizers. Soups. Salads and salad dressings. Side dishes. Entrées. Breakfast goodies, sweets, and desserts. References.

Talk with Mary Tamaki. 1997. Jan. She is now working on a second tofu cookbook. She is now a film actress with an agent, very busy with many small roles. She was a theater actress for about 12 years and her first love is the theater–but it takes much more time and doesn't pay much. She has a one year old son. Address: Grassroots Graphics, 412 East Ellis Ave., Inglewood, California 90302. Phone: 310-412-7700.

11312. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: Harry Willis Miller (1879-1977). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 2, p. 71-72.

• ***Summary:*** A good, detailed biography of Dr. Miller. "In later years Harry Miller worked seriously with the soybean. He made products that were tasty and practical. These included "vegeburgers," "wieners," and soy cheese [tofu]. His crowning accomplishment, however, was a tasty, affordable, nutritious soy milk, which literally saved the lives of many Chinese babies. Before his death Miller saw his grain-and-soybean-based foods adopted as alternatives to meat all over the world.

"In his 90s Harry Miller continued as a consultant to the World Health Organization and the Food and Agriculture Organization of the United Nations, and still made frequent trips to eastern Asia." Address: Washington, DC.

11313. Winter, Ruth. 1996. Super soy: The miracle bean. New York, NY: Crown Publishers Inc. 192 p. Index. 21 cm. [106 ref]

• ***Summary:*** On the cover is written: "This wonder bean can help fight cholesterol, high blood pressure, blood sugar, cancer, ease menstrual and menopause symptoms, and keep a colon healthy. Includes a cookbook of 50 soy recipes from New York's Natural Gourmet Cookery School."

Contents: Introduction: The Cinderella bean. 1. How soy protects the heart and blood vessels: Full of fiber, the Eskimo

11314. **Product Name:** [Tofu].
Foreign Name: Queso de Soya (Tofú).
Manufacturer's Name: Hosanna
Manufacturer's Address: Carrera 53 #167-64, Santafé de Bogota, Colombia. Phone: 670 33 92.
Date of Introduction: 1996?
New Product–Documentation: Talk with Nestor and Cecilia Santacruz. 1999. April 1. They found that there were already two companies in Bogota that made tofu and other products. Named Hosanna and Sabyi, they each opened in about 1996-97, and were run by Colombians (non-Asians), but their focus was on products such as sausages made with tofu and soy flour, or pimento-flavored tofu, their tofu was not hand-made.

Leaflet (undated) sent by Nestor and Cecilia Santacruz. 1999. Sept. 17. "Hosanna: Piensa... en comidsa sana [Hosanna: Think... about healthy food]." Hosanna's products are made 100% from soya and contain isoflavones, a natural substance from the soybean, with the following benefits: (1) Prevents heart attacks, reducing levels of cholesterol. (2) Prevents osteoporosis, since the body retains calcium from soya better than calcium from animal products. (3) Prevents cancer*, since they block angiogenesis or the creation of new blood vessels that feed tumors. * = According to a technical bulletin from the American Soybean Association, compiled by Yeong Boon Yee, Technical Director in Singapore.

Moreover, Hosannah's products do not contain (1) Preservatives (nitrates, nitrites, sorbates, polyphosphates, etc.); therefore they should be consumed as soon as possible after being opened. (2) Carbohydrates (flours), sugars, or animal fats. Therefore, our products are Light: low in fats (see label), condiments, and salt. A table shows the nutritional composition of the company's sausages and tofu.

Our products and their preparation: Salchichas: Heated in water. To be fried or enjoyed as is. Salchichon: Fried or as is. Mortadela. Pate. Chorizo. Hamburguesa. Tofu (queso de Soya): Look for the recipe which comes on the back of each package of Hosanna soy cheese. For more information about our products, call our customer service line at 613 08 17. After 10 March 1999 our new address will be Carrera 53 #167-64. Phone: 670-33 92.

11315. **Product Name:** [Tofu].
Foreign Name: Queso de Soya (Tofú).
Manufacturer's Name: Sabyi.
Manufacturer's Address: Transv. 24 No. 83-40, Polo Club, Santafé de Bogota, Colombia. Phone: 256-8828 or 622-5583.
Date of Introduction: 1996?
New Product–Documentation: Talk with Nestor and Cecilia Santacruz. 1999. April 1. They found that there were already two companies in Bogota that made tofu and other products. Date of Introduction: 1996?
Ingredients: Soyanaise: Tofu (filtered water, certified organically grown soybeans, vinegar), brown rice syrup, canola oil, salt, apple cider vinegar, malic acid, xanthan gum, spices.
Wt/Vol., Packaging, Price: 350 ml jar.
How Stored: Refrigerate after opening.
New Product–Documentation: Leaflet (glossy, black and white, front and back). 1996? Undated. Sent by Richard Rose from a trade show. "Eggless. Cholesterol-free, Low in fat. Dairy-free." "Sunrise: the leading tofu company." Web = http://www.sunrise-soya.com.

11320. Sunrise Soya Foods. 1996? Sunrise tofu (Leaflet). Vancouver, BC, Canada. 1 p. Front and back. Undated. 28 cm.

• ***Summary:*** Leaflet (color) sent by Richard Rose from Natural Products Expo. 1996. March. On the front are six colorful packages of tofu against a green background of lettuce leaves. The types are: Medium Firm (Red, 16 oz, Moyenne). Almond Tofu Dessert (Yellow, 10 oz). Tofu Dessert (Red, 10 oz). Premium Tofu Extra Firm (Green, 12.4 oz). Soft Tofu (Purple, 10 oz., Souple). Tofu: Savory Garden Herb (Dark red, 12.4 oz, aux Herbes). A photo shows 8 prepared tofu dishes. "From appetizers to desserts–Use Sunrise Tofu in any meal. No cholesterol. Rich in protein. Low in saturated fat. No preservatives. Tofu recipe phone line: (604) 253-BEAN or 1-800-661-BEAN." In the lower left corner is the red Sunrise logo of a sun half risen: "The leading tofu company."

On the back are tables of ingredients, and product and nutritional information for each product. The Sunrise Tofu Club entitles members to quarterly newsletters. Address: 729 Powell St., Vancouver, BC Canada V6A 1H5.

11321. Na, Shin; Breen, Michael; Gustavson, John. 1997. Korea: Insight guides. 6th ed., updated. Singapore: Apa Publications. Houghton Mifflin. 297 p. Illust. (some color). 23 cm.

• ***Summary:*** The section on "Food and drink" (p. 98-99) states: "More common table vegetables–such as mung and soy beans, spinach, lettuce, and black sesame leaves–a typically grown in the backyard,... Especially popular is *twoengjang-guk,* fermented soybean paste soup... A spicy hot seafood soup, called *mae-un-t'ang* "usually includes a good portion of firm, white fish, vegetables, soybean curd (*tubu*), red pepper powder, and an optional poached egg."

The working man's brew (p. 102): The Korean counterpart of Japanese *doburoku* is *makkolli,* "a milky liquor that most households ferment at home from rice." Side dishes (*anju*) served with this mildly alcoholic beverage include soybean curd (tofu).

The city of Chonju (p. 207-08) is famous for *Pi pim pap* made of boiled rice mixed with soy sprouts and topped with many delicacies.

The "Yellow pages" at the back, titled "Travel tips," includes a section on "Eating out" (p. 278-79) that lists seven types of restaurants. Foods they serve include soy sauce (*kan-jang*), soybean curd, fried soybean curd, and soybean paste.

Created and directed by Hans Höfer. Executive editor: Scott Rutherford. Editorial director: Brian Bell.

11322. Jacobi, Dana. 1997. Re: Delicious tofu and pressed tofu sheets made at Soo Chow, a Chinese restaurant in New York City. Letter (fax) to William Shurtleff at Soyfoods Center, Jan. 8. 1 p. Typed, without signature.

• ***Summary:*** This restaurant, located at One Chatham Square, in Chinatown, New York City, recently began serving tofu they claim to make themselves. "It certainly tastes fresh and

© Copyright Soyinfo Center 2013

has a wonderful texture. It is fine like a silken tofu but holds together like a soft regular tofu, but without any graininess or rubbery quality." They sell this tofu, and also use it in preparing dishes like bean curd with shrimp.

A woman at the restaurant also makes a pressed tofu sheets [called *pai-yeh* or *ch'ien-chang* in Chinese]; each sheet is about ¼ inch thick and elastic. Originally Dana thought these were fresh and tender yuba. These sheets are used in only one dish sold at the restaurant, and are not sold separately.

Yuba (the thin, firm kind that is used to make "vegetarian duck") is also used in at least one dish at this restaurant–Buddha's Delight–together with the "homemade" tofu, enoki and shiitake mushrooms, shining noodles, Chinese vegetables, and a bit of seaweed. Some yuba can also be found in Chinatown stores, mostly refrigerated or frozen and not very good. The most frequent way one sees it served is in "vegetarian-duck." Address: New York City.

11323. Pearce, Jean. 1997. Getting things done: Starting out on soy. *Japan Times* (*Tokyo*). Jan. 12. p. 17. Wednesday. [Eng]

• ***Summary:*** "Last week's columns reported on recent research pointing to the dietary benefits of soybean products in relieving complaints associated with menopause." Discusses isoflavones and the isoflavone content (in micrograms per gram) of kinako (roasted soy flour, 2,589), roasted soybeans (1,625), edamame (1,354), natto (1,273), regular tofu (509), fried tofu (695), soy milk (357), miso (373), shoyu (16).

Gives several tofu recipes and recommends *The Book of Tofu* by Shurtleff & Aoyagi.

"And finally, kudos to Japan Airlines for creating natto in a palatable form, freeze-dried and flavored... It has been tremendously successful. In two years, total sales amounted to ¥56 million. Just think of all those isoflavones." A photo shows Jean Pearce.

Note: This article may have been published on 12 Feb. 1997 rather than 12 Jan. 1997. Address: Columnist.

11324. Blazek, Zdenek. 1997. Re: G.B.Z. is preparing soy products in the Czech Republic. Letter to William Shurtleff at Soyfoods Center, Jan. 13. 2 p. Handwritten, with signature. [Eng]

• ***Summary:*** His company is making soy products in the Czech Republic. They have the book titled *Tempeh Production* by Shurtleff & Aoyagi. Now they would like to introduce some new products such as seitan, amazake, koji, soy yogurt, natto, and cheese alternatives.

Talk with a company representative who speaks German. 1997. Feb. 3. The company now makes tempeh and natto. They introduced each product about 18 months ago. They would like to introduce tofu and seitan as soon as possible. Address: G.B.Z. s.r.o., 68606 Uherske Hradiste, Czech Republic. Phone: +42 632 636 16.

11325. Roller, Ron. 1997. New developments with organically grown soybeans in America (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The demand for organic soybeans in America is rising rapidly. Ron thinks this has nothing to do with concerns over genetically engineered (transgenic) soybeans such as Monsanto's Roundup Ready soybeans. "Soybeans have become, hands down, the main cash crop (the one that makes the most money) for organic farmers, at least those in the Midwest. Organic growers in the Dakotas and Montana still rely on wheat as their main cash crop, but the corn, wheat, and soybean growers everywhere else rely on soybeans." The demand for organic soybeans is growing faster than the supply–even though the supply is rising. Increasing prices have attracted more and more farmers to growing soybeans organically. The biggest demand is still from Japan, as it has been for the past 4-5 years. As interest in organic foods has grown in Japan, bigger food manufacturers (primarily of tofu and natto) have started to use organic soybeans. The American food companies that use organic soybeans are still relatively small and few. Ron's company (if you add the organic soybeans Ron exports) may be the single biggest.

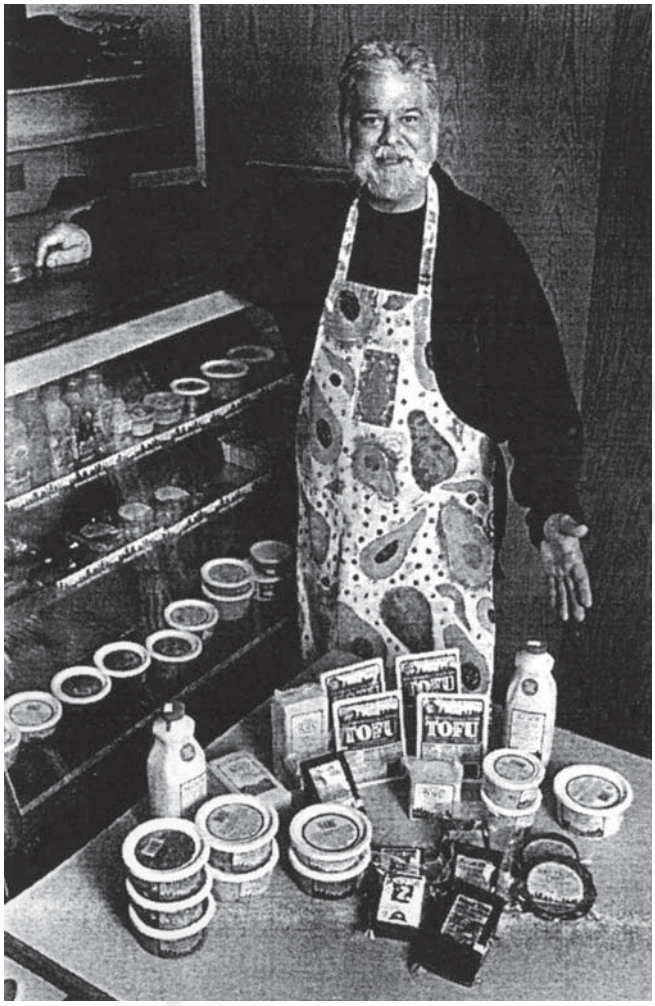
The demand for organic natto soybeans from Japan appeared suddenly and is now very large. Acreage that was used to grow organic soybeans for tofu or soymilk suddenly got switched to growing small-seeded organic natto soybeans. Because of that, the acreage used to grow organic soybeans for tofu and soymilk has decreased. Last year the organic soybean crop in the Midwest (especially Michigan and Ohio) was smaller than expected. So the combination of the export demand (mainly to Japan but also to Europe), the loss of acreage to natto beans, the bad crop, and the lack of new growers, has made the price of organic soybeans rise–by about 10%. But remember that the price of organic soybeans were already more than double, very often triple, that of non-organic beans. The highest prices are paid for Vintons and natto beans. It is these premium prices that are so attractive to the organic farmers. "This trend is of great concern to me, and especially the effect it could have on the price of soyfoods. In a free market economy, with lots of farmers looking for value-added crops, you would think that many more of them would start growing organic soybeans. But it is a difficult chasm to cross. A farmer must learn a whole new way of farming, and, he must wait for 3 years before that land can grow organic crops. That 3-year lead time is the big stumbling block; many farmers actually lose money on that land during those 3 years. Some big farmers are now starting to grow organic soybeans, but they getting involved on a gradual basis, adding 50 to 100 acres a year. Those large commercial growers, who have recently switched to growing

© Copyright Soyinfo Center 2013

soybeans organically, are sitting in the catbird seat, and doing extremely well."

In Ron's market, there have been very few questions from consumers about genetically engineered (transgenic) soybeans. "It hasn't become a problem at all for ASP; I think it will be an asset for us–because we don't use them and we can prove that we don't. However a lot of growers want to grow transgenic soybeans." Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

11326. Lukens, Margaret. 1997. Simply tofu: Transforming soybean to versatile vegan protein [Wildwood Natural Foods]. *Pacific Sun* (*Mill Valley, California*). Jan. 22. p. 14-15. Food & Drink section.



• ***Summary:*** Billy Bramblett, one of the partners in 17-year-old Wildwood Natural Foods (Fairfax, California) explains how tofu is made, its nutritional value, and how it is used. Wildwood now receives about 15,000 lb/week of soybeans at their manufacturing plant in Santa Cruz from contract farmers in Minnesota and Illinois. "Recently, to better ensure its supply of the best organic beans, the company has begun growing its own beans in Mexico."

"Tofu is an excellent source of complete protein, one of the few vegan foods that can make that claim." Contains 3 tofu recipes: Stir-fried tofu with rice. Tofu in coriander-mustard sauce with kohlrabi and pears. Creamy squash bisque. A photo shows Billy Bramblett, dressed in an apron, standing behind a table on which are many Wildwood products.

11327. *Boston Globe.* 1997. Way Ping Wong, 85: Pioneer in Boston tofu industry. Jan. 27. p. A13.
• ***Summary:*** An obituary. "Way Ping Wong of Boston, a pioneer in the local tofu industry, died Friday at St. Elizabeth's Hospital in Brighton from a respiratory illness. He was 85.

"Born in Canton, China, Mr. Wong was a tailor of fine clothing and became the personal tailor to Chiang Kai-shek in the 1940s. Mr. Wong moved to Taiwan in 1949 and began manufacturing tofu, a soybean curd product.

"In 1973 he moved his family to the United States and settled in Boston, where he founded the Wah Kee [sic, Yah Kee] Company, Inc., a tofu manufacturing company that now handles over 50 percent of the New England, said Cheong Chen, a family friend.

"He was former national chairman of the ON Leung Chinese Merchants Association and the former president of the Wong Family Association in Boston. Mr. Wong leaves his wife, Shou Fong (Chow) Wong of Boston; two sons; Chen Kwan Wong, and Cheng Wah Wong, both of Newton; a daughter, Jen Mee To of Quincy; and seven grandchildren. Mr. Wong will be honored with a Buddhist funeral ceremony in the Wing Fook Funeral Home in Boston at noon on Friday.

Talk with Marleen, Librarian at the Boston Globe. 1997. Feb. 11. Wah Kee no longer exists in Boston in any of her directories.

Talk with Betty Wong, daughter-in-law of Way Ping Wong. 1997. Feb. 13. The article in the *Boston Globe* spelled the name of this company incorrectly. The correct name is Yah Kee. The company is now located in Waltham, Massachusetts. Address: Massachusetts.

11328. B-rave Studio. 1997. Absolutely tofu. Parts I and II (Color videotape). New York, NY. 60 min. each.
• ***Summary:*** These two excellent 60-minute color videos feature the talented chefs Kate Farrell and Myra Kornfeld from the celebrated vegetarian restaurant Angelica Kitchen in New York City. They demonstrate how to cook a variety of vegetarian tofu recipes. A recipe booklet is include with each video. Each video costs $24.95 plus postage.

Tofu 1 demonstrates 7 recipes: Orange cilantro baked tofu. Thai kebabs. Sweet ginger tofu triangles. Black [turtle] bean sweet potato casserole. Spring salad with cashews. Provençal pasta cake. Lemon poppyseed cheesecake. You will also tour a tofu factory.

© Copyright Soyinfo Center 2013

Tofu 2 demonstrates 6 more delectable recipes: Millet and sunflower croquettes. Roasted vegetable lasagna. Autumn harvest stew. Chick pea and red pepper phyllo. Smokin' chile [chili]. Chocolate mocha moosecake. Then visits with a CSA biodynamic farmer and an organic farmer.

You may also visit their Web site: http://tofu.wildhack.com.

Note: *Webster's Dictionary* defines phyllo (pronounced FEE-lo, and derived from the Greek), a word first used in English in about 1950, as "extremely thin pastry dough that produces a flaky pastry."

For more on these videos see: Vegetarian Times. 1997. March. p. 12. Address: P.O. Box 1365, Canal Street Station, New York, NY 10013-0877. Phone: 1-800-431-3801.

11329. Goh, Francis N.K. 1997. Unicurd Food Company Pte. Ltd. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*) 10(1):1-2. Jan.
• ***Summary:*** Contains a good description and history of this tofu manufacturing company. A rather dark photo shows Mr. Francis Goh holding some of his company's tofu products. Address: Director and Founder.

11330. Levine, Lois. 1997. The king of the ranch casseroles: A cowboy classic for lighter lifestyles. *Vegetarian Times.* Jan. p. 24-26.
• ***Summary:*** This meatless version of the hearty Texas favorite contains marinated baked tofu and tofu sour cream. A color photo shows the finished dish.

11331. **Product Name:** Nasoya Nayonaise: Veg-Dressing & Spread [Fat Free].
Manufacturer's Name: Nasoya Foods, Inc.
Manufacturer's Address: 23 Jytek Park (P.O. Box 841), Leominster, MA 01453. Phone: 1-800-229-TOFU (8638).
Date of Introduction: 1997. January.
Ingredients: Silken tofu (water, organic soybeans*, lemon juice concentrate), distilled vinegar, can juice solids, corn starch, salt, xanthan gum, guar gum, mustard seed, onion powder, garlic juice, natural flavor, spices, oleoresin paprika.
Wt/Vol., Packaging, Price: 14 oz glass jar.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad (half, color) in Natural Foods Merchandiser. 1996. Oct. p. 123. "Our delicious Nayonaise is now also available fat free!" Talk with woman in marketing department at Nasoya Foods. 1996. Oct. 10. The introduction of this product has been delayed; they expect to start shipping in mid-December. The main soy ingredient will be their silken tofu. Talk with Shari Ann Peters, Marketing Assistant at Nasoya. 1996. Nov. 14. This product is expected to be available for sale in Jan. 1997. A small batch was made for sampling at the Natural Products Expo in October. Color brochure sent by Shari. Shows color photos of jars of regular and fat-free Nayonaise.

11332. **Product Name:** Tofu-Cotta (Resembles Ricotta Cheese) [Garlic Basil Flavor].
Manufacturer's Name: Soy Devine.
Manufacturer's Address: 1388 Haight St., Suite 222, San Francisco, CA 94117. Phone: 415-339-8045 or 415-929-0671.
Date of Introduction: 1997. January.
Ingredients: Organic nigari tofu*, organic apple cider vinegar*, filtered water, fresh garlic, basil, evaporated cane juice, sea salt. * = Grown in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 15 oz (425 gm) plastic tub. Wholesales for $2.00. Bulk price (4 lbs. minimum): $1.85/lb.
How Stored: Refrigerated.
New Product–Documentation: Call from Martha Devine. 1997. Jan. 16. She left Arcata in April 1996 and is starting this month to make products in San Francisco in a new kitchen. She buys her tofu from Quong Hop. This product, which is a non-dairy ricotta cheese, works very well as a shmear (Yiddish for "spread") for bagels. Leaflet and photocopy of Label sent by Martha Devine. 1997. Feb. 3. Leaflet: "Sent from Heaven. Soy Devine presents Tofu-Cotta: Garlic Basil Flavor." "And the angel Glycine appeared unto them and the glory of the Bean shown 'round about them." Label: 3 inches square. "Organic vegan. A vegan diet is kinder to animals, people & the environment. You'll eat a lotta Tofu-Cotta. Use Tofu-Cotta instead of cheese in dishes like: Lasagna, manicotti, calzone, pizza, pasta sauce, spanakopita, chili rellenos, enchiladas or your own favorites! It's a shmear! Its a dip! It's ready to eat! Soy is joy." Note: Mara changed her name back to Martha (her name at birth) in Dec. 1995.

San Francisco Bay Guardian. 1997. March 25. Dine & Travel section. "The name game, by Eric Stephan." This restaurant critic visited a new vegetarian restaurant named "Herbivore" and ordered lasagna ($6.95). It was made with Soy Devine's Garlic Basil Tofucotta, "which hardly gave a clue that it wasn't cheese."

11333. Stevens & Associates, Inc. ed. and comp. 1997. U.S. 1997 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 47 p. 28 cm. [29 ref]
• ***Summary:*** This second, expanded edition of the directory contains more than 270 company listings. Contents: Foreword. How to use the Soyfoods Directory (incl. Internet access). Daily soyfood guide pyramid (color). Soyfood descriptions (alphabetical): Introduction, green vegetable soybeans (edamamé), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen dessert, okara (see soy fiber), soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate, soy protein–textured, soy sauce

© Copyright Soyinfo Center 2013

(tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk (soy beverages), soynut butter, soynuts, soyoil & products, sprouts–soy, tempeh, tofu & tofu products, whipped toppings (soy based–"similar to other nondairy whipped toppings, except that hydrogenated soyoil is used instead of other vegetable oils"), yuba. Soybean products chart: From whole soybeans, from soybean meal, from soyoil and lecithin. Soyfood companies by product (products listed alphabetically).

Composition and nutrient content of soyfoods (large table, p. 14). Soyfood companies (alphabetical by company name; Each listing contains address, contact, phone, soy products, product names, distribution, to locate product, classification). Mail-order soyfoods: Soyfood mail order companies (listed alphabetically by company). Soyfood companies by state (alphabetical by state; California has by far the most). Soybean promotion & research organizations (national, and state). Professional associations and industry information resources. Soy cookbooks (19). Soy resource books (10). Soyfood fact sheets and recipes: 1-2 pages each for meat alternatives, miso, soyoil, soy flour, soymilk, tofu, textured soy protein, whole soybeans. Soyfoods directory survey.

This directory is on the Internet's World Wide Web at http://www. soyfoods.com. For more information or suggestions, call 1-800-301-3153. The Internet version of the Directory continues to improve. "The first year saw hits to our site increase from 1,000 the first month to more than 8,000 per month now. We have added a new search engine that makes it easier to find information and a new monthly e-mail newsletter, *Soyfoods USA,* designed to inform media sources, dietitians and consumers about the latest soyfoods information. To subscribe to this popular newsletter, just send an e-mail message to soyfoods@ind.com with the words 'Subscribe Soyfoods USA' in the body or subject field."

Talk with Roger Stevens. 1997. March 10. The 1997 directory was first available in January 1997. About 100,000 copies of this directory were printed, and all but 7,000 have already been sent out free of charge. About 77,000 copies were sent to registered dietitians nationwide; all are members of the American Dietetic Association. Another 10,000 copies were sent to the American Association of Family and Consumer Sciences–basically extension personnel at the Cooperative Extension Service in each county; these people provide a lot of consumer information about foods and agriculture. About 500 copies were sent to each of the 20 state soybean development councils. The remaining 6,000 copies were sent to callers who left their name and address at a toll-free answering service. The next step is to do a media tour in Indiana. Traveling with a registered dietitian, they expect to generate a lot of requests from citizens of Indiana. One of the goals is to show other states that if you promote soyfoods in this manner, you will get a lot of interest. Roger hopes to encourage other states to take a more active role in promoting soyfoods. The directory has generated a tremendous amount of information on the part of dietitians who call the toll-free number and have many questions about soyfoods; Roger tries to refer them to people who have the answers–such as 1-800-Talk-Soy. The Indiana Soybean Council has had to hire a new person just to handle the requests for this directory.

Next Roger plans to do a survey of registered dietitians to learn more about their responses to the 1997 directory. He might ask: Did you receive the book? Do you use it? If so, in what way and how often? How many people do you influence with regards to soyfoods as a result of this book? So if each of the 77,000 dietitians influences, on average, 10 people a year, the directory has reached more than 750,000 people. One major goal of this book is to help dietitians include more soyfoods in their own diets and in the diets of their clients. How can we better help you do this? Do you want a cookbook? A starter kit? Shall we include coupons?

From the focus groups he has already conducted, Roger thinks that future editions of the directory will be presented more like a cookbook or recipe book, with the directory in the back. "People really like the recipes. They just hand them out to their clients. We get requests for 100 books at a time from dietitians, who give the entire book to their clients at classes, in their offices, etc." Roger has the funds to do the research to find out exactly what dietitians want in the way of soyfoods recipes and how they want them organized.

Other possible questions: Which part or parts of the book do you find most valuable? Which do you find least valuable. Is there any information which is not in the book that you wish were included?

Roger would also like to develop for the next edition of this book a graphic presentation of the inside of a typical supermarket showing all the different products which contain soy.

Note: The word "soyoil" is used instead of "soy oil" throughout this directory. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

11334. Sullivan, Cheryl; Rhodes, Kathy. 1997. Simply soy: A variety of choices. Williamsburg, Virginia: Virginia Soybean Association. 118 p. Undated. Illust. Recipe index. 26 cm. • ***Summary:*** Contents: Introducing soyfoods into your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts.

Talk with Susan Haller of the Virginia Soybean Assoc. 2000. Nov. 9. This undated book was published about 3-4 years ago.

© Copyright Soyinfo Center 2013

Talk with Cheryl Sullivan. 2002. Aug. 12. She wrote this booklet for the Michigan Soybean Promotion Committee; it was published in about Jan. 1997. It was never sold and is now available online at www.soyfoods.com/SimplySoy. Address: 1. M.A., R.D., Sullivan Nutrition Inc.; 2. PhD, R.D., Preventive Cardiology Program, Univ. of Michigan; c/o 151 Kristiansand Drive, Suite 115 E & F, Williamsburg, Virginia 23188. Phone: (757) 564-0153.

11335. **Product Name:** Smoked Tofu Spread.
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1997. January.
Ingredients: Tofu (filtered water, organic* soybeans, nigari), organic* canola oil, soy sauce (water, soybeans*, whole wheat*, salt), filtered water, lemon juice, kelp, distilled vinegar, organic* cider vinegar, natural hardwood smoke. * = Grown in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 8 oz.
New Product–Documentation: Two Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in Jan. 1997. Label #1 of Jan. 1997. "Smoked Tofu Spread." 3 inches diameter. Self adhesive. Dark red on beige. Illustration shows a tofu shop on stilts near the ocean with a tree arching overhead.

Label #2 of Oct. 2002. "Organic Smoked Tofu Spread." 3½ inches diameter. Self adhesive. Brown and orange-yellow on white. A handsome, impressionistic watercolor illustration shows a tofu shop on stilts on a cliff with a tree arching overhead. "Low in saturated fat. Cholesterol free. Contains 170 mg Omega 3 fatty acids per serving."

• ***Summary:*** "This column may be beneficial to your health. First, the conclusion. Increase your consumption of soy products today. Now I will tell you why." Address: Columnist.

11337. Dominguez de Diez Gutiérrez, Blanca. 1997. Re: Update on her life, and past and upcoming work with soya. Letter to William Shurtleff at Soyfoods Center, Feb. 11. 4 p. Handwritten, with signature. [Eng]
• ***Summary:*** In 1987 Blanca went to Ecuador to teach soyfoods to housewives. She was active with soya until 1989, when her health began to decline. She had to close her Fundacion Mariposa. In 1993 she finally had a heart attack; she underwent surgery and had 3 coronary bi-passes. She had low cholesterol levels; the heart failure is hereditary. All her family on the father's side died of heart attacks at about age 50 to 60. Blanca is now age 77, so she has outlived them all.

She came to the USA 3 years ago to live with her son (who is single) in Houston. She also has a daughter in Houston, and another son and daughter in Mexico, plus 7 grandchildren. She must live at sea level because she needs the oxygen. She had to leave everything and start over again. She is still not allowed to drive an automobile. But she is now feeling stronger and better.

She has accepted an invitation to go to Los Mochis, Sinaloa, Mexico, in mid-April for 2-3 weeks to teach women about soyfoods. Los Mochis is on the Sea of Cortés [Gulf of California].

In Mexico she used to make delicious dishes with okara to replace eggs (*Huevos a la Mexicana*) with plenty of onion, garlic, tomato, cilantro, and chili. You scramble it like eggs.

Blanca keeps in touch with some of the people to whom she taught soyfoods during the 1980s. This work is still alive in the following places: (1) Tepozlan, Mortelos. The women named Coti who was the most Indian of all her group was the one who caught on; her native language is Nahuatl, but she learned to speak a little Spanish. She has a little vegetarian shop where she makes soya milk, tofu, and okara dishes. Coti and Blanca's niece are very close friends, so Blanca's niece tells her about this work. (2) In Durango, a lot of work has been going on for years. Lots of information about soya is taught to all the social workers and teachers in the college for teachers (*La Normal de Maestros*). Blanca's book is used like a textbook. A friend of Blanca's who is a teacher here keeps the work going and keeps Blanca informed. (3) In both Veracruz and Huauchinango also Blanca's work is continuing. She keeps in touch with friends there. (4) In the state of Tlaxcala, at a little teaching center, Prof. Alfonso is teaching about soya.

After her heart attack, she just had to let everything go–but it is now going on its own "I had a death experience. I feel like I'm alive, but I'm dead. I let everything go. She closed her *Fundacion Mariposa* (Butterfly Foundation) in 1994. There she taught nutrition, and tried to take culture to the children, from grades 1 to 6, in this poor, rural area. They put on plays such as the *Iliad* [an epic by Homer that recounts the story of the Trojan War] and the *Odyssey*–and they loved it. She called these poor little peasant children kings and queens. She also lectured on ecology to high school kids and teachers in the town nearby, and taught Indian philosophy (such as the *Bhagavad Gita*), which has helped them a lot with their emotional problems. She tried to help them to develop character and to love their work. She also tried to return the dignity of cooking to the women and the sacredness of food. Blanca has been a professional painter, and she was an art teacher. She married when she was young and had 4 children; she was happily married to Jose Diez Gutierrez for 48 years until her husband died 7 years ago. Her husband didn't understand a thing about her work with spiritual teachings and soya, but he never let her down.

NAFTA has been a disaster for Mexican-owned

© Copyright Soyinfo Center 2013

business. Only the multinational have really come out ahead; they now employ more Mexicans than ever before. Blanca believes that the multinationals are also into drug trafficking. Address: c/o Mr. Jose Diez Gutierrez, 3231 Meadway Dr., Houston, Texas 77082. Phone: 281-870-1850.

11338. Fan, Stephanie. 1997. Early Chinese tofu manufacturers in Boston (Interview). *SoyaScan Notes.* Feb. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Her mother, who is 76, remembers a Mr. Wong, who owned a tofu manufacturing company on Oxford Street in Boston in the 1930s. She does not recall his first name. In the late 1940s, Mr. Wong sold his company to Mr. Biu CHEW (his family name may have been spelled Choo or Jew or Chue). The company was still on Oxford Street. When Stephanie was growing up in Boston in the 1940s and 1950s, she remembers this tofu company on Oxford Street. She hated going down there (to give a message to Mr. CHEW) because of the awful strong smell.

She thinks that Wah Kee tofu co. still exists on Tyler St. She cannot find the address in a directory but she will find it in some way. Address: Chinese Historical Society of New England, 2 Boylston St., Suite 210. Phone: 617-338-4339.

11339. Mio, Art. 1997. Re: Pacific Nutritional Foods, Inc. Tualatin, Oregon, will be shipping its first orders of U.S.-made aseptically packed Mori-Nu Tofu on February 18, 1997. Letter (fax) to William Shurtleff at Soyfoods Center, Feb. 11. 1 p. Typed, with signature on letterhead.
• ***Summary:*** The first sales will go to the health food industry; other sales channels will be filtered in over the next few months. During this transition period, Morinaga Nutritional Foods will be selling both Tokyo-made 10.5 oz. Mori-Nu as well as the new 12.3 oz. U.S. product.

The Grand (internal) opening will be held at the plant on 4 March 1997, starting at 1:00. Note: Only about 200 "insiders" will be invited for a luncheon; no local or state government people will be present. Address: National Sales Manager, Morinaga Nutritional Foods, Inc., 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

11340. Smith, Michelle. 1997. Members of the Soyfoods Association of North America (as of 12 Feb. 1997). Walnut Creek, California. 1 p. Feb. 12. Unpublished typescript.
• ***Summary:*** The Association has 35 paid members. Two of the companies (Devansoy and MLO Products) have two people listed from each company. The companies are: ADM–Jack Painter, Eden Foods–Sally Gralla, Devansoy–Elmer Schettler & Ed Pedrick, Lightlife Foods–Rick McKelvey, MLO Products–Ed Cabelera & Ryan Schmidt, Pulmuone–Seung Hoon Lee, SunRich–Allan Routh, Sacramento Tofu–Alvin Kunishi, American Miso–Don DeBona, Tofu Shop–Matthew Schmit, Turtle Island–Seth Tibbott, Vitasoy–Yvonne Lo, Westbrae–Myron Cooper, American Soy–Tim Redmond, Clofine–Richard Eluk, International ProSoya–Dusty Cunningham, Monsanto–Molly Cline PhD, MYCAL–Terry Tanaka, Natural Products–Paul Lang, Pacific Soybean–Dan Burke, Alfred College–Charles Goubau, Ohio Soybean Council–Jim Kapp, Iowa Soybean Association–Kirk Leads, Iowa State University–Dr. Lester Wilson, Mark Messina PhD, Nebraska Soybean Board–Stephanie Lynch, EMB Partners–John Eastham, Nutrition Advantage–Anne Patterson R.D., Soyatech–Peter Golbitz, Soyfoods Center–Bill Shurtleff, Apple Valley Market–Gary Pappendick, Essene–Howard Waxman, Sevananda–Vince Hoffman. Address: Executive Director, Soyfoods Assoc. of North America, P.O. Box 3179, Walnut Creek, California 94598. Phone: 510-935-9721.

11341. Nelson, Emily. 1997. Ambiance to go: Two neophytes bring a taste of New York to Hungry Pittsburg: In the land of the Pierogi, customers stand in line just for the atmosphere. But avoid the curried tofu. *Wall Street Journal.* Feb. 18. p. A1, A17.
• ***Summary:*** Tom Baron and Juno Yoon are copying hot restaurant ideas in Pittsburg. Their restaurant named Soba serves miso-glazed red snapper. But one evening at their restaurant Kaya, they both tasted the curried-tofu appetizer, found it terrible, and sent it back to the kitchen. Address: Staff reporter.

11342. Bertagnoli, Lisa. 1997. Going green: Why are more seniors kicking the meat habit? Their reasons may surprise and enlighten you. *Vegetarian Times.* Feb. p. 76-81.
• ***Summary:*** Older people are turning to a vegetarian diet in ever-increasing numbers. Not surprisingly, demographics are driving the drift. By the year 2005 Baby Boomers, those born between 1949 and 1963, will make up 38% of the U.S. population. This educated, health-conscious, rebellious, and relatively affluent segment of the population fits the traditional vegetarian profile.

11343. Galaxy Foods Company. 1997. Galaxy Foods–Creator's of today's lifestyle foods (Portfolio). Orlando, Florida. Nine inserts. 30 cm.
• ***Summary:*** On the cover of this portfolio is the Galaxy Foods logo and four of its brand logos (formägg, Soyco, Soymage, Lite Bakery) against a white background. Across the bottom is written the slogan in bold red letters: "Creator's of today's lifestyle foods." A four-page color insert, stapled to the portfolio contains a color photo of Angelo S. Morini (Galaxy's Chairman, President & Founder), a mission statement (dual purpose), photos and descriptions and photos of the company's products and plant, a description of the new plant (60,000 square foot facility in Orlando, Florida).

The nine inserts in this portfolio include: Five news releases from 1996 and early 1997 as follows: "Galaxy

© Copyright Soyinfo Center 2013

Foods announces $2 million line of credit" (4 Nov. 1996). "Galaxy Foods, Pepsi and The Golf Channel to launch health show" (25 Nov. 1996). "Galaxy Foods announces continued expansion of export sales" (9 Dec. 1996). "Galaxy Foods announces 3rd quarter results–Sales up 325% over same quarter last year" (11 Feb. 1997). "Galaxy Foods pulls out of Pacific Foods/HZ Foods joint venture" (28 Feb. 1997). Note: HZ Foods = Huzhou Zhenyuangtong Foods is located in China. Galaxy first reported the proposed joint venture in a press release dated 24 Sept. 1996. The venture was intended to produce, distribute, and sell various food products to consumer markets in China (PRC).

A 2-page letter to shareholders dated 20 Dec. 1996 from Angelo Morini. A 4-page brochure titled "About Galaxy Foods Company." It begins: "Galaxy Foods' flagship line, formägg, was originated in 1968 as a healthy cheese topping for pizza. During the next few years, the product was sold to pizza makers, frozen food manufacturers, hospitals, schools and restaurants. In 1972, when the dangers of foods high in cholesterol became known, Galaxy began selling formägg in health food stores." Formägg is made by blending casein, protein from skim milk, with canola oil. It is a lactose-free cheese product made with no saturated fats and no cholesterol. It now comes in seven different flavors and forms, such as Grated fat free Parmesan, Mozzarella and Cheddar shreds, Fat free yellow American individually wrapped slices.

A color brochure (front and back) titled "Nature's alternative to cheese: Formägg veggie slices."

Galaxy's quarterly report (Form 10-QSB) for the quarterly period ended 31 Dec. 1996 (14 p.). The company lost more than 1 million dollars in 1995 and in 1996. Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

11344. House Foods America Corporation. 1997. Changing the way America eats–Hinoichi (Brochure). Garden Grove, California. 6 p. 28 cm.

• ***Summary:*** This is a stylish, glossy, 6-panel full-color brochure, with a white on red cover. Contents: The freshest ideas for healthy appetites: An ingredient full of innovation, two billion people can't be wrong, eating, feeling, and looking better, doctors and chefs now agree, making change so natural. The House behind the brand.

Photos show: A full-page shot of tofu in 4 dishes as part of an elegant dinner. Small shots of tofu in various dishes. The label of 3 types of Hinoichi tofu (regular, firm, and soft–kinugoshi). The outside of the company's new plant in Garden Grove. Rows of stainless steel pressing boxes inside the new plant. Address: 7351 Orangewood Ave., Garden Grove, California 92841. Phone: (714) 901-4350.

11345. House Foods America Corporation. 1997. House Foods America Corporation. Garden Grove, California. 12 p. 28 cm.

• ***Summary:*** This color booklet is written in 4 languages: English, Japanese, Korean, and Chinese. Thus four blocks of text, each with the same message, appear on each 2-page spread. Contents: Introduction. House Foods products. Tofu & tofu products. Restaurant–Curry House. Factory.

"House Foods Corporation is the biggest spice manufacturer in Japan, selling processed foodstuffs such as curry mix and stew mix products. In 1981, we established the Los Angeles office to introduce Japanese style curry... In 1983 we opened a curry restaurant in Little Tokyo, where our customers enjoy cuisine created with a Japanese sensibility. We also [in 1983] started manufacturing tofu, the healthy food low in fat and high in protein. Tofu has become increasingly popular in the United States and most grocery stores carry it. In 1997, we established House Foods America Corporation by merging the three enterprises: House Foods Los Angeles Office, which is in charge of the sales of House Foods' products from Japan, Curry House Restaurant, and Hinoichi Tofu manufacturing. The new entity allows us to provide better quality products to our customers. House Foods America Corporation aims to bring the rich Japanese food culture to the United States by providing high quality food products to American customers."

The new factory in Garden Grove makes 3 types of tofu, natto, fried bean curd, and konnyaku. "This factory features state-of-the-art equipment which can produce 150,000 packages of tofu per day." As of March 1997 there are five Curry House restaurants in the Los Angeles area.

Contains many color photos including: Two views of the outside of the new tofu factory in Garden Grove, California. Curry and Chinese Mabo Tofu Sauce packages. Packages of 3 types of Hinoichi Tofu (regular, firm, and soft kinugoshi) plus natto. The inside of a Curry House restaurant. Five views of the equipment in the new tofu factory, including an overview of the production area. Address: 7351 Orangewood Ave., Garden Grove, California 92841. Phone: (714) 901-4350.

11346. Mangels, Reed. 1997. Vegetarian Journal's guide to breakfast "meats." *Vegetarian Journal* (*Baltimore, Maryland*). Jan/Feb. p. 24-25.

• ***Summary:*** A large table gives a nutritional comparison of breakfast meats and meat alternatives in three categories: Bacon (2 alternatives), Canadian bacon (1), and sausage (9). The meatless meat alternatives are made from tofu, tempeh, and textured soy protein concentrate and wheat gluten. Address: Ph.D., R.D.

11347. **Product Name:** Mori-Nu Tofu–Silken Style [Firm, Extra Firm, Soft].
Manufacturer's Name: Morinaga Nutritional Foods, Inc. (Product Developer-Distributor).
Manufacturer's Address: 9960 S.W. Potano, Tualatin, OR

© Copyright Soyinfo Center 2013

97062. Phone: 503-692-3498.
Date of Introduction: 1997. February.
Ingredients: Firm and extra firm: Water, soybeans, isolated soy protein, gluconolactone (a non-dairy coagulant derived from food starch), calcium chloride.
Wt/Vol., Packaging, Price: 12.3 oz (349 gm) Tetra Brik Aseptic carton. Retails for $1.19 (1997/06, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1997. June 16. Each package has a color photo on the front panel and a recipe on one side.

Talk with Art Mio of Morinaga. 1997. June 16. These three products were first sold commercially on Feb. 17. They are made by a new company named Pacific Nutritional Foods, Inc., which is a joint venture between Morinaga Nutritional Foods, Inc. and Pacific Foods of Oregon, Inc.; the company's sole purpose at present is to manufacture aseptically packed tofu.

11348. Pacific Nutritional Foods, Inc. 1997. Re: Invitation to open house (Folded card). Tualatin, Oregon. 4 panels.
• ***Summary:*** On the cover of this printed, folded invitation card (each panel is 6¼ by 4½ inches) is written "Pacific Nutritional Foods Incorporated." Above these words are two green waves. On the inside is written: "Pacific Nutritional Foods, Inc. cordially invites you to attend our Open House. 11:00 a.m. to 4:00 p.m. Tuesday, March 4, 1997, at our facility located in Tualatin. 9960 S.W. Potano. Dedication ceremony at 1:00 p.m.

Note: This new company and factory, Pacific Nutritional Foods, Inc., is a joint venture between Morinaga Nutritional Foods, Inc. and Pacific Foods of Oregon, Inc. It will make Mori-Nu Tofu. Address: Tualatin, Oregon.

11349. Shurtleff, William; Lingle, Sheila. 1997. Readers like Soyfoods Report. *Soybean Digest.* Mid-Feb. p. 66.
• ***Summary:*** Since Soyfoods Center was omitted from the "Soyfoods Special Report" in a previous issue of *Soybean Digest,* Shurtleff writes about the Center and its resources. A Texas reader thanks the Digest for writing about tofu and tempeh, which he has eaten for the past 30 years as he worked as an agronomist. Address: 1. Director, Soyfoods Center, Lafayette, California; 2. Indiana Soybean Development Council.

11350. **Product Name:** Soymeat Mealmaker (Formerly Cajun BBQ Style and Vegan Cajun Burger) [Original Spicy Flavor].
Manufacturer's Name: Soy Devine.
Manufacturer's Address: 1388 Haight St., Suite 222, San Francisco, CA 94117. Phone: (415) 339-8045.
Date of Introduction: 1997. February.
Ingredients: Organic nigari tofu*, organic tomato sauce*, fresh onion, filtered water, mustard, organic brown rice syrup*, organic apple cider vinegar*, Bragg Liquid Aminos, organic miso*, organic peanut butter*, fresh garlic, non-irradiated spices. * = Grown in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 14 oz (392 gm) plastic tub. Wholesales for $3.00. Bulk price (4 lbs. minimum): $3.00/lb.
How Stored: Refrigerated or frozen.
New Product–Documentation: Call from Martha Devine. 1997. Jan. 16. She left Arcata in April 1996 and is starting this month to make products in San Francisco in a new kitchen. She buys her tofu from Quong Hop. This product, which was launched in Jan. 1995 as Vegan Cajun Burger (On a Bun), has been renamed and repositioned.

Photocopy of Label sent by Martha Devine. 1997. Feb. 3. This product will be coming soon. Label: Top–3½ inches diameter. "Healthy delicious fast foods. A vegan diet is kinder to animals, people & the environment." "Use meatless Soymeat Meal-Maker to replace the beef, pork, chicken, turkey, tuna, or sausage in dishes like: burritos, chili, enchiladas, nachos, tacos, tamale pie, tostadas, shepherd's pie, lasagna, spaghetti, hero subs, sloppy joes, rice or noodle casseroles, or your own favorites! Pre-cooked. Delicious 'as is' or just heat & eat! Soy is joy." Note: Mara changed her name back to Martha (her name at birth) in Dec. 1995.

11351. Witt, Barbara. 1997. Pan-Asian express: Quick fixes for Asian food fans. New York, NY: Bantam Books. xiii + 194 p. Index. 24 x 14 cm.
• ***Summary:*** The author, who grew up in Connecticut, loved Chinese food and Mott Street in New York City. An excellent writer, she won the James Beard award in 1993. The section on "Seasonings" (p. 8-13) gives descriptions of: Hoisin sauce, sesame seeds, soy sauce (Kikkoman is a good brand; tamari is darker and stronger), soy sauce–dark (sometimes called "black soy"; Koon Chun is a good brand), soy sauce–mushroom (flavored with straw mushrooms; Pearl River Bridge is a good brand). Soy sauce–shrimp (The Chinese equivalent of Thai and Vietnamese fish sauce. Pearl River Bridge is a good brand), soy sauce–Indonesian (*Ketjap manis;* not to be confused with the less subtle Chinese sweet soy sauce).

The section on "General packaged goods" (p. 15-18) gives descriptions of: Black beans–Chinese salted (Chinese salted black beans: "The ancient and original soyfood that produced miso and soy sauce looks kind of pitiful..." Good brands are Mee Chun and Pearl River Bridge. Avoid those flavored with five-spice powder), coconut milk (canned is excellent), coconut cream, tofu ("innocuous").

Soy-related recipes include: Seared corn, tomato, and black bean relish (with "chopped Chinese black beans," p. 40-41). Silky tofu walnut dip (p. 50-51). Bean paste soup (*miso shiru,* with red bean paste, p. 91). Romaine salad with

© Copyright Soyinfo Center 2013

lemon soy dressing (with soy sauce, p. 95-96). Tropical fruit, avocado, and tofu salad (p. 110-11). Scallops with pork and black beans (with "Chinese fermented black beans," p. 146-47). Curried mushrooms, peas, and potatoes (p. 171-72). Address: Washington, DC.

11352. Tsurata, Shizuka. 1997. From Mother Earth kitchen: Sifting through soybeans for a taste of tofu. *Japan Times* (*Tokyo*). March 6. [Eng]
• ***Summary:*** "Tofu has now become a staple food in the West,..." Address: Columnist.

11353. Endo, Margaret. 1997. The Los Angeles Tofu Festival (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This festival was held on 10-11 August 1996 in Los Angeles, in collaboration with the annual Nissei Week–which has been celebrated for more than 50 years. Nissei Week in Los Angeles resembles the week-long Cherry Blossom Festival in San Francisco. The goal is to draw outside people into Little Tokyo and to expose them to Japanese culture, businesses, etc. 10,000 people attended–6,000 the first day and 4,000 the second day. The idea came from Bill Watanabe, executive director of the Little Tokyo Service Center (LTSC), which is a non-profit community organization which provides a variety of social services for the Little Tokyo community. The staff of LTSC is mostly Japanese-American. The main sponsor to step forward was Hinoichi Tofu Co. Tofu recipes were served at restaurants and one tofu cookbook, titled *The Four Seasons of Tofu Cookbook,* was compiled in 1996 for the festival by the staff of the LTSC (from recipes they contributed and tested), published in English, and sold at the festival. Note: Patricia Greenberg of Los Angeles, head of The Fitness Gourmet, who is writing a soyfoods cookbook, visited this festival in 1996.

The second Tofu Festival will be held this year on August 9-10, the first weekend of Nissei Week. A Japanese-language edition of *The Four Seasons of Tofu,* will also be published. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

11354. Ubiera, Leonidas Radhames. 1997. Re: Work with soyfoods and gluten in the Dominican Republic. Letter to William Shurtleff at Soyfoods Center, March 10–in reply to inquiry. 2 p. Typed, with signature.
• ***Summary:*** Gives the date that each of the company's products were introduced, and the main ingredients in each. Tofu and soymilk were both introduced in Sept. 1995. All other products were introduced in 1996.

Leonidas is aware of only one company that made soy products in the Dominican Republic before his company–that is a company named Salubi, which made salami from texturized soya and sold other imported products.

UFIESA is an abbreviation/acronym for Ubiera & Fortunato Import-Export, S.A. It is a division of Productos Nutrisoya.

The address on this letter is his home and office. His factory is located at Av. de los Restauradores No. 149.

He thanks William Shurtleff for sending him a database search of all known work with soya in the Dominican Republic from earliest times to the present. "I will use this to teach about soya in our country." Address: Calle 33 #9-A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: 809 590 3418.

11355. Tanikawa, Harry. 1997. House Foods, America's second largest tofu maker, to open a new tofu factory–America's largest–on March 12 in Garden Grove, California (Interview). *SoyaScan Notes.* March 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The address of the new plant will be 7351 Orangewood Ave., Garden Grove, California 92841. Phone: 714-901-4350. Garden Grove is about 30 miles southeast of Los Angeles–near Anaheim and Santa Ana.

First a bit of history: In 1983, House Food Industrial Co., Ltd. of Japan purchased 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company was renamed House Foods & Yamauchi, Inc. A year or two earlier Mr. Yamauchi had changed his company name to Yamauchi Enterprises (from Hinode Tofu Co.) because he was challenged by the Hinode Rice Co. over use of the word "Hinode." At this time, Harry was at Japan Food Corporation (JFC). Mr. Yamauchi asked JFC (since they were a big customer for his products) for their advice concerning the best company and brand names, from among several that had been suggested by a research company. Mr. Yamauchi selected "Hinoichi" as a new brand name, to replace "Hinode." The "Hinoichi" brand originated at this time. In 1993, House Foods Corporation of Japan purchased the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company was renamed House Foods America Corporation. No news release was issued at the time and no media stories appeared. Mrs. Yamauchi would probably know all the exact dates that these things happened.

The new plant will have three tofu production lines and a capacity of 150,000 cakes of tofu, compared with 70,000 for the previous plant. The plant size is about 130,000 square feet on 5 acres of land–which gives plenty of room for expansion. House Foods bought the property. Mr. Yamauchi also used to own his parcel in downtown Los Angeles, at 526 Stanford Ave., on the outskirts of Little Tokyo. The plant was located near Yohan and next to many very old, first-time established Japanese manufacturers in that area. It was a bad neighborhood, with many drunks on the streets and it

© Copyright Soyinfo Center 2013

steadily got worse.

Mr. Yamauchi no longer comes to work each day at the tofu plant; he stopped coming to work in about August 1996; he is retired and just stays home with his family.

The biggest upgrades at the new plant are the cooker, the double-cool pasteurizer, and the cutting and packing. In the old factory, the tofu went through a single-cool pasteurizer. First it moved through long a hot-water pasteurizing tank, and then through a cold lower pasteurizer, which would lower the internal temperature of the tofu to around 40ºF– which was above shipping or storage temperature. In the new factory, the tofu will pass through the hot bath, then a room-temperature cold bath, then it will go down through a very cold temperature bath at about 33ºF; it will come out at the exact temperature desired for storage or shipping, which give the product a longer shelf life. All the tofu cutting and packing is now fully automatic.

House Foods would like to become the biggest tofu manufacturer in America. The new plant will give them the capacity to pursue that goal. House has the finances and determination to reach the goal.

On 1 April 1997 House Foods American Corporation will be formed as a merger of three different companies that were established in Los Angeles: (1) House Foods Corporation in Torrance was an importer of spices manufactured in Japan by House Foods of Japan. They also exported some raw material; (2) Curry House America, a restaurant division with five Curry House restaurants in the Los Angeles area (in Little Tokyo, Torrance, Cypress, Gardena, and Beverly Hills). (3) The tofu manufacturer and seller of tofu. House Foods America Corporation will then be a subsidiary of House Foods Corporation of Japan.

House Foods issued a news release in which it claimed to be the largest tofu manufacturer in the USA, with 60% of the domestic market. This was supposed to read 60% of the Los Angeles market–which is true.

Note: House Foods is the oldest existing Japanese-American tofu manufacturer in the United States. The company traces it roots back to 1923 in Honolulu, Hawaii, when a company named H. Iwanaga Daufu was started. After being purchased by Shoshiro Kanehori and then by Mrs. Haruko Uyeda, it was finally purchased in 1939 by Mr. and Mrs. Shokin Yamauchi, and later renamed Aala Tofu Co. Mr. Shoan Yamauchi, the son, worked at the family shop in Hawaii, then in 1947 came to California with his wife, Shizuko. The former owners of Tomoi Tofu Co. (Mr. Tomoi and probably a partner) had started Hinode Tofu Co. in March 1947 at Sixth St. and Towne Ave. in Los Angeles. They made 1,500 cakes of tofu a day. Mr. Shoan Yamauchi and his wife purchased the company in late 1947. Later they renamed it Matsuda-Hinode Tofu Co., then Hinode Tofu Co. Mr. Yamauchi pioneered the packaging of tofu in plastic tubs with a heat-sealed film lid and was the first to have his tofu sold in U.S. supermarkets. For many years Hinode Tofu Co. was the largest tofu maker in the USA. Address: National Sales Manager, House Foods of America Corp., 7351 Orangewood Ave., Garden Grove, California 92841. Phone: 714-901-4350.

11356. Wight, Karen James. 1997. Work with tempeh and tofu at Homeland Foundation in Australia (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Karen arrived at Homeland Foundation in Australia in either late December 1981 or early 1982 (she no longer has her passport from that era). She lived in Australia for 6½ months, during which she lived at Homeland Foundation for 3½ months. Homeland was located at Upper Thora, in the Bellingen Valley, about 40 miles inland from Coffs Harbour, near the east coast of New South Wales. The area was incredibly lush, green, and fertile.

She left southern California in August 1981 (after leaving a professorship at UCLA), spent 2 months in Hawaii studying body work, then flew to Sydney (the capital of New South Wales), arriving in about October 1981. She met Jonathan Gordon at a community in a hotel just outside of Sydney, where they stayed for about a month. Then they stayed at a community in Victoria for about 1 month. They spent Christmas in Melbourne–where the only thing offered to eat was meat. Then they went directly to Homeland. They wanted to go there because Jonathan had been to Findhorn (a spiritual community in northern Scotland), and he knew some of the Findhorn people who had started Homeland.

Karen is sure the company that made tofu, tempeh and sprouts (mainly alfalfa and mung bean sprouts; no soy sprouts) had a name (but she cannot remember what it was) because they sold products commercially outside the community in order to earn income for Homeland Foundation. The equipment was new and gorgeous; the sprouting room was very modern, sanitary, and well organized. The company made good use of the okara–a by-product from making tofu; they used it to make delicious okara granola and soysage. These two products were consumed mostly in the community and by friends; they were not sold.

Karen has no idea when Homeland was established or when they started to make tempeh and tofu. She would guess they had been making and selling soyfoods for at least a number of months, and perhaps a year or two. She thinks it is fairly likely that they were making tempeh by January 1981. They had clearly built it into a very productive and well-organized operation. Karen is quite sure that they started making tempeh after tofu production was well established.

The tofu and tempeh were made in the same small room, but each was made by different people; Karen made tofu more than tempeh. They made tempeh in an incubator that was the size of a refrigerator–about 30-40 pounds at a time, approximately twice a week. Tofu was made daily.

© Copyright Soyinfo Center 2013

Only soy tempeh was made. They may have learned both the tempeh and tofu processes from one of the many people who came regularly from Findhorn. The various people who were head of the community had all been to Findhorn. Karen remembers getting up at 2:00 in the morning to make tempeh. She wishes Jonathan would write a book about spirituality, service, cooking, and food. Address: 2333½ Rodriguez Rd., Santa Fe, New Mexico 87501. Phone: 505-982-4765.

11357. Apodaca, Patrice. 1997. Curd is the word: Tofu–Nation's largest factory open in Garden Grove [southern California]. *Los Angeles Times.* March 13. p. D1, D5. Business section. [1 ref]
• ***Summary:*** Osaka-based House Foods opened America's largest tofu factory on Wednesday. A Shinto minister, the Rev. Alfred Y. Tsuyuki of Konko Church, Los Angeles, stood before a shrine and conducted the ceremony of blessing–as traditional to Japanese opening a new business as christening a ship is to Westerners. Rev. Konko has blessed Japanese buildings across America. "These plants have made millions off me," he quipped.

The fully automated, state-of-the-art, 130,000 square foot plant cost $21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day. The old factory has been operating a full capacity for years. The new one will have 150 workers by the time it is fully operational next month. The new plant even has a test kitchen, where a resident home economist will test recipes and consult with dietitians. The firm's sales are currently about $10 million a year. House Foods is best known in this country as a maker of snack foods and curry powder.

House Foods is hoping that its U.S. expansion will help it withstand growing pressures at home. With about $1.7 billion in total sales, it has had among the highest profit margins in the Japanese food industry, according to Patricia Horvath, an analyst at UBS Std. in Tokyo. But House Foods' profits have decreased in the past few years due to increased competition, the Japanese recession, and a weaker yen which increases the cost of imported materials. In 1983 House Foods bought an interest in the Hinoichi tofu plant in Little Tokyo, Los Angeles, then purchased the rest of the company in 1993.

After the Shinto ceremony, before the guests were ushered away to a lunch of traditional fare and tofu lasagna, the company–leaving nothing to chance–finished with a typical American opening symbol. They cut a ribbon.

In America tofu has been championed by vegetarians as a meat substitute. "They've fought to overcome the typical American impression of tofu as soggy and tasteless by promoting its chameleon-like" versatility. Contains a quote from *The Book of Tofu* by Shurtleff & Aoyagi about how a traditional craftsman makes tofu.

Color photos show: Yellow soybeans. Soymilk being curded in a carousel curding machine with about 24 cylindrical vats. Rev. Tsuyuki in Shinto cap holding a bowl. Address: Times Staff Writer.

11358. Rose, Richard. 1997. Re: Soy cheeses in Europe. Letter to William Shurtleff at Soyfoods Center, March 13. 1 p. Handwritten.
• ***Summary:*** Richard just returned from Biofach in Germany. The tofu/soy cheese sold by Viana died. Sharon's Finest is going to (1) export some Rellas to Europe via Ki Foods in Italy, and (2) produce some tofu products and hemp foods in France, under license to Soleil de la Lix. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11359. *SoyaScan Notes.* 1997. A new challenge for soyfoods manufacturers in America (Overview). March 14. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the last year or two, Soyfoods Center has been receiving a growing number of calls from people who ask "How can I get more soy into my diet?" Never before have we heard people ask a question like this. These people have heard about the many health benefits of consuming soyfoods regularly but they don't know what foods would suit their tastes and diet. Some are willing to try tofu, but others are not. Those who have tried soymilk often say that they don't like the taste and it is too expensive.

We think there is a need for a new type of soy product with the following specifications, listed here in order of importance: (1) It must be delicious, something that most Americans would like immediately. (2) It must be ready to eat, ideally without even heating. (3) It should be low in fat and low in calories. (4) It should contain enough soy isoflavones/phytoestrogens (i.e. soy protein) to have significant health benefits if consumed daily. (5) It should not be too expensive. (6) It should contain only natural ingredients and no animal products.

Examples: (1) A pudding or parfait–either the type made from soymilk and sold so widely in Europe in Tetra Brik cartons, or one resembling the Imagine Foods 4-pak puddings (which have no nutritional benefits except low fat and low calories). (2) A protein-rich soy yogurt with added sweetener plus fruits or flavoring. (3) A dry mix to which one adds water or soymilk for use as a breakfast shake.

How to market it: Any slogan that works, with the subheading "Contains 30 mg natural soy isoflavones/phytoestrogens per serving." Or "Contains 30 mg natural genistein per serving."

11360. Koda, Carole. 1997. Re: Soybeans, tofu and Japanese-Americans in the Central Valley of California. Letter to William Shurtleff at Soyfoods Center, March 17–in reply to inquiry. 2 p. Handwritten, with signature.
• ***Summary:*** Carole is writing an oral history on the maternal

© Copyright Soyinfo Center 2013

side of her family. Her mother, who married into the Koda family after World War II, doesn't think that the Kodas grew soybeans. She also asked her uncle, who has farmed in Livingston, California, all his life. He wasn't aware of any Japanese or Japanese-Americans who grew soybeans.

But Carole has a memory of tofu. "When I was a child visiting aunts and uncles in Livingston & Cressey, the tofu truck used to come to the houses delivering fresh tofu and various Japanese foods."

Note: Livingston is in the California's Central Valley between Modesto and Merced on Highway 99. Address: Kitkitdizze, 18442 Macnab Cypress Road, Nevada City, California 95959.

11361. Rawlings, Andrew. 1997. Re: Work with soyfoods in Guyana. Letter to William Shurtleff at Soyfoods Center, March 20. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Andrew came to visit Soyfoods Center (Lafayette, California) in Nov. 1994 and was given one of the Center's books on soyfoods production. He found it filled with valuable information, which he has been using. From the Philippines he wrote [in Nov. 1994] about their production and sale to the public of tofu, using sea water and vinegar as a coagulant.

He has now become an Acharya of Ananda Marga (AM). His name is Acharya Jiivanmukta Brahmacari [Brahmachari] "Dada." For the past year he has been living in Guyana. He travels to Brazil every 3-4 months to attend seminars and retreats of AM. It is expensive since Guyana is cut off from Brazil by the Amazon Basin and is really part of the Caribbean community; it is the only English speaking country in South America.

In the past he has financed his travel by buying soy meat "chunks" in Sao Paulo, Brazil, and reselling them in Georgetown. It was a very successful venture and the chunks have become so popular that even the butcher shops carry them for the public. Though his predecessor was the first to bring chunks into Guyana, both of them have been left out of the growing market because many entrepreneurs are now importing the chunks from Trinidad, the USA, etc. and selling them in Guyana for half the former price.

Ever since he arrived in Guyana he thought how nice it would be if he and AM could grow soybeans there and make the chunks themselves rather than importing. That way they could provide a very nutritious and inexpensive food stuff made locally and still create enough finance for travel and maintenance of AM projects there. Now it seems that this is the only way they can continue with the soy line at all. He asks Soyfoods Center for information on making such soy chunks. Address: Ananda Marga Yoga Society of Guyana Limited (Self Realization), 83 Rail Way Line, Stewartville, Guyana. Phone: 068-384.

11362. Kashama, Johnny. 1997. Re: Update on Tofu-Rwanda s.a.r.l. Letter to William Shurtleff at Soyfoods Center, March 31. 3 p. Handwritten, with signature. [Eng]
• ***Summary:*** Johnny was recently with the director of Tofu-Rwanda who is Miss Mado Niyontese. She told him the following. Before the civil war in Rwanda [April to July 1994] the address was 1906, Kigali, Rwanda. But now it was given to another person. The current address is: Tofu-Rwanda, c/o Swiss Embassy, P.O. Box 1297, Kigali, Rwanda.

The name "Tofu-Rwanda" will disappear in a few days because all the associates are no longer together; they were ruined. The enterprise was been under the direction of the Switzerland Cooperation for two years, but that ended in 1996. The director will create a kind of cooperative which they plan to name Soja Val. Its main goal will be social service, but it will also attempt to be profitable. The director is planning many workshops on tofu and other soybean foods in all the prefectures of Rwanda. The phone number is +250 75812. They recommenced making tofu on 28 Nov. 1994. They are still producing soymilk, tofu, croquettes, and fritters. They added two other products–soy flour, and Misola made of a mixture of millet, soja, and peanuts. Address: Rwanda.

11363. **Product Name:** [Sweet Tofu (Rumba, Caramella, Pina Colada, Vanilla, Caramella)].
Foreign Name: Sweet Tofu (Rumba, Caramella, Pinacolada, Vanilla, Caramella).
Manufacturer's Name: Bio Vita Naturkost.
Manufacturer's Address: W.v. Selve Str. 2, 31789 Hameln, Germany.
Date of Introduction: 1997. March.
Ingredients: Rumba: Tofu*, honey*, nuts*, raisins*, Jamaica rum, spices* (*Gewürze*), carob flour (*Johannisbrotkernmehl*). * = Organically grown (*aus kontrolliert biologischem Anbau*).
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Leaflet (4 by 5 inches, 4 panel, color) from Biofach, Germany. 1997. March. "Sweet Tofu Premiere. The light spread with the heavenly taste." Ingredients in Pina Colada: Tofu*, bananas, honey*, apricots*, coconuts* (*Cocos**), carob flour. Note: Hameln is southwest of Hannover.

11364. Bruno Fischer GmbH. 1997. Neuheiten 1997 [New products for 1997 (Leaflet)]. Aetorf, Germany. 1 p. 30 cm. [Ger]
• ***Summary:*** This leaflet from Biofach, March 1997, contains a list of new products made by the company, including four tofu spreads (*Deftico, Violetta, Peppino, Vulcano*), and various vegetarian sausages. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

11365. Cheng, Guoqiang. 1997. Market prospects for upland

© Copyright Soyinfo Center 2013

crops in China. *Palawija News* (*Bogor, Indonesia*) 14(1):1-12. March.

• ***Summary:*** In China, the soybean is considered a major upland crop, along with maize, sweet potatoes, potatoes, and rice. Economic reforms in China have led to major changes in the eating habits of Chinese consumers. "Grain consumption of urban consumers dropped from 145.4 kg in 1981 to 97.8 kg in 1993. However, the consumption of pork, beef and mutton grew from 18.6 kg to 20.8 kg and poultry meat from 1.9 kg to 3.7 kg. The grain consumption of rural consumers increased from 248 kg in 1978 to 266.0 kg in 1993, pork, beef and mutton consumption grew from 6.1 kg to 13.3 kg, and poultry consumption from 0.3 kg to 1.6 kg."

Table 4 shows income elasticity of food consumption for various commodities in China (mean, rural, and urban). A negative elasticity (as for maize, sweet potatoes, or potatoes) means that as income rises, consumption of these commodities decreases. A high positive elasticity means that a small increase in income leads to a large increase in consumption of that food. Foods with the highest mean elasticity are poultry (0.86), eggs (0.57), pork (0.49), and vegetable oils (0.35). As as income increases, consumption of foods with the highest elasticity will increase most rapidly. Beans have a mean elasticity of 0.38; soybeans are not specifically mentioned.

Table 5 shows projected growth (%) in demand for food. Demand for soybean (which has an expenditure elasticity of 0.38) is expected to grow at 3.56% a year. Other projected annual growths in demand: Poultry 6.44%. Eggs 4.70%. Pork 2.22%. Edible oils 3.39%.

A long section (p. 5-9) discusses supply or and demand for feed. In China, feed is conventionally divided into three types: feedgrains (71.4% of total), oilcakes (8.4%) and bran (20.2%). Feedgrains include maize (by far the largest), rice, tubers, and roots (mainly potato and sweet potato). Table 8 shows total grain and feedgrain in China from 1980 to 1994 (in million tons). Total grain grew at 2.37% annually from 320.56 in 1980 to 445.10 in 1994. Feedgrain grew at 6% annually from 59.39 in 1980 to 134.24 in 1994. Feedgrain comprised 18.53% of total grain in 1980, but 30.16% in 1994.

Table 9 shows the availability of feed by source in 1993. 15.00 million tons (MT) of oilcakes were available, including cottonseed meal 5.23MT, groundnut meal 4.88MT, soybean meal 4.70MT, and others 0.19MT. Note the relative unimportance of soybean meal.

Table 10 shows that the output of formulated feed (in million tons) in China grew from 0.60 in 1978 to 42.32 in 1994. Table 12 shows the demand for commodities as animal feed in China in the year 2,000. The total feed demand is projected to be 231.74 million tons, including 103.82MT of maize, 25.95MT of rice, and 6.03MT of soybean meal.

A subsection titled "Soybean" (p. 7-8) states that the soybean has received increasing attention by producers and consumers with the change of consumers' views and adjustment of the food structure of households. In 1994, soybean was grown on 9.22 million hectares, accounting for 8.4% of total grain acreage and the output was 16 million tons, accounting for 3.6% of total grain production.

"Soybean in China is mainly used as food (49%) and for oil extraction (43%). Most of the soybean meal is utilized domestically (89%), with a small proportion used for export (10%). It is projected that by the year 2000, the demand of soybean in China will be 15.32 million tons, of which 6.57 million tons will be used as food and 7.54 million tons for oil extraction. Direct consumption of soybean (such as processed into bean curd, soybean sprouts, soybean milk, etc.) will still be the major form of soybean utilization in China. Due to an ever increasing domestic demand, the export of soybean in the future will not increase."

11366. Danival. 1997. Price List–Danival: 1 March 1997. Mezin, France. 21 p. 30 cm. [Eng]

• ***Summary:*** Contents: Unrefined Atlantic sea salt. Tomato preserves. Vegetable preserves (incl. azuki with hijiki sea weed). Mushroom preserves. New condiments. Fruit purees with no added sugar (but 35% corn syrup for sweetness). Cereal sweeteners (barley malt, wheat syrup, corn syrup, rice syrup, apple syrup). Desserts and fruit juice. Fruit desserts. Agen prunes. Danival's macrobiotic food range: "Europe's leading manufacturer of organic macrobiotic food products. Produced in France, traditional Japanese manufacture. Non genetically engineered soya, grown by Mr. Berjon from his own seed beans since 1991." Brown rice miso* (unpasteurized, 4 sizes), barley miso* (unpasteurized, 4 sizes), young shiro miso* (unpasteurized, 2 sizes), shoyu* (unpasteurized; 5 sizes), tofu*, smoked tofu*, tempeh with shoyu and wakame*, seitan with shoyu and hijiki*, gluten powder*. * = Organically grown, certified by AB-Ecoconcert.

A 4-page French-language color insert (dated March 1997) contains color photos of many of these products, sealed in glass jars–incl. "Bio Miso (*Orge/Gerst*), Sauce Bolognaise Seitan, Raviolis (*Farcies au Seitan*), and Bio Shoyu." Address: Moulin d'Andiran, 47170 Mézin, France. Phone: +33 5 5397 0023. Fax 5 5397 0010.

11367. DuPont Quality Grains. 1997. Optimum quality grains (Leaflets). Des Moines, Iowa. 2 p. Each leaflet is single sided. 28 cm.

• ***Summary:*** One leaflet describes A231QT Optimum yellow hilum soybean varieties "designed specifically for the soyfood market. It is large seeded, high protein, yellow hilum, and lipoxygenase 2, null" [i.e. lacking the undesirable L2 lipoxygenase enzyme which causes beany flavor]. Soyfood evaluations conducted by the Illinois Crop Improvement Association show that soymilk yields, tofu yields, tofu strength, and protein content meet and exceed

© Copyright Soyinfo Center 2013

Soyfood standards. Quality specifications on a dry matter basis: Seeds/lb: 2100. Protein: 46.3%. Oil: 20.6%. Tofu yield 332.6. White index of tofu: 51.6%. Tofu strength: 22.7 gm/sq. cm. Soymilk yield: 4.8 ml/gDS. Solids content of soymilk 11.7%. Protein content of soymilk: 50.3%. Sold in 50 lb bags and bulk.

The second leaflet describes A232QT Optimum high sucrose soybean varieties which "have been specifically selected and developed for their unique characteristics for use in the soyfoods industry and traditional food industries. High sucrose varieties have significantly increased sucrose content, reduced stachyose content [Note: Stachyose is an oligosaccharide that causes flatulence], and are lipoxygenase 2, null. Flours and powders from high sucrose varieties have a unique flavor profile offering opportunities for making improved beverages, bakery, pasta products, and other processed foods. Quality specifications Seeds/lb: 2900. Protein: 42.4%. Oil: 19.7%. Carbohydrate profile (dry weight basis): Sucrose: 8.4%. Raffinose: 0.03%. Stachyose: 0.40%. A color photo shows the soybeans with sliced white bread.

A cover letter from Kent Savage states that "These soybeans were developed through traditional plant breeding methods, and were produced in Iowa and Minnesota."

Note: 1997 July 11–There is no good source of bland soymilk base in the United States. Use of these lipoxygenase-null soybeans could be the answer to that problem. Address: 10700 Justin Dr., Des Moines, Iowa 50322. Phone: (515) 251-3056.

11368. House Foods America Corporation. 1997. Completion of new production plant: The company with the No. 1 tofu production capability in the U.S.–House Foods America Corporation (News release). 7351 Orangewood Ave., Garden Grove, California 92841. 2 p. March.
• ***Summary:*** "House Foods America Corporation held a ceremony on March 12 celebrating the completion of its new production plant, which had been under construction in the city of Garden Grove, California.

"House Foods America Corporation was established in 1983 when House Foods Co., Ltd. (President: Kunihiko Otsuka) bought an interest in a U.S. company located in Los Angeles. House Foods America became a wholly owned subsidiary of House Foods Co. in 1993, and is currently engaged in the production and distribution of various tofu and soybean products under the brand name 'Hinoichi,' which has nearly a 60 percent share of the domestic market."

The area of the land is 221,646 square feet. The total floor area is 128,746 square feet, including the first floor (production facility, warehouse, etc.) of 98,464 square feet, and second floor (offices, etc.) of 30,382 square feet. Production capability: 150,000 cakes/day of tofu, vs. 70,000 cakes/day in old plant. Investment: $21 million, including price of buying the land. Production will start in April 1997. Contact: Mr. Akio Watanabe. Address: Garden Grove, California. Phone: (714) 901-4350.

11369. House Foods America Corporation. 1997. House Foods America Corporation's U.S. business strategy (News release). 7351 Orangewood Ave., Garden Grove, California 92841. 2 p. March.
• ***Summary:*** "Effective April 1, the expanded House Foods America Corporation [HFAC], formed by the merger of House Foods America Corporation with Curry House America, Inc., will operate its new production facility in Garden Grove.

"The purpose of this merger is to consolidate the formerly spread-out business functions, assimilate information of the U.S. market and react to its demands in an appropriate and timely fashion, as well as to improve business efficiency in preparing for the future growth of the market. At the same time, House Foods intends to import and distribute its products in the U.S. to increase its share of the domestic market.

"House Foods America Corporation was established in 1983 when House Foods Co., Ltd. (President: Kunihiko Otsuka) bought an interest in a U.S. company located in Los Angeles. In 1993, House Foods America became a wholly owned subsidiary of House Foods Co. Currently, House Foods produces and distributes tofu and soybean products under the brand name 'Hinoichi,' which has nearly a 60 percent share of the domestic market. The company's new production plant, which will have the largest tofu production capability in the U.S., is scheduled to complete construction on March 12 in Garden Grove, California, and will start operations in April."

Sales of HFAC: Approximately $20 million/year. Number of employees: 150. President: Osamu Torii. Address: Garden Grove, California. Phone: (714) 901-4350.

11370. **Product Name:** Mori-Nu Silken Tofu–Lite [Firm, or Extra Firm].
Manufacturer's Name: Morinaga Nutritional Foods, Inc.
Manufacturer's Address: 9960 S.W. Potano, Tualatin, OR 97062. Phone: 503-692-3498.
Date of Introduction: 1997. March.
Ingredients: Lite firm: Water, soybeans, isolated soy protein, gluconolactone*, calcium chloride. * = Gluconolactone is a non-dairy coagulant derived from food starch.
Wt/Vol., Packaging, Price: 12.3 oz (349 gm) Tetra Brik Aseptic carton. Retails for $1.19 (1997/06, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Art Mio of Morinaga. 1997. June 16. These three products were first sold commercially on March 1. They are made by a new company named Pacific Nutritional Foods, Inc., which is a joint venture between Morinaga Nutritional Foods, Inc. and

© Copyright Soyinfo Center 2013

Pacific Foods of Oregon, Inc.; the company's sole purpose at present is to manufacture aseptically packed tofu. The building is located about 1 block away from the Pacific Foods of Oregon factory.

Product (Lite–Firm) with Label purchased at Safeway supermarket in Lafayette, California. 1999. March. Tetra Brik carton. 4 by 3 by 2 inches. Light blue, dark blue, purple, and red on white. "Low fat. 50% less fat and 33% less calories than regular tofu. See nutritional panel." Recipe on one side for Strawberry banana shake. On back panel: "Free video–Why tofu? Includes latest nutritional research and 7 delicious recipes. Tofu & You, weight-loss plan and healthy eating guide with 102 low fat recipes–28 featuring tofu ($14.95). Free recipes." Send a SASE to Mori-Nu. One side panel states: "New 'Lite' from Mori-Nu is the world's first truly low-fat tofu with only 1 gram of fat per serving. Mori-Nu is a good source of cholesterol-free vegetable protein containing important soy isoflavones such as genistein and daidzein. It is low in calories, fat and sodium. Mori-Nu's revolutionary package locks out light, oxygen and microorganisms which can lead to spoilage. Guaranteed quality. Always tastes freshly made. No preservatives. No irradiation. Refrigeration not required until opened. Also available in extra firm."

11371. Murphy, P.A.; Chen, H.P.; Hauck, C.C.; Wilson, L.A. 1997. Soybean protein composition and tofu quality. *Food Technology* 51(3):86-88, 110. March. [20 ref]
• ***Summary:*** Contents: Introduction. Tofu types. Soybean variety evaluation. Effect of storage. Gel model systems. Tofu dilemma. Tables: (1)–Proximate analysis and storage protein content of tofu soybean varieties. (2)–Soybean proteins and tofu textures: significant correlations (3)–Food and oil-type soybeans: correlations between soybean proteins and tofu textures. (4)–Tofu instrumental texture and soybean protein subunits.

No correlation was found between soybean protein content and tofu yield. And soybean protein content was found to correlate negatively with tofu hardness and fracturability. Address: Iowa State Univ., Food Science & Human Nutrition, 2312 Food Sciences Bldg., Ames, Iowa.

11372. Now & Zen, Inc. 1997. Indulgence is good for you, but only Now & Zen (Leaflet). South San Francisco, California. 2 p. Front and back. 28 cm.
• ***Summary:*** Lists (and photos show) ten "Cakes that nourish the body and tantalize the soul." Tofu is a common ingredient in the cakes, which are "made without the use of dairy products, eggs, refined sugar, or refined flour. Sweetened exclusively with natural liquid sweeteners such as Fruit Source, fruit juice concentrate (pear, peach & pineapple juices) and barley malt, they provide subtle, not cloying sweetness. Only organic whole grain flour–either whole wheat pastry or brown rice–are used to produce a moist, light texture, and healthful ingredients such as tofu, applesauce and raw nuts replace cholesterol laden butter, milk and eggs. The grand results–cakes that satisfy both the eye and the palate and will lure even the most health conscious consumer."

The cakes are shipped frozen. Those marked with an asterisk are available wheat free. Examples: Chocolate almond raspberry torte*. Chocolate decadence. Toasted almond rum torte*. Blueberry teasecake*. Spicy carrot creme cake. Address: 121 South Maple Ave., Unit 7, South San Francisco, California 94080. Phone: (415) 794-0980.

11373. **Product Name:** Angelic Frosted Brownie.
Manufacturer's Name: Now & Zen, Inc.
Manufacturer's Address: South San Francisco, California. Phone: (415) 794-0980.
Date of Introduction: 1997. March.
Ingredients: Organic whole wheat pastry flour*, FruitSource (whole rice syrup and grape juice concentrate), tofu, cocoa, coffee, aluminum-free baking powder, vanilla, apple cider vinegar. Icing: FruitSource, cocoa, water, cornstarch, vanilla. * = Grown in accordance with the California organic food act of 1990.
Wt/Vol., Packaging, Price: 12 oz (336 gm).
How Stored: Frozen or fresh.
New Product–Documentation: Leaflet with real Label brought by Patricia Smith from Natural Products Expo at Anaheim. 1997. March. Leaflet. 8½ by 11 inches. Printed black on beige paper. "Rich, chewy, chocolatey, and 98% fat free." Label. Gold and black on red. "98% fat free. Vegan! No dairy or eggs! No fat added! No refined sugar or honey!" 8 muffins per package.

11374. Parks, Thomas R.; Lampi, R.A.; Marquardt, R.F. 1997. Development of technology base needs for processing in an advanced life support (ALS) system. Moffett Field, California: National Aeronautics and Space Administration, Ames Research Center. 62 + 63 p. March 24. Illust. No index. 28 cm. Final report. NASA CR-6816SN. [16 ref]
• ***Summary:*** This final report covers five crops: Soybeans, rice, wheat, peanuts, and white potatoes. The section titled "Process investigations–Soybeans" (p. 1-25) discusses five products made from soybeans: Soy flour, tempeh, soymilk (plus okara), soy yogurt (fermented), and tofu. Descriptions are given of each food and the process used.

Figures show: (1) General flow schematic–Soybean products. (2) Flour from dehulled soybeans. (3) Concept sketch–Soybean dehuller. (4) Water elutriation column to classify/separate particles by settling rate differences (Input: Dehulled beans and hulls). (5) Flow chart of tempeh from dehulled soybeans. (6) Flow chart of tempeh from beans with hulls. (7) Flow chart of soymilk from dehulled beans. (8) Flow chart of soymilk without prolonged soaking. (9) Flow chart of soymilk (Shurtleff & Aoyagi procedure). (10)

© Copyright Soyinfo Center 2013

Flow chart of tofu from beans with hulls. (11) Flow chart of tofu from dehulled beans. (12) Flow chart of yogurt from dehulled beans. (13) Label of Redi-Set Culture from Chr. Hansen Laboratory, Milwaukee, Wisconsin.

Color photos show: (1) Vertical plastic tube described in Fig. 4. (2) Soybean hulls and cotyledons following flotation separation using the prototype device shown above. (3) The K-Tec mill used in preparing the various flour products for this project. (4) Plastic bag filled with full fat soy flour prepared from dehulled beans. (5) Tempeh in perforated plastic bags, made according to "The Tempeh Lab" procedure. (6) A glass of soymilk produced by modified Shurtleff & Aoyagi procedure. (7) Freshly made okara on a blue dish. (8) Freshly prepared tofu; one sample was made from dehulled soybeans, the other from beans with hulls.

Table 1 shows yield data for different food products: Soymilk 11:1. Tofu 1.77:1. Soy yogurt 10.2:1. Tempeh (dehulled beans) 1.59:1. Tempeh (beans with hulls) 2.32:1. Okara (dehulled beans) 1.64:1. Okara (beans with hulls) 2.19:1. Soy flour (dehulled beans) 0.62:1. Address: Food and AgroSystems, Inc., 1289 Mandarin Dr., Sunnyvale, California 94087. Phone: 408-245-8450.

11375. Pirello, Christina. 1997. Cooking the whole foods way: Your complete, everyday guide to healthy, delicious eating with 500 recipes, menus, techniques, meal planning, buying tips, wit & wisdom. New York, NY: Berkeley Publishing Group (HPBooks). xii + 525 p. March. Illust. Index. 24 cm. In 2003 a CD was made in Princeton, New Jersey by Recording for the Blind & Dyslexic. [38 ref]
• ***Summary:*** This is basically a macrobiotic cookbook. It is largely vegetarian, but has one long chapter of fish recipes (p. 189-220). No red meat or sugar is used. One long chapter, titled "Tofu, tempeh, & seitan" (p. 157-88) contains many recipes. Other soy-related recipes include: Basic miso soup (p. 38). Miso millet stew (p. 78). Minute miso soup (p. 102). Black soybean relish (p. 136; as black soybeans are simmered, they create their own gravy). Baked beans with miso & apple butter (p. 143). Tofu cheese (with miso, p. 162). Lemon miso sauce (p. 422). Also contains recipes for amasake, azuki beans, and sea vegetables.

The recipe for "Tofu cheese" (p. 162), which is very creative and delicious, was developed by Christina many years ago, but the method was kept a secret–until now! Basically extra firm tofu is fermented / pickled in white miso. This recipe is for those who can't stand to give up cheese, and the resulting fermented soy cheese can be used in place of dairy cheese in many recipes, ranging from creamy white sauces to thin squares on a cracker. The tofu can be fermented in the miso anywhere from 12 hours to 4 days–depending on how strong you would like the flavor to become.

11376. **Product Name:** Smoked Monterey Jack TofuRella (Renamed Hickory Smoked TofuRella by Oct. 1997).
Manufacturer's Name: Sharon's Finest (Product Developer-Marketer).
Manufacturer's Address: P.O. Box 5020, Santa Rosa, CA 95402-5020. Phone: 707-576-7050.
Date of Introduction: 1997. March.
How Stored: Refrigerated.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1997. March. p. 102. "Look at what we've been smoking." "Yes, the Wizards from the Land of Rella have been smoking again. Smoking TofuRella that is!" Stop by Expo Booth #1783.

Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1997. March. "News from the Land of Rella." Smoked TofuRella. Yes, we've been smoking again... smoking TofuRella, that is! Real Jack TofuRella smoked in a real cheese smokehouse, none of that cheap smoke flavoring like the other guys. Most amazing texture and flavor. $3.99 suggested retail. 12 x 8 oz case. Talk with Richard Rose. 1997. March 16. This product was introduced at Anaheim.

Ad (full page, color, copyright 1997) in Natural Health. 1998. Jan/Feb. "Experts prefer TofuRella." Shows a large package of Hickory Smoked TofuRella hanging from a string. The ingredients are now: Tofu (water, organically-grown soybeans, calcium sulfate), caseinate (milk protein), soy oil, modified food starch, natural flavor, sodium citrate, salt, citric acid, sorbic acid, vitamins and minerals (see back). The company is now named Rella Good Cheese Co. (formerly Sharon's Finest).

Talk with Richard Rose. 1998. Feb. 16. This product was renamed in about August 1997. Richard thinks that this is his company's best-tasting product. Smoking in a real old-fashioned smokehouse also changes the texture.

11377. Soto Feinkost. 1997. Vegetarische Frische-Spezialitataeten: aus kontrolliert oekologischem Anbau [Vegetarian fresh specialties: Organically grown (Leaflet)]. Breitbrunn/Chiemsee, Germany. 3 panels each side. Each panel: 23 x 10 cm. [Ger]
• ***Summary:*** This leaflet from Biofach, March 1997, contains a list of products made by the company. Address: Oskar Schramm, Königstr. 3, D-83254 Breitbrunn/Chiemsee, Germany. Phone: 08054/9107.

11378. **Product Name:** Meat Free Tender Deli Cuts (Fat Free) [Hickory Smoked Turkey Flavor, Peppercorn Chicken Flavor, Honey Smoked Ham Flavor].
Manufacturer's Name: Soyco Foods. Div. of Galaxy Cheese Co.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1997. March.
Ingredients: Hickory Smoked Turkey: Soy beverage

(filtered water, isolated soy protein, organic tofu*), rice & tapioca maltodextrins, maltodextrin, rice protein, carrageenan (sea weed gum), sea salt, xanthan gum, Florida Crystals (unbleached sugar), natural flavorings, citric acid, acetic acid.
Wt/Vol., Packaging, Price: 6 oz. for 6 singles.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1997. March. The front panel states: "Individually wrapped meat slices for maximum freshness. Enjoy the flavor of meat again. All natural. Vegetable based. 100% meat free." A color photo shows the front of each package and label. The back panel states: "Enjoy the great taste of meat with Soymage Meat Free Deli Cuts." Note 1. These are slices of soy cheese that are flavored and colored like meat. The company is trying to present its cheese alternative as a meat alternative–somewhat deceptively we believe. Note 2. Galaxy Cheese Co. has been publicly traded for the past 5-7 years. The symbol on Nasdaq is GALX. They have done 7-8 stock offerings and sold about $40 million worth of stock. Much of the stock is said to be sold to non-U.S. citizens and as private placements to sophisticated investors.

11379. Taifun-Produkte. 1997. Tofu-Würstchen. Tofu-Clipper [Little Tofu Sausage. Tofu Clipper (Leaflet)]. Freiburg, West Germany. 1 p. each, Front and back. 30 cm. [Ger]
• ***Summary:*** Two leaflets from Taifun Naturkost. The "Little Sausages" leaflet is printed black and gray on yellow paper. The Tofu-Clipper is printed black and gray on pink. Tofu Clipper comes in 3 flavors: Flamingo, Shiitake, and Village, Address: Bebelstrasse 8, 79108 Freiburg, West Germany. Phone: 0761 / 15210-0.

11380. Tofumanufaktur Christian Nagel GmbH. 1997. Nagel's Tofu: Wissenwertes und Rezepte [Nagel's Tofu: Basic information, products, and recipes (Leaflet)]. Hamburg, Germany. 2 panels each side. Each panel: 21 x 15 cm. [Ger]
• ***Summary:*** Printed with black, green and blue ink on glossy white paper. This leaflet from Biofach, March 1997, contains a list of products made by the company. Basic tofu types: *Tofu natur. Kräutertofu. Räuchertofu. Madagaskar-Tofu. Oriental-Tofu. Provencal-Tofu. Tofu-Terrine. Tofu-Knacker.* Spreads: *Paprika, Kräuter, and Räucher. Seitan.* Ready-to-eat snacks: *Reis-Tofuhappen. Grünkernhappen. Hirse-Kroketten. Frühlingsrollen.*

Note: The company has changed its name slightly, but significantly since the first word now starts with T rather than C. Stapled to this leaflet is Christian Nagel's business card (printed with black ink on heavy blue paper). Address: Osdorfer Landstrasse 4, 22607 Hamburg, Germany. Phone: 040/89 49 37.

11381. Topas K. Gaiser GmbH. 1997. Topas–Natuerlich und vom besten [Topas–Naturally and from the best (Leaflet)]. Öschingen, Germany. 3 panels each side. Each panel: 23 x 10 cm. [Ger]
• ***Summary:*** This glossy color leaflet from Biofach, March 1997, contains a list of products made (from both wheat gluten and tofu) by the company. These include *Wheaty, Wheaty vom Rauch, Bratquadrat, Streichkonzert, and Minis.* Color photos show some of these. Address: Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/8320.

11382. Viana Naturkost GmbH. 1997. Preise und Neues [Prices and new products]. Euskirchen, Germany. 28 p. 30 cm. [Ger]
• ***Summary:*** This impressive, stylish/classy color catalog from Biofach, March 1997, consists of two parts. The 20-page smaller format (26.5 cm) black-and-white insert gives the prices of all products for 1997. The larger color catalog describes new products. The price list contains the following product categories: Basic and seasoned tofu products. Fresh tofu spreads. Tofu hot dogs. Wheat gluten products. Tofu cutlets. Tempeh. Seitan. Burgers and snacks. Spreads in glass jars. Soy sauce and miso products (organic shoyu, organic tamari, barley miso, brown rice miso). Fresh patés. Deli salads. Soya mayonnaise (Vianaise). Rice drink. Noodles. Fresh pasta stuffed with tofu fillings (Tortellini, Maultaschen). Frozen products (incl. Chili con tofu and spring rolls). Sprouts (11 types & products, not incl. soy sprouts). Spreads from Noka. Canned products (*Konserven*). Address: Willi-Graf-Str. 88, 53881 Euskirchen-Kuchenheim, Germany. Phone: 02251-9446-0.

11383. Pancrazio, Angela Cara. 1997. The business of being a family: Ties of blood bind the people who built and work at Ota Tofu, and those ties are what kept the company alive and thriving, even through the war. *Oregonian* (*Portland, Oregon*). April 10. p. 1, 5.
• ***Summary:*** The Ota family gave birth to their tofu business around 1917 or 1918 (according to the memory of Matsuno Ota, age 80) on Northwest Fifth Avenue, between Everett and Flanders.

Note: Actually the Ota Tofu Shop was founded in 1911 at 266 Davis St., Portland, Oregon. By 1912 the address was 96 N. 5th St., by 1913 it had changed to 86 North 5th St., and by 1914 it was located at 86½ North 5th St.–all in Portland's Japantown.

For decades the family business, though small, thrived. Shortly after the Japanese bombed Pearl Harbor on 7 December 1941, Shino and Saizo Ota (like many other Americans of Japanese descent living on the West Coast) were shipped to the Minidoka internment camp in the high

© Copyright Soyinfo Center 2013

desert of southern Idaho. High fences surrounded stark wooden buildings. But their daughter, Matsuno, was in Japan going to school when the war started, and its wasn't until the fall of 1943 that a letter arrived from America. Her father had died on April 1, 1943. She got a letter from the Red Cross in November 1943. In 1945 her mother returned from Portland.

"All through the internment, when it was popular to show hostility toward Japanese people and other Asians, a landlord's gesture of kindness secured the family business and secured the tofu equipment for the Otas." Shina, a single Japanese woman, re-started the tofu shop at its former location. "As business picked up, Matsuno and her husband, Sokichi, came to Portland and joined the little company." In 1957 a stroke forced Shina to leave the family business. "She was sick for 18 years." Sokichi took her place.

Color photos show: (1) A man cutting a large block of tofu under water in a cooling sink. (2) Matsuno Ota, a grandmother who was born in Portland in 1916. At age 80+, she is the backbone of the tofu business. Her mother and father, Shino and Saizo Ota, started selling tofu in Portland around 1917 or 1918. She holds a photograph of her husband, Sokichi, her son Ko, and herself in their white aprons, inside their shop where they all made tofu. (2) Ko Ota, surrounded by steam, as he watches soymilk run from the hydraulic press into the cloth-covered curding barrel.

Note: Ota Family Tofu is now located at 812 S.E. Stark, Portland, Oregon 97214. Phone: 503-232-8947.

11384. Nash, J. Madeleine. 1997. Early flash points: Beset by symptoms caused by ebbing hormones, women in midlife turn to herbs and health foods to smooth out the rocky road to menopause. *Time.* April 21.
• ***Summary:*** "The ingredients she weaves into each and every recipe–flaxseed, soy milk, tofu–contain chemical compounds known as phytoestrogens, which are estrogens produced by plants."

11385. Greenberg, Patricia. 1997. The meaning and pronunciation of several important kosher terms (Interview). *SoyaScan Notes.* April 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pareve, Parve (both pronounced "parv"), and Parevine (pronounced par-VAIN) are interchangeable words. All mean "Not meat or dairy," and when they appear on a product label, all must be used with a reliable, nationally recognized kosher symbol from a kosher certifier. A rabbi must make quarterly visits in order for a company to maintain the symbol on the label. On a non-dairy chocolate bar (made with tofu rather than milk), it would make good sense to print Kosher Pareve on the label. That means a person keeping kosher can eat the product with a meal which contains meat. If a kosher symbol has the letter "D" next to it, that means it contains dairy products. If someone printed "Pareve" on a label but had no certification, the company would soon be black-balled via product alerts, etc.

Kashrus (pronounced KASH-root and meaning "dietary laws") is Hebrew for kosher. But people typically say: "I keep kosher," meaning "I abide by the dietary laws." People also refer to "the laws of Kashruth" or "the laws of kosher." Patricia prefers to write "Kof-K" rather than "Chof-K" for the widely recognized symbol. Address: 858 Moraga Drive #3, Los Angeles, California 90049. Phone: (310) 472-8687.

11386. Gorman, Christine. 1997. The low-pressure diet: A new study shows how you can ease hypertension with fruits, veggies and low-fat dairy products. *Time.* April 28.
• ***Summary:*** Why do vegetarians have lower blood pressure than most people? "Was it the absence of artery-clogging fat in their diet or something in the tofu that made their blood flow so smoothly?"

11387. Elliott, Julia. 1997. With a little help from the soybean. New York, NY: SCB–Published by the author. 62 p. No index. 28 cm. Lay-flat comb bound. April.
• ***Summary:*** Contents: Facts and information (p. 1-8): Why the soybean? Areas of health that soy may affect: Heart disease and cholesterol, cancer, osteoporosis, kidneys, Alzheimer's disease, menopausal symptoms. Soyfoods (p. 9-13): Soy milk, tofu, soybeans, soy flour, miso, tempeh, texturized soy protein, soy protein isolates. Isoflavone contents. Recipes (p. 14-61): Appetizers, main dishes, desserts, tofu.

Note 1. There are no references to back up the many medical statements and claims on pages 1-8 of this book. Note 2. This is not a vegetarian cookbook; ingredients include 1 lb. ground beef (p. 14), 6½ oz. minced clams (p. 15), 1 lb. sweet or hot sausage (p. 16). Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

11388. Hartley, Bonnie. 1997. Is soy a ploy? A look at some claims and research. *Healthy & Natural Journal* (*Sarasota, Florida*) 4(2):38-40. April.
• ***Summary:*** This article is pure fluff–a rehash of the views of Sally Fallon and Mary Enig–to which are added those of Gabriel Cousins, internationally renowned healer and the author of *Conscious Eating,* who says "his research has been indicating the same thing for years." They all agree that only fermented soyfoods belong in human diets.

11389. *Healthy & Natural Journal* (*Sarasota, Florida*). 1997. Creative cooking with soy: Flash! Even kids like soy foods! 4(2):58-59. April.
• ***Summary:*** These six recipes and three color photos are courtesy of the Indiana Soybean Development Council. For a brochure featuring these and other soy recipes, contact them at 1-800-735-0195. Recipes call for: Silken tofu (3). Soy milk. Roasted soy nuts. TVP textured vegetable protein. Cooked whole soybeans.

A sidebar titled "Flash! Even kids like soy foods!" is compiled from the American Dietetic Association and other sources.

11390. Hyde, Tom. 1997. Health: Bean there, done what? Soy foods have long been favoured by vegetarians and other careful-what-you eat types as the healthy alternative to animal proteins but critics of the seemingly innocuous bean suggest its anything but. Tom Hyde looks at both sides of a long-running debate. *Metro* (*Auckland, New Zealand*). April. p. 68-76.

• ***Summary:*** This is one of the most detailed and balanced articles on the "soy debate" seen to date. Dick James attended Canterbury University law school in Christchurch, New Zealand. There he met his wife Valerie. They ended up living and raising two kids in the San Francisco Bay Area [actually Walnut Creek]. He worked as a contracts manager for Bechtel, the multinational construction firm, while completing an MBA at Golden Gate University in his spare time. Valerie worked as a schoolteacher, and they also sold real estate. By the mid-1980s they had more than $2 million in savings; they decided to pursue their favorite hobby, raising exotic birds. They moved back to New Zealand and settled in Big Monroe Bay near the Whangarei Heads. In 1990, on 2½ acres of waterfront land, they established their own aviary and began raising colorful parrots, parakeets, and finches on seeds and berries. All went well for about a year until they began hand-feeding the birds a powdered mix containing more protein (about 20%) made by a California company named Roudybush. For the first six months, the Jameses' flock of about 600 birds seemed to thrive on the new diet. They produced offspring during the first breeding season and their plumage was good. "Then, over the next 12 months, the Jameses lost 542 chicks and 289 adult birds. Many of them haemorrhaged violently before death. Some simply faded away. The remaining birds produced 1,272 infertile eggs. Valerie says: 'I felt like the wrath of God had come down on us.'"

They began to do research and "identified soy protein in the bird feed as a possible explanation not only for the mysterious death of their birds, but for the hyperactivity and aggression of their own children who had been raised on soy formula."

Additional information reinforced their suspicions and they concluded, rightly or wrongly, that soy protein was a dangerous substance to feed both birds and babies.

They contacted their scientist brother-in-law, Dave Woodhams, and together they formed the "Soy Toxin Team" and began what became a huge worldwide debate (more like a war of words) over the safety of soy protein in animal feeds and infant formulas. The team admits that traditional Asian methods, some of which involve long fermentation processes, produce foods that are safe to eat, but that modern mass production methods do not.

Trevor Johnston of Bean Supreme, makes tofu, soymilk, and related products which he knows are safe–as do his many customers. But his business has been hurt by the Jameses' campaign. The more the Jameses talked with other animal breeders, the more their suspicions grew.

Mike Fitzpatrick, a young PhD in chemistry from Otago University, suggested to the Jameses that they pay him to go to the library to learn everything he could about toxins in soybeans. He quickly found many books and articles about natural toxins in soybeans–and other legumes too. Among these toxins were proteins and phytoestrogens, yet many of them were inactivated by heat or had such a low concentration that they were not generally a problem for humans–unless the dosage was too high and the exposure too long. Since he was looking only for negative information, his literature search was one-sided, unbalanced, and out of context. / Note: The above summary covers only the first few pages of this excellent article.

Photos show: (1) Dick and Valerie James. (2) Dave Woodhams. (3) Trevor Johnston of Bean Supreme. (4) Pat Carr of Roudybush; she was forced to close her business after much negative publicity. (5) Mike Fitzpatrick. (6) Dr. Ian Robertson, PhD in zoology and researcher of anti-cancer compounds at Auckland medical school. Address: Metro's Deputy editor.

11391. Morinaga Nutritional Foods, Inc. 1997. The wonders of nature–in a perfect package (Ad). *Natural Foods Merchandiser.* April. 4-page insert glued in after page 18.

• ***Summary:*** This is an elegant 4-page color ad (8½ by 11 inches). On page 1 is the new package of Mori-Nu silken tofu (made in the USA) against a waterfall splashing down over rocks. Across the next 2 pages in large, soft-blue letters is written "tualatin, oregon. state of the art packaging." Page 2, titled "Pure tofu," begins: "Mori-Nu Tofu now arrives fresh from the Pacific Northwest, where the cool, clean currents of the Columbia meet the pure, sweet waters of the Willamette. Because quality tofu depends on quality water, Mori-Nu has found a new home in the little town of Tualatin, Oregon." Page 3, titled "perfect package," describes the new and larger 12.3 ounce "airtight package." "In fact, this state-of-the-art packaging was voted the "#1 food science innovation of the last fifty years" by the prestigious Institute of Food Technologists. Photos on these two pages show: Tofu dishes. Majestic Mt. Hood. An aseptic packaging line. Five different Mori-Nu tofu packages.

Across the top of page 4 is a collage of many magazine and newspaper headlines such as: "Tofu is healthy." "The one food that could save your life." "Foods that fight breast cancer. "Tofu seems to decrease breast cancer, hot flashes." "Tofu is a good source of protein in your diet." The text begins: "Low in saturated fat with no cholesterol, tofu is the primary source of protein for over one billion people every day. As more Americans recognize the benefits of eating soy,

© Copyright Soyinfo Center 2013

tofu is gaining popularity–and with good reason.

"Soybeans contain high levels of a unique type of *phytoestrogen* (a plant chemical) called *isoflavones;* researchers suggest *genistein,* the main isoflavone found in soyfoods, helps to inhibit the growth of cancer cells and to reduce the risk of osteoporosis. In fact, current studies suggest that soyfoods may play a significant role in lowering cholesterol levels; preventing many forms of cancer, heart disease and osteoporosis; and controlling diabetes. Recent research also indicates that soyfoods, like tofu, help to minimize the unpleasant hot flashes of menopause."

Visit the Mori-Nu website at http://www.morinu.com. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11392. *Nutrition News* (*Riverside, California*). 1997. Soy tsunami: The wave of the future. 21(4):1-4. April. [1 ref]
• ***Summary:*** Contents: A wave is coming (introduction). East soy and save your life. Soy vs. cancer. Top ten benefits of soy–According to Earl Mindell's Soy Miracle. Genistein is unique to soy. Soy vs. heart disease. The pause that refreshes: a soy shake. And, by the way, save your planet too. Get on the soy train! If you are a first timer, jump in there with tofu and/or isolated soy protein.

Where the good stuff is–table showing nutritional composition, including isoflavones of 1 serving of: miso, cooked soybeans, soy flour, soymilk, soy nuts (dry roasted), soy protein isolate, tempeh, firm tofu, low fat tofu (aseptic pack), extra firm tofu (aseptic pack), textured soy protein. Note: Good sources of isoflavones provide 30-50 mg per serving.

"This issue of *Nutrition News* is dedicated to partners William Shurtleff and Akiko Aoyagi and to Frances Moore Lappe, pioneers in the promotion of soyfoods and of the concept of kindness of eating."

11393. *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Soy and osteoporosis. April. p. 6.
• ***Summary:*** Describes a new cookbook called *Bone Vivant* put out by the Osteoporosis Society of Canada: "Although many such cookbooks focus on dairy foods, this book features alternative calcium sources. Because soybeans are a source of calcium, one quarter of *Bone Vivant* recipes include soyfoods. Whole soybeans, tofu and soy flour can all be part of a bone-building diet." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11394. Raymond, Jennifer. 1997. Fat free & easy: Great meals in minutes! No added fat. No cholesterol. No animal ingredients. Calistoga, California: Heart & Soul Publications. 152 p. Recipe index. 26 cm.
• ***Summary:*** A very useful vegan cookbook. Contents: Introduction. Health consequences of high-fat diets. How much fat should you eat? Calculating your fat intake. Sources of fat in food. Fats are not created equal. Tips for cutting the fat. Meeting your protein needs. Problems with excess protein. Protein myths and facts. Salt. Menu planning and menu ideas. Stocking your pantry. Ingredients that may be new to you. Recipes: Breakfast foods, breads & muffins, sandwiches, sauces & spreads, salads & dressings, soups & stews, vegetables, grains & side dishes, main dishes, sweets.

In this book, all recipes that would typically call for milk (such as smoothies or pancakes), call for "soy milk or rice milk." Many recipes are seasoned with soy sauce. Other soy-related recipes include: Scrambled tofu (p. 33). Missing egg salad (with tofu, p. 47). Creamy cucumber dip (with tofu, p. 49). Cucumbers with creamy dill dressing (with tofu, p. 61, 66). Holiday tofu roast (p. 113). Truly terrific tacos (with Boca Burgers, p. 119). Tofu cheesecake (p. 133). Chocolate tofu pudding (p. 136). Creamy prune pudding (with tofu, p. 139). A photo (p. 151) shows Jennifer Raymond, her husband Stephen Avis, and their five dogs. Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

11395. Hunter, Jean B. 1997. Research on foods for lunar and planetary stations (Interview). *SoyaScan Notes.* May 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In late 1996 Jean received a $500,000 grant from NASA (North American Space Administration) to study foods for lunar and planetary stations. They are going to hire a dietitian; they already have a chef and a link with an institutional food manager. They are going to develop vegan and near-vegan recipes, food processing equipment, and menus suitable for use in the future of space exploration in bioregenerative life-support systems.

The basic assumptions are that crews rotate in and out every 6 months–as on the Russian space station *Mir,* 85 to 90% of the food must be produced in outer space, but 10-15% may be supplied by re-supply operations. These latter foods include fats and oils (incl. as butter), sweeteners, hard cheeses, egg whites, etc. Anchovies and bacon bits will be used as condiments. There will be no live food animals (such as chickens or fish) on board. She will continue her research on fermented food. Foods in which both she and Soyfoods Center are interested include Amazake (sweetener), tempeh–made from whole soybeans or okara (meatlike texture), dawadawa/natto (meaty flavor), soy yogurt (sogurt; dairylike) and other soy dairy replacers, and fermented black soybeans (salt-cured black beans). She is also studying tofu. Jean has recently become a vegetarian (but not a vegan).

This type of research traces its roots back to the 1960s when food uses of algae were studied. Address: Cornell Univ., Dep. of Agricultural & Biological Engrg., Room 218 Riley Robb Hall, Ithaca, New York 14853. Phone: 607-255-2297.

11396. Johnston, Trevor. 1997. Recent nightmares at Bean Supreme Ltd. in New Zealand (Interview). *SoyaScan Notes.*

© Copyright Soyinfo Center 2013

May 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The last 18 months have been a marketing nightmare for Trevor. The problems started when a toxicologist, who works for the government in New Zealand, fed his parrots a soy-based formula and they died. He blamed the soy. He and others formed "The Soy Toxin Team" and have been working ceaselessly to (1) get soy-based infant formula banned from the market in New Zealand, and (2) alert the public to what they feel are the dangers of the phytoestrogens in soybeans. Trevor has a huge file of anti-soy and anti-phytoestrogen articles published in New Zealand. Note that in the USA almost all of the many articles about the phytoestrogens in soybeans consider them to be one of the main benefits of soybeans.

The second major problem has been Roundup Ready soybeans–which are genetically engineered by Monsanto. Greenpeace in Australia has made these soybeans their major project; they are working to alert the public to the fact that most food products that contain soybeans–unless specifically labeled otherwise–probably contain at least a small percentage of Roundup Ready soybeans–which are not labeled as being genetically modified (GM). These soybeans offer no benefits to consumers and Greenpeace argues that they main contain some real dangers. They have conducted a number of media actions, such as taking soy products off supermarket shelves to point out that they contain soy–as the cameras roll. The result has been to give soy a negative image in Australia. A group called the Natural Food Commission (an offshoot of Maharishi's Transcendental Meditation or TM) has been formed and is now circulating a draft proposal on genetically modified organisms in foods–urging that they be labeled.

Trevor's sales have decreased by 25% over the past 18 months. His biggest specific problem is trying to find a source of soy protein isolates that are guaranteed to be free of GM soybeans. Protein Technologies International is refusing to deal with this issue by saying that their isolates are safe. There are other big users of soy protein isolates in Australia: A large sausage company and Sanitarium Foods. Of his various products, Trevor's isolate-based soymilk has suffered the greatest drop in sales. Sales of his tofu products have not decreased, and sales of his soy ice creams are down only a little. Address: Managing Director, Bean Supreme Ltd., P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

11397. Spaelstra, J.; Shapira, H.; Donnelly, H. 1997. Re: Introducing Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter to William Shurtleff at Soyfoods Center, May 7. 1 p. Handwritten.
• ***Summary:*** The letter begins: "To whom it may concern: We are a young company. Just started one year ago and *very* enthusiastic. I have come across your *Book of Tofu* and loved it. Started experiments and love it even more now. My friend and partner in business [Seemo] came across some American book [*Handbook of Indigenous Fermented Foods,* edited by Keith Steinkraus] that had 1 chapter about tempeh production. Out of this he developed the way to make tempeh here in India, which was quite difficult at times because the info was far from complete. Meanwhile our plans have changed because of all this and the *very* wholesome atmosphere that we sense around working with soybeans (and consuming the different products)–the same atmosphere we are picking up from your books too which is very inspiring to us."

They order three books–tofu-, tempeh-, and miso production, plus *The Book of Tempeh*–all by Shurtleff & Aoyagi. "We would really like to set up a complete soyfood line now. So please get in touch!" Signed: J. Spaelstra (Holland), H. Shapira (Israel), and H. Donnelly (Indian). Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

11398. Mack, Heidi. 1997. Tofu doesn't have to be yucky: Disguise it, change its texture, and you might even fool Godzilla. *Christian Science Monitor.* May 8. p. 14.
• ***Summary:*** During the past few years, the number of soy products available to consumers "has grown phenomenally." They include soy yogurt, soy ice cream, soy milk, tofu turkey and pastrami, tofu salad dressing and mayonnaise, soy flour, vegetarian philly steak and Sloppy Joes, tofu dogs tofu burgers, and soy cheese.

The author, a vegetarian for 15 years, admits a genuine dislike of tofu. However she discovered that freezing it for at least a week, to transform its soggy texture, squeezing the water out of the tofu by hand, and then marinating it, made all the difference. Now she makes Tofu Taco Meat using frozen tofu instead of meat, and her family likes it in tacos, burritos, chili, spaghetti, and taco salad. Friends and family no longer stop at McDonalds on the way to her house.

Contains recipes for Barbecued tofu, Barbecue sauce, Spicy peanut tofu, and Tofu taco meat.

11399. Skow, John. 1997. My first two weeks on Dr. Weil's health regimen. *Time.* May 12.
• ***Summary:*** This article is part of a larger article titled "Mr. Natural" by Jeffrey Kluger (Tucson, Arizona). "Dr. Weil, reasonable fellow, says eat salmon, olive oil, garlic, soy sauce, ginger, broccoli." The writer likes all that stuff. "But Weil, dietary despot, also suggests eating tofu, which is organic Styrofoam; drinking Japanese green tea, which tastes like water..."

11400. Johnston, Trevor. 1997. Genetically modified foods update–May 13 (News release). Auckland, New Zealand: Bean Supreme, Ltd. 1 p. May 13.
• ***Summary:*** "This memo is to let you know what we are

© Copyright Soyinfo Center 2013

doing to ensure our consumers GMO (genetically modified organism) free soy products.

"At present we **can** control the source of our soybeans which we import. We do not and will not in the future import any genetically modified whole soybeans for our Tofu manufacture.

"The situation is more complex with soy derivative products which we also use in many of our products, e.g. soy protein powders [soy protein isolates]. These are highly nutritious and valuable food ingredients to us. We along with many other companies are lobbying our suppliers to guarantee us GMO free product. At present they can't give us this assurance because they draw their source beans from commodity stocks of beans which may or may not contain small quantities of GMO beans (Roundup Ready beans comprise approx. 2% of the US crop in 1997).

"There is presently no requirement in U.S. law to segregate GMO and conventionally bred stocks."

Johnson ends the new release with a suggestion: "If you wish to express your views directly to the manufacturer of soy protein powders such as those used widely in the industry write to; Michael W. Sel, Director, Product Quality, Protein Technologies International, 900 Checkerboard Square, St. Louis, Missouri 63814 USA. Fax 001 314 982 1841." Address: Marketing director, Bean Supreme Ltd., Box 12082, Penrose, Auckland, New Zealand]. Phone: 64 9 579-0592.

11401. Seemo (H. Shapira). 1997. Re: History of Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, May 13–in reply to inquiry. 7 p. Handwritten.

• ***Summary:*** Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Seemo is in charge of tempeh, Kairava in charge of tofu & soymilk. They are making the earliest known commercial soybean tempeh in India. For their first letter see Dakini (1997).

Both Seemo and Kairava are devout disciples of Osho (formerly called "Sri Rajneesh"), he since 1984 and she since 1986. They arrived in Pune to stay in about 1988/89. Initially to support themselves, they had a gem and crystal shop, a wholesale new-age jewelry operation, and a motor bike repair shop. Now they have finally found what they want to do for work. "It's love and Zen." Osho died in Pune on 19 Jan. 1990; they returned to India the next day; the fire was still burning at the burning ghat. In the year before his death, his discourses were mostly about Zen. He died in Pune due to heavy metal poisoning and radiation damages done to him by U.S. marshalls in an Oklahoma jail cell, where he was kept unlawfully in 1985.

Their company started with the idea of making white tahini and possibly Turkish halva [halvah] (in which white tahini is a main ingredient). It was extremely difficult to get started. As foreigners doing business in India, they had to register a "Pvt. Ltd." company. Then they could not find a space for the company, since Pune is a rapidly growing city. So Seemo pulled down the back garden in his rented house, constructed a shed with a floor area of 25 square meters, and moved his bedroom up to the second floor. This gave him an additional 24 square meters where the bedroom used to be. They also have a 25 square meter storeroom where they make the tempeh. He got electrical connections then waited for 8 months while a colloid mill (copy of a 1940 model), hot air oven, and filling machine were delivered. The mill proved to be a technical nightmare; he had to totally rebuild it. Finally their small factory started operation. Then they added peanut butter and brown tahini to their product line–with no additives or preservatives. They had to set aside their plan to make halva.

Spicer College, run by Seventh-day Adventists, is located in Pune. They have a health food store and they make peanut butter–nearly edible, with too much sugar and salt, plus other ingredients. Their sesame butter (brown tahini) is gritty, rancid, and inedible. They also produce grape juices (very, very sweet), pastries (Mmmm good). And they make and bottle soy milk in plain and chocolate flavors, but it is loaded with white sugar and Class II permitted preservatives! They also make pretty good tofu; Seemo used to eat it now and then for the last 8 years. "Besides being actually able to taste the Bible in it, I had no reason to complain." This tofu is now served at the Osho commune. "Pune old timers told me that once–20 years ago–the place was managed by an enthusiastic old American woman and the quality of their products was very good.

At Dakini, they now also make hummus in their kitchen, 15 kg/week in summer and 60 kg/week in winter. They pack it in 200 or 400 gm cups and sell it at various shops in town to foreigners and Indians. They like it.

Seemo started developing the tempeh about 8 months ago. Last year a friend of his found a book titled *Handbook of Indigenous Fermented Foods,* edited by Dr. Keith H. Steinkraus, in a pavement stall for 400 rupees (US$13.00). Since he had been to Bali, Indonesia, many times, he tried making some of the foods but rarely got any edible products. So before leaving Pune, he gave the book to Seemo as a gift. As he read it, Seemo got really excited. He had grown up in a meat-eating family. Even while traveling and living in Europe, he continued to eat meat and junk foods. "Then I understood it was not good for me on all levels, and went vegetarian." Living in Holland later on, he started to learn about tofu, and then tempe, tamari, etc. "So now I was a healthy, well-fed vegetarian." Then he moved to India, but after some years of eating fried foods, lentils and lots of dairy products, he started to eat meat again, 2-3 times a month. "It did not feel too good, but I had no idea how to manage my diet, and living on mostly dairy products did not suit my body. So when Dr. Steinkraus' book fell into my hands, I got excited and realized that it might be possible to

© Copyright Soyinfo Center 2013

make tempe here in India at a small, affordable investment.

"So I first got a small incubator built; its actually like a cool box ½ meter wide and 1½ meters high, made of galvanized sheet metal with insulation and 8 shelves (of which I now use only 3)." At the bottom are heaters, which give 250-540 watts of heat. Two old computer cooling fans distribute the heat, and a thermostat regulates it. "It's not a perfect machine but I can do 5-12 kg/day when I want and, most important, I can produce in it excellent spore powder–since it is difficult to import anything here. Actually, I nearly gave up the project, because I was making sporulated tempeh, then sun-drying it and running in through my spice grinder. The powder looked great. The tempe cakes used to get hot, then very hot, then smelly with funny colors (no white mold). I double-checked everything. In the end, only the grinding was left, so I bought a small hand-turned grain mill (500 rupees = US$15.00). Since then, perfect tempeh has been happening.

"For starter, I first got a packet of spores from Holland. Later I got 1 gram of white tempe starter from an American friend in Goa (she used to make her own supply down there), and playing with it I found it a bit more suitable for my use. So most of my spore stock now is from this starter, and some is mixed. I still have to study how to make tempe and starter during the different seasons here. Now it is very hot and dry. Next month is monsoon (wet), followed by a month that is hot and humid, and then the 3-month 'cold' season."

About half of all tempe produced is sold frozen; the other half is sold fresh. Seemo also plans to try making dry tempeh. He gives away lots of tempe as samples; most people love it. Starting this July, it will appear on the menu of one restaurant, possibly two–first as Tempeh Stroganoff and Tempeh Shashlik (steamed, then spiced, then barbecued). "When I get *The Book of Tempeh* I will introduce it to more places. Meanwhile, I have totally forgotten about eating meat. I feel strong and light. I find my vision benefits too; I haven't noticed that with tofu. Now that I am a bit more confident working with the mold, I hope to raise some capital, move to a suitable place (possibly well out of town), and then start to make tamari shoyu, and definitely some miso too. So that's a little of our story. Thank you." Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

11402. Buchheim, Steve. 1997. New developments at ADM. Thoughts on the use of genetically engineered soybeans in foods (Interview). *SoyaScan Notes.* May 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** About 3 weeks ago ADM announced that G. Allen Andreas (a nephew of Dwayne Andreas) is the new CEO of ADM. Dwayne Andreas, who had been CEO for many years, will continue to be chairman of the board. As a result of this change, Dwayne Andreas' activities and involvement with ADM are not likely to decrease at all. A good article appeared in the *Wall Street Journal.* The main contribution of G. Allen "Allen" Andreas is that he understands "Wall Street," and he understands that investors are not attracted by ADM's perennially small dividend. Dividends may go up, as ADM pays more attention to Wall Street. ADM has never liked to borrow money–perhaps because of Dwayne's Mennonite background. That may change. ADM has authorized a big "buyback" of ADM stock to raise the price. The family wants stock prices to go higher. Allen was in Europe for 15 years and he grew that part of ADM's business at an impressive rate. He is soft spoken, intelligent, and a "people person."

Concerning the price-fixing charges, lysine was $1.40 a pound when ADM got into the business and $1.08, when the government went after ADM for price fixing. Michael "Mick" Andreas, Dwayne's son, no longer works at ADM. He is apparently on "administrative leave," but still on the ADM payroll. He has an office in downtown Decatur; Steve has no idea what he is doing.

Steve does not agree with the criticism that ADM is a company that is run for the ownership, rather than for the shareholders. It is rather a question of management having free reign to make the decisions that are best for the company. Dwayne Andreas does not want others trying to force him and the board to do something to the company that he does not want to do. ADM uses its profits to build the company and expand assets. A buyer recently came from China and told top ADM management that he could give them orders for soybean meal and soy protein isolates that are ten times their corporate crushing capacity. ADM is just now finishing their fifth plant [its in Europe] to manufacture isolates; all of the production is sold out for two years. It is well known that Dwayne is one of the wealthiest Americans. What is less well known that his ADM holdings (shares) account for only about one-fifth of what he is worth. He was the largest single individual shareholder in Nabisco and they have been bought out twice. Dwayne doesn't operate for money; he now cares very much about his legacy.

Concerning genetically engineered soybeans: Almost all companies in the soybean industry are sitting on the fence and waiting to see what happens. By making non-GMO products available, you encourage and abet the whole process of diving the soy protein business into GMO and non-GMO, and you negatively affect all the other businesses that are contemplating going into genetic engineering.

Shurtleff argues: But the alternate position is not to do anything until there is a crisis and/or the voices demanding labeling of GMO ingredients get louder and louder. If you start soon to offer non-GMO soybean meal, isolates, and TVP, there are many huge benefits. You become the first company worldwide to do so. You diffuse criticism of genetic engineering in general and gain large amounts of goodwill (which ADM now needs) and free publicity as the

© Copyright Soyinfo Center 2013

leader in this area. As you offer these non-GMO products (responding to consumer demand) you make it very clear that you agree with consumers' right to know what is in their food, but that you also believe that GMO products are completely safe. Note: Soyfoods Center has recently received a number of calls from companies which use large amounts of soy protein isolates in soymilk, tofu, and other food products, and which are in urgent need of an isolate that is guaranteed by the manufacturer to contain no genetically engineered soybeans.

Steve agrees with many of these ideas. ADM's position has always been that they are consumer driven and market driven; they respond quickly to demand. All smart businesses know they are consumer driven. If it is soy, ADM should be making it available in both GMO and non-GMO forms. One way to do this would be to create a new corporation (named, for example, New World Proteins), which is a subsidiary of ADM. They lease existing excess capacity from ADM, using facilities that crush soybeans and make soy protein products such as isolates and TVP. The new corporation says to ADM: "You will agree under contract to clean these facilities thoroughly and certify that they will be used only for non-GMO soy products. We will separately contract for the purchase of soybeans. You will crush and process them for me to my specifications, and we will market them. Nothing moves. Its very simple. The new corporation could be run by people who wouldn't even have to move their desks. It makes a lot of sense from a pure commercial/profit standpoint. It is the right and the smart and the responsible thing to do. Then we can follow the market whichever way the wind blows. We can take a position where we win either way. ADM could become the first in the world to take an enlightened, consumer-driven position on this issue. I personally believe deeply that consumers have the right to know what is in their food. It is a fundamental right. ADM has always been on the side of the consumer's right to know. Now we're putting our money where our mouth is.

There is a major problem out there, and this would be a solution that makes sense for ADM at this time. Steve is going to start talking with his superiors at ADM (such as Larry Cunningham, who has assumed Michael Andreas' responsibilities) about this, and he will keep in touch on new developments.

Much of ADM's current activity is in China, where the company has many joint ventures, and is building factories, teaching the Chinese new ways of using soybeans, etc. Address: Marketing Manager, Soy Protein Applications, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5824 X-5394.

11403. Osho, Sidi M. 1997. Work with soyfoods in Nigeria (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sidi Osho was born on 19 Aug. 1959 at Ibadan,

Western Nigeria; ethnically she is Yoruba. The family spoke mostly Yoruba (but some English) at home; in Nigerian schools only English was spoken. Her first name, Sidi, means "Truth" in Yoruba. Her second name, Modupe, means "I thank God." She was the second child (and the first girl) in the family of 3 boys and 3 girls. Her father (born on 22 May 1927) was a civil engineer, educated in Lagos, Nigeria, at Yaba College of Technology; he has been in the construction business since 1959. Both of her parents believed strongly in the importance of education. They spent all of their money to educate their children, sending four of them to the United States for college and higher education. Sidi received no scholarships to help in her higher education. Today, with the change exchange rate between the U.S. dollar and the Nigerian naira, it is even more expensive for a Nigerian to get an education in America. "After we receive this education, he always reminds us–'Any education you have, if you don't apply it and offer other people opportunities, then it has been a waste of time.'" So Sidi decided to return to Nigeria after she earned her MSc degree at Ohio State University, and to look for work oriented toward development.

In Jan. 1983 she entered Nigeria's National Youth

© Copyright Soyinfo Center 2013

Service Corps (NYSC) as a volunteer. She was assigned to work at IITA (International Institute of Tropical Agriculture) at Ibadan as a biochemist in the root and tuber improvement program. Then from Jan. 1984 to Aug. 1985 she was employed as a Field Work Specialist with women's groups in Nigeria. She first got interested in soybeans in 1987. Many of the people with whom Sidi worked at IITA were not enthusiastic about her work to teach Africans food uses of soybeans. She always felt under pressure. "They believed that soybeans should be fed to animals. That was one of the reasons my contract was not reviewed. Now IITA is not doing anything on soybeans. Whatever you see in annual reports is descriptions of work they have done before that is just being repeated. The problem is not so much IITA as an organization as specific individuals within the organization; some of these are Americans.

Concerning the proceedings of the Second International Soybean Processing and Utilization Conference: The proceedings have not yet been published–but they probably will be soon. The editor is Alex Buchanan of Australia. The proceedings for the First such conference, held in China, were apparently never published. The second conference was better organized than the first.

Sidi is very interested in both tofu and tempeh. She and a Japanese researcher found a new coagulant to transform soymilk into tofu–the leaves of the *Calotropis proceara*, a bush which has long been used as a coagulant of animal milks to make cheese. This was a major discovery since calcium sulfate and nigari are not available in Nigeria, especially in the rural areas.

Sidi has set up a soybean processing center in a market in Ibadan. She would like to use this as a model and set it up in every market in Nigeria.

Chicken is now more expensive than red meat in Nigeria. Address: Forest Hill Estate, G.P.O. Box 38619, Ibadan, Nigeria. Phone: 234-2-241-3993.

11404. Sim, John. 1997. Tofu production statistics and philosophy at Pulmuone (Interview). *SoyaScan Notes.* May 23. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter dated 14 July 1997.

• ***Summary:*** John Sim (brother of Jeannie Sim) is marketing director at Pulmuone (pronounced PUL-mu-wun) USA Inc. in southern California. This company is owned by a larger Korean company of the same name. John volunteered the following statistics: Pulmuone soaks 3,000 kg (6,613 lb) of soybeans a day. From these soybeans they make only tofu (no soymilk). This tofu is of four types: Soft, firm, silken, and "extra soft." The "extra soft" is actually unpressed soymilk curds, called *sun tubu* in Korean, and sold by Pulmuone in America as "Spiced Tofu Casserole."

Pulmuone sells all of its tofu water-packed. They think this is the packaging of the future, because water-packed tofu tastes best.

In response to some follow-up questions in a fax (dated 24 June 1997) from William Shurtleff, John replied (July 14): "1. The average retail price of firm, soft, and silken is $0.99 and two or three times a year the markets retail sale price is at 2 for $0.99. Extra soft (*sun tubu*) tofu sells at retail for $0.69.

"2. From one pound of soybean, we get three pounds of tofu (average). It is difficult to get a specific for each of the tofu. You can assume that firm requires more soymilk than soft and so forth.

3. Pulmuone's tofu is color coded: "Pink is for firm, blue is for soft, green is for silken. This seems to make things easier for our warehouse and markets for stocking purposes where the carton boxes indicate the appropriate colors as well.

4. Competitors for Korean-speaking consumers: "There are two other brands or competitors in the Korean markets. Hinoichi and Obok Foods. Hinoichi uses their own English version label and Obok uses their single, Korean label.

"5. Yes we are making *sun tubu* and currently distributing to Beverly sun tubu in Korea town. They are the second largest in Korea town next to So Kong Dong sun tubu. We are currently supplying them 100–5 gallon buckets of sun tubu per week. So you can imagine how much So Kong Dong uses." Address: Marketing Director, Pulmuone, 4585 Firestone Blvd., Southgate, California 90280. Phone: 213-564-2000.

11405. Tibbott, Seth. 1997. The tempeh market in the United States (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A total of about 55,000 lb/week of tempeh is now made in the USA, compared with 34,700 lb/week in Jan. 1984 (based on a Soyfoods Center survey, published in Soyfoods Industry and Market, 5th ed.). This is the result of a major phone survey that Seth has just completed; he interviewed each of the major U.S. tempeh makers by phone, on the condition that their individual production figures would not be revealed–only the aggregate. Seth plans to present this information at a tempeh conference in Bali, Indonesia, on July 17. Seven U.S. companies make more than 1,000 lb/week of tempeh. The top 3 manufacturers are Lightlife Foods, White Wave, and Turtle Island (in that order). Of these three, Turtle Island has experienced the greatest percentage growth since 1984. The next four are Quong Hop, Surata Soyfoods, Northern Soy, and Cricklewood. In 1984 the four largest tempeh makers had 63% of the U.S. market (by weight); now they have 84%. The best-selling type of product is soy tempeh in an 8-oz package; it sells even better than tempeh burgers.

The average retail price of an 8-oz package of tempeh in the USA is $1.81. Shurtleff suggests that Seth compare this with the price in Indonesia. The yearly per capita income in Indonesia is $560 compared with $18,690 in the USA.

© Copyright Soyinfo Center 2013

The U.S. figure is 33.37 times as large as the Indonesian. Dividing $1.81 by 33.37 we see that if tempeh sold for 5.42 cents per 8 oz in Indonesia, it would be the same relative price as tempeh in the USA.

In terms of packaging, 80% of the tempeh in America is vacuum packed–even though most manufacturers admit that vacuum packaging lowers the product quality by imparting a slightly bitter flavor and less desirable texture. Seth's company is one of the few that does not vacuum pack its tempeh.

By product type, there are: 13 different burgers on the market, 9 soy tempehs, 6 multi-grain tempehs (soy plus several cereal grains), 5 bulk soy tempehs, 4 soy & brown rice tempehs, 2 soy & sea veggie tempehs, 2 soy & wild rice tempehs, 2 soy & millet tempehs, and 2 sloppy joe tempehs.

Seth plans to take his family to the Conference in Bali (he will be there July 11-20; the conference ends July 15), and then to travel to Malang to study how tempeh is made there. They will leave Indonesia on July 29. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

11406. Zambrano, Jerónimo. 1997. Tofu, un largo camino de Taiwan a la Argentina: Más conocido por ese nombre, el queso de soja es un milenario producto oriental que ahora se fabrica aqui [Tofu, a long road from Taiwan to Argentina: Better known by the name, soy cheese is a thousand-year-old Oriental food product that is now made here]. *Nacion* (*La*) (*Buenos Aires, Argentina*). May 30. Section 2. p. 10. [Spa]
• ***Summary:*** A color photo shows a Chinese man surrounded by tofu manufacturing equipment; a sign reads Sanfo. The caption: With technology imported from Taiwan, Tien Cheng Tan can make up to 10,000 packages a day. Six years ago, Tien Cheng Tan left Taiwan for Argentina, accompanied by his entire family. He later spent US$400,000 to US$500,000 to buy a modern tofu manufacturing system made in Taiwan by Sanfu. After two years of residing here, he began to study the market in order to establish a food manufacturing company that would make Chinese foods. After three years of examining the possibilities, and with help from the Taiwanese community established in Argentina, Tan will open, in Villa Marteli, the firm Sanfu, dedicated to making soyfoods, mainly tofu.

Note: Carlos Planes says: Sanfu is a Chinese-run company in Taiwan that manufactures tofu-making equipment. Address: Reporter, Argentina.

11407. Barnard, Neal. 1997. Real men eat tofu: What can a vegetarian diet do for you? Add zip to your love life, trim pounds from your waistline and maybe even make you nicer. *Vegetarian Times.* May. p. 66-70.
Address: M.D., president of Physicians Committee for Responsible Medicine.

11408. *Chatelaine.* 1997. Tofu: soy good. 70(5):131. May. *
• ***Summary:*** Includes related article on tofu nutrients. Includes recipes.

11409. **Product Name:** Veggie Slices (Cheese Alternative) [Mozzarella Flavor, Provolone Flavor, American Flavor, Pepper Jack].
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1997. May.
Ingredients: Soy beverage (filtered water, organic tofu, and isolated soy protein), casein [a protein from cow's milk], unhydrogenated canola oil, natural flavors, tricalcium and potassium phosphates (a source of calcium, potassium and phosphorus; naturally present in cheese), corn starch, sea salt, citric acid, vitamin E (antioxidant), vitamin A palmitate, riboflavin. Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. for 12 single individually-wrapped slices. Retails for $1.50 (2 for $3.00) at Safeway supermarket (1997/05, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1997. May 25. Sold refrigerated from a large display in the produce section. Label: White, black, yellow, and blue on green. "New! Nature's alternative to cheese. Made with organic tofu." At the top of the back panel is written in large red letters: "Low fat. Lactose free. Cholesterol free." "No animal fats are used in this product."

Note 1. The word "Veggie" in this product name is deceptive, because the product contains casein, made from cow's milk, as a major ingredient. Note 2. This is the first time a cheese alternative containing tofu has been seen at Safeway in Lafayette. Soyfoods Center taste test. Flavor: Quite bland; the Provolone is "smoky." Texture: Very good. Color: Almost pure white. Package design: Excellent. Truth in labeling: Poor. Price: The original sale price of $1.50 per 12 slices = 8 oz. was good. The next week the product was placed in a cooler storage case with tofu and the price rose to $1.99 per 8 oz. By comparison, Safeway pasteurized process cheese food (12 slices, 8 oz) in Swiss or Monterey Jack flavors sells for $1.89 and the equivalent Kraft product sells for $2.59.

Monthly Insight (Galaxy Foods newsletter). 1998. April. In Feb. 1997 Galaxy sold 6,000 cases of Veggie Slices. In Feb. 1998, a total of 37,000 cases were shipped. "That's more than a 600% increase in sales!"

Chapman & Hall. xxvi + 532 p. See p. 1-24. Chap. 1. Index. [36 ref]

• ***Summary:*** Contents: Introduction. Origin. Early history in Europe. Early history in North America. Agronomic characteristics: Seed morphology, germination and seedling development, growing stages and maturity groups, seed development, nitrogen fixation, diseases and pests. Harvesting, drying, and storage: Harvesting, drying, storage. Marketing and trading. Grades, standards, and inspection. Variety identification. Food beans and oil beans.

Figures: (1.1) Graph of total annual soybean production in the USA and worldwide from 1955 to 1994. World production increased from 20 million metric tons (tonnes) in 1955 to 138 million tonnes in 1994. Note the huge increases in 1992 and 1994. The United States' share of the total has been dropping since the mid-1970s. (1.2) Pie chart of market share of world soybean production by major producing countries between 1994 and 1995. USA 50.5%, Brazil 18.2%, China 11.8%, Argentina 9.2%, all other 10.3%. (1.3) Structure of a soybean seed (line drawing). Hypocotyl, radicle, micropyle, hilum, epicotyl, plumule, cotyledon, seed coat. (1.4) Stages in germination and early seedling growth (line drawing). (1.5) Map of geographical zones of the American continent where soybean maturity groups are best grown. Extends from OO in southern Canada down to X in southern Central America and northern South America. (1.6) Graph of equilibrium level of soybeans with the temperature and relative humidity of the surrounding air. Moisture content of soybeans is the third variable plotted. (1.7) Graph of allowable storage time for soybeans as functions of bean temperature and percentage moisture content. (1.8) Diagram of the general flow of grain from the farm through the distribution system to the domestic and overseas processor. (1.9) Diagram of a general outline of soybean food use based on classification of oil and food beans. (1.10) Visual differences between oil and food beans (photo). Left: oil beans (3 cultivars in plastic bags). Right: food beans (top and middle are two tofu bean cultivars, bottom is one small-seeded natto bean cultivar).

Tables: (1.1) The U.S. grades and grade requirements for soybeans. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

11411. Liu, KeShun. 1997. Nonfermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 137-217. Chap. 4. Index. [125 ref]

• ***Summary:*** Contents: Introduction. Soymilk: Traditional soymilk preparation methods, chemistry of beany flavors, modern soymilk preparation methods (Cornell method, Illinois method, rapid hydration hydrothermal cooking, methods using defatted soy material, deodorization techniques, commercial methods, novel approaches), basic steps and principles of soymilk preparation (starting material, water incorporation, grinding, soymilk extraction, heat treatment, formulation and fortification, final processing and packaging, additional processing), other constraints (objectionable aftertaste, chalkiness, yields), standardization of soymilk.

Tofu: Tofu preparation methods (traditional methods, variations in tofu preparation methods), tofu varieties, quality and quantity attributes of tofu, factors affecting tofu making (soybean varieties and compositions, temperature of grinding soybeans, concentration of soymilk, heat processing of soymilk and tofu gelation mechanism, types of coagulants, concentration of coagulants, coagulation temperature, mode of adding coagulants, coagulation time, molding conditions, other factors, tofu made from full-fat soy flakes, novel treatments), microbiological safety.

Yuba: Preparation, chemical composition, varieties, utilization, mechanism of film formation, conditions for film formation and their optimization.

Other nonfermented soyfoods: Soybean sprouts, okara, roasted soybeans, soynuts, and soy flour (roasted soy flour, known in China as *dou fen* and in Japan as *kinako.* "In China, roasted soy flour may be mixed with lard and sugar and used as a filling or coating material for pastry... In Indonesia, the flour is mixed with spices, such as garlic and chili powders, and served with *longtong,* which is boiled rice wrapped in banana leaf"), cooked whole soybeans, immature soybeans [green vegetable soybeans]. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

11412. Liu, KeShun. 1997. Fermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 218-96. Chap. 5. Index. [127 ref]

• ***Summary:*** Contents: Introduction. Fermented soy paste (*jiang* and miso): Varieties of miso and jiang, koji and microorganisms involved, koji starter and its preparation, Chinese jiang preparation (traditional household method, pure culture method, enzymatic method), Japanese miso preparation (rice koji preparation, treatment of soybeans, mixing and mashing, fermentation, pasteurization and packaging), principles of jiang and miso preparation, major factors in jiang and miso making (raw materials, cooking temperature and time, conditions during koji preparation, proportions of ingredients, fermentation conditions, novel processing for special products). Soy sauce (*jiangyou* or shoyu): Varieties of soy sauce, soy sauce processing (traditional Chinese household method, modern Chinese method, processing of Japanese shoyu, comparison of soy sauce and *jiang* or miso preparations), principles of making soy sauce (action of koji enzymes, fermentation by lactic bacteria and yeasts, color and flavor formation, glutaminase and glutamic acid), chemical soy

sauce, progress in soy sauce preparation (use of defatted soy grits or flakes, improvements in treating soybeans, development of an automatic koji-making system, application of microorganisms with specific activities, techniques to shorten production time, improvements in soy sauce clarification), chemical composition, quality attributes and standardization, mycotoxins. Tempeh: Varieties of tempeh, preparation (traditional method, pilot plant method, petri dish method), microorganisms involved, factors affecting tempeh fermentation (starter, dehulling and aeration, moisture, temperatures, acidity, losses of solids), changes during fermentation (general changes, protein, lipid, carbohydrates and other constituents), production of vitamins, storage, nutritional value. Natto: Preparation, microorganisms involved, factors affecting natto quality (raw material, soybean cooking conditions, storage), changes during fermentation, trends in research on natto and *B. natto* (development of novel strains of *B. subtilis,* purification and characterization of key enzymes, studies into genes encoding key enzymes of *B. subtilis,* studies of possible physiological roles of natto). Fermented black soybeans (douchi or hamanatto). Sufu: Preparation, types of sufu, microorganisms involved, effect of mold growth, effect of brine aging.

Figures show: (1) Photo of Chinese chiang, and Japanese red and white miso, each on one of three spoons in a shallow white bowl. (2) Flow chart of a Chinese method for making koji starter from whole soybeans and wheat bran. Adapted from Shi and Ren (1993). (3) Flow chart of a pure-culture method for making Chinese jiang from whole soybeans (65%) and wheat flour (35%). Adapted from Shi and Ren (1993). (4) Flow chart of an enzymatic method for making Chinese jiang from whole soybeans (65%) and wheat flour (35%). Adapted from Shi and Ren (1993). (5) Flow chart of the manufacturing process for Japanese rice miso [red miso]. Adapted from Fukushima (1981). (6) Diagram of the interactions of basic miso components during miso fermentation. From Shurtleff and Aoyagi (1983) who adapted it from Shibasaki and Hesseltine (1962). (7) Graph of trichloracetic acid (TCA)-soluble nitrogen (N) contents of miso samples prepared with soybeans cooked at different temperatures for 10 minutes, followed by 0 days or 25 days of fermentation. Adapted from Nikkuni et al. (1988). (8) Graph of temperature and time control curves for different types of Japanese miso during fermentation. Adapted from Shurtleff and Aoyagi (1983). (9) Photo of soy sauce in three different containers: dispenser, small Yamasa bottle, and large Chinese can (Soy, Superior Sauce). (10) Flow chart of a typical manufacturing process for koikuchi shoyu, the most widely used type of Japanese soy sauce. Adapted from Fukushima (1981). (11) Graph (salt content % vs. temperature) Of safety zone for enzymatic digestion of shoyu koji. Protein digestibility and amino acid content in Zone A are better than those in Zone B. From Yokotsuka (1986). (12) Graph of lactic acid fermentation of shoyu mash as a function of time. Adapted from Jose et al. (1976). (13) Flow chart of role of the proteolytic enzymes of koji mold in liberation of amino acids from proteins. Adapted from Fukushima (1985). (14) Chromatogram of organic acids in fermented and chemical [HVP] soy sauce manufactured in the United States. Optical densities vs. retention time. From Fukushima (1979a). (15) Flow chart of traditional Indonesian method for making tempeh from whole soybeans. Adapted from Winarno (1989). (16) Four superimposed graphs of change in pH and organic acids as a function of incubation time during accelerated acidification of soybeans at 30ºC. Shows acetic acid, lactic acid, citric acid, and pH. Adapted from de Reu et al. (1995a). (17) Graph of water soluble nitrogen content in the fermentation of soybeans with *Rhizopus oligosporus* during the traditional tempeh process at 25, 30, and 37ºC, and with the rotating drum reactor at 36ºC. (18) Photo of two chopsticks lifting some Japanese natto from a bowl full of natto; the thin strings connecting the natto above and below are clearly visible. (19) Flow chart of typical method for making Japanese natto from whole soybeans. (20) Photo of Chinese fermented black soybeans (*douchi*) on a white plate. (21) Flow chart of typical method for making Chinese fermented black soybeans from whole soybeans. (22) Photo of cubes of sufu (Chinese cheese) in a shallow white bowl. (23) Flow chart for making Chinese sufu from firm tofu.

Tables: (1) Proximate composition of some traditional soyfoods (both fermented and nonfermented). (2) Classification of major types of Japanese miso and their chemical composition. Adapted from Fukushima (1979a). (3) Types of soy sauce recognized by the Japanese government and their chemical composition. Manufacturer's Name: Organic Foods, Inc.
Manufacturer's Address: 534 Smithtown Ct., Excelsior, MN 55331. Phone: 612-474-3989.
Date of Introduction: 1997. May.
Ingredients: Incl. tofu.
New Product–Documentation: Talk with Donna Stacey. 1997. Oct. 7. This vegan and vegetarian item was introduced in May 1997. The tofu spread is spread on the chapati, then that is wrapped around the vegetables. It was developed for and is presently sold only to an upscale coffee house chain in the Minneapolis area.

11418. Patterson, Anne G. 1997. Concerned about calcium? Soyfoods can help. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 5(2):3. Spring.
• ***Summary:*** "Food labels are valuable tools in helping us meet our requirements for calcium. Nutrition Facts found on food labels are required by law to list the percent 'Daily Value' of calcium. The daily value for calcium is 1 gram for adults and children age 4 or older. This is equal to 1,000 milligrams. If the Nutrition Facts on a soymilk container states, 'Calcium 20 percent,' then you know the amount of calcium for one sewing of soymilk is 200 milligrams, or 20 percent of the recommended daily value for adults and older children.

"If you've been reading the labels on containers of soymilk and tofu you may have noticed a big difference between the amounts of calcium provided brand to brand. Both tofu and soymilk contain calcium since there is naturally occurring calcium in soybeans.

"The amount of calcium varies in tofu because of the type of calcium-rich coagulant used to thicken the soymilk. Taste and the type of tofu desired determines what type of coagulant or combination of coagulants are used in tofu processing. If you want more calcium, then look for a tofu which lists the coagulants, calcium chloride or calcium sulfate, in the food ingredient list.

"Soymilk that has been fortified with calcium is your best choice for getting significant amounts of calcium. Since all soymilk is not fortified, one needs to review Nutrition Facts on labels carefully. Use the following chart to help you get a jump start on the right soymilk for you. Remember it's still wise to check out that food label since food companies may reformulate their product."

A large table shows only fortified soymilks which may be found in retail stores. The 5 columns are: (1) Brand and flavor. (2) Milligrams of calcium per cup. The range is about 200-400 mg. (3) Calories per cup. (4) Grams of protein. The range is about 4-6 gm. per cup. (5) Grams of fat per cup. Address: R.D., L.D.

11419. **Product Name:** Soft Tofu, Firm Tofu.
Manufacturer's Name: Tree Town Tofu.
Manufacturer's Address: 396 Washington St., Ann Arbor,

© Copyright Soyinfo Center 2013

MI 48103. Phone: 313-662-8638 (TOFU).
Date of Introduction: 1997. May.
New Product–Documentation: Talk with John Gingrich, owner. 1997. July 21. John started this company, which began selling tofu in May 1997. It is a traditional shop, and he put together the equipment himself, which includes a BMI Disintegrator. John was a member of Ann Arbor's first tofu company, The Soy Plant, and at one time was in charge of their tofu production. He also worked for Eden Foods.

11420. Drosihn, Bernd. 1997. Re: Monsanto's genetically engineered soybeans, and update on Wolfgang Furth. Letter (fax) to William Shurtleff at Soyfoods Center, June 9. 2 p.
• ***Summary:*** The problems caused by Monsanto's genetically engineered soybeans were not too big. The whole issue made the word "tofu" better known in Germany, because during the discussion, tofu was always mentioned as a familiar kind of soy food.

Wolfgang Furth (formerly Furth-Kuby, a soyfoods pioneer in Germany) has been divorced from his wife, Gabriella. He is now at: Baeckerzeile 3b, 83512 Wasserburg, Germany. Phone: +49 8071 50480.

Bernd asks how White Wave's new fresh soymilk is selling. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 5350 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

11421. Ngo, Nga. 1997. Two Vietnamese-American manufacturers of tofu and soymilk in Little Saigon, Orange County, California (Interview). *SoyaScan Notes.* June 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nga works for a dairy plant in Southern California. Her employer is thinking about introducing its own brand of soymilk which has a beany flavor–since that is what Vietnamese like. There are already two companies in the area, each run by Vietnamese-American families, that make tofu and soymilk, but they hot-pack their soymilk and it spoils quickly. The older and larger of the two companies is Tan-Tan Tofu, located in Westminster or Santa Ana, Orange County, which was in business by the late 1980s. Its younger competitor is Buong Son, which started in about 1992 and is located in the same area. Address: Orange County, California. Phone: 818-961-3399.

11422. Sim, John. 1997. Re: Pulmuone brochure and tofu production statistics. Letters to William Shurtleff at Soyfoods Center, June 12 and June 17. 1 p. each. Typed, with signature.
• ***Summary:*** John encloses a handsome brochure on Pulmuone. "I hope you can utilize the information and include it in your database.

"You will be quite surprised at our current production rate." Pulmuone is currently making 20,000 pounds/day of tofu, and operating at only half of its tofu production capacity (one shift, 5 days a week); full capacity is 40,000 pounds of tofu per day (two shifts, five days a week).

Pulmuone began distribution to all 262 Ralphs Supermarkets in March of this year, and the company expects to have distribution to Vons by early August this year.

Update: June 17. Pulmuone makes 100,000 lb of tofu per week and 435,000 lb of tofu per month at its factory in Southern California.

Update: June 30. Talk with John Sim. About 80% of Pulmuone's tofu is sold the Korean-American market. The handsome labels are designed by the company's art department, which has won numerous awards, in Korea. Three companies now sell tofu in Korean-American food retail stores in Southern California; Pulmuone, House Foods, and Obok; only Pulmuone and Obok use Korean characters on the labels. Pulmuone's ads in the *Los Angeles Times* have been entirely in Korean.

Update: 1997. Dec. 29. John says that Pulmuone's main office is in the process of setting up a tofu factory in mainland China; it is expected to open in about December 1998. Address: Marketing Director, Pulmuone, 4585 Firestone Blvd., Southgate, California 90280. Phone: 213-564-3000.

11423. Tibbott, Seth. 1997. Estimates of the retail markets for tofu, soymilk, and tempeh market in the United States (Interview). *SoyaScan Notes.* June 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tofu: Steve Demos, founder and president of White Wave, thinks that the retail value of tofu sold as tofu in the USA in 1996 was about $110 to $130 million. Peter Golbitz estimated that in 1990 the U.S. retail tofu market was $89.6 million, rising to $116 million in 1996. He also estimated that in 1990 the U.S. retail soymilk market was about $54 million, rising to $125 million in 1996.

Tempeh: A total of about 55,000 lb/week of tempeh is now made in the USA, compared with 34,700 lb/week in Jan. 1984 (based on a Soyfoods Center survey, published in Soyfoods Industry and Market, 5th ed.). The average retail price of an 8-oz package of tempeh in the USA is $1.81. Thus the retail value is 55,000 x $1.81 x 52 = $5.18 million.

Note: A detailed survey conducted by Soyfoods Center in Feb. 1984 and published in Soyfoods Industry and Market (5th ed., 1985, p. 41) found the U.S. retail value of tofu and tofu products to be $46.08 million, of soymilk and soymilk products (including soy-based infant formulas) to be $221.97 million; about 6.7% of that value or $14.9 million was "adult soymilk." And of tempeh to be $4.96 million. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

11424. *Badische Zeitung* (*Germany*). 1997. Eiweisskuchen aus Sojabohnen: Tofu-Land "Taifun." [Protein cake from

© Copyright Soyinfo Center 2013

soybeans: Tofu-land "Taifun"]. June. [Ger]
• ***Summary:*** Tofu-Land invites you to take a trip. It lies in the industrial park Hochdorf, is named Taifun, and is very busy on weekends; Saturday from 2 to 8 p.m. and Sunday from 11 to 6 p.m. At these times, in Tofu-Land, you will find music, clowns, organic beer, wine, organic drinks, soya ice cream, tofu delicacies, coffee and cakes. The occasion? For 10 years the company has made tofu here in a variety or forms and combinations–from guaranteed organic soybeans that have not been genetically engineered. From fresh tofu the firm makes everything from tofu patties (*Tofubratlinge,* round like an American hamburger) and tofu sausages to fried tofu with rice (*frittierte Reisbratsticks*)–and it sells this pure plant protein in natural food stores and Reform Houses in Germany, England, Belgium, and Luxemburg.

11425. Bean Supreme Ltd. 1997. Price list with sale. Auckland, New Zealand. 1 p. Single sided. 30 cm.
• ***Summary:*** Effective 20 June 1997. Black on yellow. The products are listed in categories except for the first, which is soyfoods. For each is given the product name, weight, price, barcode, outer, and price. Tofu bulk organic. Tofu firm vacuum pack. Tofu firm vacuum pack organic. Tofu soft Asian. Tempeh vacuum pack. Tempeh fr. frozen. Soysage. Luncheon [Traditional, Cajun, Smoke]. Tempeh patty frozen. Meatfree sausage.

Soymilks: Soyplus 1 liter. LiteLicks [soy ice cream] (Honey Vanilla, Wildberry, Maple Walnut, Chocolate, Fruit Fiesta, Almond Fudge, Bulk packs) (9 or 16 liters).

Biofarm yoghurts (5 flavors). Malabar goat yoghurt. Olive Grove: Falafel mix, hoummus, Souvlaki sauce, tahini.

Koromiko cheese (11 types, of which the first 4 are vegetarian). Koromiko wax selection (private bin). Pacific Harvest: Agar, kelp and karengo granules, fronds, or flakes. Address: Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: 64 09 579 0592.

11426. Bender, Karen. 1997. Tofu processors' survey (Blank questionnaire). Urbana, Illinois. 4 p. Plus cover letter.
• ***Summary:*** This survey contains 13 questions. "All survey responses will remain confidential. Data will only be published in the aggregate." Address: Dep. of Agricultural and Consumer Economics, 1301 W. Gregory Drive, 304c Mumford Hall, Univ. of Illinois at Urbana-Champaign, IL 61801.

11427. **Product Name:** Jamaican Jerk Tofu with Vegetables.
Manufacturer's Name: Gloria's Kitchen.
Manufacturer's Address: P.O. Box 2071, Burlingame, CA 94011-2071. Phone: 650-579-0638.
Date of Introduction: 1997. June.
How Stored: Frozen.
New Product–Documentation: Letter (fax) with date sent by Gloria's Kitchen. 1999. June 21. This product was introduced in June 1997. Talk with Gloria Shih. 1999. June 21. Her consultant told her that in Jamaican, the word "Jerk" refers to a type of spice or spices.

11428. Harvest Direct, Inc. 1997. Harvest Direct: Food you can live with. Early summer 1997 [mail order catalog]. Knoxville, Tennessee. 31 p. 27 x 16 cm.
• ***Summary:*** Written large at bottom of front cover: Soyfoods. Vegetarian foods. Vegetarian barbecue. New meatless pepperoni. More special sales items. Address: P.O. Box 988, Knoxville, Tennessee 37917. Phone: 1-800-835-2867.

11429. Haumann, Barbara Fitch. 1997. Soy protein foods gain store space. *INFORM* (*AOCS*) 8(6):588-596. June.
• ***Summary:*** Contents: Introduction. Nutritional drive. Meat alternatives. Soymilk and tofu markets. Soybeans as vegetables. Emerging products. Products consumers want. Hurdles. Possible health claim? School lunch opportunities (federal school lunch program). Product promotion. Nutraceuticals.

Soy protein foods sold in supermarkets are no longer targeted at only vegetarians; they're becoming mainstream products. Many U.S. consumers are decreasing their consumption of meat. USDA food intake surveys show that from 1977 to 1994 per capita beef consumption decreased 54% and pork consumption dropped 45%.

The leader in meat alternatives is Worthington Foods, which has seen sales rise approximately 20% in each of the past 3 years. Its Morningstar Farms brand, sold in frozen food sections in supermarkets and geared for mainstream consumers, represents 75% of the company's offerings.

PMS Foods, Inc. in Hutchinson, Kansas, is among the companies that make meat alternatives, including soy-based beef, chicken, ham, pepperoni, bacon, sausage-flavored crumble, sloppy joe mix, soy-based taco mix, and soy-based chili mix–which it sells wholesale, primarily to foodservice operations. Some of its products are used as ingredients in supermarket products–such as bacon bits and salad dressing mixes.

Steve Demos, founder and president of White Wave, jokes: "We're primarily a dairy without a cow. We 'milk' soybeans. Founded in 1977, the company now sells 54 retail products and produces about 125 tons a week of soy proteins via aqueous extraction. White Wave has up to 30 linear feet in the refrigerated sections in some natural food stores. White Wave has experienced 25-30% sales increases per year over the past decade.

The Soy Protein Council in Washington, DC, now has 3 members: ADM, Cargill Inc., and Central Soya; all produce soy protein concentrates, isolates, and soy flours. The council promotes the growth of the soy protein industry and works to broaden the acceptance of soy products in foods. The council's Web site is http://www.spcouncil.org.

© Copyright Soyinfo Center 2013

Fourteen state soybean boards, the United Soybean Board, and the Soy Protein Council gave joined together to form the "Soy Protein Partnership," whose goal is to promote domestic soy protein use in human foods. Seven members of the partnership–the state soybean boards from Indiana, Iowa, Kansas, Michigan, Nebraska, Ohio, and South Dakota–are providing $270,000 to fund the partnership's first project, a "Food Manufacturer's Initiative." The group in using the slogan "New Food, New Uses: How soy protein can expand your business, to reach food marketing executives and food technologists and to increase their awareness of the demand for soy products and their use in food products.

Surveys by Wiese Research Associates have shown that consumer awareness concerning soy protein increased from 55% of consumers polled in 1991 to 79% in 1996. Likewise, those saying they wee likely to purchase a product if they knew it contained soy protein increased from 20% in 1988 to 32% in 1996.

In addition, a national Gallup survey conducted in 1996 for the Nebraska Soybean Board showed that 56% of the 600 school foodservice directors polled currently use soy products. And studies by the National Restaurant Association indicate that 97% if colleges and universities and 80% of restaurants have incorporated meatless entrees into their daily menus.

Schouten USA Inc. of Minnesota, whose parent company is the Schouten Group in the Netherlands, manufactures SoyLife, a soybean [sprout] extract containing 25-30 mg of isoflavones per gram. According to Laurent Leduc, Schouten USA's international marketing manager, it is presently used as an ingredient by more than 40 different vitamin and supplement companies as a source of isoflavones in their products, and is being incorporated into "functional foods" around the world. Leduc notes that research has indicated that consuming 60-80 mg of isoflavones a day may provide health benefits. He adds: "The only other way to get that much is by eating 8-9 ounces of tofu or drinking two-thirds of a liter of soymilk a day. The average American is not going to do that."

William Shurtleff of Soyfoods Center "said it currently is no longer usual to field questions from consumers in Midwestern states who would like to know how to incorporate soy as part of their diets to lower cholesterol.

"'I credit much of this to the state soybean checkoff boards that are promoting interest in soyfoods, particularly in the heartland. This is changing the demographics for the market throughout the United States. Within the past two years, these boards have collectively become the single biggest force promoting soyfoods in America.'" Address: Senior editor/writer for INFORM.

11430. Lorente, Carol Wiley. 1997. Silky, smooth, and sensible: A low-fat, vegan cheesecake that won't weigh you down. weight you down. *Vegetarian Times.* June. p. 24-26.

• ***Summary:*** Gives a recipe for Lemon Tofu "Cheesecake." which contains only two-thirds as many calories and one-fifth as much fat. A color photo shows a slice of the cheesecake.

11431. Morinaga Nutritional Foods, Inc. 1997. The wonders of nature–in a perfect package (Ad). *Vegetarian Times.* June. p. 5.

• ***Summary:*** This attractive full-page color ad (see next page) is a condensed version of its 4-page counterpart that appeared 2 months earlier. Near the top is a large photo of a waterfall splashing down over rocks. To the left of that, and vertically, are five packages of Mori-Nu Tofu; the top 3 have a new design with a photo of a prepared tofu dish at the top of the front panel. At the bottom is a photo of a purple smoothie.

The text reads: "Quality tofu depends on quality water. From our new home in the little town of Tualatin, Oregon, we blend the finest soybeans with the pristine water of the Pacific Northwest to create the creamy, smooth texture and 'just made' taste of Mori-Nu Tofu." The logo is a red script M. Below it is written "Mori-Nu. Pure tofu. Perfect package." Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11432. **Product Name:** Tofu Dessert [Mango].
Manufacturer's Name: Nutrisoy Pty. Ltd.
Manufacturer's Address: 15 Hannon St., Botany NSW 2019, Australia.
Date of Introduction: 1997. June.
Ingredients: Filtered water, organic soybean, mango, peach, honey, apple juice, pectin (extract of citrus peel), natural nigari (magnesium chloride).
Wt/Vol., Packaging, Price: 200 gm cup.
How Stored: Refrigerated.
New Product–Documentation: Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in June 1997. Green, yellow, red and orange on pale blue.

11433. Rella Good Cheese Co. 1997. Healthy alternatives from the land of Rella (Leaflet). Santa Rosa, California. 1 p. Front and back.

• ***Summary:*** On the front of this attractive glossy leaflet are nine products marketed by the Rella Good Cheese Co. (formerly Sharon's Finest); behind them are colorful circles of every color in the rainbow. The products are: TofuRella and TofuRella Slices (Mozzarella, or Cheddar), HempRella, Zero-FatRella, AlmondRella, VeganRella, ParmaRella, and Hempeh Burger. At the bottom of the front are given the company's phone number (707-576-7050), email address (yourfriends@rella.com), and website (http://www.rella.com).

The back is titled "Rella product information for consumers." It contains ordering information, the ingredients in five of the products, advantages of the products, and a full column titled "About Rella Good Cheese Co."

"Advantages: Since 1980 we have been the leading innovator in delicious and natural cheese alternatives. Now *Enriched* will be nutritionally equal to cheese, but with less fat and sodium, and no cholesterol... Full ingredient disclosure and product information. Questions about our products? Call our toll-free Answer Line: 1-800-NJOY NOW."

"Rella Good Cheese Co., was known as *Sharon's Finest* from 1986 to 1997. We changed the name to reflect our commitment to making the best unique cheeses in the world. In 1980 Richard and Sharon Rose started *Brightsong Tofu,* an innovative tofu products company located in Petaluma, California." [Note: Brightsong Tofu was started in June 1978 by Joel Brightbill and Bob Heartsong in Redwood Valley, California. In June 1980 Dik and Sharon Rose bought the company, and in 1982 they moved it to Petaluma, California].

"Soon after we wrote our Environmental Mission Statement, including our self-imposed 'Green Tax' policy. From that tax we give at least 5% of profits to various groups working to protect the world's Rainforests, including *Rainforest Action Network, Sierra Club of Western Canada, Cultural Survival,* and *EarthSave Foundation.*

Sharon's Finest has also donated over $84,000 worth of food to Second Harvest Food Bank, and will donate money to groups working to legalize the commercial use of drug-free Hemp.

We believe it is important to use our business as a tool for social and environmental good. And thanks to concerned customers like you we have been able to achieve that goal!"

This information supersedes all others printed prior to 18 June 1997." Address: P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11434. **Product Name:** Tofu-Mexi Patties: 2 Baked.
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1997. June.
Ingredients: Tofu (filtered water, organic whole soybeans*, nigari), fresh jalapeño peppers, carrots, cilantro, garlic, soy sauce (water, organic soybeans*, organic wheat*, salt), lime juice, arrowroot powder, sunflower seeds, celery, green onions, distilled vinegar, chili powder, cumin, salt. * = Grown according to CA Natural Foods Act of 1990.
Wt/Vol., Packaging, Price: 6 oz. vacuum packed.
How Stored: Refrigerated.
New Product–Documentation: Two Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in June 1997. Label #1 of June 1997. 3 inches diameter. Self adhesive. Red, black, and white on yellow. "Perishable, keep refrigerated. Good source of protein. Low in saturated fat. Cholesterol free. Illustration of an adobe pueblo overlooking waves and two stylized native American animals (rabbit and squirrel).

Label #2 of Oct. 2002. "Mexi Patties: Baked Tofu." Red and orange-yellow on white. 3 inches diameter. No adhesive. A handsome, impressionistic watercolor illustration shows a tofu shop on stilts on a cliff with a tree arching overhead. "Good source of protein. Low in saturated fat. Cholesterol free."

11435. Seemo, -. 1997. Re: Dakini Health Foods in India is experimenting with tofu. Letter to William Shurtleff at Soyfoods Center, July 2. 1 p. Typed.
• ***Summary:*** "We are eating tons of tofu as Kairava is perfecting her art. We are using calcium chloride and everyone loves it. I serve it to our workers too and they love it. I let them take some home today to let them learn how they like to prepare it." If and when they start making tofu commercially they will have to buy or make all the equipment in India; imports are not affordable. "The biggest problem is to find a suitable working space."

Note: Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

11436. Nakamura, Makiko. 1997. Tofu hero in London. *Casa* (*Japan*). July 10. Summer. [Jap]
• ***Summary:*** A large color photo shows a man on a bicycle pulling a lightweight cart it is filled with tofu, which he is delivering in London in the traditional Japanese way. Smaller photos show: (1) The front cover of *The Book of Tofu,* by Shurtleff & Aoyagi. (2) The front of a Chinese tofu-making machine. McClennan dreams of buying one made in Japan.

The caption at the top of the big photo states: The world already knows tofu; it is already in fashion. If you ask around the world about tofu's amazing accomplishment, even [Microsoft's] Windows would be surprised. Caption at the bottom: He transformed his bicycle to pull a cart that carries handmade tofu. Previously he used a trumpet instead of a *rappa* [Traditional Japanese tofu-maker's horn]. Even in London a tofu maker's day starts early; he makes tofu at night and delivers it in the morning.

11437. Sagae, Chie. 1997. Original from Provence. *Casa* (*Japan*). July 10. Summer. [Jap]
• ***Summary:*** A color photo shows the front panel of two boxes of tofu, and cubes of seasoned tofu that were inside them. The brand name is Tossolia made by the company named Tofoulie. The first box is "Tofu artisanal au basilic" (Hand-made tofu with basil and olives). The second: "Galette

© Copyright Soyinfo Center 2013

sarrasines artisanales au tofu" (Handmade buckwheat patties with tofu). The text states; Maybe these surpass Japanese tofu.

Note: As of April 2008 these products at listed on the website www.kigroup.com, for KI Group S.p.A., Strade Settimo, 399/11, 10156 Torino, Italy.

11438. Verdonk, David. 1997. Making panir from cow's milk at Ridge Crest Dairy Ltd. in Canada (Interview). *SoyaScan Notes.* July 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ridge Crest Dairy has been making Panir (it is spelled like this on the label) since 1986 and selling it largely to Indo-Canadians (Indians who live in Canada). Two or three other companies in Canada also make panir, including Dada Panir in Winnipeg (Manitoba). The product is sold fresh and has a very short shelf life. Indians use it mostly on special occasions, such as weddings or funerals–not as a daily food. David's main competition is not so much other manufacturers as Indian housewives, who simply buy a gallon of dairy milk and make their own panir at home.

Update: Talk with David Verdonk. 1998 Aug. 17. The other main maker of dairy panir in Canada today is Punjab Dairy Food in Surrey, British Columbia. Dada Panir seems to be out of business. Address: Ridge Crest Dairy, Ltd., 32929 Mission Way, Mission, BC V2V 6E4, Canada. Phone: 604-820-4001.

11439. *SoyaScan Notes.* 1997. Update on Wildwood Natural Foods (Overview). July 11. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Wildwood is now looking for capital to expand its basic plant in Santa Cruz. The relatively small plant is operating at full capacity. There are four shareholders who each currently own 25% of the company: Jeremiah Ridenour, Billy Bramblett, Paul Orbuch, and Paul Rosenmayr. Paul is not on the board of directors.

Update: 1997. Nov. 5. The company has made some profit recently–roughly $100,000 in the past 12 months. Talk with Paul Orbuch. 1999. Dec. 17. The same four people still each own 25% of the company. Paul was a VP at Odwallah, helped the company with its IPO and during its years of rapid growth; he was there during the apple crisis. Now he is a day trader and investor.

11440. Andoh, Elizabeth. 1997. Tea and temple fare in Kamakura. *New York Times.* July 20. p. XX6, XX18 (Sunday).

• ***Summary:*** Contains reviews of restaurants in Kamakura. Saami serves dishes that include wheat gluten, and "soy foods," and a sweet tofu-based pâté known as gizei-dofu [gisei-dofu], plus "goma-dofu, creamy sesame pudding drizzled with soy sauce and topped with a dab of fiery wasabi horseradish."

Kintame uses traditional pickling mediums including "miso paste." Their "house soup is ozoni, a creamy, pale, a miso-thickened broth.

Fushiki An offers shojin ryori, temple-style vegetarian cuisine including goma-dofu and a "clear broth with cubes of silken bean curd..." The chirashi-zushi contained "soy-simmered koya-dofu bean curd..." Address: Tokyo, Japan.

11441. Mueller, Ed. 1997. Brief history of Takoma Soy Inc. (Interview). *SoyaScan Notes.* July 21 and 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Takoma Soy was incorporated on 5 March 1992 and started operation on 1 April 1992–sharing the same space as Olive Tree Works in Takoma Park, Maryland. Takoma Soy purchased tofu from Spring Creek Natural Foods (Spencer, West Virginia) and sold it at cost to Olive Tree. Takoma Soy is now a full-line natural foods distributor, carrying products which include Spring Creek Tofu (from Spencer, West Virginia), Miso Master miso (from North Carolina), and tempeh from Cricklewood (Mertztown, Pennsylvania). They recently purchased (using a bank loan) a property that used to be a Bible camp. On the property are a 12,000 square foot building, a lodge house (with 5-8 bedrooms), and 3 cabins. At its peak the camp had 300 to 500 day campers and up to 150 overnight guests. Ed would like to convert the main building into a tofu factory. He is working on a joint venture that would probably set up a new company, with Twin Oaks and Olive Tree involved as partners. Twin Oaks plans to stop making tofu, buy their tofu from Takoma Soy in Maryland, and focus on making second generation tofu products.

Ed was a Peace Corps volunteer in Sierra Leone. His vision for the property is to develop a center where people can come to learn agricultural skills, including how to make tofu, bake bread, etc. Address: 11 South Pennsylvania Ave., Hancock, Maryland 21750. Phone: 301-678-5283.

11442. Buzzell, R.I.; Poysa, V. 1997. Two food quality soybean cultivars released by GPCRC. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):1. July.

• ***Summary:*** GPCRC is the Greenhouse and Processing Crops Research Centre (formerly Harrow Research Station). "These two cultivars, AC Onrei and OX756, have been introduced to complement Harovinton expand the export of Ontario soybeans into the premium Asian soyfood market. Harovinton, a tofu-type soybean cultivar developed at Harrow, has established Canadian soyfood soybeans as a premium quality product in Asia, where it is called 'Orient Pearl.'

"AC Onrei is a selection from the cross Vinton X Enrei. Enrei is a premium quality Japanese tofu cultivar which lacks the a4 protein sub-unit of the 11S glycinin (gy4/gy4). Enrei's superior tofu quality, especially the ability to make premium tofu using the 'nigari' (magnesium chloride) coagulant, is

© Copyright Soyinfo Center 2013

due to the lack of this a4 protein sub-unit. Vinton is Gy4/Gy4 and has the a4 protein sub-unit."

"OX756 was developed from the backcross of L2 X Harovinton. L2 is a backcross derived lx2/lx2 line of Century which lacks the L2 lipoxygenase isoenzyme... Harovinton is Lx2/Lx2 and has the L2 lipoxygenase isoenzyme."

"OX756 is a low lipoxygenase (lx2/lx2), yellow hilum cultivar similar in yield but earlier maturing than Harovinton, the recurrent parent. The lack of the lx2 lipoxygenase enzyme should reduce the 'beany' flavours in tofu, soymilk, and other soyfood products made with OX756, thus promoting wider acceptance of soybeans as food ingredients. It was released to W.G. Thompson and Sons, Ltd."

A table shows agronomic performance and seed quality for these two new food varieties compared with Harovinton during 8-9 years. For each variety are given: Yield, plant height, lodging score, days to maturity, weight of 100 seeds, protein %, and oil %. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

11443. Jessop, D.B. 1997. The food processing lab at GPCRC at Harrow. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):1. July.
• ***Summary:*** "The food processing lab at the GPCRC [Greenhouse and Processing Crops Research Centre] has, for the past several years, evaluated soybean varieties for their soymilk, tofu and miso making properties. The Grainspec whole grain infrared analyser is capable of evaluating raw soybeans for moisture, oil, protein, total sugar, colour and more recently sucrose and stachyose [an oligosaccharide that causes flatulence]. The raw beans are also analysed for water uptake in both the tofu and miso process." Address: AAFC, GPCRC, Harrow, Ontario, Canada.

11444. Kamberg, Mary-Lane. 1997. Beyond tofu: Soy-based meat substitutes gain greater consumer acceptance. *Produce Merchandising.* July. p. 23-24, 26, 28. In "Healthy Lifestyles" special pull-out section.
• ***Summary:*** A long article about the tofu industry and market in the USA. Lightlife Foods' sales have increased 50% in each of the past three years, says Rick McKelvey. Lightlife makes 35 SKUs of vegetarian products.

11445. Lightlife Foods, Inc. 1997. Now your soy set can be as effective as it is appetizing: Introducing Lightlife's 'Eating healthy can be soy easy' merchandising program (Ad). *Produce Merchandising.* July. p. 27. In "Healthy Lifestyles" special pull-out section.
• ***Summary:*** This full-page color ad (see next page) shows most of Lightlife's soyfood products in the produce section, flanked on both sides by celery, lettuce, tomatoes, artichokes, bell peppers, and mushrooms. Products (from top to bottom) include: Smart Dogs, Wonderdogs. Tofu Pups. Lightburgers. Barbecue Grilles. Lemon Grilles. Tamari Grilles. Smart Deli Roast Turkey. Smart Deli Bologna. Smart Deli Country Ham. Lean Italian Links. Lean Italian Links. Lean Breakfast Links. Soy Gourmet. Gimme Lean! (meatless). Tempeh. Smoky Tempeh Strips. Nasoya tofu.

At the top is a booklet (1997) titled "Eating healthy can be soy easy."

The ad text reads: "As any as 120 million people are on meat restrictive diets–and just about everybody else wants to cut cholesterol and fat. Soyfoods, for many of these people, are becoming one of their basic food groups. These consumers are spending more of their food dollar in the produce department and that's why Lightlife soy set in your produce section makes sense–and sales. Only Lightlife provides a fully integrated, complete merchandising system."

"As a leading producer of meatless soy based products, Lightlife delivers satisfying flavor through an entire line of mouthwatering vegetarian replacements for hot dogs, burgers, sausage, luncheon meats, ground meat, and tempeh."

"Why Lightlife? Proven category leader. Merchandising support. No spoilage." www.lightlife.com.

11446. Morinaga Nutritional Foods, Inc. 1997. Mori-Nu. The lowest fat tofu in the world. Now 18% larger. The others are just plain tubby (Ad). *Produce Merchandising.* July. p. 35. In "Healthy Lifestyles" special pull-out section.
• ***Summary:*** Shows horizontal packages of Mori-Nu Silken Tofu: Extra Firm Lite and Firm Lite. "Web site: www.morinu.com." Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-Now Tofu.

11447. Nasoya Foods, Inc. 1997. Get the soy you need with Nasoya Vegi-Dressing: Five delicious flavors made with soy for a smooth creamy texture with absolutely no dairy or cholesterol (Ad). *Vegetarian Times.* July. p. 45.
• ***Summary:*** This attractive full-page color ad shows Nasoya Vegi-Dressings in the following flavors: Sesame garlic, Creamy dill, Thousand island, Garden herb, and Creamy Italian. The dressings are placed on a table with a light purple table cloth. One bottle is being poured over a freshly-made salad. Address: [Massachusetts]. Phone: 1-800-229-Tofu.

11448. *Produce Merchandising.* 1997. Healthy lifestyles: A 16-page special pull-out section of articles and ads. July. p. 21-36.
• ***Summary:*** *Produce Merchandising* is a key produce trade magazine. On the front page of this special section: "Inside–Tofu and other soy protein foods gain a following. 13 million vegetarians search produce departments for meat substitutes. 120 million consumers on meat-restricted diets build mainstream demand. Category may be biggest merchandising opportunity since value-added."

11449. *Stanford* (*Palo Alto, California*). 1997. The father of tofu [Bill Shurtleff]. July/Aug. p. 15. [3 ref]
• ***Summary:*** Bill Shurtleff, a Stanford graduate (1963, MA 1969), is known as the "Father of Tofu." A ¼-page summary of his work with tofu, soyfoods, and the Soyfoods Center is given. A color photo shows a tofu dish. Note: This glossy, color magazine is published by the Stanford University Alumni Association.

11450. Vitasoy International Holdings Ltd. 1997. Annual report 1996/97. New Territories, Hong Kong. 100 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1996, group turnover (sales) was HK$1,524 million, up 17.1% over the previous year. Of these sales, 70.3% came from Hong Kong, 19.3% from North America, and 10.5% from the rest of the world. Operating profit was HK$120 million, up 12% from the previous year. Earnings per share were 22.3 cents, up 272%. Dividends for the year were 10.2 cents, up 6% from the previous year.

"North America: Sales continued to be healthy, with good increases over the previous year. The U.S. Group achieved a total gross revenue of HK$294 million, an increase of 15% over the previous year. Again, tofu products made up the largest share, commanding more than 40% of gross sales, a rise of over 18%.

"Soyamilk contributed the second largest revenue stream, and the Natural Vitasoy product range realized a significant increase of nearly 30%. Vita tea and juices made a modest increase over last year, while pasta, with just over 10% of gross sales, rose nearly 7%."

"Nasoya Foods, Inc. has purchased a new building in Massachusetts to relocate its tofu plant and greatly increase production capacity. It is also adding a new soyamilk processing line. To better serve our American customers, Natural Vitasoy soyamilk will be produced in North America from October, 1997."

Two Americans are on the board of directors: Mr. Jerry Maynard (age 47, Chief Operating Officer of Vitasoy USA, joined the Group in 1988) and Mr. Alfred H. Eaton (age 41, President of Nasoya Foods, joined the Group in 1990).

China: "With both the Shenzhen and the Hong Kong plants running at almost full capacity, and the new Shanghai plant planned to commence production in the third calendar quarter of this year, the Group is well positioned for growth."

The Group was awarded one of the "Top 20 Leading Companies in Hong Kong" in an election organized by the *Hong Kong Economic Times.*

The company now has two websites: www.vitasoy.com and www.nasoya.com. Photos show: Vitasoy chilled soymilk in gable-top cartons (p. 6). The Shenzhen plant (p. 9). The Nasoya plant in Massachusetts (p. 10). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

11451. Woodrow, L.; Buzzell, R.I. 1997. Sugars in food processing soybeans. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):2. July.
• ***Summary:*** "The soybean program at the Greenhouse and Processing Crops Research Centre [formerly Harrow Research Station] focuses on the development of lines with characteristics suited to the domestic and export food processing markets. Seed characteristics such as hilum and seed coat colour; storage protein content and profile; enzyme profile; oil content and fatty acid composition; total carbohydrate content; and free sugar composition are important determinants of the food processing performance of soybeans into products such as soymilk, tofu, and miso."

"As soybeans mature, free sugars are synthesized and form part of the storage reserves of the seed. When the seed germinates, these sugars represent the first energy available to the young seedling... Glucose and sucrose are present in most fruits and vegetables, raffinose and stachyose are found in some plant families including legumes. These sugars are synthesized in a pathway that leads from the monosaccharide glucose to sucrose (disaccharide), raffinose (trisaccharide) and finally the tetrasaccharide, stachyose. In the mature soybean sucrose and stachyose are present at levels ranging from 3.0-8.0% by weight dry matter depending on the variety or line. Raffinose and glucose are intermediates in the synthesis and are present at much lower levels in the mature seed."

A graph shows the glucose, sucrose, raffinose, and stachyose contents of 40 soybean varieties and lines, plotted to show their relationships with the total free sugar content. The data illustrates that among lines increasing total free sugar content is correlated with an increase in sucrose. Sucrose is the most abundant sugar in mature soybeans, followed by stachyose, then raffinose. Glucose and fructose are present in only trace amounts. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

11452. [Sharon's Finest]. 1997. TofuRella: In produce for 9 years (Ad). *Produce Merchandising.* July. p. 24. In "Healthy Lifestyles" special pull-out section.
• ***Summary:*** A 1/3 page black and white ad. "Yes, TofuRella has been a Produce success story for 9 years. Why? Because consumers want a cheese alternative made with tofu, lower in fat with no cholesterol or lactose." www.rella.com.

11453. Snider, Nancy. 1997. Solving problems related to *E. coli* O-157 in tofu and other soyfoods (Interview). *SoyaScan Notes.* Aug. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The sprout industry has recently been plagued by problems caused by *E. coli* O-157, a very toxic and potentially lethal food contamination bacterium. Nancy and ISGA have worked with three excellent people

© Copyright Soyinfo Center 2013

who could also probably be very useful to soyfoods manufacturers: (1) Dr. Gerald Saper, USDA food research in Philadelphia, Pennsylvania. Phone: 215-233-6417. (2) Dr. Jim Elgin, USDA national program staff, Beltsville research center, Maryland. Phone: 301-504-5618. (3) Mel Drozen, an attorney in Washington, DC, and a very good man who specializes in legislative issues related to food contamination. Phone: 202-434-4100. Fax: 202-434-4646.

The CDC (Center for Disease Control) has not yet proven that O-157 has been found in sprouts; they have only shown a statistical probability that it was, based on those who have gotten sick. They get bloody diarrhea, some vomiting, fever, nausea, and sometime dehydration–sort of like a bad flu, except that bloody stools are involved.

But that is not the main issue. Nancy believes firmly that sprout growers and tofu makers must change their manufacturing methods and record keeping procedures now, and they must begin to educate themselves about this very complex and serious subject–which has the potential to severely damage a company or an entire industry.

Four basics: (1) Heating foods to 140ºC for even a short times kills this bacterium. (2) A hydrogen peroxide rinse on equipment is very effective for sterilization. (3) Each manufacturer must identify general hazard points in the plant, then use general guidelines to develop an HACCP (Hazard Analysis Critical Control Points) for that plant. (4) Manufacturers must know and reveal the sources of their soybeans. Many of the problems come from seed raised with manure (cow or human)–though not if the manure is properly pre-heated to 140ºC. Bacteria may be able to get under the seedcoat. Address: President, International Sprout Growers Assoc., P.O. Box 270, Marion, Massachusetts 02738; and poner, Snider's Sprouts, Potomac, Maryland. Phone: 1-800-448-8006 or 508-563-2714.

11454. Nordquist, Ted. 1997. Re: Founding and early history of Aros Sojaproduktor KB in Örsundsbro, Sweden. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 3 p. Typed, with signature on letterhead. Preceded by an interview on July 14.

• ***Summary:*** Ted Nordquist and William Shurtleff have been friends since Oct. 1975. In looking at the early history of Aros Sojaprodukter (Sweden's earliest known tofu manufacturer), Shurtleff was struck by the fact that three nice articles had been published about the company in Swedish during 1980, yet (according to a 1984 letter from Nordquist, its founder) the company had not started making tofu commercially until Feb. 1981. Shurtleff talked with Nordquist about this, then sent Nordquist a photocopy of all documents (16, in chronological order) in the Soyfoods Center library that were published (or written) before Jan. 1982 and asked Ted if he would please check that Feb. 1981 date. Ted did so, carefully and with interest, then wrote the following:

"Re: Aros Sojaprodukter KB. Dear Bill: Thank you for the call and the materials. Wow, how to bring back memories... and good ones to boot!

"I was right the first time [about Feb. 1981 being the date the company started making tofu commercially]. You can't trust married men over 50 with instant truth about their pasts. Time is condensed into the Good Times, and the hard work is quickly forgotten. Your documentation pays off handsomely revealing that.

"1. We located the building in Örsundsbro in the fall of 1979, as revealed in Tim Öhlund's letter of November 26, 1979. We planned and talked money, floor plans, permits and whatnot.

"2. We formed the *kommanditbolag,* limited partnership, and raised $20,000." Prof. Ki Yong Kim and Ted each contributed $10,000, and 5% of the company shares were distributed to Tim Öhlund, Göran Sollenberg, Gunnar Karlsson [no relation to Ted's wife], and Lars-Oluv Kulin in return for time spent working on establishing the company. "I do not remember the exact date we received the papers and became official, but it was in 1979.

"3. We applied for loans from several banks during the beginning of 1980. We rented the locality in Örsundsbro from January 1980. The rent was 1,000 SEK per month, about $200/month.

"4. We did not get the money we asked for, about 800,000 SEK or about $160,000. By this time, we were famous! The local newspaper journalist, Göran Palm, interviewed us several times, and the Health Food Store in Uppsala owned by Birgitta Akerheden was used for Soy Product Presentations. So by the Spring of 1980, we still had a building, lots of enthusiasm, media coverage, but no money.

"In May (I think) of 1980, Gunnar Eriksson, the local bank manager of Nordbanken in Örsundsbro called me in to tell me that even his bank, Nordbanken, was not prepared to lend us the 800,000 SEK. Then he asked me how much money I could raise. I told him the $20,000 (100,000 SEK) was all that I could raise. He asked me if I could start I factory with a total of 200,000 SEK. I told him I would get back to him the next day with an answer.

"6. So we started on a shoe string. I called Anne-Marie's father, Gösta Karlson, and told him that if he would live with us during the summer of 1980, help me renovate the factory, and build the plant primarily with material from the stainless steel scrap-yard, then I would go for it. He accepted.

"I ordered the machinery through Birgitta Akerheden simply because I had no credit. I ordered a Takai grinder, hydraulic press, coagulation barrels, stainless steel pressing boxes, presses and two stainless rinsing tanks. The steam cooking process, pressing tables, etc., we built ourselves. I paid Takai about 46,000 SEK for this equipment.

"7. So Gösta and I built Aros Sojaprodukter KB and we completed the job by the end of 1980 (The article #3540 by

© Copyright Soyinfo Center 2013

Göran Palm dated 23 September 1980 shows me in the office using our tool chest as a coffee table). Tim, the other partners and I had an open house by the end of the year, beginning production in February of 1981. During the year of 1980, we were making tofu at home and presenting tofu dishes to people in Uppsala and Stockholm. We were basically doing what we could to build up an interest for the opening of our factory.

"8. By the summer of 1981, the lady living above the factory died, and the owners asked me if I wanted to buy the building. Again, Gösta helped me renovate the living quarters and we moved into the building from Uppsala in time for school, August of 1981. Again, Gunnar Eriksson of Nordbanken in Örsundsbro just granted me the loan to buy the building. He helped me throughout our development and also took up to 18% interest in our loans!

"10. I worked at Uppsala University at the History of Religion Institute until the summer of 1984. But my 18-hour days were catching up to me and I quit the academic life to work and pay back loans full time. Actually, I was not able to pay back my loans until after I founded Aros Sojaprodukter AB with a new partner named Erik Kennhed (in 1990), finished building the TAN Soy Base plant in Tinnsryd, made Tofuline glass [Tofu Line soy ice cream] a success in Sweden and Finland and then sold everything to Blekinge Invest in 1992. I started that project with Marc Ljungström, Trensums Musteri AB, in Tingsryd in 1982. We started making TAN Soy Base in 1987 but it was not until 1990 that the Tofuline glass started rolling off the production line.

"11. I agreed not to compete with Blekinge Invest for three years (in return for a percentage of Tofuline sales over three years)." Address: TAN Industries, Inc., 351 California St., Suite 1330, San Francisco, California 94104. Phone: 415-398-8007.

11455. Tobar, Hector. 1997. A world of surprises at Tofu Festival: Little Tokyo event includes twists on dishes from burgers to chocolate mousse that belie the food's bland image. *Los Angeles Times.* Aug. 10. p. B3, B7. Metro News section.

• ***Summary:*** The article begins: "To the uninitiated, tofu is synonymous with bland. It comes in funny white blocks that float in water. All by itself, it doesn't taste like much. But the people attending the Tofu Festival in Little Tokyo this weekend know better. They'll tell you what with some imagination and expertise–and a lot of spices–tofu is a culinary delight." More than 20,000 people were expected at the event, on Saturday and Sunday. Twenty-six restaurants served up a variety of tofu dishes. One favorite dish was the tofu cheesecake offered by Ryo Sato, the chef *de cuisine* and owner of Chez Sateau restaurant in Arcadia. The exact recipe is secret but the ingredients include tofu (50% of total), cream cheese, sour cream, egg, and lemon juice.

Talk with Margaret Endo of Little Tokyo Service Center. 1997. Sept. 10. This year's Tofu Festival was much bigger and better than the first one last year. Close to 20,000 people attended; roughly 70% of these were Asian Americans (with the majority of those being Japanese-Americans, but with also many Chinese- and Korean-Americans), and the remaining 30% were Caucasian-Americans. Pat Greenberg was very involved. A new edition of *The Four Seasons of Tofu* cookbook was prepared for the festival, and about 1,000 copies were sold. Address: Times Staff Writer.

11456. Recer, Paul. 1997. Every body still needs milk. Experts: Osteoporosis threatens all. *Oakland Tribune.* Aug. 14. p. A-1, A-9.

• ***Summary:*** One out of four women will have a hip fracture during her lifetime, according to Dr. Connie M. Weaver of Purdue University, Indiana. Hip fractures are also on the increase among men.

A table (on the front page) lists four calcium-rich foods and their calcium content: Skim milk 300 mg of calcium per cup. Tofu 516 mg/cup. Broccoli–70 mg/cup. Almonds 160 mg/ounce. Though tofu is the most concentrated source of calcium, it is not mentioned in the article, which begins: "Virtually all Americans–not just women–should eat and drink more calcium-rich foods such as milk, cheese and yogurt to slow an 'alarming' increase in the brittle bone disease osteoporosis, a panel of experts said Wednesday. Protecting against brittle bones requires 1,000 to 1,300 milligrams of calcium a day..." Address: Associated Press.

11457. Myong, Jung. 1997. A Korean food manufacturing company named "Zion" plans to start making soy sauce, tofu, and soy sprouts in America (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jung is Korean. She works for a Korean company named "Zion" which currently makes soy sauce and tofu in Korea. They are planning to start a factory in the USA to make soy sauce, tofu, and soy sprouts. Address: 20973 Glenbrook Dr., Walnut, California 91789-4818. Phone: 909-595-4681.

11458. Brody, Jane E. 1997. Diet may be one reason complaints about menopause are rare in Asia. *New York Times.* Aug. 27. p. B10. Health section (Natl).

• ***Summary:*** A table (from the scientific journal *Obstetrics and Gynecology*) shows the content of phytoestrogens (in milligrams) in various soyfoods: Roasted soybeans 165.2. Textured vegetable protein 138.2. Green soybeans 135.4. Soy flour 112.4. Tempeh 62.5. Tofu 33.7. Tofu yogurt 16.4. Soy hot dog 15.0. Soy noodles (dry) 8.5.

11460. Funaki, Junko; Yano, Midori; Misaka, T.; Abe, K.; Arai, S. 1997. Purification and characterization of a neutral protease that contributes to the unique flavor and texture of tofu-misozuke. *J. of Food Biochemistry* 21(3):191-202. Aug. [14 ref. Eng]
• ***Summary:*** Tofu-misozuke, a food indigenous to the Fukuoka district of Japan, is a type of tofu fermented in miso; it has a unique cheese-like taste and soft texture. The changes in the tofu are caused by protease enzymes originating in the koji, which is one of the raw materials of miso. The key enzyme, a protease [that digests protein] was purified and identified. Address: 1-2. Faculty of Human Environmental Science, Fukuoka Women's Univ., 1-1-1 Kasumigaoka, Higashi-ku, Fukuoka 813, Japan.

11461. Galaxy Foods Company. 1997. Annual report 1997. Orlando, Florida. 29 p. 22 x 28 cm.
• ***Summary:*** Sales in 1997 were $17,171,496, up 334% from $3,950,455 in 1996. Net loss was $2,736,660–not as bad as the $3,282,58 loss in 1996. In the first quarter of 1998, sales were $5.8 million–up 75% over the same quarter one year ago, and the company made a profit.

Accompanying the report is a "Notice of annual meeting of shareholders to be held Wednesday, October 15, 1997" (15 p.). The principal shareholders (p. 3) are Angelo S. Morini (age 54, 38.8%) and Cede & Co. (New York, 48.9%). Mr. Morini's salary is an astonishing $250,000 plus $16,262 in other annual compensation.

"Between 1974 and 1980, Mr. Morini was the general manager of Galaxy Cheese Company, which operated as a sole proprietorship until its incorporation in May 1980. Prior to 1974, he was associated with the Food Service Division of Pillsbury Company and the Post Division of General Foods Company. In addition, he worked in Morini Markets, his family-owned and operated chain of retail grocery stores in the New Castle, Pennsylvania, area. Mr. Morini received a B.S. degree in Business Administration from Youngstown State University in 1968" (Notice, p. 7). Address: 2441 Viscount Row, Orlando, Florida 32809. Lion's Club (LA, 1974–Tofu miso soup, Futomaki sushi). Mr. Ramen (LA, Oct. 1993–Vegetarian {with tofu} ramen). Ocean Seafood Restaurant (LA, 1990–Mabo tofu, Tofu with mixed vegetables, Tofu in clay pot). Papa Jon's Cafe (Long Beach, 1990–Greek tofu salad, Tofu lentil salad, Potato-tofu salad, Sesame tofu salad, Tofu spinach, Lasagna, Tofu broccoli stir-fry, Spaghetti and tofu balls, Tofu/lettuce/tomato {TLT} sandwich, Tofu scramble {breakfast}, Tofu dessert pies, Tofu frosting {on cake}, Tomato basil w/tofu, Teriyaki tofu, and Spinach mushroom pasta w/tofu). Pat Greenberg, "Fitness Gourmet" (Beverly Hills, Renowned instructor of the "Joy of Soy" cooking classes). Southern California Cuisine (LA, 1994–Tofu ravioli served with Curry sauce or traditional marinara sauce). Suehiro Cafe (LA, 1972–Stir-fried eggplant, Bell peppers with tofu braised in miso sauce, Deep-fried tofu with sauce). Three Brothers Restaurant & Catering (Harbor City, 1983–Chinese tofu salad, Tofu seafood salad). Tofutti Brands Inc. (Cranford, New Jersey, 1982–Non-dairy frozen desserts, Tofutti tortellini, Mini ravioli, Tofutti cookies). Unique Catering (Chino Hills, 1995–Tofu patty with shiitake sauce, String beans with tofu dressing, Inari-sushi). Vegetarian Delight (San Gabriel, 1991–Veggie fish in hot braised sauce). Wild Oats Community Market (Santa Monica, 1984–Tofu tempeh deli salad).

Advertisements (p. 10-21), including ads for Tofutti, Patricia Greenberg "The Joy of Soy" cooking classes, JFC International Inc., House Foods America Corporation (full page, inside rear cover). Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

11466. Nash, Jonell. 1997. Elegance on the cheap. *Essence* 28(4):109. Aug. *
• ***Summary:*** Includes recipes.

11467. Newshour with Jim Lehrer. 1997. Osteoporosis, calcium, and the U.S. diet. Television broadcast. PBS. Aug. 14.
• ***Summary:*** Americans and Canadians need more calcium in their diets to guard against the bone disease osteoporosis, according to a report released yesterday by the Institute of Medicine (an affiliate of the National Academy of Sciences) in Washington, DC. The study recommended increasing the daily dose of calcium for adults to 1,000–1,300 mg, depending on age. That is an increase from the current 800–1,200 mg which had been recommended by the National Academy of Sciences. Many women and teens still get less than 600 mg/day.

"Calcium can be consumed in dairy products and foods such as broccoli and tofu." Note: Experts agree that getting enough calcium is essential to building strong bones. Other good sources are calcium-fortified soymilk and calcium-fortified orange juice. Another key to keeping calcium levels high is retention–smoking, coffee, and intense physical exercise all deplete calcium stores–as does excess protein consumption.

11468. Now & Zen–Gourmet Vegetarian Bistro & Bakery. 1997. Menu. San Francisco, California. 1 p. Front and back.
• ***Summary:*** Contents: Appetizers (7). Salads (5). Entrees (8). This vegan's restaurant's perennial bestseller is Zen Kabobs–"succulent seitan dressed in a orange-soy marinade and seasonal vegetables grilled to perfection over a bed of brown rice. Tofu can be substituted for seitan. Oil free marinade used upon request. $10.95." Seitan is also used in several other entrees. Portabella & Polenta Lasagne contains tofu. Tofu "chevre" is used in one salad. Address: 1826 Buchanan St., San Francisco, California 94115. Phone: 415-922-9696.

11469. **Product Name:** Tofu, Baked Tofu, No-Chicken Tofu, Tofu Spreads, The Healthy Wrap (With Rice, Veggies, & Tofu).
Manufacturer's Name: Organic Foods, Inc.
Manufacturer's Address: 534 Smithtown Ct., Excelsior, MN 55331. Phone: 612-474-3989.
Date of Introduction: 1997. August.
Ingredients: Incl. tofu.
New Product–Documentation: Talk with Jim Skiff of CornBelt Foods. 1997. Oct. 6. Tom Stacey and his wife [Donna] make tofu in Excelsior, Minnesota. Jim saw them recently at the Natural Products Expo in Baltimore. They presently sell to Lunds Stores, upscale supermarkets in the Minneapolis area. Jim's old partner [Shichiro Sato] may be involved. Organic Foods had planned to bid on Jim's former silken tofu equipment but in the end did not have enough money.

Talk with Donna Stacey. 1997. Oct. 6. Their tofu factory is in Victoria, Minnesota, but mail is not delivered there, so their mailing address is at their home (534 Smithtown Ct.). Their first and main product line was The Healthy Wrap, a vegan/vegetarian sandwich, wrapped in a chapati and launched in August 1991. Originally it was made with rice, veggies, and tofu–the tofu being purchased from another company. But they had difficulty getting the quality tofu they wanted, so they started making their own tofu in August 1997, along with the other products mentioned above. They also make specialty items for an upscale coffee house chain in the Minneapolis area.

11470. Stein, Gary. 1997. New developments at San Diego Soy Dairy (interview). *SoyaScan Notes.* Sept. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Gary's tofu business started growing about 2 years ago and is now booming. He is now operating at full capacity, so he is installing a new BMI cooking system, like the ones at White Wave and Wildwood Natural Foods, in

© Copyright Soyinfo Center 2013

order to greatly expand his production capacity.

Gary now makes private label tofu for several customers, the biggest of which is Trader Joe's. Several years ago Trader Joe's sold only a soft calcium sulfate tofu (probably made by Ken Lee of Soyfoods of America), but since they started selling Gary's very firm nigari tofu, it has become their best-selling tofu. Trader Joe's now buys 8,000 lb/week from Gary. He will soon introduce an Herbal Tofu [named Herbed Tofu by Feb. 1998], in which oregano and other herbs are mixed in with the curds before pressing.

Recently Gary did a mailing to thousands of delis and foodservice places offering (for a refundable $75) to send them his chef to teach them how to use tofu in their bulk recipes. He refunds the money at the rate of 10% off each invoice.

Gary does not have to compete with the many low-priced tofu brands made in the Los Angeles area by Asian-American companies. To see these brands and their amazingly low prices, one need only visit one of the many "99 Ranch Market" outlets. These are gigantic Asian supermarkets, each with about 40 linear feet of every low-priced brand fresh tofu, some selling for as little as $0.49/lb. Also in each of these supermarkets are 7-8 Asian-style restaurants.

Gary still has his soycrafters apprenticeship program; it now costs $2,500 for 3 weeks of hands-on instruction. The last apprentice to go through was Marian McRiggle–quite a few years ago. Address: Owner, San Diego Soy Dairy, 1330 Hill St., Suite B., El Cajon, California 92020. Phone: 619-447-8638.

11471. Jha, Krishna. 1997. Soya bean: Do we know enough about it? *Indian Express–Pune Newsline* (*India*). Sept. 6.
• ***Summary:*** Subtitle: "Very few people might be really aware of the uses and benefits of soya beans. Most of us simply know that it is used for extraction of edible oil. Soya bean apart from containing about 20-22 per cent oil also contains about 44 per cent high quality edible protein which is approximately two times higher than what is present in common pulses popular such as *arhar, urad, moong,* gram, lentil, etc."

This article focuses on the therapeutic benefits of soya bean in reducing cancer risk, improving glycemic control in diabetics, and lower cholesterol.

"Soya milk, soya paneer (tofu), breads, cakes, yoghurts, biscuits, nuggets, etc. and many other food products will shortly be available to the common man.

"For the first time, in Pune this useful product will be made available for mass consumption by Amrit Foods, Pune.

"The various products including Soya Milk and Soya Paneer (Tofu) will be launched in a fortnight and Breads, Cakes, Yogurts, Biscuits, Nuggets along with a host of other soya products are in the pipeline for the future." Address: PhD, Senior Scientist, Microbiology.

11472. Sandler, Richard. 1997. Recollections of early tofu cheesecakes in Boston and New York #2. The place of cheesecakes in Jewish culture (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Concerning the first tofu cheesecake in Boston, Richard's brother, Matthew Sandler, stated today: "The original recipe for the tofu cheesecake probably came from Connie Frank Sandler, the first wife of Matt's brother, Richard. Connie and Richard made a tofu cheesecake at Sanai restaurant in about 1966-67." But Richard says he has no recollection of any cheesecake in Boston. He suggests calling Connie Sandler (now Hanna Frank, who lives in Mexico). The recipe he best remembers developing with Connie was Rice Kayu Bread–which she invented.

"My first recollection of tofu cheesecake (or tofu pie) was 1969 in New York. The Caldron restaurant was started by Marty Schloss, his wife Glory, and his mother, Seena. I was the first cook at The Caldron; I set up the kitchen, the menu, the bookkeeping, etc. The Caldron first opened for business on 18 April 1969." About a month of two after The Caldron opened, its three founders started a natural-food grocery story and bakery right next door to the Caldron; it was named The Caldron's Well. Marty's mother, Seena, became the baker at The Caldron's Well roughly 6 months after April 1969. I think she invented and developed the tofu cheesecake that soon became very popular at The Caldron. A fellow named Danny Mount (who arrived after Richard and probably working with Seena) also made tofu cheesecakes at The Caldron. Before working at The Caldron, Danny had worked at the Good Karma Cafe in San Francisco, California. "I don't think Seena had any precedent for her discovery. My personal opinion is that, as in all great historical discoveries, there are often two or three people independently working on the same thing. It speaks to that fact that it is Nature that is producing this, speaking to a few minds. I firmly believe that.

"This is definitely my first recollection of seeing or tasting a tofu cheesecake anywhere. I lived in the Kushi's house in Boston and Aveline never made a tofu cheesecake. I was the cook at Sanae and neither I nor Evan Root, the first cook there, ever made it. I made desserts at Sanae every single day, but I definitely never made a tofu cheesecake. I moved to Boston on 1 Jan. 1968 and immediately went to work helping out with the construction of Sanae–which was already about 80% done. Sanae opened in about January or February 1968."

"In 1968 in Boston, the only tofu that even existed in this strict macrobiotic community was tofu from Chinatown. Tofu was always a suspect food. But cheesecake was something that always appealed to Jewish macrobiotics, trying to adapt the food to their traditions. Cheesecake is a very Jewish dessert–at least among secular Jews in the

© Copyright Soyinfo Center 2013

USA in the 1950s and 1960s. It is not quite as Jewish as lox and bagels, but it was definitely indicative of wealth in the Jewish community, or of a Jewish person climbing the ladder of success. It was like 'Oy–You got so much cheese you can make a cake! I can't believe it.'"

The laws of Kosher say that if you eat meat, you must wait about 4 hours before you eat dairy. Until about 50 years ago, almost all Jews kept Kosher, but by the 1950s the majority of Jews probably were not Kosher. Yet many Jews who gave up Kosher laws, still kept meat and milk apart. There are two kinds of Kosher restaurants in New York City–Meat restaurants and dairy restaurants. The meat restaurants sold no dairy products and the dairy restaurants sold no meat products; the dairy restaurants sold dairy products but no meat. The Kosher dairy restaurants sold delicious cheesecakes.

Other people who might remember more about early tofu cheesecakes: (1) Hanna Frank (formerly Connie Sandler), Richard's first wife. She now lives in Mexico. (2) Wally Gorell, who lives in the Bay Area and has an encyclopedic memory and mind. He was in Boston for a short time in the early days, then soon left to go to Japan. Wally was seen as a prodigy in terms of cooking, and was greatly admired by everyone for his light touch and great creativity. In 1968 there were only two macrobiotic study houses in Brookline (Boston): The one that Michio and Aveline lived in, on Gardner Road, and the second one which was on University Road. Wally and Richard and Matt Sandler lived in the house on University Road. When Nahum and Beverly Stiskin moved out of the University Road House, Richard took their room. Later Connie, Richard and Wally moved into Michio's house on Gardner Road.

(3) Beverly Sky (formerly Stiskin; she is now single and lives in Boston). (4) Nahum Stiskin in New York City (he's involved in computer software and the financial world).

(5) Michelle = Maier Abehsera, who is now an Orthodox Jew and lives in Brooklyn with his wife Claude. His phone number is listed. He and his wife had a great, great macrobiotic restaurant in New York named *l'Épicerie.*

Note: For a previous interview with Richard Sandler on this subject, see SoyaScan Notes, 26 May 1992. Address: 251 East 10th St., Apt. 7 [East Village], New York, New York 10009. Phone: 212-777-7138.

11473. Chua, G.P. 1997. Re: Plans to establish over 1,000 franchise outlets to make and sell instant soya milk and tofu. Letter to William Shurtleff at Soyfoods Center, Sept. 25. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Chua is looking for sources of information, soybeans, tofu coagulants, and equipment. He plans to establish over 1,000 franchise outlets to make and sell instant soya milk and soft tofu.

Note: A record in the SoyaScan database dated 1 Nov. 1985 showed: Mr. G.P. Chua, Cai Consultants, Industrial Pk 3 #03-18, 6024 Ang Mo Kio, Singapore 2056. At the bottom of his letterhead the following address is crossed out: Cai Technologies, 20, Bideford Road, #05-02 Wellington Building, Singapore 0922. Phone: 732-1991. The top of his letterhead states that Cai Technologies has offices in Los Angeles [California], Chicago [Illinois], Hong Kong, Melbourne and Perth [Australia], London [UK], and Tokyo [Japan]. Address: President, Cai Technologies, 153A Rochor Road, Singapore 188428, Singapore. Phone: +65 339-3733. Fax: +65 339-1733.

11474. *Badische Bauern Zeitung* (*BBZ, Germany*). 1997. Verzicht auf Gen-Soja oeffnet hierzulande Marktnischen [Renunciation of genetically engineered soybeans opens many new market niches in this region]. Sept. 27. No. 39. p. 30. [Ger]
• ***Summary:*** 75 ha of organic, non-GE soybeans in the upper Rhine flatlands: The Freiburg tofu-maker Taifun, with 30 employees and a weekly output of 10-12 tons of tofu, processes only soybeans produced in accordance with ecological guidelines (*Oeko-Rechtlinien erzeugte Sojabohnen*). In order to be sure its soybeans are not genetically engineered (GE), in 1997 Taifun started working with local ecologic farmers in a program to grow organic, non-GE soybeans. In 1997 in Baden's Upper Rhine Valley about 75 hectares (ha) of soybeans for this project were cultivated.

11475. Bean Supreme Ltd. 1997. Soy kids: Easy family recipes with children in mind (Brochure). Auckland, New Zealand. 6 panels each side. Each panel: 10 x 14 cm. Undated.
• ***Summary:*** On the cover, red on pink, is an illustration of 7 happy kinds before a large rayed sun. The first 2 panels are about the health benefits of soyfoods. Then come 6 pages of recipes and tips for using Bean Supreme's Soyplus soymilk, tofu, and Lite Licks frozen dessert (soy ice cream). The company also makes tempeh and Tofu Luncheon. The back panel lists the company's soy products, has a statement about the goodness of soybeans, and states: "Bean Supreme brings happiness." Address: Box 12082, Penrose, Auckland, New Zealand.

11476. Bean Supreme Ltd. 1997. Soybeans–why the fuss! Soyplus [soymilk]. Hot health tips. Smart Meatfree Sausages (Leaflet). Auckland, New Zealand. 1 p. Back to pack. 30 cm.
• ***Summary:*** This brochure introduces all the soyfood products in the Bean Supreme line / range: Small photos show: Tofu (chub pack). Soyplus soymilk (in Tetra Pack cartons). Tofu Luncheon. Lite Licks nondairy frozen dessert. Meatless Sausages. Address: New Zealand.

11477. **Product Name:** Light 'n Less Grated Parmesan Cheese Alternative.

© Copyright Soyinfo Center 2013

Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-808-2325.
Date of Introduction: 1997. September.
Wt/Vol., Packaging, Price: 4 oz. plastic jar.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) from Natural Products Expo East. 1997. A photo shows the front panel of six nondairy cheeses. Sept. White, black, red and yellow on dark green. In plastic jar with green lid. Front panel: "Refrigerate after opening. Saturated fat free. Cholesterol free. Made with organic tofu. Lactose free."

11478. **Product Name:** Soymage SoySingles (Made with Organic Tofu).
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-808-2325.
Date of Introduction: 1997. September.
Wt/Vol., Packaging, Price: 6 oz (168 gm) 8 x 3/4 oz slices.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) from Natural Products Expo East. 1997. A photo shows the front panel of six nondairy cheeses. Sept. Purple, white, red, black and green. American alternative. 100% dairy free and fat free. Casein free. Lactose free. Cholesterol free.

11479. Milligan, Patti Tveit. 1997. Experience the powerful benefits of soy: Part one of two. *Health Counselor.* Aug/Sept. p. 43-45, 60.
• ***Summary:*** Focuses on the health benefits of phytoestrogens in soy, especially genistein and daidzein. A table (p. 44) shows the content of genistein + daidzein, protein, calories, and calcium in a serving of tofu, soy flour (low-fat), tempeh, cooked soybeans, and green vegetable soybeans (fresh or frozen). Address: M.S., R.D. Corporate dietitian at Henry's Marketplace, a health food chain in California.

11480. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales (p. 21). (5) Percentage distribution of population–Canada (p. 22). (6) Percentage distribution of age groups–Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)–in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports–All countries, dollar values (p. 33. The leading imports are soybean meal $202.7 million, crude soybean oil $16.75 million, and whole soybeans for oil extraction $12.59 million. The leading exports are protein concentrates and textured protein substances $9.1 million, soybean meal 6.5 million, and brans, sharps and other residues $4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors–1996–metric tons (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood

© Copyright Soyinfo Center 2013

products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brand, Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy's, Sharon's Finest. Meat analogs: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

11481. **Product Name:** Organic Tofu.
Manufacturer's Name: Organic Choice.
Manufacturer's Address: Huonville, near Hobart, Tasmania. Phone: (004) 91 1663.
Date of Introduction: 1997. September.
Ingredients: Incl. organically grown soybeans.
New Product–Documentation: Letter from Trishala Shub. 1998. Jan. 8. She has been the sole producer of organic tofu in Tasmania for the last 6 years. "I will soon be joining forces with people from Organic Choice in the Hobart area and we hope to diversify, offering miso and tempeh as well as tofu and soy dairy products."

Talk with Trishala Shub. 1998. Jan. 18. Organic Choice is a business, but the people who work there want to start their own community. They also own a restaurant, and she thinks they have already made about 3 batches of tofu, which they have sold to their restaurant. The tofu factory is located in a former jam factory in Huonville, which is just south of Hobart; she has the address at home. They may move the factory onto a big farm in Molsworth (not far from Hobart) and try to set up a community–a sort of Findhorn of the southern hemisphere. She plans to buy one large building that used to be used for hops processing. She would like to convert it for dehydrating organic fruits and vegetables, the tofu factory, and possibly tempeh and miso production. She would also like to teach leadlining (making stained glass windows) and have a healing center. The buildings are quite large.

11482. Richmond, Akasha. 1997. The art of tofu: Celebrated vegetarian recipes from around the world. Torrance, California: Morinaga Publications. iv + 84 p. Illust. No index. 22 cm.
• ***Summary:*** Contents: Preface. Food with charisma. Guide to ingredients. Freezing, blending, storing, and baking with Mori-Nu Tofu. Cooking terms and techniques. Recipes: Small bites. Soups. Entrée salads and sandwiches. Main meals. Baked goods and desserts. Ingredient equivalents. Metric equivalents. Oven temperature equivalents.

This book was sponsored and published by Morinaga, and every recipe calls for the use of Mori-Nu Tofu. The 50 recipes are low in calories and fat–and delicious!

Known as the "chef to the stars," Akasha has been the personal chef for celebrities such as Michael Jackson, Barbara Streisand, and Carrie Fisher–to name a few. Her catering company has catered events and parties for the likes of Madonna, Al Pacino, Richard Simmons, MTV, and others. The Preface begins: "Back in 1975, when I first decided to go 'vegetarian,' you could only find tofu in Chinese restaurants and obscure health food eateries." She grew up in Hollywood and Florida; "Coconut Grove hippies and surfers were the start of a career that would take me all over the world." Address: Beverly Hills, California.

11483. White Wave, Inc. 1997. Twenty years of tofu... What a concept! White Wave celebrates two decades of success (News release). 1990 North 57th Court, Boulder, Colorado 80301. 2 p. Sept. Front and back.
• ***Summary:*** White Wave was founded by Steve Demos in Sept. 1977. This news release begins: "TofuTown, USA (Boulder, Colorado), September 1997–"'We're still here,' exclaimed Steve Demos, president and founder of White Wave Vegetarian Foods, in recognition of the company's twentieth anniversary this month. 'I can't believe we are still selling bean curd after 20 years. Who would have thought it!'

"Twenty years ago Steve Demos had the vision of creating a leading natural foods company which would spearhead the integration of healthy food into the American diet while promoting environmental, sustainable agriculture. This dream was a far-cry from the reality of launching a tofu company in the 1970s. At best, tofu was known as one of those weird hippie foods like granola or as those odd, mushy white cubes found in increasingly popular Chinese food. Educating his not-so-eager audience was the challenge as Demos began his small tofu company, which he called White Wave, making tofu in a bucket and delivering it to local retailers in a little red wagon."

"And through it all, White Wave has grown to become

© Copyright Soyinfo Center 2013

an $11 million company. Not bad for the sale of what is still considered an 'off-beat' food product by most Americans.

"'Our dream was to be where we are now, but we're just as surprised as everyone else that it actually came to be,' shared Demos." In recent years, White Wave has grown at the rate of 30% a year. Address: Boulder, Colorado. Phone: (303) 443-3952.

11484. White Wave, Inc. 1997. Tofu rules! (Postcard). 1990 North 57th Court, Boulder, CO 80301. 1 p. Front and back.
• ***Summary:*** This 4 by 6-inch card, has the word "Tofu" printed in large black and white letters over a blue oval window with a scalloped pink border, on a beige background. Across the bottom is "spray painted" the word "Rules!" In the lower left corner is the White Wave logo.

The message printed on the back reads: "White Wave rules! White Wave, 'The Pride of Tofu Town' is celebrating 20 years of success in Boulder. Come rock to reggae and dance 'til the beans come home. Munchies, too. Saturday, September 27, 1997 8 pm to 1 am (doors open at 7:30 pm). The Boulder Theatre, 2034 14th Street (Pearl and 14th in Boulder). This card admits two. Please show at the door."

For details on the party, see interview with James Terman, Oct. 1997. Address: Boulder, Colorado.

11485. White Wave, Inc. 1997. Tofu rules! (Bumper sticker). 1990 North 57th Court, Boulder, CO 80301. 19 x 9 cm.
• ***Summary:*** This bumper sticker has the word "Tofu" printed in large black and white letters over a blue oval window with a scalloped pink border, on a beige background. Across the bottom in bright pink is "spray painted" the word "Rules!" In the lower left corner is the White Wave logo. It was created for White Wave's 20th anniversary. Address: Boulder, Colorado.

11487. Sinzinger, Keith. 1997. Tempeh turkey heads east: Vegetarian innovations. *Washington Post.* Oct. 8.
• ***Summary:*** Until recently, when a roasted bird has been the centerpiece of a holiday feast, vegetarians have either cried fowl, settled reluctantly for side dishes, or perhaps even compromised their principles. But this year several West Coast entrepreneurs are expanding distribution of their "turkey alternatives" eastward. Precooked, stuffed, and sliceable dishes, they contain no animal ingredients, but have a taste, texture, and appearance much like the real bird.

Rhonda Wrobel of Portland, Oregon, offered samples of Tofurky–a tofu and seitan roast–at the Natural Products Expo in Baltimore, Maryland, last month. Wrobel and her husband Hans, a former banquet chef in New Jersey, invented Tofurky in the early 1990s, and have improved their formula each year. This year they have downsized Tofurky to a 26-ounce roast with a stuffing of rice, bread, and sunflower seeds, intended to serve 3 or 4 people. Their company, Turtle Island Foods, is anticipating nationwide retail sales this year of 15,000 to 20,000, up from about 5,000 last year.

Miyoko Schinner, founder of Now & Zen restaurant in San Francisco, first prepared a seitan-based bird one Thanksgiving. Later she published a recipe for her UnTurkey, then began selling it at her restaurant several years ago. Last year she sold about 1,000 UnTurkeys in the Bay Area, and is hoping for sales of 10,000 this year. Address: Washington Post staff writer.

11488. Whitney, Daisey. 1997. Tofu king makes healthy profit. *Denver Post* (*Colorado*). Oct. 26. p. 3L (Business section).
• ***Summary:*** White Wave, celebrating its 20th anniversary, now makes about 6 million pounds of tofu a year, and projects total sales of more than $11 million this year. Founder Steve Demos has heard tofu called "toad food" and has been the butt of every joke on tofu for the last 20 years. His reply: "Hate me harder."

William Shurtleff, president of the Lafayette, California-based Soyfoods Center, likened the company's creativity and innovation to that of computer giant Microsoft.

In July and August of 1997 White Wave was the leading brand in natural-foods stores, with 30.3% of sales, according to SPINS, a San-Francisco based company that tracks the sales of natural products. White Wave's closest competitor had a 21.3% share of the market.

A photo shows tofu-making equipment inside White Wave's plant; Steve Demos, dressed in hair net and sweater, watches many 1-pound blocks of tofu come off the end of a conveyor line.

11489. Terman, James. 1997. White Wave's 20th anniversary celebration in Boulder (Interview). *SoyaScan Notes.* Oct. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The celebration was held at the Boulder Theater–which is now owned by New Hope Communications. There was a live band and 300-400 invited people attended. Invitations were sent out on a postcard titled "Tofu Rules" which is now also a bumper sticker. Basically it was a "thank you" party for employees and their families, venders, New Hope, Celestial Seasonings, and some folks from the local media. The party was not open to the public.

James attended Bowling Green State University in

Bowling Green, Ohio, with Steve Demos and Pat Calhoun, then later started his own design firm. Now he is in charge of White Wave's design.

Update: Talk with Steve Demos. 1998. Feb. 6. James Terman, White Wave's vice president of marketing, is responsible for the development, either internally or externally, of all communication programs (including advertising and public relations), packaging, etc. He is an extremely talented and creative person. He goes out and employs two other companies in Boulder. Holden-McClure is White Wave's public relations company, a one-person company run by Susan Holden–who does a great job. Sparks Studios is White Wave's advertising company, which does most of the illustrations and copy concepts; contact Dale Hess. Together, they all are doing an excellent job for White Wave. Address: Vice President–Marketing, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

11490. **Product Name:** Tofu (Bean Curd).
Manufacturer's Name: Bean Me Up, Soya Station, Salad Bar, div. of Ooh-La-La Ling [Lingerie].
Manufacturer's Address: 1684 Ouneachem Baht, Anjuna Bardez, Goa, Goa, India 403-507. Phone: 0091-0832-2273648.
Date of Introduction: 1997. October.
Ingredients: Soya beans, calcium chloride.
Wt/Vol., Packaging, Price: 500 gm. No package; delivered in plastic tubs and transferred to the customer's tub. 120 rupees.
How Stored: Refrigerated.
New Product–Documentation: Letter (e-mail) from Lisa Camps of Goa. 2005. May 15-16. This product was introduced in about Oct. 1997.

Letter (e-mail) from Lisa Camps. 2005. July 16. Sales of tofu were 2-3 kg/day at the time.

This recipe contains 50% less fat and 30% fewer calories than a typical lasagna made with ricotta and mozzarella cheeses–and has no cholesterol. A color photo shows the lasagna. Address: VT Food Editor.

11494. Lehmkuhl, Vance. 1997. The joy of soy: Vegetarian cartoons. Bala Cynwyd, Pennsylvania: Laugh Lines Press. 98 p. Illust. No index. 18 cm.
• ***Summary:*** This humorous little collection of vegetarian cartoons pokes fun at meat-eaters and vegetarians alike. There are also cartoons on: Animal rights (p. 28, 37, 71). Seitan (p. 31). Vegan diets (p. 32). Gluten (p. 33). Tofu (p. 56, 65). Soy beans (p. 88). Vance Lehmkuhl has been a vegetarian since 1985; his photo appears on the rear cover. Address: Political cartoonist, Philadelphia City Paper, Pennsylvania.

11495. Madison, Deborah. 1997. Vegetarian cooking for everyone. New York, NY: Broadway Books. x + 742 p. Oct. Illust. Plus 24 full-page color plates. Index. 26 x 21 cm. A tenth anniversary edition was published by Broadway Books in 2007, featuring a new introduction by the author.
• ***Summary:*** One of the most comprehensive vegetarian cookbooks ever published; Contains 1,400 recipes. One chapter, titled "The Soy Pantry" (p. 593-609) has the following contents (with many recipes): Introduction (The soybean is the cow of the Orient). Soy milk. Tofu. Tempeh. A sidebar (p. 594) lists more recipes that include soyfoods, by chapter.

Soy-related recipes (not including those on p. 593-609) include: Soy oil (p. 43). Bechamel sauce (p. 53; dairy-free variation uses soy milk). Tofu "mayonnaise" (p. 60). Tofu garlic "mayonnaise" (p. 60). Sesame sauce with tofu (p. 67). Peanut-tofu sauce (p. 69). Spring rolls with napa cabbage and tofu (p. 107). Tofu salad spread (p. 129). Marinated tofu sandwich (p. 130). Tempeh on rye sandwich (p. 130). TLT–Tempeh, lettuce, and tomato sandwich (p. 130). Buckwheat noodle salad with grilled tofu and roasted peppers (p. 178). Green goddess dressing (p. 190; dairy-free variation with silken tofu). Miso soups (about, plus 5 recipes; p. 231-33). Mushrooms with paprika and sour cream–variation with tofu (p. 255). Thai tofu and winter squash stew (p. 257). Winter vegetable pot pie (p. 259; dairy-free variation can use

© Copyright Soyinfo Center 2013

soymilk).

In the section on "Stir-fries" and stir-frying is a subsection titled "Some essential Chinese ingredients." The last entry (p. 262) is: "Salted and fermented black beans: Black soybeans partially fermented and preserved with salt add a rich flavor to vegetables, especially asparagus, green beans, and broccoli. Crush them with the flat of a knife before adding them to release their flavor. The best come in a plastic bag with ginger and orange peel."

Vegetable stir-fry with fermented black beans (with "2 tablespoons fermented black beans, chopped," p. 263). Mushrooms and tofu in Hoisin sauce (p. 269). Stir-fried broccoli, mushrooms, and peppers with caramelized tofu (p. 270). Dried mushroom, leek, and tofu stir-fry with Chinese barbecue sauce (p. 270). Goat cheese enchiladas with corn and red mole (p. 292; silken tofu can replace a portion of the goat cheese to give a less rich version). Soybeans (about; p. 314). Somen in broth with silken tofu and spinach (p. 482-83). Soba in broth with spinach, purple dulse, and silken tofu (p. 483). Udon with stir-fry and five-spice tofu (p. 484). Smoothies (p. 594). Protein drink for breakfast (p. 617, with soy milk). Breakfast burritos with tofu (p. 625). Scrambled tofu (p. 627). Scrambled tofu with herbs and cheese (p. 627). Scrambled tofu with tomatoes and salsa (p. 627). Multigrain waffles (with soy flour, p. 633).

Also used in the recipes are: Quinoa. Sea vegetables. A color photo on the cover shows Deborah Madison.

The dust jacket (and *Jessica's Biscuit Cookbook Catalog*, spring 1998) says: "What Julia Child is to French cooking and Marcella Hazan is to Italian cooking, Deborah Madison is to contemporary vegetarian cooking. At the Greens restaurant in San Francisco [California], where she was the founding chef, and in her two acclaimed vegetarian cookbooks, Madison elevated vegetarian cooking to new heights of sophistication... Madison received the M.F.K. Fisher Mid-Career Award in 1994... She has been a board member of the Santa Fe Area Farmers' Market for the past six years in Santa Fe, where she lives with her husband, Patrick McFarlin."

Marion Cunningham, author of Beard Award winners *The Fannie Farmer Cookbook* and *The Fannie Farmer Baking Book*–"If I could have only one book on the subject of vegetables, *Vegetarian Cooking for Everyone* would be it."

Letter (fax) from Dana Jacobi. 1998. April 26. This cookbook just won the IACP/Julia Child award as the "cookbook of the year" for 1998–the highest honor given, out of 432 books nominated–and a tremendous honor for vegetarianism as well as for Deborah Madison. Note: IACP is the International Association of Culinary Professionals. This book also won the IACP/Julia Child award as the best general cookbook of the year (out of 54 cookbooks nominated, and beating out the new 1997 edition of *The Joy of Cooking*). Two major sets of cookbook awards are given each year: The IACP/Julia Child awards (given in April at a different location each year) and the James Beard awards (given in May in New York City). Each set offers awards in something like 10 different categories. There is surprisingly little overlap among the nominations for both in each category. Address: Santa Fe, New Mexico.

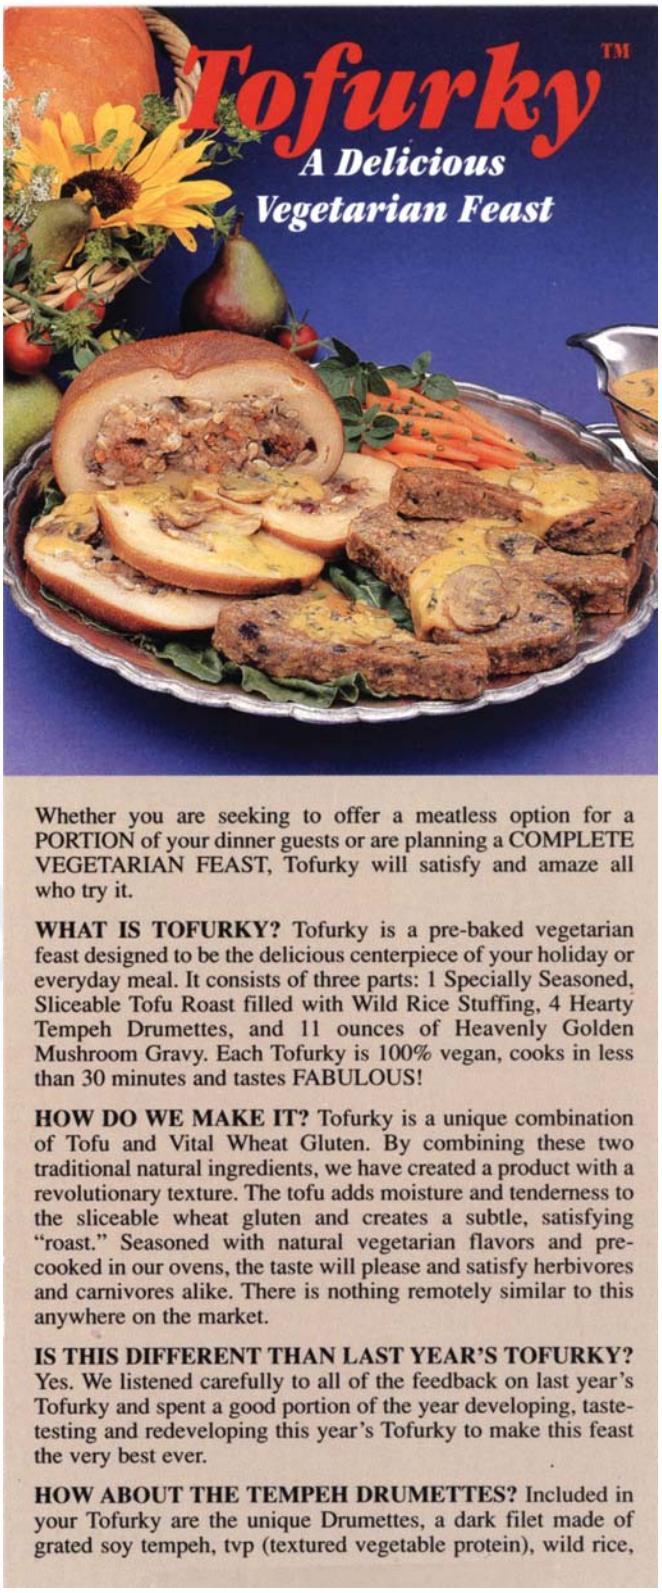
11498. **Product Name:** Tofurky '97: A Delicious Vegetarian Holiday Feast.
Manufacturer's Name: Turtle Island Foods, Inc.
Manufacturer's Address: P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).
Date of Introduction: 1997. October.
Ingredients: Each Tofurkey includes: (1) 26-ounce tofu roast, seasoned and stuffed: Water, vital wheat gluten, tofu (water, soybeans, calcium sulfate), white beans, garbanzo beans, natural vegetarian flavor, canola oil, tamari, spices, lemon juice, calcium lactate from beets, salt. Stuffing: Brown rice, wild rice, bread cubes (whole wheat, water, salt, yeast), onion, celery, natural vegetarian flavor, sunflower seeds, roasted garlic powder, seasoning; (2) 4 Drumettes: Textured soy protein (soy flour and water), soy tempeh (non-genetically modified soy beans grown without chemical fertilizers, herbicides or pesticides, water, apple cider vinegar, starter culture), grated carrots, wild rice, malt extract, natural vegetarian flavor, dried cranberries, vegetarian Worcestershire sauce, isolated soy protein, carrageenan, herbs and spices. (3) Golden Mushroom



© Copyright Soyinfo Center 2013

Gravy: Water, nutritional yeast, expeller pressed canola oil, unbleached flour, chopped fresh mushrooms, diced onion, shoyu soy sauce (water, soybeans, wheat, salt), herbs, spices, non-dairy lactic culture.
Wt/Vol., Packaging, Price: 3 lb 4 oz (serves 4).
How Stored: Frozen.
New Product–Documentation: Product (without box) and color poster sent by Seth Tibbott. 1997. Dec. 13.

Full-color glossy leaflet (8½ by 11 inches). 1997. Oct. "We have it! Tofurky–A delicious vegetarian holiday feast" (which see). Box with Label sent by Seth Tibbott. 1997. Dec. 24. This is a very attractive and well-designed box, 10 by 6.5 by 4 inches deep. The top is covered with a color photo of Tofurky, sliced in half, served on a plate, with tempeh drumettes, a gravy boat to the right, and a basket of fruits in the upper left. A snipe across the upper left corner states: "100% vegan." In the lower left is written: Contains: Specialty seasoned stuffed tofu roast. 4 hearty tempeh drumettes. Heavenly golden mushroom gravy. Keep frozen. Net weight 3 lbs. 4 oz. (1474.4 gm). In the lower right corner is a circular logo 1½ inches in diameter. Across the top is written: "The Wide World of Soy." Across the bottom: "Have you had your soy today?" In the middle are three soybeans in pod; the two end ones are yellow and the middle one is a tiny Planet Earth. Behind them are three soybean leaves. On the back are three sets of ingredients and nutrition facts for: Drumettes, Golden mushroom gravy, and Stuffed tofu roast. On one end is information about Farm Sanctuary (Watkins Glen, New York); Turtle Island donates 1% of the gross sales from Tofurky to the Farm Sanctuary's Adopt-A-Turkey program. One side states that "The Wide World of Soy" is a line of natural soyfoods: Tofurky, Tempeh Drumettes, Vegetaballs, and Now Burgers. "Today, soyfoods are receiving renewed interest from scientists and nutritionists from their supply of isoflavones, a unique type of phytoestrogen (a plant chemical)."

Update: Talk with Seth Tibbott of Turtle Island. 1998. Nov. 18. Last year they sold 15,000 Tofurkys; this year they have already sold 35,000 and expect to sell 50,000 by Dec. 31. The media coverage this year has been even more amazing than last year. White Wave has dropped its tempeh burgers (incl. Lemon Broil) because its tofu business is growing so fast.

11499. Turtle Island Foods, Inc. 1997. We have it! Tofurky–A delicious vegetarian holiday feast (Leaflet). Hood River, Oregon. 2 p. Front and back. 28 cm.
• ***Summary:*** The text at the bottom front reads: "As seen on: ABC (Good Morning America), NBC (Today Show), and CBS (This Morning)." On the front is a full-color photo (on a blue background) of a Tofurky sliced in half, on a bed of lettuce with sliced carrots, on a silver plate, with the drumettes and gravy in a silver gravy boat. In the upper left is a basket with a sunflower, pumpkin, pear, and cherry tomatoes.

On the back is a detailed description of the product: "After three years of product development, testing and listening to customers... We've taken tofu and blended it with vital wheat gluten to create a savory, sliceable roast filled with our own meatless stuffing." Tofurky includes two levels of promotional support. "Option #1: Vegan Super Holiday Demo. Order 25 mixed cases of Tofurky and Tempeh Drumettes plus 3 cases of any size Rice Nog by Grainaissance Natural Foods and receive a $60 demo of Tofurky, Tempeh Drumettes and Rice Nog." "Watch for upcoming blurbs in November Bon Appetit and New Woman magazines. In addition we will again be sending out over 750 press releases to major US media organizations. In-store posters and brochures available at no cost. 1% of all gross sales of Tofurky go to the Farm Sanctuary's Adopt A Turkey Program." Suggested retail price: $19.95 to $24.95. Address: P.O. Box 176, Hood River, Oregon 97031. Phone: 1-800-508-8100.

11500. United Soybean Board. 1997. National report on consumer attitudes about nutrition. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This fourth annual nationwide survey, commissioned by USB, was conducted in July 1997 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,000 consumers. The sample error ranges as ±3.2 percentage points at the 95% confidence level.

Contents: Concern about nutrition. Changes in eating habits: Percentage of consumers making dietary changes due to nutrition concern, specific dietary changes, reasons for dietary changes. Nutrition and dining out. Menu selection and shopping habits due to nutrition concerns. Media sources and nutritional information. Consumer perceptions of soy products. Consumer concern and confusion about specific nutrition terms: Percentage of population familiar with term–Soy protein, saturated fats, polyunsaturated fats, trans fatty acids, hydrogenation.

Consumer perceptions of soy products: 1. 59% of Americans acknowledge that soy is healthy. 2. Soybean product trail usage is reaching relatively high levels among nutrition–conscious consumers. Approximately 70% of consumers very concerned with nutritional content indicate they have tried some type of soy product. 3. The perception of healthfulness is a primary driver of soy product trial and use. Among consumers who have tried soy products, 68% indicated soy is healthy. 4. One in three consumers who eat soy products about once per week indicated that a magazine or newspaper article influenced them to include soy in their meals. 5. Among consumers who indicate usage of soy products, tofu and soy burgers are the products most frequently incorporated into their diets.

• ***Summary:*** "'The irony,' says a witness, 'is that he never ate lunch. He used to prefer tofu sandwiches.'"

11502. Gonzalez-Watanabe, Yvonne; Watanabe, Joji. 1997. Introducing tofu to Hispanics. Visit to the House Foods America Corp. tofu factory in Garden Grove near Los Angeles (Interview). *SoyaScan Notes.* Nov. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yvonne and her husband Joji (who first contacted Soyfoods Center on 12 Sept. 1997) are interested in translating *The Book of Tofu* into Spanish and introducing tofu to the Hispanic community, starting in Los Angeles. Yvonne, age 24 was born in the USA, where her parents (who are both from Costa Rica) lived for 30-35 years; her father was a pharmacist. She learned to speak some Spanish at home. Her parents have returned to Costa Rica. Yvonne (who was raised a Catholic) now works in a real estate office and teaches vegan cooking classes at the Kanzeonji Non-Sectarian Buddhist Temple and Shiva Ashram Yoga Center at Mt. Washington in Los Angeles; there both she and Joji practice Zen meditation and yoga. Rev. Ryugen Watanabe, Joji's uncle, is a Soto Zen master, yoga teacher, and the head of this temple. Both Yvonne and Joji are vegetarians, and she is a vegan. Her sister is an editor for El International, a big Spanish language magazine located in Miami, Florida.

Yvonne got interested in vegetarianism and soyfoods through Rev. Watanabe. She had had severe migraine chronic headaches for many years. After trying every possible remedy to no avail, she told her uncle, Rev. Watanabe, about her problem. He said simply but forcefully, "It's your diet." She thought: "He's crazy. I have a great diet." In 1994, although she had been eating meat for 30 years, she tried the vegetarian diet he recommended and got quick relief. Following his advice, she began by giving up red meat and pork, then phased out chicken and fish until after 8-9 months she was consuming a vegan diet. As Yvonne began educating herself about vegetarian nutrition, she was looking for alternatives to meats as a source of protein. Rev. Watanabe told her about tofu, and even taught her how to make it at home from whole soybeans. Now Yvonne teaches other people how to make tofu at home.

Yvonne has great admiration for Rev. Watanabe. "He's really great. He's been teaching Zen and yoga for more than 20 years and he still charges the same, low prices–$2.00 for a yoga class. If you can pay, you pay. If you can't, how about rolling some incense. It's wonderful. I've never seen someone so committed to people."

Yvonne has been a vegan ever since and has not had a headache in almost five years. A friend of Yvonne's had migraine headaches that were so bad, she had to give herself shots. Yvonne suggested that she try switching to a vegetarian diet. She hasn't had a headache in a year. Over the years many of Yvonne's female relatives (her mother, sister, cousin, etc.) have become vegan–largely because they want to lose weight.

Joji, age 36, was born in Tokyo but has lived in the USA since age 6. He speaks Japanese and English and is a financial consultant. Joji graduated from USC, and now works in a corporate environment in real estate financing. His grandmother, Masa Miyai, lives with them. Four years ago they shut down their business selling medical supplies to Latin America. Now they are developing a project to introduce tofu to Hispanics.

On Oct. 18-19 Yvonne and Joji visited Soyfoods Center, where they talked with Bill Shurtleff about their project and book publishing. They photocopied many Spanish-language documents and recipes related to tofu. Upon returning to Los Angeles, they developed a one-page Spanish language brochure on tofu, visited with Margaret Endo in order to arrange for a booth in next summer's Tofu Festival, and began to do research.

Their first research project was a visit to the House Foods America Corp. tofu plant in Garden Grove, Southern California. After a brief meeting with employee Miyuki Nagano, she took them on a walking tour of the plant, so they were able to observe the entire tofu-making process. It is completely automated, except when a worker smooths the curds in the pressing trays before they are pressed. The company employs about 120 people at this facility. Of the 78 workers in the factory (including shipping and receiving), 98% are Hispanic men, but the office workers are all Japanese. The company has its own delivery trucks; its marketing is focused on California, in part because of increased competition from companies outside the state–as in Massachusetts [Nasoya Foods]. The company invites the Hispanic workers to take home tofu, but they don't–probably because they don't know what to do with it. The company has a full test kitchen and laboratory, and Miyuki is interested in developing tofu recipes that Hispanics will like. The company also makes natto at this plant.

Update: Talk with Yvonne. 1997. Nov. 23. Her cousin, Alejandra Jimenez, from Costa Rica has just arrived in Los Angeles to work with her on the tofu project. Alejandra's native language is Spanish but she also speaks perfect English and has a master's degree in English. Another cousin from Costa Rica is part of an all-male rock band, whose members are ages 30-37; all were born and raised in Costa Rica. She served them 3 tofu recipes–which they liked very much: (1) Tofu cubed in miso soup; (2) Chilled tofu, cubed with sesame oil, rice vinegar, and soy sauce; and (3) Crisp freshly deep-fried tofu cubes, with soy sauce. They are interested in using tofu as part of a weight-loss program.

They all went to a Chinese vegetarian restaurant in nearby San Gabriel named Vegetarian Delights. Run by a

© Copyright Soyinfo Center 2013

Chinese-American lady, it served a delicious dish named Roasted Black Bean Fish, that tasted remarkably like fish–but used tofu instead of fish. Yvonne made friends with the owner. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

11503. Gonzalez-Watanabe, Yvonne. 1997. Tofu in Costa Rica (Interview). *SoyaScan Notes.* Nov. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yvonne's mother, who lives in San Jose, the capital of Costa Rica, did some research and found that there is only one tofu manufacturer in Costa Rica. It is a Chinese-run company, located in San Jose. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

11504. Dow Jones Readers' Reference Service. 1997. Tofu in *The Wall Street Journal* (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tofu is mentioned in the text of 95 articles in *The Wall Street Journal* between 1984 and today. It is mentioned in the headline of 8 articles between 1985 and today. To order citations, send $2 per citation plus $3 for shipping. Address: Chickapee, Massachusetts. Phone: 413-592-3600.

11505. Rosenthal, Lara. 1997. The new Thanksgiving dinner: Gravy, but turkeys not invited. *Wall Street Journal.* Nov. 26.
• ***Summary:*** The article begins: "Watch out, Butterball! The tofu turkeys are coming. Vegetarians, tired of eating bean roast and stuffed pumpkin while the nation's carnivores dine on fowl every Thanksgiving, are finding new ways to be included. They and their guests will consume an estimated 26,000 'alternative turkeys' made of tofu and other plant products this year, four times as many as in 1996."

While that is only a tiny percentage of the 67 million real birds eaten in the USA on Thanksgiving and Christmas, the companies that make faux turkeys are struggling to meet demand–even though the vegetarian turkeys are generally more expensive than their traditional counterparts. Indeed tofu turkeys have come a long way since they made their debut in the mid-1990s.

Three alternative turkeys are profiled: (1) The Tofu Turkey, made by Fresh Tofu Inc. of Easton, Pennsylvania. (2) Tofurky, made by Turtle Island Foods, Inc. of Hood River, Oregon. (3) Unturkey, made of seitan (wheat gluten) by Now & Zen of San Francisco, California.

Tofu turkeys can ease the strain in families split by gastronomic differences–as when one or more of the kids or guests are vegetarians. In gatherings of vegetarians they can fill an emotional void–served with cranberry sauce, mashed potatoes, green beans, and candied yams.

11506. Anderson, Jean. 1997. The American century cookbook. 1st ed. New York, NY: Clarkson Potter. xii + 547 p. Illust. Index. 24 x 19 cm. [586* ref]
• ***Summary:*** Contents: Acknowledgments. Introduction. How to use this book. Appetizers and snacks. Soups. Meat, fish & fowl. Casseroles. Eggs, cheese, pasta & grains. Vegetables. Salads and salad dressings. Breads and sandwiches. Puddings, pies & other desserts. Cakes & frostings. Cookies & candies. Permissions. Bibliography. Index.

The Introduction begins: "For the past ten years, I have been traveling backward in time. Back across the decades to 1900 and beyond. My quest: To trace this [20th] century's role in our culinary coming of age. To track the recipes, foods, food trends, food people, appliances, and gadgets that have had an impact on our lives from 1900 onward." This is a marvelous book about mainstream American food, but it is also somewhat strange. Marvelous because: (1) It is the culmination of a life's work as a food writer; she is the author of more than 20 cookbooks, the winner of numerous awards related to food writing, and a member of the James Beard Who's Who of Food and Wine in America, and a regular writer for leading national food magazines. (2) The historical research that has gone into this book is superb, and beautifully presented, with hundreds of old graphics (photographs, illustrations, ads, packages, labels, posters, etc.). (3) The book itself beautifully designed, and the format is original and very inviting, with numerous interesting sidebars and timelines, in addition to the graphics.

The book is strange because: (1) The author seems largely unaware (except for a brief mention in the Introduction, p. 4) that the 20th century was also the century of the rise of the natural foods, organic foods, vegetarian, and soyfoods movements in America–starting in the 1960s, with a smaller health food movement from 1900 to the late 1950s; the words "natural," "organic," "soy," and "health" do not even appear in the book's substantial index–although the word "granola" does–in connection with a recipe that contains an incorrect history. Among the various soyfoods, only tofu is mentioned–but not in a recipe. In a timeline, under 1980s: "Tofu comes to the supermarket." Note: Actually, tofu was first sold in a supermarket chain in 1958 in Los Angeles.

The books contains two vegetarian recipes: (1) Vegetarian (meatless) Moussaka (p. 166-67), a recipe the author developed in 1973 for an article she was writing in *Family Circle.* She had eaten and liked meatless moussakas in Greece. (2) Vegetarian Black Bean Chili (p. 250-51), a 1960s recipe that won "Best of the 1991 New York State Fair." There is (fortunately) a timeline entry (1971) and four recipes related to Alice Waters and Chez Panisse restaurant in Berkeley, California. (2) The book contains many unhealthy (though popular) recipes. It is overloaded with recipes for meats, fish, and fowl–the very foods that are causing a health crisis in America, with heart disease and stroke as major causes of death and disability. Other recipes (also popular) contain large amounts of refined foods, such as white sugar,

© Copyright Soyinfo Center 2013

white flour, etc.–Ingredients that people interested in healthy foods generally prefer not to eat. (3) There are some glaring omissions: Under appliances–nothing about the blender, or the juicer.

Compare the recipes in this book with those in the latest edition of the *Joy of Cooking* (also 1997) and you will see clearly that the latter has kept pace with America's changing cookery and attitudes toward food, nutrition, good health, and the important connection between diet and health.

Note: Jean Anderson, a member of the "old school," was born in 1929. Address: Chapel Hill, North Carolina, and New York City.

11507. Cai, Tiande; Chang, Kow-Ching. 1997. Dry tofu characteristics affected by soymilk solid content and coagulation time. *J. of Food Quality* 20(5):391-402. Nov. [24 ref]

• ***Summary:*** The solids content of soymilk is measured in degrees Brix. Soymilk of 7.1, 7.8, 8.4, and 9.2 degrees Brix were tested. The solids content significantly affected the tofu yield, fracturability, hardness, springiness, cohesiveness, and chewiness.

At a 9:1 water/soybean ratio, the highest Brix produced the lowest yield (201 gm of tofu per 100 gm soybeans), but the highest fracturability, hardness, springiness, cohesiveness, and chewiness. A coagulation time of 5 minutes resulted in a significantly lower tofu yield but higher cohesiveness than a time of 15 minutes. Address: Dep. of Food and Nutrition and Dep. of Cereal Science, North Dakota State Univ., Fargo, ND 58105.

11508. Lee, Jill. 1997. New soybeans fill tofu niche. *Agricultural Research* 45(11):13. Nov.

• ***Summary:*** Thomas E. "Tommy" Carter, at the USDA-ARS Soybean and Nitrogen Fixation Lab. (Raleigh, North Carolina) breeds special varieties of soybeans for use in making tofu. Although they have lower yields and demand extra care, they bring extra profits to farmers. "Tofu is gaining in popularity." USDA's Economic Research Service estimates that Japan uses about 20 million bushels each year for making a tofu; most of these are imported from China and the United States. But tofu is also made in the USA, where there are about 100 tofu makers, whose tofu has a retail value of about $130 to $150 million / year. All this tofu is made from soybeans grown in America.

"U.S. shoppers are doubling their consumption of tofu about every 3 to 4 years, according to the Soyfoods Center of Lafayette, California, which monitors such trends." Address: ARS.

11509. Lowenstein, Melissa. 1997. Natural alternatives for menopausal women: A panel discussion with the experts. *Vegetarian Times.* Nov. p. 86-90, 92.

• ***Summary:*** Several of these experts recommend the use of soyfoods. Tori Hudson, N.D., director of A Woman's Time Clinic in Portland, Oregon, was asked: "What foods do you suggest for women with menopausal symptoms?" Answer: "The best foods are those that contain high amounts of phytoestrogens, or plant estrogens. The very best sources of phytoestrogens are soy products and flaxseeds Ä not flax oil but the whole seed. A handful of roasted soy nuts, a cup of soymilk or a half-cup of tofu will give you 35 to 50 milligrams (mg.) of isoflavones, the phytoestrogen found in soy. I recommend at least 45 mg. a day, but the more, the better. Soy foods also decrease the 'bad' kind of cholesterol and increase the 'good' kind and can dramatically reduce breast cancer risk. Japanese women, who eat enough soy to get 100 mg. of isoflavones a day, are four to six times less likely to have breast cancer." Address: Santa Barbara, California.

11510. Messina, Virginia K.; Burke, Kenneth I. 1997. Position of the American Dietetic Association: Vegetarian diets. *J. of the American Dietetic Association* 97(11):1317-21. Nov. [44 ref]

• ***Summary:*** Contents: Introduction. Position statement. Vegetarianism in perspective. Health implications of vegetarianism. Nutrition considerations for vegetarians. Vegetarianism throughout the life cycle. Meal planning for vegetarian diets. Food guide pyramid for vegetarian meal planning.

Introduction: "Scientific data suggests positive relationships between a vegetarian diet and reduced risk for several chronic degenerative diseases and conditions, including obesity, coronary artery disease, hypertension, diabetes mellitus, and some types of cancer."

"Position statement: It is the position of the American Dietetic Association (ADA) that appropriately planned vegetarian diets are healthful, are nutritionally adequate, and provide health benefits in the prevention and treatment of certain diseases."

Other features of the paper include: (1) A paragraph on why people choose vegetarian diets, including ethical reasons. (2) A food guide pyramid for vegetarian meal planning, including "zero to three servings of milk, yogurt, and cheese." (3) A list of food sources for certain nutrients, including iron, zinc, calcium, vitamin D, B-12, and linoleic acid. (4) Nutritional considerations for vegetarians and vegans. For example, vegans may have lower calcium requirements than the general population because their diets contain less protein and are more alkaline; high acid diets cause more calcium to be lost in the urine as the body tries to neutralize that acid with calcium from the bones. (5) The position paper once again restates that combining proteins is not necessary and that protein intake in both lacto-ovo-vegetarians and vegans appears to be adequate.

A full-page table (p. 1319) shows food sources of important nutrients. Soyfoods are shown as sources of the

© Copyright Soyinfo Center 2013

following, with the number of milligrams per serving shown in parentheses: (1) Iron: Tofu, ½ cup (6.6), soybeans, ½ cup cooked (4.4), tempeh, ½ cup cooked (1.8), soymilk, 1 cup (1.8). (2) Zinc: ½ cup of the following cooked: Tempeh (1.5), textured soy flour (1.4), tofu (1.0), soybeans 1.0.

(3) Calcium: soymilk, fortified, 1 cup (250-300), tofu, ½ cup (120-350), soynuts, ½ cup (252), soybeans, 1 cup cooked (175), soymilk, 1 cup (84), textured soy flour, ½ cup (85), tempeh, ½ cup (77). (4) Vitamin D: Fortified soymilk or other nondairy milk, 1 cup (1.0 to 2.5 micrograms). (5) Vitamin B-12: Fortified soymilk or other nondairy milks, 8 oz = 1 cup (0.2 to 5.0 micrograms).

(6) Linolenic acid: Soybean oil, 1 tablespoon (0.9 gm), soybeans, ½ cup cooked (0.5 gm), tofu, ½ cup (0.4 gm).

11511. Morinaga Nutritional Foods, Inc. 1997. Perfect food. Perfect package (Ad). *Vegetarian Times.* Nov. p. 24.
• ***Summary:*** This attractive color ad (8½ by 11 inches) shows two aseptic packages of Mori-Nu tofu (Extra Form and Firm) on a wooden cutting board surrounded by fruits and vegetables–green beans, cherry tomatoes, tofu cubes, strawberries, cauliflower, raspberries, mushrooms, carrots, and leeks.

At the bottom of the latter ad, the reader is invited to order: *"The Art of Tofu,* featuring international recipes, by Akasha Richmond, a celebrated chef who has cooked for stars like Barbara Streisand and Michael Jackson." Call 1-800-793-9161. For more visit www.morinu.com.

This ad also appeared in the December issue (p. 24), and in the January 1998 issue (p. 47) of this magazine.

And in the Jan/Feb. 1998 (p. 79) and May/June (p. 85) issues of *Natural Health* magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11512. Morinaga Nutritional Foods, Inc. 1997. New! Mori-Nu Mates pudding and pie mix now available in vanilla (Ad). *Natural Foods Merchandiser.* Nov. p. 51.
• ***Summary:*** This full-page color ad shows a large packet of Mori-Nu Mates Low-Fat Pudding Mix in vanilla flavor against a white background. Below it are packets in Lemon Creme and Chocolate flavors. Bold text across the bottom of each package proclaims that they are "All natural. Dairy-free. No refined sugar" Blend one packet of this mix with one package of Mori-Nu Lite Silken Tofu. For more: www.morinu.com. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. 11513. Ontario Soybean Growers' Marketing Board (OSGMB). ed. and comp. 1997. Canadian soyfoods directory. Chatham, Ontario, Canada: OSGMB. 27 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate directory was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The first Canadian soyfoods directory was published in April 1994 (22 pages).

Contents: Foreword–Ontario Soybean Growers' Marketing Board (OSGMB). Acknowledgements from researchers. Table of contents. Soyfood product descriptions: Green vegetable soybeans–Edamamé, meat analogs, miso, natto, okara, soy cheese, soy flour, soy frozen desserts, soy grits, soy isolate fibre, soy lecithin, soy oil, soy protein concentrate, soy protein isolate, soy pudding, soy sauce, soy sprouts, soy yogurt, soymilk (soy drink and soy beverage), soynuts, tempeh, textured soy flour–TSF, texturized soy protein, tofu, whole dry soybeans, yuba. Soyfoods for your health: Heart disease, cancer, osteoporosis, other conditions. Composition and nutrient value of soyfoods. Soyfood companies by product. Soyfoods companies by province: Alberta (7), British Columbia (21), Manitoba (2), Nova Scotia (2), Ontario (54), Quebec (20). Soyfood companies (105 companies that make or market wholesale soyfoods)–complete listings (address, phone and fax numbers, contact person, products). Soyfoods distributors–complete listings (13). Soybean distributors–complete listings (28). Research information sources–complete listings (24). Soyfoods information sources (23). Canadian soyfoods directory questionnaire.

Spot in *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Dec. p. 5. The Canadian Soyfoods Directory was launched in November after a two-month delay. "The project was undertaken following numerous information requests from consumers, processors and health professionals." Funded by the Board of OSGMB, it has been mailed to all Registered Dietitians across Canada, and it will soon be available on the Board's website. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

11514. Saio, Kyoko. 1997. Global soybean processing and utilization for the 21st century. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 22-27.
• ***Summary:*** Contents: Abstract. Introduction. From traditional to the future via modern: Development of food industry, key words for the 21st century. Conclusion.

The processing and marketing of soybeans in the modern world involves modernization and mechanization, larger scale, the mass market, sped, hygiene and novelty. "However in the 21st century the key words such as healthy, safety, and environment will be much more important..." (p. 22). She believes that our "priority for the 21st century is not always technology-oriented progress like the 20th

Perfect Food. Perfect Package.

Simply perfect. Free from saturated fat and cholesterol, tofu is made from protein-rich soybeans and contains all eight essential amino acids. In addition, current research confirms the importance of isoflavones (unique plant chemicals found in the soybean) in the fight against cancer, heart disease, osteoporosis and diabetes.

Mori-Nu has created the perfect tofu in the perfect package. We seal the creamy-smooth texture and nutritional goodness of Mori-Nu inside a state-of-the-art, airtight package that requires no refrigeration. Our award-winning method guarantees protection from the harmful effects of light, oxygen and bacteria without preservatives or irradiation.

And Mori-Nu's silken style tofu is perfect for everything – from sauces and dips to cutlets and cream pies. Mori-Nu's mild, delicate flavor works in all your favorite recipes.

MORI-NU

11515. Tibbott, Seth. 1997. Current state of the North American tempeh [and tofu] market. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 28-35. [7 ref]

• ***Summary:*** This paper is particularly valuable for its update of tempeh history and the tempeh market in North America from 1985 to May 1997.

Contents: Abstract. History of the North American tempeh market. Current US tempeh market–May 1997: Basic statistics, who is the typical tempeh consumer?, where is tempeh sold?, how is tempeh packaged?, how is tempeh used by the consumer in North America?, what is the future of tempeh in North America?, factors that affect future growth of tempeh (health benefits of soy and label claims, consumer education, development of the food service and industrial market, development of Indonesian cuisine and restaurants in America).

In 1984 some 53 companies in the US made approximately 34,000 pounds/week of tempeh. At that time tempeh was the fastest growing soy product in the US, growing by about 28% a year.

As of May 1997 there are ten tempeh manufacturers in the USA; seven of these produce more than 1,000 lb/week of tempeh, and only one produces less than 200 lb/week. All ten US companies make an estimated 55,580 lb/week of tempeh, and these 7 largest companies make about 95% of the total. Canada has only 3 tempeh makers and they produce a total of about 1,100 lb/week. In Mexico, there are only a few tempeh makers, mostly in tourist areas. All of the 7 largest US and the 3 largest Canadian tempeh manufacturers are owned and operated by Caucasians. Caucasians also consume an estimated 95% of the tempeh made in the USA. In North America, tempeh is marketed in a variety of forms and flavors, of which soy tempeh is the most popular, followed by tempeh burgers and soy & grain tempehs. All of the existing tempeh shops in the USA and Canada trace their roots to The Farm, a spiritual community in Summertown, Tennessee.

By contrast, tofu is much more popular in North America than tempeh. More than 70 manufacturers produce over 1.5 million lb/week. Three of the four largest manufacturers are owned and operated by Asian Americans. Whereas 75% of all Americans know what tofu is, only 14% know what tempeh is.

Although tempeh sales grew very rapidly during the 5-year period from 1980 to 1984, they were stagnant during the next five years, from 1985 to 1989. This was caused in large part by competition from more sophisticated meatless burgers, such as the Gardenburger, launched in March 1985 by Wholesome & Hearty Foods of Portland, Oregon. Also microwavable and ready-to-eat foods became more popular. The period of stagnant sales led to a great consolidation within the industry. By 1990 there was renewed interest in tempeh, which paralleled the new interest in the health benefits of soy, and the rise new "meat alternatives" category. Today, tempeh sales are growing at 10-20% a year. And most Americans still like tempeh very much when they taste it. All US tempeh makers agree that education is the crucial need.

In 1984 about 20% of US tempeh was sold vacuum packed, compared with 70% today. Main advantage of vacuum packing: Longer shelf life. Main disadvantage: Imparts a somewhat bitter taste to the tempeh. A 1992 survey of 400 tempeh users by Turtle Island showed that the number one use was in stir-fried recipes, usually with rice and vegetables.

Tables show: (1) Tempeh market statistics (USA): Average retail price per 8 oz cake of soy tempeh: $1.81. Percentage of tempeh sold refrigerated: 80% (the rest is sold frozen). Total retail dollars spent on tempeh: In 1983 = $4.96 million. In 1996 = $13.15 million. Spent (retail) on tofu in 1996 = $116 million. Spent (retail) on soymilk 1996 = $100 million. Market share of the four largest tempeh makers in 1983: 63%, In 1997: 84%. (2) Number of brands of different types of tempeh on the US market in May 1997: Tempeh burgers 14, soy tempeh 9, multi-grain (mostly 3 or 5 grains) 6, bulk soy tempeh 5, soy & brown rice tempeh 4, sea veggie tempeh 3, wild rice tempeh 2, soy millet tempeh 2, sloppy Joe tempeh 2, other 8.

Talk with Seth Tibbott of Turtle Island. 1999. Dec. 6. The existing tempeh companies with the strongest ties to The Farm in Tennessee are (1) Lightlife Foods (Michael Cohen; see Sept. 1991 interview) and (2) Turtle Island (Seth; in 1977 he learned how to make tempeh at The Farm in Tennessee). Those with weaker ties are (3) Wildwood Natural Foods (Jeremiah Ridenour; he lived at The Farm for a while, has a lot of Farm history, and one of his kids was born on The Farm), (4) White Wave (In about 1980 Alexander Lyon was hitchhiking through Boulder, Colorado, and had no money. He taught Steve Demos how to make starter culture for something like $20 and a good meal), and (5) Surata Soyfoods (Benjamin Hills learned how to make tempeh from his former wife, who learned it from The Farm in Tennessee).

Turtle Island now makes tempeh for: Lean Green Foods (Hawaii; Benjamin Hills), Wildwood Natural Foods, and Quong Hop. It starts out when you're at a trade show and "people saddle up to you" and say "Uh, we're not sure exactly which way we're going with our tempeh, but do you

© Copyright Soyinfo Center 2013

have any extra plant capacity? It's just a thought." Then "If you give any kind of encouragement to them, the next week they're begging you on their hands and knees, they'll pay anything to have you make it for them. It's such a hassle and they have to devote plant space to it. Tofu is now growing so much faster than tempeh, they just keep tempeh to fill out their product line." Seth expects that White Wave and Surata will come to him next, begging him to make tempeh for them. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031.

11516. Vojtek, Ján. 1997. Follow-up report on volunteer work by Sjon Welters on 6-17 May 1996 with Alfa-Bio, a tofu manufacturer in central Slovakia. Bratislava, Slovakia. 4 p. [1 ref]

• ***Summary:*** VOCA (Volunteers in Overseas Cooperative Assistance) is an American-based organization that assists businesses free of charge outside the USA. This report focuses on the many recommendations concerning tofu production and quality made by Sjon Welters and the extent to which the company implemented them.

Ing. Ján Lunter is General Manager of Alfa-Bio and Dominik Belko is Commercial Manager. The report begins: "Alfa-Bio is the first tofu producer in the former Czechoslovakia and continues to be the most successful one in the Slovak market. The company is located in Kremni*ka, on the outskirts of Banská Bystrica, Central Slovakia."

11517. **Product Name:** [Tofu].
Foreign Name: Tou-fu.
Manufacturer's Name: Industrias Hung Lin.
Manufacturer's Address: San José, Costa Rica. Phone: 441-4821.
Date of Introduction: 1997. December.
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: -
How Stored: Refrigerated.
New Product–Documentation: Letter (typewritten with signature) from Yvonne Watanabe Dreyfus [Yvonne Gonzalez]. 1997. Dec. 1 to William Shurtleff at Soyfoods Center. She purchased a packaged of tofu at Yoahan's [a retail outlet] in Costa Rica. She encloses the label. "I found out this is a small company, family owned and operated. I will be following up with a phone call to further seek answers to your questions" [When did the company start? Who was the founder? What was their original address? Do they make any other soyfood products?].

The tiny self-adhesive Label, 1¼ inches high by 2 inches wide, printed light blue on white, states: "Ingredientes: Frijoles de soya y agua. Contiene: Alta protéina natural sin colesterol. Forma de preparar: Picar y agregar a todo tipo de frituras, sopas y ensaladas. Lic. M.S. No. 2996– Tel. 441-4821. Producto Centroamericano hecho en Costa Rica por Industrias Hung Lin, San José. Mantengase en Refrigeracion."

Yvonne also encloses two Spanish-language leaflets, whose source is unknown: (1) "Coma Tofu: Tofu es un alimento que se hace cuajando la proteina de la leche de soya." Lists 9 benefits of tofu. For more information and free recipes call (213) 254-1712. (2) A recipe for Tofu Rancheros.

11518. Mio, Art. 1997. Sales of Morinaga tofu during 1997 (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** So far, 1997 has been a good year for Morinaga. Since January 1, tofu sales by volume (number of cases sold) are up 12% overall, but sales to supermarkets are up 20%, and sales to health food stores are up 22%. Sales to the Asian-American market are flat, however that market accounts for 43.6% of Morinaga's total volume.

Recipe requests have been steadily increasing, and are now running about 200 per day. Morinaga sends out an accordion folded color brochure of recipes. Address: National Sales Manager, Morinaga Nutritional Foods, Inc., 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

• ***Summary:*** Andy Grove's cancer changed his life: "Eating with Grove most days is like a trip to a vegan commune– tofu, veggies, five servings of fruit a day, a palmful of antioxidant pills."

11520. Hymowitz, Ted. 1997. Update on recent writings related to wild perennial *Glycine* and cultivated soybeans. The differing approaches of DuPont and Monsanto. Personal use of tofu. Proceedings of the last World Soybean Research Conference V are now available (Interview). *SoyaScan Notes.* Dec. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ted Hymowitz's soybean genetics lab. now has a home page on the World Wide Web. The address is www.cropsci.uiuc.edu/~hymowitz/. It contains a complete bibliography (about 400 references worldwide) of the wild perennial *Glycine.* You will also see soybean dancing, lab research staff, research projects, references to published papers from the lab (about 240), former graduate students, post docs, visiting scholars, academic professionals, wild perennial references, links to cytogenetics, etc. There are no full-text papers (or photos of Ted) on the site.

DuPont and Monsanto are taking completely different approaches to soybean biotechnology. Monsanto is interested in selling Roundup herbicides. DuPont is interested in the value of the crop, and in adding new value. So DuPont (like other companies) is very interested in Ted's research on the wild perennial *Glycine.*

Ted enjoys tofu as a regular part of his diet; he uses it

© Copyright Soyinfo Center 2013

only in hearty soups–Eastern European-type soups (such as lentil soup, black bean soup, cream of potato soup) that he makes himself and that are a whole meal. He dices the tofu and adds it to the pot; it picks up the flavor of the soup and adds protein. He has always followed the kosher laws so he buys only kosher tofu. Muslims also buy kosher, because kosher products must not contain pork. Muslims and Jews have the same religious basis as far as foods are concerned. All Arabs claim descent from Esau and Jacob, and they say Ibraham (Abraham) is the father of their culture. Jews and Muslims follow very similar dietary rules. Indonesia is a Muslim country, but not an Arabic country. Muslims don't drink alcohol.

Ted's book on Samuel Bowen is more than half finished. All the research is done. The entire bibliography is in a computerized database. After the dissolution of his marriage, he hopes to sit down and finish writing it.

The proceedings of the World Soybean Research Conference V (held in Feb. 1994 Thailand) are now published; Ted has seen a copy–one large volume. Address: Prof. of Plant Genetics, Univ. of Illinois, Urbana, Illinois.

11521. *SoyaScan Notes.* 1997. Chronology of major soy-related events and trends during 1997 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 1–Novartis Seeds (headquartered in Golden Valley, Minnesota) is formed through the blockbuster merger of Ciba Seeds and Northrup King Co. That merger was possible because of the mid-1996 merger of pharmaceutical giants Sandoz and Ciba-Geigy. Novartis Seeds is now America's second largest seed company after Pioneer Hi-Bred International.

Feb. 3–Monsanto completes its acquisition of Asgrow Seed Co. of Kalamazoo, Michigan, for $240 million. From May 1968 to 1994 Asgrow had been owned by The Upjohn Co., which built the company into one of America's largest soybean seed companies. When Monsanto bought Asgrow it was called the Asgrow Agronomics business of Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM), a multi-national agricultural company based out of Monterey, Mexico. of Mexico.

March 4–Morinaga Nutritional Foods' new tofu plant in Tualatin, Oregon holds its official grand opening. Mori-Nu Tofu, previously made in Japan, starts to be made in America for the first time. The plant, 65,000 square feet worth about $15 million, is on the same property as Pacific Foods of Oregon, but in a separate building.

March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles. The new fully automated, state-of-the-art, 130,000 square foot plant cost $21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day, from 70,000 in the old plant. The old factory has been operating a full capacity for years. The new plant will have three tofu production lines, and is located on 5 acres of land–which gives plenty of room for expansion.

Sept. Nasoya Foods (owned by Vitasoy) finishes moving into a much larger, state-of-the-art $13.5 million plant (125,00 square feet) in Ayer, Massachusetts, from its former location in Leominster. The first Vitasoy brand soymilk ever made in America starts to be shipped from the plant in mid-September. Nasoya's offices have now been moved to Ayer from Leominster, but tofu is still being made at the plant in Leominster.

Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc. Westbrae's new name becomes Hain Food Group–Westbrae. Westbrae will continue to be headquartered in Carson, California. Dec. 1–Phytoestrogens / isoflavones extracted from soybeans by ADM start to be sold commercially in the USA in pill form by supplement companies. ADM's name for the product is Mega Soy.

Dec. 3–DuPont purchases Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates), a wholly-owned subsidiary of the Ralston Purina Co. DuPont signed a letter of intent to acquire PTI on Aug. 24. PTI, which has offices worldwide, will continue to be headquartered in St. Louis, Missouri.

"How can I get more soy into my diet?" is the question most frequently asked by callers to Soyfoods Center. Soy appears to have a bright future.

11522. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*). 1997. Canadian Soyfoods Directory released. 11(3):2. Dec.
• ***Summary:*** "Following numerous requests from consumers, processors and health professionals, the Ontario Soybean Growers' undertook this extensive project." For more information visit www.soybean.on.ca, or fax the OSG at 519352-8983.

11523. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*). 1997. Japan technical mission–September, 1997. 3(3):1-2. Dec.
• ***Summary:*** Tofu: Before the team of three professionals (representing industry, university, and government) left Canada, a series of questions concerning the different techniques and methods used in making tofu in Japan were submitted to the Science and Technology Section of the Canadian Embassy in Tokyo. These were sent to as many tofu manufacturers and researchers as possible in the hope of arriving at a consensus of opinion on the best way to make tofu. This Bulletin discusses times and temperatures for soaking the soybeans, water uptake, desired characteristics of the soymilk used to make tofu (percent solids, protein, fat, and sugar content, nitrogen, pH, and color), coagulants, times and temperatures in the coagulation process.

A sidebar titled "The GMO question" (p. 2) states: "If

© Copyright Soyinfo Center 2013

a common concern was established at all points of contact on the mission, it was the one concerning transgenics or Genetically Modified Organisms (GMO). The Japanese concern over this issue is one of the greatest to face the food production industry." According to Dr. Yukio Kawamura, a major reason for this aversion arises from the fact that "because Japan was the only nation to suffer from an atomic bomb, the people fear the effects of mutation from non-natural sources... Even though several departments of the Japanese government have OK'd the use of GMO in the food supply, there is a strong resistance to them... Mr. Ozawa, President of Fujishoji [Fuji Shoji], said that being able to label products as GMO-free will be as popular as those products who currently advertise that only organically grown beans are used in their manufacture. Wherever the team visited, this was the foremost topic of conversation. The Japanese are currently seeking a written documentation to accompany shipments stating that they are GMO free. Even though acceptance may be forthcoming in the future, this is a unique opportunity to protect and possibly increase market share in Japan."

11524. Holin, Fae. 1997. Cooking cardiologist prescribes soyfoods: They cut heart disease risks, Dr. Richard Collins advises. *Soybean Digest.* Dec. p. 50, 52.
• ***Summary:*** Richard Collins, M.D., is a gourmet chef who uses soy in a high-protein, low-fat menu. Called the "cooking cardiologist," he is also director of The Heart Institute in Omaha, Nebraska. "He's convinced that soyfoods have helped his patients live longer." When Collins first tried this diet on himself (before trying it on his patients) he recalls "I lost 20 pounds, had more energy and felt better." He has made a video titled "Soy Healthy Cooking," which comes with a brochure of 45 recipes. Collins recommends replacing some high-fat foods with products such as tofu, soy beverage and soy flour. Consuming 30-40 grams of soy a day makes a difference in ones health. This amount of soy can be achieved with a chocolate tofu "smoothie", adding tofu in place of meat or cheese and using soy beverage or part soy flour when baking. Collins has a video which gives research and nutritional information. Also on the video, can be seen the preparation of various dishes from his recipe booklet. To order the video ($17.95 + $4.95 s/h), call 800-869-4956.

Color photos show: (1) Richard L. Collins, M.D. (2) Stuffed manicotti with tofu in a skillet–one of the recipes on Collins' video.

11525. Honda, Kyoko. 1997. Tofu & soybean cooking: The Japanese healthy way. Translated by Kazuhiko Nagai. Tokyo: Graph-sha Ltd. 64 p. Dec. Illust. 26 cm. [Eng]
• ***Summary:*** This full-color Japanese-style cookbook is loaded with color photos showing both steps in the process of preparing recipes and the finished dishes. Contents: Basic preparations: Parboiling soybeans, draining tofu, reconstituting Koori-dofu ([Kôri-dofu], freeze-dried tofu), removing oil from abura-age (thin deep-fried tofu), toasting okara. 1. Soybean cooking (daizu = soybeans, aodaizu = green soybeans, edamame = young soybeans in pods, kuromame = black soybeans), abura-age, soybean sprouts. 2. Tofu & natto dishes (Koori-doofu, kouya-dofu, shimi-dofu, okara, yu-dofu = simmered tofu). Let's make momen-dofu (homemade tofu). Tofu dishes from Okinawa (Goya champuru, Ukarairichi, Ujira-tofu).

3. Other dishes from soybeans (Atsu-age, Chinese cheese–Furu [Fermented tofu], miso, soy milk, yuba, daizu moyashi = soybean sprouts, kinako). Articles (summary of four articles).

Note. This is the earliest English-language document seen (April 2013) that uses the term *Koori-dofu* or the term *kouya-dofu* to refer to dried-frozen tofu. Address: Sc.D. (Doctor of Science), nutritionist, and lecturer at Women's Junior College of Nippon College of Physical Education.

11526. **Product Name:** Smoked Tofu (Organic) [Sea Veggie].
Manufacturer's Name: Smoke & Fire Natural Foods.
Manufacturer's Address: 1885 North Main St., Sheffield, MA 01257. Phone: 413-528-6891.
Date of Introduction: 1997. December.
Ingredients: Organic tofu (Organically grown soybeans, water, nigari and/or calcium sulfate), organic tamari, nori and dulse sea vegetables, organic apple cider vinegar, onion, garlic, spices, natural wood smoke.
Wt/Vol., Packaging, Price: 5.5 oz (156 gm) vacuum pack. Retails for $2.15 (1998/07, Massachusetts; Range: $1.89 to $2.50).
How Stored: Refrigerated, 90 day shelf life (at 34-36ºF).
New Product–Documentation: Talk with then form filled out and Label sent by José Antunes (pronounced jo-ZAY ahn-TU-nays), founder and president, who is Portuguese. 1998. June 29. An invoice (sent to Soyfoods Center) shows that the Sea Veggie flavor was first sold on 22 Dec. 1997. Each case wholesaled for $14.54.

11527. **Product Name:** Firm Tofu: Japanese Style Soybean Cake.
Manufacturer's Name: Azumaya Inc.
Manufacturer's Address: 1575 Burke Ave., San Francisco, CA 94124. Phone: 415-285-8500.
Date of Introduction: 1997.
Ingredients: Water, soybeans, calcium sulfate, glucono delta lactone.
Wt/Vol., Packaging, Price: 14 oz (397 gm) packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
Nutrition: Per 3 oz (85 gm): Calories 60, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm),

© Copyright Soyinfo Center 2013

cholesterol 0 mg, sodium 0 mg, total carbohydrate 3 gm (dietary fiber 0 gm, sugars 0 gm), protein 6 gm. Calcium 15%, iron 4%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1997. Dec. 7. 5.75 by 4.75 inches. Dark green, light green, black, white, and gold. Below the product name is written: "Soups, Salads, Fillings, Stuffings." Azumaya logo with 4 circles over the "Y." In the lower left corner, above the UPC indicia, the American Heart Association logo shows a white check on a red heart: "This product meets American Heart Association dietary guidelines for healthy people over age two when used as part of a balanced diet." Text in lower center of label: Pasteurized. No preservatives. Perishable. Keep refrigerated. See back for nutrition information about saturated fat, cholesterol, and heart disease. Text in lower right corner: "For free recipes, coupons or comments, Call 1-800-Eat-Tofu. Net Wt. 14 oz (227 gm)." Retails for $1.39. K Parve ORC. The back panel, green and black on white, contains a recipe for Tofu Stir Fry.

11528. Bundesherstellerverband ökologischer Sojaprodukte Oekosoj e.v. 1997. Presseinformation–Genmanipulierte Sojabohnen sind fuer Naturkostherseteller ökologischer Sojaprodukte ein Tabu: Sojabohnen- und produkte aus kontrolliert biologischem Anbau [Genetically engineered soybeans are taboo for makers of ecological natural foods: Soybeans and soyfoods from organically grown soybeans (News release)]. Freiburg, West Germany. 3 p. 30 cm. [Ger]
• ***Summary:*** This organization was founded in response to the appearance of Monsanto's genetically engineered soybeans in Germany's main soybean distribution system. The names of the six German founding companies are listed just below the title of this news release: (1) Taifun-Sojaprodukte, Life Food GmbH, Freiburg; (2) Soto, Breitbrunn. (3) Christian Nagel GmbH, Hamburg; (4) Sojafarm, Trechtingshausen; (5) Alberts Tofuhaus, Lautersheim; (6) Viana Naturkost GmbH, Euskirchen. Address: Bebelstrasse 8, 79108 Freiburg, West Germany.

11529. Cai, Tiande; Chang, K.C.; Hou, H.J.; Shih, M.C.; Ji, M. 1997. Comparison of bench and production scale methods for making soymilk and tofu from 13 soybean varieties. *Food Research International* 30:659-68. *
Address: Dep. of Food and Nutrition and Dep. of Cereal Science, North Dakota State Univ., Fargo, ND 58105.

11530. **Product Name:** SuGee (Vegetarian Chicken) [Creamy Shanghai Style, or Hickory Smoke Peking Style].
Foreign Name: Su-ji.
Manufacturer's Name: CAMS Foods Inc. (Importer-Distributor).
Manufacturer's Address: Yorba Linda, CA 92886. Phone: 714-NL.
Date of Introduction: 1997.
Ingredients: Creamy: Rehydrated soybean curd, water, isolated soy protein, soy oil, sesame oil, fructose, salt, hydrolyzed vegetable protein, autolyzed yeast extract, natural flavors, spices.
Wt/Vol., Packaging, Price: 8 oz (226 gm) paperboard box.
How Stored: Refrigerated.
New Product–Documentation: Package with Label brought by Bob Gerner of Berkeley Natural Grocer. 1997. July 2. 2 by 2 by 5 inches. "Soy-based vegetarian delicacy. All natural. No preservatives. Wheat free. All vegan. No MSG. Keep refrigerated." An the box are the Chinese characters for "vegetarian chicken."

On the package is a toll-free Hotline (1-800-LA-SUGEE) which has been changed to a number which is incorrect. There is no listing for the company in Yorba Linda, California.

11531. **Product Name:** Soyboy LowFu Extra Firm: Low Fat Tofu Made with Organic Soybeans.
Manufacturer's Name: Northern Soy, Inc.
Manufacturer's Address: 545 West Ave., Rochester, NY 14611. Phone: 716-235-8970.
Date of Introduction: 1997.
Ingredients: Filtered water, organically-grown soybeans, defatted soy flour, natural calcium chloride nigari (a mineral coagulant, not a preservative), natural calcium sulphate.
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray (No. 2 HDPE) with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
Nutrition: Per 3 oz (85 gm.): Calories 90, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0X gm), cholesterol 0 mg, sodium 0 mg, total carbohydrate 6 gm (sugars 0.5 gm), protein 12 gm. Calcium 25%, iron 8%. Not a significant source of dietary fiber, sugars, vitamin A, vitamin C. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Label sent by Maya Clarke. 1999. Jan. 26. She purchased this product with Label at Wild Oats Community Market in Miami Beach, Florida. 3½ by 5 inches. Yellow, orange, blue, red, white, and black. Use by 29 Jan. 1999. "2 grams fat per serving" [3 oz, about 1/5 block]. Copyright 1997.

Leaflet (8½ by 11 inch, front and back, glossy color) sent by Patricia Smith from Natural Products Expo East. 2000. Sept. "Greater protein: Better tofu." Shows the front panel of three tofu packages against a light green tiled background: Soyboy Non-GMO LowFu Low Fat Tofu. Soyboy Organic Tofu (Extra Firm). Soyboy Organic Tofu (Firm Style).

11532. **Product Name:** [Tofu].

© Copyright Soyinfo Center 2013

Foreign Name: Tofu (Queso de Soja).
Manufacturer's Name: Sanfu S.A.
Manufacturer's Address: Buenos Aires, Argentina. Phone: 552-8119.
Date of Introduction: 1997.
Ingredients: Water, organically grown soybeans, strawberry pulp, rice, sugar, pectin, lactic acid bacteria (*fermentos lácticos*), strawberry essence (*esencia de frutillas*).
Wt/Vol., Packaging, Price: 200 gm plastic yogurt cup.
How Stored: Refrigerated.
New Product–Documentation: Zambrano, Jerónimo. 1997. "Tofu, un largo camino de Taiwan a la Argentina: Más conocido por ese nombre, el queso de soja es un milenario producto oriental que ahora se fabrica aqui" [Tofu, a long road from Taiwan to Argentina: Better known by that name, soy cheese is a thousand-year-old Oriental food product that is now made here]. *Nacion* (*La*) (Buenos Aires, Argentina). May 30. Sec. 2, p. 10.

Visit with Carlos Planes at Soyinfo Center in Lafayette, California. 2012. Feb. 23. Carlos brought an original of the 1997 article cited above and a sell sheet titled "Tofu: Queso de Soja" for the company's tofu (4 panels, 8.25 by 4.75 inches each). The inner two panels contain 5 recipes, and the back panel contains information about the company and about tofu. Two large color photos (5 by 7 inches) brought by Carlos show: (1) The front of three packages of tofu (regular, firm, and extra firm) made by Sanfu S.A. in a supermarket in Chinatown, Buenos Aires. Taken Feb. 2012. (7) The front of three more (and different) types of tofu made by Sanfu S.A. at the same Chinatown in Buenos Aires. One is named "Tokan" [Pressed Tofu].

11533. **Product Name:** Pressed Tofu, Fried Tofu, Soymilk.
Manufacturer's Name: Top Grade Foods.
Manufacturer's Address: 3990 Pleasantdale Rd., Doraville, GA 30340. Phone: 770-263-1880.
Date of Introduction: 1997.
How Stored: Refrigerated.
New Product–Documentation: Talk with Russell Chan of Top Grade Foods. 2002. June 26. He started making these products in 1997.

11534. **Product Name:** Trader Joe's Soy Cheese [Jalapeño Jack].
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 1997.
Ingredients: Tofu (water, organic soybeans*, calcium sulfate), sodium caseinate (nonfat milk protein), liquid soy oil, red & green jalapeño peppers, sea salt, lactic acid, natural flavor, lecithin, annatto (vegetable color), guar gum. * = Grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: About 1 lb, wrapped in plastic film. Retails for $2.54 (1997/10).
How Stored: Refrigerated.
Nutrition: Per 1 oz. (28 gm, about 1 inch cube): Calories 70, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 230 mg (0%), total carbohydrate 1 gm, protein 5 gm. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Concord, California. 1997. Oct. 3 inches square. Red and tan on white. "A natural cheese alternative made with organic tofu. No cholesterol. Lactose free. Keep refrigerated." SKU# 016136.

Talk with Richard Rose of the Rella Good Cheese Co. 1998. Feb. 16. This product is made for Trader Joe's by Soya Kaas [American Natural Snacks].

11535. **Product Name:** Southwestern Wild West Tofu Burgers.
Manufacturer's Name: Wildwood Natural Foods of Santa Cruz, Inc.
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1997.
Ingredients: 1997: Wildwood Tofu (filtered water, organic soybeans grown in accordance with the California Organic Foods Act of 1990, nigari {magnesium chloride} or calcium sulfate {natural firming agents}), corn, onion, kale, dried tomato, garlic, jalapeño pepper, ginger, cilantro, parsley, spices, salt, Fruitrim (fruit juice, natural grain dextrins), rice flour, garlic & onion powders, safflower oil.
Wt/Vol., Packaging, Price: 6.5 oz vacuum pack.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1988, and made at Wildwood's plant in Santa Cruz.

11536. Ali, Nawab. 1997. Technology for processing and utilization of soybean in India. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 447-50. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [8 ref]
• ***Summary:*** Contents: Abstract. Introduction. Soybean food options and technology. Full-fat soyflour. Medium-fat soyflour. Soy-fortified biscuits. Soypaneer [tofu]. Indigenous soypaneer plant (based on the CIAE process of making soypaneer). Packing and storage of soyfoods. Conclusion. Contains 3 tables. Address: Soybean Processing and Utilization Center, Central Inst. of Agricultural Engineering (CIAE), Bhopal 462018, India.

11537. Cerquetti, Giorgio. 1997. The vegetarian revolution.

© Copyright Soyinfo Center 2013

Badger, California: Torchlight Publishing, Inc. xiv + 243 p. No index. 23 cm.
• ***Summary:*** This book is divided into two parts: Commentary (which includes many quotations about vegetarianism) and cookbook. Contents: Part A–The vegetarian revolution. 1. Join the revolution. 2. The future is vegetarian. 3. Animals deserve to be alive. 4. More evidence. 5. Proteins and vitamins. 6. Vegetarians live longer: Longevity, prana, fasting. 7. Vegetarianism and world religions: Vegetarian Jews, vegetarianism and early Christianity, Jesus was vegetarian, the new Catholic catechism, the oldest teachings, the law of karma, Buddha was vegetarian, was Mohammed vegetarian, Sikhs, Jains, speciesism: The last barrier, thought-provoking facts about vegetarianism. 8. Open letter to McDonalds.

Part B–Recipes (108 recipes). 9. Recipes of famous people. 10. Recipes of vegetarian groups. 11. Recipes of vegetarian restaurants. 12. Recipes from vegetarian cookbooks.

Part C–Resources. Vegetarian international. Alphabetical listing of recipe sources. About the author.

Giorgio Cerquetti, PhD, author and yoga practitioner, was born in Italy in 1946 and has been a vegetarian since age 16. In 1991 started to spend more time in the USA and, with Alister Taylor, he founded Vegetarians International. Address: Italy and the USA.

11538. Emmons, Didi. 1997. Vegetarian planet: 350 big-flavor recipes for out-of-this-world food every day. Boston, Massachusetts: The Harvard Common Press. xii + 564 p. Illust. by Melissa Sweet. Index. 24 cm.
• ***Summary:*** This hefty vegetarian cookbook contains 350 new and exciting innovations on recipes from around the world. Didi is described as "a bold new talent!" and her book is a Beard Award nominee. Soy-related recipes include: Miso soup (p. 113-14). Thai tofu with red curry sauce over coconut-scallion rice (p. 213-15). Frozen soybeans [green vegetable] (p. 263). Many Chinese markets sell these in their freezer sections. "Packaged in Taiwan, they look a lot like lima beans, but they are delicate in flavor and especially high in protein. I keep them in my freezer and add them by the handful to various dishes, just as I would add peas or snow peas." The names and pages of recipes to which they can be added are given.

Mu shu tofu (p. 360-63). Cooking with tofu (p. 361, including description of varieties and serving suggestions). Cooking with legumes (incl. azuki beans and soybeans, p. 368-69). Tofu and pumpkin seed burgers. Also contains many recipes using sea vegetables. Address: Chef at Pho République (a French-Vietnamese Bistro), Cambridge, Massachusetts.

11539. Grogan, Bryanna Clark. 1997. Twenty minutes to dinner: Quick, low-fat, low-calorie vegetarian meals. Summertown, Tennessee: The Book Publishing Co. 192 p. Illust. Index. 21 cm.
• ***Summary:*** This vegan cookbook contains a wealth of soy-related recipes. The glossary mentions tofu, soymilk, soymilk powder, tempeh, miso, soy sauce (shoyu, tamari) textured vegetable protein, Chinese condiments (hoisin sauce, Chinese black bean sauce, Chinese brown bean sauce, Szechuan hot bean paste), seitan, soy bacon bits or chips.

In the section titled "Ingredient substitutions," under "Yeasted products" we read (p. 15): "I can think of no practical substitutes for light miso or certain fermented Chinese products like doufu-ru (Chinese fermented bean curd, which has a strong 'blue cheese' type of flavor)."

The recipe for "Buffalo potato wedgies" (an alternative to "Hot wings") advises: "Dip the crusty wedges into Vegetable Dip (p. 48)–you can add a bit of crumbled, white Chinese fermented tofu (doufu-ru) to make it more like traditional blue cheese dressing or dip."

Also includes soy-free options for recipes with tofu and soymilk. Address: Denman Island, east of Vancouver, British Columbia, Canada.

11540. House Foods America Corp. 1997. Tofu temptations (Recipe booklet). Garden Grove, California. 24 p. Each page: 7.8 x 12.8 cm. [Eng]
• ***Summary:*** This small, dated, glossy color booklet has a subtitle on the first page: "Discover all the wonderful ways you can enjoy tofu, from sensational salads to hearty main dishes to delicious desserts." A photo shows half of a creamy tofu pie.

Contents: What is tofu? Know your tofu: Hinoichi soft, regular, firm, or extra firm. Recipes (each recipe takes 2 pages and is accompanied by a color photo): Tropical smoothie. Fruit with creamy strawberry sauce. Omelet de España. Spinach mushroom quiche. Santa Fe stir-fry. Tuna dijon pasta salad. BBQ kebabs. Cappuccino pie. Lemon raspberry parfait. Creamy mandarin orange pie.

On the rear page are photos of the four different types of Hinoichi tofu. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

11541. Katzen, Mollie. 1997. Vegetable heaven. New York, NY: Hyperion. xv + 223 p. Illust. (Color by Mollie Katzen). Index. 27 cm.
• ***Summary:*** A handsome vegetarian cookbook. Soy-related recipes include: Vietnamese salad rolls (with firm tofu, p. 11). Kung pao lettuce cups (with firm tofu, Northern Chinese, p. 13). Eggflower soup with pasta shells (with firm tofu, p. 32). Potato soup with rosemary and roasted garlic (with silken tofu, p. 33). Coconut-lemon grass soup (with firm tofu, p. 43). Baked coated nuts sweet or savory (with soy sauce, p. 57). Basic soyburgers (with cooked soybeans and tofu, p. 76). Green beans and tofu in crunchy Thai peanut sauce (with firm tofu, p. 103). Magic carrot flans (with milk

© Copyright Soyinfo Center 2013

or soymilk, p. 122). Scalloped potatoes three variations (with milk or soymilk, p. 130). Sandwiches to write home about (with firm tofu, p. 136). Buckwheat soba with squash, smoked tofu, and basil (with smoked tofu and miso, p. 144). Tiny pasta stew (with firm tofu, p. 151). Horseradish aioli (with silken tofu, p. 168). Peanut-chile [chili] dressing (with soy sauce, p. 174). Homemade butterscotch pudding (with milk or soymilk, p. 194). Pumpkin mousse with gingersnap crumbs (with silken tofu, p. 196). Bittersweet chocolate-banana mouse (with silken tofu, p. 197).

A color photo on the rear cover shows Molly Katzen. Address: California.

11542. Keussink, Ruth. 1997. Soja und Sojaprodukte [Soybeans and soy products]. Bonn, Germany: Auswertungs- und Informationsdienst fuer Ernaehrung, Landwirtschaft und Forsten (aid) e.V. 28 p. Illust. (Color photos). 21 cm. [14 ref. Ger]

• ***Summary:*** Contents: Introduction. Market and utilization. Soya in the diet: Protein, fat, carbohydrates, minerals and trace minerals, vitamins. Overview–Soy products: Whole soybeans, soy sprouts, soy oil, soy beverage, tofu, natto, sufu, tempeh, soy sauces, miso, soy lecithin, soy sausages, TVP. Processing soybeans. Soy ingredients and additives: Soy protein isolate, concentrate, soy bulk / fiber (*sojaballastoffe*), fatty acids, lecithin, vitamin E (tocopherol). Product safety. Genetically engineered soybeans. Tips for buying and storing. Recipes. Address: Konstantinstr. 124, 53179, Bonn, Germany.

11543. Kittler, Pamela Goyan; Sucher, Kathryn P. 1997. Food and culture in America: a nutrition handbook. Belmont, California: West/Wadsworth. xiv + 535 p. Illust. (photos). Index. 26 cm. [100+* ref]

• ***Summary:*** What is American food anyway? Does it include sushi, soy sauce, miso soup, or tofu? How about Peking duck or pot stickers? How about enchiladas, chile rellenos, or tacos?

This excellent and original work is arranged in chapters by cultural groups or subcultures living in the USA.

The chapter on "Latinos" states under "Foreign influence" (p. 286) that the "demand for Asian ingredients by later immigrants resulted in the introduction of soybean products,..." Under "Regional variations" (p. 290) that Cubans like a chicken dish marinated in lime juice and soy sauce. Under "Meal composition and cycle" (p. 290) that West-African fritters are made from the meal of soybeans..."

The chapter on "Asians," under "Chinese," notes (p. 328-30) that "Soybeans are transformed into an amazing array of food products that are indispensible to Chinese cooking," including soy sauce, soy milk, bean curd or tofu, black beans ("made with cooked fermented soybeans preserved with salt and ginger. Black beans are usually added as a flavoring in dishes"), hoisin sauce, and oyster sauce. Soy oil is also used in Chinese cooking. The Hakkas enjoy tofu stuffed with meat (p. 332). Every Chinese meal aims for a good balance of *fan* (grain foods, such as rice or wheat) and *tsai* (side dishes). "The Chinese believe that a good diet is critical for physical and emotional harmony and necessary to strengthen the body against disease" (p. 334). During pregnancy, soy sauce may be avoided to prevent dark skin (p. 335). Chinese who avoid fresh dairy products because of lactose intolerance, may consume soybean curd and soy milk (if fortified with calcium) as alternatives.

Under "Japanese," soy sauce is a traditional food of Japan (photo, p. 341). Soybean products (p. 350) are an important part of the Japanese diet; they include tofu, shoyu (soy sauce), miso, and teriyaki sauce–to name just a few. Second-generation Japanese use more soy sauce than non-Asians (p. 354) but as their diet becomes Americanized, they fall prey to more diseases of affluence. The response to dairy products and lactose intolerance is similar to that of Chinese, with the use of tofu and soy milk.

Under "Koreans" (p. 363, 366) Soybean products are in important part of the diet; they include soy sauce, soy paste, and soybean curd or tobu [sic, *tubu*] (tofu).

Under "Southeast Asians and Pacific islanders." Adobo is a popular Filipino stew, seasoned with soy sauce (p. 389). Soy products include soy milk and tempeh (p. 399, 402, 404, 421-22).

The "Glossary of ethnic ingredients" mentions many soy products including (p. 490): "Black beans, fermented: Black soybeans salted and fermented to produce a piquant condiment. Used in Chinese cooking as a seasoning or combined with garlic, ginger, rice wine, and other ingredients to make black bean sauce." Address: 1. M.S., Food and nutrition education consultant; 2. Dep. of Food and Nutrition, San Jose State Univ., California.

11544. Klingel, Brigitta. 1997. • ***Summary:*** A small but attractive book, containing many color photos on glossy paper. Soya, the food of the future? Favorable use of land using soya. New industrial uses of soybeans. History of the soybean: East and West. World soybean production, yesterday and today. Soy in modern times: Henry Ford, two basic ways of using soybeans (as food or as livestock feed and oil), the sad story of genetically engineered (*genmanipuliertes*) soybeans. Soya: The power packet: Nutritional composition, a source of B-vitamins, magnesium, calcium and fiber, the world's best source

© Copyright Soyinfo Center 2013

of protein. Soya in medicine: Preventing cancer, plant estrogens, isoflavones, prostate cancer, fiber and stomach cancer, effect on female hormones, men, medicine and soya, lowering cholesterol, help with diabetes, healthy nutrition.

Food products and buying tips: Yellow soybeans, black soybeans, green mungbeans (dehulled and not), azuki beans, glossary of soyfoods (miso, okara, soy flakes, dry soymilk powder, soy lecithin, Sojamark {TVP}, soy flour, soymilk, soy oil, soy protein, soy sauce, soy sprouts, tempeh, tofu, dry tofu, yuba).

Cooking with tofu–for a healthy kitchen, cooking with soy is easy. Infant and child nutrition. Recipe ideas: Basic recipes. Cooking whole soybeans. Homemade soymilk. Homemade soy cream. Soy mayonnaise. Homemade soy sprouts. Soya butter. Classical meat alternative with soya. Okara specialties. International tofu cuisine. Quick and easy recipes with soy and tofu. Healthy recipes for two. Desserts. Baked recipes. Address: Germany.

11545. McCullough, Fran [Frances Monson]. 1997. The low-carb cookbook. New York, NY: Hyperion. xiv + 384 p. Foreword by Michael R. Eades, M.D., and Mary Dan Eades, M.D. Index. 24 cm.
• ***Summary:*** "The complete guide to the healthy low-carbohydrate lifestyle. With over 250 delicious recipes..." (from the front cover).

Soy-related recipes: Nappa cabbage soup with tofu (p. 104). Jerk tofu [tofu jerky; based on an idea of soy queen Dana Jacobi] (with 1 pound extra-firm tofu, frozen, defrosted, sliced lengthwise in quarters, and squeezed dry, p. 177). Tofu tips ("This best of all vegetable protein sources is a useful item to have on hand, even if you're not fond of tofu." Gives various serving and preparation suggestions, p. 178). Curried tofu (p. 179). Tuna with mint, garlic, and soy (the "soy" is soy sauce, p. 185).

"In 1995, McCullough edited the manuscript of Protein Power, by Drs. Michael and Mary Eades, a book (published in 1996) about carbohydrate intolerance, or hyperinsulinemia, a metabolic condition in which ingestion of carbohydrates stimulates excessive production of insulin which in turn causes fat cells to store more fat. Finding that she could control her own weight by limiting her intake of carbohydrates McCullough developed the 250-plus low-carbohydrate recipes here. She reports a 60-lb. weight loss." From the publisher. Address: Culinary Inst. of America at Greystone (in St. Helena, California).

11546. Messina, Virginia Kisch; Messina, Mark. 1997. Soy to the world. In: 1997 Medical and Health Annual. Published by Encyclopedia Britannica, Inc. See p. 197-202.
• ***Summary:*** In the section titled "Diet and Nutrition" is a long subsection on "Soy to the world." Contents: Introduction. Sacred crop (history). Varied and versatile: Whole soybeans (incl. green vegetable soybeans), traditional soyfoods (soymilk, tofu, okara, yuba, tempeh, miso, soy sauce or shoyu), modern soy products (textured soy flour or TVP), "second-generation" soyfoods. One of nature's most nutritious foods. Health benefits: the evidence so far: Cancer, heart disease, osteoporosis, kidney disease, menopause. Tofu on your table (how to incorporate soy into American diets; incl. TVP, soymilk, soy flour, soy nuts). Address: 1. M.P.H., R.D.; 2. Ph.D. Both: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

• ***Summary:*** Contents: Tofu–versatile and healthful. The soybean: Cultural history, production, the world and the soybean, nutritional value of soybeans, soyfood products (soy sauce, miso, tempeh, okara, soy coffee, soynuts, soy sprouts, modern western soy protein products–soybean flour, flakes, textured soy flour, soy protein isolates, defatted soybean meal, industrial soy products), genetically engineered soybeans. Tofu. Tips, tricks, and useful information. How to make soymilk at home. How to make tofu at home. Tofu recipes and marinades. Raw foods and salads. Dressings. Sauces. Soups. Main dishes. Soufflés. Pasta. Patties / burgers. Spreads. Party snacks. Cooking and baking. Desserts and sweet delicacies (*süsse Leckereien*). Ice cream. Address: Weigandufer 38, 12059 Berlin, Germany. Phone: 30 / 6808 0686.

11548. Nutrition Education Service, Sanitarium Health Food Company. 1997. Sensational soy cookbook. Sydney, London, Vancouver, New York: Murdock Books. 64 p. Illust. Index. 20 cm. [32 ref]
• ***Summary:*** A saddle-stitched vegetarian cookbook on glossy paper loaded with color photos and lightweight text. The author and nutritionist is Cathy McDonald of Sanitarium. Recipes developed by Wendy van der Veer of Sanitarium. Contents: The story of soy. The soy family: Miso, soy beans, soy breads & cereals, soy cheese, soy drink, soy flour, soy grits & soy flakes, soy 'meats,' soy pasta, soy sauce, soy snacks, tempeh, TVP, tofu, tofu desserts (ice cream and yoghurt). Breakfasts. Soy for health (isoflavones, menopause, breast cancer, osteoporosis, prostate cancer, heart disease). Light meals. The secrets of soy. Main meals. Soy in perspective. Desserts. Sensational soy (sample menus). Snacks. Know your nutrients. Bibliography. Estimated isoflavones in soy foods (table). Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia.

11549. Osho, S.M.; Obatolu, V.A.; Uwaegbute, A.C.; Ndaeji, C.F.; Olowoniyan, F. 1997. Food uses of soybean in Nigeria: Opportunities and constraints. In: Napompeth, Banpot, ed.

© Copyright Soyinfo Center 2013

1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 422-30. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [6 ref]
• ***Summary:*** Contents: Introduction. Past uses of soybeans in Nigeria. The present uses of soybeans. Results and discussion: Composition of some Nigerian traditional foods with and without soybean fortification. Inactivation of the trypsin inhibitor at household level. Development of a soybean-cassava product (soy gari). Soybean tofu processing (soywara or soycheese). The processing of a soy beverage (kunu). Soybean oil. Extrusion cooking (IITA concept). Achievements. Impact.

Tables: (1) Nutritional composition of selected home-made soy-based products compared with products from traditional preparation method (Soy ogi, soy milk, soy moinmoin, soy akara). (2) Phytic acid, tannin, and trypsin inhibitor levels of raw and processed soybean products (the 4 products shown in table 1). (3) Time, temperature, and treatment necessary for complete inactivation of soybean trypsin inhibitor at the household level: Boiling under pressure (with or without soaking), boiling with soda or kaun, boiling whole without pressure (with or without soaking), boiling with prior processing (grits, dehulled soybeans, flour), roasting whole (in sand, in pan). (4) Composition of local gari and fortified soybean gari (fortified with okara, or with whole soybean paste). (5) Sensory evaluation of these three types of gari. (6) Nutritional composition of local cheese (*warankasi*) and tofu. (7) Sensory evaluation of local cheese (*warankasi*) and tofu. (8) Nutritional composition of *kunuzaki* and soy *kunuzaki.* (9) Nutrient composition of selected soy flours from the extruder and screw press (defatted, extruded full fat, defatted extruded, extruded defatted). (10) The percentage of farmers/households producing and utilizing soybean in IDRC project sites (1987, 1991, 1992; Oyo State, Niger State, Kaduna State, Enugu State). (11) 33 soybean products that are being made and marketed by companies in Nigeria (Feb. 1992). For each is given: Name of manufacturer. City or state of manufacture. Product name or description. Percentage of soybean used in the product. (12) Summary of number of markets and retail sale outlets for soybean in Ibadan, Nigeria (each January from 1987 to 1993): Increased from 2 markets and 4 retailers in Jan. 1987 to 42 markets and 824 retailers in Jan. 1997.

Flowcharts show the processing of: (1) Soybean gari. (2) Tofu. (3) Soybean kunuzaki. (4) Soybeans by extrusion or expelling. (6) Soybeans and cereals by extrusion. Address: 1. Soybean Utilization Project, International Inst. of Tropical Agriculture, PMB 5320, Ibadan; 2. IAR&T, PMB 5029, Ibadan; 3. Univ. of Nigeria, Nsukka; 4. NCRI, PMB 8, Badeggi; 5. NAERLS, PMB 1067, Zaria. All: Nigeria.

11550. Passmore, Jacki. 1997. The vegetarian table: Thailand. San Francisco, California: Chronicle Books. 160 p. Illust. (color photos). Index. 24 cm.
• ***Summary:*** The author dedicates this book to Isobel, her daughter, friend and critic, "who can't pass a day without tofu."

The Introduction notes that Thailand has a strong and living Buddhist tradition. Since Nature provides plenty of food, Thai cuisine has evolved with a moderate use of red meat, following "the Buddhist precepts on the slaughter of animals." But many Thais make an exception for seafood, with this charming rationale: "If a fish is stupid enough to swim into a trap and die, then we may as well eat it!"

This book relies heavily on tofu as a meat alternative. The index has 28 entries at "Tofu," so we will list only a few representative examples below. Contains a wealth of full-page color photos. In place of widely used fermented shrimp and fish pastes, this book uses various salt-fermented soy products such as yellow bean sauce, Chinese bean pastes, fermented tofu in brine, and tempeh (p. 11).

The Glossary defines the following that contain soy: Chili bean paste, fermented tofu, Hoisin sauce, kecap manis [sweet soy sauce], soy sauce (3 types), tempeh, tofu (tao hoo in Thailand); "The soybean is singularly one of the most important food plants in the world." Few other food products can match the versatility and goodness of tofu. Incl. firm tofu, soft tofu, fried tofu and "bean curd sheets" or sticks [yuba], yellow bean sauce.

Soy-related recipes include: Classic Thai rice soup (with 6 oz. firm tofu, p. 74). Sweet and sour pomelo salad (with ¼ cup {3 oz.} cubed tempeh, p. 78). Green vegetable chu chee curry (with tofu or tempeh, p. 97). Vegetarian jungle curry (with fried tofu, p. 102). Tofu and beans with red curry paste (with fried tofu, p. 105). Clay pot of fried tofu and vegetables in brown sauce (p. 107). Stir-fried tempeh with garlic and pepper (p. 108). Stir fry of wheat gluten or tofu with straw mushrooms (p. 109). Tofu & tomato stir fry (p. 131). Thai fried rice with tofu and egg (p. 135). Pineapple fried rice (with firm tofu or tempeh, p. 136). Glutinous rice with peanuts and mushrooms (with diced fried tofu or tempeh, p. 141).

© Copyright Soyinfo Center 2013

Becker, Ethan. 1997. The joy of cooking. New York, NY: Simon & Schuster / Scribner. xiv + 1136 p. Illust. Index. 24 cm.

• ***Summary:*** Soy-related subjects include (* = recipe): Soy sauce butter* (p. 77). Asian black bean sauce* (with "3 tablespoons preserved black beans" [fermented black soybeans], p. 83). Japanese wasabi soy sauce* (p. 83-84). Ginger soy sauce* (p. 84). Soy and sherry marinade* (p. 85). Description of miso soups and their role in the Japanese diet (p. 107-08). Light-colored miso soup with simmered vegetables and dark-colored miso soup with sautéed vegetables and Mongolian Hot Pot–a miso soup based dish* (p. 108). Ginger soy vinaigrette* (p. 238).

One long chapter is titled "Beans and Tofu" (p. 270-294). Lentils with spinach and soy sauce* (p. 280). The section titled "soybeans" (p. 287) discusses their nutritional value, health benefits ("They contain substances thought to help prevent breast and other cancers, as well as Omega-3 fatty acids, which reduce the risks of heart disease"), how to cook yellow and black soybeans, how to dry-roast [to make soynuts], many ways of processing, soy milk, okara, fermented black beans, soy sauce, tamari, miso, soy cream cheese, soy sour cream, and soy cheese. There are also substantial subsections describing the following soyfoods: (1) Soy milk, including a recipe for making it at home (p. 287-88). (2) Tofu, including silken tofu, cottage tofu, frozen tofu, sauteed or fried tofu, and smoked tofu (p. 288-89). Recipes containing tofu include: Szechuan spiced tofu, Southeast Asian curried vegetable stew, Smoked tofu burgers, and Brown rice tofu salad with orange sesame dressing (p. 289-90; the latter recipe calls for toasted sesame oil and adzuki beans, with smoked tofu being optional). (3) Tempeh, including recipes for Moo shu tempeh and Szechuan-style "hacked" tempeh. (4) About soy protein, describing textured vegetable protein and textured soy concentrate, with recipes for Dinner loaf Tex-Mex style and Lion's head (p. 292). This is followed by a subsection describing seitan and with recipes for Root vegetable and seitan stew, and Seitan kibbe (p. 293-94).

Asparagus with mustard miso* (p. 343-44). Baby bok choi with soy ginger sauce* (p. 349). Steamed scallops or shrimp with soy sauce* (p. 513). Grilled or broiled whole red snapper with ginger soy vinaigrette* (p. 548-49). Small fish, fillets, or steaks poached in soy sauce* (p. 555-56). Chinese soy-braised chicken* (p. 601-02). The chapter titled "Know your ingredients" (1059-87) includes short descriptions of bean sauce, Hoisin sauce, miso, nori, salted and fermented black beans, sesame oil, sesame paste, soy sauce, tamari, tonkatsu sosu (dark spicy sauce based on soy), wakame, wasabi, vinegars from fruit and grains, margarines (mentions trans fatty acids, but not soy), and shortenings (p. 1065-69).

Subjects related to vegetarianism include: Discussion of vegetarian diets (positive and accurate, in Chapter 1, p. 3). List of vegetarian side-dishes and main courses in this edition (27 recipes, p. 20). Vegetarian chili* (p. 283). Dairy-free chocolate cake* (vegan, p. 932). Ultra-orange cake* (vegan, p. 932-33).

Irma Rombauer (the grandmother of Ethan Becker) first wrote the *Joy of Cooking* in 1931, "when domestic help was fast becoming a thing of the past and women all over the country were once again heading to the kitchen."

Note: This cookbook was written by a committee of experts, put together by Maria Guarnaschelli. Many controversies and clashes of opinion arose out of this arrangement. Address: 3. Cockaign, Cincinnati, Ohio.

11554. Saio, K. 1997. Soybean foods: Nutritionally and industrially valuable. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 521-26. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [10 ref]

• ***Summary:*** Contents: Abstract. Introduction. Localization of the components seeds and foods. Roles and behavior of the components in soybean food. Physical functionalities of the components. Nutrition and physiological functionalities of the components. Conclusion.

Contains 4 figures (incl. 11 photos and 1 graph) and 4 tables. Table 3, "Chemical composition of main soybean foods (in 100 gm)" includes tofu (regular), abura-age, kori-tofu, yuba, kinako, soybean sprouts, natto, miso (dark yellow), soy sauce (common), TVP [textured soy flour], isolate, soybeans (Japanese). Address: National Agricultural Research Center, 1-1-3 Kannondai, Tsukuba, Ibaraki, Japan 305.

11555. Shandler, Nina. 1997. Estrogen: The natural way. Over 250 easy & delicious recipes for menopause. New York, NY: Villard Books. xxxv + 300 p. Index. 24 cm. [125 ref]

• ***Summary:*** This is a book about plant estrogens (called phytoestrogens, isoflavones, and lignans) and the new estrogen consciousness. Soy and flaxseed contain substantially larger quantities of plant estrogens than other foods. Carefully documented, it tells the author's personal adventure in menopausal self-care and offers 250 easy recipes to replace estrogen naturally.

The three estrogens produced by a woman's body come in different strengths. Estradiol, the most potent, is 80 times stronger than estriol, the weakest. Estrone, of medium potency, is twelve times stronger than estriol. When a girl reaches adolescence, her ovaries become active, producing twenty times as much estradiol as in childhood. As menopause approaches, estradiol production slows. After menstruation stops and menopause begins, the ovaries stop producing estradiol, but other organs and tissues, primarily the adrenal glands and fat glands, generate limited amounts of the medium-potency estrone for as long as 20 years.

© Copyright Soyinfo Center 2013

Prolonged exposure to strong estrogen increases a woman's risk of breast cancer. The earlier a woman starts menstruating and the later she stops, the greater her likelihood of developing breast cancer. In mid-1995 Colditz and co-workers at Harvard published a study in the *New England Journal of Medicine* which documented the long-term effects of hormone replacement therapy on 120,000 women. They found that estrogen replacement pills increased the risk of breast cancer by 30%. The study's lead researcher, Dr. Graham Colditz, offered clear advice: "Don't take hormones for a long time if you can avoid it." The previous generation of women taking hormone therapy experiences a tenfold increase in uterine cancer.

Recipes for tofu and other soyfoods are at the center of this book's program for reducing hot flashes and night sweats. Address: Amherst, Massachusetts.

11556. Srisawat, Pinyo; Jonglertjesdawong, Yingsak. 1997. The vegetarian taste of Thailand: Vegetable, tofu & seafood dishes from Cha Am restaurant. Berkeley, California: SLG Books. 224 p. Illust. Index. 28 cm.
• ***Summary:*** Cha Am is a popular Thai restaurant which opened in Berkeley, California in 1985. This is a very beautiful and strange book. Beautiful because on every other page is a spectacular full-page color photo, showing the prepared recipes, ingredients, and many lovely scenes from Thailand. Strange because the word "vegetarian" is in the title, yet a large number of recipes call for fish or seafoods (which have never been eaten by vegetarians) as the main ingredient.

Soy-related recipes include: Tau hoo neng: Steamed bean curd (p. 21). Tao hoo nam daeng: Bean curd stew (p. 27). Tao hoo op moor din: Clay pot bean curd (p. 33). Hoi jor name jim boi: "Seafood" rolls with plum sauce (p. 43; the filling is rolled in "bean curd sheets" [probably pressed tofu sheets, but possibly yuba], each 8 inches square). Tom som Tauhoo: Spicy bean curd soup (p. 63). Tao jiao lon: Spicy fermented soy bean dip (p. 185). On pages 212-13 are full-page color photos of various Thai soybeans and soyfoods.

The section titled "Gluten" (p. 214-17) describes this product and shows how to make it at home. Gluten is also used in recipes throughout the book.

The interesting glossary (p. 221-24) includes descriptions of: Bean curd (*tau hoo* is soft tofu; *tao kwa* is firm tofu, used for stir-frying, deep-frying, and braising). Bean curd, fermented (*tau hoo yee;* the two most common types are red and white. The red variety is cured in a brine with fermented red rice flavored with annatto seeds and rice wine). Bean curd, spongy (deep-frying gives tofu a spongy texture, so it can absorb the flavors of any sauce in which it is cooked a second time). Bean sauce (a seasoning made from fermented soybeans, flour, and salt. There are four popular types: yellow bean sauce, brown bean sauce, black bean sauce, and hot bean sauce. The preferred sauce is made from whole soybeans. The ground varieties are often quite salty). Beans, black fermented (also known as salted black beans, these are small black soybeans fermented with salt and spices. They are delicious when combined with garlic, fresh ginger, or chilies. Note: Fermented white soybeans are called *tao jiao*). Soy sauce (*si iu;* These recipes call for the Chinese rather than the Japanese type. The three most widely used soy sauces are light soy sauce {*si iu khao*}, dark soy sauce {*si iu dam*}, and mushroom soy sauce).

Note: This is the earliest English-language document seen (April 2013) that uses the word "tauhoo" to refer to tofu. Address: Bangkok, Thailand.

11557. Sullivan, Cheryl; Rhodes, Kathy. 1997. Soyfoods: A healthy profile. Revised ed. Sioux Falls, South Dakota: South Dakota Soybean Board. 118 p. Illust. Index. 22 cm.
• ***Summary:*** Contents: Introducing soyfoods to your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts. Guide to modifying recipes: A one-for-one substitution.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996, and revised in 1997. It was reprinted by the Nebraska Soybean Board with their name and phone number on the rear cover.

Talk with Cheryl Sullivan. 2002. Aug. 12. This booklet is basically *Simply soy: A variety of choices,* with a new cover and title, plus a few pages of additional information added by the South Dakota Soybean Board in Sioux Falls. Address: 1. M.A., R.D.; Ph.D., R.D.

11558. Sunarlim, N.; Anwarhan, H. 1997. A synthesis of agronomic results of SYGAP II in Indonesia. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 500-02. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [5 ref]
• ***Summary:*** SYGAP is the soybean yield gap analysis; it was conducted in three locations in Indonesia. The objectives were to identify and alleviate yield constraints and to develop a package of improved practices–which is described.

In Indonesia, about 70% of the soybeans are used for human consumption, mainly in the forms of tempeh, tofu, soy sauce, and tauco (fermented whole soybeans). Address: Bogor Research Inst. for Food Crops, Tentara Pelajar 3A, Bogor, Indonesia.

11559. Tajimaya Shokuhin K.K. 1997. [Progressive Tajimaya]. Hyogo prefecture, Japan. 22 p. 30 cm. [Jap; eng]
• ***Summary:*** This elegant color catalog, with striking graphic

© Copyright Soyinfo Center 2013

design and many photos, written entirely in Japanese (except for the cover and the page tabs and headings) describes the company and its products. It was picked up at FoodEx (a major food exposition in Japan) on 12 March 1997 and sent to Soyfoods Center, On the cover is a naked Japanese mother holding a naked baby in her arms to cover her breasts; over one arm is draped a white towel. The subtitle reads (in English): "We create new diet and value through our high-proteins & low-calorie soy processed foods, by positively and steadily pursuing the future of various possibilities."

Contents: What's new–The soybean story. Low calorie & high protein. Production. Distribution. Product branch. Research & development. Challenging spirits. For the next one. A note from the president. Company profile and chronology. Sales from 1987 (27.2–units not given) to 1996 (50.4).

Accompanying this main catalog are the following smaller (but equally elegant) full-color brochures and leaflets: (1) Progressive Tajimaya. 8-panel brochure. Shows color photos of all the company's soy products in packages on 4 pages: Agé (22 types). Tofu (22 types, including those fortified with vitamin E, beta-carotene, or yuzu, plus organic tofu, nigari tofu, grilled tofu, Hiya-yakko tofu). Okara (*unohana*). Tachikawa tofu (plain or with green tea added, in the form of noodles; The word "Tachikawa" is composed of two characters meaning waterfall + river). Tofurich.

(2) Frozen Tofu (4-page brochure). Includes color photos of the inside of the company's factory, and prepared tofu dishes. (3) Single-sided color leaflets, each with a large color photo and the following titles: Frozen momen. Frozen yaki-tofu (Grilled tofu). Tachikawa-dofu. Tezukuri-age. Warabi mochi-fu tofu shokuhin. Tofu pudding. Tofu bread. Address: Ikejiri 7-139, Itami-shi, Hyogo prefecture, Japan. Phone: (0727)-77-3939.

11560. Vavilov, Nicolay Ivanovich. 1997. Five continents. Translated from the Russian by Doris Löve. Rome, Italy: International Plant Genetic Resources Inst. xliii + 198 p. Illust. No index. 24 cm. [10 ref. Eng]

• ***Summary:*** This book, about the life and work of N.I. Vavilov (1887-1943), was published long after his death as a political prisoner. Unfortunately, the book has no index. The excellent introductory chapter titled "The Russian scientist Nicolay Vavilov," by Seymon Reznik and Yuri Vavilov (p. xvii-xxix) is a frank biography, including details of his conflict with arch-enemy Trofim Lysenko, his fall into disgrace by 1935, his arrest by the KGB on 7 Aug. 1940, and his death in prison in 1943.

In "The basic principle behind the expeditions" (p. 1-4) Vavilov notes that the seven basic geographical centers of origin, which cover only about 7% of the world's land area, are: (1) The tropical centre, in tropical India, IndoChina, and southern China. (2) The East Asiatic Centre, includes the central and western parts of China, Korea, Japan. and the major portion of Taiwan. (3) The Southwest Asiatic Centre. (4) The Mediterranean Centre, along the coast of the Mediterranean. (5) The Abyssinian Centre. (6) The Central American Centre, and (7) The Andean Centre. Maps show Vavilov's travels in each center. These centers were first outlined in his book *Centres of Origin of Cultivated Plants* (1926, Leningrad).

In the chapter titled "Expedition to Japan" (p. 58-61) he expresses his surprise at "the endless variety of plant types" including the "various preparations of soya beans and 'adzuki' beans (*Vigna angularis* [Willd. Ohwi & H. Obashi])." "There is perhaps no other country where the love of trees and flowers is so strongly expressed as in Japan. The care of flowers and plants has become a national characteristic of this country." "There is not a single weed in the fields or in vegetable gardens." In Japan he found "a multitude of dishes made of soyabeans (substituting for fat and including a cheese called 'tofu,' a soya product)..." He was impressed by the work of Ekiken Kaihara [Kaibara; 1630-1714]. A philosopher, man of letters, physician, geographer, historian, agronomist and naturalist, he wrote 270 volumes on 60 different themes, including a 5-volume work on garden plants and a 3-volume work on vegetable plants. In 1638 two gardens of pharmaceutical plants were established in Edo (Tokyo) and in 1720 another one in Komada.

In the chapter titled "Expedition in Korea" (p. 69-71) he again mentioned soyabeans and 'adzuki beans,' and noted: "Dozens of different foods are made from soyabeans, including the special cheese, tofu. Sprouts of soyabeans are rich in vitamins and are available in large amounts in all markets in Japan. Soya is used for seasoning meat and rice and of course, it produces an excellent oil, used for making margarine and for technical purposes. Although it is a crop exceptionally well suited to a monsoon climate, the soyabean has become the most important technical crop worldwide during the last couple of decades. Owing to the effect of European and American demands an enormous area has become planted to soyabeans. During the past two decades the plantations of soya in Manchuria have reached 7 million hectares and the world-wide area has exceeded 15 million hectares. It is difficult to imagine a more flexible plant in respect of the variation of both biological and other characteristics. The varieties of soyabeans can be counted by the thousands. The present American industry has introduced even more variety."

In Seoul, Vavilov unexpectedly met two colleagues, P.H. Dorsett and William Morse, known to him from Washington, DC. "Dr. Morse is the co-author of a well-known monograph on soyabeans, written by him and Dr. Charles Piper, another plant introducer from Vancouver, Canada. Morse was fanatically devoted to soyabeans throughout his life. In the course of some years, Piper studied in China, Korea, Manchuria and Japan on behalf of the U.S. Department of

© Copyright Soyinfo Center 2013

Agriculture, investigating crops of soyabeans, collecting seed material and forwarding it to the USA." Also discusses the agricultural explorations of Frank Meyer and Mark Carleton. Swingle "organized an extensive utilization of Chinese research, including the building up of a valuable library of Chinese literature and a whole staff of translators, who revealed the treasures of ancient Chinese agronomical science. The results of this endeavour have become obvious during the past couple of years. The similarity between the conditions of extensive parts of the territories of the USA and China make possible a wide utilization of soyabean crops, which during the last couple of years have amounted to as much as 1.5 million hectares."

"Quietly and modestly, Morse, who traveled with his family, wife and daughter, went from one city to another while staying in the best hotels."

Note: Soyfoods Center has a copy of the "Translator's Foreword" (p. xxx-xxxvi) which was typeset but later deleted from the book. Only the last two paragraphs were used. It tells the real story of Vavilov's work, his downfall at the hands of Trofim Denisovich Lysenko, several moving petitions by Vavilov asking that he be able to finish writing unfinished books, and details of his case history and death. Address: Head, All-Union Inst. of Plant Industry (VIR), Russian SSR.

11561. Mukherjee, Anjali; Singh, Kanaka. 1998. Add years to your life–starting 1998. *Times of India* (*The*) (*Bombay*). Jan. 8. p. A4.
• ***Summary:*** Studies show that vegetarians are healthier and live longer than meat eaters; they have lower blood pressure and cholesterol levels, plus lower rates of heart attacks and cancer.

Eat more foods made from soybeans. That may be why the Japanese outlive the Americans. The soybean contains an arsenal of antidisease agents such as antioxidants, lecithin, phenols, genistein and phytates. Genistein has anti-cancer activity. "Soya foods boost the 'good' cholesterol and improve the HDL / LDL ratio." Soya foods and soya milk are also good sources of calcium. To derive the full benefit of soyabeans, it is best to eat "soya foods" every day. To incorporate them into your daily diet: (1) When making chappatis [chapatis], mix wheat flour with soya flour in a 2:1 proportion. This will ensure a steady intake of soya. (2) Use tofu in place of paneer whenever possible. Tofu has more antioxidant punch than casein, the protein in milk. Animal studies have shown that those fed soyabeans had a life span 10-15% longer than those fed casein. (3) Used roasted soyabeans [soynuts] as a tasty snack food. (4) Use textured soya protein products like Nutrinuggets or Nutrella, which come in granule or chunk form, together with mushrooms or green peas to vegetarian chilies or vegetable pulao

pilaf. (5) Whole dry soybeans can be cooked like other pulses to make rajhma / rajma [a north Indian vegetarian dish consisting of red kidney beans in a thick curry and lots of Indian whole spices] or channa / chana masala; serve with rice or chappatis [chapatis].

11562. *SoyaScan Notes.* 1998. Soya Clips receives 259 clips in August 1997 and 111 clips in September 1997 (Overview). Jan. 13. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is an average of 185 clips per month for these two months. From Aug. 1 to Dec. 31, 1997, Soya Clips received 581 clips; this is an average of 116.2 clips per month for these 5 months, or the equivalent of 1,394 clips for the year. The specifications are narrower now than they were in the late 1980s or 1990. These clips were received from Luce Clipping service. They were sent to the Soyfoods Association (Michelle Edwards) about 7-8 times per month.

By comparison: Soya Clips received 1,547 clips in 1990, down from 2,105 clips in 1989, 1,766 clips in 1988, 1,587 clips in 1987, and 1,586 clips in 1986.

11563. Lang, Susan. 1998. Extraterrestrial food is cooking in lab. *Cornell Chronicle* (*Ithaca, New York*). Jan. 15. p. 7.
• ***Summary:*** "To help NASA plan the cuisine for future lunar and Martian space colonies, and Cornell chef, nutritionist, food engineer and vegetarian cooking teacher are collaborating to develop and test tasty, nutritious and economical recipes that astronauts can prepare from a limited set of 15 to 30 crops to be grown in future space habitats. Wheat and potatoes are the staples to be complemented with rice, soy and peanuts, salad crops and fresh herbs, all to be grown hydroponically in artificially lit, temperature-controlled space farms.

"The fare now being tested at Cornell by weekly taste-testing panels composed of students, faculty and staff includes seitan tacos with lettuce and tomato sprinkled with earthmade cheese, carrot 'drumsticks,' tempeh sloppy Joes, basil pesto with soy nuts, pasta primavera and tofu cheesecake.

"'Our goal is to develop a database of food-processing information and a menu of at least 100 primarily vegetarian recipes of familiar and new menu items based on crops raised in a bioregenerative life support system,' said Jean Hunter, the food and biological engineer and associate professor of agricultural and biological engineering at Cornell who is heading up the project." Also working on the project are David Levitsky (professor of nutritional sciences and psychology), Rupert Spies (a chef and lecturer in food and beverage management in the Cornell School of Hotel Administration), and Adriana Rovers (formerly a caterer and a teacher of vegetarian cooking who prepares the recipes and runs the tasting panels). The researchers launched the project 6 months ago, with a $507,000 three-year grant from NASA. A photo shows Jean Hunter with some hydroponically grown plants for the project.

Talk with Jean Hunter. 1998. Jan. 22. A news release

© Copyright Soyinfo Center 2013

was issued (which Jean sent) and this story got picked up by the Microsoft News Service, MSNBC Web News, and by Yahoo Web News; both appeared on the Web. The *Cornell Chronicle* article, with photos in color, was also put on the Web at http://www.news. cornell.edu/Chronicles /1.15.98/NASAfood.html. A recent experiment included a 91-day closed-chamber study with 4 crew members at Johnson Space Center. It was checking an advanced life support system which included some air regeneration by plants. For ten days they fed the crew of four vegan foods–including tempeh, tofu, and many other soyfoods. A copy of the menu is available. The crew said it was so satisfying to have food that looked, tasted, and smelled fresh. "It made all the difference." NASA needs to develop meals that can be created from foods grown in space because the cost of transporting food from Earth on long missions is "astronomical."

Note: It costs roughly $1,000 to $10,000 to transport one pound of anything to the moon.

11564. Paolucci, Danny. 1998. Experiments with vacuum-packaging tofu Swan Foods Corp. in Miami, Florida. Suspicions of spying by Premmies from Swan Gardens (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Danny said in an interview in Nov. 1992 that Mary Pung and Robert Brooks, founders and owners of Swan Foods, were both doing a lot of new product R&D, and playing with a clam-jaw-type vacuum packager.

Swan Foods water-packed its tofu. The work with a vacuum-packaging machine probably never got past the experimental stage. He is quite sure that they had a chamber-type vacuum packaging machine at one end of the tofu factory. He is very sure they were experimenting with this machine, but he is not sure that they used it to pack any of their tofu. Later, after he started Sunshine Soy Company Inc. in Miami, Danny vacuum packed his tofu and he is sure that he got the idea from Swan Foods. Even if we could locate Mary Pung (who had not changed her maiden name, Pung, by 1983), she would probably not remember the answer to this question. "Her brain is probably gone."

Dick McIntyre, owner of Swan Gardens in Miami, may have purchased Swan Foods' vacuum-pack machine. Dick was always very a unsociable, private and non-communicative person. Dick was a Premmie–a disciple of the young Indian Guru Maraji. Danny strongly suspects that he hired Premmies to work in Danny's factory. Then they would go to *satsang* and tell him what was happening in Danny's factory. "Basically, corporate spies."

Danny was not a disciple of Guru Maraji; he has done Hatha Yoga all his life and began to practice Zen meditation at age 18; he still practices Yoga and Zen regularly. He came from a very conscious family. His stepfather was from England and his mother from Austria. In the 1950s, they ate yogurt and whole-wheat toast, and they had an Acme juicer on the kitchen counter–for making carrot juice.

Others who might know about Swan Foods: (1) Bernie Shapiro, who ran the I Ching, an spiritual/alternative bookstore in Miami and "knew everyone." (2) Jimmy Wilks, who was a founder of Swan Foods, who later worked at Popeye's Health Foods in Miami, and might still work there. (3) Chik Shank, who published *Alternatives* magazine in Miami; he still lives in Miami and is still involved with publishing. Address: 2219 S.W. 59th Ave., Miami, Florida 33155. Phone: 305-266-0830.

11565. Boyle, Alan. 1998. Recipes for beyond a small planet: Researchers help NASA develop menus for moon, Mars (Web article). *MSNBC Web News.* Jan. 19.

• ***Summary:*** This article, based on a news release from Cornell University, appeared on the Web at http://www.msnbc.com/news. It begins: "Carrot drumsticks? Soybean sloppy Joes? Tofu cheesecake? It sounds like a vegetarian's dream and it could be an astronaut's reality on Mars or the moon, if food experts from Cornell University have their way. The Cornell team is developing recipes for long-duration spaceflights as part of a program funded by NASA." Address: MSNBC.

11566. Messina, Mark J. 1998. Soy phytoestrogen pills–The biggest soy-related story of the year (Interview). *SoyaScan Notes.* Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Phytoestrogens extracted from soybeans, made by ADM and sold in pill form, went on the market in the USA in about November 1997. The first company to sell them was the Life Extension Institute in Wilton Manors, Florida. They call the product Mega Soy Extract; in their catalog it is listed under the category Soy Supplements. They sell the capsules in two sizes: 135 mg and 700 mg. ADM is not mentioned in the catalog, but they have their own ADM brand name for the product: Novasoy. Two research scientists to talk to at ADM are Eric Gugger (phone 1-800-637-5850 X-4380) and Rasik Daftary. Mark has the highest regard for these two men as scientists. They are dedicated to the facts as shown by scientific research.

Central Soya is now also making and selling the same kind of soy phytoestrogen pills, but ADM's were on the market first. What would happen if a person (such as a teenage girl wanting larger breasts) took 60 of these 135 mg pills at once? Mark has no idea; you'd have to know more about the absorption and blood levels. Many studies now suggest that a person needs to consume 70 to 100 mg/day of these soy isoflavones (equivalent to about 2 servings of tofu or 2 cups of soymilk) to derive the benefits. This is clearly much more than most Americans would be willing to consume day after day. So the supplements make it much easier for people to get their isoflavones. The average intake

© Copyright Soyinfo Center 2013

of these isoflavones among people in Asia is actually quite low, probably about 15-25 mg/day; this is much lower than was formerly thought to be the case, yet epidemiologic studies suggest that even these low levels confer benefits.

Solid studies increasingly show that these isoflavones give benefits in the areas of bone health (osteoporosis), reduced risk of heart disease, and reduction of menopausal symptoms. The benefits appear to be dose related–though there may be a threshold. There seem to be more benefits to women than to men, and little or no danger of any harm if taken at the recommended doses. Though the results are not yet definitive, there may be reduced prostate cancer risk for men. Some studies have also looked at the individual isoflavones. So Mark believes that many Americans will want to try these pills. They may take their place on the dining room table next to vitamins, minerals, and other supplements.

The area of greatest controversy concerns the effect of these isoflavones on breast cancer. Mark thinks it is very unlikely that they would increase the risk of breast cancer–even though some studies do seem to indicate that, and therefore further research is needed. Many difficult ethical questions are raised by how information in this area is presented to consumers.

Concerning soy and bone health, a 2-year study of monkeys without ovaries found that soy did not favorably affect bone health, even though estrogen did. That was one of the best studies conducted to date, yet it is never mentioned at any of the soy meetings. Mark is very concerned that there is a real bias in the way this information is being presented. This is such a "hot" area right now. There are so many fortunes to be made, so many researchers with patents, and so many trying to establish their careers on the basis of soy right now. Clinics all over the USA are now doing studies with isoflavones and with soy. Discussion groups on soy and breast cancer are taking place. "This is as hot as it gets."

A big-name researcher in this field, with a reputation in nutrition research going back 20 years, recently proposed the "soy protein hypothesis" in a scientific paper. It had to do with the possibly favorable effects of protein on kidney function, with no acknowledgment of previous research in this area. But this idea/hypothesis was out 4-6 years ago, and a summary in *The Simple Soybean and Your Health* (published April 1994) concluded that soy protein favorably affected kidney function. This appears to be but one of many examples where researchers are trying to establish their niche in soy and ride it to fame–and sometimes fortune. Now in nearly every major university in America, there is at least one researcher who is seriously interested in soy. That is really good for the field, and will help its progress.

The biggest event of 1997 is ADM starting to make soy isoflavone pills and thus taking soy isoflavones to the next level. These isoflavone pills are even sold on TV, in home shopping clubs–an amazing development. Many new books are being written on this subject by well-known authors, and soy plays a leading role. "There is a soy bandwagon here and everyone is jumping on it. The pills will take soy to the next level because there is more money to be made, and they are accessible to everyone. Now anyone can get the benefits (whatever they may turn out to be) without having to eat tofu or drink soymilk. Even with a bland soy powder, it was difficult for most people to consume enough of it (60 gm/day) to get benefits. Now that the soy isoflavones are available as pills, many researchers will now do clinical studies with them. Even now, there are studies underway all over the country. Three years ago, few people were aware of soy isoflavones. Now the research is almost one step removed from mainstream medicine. Virtually all researches involved with progressive health and nutrition, or with women's health, known about soy and phytoestrogens. It's just incredible. Being able to give out two placebo pills and two 'soy pills' a day makes it much easier to conduct controlled studies." People used to think of soy as strongly connected with tofu. Then they began to think of the isoflavones separately and independently. Isoflavones are a type of phytoestrogens, but when the word "phytoestrogens" began to replace the word "isoflavones" a quantum leap took place. Every physician knows what estrogens are, and the word has a power that resonates. For example, Mark recently gave a talk last year at a meeting of the American Dietetic Association (ADA). He titled it: "Soybean phytoestrogens: Possible alternatives to hormone replacement therapy."

So, in the field of soy, ADM and their soy pills is the big story of late 1997 and early 1998. ADM is a huge, respected company, and they plan strong promotion for these soy pills. Granted there were soy isoflavone pills available last year, but because they were made from the ground sprouts (hypocotyls) of soybeans, they had very low levels of genistein and they weren't nearly as potent as ADM's pills. Moreover, ADM is learning ways of processing soybeans to further concentrate the isoflavones, which will make the pills even more potent. Mark believes that the "halo effect" of these soy pills will soon benefit the whole category of soyfoods as well.

Mark has no plans to take these pills; he gets plenty of isoflavones from his natural diet, which contains lots of soymilk, plus some tofu, and other soyfoods.

An Australian newspaper reported that Protein Technologies International (PTI) recently paid $15-20 million to Novagen, an Australian pharmaceutical company that will be marketing Promensil (made of isoflavones from red clover). Note: As of 3 Feb. 1998 Novagen is not listed in the text of any article in the *Wall Street Journal* since March 1984. It is not clear to Mark exactly what PTI got for this large amount of money (perhaps patent right to claims about a product containing isoflavones). This last weekend, PTI helped to sponsor a symposium at UCLA, attended by only about 45 people, but with good press coverage that made the

© Copyright Soyinfo Center 2013

wire services. The point is, a lot of money is being spent on this subject. Whereas ADM does not live or die by its new isoflavone business, some smaller companies do.

The proceedings of the Brussels symposium have been in the hands of editors at the *American Journal of Clinical Nutrition* since Sept. 1997; they have been reviewed, the comments have gone out, but they will not be published before Sept. 1998. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

11567. Early soyfoods in China–Chronological (SoyaScan database search report). 1998. 12 p. incl. index. Jan. 23. Unpublished manuscript. [20 ref]
• ***Summary:*** This carefully customized database search was conducted for Mark Messina to document the fact that soyfoods have been widely consumed for a long time in China. Among the 20 records are the earliest Chinese-language and English-language documents that mention or discuss soyfoods in China, with emphasis on soy sauce (15 records), tofu (12 records), and Chinese-style miso (chiang, 6 records). Also includes the earliest English-language records that give significant industry or market statistics on soy sauce or tofu in China.

11568. Early soyfoods in Japan–Chronological (SoyaScan database search report). 1998. 36 p. incl. index. Jan. 23. Unpublished manuscript. [20 ref]
• ***Summary:*** This carefully customized database search was conducted for Mark Messina to document the fact that soyfoods have been widely consumed for a long time in Japan. Among the 47 records are the earliest Japanese-language and English-language documents that mention or discuss soyfoods in Japan, with emphasis on tofu (27 records), soy sauce (26 records), miso (20 records), and soymilk (8 records). Also includes the earliest English-language records that give significant industry or market statistics on tofu, miso, or soy sauce in Japan.

11569. Schillinger, John A. 1998. History of Asgrow Seed Co. and of his work with the company: 1994 to present (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1994 Upjohn decided to sell Asgrow Seed Company to Empresas La Moderna (ELM), a multi-national agricultural company based out of Monterey, Mexico.

In 1995 the fault-line between the vegetable and agronomic sides of Asgrow, which had been growing ever wider since 1968, finally split, as ELM divided Asgrow into two separate divisions. The vegetable division, which was still larger in terms of total sales than the agronomic division, was merged with Petoseed and Ball Seed in 1995 to form Seminis Vegetable Seeds (still owned by ELM). The agronomic division of Asgrow was sold to Monsanto, the deal being finalized on 3 Feb. 1997.

Question: A recent survey conducted by Doane Marketing Service contains a ranking of U.S. soybean seed companies by quantity of seed sold (not value/dollars) The top two companies are: (1) Pioneer Hi-Bred, which has a little over 19% of the total market share, and (2) Asgrow (not including Hartz), which has just under 12% of the total market share. Do these figures seem accurate and fair? Schillinger: Hartz is a part of Asgrow, with offices in the same building in Des Moines, Iowa. If Hartz's numbers were included, Asgrow's total would be significantly higher. These figures also do not include seed saved by the farmer (saveseed), and Asgrow's surveys show that farmers save more Asgrow soybean seed than any other variety. So if saveseed was included, Asgrow's total would be even larger. There is a big difference between planted acres and newly purchased seed. If you look at planted acres, Asgrow has about 19.4% of the total. While this may still be somewhat less than Pioneer's total, the gap is smaller.

During the last 3 years, Asgrow's sales have skyrocketed. In the year just passed (calendar year 1997), Asgrow sold almost four times as many Roundup Ready soybean seeds as the previous year. Before January 1, 1998, Asgrow had already sold all of its soybean seed for the coming 1998 crop year. John thinks that this year, Asgrow's volume of sold-seed will exceed Pioneer's for the first time.

Question: Do you believe that profitably will be the main determinant of what type or variety of soybeans farmers plant in the future? Schillinger: Yes. Question: Do you have figures showing that Asgrow's Roundup Ready soybeans are more profitable to farmers now than non-Roundup Ready soybeans? Schillinger: Yes, we do have data and our researchers and our sales staff could provide it. There are two sets of data. When Roundup Ready soybeans are planted using our system with Roundup herbicide, there is a definite profit advantage to the Roundup Ready soybeans. But if you treat the Roundup Ready soybean as if it were an ordinary soybeans, the advantage is not nearly as great–but it is still there. Our research shows that there is long-term stunting of soybean plants from other popular herbicides such as Pursuit, but none from Roundup. When you spray soybean plants, even during stressful times, there is no effect on the plant growth and development. If our Roundup Ready soybeans were not the most profitable, why are farmers buying them faster than we can supply them? "Our biggest challenge right now is to tell our customers that we are very sorry we did not have enough supply for them. The orders came in so fast that we sold and oversold, particularly in areas like Illinois and Indiana. It was embarrassing. So were are instituting programs like going back to the farmers and saying 'You order right now what you want for next year, and we'll guarantee delivery.' The market clearly seems to be saying that there is a very high regard for Asgrow's Roundup Ready soybeans.

"Asgrow has an advantage and a lead because we were

© Copyright Soyinfo Center 2013

the first company to get the gene that protects soybeans from Roundup herbicide. That's because we worked with Monsanto in a collaborative project. In 1989-90 we were first able to shoot Roundup gene into our soybean variety 5403; in 1991 we began testing and growing out. So we were able to use a different protocol from other companies that did not get this gene until 2 or 3 years later. We just went through the normal variety development process. We didn't backcross into old varieties that would be outdated by the time they went to market. Rather, we proceeded with what we call 'forward crossing' which is crossing into other elite material and then selecting for yield and performance. Our first commercial soybean seed product containing the Roundup gene was on the market in 1996.

Question: In food uses, Roundup Ready soybeans contain no consumer health benefits. Some consumers are reluctant to consume these soybeans in foods. What is the main obstacle that needs to be overcome before these soybeans will be accepted. Schillinger: "I think we need to develop a strong message, based on science, that consumers and advocate groups can understand. We have to develop an education and communication system that will reveal the truth of what these product have and don't have. We need to answer questions about possible threats to humans as well as to the environment. I have four grandchildren that I love dearly. People ask me, 'Would you feed your grandchildren these soybeans?' I have no qualms at all; I would not hesitate to do that. I've eaten them since 1991. But still we have to communicate. I think that Greenpeace and others have communicated through psychological warfare some misunderstandings that are going to be difficult to overcome. But that's one of the key things we need to do. One consumer benefit is that we can produce soybeans cheaper. Our company supplies a major share of the tofu soybeans for Japan–roughly a million bushels a year to Japan just for making tofu. We grow the identity preserved soybeans containing the Roundup gene under contract, then clean them and sell them to Japan–not to farms but directly into the food system.

Roundup Ready soybeans have already played a major role in protecting the environment by enabling farmers to move to conservation tillage practices. These soybeans plus Roundup give them the tools they have needed to produce soybeans with a lot of crop residue on their land; this holds the soil and water, leads to less runoff. Roundup is probably the safest herbicide, because as soon as it hits the soil, it breaks down (decomposes) instantly into some very safe and naturally occurring compounds; it doesn't even get into the soil. "You could even drink it and it wouldn't hurt you. I wouldn't recommend it, but you can." The plant (weed) enzyme which the product binds to is not even present in any humans or animals.

Two years ago, Asgrow started to introduce consumer nutritional / health benefits into Roundup Ready soybeans–such high oleic acid. These soybeans should be on the market in 4-5 years. Address: Co-President, Asgrow Seed Co., 4140 114th St., Des Moines, Iowa 50322. Phone: 515-331-7111.

11570. Weber, Thomas E. 1998. Takeout food: NASA is seeking recipes that travel really well. *Wall Street Journal.* Jan. 27. p. B1.
• ***Summary:*** The article begins: "That's one small step for man. One gigantic leap for tofu." A group at Cornell University (Ithaca, New York) is working under a NASA grant to develop meals that can be prepared almost exclusively from vegetables that grow well in space. For long space missions, like a flight to Mars, spacefarers may not be able to carry enough food to last the trip, so they will need to grow and cook their own. Trying to produce meat during the mission is too inefficient. "That has set off a space race to develop vegetarian meals that astronauts can stomach. The researchers believe they have found the right stuff" including tempeh, "a sort of super-tofu made from soybeans, and seitan, a gluten extract from wheat." Jean Hunter, a Cornell professor heading the project, says that Creamed tempeh, cooked in soy-milk sauce, "takes a little getting used to." Includes a recipe for Sloppy Joe Tempeh. Address: Staff reporter.

11571. Ota, Eileen. 1998. Update on Ota Family Tofu in Portland, Oregon (Interview). *SoyaScan Notes.* Jan. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ota Family Tofu has tofu making equipment that Eileen would like to sell; it has hardly been used. In about 1981 the company moved to a new location, 812 S.E. Stark St.; it had more than twice as many square feet as their previous location. When they moved Ko went to a soy conference and met Eddie Okita, who was selling tofu manufacturing equipment. Ko decided to buy new equipment. Eileen objected at the time, suggesting that he try it before he buys it–to be sure you get the product that you want. Ko said "No." He just wanted to buy it. Coincidentally, at the same time, a competitor (Dae Han Tofu) began making tofu in Portland. Before that, there was a small tofu maker in Salem that didn't last very long. Dae Han was planning to deliver their tofu, which Ota had never had to do before. So Ota lost a large portion of the Portland tofu market to Dae Han.

Ko used the new equipment for a while, but then it became apparent that the tofu and the agé were not coming out the same. He had less control over the more automated equipment. Their customers noticed the difference and did not like the change. Moreover, Ota no longer had the volume to support the new equipment. So they went back to their old machines.

One of the early tofu-makers was Saizo Ohta (not Seizo), but he was not one of the founders. Two brothers apparently started the company. At the time of the "Spanish

© Copyright Soyinfo Center 2013

flu" epidemic in 1918-19, one or both of them became ill and the business went to Saizo Ota, Matsuno Ota's father. Matsuno was an only child, and in those days there was the tradition of sending Japanese children in America back to Japan for education. So when she was 4-5 years old she went to Japan. She did not return to America until after World War II. During the war her father, Saizo, had died. Matsuno returned to the USA in the early 1950s. The Grandmother, Shina, had a stroke after they arrived in Portland. At that point, in about 1956-57, Ko's father (Matsuno's husband) took over the tofu business. Ko's father was trained as a medical technician in Japan, but he couldn't get a job in the USA because his certification didn't transfer. So he worked for a while as a janitor and then spent a lot of time helping the grandmother, Shina.

After Ota Tofu moved to its present location, there was a huge influx of Vietnamese people who wanted soymilk, so the company started making it.

Shurtleff tells Eileen of an early listing for Ota Tofu in Portland in a 1922 Japanese-language directory of Japanese in the United States.

11572. Smith, Sieglinda. 1998. Looking for the Ota family in the Polk's Portland city directories (Interview). *SoyaScan Notes.* Jan. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the 1915 city directory she finds: Ota Roy, student in dentistry and pharmacology. Also an Ohta F baths at 86½ 5th St. North. In 1916 the student appears again. In 1917 there is Ohta E restaurant at 67 6th North 6th North (which is today's 217 NW 6th St., between Davis and Everett on 6th). Also in 1917 there is "Ota Saijo (Shina) lndy [laundry] 266 Davis." In the 1918 city directory she finds: Ota E restaurant, 67 6th St. North. She called the city archives, but they have only a 6 year retention rate for business licenses. Then she called the Business Bureau which had a record for the Ota Family Tofu Co., founded in 1972. However in 1971 the city directory had Ota Soybean Cake Co. at the same address where they are now, on Stark.

The addresses in Portland changed in 1930. For example Ota baths at 86½ 5th North, which is now 322 NW 5th.

In the book *Issei,* by Kazuo Ito (1973) is an undated business map of oldtown Portland, 1915-1941. Below the map is handwritten: "90 Japanese business, 1935." On that Map Ohta Manufacturing appears on 5th between Everett and Flanders–which is where the family places it.

Siegfried just noticed that the name is spelled Ohta and she has been checking in the Polk's city directories under Ota. So she looks again: Nothing for Ohta in 1918. In the 1935 city directory there is an Oha Saizo baker wholesale 322 NW 5th Ave. Address: Reference Librarian, Oregon History Center, 1200 SW Park Ave., Portland, Oregon. Phone: 503-306-5240.

11573. *Badische Bauern Zeitung* (*BBZ, Germany*). 1998. Gentechnik fuehrt zu wachsender Nachfrage bei Oeko-Sojabohnen [Genetic engineering leads to growing demand for organic, non-GE soybeans]. Jan. 31. No. 5. p. 24. [Ger]

• ***Summary:*** Soybean cultivation in the upper Rhine valley received a strong impulse from the Freiburg tofu manufacturer "Life-Food Taifun," which, through domestic production of organic, non-GE, eco-soybeans (*Oeko-Sojabohnen*), would like to be independent of soybean imports from America.

The background for this is the rejection of transgenic [genetically engineered] soybeans by tofu consumers and therefore a new market potential for organic soybeans. The price of eco-soybeans in 1997 ranged from about 100 German marks per quintal (100 kg) for delivered raw soybeans to 125 marks per 100 kg for processed / prepared (*aufbereitete*) (dried and cleaned) soybeans.

With respect to the project "Ecological Soybean Cultivation 1997" the company Life Food, which took 90 metric tons, accounted for 20 percent of the total soybean demand in Germany.

In Germany each year 3,000 to 4,000 metric tons (tonnes) of soybeans are made into foods each year. Of this amount, 800 to 900 tonnes are used to make tofu. The demand for eco-soybeans lies in the range of 1,200 tonnes per year.

The demand for organic soybeans (*Bio-Soja*) in Switzerland amounts to about 2,000 tonnes and is made up almost entirely of imports.

11574. Becker, Diane. 1998. Easy-to-digest soyfoods are her salvation. *Soybean Digest.* Jan. p. S-22.

• ***Summary:*** Soyfoods are helping people eat without a feeding tube. Some 100,000 people in the USA suffer from a disease that prevents them from properly utilizing the foods they eat. At one center using soyfoods, 40% of the intravenously fed patients admitted to the center each year are taken off feeding tubes a month into the program. They eat six small meals a day, including soy beverage and tofu. Says dietitian Linda Veglia, "We use tofu a lot."

11575. Dworkin, Norine. 1998. Eat to win: Whether you're a champion athlete or a weekend warrior, eating a vegetarian diet can give you what it takes. *Vegetarian Times.* Jan. p. 60-64.

• ***Summary:*** This article profiles 3 vegetarian athletes and the daily diet of each: Dave Scott, Debbie Lawrence (5K racewalk), Robert Banner (rides a horse in steeplechase) and Diana McCabe (distance runner). Dave Scott is an Ironman Triathlon world champion. That means he has traveled to Kailua-Kona, Hawaii, to compete against 1,500 of the world's toughest endurance athletes in a 2.4 mile ocean swim, followed by a 112-mile bike race and a 26.2 mile marathon. This Ironman Triathlon is considered the

© Copyright Soyinfo Center 2013

ultimate test of athletic endurance. Dave Scott has competed in the event eight times and won six. He retired after this last triathlon in Sept. 1997. Scott turned to a vegetarian diet in college, partly for fitness reasons and partly for reasons related to the environment and world hunger. He found that his body functioned better on a vegetarian diet. While training, his diet consists of 60% carbohydrates, 20% protein, and 20% fat. Every week Scott, who is 6 feet tall and weighs 164 lb, would bicycle 340 miles, run 65 miles, and swim 25,000 yards. Plus, he lifted weights and stretched every day. "But even now, with his careers as a motivational speaker, coach and sports consultant, his diet remains the same. 'A vegetarian diet is the healthiest decision a person can make for longevity reasons. It's also an athletic diet. A healthy diet means performance.'"

Scott's daily diet includes: Wake Up: 8 to 12 ounces of water (8 oz = 1 cup). Early morning: PowerBar or a piece of whole-grain toast with sesame spread and a piece of fruit. Once cup of orange juice. Breakfast: Whole-grain raisin toast, 64-68 oz of protein drink (blend 3 bananas, 1-1½ cups of berries or grapes, 3/4 cup soy yogurt, a few ice cubes, ½ cup orange juice, 28-34 gm whey protein powder, and water). Midmorning: PowerBar. Lunch: 5 corn tortillas filled with a mixture of scrambled semi-hard tofu, spicy black-bean spread, yogurt and salsa; 2 pieces of fruit; and water. etc. A large color photo shows Dave Scott on a bicycle.

Note: According to an article in *Outside* magazine (Feb. 1998, p. 40-47) Mark Allen won the Hawaii Ironman race six times before retiring in Oct. 1996, at age 38. Paula Newby-Fraser has won the Hawaii Ironman eight times.

11576. Golbitz, Peter. 1998. Tofu & soyfoods cookery: Delicious foods for a healthy life. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. (3 photos). Recipe index. General index. 21 cm.

• ***Summary:*** Contents: Preface and acknowledgments. The history of soyfoods. A closer look at soybeans. Soybeans and health: Introduction, malnutrition, cardiovascular disease, cancer, osteoporosis, menopause, more to come. Using soyfoods: Whole dry soybeans, tofu, soymilk, soy flour, textured soy protein, green vegetable soybeans, tempeh, miso, soy sauce, soy protein concentrate, soy protein isolates, natto, soybean oil, second generation soyfoods, meat alternatives, cheese alternatives, soy yogurt, nondairy frozen desserts, mayonnaise and dressings, instant soups and other dry mixes, margarine, lecithin, soynuts and soynut butter, soy sprouts, okara or soy pulp. Basic recipes. Breakfast. Bread. Salads & dressings. Soups & sandwiches. Main & side dishes. Desserts & drinks. Glossary. U.S. & Canadian soyfoods companies. Sources of information on soyfoods. Nutrients in soyfoods.

Contains 125 of Peter Golbitz's favorite recipes, selected from the works of some of "the world's leading soyfoods chefs." A list of these "leading vegetarian and soyfoods pioneers" (all of whose books have been published by The Book Publishing Co.) appears on the rear cover. Peter (born in 1952) lives with his wife, Sharyn Kingma, and son on a beautiful island off the coast of northern Maine. A color photo of the family appears on the rear cover. Twenty years ago (in 1978) Peter was "first introduced to tofu and the wonders of soyfoods." A photo of Peter with his book appears in the Book Publishing Catalog of Jan. 1999. Address: President and Founder, Soyatech, Inc., Bar Harbor, Maine. Phone: 207-288-4969.

11577. Greenberg, Patricia; Hartung, Helen Newton. 1998. The whole soy cookbook: 175 delicious, nutritious, easy-to-prepare recipes featuring tofu, tempeh, and various forms of nature's healthiest bean. New York, NY: Three Rivers Press (Crown Publishers / Random House). ix + 221 p. Illust. Index. 24 cm.

• ***Summary:*** Contents: Acknowledgments. Introduction. All about soy: Health benefits of soy (reduces the risk of heart disease, lowers the risk of breast cancer, eases the symptoms of menopause, protects against prostate cancer, prevents digestive disorders {when using whole soybeans or soy products containing high levels of fiber}, eliminates the problem of lactose intolerance, prevents the problems of milk allergy, beneficial in diabetic diets), cooking with soy products (meat analogs or meat substitutes {soy sausage, soy bacon, hamburgers and hot dogs}, miso, okara, soy cheese, soy milk, soy sour cream, soy yogurt, soy flour, whole soybeans, soybeans–green, soybeans–roasted, tempeh, textured vegetable protein (TVP), tofu & silken tofu; Soy-based foods (containing little or no protein): Egg replacers, soy margarine, soy mayonnaise, soybean oil, soy sauce) how to get optimum nutrition from soy (protein, carbohydrates, fat, cholesterol, fiber, sodium), nutrition information. Sample menus (for 3 meals a day, 7 days a week). Recipes: 1. Appetizers, dips, and spreads. 2. Salads and vegetables. 3. Brunch and breads. 4. Pizza and sandwiches. 5. Soups and stews. 6. Main dishes. 7. Pastas and grains. 8. Desserts.

This books contains almost 200 delicious and easy ways to add that essential 25 grams of soy protein to your diet. These recipes (each of which includes a nutritional analysis) are based on more than ten years of experience and experimenting (p. 2). Address: P.O. Box 10853, Beverly Hills, California 90213. Phone: (310) 474-4539.

11578. Holin, Fae. 1998. Adventures in soy consumption. *Soybean Digest.* Jan. p. S-22.

• ***Summary:*** The author, a farm wife, after researching a few stories on soyfoods, "started cooking with the stuff." Her husband equated the resulting meals with ancient Chinese torture. Now she sneaks a little soy into her recipes to make them more nutritious. "So they're not ready for tofu. So maybe if I snuck a little into a chocolate cake..."

11579. Jacobi, Dana. 1998. Over-the-top desserts: Cooking with soy. *Veggie Life* (*Concord, California*). Jan. p. 18, 20, 86.
• ***Summary:*** Includes recipes for: Tiramisu (with pureed silken tofu). Cran apple crumble (with soy milk). A luscious chocolate bread pudding (with soy milk).

11580. Lehnert, Dick. 1998. Specialty soybean varieties bring premiums for a price: Markets for food-grade varieties are growing. *Soybean Digest.* Jan. p. 64-65, 68.
• ***Summary:*** About 120,000 tons of specialty soybeans are now shipped from the USA to Japan each year–about 10% of the food-grade soybeans the Japanese buy. The soybeans must always be kept separate–"identity preserved." Growers typically get more dollars per bushel, but sometimes get fewer bushels per acre. The soybeans are made into foods such as tofu, tempeh, natto, or miso.

Kim Nill, deputy director for international marketing at the American Soybean Association, keeps tabs on the growing opportunities for specialty soybeans. He says seed companies are finding niche markets for food-grade soybeans.

Last year, DuPont introduced a variety that produces oil high in oleic acid (naturally lower in saturated fats and more heat stable without hydrogenation). DuPont is now working on a low stachyose bean. Pioneer Hi-Bred International grew 7,000 acres of low-linolenic oil beans for a market similar to that of high-oleic acid beans.

A photo shows a combine harvesting specialty soybeans that will be made into tofu.

11581. Mitchell, Paulette. 1998. The complete soy cookbook: More than 150 simple recipes for good health and great taste. New York, NY: Macmillan Publishing (A Simon & Schuster Macmillan Co.). xlix + 270 p. Illust. Index. 24 cm.
• ***Summary:*** A very attractive vegetarian cookbook. Each recipe is marked with one of three symbols: V = vegan, lo = lacto-ovo vegetarian, and l = lacto vegetarian. Contents: Preface: An ancient Asian secret isn't a secret anymore. Introduction: The whys (cancer, heart disease, osteoporosis, menopause, diabetes), the hows, soy food ingredients (soybeans, sweet beans {edamame}, tofu, tempeh, texturized vegetable protein {TVP}, soy milk, soy flour, soy oil, soy sauce), other soybean products (soybean sprouts, okara, miso, roasted soynuts, isolated soy protein {ISP}, dairy and meat analogs), a note on food allergies. Soy success: Stocking your refrigerator and pantry, using the recipes, kitchen equipment. 1. Appetizers. 2. Soups. 3. Salads. 4. Entrees. 5. Desserts. Appendix: Recipes listed by soy food categories (and within each category by recipe type–such as salads, soups, desserts): Whole soybeans (32 recipes), sweet beans (green vegetable soybeans, 7 recipes), tofu (96), frozen and thawed tofu (14, all entrées), pressed tofu (12), tempeh (14), textured vegetable protein (TVP, 4), soy milk (14). Note that tofu was used in by far the most recipes (96), followed by whole soybeans (32).

Paulette, who lives in Minneapolis, Minnesota, is a cooking instructor, restaurant consultant, and lecturer. Paulette is the author of many Macmillan books, including *The 15-Minute Vegetarian Gourmet, The 15-Minute Single Gourmet,* and *The Complete Book of Dressings.* This book is dedicated to her 14-year-old son, Brett. Address: Minneapolis, Minnesota. Phone: 612-941-7576.

11582. Morinaga Nutritional Foods, Inc. 1998. Mori-Nu Tofu and the dinner bell (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.
• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, were introduced in Jan. 1998. On the front is a color photo of three green peppers stuffed with tofu and vegetables, in a tomato sauce in a tureen–which is surrounded by uncut vegetables. In the background is a pack of Mori-Nu Firm Tofu. On a diagonal yellow band (snipe) in the lower right corner is written in black: "Delicious vegetarian recipe on back".

On the back is a recipe for Stuffed Cajun Bells, plus a nutritional analysis, facts about Mori-NU Tofu, and an offer for additional free recipes. Address: Torrance, California. Phone: 1-800-669-8638.

11583. Nash, Jonell. 1998. 7 super foods for women. *Essence* 28(9):108. Jan. *
• ***Summary:*** Foods discussed are kiwi fruit, brown rice, tofu, pinto beans, cabbage, sweet potato, and canned salmon. Includes recipes.

11584. Rella Good Cheese Co. 1998. Experts prefer TofuRella (Ad). *Natural Foods Merchandiser.* Nov. p. 58.
• ***Summary:*** This 8½ by 11 inch color ad (copyright 1997) shows the head of a white mouse looking out of a small hole in a tree. A package of Hickory Smoked TofuRella (with the label fully visible and easy to read) is hanging on a string from the hole. The text begins: "Try Rella's newest flavor: Hickory Smoked TofuRella. Smoked in a real cheese smokehouse in Wisconsin, it's as good as gouda. Since 1986, millions of folks have learned that the best cheese doesn't always come from cows! Made with organic tofu, the 6 flavors of TofuRella melt and taste like dairy cheese but with 2/3 less fat and no cholesterol or lactose." The company claims to be "the Number 1 alternative cheese brand around."

This ad also appeared in the Dec. 1997 the Jan. 1998 issues of this magazine. It also appeared in *Natural Health* in 1998 (Jan/Feb., p. 83). It also appeared in *Vegetarian Times* in the 1998 issues of Jan. (p. 81) and Feb. (inside rear cover). Address: Santa Rosa, California. Phone: 1-800-NJOY-NOW.

11585. *Soybean Digest.* 1998. New tofu line produces bigger soybeans. Jan. p. 91.
• ***Summary:*** NTCPR92-40 is a new soybean breeding line that was developed for tofu production by USDA's Agricultural Research Service (ARS) breeders. It produces soybean three times bigger than Pearl, an earlier tofu breeding line. It also has high protein and yields 5% less than conventional varieties. It is grown est in southeastern U.S. NTCPR92-40 (one of four new lines) produces clear-hilum soybeans, an important selling point.

11586. Wendelstein, Lisa Irmgard. 1998. Discover tofu: A heart to heart cookbook. West Hills, California: Magic Wings. 64 p. Jan. Illust. Index by food category. 22 cm.
• ***Summary:*** Contents: Dedication (in loving memory of her mother). Acknowledgements. Prologue. Miscellaneous. Dips and spreads. Soups. Salads. Salad dressings. Fillings. Sauces. Main dish. Desserts. Soy facts. Tips. At the bottom of each page is a quotation, from many different sources.

Talk with Lisa Wendelstein Meriweather. 1998. Feb. 12. She was born in Germany and this book contains some German-style tofu recipes. Often when she buys tofu at the store, or is waiting in line to pay for it, people ask her how she prepares it; those many questions were the inspiration for this book, which was self-published in Jan. 1998–even though the copyright date is 1997. Spiral bound. Address: 23926 Hamilin St., West Hills, California 91307. Phone: 818-347-7486.

11587. [Nasoya Foods, Inc.]. 1998. Nasoya Tofu & NewMenu TofuMate: Now the benefits of soy are so easy to enjoy (Ad). *Natural Health.* May/June. p. 64.
• ***Summary:*** A full-page color ad. Shows 4 types of Nasoya certified organic tofu: Firm, Soft, Extra Firm, and Silken. And six packages of TofuMate (spice blends for seasoning tofu). "Call Nasoya Foods at 800-229-TOFU or visit our web site at http://www.nasoya.com."

11588. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes.* Feb. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard renamed his company to Rella Good Cheese Co. in about Oct. 1997. Starting in Feb. of 1997, his company began enriching all of its cheese alternatives (except VeganRella) with a vitamin-mineral mix to make them nutritionally equal to dairy cheese. Consumers prefer enriched alternatives; it is not required.

To date, Richard's company has used its self-imposed "Green Tax" to give about $40,000 to environmental groups (EarthSave, Rainforest Action Network, etc.)–in addition to the more than $84,000 donated to the Second Harvest Food Bank. The largest single recipient group was EarthSave, but they are no longer a recipient. Right now the Hemp Industries Association is the major recipient among environmental groups. Remember that half the pesticides in the USA are used on cotton crops.

It is not very difficult to buy hemp seeds in the USA, but all of it is imported. Last year 1 million pounds was imported into the USA. You can order by phone from 1-800-buy-hemp. You can also buy it from bird stores, where it is used as bird feed. In addition, about 500,000 acres of feral / wild hemp (called "ditchweed") grow in the USA each year–mostly in the Midwest, but almost nobody harvests the seeds, since that is illegal. Since 1957 it has been illegal to cultivate hemp in the USA without a license. One group, the Research Inst. of Pharmaceutical Sciences, Univ. of Mississippi, has a license to grow hemp for the DEA (Drug Enforcement Administration) for the 7 patients the government gives 300 joints per month to.

The whole issue of decriminalizing drugs (including marijuana) is now being supported by a number of prominent public figures such as George Schultz (former Republican secretary of State), Milton Friedman (conservative Republican economist), a superior judge in Orange County, and the mayor of Baltimore, Maryland. They want to medicalize addiction. The Netherlands has decriminalized drugs and the results have been good.

So Richard's company imports its hemp seed from Germany; it is certified organic and dehulled. His is the first company to import dehulled seeds. Their flavor is delicious–like sunflower seeds. It is a complete protein and 65% of the protein is edestin–which is very high quality.

Trader Joe's now has its own brand of soy cheese, named Trader Joe's Soy Cheese in Jalapeño Jack flavor. For a while, Trader Joe's kicked TofuRella off their shelves. Then they had a big problem with a shipment of soy cheese from Soya Kaas, so they brought Richard's products back in–sheepishly.

The main ingredient in Richard's soy cheeses is actually spray-dried tofu. In Canada it must be shown as such on the label, but not in the United States. Richard has never been in the factory where his spray-dried tofu is made, but he has asked the owner point blank if they are coagulating it and they say they are. Nor does he have any statement in writing. They probably coagulate a large tank of soymilk with calcium sulfate (not GDL) to make it into thin silken tofu, then they slurry it and run it through a spray drier. At least three companies make tofu powder: Clofine Dairy & Food Products, Inc. (Linwood, New Jersey), SunRich Inc. (Hope, Minnesota), and Prosource, Inc. (Alexandria, Minnesota). Devansoy Farms, Inc. (Carroll, Iowa; Elmer Schettler, president) makes soymilk powder, but not tofu powder.

In May 1997 Richard incorporated a new company named The Hemp Corporation (THC). There is some fall-out from anti-help people in the industry.

In the near future, he plans to transfer all existing hemp products (HempRella, Hempeh Burger) to THC, which does not yet have any products on the market. Three new hemp

© Copyright Soyinfo Center 2013

products for 1998 will be the HempNut (dehulled hemp seeds), a chocolate, and an aseptic hemp milk (a world's first; tests show there will be no problems with trans fatty acids, which sometimes form at high temperatures). He was on the Jay Leno show 3 times, where they did skits with his foods–the cheese and the chocolate. This was related to the name change to Rella Good Cheese Co. which will license the "Rella" trademark.

Richard also plans to change his environmental policy pretty soon to "All profits go to charity."

Richard is now exporting some of his cheese alternatives to Italy. VeganRella has been made under license in England for several years.

Concerning the cheese alternatives market, in 1996 (according to data from SPINS, which covers most major natural foods distributors except for Tree of Life), Richard's company was the leader in units sold, Soya Kaas No. 1 in dollar sales, and Galaxy was a distant third in the natural foods market (but Galaxy's main market is supermarkets). There are only three major players in this market. Richard does not have the statistics for 1997. Richard expects White Wave to be dropping their soy cheese soon. Originally Richard made White Wave's soy cheese. Then there were problems, it went to litigation; arbitration awarded Richard $45,000 several years ago. Now Soya Kaas makes White Wave's soy cheese.

"The soul of the natural foods industry is being co-opted quickly." One example is Whole Foods Market (WFM). Richard is getting fed-up with the lack of integrity in the industry. WFM recently yanked all the Rellas from all their stores nationwide because sorbic acid (a completely harmless mold retardant/inhibitor) appears on the label. Richard's competitors use sorbic acid (or calcium propionate) as a mold retardant but do not list it on the label. Moreover, WFM carries other products that contain sorbic acid–which they say are "exempted." So WFM punishes the people who are being honest, and at the same time promotes itself as being socially responsible, ethical, members of Social Venture Network, the honest retailer of foods in America. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11589. *SoyaScan Notes.* 1998. Update on Nasoya (Interview). Feb. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nasoya finally closed its plant at Leominster about 3 weeks ago. Everything is now consolidated at Ayer, which is a much larger plant. All is going well. The tofu market is growing so rapidly that Nasoya can't even keep up–which creates a whole new set of problems. Chinese New Year (which is very big for Nasoya) just finished, and they have yet to get the second tofu production line up and running; it just arrived from Leominster. So only the one new line is presently making tofu. There are still some bugs to work out but overall things are going well. Address: Nasoya Foods, Inc., One New England Way, Ayer, Massachusetts 01432. Phone: 978-772-6880.

11590. Tanaka, Wendy. 1998. The joy of soy: Consumer awareness of health benefits boosts Bay company [Vitasoy]. *San Francisco Examiner.* Feb. 17. p. C-1, C-2.
• ***Summary:*** Vitasoy USA Inc. "has become a powerhouse in the fast-growing soy foods industry." Yvonne Lo, president and CEO, worked as a city planner in Toronto (Ontario, Canada) before investing $10,000 to start the U.S. arm of her father's business in 1979. Company sales have grown at double-digit rates for the past 5 years, reaching an estimated $43 million for fiscal 1997. Today, the company's soy milk is the No. 2 brand in the USA, controlling 25% of the $150 million market (which has been growing at 10% a year since 1990), according to Soyatech Inc. Edensoy is first with 38% of the market.

Soyatech statistics show that U.S. tofu market sales have grown 5% a year for the last 5 years to $125 million a year last year.

The acquisition several years ago of Azumaya and Nasoya, two of America's largest tofu manufacturers, has made Vitasoy America's largest producer of tofu. Now Vitasoy is hoping to further increase its sales of tofu and soymilk with its $13.5 million state-of-the-art plant in Ayer, Massachusetts. Vitasoy can now deliver soymilk to retailers in 7-10 days, compared with 45-60 days during the years prior to fall 1997 when all of its soymilk was imported from Hong Kong. Moreover, the new plant will eventually have be able to produce 50% more soymilk than the company had been able to import. The plant at Ayer will also produce Nasoya brand tofu. "Vitasoy USA already has a tofu factory in China Basin [actually 1575 Burke Ave., San Francisco] to produce the Azumaya brand." Vitasoy now sells its products in mainstream retail markets such as Safeway, Lucky, Andronico's and Walmart. The vice president for produce merchandising at Walmart Superstores says they have had very good success with Vitasoy's tofu.

A color photo shows Yvonne Lo holding packages of Azumaya tofu and Vitasoy Light vanilla soymilk in front of pallets of product stacked 10 feet high at the company's Brisbane warehouse. Address: Examiner staff.

considered a sacred food, reserved for the gods.

Note: Carlos says this was the first article about his company or work with tofu in Argentina. Address: Reporter, Argentina.

11592. Bishop, Jack. 1998. Deborah Madison: Mastering the new vegetarian cuisine. *Natural Health.* Jan/Feb. p. 106-09, 167-69.
• ***Summary:*** Deborah was the "founding chef at San Francisco's Greens [California], the most famous vegetarian restaurant in the country." Today she uses less butter, cheese, and cream in her cooking. Many of her recipes are dairy-free. The first recipe (p. 109) is for "Tofu in curry coconut sauce." A full-page color photo shows Deborah Madison, age 52; she now lives in Santa Fe, New Mexico. Address: 1416 S.E. 8th St., Portland, Oregon 97214. Phone: 503-796-0109.

11593. BUKO Agrar Koordination. 1998. Soja [Soya]. Stuttgart, Germany: Schmetterling Verlag. 106 p. Illust. 23 cm. Series: BUKO-Agrar-Dossier No. 19. [11 ref. Ger]
• ***Summary:*** This book consists of 13 chapters by various authors under four broad headings. The general themes are the craziness of the modern world's soybean industry and the search for local alternatives. Part I: Introduction. 1. Soya, a little seed of the mighty. 2. The world market for soya and grains. 3. The soybean–From cultivation to products. 4. What are livestock feeds? Part II: Soybean production and Brazil. 5. Help for development and agronomy. 6. Balsas–Capital of mechanized agriculture. 7. Soybean boom in northern Brazil.

Part III: Soya and genetic engineering. 8. Roundup Ready–Ready or not. 9. Transgenic oilseed plants as producers of raw materials. 10. Herbicide-resistant soybeans and ecological agriculture. Part IV: Soya in Germany. 11. Domestic soybean production for humans or animals?, by Mute Schimpf. 12. No pearls before swine. 13. Soybean production in Germany: The tofu maker "Taifun Naturkost" in southwest Germany goes in new directions, by Wolfgang Heck (founder of Taifun Naturkost in Freiburg). Glossary.

In Chapter 11, a table titled "Soybean production in Germany" (p. 90) shows the production by state and total from 1993 to 1997. In 1993 Baden-Wuerttemberg was the only state shown with 200 ha, total 580 ha. In 1997: Baden-Wuerttemberg 126 ha, Bayern 103 ha. Total: 270 ha. Source: *Geschaeftsbericht des Deutschen Soja-Foerderrings* (1997, Freiburg).

In Chapter 12, about Taifun, the company's motto is Ethics, Ecology, Economy, and Tradition. Its 35 workers produce 12 tons of tofu/week using whole soybeans. Their goal is to use only non-GE soybeans which have been grown in southern Germany. The company is working with local organic soybean farmers. Address: Nernstweg 32-34, D-22765 Hamburg, Germany. Phone: 040/39 25 26.

11594. Cuthbert, Lauren. 1998. Soyfood sales surge with more products and new customers: Research sparks soy craze. Soy popularity rising with boomers and their kids. *Natural Foods Merchandiser* 19(2):1, 63-64, 66. Feb.
• ***Summary:*** Second-hand statistics about the soyfoods industry and market. "Why the sudden increase craze? In a word, isoflavones." Address: Mill Valley, California.

11595. Indiana Soybean Board. 1998. Indiana soyfoods locator guide: A guide to finding soyfoods in the supermarket and health food store. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm.
• ***Summary:*** This is the first edition of this Guide. On the cover is a paper grocery bag resting on a bed of soybeans and chock full of foods: Veggie Slices (soy cheese), soynut butter, veggie burger, tofu, soymilk, soy flour, plus carrots, celery, and cooking oil. Contents: Food pyramid. Soyfoods descriptions–Meat the Bean: Introduction, green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate (isolated soy protein), soy protein–textured (textured soy protein, textured soy flour), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk–soy beverages, soynut butter, soynuts, soybean oil & products, sprouts–soy, tempeh, tofu & tofu products, whipped toppings–soy-based, yuba. A taste for health–Scientists are learning about soy's health benefits: Heart disease, osteoporosis, menopause, cancer, isoflavones. Soyfood icon chart. Soyfood facts & recipes: Meat alternatives, soybean oil, textured soy protein, whole soybeans, soy flour, soymilk, tofu. Composition and nutrient content of soyfoods. Soyfood conversion charts: description of one serving of soyfoods, guide to modifying recipes, soyfoods substitution chart. Mail order soyfood companies. Soyfoods Web site packed with information. Soy cookbooks. Soy resource books. 1-800-talksoy. Soyfoods market search map; where to find soyfoods in the supermarket (a two page color layout of a supermarket displaying where soyfoods are located). Soybeans... they're in almost everything. Finding soyfoods at the supermarket (store listings by county). Address: Indianapolis, Indiana 46205-1744. Phone: 1-800-275-7679.

11596. INTSOY. 1998. INTSOY course: Soybean processing and utilization. May 26 to June 19, 1998 (Brochure). Urbana, Illinois. 8 panels. 2 p. 22 x 10 cm each.
• ***Summary:*** Contents: Topics to be presented in the 1998 course: Basic processing concepts, nutrition and functionality, extrusion technology, oil extraction, soymilk and dairy analogs (soymilk, soy yogurt, soy ice cream), Oriental soybean foods (tofu, tempeh, etc.), animal feed applications, quality control, animal feed applications, overview of the soybean industry, economics and marketing

© Copyright Soyinfo Center 2013

of soy products. Cost and travel information (the course costs $4,300 plus about $1,600 for room, board, and other local living expenses. INTSOY is unable to offer scholarships).

The course time consists of 35% lectures, 45% hands-on exercises, and 20% industry visits. This is the 18th offering of the training program. Some 200 persons from 41 countries have attended the course. Danny Erickson is the training officer in charge. E-mail intsoy@uiuc.edu. Address: International Soybean Program, Univ. of Illinois, 35 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

11597. Lindsay, Shirley H.; Claywell, Lora G. 1998. Considering soy: Its estrogenic effects may protect women. *Lifelines* (*Association of Women's Health, Obstetrics and Neonatal Nurses*) (*Hagerstown, Maryland*) 2(1):41-44. Feb. [14 ref]

• ***Summary:*** Contents: Introduction. Understanding soy. Soy and menopause. Effects on osteoporosis. Soy & breast cancer. Effects of cholesterol. One sidebar, titled "A look at popular soy foods," gives a brief definition of miso, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), roasted soy flour, tempeh, tofu.

A second sidebar, titled "One woman's experience," states that author Shirley Lindsay has been a near vegetarian for two years, using soy protein as her main protein source, but also an occasional serving of fish. She consumes one 14-oz. glass of soymilk and 5-8 oz. of low-fat silken tofu daily. Her diet contains approximately 70 mg/day of isoflavones. She also eats a very low-fat diet that includes low-fat diary products, egg whites, fruits, vegetables, and olive oils. Lindsay also bakes with soy products and flax seed; the latter is rich in lignans.

"Lindsay has successfully eliminated 90 percent of her menopausal symptoms, as well as decreased her serum lipids. When she began the diet, she eliminated animal proteins except skim milk and egg whites, and within 10 days she noted a 90 percent decrease in hot flashes and night sweats. At one point, Lindsay only ate isolated soy protein powder supplements, but her menopausal symptoms returned because a significant amount of phytoestrogen is lost in the processing of powders." Address: 1. Asst. Prof. of Maternal-Newborn Nursing; 2. Director, Associate of Science in Nursing program. Both: Deaconess College of Nursing, St. Louis, Missouri.

11598. Messina, Mark. 1998. Estrogen, phytoestrogens and cognitive function: November 1-2, 1998, Four Seasons Olympic Seattle–Council Room, Seattle, Washington (Portfolio). Seattle, Washington: United Soybean Board. Four inserts.

• ***Summary:*** The four documents enclosed in this portfolio (which has no cover) are: (1) Conference program, including reception on Sunday evening, breakfast on Monday morning, opening remarks and introductions, seven papers, plus discussion and research recommendations. For each paper is given: Title, author, author's address, and presentation time (2 pages). (2) Contact information: Speakers and attendees (1 p. 12 people). (3) Speaker biographies (3 p.) (4) Speaker abstracts (5 p.).

The following seven papers were presented: Soybean phytoestrogens: An overview of health effects, by Mark Messina. Estrogen replacement therapy and cognition, by Madeline Murguia Rice. Estrogen, tofu consumption, and cognitive change in older Japanese American women: the kame project, by Madeline Murguia Rice. Tofu consumption and brain atrophy, by Lon White. Phytoestrogens in brain: analytical and cognitive studies, by Timothy J. Maher. Of rats and monkeys, the cognitive effects of soy phytoestrogens, by Jay R. Kaplan. Modulation of Alzheimer's disease markers by dietary soy phytoestrogens, by Helen Kim.

The key paper in this symposium, and the one which caused it to be convened, was by Lon White and colleagues. In the speaker abstracts it appears as follows: "Brain aging and midlife tofu consumption, by Lon White, Helen Petrovich, G. Webster Ross, Kamal Masaki, John Hardman, Daron Davis, James Nelson, and William Marksberv. In a population-based study of aging Japanese men in Hawaii, midlife tofu consumption was associated with cognitive impairment assessed two decades later, and with low brain weight at autopsy. An increasing prevalence of cognitive impairment with increasing tofu intake was consistently observed in each age stratum. An increased prevalence of low brain weight with greater midlife tofu intake was apparent in men both below and above mean body mass index. The associations remained statistically significant in multivariant regression models after controlling for internal skull diameter, age at death, midlife blood pressure, and midlife tofu intake. The findings may reflect long-standing sub-optimal plasticity and accelerated brain aging due to repeated exposure during midlife to soy isoflavone phytoestrogens, and to lower levels of endogenous estrogen generated in adipose tissue in leaner men. This interpretation implies that estrogen-dependent plasticity mechanisms may ameliorate the erosive effects of aging in men as well as in women."

Lon White has MD and MPH degrees. His biography reads: "Lon White completed his medical education at the University of Washington in 1963, his pediatric residency at the University of Washington affiliated hospitals in 1969, and his MPH in epidemiology at the Johns Hopkins University School of Hygiene and Public Health in 1980. From 1964 to 1997 he served in the United States Public Health Service as a researcher with the National Institutes of Health, initially at the National Institute for Child Health and Human Development, later at the National Institute for Neurological Diseases, and, since 1981, at the National Institute of

© Copyright Soyinfo Center 2013

Aging. Prior to 1981 he conducted virologic, immunologic, and biochemical research related to persistent virus infections in animals and man, and to neurological diseases of uncertain cause (as Guamanian P-D and ALS) in the laboratory of G. Carleton Gajdusek, NINCDS. At the NIA he initiated a series of epidemiological studies of cognitive functioning and dementia, including the East Boston study, the Framingham dementia study, and the Honolulu-Asia Aging Study (HAAS). He designed and served as the on site Scientific Director of the HAAS from its beginning in 1991 until his retirement from federal service in August, 1998. He is currently a member of the faculties of the Schools of Medicine and Nursing at the University of Hawaii, research consultant to the Honolulu, VA [Veterans Administration], and the Senior Neuroepidemiologist for both the HAAS and the allied Neurotoxins and Neurodegenerative Disorders Project, based at the Pacific Health Research Institute in Honolulu. His current research is focused on brain aging and the pathogenesis of Alzheimer's disease, vascular dementia, Parkinsonism, cerebrovascular disease, and aging-related cerebral atrophy."

11599. Morinaga Nutritional Foods, Inc. 1998. Celebrity tofu (Ad). *Vegetarian Times.* Feb. p. 51.
• ***Summary:*** This full-page color ad shows a package of Mori-Nu Firm Lite Tofu next to a round white bowl of Australian-Pumpkin Soup and a square glass bowl of creamy Asparagus Bisque, surrounded by squash, pumpkins and asparagus.

At the bottom of this ad, the reader is invited to order: *"The Art of Tofu,* by Akasha Richmond. She is "the Health Food Chef to the Stars." The book is filled with delicious vegetarian gourmet recipes from around the world. "Every recipe is made with Mori-Nu Tofu, the prefect tofu in the perfect package."

This ad also appeared in the Feb. (p. 51), March (p. 29) and April (p. 49) issues of this magazine.

Note: On page 50 (the left hand page facing this page) is a 1/3 page ad for *The Art of Tofu,* by Akasha Richmond. Containing 50 gourmet recipes, it is on sale at $9.95 for *Vegetarian Times* readers. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504.

11600. Shumaker, Susan; Saffel, Than. 1998. It's a veg world, after all: Even more surprising than a talking mouse is the bounty of delicious meatless meals at America's top tourist attraction. *Vegetarian Times.* Feb. p. 70-72, 74-79.
• ***Summary:*** "The revolution in Disney's attitude toward food actually began in 1988, when European chef and inveterate foodie Dieter Hannig was tapped to open 22 new restaurants at Disneyland Paris. The marathon runner and self-described "near-vegetarian" had spent the previous 14 years working for Hilton International.

"Hannig's first order of business was to change the way Disney went about preparing and serving food... Hannig believed that the food could become an attraction in itself... All but one of the chefs that worked with him in Paris followed him to Florida. That small team has been the force behind the change in food in Orlando... 'And I just love vegetarian food. My colleagues called me the Tofu King.'"

11601. **Product Name:** Organic Tofu (Flavored) [Vegetable].
Manufacturer's Name: Small Planet Soyfoods.
Manufacturer's Address: 330112 Hwy 2, Newport, WA 99156. Phone: 509-447-5146.
Date of Introduction: 1998. February.
How Stored: Refrigerated.
New Product–Documentation: Talk with Phil Spiegel. 1998. July 30. This product was introduced in Feb. 1998. He uses a deluxe dehydrated soup blend (of dry vegetables) and a vegetable broth powder; he mixes the two, then adds the mixture to the hot soymilk before he adds the nigari.

Leaflet (8½ by 11 inch, black-and-white) sent by Patricia Smith from Natural Products Expo West. 2000. March. "Small Planet. 'The micro-brew of tofu.' Certified organic tofu." Small Plant Tofu in Newport, Washington, is locally owned and operated by "Tofu Phil." They make five flavors of fresh tofu: Firm, Garlic & Herb, Curry, Hot, and Vegetable.

Letter (fax) from with Phil Spiegel. 2001. May 17. His website is www.smallplanettofu.com. A company named Small Planet Foods was founded after his company and the similarity company names has caused some confusion. So he uses two names, but his official name is Small Planet Soyfoods.

Labels for Vegetable Organic Tofu sent by Phil Spiegel. 2001. May 18. 3.75 by 5 inches. Self adhesive. "Non-GMO" logo. "Hand crafted in the Northwest by Penrith Farms, 330112 Hwy #2, Newport, WA 99156. Phone: (509) 447-5146. www.smallplanettofu.com." A large illustration shows a river with trees and mountains.

11602. Stevens & Associates, Inc. ed. and comp. 1998. U.S. 1998 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 47 p. 28 cm. [33 ref]
• ***Summary:*** This third edition of the U.S. Soyfoods Directory was produced for the Indiana Soybean Board by Stevens & Associates. The color cover has a wide green and white checkered border.

Contents: Soybean facts. Welcome. How to use the soyfoods directory. Daily soyfood guide pyramid. One bean: a multitude of products.

Soyfood descriptions [alphabetical]: green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber),

© Copyright Soyinfo Center 2013

soy flour, soy grits, soy protein concentrate, soy protein isolate (isolated soy protein), soy protein–textured (textured soy protein, textured soy flour), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk (soy beverages), soynut butter, soynuts, soybean oil and products, sprouts–soy, tamari (see soy sauce), tempeh, teriyaki sauce (see soy sauce), tofu & tofu products, whipped toppings–soy based, yuba.

A taste for health: Scientists are learning about soy's health benefits (heart disease, osteoporosis, menopause, cancer, isoflavones). Soybeans: health insurance in a pod. Approximate isoflavone content of selected soyfoods.

Fact sheet and recipes (1 or 2 pages each): Meat alternatives. Soybean oil. Textured soy protein. Whole soybeans. Soy flour. Soymilk. Tofu.

Composition and nutrient content of soyfoods (full-page table, p. 20). 1 serving of each soyfood. Guide to modifying recipes (substitutions). Soyfood substitution chart (½-page table). Soyfoods website packed with information (http://www.soyfoods.com). Soy cookbooks. Soy resource books. 1-800-Talksoy (for answers to your questions).

Soyfood companies by product (e.g., names of all companies that make meat alternatives; products listed alphabetically).

Soyfood companies (directory; p. 27-40. Alphabetical by company name; Each listing contains address, contact person, phone number, fax, e-mail, soy products, product names, distribution, how to locate product, classification). Soyfood mail order companies (p. 41-42). Soyfood companies by state (California has by far the Most). Soyfood promotion and research organizations (incl. state soybean boards / councils). Professional association and industry information resources.

Note: Nasoya Foods has its own listing but Azumaya does not. Azumaya is listed under Vitasoy USA Inc. as a brand. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

11603. Wapner, Kenneth; Bates, Colleen Dunn. 1998. The magic bean. *Weight Watchers Magazine* 31(1):84. Jan/Feb. *
• ***Summary:*** Soybean Dishes. Includes recipes.

11604. Fischer, Bruno. 1998. Update on soymilk in Europe: Sojinal, Alpro and Nutrition et Soja (Interview). *SoyaScan Notes.* March 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In mid-1993 Sojinal (of Issenheim, France) was purchased by a Swiss group named B&K Industry Holdings. The heirs got much of their money from disinvesting in weapons and ammunitions. Then in December 1996 Alpro (in Belgium) bought Sojinal from B&K. They now make mostly sterilized pre-pack tofu patties and other related meat alternatives. In Bruno's opinion these products are not very good–they don't fit anywhere.

Alpro dominates the European market for soymilk and soymilk products. They do a lot of private label packaging in their factory, and they now make a little pudding in a cup with a peel-off lid. Bruno heard that in 1995 they had sales of 50 million German marks. Note: In March 1998 one German mark was worth about $0.55. So, very roughly, 50 million would be worth about $27 million.

Alpro now also makes rice drink, and in 1995 launched a rice beverage made by Alpro and packaged in glass bottles.

In about Feb. 1998 Vandemoortele, Alpro's parent company, sold all of its margarine manufacturing operations to Cargill. Now Vandemoortele has only Alpro and its oilseed crushing operations.

Nutrition et Soja (in Revel, near Toulouse, France) no longer sells their soymilk in Tetra Pak cartons–so they must be using it as an ingredient in their own products.

DE-VAU-GE (which made the Grano Vita line) no longer makes soymilk. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

11605. Paolucci, Danny. 1998. How LEASA helped to build distribution for Swan Foods Corp. in Miami, Florida, then ended up destroying Sunshine Soy Co. and Swan Gardens (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** LEASA Industries Co. was (and still is) a food manufacturing and distribution company in Miami owned and run by a Korean-American family. They made and distributed [mung] bean sprouts and tofu. After Danny arrived at Swan Foods (in late 1977) they arranged to have LEASA distribute their products to grocery store chains. This was very beneficial for Swan Foods.

After Heartsong Tofu (run by Bob and Toni Heartsong in Miami) went out of business in about 1984, LEASA bought their equipment. Then they proceeded to put Swan Gardens out of business. Later they also killed Danny's company, Sunshine Soy Co. Address: 2219 S.W. 59th Ave., Miami, Florida 33155. Phone: 305-266-0830.

11606. Carrasquillo, Fausto. 1998. Masao's Kitchen in Cambridge, Massachusetts, wants to make fresh tofu (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fausto was a soyfoods pioneer in Puerto Rico. Nature Foods Inc., a company he founded and ran in Santurce, Puerto Rico, started making Organic Tofu Rico in Sept. 1980 and Tempeh in Jan. 1981. For the last year, he has been in the United States, working at Masao's Kitchen (run by Masao Miyagi), a macrobiotic restaurant in Cambridge, Massachusetts. Now he and this restaurant would like to make fresh tofu, for in-house used and to distribute elsewhere. He plans to stay at Masao's Kitchen in the USA for at least several more years. Address: Masao's Kitchen,

© Copyright Soyinfo Center 2013

P.O. Box 3812375, Cambridge, Massachusetts 02238. Phone: 617-776-7198.

11607. Pejic, Zlatko. 1998. Learning how to make tofu in Croatia (Interview). *SoyaScan Notes.* March 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In September 1991, Bill Spear, who had just returned from a 1-week macrobiotic summer camp at Kumrovec, Croatia (then part of Yugoslavia), said: "The man who knows the most about soyfoods in Yugoslavia is Zlatko Pejic (pronounced like "Page," as in "the page in a book"), a peace activist who is president of the Society for the Improvement of the Quality of Life and head of the macrobiotic community in Zagreb. His wife is a cooking teacher. He invited Bill to Yugoslavia, has been to the USA, and lectures throughout Yugoslavia. He has visited most of the soyfoods companies in Yugoslavia..."

On 17 March 1998 Zlatko visited Soyfoods Center with Paul Sayre and described his many attempts to make tofu, starting in 1978. He knew that tofu was a good, healthy food made from soybeans, but he didn't have any idea how to make it. His first breakthrough was soaking whole dry soybeans. His next discovery was grinding the soaked beans using a meat grinder. But the resulting paste tasted very bad. Then he tried cooking this paste–but still no tofu. Then he tried adding water and cooking the paste, and the resulting soybean soup, if seasoned properly, was not bad–but it was not tofu. So he accidentally set it aside in a container in which he had some lemon juice and pickles. When he returned, he was astonished to find that it had curded. He put the curds in a cloth and hung them up to drain; the result was spoiled curds. After several months he tried the whole process again, but this time he steamed the curds after they had drained to prevent them from spoiling. The result was good-tasting tofu, first made in 1978. Zlatko may have been the first person to make tofu in Croatia. Address: MacroNova Center, P.O. Box 117, 10,000 Zagreb, Croatia. Phone: +385 1 4847 115.

11608. Liu, KeShun. 1998. Re: Profile. Letter to William Shurtleff at Soyfoods Center, March 18. 2 p.
• ***Summary:*** This profile is an autobiography of Dr. Liu. Soyfoods Center has divided the story into two parts. Most of it is told in our "About the author" section at Dr. Liu's excellent 1997 book titled *Soybeans: Chemistry, Technology, and Utilization.* The rest, which follows, is a description of his major responsibilities as Project Leader of the Soyfoods Laboratory at Hartz Seed in Stuttgart, Arkansas, where he works on breedings soybeans for food use. He oversees the laboratory and "collaborates with several plant breeders within Hartz Seed and scientists at Monsanto's Life Sciences Research Center, St. Louis [Missouri], to improve soybean quality for making both Oriental soyfoods and Western soy products (including soy oil and soy protein ingredients). His major responsibilities include: (1) conducting research on the factors that affect the quality of soyfoods (such as soymilk, tofu, natto & soy sprouts) and soy protein ingredients, (2) identifying relationships between raw soybean components and the quality and yields of soyfoods, (3) developing reliable laboratory methods for making soyfoods and evaluating their quality attributes, (4) developing rapid methods for screening chemical components of breeding lines (e.g. assay for fatty acid composition), (5) researching the nutritional and functional properties of soybean oil and exploring applications of modified soybean oil obtained through plant breeding, (6) and identifying new product concepts and areas for further improvements of soybeans as food." Address: Project Leader, Soyfoods Lab., Hartz Seed–A Unit of Monsanto Co., Inc., 901 N. Park Ave., Stuttgart, Arkansas 72160. Phone: (870) 673-8565.

11609. Thompson, Keith. 1998. Breeding food-grade soybeans at Hartz Seed Co. (Interview). *SoyaScan Notes.* March 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hartz's natto breeding program is one of the best models for developing food grade soybeans with what are increasingly called "quality traits." Frank Orthoefer, a scientist with an MBA, is an expert in this field–especially in the area of proteins and oil. Frank used to work for Riceland Foods in Stuttgart, but now he works for Hartz / Monsanto. KeShun Liu was hired to work on tofu and natto. The work with tofu has not progressed well, but the work with natto has. From the Hartz viewpoint, Dr. Liu's three most important areas of research are breeding soybeans: (1) for natto (which accounts for 30% of Hartz's revenue), (2) that are high in saturated fat, allowing elimination or reduction of hydrogenation; and (3) that are high in total oil content. Address: Food and Export Manager, Hartz Seed, P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

11610. Soyfoods Association of North America. 1998. Membership lists (as of March 1998). Washington, DC. 1 p. March 23. Unpublished typescript.
• ***Summary:*** The Association has 34 paid members; 7 past members have not yet paid for 1998. The paid members are: ADM, American Health & Nutrition, American Soy Products, Central Soya Co., Clofine Dairy & Food Products, Corn Belt Foods, Devansoy Farms, EMB Partners, ExSeed Genetics, Galaxy Foods, GeniSoy (MLO) Products, Highland Equipment, Iowa Soy Specialties, Iowa Soybean Assoc., Kentucky Soybean Assoc., Lightlife Foods, Monsanto, MYCAL, Natural Health Magazine (Boston Common Press), Natural Products, Inc., Nebraska Soybean Board, Nutrition Advantage, Optimum Quality Grains [DuPont], P.J. Lisac & Associates, Pacific Soybean & Grain, Sacramento Tofu (California), Soyatech, Sun Rich, Sunrise Markets, Tofu Shop Specialty, Vitasoy (USA), White Wave,

© Copyright Soyinfo Center 2013

Wildwood Natural Foods, Worthington Foods.

The biggest paid members are ADM, Central Soya Co., and Monsanto. Address: N. Chapman Associates, 1723 U. Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

11611. Gonzalez-Watanabe, Yvonne; Watanabe, Joji. 1998. Update on introducing tofu to Hispanics in the Los Angeles area (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This summer the Little Tokyo Service Center will be organizing their third annual tofu festival in Los Angeles. Yvonne and Joji have reserved a double booth, where they will give away samples of food made with tofu, give lectures once an hour in Spanish on the nutritional benefits of tofu, and conduct cooking classes in Spanish at a demo area. Yvonne will talk in English and José will translate into Spanish. They have put together a pamphlet of tofu recipes including a coupon. They have gotten to know Pat Greenberg, who is on a festival committee.

Presently Yvonne is conducting tofu workshops (*tofu tajellar*), like cooking classes in Spanish at a community recreating center in Pasadena; only Spanish-speaking people attend, and they generally want to learn Asian-style (rather than traditional Hispanic) recipes. About 90% of the participants are women–of all ages, from 20 to 80. They come for health reasons–high blood pressure, elevated cholesterol levels, or overweight. An average class has about 12 people (range 4 to 30 people). Yvonne teaches them how to make tofu at home from whole soybeans, uses that tofu to prepare a number of Hispanic recipes, then gives them basic nutritional information. Miyuki, who is their contact at House Foods America Corp., plans to attend their next class. Yvonne greatly enjoys her work, but she needs some income and is planning to approach House Foods to ask for sponsorship of her workshops. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

11612. Schweitzer, Peter. 1998. Plenty International (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Plenty International is now the official name of their organization. This is the named under which they are registered with the United Nations, Canadian International Development Agency, and other government organizations. But "it's a mouthful," so they usually call it just "Plenty" for short. In the past, however, Plenty has sometimes used two names at the same time. In about 1982-83, after the original Plenty split up, the U.S. half usually called itself Plenty USA vis a vis Plenty Canada. In early 1998 the Board officially changed the name to Plenty International, and the organization is incorporated under that name with the state of Tennessee. They had to re-do the by-laws.

There is now also a Plenty Spain in Barcelona started by a guy from Argentina who worked with Plenty in the USA and Lesotho for many years. They do many projects but none of them are soy-related.

Bisi Iderabdullah, the founder and director of the Imani House project and soy program in Liberia, is currently in Brooklyn, New York, trying to raise grant money for her program in Liberia. Plenty recently sent their clinical director to Senegal for medical training. The work is ongoing, run by their local staff people, in Liberia, and Bisi plans to return soon.

Plenty Canada has gone through major changes. They moved their headquarters to an Indian reservation for a while and their whole board of directors was Native Canadian for a while. Peter is trying to find out what is going on; he has heard that some of the original people are now coming back into the organization.

Of Plenty's various soy projects around the world, the one in Guatemala is currently by far the most successful and active. The soy dairy is now on a solid financial footing, managed by Agostine and Elena Xoquic (pronounced cho-KEEK), who have been actively involved since about 1995. Amada del Valle, who worked with Plenty Canada and was close fields with Laurie, is no longer involved. Laurie has worked with both Plenty Canada and Plenty USA. The soy dairy is under the auspices of the *Comité de San Bartolo,* which is the village committee. They have struggled and hung in there during the difficult times, and now things are going much better. Their biggest market is the tourist restaurants in Panajachel and Antigua (Guatemala), but they do have 3-4 outlets in Guatemala City. They now have an outlet right on the village square in Solola, where they sell soy ice cream, tofu, and a soymilk popsicle that is very popular. Suzi and Peter went down to offer assistance in recent years. Plenty bought them a truck so they could start doing deliveries instead of riding buses with their buckets of tofu, and also helped them with some Spanish-language publications. Suzi did many soy demos in restaurants in Panajachel. Chuck Haren has been going there several times a year. Plenty has gotten them grants of roughly $10,000 a year so they could upgrade broken equipment and refrigeration. They have developed some new products, and they are now making tempeh. The ongoing outside help has been essential to their survival, but they have learned how to operate–though they are not that ambitious. Chuck believes they could be much more successful. He feels they have an unlimited market. They earn enough money to pay the staff and put some back into the village. They operate a little nutritional outreach program.

Peter notes that the work with soy has always been very prominent through the history of Plenty's activities worldwide. "It's always been a part of the programs that people seem to like. I see a really healthy future for it."

Plenty had one 3-year period when Chuck was really well funded, with about $50,000 from three public welfare foundations. New programs started in many places, including

11613. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the fall of 1997 Richard fired his national sales manager and his CEO (Janet Crolius, who was with the company two years). Galaxy Cheese Co. almost immediately hired the sales manager, then (according to Richard) they induced him to violate/breach two contracts he signed. Using the money he saved from paying salaries, Richard launched a large ad campaign featuring three ads: (1) A tie-dye ad with the slogan "When we first introduced tofu cheese, people said we must be smokin' something. Well, we are now," for hickory-smoked TofuRella, (2) The white mouse in a tree with the slogan "Experts prefer," and (3) "Not milk?"–See the current issue of Vegetarian Times. Plus the ad agency that put the campaign together took on Richard's company at cost–because they didn't have any clients from the food industry and they wanted to develop a creative campaign that they could use to win potential new clients. The agency designs the ads and Richard places them. The ad blitz started in Sept. 1997 and is costing $10,000 to $15,000 a month. The ads have run in three mainstream supermarket trade magazines (*Supermarket News, Produce Merchandising,* and *Produce Business*), and several natural food magazines (*Natural Food Merchandiser, Natural Health, Natural Health Shopper, Alive Canada, Veggie Life,* and *Healthy Living* (*New York City*)). Richard's products have been in Safeway–Canada for 11 years; the head buyer likes these products very much. "He thinks he can do a million dollars with our products this year." Most of the Richard's company's growth is coming from supermarkets and chains–A&P, Trader Joe's, Waldbaum's and Wegmans (back east).

Galaxy has introduced a new product named "Tofu Slices" which Richard believes is misnamed, since it appears to contain no tofu. It is made in Canada and contains "liquid soy mix" (and no casein). Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11614. Kelly, Julia. 1998. Fond remembrances of Robert Brooks, co-founder of Swan Foods Corp. in Miami, Florida (Interview). *SoyaScan Notes.* March 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Julia first met Robert Brooks in late 1973 or early 1974 at a Premmie house out in the country near New Paltz, New York. "I met Robert because I wanted to receive knowledge. I found out about Maraji and I started going satsang in New Paltz, New York–where I was going to the state university. Robert was one of the first people who told me about Guru Maraji. The first time I saw him he was dressed in a tattered Divine Line Mission t-shirt with his head stuck inside of an old funky oven, cleaning it. He had been a devotee of Guru Maraji and a Premmie for about 1 year before I met him." Then Julia moved into the Premmie house, where she lived with Robert and two other guys. Robert was the "house father"; he rented the old 3-story house (there was a wood stove on each floor and an outdoor toilet), cooked all the food, collected the money, and inspired many of the young people who came there. Julia received "knowledge" in November 1974. Robert told her "Don't eat anything outside this house; just eat what I cook for you. So I went from eating roast beef, sugar, Coca-Cola, and chocolate, to hand-grinding my own toasted brown rice in the morning for cereal. Robert had a remarkable ability to talk about food and macrobiotics, tie it into the order of the universe, and make it all make sense. He was very clear–like a genius. At the time, Robert knew a great deal about tofu and soyfoods, and he talked about them a lot. Robert grew up in Poughkeepsie (pronounced puh-KIP-see), New York. His father owned a liquor store there." Robert had 2 or 3 brothers. One brother was an attorney. His younger brother, David, was also a "super-inspired, genius, spiritual very creative guy, who also liked to teach, and he did shiatsu, rapped about tofu, and other energy stuff." David is kind of nutty now. Robert believed that a vegetarian diet plus soyfoods could help keep a person healthy and filled with good energy. Julia's mother had died of cancer 5 years earlier and one of her brothers was schizophrenic, so she listened to what Robert said. He said that cancer and schizophrenia were caused by the same type of foods that Julia's family ate–so she quickly and completely changed her diet to a pure vegetarian [vegan] diet–free of eggs and dairy products–which he followed for the next 15 years. He taught that "soy was a clean source of protein." Robert was a natural-born teacher. He taught shiatsu, macrobiotics, tai-ch'i, and the Science of Mind. He was high and charismatic, though he was not out to become famous. He had a big circle of friends. Julia lived with Robert in the Premmie House in New York during 1974 and 1975. In late 1975 or early 1976, Robert went to Miami, Florida, to attend a massage school.

Robert met Mary Pung in Miami, Florida. After they founded Swan Foods, he loved to "turn people on to soy." In early November of 1977 and 1978 Guru Maraji held a huge 3-day festival in Kissimmee (located about 15 miles south of Orlando), the capital of Osceola County, Florida. This festival was named Hans Jiyanti, in honor of the birthday of Sri Hans, who was Maraji's father. More than 10,000 Premmies and other people came and camped out on this land by a nice little lake to see and hear Maraji. Julia was there, "hanging out with the musicians." Vegetarian foods from many different cultures were sold at booths at the festival. "Robert supplied the whole festival and Maraji with his soy products–he wanted to turn on the all these people from all over the world to soy–and he did. In 1977

© Copyright Soyinfo Center 2013

he brought mostly tofu and soymilk, but in 1978 he brought all of these delicious soy desserts, pies, etc. that he and Mary and Debbie Curran had developed at Swan Foods. He did all this as an offering for Guru Maraji. That was the vision behind all his creativity and production. Robert was definitely high and he deserves recognition."

"One reason that Swan was able to grow by leaps and bounds was that Robert has all these selfless Premmies doing service for Maraji by working for Robert. He had some of the best and the brightest minds in the country working together for a common cause–the highest good of all human beings. It was hard for any other business to compete with this. It was a very special time, with much remarkable talent–including many fine musicians."

Julia first met Mary in about 1978 in Miami. She knows a number of people who knew Robert well: (1) Mark and Pat Lewis (who are still married and have 2 kids) worked at Swan Foods making tofu; they did most of the hard work. Mark said the Premmies would come into the plant during the daytime (as part of their service to Maraji they worked for a pittance or for free), but none of them knew what to do and they'd all be spaced out, then Mark and Pat would go in every night and make 1,000 pounds of tofu. Mark was very close to Robert and he may know where Mary Pung or Robert's father or brother are now. (2) Debbie Curran (an extremely beautiful and creative girl–Phone: 305-667-7692) is now living with rock musician Fleet Starbuck, who has a blues band. Debbie was a good cook; she worked with Mary Pung to develop many tofu dessert recipes. For years after Swan Foods went out of business, on her own and to make a little money, Debbie would make recipes like tofu lasagna and sell them at places like Oak Feed store and 5-6 natural food stores in Coconut Grove. (3) Jerry Wiener–JD. He worked at Swan Foods for a couple of weeks when Danny Paolucci was there. He recalls big refrigerated trucks from Eastern Airlines pulling up in front of Swan Foods to load up on their soy products. (4) Michael Bo knew about tofu and taught Julia how to make her own. Julia does not know Jim Wilks.

Robert was not involved with hard drugs for most of his life, but he was a hippie who smoked (and later bought and sold) large amounts of pot (marijuana).

What caused Swan Foods to go out of business? Julia thinks it was more Robert's greed than his lack of business management skills. "He had both a high side and a greedy side. He switched from making tofu to dealing pot because he could make so much more money from the pot, and he was losing money making tofu. It was strictly a business decision. He told me that in 1978 in Miami as the company was going under. He didn't start selling pot in an attempt to save Swan Foods. He did it to make more money. He was a very good businessman. If he had been humble and gone more slowly in building Swan Foods, not tried to get so big so fast, just stuck with it without getting distracted by all the flashy Miami stuffing going on all around him, Swan Foods might be prospering today." Eventually Mary Pung gave her son, Aslan (who was about age 6-8), to one of Robert's brothers who was an attorney. Julia knew Aslan, who must be about 20 by now. Note: Aslan was named after one of the heroes in *The Chronicles of Narnia,* by C.S. Lewis–series of wonderful allegorical books that were very popular at the time. In the book, Aslan (a name coined by C.S. Lewis) was the great lion in the land of Narnia. Like the Lord, he was the epitome of goodness. He gave up his life to save children and was later resurrected.

Julia has heard from reliable sources that, after Swan Foods went out of business, Robert started hanging out with one really bad guy, who had a strong negative influence on him. He started smoking cigarettes and eating meat, and eventually involved with hard drugs (such as cocaine) for the last 1-2 years of his life–but Julia had lost touch with him by then.

Tatiana, his wife when he died, was a very big spender. "She'd spend thousands of dollars getting her body waxed and her hair done. She was going to testify against him before a grand jury. He became the key guy in a big investigation. She was part of the reason he died the way he did. If he hadn't committed suicide, he might have gotten murdered. He was in a really bad place.

Julia thinks Mary may have lived in Hawaii for a while after Swan Foods went under. Julia presently lives in her van outside a friend's house in Miami, under a sapodilla tree. She used to live in Hawaii. Address: Miami, Florida. Phone: 305-791-2370 or 305-663-0082.

11615. Demos, Steve. 1998. New developments with soymilk and other soyfoods at White Wave. Part II (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sales of White Wave's baked tofu are growing at 38% a year, while plain tofu is growing at 18-21% a year. White Wave is the leader nationally in the baked tofu category, with more than 60% of the market share. Plain dairy yogurt in America still outsells dairy yogurt with fruits and flavors, but it was the fruit yogurts that introduced consumers to the plain product. Baked tofu seems to be playing the same role with respect to plain tofu. White Wave is about to invest very heavily in the automation of baked tofu. If a company's plant capacity is 250,000 units per week, it makes much more sense to produce baked tofu at $1.80/unit instead of block tofu at $0.70/unit. White Wave is trying to turn the tofu market from block to flavored, in order to gain market share and position–in exactly the same way the company has been trying to turn the soymilk market from aseptic to refrigerated.

One key question concerning baked tofu remains unanswered? How do consumers eat it? Steve thinks they are eating it in the car on the way home from the store as a salted

© Copyright Soyinfo Center 2013

snack food–or perhaps on sandwiches. Until White Wave can be sure of how it is used, they don't want to commit to positioning it against some other product–such as cheese or meat.

White Wave's first goal was to establish its products in the refrigerated dairy section. Whereas many companies still sell tofu to the produce section, White Wave never sells to the produce section any longer. Everything is refrigerated, controlled temperature during distribution and sale. Only rarely does a White Wave product end up being sold in any produce section; they are usually sold in the juice cooler or in the dairy section. 80% of White Wave's revenues come from the natural foods sector, and in natural foods stores all White Wave products are in the dairy section–as part of their shelf-set program, which has been very effective in establishing a beachhead in the refrigerated section. Around that now Lightlife and Yves each have their own sections. So the vegetarian category is emerging, usually located in the store around dairy cheeses, milk, yogurt, and eggs.

The most interesting insight Steve has gained in the last few years is the one that says consumers are picking four product categories that they want to see in supermarkets. So White Wave has been reducing the number of products it offers; it has dropped hot dogs, sausages, all burgers except tempeh burgers and lemon broil. The company is actively evaluating what consumers want and where they want to find it in the store. One new program will be to give consumers a free half-pint carton of Silk asking them to "Try this–It's the new milk."

Steve is very happy with Silk's sales performance over the past two years. "It's been exceptional, but it cost $400,000 just to launch the product." According to data from SPINS, during the May-June 1997 period, the market shares for soymilk brands in the U.S. natural foods market were as follows: Westbrae 34%, Edensoy 32%, Vitasoy 16%, and Silk 7%. Silk's share is now 10%. Sales of Silk grew by 170% during the past year. The soymilk market grew by 21% during the same period, Edensoy grew at 30%, Rice Dream dropped 0.4%, and the rice beverage market contracted by 0.2%.

Tree of Life (which does not share its sales figures with SPINS) is no longer the biggest natural foods distributor in the USA. United Naturals is now the biggest (after they bought Stow Mills) with sales last year of $650 million vs. $520 million for Tree. United Naturals also owns Mountain People's Warehouse, Mountain People's Northwest (which was NutriSource), Rainbow–Chicago (Illinois), Rainbow–Denver (Colorado), Cornucopia, and Cornucopia–Atlanta (Georgia).

ConAgra is trying again to get into the natural foods industry. They recently tried to buy one big privately owned natural foods manufacturer, and were turned down! ConAgra launched a new "Advantage 10" line of frozen entrees (many of which contain gluten products) that is backed by Dr. Dean Ornish. White Wave is supplying them with some of these gluten products. ConAgra had a huge presence at the Anaheim show–yet they don't understand how natural foods shoppers think and see the world. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11616. Bertran, Magda. 1998. Pioneros de la soja en España: Locos por la macrobiótica [Pioneers of soya in Spain: Crazy about macrobiotics]. *Vital.* March. p. 66-69. [Spa]
• ***Summary:*** This is the story of a community of about 20 adults and children who live in southeastern Spain, just north of Barcelona, in Moianés, near the towns of Castellerçol and Castellcir. Tofu, tempeh, veggie burgers, and other soyfoods (*derivados de la soja*) form an important part of their diet. Members of the community have created new food companies such as Vegetalia and Natursoy, and become pioneer soyfood processors in Spain. More recently, Luz de Vida has started to import high-quality natural products into Spain.

"The history of the production of soyfoods has diverse origins, according to the version of the protagonists. It can be said that it started about 20 years ago in the little village of Tavertet, due to the efforts of Josep M. Villagrasa, a person who was crazy about macrobiotics (*un "loco por la macrobiótica"*). We must also remember the pioneering work of Javier Arozena [sic. Arocena] and his company Zuaitzo (*Arbolito*) in Vasco region.

In addition, two couples who were also "crazy," Joan Mateu and Lluïsa Playà, and Josep Maria Clapés and Sandra Cano, came together to share a house and experiences in La Floresta (Barcelona). Lluïsa (along with others) was running the restaurant Macrobiótic Zen, the first macrobiotic restaurant in the city of Barcelona, while in the kitchen Joan was preparing tofu for the restaurant, helped by Sandra and Josep Maria. The latter also worked as a homeopathic doctor. Lluïsa maintains that the first tofu manufactured in Spain was made in 1978, in the kitchen of that house named La Floresta.

Little by little the production of tofu grew, and Joan started to make seitan for the first alternative food shops that were created in Barcelona, and then throughout Spain. Address: Spain.

11617. Book Publishing Co. 1998. Catalog–1998 (Mail order). Summertown, Tennessee. 48 p. 23 cm.
• ***Summary:*** This catalog has a glossy color cover with five books pictured on a gold background. In the center is Tofu Cookery. Contains many books about vegetarian cookery (p. 14-29), including books on TVP, gluten and seitan, tempeh, soyfoods, and tofu. Address: P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

11618. Franke, Adrian A.; Custer, L.J.; Wang, W.; Shi, C.Y. 1998. HPLC analysis of isoflavonoids and other phenolic

agents from foods and from human fluids. *Proceedings of the Society for Experimental Biology and Medicine* [*PSEBM*] 217(3):263-73. March. [58 ref]
• ***Summary:*** Discusses: Soybeans (raw, dry, Singapore), soybeans (roasted), soybeans (toasted), green soybean pods, soy protein, soybean sprouts, tofu (raw), tofu (fermented, Singapore), curd (fermented), soy milk, soy cheese, Foo Jook (skimmed, dry supernatant [dried yuba sticks], raw, Singapore), Foo Jook (cooked), Tau Kwa, raw (pressed tofu, raw, Singapore), Tau Pok, raw (fried Tau Kwa, Singapore), bean curd (fried). Daidzein, genistein, glycitein. Address: 1-2. Cancer Research Center of Hawaii, 1236 Lauhala St., Honolulu, Hawaii 96813; 3-4. Dep. of Community, Occupational, and Family Medicine, National Univ. of Singapore, Singapore 0511, Republic of Singapore.

11619. **Product Name:** Tofu Slices (Cheese Alternative) [Original, Italian Garlic Herb, Savory, Hickory Smoked].
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. March.
Ingredients: Original: Soy beverage (filtered water, isolated soy protein, organic tofu*, calcium sulfate), unhydrogenated soybean oil, corn syrup solids, corn starch, maltodextrin, carrageenan (sea weed gum), sea salt, citric acid, calcium propionate (a source of calcium to control mold growth), natural flavor. * = Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. for 8 slices.
How Stored: Refrigerated.
New Product–Documentation: Leaflet brought by Patricia Smith from Natural Products Expo at Anaheim. 1998. March. 8½ by 11 inches. Full color. "Turn over a new leaf... & discover new profits. Low fat. Organic. Delicious. Convenient." On the front, a photo shows 4 packages (including the front label of each) of the product against a bluish-gray stone tile background, surrounded by crackers with pieces of the tofu slices on top, whole soybeans, and fern leaves. On the back are ingredient listings, nutrition facts, and product specifications.

Monthly Insight (Galaxy Foods newsletter). 1998. April. "Another first from Galaxy." Tofu Slices come in four flavors and are made with organic tofu. Each pack contains eight 1-oz. slices.

11620. **Product Name:** Tofu Slices (Firm, Individually Wrapped Singles, Made with Organic Tofu) [Savory, Italian Garlic Herb, Hickory Smoked, Original].
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-808-2325.
Date of Introduction: 1998. March.
Ingredients: Original: Liquid soy mix (water, organic tofu powder, isolated soy protein, calcium sulfate), unhydrogenated canola oil, corn syrup solids, corn starch, maltodextrin, carrageenan (sea weed gum), sea salt, natural flavour, carotenal color, citric acid, calcium propionate (a source of calcium, to control mold growth).
Wt/Vol., Packaging, Price: 336 gm. 16 x 21 oz slices per pack.
How Stored: Refrigerated.
New Product–Documentation: Ad in *Natural Foods Merchandiser.* 1998. March, p. 32-33. Leaflet sent by Patricia Smith from Natural Products West. 1998. March. On the front: The front panel of four packages is show; each is labeled in both English and French. For example: "16 Tofu Slices / Tranches. Firm / Ferme. Smoked Hickory / Fumée de Hickory." On the rear: The ingredients for each flavor is given in both English and French.

11621. Nasoya Foods, Inc. A subsidiary of Vitasoy USA Inc. 1998. Invitation: Cordially invites you to attend the grand opening of our new Ayer. MA facility... (Card). South San Francisco, California. 2 panels each side. Each panel: 13 x 18 cm.
• ***Summary:*** "Friday, April 24th, 1998. Ribbon cutting ceremony at eleven o'clock. Followed by celebration luncheon. One New England Way, Ayer, MA. RSVP by April 1." A stamped, self-addressed envelope in enclosed.

On the cover of the card is an illustration of the new plant. On the rear is a map showing how to get there from Logan Airport, Boston.

11622. Soyco Foods. Div. of Galaxy Foods Co. 1998. Thanks for making us the #1 brand! (1997 SPINS data). Build your healthy cheese section with Soyco Foods (Ad). *Natural Foods Merchandiser.* March. p. 32-33. 28 cm.
• ***Summary:*** A two-page color spread. A large photo shows six products divided into three categories: 1. Soy nutritious (Soyco brand): Lite & Less Grated Parmesan. Lite & Less Veggy Singles. 2. Soy free (made with rice): Rice Parmesan (made with organic brown rice). Rice Slice (American flavor). 3. Dairy free (Soymage brand): SoySingles. Grated Parmesan.

"Is there any wonder we lead the industry? Soyco Foods was the first company to introduce individually wrapped cheese slices to the industry and look how fast we've grown."

"Soyco Foods is also proud to introduce the hottest item of the year: Tofu Slices! Ask for them at Expo West."

nasdaq:GALX. www.galaxyfoods.com. Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: (407) 855-5500.

11623. SunRich Inc. 1998. SunRich: Products for the 21st century (Leaflet). Hope, Minnesota. 3 panels each side. Each

panel: 22 x 9 cm.
• ***Summary:*** The color photo on the front panel shows a field of mature soybeans with a farm and tall silo in the background. "SunRich Inc. was founded in 1978 as Minnesota Waxy Corn Growers for the purpose of marketing waxy corn. Business diversification and expansion of core markets prompted a name change to SunRich Inc. The major focus of SunRich's business remains bringing together growers and suppliers of specialty grains and ingredients for mutually beneficial business relationships."

"SunRich products include: Soymilk, soymilk powder, spray dried tofu, corn grits, corn cones, corn flower, corn masa, maltodextrins, corn syrup solids, sweet beans (green vegetable soybeans), vegetable powders."

"Our goal is to provide the best natural and organically grown and processed food ingredients. SunRich: the ultimate in value-added commodities." Color photos show: (1) The sun setting behind a combine. (2) A low aerial view of the company's facilities, mainly silos. Address: P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976.

11624. Wildwood Natural Foods. 1998. Trusted quality since 1980 (Leaflet). Santa Cruz, California. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** Leaflet (green, yellow and red on beige) sent by Patricia Smith from Natural Products Expo West. 1998. March. On the front panel is a square illustration of green trees growing beside a lake and reflected in its placid water. "Responding to the community's need for fresh, organic, vegetable-based protein."

The inside 3 pages: Across the bottom half is the green silhouette of trees. "Wildwood roots (founded in 1980). California's soy dairy. Tofu: What is that stuff?, get your money's worth, know your tofu, Great, but what do I do with it? Fat from soy oil: Isn't tofu high in fat? Nutritional info for Nigari firm style tofu vs. Calcium fortified tofu, medium style.

Panel 5: Two recipes. Rear panel: Partial list of Wildwood products: Organic firm tofu. Organic medium low-fat tofu. Organic soymilk (plain or honey vanilla). [Tofu] Fillets and cutlets: Baked, smoked, or agé style, Teriyaki, Thai, Szechwan or Hawaiian flavors. Vegie burgers: Original, Mexican, or Wild West (Southwestern style). Tofu salads: Dill, Mediterranean, Antipasto, or Firenze. Mid-East Hummus. Address: 1560 Mansfield Ave., Santa Cruz, California 95062; 135 Bolinas Rd., Fairfax, CA 94930. Phone: 800-499-TOFU.

11625. Iderabdullah, Bisi. 1998. History of work with soybeans and soyfoods. Part I (Interview). *SoyaScan Notes.* April 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bisi was born in Brooklyn right after World War II, and grew up there; her father was from Jamaica and her mother from the American South. After graduating from high school, Bisi's entrepreneurial spirit began to appear. She and her mother bought a Carvel ice cream franchise, and she began to make money. On her own initiative, she traveled to Europe three times–before she had even entered college! In 1968 she entered Brooklyn College in New York. During her first year as pre-med student, she was introduced to soyfoods and soybeans when she read Jethro Kloss' book *Back to Eden.* Her college friends were also exploring more natural lifestyles, including natural foods. Bisi liked to cook so she experimented with Kloss' recipes for soybean butter, soybean cheeses, etc. Also during her first year she met her husband-to-be. In 1970 he converted to Islam and changed his name to Mahmoud. As part of her medical program, she had to see an autopsy. "It really shook me up. When they peeled the person's skin back, it looked just like chicken. The only meat I could eat after that was hot dogs–and that got tiring after a while." She had taken the first steps to becoming a vegetarian.

In 1973, during her junior year at Brooklyn College, Bisi converted to formal Islam (she did not become a Black Muslim) and was married to Mahmoud in an Islamic wedding. "At that period in U.S. history Islam was strongly linked with Africa and African myths; many converted to Islam because they felt it was more African. It wasn't as much religion as it was traditional carriage." Mahmoud was a pre-med student studying to be a health educator. Three months later she won a scholarship to study abroad–anywhere in the world she wanted. She chose Africa. Bisi wanted to return to study her roots, to learn more about where she (as an African-American) had come from. So, leaving her husband studying in Brooklyn College, she flew to Zambia for 5 months and studied at the University of Zambia in Lusaka. When school was out there, she flew to Ghana, where she was joined by her husband. She studied archaeology at the University of Ghana in Legon for one year. When in Ghana, they tried unsuccessfully to study with a traditional natural healer.

Returning to the USA (Brooklyn), pregnant with their first child, she decided not to continue her pre-med education, because of its lack of emphasis on healthy lifestyles, nutrition, prevention, etc. They bought a house in Queens. Her husband was working at a clinic, but in 1974, one week before the birth of their first child, a boy, he lost his job. When the child was born, the delivery was extremely long, difficult and painful. In 1976, shortly after the birth of their second child. Bisi started making jewelry as a hobby, then professionally to earn money. They bought a camper, took their two kids, and began to travel all over America. "We became free spirits, traveling to wherever there was an art show, to enter our jewelry."

They ended up settling in an apartment in Fort Lauderdale, Florida. Expecting a third child in 1978, they decided to do the birth themselves–with a midwife. So they bought the book *Spiritual Midwifery,* by Ina Mae Gaskin,

© Copyright Soyinfo Center 2013

published by The Farm. They also bought one of the Farms' cookbooks. From these books Bisi learned about the many creative things done by The Farm–such as donating food and relief help to developing and poor countries.

They bought a house in Miami and decided, now with three kids, to end their itinerant life. First they opened a jewelry shop in Miami; soon it was thriving. Then they joined a co-op and many of their friends were Rastafarians–who are vegetarians. Soon they decided firmly to become vegetarians and soy became a large part of their diet. Bisi made her own tofu for her family, using *The Book of Tofu* by Shurtleff & Aoyagi. She also made her own whole-wheat breads and other natural foods. Bisi decided to start an alternative school in Miami to give her sons a better education. She incorporated the school and became the principal. Many Rastafarians sent their kids to the new school.

When she was in Ghana in 1973, Bisi decided that someday she definitely wanted to return to Ghana. Over the years she had worked hard to save her money for the return trip. One place in Africa she knew she didn't want to go was Liberia, where she heard the indigenous people were treated badly. Now she realized that if she waited any longer to return to Africa, their eldest son would resist the move. So they pulled up roots in Miami, rented their house in Queens, and Bisi flew to Africa to prepare the way for her family. She decided to settle–of all places–in Liberia, arriving in 1985. After finding a place to live, she returned to New York to bring her family back with her. Her goal was to do something to help the people of Liberia and to find a place where she and her family could pursue their own development.

In 1986 Bisi and her husband started the African Islamic Mission in Monrovia, Liberia, as a non-governmental organization (NGO). Its focus was to be on agriculture and education, helping the people of Liberia to feed themselves, and also on promoting Islam. Because of their lifestyle, they were very interested in organic, sustainable agriculture. But the local people became suspicious; who were these foreigners who were not connected with any known organization? When Bisi and Mahmoud finally got a permit to open their own school, they decided instead to teach at an existing Liberian school (pre-school to 9th grade) in Monrovia. Bisi taught there from late 1986 to 1990. Mahmoud taught there for one year, then got a private-sector job to earn needed money. In their spare time they started programs at their Mission–teaching literacy, English as a second language, and sex education for young girls. Their agricultural work was limited to a backyard garden.

In about 1985-86 Koreans started coming to Liberia to farm. They started selling small amounts of tofu in about 1989, and Bisi started buying it from them in Monrovia–but unfortunately the tofu didn't stay fresh very long. Bisi has no idea where they got the soybeans to make the tofu.

In about 1987 or 1988 the extension service at the University of Liberia in Monrovia tried to grow soybeans. They collected some statistics, but everything was lost during the civil war. Methodists in Liberia had experimented with growing soybeans just before the war, but the project was a total failure. A friend of Bisi's who is a vegan and a Methodist missionary, Bill Whitfield, convinced the Methodist Farm Project to grow soybeans, because he eats soyfoods in place of meat and dairy products–and he was having to import the soybeans. They did grow the soybeans successfully. Bisi bought a 50-lb bag from the Methodists, so that her African Islamic Mission could start making tofu again. But it was a failure because the farmers and the Liberian people weren't interested, and Bill Whitfield had left Liberia and didn't go to the extension service to show people how to use the soybeans. Continued. Address: Director, Imani House, 76A Fifth Ave., Brooklyn, New York 11217. Phone: (718) 638-2059.

11626. Iderabdullah, Bisi. 1998. History of work with soybeans and soyfoods in Liberia. Part II (Interview). *SoyaScan Notes.* April 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In December 1989 a bloody civil war began in Liberia in the countryside. By July 1990 it had reached Monrovia. Many orphaned and abandoned children were brought to the Mission, so an orphanage and clinic sprang into existence at a house next to their house, on an adjacent compound, and was soon caring for about 30 kids. Bisi and Mahmoud paid all expenses of the orphanage, clinic, and Mission from their personal funds.

Bisi and her family returned to the USA after a cease-fire in late November 1990 and tried to solicit support to help feed the many starving people in Liberia. She called CARE and many other organizations, but with little results. One day someone asked her: "What is the name of your organization?" She had previously lost their fifth child, named Imani, so she said spontaneously "Imani House." The name stuck. Then she called The Farm–getting the address from Ina Mae's book. She was told that they had a philanthropic arm named Plenty, but they no longer supplied relief foods. Then she called Peter Schweitzer's office in California to ask him what they could do to help–the situation was very urgent and the world wasn't paying much attention. They got to know one another over the phone and Peter said that Plenty would choose Imani House as a group that they would work with. When they talked about growing soybeans, Bisi thought it was "a little bit way out for Liberia."

Bisi and Chuck Haren (who had been sent by Plenty) went together to the International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria. Chuck had already taken their training program, but he wanted to introduce Bisi to it. IITA people showed them how to grow soybeans, gave them soybean varieties especially adapted to West Africa,

© Copyright Soyinfo Center 2013

demonstrated simple machinery for pressing oil from the soybeans, introduced them to the *bumbum* leaves they use with lemon as a coagulant in the lab to make tofu, prepared many different dishes from soybeans, and demonstrated different quick and simple ways of making soymilk for use as a beverage. They spent a lot of time with Dr. Sidi Osho, an expert in soybean utilization. Bisi and Chuck were given a tour of local businesses producing soyfoods, including one that made Soyvita soymilk in Lagos. One chemist had turned his distillery into a soymilk factory. In the market, they saw soybeans being fermented to make dawa-dawa, a seasoning. After seeing all these things at IITA, Bisi's skepticism about the potential of soyfoods in Liberia was largely overcome. She and Chuck returned to Liberia.

Returning to Liberia, Bisi and Mahmoud changed the name of their African Islamic Mission to "Imani House;" they didn't want to be killed because they were Muslims–which happened a lot in Liberia during the war. Their original mission, to teach agriculture and education, remained unchanged.

Originally Bisi had assumed that the agricultural work of Imani House would have to be done in the countryside, outside of Monrovia. But by 1990 she realized that urban agriculture was a real possibility.

Bisi and Chuck first planted soybeans in Liberia in about 1991. The seed came from two sources: They brought back about 6 kg of specially adapted seed from IITA, and the rest they bought in a local market in Liberia; the latter soybeans had come in to Liberia as a relief food and the people were rejecting them (they took too long to cook; the local people thought they were split peas), so they were selling at a very low price. They supervised the planting of these soybeans at 8 different sites, in small plots totaling about 1 acre, in and around Monrovia–no further than 25 miles away. The United Nations provided an agronomist (Mr. Sha of UNDP), who planted some of the seeds incorrectly; they were viable and they germinated. Imani House had 5 acres of land on which they planted one small plot. None of the 8 plots grew well. The war was going on and people grew the soybeans on poor soil that they would not ordinarily use. The plots did not yield enough soybeans to eat, but they did yield enough seeds to replant. The seeds from IITA did the best, but they never gave good yields. The bean beetle became the biggest plague, eating through the leaves. Bisi used compost and many organic methods. The farmers wanted to spray a lot and use chemical fertilizers. In about 1994 they had a very good yield one year at one site in a back-yard garden on virgin soil. The soybean plants were lush and the beans were large. There were big problems with seed storage, since there were heavy rains 6 months of the year.

Throughout this time, Bisi was doing trials with utilization. They would take a few pounds of soybeans to an orphanage and teach them how to make and use soymilk and okara fritters (seasoned patties of okara mixed with flour then, fried). "They loved these foods." They had a big demonstration for home economists from the Ministry of Agriculture, who work with the school feeding program. They developed a sheet of nutritional information on soybeans and soymilk (comparing soymilk with cow's milk) which they passed out to these nutritionists.

From September to December 1995, with help from the Trull Foundation of Texas, Plenty was able to send a soy/agricultural technician from Belize to Liberia to help Imani House with its soybean project. His name was Ignatius ("Gomier") Longville. A Caribbean native and a Rastafarian (Rasta = "Roots") farmer, he was skilled in ways of growing food under adverse conditions using the natural rhythms and resources. He had worked with Plenty on the island of St. Lucia from 1984 to 1990. Now he volunteered his services, providing hands-on assistance to help Imani House and the farming groups with which they were working in Liberia to grow soybeans and other crops in nutrient-deficient soils. He introduced organic methods of pest management and demonstrated composting techniques. They used a Rototiller to open the soil and control the bean beetle, and added small amounts of chemical fertilizers. The result was the most successful crop of soybeans ever. The Liberian farmers were impressed.

In October 1995 Imani House won first prize for food processing at a World Food Day Exposition in Monrovia. Gomier and the Imani House staff conducted soyfood demonstrations for 10,000 people. "We couldn't make food fast enough. We made pies, soymilk (mixed with cocoa), soy fritters, soynuts, and tofu on site. We just didn't have enough. It was amazing." They had plenty of soybeans (300-400 lb), which they bought from Ghana, with help from the Ghanaian Ministry of Agriculture.

Building on these successes, Bisi got FAO to agree to bring in a container of soybeans for planting and to provide a consultant (Delvin Walker) to help Imani House. Walker was an agronomist; before the war he had been a teacher of agriculture at Cuttington University, the Christian university in Liberia. Walker was already a member of the Imani House board of directors; he went with Bisi to talk with FAO and WFP (the World Food Program). They also got the World Food Program to agree to bring in soybeans for utilization. The Liberian government had agreed to give Imani House a memorandum of understanding that they would be the soybean growers and demonstrators in Liberia. The head of the Ministry of Agriculture believed that this agreement would help Imani House to get the funding that they needed so much. Work was underway using soybeans and cassavas to make an enriched *gari.*

Then in April 1996 factional fighting flared up again, devastating Monrovia. The civil war was on again. Bisi, too was devastated–just as her soybean program was finally about to take off. "Armed robbers took our Rototiller, all of our farming equipment. We lost everything. We left Liberia

© Copyright Soyinfo Center 2013

and stayed in Senegal for four months, waiting to go back. But it never got better." Then they went to Gambia. In English-speaking Gambia they were invited by a leading citizen to stay and work to introduce soybeans.

The civil war is now officially over, and Bisi is working to raise funds in the USA which are used to support her Liberian program. She is also trying to raise funds for the soybean, agricultural, and literacy programs. The clinic has been rebuilt and literacy programs have been re-started in English and Bassa. Benjamin Grant is administering the programs. The war has cooled down but anyone who buys equipment is at risk of visits from armed robbers. Because she is now in New York, Bisi is also developing Imani House's local program. She hopes eventually to return to Liberia. "The problem now is not to import soybean to Liberia but to grow it. We see it as a way of solving major problems of malnutrition in Liberia." Address: Director, Imani House, 76A Fifth Ave., Brooklyn, New York 11217. Phone: (718) 638-2059.

11627. Seemo (H. Shapira); Kairava (J. Spaelstra). 1998. Re: Exciting new developments at Dakini Health Foods Pvt. Ltd. in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, April 10. 1 p. Typed, without signature on letterhead.

• ***Summary:*** "Hello Bill. Greetings from hot, hot India, and some gossips too. 3 months ago we managed to close a deal on a 17,000 square foot plot about 7-8 km from our present place.

"We dug a bore well and found a good spring!!! And yesterday we got our electricity connection–a Big story in India.

"We are trying now for building permits and planning to have 5,000 square feet ready by next year some time. About half of the space will be for our soy project–tofu, soy milk, soyogurt drink, tempeh–and hopefully more. We can get nearly all the equipment built locally–steam boiler, cooking pots, refrigeration, etc. We also want to fabricate a pressure cooker, an okara press, etc.

"For grinders some hammermills are available but I think we prefer to get a sanitary stone grinder so please if you have the address of some manufacturer / stocklist of these. Models sold without motors are best. We will be happy to know as this type of equipment has never evolved in India and importing is the only solution. Taiwan, Japan, or the U.S. are all OK. We may possibly buy a small one for hummus production as well.

"All the best, with love. Seemo & Kairava.

P.S. Tempeh production is running smoothly, 60-80 kg per month, 7-10 per batch for now. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

11628. *SoyaScan Notes.* 1998. The production of spray-dried tofu in America (Overview). April 21. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The three major manufacturers of spray-dried or powdered soymilk are Clofine, Devansoy, and SunRich. Ed Pedrick started with Clofine, then moved to Devansoy. Most of these companies make their spray-dried tofu starting with finely milled soy flour. Some add calcium sulfate. They add water, and perhaps slurry it with water, but it is not known whether or not they actually have a coagulation step–which is necessary before the product can be called tofu. The process is highly secret.

11629. Krizstan, Jan. 1998. Update on work with tofu and soybeans in Slovenia (Interview). *SoyaScan Notes.* April 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan has recently introduced several new soy products, types of pasta (vegetarian ravioli, and kapaleti) and a *jibanita* (like a country pie, a specialty in northeastern Slovenia) filled with tofu (made by Mirko Trampus) and spices. They are selling quite well, and some are starting to be exported to Reform Houses in Austria. They are promoted broadly as being "Good for all who care about cholesterol or their weight"–rather than an as vegetarian or made with tofu. The pasta is made using only durum wheat (hard winter wheat). Jan also plans to produce sausages made of gluten from Spelt (an ancestor of wheat). This may be the world's first Spelt seitan product.

Jan and Mirko are no longer working together. Mirko married Jan's sister and they have a child. Mirko is growing organic soybeans, focusing on one very old soybean variety from Novi Sad. This variety won first prize for protein content in a 1904 competition in Austria. Mirko is also still making tofu, and his is still No. 1 in all of Slovenia. It is the only variety curded with natural nigari, which makes it much easier to digest than all the other varieties which are curded with calcium sulfate.

Jan has started to publish his magazine again. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

11630. American Pride Soyfoods. 1998. American Pride tofu–Organic and proud of it. *Everybody's News: Fresh Thoughts on Health, Nutrition and Food* (*Fairfield, Iowa*) 2(2):6. March/April.

• ***Summary:*** Alex Green, the owner of American Pride, says that making tofu resembles a Zen experience. The company has made only organic tofu since 1986. "According to Alex, Fairfield may be the tofu capital of the western world in terms of pounds per person. The people of Fairfield consume 10 pounds of tofu per person per year. For the rest of the U.S. the average is ½ pound per person per year. For the community of meditators and sidhas the average is closer to 40 pounds of tofu per person per year, greater even than that

© Copyright Soyinfo Center 2013

of Japan."

"Why American Pride? Alex says he often wondered about that himself after he bought the company from its former owner Earl Kaplan. Earl inherited the name from the company's founder Fred Schaeffer after he started the business in 1978. 'One day it hit me that I had a very quiet but unmistakable feeling of pride about our business. We had kept going year after year, soybean after soybean, challenge after challenge, making the product in the best way we knew how and our American consumers were still appreciative.'"

Tony Lucchino, plant manager, has been with American Pride for the past eleven years, and tofu-maker David Newlon for the past 5 years. Photos show: (1) Tony Lucchino scoops soy curd for the tofu press. (2) David Newlon breaking up the curd for American Pride which makes up to 900 lbs/day of tofu.

Note: Many of American Pride's customers are affiliated with Maharishi International University in Fairfield.

11631. *Bluebook Update* (*Bar Harbor, Maine*). 1998. Barrels of hot soymilk move around on a carousel in tofu making process... (Photo with caption). 5(2):2. April/June.
• ***Summary:*** This black and white photo shows a carousel carrying heated steel barrels of soymilk from the location where coagulant is added to the location where the curds are put into tofu pressing boxes. The photo was taken in House Food America's soyfoods plant, located in Garden Grove, California. The factory produces 150,000 tofu packages per day. Photo by Peter Golbitz.

11632. Carlson (J.R.) Laboratories, Inc. 1998. Soyfoods: Fast & easy! (Ad). *Vegetarian Times.* April. p. 91.
• ***Summary:*** A half-page color ad for Carlson's EasySoy–isoflavone concentrate. "Four capsules provide more isoflavone content than ½ cup of tofu or soymilk!" Address: 15 West College Dr., Arlington Heights, Illinois 60004-1985. Phone: 800-323-4141.

11633. **Product Name:** Veggie Spread: Nature's Alternative to Butter or Margarine. Renamed "Veggie Margarine: Nature's Alternative to Butter" by 31 May 1998.
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. April.
Ingredients: Soy beverage (filtered water, organic tofu*, isolated soy protein), hydrogenated canola vegetable oil, casein (a dried skim milk protein), maltodextrins, organic food acidulants (lactic and citric acids), tricalcium and potassium phosphates, sea salt, carrageenan (sea weed gum), natural vegetetable locust bean gum, natural flavors, annatto and turmeric colors, vitamin E (antioxidant), vitamin A palmitate. *Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. white plastic tub. Retails for $2.19 at Safeway supermarket (1997/05, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. April 12. Sold refrigerated from a large display next to the produce section. Tub is 3.75 inches in diameter and 2.375 inches high. Label on top of tub: 3 inches diameter. Yellow, white, red, and black on green. "New! Made with organic tofu." Label on side: Fat per serving: This product: 3 gm. Margarine or butter: 11 gm. Website: www.galaxyfoods.com. Soyfoods Center product evaluation: What is it? This nondescript product/spread somewhat resembles a soft tub margarine, but it doesn't taste very good when used in place of butter or margarine–as on toast. The flavor is unusual and somewhat rancid. The package design is excellent. If it contains any tofu, that must be so-called "spray-dried tofu," but it is not labeled as such. Price: $2.19–Very expensive.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. May 31. The product is now named "Veggie Margarine: Nature's Alternative to Butter," however it appears to be the same product described above. The price is still $2.19. One ingredient has changed: Hydrogenated canola vegetable oil has been changed to "unhydrogenated canola vegetable oil."

11634. Green, Cindy. 1998. Just a spoonful of food makes the medicine go down. Nutraceuticals: the hottest trend in value added agriculture. *Ag Innovation News* (*AURI–Agricultural Utilization Research Inst., Waseca, Minnesota*) 7(2):1, 4-5. April.
• ***Summary:*** A "new wave is hitting America. Healing foods that can stifle a cold or even ward off cancer are all the buzz in value-added ag circles. Whatever name they go by–medicinal plants, nutraceuticals, functional foods, natural therapeutics–they're foods touted to prevent or cure health problems, and AURI is looking at them with an eye to opening up new crop and product markets for Minnesota agriculture." A variety of plants are now known to have medicinal value. "Even traditional crops like soybeans stand to gain. Soybeans are in the spotlight for the isoflavone 'genistein,' a cancer-fighting compound that could boost sales of Minnesota-made tofu, soy oil and soy patties."

"Medicinal foods are catching on fast with the 76 million baby boomers struggling to retain youthful vitality."

"'Consumers today are losing faith in modern medicine, and many are taking a holistic approach to life... treating and nourishing the body in order to improve health, rather than taking drugs to treat specific ailment,' writes Donna Gorski, senior editor of Dairy Foods, in the January 1998 edition of the magazine."

"Nutraceuticals can be whole foods or extracted

© Copyright Soyinfo Center 2013

components added to other foods."

"Isoflavones in soybeans may reduce the risk of certain cancers including breast, lung, colon, rectum, stomach and prostate cancer."

A color photo shows tofu served on a glass dish with a sprig of parsley on top.

11635. Haedrich, Ken. 1998. Feeding the healthy vegetarian family. New York, Toronto, London, Sydney, and Auckland: Bantam Books. 305 p. Index. 24 cm.
• ***Summary:*** A lovely vegetarian cookbook. Soy-related recipes include: Mom's hot soy milk (p. 13). Tempeh barbecue, avocado, and Monterey Jack burritos (p. 79). Oriental tofu Reuben (p. 80-81). Tempeh barbecued sandwich topped with coleslaw (p. 82). Baked or grilled vegetable packets (with tempeh, p. 129-30). Spaghetti with tempeh tomato sauce (p. 148-49). Tempeh, onion, and cheese enchiladas (p. 181-82).

We especially like p. 292, titled "Mindful eating, smiling grace." Ken Haedrich is a winner of the Julia Child Cookbook Award. Address: Rural New Hampshire.

• ***Summary:*** Chefs from stylish restaurants sing the praises of tofu and offer their favorite recipes: Jump start smoothie (with soymilk). Veggie Peking 'Duck' (with frozen, dried sheets of yuba). Miso risotto. Curried tofu and sweet potato wakaya. Barbecued tofu. Sweet-and-sour tempeh with cucumber and cauliflower. Golden-fried bean curd with tomatoes. Sauteed eggplant with miso sauce. Note: The word "soyfoods" is misspelled as "soy foods" (two words) throughout this article. Address: Chicago.

11637. Sass, Lorna J. 1998. The new soy cookbook: Tempting recipes for tofu, tempeh, soybeans & soymilk. San Francisco, California: Chronicle Books. 120 p. Illust. (25 color photos by Jonelle Weaver). Index. 21 x 23 cm.
• ***Summary:*** Contents: Introduction–The soy of cooking (descriptions of soybeans, black soybeans, soymilk, tofu, tempeh, miso, soy sauce). Appetizers and soups. Entrées. Soy on the side: Vegetables and grains; Salads, slaws and dressings; Scones and a few desserts. Mail order sources. Table of equivalents. A black-and-white photo shows the author. Note: This is not a vegetarian cookbook. Ingredients include swordfish, shrimps, mussels, codfish, clam chowder, etc.

Letter (fax) from then talk with Lorna Sass. 1996. Sept. 8. This trade paperback book, with many full-page color photos, is scheduled to be published in the spring of 1998. Chronicle Books is now publishing a series of books titled *The Vegetarian Table,* with each book featuring the vegetarian cookery of a different country. Address: 46 West 83rd St., New York City, NY 10024. Phone: 212-799-1085.

11638. Sass, Lorna J. 1998. Sensational soyfoods. *Delicious!* (*Boulder, Colorado*) 14(4):50-52, 54-55. April.
• ***Summary:*** Contains recipes using tempeh, silken tofu, black soybeans, and soymilk–excerpted with permission from her latest book, *The New Soy Cookbook.*

Note: The Delicious! website address is written at the bottom of every other page. Readers are invited to visit this website at 7 p.m. Mountain Standard Time for an online chat with soyfoods expert Lorna Sass. Address: Culinary historian, New York.

11639. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times.* April. 12-page color insert after p. 58.
• ***Summary:*** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraid nutritional drink), Sno Pac (frozen Sweet Beans–organic green vegetable soybeans), and GeniSoy (soy protein bars). On the rear cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods–Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and "Soy facts." The text on page 1 begins: "Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it's no wonder; soy truly is a nutritional and culinary gift from nature.

"Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu 'eggs,' or soy 'sausages.' A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

"So dig in... with the huge variety of soyfoods available at your local natural foods store, it's easy to get your daily intake of soy, and reap the many benefits of the bean supreme."

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When

© Copyright Soyinfo Center 2013

adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It's not only what you eat; its also what you don't eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for "hot flash" in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800's. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address: Washington, DC.

11640. Vitasoy USA, Inc. 1998. Do you know what to do with tofu? Let Azumaya tofu show you how to cook a great meal (Ad). *Vegetarian Times.* April. p. 19.
• ***Summary:*** This full-page color ad shows packages of five types of Azumaya tofu–before the labels were redesigned: Firm, extra firm, and silken tofu, fried tofu, and tofu puffs. Address: 400 Oyster Point Blvd., #201, San Francisco, California 94080. Phone: 800-EAT TOFU.

• ***Summary:*** Contains summaries of previous reviews of the Penang Cuisine Malaysia and the Taipei Wall Sea Street Taiwanese Restaurant, described in detail by Ruth Reichl in the 24 Feb. 1995 issue of this newspaper (p. C24). Mentions "fermented bean curd," tofu, and "fermented black beans."

11642. Gonzalez-Watanabe, Yvonne. 1998. Introducing tofu and soymilk to Costa Rica. Update on soyfoods work in the Los Angeles area (Interview). *SoyaScan Notes.* May 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yvonne just returned from a month (March 29 to April 24) in her native country of Costa Rica, where she was teaching about and studying tofu and soymilk. She gave 8 classes in people's homes, where she taught them how to make and use soymilk and tofu; about 30-40 people attended, and about half the people attended more than one class. During these classes she developed a recipe for tofu seviché (pronounced say-VEE-chay), which is traditionally made with marinated raw fish but occasionally with green plantain or avocadoes substituted for the fish. Yvonne used tofu in place of the fish, and it was a big hit.

Vegetarianism is now quite popular in San Jose, the capital of Costa Rica, but it goes under the name of macrobiotics. There are a number of "macrobiotic" restaurants in the capital; all serve only vegetarian food.

When Yvonne tried to interview the one existing Chinese-run tofu company, they were very uncooperative. It seemed like they might be going out of business because tofu is now being made on a small scale in many other places. Yohan, the big chain of Japanese-run food stores, now makes fresh tofu each day in the store. Many small Chinese food markets and restaurants also make their own tofu. Kikkoman Tofu, sold in aseptic packages, is fairly widely available.

Yvonne's booth and tofu recipe brochure for the LA Tofu Festival are progressing nicely. Margaret Endo has found advertisers for the booklet, which will enable Yvonne to expand its size. She has also found a Costa Rican celebrity to be the host at her booth–Lily Melgar, a well-known actress and friend of her cousin. Yvonne went to Lily's home and prepared her favorite tofu recipes, which Lily liked very much.

Update: Talk with Yvonne. 1998. July 8. The Southern California Gas Co. will be sponsoring Yvonne's booth at the LA Tofu Fair–which is now set for Saturday and Sunday, August 15-16. They will pay for all the bands, the music, and a Spanish-language flyer–largely because they are interested in reaching the Hispanic population in the Los Angeles area. Yvonne has been meeting a large number of people who are interested in tofu–some of them local celebrities. One Puerto Rican lady who is a musician, goes by the name "La India." Ricky Martin from Mexico is a pop music star. Yvonne has cooked Hispanic vegan tofu recipes for both of them.

Update: Talk with Yvonne. 1998 Dec. 10. She is now the guest chef on a TV show in Los Angeles (KCET–Channel 52) twice a month teaching cooking–vegetarian and soyfoods. She receives no pay for this, but it is very interesting and good exposure. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

11643. Rose, Richard. 1998. How so-called "spray-dried tofu" is made (Interview). *SoyaScan Notes.* May 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard makes a number of cheese alternatives (such as TofuRella) which contain a substance that is listed on the label as "Tofu" (not as "spray-dried tofu" or "tofu-reconstituted"), giving consumers the impression that it is fresh tofu. Although Richard has been using this substance in his products for more than 10 years, he has never seen it made and he is not sure how it is made. However he thinks it is made as follows.

The process begins with finely ground soy flour, not with whole soybeans. This soy flour is slurried with water and run into a continuous-process cheese-cooker, where it is moved along by an auger. Calcium sulfate (a tofu coagulant) is added and "continuous coagulation" takes

© Copyright Soyinfo Center 2013

place, although Richard thinks there is no separation of curds and whey. At the same time the slurry is cooked, probably by steam injection. Finally this slurry is spray dried. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11644. Cohen, Misha Ruth. 1998. Tofu as seen by traditional Chinese medicine (Interview). *SoyaScan Notes.* May 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** From the viewpoint of traditional Chinese medicine (TCM), tofu is a *yin* food with three main healing properties: It is a cooling food, it moistens dry conditions (increases fluids), and it is a *yin* tonic. To say that tofu is simply a *yin* food (as some followers of macrobiotics do) is an oversimplification in the view of TCM. A *yin* food such as tofu is good/healing for some people but not good for others, depending on the person's constitution and particular health condition or problems.

Yin is more the water element, as opposed to yang which is more the fire element. A yin tonic increases the yin effect on or aspects of the body–including coolness and fluid; likewise, a ch'i tonic increases the amount of energy in the body. A person might need a yin tonic if they had dryness, hot flashes, and night sweats or afternoon sweats. TCM uses yin (and tofu) to treat perimenopausal symptoms.

A healthy body has yin and yang in balance. At this point it is important to distinguish four states of yin/yang imbalance: Yin deficiency, yang excess, yang deficiency, and yin excess. The latter condition (yin excess) is rare, except in dampness, as manifested by a "slippery pulse" and too much fluid in the body. A person (such as one with liver fire) could have a large yang excess plus some yin deficiency, which in TCM is called "yin deficient–yang excess." Such a person might have dry skin and the tip of their tongue might be red. Tofu would be a good food for this person to eat.

Seen from the Western viewpoint, tofu contains phytoestrogens. That means it is a "yin tonic" because estrogens are yin substances, which create the female (yin) character. As people get older, they gradually lose all of their hormones. As a yin tonic, tofu is good for older people, both men and women.

Concerning heating and cooling foods: If a woman comes to Misha with menopausal symptoms, such as hot flashes and night sweats, she would first look at her digestion. People who have very poor digestion find it hard to eat tofu–because it is too cooling. Americans typically have "cold digestion"–which is not true of most Japanese. Children usually have hot digestion, and their diarrhea is "hot diarrhea." Older people are generally constipated–they have yin deficiency; they don't tend to get loose stools. People who have loose stools and cold stomach conditions should not, generally, eat plain tofu. As Paul Pitchford says: "Its yin cooling quality needs to be altered by thorough cooking; adding warming spices such as ginger is particularly helpful for "cold persons." A person can have heat in many areas of the body (such as the spleen or liver) and still have a cold center and cold digestion. So the cooling properties of tofu can be changed by heating it. "I see a lot of women who are eating a lot of tofu and other soyfoods, and they are having problems with their digestion, including a lot of gas. So I tell them how to cook it, with ginger or garlic or things that are more warming, and all of a sudden they can enjoy the tofu without the digestive problems. But if a person is very hot and has good digestion, they can make a tofu shake." Note that in Japan and Hawaii, chilled tofu is very popular during the summer–when the weather is quite warm (*yang*). So a practitioner of TCM must look at many things (tongue, pulse, environment, etc.) before recommending a specific food and method of preparing it.

Question: The concept of heating and cooling foods goes back to the T'ang dynasty in China (A.D. 618-906) and is widely understood by typical people throughout Asia. Do you think that this must be explainable in terms of Western biochemistry and medicine, or is it possible that this is a concept that Western science has overlooked? Most post-menopausal women in the USA and Europe who have hot flashes and night sweats never think about using a cooling food (such as tofu, watermelon, wild chrysanthemum tea, or cucumbers) to help relieve the problem.

Answer: Misha is not sure, but she does think that if perimenopausal women were aware of and consumed cooling foods and yin tonics in an intelligent way, it could save them much suffering. These foods are described in Misha's book titled *The Chinese Way to Healing: Many Paths to Wholeness* (1996, Berkeley Publishing Group/Perigee). Visiting an acupuncturist is a good way to deal with difficult menopausal problems (such as hot flashes and night sweats); the combination of acupuncture, herbs, and dietary recommendations often give surprisingly quick results. Hot flashes are usually a combination of yin deficiency and yang excess, but Misha has seen many kinds; some are more liver-heat hot flashes and others are more yin-deficient hot flashes. But tofu is one food that is almost always good for hot flashes because it tonifies yin, is cooling, and increases fluids. Historically, the Chinese have been extremely good at dealing with gynecological problems; women's health a major part of Chinese medicine. Address: O.M.D. (Doctor of Oriental Medicine), LAc, Chicken Soup Chinese Medicine, San Francisco. Phone: 415-861-1101.

11645. Demos, Steve. 1998. Thoughts on making good-tasting soymilk (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The process of making soymilk can be divided into two parts: Making the base, then formulating it before packaging. Many years of experience have taught Steve that the second part of the process is more important than the first

© Copyright Soyinfo Center 2013

in making top-quality soymilk. Ted Nordquist's expertise is in formulating the product more than in making the base. Most of the literature is focused on the first part, making the soymilk or base. Steve has also found that making soymilk is easier and takes much less space than making tofu.

The equipment traditionally used by Ted Nordquist traces its origins to Alfa-Laval. It was "an Alfa-Laval knockoff." Steve does not yet manufacture his own base concentrate; he buys it from several suppliers, formulates it himself, then uses dairies to pack it into ESL cartons. He is now planning to buy a standard soymilk system from one of the major equipment sellers–probably from the Tetra-Laval Group. A soymilk system–without the building, refrigeration, steam system, or packaging equipment–will cost him about $1.2 million. Steve no longer feels a need to economize. His main goal is to get a strong, reliable system from a dependable supplier, and to have it running in less than 1 year inside one of Steve's existing buildings in Boulder. It will take up very little space–something like 500-600 square feet of floor space. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11646. Fischer, Bruno. 1998. Leading soyfoods manufacturers in Germany (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The biggest soyfoods company in Germany is probably Noelke (Nölke), which is a big, private meat-processing company with four plants throughout Germany. Their headquarters is in the Osnabrueck area (Osnabrück, 30 miles northeast of Muenster). Their products, which are mostly meat alternatives (especially sausage alternatives) are marketed under the Eden brand in Reform Houses. No. 2, DE-VAU-GE (pronounced day-fau-GAY, whose Granovita brand is very popular), also makes many meat alternatives, such as links (sausages).

No. 3 is Life Food GmbH in Freiburg (Taifun brand). No. 4 may be Huegli, but they are not really a soyfoods manufacturer. They did buy Soyastern, Yamato, and Horst Heiler, and they sell products under those three brands–not under the Huegli brand.

No. 5 is Albert's Tofuhaus; he produces a lot of bulk tofu for other companies. No. 6 is Viana. The others are fairly small. Geestland started with soy then tried to introduce Lupino (made from Lupins), but the Lupins was not very successful. They are a regional tofu plant, a little bigger than Christian Nagel in Hamburg. Svadesha still exists, but they have been sold to non-soy people, who are fiddling around. They are quite regional and don't make very much soy at present.

TKW (pronounced TAY-kah-vay) has an unusual history. They are a branch of a machinery manufacturing company. They were asked to make a tofu plant, but their customer went bankrupt. So rather than letting the equipment just stand idle, they decided to make tofu. TKW was owned by two brothers who didn't get along very well with each other. So one went into making tofu and the other stayed with the making machinery. "They still seem to do something, somewhere, for somebody. I think they are more into the bulk tofu business."

Henselwerk in Switzerland is not a soyfoods manufacturer. In fact, they don't process any foods; they bottle lecithin, package texturized protein, etc. Soyastern doesn't exist any more; the factory was closed but Huegli still uses the Soyastern brand. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

11647. Fischer, Bruno. 1998. Comparing quark and tofu (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** To make quark: Sour milk with lactic acid bacteria to pH 4.2–like yogurt this takes 6-8 hours. Remove any whey. Package plain or sweetened (with flavor if desired) in a plastic cup (typically 250 or 500 ml). Quark is richer, thicker, and firmer than yogurt; it has twice the solids content and more body. Quark is about half-way between yogurt and *Frischkaese* ("Fresh cheese"–which is quite like Philadelphia cream cheese). In olden times, it was considered the "cream cheese of the poor." Plain quark (about 20% of the total) is now used mostly to make cheese cake by food companies. Sweetened or flavored quark (80% of the total) is sold mostly direct to consumers, who use it primarily as a spread for breads. Soy quark would be somewhat different than tofu. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

11648. Louie, Elaine. 1998. Vegetarian that's filling. *New York Times.* May 13. p. F8.

• ***Summary:*** Julie Sahni, cookbook author and teacher, says that vegetarianism has been an inextricable part of Indian culture since about 500 B.C., when Mahavira, a Hindu philosopher, developed the concept of ahimsa, or non killing. Although meat is scarce in Indian cookery, protein is not. A recipe for Indian chickpea ragout shows this.

A recipe for Bean curd sauté, adapted from Youngin Hyun, calls for "2 pounds extra-firm or firm bean curd" [tofu]. Hyun, a Manhattan [New York City] photographer and talented home cook, says that Koreans, which also have a long and rich tradition of vegetarian cookery, have used beans as a protein source since 107 B.C. In Korea, all beans, including soybeans, are called "the meat of the soil." Koreans began making bean curd (called *du bu*) during the late Koryo Dynasty (918-1392), according to Mrs. Hyun. Today bean curd comes in two consistencies, firm or silken. The silken type can be sliced then drizzled with a mixture of soy sauce, sesame oil, vinegar, sugar, and chopped scallions. The firm kind is used in stews and sautéed dishes. In the decade after the Korean war (which ended in 1953), Koreans

© Copyright Soyinfo Center 2013

ate lots of bean curd as the poor country rebuilt itself.

11649. Morgan, Miriam. 1998. Students says yes to school veggie burgers. *San Francisco Chronicle.* May 13. Food section. p. 2.
• ***Summary:*** In the Palo Alto Unified School District (California), food service officials are wondering if they should offer veggie burgers on next year's school lunch menu. So third graders sampled and rated four brands of burgers, chosen for their availability in institutional and retail packages. The winner: Wildwood Tofu Veggie Burgers! Followed by Green Giant Harvest Burger, Gardenburger, and Quong Hop Soy Deli Original. Address: Staff writer.

11650. Messina, Mark J.; Messina, Virginia. 1998. Does consumption of soy increase or decrease a woman's risk of breast cancer (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mark: In the area of possible adverse effects of soy (especially soy isoflavones), Mark's greatest concern is with soy and breast cancer. "It still bothers me tremendously." There have been 3-4 animal studies in which soybeans or isoflavones have been fed to animals and then they have been given a breast carcinogen. In none of these studies have scientists found an increase in the number of tumors or in the incidence of breast cancer. Several of the studies show "modest protective effects" from soy. So this is good news. The epidemiologic studies are not that supportive of the hypothesis that soy reduces the risk of breast cancer, but none of them have suggested that soy increases breast cancer risk. There were one or two studies showing that fried tofu increased risk of breast cancer, but that nonfried tofu did not. So within an individual study, one soyfood might pop up as being problematic. "But overall, you would not look at those kinds of studies and conclude that soy is risk factor for breast cancer." The fact that Japanese women have about one-fourth the incidence and mortality of breast cancer compared with American women is worth noting. Several basic facts about soy must be kept in mind. (1) It is clearly estrogenic, containing phytoestrogens. (2) When you add genistein to cancer cells that are estrogen receptor positive, it will stimulate their growth over the typical physiologic concentration, but at higher levels it will inhibit their growth. In the range at which it stimulates growth, this is probably due to an estrogenic effect, but at the higher range, genistein is probably inhibiting one of the enzymes that cause the cancer sells to stop growing. At least ten scientific papers have raised the question of what is happening with these isoflavones, and they sound a little cautionary note. The criticism of these studies, where a little genistein is added to cells growing in a petri dish, is that there is absolutely no estrogen in the medium, and that even in post-menopausal women estrogen is present. So some people would say the petri dish does not represent a physiologic condition–you need to add some estrogen. Mark has heard that a researcher in Minnesota has added estrogen to the medium and she still gets a 20% increase in breast cancer cell growth. So genistein may still be an estrogen in that situation. One animal study showed that if you implant estrogen receptor positive cancer cells into rats who don't have ovaries, then you give them a significant amount of genistein, it will stimulate the growth of those cancer cells (tumors). But one criticism of this design is that there is very little estrogen in these rats and fairly high doses of genistein were used.

It is the three human studies (two of which have been published) which are troubling, and cannot be ignored. One is "Stimulatory Influence of Soy Protein," by Nicholas Petrakis at UCSF (1996) in *Cancer Epidemiology, Biomarkers, and Prevention* (5:785). A second is an abstract from the 1997 Brussels symposium by McMichael Phillips. Third, McMichael Phillips told Mark about a study in England that was 4 months in duration. They looked at nipple aspirate fluid and also got an increase in estrogen-regulated gene products. Mark has not seen the actual study and it is a long way from being published. These studies are troubling not because they are scary, but because they do not make sense. Malcolm Pike, from UCLA, a leading endocrinologist, said after studying McMichael Phillips' actual paper (not the abstract), that his must be a short-term effect, because that kind of stimulus would cause an increase in breast cancer, as (for example) in the Japanese population. Given that the other epidemiology does not suggest that soy increases risk, and given that the animal studies don't either, and given that the Japanese have a low breast cancer mortality rate, there is probably something else that could explain this phenomenon. Again, it could be a short-term effect that is actually preventive in the long run. But if it was a short-term effect, it still might be possible that soy should not be given to a person who already had estrogen-receptor positive cancer. So Mark is very reluctant to think that soy could increase risk of breast cancer risk; for one thing, it is very hard to identify any kind of food that increases or decreases breast cancer risk. And it is so unlikely that such a food would be soy, because there is very little supporting evidence. Nevertheless, Mark has about 25 scientific studies at the end of which the authors have expressed a cautionary note. The latter range from "Wow! These soy isoflavones are stimulatory; we've got to find out what is going on here," to "It's clear that we need to understand more about the estrogenic / antiestrogenic effects of these compounds before we recommend them to the public."

Mark does not differentiate between soyfoods such as tofu and isoflavone pills in terms of toxicity. He asks: "Would anyone use the above studies to recommend that people stop consuming tofu? No! When you look at the data collectively, it's hard to conclude that soy would increase the risk of breast cancer–especially for normal women. On the other hand, if it weren't for the low breast cancer

© Copyright Soyinfo Center 2013

mortality rate in Japan, and we just had the animal studies and the individual case control studies (neither of which show that soy increases breast cancer risk) plus the human studies, there would be more of a movement to look into this." When Nick Petrakis' study was published, it didn't get much attention; Mark thinks there is a built-in bias to assume that soy is either beneficial or (at the worst) has no effect. It will be interesting to see what the response will be when McMichael Phillips' paper is published as a full paper as part of the proceedings of the Brussels symposium (in Sept. in a supplement to the *American J. of Clinical Nutrition*). It is quite powerful; they actually took biopsies and found an increase in DNA synthesis.

Virginia: Ginny is well aware of the research showing possible adverse effects of soy (especially soy isoflavones) on breast cancer. She definitely thinks about this in planning her diet–in part because she has a fairly high risk for breast cancer; she has had two biopsies. "This is uppermost in my mind almost every day." Ginny wasn't eating a lot of soy products before this new research was published (she probably ate them 3-4 times a week), so she has not reduced her consumption based on the new information. Because of the concern with soy and breast cancer, Ginny would not eat soy products 2 or 3 times a day. "I certainly still eat soy products and I do not feel that I need to avoid them."

Ginny eats soyfoods because she is a vegetarian, because she likes them, they are easy to include in the diet, and they are generally good, healthy foods. Ginny has never calculated how may milligrams of isoflavones she is consuming per day. "I'm really into food, into good, healthy, whole food, with lots of fruits and vegetables, and whole grains. I don't think about things like isoflavones, vitamin C. I just figure I eat a really good diet." Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

11651. Brody, Jane. 1998. What to serve for dinner, when dinner is on Mars: Menu is vegetarian only–if you can get a table. *New York Times.* May 19. p. F1.
• ***Summary:*** At Cornell Univ., Dr. Jean Hunter and other food scientists are working to develop "tasty, appealing, nutritious dishes for consumption on the Moon, Mars, Jupiter–anywhere the astronauts might set up long-term housekeeping." The foods are made from crops that can be grown hydroponically in space. The possible foods include amazake (from rice), seitan (from wheat), soymilk and soy nog, etc.

11652. Roblin, Lynn. 1998. Asian staple soy good for you. *Toronto Star* (*Ontario, Canada*). May 20.
• ***Summary:*** Discusses the health benefits of soyfoods, which may be caused by their rich content of isoflavones, soy sterols, and soy protein. Various soyfoods are discussed: Tofu, soy beverages (brands include So Good and ProSoya So Nice), soy cheese, texturized soy protein (TSP, such as So Soya made by Bay Hill Impex Ltd. and TVP Meatfree made by Health Haven: A Vegetarian Place), tempeh, and most soy flours.

11653. Hainer, Cathy. 1998. Oh, 'soy' wonderful! Shucking its hippie image, the bean goes mainstream. *USA Today.* May 29. p. 08.D. Final edition.
• ***Summary:*** "Over the years, soy products, particularly tofu, have been derided as weird hippie food. But now the soybean is a nutritional star, and baby boomers are integrating soy products such as miso and tempeh into their upscale cooking."

Also discusses miso, tempeh, soynut butter, tofu burgers and soy cheeses.

11654. **Product Name:** [Fresh Tofu, Marinated Tofu, Smoked Tofu, Fresh Seitan, Marinated Seitan].
Foreign Name: Svjezi Tofu, Marinirani Tofu, Dimljeni Tofu, Svjezi Seitan, Marinirani Seitan.
Manufacturer's Name: Annapurna.
Manufacturer's Address: Poljanicki, Prilaz 12, 10000 Zagreb, Croatia.
Date of Introduction: 1998. May.
Ingredients: Marinated tofu: Soybeans, water, nigari, shoyu. Smoked tofu: Soybeans, water, nigari, natural smoke.
Wt/Vol., Packaging, Price: Marinated: 280-350 gm vacuum packed in plastic bags. Sells for 50kn/kg. Smoked: 200-250 gm in plastic bags. Sells for 60kn/kg.
How Stored: Refrigerated.
New Product–Documentation: Talk with Vlatka Kuzmic (see next page). 2001. Dec. 12. She and her husband started making tofu officially in Feb. 2001, but unofficially about 2-3 years earlier. They learned how from Susanna Ciceli, a macrobiotic friend.

Letter (fax) from Vlatka Kuzmic. 2001. Jan. 12. They started to sell Fresh Tofu, Marinated Tofu, and Fresh Seitan in May 1998. Marinated Seitan was introduced a month later. The tofu was made with regular soybeans (not organic) and nigari (white/refined flakes). Smoked tofu was introduced in Sept. 1998.

Kuzmic, Vlatka. 2002. "Brief history of Annapurna and work with tofu in Croatia." Letter to William Shurtleff at Soyfoods Center. 1 p. Gives key dates.

Labels sent by Vlatka. 2002. March.

Letter (e-mail) from Vlatka Kuzmic. 2006. July 11. This tofu was (and still is) smoked in a smoke house; no smoke flavor is added.

11655. Berry, Rynn. 1998. Tofu comes west: The spread of vegetarianism from Asia's religions. *Vegetarian Voice* (*NAVS, Dolgeville, New York*) 23(1):14-17, 26-27. Spring. [3 ref]
• ***Summary:*** Discusses: Asian religions in America, Asian

© Copyright Soyinfo Center 2013

Ahimsa-based beliefs, William Shurtleff and Akiko Aoyagi, roshi Philip Kapleau, Ron Pickarski, Rev. Prof. Dr. Andrew Linzey (Anglican priest and professor at Oxford University, the world's first to hold an academic post on the ethical and theological aspects of animal welfare; he has written or edited more than 13 books on the moral status of animals), Ellen G. White, The Bible Christian Church, the Order of the Cross (founded in 1904 in England by the Rev. John Todd Ferrier; would-be members must take a vegetarian vow).

Says Prof. Linzey: "From my perspective, it is not inconceivable that Jainism, in its care and respect for creation, has more understood the Christian doctrine of Love than the Christians have themselves."

Says Ron Pickarski: "It may not be in my lifetime, but someday the Western Church will adopt many of the features of Asian religions such as karmic doctrine, reincarnation, vegetarianism, and ahimsa."

11659. *Travelin' Light* (*Lightlife Foods, Greenfield, Massachusetts*). 1998. It was twenty years ago today... or thereabouts. Spring/Summer. p. 1-2.
• ***Summary:*** This is a nice history of the Tempehworks / Lightlife Foods. "In the late 1970s, in the hill towns of western Massachusetts, a unique mix of socially responsible, alternative lifestyle cottage industries were springing up. Frances Moore Lappé's influential book *Diet for a Small Planet* had just come out, articulating the benefits of a non-meat-based diet on both personal and planetary health. A founding partner in one of America's first natural foods tofu companies, Laughing Grasshopper Tofu, Michael was often asked by customers if anyone was producing tempeh. Sensing opportunity, Michael set out on his own to learn the craft of making tempeh and start a very small business. Initially called Tempehworks, the business was born in early 1979 in an abandoned car wash and soy tempeh was the sole product.

"When Chia Collins joined Tempehworks in 1980 there was no business plan and little structure to the organization. Chia's talents were an immediate asset to the upstart company."

"In the early years of the company, tempeh was still an unusual and unknown food and vegetarian diets were not common or well understood. Struggling to pay the bills, Chia and Michael suddenly realized that utilizing tempeh alone to accomplish their mission of converting people to a plant based, rather than meat based diet would take a tremendous amount of consumer education–far beyond the company's meager budget for such marketing activities. Their innovative solution to this dilemma was marketing products that were already familiar to their customers while still bearing the benefits of protein from plants. Enter, meatless alternatives to America's favorite foods: hot dogs and hamburgers.

"So, in 1984 the company changed its name to Lightlife Foods, moved to a larger location (this time a retired trucking terminal) and Tofu Pup hit the market. A delicious vegetarian hot dog made from tofu, Tofu Pups were an immediate success and Michael and Chia knew that they were onto something big. Vegetarian products were here to stay and the two soy entrepreneurs were more determined than ever to make Lightlife the leader in the field. In 1988 the company took a leap of faith, and with considerable support from the local community, received financing to expand its operations to meet the growing demand. Tofu Pups were soon followed by Smart Dogs, the first fat-free hot dog (and today, the country's best-selling meatless frank) and Smart Deli Slices, Lightburger and more."

Old black-and-white photos show: (1) Michael Cohen holding a jar of tempeh starter Culture, 1980. (2) Employees of the Tempehworks circa 1980. (3) Making tempeh at Tempehworks circa 1980. Box 870, 74 Fairview Ave., Greenfield, M 01302.

11660. Tree of Life, Inc. 1998. Looking for ways to use the ol' bean? (Ad). *Natural Health.* May/June. p. 77.
• ***Summary:*** This stylish, full-page color ad shows ten different packaged tofu products sold by Tree of Life, plus many dishes in which they are used. "And most are already seasoned, pre-cooked–and ready to serve."

The types are: Organic Firm Style, Reduced Fat Firm Style, Water Pack Firm Style, Baked, Savory Baked, Ready Ground, Savory Garlic Ready Ground, Hot 'N Spicy Ready Ground, Smoked, Hot 'N Spicy Smoked.

11661. **Product Name:** Tofurky Deli Slices [Hickory Smoked, Original Style, or Peppered].
Manufacturer's Name: Turtle Island Foods, Inc.
Manufacturer's Address: P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).
Date of Introduction: 1998. May.
Ingredients: Hickory Smoked: Water, vital wheat gluten, tofu (water, soybeans grown without herbicides, pesticides, or chemical fertilizers {and calcium sulfate coagulant}), white beans, garbanzo beans, natural vegetarian flavor, expeller pressed canola oil, shoyu (water, soy beans, wheat, salt), spices, lemon juice, calcium lactate from beets, salt. No nitrates or MSG.
Wt/Vol., Packaging, Price: 5.5 oz (156 gm) vacuum pack. Retails for $2.49 (2002/03, Lafayette, California).
How Stored: Frozen or refrigerated.
Nutrition: Per 1.5 oz (43 gm) serving.: Calories 120, calories from fat 15, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 286 mg (12%), total carbohydrate 14 gm (dietary fiber 2 gm [8%], sugars 0 gm), protein 13 gm. Calcium 2%, iron 7%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Leaflet (8½ by 11 inches, color) sent by Seth Tibbott. 1998. Published in May. "The famous Tofurky. Now available in Deli Slices." The product comes in two flavors: Original and Hickory Smoked. The back contains information on ingredients, nutrition facts, and quotes from satisfied consumers.

Postcard (color, 4 by 6 inches) sent by Seth Tibbott. 1998. "New! Tofurky Deli Slices. 100% vegan. Low fat." The text on the back reads: "Now you can enjoy the great

© Copyright Soyinfo Center 2013

taste and texture of the Famous Tofurky all year long!" Talk with Seth Tibbott. 1998. Nov. 18. Original and Hickory Smoked were introduced in May 1998. The Hickory is smoked in a real smoke house. Product with Label sent by Seth Tibbott. 1998. Dec. 16. Both flavors. 5 by 8 inches. Hickory Smoked is black, yellow, red and white. Original style is Red, black, white, and yellow. At top of front panel: "Low fat. 100% vegan." At bottom: "Tastes great cold or hot."

Product (Hickory Smoked) with Label purchased at Safeway supermarket in Lafayette, California. 2002. March 11. Product evaluation: Excellent taste, texture, and packaging.

Letter (e-mail) from Seth Tibbott. 2009. Jan. 25. Peppered Deli Slices were first sold commercially in Sept. 1998.

11662. Lew, Audrey. 1998. Why you should give tofu a second try: The soy food goes with lots of recipes and is healthful. *Investor's Business Daily* 15(36):A1, A5. June 1.

11663. *SoyaScan Notes.* 1998. Vitasoy redesigns Azumaya tofu package, label, and the tofu itself (Overview). June 14. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** On June 14, Azumaya tofu with a new look appeared in Safeway supermarkets in California. Gone are the old, familiar red-label Chinese-style tofu and the green-label Japanese style. The new label no longer refers to tofu in ethnic terms; all words such as Chinese or Japanese are gone. The design on the package is vertical (portrait) rather than horizontal (landscape). The word Azumaya is written in a new, larger, and more jagged black typeface. It is now the largest and most prominent word on the package, whereas before the word "tofu" had been larger and more prominent. The words "All Natural" now appear at the very top of the package, above the word "Azumaya"; previously they had been located below the brand name.

Below "Azumaya" in rather small, light green pastel letters, is the word "Tofu," and below it, in black letters, "A Source of Soy Protein." On the next line in still smaller italic letters: "Best for Sautéing, Casseroles & Salads." And on the bottom line, in the same color and typeface and soft shade as the word tofu is the texture–"Firm."

In the lower right hand corner is a colorful photo of a tofu dish–cubes of fried tofu, with bits of broccoli, sliced carrots, and tomatoes on a bed of white rice on a while plate. To the left of that is stamped: "Best if used by 07 23 98," and below that a nine-digit lot code.

In the lower left corner in small black letters: "Pasteurized. No preservatives. Perishable. Keep refrigerated." Below that is the red American Heart Association Logo with a check through it: "Meets American Heart Association food criteria for saturated fat and cholesterol for healthy people over age 2.

"While many factors affect heart disease, diets low in saturated fat and cholesterol may reduce the risk of this disease."

Net Wt. 14 oz (397 g). Then the Circle K Pareve Kosher symbol.

The product itself has been redesigned by leaving out the glucono delta lactone–that compromised the taste of earlier Azumaya tofu, but was used to get more tofu from a pound of soybeans.

A real innovation is two labels (each 2.62 by 3.75 inches, written in hard-to-read light-green ink on white) on the bottom of the package, one below the other. The first bottom label gives nutrition facts, ingredients, a UPC indicia, the manufacturer's name, plus: "See reverse side for recipes. For more recipes and product information, please write to us at: Vitasoy USA Inc.–Azumaya, P.O. Box 2012, S. San Francisco, CA 94083. If you are not completely satisfied with this product, notify our Customer Service Department toll free at 1-800-EAT-TOFU / 1-800-328-8638, or www.vitasoy.usa.com." In the lower left corner of this bottom label is a little arrow that says: "Peel here." On the back of the label just peeled off are two tofu recipes: Cannelloni, and Veggie pasta salad. On the label below that is written: "Azumaya. Try all of Azumaya's products: Azumaya tofu–Available in 5 varieties: silken, lite silken, firm, extra firm and lite extra firm. Azumaya Asian Style Noodles & Asian Style Noodle Soups... Azumaya Wrappers & Wraps–All natural pasta shells, available in square and round shapes, for egg rolls, won tons and potstickers. Azumaya–A Vitasoy brand of tofu."

Safeway now carries only three types of Azumaya tofu: Firm, Silken, and Extra Firm. Each sells for the same price as before: $1.39 for 14 oz.

11664. *SoyaScan Notes.* 1998. Tofu, Alzheimer's disease, and Lon White of Hawaii (Overview). June 16. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** On June 16 Trevor Johnston called from New Zealand to say that a big splash had been created by an article linking consumption of tofu and Alzheimer's disease. He phoned and talked with Lon White, who conducted an epidemiological study on this subject, in Hawaii.

Talk with Mark Messina. June 17. Lon White's study has never been published. Mark has traveled to Hawaii to talk with Lon about the study–which raises many interesting questions.

11665. Morinaga Nutritional Foods, Inc. 1998. Mori-Nu: Tofu land (Website printout–part). www.morinu.com Printed June 21.

• ***Summary:*** Contents: Home page. 1. Mori-Nu Low Fat Tofu product (Product nutritional value and 'Great Fat Debate' article; 2 p.). 2. Mori-Nu Mates (Desserts and nutritional information; 2 p.). 3. Soy nutrition information (Health

11666. Nasoya Foods Inc. 1998. Nasoya Foods Inc: Today's natural choice for healthy eating (Website printout–part). www.nasoya.com Printed June 21.
• ***Summary:*** Contents: Home page. 1. Soy news (Praises soy foods; 2 p.). 2. Our products (Descriptions Vegi-Dressing, Vegi-Burger and VegiDogs, Nayonaise, Tofu, Homemade-style Noodles, TofuMate; total p. 15). 3. Nasoya Story (History of company and facts about soyfoods; 2 p.). 4. Retail Outlets (2 p.). 5. Recipes (Tofu recipes; 6 p.). 6. Frequently asked questions (About tofu; 2 p.). 7. Nutritional information (Nutritional labels; 6 p.).

History: 1978 April–John Paino and Bob Bergwall began producing tofu at Nasoya in a small (2,000 square foot) converted dairy barn in Leominster, Massachusetts. Their goal was to provide natural soyfoods (the root of the name "Nasoya"). 1984–As tofu production passed 25,000 lb/week, the company outgrew its original location and moved to a much larger facility in Leominster. 1987–Nasoya was making more than 60,000 lb/week of tofu. 1990–Nasoya was acquired by Vitasoy USA Inc. Address: One New England Way, Ayer, Massachusetts 01432. Phone: 1-800-229-8638 (TOFU).

11667. Vitasoy USA Inc. 1998. Vitasoy (Website printout–part). www.vitasoy-usa.com Printed June 21.
• ***Summary:*** Contents: Home page. 1. Company history (Different holdings; 2 p.). 2. Product Information (Links to each brand; 2 p.). 3. Recipes (Five recipes including one from Martin Yan's "Yan Can Cook"; p. 6). 4. Health information (Diabetes, kidney disorders, cholesterol, cancer, menopause, and how to get more information; 3 p.). 5. What's new (Company news, new faces, new customer service department; 2 p.). 6. Gifts & games (Under construction). 7. Azumaya (Info on products: Tofu, wraps; 5 p.). 8. Vitasoy (Soy drink suited for Western tastes; 2 p.). 9. Vitasoy & Vita (English and Chinese, Describes ethnic line: Vitasoy Tofu and Vita; 5 p.). 10. Vitasoy / Vita Beverages (Soy drinks, tea drinks, juice drinks; 4 p.). 11. New Menu (VegiBurger, VegiDog, TofuMate seasonings; 3 p.).

The section on company history begins as follows: "Vitasoy International Holdings was founded in 1937 by Mr. Kwee-Song Lo when he made his first batch of soymilk to feed Chinese refugees who were plagued and diseases like beri beri and pellagra."

Note: All accounts of Vitasoy's history, including many written by Mr. Lo himself, state that his company (originally named Hong Kong Soya Bean Products Co. Ltd.) was founded in March 1940 and first made commercial soymilk at that time. In 1939 he and a small group of volunteers made soymilk at a refugee camp set up in Argyle Street on Kowloon. They gave it away free of charge to Chinese refugees fleeing the Japanese invasion of China. The results of this volunteer effort gave him the full confidence to start a company. Address: 400 Oyster Point Blvd., Suite 201, S. San Francisco, California 94080. Phone: 1-800-VITASOY.

11668. White Wave, Inc. 1998. White Wave (Website printout–part). www.whitewave.com Printed June 21.
• ***Summary:*** Contents: Home page. 1. About White Wave (Mission statement, brief history; 1 p.). 2. About soy (Nutritional benefits; 1 p.). 3. Related sites/links (Vegetarian / soy / natural foods, sites about Boulder, Colorado; 1 p.). 4. What's new. 5. Product info, questions and answers (Name of all products with nutritional, ingredient, and package view information; Frequently asked questions; Questions about allergies; How do I cook with this stuff; 6 p. total). 6. Where to find our products (Directory of retail stores). 7. Special offers (Books and bumper stickers which can be ordered from White Wave; 1 p.). 8. Recipes (8 pages of recipes for tofu, tempeh, and Silk soymilk on 3 x 5-inch cards).

"White Wave's mission is to creatively lead the full integration of healthy, natural, vegetarian foods into the average American diet. 'Our interest is in promoting the use of foods we consider the world better off *with,* rather than without.' Steve Demos, president of White Wave.

"Founded 20 years ago in 1977 as a small tofu company, White Wave, Inc. has grown to become one of the largest soyfoods manufacturers in the United States and a leader in the vegetarian foods industry. White Wave's reputation for quality, consistency and innovation has led its sales to grow 20% annually over the last 6 years." Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

11669. Brown, Allan; Brown, Susan. 1998. Making tempeh and other natural foods at McDonalds Corners, Ontario, Canada (Interview). *SoyaScan Notes.* June 22-24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land. There they started to make tempeh.

Throughout the 1980s, Allan and Susan trained Plenty volunteers at Noble Bean to make tempeh; these volunteers then took that knowledge abroad–mostly to developing countries. Maya Clarke took it to St. Lucia, Peter Dudding to Sri Lanka, a Canadian lady to Lesotho, and Mario and Laura Rimoldi [not Rimaldi] to Barcelona, Spain. Allan and Susan had met the Rimoldis on The Farm in Lanark in 1983; they later started making tofu as well in Barcelona.

Also during the 1980s, the Browns started some new businesses to bring in additional income. First came a natural

© Copyright Soyinfo Center 2013

cookie company named Casey's Cookies–after their firstborn son, Casey. Soon they were selling 40 to 60 dozen organic Casey's Maple Pecan and Honey Walnut cookies into the Ottawa market. In 1990 they sold the cookie company and took a trip/vacation to Mexico in their camper. On the way, they stopped by The Farm in Summertown, Tennessee, where they stayed with their old friends Cynthia and Albert Bates–who had taught them how to make tempeh and tempeh starter in 1974. Now the Bates were "deep into the Mushroom People trip. They were pumpin' the spores into logs out in front of their home with major rock and roll going on in the woods." Again the Bates taught the Browns a new occupation–how to grow shiitake mushrooms. Back home in Ontario, the Browns grew shiitake on about 25 logs outside their home–but mainly for their own consumption, because it was a very labor-intensive process. Soon, however, they were buying and re-selling shiitake–which they do to this day. Later, they started an incense import business named Soul Scents, which soon became the most profitable of all.

The Browns now make 600 lb/week of tempeh, working 3 days each week. It is still a very hands-on process. Allan and Susan are both active in the tempeh-making process (they also share child care), but now they have hired a woman who does much of the physical tempeh work. Most of Larry's time is focused on Soul Scents. Allan has always believed that vacuum packaging lowers the quality of tempeh. Their business has not grown in the last 5 years. He thinks it is because of the influx of meat analogs. Seth Tibbott did a survey before the Bali conference which showed that tempeh production in the USA peaked in 1989 or 1990. But several years ago Allan and Susan started an import business which has sales of $250,000 last year, so they are now in good shape financially. Two other tempeh companies in Canada are Soy City Foods in Toronto (they make mostly tofu; their tempeh is sold mostly in large cakes to foodservice) and Sooke Soyfoods in Vancouver, BC (owner Wayne Fatt gets plenty of competition from Seth Tibbott's Turtle Island Foods in nearby Oregon). Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

11670. Rose, Bruce. 1998. Update on Rosewood Products, Inc. and Tofu International Ltd. (Interview). *SoyaScan Notes.* June 23. Conducted by William Shurtleff of Soyfoods Center.
Address: Founder and President, Rosewood Products, Inc., 738 Airport Blvd., Suite 6, Ann Arbor, Michigan 48108. Phone: 734-665-2222.

11671. *SoyaScan Notes.* 1998. What ever happened to Legume, Inc. of New Jersey–Founded and run by Gary and Chandri Barat? (Overview). June 29. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyfoods Center last interviewed an owner of Legume, Inc. (Chandri Barat) on 6 Sept. 1995. At that time, the company was having difficulty because Celentano, the company that made their tofu entrees, had come out with a competing line.

On 3 June 1993, during a talk with John Belleme (of North Carolina), John mentioned that Gary Barat was no longer a major player in Legume; a big stockholder had bought him out. But John did not know when, who, or why.

In the *U.S. Soyfoods Directory,* published Feb. 1998, Legume, Inc. has a new address, phone number, and contact person: 420 Kent Ave., Brooklyn, New York 11211. Contact: Mitch Helpert. When Soyfoods Center phoned Mitch he said Legume is now a brand or label owned and distributed by HKS Marketing, Ltd. at 420 Kent Ave. HKS distributes various lines of foods, one of which is the Legume line–which HKS is responsible for having made and packaged. Legume, Inc. no longer exists as a corporation. The Legume line contains about 7 frozen items and 6 items in cans. The line hasn't changed much since the time HKS bought it from the Barats. Gary and Chandri left the company about 2 years ago. Mitch does not know where they are now or what they are doing.

11672. *Rafu Shimpo* (*Los Angeles, California*). 1998. TV host Huell Howser named Tofu Festival celebrity chair. June 30. [Eng]
• ***Summary:*** The L.A. Tofu Festival will kick off the 58th annual Nisei Week celebration. "No longer just an Asian mainstay, tofu is fast becoming a cross-cultural 'super' food, packed with antioxidants, protein and calcium. Made of soybean curd, tofu is finding it's way into enchiladas, chocolate cheesecakes and *ceviche / seviche*–some of which will be offered at the weekend festival." A photo shows Huell Howser enjoying a tofu dish at Jozu restaurant.

11673. **Product Name:** [Momen Tofu (Nigari), Okara, Oboro Tofu, Atsuagé (Deep Fried), Yaki Dofu (Grilled), Fresh Yuba].
Foreign Name: Momen Tofu (Nigari), Okara, Oboro-dofu, Atsuagé, Yaki Dofu, Fresh Yuba.
Manufacturer's Name: Awayuki.
Manufacturer's Address: Boerhaaveplein 2hs, 1091 AS Amsterdam, Netherlands. Phone: +31 (20) 468-5617.
Date of Introduction: 1998. June.
Nutrition: Tofu; SS-VA; USA; CSP; FibeOkIgûTofu; SS-VA; USA; CSP; FibeOkIg
New Product–Documentation: Letter from Mitsuo and Atsuko Kamada. 1998. Jan. 16. They plan to start a tofu shop making Japanese style momen tofu, yose-dofu, yaki-dofu, and atsuage. Present address: Gerrit van der Veenstraat 145/4, 1077 DZ Amsterdam. Company name: Awayuki–Japans Tofu en Delicatessen Produceren.

Letter from and form filled out by Mitsuo and Atsuko, husband and wife, founders and partners in Awayuki. 1999.

© Copyright Soyinfo Center 2013

Jan. 20. On 1 Jan. 1998 in Amsterdam they established a production and wholesale company named Awayuki. They began tofu production in June 1998. Their production is completely Japanese traditional style like Sangen-ya and uses nigari from Yoshikawa for curding. Equipment: Japanese stone mill, stainless steel cauldron 60 cm in diameter with gas cooking stove, Japanese hand press machine, and a deep forming box. They bought some equipment and special tools from Japan. All their products are now made from organic soybeans, which they buy from a Dutch company. Two books by Shurtleff & Aoyagi (*The Book of Tofu,* and *Tofu & Soymilk Production*) were very helpful to them. Everything they know they learned from these books, because now in Japan it is difficult to find traditional tofu production. They now make the following amounts of the following soy products: Nigari momen tofu, started June 1998, about 2,500 packs/month (each pack weighs 370 gm). Atsuagé (Deep Fried), started Sept. 1998, about 300 packs/month. Yaki Dofu (Grilled), started Nov. 1998, about 100 packs/month. Fresh Yuba, started Nov. 1998, by special order only. A letter to Akiko in Japanese says that her many detailed illustrations in the above books were very helpful. Everyone in Amsterdam says their tofu is the tastiest available.

Photos sent by Mitsuo and Atsuko. 1999. April 5. Eleven color photos show how they make traditional tofu in their shop in Amsterdam.

11674. Azumaya, Inc. 1998. All natural Azumaya fresh tofu and pasta: Take a second look... (Ad). *Vegetarian Times.* June. p. 31.
• ***Summary:*** Shows the new labels on five Azumaya-brand products, including extra firm and silken tofu.

11675. Dateline. 1998. Healthline: The joy of soy. Television broadcast. NBC. June 9.
• ***Summary:*** The announcer from Studio 3B in New York is Stone Phillips. He has four guests: Chief medical correspondent Dr. Bob Arnot, Bob McKeown, Keith Morrison, and chief consumer correspondent Lea Thompson. Mr. Phillips begins: "Most Americans don't know beans about soy, but that may soon change. The humble soybean is sprouting into the hottest new health food trend since oat bran, and for good reason. Scientists are learning that soy may help lower the risk of an amazing range of diseases."

Mr. Arnot then asks John Glaspy: "Which of these diseases could soy play a very positive preventive role? Heart disease?" Answer: Probably. Osteoporosis? Almost certainly. Menopause? Almost certainly. Breast cancer? Almost certainly.

Mr. Glaspy is most interested in breast cancer. He says that changing the way Americans eat could stop this killer. He believes that diet "could be a huge risk factor and could explain up to... 80 percent of breast cancer in the world."

Arnot adds that the first hint that soy may be a dietary factor begins in Japan. "Japanese women have one of the lowest breast cancer rates on earth. But when they move to Hawaii, leaving behind their native diet, their risk doubles. Doctors think the difference is soy."

Arnot says that "Debbie McCurdy is betting her future on soy. Diagnosed with breast cancer 2½ years ago, she has gone through surgery, chemotherapy, a bone marrow transplant and radiation. Now she's part of Dr. Glaspy's study to see if soy can protect her from a recurrence."

"Here's how doctors think soy works. In order for a breast cell to turn cancerous, it needs to be fed by strong hormones, like estroGen. But soy has what are called 'weak estrogens' that float through the blood and attach themselves to breast cells. That means, the strong, potentially harmful hormones have no place to attach to, and no way to turn a normal cell into a cancer cell."

"For the study, Debbie drank soy shakes three times a day and doctors took tissue samples to look for changes that might indicate the soy is working, but Debbie's not waiting for the results. Her family's menu has changed for good. They now eat lots of fruits and vegetables, as well as soy beans, miso soup, even tofu added to chili. And they seem to like it!"

11676. **Product Name:** [Tofu, Soymilk, Tofu Cheesecake, Tofu Cheesecake with Apples, Tofu Pie with Bananas, Tofu Mayonnaise, Mushroom Quiche with Tofu, Soymilk with Oats & Natural Sugar, and Tofu Burgers].
Foreign Name: Tofu, Leche de Soya, Cheesecake, Cheesecake de Manzana, Mayonesa de Soya, Torta de Championes con Tofu, Avena Helada con Leche de Soya, Hamburguesa de Tofu.
Manufacturer's Name: DeliSoya–Delikatessen.
Manufacturer's Address: Calle 78 No. 12-03, Santafe de Bogotá, Colombia. Phone: 346-2178 (OF) or 610-1210 (HM).
Date of Introduction: 1998. June.
How Stored: Refrigerated.
New Product–Documentation: Letter from Nestor and Cecilia Santacruz. 1998. Sept. 8. "We started on June 26 in Bogotá (Colombia) a small scale manufacture of soyfoods products, tofu and soymilk, that we distribute personally and sell in a place called 'Delisoya' (see address above). Your books are a permanent source of inspiration. We also prepare 'cheesecake,' *mayonesa de soya,* and *hamburguesa de soya.* Our shop is not located in a place of much public influence but the response to it has been very stimulating and we are very encouraged."

Letter and forms filled out by Nestor and Cecilia Santacruz. 1998. Oct. 14. They started and own Delisoya, which is located in northern Bogota. They do not have labels for their products. Each week they make, on average, 96 cakes of tofu (500 gm each) and 25 liters of soymilk. They used to deliver tofu to a store named *El integral* and to a

© Copyright Soyinfo Center 2013

restaurant named Caliz, but not they reserve all of their small production for their soya deli. Some Japanese housewives are starting to come to Delisoya to purchase tofu. Nestor and Ceci reserve one day each week to deliver tofu to others at their homes. The foods served each day at Delisoya are shown on a menu board. They occasionally make other foods besides those shown above, so that people can try them and see what can be done with tofu–for example *Torta de champioñ con tofu* (Mushroom quiche with tofu). Turnovers–Tofu, vegetables and spices wrapped in a crust. Sandwiches–Whole wheat bread, tofu, and vegetables. Soymilk with oat and natural sugar (*panela*).

Ingredients–Tofu burgers: Tofu, onion, carrot, parsley, oregano, salt & pepper. Whole wheat bread, lettuce, fresh vegetables. Price: $2.500 each. Source: Mrs. Bernadette Kikuchi (wife of Tomio Kikuchi). Cheesecake (plain or with fruits): Tofu, tahini, lemon, oil, raisins, brown sugar, vanilla, salt, okara granola. Price: $15.000 pesos each. Refrigerated. Source: *The Book of Tofu* (p. 150; Ten Speed Press ed.). Tofu mayonnaise: Soymilk, tofu, lemon, oil, salt. Price: $1500 pesos for 125 gm glass jar. Soymilk, tofu, lemon, oil, salt.

Letter from Cecilia and Nestor Santacruz. 2000. Sept. 12. "As for questions (Bill's letter of 16 Nov. 1999) about our products: 1. *Torta de Champiñoes con Tofu:* It is more like a quiche and can be named 'Mushroom quiche with tofu.' 2. In hot places in Colombia we like to drink *avena helada* which is a drink made of milk (dairy) with powdered (instant or cooked) oat, sugar and cinnamon in a blender and cooled for freshness. We make it with soy milk and it tastes as well. 3. It is Hamburguesa de Tofu. I was wrong saying Hamburguesa de Soya. 4. In 1998 we had plain Cheesecake and Cheesecake de manzana (Tofu cheesecake with apples) and Tofu pie with bananas. We still use apples a lot in pies, drinks with soymilk but have introduced other fruits that are easily available such as mulberry, agraz, guayaba, curuba etc. We make pumpkin pie with Tofu too. We like to vary the repertoire because the same people come to see us often. 5. Yes, we use okara granola in all the different types of pies. We love it instead of bread crumbs and crusts made of wheat, etc. We plan to increase using it in the near future. 6. It is $15,000.00 pesos (or 7.00 U.S. dollars approx.). One dollar is $2,200.00 approx. Our money is so devalued that the least coin is of 20 pesos but no one wants it because it doesn't have any commercial value. 7. It is 'Tofu mayonnaise'. In 1998 we referred a lot to soy because it is a much better known word than Tofu. A 125 gm [of Tofu Mayonnaise] used to cost 1,500 pesos but now it is 2,500 pesos."

11677. **Product Name:** Veggie SourCream: Nature's Alternative to Sour Cream.
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. June.
Ingredients: Soy beverage (filtered water, organic tofu powder*), unhydrogenated canola, calcium caseinate (a dried skim milk protein with calcium), maltodextrins, corn starch, calcium and sodium phosphates, sea salt, carrageenan (sea weed gum), natural vegetetable guar and locust bean gums, organic food acidulants (lactic & citric acids), sea salt, natural flavor, potassium sorbate (to preserve freshness), vitamin E (antioxidant), vitamin A palmitate. *Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. white plastic tub. Retails for $1.89 at Safeway supermarket (1998/06, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. June 28. Sold refrigerated from a large display next to the produce section. Tub is 3.75 inches in diameter and 2.375 inches high. Label on top of tub: 3 inches diameter. Yellow, white, red, and black on green. "New! Low fat. Made with organic tofu."

11678. **Product Name:** Fresh Tofu.
Manufacturer's Name: Pacific Food Co.
Manufacturer's Address: Uptown Excellent Mall, Corner of Park and Frederick St., Port of Spain, Trinidad and Tobago, West Indies. Phone: 868-627-8370.
Date of Introduction: 1998. June.
Ingredients: Whole soybeans (grown in Georgia, USA), calcium sulphate coagulant.
Wt/Vol., Packaging, Price: 3 pieces in 1 lb cylindrical tub, shrink wrapped. Wholesale price is $10 TT (US$1.62); retail ranges from $14-17 TT (US$2.27-2.67).
How Stored: Refrigerated.
New Product–Documentation: Talk with (call from) Dennis Low of Pacific Food Co. in Trinidad. 2005. Oct. 19. His father, Stephen Low, started making and selling tofu in the summer of 1998. Dennis is from Toronto, Canada, where he worked in the insurance industry; he has been in Trinidad for only 1-2 weeks. The company makes only one product, tofu. He would like to know where to buy a tofu packaging machine. He would also like a copy of the "What is tofu?" brochure. Shurtleff will send him a copy and the rights to reproduce it free of charge in exchange for a history of his company, based on interviews with his father.

Low, Dennis. 2006. History of Pacific Food Co. Letter (e-mail) to Soyfoods Center. 2006. Jan. 18. Includes black-and-white scanned images (undated) of the company's Fresh Tofu and Firm Tofu. E-mail: pacific@tstt.net.tt.

11679. Shimbo-Beitchman, Hiroko. 1998. Magical miso. *Saveur* (*New York, NY*) No. 27. May/June. p. 100-08, 110, 112.
• ***Summary:*** A beautiful article, loaded with glossy color

© Copyright Soyinfo Center 2013

photographs (by Christopher Hirsheimer and Tom Wagner) and recipes. Photos show: (1) Shiromiso in a stylish bowl. (2) A Japanese worker, in clothing with traditional designs, stands on the rim of a miso vat and shovels what will become miso at Yamaki Jôzô, a miso brewery built in 1902 by the Kitani family, in Kamiizumi-mura, Honjô city, Saitama prefecture, 75 miles northwest of Tokyo, Japan (full page). *Yama* means "mountain, *ki* stands for Kitani, and *jôzô* means "brewery. Kazuhiko Morita is the brewery's director. The company has been making three basic types of miso, plus shoyu and tofu, since 1902. Yamaki partially automated in the mid-1980s and today makes about 400 tons of a miso a year; it is not pasteurized and no alcohol is added in packaging as a preservative. (3) Looking down into a bowl of miso soup with tofu and wakame (full page). (4) The exterior of Yamaki Jôzô; a tree bearing bright orange persimmons stands in front of several traditional wooden buildings. (4) Hiroko Shimbo-Beitchman. (5) Mr. Morita, in traditional clothing, smelling the koji in a large, automated, stainless-steel koji incubation room. (6) The man shoveling the finished koji out of the incubation room onto a conveyor belt. (7) Eggplant Dengaku (with red and white miso, full page). (8) Walnuts being ground to a paste in a suribachi. (9) Steaming the soybeans at Yamaki Jôzô; 5,300 pounds of whole soybeans are steamed at a time. The company has two giant steel pressure cookers. For akamiso, the beans are cooked for about 7 hours until soft and yellow. (10) Cooling the cooked soybean on a conveyor belt. Most of the miso's flavor comes from the beans; the aroma and sweetness come from the kôji. (11) Mixing the cooked soybeans and koji, with salt and a little spring water. Then the mixture is forced through a machine like a meat grinder to produce a smooth paste, which will ferment more easily than a chunky one. (12) Putting the ingredients for akamiso into 100-year-old cedar vats, which are covered with plastic sheeting then weighted. After several months it is moved to another set of barrels, then again a few months later. It can age for up to two years. (13) Three packages of commercial Japanese miso: akamiso, akadashi-miso, and shiro miso.

Recipes: Miso soup with tofu and wakame. Eggplant dengaku with two miso sauces. Green beans with miso dressing. Broiled miso-marinated black cod. Panfried miso-marinated beef. Steamed pork with mamemiso. A sidebar describes the different types of miso, with details on akamiso, mamemiso, and shiro miso. The company also makes brown rice miso (unpasteurized), and a kit (with koji and instructions) for making your own miso at home.

Traditionally miso made at home was the source of great family pride. *"Temae miso desu ga,"* one would say–meaning "I don't want to boast about my miso, *but..."* Today Japan's 50 largest miso manufacturers control about 90 percent of the market. But miso connoisseurs prefer miso made by smaller companies in the traditional way; these are painstakingly preserving old-fashioned techniques and regional miso styles. Address: Teacher of Japanese cooking, Hiroko's Kitchen, London, England. Phone: Fax: 44-171-289-0855.

11680. *Vegetarian Times.* 1998. I can't believe it's not turkey: The name Tofurky may be funny, but its taste sure isn't. June. p. 18.
• ***Summary:*** The name "Tofurky" was designed to be amusing. but the flavor is no laughing matter–it's great. 11682. **Product Name:** Certified Organic Soymilk (Sold in Quart Pure-Pak / Gable Top Cartons) [Regular, and Chocolate].
Manufacturer's Name: Wildwood Natural Foods (Marketer-Distributor).
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1998. June.
Ingredients: Filtered water, whole non-genetically modified, certified organic soybeans*, certified organic brown rice syrup*, naturally occurring calcium carbonate, sea salt, carrageenan, xanthan gum, vitamin A palmitate, vitamin D-2, vitamin B-2 (riboflavin), vitamin B-12. * = Grown and processed without synthetically compounded herbicides or pesticides in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fl. oz (1 quart). Pure Pak carton. Retails for $2.29 (1998/07 California).
How Stored: Refrigerated.
New Product–Documentation: Talk with Billy Bramblett of Wildwood Natural Foods. 1998. June 24. Wildwood recently introduced a new fresh soymilk, sold in gable-top quart cartons. The flavor is excellent. Two packages with Labels sent by Billy Bramblett. Green, red, blue, and orange on white. The front panel states: "1% of sales donated to the Breast Cancer Fund. Low fat. Non-dairy drink. Calcium and vitamin enriched. Naturally lactose free." One side panel states: "A diet rich in soy contains a variety of beneficial phytonutrients including*: Isoflavones. Genistein. Phytoestrogens. * = Consult your physician concerning the

© Copyright Soyinfo Center 2013

role soy may play in effecting specific chronic diseases. Trusted purity since 1980: Naturally antibiotic and hormone free. Vegan–No animal products. Enjoy other Wildwood soy foods: Organic tofu. Wild Dogs. Vegie Burgers. Meltables. Talk to us at 1-800-499-Tofu." A second side panel, titled "The fresh approach to healthy eating," states that "1% of sales of this product goes to researching environmental causes of breast cancer."

Talk with Bill Bramblett. 1998. June 9. Ted Nordquist and his company TAN Industries, Inc. have played a major role in developing and making this soymilk. Jeremiah and Ted have been friends for many years, and recently they have been working together very closely on this soymilk. They used to call it the "Ted and Wally Show." Jeremiah went to Ted 4-5 years ago; Ted had a new technology for making non-beany soy base. Jeremiah and Ted came up with a formulation for the final product made from Ted's soy base. They had dreams of building a plant together, where Wildwood would do the tofu side and Ted would do the milk side. But in the end, Wildwood didn't have the funds or energy to go that direction, so Ted went to White Wave and told them about his great soymilk. Then White Wave came up with their own formulation (which was different from Wildwood's formulation), resulting in Silk. Ted makes his soymilk at a plant in southern California [Soyfoods of America], then another California company [Morningstar, formerly called Avoset] finishes and packages the product for Wildwood. Ted is in the process of developing a new yogurt, which is not yet on the market. He would like to make it for Wildwood, but Billy doesn't think it is ready. Also Ted wants the yogurt package to bear the words "Made with TAN soy base."

Talk with Jeremiah Ridenour of Wildwood. 1998. Oct. 20. This product was first sold in June 1998. It may be the first soymilk in America to have the word "Soymilk" in the product name–to test the FDA. Wildwood has nothing to do with the manufacture of packaging of the product; It is made at one place and packaged in another. White Wave's Silk is this product's main competitor. Jeremiah believes that Wildwood's formula is better. See also Oct. 1998 interview with Jeremiah on the early history of this product. This product states in the ingredient listing that it is GMO free, but Jeremiah thinks that the term "organic" is still more important to consumers than "GMO free."

Product (chocolate, quart) with Label purchased at Safeway supermarket in Lafayette, California. 2001. April 1. Both real vanilla and chocolate quarts are sold refrigerated in the Odwalla cooler in gable-top cartons for $1.99/quart. One side panel reads: "Wildwood has been making soymilk for over 20 years. As a pioneer in American soyfoods Wildwood has learned to make great tasting nutritious soymilks." The certified organic chocolate is produced from beans grown in a bio-diversity preserve in Costa Rica and Panama.

The back panel states: "Wildwood Natural Foods. Affecting dietary and agricultural change. Wildwood owners Jeremiah Ridenour and Billy Bramblett both grew up in Michigan, then migrated to California and became evangelists for soy. Jeremiah comes from a soybean farming family. While he was studying tofu production in Japan, his future partner Billy was concocting tofu delectables at the legendary Sleeping Lady Cafe in Fairfax, California. Wildwood Natural Foods started producing organic Soymilk and Tofu in 1980. Today these two lead their company's production of thirty-five delicious, premium, organic soy products. More organic choice means less chemicals in your environment..."

11683. [Nasoya Foods, Inc.]. 1998. Taste the freshness! Nasoya tofu–the #1 brand in America (Ad). *Natural Health.* May/June. p. 64.
• ***Summary:*** A half-page color ad. Shows 4 types of Nasoya certified organic tofu: Firm, Soft, Extra Firm, and Silken. And six packages of TofuMate (spice blends for seasoning tofu). "Call us for more information at 1-800-229-TOFU."

11684. Bramblett, Billy. 1998. Early history of Wildwood Natural Foods (Interview). *SoyaScan Notes.* July 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Billy is presently a 25% owner of Wildwood Natural Foods and the corporate treasurer. He functions as the general manager of Wildwood's Fairfax plant, and is in charge of product development, in-store product demos (they do about 200 a year) and trade shows (they do about 2 a year and he has a full-time assistant), he helps with quality assurance and teaches employees how to make the products. He considers himself a chef.

Billy first got interested in tofu in about 1974. He was a musician who had been cooking at the Sleeping Lady since it started in 1972. The Sleeping Lady was a unique and creative cafe, restaurant, and night club that Billy and several other musicians, artists, poets, etc. had started. They had an alcohol license to sell beer and wine. At the time there was no legal way to be a worker cooperative, so it remained a sole proprietorship (with Billy as the owner and source of funding) for the first five years, until 1977. But they ran it as though every worker had a say in the business. They had a meeting every Tuesday, where they discussed and voted on issues–so it was run like a worker cooperative. In about 1976 they worked with a lawyer to create an association that owned all the shares in a corporation. The membership of the association was comprised of workers at the restaurant–if they worked at least 12 hours a week and attended two-thirds of the meetings–per quarter. Then Billy transferred the ownership to the corporation and he was eventually paid back nearly all the money he invested. This whole idea was a forerunner of today's Subchapter T corporation, which is strictly for worker-owned corporations, and allows members can come and go freely.

© Copyright Soyinfo Center 2013

In 1972 Billy spent about 50% of his time and energy being a musician and the other 50% running the Sleeping Lady; likewise, about half of his personal income came from each activity. He had been in the U.S. Navy until 1970. He got out of the navy, went to school at the Art Institute in San Francisco for a year, moved to Marin, was working as a musician (he plays guitar and keyboard, and he sings and composes music), then got involved with some guys who were working at a pizza place in San Anselmo and together they ended up opening the Sleeping Lady–which was a vegetarian [except from 1972-1975], non-smoking, cooperatively owned and operated restaurant and night club. They served breakfast and dinner 7 days a week and they had music (provided by Billy and many others) at night 7 days a week. He had graduated from the College of Marin music program in 1976 and by 1977 he was in four different bands that were playing all over the Bay Area: Fairfax Street Choir, Looking for Your Long Lost Mind Review, Duck Soup (a little comedy quarter), and Space City (his own band, which played and sang mostly folk music). Three of these four groups (except Long Lost Mind Review–which was a more high-powered band with bigger stars) played at the Sleeping Lady. Paul was a busy man, plus he had a wife and one child.

One of the musicians who was in both Space City and the Fairfax Street Choir was named Dennis Desjardin. Desjardin was a superb saxophone player and a master carpenter in the Japanese style. Later he abandoned all that, went back to school, got his PhD in mycology, and now he is a professor of biology at San Francisco State University, where he oversees their herbarium.

Back to 1972: One day, after they finished rehearsing at a house in Laguanitas (little town west of Fairfax, in west Marin County), Desjardin made the group some lunch, including tacos. He put tofu in the tacos. Soon after that, it 1974, Billy started cooking with tofu on a regular basis at the Sleeping Lady. He used tofu made by Quong Hop & Co. in South San Francisco. He invented several vegetarian tofu entrees: (1) Tofu cutlets. Cut the top off an entire cake of tofu, hollow it out, stuff it with a mixture of cooked rice, vegetables, and gravy (made with a dairyless roux plus soy sauce and fresh herbs); (2) Dairyless pesto cream sauce, with fresh basil and tofu, served over fresh fettuccine (introduced in about 1977-78). Billy may still have some of these recipes in boxes at his house.

Billy's restaurant, The Sleeping Lady, was the headquarters of Wildwood's sandwich assembly operations from Jan. 1978 until about 1980–when Wildwood built its own tofu shop at another location in Fairfax and began making tofu. During these years Billy was very interested in tofu. "I actively supported Paul Duchesne and his trip for several years before we really got involved as a business. I was his buddy. We would hang out. He'd give me a sandwich when he left to go out for deliveries. Paul Watson [sic, Chris Smith] coined the name Wildwood; he made and/or delivered tofu sandwiches after Paul Duchesne left for Boston, Massachusetts.

Doug Porter, who is now a main buyer for Wildwood, was involved with Wildwood from the very early days. He and Michael Pierce made sandwiches for Paul Duchesne before the company was incorporated–during the transition period. At one point Doug was Wildwood's kitchen manager, and he knows much of the early history. They talked about making a formal company in late 1979, then they incorporated in April 1980.

Wildwood first started making its own tofu on 8 August 1980. They rented the space in November 1979. It took at least 3-4 months to get through the permit process in Fairfax just to start renovating the space. Between about March and June of 1980 they were renovating the building, and also figuring out what type of equipment to use. They wanted to use stainless steel, but the Japanese tofu equipment wasn't stainless. So Wildwood had tofu equipment fabricated to its specifications by a stainless steel fabricator in San Francisco. The most incredible piece of equipment they had was that used for pressing the soymilk from the okara. It was a stainless steel table about the size of a card table. A dye-press operated by a long ratcheted handle did the pressing. Under the table was a pot with a long horizontal spigot at the bottom. The soymilk would flow out the spigot into a curding barrel.

Wildwood's first floor was made of a substance that was dissolved by the magnesium chloride which ended up in the tofu whey. So they had to replace the entire floor.

Changes in plant addresses at Fairfax: They started at 135 Bolinas Rd. in Aug. 1980, then moved to 31 Bolinas Rd. in about 1986. The primary phone number throughout has been 415-459-3919. Santa Cruz started in 1986. All vacuum packing of tofu has always been done at Santa Cruz. They moved baking operations to Santa Cruz in about 1994. All smoking of tofu is done at a specialty smokehouse in San Jose, using tofu made in Santa Cruz.

The original Wildwood shop at 135 Bolinas Road was only one door away from the Good Earth–a health food store. It was their first main outlet, and sometimes Wildwood would take products to Good Earth while they were still hot out of the ovens, and sell them on the counter.

Non-soy products introduced since 1987 that are still popular include: Mid-East Hummus (1987–Organic garbanzo beans & sesame tahini). Pesto Sauce (1988–Fresh basil & olive oil). Baba Ganooj (1995–Eggplant & tahini). Low-Fat Hummus (1995–Organic garbanzo beans, water & sesame tahini). Spicy Hummus (1996–Organic garbanzo beans, water & sesame tahini). Pesto Hummus (1997–Organic garbanzo beans, water, basil & sesame tahini). Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11685. Gorman, Christine. 1998. Sugar busters! *Time.* July 6.

© Copyright Soyinfo Center 2013

• ***Summary:*** Do you need to lose some weight. "Should you (a) swear off ice cream and take up bicycling; (b) eat raw spinach and tofu for breakfast, lunch and dinner, or (c) avoid sugar, carrots and potatoes?"

11686. Lang, Paul. 1998. Allan Routh of SunRich Inc. (Hope, Minnesota), current president of the Soyfoods Association, recently had a serious accident (Interview). *SoyaScan Notes.* July 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** About 3 weeks ago, in mid-June, Allan was with his son and they were moving a huge tree stump. It flipped over and more-or-less crushed him. He is still alive. The doctors put him in an induced coma for the past 3½ weeks. His skull is cracked and he broke every rib in his body. Paul just got an e-mail yesterday saying that he's just coming out of the induced coma and that he will live. For a while, we were not sure whether or not he would survive. If Allan is at the next NFM Expo at Anaheim, Paul would like to see members of the Soyfoods Association have a get-together to show our support for him. "I just appreciate Allan; he's a good man."

Yvonne Lo did not want the job of vice president at the last elections; but she took it because no one else would take it. Now she may have to shoulder additional responsibility. Basically nothing has happened since Allan was hurt. Peter Golbitz is also helping out. "He gives a lot of energy and time to the Association, and he has for many years. Even though he is no longer president, everyone still passes a lot of decisions and other things through Peter. He's sort of the Godfather, but now its becoming a problem for him because it takes a lot of time." Fortunately a lady from Nasoya has volunteered to spearhead the Soyfoods Month. "She's doing a great job." Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

11687. Bramblett, Billy. 1998. Frank Stevens has just purchased Quong Hop & Co. (Interview). *SoyaScan Notes.* July 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** About a year ago Frank Stevens offered to buy Wildwood Natural Foods for $2 million–which the owners considered to be much too low an offer. But Frank liked Wildwood's basic plan, which was to build a new manufacturing plant, and maybe buy some other smaller soyfoods companies on the West Coast–such as San Diego Soy Dairy, Quong Hop, and Island Spring. Stevens wanted to fund the whole plan, keeping the present management structure in place, but he wasn't willing to pay enough for Wildwood. At the time, he had the "enlightened" investor group Swander-Pace (from San Francisco) along with him; they were going to do some kind of joint venture together, but apparently Swander-Pace lost interest.

So about 2 months ago, Stevens bought control of Quong Hop in South San Francisco. Frank is kind of a plump good ole' boy from North Carolina, with a "gosh and golly" manner and a North Carolina drawl. He wears a starched shirt and tie, is very personable, but a little too slick for some of Wildwood's owners. Stevens has spent many years in more conventional food businesses–perhaps dealing with varieties of salad dressing, jerky, sauces, etc. Now he is trying to be a venture capitalist. Apparently he thinks that soy is an industry with a bright future, so he decided to jump in. So far, Billy has seen no change in their products or management structure at Quong Hop.

Update: Talk with Martha Devine of Soy Devine in San Francisco. 1998. Aug. 21. She talked with one of Quong Hop's delivery truck drivers, who said that a new partner had joined the company, an American guy, who has invested a lot of money. It was a partner, not a buy-out. They are expanding their production facility in South San Francisco into the adjacent building, and they are adding many new products to their line. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11688. Cooley, Jim; Coral, Mary; Wickberg, Ellen. 1998. How smoked tofu came to America (Interview). *SoyaScan Notes.* July 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim Cooley, founder and owner of Central Soyfoods, made the first commercial smoked tofu in the USA. The idea for this product came from Mary Carol, with whom he still lives. Mary (who was born in 1937) grew up in Venice, California. The grocery store near her home sold tofu, since there was a large Asian-American population working at the truck gardens in Venice. Mary's family was poor, and her mother would buy tofu regularly because it was inexpensive and nutritious. Mary is sure she had eaten tofu by the mid-1940s. After living for several years in New York City, Mary moved with her academic husband to Lawrence, Kansas. As a faculty wife with lots of spare time, Mary learned how to make tofu from Ellen Wickberg, whose husband, Ed (Edgar), was in the Department of History at the East Asian Center at Kansas University in Lawrence. Ellen had traveled with her husband to Taiwan for a year and learned how to make tofu (for her own use at home) by standing outside a tofu factory at the end of a lane and watching. Ellen and Ed had gone to college at the University of California in Berkeley during the 1950s–before they moved to Lawrence. Ellen used to buy tofu at the local co-op in Berkeley. Tofu was not available in 1962 in Lawrence, Kansas (where they lived from 1962-69), so Ellen decided to make her own. She went to the local pharmacist to buy some food-grade gypsum. He didn't want to sell it to her because he said it would set up in her stomach. Eventually Ellen made both tofu and doufu-gan (pressed) tofu in Lawrence; she recalls smoking the doufu-gan.

Mary loved to cook and she collected cookbooks. From

© Copyright Soyinfo Center 2013

one of her Chinese cookbooks (which she can't find), Mary Coral learned how to smoke tofu on a kitchen scale, as follows: Put a whole block of tofu between boards, outside, and press it gradually all day long, until it was about ½ inch thick and very firm. Paint it with soy sauce or a seasoned soy-sauce marinade. Arrange bricks in the back yard to make a stand for a wok. Put pine needles (not a lot; she used blue spruce needles from a tree in her back yard) in the bottom of a dry the wok. Over them place a metal grill or rack and on that arrange slices of the firm, marinated tofu. Light the needles with a match, then snuff the fire for a while by putting the lid on the wok. Steam for 45-60 minutes. "Ellen and I used to do these elaborate meals. We don't eat like that any more. We'd start eating early in the evening and go on for 10 or 12 courses. There wasn't a lot to do in this town!"

Jim learned how to make tofu and smoked tofu from Mary Coral, who was making her own tofu at home in Lawrence, Kansas, by about 1964-65, when Jim first met her. His first commercial smoked tofu was mas made as follows. One of his employees had a family-size backyard smoker on wheels named Mr. Meat Smoker. It was similar to a backyard barbecue grill, but taller and slim. Jim sliced cakes of tofu horizontally into halves, then put them on the grill in the smoker, with the lid on, and smoked them for 45-60 minutes. The smoke came from red-hot charcoal topped with hickory chips, which had been soaked overnight in water to make them smoke better and longer before they finally burned. He smoked 25 lb of tofu in each batch. But slicing the tofu took a lot of time and space, so he tried smoking whole, uncut cakes of tofu with liquid smoke in order to double to amount of tofu that could be smoked in one batch. The resulting flavor and texture were basically unchanged, and the tofu still had grill marks on it. As sales increased, Jim bought a larger smoker–a Sunbeam backyard grill (on wheels with a propane tank), which he adapted to smoking. After someone stole that, he tried having his tofu smoked in a commercial smokehouse that smoked ribs. They smoked the tofu for several years. The cost and flavor were about the same, but the process was inconvenient, because Jim had to deliver the tofu then pick up the finished product. Occasionally, they would not clean their smoker well, and some meat drippings would end up on the tofu–which made it unusable. After the smokehouse went out of business, Jim purchased an army field oven that had been converted to a smoker by the grandfather of one of his employees. He adapted it, by getting the right sized grills and putting in a pan of water so it did not get too hot. Now he can do 48 lb of tofu per batch. The cakes of tofu go in weighing a little more than 1 lb and they come out at about 14 ounces. Both smoking and liquid smoke are still used. People like the product very much. In 1986, shortly after he got his vacuum packing machines, Jim introduced smoked tofu in a larger salad bar pack containing 4 x 14 oz pieces weighing 3½ lb total. Address: 1-2. Central Soyfoods, 11 West 14th St., Lawrence, Kansas 66044; 3. Vancouver, BC, Canada. Phone: 785-843-0653 and 604-733-3602.

11689. *Rafu Shimpo* (*Los Angeles, California*). 1998. Tofu festival celebrates multicultural diversity. July 21. p. 1, 3. [Eng]

• ***Summary:*** A good preview of the festival, to be held Aug. 15-16. General Food tickets will be available for $1 each. Preferred seating will also be available for $25 per person. More than 30 Southern California restaurants will showcase an array of international cuisine ranging from tofu enchiladas and chocolate tofu cheesecakes to tofu ceviche / seviche. The new Children's Pavilion play area will offer face-painting, balloon-making, story-telling, break-dancing, puppet shows, arts and crafts, and many more activities.

"Proceeds from the L.A. Tofu Festival will benefit the Little Tokyo Service Center and the Japanese American Cultural and Community Center, two community-based nonprofit organizations." A photo shows participants in last year's Tofu Eating Contest.

11690. Mueller, Ed. 1998. Update on Takoma Soy Inc. and Potomac Whole Foods (Interview). *SoyaScan Notes.* July 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Takoma Soy has not yet started making tofu; they hope to be in production in a couple of years. They are short on capital and using what they have to work on the building, and to build a bakery and community kitchen. Jon Kessler is still at Twin Oaks; he works in the field of soy, but he no longer works at their tofu shop. Potomac Whole Foods (PWF), their wholesale and distribution business, brings in the money. Ed Talked with Yaron the other day. Yaron is at Olive Tree Works; they are the people who use Oak Tree's tofu to make other products, such as savory tofu. "If we started a tofu business, we'd go into partnership with Olive Tree Works."

Ed is quite sure that Bean Mountain Natural Foods (of Weaverville, North Carolina) is out of business. He thinks that some of their equipment ended up at Twin Oaks.

Ed now buys and distributes tofu from Spring Creek, which makes a firm nigari tofu and is located in a relatively depressed part of West Virginia. So this is an ethical and social issue; Ed does not want to put them out of business, or even really compete with them. If Ed started making tofu then, of course, PWF wouldn't distribute their tofu–and that would hurt them because PWF is their biggest distributor. So Ed is thinking of making a softer tofu curded with calcium tofu, then using that as a base for other tofu products such as tofu mayonnaise, tofu puddings, etc. He would also like to make a good soymilk. In that way, Ed would not compete with Spring Creek.

Ed is still interested in starting a tofu school as part of his tofu factory.

Update: Talk with Jon Kessler of Sunergia. 1999. March

© Copyright Soyinfo Center 2013

21. Ed is still working on his soy business. He hopes to be making commercial products by the end of 1999. Jon heard from Ed Mueller of Potomac Whole Foods and Bread of Life that Bud, Inc. of Baltimore has lost its lease and perhaps has ceased operations. Ed is hoping to move the Bud equipment up to Hancock, Maryland, and start a new tofu shop there. Address: 11 South Pennsylvania Ave., Hancock, Maryland 21750. Phone: 301-678-5283.

11691. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods. Fairfax, California. 10 p. Unpublished typescript.

• ***Summary:*** Contents: The beginning (1978-1981). The evolution (1982 to 1998). \"The beginnings of Wildwood Natural Foods, Inc. evolved over 2 years starting in 1978 [or maybe 1977] and culminating with incorporation in April of 1980 and actual operations in August of 1980. "In 1978, Paul Duchesne was an employee of the Good Earth Natural Food Store in Fairfax, California. Among his duties were the squeezing and bottling of fresh beet and carrot juice and the making of fresh sandwiches, all of which would be sold in the store each day. During a routine inspection of the Good Earth by the Marin County Health Department inspectors, it was determined that this practice was illegal, since the Good Earth did not have a health department approved kitchen and, therefore, no license to produce these products on the premises. Mr. Duchesne approached the cooperative ownership of a neighboring vegetarian restaurant, The Sleeping Lady Cafe, to determine if space might be rented at their kitchen during the very early morning for the production of sandwiches and juices. The co-op agreed and soon Mr. Duchesne was producing these products each morning and then transporting them to the Good Earth for sale.

"After a few months, Mr. Duchesne started producing a sandwich of his own invention, the brown rice and tofu sandwich (BRT), at the Sleeping Lady, on his own and selling those sandwiches to the Good Earth and a few other local health food stores. By the late summer of 1978, Mr. Duchesne was producing hundreds of the sandwiches weekly and delivering them to seven locations in central Marin county.

"At that point Mr. Duchesne decided that he wanted to move to Boston, Massachusetts, to study macrobiotics with Michio Kushi and so he gave his fledgling, as yet unnamed, business to a fellow named Paul Watson [sic, Chris Smith]. This enterprising man expanded the business and was soon delivering to over fifteen locations in central and southern Marin County. During a routine inspection of one of the southern Marin locations, the health department inspector noticed that the labels on these sandwiches were in violation of the State of California's labeling laws and contacted Mr. Watson. One of the violations was that there was no company name on the label. Mr. Watson [sic, Chris Smith] came up with the name Wildwood Natural Foods. He asked the advice of Bill Bramblett, the founder and general manager of the Sleeping Lady, on the choice of that name. Mr. Bramblett looked up 'wildwood' in the dictionary and discovered the meaning to be 'natural or wild wood or forestland in its natural state.' Since this described the Fairfax area fairly accurately, Mr. Bramblett agreed that this was a good choice for Mr. Watson's company."

Note: Talk with Billy Bramblett. 1998. Oct. 14. Billy now agrees (after talking with several old-timers, and reading some old articles) that it was Chris Smith, not Paul Watson who took over the company when Paul Duchesne left for Boston and who coined the name Wildwood. Billy cannot recall what Chris Smith looked like. He clearly remembers Paul Watson, who made and/or delivered Wildwood sandwiches after Duchesne left for Boston.

"Sleeping Lady Cafe began in 1972 and served all kinds of food, including meat, for the first three years. In 1975 we stopped serving meat, but did serve eggs and dairy. We also went non-smoking at that time. This was in the days before "vegan." We made our own yogurt, and got the cleanest foods we could find back in those days.

"Our credo was good food from the best sources we could find at reasonable prices, a wide variety of music and performing arts each night (and sometimes during the daytime as well) and rotating local art on the walls. We made our own furniture, built everything ourselves. We were hippies having fun. We were able to last over 12 years because we paid cash for everything and paid ourselves last. An amazing adventure.

"By the spring of 1979, Mr. Duchesne had started his own version of the brown rice and tofu sandwich company in Boston, but had had a difficult winter and was weary of the East Coast. Mr. Watson longed to travel east and study macrobiotics with Mr. Kushi, and so the two traded places, Mr. Duchesne returning to Fairfax and Mr. Watson going to Boston. Since Mr. Duchesne had given Mr. Watson his business, Mr. Watson gave it right back to Mr. Duchesne. Suddenly Mr. Duchesne was an entrepreneur and was making 400 to 500 sandwiches each week and delivering them all over Marin County. He did most of the work himself, with his wife and children helping out on occasion. Each morning as Mr. Duchesne departed on his route, he would give a BRT sandwich to Mr. Bramblett, who was the breakfast cook at the Sleeping Lady. Mr. Bramblett loved these sandwiches and realized what a great potential there would be in the greater San Francisco Bay are for this product. One morning Mr. B mentioned to Mr. D that an investment of about $10K could likely put this product Bay Area wide. He outlined his plan for such a move, which included building a new kitchen somewhere else in Fairfax, hiring a few employees and getting another vehicle to use for the expanded delivery.

"Mr. D was astounded, He told Mr. B. that he had been

© Copyright Soyinfo Center 2013

chanting for just that amount, $10K, and that he had similar notions. After work, several days per week, Mr. B and Mr. D would smoke marijuana and plan for their business venture. They would be equal partners. Mr. B. would put in the $10K and Mr. D would put in his existing business. Then they decided if they were going to make brown rice and tofu sandwiches, why not make the tofu as well? So they got the *Book of Tofu, Volume II,* by Bill Shurtleff, and started making calculations. They figured they would need more like $30K to pull that one off, so Mr. D approached a couple of his macro-psychotic friends, Frank Rosenmayr, a developer, and Paul Orbuch, a photographer. Mr. B. approved of these two fellows and soon the four were talking to lawyers about incorporation. In the meanwhile a location in Fairfax had been found. While the partners went through the permit process with the town of Fairfax, the incorporation process ensued. In the meanwhile Mr. D continued to operate his sandwich business out of the Sleeping Lady.

"On August 8, 1980, Wildwood Natural Foods, Inc. officially began business at 135 Bolinas Road, Fairfax, California 94930, (415) 459-3919. Mr. B was the Tofu manager, Mr. D was the general manager, Mr. R had supervised and done most of the renovation of the property, and Mr. O was in charge of graphics and label art.

"During the first six months, several people were hired to make sandwiches, work in the kitchen during the daytime doing preparation work for the next night's sandwich shift as well as developing and producing various other products. Four other people also made tofu and there were three drivers/delivery person. But, alas, after six months this new little enterprise had lost over $16,000.00 and the owners were troubled. Each of the three money dudes kicked in an additional $2500 to keep things afloat and the Board of directors became the functional general manager. It was decided that the enormity of the job was too much for Mr. D and so the board go involved with all the day to day stuff. Mr. D remained in charge of the production and delivery, but was not happy about his demotion. It was soon clear that a divorce was in the air. One of the things that was being considered was the expansion of the business to deliver other small manufacturers products to help pay for the expense of delivery. At a BOD meeting in October of 1981, which was specifically called for the purpose of discussing this concept, Mr. D announced that he was leaving Wildwood and starting his own delivery service, called Cauldron Express. By early December, 1981, Mr. D was gone, as was his wife, the bookkeeper. Mr. B and Mr. O dropped what they were doing and jumped in, feet first to salvage the company." Continued. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11692. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued–Document part II). Fairfax, California. 10 p. Unpublished typescript.

• ***Summary:*** "The evolution: On January 2, 1982, there was a major flood in Marin County." The company was hit hard. By February Bramblett and Rosenmayr had attended a computer seminar and were convinced the company had better get computerized. "By March the new structure was set. Mr. Orbuch was in charge of production and distribution; Mr. Bramblett was in charge of tofu production, accounting, and administration."

Meanwhile Orbuch and Bramblett continued toward their goal of building sales to $10,000 per week "and started looking into other small manufacturers that made similar products. Our first 'other distributed' product was the Solar Taco made by Rademacher/Worley Farms in Cotati. This product had been on the market for a year or two, but they did not have their distribution together. We also found some sub-distributors to take our products to West Marin and Sonoma County."

Bramblett "arranged for the purchase of an Apple computer along with accounting, spread sheet, and word processing software. The bookkeeping was transferred to the computer and soon Wildwood had timely financial reports that were used to analyze the operations. One of the main sources of financial loss were the returns. Wildwood had a policy from the get-go to guarantee sales. That meant that any product not sold by its 'pull-date' was credited to the store to which it had been sold. It was the job of the distribution department (Mr. Orbuch & the route drivers) to keep this return rate low by correctly estimating how many sandwiches (and other products) would sell before their respective pull dates and deliver that amount to each store on each delivery day. Unfortunately, this was a difficult task and the return rate was about 15%, which was way too high for WNF to make a profit. Mr. Bramblett tried using the spread sheet program to analyze old sales data in order to make accurate predictions for the future. The computer did not have enough memory to accomplish this task. Fortunately, we had a sandwich maker who was a computer programming school grad and who agreed to write a program for the computer which would do all our invoicing and sales tracking as well as predict future sales and help us lower the return rate. He did so and, although the prediction part was way too cumbersome to deal with, Wildwood soon had a billing and sales analysis tool that we still use today.

"Meanwhile, we increased our product line to include baked and vacuum packed tofu, broadened the sandwich line to include avocado and cheese sandwiches as well as bean and rice burritos, and varied flavors of the BRT. We also refined the salad line and expanded the routes into the peninsula and Santa Cruz areas. By 1984 we were profitable enough to have bought out Mr. Duchesne, return the extra $2500.000 that Mr. Bramblett, Mr. Orbuch, and Mr. Rosenmayr had kicked in, as well as pay a dividend of $12,000 to each remaining partner, effectively returning the entire investment in five years, which is equal to a 20% per

© Copyright Soyinfo Center 2013

year return on investment. The partners decided to form a new partnership to buy a piece of property in Fairfax, on which they could expand WNF. And so they did, right down the street, at 31 Bolinas Road.

"The property was a three lot parcel, which housed a funky car repair facility and which was a major eyesore. The actual purchase and all the trials and tribulations we went through with the town is a-whole-'nother story. Suffice it to say that, it was a major pain in the ass which is well documented in the local paper of the day *The Fax***.** We also endured major problems from Sherman Chickering, who lived in a neighboring house, but I won't bore you with that story either.

"Also during 1984 we met Jeremiah Ridenour, who owned a major piece of Santa Cruz Tempeh and who aspired to make 'local tofu' in Santa Cruz. He had seen our products and wanted to join up with us in creating a mid-size tofu operation in Santa Cruz to replace one that was about to fail. He had space for such a project in the building that housed the tempeh factory. The concept was also to be able to bolster tofu production output, which was nearing the limit in Fairfax.

"So a new corporation was formed which included Mr. Orbuch, Mr. Bramblett, Mr. Rosenmayer, and Mr. Ridenour. This was called Wildwood Natural Foods, Santa Cruz, Inc. So, while Frank was renovating 31 Bolinas in Fairfax, Jeremiah was renovating the Mansfield Ave., Santa Cruz, location to house a new, steam cooking, pump-moving, ass-kicking modern hi-tech, but still hand-made, tofu factory.

"We soon realized that the Santa Cruz location would also serve as a distribution point and so it did, and still does. WNF (or 'north') maintains an office and several employees in Santa Cruz and operates four routes from that location. The downside of this whole Santa Cruz trip was that it took twice as along and cost twice as much to get underway as originally planned. Wildwood Natural Foods, Santa Cruz, Inc. did not produce a profit until 1991. Since it was a 'Subchapter S' corporation, the partners were able to take a tax loss on this project, but the grim reality was that north supported south and gave away many things to help it along (e.g. the very profitable soymilk production). This became a bone of contention between the partners.

"Meanwhile, north flourished, saleswise. Taking on new product lines for its distribution line, willy-nilly, sales grew incredibly. Mrs. Wiggles Rocket Juice led the way. Solar Tacos extended their product line and several different salsa lines were tired, with varying success. We also started distributing Brightsong Tofu products, most notably various salads to Diet Centers and a new soy cheese product called Tofurella. We also picked up Grainaisannce's mochi and amazake products. These 'distributed' products or 'manu prods,' as we called them, yielded low margins, 15% to 20% and it became increasingly difficult to manage the inventory. Additional walk-in space was built and purchased. The philosophy was to fill up the trucks that were going to the stores already to maximize the delivery efficiency. The short sighted part of this was that it began to take the drivers much more additional time to drive the route. The upside was that we began to have more clout in the stores and could get more and better shelf space.

"Growth takes a toll on cash flow and, in fact, the lack of that foresight nearly wiped Wildwood out during this incredible growth period. Time and again short term, no interest loans were made by the partners to bolster cash flow while we grew sales to $100,000.00 per week. The administrative burden became much heavier during this period and the office space became cramped and unworkable. Mr. Bramblett left the company in early 1990 and Mr. Orbuch ran the north for the next two years. In 1990, the north suffered losses of nearly $100,000.00 and nearly failed. Mr. Orbuch tried to make the company appear profitable in 1991, by eliminating key positions and programs, e.g. product development and product control. This did effectively save money but the infrastructure was severely damaged." Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11693. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued–Document part III). Fairfax, California. 10 p. Unpublished typescript.

• ***Summary:*** "Meanwhile, Mr. Ridenour had brought the Santa Cruz operation into the sunlight of profitability. He had developed systems and teams that worked together toward enlightened profitability. His workers worshipped him, called him 'Dad,' and became a family of which he was the head and patriarch. Wildwood Santa Cruz was profitable in 1991, and on a firm footing.

"After a Stanford MBA analysis indicated that both companies should be headed by the enlightened leadership of Mr. Ridenour, the BOD [board of directors] north elected Mr. Ridenour as president and Mr. Orbuch retired. Mr. Ridenour has set about cleaning up the north and installing those systems and procedures which have been proven effective and profitable in Santa Cruz."

"So as of February 1992, Mr. Ridenour was in charge of both companies... In August, 1992 Mr. Bramblett returned at Mr. Ridenour's request to help with product development and financial analysis (Mr. Bramblett had been the CFO of China Books and Periodicals in San Francisco for the past two years). The analysis determined that the company was losing money primarily due to distribution costs and the imbalance between the sales of Wildwood products and the sales of products made by other manufacturers, which at that time was 33% Wildwood and 67% other."

In 1993 Mr. Bramblett took over the accounting department; Wildwood returned to profitability and the owners decided to merge the two companies so they could sell off a small part of it to raise capital. In Nov. 1993 John

© Copyright Soyinfo Center 2013

Breen was hired as controller.

The corporate merger was accomplished in 1994 with each of the four shareholders owning 25% of the surviving corporation. "We then wrote a business plan in which we proposed to build a new tofu factory, bring all production under one roof (likely in Watsonville) and leave a cross dock in Marin County near the Hwy. 101/580 intersection."

"We finally lined up financing for the new factory, but the senior debt underwriters wanted to see more equity on the balance sheet... We have not yet been successful in this plan but have had much interest and several buy-out offers. We have joined the Social Venture Network and have made presentations to the Investor Circle (SVN spinoff) and have a few investment suitors at this time.

"Meanwhile the combined corporations became profitable in 1995, 1996 and 1997 and so far in 1998. We have strung together 13 consecutive profitable quarters and added to our equity thereby. While only growing total sales by about 10% over the past three plus years, we have flip flopped the products profile and are now at 69% Wildwood and only 31% other products, a much more profitable balance. We have also developed many new products and have several products private labeled for us.

"Most recently we have introduced a new private labeled [by Ted Nordquist and TAN Industries] organic soymilk in gable topped cartons which comes in two flavors, Plain and Chocolate. We expect to have this product in distribution in the western U.S. by September 1998.

"Wildwood is currently producing approximately 30,000 lbs, of tofu per week and bottling 2,000 quarts of Yo Soy traditional soymilk (in plastic quarts) in two flavors, Plain and Honey-Vanilla. We reprocess about 40% of the tofu and sell the rest as either 10 oz. vac pack, or 20 oz. vac pac, 16 oz. firm water pack, 16 oz. medium (low fat, calcium sulfate) water pack, or institutional vac pac in 8 lb. blocks or 7 lb. pre-cut. We also produce 20 oz. vac pac for Whole Foods with their label.

"In addition Wildwood produces Hummus in four styles, traditional Mid East, Low Fat, Spicy Low Fat, and Pesto. To complete our middle eastern line, we also produce Tabouli Salad and Baba Ganooj.

"Secondary tofu products include Baked Tofu in four flavors, Smoked Tofu in two flavors, Tofu Vegie Burgers in three flavors, and Tofu Cutlets (traditional Nama Age). We also make Braised Tofu Salad (cubes of tofu lightly grilled with fresh vegetable in exotic sauces) in five flavors and fresh tofu salads in two flavors as well as two tofu spreads. We have abandoned the sandwich market altogether.

"The retail side of the natural foods market has consolidated. Very rarely will you find the small neighborhood health food store or the little mom and pop place that would sell ready to eat products such as ours. Now its all big corporate up-scale super stores with coffee bars, juice bars, cookie bars, salad bars, sushi bars in 65,000 square feet of fancy, wide aisles, highly decorated and high prices.

"These stores also demand more margin, squeezing distributors and manufacturers and exhibit 'serve all our stores or serve none' ultimatums. We have countered by refining our DSD (direct store delivery) system. Wildwood is now Macintosh networked from orders through production, packing and delivery. The driver/sales reps now deliver to the stores with completed invoice in hand. We educate the store clerks and managers to understand that our full service distribution saves them over 5% in stocking and inventory management expense and have kept the stores margins below 30% in most cases. Also, since we have concentrated on developing products with longer shelf lives and have refined production methods to extend the shelf lives of existing products, the return rates have dropped dramatically to under 3% for the entire Wildwood product line."

"Quality is still our number one goal, but profitability is a close second."

"We have expanded our distribution to include several sub distributors. Rock Island Foods carries our longer shelf life products into stores in the SF Bay area which we opt not to serve, as well as into eighty Lucky Markets and any account which is outside of Wildwood's distribution area. In Los Angeles our products are distributed by California Day Fresh as well as Tree of Life and Nature's Best."

In Portland, we are carried into natural foods accounts by Zanya Trading, and we are preparing to open the Seattle market by the fall of 1998. Our new soymilk will be carried by Texas Health into Texas, Colorado and New Mexico and will pave the way for the rest of our product line into those markets.

"Wildwood will continue to seek financing in order to build a new production facility before the new millennium and we plan to be nationwide by 2005. Our products continue to gain critical acclaim and have won first place or best of show at three separate San Francisco Chronicle and American Tasting Institute events in 1998 alone.

"In case you missed the ownership / management lineup, here's a recap:

"Jeremiah Ridenour, President & CEO, Board of Directors, 25% shareholder.

"Billy Bramblett, Treasurer, BOD, 25%, GM in Fairfax, product development, demonstrations.

"Frank Rosenmayr, VP & Secretary, BOD, 25%.

"Paul Orbuch, 25%.

"Other key personnel include:

"John Breen, controller.

"Erik Todd, distribution manager.

"Dolly Gianni, human resources (and so much more).

"Doug Porter, purchasing manager, graphic design (and so much more).

"Maria Gonzales, production manager, Fairfax.

"Chris Spalaris, plant manager, tofu manager, Santa

© Copyright Soyinfo Center 2013

Cruz.

"Juan Macias, secondary production manager, Santa Cruz.

"Currently we run thirteen delivery routes which visit our accounts three times a week. We have 95 employees. 1998 sales are estimated to exceed $6.5 million of which about 70% will be Wildwood branded products." Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11694. *CaliforniaCare News* (*Blue Cross of California*). 1998. I'm soy excited: It's not just tofu anymore. Summer.
• ***Summary:*** "Soy foods come from the soybean." They are turning up everywhere in many forms: Vegetable oil, soy flour, "tofu (soybean curd), soynut butter–a peanut butter alternative that's lower in fat, soy milk, yogurt, cheese, and frozen desserts (good dairy substitutes for the lactose intolerant), meat substitutes, such as soy burgers and soy hot dogs (especially good for those trying to cut down on red meat).

"A healthy choice: Many soy foods are high in protein. Two exceptions are soybean oil, which is high in fat, and soy sauce, which is high in sodium.

"Soybeans also contain a chemical that is similar to the female hormone estrogen. Researchers say this chemical may help prevent and treat some cancers, heart disease, and osteoporosis. It can also relieve the hot flashes associated with menopause."

To learn more, call the United Soybean Board at 1-800-Talk-Soy (825-5769).

A color illustration (cartoon) shows a group of singing soy products: green vegetable soybeans in the pod, soy cheese, soy flour, and a soy hot dog in a bun. Address: 21555 Oxnard St., Woodland Hills, California 91367.

11695. **Product Name:** Veggie Cream Cheese: Nature's Alternative to Cream Cheese.
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. July.
Ingredients: Soy beverage (filtered water, organic tofu powder*, isolated soy protein), unhydrogenated canola vegetable oil, casein (a dried skim milk protein), maltodextrins, organic food acidulants (lactic & citric acids), tricalcium and potassium phosphates, sea salt, carrageenan (sea weed gum), natural vegetetable locust bean gum, natural flavors, vitamin E (antioxidant), vitamin A palmitate. *Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. white plastic tub. Retails for $2.19 at Safeway supermarket (1998/06, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. June 28. Sold refrigerated from a large display next to the produce section. Tub is 3.75 inches in diameter and 2.375 inches high. Label on top of tub: 3 inches diameter. Yellow, white, red, and black on green. "New! Low fat. Made with organic tofu." Label on side: "Fat per serving: This product: 3 gm. Regular cream cheese: 11 gm." Website: www.galaxyfoods.com.

benefits of soy protein, by James W. Anderson, M.D. 1. The soy solution. 2. Soy what? (soybeans, tofu, tempeh, textured soy protein or TVP, soy milk, miso, soy sauce, soy flour, dry-roasted soybeans or soy nuts, soy convenience foods, egg replacers). 3. Making soy protein work for you. 4. Breakfasts. 5. Let's do lunch. 6. What's for dinner? 7. Desserts. 8. Shakes and more. 9. Sample menus. Glossary (In addition to the soy foods described at Chapter 2: Gomasio, soy cheese, soy protein powder, and tamari soy sauce).

The author, who is a woman, worked as a professional chef during the 1980s, when she used large quantities of meat, eggs, and dairy products to prepare dishes in classic cuisines, such as French and Italian. In 1987 she made a dramatic change in her life, when she decided to stop working in professional kitchens, and start to pursue a healthier lifestyle, becoming a vegetarian, eliminating all meat and dairy products from her diet. Having lost both parents to heart disease and stroke, she had a personal interest in helping people learn how to cook and eat properly. Using soy products such as tofu, tempeh, and soy milk, she was able to recreate her favorite old recipes–sautéed dishes with cream sauces, rich pasta dishes, and even delicious cheesecakes–all without cholesterol. But these soy foods actually offered a double benefit, for recent scientific studies show that they actually reduce cholesterol levels.

11700. **Product Name:** Azumaya Fried Tofu.
Manufacturer's Name: Vitasoy USA Inc.
Manufacturer's Address: 1575 Burke Ave., San Francisco, CA 94124. Phone: 1-800-328-8638 (= Eat Tofu).
Date of Introduction: 1998. July.
Ingredients: Water, soybeans, soybean oil, calcium sulfate, calcium chloride.
Wt/Vol., Packaging, Price: 8 oz (227 gm) packed in poly pouch. Retails for $1.39 (1998/07, California).
How Stored: Refrigerated.
New Product–Documentation: This product, introduced in 1972, was originally named "NamaAge: Fried Soy Bean Cake." Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. Dec. 7. 4 by 7.5 inches. Poly bag. Black and orange on white. A color photo in the lower right corner shows slices of fried tofu on a white paper plate, surrounded by vegetables. Below the product name is written: "Best for Stir-Fry, Sandwiches & Salads." At the top of the front panel: "No preservatives. Perishable. Keep refrigerated." Stamped in blue on the front panel: "Best if used by 7-24." The back panel, 3½ by 7 inches, made of paperboard and printed with orange-brown ink on white, contains nutrition facts and "Try all of Azumaya's products" with a listing. Text in upper left corner: "For recipes and product information please write to us at: Vitasoy USA Inc.–Azumaya, Post Office Box 2012, South San Francisco, California 94083. If you are not completely satisfied with this product, notify our Customer Service Department toll free at 1-800-EAT-TOFU/ 1-800-328-8638 or www.vitasoy-usa.com."

11701. *SoyaScan Notes.* 1998. Soya Clips receives 687 clips from Jan. 1 to June 31, 1998 (Overview). Aug. 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is an average of 114.5 clips per month for these six months, or the equivalent of 1,374 clips for the year. This compares with 2,105 clips in 1989–the peak year.

An invoice from Luce shows that one clip during the past year costs (on average) $2.74. The total bill for the 12 months from Aug. 1997 to July 1998 (inclusive) was $5,333.34.

11702. *SoyaScan Notes.* 1998. As of 1 Aug. 1998 there are 77 active tofu manufacturers in the USA and 55 in Canada (Overview). Aug. 2. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Firm confirmation was obtained by a mailing and phone calls for each of these companies. Note: This updated list was published in the Ten Speed Press edition of *The Book of Tofu* (Oct. 1998).

11703. *Rafu Shimpo* (*Los Angeles, California*). 1998. King's Hawaiian serves up Tofu Smoothie. Aug. 3. p. 5. [Eng]
• ***Summary:*** This is a profile of King's Hawaiian Bakery and Restaurant in Torrance, California–in conjunction with the L.A. Tofu Festival. The business has been in the Taira family for about 50 years. "Robert Taira began Robert's bakery in Hilo, Hawaii, where the Portuguese sweet bread became a local favorite. The business relocated to King Street in Honolulu and expanded to include a restaurant.

"In 1977, Taira made the bold move to bring his family to Torrance and brought his bakery and restaurant with him.

"Look for King's Hawaiian Tofu Smoothie at the L.A. Tofu Festival." A photo shows Robert Taira in front of his deli case.

11704. Little Tokyo Service Center. 1998. Presents the Third Annual 1998 LA Tofu Festival (Ad). *Rafu Shimpo* (*Los Angeles, California*). Aug. 7 and 12. p. 3. [Eng]
• ***Summary:*** "Tofu salads. Tofu desserts. Tofu main dishes. Title sponsor: House Foods America Corp. (Hinoichi Tofu). Gold sponsor: Sparkletts. Festival patrons: AT&T, Farmers Insurance Group, Inc., Pacific Bell. Festival supporters: The Gas Company, Vitasoy USA, Inc., Whole Foods Market, Yuasa, Inc. Official festival airline: Northwest Airlines. Celebrity co-chairs: Huell Howser of "California's Gold" and Lilly Melgar, International Actress. Media partner: KSCI–Channel 18.

"Saturday, August 15: 11 to 6. Sunday, August 16: 11 to 4. Plus: Entertainment, music, taiko, & children's performances. Health and information screening (free immunization for children on Saturday. Must present

immunization card). New recipes and tofu samplers. Promotional and giveaway items. Cooking demonstrations. Drawing–(grand prize, trip for 2 to Japan). Children's pavilion with games and crafts. Cultural events of the 58th Nisei Week Festival, the Street Arts Festival and Grand Parade on Sunday. Come and experience an array of international tofu dishes prepared by top chefs in southern California."

Note: Other ads show: "Participating food providers include: Al Mercato, Aloha Food Factory, Bali Place, BCD Tofu, Berth55, Boxer, Cafe La Boheme, Chez Sateau, Citrus, Classic Catering, Coma Tofu, Curry House, Empress Pavilion, Feast from the East, Flowering Tree, Furaibo, Gadsby's, Galaxy Tea Corp., House Foods America Corporation, Hyatt Regency L.A., Pavan Pacifico, Indo Cafe, Inn of the Seventh Ray, Japan California Products, JFC / Tama Nishiki Rice, Jozu Restaurant, King's Hawaiian, Marina Mago Restaurant, Melissa's, Mother Earth, Papa Jon's Cafe, Southern California Cuisine, Suehiro Cafe, Tofu Cabin, Tofutti Brands, Trader Joe's, Union Center Cafe, Unique Catering, Vege-D'Lite, Vitasoy USA Inc., Whole Foods Market, Yujean Kang's, Zen Grill."

11705. Demos, Steve. 1998. Brief history of White Wave's use of organically grown soybeans (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of 18 Feb. 1999.

• ***Summary:*** White Wave started making tofu on 27 Sept. 1977. Steve was one of the tofu makers. That original batch of tofu was made using "organic soybeans," as stated clearly on the first tofu label. The original label was done in two colors (blue–with small amounts of black shading–printed on white), because the company could not afford to use more colors. The labels were supposed to be self-adhesive, but they came with no glue on the back, so for about 6 months the workers had to figure out how to glue the labels onto the top of the little Chinese paper carry-out pails which contained the tofu floating in water. Steve still has samples of the original art work because about five years ago Ginny, his ex-wife, gave him an album (8-10 pages, double-sided, for memory's sake) containing almost all of White Wave's early labels and advertisements, including the deli and nut butter business, plus some press clippings about the company.

The second version of the label, introduced in early 1978, is quite similar to the first except that the ingredients are listed across the top of the oval. The first ingredient is "Organically raised soybeans." The third version of the label, in about 1980, just after the company moved to Walnut Street, has a little more color (especially green). Steve still has the press sheet for that those horizontally oval labels framed on his office wall.

"When White Wave started, our first priority was the integration of vegetable-based foods; our second priority was organic raised products. Organic has always been very important to us–and to many of our customers." Steve had been in the natural foods industry before he started White Wave. In 1974, in between one of his trips to India he opened a store (in La Haska, Pennsylvania) that sold bulk organic food. He soon sold the store, took the money, and went back to India. It was while running this store that Steve first learned about buying organically grown foods. At the time that White Wave started business in Boulder, there was a small distribution company in town named the Green Mountain Grainery, run by Bruce Macdonald, that also had a distribution arm in Denver, and a retail outlet in Boulder. They were big on organics, so Steve bought his first organic soybeans from Green Mountain Grainery; the soybeans were grown by Living Farms in Tracy, Minnesota (Ardell Anderson). Within a very short time, White Wave began buying its organic soybeans directly from Living Farms. At the first nationwide soycrafters convention in Ann Arbor, Michigan (28-30 July 1978), Steve filled out a form titled "Bean Supplies." His supplier was "Living Farms, Tracy, Minnesota. Price: 17.5 cents/lb."

Once when Steve was on vacation, Pat Calhoun "had to make the tremendous decision of buying 2,000 lb of them at once. That was a huge amount, enough to last for a long time–in those days." After that, Steve drove to a meeting of the Organic Growers Association in Iowa. He spoke to solicit growers, saying: "This is the up and coming thing and we will pay a premium for these soybeans but we need reliable sources." One big problem in those days was that half the bag was soybeans and the other half was dirt. At the Iowa meeting Steve met Marvin Kurpkeweight, who was already growing soybeans organically in eastern Nebraska. Shortly after the meeting, in the fall of 1978, Steve visited Marvin's farm. He recalls walking out on his beautiful large farm, seeing how the crops and animals were nicely integrated, meeting his family, discussing crop rotation, etc. Steve contracted with him (at a price lower than he had to pay Green Mountain Grainery) for a certain amount of soybeans to be delivered at specified intervals throughout the year–in much the same way White Wave does today. Steve used Marvin as White Wave's sole supplier of soybeans for the next few years. Thus, all the soybeans White Wave used during this time were (to the best of Steve's knowledge) totally organic.

Why didn't Steve mention his work with organics during several long interviews on White Wave's early history in 1987? "There's only one bullet you ultimately get across. What are you? Are you the organic company? No, we're the vegetarian company. We always presented ourselves as the soy vegetarian company. We constantly tried to reinforce that basic identity." Nevertheless, every year except one, White Wave has made its products using organic soybeans–either third-party certified organic or transitional organic. The former are twice as expensive as the latter. On the transitional organic label they asterisk the soybeans and

© Copyright Soyinfo Center 2013

write: "Raised without the use of herbicides, chemicals, or pesticides." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11706. Liu, Jeff; Tokumura, Megumi. 1998. Tofu geddon: When Stephen Fong, reigning bean-curd eating champion, licks his chops, watch out. It's over. *Rafu Shimpo* (*Los Angeles, California*). Aug. 11. p. 2. [Eng]
• ***Summary:*** A dialogue with Stephen Fong, age 14, a freshman at Schurr High School; he won one of two tofu-eating competitions last year, and hopes to win again this year. Contestants can't use their hands when eating the tofu; hands must be behind the back. The tofu is placed, unseasoned, in a dish on the table. Three photos show Stephen eating a cake of tofu.

11707. Duchesne, Paul. 1998. Reflections on the early history of Wildwood Natural Foods, and how Richard Rose got involved with tofu (Interview). *SoyaScan Notes.* Aug. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul's company is now named "Mama Paul's." Paul Watson was a mutual friend of Paul Duchesne and Billy Bramblett who happened to work in the Good Earth Natural Foods store as a stock clerk. He started to study acupuncture with a person in Bolinas. He is a carpenter and licensed contractor now in Mill Valley. He had nothing to do with tofu. Chris Smith was last seen in or near St. Louis, Missouri, teaching macrobiotics.

Wildwood started making and bottling soymilk starting about 1-3 months after it began to make tofu in 8 Aug. 1980 in Fairfax.

The Tofumobile got Wildwood a lot of early publicity.

Paul has heard: When the people in Ukiah sold the tofu shop to Dik Rose, he agreed (it was written into the contract) not to move it out of Redwood Valley. But he did. He moved the whole thing to Petaluma. They were very upset. They broke in and stole all the equipment, then put it in a locker. They then threatened him that he was not going to get it back; this went on for a long time. Dik finally showed up with the sheriff and guns, and forced them to open the locker and give him back his equipment. Redwood Valley is 5 miles north of Ukiah. David Patton (who was in a partnership with something like 3 people) was one of the people whole sold the shop to Rose. David was the main tofumaker and they wanted fresh tofu in Ukiah. David wrote Paul a letter last year from Edinburgh, Scotland, studying. David has long been involved with interesting ecological things such as yurts, planting trees, and tofu. "They were very, very upset that Rose moved the shop out of Redwood Valley down to Petaluma. They felt he totally betrayed them." Address: Fairfax, California. Phone: 415-453-2360.

11708. Albano, Leilani. 1998. Nisei Week kicks off in Little Tokyo. *Daily News* (*Los Angeles, California*). Aug. 17. p. 4.
• ***Summary:*** "Second generation Japanese-Americans began Nisei Week in 1935 as a way to honor the issei, or first-generation Japanese immigrants to the United States.

"The festival was suspended for seven years when Japanese-Americans were interned in camps during World War II, and the celebrations resumed in 1949.

"'The festival is in honor of what the issei had gone through,' said Wendy Fujihara Anderson, a spokeswoman for the festival.

"Soybean lovers got a taste of their favorite cuisine Saturday and Sunday at the Nisei Week tofu festival, part of the overall event.

"Thirty Southland restaurants participated in the two-day celebration that became a blend of the old and the new, with traditional Japanese tofu plates served alongside contemporary dishes that included tofu enchiladas, tofu cheesecake and tofu seviche."

A photo shows vendors in tents serving tofu dishes along the street side in Little Tokyo (Los Angeles). Note: Nisei Week opened with a taiko drum festival, by the Daion Taiko drummers of Anaheim.

11709. Castillo, Joaquím; Dunn-Meyell, Catalina Mary. 1998. Re: Three pioneering soyfoods companies in and around Barcelona, Spain. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 3 p. Handwritten, with signature. [Eng; Spa]
• ***Summary:*** This letter was written first in Spanish, then sent back with an English translation done by Joaquim's wife, Catalina, who is English. For the last ten years Joaquim has been involved in the sale of a variety of ecological products, such as recycled stationary. He is currently contemplating a change in career and is looking at production of organic foods, which appears to be a very promising field in Spain. The region of Catalunya, of which Barcelona is the capital, has always been the pioneer in Spain with respect to organic products.

The three companies are: (1) Vegetalia S.L., c/ Placa de l'era S/n. 08183 Castellcir (Barcelona). Phone: 93 866-6161. Fax: 93 866-8298. Sr. Salvador Sala. They make tofu, tempeh, seitan, tofu paté, tofu hamburgers. 20 workers. Products sold mostly in health food shops.

(2) Natursoy, c/ Josep Galles, No. 36-52, 08183 Castell Tercol (Barcelona). Phone: 93 866-6042. Fax: 93 866-6250. Sra. Carmen Ascension. Vegetalia and Natursoy used to be the same company, but they separated a few years ago. They make different types of tofu, seitan, hamburgers, etc. They also import organic products; cereals, biscuits, fruit juices, etc.

(3) La Sojeria–also situated in Barcelona. "I have been unable to obtain information about them, but their distributors are: Nutresco S.L., c/ Mossen Lluis David, No. 69. 08180 Moia (Barcelona). Phone: 93 830-0166. Fax: 93 820-8404. Sr. Dionis Guiteres.

Macrobiotic community: Ecole Cuisine et Santé, Fondation Macrobiotique, Pont de Valentine, F. 31.800 St. Gaudens, France. Phone: 61 89-7514. Fax: 61 89-3607. Run by M. René Levy, disciple of G. Ohsawa. The organization continues Ohsawa's work and endeavours to make known the benefits of macrobiotics. Tofu is only produced for use within the community, which has been in existence for nearly 20 years. It is situated in a beautiful spot in the southeast of France. Address: Partida Rosers 26, E-03750 Pedreguer (Alicante) Spain.

11710. Castillo, Joaquím; Dunn-Meyell, Catalina Mary. 1998. Re: Ecole Cuisine et Santé, a macrobiotic community in France that makes its own tofu. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 1 p. Handwritten, with signature. [Eng; Spa]

• ***Summary:*** *Ecole Cuisine et Santé* is located at: Fondation Macrobiotique, Pont de Valentine, F-31800, St. Gaudens, France. Phone: 61-897514. Fax: 61-893607. This macrobiotic community is run by René Levy, a disciple of George Ohsawa. It has been in existence for nearly 20 years, and is situated in a beautiful spot in southeastern France. The organization continues Ohsawa's work and endeavors to make known the benefits of macrobiotics. The community makes it own tofu, which is used entirely within the community. Address: Partida Rosers 26, E-03750 Pedreguer (Alicante) Spain.

11711. Liu, Jeff. 1998. Third Annual Tofu Festival dazzles: Thousands of tofu enthusiasts attend Nisei Week tribute to soy bean cake product at JACCC. *Rafu Shimpo* (*Los Angeles, California*). Aug. 18. p. 1, 5. [Eng]

• ***Summary:*** This is the best overview seen of the 1998 L.A. Tofu Festival. An "estimated crowd of between 40,000-50,000 hungry people streamed into Little Tokyo this past weekend for a tribute to all things tofu." Over 40 restaurants and food providers offered tofu dishes. This year's festival was the biggest ever, spilling from the Japanese American Cultural and Community Center (JACCC) Plaza into South San Pedro Street. Popular recipes included: Fried tofu with garlic (by Empress Pavilion). Tofu cheese mousse. Tofu cheesecake (Inn of the Seventh Ray), Iced mocha cappuccino with soy milk. Halo-halo and soy snowcones. Tofu coffee dessert (Jello-like). Tofutti Cuties. Hawaiian orange passion mango banana tofu smoothie (from King's Hawaiian; "a remarkable and refreshing fruit-soy shake that is a wonderment to the sense..."). Tofu curry. Smoked eel with tofu and soba. Tofu tuna poke salad. Mabo tofu. Tofu avocado seviche (by Coma Tofu, an outreach to the Latino community organized by Yvonne Gonzalez; "a potent blend of minced onions, chopped cilantro and lime in an all-vegetarian version that substitutes crumbled tofu for fish"). A photo shows an aerial view of one street, lined with tent-like booths and jammed with people. Address: Rafu staff writer.

11712. Endo, Margaret. 1998. The LA Tofu Festival of August 1998 (Interview). *SoyaScan Notes.* Aug. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This year's Tofu Festival was the biggest and most successful yet. Since there is no admission fee to the Tofu Festival, the Little Tokyo Service Center raises its money by selling food scrip tickets. Each ticket costs $1.00 and can be used at any of the booths, for food, drinks, or novelty items. This year sales of those tickets was $69,000, almost double the $37,000 dollar figure last year. Saturday they sold $33,000 in tickets compared with $16,000 last year. Sunday they sold $36,00 in tickets compared with $20,000 last year. There were 40 food booths and 3 drink booths, including one selling soymilk snow cones. Most of the food booths were run by restaurants that served tofu dishes. One restaurant sold chilled edamamé. There was one tofu boutique selling t-shirts, polo shirts, shorts, etc. and on each was written LA Tofu Festival. This year there was a children's pavilion with really cute tofu-related games, soy coloring books sent by the United Soybean Board, and 300 soy-based crayons sent by Dixon-Ticonderoga. They also raise money by having corporate sponsors, and selling their tofu cookbook (which was only slightly changed from last year). There was also a program booklet, that contained a history of tofu.

Rafu Shimpo did lots of good English-language articles this year, including highlights of each restaurant that participated. The LA Times did nothing. The crowd was more racially diverse than last year, with a larger percentage of non-Japanese Americans and non-Asian-Americans, including a lot more Chinese-Americans, and Hispanics.

They did a lot of work with Yvonne Dreyfus of the Latino Outreach. She was on KBEA–the Latino station. It worked out pretty well but it was a little bit difficult for Yvonne. Because she wasn't a restaurant, she had much fewer resources as an individual, so LTSC had to help a lot with things like ordering the food products. A little more maintenance was required–but it was well worth it because of the outreach and exposure to the Latino community. Margaret is hoping she will stay involved next year. People liked her Tofu Seviche.

In Los Angeles there is a program on PBS (KCET-TV–channel 28) titled "Visiting... with Huell Howser." This coming Saturday at 6:00 p.m. and Sunday at 7:00 p.m. in Los Angeles (channel 28) a 1-hour documentary he filmed on Saturday about the Tofu Festival–All You Wanted to Know about Tofu will air on this channel. He first visited a tofu factory (American Foods) to show how tofu is made, then shot footage at the festival. The program will not be aired outside the Los Angeles area. The phone number of Huell Howser Productions is 213-953-5380. Note: They sent Soyfoods Center a free copy of the 1-hour video. A PR company volunteers their time each year and puts together

© Copyright Soyinfo Center 2013

a media packet of all the articles etc. about the Festival. Margaret will ask them to send one packet to Soyfoods Center. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1613.

11713. **Product Name:** Tofu.
Manufacturer's Name: Clark Foods.
Manufacturer's Address: Unit 13, Manorpark Estate, Flint, Wales CH6 5UY, UK. Phone: 01352 735522.
Date of Introduction: 1998. August.
New Product–Documentation: Talk with (call from) John Clark, owner and founder of Clark Foods, a tofu manufacturing company. 1998. Oct. 12. Referred by Ray Pierce. His company started making tofu in Aug. 1998. They now make tofu as an ingredient in prepared meals, but they are working on selling their tofu in a retail pack of about 240 gm. The Ltd company is named Waterfront Corp. Ltd., but it trades as Clark Foods.

Letter (fax) from John Clark. Clark Foods now writes its address as: Unit 13, Manor Industrial Estate, Flint, Flintshire, CH6 5UY, UK [Wales].

Civil Engineer thesis, University of Lubumbashi, Polytechnic Faculty, Dep. of Industrial Chemistry. v + 154 + 16 p. Illust. 30 cm. [73 ref. Fre]
• ***Summary:*** Preface and dedication. Introduction. Part I: Review of the literature. 1. General information about soya and proteins: 1.1. The soybean (Botanical, origin and history, soybean production and commerce worldwide, soya in the Democratic Republic Republic of the Congo {Congo, formerly Zaire}, structure and composition of soybean seeds, utilization of soybeans {with diagram}, food uses of

© Copyright Soyinfo Center 2013

soybeans {oil and meal, soy flour (4 types), soy concentrates and isolates, textured soy proteins {TVP, thermoplastic extrusion, spun fibers}, soymilk, tofu, other uses (shoyu, miso, tempeh, yuba)}, industrial uses of soybeans {linoleum, plastics, paints, varnishes, etc.}). 1.2. Proteins (in the human body, in foods), the structure of proteins (amino acids, ionization and acid-base properties of amino acids), protein bonds, denaturation. 1.3. Soya proteins (glycinin or globulin 11S, globulin 7S, hemagglutinins or lectins, protein inhibitors and other antinutritional factors, amino acid composition of soy protein). 1.4 Factors affecting the food value of soya: Acceptability problem (food value of raw soybeans), intolerance to soy proteins, off-flavors in soya and their source, inactivation of lipoxygenase, other treatments affecting the food value of soya: Alkalis.

2. Preparation and properties of soymilk. 2.1. Properties. 2.2. Advantages and disadvantages of soymilk compared with cow's milk. 2.3. Preparation. 2.4. Commercial / industrial production using the Alfa-Laval process.

3. Reminder of certain operations required for the preparation of soymilk powder: 3.1. Homogenization. 3.2. pasteurization and sterilization. 3.3. Concentration by evaporation. 3.4. Drying by atomization. 3.5. economies of energy in dewatering operations.

4. Some ideas on the methods of sensory evaluation: 4.1. The different methods. 4.2. Results and interpretations.

5. Important ideas in the study of the market, in determining the capacity of production, and in the economic evaluation of a project: 5.1. Study of the market. 5.2. Determining the capacity of production. 5.3. Economic evaluation of a project, incl. estimating fixed capital by adding capital costs.

Part II: Experimental, industrial calculations, economic calculations. Introduction. 6. Origin and characterization of the raw materials, trials for inactivation of lipoxygenase. 7. Determination of the optimal conditions for the preparation of soymilk. 8. Results of pilot plant trials. 9. Market study and determination of the capacity of production. 10. Description and calculations for the installation. 11. Economic evaluation of the project. General conclusion.

Tables show: (1) Number of people that can be supported for 1 year by the production from one acre devoted to certain crops and animals. Fewest: Beef 190. Pork 319. Poultry 457. Most: Potatoes 5,329. Split peas 6,901. Soybeans 9,075. Algae 43,200–154,000. Yeast 3,275,000. (1.1) Leading soya producing countries in 1985 (worldwide, with area, production, and yield; USA, Brazil, China, Argentina, India). (1.2) Leading soya producing continents in 1985 (North and Central America, South America, Asia, USSR, Europe, Africa, Oceania). (1.3) Leading soya trading countries in 1985. Importers: Japan, Netherlands, R.F.A. (Republique Federal Allemagne = Germany), Spain, Italy. Exporters: USA, Brazil, Argentina, China, Paraguay. (1.4) Production of soya in the Congo, by province 1970-1978 (the leading producer by far in 1978 was Western Kasai). (1.5) Production of soya in Katanga [formerly Shaba, before that Elisabethville] (1990-1994; by far the leading producer is Tanganyka). 1.6 Total production of soya in the Congo (1,000 metric tons) from 1970-1995 (increased from 1.7 in 1970-74 to 18 in 1995). (1.7) Average composition of different parts of the soybean seed. (1.8) Physico-chemical composition of soybean seed (ranges and average). (1.9). Mineral content of soybeans. (1.10). Vitamin content of mature soybean seeds and soybean meal. (1.11) Fatty acid composition of soybean oil. (1.11A) Enzymes in the soybean: Lipoxidase, urease, lipases, beta-amylase. (1.12) Properties and characteristics of the water-soluble fractions of soybean seeds. (1.12A) Variations in the solubility of proteins from defatted soy flour at various pH levels. (1.12B) Amino acid composition of soybean protein. Address: Lubumbashi, Katanga Province, Congo.

11720. *Ontario Soybean Growers' Marketing Board Newsletter.* 1998. Soybean processing and the Guelph Food Technology Centre. Aug. p. 4.

• ***Summary:*** "For a crop like soybeans, processing is the 'magic' that converts a hard little bean into a wide variety of high quality, nutritious foods and food ingredients. Whole soybeans can be processed into traditional soyfoods like soymilk or tofu, or they can be separated into their primary components: Protein, oil, lecithin and fibre.

"Consumer interest in foods containing soybeans is on the rise... many Canadian food processors have begun to develop new soyfood products for the marketplace. However, soyfood development is no simple task, so many have contracted the services of the Guelph Food Technology Centre," which is located on the main campus of the University of Guelph. The facilities and benefits are described. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11721. Rauchman, Steve. 1998. Look who's cookin' now: From chef to CEO–Yves Potvin is healthy, wealthy and wise. *Sales Promotion* (*Canada*) 2(4):28-32. Aug.

• ***Summary:*** The story of Yves Potvin and his company. Photos on the cover and in the article show Yves. Yves, age 42 (so born in about 1956), is married and has a daughter not yet a year old. At age 19, while studying to be an architect, he decided to switch to the two-year chef's course at the St. Hyacinthe Professional School of Cooking in Quebec.

He worked at a resort in the Laurentian Mountains in southern Quebec, at restaurants in Sherbrooke and later Vancouver, mainly French restaurants, working with French cuisine and nouvelle cuisine. He became an admirer of Paul Bocuse, who did something remarkable when he created *nouvelle cuisine* in the 1960s, and thereby changed French cuisine.

In 1985, at age 28, Yves started his own food

© Copyright Soyinfo Center 2013

manufacturing company, Yves Fine Foods, with $10,000 of his own money and $30,000 raised from family and friends. In 1992 the company was later renamed Yves Veggie Cuisine. His first product was a tofu wiener / hotdog.

11722. Sato, Satoru. 1998. Chef Sato's all-natural desserts: Delicious cakes, pies, pastries, and other irresistible sweets. Becket, Massachusetts: One Peaceful World Press. 96 p. Foreword by Aveline Kushi. Recipe index. 22 cm.
• ***Summary:*** This innovative little book contains "42 delicious, sugar-free, dairy free desserts." Soymilk is widely used in place of dairy milk (as in fillings), and tofu is used in many frostings. Maple syrup is used as the sweetener. Address: Great Barrington, Massachusetts.

11723. Warrick, Sheridan; Levin, Karen A. 1998. A garden on the grill. *Health* 12(5):102. July/Aug. *
• ***Summary:*** Includes international barbecuing recipes.

11724. Chou, Hsiao-Ching. 1998. Beans on branches: Fuzzy, green and sweet, they're full of nutrition. *Denver Post* (*Colorado*). Sept. 16. p. 1E, 5E.
• ***Summary:*** A good, very positive article about edamame (the Japanese name means "beans on branches"), also called *mao-doh* ("fuzzy beans") in Chinese. They taste good and they're good for you. Now, in the Denver and Boulder areas, natural food stores and farmer's markets offer green vegetable soybeans, freshly harvested from a local farm–for $5 to $6 per pound. Try the Boulder farmer's market, Whole Foods in Boulder, Wild Oats in Denver, Alfalfa's in Cherry Creek, or the Cherry Creek farmer's market. In Longmont, Colorado, Pachamama Organic Farm (38 acres) grows 1½ acres of the new crop. This is the second year that Ewell and Lauren Culbertson have grown edamame. Planted in August, they are expected to yield 10,000 pounds before the first frost arrives. Pachamama is the only known farm in Colorado that grows the green soybeans, partly because it's a labor intensive crop. Americans like these green soybeans, and so do kids. The Culbertson's 10-year-old son, Amos, packs them in his lunch and enjoys them with his schoolmates. Gives 3 recipes: Fried rice with green soybeans and mushrooms. Green soybean, corn, and artichoke salad. Tarragon sweet beans, onions, and potatoes.

Large color photos show: (1) Lauren Culbertson in the field with both arms filled with fresh soybean plants and edamamé. (2) Roasted light-green edamamé in the palm of a person's hand. (3) Ewell Culbertson inspecting an edamamé plant growing on his farm. A small black-and-white photo shows bundles of edamamé in a box, with a hangtag on each.

A sidebar titled "Soy hormones power tofu diet," by Cooking Light (p. 5E) discusses soy hormones and their medical benefits. "The real medicinal hero of tofu is the soybean... But even soybeans have an inner hero–a group of compounds called isoflavones. These plant hormones, with names such as genistein and daidzein, may help battle chronic illness on several fronts..." Stronger bones, lower cholesterol levels, relief from hot flashes, lower risk of cancer.

11725. Stipp, David. 1998. Nutraceuticals–Engineering the future of food: A revolutionary blurring of foods and drugs is transforming the industries that make them and promising to help us age gracefully. *Fortune* 138(6):128-30, 134, 136, 140, 144. Sept. 28. [1 ref]
• ***Summary:*** This is a very (perhaps overly) optimistic portrayal of the future of genetic engineering. In January 1998 Charles "Chad" Holliday was installed as the CEO of DuPont. A few months later he acquired Protein Technologies International (PTI), a subsidiary for Ralston Purina Co., for $1.5 billion. Analysts were puzzled by the deal, and the very high price that DuPont paid. On the day the deal was announced, DuPont's shares slipped $0.31 to close at $65.63, while Ralston's jumped $3.44 to $91.69.

This acquisition was part of the "life science" revolution, an example of how chemical and agribusiness companies are increasingly envisioning their future in biology, and especially biotechnology. Last year Monsanto (an old-line chemical firm) spent over $6 billion for seed companies, while DuPont paid $1.7 billion for a 20% stake in Pioneer Hi-Bred International. Yet the prize in the life-sciences revolution is seen as lying, not in seeds, but in food–and in the blurring of the distinction between food and drugs, between edibles and pharmaceuticals. For example, in 1996 there was the $29 billion merger of Sandoz and Ciba-Geigy to form Novartis.

These new health-enhancing foods go by several names. The food makers call them "functional foods" while the pharmaceutical companies prefer the name "nutraceuticals." A functional food might be spaghetti enriched with soy protein to prevent osteoporosis. Unfolding scientific research suggests that men with prostate cancer may be able to slow the progression of the disease "by eating lots of tofu and other soy-based foods." According to Clare Hasler, executive director of the interdisciplinary functional-foods program at the University of Illinois, the emphasis is shifting from removing the bad components from food (fat, cholesterol, salt) to enhancing the good. One example is the trend to fortify foods with calcium; it took off in 1995 when Tropicana started fortifying its orange juice with bone-building calcium. Today calcium is added to a host of foods to make them more nutritious.

Marketing these foods will be aided by FDA health claims (which can be printed on the front of each package) based on clinical studies. DuPont is working to gain FDA approval of a health claim for products containing soy protein–which is rich is isoflavones. Steven Potter, DuPont's Director of agriculture business development, believes that if this health claim is approved, the $1.5 billion DuPont paid

© Copyright Soyinfo Center 2013

for PTI will look like "chump change." People think of the U.S. pharmaceutical market as a huge one, but it is actually only about one-fifth as large at retail as the $500 billion food market.

The soul of the new life-sciences machine will probably turn out to be phytochemicals–such as the isoflavones found in soy protein foods or the lycopene found in tomatoes (which cold lower the risk of prostate cancer). Other popular fortifiers are fiber, antioxidants, and zinc.

The government has played an important role in drawing or blurring the line between foods and drugs. In 1976 Congress passed a law prohibiting the FDA from limiting the potencies of vitamins and minerals. Then in 1986 the National Cancer Institute worked with the Kellogg Co. (Battle Creek, Michigan; without consulting the FDA) to put the first health claim on a mainstream food–Kellogg's All Bran. The message on the front of each package stated that high-fiber foods may lower the risk of certain cancers. FDA officials were furious, but they decided not to take action against Kellogg, in part because the statement had been proven true by science and the food was a healthy one.

So in 1990 Congress created a legal basis for such claims when it passed the NLEA (Nutrition Labeling and Education Act). But the FDA got the last laugh by interpreting the law so strictly that only 11 claims, each very carefully worded, have been allowed to date. For example: "Diets low in sodium may reduce the risk of blood pressure, a disease associated with many factors."

Finally, in 1994 Congress passed the Dietary Supplements Health Education Act (DSHEA, also called the Hatch Act), a "bulldozer" of a law that allows companies selling dietary supplements to print health claims on their packages without seeking FDA approval. Although the law forbids claims that supplements can treat diseases, it does allow claims linking phytochemicals to good health. The law took away most of FDA's power to regulate supplements, according to Stephen DeFelice, who coined the word "nutraceuticals" and started the nonprofit Foundation for Innovation in Medicine (Cranford, New Jersey), which promotes natural remedies.

A sidebar is titled "Can soy cut cholesterol." Studies suggest it can. Our writer tries to replicate them using himself as a guinea pig." Before the experiment, his total cholesterol was 223 ("borderline high") and his LDL (bad cholesterol) was 165 ("dangerously high"). He added 30 gm/day of soy protein isolates to his diet and cut back on his "American soul food" such as hamburgers. After two weeks his total cholesterol was unchanged, but his LDL fell 5.5% to 156 ("high")–not bad in only two weeks.

Note: This study uncritically assumes that consumes will accept genetically engineered crops and foods.

11726. Ginsberg, Beth; Milken, Mike. 1998. The taste for living cookbook: Mike Milken's favorite recipes for fighting cancer. Santa Monica, California: CaP CURE. Distributed by Time-Life Books. 118 p. Illust. Index. 26 x 27 cm. [2 ref]
• ***Summary:*** This is a gorgeous, low-fat vegetarian cookbook in which about half the recipes use soy as a major ingredient. It is loaded with color photos (many full page), playful graphics, and good advice. Note: 100% of the proceeds from this book are used to fund prostate cancer research. The book is available at bookstores nationwide, or it can be ordered by dialing toll-free 1-877-884-5433 (LIFE). Contents: Introduction, by Michael Milken. Preface, by Beth Ginsberg. Four nutritional principles of CaP CURE to fight prostate cancer and other hormonal cancers: (1) Limit dietary fat to 15% of total energy intake (calories). (2) Eat 5 or more fruit and vegetable servings per day. (3) Consume 25 to 35 grams of dietary fiber a day. (4) Consume 40 to 60 grams of soy protein a day. "Americans have a five times higher incidence of prostate cancer than people living in Asia and eating a traditional diet. Soups. Exercise. Entrees. Soy and soybeans. Sandwiches and sides. Cruciferous vegetables. Breakfasts and shakes. Desserts. Healthy pantry. Afterword, by Donald S. Coffey, PhD, President of the American Assoc. for Cancer Research and Professor of Urology, Oncology, Pharmacology and Molecular Sciences, Johns Hopkins Hospital, Baltimore, Maryland: We are what we eat, how does food cause or protect us from cancer (ROS = reactive oxygen species), how did we lose our way?, how did our diet change ("The great apes were primarily vegetarian, consuming great quantities of vegetables that are high in fiber"), what should we do? About CaP CURE.

Soy-related recipes include: French onion soup (with soy cheese and soy sauce, p. 20). Broccoli potato soup (with grated nonfat cheddar-style soy cheese, p. 22). Shiitake miso soup (with silken tofu and low-sodium tamari sauce, p. 22). Taco salad with a chili lime dressing (with 1½ lb fat-free soy meat, p. 26). Chinese roasted tofu salad (p. 33).

Note. This is the earliest English-language document seen (April 2013) that contains the term "roasted tofu;" it refers to grilled tofu.

Orange ginger dressing (with white miso and tamari, p. 33). Chef's salad with miso shallot dressing (and Soy Deli Slices, p. 34-35). Thousand island dressing (with tofu, p. 34-35). Chopped vegetable salad (with 1 cup edamame, p. 36). Teriyaki tofu bowl with Chinese vegetables (p. 40). Tofu dog casserole with a pretzel crust (p. 42). Soy and Soybeans (with a sidebar on "understanding tofu," p. 44-45). Lasagne with "soysage" (with fat-free vegetarian sausage, silken tofu, and soy cheese, p. 46). Spinach cannelloni with fresh tomato sauce (plus soy milk and low-fat tofu, p. 48-49). Vegetable fritatta with roasted tomato salsa (and 2 lb tofu, p. 54-55). Enchilada pie with ranchero sauce (and 1 lb soy cheese). Greek spinach pie in a phyllo nest (with tofu, p. 61; remake of spanakopita). Homemade vegetable pizza with soy cheese (p. 62-63). Vegetable reuben (with tempeh bacon strips, p. 68). Tofu egg salad sandwich (p. 72). New

© Copyright Soyinfo Center 2013

Deli (fat-free hot dog, p. 75). VLT with herb mustard (and fat-free tofu bologna slices, p. 76). Broccoli in soy cheese sauce (p. 78-79). Fruit shake (with soy protein isolate, p. 84). Blueberry banana multi-grain pancakes (with soy milk, p. 87). Strawberry shortcake (with soy milk, p. 96). Carrot cake (with silken tofu, p. 100-01). Devil's "fool" cake with cocoa frosting (plus silken tofu, p. 104). Tofu cheesecake with fresh berry topping (p. 106-07). Banana cream pie (with 3 cups vanilla soy milk, p. 108). Old fashioned chocolate pudding (with 2 cups cocoa soy milk, p. 109). Maple flan (with 2 cups soy milk, p. 110). Address: CaP CURE, 1250 4th St., Suite 360, Santa Monica, California 90401. Phone: 310-458-2873.

11727. Goldbeck, Nikki; Goldbeck, David. 1998. The healthiest diet in the world: A cookbook and mentor. New York, NY: Dutton (Penguin/Putnam Inc.). xiii + 561 p. Sept. Illust. General index. Recipe index. 25 cm. [840+* ref]
• ***Summary:*** This is an excellent book, with a wonderful title that lives up to its promise. Both authors are real professionals, with 25 years in the field. Contains extensive information about the importance of a wholefoods, natural foods diet, with plenty of fresh fruits, vegetables, beans, and soyfoods as sources of the many recently-discovered phytochemicals, which offer promising health benefits. The authors are fans of soyfoods, which are featured in both the text and recipes throughout the book.

In Part I, "Goldbeck's Golden Guidelines," No. 5 is "Super Soy Foods" (p. 14-15) which encourages readers to "Make soy foods a regular part of your diet."

Part II is the recipe section, titled "In Nikki's kitchen: Healthiest diet recipes." The main soyfoods used in recipes are tofu (48 recipes!), tempeh (15), soy milk (14), miso (8), soybeans, whole dry (3), and soy flour (2). This book contains so many soy-related recipes that we cannot possibly list all of their names. So here are two samplers of such recipes to give a feeling of their diversity, extent, and inviting names. (1) Salad dressings and salads: Creamy miso-mustard coleslaw (p. 178). Tofu mayonnaise (p. 190). Creamy tofu Russian dressing (p. 191). Creamy tofu ranch dressing (p. 191). Lemon-tahini dressing (with soy sauce, p. 192). Creamy miso-mustard dressing (p. 193).

(2) Tempeh recipes: Tempeh strips (p. 31). Tempeh breakfast links (p. 32). Baked Italian tempeh (p. 38). Tempeh burgers (p. 39). Skewered tempeh with orange-nut crust (mini kebabs, p. 61). Maple-pecan tempeh (p. 98). Baked corn-tempeh hash (p. 98-99). Picadillo (Latin American sloppy Joes with tempeh, p. 99). Tempeh mushroom stew (p. 100). Asian grill (with marinated tempeh, p. 101). Tempeh kebabs (p. 102). Shish kebab in a bag (p. 103). Tempeh-bean chili (p. 114-15).

In Part III, "Mentor," one entire chapter is dedicated to soyfoods ("5. In praise of soybeans," p. 408-29). The contents of that chapter: Introduction. Soy's special assets. The phytochemical furor. Protein plus. Soy fiber. Vitamins and minerals. Soy concerns. Soy food selection (incl. Western-style dairy and meat alternatives; soy cheese, soy ice cream, "soy-based imitation meat"). Stick with traditional soy foods: Tofu, tempeh, soy milk, soy nuts, whole soybeans (incl. edamame or green soybeans), soy sprouts, soy flour, soy grits, soy sauce, miso, okara (soy fiber), natto. Soy for health: Introduction, cancer (breast, prostate, and other hormonally influenced cancers), heart disease, diabetes, osteoporosis, women and soy, infant feeding. Nikki's dialog boxes: Mixing and matching soy protein. Just because they call it "milk": Nondairy vs. dairy. The question of salt. How to acquire your anti-cancer soy intake. Twenty-five grams of soy protein a day?

Soybeans are also mentioned in Chapter 6, "The beauty of beans" (see p. 431, 434). The 43-page bibliography of current scientific information on the health benefits of foods is worth the price of the book.

In the chapter titled "Controversial carbohydrates" is a long section about the glycemic index of foods titled "G-Force: A new perspective on carbohydrates" (p. 280-89); it includes a 6-page table showing G-force [glycemic index] ratings for individual foods. "Foods with a high G-Force [55 and above, bad] raise blood sugar levels quickly; this is usually matched by a rapid rise in insulin. Foods with low G-Force cause blood sugar levels to rise gradually, in which case insulin is usually released more evenly." Foods that tend to have a high G-Force are: Desserts and sweets (doughnut 108, graham crackers 106), foods made from refined flours (baguette 136, bagel 103, white wheat bread 100), sweet and refined breakfast cereals (puffed rice 132, Cornflakes 119, Cheerios 106), sugars (maltose 150, glucose 137, sucrose 92). Foods groups that tend to have low G-force are: Fruits (apple 54, apple juice 58, orange juice 63, but watermelon 103), legumes (soybeans 25, chickpeas 47), dairy products (yogurt 20, milk 46). vegetables (non-starchy). Address: Woodstock, New York.

11728. Liebman, Bonnie. 1998. The soy story. *Nutrition Action Healthletter* 25(7):1, 3-7. Sept. [22 ref]
• ***Summary:*** A excellent debunking of the recent media hype about the health benefits of soyfoods, plus an accurate assessment of their real nutritional and health benefits. Contents: Introduction. Heart disease. Beyond cholesterol. Breast cancer. Prostate cancer. Osteoporosis. Menopausal symptoms. The waiting game: A surprising number of studies on soy are in progress.

There are three sidebars: (1) Shopping for soy: Look for isoflavones, take a powder, hit the bar (GeniSoy), don't forget tofu ("It may no longer be trendy, but tofu (soybean curd) tastes terrific in stir-fries, marinated and grilled... Tofu is a good source of protein that has no cholesterol and less saturated fat than meat or poultry"). (2) Soy, what's new: The amount of isoflavones and protein in 14 drinks and powders, 17 foods, and 6 pills. Two caveats accompany this table: (1)

© Copyright Soyinfo Center 2013

The isoflavone levels in soybeans and soyfoods vary widely. (2) Isoflavones are attached to a sugar-like compound that accounts for about 40% of their weight. Most companies can't say whether their isoflavone numbers include the sugar or not. (3) Baby soy: Concerns over the safety of soy-based infant formulas.

"The bottom line: (1) Roughly 25 grams of soy protein (with its naturally occurring isoflavones) is enough to lower LDL ("bad") cholesterol by about 10 percent in people who start out with an LDL level above 160. (2) It's too early to say whether soy or its isoflavones can reduce the risk of breast or prostate cancer, osteoporosis, or hot flashes. (3) To play it safe, women who have had breast cancer shouldn't load up on soy protein or take isoflavone pills."

Color photos show packages of: Iso-Soy powder, GeniSoy bar, Solgar genistein–soy isoflavone extract.

11729. Morinaga Nutritional Foods, Inc. 1998. "You don't have to be a vegetarian to love Mori-Nu Tofu" (Ad). *Vegetarian Times.* Sept. p. 27.

• ***Summary:*** This full-page color ad shows a lovely red-haired lady dressed in a chef's uniform, with her right elbow resting on a huge whisk. Below the photo we read: "Alex Hilebronner, Reel Foods Productions, Los Angeles, California / Chef, Caterer, Part-Time Vegetarian."

The text reads: "I'm a caterer. My company does parties, business luncheons, film crew feeds, and custom meals. I've been cooking with tofu for 10 years and every day I get requests for tofu dishes. Maybe my clients eat tofu to stay trim. Or they've hears about the benefits of tofu–like fighting cancer, heart disease, high cholesterol, and even reducing the hot flashes of menopause. Whatever the reason, healthy, good tasting food is always important. That's why I choose creamy smooth Mori-Nu Tofu. It purées, marinates, and grills like no other tofu to create delicious low-fat dishes like tomato soup, pad thai, or chocolate pie. The airtight package keeps Mori-Nu fresh and ready to use without refrigeration... But don't just take my word for it. Visit www.morinu.com and try one of the recipes yourself."

A color photo in the lower right corner shows two packages of Mori-Nu Tofu (from and extra firm) on a small wooden cutting board, surrounded by fresh vegetables. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11730. Morinaga Nutritional Foods, Inc. 1998. Surprise. It's Mori-Nu Tofu (Ad). *Natural Foods Merchandiser.* Sept. p. 62.

• ***Summary:*** This full-page color ad shows a package of Mori-Nu Silken Style tofu on a wooden cutting board surrounded by strawberries, raspberries, tofu cubes, carrots, and mushrooms. At the top right is a bowl of Creamy pumpkin soup. At the top left a plate of Fiesta burritos. Top center: Chinese un-chicken salad. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

11731. Nakatomi & Associates. 1998. L.A. Tofu Festival media clips (Portfolio). Santa Monica, California. 53 inserts. 28 cm.

• ***Summary:*** This is a portfolio of 53 newspaper clippings, advertisements, news briefs, and articles related to the L.A. Tofu Festival, which took place in Los Angeles on 15-16 August 1998 (Saturday and Sunday). The dates range from August 7 to 21. The most popular source was *Rafu Shimpo* (an English-language newspaper for Japanese Americans) with 21 clips, followed by the Los Angeles Times (Food section, calendar section), with 6 clips, and the Daily News (incl. L.A. Life Weekend, 4). But clips from many other newspapers, spanning many ethnic groups, also appear: *Asian Journal, Chi-Am Daily News* (*3*), *Chinese Daily News, Downtown News, Gardena Valley News, KoreAm Journal, Korean Journal, La Opinion* (*Spanish*), *Lighthouse* (*2*), *Los Angeles Magazine* (*2*), *New Times Los Angeles, Pacific Asian Current, Pacific Citizen, Sing Tao Daily* (*Chinese*), *Vecinos del Valle* (*Spanish*), *and Viet Bao Kinhte* (*Vietnamese*).

These clips show how the Festival was promoted through and covered by the media in the greater Los Angeles area. Clearly the great success of this year's festival was due, in part, to the excellent public relations work of Nakatomi & Associates. A number of the clips in *Rafu Shimpo* featured individual restaurants that would be serving their favorite tofu dishes at the festival. This concept, starting on July 31, spotlighted 12 restaurants. Address: 1301 Montana Ave., Santa Monica, California 90403. Phone: 310-656-1616.

11732. Nasoya Foods, Inc. 1998. Nasoya: Making it easy for you to add soy protein to your diet! (Ad). *Vegetarian Times.* Sept. p. 79.

• ***Summary:*** A full-page color ad for Nasoya Nayonaise and Nasoya Veggie Dressing, which comes in 5 distinctive flavors: Sesame garlic, Creamy dill, Thousand island, Garden herb, and Creamy Italian. www.nasoya.com.

Note: This ad also appeared in the April 1999 issue (p. 7). Address: One New England Way, Ayer, Massachusetts 01432. Phone: (800) 4-NASOYA.

11733. **Product Name:** [Breaded Tofu Cutlets (With Spinach and Fine Herbs)].
Foreign Name: SOY Croustisoy (Épinards et Fines Herbes).
Manufacturer's Name: Nutrition & Santé S.A. (Formerly SOY / Société Soy).
Manufacturer's Address: B.P. 33, Z.I. de la Pomme, 31250 Revel (near Toulouse), France. Phone: +33 62 18 72 50.
Date of Introduction: 1998. September.
Ingredients: Fresh tofu* 69% (water, dehulled soybeans, coagulants: calcium sulfate, nigari), grated bread crumbs*, wheat flour*, spinach* 4%, flakes of whole oats, fine herbs*

© Copyright Soyinfo Center 2013

© Copyright Soyinfo Center 2013

3.7% (basil*, parsley*, chives*), olive oil*, sea salt, garlic*, yeast extract, cider vinegar*, pepper*. * = Organically grown ingredients 89.8%. Certified by Ecocert F 32600 L'Isle Jourdain.
Wt/Vol., Packaging, Price: 200 gm paperboard box, 2 cutlets per pack.
How Stored: Refrigerated, store at 4ºC.
New Product–Documentation: Product with Label brought by Taro Mikuriya of the Nutrition & Santé Group (Revel, France). 2011. Dec. 14. Paperboard box. 4 by 6 by 1.5 inches. Dark green, light green and black on white. Color photo of a cutlet on greens on a plate. On the front panel are the Soy logo (white on dark green), the two organic certification symbols, and the company's logo / statement: Soybeans grown in France, not genetically engineered (*Soja français sans OGM*). On the back: SOY, tofu pioneer in France. The first French company to make tofu, starting about 30 years ago. Since 1998 Soy has created the first line of products in Europe guaranteed to be not genetically engineered. More than 200 organic farmers in southwest France (Haute-Garonne, Tarn, Gers,...) working in this way in close partnership with SOY. For recipes and more visit www.soy.fr.

Letter (e-mail) from Bernard Storup, founder of Nutrition & Nature (Revel, France). This product was first sold commercially in Sept. 1998.

11734. *Soya & Oilseed Bluebook.* 1998--. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook Plus. A directory and information book for the soybean processing and production industries. The first issue (shipped Sept. 1998) is subtitled "The annual directory of the world oilseed industry." On the cover, below a map of the world is printed the date "1999" in large letters, followed by "A Soyatech Publication." Crops featured on the front cover and inside are "soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut."

Contents (the four main sections are marked with a fold-out tab): Translations of oilseed terminology (English, German, French, Spanish, and Portuguese). Organizations and government agencies: Complete listings by country. Oilseeds and oilseed products: White pages (Index, individual crops), catalog pages, yellow pages (complete company listing by country). Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, internet address index, brand name index, advertiser index.

Soy-related terms appearing in the translation section (p. 9-15) are: (1) Oilseeds and products: dairy analogs, lecithin–edible, lecithin industrial, meat analogs, miso, organic soy products, soy distillate, soy fiber, soy flakes–defatted–edible, soy flakes–full fat, soy flour–defatted, soy flour–enzyme active, soy flour–full fat, soy flour–low fat, soy flour–roasted, soy flour–textured, soy grits, soy isoflavones, soy livestock feed, soy oil margarine, soy oil shortening, soy oil–crude, soy oil–edible, soy oil–hydrogenated, soy oil–industrial, soy oil–refined, soy oil-based fuel, soy protein concentrate, soy protein isolate, soy protein–hydrolyzed, soy protein–industrial, soy sauce, soy sterols & tocopherols, soy-based foods–other, soybean fatty acids, soybean hulls, soybean meal, soybean meal–full fat, soybean seed breeder, soybean seed (for planting), soybean soapstock, soybeans–food grade, soybeans genetically modified, soybeans–green vegetable, soybeans–identity preserved, soybeans–non-gmo, soybeans–organic, soybeans, whole dry, soymilk beverages, soymilk powder, soynuts, tempeh, tempeh starter cultures, textured vegetable protein, tofu & tofu products, tofu powder. (2) Equipment & services: Coagulants for tofu, soymilk & tofu processing equipment, sprouting equipment. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

11735. **Product Name:** Soymilk, Tofu, Soy Snacks.
Manufacturer's Name: Soytein, Inc.
Manufacturer's Address: 480 Douglas St., Mt. Gilead, OH 43338-1019. Phone: 614-766-0688.
Date of Introduction: 1998. September.
New Product–Documentation: U.S. Soyfoods Directory. 1999. p. 42-43. Talk with Bill Lui, founder and owner. 1999. May 3. He started making soymilk in Sept. 1998, then tofu in Dec. 1998. He designed and built all the equipment in his plant. He also sells custom made equipment; it is made in Taiwan to his specifications. A tofu maker will soon arrive to help him.

Letter from Bill Lui. 1999. May 10. A 1-page laser-printed leaflet describes "Soytein Inc." He has clipped and included two color photos of tofu equipment made in Taiwan to his specs.

11736. Stromnes, John. 1998. Zen among us: Former Seattle teacher finds a peaceful existence in western Montana. *Missoulian* (*Missoula, Montana*). Oct. 5. p. A1, A8.
• ***Summary:*** Genki Takabayashi, age 66, a Zen master born in Japan, is teaching authentic Rinzai Zen Buddhist meditation at a temple located in a rented farmhouse near Ronan, Montana. He is one of only three native Japanese teachers of the Rinzai Zen school in America. He is married to an American named Leslie Gannon. Genki Roshi likes to make his own tofu, using a primitive, 300 year old hand-turned stone mill. As part of his daily practice, he grinds ten pounds of dried soybeans (which have been soaked) at a time. Large color photos show: (1) Roshi grinding soybeans–with Montana scenery in the background. The stone mill is inside a large, shallow galvanized metal bucket. (2) Roshi dressed in his formal brown robes, sitting zazen near his

© Copyright Soyinfo Center 2013

home altar.

Also included with this newspaper article: (1) A letter from Leslie Gannon, dated 15 Oct. 1999. She hopes to start a small commercial tofu shop as a source of income. (2) The Newsletter of Zen No Ji Farm (March 1999, Vol. 2, Issue 1). (3) A color photo of Roshi standing in his robes. (4) The June/July 1999 issue of Inspiring Times (Helena, Montana), which contains an article about Genki Roshi titled "Mountain Clay," by Bill Halinan (p. 6, 10). Roshi was born in 1933 in Japan, and entered the monastery at age 11. He has practiced Rinzai Zen for 55 years, many at Daitokuji in Kyoto, but the most recent 20 years were with the Seattle Monastery in Seattle, Washington. He and his new wife Leslie moved from Seattle to the Flathead Valley in the summer of 1997, drawn by the mountains and rural farm setting. Photos show: (1) The roshi making tofu. (2) Leslie Gannon and Genki Roshi in robes. Address: Staff reporter.

11737. Harrigan, Brian. 1998. Update on the work of ASSOY and ProSoya Inc. in Russia and the former Soviet Union (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ProSoya has a technology transfer agreement with ASSOY (Associatsiia "Assoya"), the Russian Soybean Association, which is their partner. Founded and run by the energetic Alexander Podobedov, ASSOY has made more than 250 of the small SoyaCows, and sold them within the former Soviet Union during the last 1½ to 2 years. In addition, ProSoya has sold about 100 of these small SoyaCows elsewhere. In Russia, most of these SoyaCows are in the shops of small entrepreneurs. They make soyfoods to retail to the general public. In Krasnodar alone, ASSOY has opened 7 shops which are called Soyushka, meaning "Little Soya." They sell only soyfoods–tofu, soymilk, soynuts, soy oil, soya flour, soy power and a variety of foods made from soya–such as soya breads. Outside of Russia, there are SoyaCows in the Ukraine, Moldova, Belarus (quite a few there). ASSOY is now actively running newspaper, radio, and TV ads in various countries of the former Soviet Union, and throughout this region Soyushkas are becoming well known and the people are becoming soya-conscious–largely through the efforts of ASSOY. Brian has the whole story, but in Russian, in marketing documents. On paper the story sounds better than it looks when you actually go there. Some of the plants are idle. Some employees haven't been paid in 6-8 months, so they don't work very hard. ASSOY keeps trying to get the Russian government to help them out. The government keeps saying that they will, and they have even signed decrees saying that the government will help send soyfoods to the prisons, schools, and hospitals–where there are dire shortages of protein. But the government never does what it says.

ASSOY provides spare parts for the soy shops, plus all the marketing, recipes and recipe books, everything. The man behind these remarkable developments is Alexander Podobedov, who is a real entrepreneur. But he has a style that is very rough and tough with people, which sometimes (especially in Russia) helps him and other times (especially with Westerners) limits his effectiveness. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11738. Pasternack, Erin. 1998. Mike Milken, Beth Ginsberg, Cap Cure, and research on prostate cancer (Interview). *SoyaScan Notes.* Oct. 20. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Michael Milken, once famous for junk bonds, was diagnosed as having advanced prostate cancer. It had spread from his prostate gland to his lymph nodes, so there was no simple treatment using surgery or radiation. He decided to research the subject on his own. He found that dietary changes, including soyfoods, can make a difference. Now his cancer is in remission and he has devoted his life to teaching people about and funding research on prostate cancer.

After he discovered the importance of diet in treating prostate cancer, Michael found a personal chef Beth Ginsberg, who lives in Los Angeles, graduated from the Culinary Institute of America (CIA, first in her class). She went into the Culinary Institute with an interest in healthy foods and came out with great skill in preparing such foods. She loves tofu, has been cooking with tofu for about 10 years, and developed the recipes in their new book on the subject, *The Taste for Living Cookbook: Mike Milken's Favorite Recipes for Fighting Cancer,* was published last month. It contains many soyfoods recipes. 100% of the proceeds from this book are used to fund prostate cancer research.

Michael established CaP Cure, a foundation and public charity that funds prostate cancer researchers; they fund specific studies, with a focus on advanced stage prostate cancer–since the earlier stages are quite curable with surgery or radiation. Last year they funded $15 million worth of such research. 100% of the proceeds from this book go to fund prostate cancer research. CaP Cure also gives nutritional advice, workshops, and cooking classes to people with prostate cancer–especially advanced prostate cancer. Erin talks at prostate cancer support meetings and groups. How often has she heard: "I tasted tofu and it was gross." They don't realize you can't just eat it plain. She has found that most people do not know how to cook tofu. Address: Cap Cure, 1250 4th St., Suite 360, Santa Monica, California 90401. Phone: 310-458-2873.

11739. Ridenour, Jeremiah. 1998. How Jeremiah Ridenour of Wildwood Natural Foods and Ted Nordquist of TAN Industries developed America's first soymilk in a gable-top carton (Interview). *SoyaScan Notes.* Oct. 20. Conducted by

© Copyright Soyinfo Center 2013

William Shurtleff of Soyfoods Center.

• ***Summary:*** Background: Ted Nordquist, a native of California, is perhaps the world's leading developer of soy base and dairylike products derived therefrom. He pioneered tofu, soymilk, and soy ice cream in Sweden, and eventually sold his company to one of Sweden's largest food manufacturers, before moving back to California in the early 1990s (1992-94). His family joined him in Sonoma in August 1994.

Jeremiah and Ted met not long after Ted moved from Sweden to California in about 1993-94. This was before his family came, when he was here by himself. Ted contacted Jeremiah. He wanted to make a soy ice cream in the USA–that was his main focus. He suggested that Jeremiah buy Woody Yeh's soymilk yogurt plant in Hayward, California, because Woody's company (Soyeh Natural, Inc.) was about to go out of business. Jeremiah did not do this and Woody went bankrupt then sold his equipment to an Asian American man [Jim Pong of Pure Land Co.] who is now producing tofu there. Woody is now running an import/export company.

Jeremiah liked Ted and thought his soy base was great, so he introduced him to the packaging company, and to Dreyer's (the ice cream company). They spent time together and talked about gable-top soymilk. On his own, Ted soon met Ken Lee of Soyfoods of America (where Ted's soymilk is now made). Not long after Ted got involved with the packaging company, in early 1995, Jeremiah started developing soymilk formulations using Ted's base, then together they started doing pilot runs (into gable-top pints), then larger tailing runs (into quarters) at the packaging plant. In a tailing run, you come in behind someone else's product run, clean out the system with a slug of cleaner, then run your product into the last 100 or so cases. A tailing run duplicates your pilot run on a larger scale to check that all of your assumptions about scaling up really work. They ran two 100-case runs into quarts–which was pretty expensive–but it proved that everything worked. The minimum soymilk run for Wildwood at this packaging plant would be 3,000 gallons (12,000 quarts). Jeremiah ran some calculations and quickly determined that making and packing that much soymilk would be overstretching the financial resources of Wildwood. The ESL carton will get you a 12-week shelf life, but some precipitation (formation of a little tofu on the bottom) takes place after you add calcium and the carton bulges slightly (which makes it look a little funny) around the 11th week due to some saturation of the packaging material. Therefore Wildwood decided to stamp on a conservative use-by date of 10-weeks. So Jeremiah would have to refrigerate and sell 12,000 quarts of a perishable soymilk in ten weeks. Actually he would have to sell it in 6 weeks, because most retailers won't take a perishable product that has less than 4 weeks (30 days) on it. Thus, Wildwood would have to produce a new batch every 6 weeks. That would be difficult, because it was a new product (the first of its kind in the USA) and no one knew how long it would take to catch on with retailers and consumers. Everyone with experience knew that Murphy's Law operates at full force with new, perishable products. But the cash flow problems were an even bigger problem. Before the first run of 12,000 quarts were sold, Wildwood would have to do a second run–and pay for it. The company was already out trying to raise money to finance expansion of its existing tofu business. Jeremiah finally concluded that he didn't have a big enough cash flow or line of credit to take on the soymilk; it was a great product but was just too risky–and a mistake could sink the company.

If money hadn't been an issue, this new soymilk product could have been on the market in late 1995 or early 1996. Finally Jeremiah had to tell Ted that he and Wildwood did not have the capital and were not willing to take the risk of going ahead on the project. Moreover, Ted's production process at Soyfoods of America had not yet been proven; he did not have the equipment there that he has today, and he had never made 3,000 gallons of soymilk in America–though he had made much more than this in Sweden. Also Jeremiah had questions about the reliability of Soyfoods of America.

Jeremiah's contributions toward developing the new product were choosing the type of sweetener and determining the sweetness level for each flavor. He wanted a sweetness that was very similar to that of dairy milk and that came from an organic ingredient. He eventually chose organic brown rice syrup over organic cane sugar; the former has a roundness of flavor but imparts a tan color to the soymilk. Titanium dioxide, a pigment or bleach, could be added to make the soymilk white, but it would have to be listed on the package as an ingredient and was inconsistent with the company's philosophy on using organic. Most important, Jeremiah introduced Ted to the ESL (extended shelf life) gable-top packaging system.

Ted argued that Wildwood should aim for a quart of soymilk that sold for the same price as a quart of dairy milk–and thus drop the expensive organic ingredients. Jeremiah responded: "That is not who Wildwood is." So Ted had no choice but to approach Wildwood's competitors. First he went to Westbrae (who was not interested), and then to White Wave–which was the first company to put this fresh, gable-top soymilk product on the market. Named Silk, it was an excellent product, well made and marketed, and it soon became the most successful product in White Wave's history. Many industry watchers were surprised at the response and sales volume. White Wave discontinued their burgers and hot dogs so they could focus on their soymilk and yogurt. Over the next few years, Wildwood's financials improved, and in June 1998 they were finally able to launch their gable-top soymilk–made by Ted Nordquist. Unfortunately, it was now a "me too" product, but moving into a proven market. One big challenge for Jeremiah is how to move his fresh soymilk out of the produce section and into the dairy case. 11740. Byrd, Deborah. 1998. Soy what? Once-bland products touted as tasty, hearty protein sources. *Contra Costa Times.* Oct. 21. p. G1, G9. [9 ref]
• ***Summary:*** Includes a brief review of nine new books that contain soy recipes, a discussion of the health benefits of soyfoods, a talk with William Shurtleff of Soyfoods Center, a glossary and brief description of several soyfoods (edamame, dry soybeans, tofu, tempeh, miso), and 5 recipes: Luscious lemon pie (with silken tofu). Tempeh simmered in red wine with *herbes de provence.* Tofu teriyaki. Chocolate velvet pudding (with silken tofu). Mushroom almond spread (with firm silken tofu). A huge color photo shows Chocolate velvet pudding in a stem glass with a sliced peach. Address: California.

11741. Lerner, Jane. 1998. Global Protein may be shut down: Valley Cottage tofu packager out of second chances, official says. *Journal News* (*The*) (*Valley Cottage, New York*). Oct. 25. p. 12A-13A.
• ***Summary:*** The article begins: "A Valley Cottage tofu-making company has one of the worst food safety and sanitation records in New York and could be shut down by the state any day because of its repeated failure to clean up.

"Global Protein Foods, which processes and packages tofu, bean sprouts and soy beans, has been charged with more violations–for roaches, rat droppings, dirty equipment–than any other establishment in Rockland, Westchester or Putnam counties.

"The company, which has been ordered to pay nearly $7,000 in fines since 1996, is among the worst offenders in the state, said Peter Gregg, spokesman for the state Department of Agriculture and Markets."

Records show that the company has failed 21 of 29 inspections by the Department since 1993. The company failed 8 of its last 10 inspections, the most recent of which took place on Oct. 14. "'Our file on them is as thick as the telephone book,' he said. 'This place continues and continues to ignore our laws and regulations.'"

Located at 707 Executive Blvd., in an otherwise spotless corporate park, the entrance to Global Protein Foods is heaped with garbage. The business has been in Valley Cottage for 7 years. Company president Haruhisa Tsuchitani, now on a business trip in Japan, was unavailable for comment.

11742. Black, Pam. 1998. Is soy the recipe for what ails you? *Business Week.* Oct. 26. p. 162-E18.
• ***Summary:*** The soybean gained prominence as a health food in the 1970s. Now even former junk-bond king Michael Milken is "promoting soy's potential to fight prostate cancer..." During the past decade, scientists have discovered estrogen-like active substances named isoflavones or phytoestrogens which may be responsible for "soy's health effects."

Researchers have proven that soy has cardiovascular benefits, primarily by lowering low-density lipoprotein, or LDL ("bad cholesterol"). The mechanism is not clear; the soy may keep LDL from being oxidized to form plaques that clog arteries. Soy increases flexibility of the arteries, which stiffen and harden with age. Thomas Clarkson, professor of comparative medicine at Wake Forest University School of Medicine (Winston Salem, North Carolina) emphasizes that some amount of soy protein must be consumed for the phytoestrogens to exert cardio-protective benefits. Isoflavone pills alone will not be effective. Scientists recommend consuming 30 to 60 mg of isoflavones per day with 7-10 gm of soy protein. A table shows good sources of soy protein, plus their content of isoflavones (mg) and protein (gm): Solgar Iso-Soy powder (1 oz) 103 / 12. GeniSoy natural protein powder (1 oz) 74 / 24. White Wave baked tofu (3 oz): 52 / 19. White Wave tempeh (3 oz) 47 / 18. Edensoy original drink (soymilk, 8 oz) 41 / 10. Soyboy Not Dogs (1.5 oz per dog) 35 / 7.

Soy's effects on cancer are less conclusive; most researchers doubt that soy is harmful. Soy has great appeal to women approaching or past menopause. Nutritionists think soy phytoestrogens may be safer than Premarin–which may increase the risk of breast cancer.

"And for those of you who've always turned up your noses at tofu, there is good news: Soy is available in such guises as hot dogs, burgers, cheeses, and ice cream."

11743. Abourezk, Sanaa. 1998. Oh boy! I can't believe it's not soy: Over 100 gourmet recipes that help prevent cancer, heart disease and alleviate menopause. Sioux Falls, South Dakota: Palmyra Publishing Co. xii + 123 p. Illust. Index. 23 cm.
• ***Summary:*** This is an attractive and unique spiral-bound cookbook, loaded with gorgeous full-page color photos. Most of the recipes are based on eastern Mediterranean or Middle East cuisine. The author, a woman, was born in Syria, is a nutritionist, and learned to cook in Italy and France. Contents: Appetizers. Salads. Soups. Main dishes. Desserts. Glossary.

Though it does not use red meat or poultry as an ingredient, it does contain at least 12 dishes made with salmon. Most of the recipes call for either boiled soy beans, "lite tofu," or "soy vegetable protein crumbles." A few use "nonfat soy milk."

Talk with Sanaa Abourezk. 1999. Feb. 1. This book was self-published in Oct. 1998. Her husband, James Abourezk, who was a Republican senator from South Dakota, has been a vegetarian for 27 years. This is all the more amazing since South Dakota is a cattle state. After they were married, she started developing recipes for him. When his meat-

© Copyright Soyinfo Center 2013

and-potatoes lawyer friends would come for dinner, they would say how much they loved her eastern Mediterranean cooking. She would reply: "There is no meat is these recipes; they are made with soy products." The guests could not believe it. They have quite a few elderly neighbors, with whom Sanaa shares any extra food; they soon started asking her for recipes. Her husband suggested she write a recipe book. Address: P.O. Box 88038, Sioux Falls, South Dakota 57109-1001. Phone: 1-888-351-3663.

11744. **Product Name:** Nate's Easy Tofu (Naturally Wood Smoked Tofu Cutlets) [Sweet Heat, Lemon Thai, Mesquite Grill].
Manufacturer's Name: Elite Foods.
Manufacturer's Address: 489 Cabot Road, South San Francisco, CA 94080. Phone: 1-800-376-5368.
Date of Introduction: 1998. October.
Ingredients: Lemon Thai: Tofu (water, soybeans, calcium sulfate), fructose, natural lemon flavor, basil, sweet red peppers, turmeric, salt.
Wt/Vol., Packaging, Price: 6 oz. vacuum pack. Retails for $2.59–$3.29 (California).
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1998. Sept. 9-13.

Talk with Peter Sartorio, co-owner of Elite Foods. 1998. Sept. 16. This line of smoked tofu products was introduced at Baltimore and will be on the market in about 3 weeks (early October). The product concept is different from all other smoked tofus in that the ingredients are mixed in with the curds before they are presses to make tofu. This is done by an existing tofu manufacturer (not Wildwood, nor Quong Hop, nor Azumaya), with which Elite Foods has a contract. The tofu is smoked in a real smoke house in South San Francisco, owned by a Mexican-American age 72; Elite Foods plans to buy the 25,000 square foot facility next year. The least spicy flavor is Lemon Thai. Elite Foods tried at length to work with Hanan Onn of North Coast Distributors in Benicia as a co-packer. After the NFM Expo in March of this year, Elite Foods placed an order with Hanan, but he was unable to supply the quantity and quality they required. This company was started 7 years ago and now has national distribution, including to major supermarkets–such as Kroger, Safeway, Lucky, etc. Their most popular product is a Chub Polenta (vegetarian, 4 varieties) sold in the deli section of many supermarkets. They make 10,000 to 15,000 lb/day of their polenta alone. They also sell products to foodservice. The other owner is Nathan Steck. Robin Lucky is an employee.

11745. **Product Name:** Nate's Easy Tofu (Gourmet Spreads) [Fire Roasted Pepper, Mediterranean Olive, Slow Roasted Garlic].
Manufacturer's Name: Elite Foods.
Manufacturer's Address: 489 Cabot Road, South San Francisco, CA 94080. Phone: 1-800-376-5368.
Date of Introduction: 1998. October.
Ingredients: Slow Roasted Garlic: Tofu (water, soybeans, calcium sulfate), roasted garlic, soya lecithin, garlic powder, salt, citric acid, malic acid, parsley, modified food starch, spices.
Wt/Vol., Packaging, Price: 5 oz. plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Robin J. Lucky of Elite Foods. 1998. Oct. 14. A photo shows each of the lid labels.

11746. ProSoya Inc. 1998. Creating great opportunities in the health food industry: Advanced soymilk technology (Brochure). Ottawa, Ontario, Canada. 4 p. 28 cm.
• ***Summary:*** This 4-page black-and-white brochure (with green and yellow overlays), discusses the company, the technology, the equipment, our customers, business opportunity. "ProSoya technology is currently being used in more than 20 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 250 small, to medium-scale plants are located on five continents around the world. ProSoya has technology transfer agreements with companies in Russia and India for the manufacture of smaller soymilk systems under license."

Photos show: (1) ProSoya's VS 7000 system. (2) ProSoya's VS 200 system. (3) ProSoya's VS 40 system. (4) ProSoya's VS 4000 system. (5) A sliced cake of tofu, a glass of soymilk, and scoop of soy ice cream on a cone. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11747. Shurtleff, William; Aoyagi, Akiko. 1998. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. Oct. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]
• ***Summary:*** This edition contains a completely new "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 1 Aug. 1998). The page "About the Authors" (autobiographical) has been updated, and the original photograph has been replaced with two more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

After the first printing in Oct. 1998, the Preface was quite extensively revised (but not updated) to include more about how this book came into being (early dates and names), including the important contributions on Jeffrey and Gretchen Broadbent, and of Nahum and Beverly Stiskin. These Preface changes first appeared in the second printing of May 1999.

On page 336 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with

© Copyright Soyinfo Center 2013

price and ISBN).

The inside rear cover has been updated, and now includes current information about SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 55,000 records from 1100 B.C. to the present, and more than 73% of all records have a summary / abstract averaging 128 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The front and rear covers, title page, table of contents, and the first page of each section have been redesigned to give the book a much more contemporary look. Still contains 500 vegetarian recipes–both Western and Eastern style.

Ten Speed Press gave this book a new ISBN: 1-58009-013-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11748. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Tiltan HaArgaman
Manufacturer's Address: P.O. Box 76. Hofit 40295, Israel. Phone: +972 53-607435.
Date of Introduction: 1998. October.
New Product–Documentation: Form filled out by Asher Roy. 1998. Nov. 15. The company started to make and sell tofu and soymilk in Oct. 1998. They currently make 2 metric tons/month of tofu and 2,000 liters/month of soymilk.

Talk with (call from) Roy Grant from Israel. 1999. Feb. 26. His company, located in Kfar-Saba, Israel, started making tofu in late 1998. His company was named Tishrei.

11749. United Soybean Board. 1998. National report: Consumer attitudes about nutrition, 1998/1999. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This fifth annual nationwide survey, commissioned by USB, was conducted in July 1997 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,028 consumers. The study's margin of error is ±3.2 percent and has a confidence level of 95%.

Contents: Nutrition concern and habits. Dietary changes in eating habits. Grocery and dining choices. Media sources and nutritional information. Nutrition terms and consumers' level of concern: Fat (73%), saturated fat (73%), trans fatty acids (42%). Concern about hydrogenation and trans fatty acids: 82% consider *trans* fatty acids to be either somewhat or very unhealthy. But only 28% consider margarine to be unacceptable. Consumer awareness and perception of soy products. Consumers' willingness to pay more for healthy foods. Consumer perceptions of genetically modified food and labeling. Consumer perceptions of cooking oil.

Consumer awareness and perception of soy products: 1. 67% of consumers believe soy products are healthy, up from 59% in 1997. Those with a college education are most likely to perceive soyfoods as healthy (75%). 2. 67% of consumers have tried soy products. 3. 15% of Americans eat soy products at least once a week. Although females are more health conscious that males, more males (19%) eat soy products once a week as compared to 13% of females. 4. Among soy products, tofu and soy veggie burgers continue to receive the highest level of trial among consumers (38%). 67% of consumers have tried a soy product. 5. Consumers most often include soy products in their diet of word-of-mouth (38%) from friends, family, or other acquaintances. Magazine and newspaper articles (23%) are also influential factors in deciding to include soy products in the diet. 6. The strongest factor driving trial of soy products is education level. Those with a college education are significantly more likely to have tried soy products than consumers with less than a college education. 7. While an increased number of consumers perceive soy products as healthy, usage is not increasing at the same rate. This may be a function of several factors: (a) Lack of understanding of different soy products available. (b) Lack of understanding of how one incorporates soy into cooking and the diet. (c) Lack of availability of soy products. (d) Negative attitudes and perceptions toward soy products due to factors such as taste and texture.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

11750. Ghiraldini, Maura. 1998. Biolab and Italy's other major tofu manufacturers (Interview). *SoyaScan Notes.* Nov. 9. Followed by a fax. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The two largest tofu manufacturers in Italy are Soyalab and La Fonte de la Vita, but they are both owned by The Key Group, which bought them 4-5 years ago. The Key Group is the largest in Italy in biological (organic) foods.

Biolab, which started in June 1992, is the third largest. The founder and owner is Massimo Santinelli, now age 34; they also make various types of seitan. Biolab is distributed by some of Italy's bigger distributors of biological (organic) food: Ecor, Probios, Baule Volante, Mustiola, and La Fenice. Biolab presently has 7 employees; all ingredients are from biological agriculture (organically grown).

The company now makes the following products: Seitan: Natural, with spices, smoked, and grilled. Tofu: Natural, smoked, "Mediterranean" (with carrots, olives, etc), erbe (with herbs), and grilled. Soymilk. Rice milk. Burgers with seitan: Rice & mushrooms, millet & carrots, millet & pepper, wheat (spelt/farro) & aubergine (eggplant). Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.

11751. Corliss, Richard. 1998. Sandler happens: Age or taste may keep you from grasping why, but the guy is a star. *Time.* Nov. 23.
• ***Summary:*** "Critics can snicker, but Hollywood may soon renounce Evian and tofu for an all-Sandler diet." Note: Adam Sandler is a movie star.

11752. Greenwald, John. 1998. Herbal healing. *Time.* Nov. 23.
• ***Summary:*** People can buy herbal supplements "not only at incense-scented tofu-and-sprouts shops but also at corner pharmacies and supermarkets, and from mail-order houses, websites and Amway distributors who rattle their pillboxes door to door."

11753. Watson, Traci. 1998. Vegetarians trade bird for the curd: Demand for tofu turkeys 'unbelievable,' creator says. *USA Today.* Nov. 25.
• ***Summary:*** About Seth Tibbott and Tofurky.

11754. Cowley, Geoffrey; Underwood, Anne; Springen, Karen; Davis, Alisha. 1998. Cancer & diet: Can you eat to beat malignancy? A controversial diet book is just one sign of the revolutionary new thinking about food and health. *Newsweek.* Nov. 30. p. 60-66. [3 ref]
• ***Summary:*** This cover story discusses the many phytochemicals in foods which may reduce risk of various cancers. On the cover is a huge fork piercing a piece of broccoli. The cover text reads: "Eating to beat the odds: What you need to know." On the top half of page 60 is a large color photo of a "low-risk dinner," ready to serve on a table. One of the three portions on the plate is a mixture of beans and tofu cubes. An arrow points to this portion; the caption reads: "The fiber in beans fights colon cancer. And the genistein in tofu appears to pack a disease-preventing wallop." On the facing page (61) is a "high-risk dinner" with advice to omit the grilled steak, french fries, cheesecake, soda, butter on white bread, and salad dressing. The article overstates the health benefits of soy and gives no scientific references for its many glowing assertions.

By 1986 laboratory researchers were already discovering many new chemicals in foods; in test tubes these obscure compounds were showing remarkable ability to disrupt the formation of tumors. Some expert oncologists believe that the future of cancer prevention is food. Yet the cancer death rate in America is roughly the same today as it was in 1970. Americans die of breast, colon, and prostate cancer at five to 30 times the rate of people in many parts of the world. Take breast cancer: The death rate in Thailand and Sri Lanka is 2-5 per 100,000 women; in the USA it is 30-40 per 100,000.

A comprehensive analysis published last year by leading cancer researchers concluded that "poor eating habits account for a third of all cancer–roughly the same proportion attributed to smoking." A spate of brash new books, some by physicians, argue that anyone can eat to reduce cancer risk. They offer specific advice, "from eating the right fats to upping your intake of soy." The best selling of these how-to books is *The Breast Cancer Prevention Diet,* by Dr. Bob Arnot, a nonpracticing physician who covers health and medicine for NBC. It now tops the *New York Times* best-seller list. But Fran Visco of the National Breast Cancer Coalition calls it "incredibly irresponsible." All these new books offer medical advice that is not backed by solid scientific evidence.–And so does this Newsweek article! But interesting questions arise: "Should we live on cheeseburgers until the case for soy burgers is seamless?" Most experts answer "no." If people who eat in accordance with what we know today, cancer rates would definitely drop.

A sidebar titled "Eating to beat the Big Four" gives three statistics on each of America's four leading malignancies: Estimated number of U.S. cases this year, percentage of Americans diagnosed during their lifetime, and potential reduction through diet and lifestyle. Prostate cancer: 184,500 / 17% / 10-20%. Breast cancer: 180,300 / 14% / 33-50%. Lung cancer: 171,500 / 7% / 90-95%. Colon/rectal cancer: 95,600 / 6% / 66-75%. "Breast cancer risk may be lowered by eating soy foods." "Weapons against colon cancer include calcium and fiber."

Tumors arise through a three-step process: initiation, promotion, and progression. Preliminary evidence suggests that compounds found in particular foods can interfere with each of these steps. A two-page sidebar shows each step graphically. (1) Initiation occurs when something alters a cell's genetic makeup, causing it to divide more than it should. The most common cause of such DNA damage is oxygen, from highly reactive oxygen molecules called free radicals. They steal electrons from other molecules, setting off a chain reaction that can damage DNA. Food tips: Antioxidants help neutralize free radicals. Garlic contains allyl sulfides which help limit the production of cancer-causing phase I enzymes, which are produced in the liver and break down procarcinogens. Cruciferous vegetables (such as broccoli) boost production of protective phase II enzymes that cart away chemical debris. (2) Promotion occurs when the damaged cell (a precancerous lesion) multiplies out of control to create a tumor. It soon sends out a network of blood vessels to deliver nutrients and oxygen necessary for further growth. Food tips: Tumor cells seem to grow less aggressively on low-fat diets than on high-fat. But Many experts now agree that, for cancer, the type of fat is as important as the amount. Some types of polyunsaturated fats are protective, others probably harmful. Omega-3 (alpha-linolenic) fatty acids may thwart tumor growth, whereas omega-6 (linoleic) fatty acids may promote it. "Trans fats: Artificially processed polyunsaturates, they are the worst for heart disease, and one study linked them to increased breast-cancer risk. Found in packaged snacks" [and many margarines]. "Soy products contain... isoflavones, which

© Copyright Soyinfo Center 2013

act as weak estrogens, and leave less room for strong ones. One color photo shows cubes of tofu, with the caption "Soy may protect reproductive tissues." Another shows estrogen receptors on the surface of a cell. (3) Progression occurs when the tumor (a mass of rapidly dividing cells) builds itself a blood supply and starts to invade surrounding tissues. The body's own estrogen promotes fast growth of breast cells in women. "Tumor cells release growth factors that promote the development of new blood vessels a process known as angiogenesis."

A sidebar shows four cancer survivors and their diets: Any Grove of Intel, a prostate cancer survivor, has a daily glass of orange juice with green-tea extract and soy protein. Mike Milken is also a prostate cancer survivor. "A soy fanatic, he eats tofu dogs, 'not-meat' loaf, and soy cheese," plus smoothies spiked with vitamins. Christine Pirello, hostess of PBS's 'Christina Cooks,' was diagnosed with leukemia in 1983. She went macrobiotic, loading up on brown rice, cabbage, tofu, and beans, with no dairy or animal products, except for fish.

On page 66 is a long section of text on soy: "Soy foods are another good bet, especially if you're worried about breast or prostate cancer. One of the strongest promoters of reproductive tumors is estrogen. Women exposed to high levels of the hormone–through early menstruation, late childbearing, late menopause, or obesity–suffer far more than their share of breast cancer. Soy contains weak estrogens, or isoflavones, which compete with the full-strength hormone for access to cells. Isoflavones bind with cell receptors that would normally attract the body's own estrogen, but the growth signal they deliver is only one thousandth as strong. That means less cell division and, presumably, less risk that a small lesion will become cancerous. No one has tested that assumption in a controlled clinical trial, but population studies suggest that tofu, tempeh, and soy milk could have some of the same benefits as the prescription drug tamoxifen, without the side effects. Chinese women on high-soy diets had only half the breast cancer incidence of women on low-soy diets." Soy also contains "compounds known as Cox-2 inhibitors, which can impede the growth of new blood vessels." At least in a test tube, tumor cells doused with Cox-2 inhibitors stop producing growth factors that trigger growth of blood vessels.

This is another article about "magic bullets." But the big, new message from Newsweek seems to be their realization that low-fat plant-based diets can reduce one's risk of cancer–as well as heart disease, stroke, and obesity. The article ends: "The real gamble is to stick with fast food [or a standard American diet] and assume you'll be all right."

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term "soy fanatic."

11755. *Newsweek.* 1998. Perspectives: Tofurky. Nov. 30. p. 23. Typed, without signature.

• ***Summary:*** This is a page of quotable quotes. "Since we didn't have the anatomy to limit us, we decided everyone can get a drumstick."

Source: "An unnamed employee at Turtle Island Foods, which makes Tofurky, a stuffed roast made from tofu and wheat gluten, with gravy and four drumsticks." Note: The drumsticks are made from tempeh.

11756. Fisher, Kate. 1998. Soy isoflavones charge onto supplement scene: Disease-preventing compounds are available in tablets. *Soybean Digest.* Nov. p. 24.

• ***Summary:*** Soy isoflavone tablets are now available from many supplement companies. Novasoy, a soy isoflavone compound made by Archer Daniels Midland Co., is the active ingredient in many of them. While many studies have shown the health benefits of soyfoods and soy protein products, few studies have been done using isoflavone tablets as supplements.

Soy isoflavones are fairly stable and able to withstand normal cooking without breaking down. There is presently no recommended daily allowance, but 30-50 mg per day seems to be beneficial, especially for post-menopausal women.

A bar chart from the University of Kentucky shows the isoflavone content of soybeans and various soyfoods (in mg per serving (svg)): Mature soybeans (170), roasted soybeans (165), green soybeans (70), tempeh (60), soy isolate (57), soy flour (45), tofu (35), textured soy protein (30), soy beverage (20), and soy concentrate (15).

11757. Monteiro, Longteine de; Neustadt, Katherine. 1998. The elephant walk cookbook: The exciting world of Cambodian cuisine from the nationally acclaimed restaurant. Boston: Houghton Mifflin Harcourt. 324 p. Illust. (some color). Index. 27 cm.

• ***Summary:*** Written by the chef-owner of Boston's renowned The Elephant Walk restaurant.

The word "soy" appears on 38 pages of this book, the word "tofu" on 10, the word "bean curd" on 9, the word "soy milk" on 7, etc.

Soy-related recipes include: Stir-fried pork with bean sprouts (*Cha samdaik bandos;* with "½ pound pressed bean curd or spiced dry tofu, cut into ¼-inch-thick slices," p. 129). Stir-fried pork with tofu and chive blossoms (*Cha p'ka kuchai;* with "½ pound spiced dry tofu or pressed bean curd, cut into ¼-inch cubes," p. 134). Pan-seared fish with pork and soybeans (*Chien chuoan;* with "2 tablespoons salted soybeans, and 2 teaspoons mushroom soy sauce," p. 160-61). Steamed fish with lilies (*Trey chamboy;* with "3 tablespoons salted soybeans, mashed slightly, and 2 tablespoons mushroom soy sauce," p. 170). Braised duck (*Hong tiah;* with "2 tablespoons salted soybeans, and 1 tablespoon mushroom soy sauce," p. 197-99).

The "Glossary" (p. 283-308) includes: Mushroom soy

© Copyright Soyinfo Center 2013

sauce (originates with Chinese cuisine). Peanuts. Pressed bean curd: See tofu.

"Salted soybeans [Fermented black soybeans] add complexity to a dish. They come in cans and jars in Asian markets (I usually use Yeo's brand), and they are often available in the Chinese section of mainstream supermarkets."

Soy sauce: See mushroom soy sauce. Spicy dry tofu: See tofu.

"Tofu... is used in moderation Cambodian cooking, primarily in stir-fries, which are Chinese in origin. The two kinds I recommend are Pressed bean curd and Spicy dry tofu, which are drier and firmer than the fresh tofu you buy in tubs in the supermarket and hold up well during vigorous stir-frying. Both are light to medium brown in color, and their flavors are mild enough not to compete with their companion ingredients. They can be found in the refrigerated section of any Asian market, usually vacuum packed... Fresh tofu–even extra-firm–tends to disintegrate when stir-fried..." About the author (p. 1): She was born into an upper-class Cambodian, or Khmer, family in the capital city of Phnom Penh. Her father, who had studied in Vietnam and received his advanced training under the French system of education there, returned to Cambodia to become the country's first veterinarian... which kept him in constant touch with foreign colleagues and new ideas. The family had many servants living with them as she was growing up. Her father was deeply influenced by French culture and he ate only French food–3 meals a day. She married a diplomat and was expected to entertain. But in April 1975, when the Khmer Rouge took power, her husband had no country to represent, so the family went into exile in France. In 1990 they moved to Boston and in Aug. 1991 they opened The Elephant Walk restaurant in Somerville, Massachusetts, right next to Cambridge. It thrived. Address: Boston, Massachusetts.

Tofu sour cream (p. 310). Creamy fudge frosting (with tofu, p. 315). Address: Swissvale, Pennsylvania.

11760. Ghiraldini, Maura; Santinelli, Masimo. 1998. Re: History of Biolab of Gorizia, Italy. Form filled out and returned to William Shurtleff at Soyfoods Center, Dec. 5. Form dated Nov. 20. 3 p.
• ***Summary:*** This company history form, sent by Soyfoods Center, was filled out by Maura who got the information by interviewing Massimo on Nov. 20. The company was founded in June 1992 by Massimo Santinelli. That same month they started to make and sell soyfoods commercially. The original purpose was contributing to the development of biologic (organic) agriculture and the production of good vegetable [plant-based] food so that a growing number of people are involved in consuming proteins from wheat or soy. The company address has not changed; the phone number was previously 0481-32261.

Milestones: 1992–Several months after opening, Biolab found its first distributor, Gea, from Treviso. 1994–Massimo's father, Piero, joined his son at Biolab. Now he has become essential to the company's work and is the "seitan master."

Firsts: "Unlike other companies, we aim at producing vegetarian food that tastes good to Italian consumers, who are not always vegetarian, and who like to use tofu or seitan in a Mediterranean diet. So a growing number of people will come closer to meatless diets, without losing the pleasure and health that the Italian way of cooking gives."

Reasons for success: "The good taste of our seitan. And,

© Copyright Soyinfo Center 2013

of course, the help of our distributor, which has grown bigger in the same way we have."

Soyfood products history: Introduced during 1992 and still sold–Tofu, Smoked tofu, Pickled tofu, seitan, smoked seitan. Discontinued: Pickled seitan, Sauce with seitan and tomato, Tomato sauce with olives and capers, Tomato sauce with mushrooms. Introduced in 1993 and still sold: Seitan burgers with millet and carrots, Seitan burger with rice & mushrooms. Discontinued: Tofu burgers, Tofu & seitan kebabs on skewers (very good but too laborious). Introduced in 1994: Grilled tofu, Grilled seitan, Tofu with herbs, Tofu Mediterraneo (carrots, capers, corn, olives), Seitan slices (for making sandwiches). Introduced in 1997: Risolight (rice milk), Roast of seitan. To be introduced in 1999: Seitan burgers with millet & pepper, Seitan burgers with wheat "farro" & aubergine [eggplant].

Present production of various product categories: Tofu (all types) total: 380 kg/week. Seitan (especially regular seitan and grilled seitan): 500 kg/week. Risolight (rice milk): 1,200 bottles/week. The company's three best-sell products in descending order of dollar value: Seitan Naturale 300 kg/week. Tofu Naturale 250 kg/week. Risolight 1,200 bottles.

The company now employs 7 people including the owners (including 2 in management and 5 in production). Last year net sales were 700 million lire. Over the past 2-3 years sales have grown at about 30% a year. The net worth of the business is about 105 million lire. The present building has about 100 square meters for production and 20 square meters for office space. Massimo is the sole owner of the business. Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 0481 533522.

11761. Karp, Jonathan. 1998. Adding U.S. soybeans to India's spicy diet faces big roadblocks: Protein-loaded legume could help the hungry, if only they'd eat it. Hiding 'that beany taste.' Currying favor? *Wall Street Journal.* Dec. 8. p. A1, A6.

• ***Summary:*** Virgil Miedema, the American Soybean Association's director for South Asia, is the son of a soybean farmer from North Dakota and speaks near-fluent Hindi. He believes that adding American soybeans to Indian diets can do wonders for their health. But there are two problems: (1) India, the world's fifth largest soybean producer, already grows so many soybeans that it exports the soy protein, although the country has a shortage of dietary protein; (2) Indians dislike the beany taste of soy–according to food scientist V.D. Devdhara, who shares Mr. Miedema's mission. The population of India is now growing by 16 million people a year–devouring the gains of the 1960s Green Revolution. Some 53% of Indian children under age 5 are malnourished. Per capita availability of lentil protein is half what it was in 1947, so the Indian government is producing lentil alternatives made of soy protein and wheat flour. The brown pellets, designed to look and taste like dal, contain 60% more protein.

The American Soybean Association (ASA) opened an office in India in 1996. It hired Mr. Miedema who had spent 17 years in South Asia with the Peace Corps and the U.S. Agency for International Development (USAID). His mission is to repeat ASA's success in China, where in just 15 years it helped turn that soybean producer into a major importer. In 1997, China bought $657 million of U.S. soy products. "Of course, the Chinese have been eating soybeans–as soy sauce and tofu, among other things–for millennia." Mr. Miedema's approach is to encourage Indian companies to add soy to everyday Indian foods–such as the wheat flour used to make chapatis.

One company, AFM Foods, Mr. Miedema's first partner, is making soy-fortified flour for chapaties that contains 35% more protein than wheat–"and can reduce the risk of cancer and the aches of menopause."

But attempts to use soy as food in India have failed before. A decade ago the ASA backed three local companies that failed in trying to popularize soymilk. RJR Nabisco Inc. quit making soy oil and Nestle SA (the Swiss food giant) recently withdrew its soymilk powder and soy-based baby food because of poor sales.

Sanjeev Chaudhry (formerly involved with Nabisco's soy oil factory) is head of the India office for Protein Technologies International. He uses Supro brand soy protein isolate to develop turbocharged soy products. He sells about 100 tons a year to 25 customers, mostly food manufacturers.

Large-scale cultivation of soybeans in India began in the 1970s to reduce dependence on imported edible oils. Soy oil still is not popular, and for Indians see soybeans as an evil threat. Ms. Vandana Shiva believes that free trade in agriculture, inevitably controlled by multinational corporations selling expensive genetically engineered seeds, will destroy India's farmers and local foods.

Yet Mr. Verghese Kurien, a famous Indian nationalist from the western town of Anand, has decided to join the soybean forces. As head of India's National Dairy Development Board, he was largely responsible for making India self sufficient in milk and the world's largest producer of cow's milk–while thwarting foreign dairy firms. He then branched out into edible oils to help his country cut costly imports. Though he retired last month, his main project is now developing the lentil alternatives.

The idea has been simmering for a decade, starting with U.S.-funded soybean research at an Indian university. The dairy board, whose sister organization, Amul, is one of India's largest food marketers, accepted the challenge of developing an inexpensive, uniquely Indian protein alternative. Mr. Kurien argues that if soy can be made into chicken and bacon, why not into dal? After years of fine tuning, the product launch is at hand. If it succeeds, the ASA could try for a second wave of products (made from U.S. soybeans) such as "soymilk and tofu, which looks and

© Copyright Soyinfo Center 2013

feels like Indian cottage cheese, called paneer." Indians say that tofu does not taste as good as paneer, but Mr. Miedema responds that its better for you. An illustration (dot-style) shows Mr. Miedema. Address: Staff Reporter.

11762. Takai, Wataru. 1998. Re: Several manufacturers of tofu equipment have gone bankrupt in Japan during 1998. Letter (fax) to William Shurtleff at Soyfoods Center, Dec. 18. 1 p.
• ***Summary:*** These include: (1) Touffer Co., formerly named Takahashi Shoten (Nagoya). (2) Nakamuta Seisakujo (Kyushu). (3) Hoshitaka Co. The Japanese economy has been struggling for the past 8 years or so. Address: Takai Tofu & Soymilk Equipment Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. Phone: 011-81-0762-48-1355.

11763. Calhoun, Pat. 1998. New developments at White Wave (Interview). *SoyaScan Notes.* Dec. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave's capacity is always being pushed to the max nowadays. Baked Tofu has really taken off in popularity, and the company is also doing more with seitan; they will soon have a line of dinners containing seitan.

White Wave still makes basic tempeh but they have decided to discontinue their line of tempeh burgers, including their popular Lemon Broil Tempeh (introduced Oct. 1986), Veggie Life Burger (May 1993), and Chicken and Prime Burgers (Oct. 1995). They have to focus on their strongest products and make best use of their production capacity.

Pat is already looking for a new building, but they probably won't need it for another two years. Major issues are: Will it be in Boulder or not. Water quality and disposal.

Jonathan Gordon of England left the company after basically promising to stay. White Wave helped him prepare his papers so he could get a Green Card. Address: Chief Financial Officer, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11764. *SoyaScan Notes.* 1998. Chronology of major soy-related events and trends during 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** June–Britain's Prince Charles, who practices organic farming and is a patron of the Soil Association, writes an article attacking genetically modified food that is published in Britain's *Daily Telegraph.* Explaining that he wouldn't eat such food or knowingly give it to his family or guests, he concludes, "I happen to believe that this kind of genetic engineering takes mankind into realms that belong to God and God alone." The prince's surprise article helped unleash a wave of anti-GMO activity and sentiment, that continued for weeks in the British press and carried over to the Continent.

Sept.–New European Union (EU) labeling laws, requiring labeling of genetically modified ingredients, go into effect. However the regulation exempts foods which contain no soy protein but do contain soy oil or soy lecithin.
Sept.–Imagine Foods of Palo Alto, California, the natural foods leader in nondairy beverages, launches Soy Dream, the company's first soy product. They support the product with an extensive and very creative advertising campaign.

Sept.–Protein Technologies International starts to offer certified non-GMO soy protein isolates.

Oct.–The Hain Food Group (which owns Westbrae) has announced that it will start to label some of its products as GMO-Free (i.e. free of genetically modified / engineered organisms). It has developed a "Pure Food" logo and a "Just Say No to GEOs" slogan.

Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

Nov. 1-2–Conference titled "Estrogen, phytoestrogens and cognitive function" held in Seattle, Washington (organized by Mark Messina), largely to learn more about the research of Lon White on tofu and dementia/Alzheimer's disease.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

Major trends: (1) The steady expansion of genetically engineered Roundup Ready soybeans. This year an estimated 30% of America's soybean acreage was planted to genetically engineered soybeans. This is one of the hottest and most controversial stories in most countries of the world–except the United States, where it gets unbelievably little media coverage. (2) The hype about the health benefits of soyfoods continues to increase. There are definitely some health benefits, but the exaggerated statements that now routinely appear in articles and advertisements go far beyond what can be supported by scientific evidence. The media seems intent on making as much money as possible as it whips up the story of soy's health benefits. The bigger the story it becomes, the more money they can make later debunking it. (3) The natural foods industry is changing into a supplements industry because of the higher profit margin on supplements. Many consumers are being misled into thinking that supplements are more important than healthy foods in determining good health. (4) Among commercial soy products this year, the ratio of supplements to foods has increased sharply.

Areas of potential danger on the horizon: (1) Lon White of Hawaii and his data on tofu and dementia/Alzheimer's disease. (2) Young girls discovering that overdoses of soy isoflavones could be useful in growing breasts, then publicizing that information using the Internet and World Wide Web. (3) The danger that the media will start to debunk its own hyped story of the health benefits of soy. (4) The concern that the FDA health label claim for soy will not include traditional soy products–such as tofu and soymilk–

© Copyright Soyinfo Center 2013

which contain too much fat. Therefore manufacturers will be tempted to add soy protein isolates to raise the protein to a level that will trigger the health claim.

11765. *SoyaScan Notes.* 1998. Soya Clips receives 1,823 clips from Jan. 1 to Dec. 31, 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is an average of 152 clips per month. This total of 1,823 compares with 2,105 clips in 1989–the peak year. An invoice from Luce shows the total bill for calendar year 1998 to be about $5,531. Thus, one clip costs (on average) $3.03.

Regen of Soyfoods Association says that clips from weekly newspapers will be eliminated in order to cut down on duplicates.

11766. Golbitz, Peter. 1998. Proposed labeling rule may turn soy to gold. *Newsletter of the Soyfoods Association of North America* (*Washington, DC*). Dec. p. 1-2.
• ***Summary:*** A proposed health claim for food labeling, now under review by the U.S. Food and Drug Administration (FDA), would authorize the use of a health claim on food products which contain soy protein. The rule, published for comment in the U.S. Federal Register on 10 Nov. 1998, resulted from a petition originally filed on 4 May 1998 by Protein Technologies International (PTI) of St. Louis, Missouri. This petition summarizes years of clinical studies related to the cholesterol-lowering effects of consuming products that contain a significant amount of soy protein. The comment period ends on 25 Jan. 1999.

According to FDA, "studies show 25 grams of soy protein per day have a cholesterol-lowering effect. Therefore, for a food to qualify for the health claim, each serving of the food must contain at least 6.25 grams of soy protein, of one-fourth of the 25 gram amount shown to have the cholesterol-lowering effect. The exact wording to be allowed on packages won't be finalized until after the comment period ends, but an example of how the health claim might be used on a package is: "Diets low in saturated fat and cholesterol that include 25 grams of soy protein per day may reduce the risk of heart disease. One serving of (name of food) supplies ___ grams of soy protein.

Since a typical serving of most soyfoods (such as tofu, soymilk, tempeh) etc. contain the required 6.25 grams of soy protein, manufacturers and marketers of these foods will clearly benefit if the rule is approved. But perhaps even more important, food processors will probably consider including soy protein products as an ingredient in a wide variety of foods ranging from breakfast cereals to pasta.

The last four proposed health claim rules were all approved by the FDA, which has up to 540 days from the original filing date to complete action on the proposal. So the two key dates to watch are January 25 and late October 1999.

11767. Quak, Seng Hock; Tan, Siew Pin. 1998. Use of soy-protein formulas and soyfood for feeding infants and children in Asia. *American J. of Clinical Nutrition* 68(6S):1444S-46S. Dec. Supplement. [16 ref]
• ***Summary:*** Table 1 shows the "Percentage of mothers breast-feeding infants at various ages in Singapore." The percentage has decreased, from 85% at birth in 1951, to 73% at birth in 1960, down to only 28% at birth in 1971 and only 4% at 3 months in 1971.

Whether breast- or bottle fed, infants in Singapore are weaned to solid foods from about 4 months of age onward. Soft rice cereal is the first solid food most Asian infants are fed. Tofu is commonly introduced at about the same time. "Many Asian mothers choose tofu for weaning because it is freely available at low cost. The soft consistency is also an important factor. Tofu can easily be mashed into a paste or gruel and mixed with rice cereal for feeding to babies. Asian infants accept tofu readily because it is highly palatable." The nutritional value of tofu is well established and it is highly recommended by dietitians for weaning as a good source of protein and calcium.

There are two main types of lactose intolerance: primary, late-onset intolerance and secondary lactose intolerance. "Lactose intolerance is a clinical syndrome characterized by abdominal distention, pain, flatulence, and explosive watery diarrhea after ingestion of lactose-containing products. It is due to a deficiency of the digestive enzyme lactase..."

Soy formulas (or soy protein) are better than cow's-milk formulas for infants and children with lactose intolerance (as shown by a bout of infantile gastroenteritis) and are recommended by family physicians and pediatricians. Asian children generally develop lactose intolerance after 2-5 years of age, and incidence generally increases with age. By age 10 about 80% of Asian children are lactose intolerant.

Figure 1 (a bar chart) shows "Percentage of healthy Asian children in Singapore who consume soymilk as their primary beverage." The percentage is about 5% from 1-5 years, then increases to 17% at 6 years, 42% at 7 years, and a peak of 56% at 8 years, falling slightly to 53% at 10 years. Thus (remarkably) about half of all children in Singapore consume soymilk as their primary beverage from age 8 to age 10.

"The incidence of intolerance to cow-milk protein has decreased over the years and intolerance is no longer a common cause of prolonged diarrhea." Address: 1. National University Hospital, Dep. of Pediatrics, Lower Kent Ridge Road, Singapore.

11768. Schlossberg, Suzanne. 1998. Shape achievement awards (1998). *Shape.* Dec.
• ***Summary:*** "Category I: Food and nutrition. Soy to the world. Award: Soy." The text begins: "Of course, there's no such thing as a wonder food, but to read the latest research, soy seems pretty darn close. It appears to protect against a

© Copyright Soyinfo Center 2013

whole host of cancers–including breast, uterine, stomach, colon and lung. Diets high in soy also seem to reduce total cholesterol and LDL cholesterol levels, thereby reducing the risk of heart disease. Among post-menopausal women, high doses of soy protein also have been linked with increased bone density–good news for the prevention of osteoporosis. Soy protein even appears to reduce the incidence of hot flashes. Experts recommend getting about 3O-5O grams of soy protein daily."

On the facing (right) page are three cakes of tofu, piled atop one another, with a green edamame pod and 3 beans on top. The caption: "Soy milk, tofu and soy cheeses are great sources of this wonder food, and we expect to see a number of new foods on the market, such as soy-fortified drinks and baked goods."

11769. **Product Name:** Soy Spread [Savory Tofu, or Fine Herb Tofu].
Manufacturer's Name: Sunergia Soyfoods.
Manufacturer's Address: P.O. Box 1186, Charlottesville, VA 22902. Phone: 804-970-2798.
Date of Introduction: 1998. December.
Ingredients: Savory Tofu: Organic tofu (water, organic soybeans, nigari), textured soy flour, organic shoyu (water, organic soybeans, organic wheat, salt, culture), organic whole oat flour, garlic flakes, onion flakes, yeast extract, portabella mushroom. Organic content: 97%.
Wt/Vol., Packaging, Price: 10 oz. (340 gm). Chub pack. Retails for $3.29.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Jon Kessler, founder and owner of Sunergia. 1999. March 16. Talk with Jon Kessler. 1999. March 21. These products were introduced in mid-December 1998.

11770. **Product Name:** More Than Tofu (Marinated) [Italian Herb, or Savory Portabella].
Manufacturer's Name: Sunergia Soyfoods.
Manufacturer's Address: P.O. Box 1186, Charlottesville, VA 22902. Phone: 804-970-2798.
Date of Introduction: 1998. December.
Ingredients: Italian Herb: Organic tofu (water, organic soybeans, nigari), okara soybean fiber (water, organic soybeans), textured soy flour, onion flakes, garlic flakes, basil, oregano, fennel seed, black pepper. Marinade: Shoyu soy sauce (water, soybeans, salt, wheat).
Wt/Vol., Packaging, Price: 8 oz. (340 gm). Reclosable square vacuum pouch about 3/4 inch thick. Retails for $2.99.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Jon Kessler, founder and owner of Sunergia. 1999. March 16. Talk with Jon Kessler. 1999. March 21. These products were introduced in mid-December 1998. They put the tofu in the pouch, pour in the marinade, then vacuum pack it. It retails for $2.99. These two products are the company's best-sellers, and the Savory Portabella outsells the Italian Herb.

11771. **Product Name:** [Meatless Diced Veal].
Foreign Name: Pfannen Geschnetzeltes: Vegetarisches Pfannengericht nach Kalbfleisch-Art gewuerzt.
Manufacturer's Name: Viana Naturkost GmbH.
Manufacturer's Address: D-54578 Wiesbaum / Vulkaneifel, Germany.
Date of Introduction: 1998. December.
Ingredients: Tofu (Water, soybeans*) (32%), whole wheat flour*, wheat gluten* (24%), sunflowerseed oil*, soy sauce (water, soybeans*, wheat*), thickener (carob flour*, guar seed flour), seasonings*, sea salt. * = Organically grown.
Wt/Vol., Packaging, Price: 200 gm pack.
How Stored: Refrigerated.
New Product–Documentation: Color package sent by Bernd Drosihn. 2004. Nov. 15. Size: 10 by 17.5 by 3.5 cm. Paperboard box. Red, black, yellow, orange, and green on beige. Color photo of the dish, ready to eat, on a white plate. This meat alternative, ready to heat and serve, was introduced in Dec. 1998.

11772. Wildwood Natural Foods. 1998. The Joy of Soy to you from all of us at Wildwood: Happy holidays tofu facts (Folded card). Santa Cruz, California.
• ***Summary:*** This very creative and 100% original card arrived in mid-December, shortly before Christmas and after Hanukkah. It was packed in a sealed plastic pouch (like vacuum-packed tofu) with a "Greetings" postage stamp and a mailing label on the outside. Inside the pouch were sprinkled many little sequins in the form of holly leaves, snow flakes, circular red ornaments, and a small Magen David (symbol of Judaism). The front and back of the card itself were off-white and shaded to looked like a three-dimensional cake of tofu; only the two inside surfaces contained printed text. When opened, the top half contained the equivalent of a nutritional facts panel but with holiday content: "Total blessings 7 (11% daily value), saturated blessings 3 (7% daily value), love 1 (100% daily value), joy 2 (100% daily value), cheers 3 (15% daily value), happiness 7 (100% daily value), hallelujah (amen). Peace 100%, Nirvana 100%, Shalom 100%, Heaven 100%." On the back of the cake is a little sticker that reads: "Celebrate by 12.31."

Note 1. Talk with lady at Wildwood Foods in Santa Cruz. 1998. Dec. 18. The idea for this card came from Billy Bramblett and his wife of Wildwood–Fairfax. Billy says (May 1999) Wildwood got a great response from the card.

Note 2. Wildwood now makes about 7,000 lb/day of tofu in Santa Cruz using an open-top steam-injection cooking system. Still, they can't keep up with demand. Address: Wildwood Natural Foods of Santa Cruz, Inc., 1560 Mansfield Dr., Suite D, Santa Cruz, California. Phone: 408-476-4448.

11773. Wu, Anna H.; Ziegler, R.G.; Nomura, A.M.; West, D.W.; Kolonel, L.N.; Horn-Ross, P.L.; Hoover, R.N.; Pike, M.C. 1998. Soy intake and risk of breast cancer in Asians and Asian Americans. *American J. of Clinical Nutrition* 68(6S):1437S-43S. Supplement. Dec. [46 ref]
• ***Summary:*** The risk of breast cancer varies significantly throughout the world. Rates are highest among whites in the USA and Europe, and lowest among native Japanese and Chinese and other Asians in their homelands. The risk among the first group (whites) has historically been about 6 times as high as that of the risk among Asians. Migration studies have proved that this large difference in risk is not caused by genetic differences. Evidence from case-control studies suggests, but not entirely consistently, that soy intake may protect against breast cancer.

Two of three epidemiologic studies published before the 1990s suggested that intake of soy may protect against breast cancer (See: Nomura et al. 1978; Hirayama 1986). Since 1990, four case-control studies have evaluated the association between self-reported soy intake and breast cancer: See Lee et al. 1991, and 1992 (Conducted among Chinese in Singapore); Yuan et al. 1995 (Chinese in Shanghai and Tianjin, China); Hirose et al. 1995 (Japanese in Nagoya, Japan); Wu et al. 1996 (Asian-Americans {Chinese-, Japanese-, and Filipino Americans} residing in the San Francisco-Oakland metropolitan statistical area, Los Angeles County, and Oahu, Hawaii). This article compares those studies very carefully.

In groups consuming similar amounts of tofu, the tofu was more protective in Asians who migrated to the USA, than to Asians born in the USA. Address: Dep. of Preventive Medicine, Univ. of Southern California, Los Angeles; Environmental Epidemiology Branch, Div. of Cancer Etiology, National Cancer Inst., Bethesda, Maryland; Epidemiology Program, Cancer Research Center of Hawaii, Univ. of Hawaii, Honolulu; Northern California Cancer Center, Union City.

11774. **Product Name:** Medium Tofu, Soymilk.
Manufacturer's Name: Bui Natural Tofu.
Manufacturer's Address: 520 NE 76th, Portland, Oregon.
Date of Introduction: 1998.
New Product–Documentation: Blog posted on the Web on 12 Jan. 2007 mentions this company. A Vietnamese-American enterprise. Talk with owner and tofu maker Bui Minh. 2008. July 2. This company started making tofu in about 1998. They make only medium tofu and soymilk. He is the owner, but it is a traditional family business run by four brothers; of course, all have the family name of Bui. They deliver to local Asian stores.

11775. IDRC (International Development Research Center). 1998. An effort to promote the production and consumption of soybeans as a means of improving nutrition in Nigeria (Web article). http://www.solutions -site.org /cat11_sol101.htm.
• ***Summary:*** "Summary: An International Development Research Centre (IDRC) program to encourage soybean cultivation and integrate soybean products into traditional food and commodity production is helping to alleviate malnutrition."

"Background: In 1987, the International Institute of Tropical Agriculture (IITA), under the guidance of Principal Researcher Dr. Kenton Dashiell, launched an ambitious effort in Nigeria to combat widespread malnutrition. With support from the International Development Research Centre, IITA embarked on a project to encourage using nutritious, economical soybeans in everyday food. Soybeans are about 40% protein–more protein-rich than any of the common vegetable or animal food sources found in Africa. With the addition of maize, sorghum, wheat, rice, or any other cereal to soybeans, the resulting protein meets the standards of the United Nations Food and Agriculture Organization (FAO). Soybeans also contain about 20% oil, which is 85% unsaturated and cholesterol free.

"Few Nigerians knew about soybeans until the IITA initiative provided information on everything from their nutritional benefits to how to plant, harvest, store, and prepare them. Since then, soybean production and consumption has increased dramatically, improving nutrition particularly among the urban poor and middle income groups. Soybean-fortified products not only have more protein and minerals than their non-fortified counterparts, they are considerably cheaper than other sources of high-quality protein such as fish, meat, milk, and other protein-rich legumes. The cost of protein, when purchased as soybean, is only about 10-20% of the cost of protein from fish, meat, eggs, or milk. Many Nigerians now incorporate soybeans into their diets, and the Nigerian government has declared soybean production and utilization a national priority."

"Impact: Production increased–Soybean production in Nigeria increased from about 28 tonnes (metric tons) in 1985 to about 200,000 tonnes in 1995. The 1995 crop was worth an estimated US $60 million, saving Nigerians an equivalent amount of foreign exchange in just one year of this project. Since then, soybean production and consumption have continued to increase.

"Number of soybean farmers increased–The number of soybean farmers in Nigeria has increased tenfold to about 500,000. All the soybeans they produce are being used domestically. The price of soybeans has also increased, improving incomes for growers.

"Training increased–As a direct result of the IDRC project, more than 47,000 Nigerians (30 000 of them women) have been trained in producing soybeans and how to incorporate them into their diets. They have, in turn, trained

© Copyright Soyinfo Center 2013

others. Some reasons given by individuals for incorporating soybean into their diet are that it is nutritious, versatile, tastes nice, and is a good substitute for expensive protein.

"New equipment developed–This project has led to developing soybean processing equipment, which has since been adopted for both home and commercial use.

"Industry increasing–The number of soybean-processing industries in Nigeria has increased from less than five to more than 65, including small-scale businesses and larger enterprises. Several large industries, including Nestle Foods and Cadbury, have incorporated soybeans into some of their products, which has proven to be very popular.

"New soybean use developed–The IDRC-sponsored project has been instrumental in encouraging the development of more than 140 soybean-based foods, including soya milk and yogurt, soya flour, biscuits, baby food, condiments, and breakfast cereals. The newest product that has become very popular in Northern Nigeria is tofu. Participating research institutions in Nigeria have developed recipes that incorporate soybeans into new and traditional foods."

11776. **Product Name:** [Tofu-yo fermented tofu].
Foreign Name: Awa Beni Dôfu.
Manufacturer's Name: Otsuka Foods Co., Ltd.
Manufacturer's Address: Osaka, Japan.
Date of Introduction: 1998.
Ingredients: Tofu (non-genetically engineered), ethyl alcohol, rice koji, red rice koji (*beni-koji*), salt, tofu solidifier (no specifics are given), spices, enzymes.
Wt/Vol., Packaging, Price: Glass jar.
How Stored: Refrigerated.
New Product–Documentation: Product with Label and outside paperboard box brought to Soyinfo Center. 2011. Dec. 14. by Taro Mikuriya of Otsuka Pharmaceutical Co., Nutrition & Sante Group. The outer, nearly-cubic box is 3 by 3 by 3¼ inches high (7.5 x 7.5 x 8.5 cm). Red and black on beige. The front panel, which appears on 3 sides of the box, shows a square of tofu-yo on a small white dish. The characters "Beni-dofu" appear large and bright red against the tan background. The product description appears on one panel. Contents: 6 pieces (no weight is given).

The fermented tofu itself comes in a glass jar, immersed in alcohol thickened by red rice koji. Atop the jar, inside the outer box is a small brochure, full color on glossy paper; with 4 panels on each side. Each panel is 6.5 cm square. The inside 4 panels describe different ways of serving the product. One outside panel gives a brief history of tofu-yo from Okinawa. Taro says (e-mail of 21 Dec. 2011) that the product was launched in 1998 by Otsuka Foods Co., Ltd.

Soyinfo Center taste test: Taste and texture: Delicious, almost like Okinawan tofu-yo. However use of the word "awa" in the product name, a possible hint at the word "awamori" (an expensive and traditional Okinawan alcoholic beverage) when there is none in the product, seems deceptive.

11777. **Product Name:** Aloha Baked Tofu.
Manufacturer's Name: Wildwood Natural Foods of Santa Cruz, Inc.
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1998.
Ingredients: 1998: Wildwood Tofu (filtered water, organic soybeans grown in accordance with the California Organic Foods Act of 1990, nigari {magnesium chloride, a natural firming agent}), unsweetened pineapple juice, soy sauce, fruitrim (fruit juice, natural grain dextrins), pineapple juice concentrate, ginger, orange juice concentrate, olive oil, molasses, ginger powder, spices.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1998, and made at Wildwood's plant in Santa Cruz.

11778. **Product Name:** Tofu Firenze: Spinach-Garlic Dip.
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 31 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1998.
Ingredients: Wildwood tofu [filtered water, organic soybeans (grown and processed in accordance with the California Organic Foods Act of 1990), Nigari (magnesium chloride, a natural firming agent)], spinach, olive oil, rice vinegar, garlic, dijon mustard, parsley, spices, guar gum.
Wt/Vol., Packaging, Price: 6.0 oz. Retails for $1.99.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Billy Bramblett. 1998. July. He says this product was introduced in 1998.

11779. Allison, Karen Hubert. 1998. The vegetarian compass: New directions in vegetarian cooking. Boston, Massachusetts: Little, Brown & Co. xiii + 383 p. Illust. Index. 24 x 20 cm.
• ***Summary:*** One chapter (p. 163-210) is titled "Tofu, tempeh, and seitan." The index contains 28 entries for tofu, 23 for tempeh, 17 for seitan, 2 each for miso and for texturized vegetable protein (TVP), and 1 each for milk–nondairy and for soy grits.

On the inside rear dust jacket is a portrait photo of the author and a brief biography. Karen "was the former owner, with her husband, Len Allison, of the three-star New York City restaurant Huberts. She taught at the Culinary Institute of America and was the author of the novel *How I Gave My Heart to the Restaurant Business* (1997). She lived in New York and Maui until her death in 1997." She is the mother of three children. Address: New York and Maui.

11780. American Soybean Association. comp. 1998. Directory of growers of organically grown or food quality soybeans. St. Louis, Missouri. 10 p. Unpublished typescript. 28 cm.
• ***Summary:*** Part I–Organically grown soybeans: Name, address, phone number, and fax number of 11 growers or brokers, listed alphabetically by company name, in California, Illinois, Iowa, Michigan, Minnesota, New York, Oregon, and Texas.

Part II–Food quality soybeans: Name, address, phone number, and fax number, and type of soybean (tofu, general food use, certified organic, etc.) of growers or brokers, listed by state, in South Dakota (3 names), Indiana (6), Iowa (15), Minnesota (27), Wisconsin (1). Note: These names and addresses were compiled from *Soya & Oilseed Bluebook* then printed in mailing list format, so they can be photocopied and mailed to the growers. Address: ASA, 12125 Woodcrest Executive Drive, Suite 100, St. Louis, Missouri 63141-5009. Phone: (314) 576-1770.

11781. Burnham, Trudie. 1998. Innovative soy cooking. Freedom, California: The Crossing Press. 95 p. No index. 15 x 18 cm.
• ***Summary:*** Contents: Preface. Introduction. Appetizers, snacks, and side orders. Salads. Dressings and toppings. Main dishes. Beverages. Desserts and treats.

The introduction begins: "Let's face it. In a society like ours, obsessed with fast, low-fat food, tofu is the ultimate answer." This is a "user-friendly guide to a soya-based vegetarian diet. Many recipes are vegan, or use a minimum of dairy foods.

The glossary of ingredients includes kelp, kudzu, lecithin, mirin, miso, nutritional yeast, oils (use expeller pressed), sea vegetables, seeds (Sunflower, pumpkin, poppy and sesame are used for eating; alfalfa, radish, red clover, and fenugreek are for sprouting), slippery elm powder, soy milk, soy sauce, soysage, sweeteners, tahini, tempeh, tofu, umeboshi plums, vinegars.

"Missing egg salad: I invented this and word seemed to travel fast and wide, because I saw it in a California deli a year later with the same name." Address: New Zealand.

11782. Fike, Rupert. ed. 1998. Voices from The Farm: Adventures in community living. Summertown, Tennessee: Book Publishing Co. xii + 164 p. No index. 23 cm.
• ***Summary:*** This excellent book (a collection of short vignettes written by various Farm members) captures the spirit and essence of The Farm, a large spiritual in Summertown, Lewis Co., Tennessee–a community that has changed the world (for the better) in many areas.

The Farm traces its roots to the late 1970s with "Monday Night Class," which was led by Stephen Gaskin, an English teacher at San Francisco State College, in California. He held free, open meetings which focused on putting the shared psychedelic experiences of those who attended into the perspective of the world's major religions. He emphasized eternal spiritual values–compassion, self-reliance, development of personal character, and an awareness of the interconnectedness of all life. After talking, Stephen answered questions from the floor, and these sometimes led to broad-ranging discussions. At each meeting there was meditation and often chanting to quiet the mind and nourish the spirit. By 1969 several thousand people were regularly attending this weekly class, and a core group of them began to consider Stephen as their spiritual teacher.

In the winter of 1969 the American Academy of Religion held its meeting in San Francisco. A group of ministers and theologians happened to wander in; they stood at the back of the class and were moved by what they saw and heard. After the meeting several of them stepped forward to invite Stephen to speak at their own congregations and classrooms across America–believing that he might be able to help heal the rift between generations. Stephen agreed and a tour was arranged. Two hundred or so of his students asked if they could come along; any who could put together living quarters on wheels joined the tour. In brightly painted school buses, Volkswagen vans, trucks and campers they left San Francisco in 1970, following Stephen as he spoke on college campuses and in churches from coast to coast. Along the way the group attracted other young people who "were searching for identity, mission, and tribe." After four months and thousands of miles, the Caravan (as it was called) returned to San Francisco. But after their shared Odyssey, the group had become a tightly-knit community–a church. They agreed to pool their money, head back to Tennessee, and buy some land.

Thus, in May 1971, at the height of the counter-culture movement, several hundred young people drove their school buses into Lewis County, southern Tennessee. They had been given permission to park (free of charge) on the Martin Farm until they could find their own land. They stayed on the Martin Farm all that summer, then in the fall purchased the Black ranch (1,000 acres)–less than ¼ mile away. They founded America's largest modern-day intentional community–The Farm. It soon became known and admired by people around the world.

It is said that The Farm had two phases–the Letting Go, which was Monday Night Class, the Caravan, and the Martin Farm. Then there was the Taking Hold–everything after that.

Farm members organized themselves on a communal basis according to a passage in the Bible's *New Testament, Book of Acts,* 2:44-45, which says: "And all that believed were together and had all things in common; and sold their possessions and goods, and parted them to all as every man had need." Each member of the community had to sign this vow of personal poverty. They ate a vegetarian diet–in fact a vegan diet, which contained no animal products, and showed

© Copyright Soyinfo Center 2013

many others how such a diet could be healthful, delicious, and ethical. They started a "Soy Dairy" and used soyfoods (such as soymilk, tempeh, tofu, soy yogurt, soy flour, and whole cooked soybeans) as a key protein source in their diet. They generally used what extra money they had to help impoverished people around the world–both in Third World countries and in the USA. In the late 1970s they worked with people in the village of Solola, Guatemala, to build an innovative Soy Dairy (see p. 78-80, by Doug Stevenson), then helped others start soyfoods businesses in the Caribbean. They did pioneering work in spiritual midwifery, publishing, and many other areas.

By 1977, there were 1,100 farm members and 14,000 visitors–many of whom spent the night. At the peak of its population in 1982, The Farm was home to over 1,500 optimistic young people and the young at heart; about half of these were children, since The Farm offered to raise the child of any woman who was considering an abortion. The community received 20,000 visitors that year alone, as many as 200 on any given night.

But The Farm had one major problem: How to financially support its many members, visitors, and activities. By the late 1970s The Farm had a large and rising debt, and the interest on that debt was starting to get out of hand. By 1980 morale was definitely beginning to suffer. In 1983, after much soul-searching, The Farm decided that no longer would all things be held in common, except for the land. Many people left; it was a diaspora. Each family (or person) who remained would now be responsible for its own economic survival.

From its beginnings in San Francisco in 1970, The Farm has been an experiment in spiritual communal living. This book tells the story of that experiment (up to the early 1980s) in 66 short chapters, told by many different community members. Its a magnificent, moving story, told in an "energy-based" language invented by The Farm but easily understood by all. Some members recount more than one chapter. Note: This book could be greatly improved by an index. Address: P.O. Box 99, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

11783. Hutcheon, Robin. 1998. High-rise society: the first 50 years of the Hong Kong Housing Society. Hong Kong: Chinese University Press; Hong Kong Housing Society. ix + 117 p. Illust. (some color). 22 x 30 cm. [8 ref]
• ***Summary:*** This is the story of a remarkable, pioneering experiment in affordable public housing designed to meet the needs of people. The idea can be traced back to a woman in Victorian England: Octavia Hill (p. 50-51). In 1945 Hong Kong emerged from 3½ years Japanese war-time occupation in a state of destitution, aggravated by damage caused by shelling and air-raids. Out of a population of 60,000, one in four were homeless." "With the end of World War II another followed on its heels–civil war in China. An influx of former residents and refugees flooded into Hong Kong, more than doubling its population in a few years. The impact this had on housing was devastating.

"Huge settlements of makeshift huts sprouted on the bare hillsides, stripped of trees for use as fuel. In the crowded tenements of the urban areas, large numbers of newcomers squeezed in. At night, streets were filled with shanties and shelters which were bundled up like parcels during the day. To accommodate the mass of humanity, Hong Kong landlords divided tenement floors into cubicles, most lacking windows or ventilation of any kind and having few basic amenities..." (p. 3).

The Housing Society in Hong Kong was proposed in 1948 by Bishop R.O. Hall (see timeline p. 82-90).

In Part II, "Snapshots," the section titled "The estates" notes (p. 63): "Hawkers also appreciated the open balconies of the older estates. They could trundle their carts of delicacies to the entrance and announce their presence and their snacks: red bean soup, grilled octopus, pigs' tripe, "tofu fa" (soyabean junket [curds made from soymilk]), "stinky tofu", dough sticks and special congee. Each hawker had his own special call which was sung or chanted rather than shouted. Tenants living in top floors would then call out their order, lower baskets on ropes with money, and collect their snacks without having to walk down six flights of stairs. Many hawkers made their fortunes from nightly visits to the estates."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "stinky tofu."

11784. Ji, Manping. 1998. Tofu qualities and yields of various soybean cultivars as affected by ratios of 7S and 11S proteins. MSc thesis, North Dakota State University. xi + 115 leaves. Illust. 28 cm. *

11785. Keuneke, Robin. 1998. Total breast health: The power food solution for protection and wellness. New York: Kensington Publishing Corp. xxviii + 416 p. Foreword by Lendon Smith, M.D. Index. 24 cm. [200+* ref]
• ***Summary:*** The key to total breast health (and preventing breast cancer) is a healthy traditional diet and lifestyle. Chapter 7, "Soybeans protect against breast cancer," has these contents: Two pro-soy quotations. Introduction. Some phytochemicals in soy and their properties. Phytic acid. Other benefits of soy for women: Osteoporosis, symptoms of menopause, symptoms of PMS, heart disease, anti-aging benefits, gallstones. Update on the politics of soybeans: Will quality be sacrificed for commercial purposes? Fermented soy foods are especially beneficial. The magic of miso: Folklore was right. The National Cancer Institute is spreading the word about soy's ability to protect against breast (and prostate) cancer. Phytochemicals in soy: (1) Inhibit the growth of tumor cells. (2) Convert cancer cells back into normal cells. (3) Block the entry of estrogen into

© Copyright Soyinfo Center 2013

breast cells; this is beneficial in preventing cancer. "Research shows that soy isoflavones may protect against high levels of synthetic estrogen in the diet." Soy foods include: tofu, tempeh, miso, edamame, soy sauce, soymilk, natto (fermented soybeans), soybeans and second-generation soy foods such as cheese, textured vegetable protein, and meat alternatives such as soy breakfast links.

Contains over 125 internationally inspired recipes, incl. Tofu Cote D'Azur, and Dilled Salmon in Miso-Lemon Sauce.

A portrait photo of Robin (a woman) appears on the inside rear dust jacket. The last page of the book (unnumbered) is "About the author." Address: Norwalk, Connecticut.

11786. Ling, Kong Foong. 1998. Food of Asia: authentic recipes from China, India, Indonesia, Japan, Singapore, Malaysia, Thailand and Vietnam. Singapore: Periplus. 160 p. Illust (color). Index. 31 cm.
• ***Summary:*** A very attractive book printed on glossy paper with at least one color photo on almost every page. The introduction and essays are by Kong Foong Ling. The index, which is poor, makes the book hard to use if you are looking for particular foods found throughout Asia such as soybeans, soy sauce, miso, salted / fermented black beans, yuba [bean curd skin], etc.

Contents: The flavors of Asia. Ingredients. The Asian kitchen. China. India. Indonesia. Japan. Malaysia & Singapore. Thailand. Vietnam. Appendix.

The "Ingredients" section includes: Bean curd (incl. cotton or momen tofu, silken bean curd, deep-fried bean curd or aburage, grilled bean curd or yakidofu, fermented bean curd or nam yee). Bean curd skin [yuba]. Black beans, salted (and fermented). Hoisin sauce ("A sweet sauce made of soy beans, with spicy and garlicky overtones"). Miso (incl. red miso and white miso). Salted soy beans (incl. "yellow bean sauce"). Soy sauce (incl. light soy sauce, black soy sauce, red soy sauce, Kikkoman, tamari, thick sweet soy sauce (kecap manis–Indonesian)). Tempeh. Also: Red beans (dried azuki). Seaweed (incl. dried kelp, golden kelp, mozuku, salted dried kelp, laver or nori, wakame). Sesame (black and white seeds, tahina {tahini}). Sesame oil. Sesame rice crackers.

Beancurd or bean curd is mentioned on pages 12, 29-30, 34, 36, 88, 94, 101, 155.

Fermented bean curd: p. 25.

11787. Marcus, Erik. 1998. Vegan: The new ethics of eating. Ithaca, New York: McBooks Press. xi + 211 p. Illust. Index. 23 cm. [406 endnotes*]
• ***Summary:*** An excellent, very important book. The New Four Food Groups (p. 194-95) are vegetables, whole grains, fruit, and legumes. Legumes includes soy milk, tempeh, texturized vegetable protein, and tofu.

Dedicated to Henry Spira, a tireless defender of animals. Eric Marcus was born in 1966. Address: Bay Area, California.

11788. *Natural Athlete* (*Evanston, Illinois*). 1998. Cooking with Chef Tina: A natural power breakfast. p. 46, 48-49.
• ***Summary:*** Tina Martini is executive chef at the Franklin Quest Fitness Institute, where she is responsible for teaching some 200 guests a week about the benefits of healthy eating. Many of these guests call her the "Queen of Tofu." She says: "The latest research on soy is that it recruits lean body mass more effectively, than any kind of protein. So I'm a big fan of soy, because along with the increase in strength, you're also getting fiber, which animal protein doesn't offer."

Contains three recipes: Bread pudding (with soy milk). Apple crisp with cashew granola (with soy milk). Natural french toast (with soy milk and tofu). Address: 2859 Central St. #106, Evanston, Illinois.

11789. Northern California Community Loan Fund. 1998. Our first decade 1988-1998. San Francisco, California.
• ***Summary:*** The page titled "Cooking up a food industry in Humboldt County" (p. 10-11) gives a profile of The Tofu Shop Specialty Foods Company. Owner Matthew Schmit says: "We can produce 60 pounds of tofu per kettle, twelve kettles per day, six days per week,..." He distributes as far south as Santa Rosa. The economy of the area has been hurt by the fall of the timber and fishing industries. Address: 870 Market Street, Suite 677, San Francisco, California 94102. Phone: 415-392-8216.

11790. Olowoniyan, F.O.; Osho, S.M. 1998. Acceptability of different coagulation agents for soycheese [tofu] processing in Kaduna State, Nigeria. In: Ferris, R.S.B., ed. 1998. Postharvest Technology and Commodity Marketing in West Africa. Proceedings of a Conference... [vi] + 300 p. See p. 169-71. Held 27 Nov.-1 Dec. 1995 at Accra, Ghana. [3 ref]*
• ***Summary:*** In Nigeria, cheese is traditionally made by coagulating cow's milk with a coagulant such a the juice of bombon leaves (*Calotropis procera*). An alternative was made from soybean milk using three different coagulants: lemon juice, Epsom salt, and alum. The results showed no significant difference in the acceptance of fried soycheese (except in mouth feel) made from of soymilk coagulated with lemon juice or Epsom salt; however lemon juice was liked best of the two. Soycheese made from alum was ranked as being of significantly lower quality. Address: 1. National Agricultural Extension and Research Liaison Services, Ahmadu Bello Univ., Zaria, Nigeria; 2. IITA, Ibadan, Nigeria.

11791. Rinzler, Carol Ann. 1998. The healing power of soy: The enlightened person's guide to nature's wonder food. Rocklin, California: Prima Publishing. xiv + 194 p. Illust. Index. 24 cm. [119 endnotes]

© Copyright Soyinfo Center 2013

• ***Summary:*** Contents: Preface. Introduction: Not your ordinary bean, the first soybeans (history), how to talk soy (glossary of soyfoods–miso, soybean oil, soy concentrates, soy flour, soy isolates, soy milk, soy "nuts," soy sauce {shoyu, tamari, teriyaki}, tempeh, texturized soy protein {TSP}, tofu). 1. The nutritional wonder bean: Vitamins, minerals, proteins, fats, carbohydrates, fitting soy into your diet, summing up. 2. Something special in the bean: Hormones and people and plants, fabulous phytoestrogens, the safety of phytoestrogens, summing up. 3. Soy and your heart: Heart Disease and its victims, cholesterol and your heart, soy versus cholesterol, soy's cholesterol busters, beyond cholesterol, summing up. 4. Soy, the cancer fighter: The statistics of cancer, diet and hormone-related cancers, the Asian experience, how soy fights cancer, is soy safe?, a practical guide to your personal war on cancer, summing up. 5. Building better bones with soy: Your hormones and your bones, the hormone dilemma, soy and your bones, getting the calcium you need, summing up. 6. Hot news about hot flashes: What a hot flash is, soy and hot flashes, other plants that may relieve hot flashes, vitamins, minerals and hot flashes, simple lifestyle changes, summing up. 7. Cooking with soy: The joy of soy, whole soybeans, tofu, tempeh, texturized soy protein (TSP), soy flour, soy milk, soy sauces, soybean oil, miso. Appendix A: Shopping for soy through the mail. Appendix B: Directory of soy manufacturers. Appendix C: Directory of soy researchers whose studies are included in this book. Sources.

The author has written seventeen books, including *Nutrition for Dummies* (IDG) and *Estrogen and Breast Cancer* (Hunter House Books). A frequent contributor to publications such as *American Health, Woman's Day,* and the *New York Times,* she lives in New York.

Note: Another quick, generic book about soy and good health by one who is not very familiar with the subject–though the footnotes show that she consulted many publications; nothing new. The history chapter is full of errors. Address: New York.

11792. Sinclair, Charles Gordon. comp. 1998. International dictionary of food and cooking. Chicago: Fitzroy Dearborn. 594 p. See p. 234. 24 cm. *

• ***Summary:*** Vietnamese: dau hu: Bean curd. dau hu chien: Fried bean curd. dau hu chung: Bean curd. dau hu ki: Dried [sic, pressed] bean curd (p. 161).

fu jook pin (Chinese): Bean curd sticks [dried yuba sticks] (p. 219).

"*gochujang* (Korean): A chilli paste similar to sambal olek" (p. 234).

Indonesian: Kecap asin is thick, salty, dark colored soy sauce used for coloring and flavor. Kecap bentang manis: See kecap manis. Kecap manis: A sweet, thick, dark colored aromatic soy sauce used as a seasoning and condiment, and for satay. "Also called ketjap sauce, kecap bentang manis, sweet soya sauce" (p. 292).

Ketjap (Ho [Holland, Dutch]) Ketchup. Ketjap sauce. See kecap manis.

The word "soya" appears on 100 pages in this book. For example: Aburage (Japanese): Soya bean pouches made by deep-frying slices of pressed bean curd.

For "soy bean" see "soya bean." For "soy bean oil" see "soya bean oil." For "soy sauce" see "soya sauce."

"Sweet bean paste. A thick brown sauce made from ground fermented soya beans mixed with sugar and brine. Popular in Taiwan as a condiment or seasoning" (p. 530).

11793. Solomon, Charmaine; Solomon, Nina. 1998. Charmaine Solomon's encyclopedia of Asian food. Boston, Massachusetts: Periplus Editions. xiv + 480 p. Color illust. ([28] p. of plates). 29 cm. [67* ref]

• ***Summary:*** An outstanding book; the color illustrations of many ingredients are spectacular and very informative. The author has an insatiable curiosity.

Contents: List of illustrations. Introduction. How to use the *Encyclopedia of Asian Food.* Acknowledgements. A-Z of Asian Food. Bibliography. Illustrated index of selective ingredients. Index of recipes. Index of alternative words and main entries.

Soy related entries: Bean curd (p. 26-28, incl. all the different types, yuba, deep-fried tofu types, fermented tofu incl. ch'ou doufu [chou doufu]: "Despite its overpowering aroma, slimy texture, unappetizing color and the unfortunate odor it leaves on the breath, those brave enough to partake of it consider it a delicacy").

Bean paste, sweet (p. 29. The three colors and types are red {from adzuki beans}, yellow {from mung beans, husked and split}, or black {from black soy beans}. "The pastes are usually available ready-made sweetened in cans. It is possible to make your own, starting out with dried beans." Name in Chinese: dow sa, tau sa {sweet bean paste}).

Bean paste, yellow (p. 29. Despite what the label says, this thick, salty condiment is brown, not yellow, in color).

Bean sauces (p. 29. "Made from fermented soy beans," they range in color from yellow to brown to black [sweet black bean paste]. Their consistency is more like pastes that must be spooned from the jar than pourable tomato ketchup).

Beans, salted yellow (p. 31. Canned yellow soybeans which have been salted and fermented).

Beef (p. 31-37 incl. Teriyaki steak, Sukiyaki, Beef with black bean sauce, incl. "2 tablespoons canned salted black beans [fermented black soybeans]").

Black bean (p. 43-44. Black soy beans which are fermented and salted. "Some are sold in cans in a salty liquid, others in plastic bags, covered with salt crystals." Also called "preserved black beans").

Flours & starches (p. 157-61). Incl. soy flour. "A high protein, low starch flour... used mostly in Japan [where it is called kinako] and China. In Korea roasted soy bean flour

© Copyright Soyinfo Center 2013

and fermented soy bean flour are used to make a variety of bean pastes."

Note. This is the earliest English-language document seen (Nov. 2012) that uses the term "roasted soy bean flour" to refer to kinako.

Legumes & pulses (p. 206-18). A long and interesting section. All entries have a scientific name. Many have an illustration. Those found in many Asian countries (e.g., green bean, green pea) have the name in each country. Includes: Introduction, adzuki bean, asparagus bean (see winged bean), asparagus pea, black-eyed pea (a variety of cowpea), black gram, blue pea, broad bean, butter bean (see lima bean), chick pea, cowpea (see yard-long bean), fenugreek, green bean, green pea, hyacinth bean (see lablab bean), lablab bean, lentil, lima bean, long bean (see yard-long bean), moong bean (see mung bean), moth bean, mung bean, parkia, peanut, pigeon pea, red bean (see adzuki bean), red kidney bean, rice bean, sataw bean (see parkia), snow pea, soy bean (short entry), sugar snap pea, tamarind, white gram (see black gram), winged bean (China: su-ling dou; India: Goa bean; Indonesia: kecipir; Japan: shikakumame; Malaysia: kacang botor; Philippines: sigarilyas; Sri Lanka: dara-dhambala. Thailand: thua pu). Yard-long bean (this is the fresh bean known by a host of names). Recipes: Adzuki bean soup.

Master sauce (p. 232). "Also known as 'flavour pot' or 'lu,' this sauce has a base of soy sauce, water, sugar and Chinese wine or sherry, with a few variable additions..." Cooking with it is similar to 'red-cooking.'

Miso (see soy bean products). Mushrooms & fungi (p. 237-40, incl. recipe for Braised bean curd, cloud ear and vegetables, and Braised soy mushrooms). Natto (see soy bean products).

Oils (p. 258-59, incl. coconut oil, gingelly oil [sesame oil], mustard oil, palm oil, palm kernel oil, peanut oil, perilla oil, sesame oil). Note: Soy oil is not mentioned here! Okara (see soy bean products). Salads, incl. recipe for Indonesian vegetable salad (gado-gado), that calls for 4 oz. fried bean curd. Shoyu (see soy sauce).

Soy bean, dried (349). China: da dau, wong dau, hak dau, tai dau. Indonesia: kacang kedelai. Japan: daizu. Korea: jaa jang. Malaysia: kedelai. Philippines: utaw. Thailand: thua lueang.

Soy bean, fresh. China: mao dau. Indonesia: kacang soja. Japan: edamame. Malaysia: kacang soja. Recipe: Fresh soy beans with bean curd.

Soy bean products (p. 350): Miso (incl. recipe for miso soup). Natto. Soy bean paste (go). Soy milk. Tahuri (Philippine fermented tofu). Tokwa (tokwan; very firm square tofu).

Soy bean sprouts, with recipe for soy bean sprout salad. China: dai dau nga choi. India: bhat. Indonesia: kacang kedele, taugeh. Japan: daizu no moyashi. Korea: Kong namul. Malaysia: kacang soja, taugeh. Philippines: utaw. Thailand: thua-lueang.

Soy sauce (p. 351-52). Chinese soy sauce: Dark soy sauce. Light soy sauce ("Usually labeled 'superior soy'"). Mushroom soy sauce (Dark soy sauce that has been flavored with straw mushrooms). Japanese soy sauces: Koikuchi (regular shoyu), tamari, usukuchi. Korean soy sauce ("About the same colour as Chinese light soy sauce, but not as fiercely salty and with a sweet malted aroma"). Thick and flavoured soy sauces: Kecap asin ("A dark, salty soy sauce, from Indonesia, a little thicker than the dark soy of China"). Kecap manis (A thick, sweet soy sauce from Java, Indonesia). Kicap cair: "The Malaysian equivalent of light soy sauce." Kicap pekat: "The Malaysian equivalent of dark soy sauce, though thicker than the Chinese version, but not as thick as kecap manis." Ponzu shoyu. Toyo mansi (p. 352): "A soy sauce used in the Philippines soured with kalamansi juice."

Note: This is the earliest document seen (April 2012) that uses the term "Kicap cair" or the term "Kicap pekat" to refer to light and dark Malaysian soy sauces, respectively.

Tempeh (p. 386). Incl. recipes for Savoury Tempeh and Thai style tempeh. Tofu (see bean curd).

Also discusses: Adzuki bean, agar-agar (incl. almond bean curd, awayuki), almond, amaranth, cowpea, crab in black bean sauce (recipe at crab), daikon, millet, monosodium glutamate ("I would strongly recommend omitting it"), Nonya (pronounced 'Nyonya.' The unique cookery found in Malaysia and Singapore resulting from the fusion of Malay and Chinese cuisine during the last century), peanut, peanut sauce, sago (this palm flowers only once in its life, at about age 15. Just before flowering, it builds up a large reserve of starch in the pith. The tree is felled, the pith scooped out, ground and washed to make sago starch), seaweed (incl. agar-agar, hijiki, kombu / konbu, mozuku, nori / laver, wakame), sesame paste, sesame seed, vegetarian meals ("By far the most important vegetarian food in the Far East... is bean curd"). Address: Australia.

11794. Tokushû 1 Takikomi gohan. Tokushû 2 Tôfu yuba [Special edition 1. Rice cooked with other ingredients. Special edition 2. Tofu and yuba]. 1998. Tokyo: Shibata Shoten. 176 p. 26 cm. [Jap]*
Address: Aomori, Japan.

11796. Wise, Victoria. 1998. The vegetarian table: Japan. San Francisco: Chronicle Books; London: Hi Marketing. 156 p. Illust. (color photos by Deborah Jones). 22 x 21 cm. Series: The Vegetarian Table.
• ***Summary:*** Contents: Introduction. Basic ingredients and seasonings for the Japanese table. 1. Appetizers and

© Copyright Soyinfo Center 2013

condiments. 2. Soups. 3. Rice. 4. Noodles. 5. Vegetables. 6. Sweets. Table of equivalents.

Ingredients include: Soybeans, soy sauce, tofu (incl. silken tofu, tofu puffs, grilled tofu), miso (red, white, yellow, brown, barley), fresh soybeans, dried soybeans (incl. black soybeans), soybean sprouts, freeze-dried tofu, soybean milk skin (yuba), and soybean curd pulp [okara]. Azuki beans, sea greens [sea vegetables incl. agar, kombu, nori, wakame], sesame seeds, umeboshi (pickled plums), wasabi, saké.

Contains too many soy-related recipes to list them all. The color photos and food styling are superb–perhaps the most beautiful we have ever seen in a cookbook.

Note: Other books in this series (all published by Chronicle Books) are: France, India, Italy, Mexico, and North Africa. Address: Oakland, California.

11797. Yeager, Selene. 1998. The doctor's book of food remedies: the newest discoveries in the power of food to cure and prevent health problems, from aging and diabetes to ulcers and yeast infections. Emmaus, Pennsylvania: Rodale Press. xiv + 610 p. Illust. Index. 24 cm.

• ***Summary:*** The chapter titled "Soy foods: Help for your hormones–Healing power" (p. 490-95) notes in the subtitle that these foods "Can help: Prevent heart disease, relieve menopause symptoms, reduce the risk of breast and prostate cancer." Contents: Introduction. In the kitchen (using tofu). Good for your heart. The joy of soy: Brief definitions of meat substitutes, soy flour (kinako–made from roasted, ground soybeans), soy milk, tempeh, texturized soy protein, tofu. Turning down the heat (hot flashes and menopause). Powerful breast protection. Protection for men (prostate cancer). Nutritional extras (Good sources of protein and other nutrients). Getting the most: Add soy products last when cooking, shop for power (it's best to eat soy foods in their unadulterated form), look for full-fat soy milk–which contains 50% more phytoestrogens than the low-fat kind. Two recipes: Soy fruit smoothie (with soymilk). Mocha tofu pudding.

Also contains chapters on sea vegetables (p. 477-81), and Thyroid disease: Foods for hormonal health (p. 528-31).

11798. Zipern, Elizabeth; Williams, Dar. comps. 1998. The tofu tollbooth. 2nd ed. Woodstock, New York: Ceres Press/ Ardwork Press. vi + 250 p. Illust. 21 cm.

• ***Summary:*** The title of this book is probably a take-off on "The Phantom Tollbooth," a classic by Norton Juster (1961). This is not a book about tofu–although most of the stores listed here probably offer tofu. Rather, it is a popular guide to more than 1,000 natural food stores and eating spots–with lots of other cool stops along the way. It was written especially for travelers. All stores have organic produce, unless otherwise indicated. The listings are alphabetically by state, and within each state alphabetically by city name. A good map appears at the start of each state, showing the major roads and numbered cities and towns where natural food stores and eating spots are to be found. For each store is given: Name, address, phone number, and business hours. How to get there by car. Up to 17 symbols indicating such things as: Deli, bakery, cafe, juice bar, salad bar, coffee to go, beer/wine, filtered water machine, nutritionist/herbalist, wheelchair access, bathroom, wheelchair accessible bathroom, independent retail, corporate, co-op, or collective. For many cities there are "hot tips" of places to go and things to see.

The authors strongly advocate organic farming and gardening. Scattered throughout the book are 27 interesting "Organic facts" such as: No. 1. "Support a true economy. Although organic foods might seem more expensive than conventional, conventional food prices do not reflect hidden costs borne by tax payers (as in federal farming subsidies). Other hidden costs include pesticide regulation and testing, hazardous waste disposal and clean up, and environmental damage. Consumers can pay now or pay later. Organic foods are priced for paying now for a more sustainable environment." A photo shows the two authors seated cross-legged by the roadside.

11799. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, 1946 to Aug. 1971. Part I (Interview). *SoyaScan Notes*. Jan. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Gretchen Priest was born on 29 Oct. 1946 in Boston, Massachusetts. She grew up in Marblehead, Massachusetts–which is located on the Atlantic Ocean 15 miles northeast of Boston. While in high school there she decided (entirely on her own, for reasons she no longer remembers) to become a vegetarian–even though she had never heard the word "vegetarian." She also began a lifelong interest in art. In Sept. 1964 she started to attended Goddard College (in Plainfield, Vermont) for one semester and was almost immediately introduced to the teachings of Kirpal Singh, an Indian Sikh master. "I went through a spiritual revolution, along with many friends." She was very sensitive and began to have spiritual experiences. At Goddard she met her husband to be, Jeffrey Broadbent, in an art class. Art is Gretchen's passion. They both found the first day of class boring, so separately they snuck out. Gretchen found the paints in the back of the room and, before they had met or spoken to each other, they ended up painting each other faces. When the teacher saw them after the class he exclaimed, "Now that's art!" At that point, Jeffrey and Gretchen introduced themselves to one another.

After the 3 months, Goddard had a work term. Gretchen went to California and experimented with psychedelics. Now all she wanted was to live a spiritual life.

Returning to Vermont in the early summer of 1965, she entered the Kirpal Ashram in Calais (pronounced KAL-us), Vermont. Only one person was living and meditating there

© Copyright Soyinfo Center 2013

at the time, Nina Gitana, age 37, the caretaker. The ashram was part of land and a trust that had been donated to Kirpal Singh for use as a retreat for his practices and teaching. Vegetarianism was a very important part of Kirpal Singh's teachings, so Nina was a vegetarian. But she did not know much about preparing vegetarian foods; a diet of fruits and juices was not giving her the strength she needed. The day Gretchen arrived, Nina left to go to Boston, where she met Michio Kushi (and maybe George Ohsawa) and began to study macrobiotics. When she returned to the ashram, she taught Gretchen what she had learned and they both began to follow a vegetarian macrobiotic diet. It felt good, and Nina's strength returned. Gretchen soon became the cook. She did not use any macrobiotic recipe books, though she did study a book of macrobiotic principles. Their first basic foods included brown rice and miso, but Gretchen also prepared lots of chapatis and brown rice croquettes (regular or deep-fried). During the cold months she cooked for the two of them (and often a neighbor), but during the summer she cooked and cared for 15-20 people. It was very difficult to get macrobiotic or natural foods in those days, so they would periodically make the 5-hour drive to buy food in Boston. They would buy most of their foods at Michio's house (where they were stored in little bags on plain wooden shelves), and in this way Gretchen came to know Michio and Aveline. But they would go to Boston's Chinatown to buy tofu; it was considered a very special treat at the ashram, served only 3-4 times a year. Considered an excellent source of protein and easy to digest, it quickly disappeared–in part since it was very perishable, but also because it balanced the very *yang* daily diet. One winter Gretchen moved to Boston to earn money (odd jobs, including work at a hospital) and study macrobiotics while Nina stayed at the freezing cold ashram. Michio Kushi gave a special series of Sunday classes to teach macrobiotic philosophy to Anne Lynn, her husband, one other person, and Gretchen; these were not cooking classes. Michio and Aveline visited the ashram for a day several times. On one visit, Michio brought his father and mother.

In 1971, after 6 years at Kirpal Ashram, Gretchen left to marry Jeffrey Broadbent. Jeffrey had been practicing Zen meditation for several years as a disciple of Suzuki roshi at Tassajara Zen Mountain Center, deep in the Santa Lucia Mountains south of Carmel Valley, California. One of Jeffrey's close friends and roommate at Tassajara was William Shurtleff, who was also a disciple of Suzuki Roshi. While he was at Tassajara, Katagiri roshi encouraged Jeffrey to go back to college and finish his education. So he enrolled at the University of California at Berkeley, where he studied Chinese language. At some point he switched from Chinese to Japanese at Suzuki roshi's recommendation. Then Jeffrey applied for U.C. Berkeley's Junior Year Abroad program in Japan. Right after he was accepted, he wrote Gretchen at the Vermont ashram: "I'm going to Japan. Please marry me and let's go together." She accepted. Jeffrey and Gretchen stayed together for a month and a half at the Berkeley Zendo, then were married on 13 June 1971 at the San Francisco Zen Center by Shunryu Suzuki roshi in a large ceremony.

Ten days after the marriage ceremony, Jeffrey and Gretchen arrived in Japan. He had been enrolled in the intensive Japanese language coarse for foreigners at International Christian University (ICU) in Mitaka, just east of Tokyo. Before the school year started, they participated in the ICU summer program, where all the new students traveled to the Kumano-Nachi shrine and Nachi waterfall at the southeastern tip of the Wakayama peninsula. The program was designed to introduce the foreigners to Japanese language and culture.

Soon after arriving at Nachi, they wrote William Shurtleff, who was now taking an intensive Japanese language course at the *Nihongo Gakko* (Japanese Language School) in Kyoto and living in the home of one of his Japanese teachers. They invited him to visit them for a week at Nachi when his school semester was finished. On 1 August 1971 Shurtleff hitchhiked south and they had a nice reunion, practicing meditation together and enjoying the beautiful mountain scenery for about a week. Then Jeffrey and Gretchen went to ICU near Tokyo and Shurtleff returned to Kyoto.

At ICU, Jeffrey and Gretchen rented a small and austere Japanese-style apartment located just off campus, about 10 minutes walk away, c/o Yoda Yoshiko, Koganei-shi, Higashi-cho 1-25-13, Tokyo, 184. The two-room apartment consisted of a small kitchen (with two table-top propane burners and a sink, but no refrigerator), a minuscule toilet chamber, and a combination living room / bedroom (6-8 tatami mats in size). Outside the sliding window was a tiny porch for airing bedding and drying clothes. Jeffrey recalls that there was one small kerosene heater in the apartment; it was used only on very cold days–to save money. But Gretchen recalls that there was no heater at all. Continued. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

11800. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, Aug. 1971 to Dec. 1972. Part II (Interview). *SoyaScan Notes.* Jan. 6. Followed by a letter from Gretchen dated Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: In the fall of 1971 the Broadbents invited Shurtleff to be a guest at their apartment at ICU if he wanted to continue his Japanese studies at the university level. Shurtleff's year-long language course at *Nihongo Gakko* finished in early December 1971. He immediately packed all his meager belongings and caught an all-night car ride to Tokyo where, on December 4, he joined the Broadbents at ICU, and moved into their small apartment. Note: That same day (there was a full moon), Bill and Jeffrey's teacher, Suzuki roshi, died of cancer in San

© Copyright Soyinfo Center 2013

Francisco, California.

Together Bill and Jeffrey took the intensive course in written and spoken Japanese, five days a week with five 70-minute periods a day. They led a very simple, rather monastic life, rising early, meditating twice each day (first thing in the morning and just before bedtime), and studying Japanese intensively. During the day, Gretchen taught English in and around Tokyo to earn money, studied Japanese language by herself while riding on trains and buses (using books and tapes), and did the laundry (by hand at home in the kitchen sink), food shopping, and cooking.

The man who made tofu in the local shop sold his tofu throughout the neighborhood on a bicycle. He blew a little horn to announce his presence. When he came in front of our apartment, we would run down and buy various kinds of tofu; it was a regular part of our diet. Shurtleff, who liked tofu very much and had eaten it almost daily while in Kyoto, continued this practice in Tokyo. Gretchen was especially fond of the deep-fried tofu, and because we had no refrigerator, she would often deep-fry left-over regular tofu during the warm months to preserve it and/or freshen it.

In about February or March 1972 Shurtleff moved out of the Broadbents' apartment and went to live for a while in a large house with Steve and Marty Caldwell on the ICU campus. Not long thereafter, Gretchen grew so interested in tofu that she sought out and began to visit the local tofu shop. She has always had a deep interest in traditional crafts and in making food. She visited the shop about six times, walking there alone in the early morning, when it was still dark. She took notes in a little notebook. The tofu maker explained quantities and times for making regular (*momen*) and silken (*kinugoshi*) tofu, and Gretchen recorded this information in her notebook. Eventually she had enough information to make tofu. The tofu maker gave her some nigari (traditional tofu coagulant) and two nylon straining bags (one for regular and one for silken tofu), which she later took back to America; she still uses the bags in Vermont to make crab apple jelly. Jeffrey Broadbent, her husband at the time, vaguely recalls visiting a very small local tofu shop–but he is not sure he ever went there.

After watching the tofu master at work Gretchen felt that there was a great need to introduce tofu and tofu shops to America. In mid-April Shurtleff returned to live with the Broadbents. Not long after that Gretchen recalls discussing her growing interest in tofu with Shurtleff and invited him to join her in a visit to the local tofu shop. At this time, Gretchen was much more interested in and knowledgeable about tofu than Shurtleff was. She recalls (Jan. 1999): "When you returned to our apartment, you were excited that I was studying tofu. We had lively conversations and I explained what I was doing. I had a notebook which I showed you. You wanted to go too. I thought we went together, but I don't have an absolute picture that I can rely on." Shurtleff likewise does not have a clear memory of going to a local tofu shop at this time, nor did he mention any such visit in his journals, yet he acknowledges that he might have gone with Gretchen and simply forgotten it. But Gretchen remembers clearly that she planted the seeds of Shurtleff's interest in tofu, which later resulted in his writing (with Akiko Aoyagi) *The Book of Tofu.*

On 22 March 1999, after thinking about these past events for more than two months, Gretchen wrote Shurtleff the following: "I have an ongoing persistent focused memory of being together at the tofu shop on one occasion. You were carrying a notebook. The tofu maker was busy with his daily work. You asked many questions and were writing down the new vocabulary. I was concerned that the questions were interfering with his work..." Continued. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

11801. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, Aug. 1971 to Dec. 1972. Part III (Interview). *SoyaScan Notes.* Jan. 6. Followed by a letter from Gretchen dated Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued:

On 25 December 1971 (Christmas eve) Shurtleff had met Kazuko Aoyagi, who was a student at ICU, through their mutual friend Travis Venters. Venters, an American from North Carolina, taught English at ICU and was Kazuko's English teacher. The next day Kazuko introduced Shurtleff to her sister, Akiko Aoyagi, and they soon became close friends. Kazuko likewise became very close to Travis, and soon they were engaged to be married.

Bill and Jeffrey's course in Japanese at ICU ended in June 1972. On June 11 Kazuko and Travis were married; their wedding ceremony was held at a hall on the ICU campus. Gretchen, a very creative cook interested in natural foods, volunteered to make all the food for the wedding party. The centerpiece of her creations, which everyone remembers clearly to this day (25 years later) was the wedding cake. It was a sensation. The icing / frosting was made of tofu! No one had ever seen anything like it. It was a round layered cake, with each layer being a fruitcake that was slightly smaller than the one below it. Made entirely of natural foods, it contained whole-wheat flour instead of white flour and honey or fruits instead of sugar. Thus, it was rather heavy. Gretchen made the frosting–her own invention–by whipping firmly pressed tofu in a blender with honey. The cake even had a theme–evolution. Gretchen formed many small creatures out of dough, then deep-fried them. There were little crabs and starfish on the bottom layer, then little animals on the second layer, and finally on the top–guess what–human beings. Because Gretchen did not have an oven in her apartment, she baked the cake on the ICU campus in an oven at the home of Steve and Marty Caldwell. She recalls: "I was really into that cake!"

After the wedding, Shurtleff and Aoyagi left Tokyo and

© Copyright Soyinfo Center 2013

traveled around Japan, visiting Zen masters at their temples and practicing meditation. Jeffrey and Gretchen went to practice Zen at the temple of Noiri roshi in central Japan. Gretchen was asked to stay at Suzuki roshi's temple not far away, but it didn't work out. In August 1972 Gretchen left to study with the Indian boy Guru Maraji at Yamaguni north of Kyoto (Shurtleff and Akiko Aoyagi were also there), and then with a sculptor named Fushigi Nangoku near Lake Biwa.

On 22 Oct. 1972 Shurtleff and Aoyagi visited tofu master Toshio Arai at this shop named Sangen-ya in Nerima-ku, several hundred yards from the Aoyagi's home. Mr. Arai later became Shurtleff's teacher. This is the first clear memory Shurtleff has of going inside a tofu shop and studying the process. Then on Oct. 28 Shurtleff & Aoyagi went to study Zen meditation at the temple of Noiri roshi where Broadbent was already studying. This did not work out, since Noiri roshi suddenly became very ill, so they returned to Tokyo and lived at Travis and Kazuko's apartment (while they were in America) in Pine Lodge at ICU.

In early December Shurtleff began to write a booklet on tofu for Americans; he probably realized that Nahum and Beverly Stiskin, who he had known in Tokyo and who had founded Autumn Press in Japan, might well be interested in publishing it. On 22 Dec. 22 Shurtleff and Jeffrey Broadbent were talking by phone. Shurtleff mentioned that he was writing a booklet on tofu, and Broadbent mentioned that he and Gretchen had recently visited the Stiskins. He gave Shurtleff the Stiskins' new address and phone number in Hayama, south of Tokyo. Shurtleff called Nahum Stiskin, who said he was very interested in discussing the book proposal, and invited Shurtleff and Aoyagi to his home to discuss the matter. A meeting was arranged for 13 Jan. 1973.

The visit went very well. Nahum was deeply interested in foods and Japanese culture, and was looking for books about Japan to publish; he and Beverly liked tofu and he liked Shurtleff's book idea. After Stiskin looked at the proposed table of contents and a brief introductory chapter, they signed a formal book contract. There was no negotiation of terms and no advance.

Gretchen is not certain how she and Jeffrey met the Stiskins. She recalled in January 1999 that she and Beverly Stiskin had met first; the initial connection was probably related to food and macrobiotics. She may have met Beverly at one of Lima Ohsawa's cooking classes in Tokyo. Then the Stiskins invited Jeffrey and Gretchen Broadbent to dinner at their attractive home in Hayama, south of Tokyo. After that Jeffrey Broadbent got the inspiration to introduce Bill Shurtleff to Nahum Stiskin. Jeffrey may have called Nahum to check out the idea before suggesting such a meeting to Shurtleff. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

11802. Nedomansky, Safi; Chin, Master Gabriel; Fiering, Steve. 1999. Master Chin played a role in starting the The Soy Plant in Ann Arbor, Michigan (Interview). *SoyaScan Notes.* Jan. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Safi was born in the Czech Republic. She is a yoga therapist and practices *tai chi.* She is actively interested in helping to start a tofu company in either the Czech Republic or in Costa Rica. Her teacher is Master Gabriel Chin, who is a healer, about age 80, and who many years ago helped to start the tofu company in Ann Arbor that is now owned by Bruce Rose.

Talk with Master Chin. Jan. 21. In the mid-1970s he was both a student and a teacher in Ann Arbor at the University of Michigan. He has long been a vegetarian and his hobby is cooking. He also likes tofu and he enjoys making his own tofu at home. He likes Chinese tofu (curded with nigari) better than Japanese tofu; the two types are curded differently, and he always finds the texture of Japanese tofu (whether it is hard or soft) to be mushy–which he does not like. Chinese like to say jokingly that good tofu should have a somewhat springy quality; it should feel like a beautiful woman's breasts. In the mid-1970s he met three students in Ann Arbor who were trying to cook Chinese vegetarian food, and who were interested in tofu. Two of them had never had tofu, but the third one had. He invited all three of them to his home, where he served them his homemade tofu. Then he showed them how to make tofu and talked with them about how to start a tofu company. "That's how the idea started." He remembers two of their names: Steve Fiering and Sue. The third person was tall and he played a musical instrument.

Talk with Steve Fiering of Dartmouth College, New Hampshire. 1999. Jan. 24. Steve remembers Gabriel Chin, especially as a teacher of *tai chi* in Ann Arbor. In the mid-1970s he taught a tai chi class each morning at 7:00 a.m. at The Cube, a central plaza on campus about 2 blocks from his home; typically 3-7 people attended. Steve sometimes attended his classes, and Sue Kalen was one of his more regular students. He also taught an afternoon (5:00 p.m.) tai chi class two days a week where 10-15 people attended. Steve had no idea what Gabriel did other than teach tai chi and cooking; he was also a professional chef who catered meals. Steve also recalls going to master Chin's house for a vegetarian meal, which included some tofu dishes prepared from tofu that Master Chin had made himself; it was very hard to get any tofu in those days. Steve recalls that he went to Master Chin's home at about the same time he started making tofu commercially in the basement of the bakery, and that was only on Sundays. "We'd make 40-50 pounds, which would go into the co-op next door, and they'd be gone on Monday." Steve thinks that Sue Kalen had the idea of asking Gabriel to cook them some tofu. He recalls that the spark which got him making tofu was *The Book of Tofu*, by Shurtleff and Aoyagi–(published in Dec. 1975), followed

© Copyright Soyinfo Center 2013

by a pre-publication edition of *Tofu and Soymilk Production* (first available in August 1977). Another spark may have been the visit to Gabriel's home, but he is not sure whether that visit too place before or after they started making tofu commercially on Sundays on a small scale. "We might have visited Gabriel's home when we were trying to bring tofu into the co-op and it was hard to get. It is quite possible that we have never made tofu commercially at the point that Sue got us together with Gabriel." The last Steve heard–years ago–Sue was in New Mexico. The third person would have been Chris Coon–who Steve thinks still lives in the Ann Arbor area. The tall musician was Steve, who played mainly five-string banjo and some clarinet. Bruce Rose, who originally owned Rosewood Foods, a company that distributed cheese, bought The Soy Plant after it had pretty much collapsed and declared bankruptcy. Steve has noticed that tofu has become "very mainstream." Steve is still a part owner of Bean Machines, Inc.–together with Wally Rogers (Rogaczewski). Wally first got interested in tofu and soyfoods while he was working on a business degree at the University of Michigan. He joined the Soy Plant cooperative after they had moved to Ann Street (in late 1977 or 1978) and made tofu there regularly. He was about the sixth or seventh person to join, and he worked there for about 4 years. Wally and Dan Ecclestone were the two key people after Steve left. Later Steve and Wally learned that Larry Needleman was trying to sell Bean Machines, and Wally was looking for a new career–after being in real estate.

Note 1. The Sue would be Sue Kalen. Note 2. The Soy Plant started making tofu commercially in about January 1977 in Ann Arbor. Note 3. Bruce Rose has never heard this story. But he has met Master Chin who visited his factory, where he showed some Canadians (now Bruce's competitors) how to make tofu. Address: 1. 1940 Golf View Dr., Apt. 202, Troy, Michigan 48084; 2. Ann Arbor, Michigan. Phone: 248-643-7932.

11803. Lacina, Tom. 1999. Starting a tofu manufacturing company on his farm in Iowa, and making the tofu from soybeans he grows (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tom is the founder and owner of Midwest Harvest Corp. He began making and selling tofu this month. His company currently makes only one product, firm tofu. His distributor to the health food market is Blooming Prairie. He is both a lawyer and a farmer (he started as a lawyer then became a farmer) so he grows many of the soybeans used to make the tofu on his own farm–without chemicals. He grew up on this farm, and both his father and grandfather farmed this land.

He has been growing identity-preserved soybeans for the Japanese market for about 7 years. He started with the Pioneer Better-Life program (no chemicals were allowed), then that company was bought out by North Country Seeds in Ormsby, Minnesota. The varieties he grew were LS301, then HP204 (HP stands for "high protein"). Now he sub-contracts out the organic soybeans, which he also uses in making tofu, to small organic farmers in the area. He is considering growing organic soybeans himself in the future.

When selecting a soybean variety to grow organically or without the use of chemicals, its agronomic properties are much more important than its characteristics that effect the final tofu flavor, texture, or yield of tofu. Tom basically looks for a soybean variety that will form a canopy quickly to block growth of weeds; this becomes the key determinant of soybean yield. His taste tests show that the effect of different food-grade soybeans on the tofu flavor is very subtle.

Organic certification in Iowa is presently a mess; growers are having great difficulty get the certifications conducted. OCIA is having big problems; they are notorious for not getting out to the fields on time and not getting their paperwork done. It is very confusing. OCIA split with the central certification organization. The good news is that demand for organic soybeans is very strong.

Yet organic does not necessarily mean value added; remember that soybeans are part of a 3-year or 5-year rotation, and some of that time the fields are planted to cover crops that create little or no income. Moreover, most organic growers get 40 bu/acre compared with about 60 bu/acre for most regular commercial growers.

Tom's packaging is unique–a paperboard sleeve over a plastic tub. On the sleeve is the story of how the soybeans are grown and the tofu is made. He uses a Takai system, that was ordered and installed for him by Bar N.A.; he did not want to deal with the problems of importing equipment, and he wanted some expertise to come with it. He watched tofu being made at both INTSOY in Illinois and on the self-contained Takai system at Iowa State University. He was been in contact with Walt Fehr, a soybean breeder, and Dr. Lester Wilson, who is "Doctor Tofu"–both at Iowa State. Dr. Wilson has visited his tofu plant on his farm. "Quite a few people in the state of Iowa are fascinated by the idea of a farmer doing this kind of value-added agriculture." His wife and sister, who are called the "soy sisters" work at the end of the tofu production line, doing the curding and controlling the quality at that end; they are also developing tofu recipes for the Midwest. Tom's brother-in-law is the operations manager.

Tom continues to work as a lawyer (partly to pay the bills), and he works in the tofu factory several days a week. Tom has no doubt that his business will survive; the big questions are (1) How much do they want to grow; from day one they have not been able to keep up with demand. (2) What will they do if ConAgra decides to set up a big tofu plant in Iowa.

Update: Talk with company representative. 2000. May 22. The company is doing "extremely well." They are looking for a source of organic calcium sulfate. Address:

Midwest Harvest Corp., 3635 Hwy 146, Grinnell, Iowa 50112. Phone: 515-236-5170.

11804. Golbitz, Peter. 1999. Re: Follow-up letter concerning FDA proposed health claim for soy protein. Letter (fax) to members of the Soyfoods Association of America, Jan. 25. 1 p.

• ***Summary:*** This fax is on Soyfoods Association letterhead. "It has been brought to our attention that the proposed rule would exclude soy products that don't fit FDA's definition of 'low fat,' which is equivalent to 3 grams of fat per serving. Unfortunately, this would exclude most tofu sold in the market today, as well as soymilks that have more than 6 or 7 grams of protein per serving. This is due to the soybean's natural ratio of approximately 2:1 for protein to fat. Naturally processed soyfood products that have the minimum 6.25 grams of soy protein per serving are likely to have at least 3 grams of fat per serving. Tofu, soymilk, tempeh and soy flour products that contain more than 7 grams of protein per serving might not be able to get the proposed health claim. I don't believe that this was the original intention of FDA in proposing this rule, as they actually used tofu and soymilk in their example of products that may qualify for the health claim."

"I urge all of you to carefully examine your product's nutritional profiles, and if you feel it is important to your company, please send a comment to FDA regarding this potential problem right away... today!" Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

11805. Sky, Beverly Stiskin. 1999. Recollections of years in Japan from June 1969, starting Autumn Press in Kyoto, and meeting William Shurtleff in Kyoto. Part II (Interview). *SoyaScan Notes.* Jan. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Stiskins arrived in Tokyo, Japan in June, 1969. Beverly, who was five months pregnant with her first child, Reuben, almost had a miscarriage from the airplane flight. They stayed for about a month in Tokyo and met Gary Peacock (who was a musician), and David and Cecile Levin–all of whom were interested in macrobiotics. Through David Levin, Nahum made a connection with the Takeda family in Kyoto. The Takedas allowed the Stiskins to live in their three-building compound, the *Higashiyama Sanso,* in eastern Kyoto, behind *Kiyomizu-dera.* They moved in in July, and Reuben was born in August. In September 1969 they both began to attend the *Nihongo Gakko* (Japanese language school) and Nahum began to study Shinto; he began to study with an esoteric Shinto sect that had preserved many old and beautiful rituals–and they were connected to Judaism. He also got involved with Japan-Israel Society whose aim was to teach Hebrew to Japanese.

After a year they moved to a small Japanese house in Uzumasa (near *Kitano-jinja*–Kitano Shrine), west of Kyoto. Ty Smith lived with the Stiskins for a while. Wally Gorell also lived in that part of Kyoto, but further west near Arashiyama.

Note: William Shurtleff arrived in Japan on 16 Jan. 1971, went straight to Kyoto and enrolled in the Japanese language school, the same one the Stiskins were already attending.

Beverly recalls that she and Nahum first met William Shurtleff at the *Nihongo Gakko.* Nahum and Beverly lived in Kyoto for 2 years. One night the Stiskins hosted an evening get-together and talk by Helen and Scott Nearing at their home near *Kitano-jinja.* Shurtleff was there, his first visit to their home. Beverly tells Shurtleff: "I remember you distinctly in Kyoto, and this will verify that that was where we met. First, we were macrobiotic and strictly vegetarian, so we were interested in tofu. You told us that you were very interested in tofu and you had just started or were about to start doing research on tofu–finding all the different ways that it is prepared, etc.

"You told us this because Nahum and I had already started Autumn Press in Kyoto. The Autumn Press logo, a sheaf of harvested brown rice, was symbolic of our mission which was to publish books to feed the mind and spirit. Erewhon was food for the body. Autumn Press was conceived of as harvesting the knowledge of Asian and American cultures to nourish the challenges of the new age. Our first book was Nahum's book, *The Looking-Glass God: Shinto, Ying-Yang, and a Cosmology for Today.* We published it ourselves because nobody else would. We borrowed $2,000 as 'seed money' from both our families (both sets of parents), did an initial printing in Japan of about 500 copies in 1971, and warehoused the books in our home west of Kyoto. Then we discovered that this book did not have copyright protection in the USA so in 1972 we published a much nicer hardcover edition with Weatherhill (New York and Tokyo). By 1972 we knew what we wanted to do in life–publish books. We had tapped into a very interesting resource for information–although none of the other publishing companies thought it was interesting. Who wants to know about Shinto? Brown rice? Forget it! Tofu? Are you crazy?

"You had a shaved head and a shoulder bag (for carrying books to school) that was made out of a big burlap bag and had the words "Kokomo Rice" [probably Kokuho Rose–a brand of short grain brown rice grown by Koda Bros. in Dos Palos, California] prominently on the side. I remember thinking that you were a unique character. I knew a little bit about you–that your family was fairly well off, but here you were living like a strict Buddhist monk, an itinerant monk from California. You wore very simple clothing, plus that rice bag–which I thought was the ultimate in humility. I think you were in Nahum's classes at the language school; you weren't in any of my classes.

"But the main point is this: Nahum and I had a

© Copyright Soyinfo Center 2013

publishing company and we were both interested in tofu–and potentially in a book about tofu. You knew this clearly when we were all in Kyoto in 1971, and we knew you were thinking about doing research and writing something about tofu. You might have first put pen a year or so later after you had moved to Tokyo, but the idea was already brewing while you were in Kyoto."

The Stiskins then left Kyoto and moved to Tokyo, where Nahum worked with a marketing company, turning their Japlish marketing studies into good English. Shurtleff left Kyoto on 4 Dec. 1971 to continue his Japanese language studies at International Christian University (ICU) on the outskirts of Tokyo. At ICU he stayed with Jeffrey and Gretchen Broadbent. Jeffrey and Bill took the same intensive Japanese language course. Gretchen was very interested in tofu, and by April 1972 was even studying tofu-making with a local tofu maker.

Beverly has no recollection of ever meeting Jeffrey or Gretchen Broadbent. "The Broadbents may have given you our new phone number in Hayama, south of Tokyo, but the important connection had already been established 6-9 months earlier in Kyoto."

"I remember the day you called Nahum, and I remember him getting off the phone and saying 'Guess who I just talked to.' We both remembered you from Kyoto, and I remember the call because we both liked the idea of a book on tofu very much. That was a turning point for us and Autumn Press."

Shurtleff then recalls that first meeting on 13 Jan. 1973 at the Stiskins' attractive home by the ocean in Hayama (2113 Isshiki, Hayama-shi, Kanagawa-ken, Japan 240-01). "I explained to Nahum that I thought a book about tofu would be interest to many people in America. He liked the idea immediately. I was astonished that anyone else shared my idea. He quickly looked over the table of contents and a few pages I had written by hand on the subject, then pulled a publishing contract out of his desk drawer and said 'please sign here.' I didn't even read the contract. There was no discussion of terms or of an advance–I didn't even know what an advance was. I signed, he signed it, we each took a copy and that was it. Before we left, Nahum showed me comments he had received from a professional cookbook editor who he had hired to edit the macrobiotic cookbook he was writing with Lima Ohsawa. I was very impressed that he would take such a professional approach. I remember him emphasizing that in a good cookbook, in the list of ingredients, the words 'teaspoon' and 'tablespoon' are always written out, never abbreviated as 't.' and 'T.' I found it remarkable that we had a meeting of the minds and signed a book contract in 1 or 2 hours."

This would be the sixth book that Autumn Press would publish: (1) *The Looking-Glass God,* by Nahum Stiskin (published in 1971 in Kyoto, revised ed. 1972). About Shinto–Japan's oldest religion. (2) *The Art of Just Cooking,* by Lima Ohsawa with Nahum Stiskin (1974, in Hayama, Kanagawa-ken, Japan). A macrobiotic cookbook. (3) *The Gayatri Mantra: Yoga for Beginners,* by Satyavan [S.K. Roy] (1974). A tiny, 50-page book. (4) *Cry of the People and Other Poems,* by Kim Chi-ha (1974). A translation into English of poems written from jail by a South Korean dissident poet, criticizing the country's dictator. (5) *Island of Dreams: Environmental Crisis in Japan,* by Norie Huddle, Michael Reich, and Nahum Stiskin (1975). A book about pollution in Japan. The Foreword was by Paul Ehrlich, and the Afterword by Ralph Nader.

Beverly continues: One of these books, *Cry of the People,* would later have a profound effect on both Autumn Press and *The Book of Tofu.* Bob Bernstein at Random House was well acquainted with Kim Chi-ha, his protest poetry and the fact the he was now in jail. Bob wanted to try to help him. When he heard that Kim's poems had been published, Bob said "I want to meet the publisher." When Nahum showed him Autumn Press' various books, Bob decided to include Autumn Press in Random House's small publishers distribution program. That quickly led to Ballantine Books (a Random House subsidiary) buying the mass market paperback rights to *The Book of Tofu* in 1978.

"Nahum was perfectionist–and so were you. This led to some problems and difficult compromises along the way, but in the end it led to a quality book... I remember one of the first times we met at Hayama, you showed up with Akiko and this box full of papers–which was supposed to be 'the manuscript.' It was very disorganized, with recipes and text all mixed up together. Nahum and I both remember that clearly and still laugh about it." Address: Boston, Massachusetts. Phone: 617-776-8749.

• ***Summary:*** The Soy Sisters, Alecia Lacina and Francine Coons, work with their husbands Tom and Dave, to make and distribute Midwest-Harvest Tofu. The introduction states: "When we are not in the factory making tofu, we are in our experimental kitchen, working together as the Soy Sisters. Our goal is to show that tofu is a kitchen staple which can be incorporated into many of our favorite

© Copyright Soyinfo Center 2013

Midwestern recipes."

Contains the following seven tofu recipes: Cream pie. Brownies. Tofu jello. Quiche. Lasagna. Chili. Pesto Pizza. Address: 3635 Hwy. 146, Grinnell, Iowa 50112. Phone: (515) 236-5170.

11808. **Product Name:** Firm Tofu, Soft Tofu.
Manufacturer's Name: Midwest-Harvest Corp.
Manufacturer's Address: 3635 Hwy 146, Grinnell, IA 50112. Phone: 515-236-5170.
Date of Introduction: 1999. January.
Ingredients: Water, soybeans (grown without the use of pesticides), natural coagulant (calcium sulfate).
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray (No. 2 HDPE) with heat-sealed, peel-off plastic film lid. Around the tray is a paperboard sleeve.
How Stored: Refrigerated.
New Product–Documentation: Spot in *Bluebook Update.* 1999. Jan. p. 3. "Midwest-Harvest to supply tofu." Talk with Tom Lacina, founder and owner of Midwest Harvest Corp. 1999. Jan. 24. He began making and selling tofu this month (Jan. 1999). His company currently makes only one product, firm tofu. See Interview.

Package (including sleeve) sent by Tom Lacina. 1999. Feb. 16. he tray is white and the plastic film is white with the following printed in black: "Made from Iowa soybeans. Midwest-Harvest. Fine soybean products. Tofu. Keep refrigerated and change water daily. This unit not labeled for retail sale. The paperboard sleeve is printed on both the outside (color) and inside (black and white). The text on the sleeve is similar in content and placement to that on the film except: Near the top is an oval logo of a soybean plant. Behind the logo is a color painting or a farm landscape (rolling hills and trees plus small farmhouse), titled "Young Corn" painted in 1931 by Iowa artist Grant Wood. Under the word "Firm" is "Soy Sisters recipes inside." Under the large word "Tofu" is "Soybeans grown without pesticides." The back of the sleeve is quite similar to the front; it states that the company is "Operating from third generation farm near the center of Iowa..." On the inside of the sleeve are two meatless recipes: Chili with Tofu, and Quiche with Tofu. "The Soy Sisters, Alecia Lacina and Francine Coons, work with their husbands Tom and Dave, to make and distribute Midwest-Harvest Tofu. When not making tofu, the Sisters cook in their Soy Sisters kitchen, preparing recipes Midwesterners will enjoy. Give their recipes a try and make Midwest Tofu a staple in your kitchen. Visit the Midwest Harvest Website at www.midwestharvest.com. For more recipes and additional information. e-mail us at mharvest@pcpartner.com with your comments and questions or to share recipes or tofu tips." Accompanying the product is a leaflet (8½ by 11 inches, printed front and back) titled "Supplier Profile." It gives a history of the farm from 1927 and of the company.

Talk with Deb Kenealy of Midwest Harvest. 2000. Aug. 24. The company now makes Soft Tofu, which was introduced in about Feb. 1999. They make only organic tofu. They are expanding their operations, and are in the process of planning a new plant.

11811. White Wave, Inc. 1999. Soyfood recipes for the American table: Favorite dishes from the folks at White Wave–America's soyfood company since 1977. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. with full-page color photos. Index by product. General index. 23 cm. [13 ref]

• ***Summary:*** Contents: About White Wave: Brief company history ("Entrepreneur Steve Demos founded White Wave, Inc., in 1977..."), healthy soil means healthy food (White Wave has supported organic farming practices for over 20 years). About soy. About White Wave products: Tofu, tempeh, Silk soymilk, Silk dairyless soy yogurt, Soy A Melt (cheese alternative), Seitan. Breakfast. Appetizers. Soups. Salads. Main dishes. Desserts.

A very disappointing, overly commercial "quickie" book with two main problems. (1) Every recipe calls for the use of "White Wave" soy products. (2) Many of the recipes in this book are taken from other 11 other books published by The Book Publishing Company–but we are not told which recipes are copies and which are original, or (on each page) where a particular copy came from. The color photos are attractive. This book would be fine if it were given away by White Wave to promote its products. Address: Boulder, Colorado.

11812. Soyfoods Association of North America. 1999. Soyfoods Association of North America celebrates April as Soyfoods Month (News release). Washington, DC. 2 p. Feb. 15. 28 cm.

• ***Summary:*** According to HealthFocus, a research firm located in Des Moines, Iowa, that tracks consumer trends: (1) In 1998 some 16% of U.S. shoppers use soyfoods such as tofu, tempeh, tofu hot dogs, etc.–up from 13% in 1996. (2) 10% of shoppers in 1998 are eating more soy specifically because they believe it will reduce their risk of disease–this is an increase of 3% from 1996 data.

What forces are driving this increased interest in soyfoods? (1) The double-digit increase of Asians in America. (2) Baby boomers (now in their 50s and more interested in longevity and health) fighting death, disease, and aging. (3) More and more teens and young adults are vegetarians or partial vegetarians, choosing more plant-based foods. An ADM survey found that 97% of colleges and universities now offer meatless entrees on their menu. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

11813. Soyfoods Association of North America. 1999. Soyfoods sales soar with increased consumer acceptance (News release). Washington, DC. 2 p. Feb. 15. 28 cm.

• ***Summary:*** During the past year, sales of soymilk grew 53% in supermarkets and 24% in natural food stores, according to recent data from SPINS. Retail sales of soymilk reached $161 million in 1997, and are projected to reach $300 million by the year 2000 according to Soyatech, Inc. (Bar Harbor, Maine).

Sales of tofu last year reached $43 million in natural food stores and $37 million in supermarkets. This increase in tofu sales is being sparked by a variety of new baked, flavored, and smoked tofu products, and these categories are growing 12% faster than unflavored tofu products, according to SPINS data.

Meat alternatives are also experiencing very rapid growth, with sales last year growing 53% in supermarkets and 20% in natural food stores, according to SPINs. The fastest growing product in this category is the meatless deli slices, sales of which grew by more than 100% last year. Total sales of meat alternatives should reach $325 million this year, with an estimated 62% of that total coming from

© Copyright Soyinfo Center 2013

supermarkets–according to Soyatech. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

11814. Demos, Steve. 1999. The market for non-dairy yogurts and puddings in the United States (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** White Wave's soy yogurt used to be named "White Wave Dairyless." But in March 1998 the company reintroduced and repositioned the product as "Silk: Dairyless Soy"–still as a spoonable dessert. It had been reformulated, and a tamper-free sealed lid was added. Steve estimates that the U.S. market for non-dairy yogurts is about $3-$4 million wholesale or $6-$8 million at retail. It is definitely growing at a very healthy rate–more than 30% a year. Silk has about 80% of that market–based on adjusted SPINS data. SPINS gives a somewhat distorted view of reality because it includes only selected distributors (and omits many of the biggest distributors such as Tree of Life, Stow Mills, etc.), and selected natural food stores–from which the information is extrapolated. Today there is only one major competitor (Nancy's of Oregon), and one small competitor (he forgets the name) that sells mostly in the Boston and New England markets. Soy yogurt is a big, important product for White Wave, which sells 100,000 units or more of Silk soy yogurt per week. The company sells more units of tofu, but the tofu generates less profit per unit and requires a huge investment in money and factory space. Yet the company's flagship product is Silk Soymilk–which is number one in both units sold and revenues earned. "Silk is our grand slam."

Ted Nordquist is expected to introduce a new soy yogurt at the Anaheim show next month under the WholeSoy brand. Steve thinks it is being made at Brown Cow in Petaluma, California.

Jonathan Gordon reformulated White Wave's soy yogurt shortly before he left–and he did a good job except for the stabilization. When you make soy yogurt that is set in the cup, then you stir with a spoon, it doesn't fracture smoothly like dairy yogurt. Woody Yeh's SoyaLatté, for example, was an excellent product, but it didn't look that good when you ate it. Making a good soy yogurt is very difficult; there are many small tricks. Soy yogurts are almost always pre-mixed, what is called European-style. You first make the soy yogurt, then put it into huge blenders which effectively homogenizes the consistency, causing a loss of body in the product. So you must reconstitute the body. After Jonathan left, White Wave hired an outside firm to help reestablish the stabilization system. Now White Wave has a "nice, fluffy, reconstituted soy yogurt structure again."

White Wave has two sizes (SKUs) of plain (unflavored) soy yogurt: a quart and a 6-ounce cup. The quart sells phenomenally well. It provides strong support to the premise that flavored yogurts ultimately bring many people to plain. About 15-20% of all White Wave's soy yogurt (by volume) is sold unflavored–even though it is the same price as the flavored products, and it is premixed just like the flavored products. Many people like to use the plain quart in home cooking. They may sweeten it with maple syrup, etc. Every week, the plain sells as well as the most popular flavor

A close relative of soy yogurt is soy pudding (or soy custard). Both are basically spoonable desserts, but the pudding is not acidified, and therefore probably has to be sold in an aseptic package. Steve believes the soy pudding market is "about to explode" and this category will upstage soy yogurts in the future. Steve would bet that at least three new soy puddings (aseptically packaged) will be introduced within 60 days. Steuben Foods is coming out with one–probably in chocolate and vanilla flavors–probably at Anaheim in March. Jonathan Gordon would love to develop one but he has signed a non-compete agreement. The pudding is basically a co-packed product; nobody would put an aseptic system just for that–at least at the beginning. Finding low-acid aseptic packers is easy. White Wave is very focused on developing a Silk soy pudding that will be aseptically packaged but sold refrigerated–next to the other Silk products. "This product will be huge! It could be the biggest soy product–after you get acceptance of the word 'soy.' But it will be a long time before its sales could pass those of Silk Soymilk." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11815. Demos, Steve. 1999. New developments with tofu at White Wave (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Last December White Wave finished installing truly automated equipment at their tofu factory. They finalized the Takai system that does the curding and pressing–using a boxless, clothless pressing system, with a matching carrousel, press table, and input feed. "Being the slow learner I am, it took me two decades to put this all together, but it now burps out 9 pounds of tofu every 17 seconds." The total tofu production system is made up of subsystem components built on American innovation. It combines pasteurization and cooling systems that White Wave invented, cooking and extraction systems that both Bean Machines and some other extractors put together, but the heart and soul of the tofu production system is the last part–from Takai. It is now a continuous-flow system where no person touches beans or any part of the process until they put the finished block of tofu in the package at the end. It runs at 1,000 pounds of dry beans per hour–just making tofu. "It rumbles and roars–I just love to get up out of my chair and watch it run." People watch the system but nobody touches or handles anything, or makes any adjustments. Starting with wet beans, they are automatically delivered, transferred, ground, cooked, extracted, curdled, pressed, cut, rinsed, leached of coagulant, and delivered to the packing machines. About 50% is vacuum packaged and 50% is water

© Copyright Soyinfo Center 2013

packed; this part has not yet been automated, but they are close. Eventually the only manual operation will be putting the sealed packages of tofu in a 12-pack carton.

Steve was recently given a tour of the House Foods tofu plant in southern California. The two companies don't compete with one another, and they are exploring some joint projects. "They sell a commercial variety of Asian-style tofu, and we sell what we call 'Honkey-Fu;' its just not Asian-style tofu–much firmer with a different mouthfeel. Steve took Shoan Yamauchi through White Wave 15 years ago. Mr. Yamauchi was able to ship his tofu nationally in part because most supermarket produce routes originate in California.

White Wave's identity and focus is presently on Silk Soymilk and Silk spoonable desserts (not only yogurt), and tofu under the White Wave brand. The company's major focus on tofu is baked flavored tofu–which has a much larger market than most people realize. The growth rate and the consumer acceptance of baked tofu is remarkable! We have a heavy commitment to developing this category. "We believe that tofu will be, to a large extent, a snack food. Dairy yogurt entered the U.S. market as a product that is eaten on a park bench at 11:30 in the morning. The consumer accepted this product as a lifestyle issue–we want to be healthy (eat healthy benefits foods), eat outdoors, and eat small meals. So yogurt kind of entered on that park bench. Even to this day, it's perceived as a light meal for health benefits. That's how White Wave would like to position baked tofu–as a grazer's food with very big potential." A closely related product is smoked tofu; White Wave is now installing smoke houses, and one will be fired up for the first time next week. According to SPINS data, White Wave has 60+ percent of the flavored tofu market in the USA and 31% of the total national block tofu + flavored tofu market–measured on a dollar basis. Even though Nasoya or Morinaga outsells White Wave in units, White Wave outproduces them in revenues. White Wave is the only company that has been willing or smart enough to make the large investment in equipment required to make baked or smoked tofu economically; the company has devoted almost $1 million to developing the flavored tofu category. Smoke and Fire, Wildwood, and Quong Hop all have good, innovative flavored tofu products, but none of them have devoted the capital to meet huge tonnage. White Wave will always make and sell block tofu, but Steve doesn't care if he never sells another block of tofu–except for his own consumption. He want to sell convenience-oriented, flavored tofu products. We want to sell value-added products–and "we will not be oversold! If your prices are higher than ours, we will raise ours to match or beat you! It's just good old American greed."

White Wave's total revenues and tonnage continue to grow a very healthy rate. "For us, a bad year is less than 30%. After 21 years, I've gotten used to riding on the back of a tiger." We are predicting 50% or more growth rate for the entire company in 1999. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11816. Demos, Steve. 1999. New developments with Silk Soymilk and related products at White Wave. Company growth rates. Looking for one large investor (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Despite all the exciting new developments with tofu at White Wave, Silk Soymilk is the company's flagship product; it is number one in both units sold and revenues earned. "Silk is our grand slam." Silk is now labeled as "lactose-free soymilk." The word "milk" has a strong positive connotation and this makes it clear that Silk is an alternative for milk. "Silk has everything that milk has except for the 'milk' part. James Terman came up with that one!" White Wave tries to fortify Silk Soymilk to be nutritionally equivalent to cow's milk.

The FDA has under review (even though they have tabled it) a petition submitted by the Soyfoods Association to legalize the word "soymilk" on product labels. As long as the word "soymilk" is being reviewed by the FDA, White Wave can legally use that word on their products. The FDA cannot make White Wave drop the word unless and until they pass a negative ruling on it–and then White Wave would have a reasonable amount of time to change its labels. Steve is aware that Wildwood Natural Foods was the first to take advantage of this petition to use the word "soymilk" on its product.

White Wave is now looking for one large investor. This coming spring White Wave will be lining up with some very large national companies as distributors and manufacturers of Silk. The interest in Silk by large companies is unbelievable. The companies that are showing interest in working with and/or investing in White Wave are among the top 100 in the U.S.–and we don't have to do much of a sales job. "They'll take it on any level they can get it." All they want is an entry point, so they can look at it later. They also believe that Silk will attract some very, very large competitors. We think that the Silk brand, the product, the position, the price–everything is lined up for Silk right now. We want to see if we can get that in as a household term. If it becomes a household brand name, we can sell Silk anything. We can always line extend. So our focus is on filling up that dairy case with Silk brand beverage and beverage-like products."

White Wave's identity and focus is presently on Silk Soymilk and Silk spoonable desserts (not only yogurt), and tofu under the White Wave brand.

White Wave's total revenues and tonnage continue to grow a very healthy rate. "For us, a bad year is less than 30%. After 21 years, I've gotten used to riding on the back of a tiger." We are predicting 50% or more growth rate for the entire company in 1999.

James Terman was at Bowling Green College in Ohio for 3-4 years at the same time as Steve and Pat Calhoun.

© Copyright Soyinfo Center 2013

Then James went on to be the art director for the state of California's university system–including Berkeley, Santa Cruz–all those universities. Then he and Steve ran into one another in Boulder and now he works for White Wave. "We can honestly say that we have a lot of fun working together as a team." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

11818. Cai, Tiande; Chang, Kow-Ching. 1999. Processing effect on soybean storage proteins and their relationship with tofu quality. *J. of Agricultural and Food Chemistry* 47(2):720-27. Feb. [41 ref]
• ***Summary:*** Tofu was made from 13 soybean varieties (both named and unnamed) using three different methods (bench, pilot, and commercial production). Beta-conglycinin (7S) and glycinin (11S) are the major "storage proteins" in soybeans and soy foods. Their content and ratio vary with soybean varieties and environment. Different soybean varieties had significantly different contents of storage proteins ranging, respectively, from 7.3 to 9.9% and from 14.1 to 22.9% on a dry matter basis. The ratio of 11S to 7S proteins ranged from 1.64 to 2.51 among the soybean varieties; thus 11S is more prevalent.

Making tofu involves a complex interaction of many factors, but the main ones are the chemical composition of the soybeans and the processing conditions / method. It is unclear how some of the factors related to chemical composition of the soybeans affect tofu yield and quality, and it is not uncommon to find conflicting results among studies. Two studies reported that soybean varieties high in protein content produced tofu with a high yield and firmer texture. However two other studies found no correlations between soybean protein content and tofu yield. One study reported that soybean protein content correlated negatively with tofu hardness and fracturability.

It was concluded that the processing method had a significant effect on the content of storage proteins in the finished tofu. Address: Dep. of Food and Nutrition and Dep. of Cereal Science, North Dakota State Univ., Fargo, ND 58105.

phytoestrogens, polyps, potatoes, Price–Weston, prostate cancer, protein, rice, Schweitzer–Dr. Albert, sea vegetables, seitan, sesame, shoyu, soy foods, tempeh, tofu, umeboshi plum, vegans, vegetarians, wakame, wartime restricted (diets, incl. World War I and II), whole grains. Resources. About the author. Address: Box 10, Becket, Massachusetts 01223. Phone: (413) 623-5742.

11821. Lamp, Greg. 1999. Soyfoods health claim nears FDA okay: Heart-risk labeling should boost soybean demand. *Soybean Digest.* Feb. p. 68.
• ***Summary:*** Funds from the soybean checkoff helped generate the research and information that was submitted to the FDA. The process began in 1995 with financial assistance from the Illinois Checkoff Board and the United Soybean Board (USB). Roughly $1 million in soybean checkoff funds were invested in the project. "A coalition to develop the soy health claim involved ASA [American Soybean Association], USB, state checkoff boards and industry partners, such as Protein Technologies International, Central Soya and the Archer Daniels Midland Company."

An estimated 20% of all Americans (54.2 million adults) have high blood cholesterol levels–over 240. ASA predicts that if each of these people consumed 25 grams (less than 1 ounce) of soy protein each day, annual demand for soybeans would increase by more than 55.2 million bushels.

Consumption of U.S. soybeans in the United States now totals about 1.2 billion bushels a year.

A color photo shows two 3-shelf racks of American foods. Those on the left rack already contain soy protein: Mori-Nu Tofu, Take Care, GeniSoy bars, Harvest Burgers, Galaxy Veggie Slices, SoNice soymilk, Edensoy, Morningstar Farms [Worthington Foods] meat alternatives, etc. Those on the right rack are foods with potential to have soy protein added: Cream of Wheat, Raisin Bran, puddings, Snackwell's cookies, etc.

11822. Making tofu in the traditional way at Awayuki in Amsterdam, Netherlands (Photographs–color prints). 1999.
• ***Summary:*** These eleven color photos, taken in Feb. 1999 and sent by Mitsuo and Atsuko Kamada, show how they make traditional tofu at their shop in Amsterdam. (1) The inside of the shop, sparkling clean, at the beginning of work. (2) Mitsuo (husband) pouring the soaked soybeans into the hopper of the grinder. (3) Ladling the cooked puree from the caldron into a pressing sack hung above a curding vat. (4) Using a hand-turned screw press to press the soymilk from the okara. (5) Atsuko (wife) ladling the whey out of the curding vat into a bucket. (6) Scooping the curds into tall, cloth-lined aluminum forming boxes. (7) Slicing the finished box-sized block of tofu under cold water. (8) Mitsuo and Atsuko, both dressed in white aprons and looking happy. He is holding a cake of tofu in a white container; she is holding a ladle. (9) Mitsuo making deep-fried tofu cutlets in a large wok. (10) Cakes of grilled tofu and deep-fried tofu cutlets on a wooden cutting board. (11) Cakes of finished momen tofu on a wooden cutting board.

11823. Morinaga Nutritional Foods, Inc. 1999. Help! Help! My tofu needs help! Never fear–New Tofu Helper is here! (Ad). *Natural Foods Merchandiser.* Feb. p. 19.
• ***Summary:*** This full-page color ad shows (at lower left) packages of four new varieties of Mori-Nu Tofu Helper: Italian Herb Medley, Shanghai Stir Fry, Eggless Salad, and Garden Scrambler. Across the very top of the ad is written: "Location: Expo West–Booth 755. A desperate cry is heard from the crowd. There's a blinding flash. And suddenly..." A Superman-type figure, with red cape, red-gloved right hand held out, and green uniform, is flying through the air over a fair maid who is crying for help. Below the packages is written: "Able to create great meals in a single pan. Faster than a hungry family. Defender of great taste everywhere. Introducing new Tofu Helper from Mori-Nu. All natural. Dairy-free. Vegan. For more info about new Tofu Helper call 1-800 Now Tofu." Website: www.morinu.com.

Note: The first product of this type with the name Tofu Helper was introduced by Larry Needleman in about 1980–but it was never commercialized.

This ad also appeared in *Vegetarian Times* (March, p. 41 and June, p. 65). Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

11824. **Product Name:** Mori-Nu Tofu Helper: Italian Herb Medley, Shanghai Stir Fry, Eggless Salad, or Garden Scrambler.
Manufacturer's Name: Morinaga Nutritional Foods, Inc.
Manufacturer's Address: 2050 W. 190th St., Suite 110, Torrance, CA 90504. Phone: 310-787-0200.
Date of Introduction: 1999. February.
Ingredients: Garden Scrambler: Vegetable broth (maltodextrin, hydrolyzed soy, corn & wheat protein, soybean oil, soy lecithin), nutritional yeast, dehydrated sulphur-free vegetables (potatoes, carrots, tomatoes, garlic, mushrooms, onions, bell pepper, cabbage, chives), dehydrated soy sauce (wheat, soybeans, salt), unrefined cane sugar, herbs, spices, sea salt.
Wt/Vol., Packaging, Price: 0.92 to 1.10 oz (26 to 31.3 gm).
How Stored: Shelf stable.
New Product–Documentation: Ad (full-page color) in Natural Foods Merchandiser. 1999. Feb. p. 19. "Help! Help! My tofu needs help! Never fear–New Tofu Helper is here!" Each package contains a dry, all natural seasoning mix, meant to be mixed with tofu. The front of each of the four packages is shown in color. This ad also appeared in *Vegetarian Times* (March, p. 41). Samples (12-pack) of products with Labels sent by Art Mio of Morinaga. 1999. Feb. 26. 4.5 by 6.25 inches. On the front of each packet is a

color photo of the prepared product on a white background, with a hole near the top center for hanging on a rack. "Ready in 15 minutes. All natural seasoning mix." For example: Garden Scrambler. "Preparation time: 15 minutes. Mix package with 1/3 cup boiling water. Set aside for 5 minutes. Mash one 12.3 oz. package of firm silken tofu (Footnote: For best results, use Mori-Nu Silken Firm or Silken Lite Firm Tofu) in a medium bowl with a potato masher or fork. Heat 2 teaspoons olive oil in a medium skillet and add tofu. Sauté 1 minute over medium high heat. Add the liquid spice mixture; cook, covered, over medium low heat for 5 minutes, stirring occasionally. Let stand a few minutes and serve. Serving suggestions: Serve with your favorite salsa, fresh fruit, and whole grain bread."

11825. Nutrisoy Pty. Ltd. 1999. Nutrisoy: Certified organic (Sell sheet). Banksmeadow, New South Wales, Australia. 1 p. Front and back.
• ***Summary:*** A large color photo on the top two-thirds of the front panel shows a young man and woman holding hands, walking in the woods, looking at each other. Below that, the text reads: One of the healthiest foods in the world. Across the bottom are three color photos, each 2½ inches square, showing the company's tofu, tofu dessert, and tempeh products.

On the back: "Nutrisoy: Fitness food." There is a brief history of the company and information about the health benefits of soyfoods. "Nutrisoy is an Australian family-owned company dedicated to producing high quality, good tasting, healthy foods. It was established in 1984." Color photos show: (1) The company's tofu and tempeh products. (2) The outside of the brick factory with three delivery vans. (3) Three stainless steel sinks containing cakes of tofu cooling in water. (4) Tofu being packaged in a heat-sealing machine. (5) A secretary typing at a computer.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: Lot 1, 19a Baker St., Banksmeadow, NSW 2019, Australia. Phone: +61 2 9316 5171.

11826. Nutrisoy Pty. Ltd. 1999. Nutrisoy: Fitness food (Sell sheet). Botany, New South Wales, Australia. 1 p. Feb. Front and back. 30 cm.
• ***Summary:*** A large color photo on the bottom half of the front panel shows the company's tofu and tempeh products. Three paragraphs above that are titled: Nutrisoy. Tofu. Tempeh.

The back is titled "Nutrisoy products range." A color photo shows each of the company's products, by category. Plain and pre-marinated tofu: Plain Firm Tofu, Tofu Vegies, Tofu Tempeh, Tofu Herbs. Pre-cooked tofu and tofu burger: Tofu Spicy, Tofu Teriyaki, Tofu Vegies Burger, Tofu Tempeh Burger. Tofu deserts and silken tofu: Tofu cups in strawberry, apricot, mango, and tropical flavors. Silken tofu. Tempeh and tempeh burger: Plain Tempeh. Seasoned Tempeh. Mildly Spiced Tempeh. Tasty Tempeh (marinated in ginger and soy sauce). Tempeh Burger.

An attached, 1-page product list, gives the name and weight of all the company's products, including those under special or private labels such as Soyco, Nutal, and a few Indonesian names. They also sell hommus (hummus), chickpea veg. burger, spirulina juice, and berry juice.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: 15 Hannon St., Botany NSW 2019, Australia. Phone: +61 2 9316 5171.

11827. Nutrisoy Pty. Ltd. 1999. Tofu & tempeh: For a high energy breakfast, quick lunch, or hearty main meal (Leaflet). 255 Forest Road, Arncliffe 2205, NSW, Australia. 3 panels each side. Each panel: 21 x 10 cm. Feb.
• ***Summary:*** This undated color leaflet contains recipes for tofu and tempeh, and shows color photos of the front panel of the company's products. One panel is dedicated to a short company history and descriptions of tofu and tempeh.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: Arncliffe, NSW, Australia.

11828. Nutrisoy Pty. Ltd. 1999. Tofu & tempeh: The healthiest foods. Recipes (Leaflet). 15 Hannon St., Botany NSW 2019, Australia. 3 panels each side. Each panel: 21 x 10 cm. Feb.
• ***Summary:*** This undated color leaflet (Nutrisoy's 2nd) contains recipes for tofu and tempeh, and shows color photos of the front panel of the company's products. One panel is dedicated to a short company history and descriptions of tofu and tempeh. A color photo on the front panel shows a young man and woman holding hands, walking in the woods, looking at each other.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: Arncliffe, NSW, Australia.

11829. *Ontario Soybean Growers' Marketing Board Newsletter.* 1999. OSGMB celebrates 50 years. Feb. p. 1.
• ***Summary:*** "Fifty years ago, soybeans were a new crop in Ontario. Soybean growers decided they needed an organization to represent their interests, and the Ontario Soybean Growers' Marketing Board was born.

"Today, soybeans are the largest acreage crop in Ontario, with expanding domestic and export markets. the OSGMB works on behalf of soybean producers in market development, research, lobbying, negotiating and communications.

"The Soybean Board is planning several special activities in 1999 to commemorate this milestone, including publishing a 50th Anniversary Magazine, launching a new tofu recipe brochure, holding special events at the Annual

© Copyright Soyinfo Center 2013

Meeting,..."

Note: This is the first issue of this newsletter seen that contains color photos or illustrations. A color illustration shows the 50th anniversary logo. A color photo shows the 1998 OSGMB directors, some seated at a table, some standing. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11830. Soyfoods Association of North America. 1999. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.

• ***Summary:*** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America–Industry insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of "April is Soyfoods Month," 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans–Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti–The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. (21) Sweet beans–Vegetable soybeans, from Sno Pac. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

11831. Stevens & Associates, Inc. ed. and comp. 1999. U.S. 1999 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm. [23 ref]

• ***Summary:*** This is the fourth edition of the U.S. Soyfoods Directory. Page 2 states: "And a special thanks goes to the Soy Protein Partnership for sponsoring this project." For a list of farmers and companies that grow soybeans organically, see p. 28. This 1999 Soyfoods directory is now available online at www.talksoy.com. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

11832. Tree of Life, Inc. 1999. We're always coming up with new ways to use the ol' bean (Ad). *Natural Foods Merchandiser.* Feb. p. 71.

• ***Summary:*** This full-page color ad shows (around the outside) photos of five different tofu dishes. The text begins: "If your customers are getting tired of tofu, perhaps you're not stocking the right brand! From traditional to reduced fat to baked and smoked varieties, you'll find more Tree of Life tofu choices than there are days of the week. And most are already seasoned and cooked. So all your customers have to add is a little imagination and voilà–dinner is served." At the center is one color photo showing 12 tofu products, each is attractive packages. Below that are the names: "Organic Firm Style, Reduced Fat Firm Style, Water Pack Firm Style, Baked, Savory Baked, Ready Ground, Savory Garlic Ready Ground, Hot 'N Spicy Ready Ground, Smoked, Hot 'N Spicy Smoked, Lemon Garlic Smoked (New), and Herbs & Spices Smoked." At the right center, in a circle, is written: "Congratulations NFM–20 years of excellence." Website: www.treeoflife.com.

Note: A similar ad, titled "Looking for ways to use the ol' bean?," appeared in May-June 1998 in *Natural Health.* The color photo showed 10 tofu products. Address: P.O. Box 410, St. Augustine, Florida. Phone: 1-800-260-2424.

11833. White Wave, Inc. 1999. Fact sheet (Leaflet). Boulder, Colorado. 1 p. 28 cm.

• ***Summary:*** Founded: 1977 in Boulder, Colorado by Steve Demos. Mission. Product lines. Ownership: Privately held. Management. Employees: 91 in White Wave's two Boulder facilities. Growth: More than 20% annual growth over the past 8 years. Sales: $14 million projected for fiscal 1998-99. Firsts: First company to introduce Reduced Fat Tofu in America. First company to introduce nationally distributed, fresh, refrigerated soymilk when it launched Silk in the United States.

Stats [Statistics]: Produces more than 40 soy products. Majority of products are organic, cholesterol-free and lactose-free, as well as certified Kosher-Parve by Star K. One of the largest producers of organic soyfoods in the United States. Commands over 30% of the market for tofu and baked tofu products, according to SPINS (Spence Information Services). Silk is ranked the fastest growing non-dairy beverage in the natural products industry, according to SPINS.

Organics: More than 90% of White Wave products are certified organic by QAI. GMOs: White Wave does not use genetically modified organisms and receives statements from all suppliers to guarantee no such ingredients are used. Media Contact: Susan Holden Walsh, Holden McClure PR 303-449-2526. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: (303) 443-3952.

© Copyright Soyinfo Center 2013

11834. White Wave, Inc. 1999. America's soy food company (Ad). *Natural Foods Merchandiser.* Feb.
• ***Summary:*** A cartoon shows a boy with a baseball and four arms holding a different White Wave soy food product in each of his four hands: Silk Dairyless, Baked Tofu Oriental, Silk Vanilla Soymilk, and Organic Firm Style Tofu.

The text reads: "Organic Silk soymilk. Organic tofu. Organic baked tofu. Organic Silk yogurt.

The White Wave logo is at the top and the background is orange at the bottom of the ad fading to yellow at the top.

Note: A very similar ad appeared in the May 1999 issue except the title was now: "America's Organic Soyfoods Company." Address: 1990 N 57 Court, Boulder, Colorado 80301. Phone: 303-443-3470.

11835. Santacruz, Cecilia; Santacruz, Nestor. 1999. Re: Introducing Delisoya. Letter to Nohra Puyana de Pastrana (first lady and wife of the president of Colombia), Santafé de Bogota, Colombia, March 1. 2 p. Typed. [1 ref]
• ***Summary:*** The President and First Lady of Colombia have taken an active interest in promoting soyfoods in Colombia. This letter introduces Delisoy and its products.

Accompanying the letter is the response sent via Bienestar Familiar saying that they are working with soy in the Eje Cafetero where a recent earthquake killed thousands of people and destroyed three cities.

Letter from Nestor and Cecilia Santacruz. 1999. April. "They tell us they will invite us to participate in October in a program to be started in Bogotá. We'll try to keep in touch with them, but bureaucracy is tough!" Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

11836. Daniels, Nahum Stiskin. 1999. Recollections of publishing *The Book of Tofu* (Interview). *SoyaScan Notes.* March 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** *"The Book of Tofu* was one of those very special projects–almost timeless indeed. We did what we all set out to do, which was to communicate a very tangible idea to the West. It's very rare when people can get together and actually pull that off. It was a very exciting and very worthwhile project–something I'm always very proud of being involved in."

Nahum has always imagined [not true] that I [Shurtleff] went to speak to Weatherhill and Tuttle before coming to Autumn Press. "I thought you came to me as a last resort, after they rejected your idea... I remember the day that I took a phone call from you. We were living in Hayama. I remember picking up the phone and hearing your voice at the other end–much like to tonight. You said, "Hi Nahum, this is Bill Shurtleff." Yeah. "I'm thinking of doing a book on tofu" something like that. "I said to myself–it was just an instinctive 'Great!' I think I said 'I think that's a great idea.'" It triggered something–like a lightbulb went on in my mind. "As soon as I heard it, I thought it was a fabulous idea." We were struggling to get our own little publishing company going.

Bill recalls: I remember that phone call too. And I remember thinking 'Amazing–There's somebody else in the world who thinks this is a good idea."

Nahum continues: "I had an image of you as this waiflike creature who had been in my peripheral vision in Kyoto. You were a free spirit, doing interesting and bizarre things. I didn't know you, but I had an instinct that when you set your mind to something, you were going to do it. Only much later did learn about your family; I still remember that your grandfather had his own railroad car."

The Book of Tofu was the sixth book that Autumn Press published, but we had never done anything of its magnitude before. Lima Ohsawa's book was very helpful in preparing me to do *The Book of Tofu.* Through one of the editors at Weatherhill I was introduced to a woman cookbook editor in America. She taught me the high style in cookbook editing.

"I remember just before *The Book of Tofu* was published, that your mom, may she rest in peace, loaned Autumn Press some money–about $5,000–to help pay for the first printing. This loan was very important and helpful to Autumn Press, to get us over the hump."

Kim Chi Ha and *The Book of Tofu:* In 1974 Autumn Press published *Cry of the People,* by Kim Chi Ha–Poems written from jail by a South Korean dissident poet. Some years later Robert L. "Bob" Bernstein, the President and CEO of Random House, was in Japan. He had a strong personal interest in free speech, and he spoke up for oppressed writers around the world. He knew of Kim Chi Ha, and knew he was in a dungeon in South Korea because he wrote and spoke publicly against the country's dictator and tyrant. In Japan, Bernstein's translator, who was a friend of the Stiskins, gave him a copy of *Cry of the People.* He said that he wanted to meet the people who had published this book. Bernstein called Nahum just as Nahum was preparing to leave Japan after seven years. Nahum didn't know who Bernstein was and said he was sorry but he was too busy to meet with him. Back in the states, after realizing the opportunity he had missed, Nahum called Bernstein and accepted an invitation to visit his office in New York City. He took copies of each of Autumn Press' books, including *The Book of Tofu,* which had just been published. They talked about publishing and Bernstein was very interested to see what kind of books Autumn Press was publishing. Before they parted Bernstein said that Random House would like to distribute Autumn Press' books. This was a huge break for Autumn Press. Random House soon noted that *The Book of Tofu* was selling very well. Several years later at a sales conference, Dick Krinsley, in charge of Ballantine Books, approached Nahum and said he would like to buy the paperback rights to *The Book of Tofu.* Thank you Kim Chi

© Copyright Soyinfo Center 2013

Ha.

In 1978 Autumn Press published *Nuclear Madness: What You Can Do,* by Helen Caldicott, a physician and anti-nuclear activist from Australia. The book sold very well and was eventually very influential. However it led to the downfall of Autumn Press, in a process filled with conflict, in which Helen eventually sued Autumn Press. Address: Stanford, Connecticut.

11837. Stuttman, Len. 1999. What does the term "food-grade soybeans" really mean? (Interview). *SoyaScan Notes.* March 4. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.
• ***Summary:*** Len uses the term "food-grade soybeans" a lot. He may have learned it from people in Canada. For making soynuts, he needs special varieties of soybeans that are high in protein, low in fat, have good texture, good taste, and retain their integrity during processing (the seedcoat or hull stays on–does not slough off–during the entire soaking, cooking, and deep-frying process). A soybean with a thin seedcoat usually has poor integrity. Actually, he must try to find a variety in which he can get as many of these qualities or specifications as possible at a competitive price. This is complicated; the only way to test a particular variety is to put it through the process. Moreover, a variety (such as Sapphire) that works well one year may not work so well the next year. Or a variety grown at one latitude that works well may not work so well when grown at a much different latitude. Soybeans grown at northern latitudes generally work better than those grown to the south. Not all of Canada's "food-grade soybeans" work well for Len's particular application. For example, manufacturers of tofu and soymilk want high protein dispersibility in water. Len wants low protein dispersibility, so that protein is not lost during soaking and cooking.

Thus within this broad category of "food-grade soybeans" each food application has somewhat different requirements. Actually, it gets even more complicated. When most people say "food-grade soybeans" they are usually talking about large-seeded, clear-hilum soybeans–most of which have a Japanese pedigree. Yet makers of natto and soy sprouts want small-seeded soybeans.

Back in the days when public soy varieties predominated, one variety (such as Corsoy) might be around for years and years. But now that most varieties originate from private seed companies, they change more often and they are not generally bred for food use–except in Canada. W.G. Thompson & Sons has a young soybean breeder who is excellent; but they do not have a food laboratory. Address: President and CEO, Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

11838. Rose, Richard. 1999. New developments at Rella Good Cheese Co. and HempNut, Inc. (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard has established a new company, HempNut, Inc., to handle all of his work with hemp in a variety of fields, including foods (HempNuts, HempRella {cheese alternative}, and Hempeh Burgers) and machinery. He has invented a machine that is better than any other for dehulling hempseeds. The Rella Good Cheese Co. is doing well; its main product is TofuRella, which accounts for 50% of the company's sales. VeganRella is back on the market in the form of a block–not a spread. The company's future lies in expansion into supermarkets. Richard is helping some supermarkets by creating a "Healthy Eating Center" which is the area where tofu, cheese alternatives, and some meat alternatives are sold.

Richard went to the last shareholders meeting of the Galaxy Food Company since they offered a free tour of the plant to all who attended. They knew who he was and kept their promise on the plant tour. The main thing he learned was that Galaxy sees its future in selling smoothies in aseptic cartons (not cheese alternatives); he thinks the product is made and packaged by Pacific Foods in Oregon. They have described it as a "psychotrophic, all-natural protein energy supplement." At Galaxy, he talked with Christopher Morini, who is Angelo's brother. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

11839. Kessler, Jon. 1999. Re: Unisoya of Canada, and vacuum packaging bulk tofu hot. Letter to William Shurtleff at Soyfoods Center, March 16. 1 p. Typed, with signature.
• ***Summary:*** Note: According to the *Soya & Oilseed Bluebook* (1999, p. 144) Unisoya, Inc. is now an affiliate of Berero Inc. (Tonatur Foods Inc.) and located at 185 Voyer St., St. Isidore Co., Laprairie, Quebec J0L 2A0, Canada. Contact: Jill Renger. Plant manager: Real Beaulieu.

Jon recently met and talked with Gilles Ranger (sales manager) and Bernard Beaulieu were recently in Virginia looking at the BMI (Bean Machines Inc.) centrifuge at Twin Oaks Community Foods (where Jon was manager before starting his own business). Unisoya has an interesting product line (as described on the enclosed business cards). They are presently making about 4,000 lb/day of tofu, 7 days a week, and are planning on expanding their plant. They package their bulk tofu (which is their best seller) in bulk vacuum pouches of 5 lbs per pouch (20 lb per box). Jon was most interested in the fact that they vacuum pack this tofu hot; they do not cool the tofu after it is made before vacuum packing. Then they pasteurize the tofu in its pouch at 205ºF and get a 50 or 60 days shelf life! Jon is considering visiting them this summer.

The enclosed business card, written in both French and English, states that M. Réal and Bernard Beaulieu are the proprietors / owners. The company slogan is: "The true

© Copyright Soyinfo Center 2013

& original." They sell tofu as follows: (1) In boxes of 225 gm, in natural or fines herbs flavors. (2) In packages of 454 or 300 gm in natural, fines herbs, seaweeds, vegetables, soft, and organic. (3) In vacuum packed boxes of 20 lb. (4) In slices or cubes. They also sell soymilk, and do private labeling.

Update: Talk with Jon Kessler. 2000. Oct. 3. His company, Sunergia, now has all its tofu made by Unisoya in Quebec, Canada, and vacuum packed. Address: Founder and owner, Sunergia Soyfoods, P.O. Box 1186, Charlottesville, Virginia 22902. Phone: 804-970-2798.

11840. Murrils, Angela. 1999. Tofu can be both tasty and tantalizing: March is the month to celebrate one humble derivative of the soybean, which is exalted at a new Kits eatery. *Georgia Straight* (*Vancouver, BC, Canada*). March 11-18. p. 49.
• ***Summary:*** April is "Tofu Month" in Canada. At a dinner cohosted by the Pink Pearl Chinese Restaurant and Sunrise Soya Foods, the writer ate course after course of "terrific Chinese food–smoked mushroom roll, Rainbow seafood soup, and, the kicker, a satanic chocolate mousse–all of it based on tofu." She became a convert. When the Joe family began making tofu 43 years ago, their only market was Chinatown. Lifestream, which used to be at Bernard Street and West 4th Avenue, was the first non-Asian store to carry it. Now soy products are everywhere.

Now Yves Potvin, the chef from Quebec, has started a restaurant serving meatless food on West Fourth Avenue. The food is great. At the end of April, he plans to open a second restaurant, at Granville and West 11th Avenue.

11841. *SoyaScan Notes.* 1999. Update on Pulmuone (Overview). March 25. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pulmuone U.S.A. Inc. is a tofu manufacturer in southern California located at 4585 Firestone Blvd., South Gate, California 90280. With the recent economic hard times in South Korea, where the mother company is located, there have been a few rumors that Pulmuone in both California and Korea may be having hard times. However a talk with a tofu industry expert from Southern California indicates that both companies are quite solid and strong. He says that both the U.S. company and the Korean mother company are still in business, but like everyone in Korea, times are somewhat difficult there. The California subsidiary is focused on the Korean-American market, but they have entered the Japanese-American markets and supermarkets in a small way, and they are doing some private labeling. They are also making noodles, and they may be going into fish cake products. So if they are expanding their line into different categories, they probably still have a pretty solid base.

A Japanese tofu expert who knows the founder in Korea says that he was a student activist during the years of Korean dictatorships, and thus was prevented from going to college. So instead he started Pulmuone, which became a very successful health food company.

11842. Delisoya in Colombia (Photographs–color slides). 1999.
• ***Summary:*** The color slides show: (1) The front window and door of Delisoya, taken from outside the shop. (2) The interior of Delisoya looking at the handsome wooden deli counter, behind which stands a man. Above the counter are written: *"Fuente de Proteina. Tofu." "Fuente de Proteina"* means "Source of Protein" in Spanish. The word tofu is written using two large black Chinese characters on a white background, and to the right of these in English–in large red letters. (3) A green blackboard, with a border of colorful flowers. The names of the various soy products and their prices are written with white chalk.

11843. Guo, Shun-Tang; Ono, Tomotada; Mikami, Masayuki. 1999. Incorporation of soy milk lipid into protein coagulum by addition of calcium chloride. *J. of Agricultural and Food Chemistry* 47(3):901-05. March. [20 ref]*

11844. **Product Name:** Xiao Mi Mi: Tofu Dessert (Sweet Tofu Curds; Tsing Xiang Tofu) [Plain, Almond Flavored, and Mango Flavored].
Manufacturer's Name: House Foods America Corporation.
Manufacturer's Address: 7351 Orangewood Ave., Garden Grove, California 92841. Phone: (714) 901-4350.
Date of Introduction: 1999. March.
Ingredients: Mango Flavored: Filtered water, soybeans, sugar, glucono delta lactone, nigari (sea water extract), natural mango extract, annatto.
Wt/Vol., Packaging, Price: Twin pack [5 oz each].
How Stored: Refrigerated.
Nutrition: Mango: Per 5 oz (142 gm): Calories 110, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 25 mg (1%), total carbohydrate 15 gm (dietary fiber 0 gm], sugars 14 gm), protein 5 gm. Calcium 2%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Yvonne Gonzalez. 1999. March 23. Sachiko of House Foods just showed her an interesting new product, like tofu curds in three flavors. Talk with Harry Tanikawa of House Foods. 1999. March 25. This new product, named Xiao Mi Mi (which means "Little Sweetheart"), was formally introduced last Monday (March 22) in a twin-pack form, with two 5-oz packs of the same flavor. The label is in both a Chinese and English, but it is targeted at Chinese because they have their dofu-hwa, which is the sweet tofu curds. Sunrise in Vancouver, BC, Canada, introduced the first such product (Tofu Dessert, in a 10-oz single pack; it sells quite well), and Vitasoy followed with a 16-oz pack–but House Foods found

© Copyright Soyinfo Center 2013

these large packages to be very unappealing as a dessert item. The product is made with thick soymilk (with high brix) so the product has more tofu flavor. Mango is a unique flavor (which Chinese and Hispanics like very much). It is being introduced to Chinese stores throughout California this week, and some demos are going on a Ninety-Nine markets this weekend.

Labels and Leaflets sent by Harry Tanikawa of House Foods. 1999. March 26. Labels: 6 by 4 inches. Printed on clear film. A color photo shows the product in a shallow stem glass, with the appropriate fruits in the background.

Leaflets: 8½ by 11 inches, full color, back to back. Written in both Chinese and English. On the front are the three products in short stemmed glasses. Written near the top: "The New Age tofu." On the back is information plus two color film clips directed at retailers and wholesalers. "With our aggressive advertising campaign, Xiao Mi Mi will be HOT! High-quality TV commercial will make Xiao Mi Mi a big hit. Aggressive PR activities at churches, nursery schools, and kindergartens to gain your customers' awareness. Active in-store promotion, free trials, and POPs will support sales."

11845. House Foods America Corporation. 1999. Hinoichi Tofu (Leaflet). [Garden Grove, California]. 1 p. Front and back. 28 cm. [Eng; Jap]
• ***Summary:*** Printed with black ink on light green paper. On the front is a half-page introduction to tofu in English (top half) and Japanese (bottom half). On the rear is a recipe (in English) for Stir-fry tofu and vegetable (with "2 {14 oz.} pkgs. Hinoichi Regular Tofu"). Address: [7351 Orangewood Ave., Garden Grove, CA 92841].

11846. House Foods America Corporation. 1999. Tofu: The joy of soy (Leaflet). Garden Grove, California. 1 p. Single sided. 28 cm.
• ***Summary:*** Glossy color (see next page). Shows photos of the front of the package of four different types of Hinoichi-brand tofu (Soft, regular, firm, and extra-firm) and four different types of House-brand tofu (Organic soft, organic regular, organic firm, and organic extra-firm). For all types: "65 days of freshness guaranteed." Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

11847. Instituto Colombiano de Bienestar Familiar. 1999. Alimentación a base de soya y germinados [Foods based on soya and sprouts]. Bogota, Colombia. 51 p. 22 cm. [Spa]
• ***Summary:*** Contents: Full-page black-and-white photo of Andres Pastrana Arango (current president of Colombia) with his wife and three children. The family as the basis of development. The soybean (*El fríjol soya*). Recipes–each with basic nutritional information per serving. Dairylike products (*Lácteos*)*:* Basic homemade soymilk, homemade tofu (two methods, each curded with lemon juice), cream cheese, soy yogurt, soy kumis. Meatlike products (*Cárnicos*)*:* Soy burgers (made with ground cooked soybeans–masa de soya cocoda), etc. Baked goods (*Harinas*). Drinks, desserts, and salads (*Bebidas, postres y ensaladas*). Soups, special dishes, and others (*Sopas, especiales y otros*)*:* Incl. soy mayonnaise, pizza with soya.

Note 1. The color photo on the cover of this saddle-stitched book is copied from the Canadian Soyfoods Directory (Nov. 1997). Note 2. Letter from Cecilia and Nestor Santacruz of Delisoya, Bogota, Colombia. 1999. April. This booklet is the successor of one titled *El Cambio es Andres* [Andres stands for change] published in late 1997. They liked the earlier edition better because it contained recipes for whole foods such as brown rice and whole wheat flour, and no meat or dairy products. Quite a few of the recipes in this more recent book call for the use of meat. Address: Bogota, Colombia.

11848. Ionmag Corporation. 1999. Health tofu: Health tofu maker from Ionmag Corporation (Leaflet). Koyang Industrial Complex, 628, Siksa-Dong, Ilsan-Ku, Koyang City, Kyunggi-Do, Korea 1 p. Single sided. 30 cm.
• ***Summary:*** Leaflet (glossy color; see page after next page) sent by Patricia Smith from Natural Products Expo West. 1999. March. A large color photo shows this red and clear plastic home tofu maker against a circle of soybeans with an orange and red border. "Coming to fresh tofu, tasty tofu within short time." Specifications: Weight: 5.5 kg. Height: 370 mm [14.6 inches]. Diameter: 240 mm. Material: Polycarbonate ABS [Acrylonitrile Butadiene Styrene], Stainless steel. Voltage: 110/220 volts. World patent pending. Address: Koyang City, Kyunggi-Do, Korea. Phone: (82-344) 968-0051/4.

• ***Summary:*** Contents: Introduction: Soybeans as a crop, composition and nutritional quality of soybeans, soyfoods–from the east to the west, soyfood classification.

Soymilk: Introduction, traditional soymilk, modern soymilk (techniques for reducing beany flavors, commercial methods, formulation and fortification, homogenization, thermal processing, and packaging), concentrated and powdered soymilk, fermented soymilk (with lactic acid bacteria), soymilk composition and standardization.

Tofu: Introduction, methods of tofu preparation, factors involved in tofu making (soybean varieties, concentration of soymilk, heat process of soymilk, types of coagulants, concentration of coagulants, coagulation temperature, coagulation time, process automation, packaging), varieties of tofu (silken tofu, regular and firm tofu, Chinese semidry tofu {*doufu gan*}, Chinese tofu sheets and tofu noodles, lactone tofu), varieties of tofu products (deep-fried tofu, Japanese grilled tofu, frozen tofu {"Made almost exclusively in rural farmhouses and temples by putting tofu outdoors in the cold weather, frozen tofu was never sold as a commodity in the past"}, Japanese dried-frozen tofu, Chinese savory tofu {"In China there are many specially made tofu varieties known as savory tofu"}, fermented tofu {Sufu or Chinese cheese, varieties of sufu, preparation methods, preparation principle}).

Soymilk film (yuba). Soybean sprouts. Green vegetable soybeans. Other non-fermented soyfoods: Okara, roasted soy powder.

Fermented soy paste (Jiang and miso): Koji, koji starter, and inoculum (koji, koji starter, inoculum), Chinese jiang (traditional household method, pure culture method, enzymatic method), Japanese miso (preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging), principles of making jiang or miso.

Soy sauce (Jiangyou or shoyu): Chinese jiangyou (traditional household method, modern methods), Japanese shoyu (treatment of raw materials, koji making, brine fermentation, pressing, refining), principles of making soy sauce, chemical soy sauce (made by acid hydrolysis; heat with 18% hydrochloric acid for 8-12 hours, then neutralize with sodium carbonate and filter to remove insoluble materials), proximate composition of soy sauce, quality attributes and grades.

Japanese natto: Methods of preparation, principles of preparation.

Indonesian tempeh: Traditional method, pilot plant method, principles of tempeh preparation. Fermented black soybeans (Douchi or Hamanatto): Chinese douchi, Japanese Hamanatto.

Tables: (1) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of nonfermented Oriental soyfoods.

Soy sprouts: Chinese: Huang dou ya, Da dou ya. Japanese: Daizu no moyashi. Korean: Kong no mool.

Yuba: Chinese: Dou fu pi, Fu zhu. Japanese: Yuba. Korean: Kong kook. Filipino: Fu chok.

Roasted soybeans (Soynuts): Chinese: Chao da dou. Japanese: Iri-mame. Korean: no name. Indonesian: no name

Roasted soy powder: Chinese: Chao dou fen, dou fen. Japanese: Kinako. Korean: Kong ka au. Indonesian: Bubuk kedelai. (2) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of fermented Oriental soyfoods. (3) Proximate composition (gm per 100 gm fresh weight) of some fermented soyfoods.

Figures show: (1) Flowchart: Traditional Chinese method for making soymilk and tofu (from whole soybeans). (2) A commercial processing method (Alfa Laval) for making soybase and a subsequent product–soymilk. (3) Photo of homemade firm tofu. (4) Photo of a dish of tofu and mushrooms. (5) Photo of cubes of sufu (Chinese cheese) on a white plate. (6) Flowchart for making sufu from firm tofu. (7) Photo of two packages of dried yuba sticks (Chinese). (8) Photo of a bowl of soy sprouts. (9) Photo of Chinese chiang, and Japanese red and white miso, each on one of three spoons in a shallow white bowl. (10) Flowchart of a common method for making Japanese rice miso [red miso]. (11) Photo of soy sauce in three different containers: dispenser, small bottle, and large Chinese can. (12) Flowchart of a common method for making Japanese koikuchi shoyu (soy sauce). (13) Photo of two chopsticks lifting some Japanese natto from a bowl full of natto; the thin strings connecting the natto above and below are clearly visible. (14) Flowchart of a common method for making Japanese natto from whole soybeans. (15) Photo of tempeh made in the USA in perforated plastic bags (Courtesy of Mr. Seth Tibbott, Turtle Island Foods, Inc., Hood River, Oregon). (16) Flowchart of traditional Indonesian method for making tempeh from whole soybeans. (17) Photo of Chinese *douchi* (fermented black soybeans) on a white plate.

composition of many different brands and products per 3 ounce serving. Data is given for calories, protein, fat, calcium, and iron. Tofu brands/makers include: Azumaya, Kikkoman, MoriNu. Nate's Easy Tofu (smoked), Nasoya, Smoke & Fire, SoyBoy Baked and seasoned (all varieties), White Wave, Whole Foods. The three tempeh makers are: Lightlife, SoyBoy, and White Wave.

For tofu: Calories range from 30 (MoriNu Lite) to 130 (Nate's). Protein ranges from 20 gm (White Wave baked) to 4 gm (MoriNu Soft). Fat ranges from 1 gm (MoriNu Lite) to 9 gm (White Wave baked). Calcium ranges from 600 gm (Nate's) to 20 gm (MoriNu–4 types). Iron ranges from 0.7 gm (MoriNu–4 types) to 9 gm (Nate's). Address: PhD, RD.

11853. McCarty, Meredith. 1999. Sweet & natural. New York, NY: St. Martin's Press. xii + 260 p. Illust. by Magué Calanché. Photographs by Jeanne Stack. Index. 24 cm. [60 ref]

• ***Summary:*** A macrobiotic cookbook containing "More that 120 naturally sweet and dairy-free desserts." The author's fascination with healthy desserts began in 1974, when she learned to make old-fashioned apple pie in a beginning macrobiotic cooking class. She was working as associate editor of the *East West Journal,* had been diagnosed with mononucleosis a couple of years before, and wanted to learn to satisfy her sweet tooth in a more healthy way.

The long chapter titled "Ingredients" (p. 11-56) gives details on the types of sugars, and commercial natural sweeteners, including brown rice syrup, barley malt syrup, FruitSource (Brown rice syrup and grape juice concentrate), Sucanat (evaporate sugar cane juice). A table (p. 26) gives source and composition of many sweeteners; for example, amazake is 80% glucose and 20% maltose; evaporated sugar cane juice is 89% sucrose, and 1% each fructose and glucose; brown sugar is 98% sucrose. The section on "Dairy and its alternatives" contains a table titled "Calcium sources" (30, incl. two types of fish), soy foods, soy milk, tofu (p. 31-33), amazake (p. 33-34), different vegetable oils, kuzu / kudzu root starch, and tofu as a binder.

Soy-related recipes include: Soymilk: Mango-Key Lime Pie with soy milk filling (130). In crisps and cobblers (p. 141). In cakes (160). In puddings (p. 225). Tofu: Pumpkin pie with tofu cream and soy milk filling (p. 132-33).

Other ingredients: Amaranth, koji, kuzu, peanut butter, sesame butter, sesame seeds. A color photo shows Meredith McCarty in her kitchen. Address: Tiburon, California: P.O. Box 2605, Mill Valley, CA 94942. Phone: 415-435-4102.

11854. Newman, Jacqueline M. 1999. Cultural aspects of Asian dietary habits. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. Asian Foods: Science & Technology. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 453-85. Chap. 15. [104 ref]

• ***Summary:*** Contents: Introduction. Foods of Bangladesh. Cambodian foods. Chinese foods: Food selection, eating behaviors, intracultural differences, feasts, holidays and special foods. Indian foods. Indonesian foods. Japanese foods. Korean foods. Laotian foods. Malaysian foods. Nepalese foods. Foods of Pakistan. Philippine foods. Thai foods. Vietnamese foods.

In each country and culture, the role and practice of vegetarianism is discussed.

Soyfoods are mentioned as follows: China (p. 458): "For breakfast, Northerners prefer warm soymilk and fried wheat-dough crullers." Vegetarians from both north and south get an important part of their protein "from a sophisticated cuisine based upon considerable use of gluten and tofu," made to look and taste like animal products.

Indonesia (p. 463): "... foods are preferred sweet; even the local soy sauce, kecap manis, is fermented sweetened."

Japan (p. 465): Mentions shoyu and tofu.

Korea (p. 468-69): Mentions tofu.

Malaysia (p. 472): Discusses Chinese who married Malay women (called Nonyas); "their families are called Peranakan or Straits Chinese and their cooking is called Nonya Cuisine. Straits Chinese live mostly in Penang, Malacca, and Singapore; practice Buddhism; and cook their Chinese food with a Malay influence. Their Nonya cuisine is eaten communally; all dishes are served at once,..."

Nepal (p. 473): "During Janai Purnima, a soup called *quantee* is essential; it is made from sprouted soy, chick pea, black beans,..."

Pakistan (p. 476): Pad Thai, a popular lunch dish, is made with tofu. Note: Pad Thai, based on rice noodles, is one of Thailand's national dishes. Address: PhD, R.D., Prof., the Dep. of Family, Nutrition and Exercise Sciences, Queens College-CUNY, Flushing, New York.

11855. **Product Name:** Nichimo Frozen Tofu [Dice Cutting, Stick Type, For Deep-Frying].
Manufacturer's Name: Nichimo (Importer Marketer). Made in Tanaba, Wakayama, Japan 646, by Tendre Co., Ltd.
Manufacturer's Address: USA: 1420 Princeton St., Santa Monica, CA 90404. Japan: Tokyo. Phone: 1-877-654-8638 (TOFU).
Date of Introduction: 1999. March.
Ingredients: Soy bean, water, gelatine, potato starch, calcium chloride.
Wt/Vol., Packaging, Price: 16 oz. foil Ziploc bag.
How Stored: Frozen.
New Product–Documentation: Talk with Mike Misawa of Nichimo. 1999. April 12. This new frozen tofu was introduced in March 1999. It comes in three forms, and each is individually quick frozen (IQF) and sold in a plastic bag. The dice cut comes in 300 gm or 450 gm, and the stick type in 80 gm. The third type is ready for deep frying. It was first sold at Trader Joe's. It is made by Tendre, a subsidiary of Nichimo, in Wakayama, Japan.

© Copyright Soyinfo Center 2013

Label and leaflet sent by Mike Misawa. 1998. April 13. 11.5 by 7 inches. On the front is a color photo printed on the foil pouch, which shows a bowl of tofu & egg-flower consomme soup in front of a baguette. "Very handy. The tasty bite size frozen tofu." The logo is a bear holding a globe sitting atop the world. On the back are six small color photos showing serving suggestions: Tofu hamburger. Tofu consomme soup. Tofu steak. Tofu pizza. Tofu scrambled egg. Tofu Italian salad.

Leaflet: "Tendre frozen tofu is a product like no other." Two sided, color. Shows many of the same photos as on the label. On the back: "Give us a chance to increase your business profit." Photocopy brochure. "Frozen tofu: Revolutionary product developed by Nichimo Co." 5 p. Nichimo Corporate Overview. 1998/04. "Towards a boundless future: Being a company which contributes to an affluent life." 12 p. For 80 years Nichimo has been a fisheries business. Website: www.nichimo.co.jp. Address in Japan: 10th Floor Nippon Building, 6-3 Otemachi, 2-chome, Chiyoda-ku, Tokyo 100-0004, Japan.

11856. ProSoya Inc. 1999. VS40 operation (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 14 minutes. March.
• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in March 1999, it describes the operation of ProSoya's VS40 SoyaCow, which makes 40 liters of airless cold-grind soymilk per batch. Use of the soymilk to make tofu (using a forming box and cloths that come with the machine) is also described. The video narration begins: "The VS40 SoyaCow system is a small and economical batch processor for producing highly nutritious, non-beany soymilk with excellent soluble protein yield. Easy to operate and maintain, this system uses an airless cold-grinding process developed by ProSoya Incorporated, world leaders in advanced soymilk technology. The grinder-cooker is the heart of the system. Powered by a single-phase one-horsepower motor..."

Talk with Raj Gupta of ProSoya Inc. 1999. May 30. This color video was produced in-house by a man named Seth Gaurav, who is a native of Bombay, India, and who studied cinema at the Moscow Film School in Russia for nine years (1986-95); he won a scholarship from the Russian government. This is the first video Gaurav produced for ProSoya. ProSoya also has a Russian-language version and also videos for its larger soymilk systems. The company's first video was produced in late 1993 or early 1994. Address: Ottawa, Ontario, Canada.

11857. Quong Hop & Co. 1999. Soy for life: The benefits of eating soy products (Leaflet). South San Francisco, California. 5 panels each side. Each panel: 15.3 x 10.2 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 1999. March. On the front panel is a tofu burger under a bun on a light orange plate. At the bottom; The Soy Deli.

Contents: The power of soy foods (anti-cancer, osteoporosis, coronary heart disease, menopausal symptoms, lactose intolerance). Tips for cooking with tofu. Additional recipes. Coupons for Soy Deli Baked Tofu and Nigari Tofu. A photo on the rear cover shows many of Quong Hop's soy products. Soymilk (2 flavors). Tempeh burgers. Tofu burgers. Baked tofu (4 flavors). Soy tempeh. Nigari tofu. Hot dogs.

"Master tofu makers since 1906: In 1906, Sing Hau Lee established Quong Hop, the oldest tofu shop in America. He brought with him his family's tofu-making secrets." Address: 161 Beacon St., South San Francisco, California 94080. Phone: 415-761-2022.

11858. Salmon, Margaret B. 1999. Soy expressions: Common-sense way to small food bills. 404 easy soy recipes. Demarest, New Jersey: Techkits, Inc. x + 160 p. Index. 22 cm.
• ***Summary:*** A quickie spiral-bound soy cookbook. It is not vegetarian; recipes call for the use of lean ground beef, chicken, turkey, frankfurters, turkey frankfurters, tuna, salmon, clams. The section at the back titled "Index" is not really an index. Some form of soy appears in every recipe; the main forms are tofu, soymilk, soybean sprouts, cooked soybeans, soy sauce, teriyaki sauce, soybean oil, "Smart Dogs," black soybeans, soybean flour, and soy bacon bits. Contents: Introduction. How safe are soybeans? Hundreds of soy recipes. Soy foods taste good. A new look at soybeans. Recipes: Soups. Salads and vegetables. Main dishes. Omelets. Breads, cookies, muffins and snacks. Sugar free soy desserts. Desserts: Pies & puddings. Shakes and pops.

Margaret is the author of many books on food and nutrition. She was "formerly Research Dietitian on the cystic fibrosis research team at Columbia-Presbyterian Medical Center in New York City, and Chief Dietitian and Director of the Dietetic Traineeship Program at St. Joseph's Hospital and Medical Center in New Jersey. She is President of Salmon Consultants, Consultants to physicians, hospitals, schools and federal nutrition programs, and lecturer for schools, colleges, radio and television.

"She received a degree in food chemistry and nutrition at the University of California at Berkeley, and degrees at Columbia University in the science of nutrition and nutrition education. She also has a Certificate of Hospital Dietetics from Duke University and is listed in Who's Who of American Women and World Who's Who of Women and is a Registered Dietitian." Address: R.D., L.D., P.D., Techkits, Inc., P.O. Box 105, Demarest, New Jersey 07627.

11859. **Product Name:** [Tofu, Soya Milk, Okara].
Manufacturer's Name: Svilen Lapakov Tofu.
Manufacturer's Address: 43/b Gabrovo Str., 9000 Varna,

© Copyright Soyinfo Center 2013

Bulgaria.
Date of Introduction: 1999. March.
New Product–Documentation: Letter from Svilen Lapakov. 2000. Jan. 3. "I live and work in Bulgaria, Europe. I have a workshop for soya milk products. I was the first to open and produce such healthy foods like tofu, okara, soya milk here, in Bulgaria. My small shop has been in existence for 9 months and for now I am the only one producer. I work with a ProSoya device, from Canada. Life in ex-Communist countries is extremely difficult now." Note: This is the earliest known commercial soy product made in Bulgaria.

11860. **Product Name:** Tofu.
Manufacturer's Name: Tasty Tofu.
Manufacturer's Address: Kannhai Hagalil 25, Jerusalem 93272, Israel.
Date of Introduction: 1999. March.
How Stored: Refrigerated.
New Product–Documentation: Talk with Eli Mor (he calls) calls from Israel. 1999 Nov. 22. Now he and his wife, Iris, are making tofu in their home, but they have reached capacity. They started selling tofu commercially 8-9 months ago–Say March 1999. Then got *The Book of Tofu* 3 months ago and that helped a lot. Their customers in Jerusalem say that theirs is the best quality tofu in the city.

Letter from Katherine Shelter, 2823 Quarry Heights Way, Baltimore, Maryland 21209-1058. 2000. Jan. 6. She orders the book *Tofu & Soymilk Production* to take to her friends Eli and Iris Mor in Israel.

11861. White Wave Inc. 1999. An introduction to our family of wholesome foods, with recipes and quick ideas for ever meal, every taste. Fast + easy. Healthy. Delicious (Leaflet). Boulder, Colorado. 5 panels each side. Each panel: 15.5 x 10 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 1999. March. On the front panel is a photo of 3 flavors of Silk soymilk, two types of tofu, seitan and tempeh.

On the remaining panels are recipes (incl. one for Silk Dairyless Soy Yogurt), a mission statement ("Our mission is to creatively lead the full integration of natural, flavorful vegetarian foods into the American diet"), "Good news about soy" (nutritional information). More about White Wave's products (the company now has 13 flavors of Silk Dairyless Soy Yogurt, Silk Dairyless Coffee Creamer, etc.).

Note from James Terman, Vice President Pictures + Words, White Wave. 1999. March. This first appeared in March 1999. Address: 1990 North 57th Court, Boulder, Colorado 80301.

11862. **Product Name:** While Wave's Silk Soymilk and other soy products new certified 100% organic by QAI (News release).
Manufacturer's Name: White Wave, Inc.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1999. March.
New Product–Documentation: White Wave is pleased to announce that as of January 1, 1999, all of its Silk soymilk line of products and most of its other soy products are 100% Certified Organic by Quality Assurance International."

Only three White Wave products will continue to be made with a combination of transitional and organic soybeans: Reduced Fat Tofu, 12 oz. Extra Firm-Style Tofu, and its "Red Box: Firm Tofu.

Steve Demos says that White Wave has supported transitional and organic soybean farmers for the past two decades, and through their hard work the company has been able to develop a solid network of certified of certified organic suppliers.

11863. Santacruz, Cecilia; Santacruz, Nestor. 1999. Tofu and other soyfoods in Colombia (Interview). *SoyaScan Notes.* April 1. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** In June 1998 Cecilia and Nestor started the earliest known non-Asian tofu shop in Colombia that focused on traditional, hand-made tofu and made delicious products from tofu. Named Delisoya, it is located in a residential part of Bogota (the country's capital) high in the Andes mountains of Colombia at 8,500 feet altitude. They visited Soyfoods Center from Salinas, California, after being given an excellent tour of the Wildwood Natural Foods soyfoods plant in Santa Cruz. The main things they learned at Wildwood: (1) They can make a large amount of very tasty tofu using an open-top, stem-injection system (without pressure). Nestor would like to get this same kind of system. (3) Their many creative tofu products are delicious; the baked (not fried) tofu burgers were especially interesting. (3) The shop was very clean and sanitary.

Ceci speaks good English, since she lived for a year in Tennessee (with "Ami") during her high school years. This is the third time they have been to the USA.

Ceci and Nestor were both born in Colombia–Ceci on 3 December 1949 and Nestor on 28 Aug. 1955. They both attended the Colombian National University (*Universidad Nacional de Colombia*) where they studied chemistry and graduated in 1982. They were married that same year, shortly after graduation. Nestor got a job in Bogota with Canta Claro, a company that operates soybean crushing plant. They made animal nutrition products from the soybean meal and various foods from the soy oil. Ceci also worked for Canta Claro for 2-3 years in quality control, then she left and worked with her family who owns a small hotel about 150 km (93 miles, 4 hours by car) outside of Bogota. She also spent more time cooking and doing things she enjoyed, alone and with her mother (who has her own foundation and is a

© Copyright Soyinfo Center 2013

very civic-minded person). In 1992 Nestor and Ceci met a macrobiotic group named *Escuela de Educación Vitalicia* (The Life and Vitality Education School) run by students of Tomio Kikuchi, a well-known teacher of macrobiotics who lives mostly in Brazil; this group had been in Bogota since 1985. Later in 1992 Nestor left his job at the soybean crushing plant and began to work as an administrator in Ceci's family hotel. Slowly their lives began to change. In June 1993 they traveled to Brazil to attended the annual winter seminar by Tomio Kikuchi. They found him to be an excellent teacher and, at age 70, a man of remarkable vitality. Bernadette Kikuchi is Tomio's wife. Through her cooking lessons in Colombia and Brazil, in their school, they first made contact with Oriental cooking and foods. Through them they came to know about brown rice and tofu for the first time, 7 years ago. "They are remarkable human beings who left a deep impression on us."

In early 1996 Nestor and Ceci bought some tofu from a Chinese man in Bogota; it was quite hard and the flavor was not very good, so they started to make their own tofu. In late 1996 Nestor and Ceci began to pursue their interest in soyfoods more actively. They saw an article somewhere about Peter Golbitz of Soyatech in Maine, so they wrote him and he sent them a free copy of the 1996 *Soya Bluebook.* In that book they saw a Takai advertisement for tofu and soymilk equipment. Takai sent them a catalog and there they saw the address of Soyfoods Center–from which they ordered several books, including *The Book of Tofu* and *Tofu & Soymilk Production.*

They found that there were already two companies in Bogota that made tofu and other products. Named Hosanna and Sabyi, they each opened in about 1996-97, and were run by Colombians (non-Asians), but their focus was on products such as sausages made with tofu and soy flour, or pimento-flavored tofu, their tofu was not hand-made, and both Nestor and Ceci found the tofu to be very hard and not tasty. So in June 1998 Nestor and Ceci opened Delisoya. There they made traditional handmade tofu and soymilk, plus several tasty second generation soy products such as cheesecake, soy mayonnaise, and soy burgers. The interior is very attractive with a large deli case stretching across the room, and a list of products and prices written by hand on a blackboard on the wall. They gave Soyfoods Center three color slides showing the above views. This is a business with a philosophy and a social mission. They want to teach local people about the goodness of soyfoods and how to use them (including the okara), and they want the shop to eventually serve as a school where other Colombians can learn to make tofu, soymilk, and other soyfoods. Recently the International Monetary Fund (IMF) has demanded that Colombia quickly open its economy to foreign goods. The influx of cheap products has had a drastic effect, creating very high unemployment and widespread suffering. Nestor and Ceci are working to alleviate this crisis.

The soybeans used to make tofu at Delisoya are all grown in Colombia, at Cali, the capital of Valle de Cauca department at 3,327 ft, in western Colombia, bisected by the Cauca River. "Valle" is pronounced "Balle" in Spanish. There is a big Japanese community living in Cali, the area where the first Japanese settled in Colombia many years ago. Another center of soybean production in Colombia is Palmira, a city at altitude 3,000 feet, in Valle de Cauca department, in western Colombia, near the Cauca River. It is about 15 minutes by car from Cali, but 8 hours by car from Bogota.

Nestor now makes a little more 100 lb of tofu per week; more precisely, he makes about 100 cakes, each weighing 500 gm. He and Ceci are looking for a larger plant near their home in Bogota. He knows a lot about machines and mechanic, so he will make some of the equipment. At the plant they will hire people they know–who are simple and nice.

Ceci and Nestor are interested in translating *The Book of Tofu* into Spanish. They are trying to gain support for the project from Japanese cultural organizations in Colombia, such as JAICA (Japan International Cooperation Agency), and JETRO (Japan External Trade Organization). JAICA is Japanese governmental organization which assists developing countries, including financial support for some projects requested by local people. They send experts in various fields (such as agriculture, earthquakes, etc.) and also send local people to Japan for training. Ceci has a friend, Mrs. Tanaka, who is the wife of the president of JETRO in Bogota.

During the last presidential campaign in Colombia, soybeans were featured by the candidate who won (in June 1998), Pres. Andres Pastrana. In about Sept. 1997 his political campaign published a booklet titled "El Cambio" which means "Change!" It is said that the president's wife, Nohra Puyana de Pastrana, took the idea from people working with soyfoods in Caldas–a department in west central Colombia. Currently, soyfoods are promoted by the *Instituto Colombiano de Bienestar Familiar* (Columbian Institute for Family Well-Being). This institute, which has its headquarters in Bogota but branches in many Colombian cities, now offers free soyfoods cooking classes and printed information (incl. recipes and nutritional facts).

The Colombian government has been studying soyfoods for at least 20 years. The first major organization to do this was the *Instituto de Investigaciones Tecnologicas* (IIT–Institute for Technological Investigations). It existed 20 years ago but ceased operations about 10 years ago. Their purpose was to help industry develop and market new products. Their first soy product was Incaparina [production began in 1963], followed by Bienestarina [first manufactured in Jan. 1976]. IIT made soymilk and targeted local people.

One soy pioneer in Colombia was a man named Joaquin Molano, who was a chemist, is now age 90, and who

founded Fundacion del Rio Magdalena. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

11864. Paroda, R.S. 1999. Jai kisan, jai Vigyan [Interview with Inder Sawhney]. *Times of India* (*The*) (*Bombay*). April 3. p. 12.
• ***Summary:*** Jai means "hail." Kisan means "peasant or farmer." Vigyan refers to the Vigyan Parishad, an apex body for science popularization under the Department of Science and Technology of the Government of India.

Various agricultural revolutions have succeeded in India since the mid-1960s. These are: (1) Green Revolution; the introduction of high-yielding varieties of seeds after 1965 and the increased use of fertilizers and irrigation, which led to a dramatic increase in production of wheat and rice, making India self-sufficient in food grains and largely eradicating famine. The revolution slowed down in the early 1980s and began to be criticised for land degradation, loss of soil fertility, and excessive use of fertilizers and pesticides.

(2) White Revolution in milk production, led by Verghese Kurien, chairman of the Gujarat Co-operative Milk Marketing Federation Ltd., the man who developed the Amul brand. India is now the largest milk producing country in the world. (3) Yellow Revolution in oilseeds and oil production (including soyabeans) (1986-1990). (4) Blue Revolution in fishing (1973-2002).

In this interview, Dr. Paroda, director-general of ICAR, "exudes confidence that India will be a power to reckon with in the field of agriculture." Much of the interview concerns the work of ICAR. Sawnney says that, contrary to popular opinion, the green revolution has benefited the majority of India's farmers.

Question: Presently, almost all of the soyameal produce in India is being exported. "Why is it not being used for making soya products when we are facing a shortage of pulses?"

Answer: Soyabeans can be an effective alternative in helping to meet the shortage of protein and pulses. "Unfortunately our people are not used to soya products. They have to develop a taste for products like soya milk, tofu (soya cheese), soya paste (for using as bread-spread and fish preparations), biscuits, ice cream and soya flour. ICAR as generated technologies for all these products."

Note: India is ready for a soyfoods revolution / movement, based on low-technology, traditional soyfoods, similar to the movement that began in the United States and Europe starting in the mid-1970s. All that is missing is leadership and vision. Address: PhD, Director General of Indian Council of Agricultural Research (ICAR).

11865. Amazon.com. 1999. The Book of Tofu, by William Shurtleff and Akiko Aoyagi (Website printout–complete). www.amazon.com Printed April 8.
• ***Summary:*** Contents: Page 1 shows the cover of the book, title, and prices. The list price is $19.95 but amazon.com sells the book for $15.96, or 20% off. Sales rank: 3,894. Avg. customer review: Five stars. Number of reviews: 3. Customers who bought this book also bought: Lists four other books. The bottom third of page 1 and most of page 2 are devoted to a brief description of the book and excerpts from book reviews. Starting near the bottom of page 2 and continuing half way down page 3 are three Customer Comments, with the most recent (18 Feb. 1999) first and the oldest (7 Dec. 1997) last. The bottom half of page 3 contains two sections: (1) "Customers who bought titles by William Shurtleff also bought titles by these authors:" The names of five authors are listed. (2) "Look for similar books by subject: Tofu. Cookery (Tofu). Cooking. Cooking / Wine. Natural Foods. Vegetarian." Address: P.O. Box 80387, Seattle, Washington 98108-0387. Phone: 1-800-570-1454 x 7123.

11866. Szekely, Deborah. 1999. Re: Interest in making fresh tofu at Rancho La Puerta in Baja California, Mexico. Letter to William Shurtleff at Soyfoods Center, April 9. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** Deborah Madison has suggested that they incorporate more tofu and soy into the foods served to the guests at Rancho La Puerta. Deborah Szekely has already ordered a copy of *The Book of Tofu* and would like to make fresh tofu on site at Rancho La Puerta. Address: 3232 Dove St., San Diego, CA 92103.

11867. Turner, Kimberly. 1999. Pair produces 'animal-friendly' sausage. *Observer* (*Charlottesville, Virginia*). April 14-20. Business section.
• ***Summary:*** Jon Kessler and his partner, Janus Raphaelidis started Sunergia Soyfoods. They now make meat-free sausages. A photo shows the two.

Note. Jon says this article contains many mistakes.

11868. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part I. 1976 to 1994 (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** George was born on 1 Dec. 1946 in Toronto, Ontario, Canada. He went to high school in Toronto but did not graduate, and he never attended college. "I attended the school of hard knocks." He dropped out of high school at age 15 he began to work full-time. At age 17 he went to work for a textile firm until he was age 20. Then he started his own business in the fields of textiles and clothing. In 1967 he married Wendy Lynn Richardson–who was born on 27 Sept. 1948. In 1973 he received knowledge from Guru Maraji (via Guru Charanan) in Toronto, became his disciple, traveled throughout the United States and (in 1973) to the Houston Astrodome [in Texas] with Guru Charanan, and

© Copyright Soyinfo Center 2013

started a vegetarian diet and vegetarian restaurant. In 1977 he was one of the founding partners of Jolly Green Garden, a vegetarian restaurant in Toronto. He called it "Guru Maraji's restaurant" because many of the employees and customers were disciples of Guru Maraji. There he first got involved with soyfoods. He bought tofu and used it to make various products, such as patties, dressings, etc., which were served in the restaurant. George has been involved with soyfoods for more than 20 years, starting in Toronto.

In early 1979 George and his family moved to southern Alberta. He went to work for the Canadian federal government helping a group of native Blackfeet people there. He set up a company named Pe-Kun-nee Garments that manufactured textiles (garments), put 300 women through a training program, and ran it (with the title of General Manager) for about 4 years. George still has the full-beaded outfit and feathers that he got from the Blackfeet people he helped.

In 1984 George and his family moved to Saskatoon, Saskatchewan, where he started a computerized embroidery business. His wife and three children still run this as a family business. Today his company is one of the top software development firms in North America for computerized embroidery. He worked for a company named Jeffrey E. McPherson, headquartered in Nottingham, England, with North American offices in Greensboro, North Carolina and in Canada; George worked for the North Carolina company. They held the worldwide distribution rights for an embroidery machine made by a Japanese company named Barudan (pronounced buh-ROO-dun) who pioneered the electronic embroidery machine from Japan. The ancient Jacquard looms, which were programmed with punch cards, originated in Switzerland [sic]–which is why we refer to "Swiss embroidery." [Note: The French inventor, Joseph-Marie Jacquard (lived 1752-1834) invented the Jacquard loom at Lyons, France, in 1801 and was awarded a patent and medal by Napoleon in 1804]. The Japanese copied these looms. George was a salesman for their equipment, and he developed a collection of baseball caps because he was one of the first people to sell caps–whether it be importers of blank caps or embroiders of finished caps. George even called himself Captain Capman. He went around and set up embroidery companies to whom he sold his embroidery equipment (from Barudan in Japan) all over western Canada. George was one of the first people to embroider a baseball team insignia direct onto the blank hat–replacing the old crest that was stuck on the hat. It was much classier, and now its the only way they do it.

In 1992 he started another gourmet vegetarian (actually vegan) restaurant, this time named Sweet Carrot Café, located at 702 14th St. East, Saskatoon, Saskatchewan S7N 0P7. Actually, George bought the building for his embroidery business, then opened up a corner of one building on the corner as a lunchroom for his staff. It was an historical building, with three buildings in one. George bought an espresso machine for his lunchroom. Passersby thought it should be a coffee shop. George lined the walls of his lunchroom with his collection of embroidered baseball caps. He soon converted the lunchroom into a coffee bar, which he named it Caps Coffee Bar. A popular menu item was Cappuccino! There was a grand piano in the dining room. It was probably the only vegetarian or vegan restaurant ever to be written up in *Where to Eat in Canada*–two years in a row. In those days most people thought of vegetarian restaurants as places where hippies with beards and long hair sat on picnic benches and ate granola bars. Most people were afraid to eat in such places, so George made his restaurant into a fine dining room. One of the main focuses of George's life since the 1970s has been vegetarianism; his wife is a vegan and teaches tai-chi. In the restaurant George made his own tofu, soymilk, and related products, such as spreads, dressings, etc. In the early days, he made these products in the old fashioned way. The firm nigari tofu was very good tasting but the soymilk had a pronounced beany flavor. He was so busy, and making all these foods was such a chore, that he began looking for other technologies to expand his production. One day in early 1992, at about the time Raj Gupta started publishing his *SoyaCow Newsletter,* a young lady from the United Way in Ottawa came into the restaurant and commented on his organic tofu sandwich. She also tried his soymilk and told him about a soymilk making machine named the SoyaCow, developed by a company named ProSoya in Ontario. George asked for more information and the lady sent him a copy of the newsletter. George immediately phoned Raj Gupta, the inventor of the machine, and was on the next airplane to Ottawa. He ended up buying the only small SoyaCow (SC-20) Raj had. Articles about George, his stylish restaurant, and his new SoyaCow appeared in two early issues of the *SoyaCow Newsletter* (Jan/March and April/June 1993–Vol. 2, Nos. 1 and 2). He used the SoyaCow to make soymilk, which he sold at his restaurant–starting in early 1993. This was the first commercial soymilk ever produced by a SoyaCow. He sold the soymilk in 1 liter glass bottles, with the SoyaCow logo printed directly on the glass on each bottle. He and Frank Daller developed the bottle. So the name of the soymilk was "SoyaCow" and it was sold in seven flavors–including maple, chocolate, vanilla, original, chocolate-peanut butter, and nog (a delicious eggnog alternative made only at Christmas). Dusty Cunningham and Lorne Broten were both patrons of George's vegetarian restaurant in Saskatoon. A romance soon developed and they were called the "love birds." George was thinking about opening a winery in his restaurant. Since Lorne was an accountant, George started working with him on a business plan for the winery in about 1994. George liked Lorne and hired him as his bookkeeper and accountant for his two businesses–embroidery and vegetarian restaurant.

© Copyright Soyinfo Center 2013

Soon, within his restaurant (which consisted of three buildings in one), George converted his Caps Coffee Bar into the SoyaCow Health Bar Deli, where he sold at least five soy products, both as part of the menu and for takeout: Soymilk (in six flavors), soy ice cream (many flavors, always changing), soy yogurt (several flavors), tofu, and Soyanaise. He also carried Yves Veggie Cuisine. He used his car to deliver some of the soymilk he made to three local stores; he never delivered his other soy products from the restaurant. He carried the glass bottles in milk crates. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

11869. Conquergood, George. 1999. Re: International ProSoya Inc. Letter to William Shurtleff at Soyfoods Center, April 21. 1 p. Typed, with signature.
• ***Summary:*** "Dear Bill, It was a pleasure to finally talk to you. Your name has been a household word around my place for many years. My copy of *Tofu & Soymilk Production* is quite dog-eared. I am surprised that Raj never mentioned myself or Dusty and Lorne for that matter, but I was never in this for the glory. Like you I just wanted to make a difference.

"I will send you my historical story under separate cover later. For now I am enclosing some articles you may not have had on IPC, as well as sample packages of the products produced." This large box also included many samples of So-Nice soymilk in various flavors and sizes. Address: 15328 Columbia Ave., White Rock, BC, V4B 1J7 Canada. Phone: 604-541-8633.

11870. Werner, Suzanne. 1999. "Tofu fordert den ganzen Koch": In Freiburg gibt es eine grosse und eine kleine Tofufabrik ["Tofu demands the whole cook": In Freiburg there is one large and one small tofu shop]. *Badische Zeitung* (*Germany*). April 22. p. 31. Friday. [Ger]
• ***Summary:*** In the *Freiburger Zeitung* section (p. 31): When tofu is not delicious, then it has not been well prepared, says Wolfgang Heck–managing director of Life Food GmbH. In 1985 Life Food started production in a cellar. The weekly production of 4 kg of tofu was sold at the weekly market. Two years later, Wolfgang Heck started a separate company, Taifun Naturkost. In 1990 the two companies merged.

On April 25, from 11:00 to 4:00 all are invited to an open house at Life Foods GmbH, a Bebelstrasse 8, in Hochdorf.

A large photo shows two men making tofu at Life Foods.

• ***Summary:*** "Previous studies showed that women who eat soy products such as tofu and soy milk are less likely to develop breast cancer."

11872. **Product Name:** Rice Kaas (Non-Dairy Cheese Alternative) [Cheddar Style, or Mozzarella Style].
Manufacturer's Name: American Natural Snacks.
Manufacturer's Address: P.O. Box 1067, St. Augustine, FL 32085-1067. Phone: 904-825-2039.
Date of Introduction: 1999. April.
How Stored: Refrigerated.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1999. April. p. 67. "Finally... Rice Kaas." "A delicious new alternative to real cheese made with whole brown rice. Soy free. No cholesterol. Lactose free. No sorbates or other artificial ingredients. Kosher (Dairy). Made with expeller-pressed non-hydrogenated canola oil. No saturated fat. From the makers of Soya Kaas."

Ad in Natural Foods Merchandiser. 1999. Dec. 10. "Our Soy (tofu) is organic ensuring it is 100% GMO free. Available in: Regular and Fat Free... Rice Kaas (TM) Now available: Mozzarella Style and Cheddar Style Rice Kaas."

11873. Foley, Jayni. 1999. How I became a vegetarian: Winner of VRG's 1998 essay contest for teens and kids. *Vegetarian Journal* (*Baltimore, Maryland*). March/April. p. 29-30.
• ***Summary:*** When Jayni was in fourth grade, her family took her to the Dupage County Fair where she realized that the pets being raised by kids for prizes would end up on the dinner table. First she went to the petting zoo, where she petted a baby cow. "Looking deep into its deep, brown eyes, I could see its soul and feelings... His fat, pink tongue felt coarse on my warm hands. His skin was as soft as velvet and I wondered why leather was said to come from cows."

After lunch she and her family visited another booth of interest. There she saw six children crying. One of them stood up, started screaming, and pointed to something behind her. It was a gigantic bloody cow carcass being hoisted into the meat chamber behind her. A loudspeaker nearby boomed out "First prize in the full grown division goes to Mr. and Mrs. John Horton of Plainfield. Congratulations to our winners. The beef will be for sale at the meat counter in the south east corner of the fairgrounds."

Now the kids were screaming with all their might: "Daisy! She was our cow! They can't just kill her for winning first prize! That ain't right... especially since she won!" Tears flowed like rivers from their eyes. They they were hushed by parents and others.

At this point Jayni suddenly understood what had happened. "I could do nothing but stare at this family. I wanted to run up to them and give them all hugs, but I could not move... That cow had been their friend and a member of their family. I wondered if they knew what the cow was in for if she won. Obviously not. More important, I found myself wondering why any parent would let their children be

© Copyright Soyinfo Center 2013

hurt in this way." She asked her parents this question, but the answers were unsatisfying. The rest of the day as she walked around the fair, her thoughts were with that cow.

She became a vegetarian and she often thinks of that experience at the fair at mealtimes. "Tofu is a perplexing substance, but it is my chosen source of protein. It is a small sacrifice I can make in order to spare the life of a young cow or any other animal. The drama of the fair will remain a part of me as long as I live... Most importantly, the eyes of the baby cow... The innocence of the cow was incredible to me. It knew not its fate or destiny, but only of steady meals, and kind hands that would pet it." Address: Age 15, Wheaton, Illinois. Phone: 630-665-9805.

11874. Jacobi, Dana. 1999. Buono appetito! Soy makes hearty Italian classics healthy. *Vegetarian Times.* April. p. 36, 38-40, 42. No. 260.
• ***Summary:*** Recipes using eight soyfoods to make one Italian dinner–a veritable soy feast. The recipes are: Herb pesto (with white miso, dairy-free). Soy minestrone (with edamame). Sicilian stuffed squash (with TVP flakes and grated soy Parmesan cheese). Pasta al forno (with fat-free Italian sausage, and white miso). Chocolate almondi biscotti (with soy flour). Italian 'cheese' pie (with extra-firm tofu and soy margarine). Address: Food writer, New York, NY.

11875. Jacobi, Dana. 1999. The ultimate scrambled tofu: The right tofu and cooking technique create a quick, satisfying breakfast dish. *Natural Health.* April. p. 78, 80, 82.
• ***Summary:*** Includes a sidebar (p. 82) titled "Like bacon with your eggs?"–which describes four brands of meatless bacon and sausage. Address: Food writer, New York, NY.

11876. Joyce, Marilyn. 1999. The magic of soyfoods. *Healthy & Natural Journal* (*Sarasota, Florida*) 6(2):56-61. April.
• ***Summary:*** Soyfoods are an easy, healthy addition to your diet.

11877. *Ontario Soybean Growers' Marketing Board Newsletter.* 1999. Tofu... Simply delicious. April. p. 5.
• ***Summary:*** The Agricultural Adaptation Council recently approved OSGMB's application for funding of a new tofu recipe brochure. To be titled "Tofu... Simply Delicious," it will feature 8 easy-to-prepare tofu recipes with color photos of each, plus nutritional analyses and tofu preparation tips. It is expected to be completed in June 1999 and will be sent free of charge to the over 650 dietitians who requested tofu recipes for their clients in 1998 and 1999. It will also be made available to anyone who contacts OSGMB requesting information on soyfoods. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11878. Santacruz, Cecilia; Santacruz, Nestor. 1999. Re: Searching for the roots of soya in Colombia. New developments at Delisoya. Letter to William Shurtleff at Soyfoods Center, April. 2 p. Typed, with signature. [1 ref]
• ***Summary:*** In searching for the earliest documents about the soybean in Colombia, Cecilia and Nestor have had the opportunity to talk with some interesting people, such as Victor Manuel Patiño (age 87) who wrote several early Bulletins, among them No. 4, titled *Plantas Introducidas* (Introduced Plants), which tells the complete story of how the soybean, and different varieties, were introduced to Colombia. It is being sent to them from Cali. Victor says that the *Estación Agrícola Experimental de Palmira* (Palmira Agricultural Experiment Station) still exists, and he will ask a friend who lives in Cali to search for the Bulletin No. 1, which mentions soybeans. The station started in 1929, and that same year the first 18 Japanese arrived in Colombia. They included agricultural mechanics and experts in the handling of tractors, etc. They started to plant soybeans and Victor, who was a student at the time, kept the seeds for future trials since no one wanted them besides the Japanese. Soybean production started on a fairly large scale in the 1940s with the manufacture of vegetable oil by Grasas SA.

ASEJA (*Asociación de Exbecarios del Japon*) is an association of Colombians to whom the Japanese government has given a scholarship or supported in some way. Ceci and Nestor know several members including Camilo Ruiz, who is Ceci's teacher of Japanese language. He also assists Japanese missions that come to Colombia through JICA (Japan International Cooperation Agency). Camilo belongs to ASEJA and next week is taking a course at JICA on how to structure a project proposal and project. He thinks that translation of *The Book of Tofu* into Spanish is a good idea and may interest JICA.

At her Japanese class, Ceci saw a nice poster celebrating the 70th anniversary of the arrival of the first Japanese emigrants to Colombia (1929-1999). It contained old photos of the early pioneers. Ceci hopes to be able to get information from the Japanese themselves through Camilo Ruiz who is going to Cali.

On April 27 Ceci and Nestor were on Colombian television for 3-5 minutes with all their products nicely displayed on a table. The program is called "En Vivo" with Adriano and Darío. Nestor spoke very well and many people saw it. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

11879. Simonds, Nina. 1999. A spoonful of ginger: Irresistible, health-giving recipes from Asian kitchens. New York, NY: Alfred A. Knopf. xii + 322 p. April. Illust. Index. 24 x 21 cm. [53 ref]
• ***Summary:*** This beautiful hardcover book and cookbook, printed on glossy paper with many color and black-and-white photos, looks at food in two ways: As medicine, and as the source of delicious recipes. The Asian holistic

© Copyright Soyinfo Center 2013

approach is relaxed and non-rigid; it emphasizes balance. Soyfoods appear throughout. Tofu is used to "increase body energy, produce fluids, and lubricate the system. It is said to have yin, or cooling, properties" (p. 23). Miso chicken soup with snow peas and tofu (p. 34). Grilled miso fish fillets (p. 66). Pan-seared halibut with garlicky black bean sauce ("Seasonings: 3 tablespoons fermented or salted black beans, rinsed, drained, and minced, 2 tablespoons minced garlic, 2 tablespoons minced fresh ginger,... p. 71; "Black soybeans have been used by the Chinese for medicinal purposes for over 2,000 years"). Baked black bean shrimp (with "Seasonings: 2 tablespoons fermented black beans, rinsed and drained; 2 tablespoons minced scallions, white part only; 1 tablespoon minced fresh ginger; 1 tablespoon minced garlic; and 1 teaspoon dried chile [chili] flakes." When the oil in a wok is very hot: "Add the Seasonings and stir-fry for about 10 seconds with a slotted spoon or spatula until fragrant." A side note on this page: *The Chinese System of Food Cures,* by Dr. Henry Lu, says that "a regular diet of fermented black beans can relieve depression and stress and counteract any toxins," p. 75). Stir-fried saucy shrimp (with sweet bean sauce or *jiang,* one of the earliest Chinese seasonings; if unavailable, substitute hoisin sauce, p. 81). Grilled hoisin scallops (with ½ cup hoisin sauce, p. 83). Spicy grilled squid with warm greens (with ½ cup hoisin sauce, p. 86-87). Broccoli or cauliflower with a soy-lemon dressing (p. 173). Grilled leeks in a garlic-soy dressing (p. 174). Grilled wild mushrooms with a teriyaki dressing (p. 178). Black bean acorn squash (with "2 tablespoons fermented black beans, rinsed, drained, and minced." Describes how to make "black bean sauce," p. 179).

One chapter, titled "Soybeans and tofu" (p. 192-215), begins with a discussion of the work of Dr. Albert Leung, author of various books on Chinese herbs and food, and creator of a computerized database on Chinese herbal medicine for the National Cancer Institute. "Like a growing number of doctors, Dr. Leung feels strongly that an integrated approach should be taken in the treatment of many diseases, one that draws from the strengths of both conventional and alternative therapies. He also concurs with Henry Lu that fortifying the immune system is critical to good health. 'Our immune system is the key to health and longevity and there are many factors that throw off our yin/yang balance,' Dr. Leung says. 'When this happens, Traditional Chinese Medicine often uses herbal tonics and food to help restore the balance.'

"Tofu is such a food. Chinese doctors classify its nature as cool and sweet. It is credited with clearing heat from the body, detoxifying the system, and strengthening the spleen and stomach."

A full-page color photo (p. 192) shows tempeh being fried. Simonds notes that the earliest known recorded use of black soybeans dates back to the middle of the eighth century.

A table titled "Soybeans and their byproducts" (p. 196) lists ten products, how each is used, and how long they will stay fresh in a refrigerator. The foods are: Fresh soybeans [as a green vegetable appetizer], soybean sprouts, miso, soybean milk, silken tofu, soft tofu, firm tofu, extra-firm tofu, 5-spice pressed tofu, and tempeh.

Recipes are from many Asian countries": Japanese-style silken tofu. Soybean sprouts and leeks in hot chile sauce. Rainbow salad with spicy peanut dressing (and tofu). Spicy garlic bean curd noodles. Vegetarian roll-ups (with tofu). Fragrant steamed pearl balls (with tofu and glutinous rice). Spicy ma po tofu. Cantonese style tofu in black bean sauce (incl. fermented black beans, garlic, ginger and hot chile paste). Vegetarian kung pao with broccoli and peanuts (with tofu. Note: Kung pao is a style of food preparation associated with Szechuan and Hunan). Curried tofu. Braised cinnamon tofu. Simmered tofu with black mushrooms. Fried tempeh with sweet and sour sauce. Spicy stir-fried tempeh with basil. Ginger teriyaki tempeh.

Also: Chicken-black bean brown rice (with fermented black [soy] beans, garlic, and fresh ginger, p. 231; Dr. Albert Leung says that making fermented black beans is a complicated process, in which small black soybeans are first soaked in water with mulberry leaves and wormwood herb, then they are fermented with salt). Vegetarian pad thai (with tofu, p. 245). Almond soy jelly with litchees and melon (with soy milk, p. 266). Two-spice vanilla tapioca pudding (with soy milk, p. 269; Soy milk lubricates the body, clears the lungs, and is often prescribed for urinary disorders and constipation). Coconut rice pudding with berries (with soy milk, p. 272). Address: Salem, Massachusetts.

11880. Soyatech; Senechal, Jorgenson, Hale & Co. 1999. The North American soyfoods market: A multiclient study. 318 Main St., P.O. Box 84, Bar Harbor, ME 04609. April. *
• ***Summary:*** The price of this market study is $9,500 before 18 Dec. 1998 and $12,500 thereafter. The study will be completed in early April 1999 and presented shortly thereafter at the Marriott Camelback Resort in Scottsdale, Arizona.

Soyatech was founded in 1984 [sic, Jan. 1987]. Address: Bar Harbor, Maine. Phone: 207-288-4969.

© Copyright Soyinfo Center 2013

Gupta got into the soymilk business (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Raj is a research scientist and a physicist. He wanted to come up with something to feed hungry and starving people in Third World Countries. His native country is India and hunger has long been a major problem in India; he wanted to do something for his people. He focused on developing a low-cost protein source that was palatable. "He knew that soy was superior food, but people in Indian didn't like the taste." He wanted to develop good-tasting alternatives to cow's milk and paneer (fresh dairy cheese), which were quite expensive in India and came from the Holy Cow. Once he had a good soymilk, he wanted to use it as the base of puddings, yogurts, and other such foods which would be popular in India.

Raj went about this research scientifically, trying to understand what was causing the problem. He found that the oxidation of lipoxygenase enzyme led to off-flavors. To control that, he developed the concept and process of airless cold grinding. An associate of his, Grant Wood, who worked for the research council under him in the same department, is the person who actually designed the original SoyaCow.

Theoretically Raj was working in his home kitchen. But he was a government employee, working for the National Research of Canada, a huge organization in Ottawa. As a professor of physics, he had access to good scientific laboratories–but physics labs rather than food labs. He and Grant Wood did most of this work on their own time. He actually got a Canada Council award for designing the grinder.

Raj filed for two patents on his cold grind airless process. These patents are owned by a U.S. company, Micronics, in partnership with his brother, who is a university professor in the United States.

Note: According to Soyfoods Center records, in March 1985 Raj and his wife, Rashmi, applied for a Canadian patent titled "Process for making soymilk with no beany flavor" (No. 477,902). In 1986, Raj, his wife, and one other Gupta filed an international patent application titled "Food processing in oxygen-free environment" [Soymilk]. In April 1987 they filed for a U.S. equipment patent titled "Equipment for making no-beany flavor soymilk." They assigned the rights to ProSoya Corp. (Maryland Heights, Missouri).

In 1992, when George first met Raj in Ottawa, Raj was using his SoyaCow SC20 to make both soymilk and tofu. He even had a little tofu forming box that he shipped with each SoyaCow. The box would form one batch of soymilk from the SC20 into tofu. A filter press pressed the okara. You would coagulate the soymilk to make tofu. Today the SoyaCow SC20 is being made in both Russia and India.

Frank Daller, who was originally in media in Canada, was an important early figure in ProSoya. Before he met Raj, he was working with a charitable organization in Canada (probably Plenty Canada, or perhaps Child Haven). Frank met Raj shortly before George did, when Raj was busy making his first SC20s. Plenty had an SC20 at The Farm in Canada, and today Plenty has several SC20s in projects operating worldwide. The two main organizations that Raj started working with through a CIDA grant he obtained were Child Haven and Plenty. Frank Daller approached Raj and convinced Raj that he should become the president of the company–the man in charge of daily affairs at the office. He invested a little bit of money; with Raj, if you invest a little bit of money, you can do anything.

In early 1996, Frank Daller left ProSoya and set up his own charitable organization. One advantage of such a corporation is that it is not required to pay any taxes. He got a lot of cash by selling the shares he owned back to ProSoya and IPC. More importantly, he had rights to stock options–which he also sold. Somehow Frank and Loren Broten wound up in some difficulty. Today Frank is the president of Daller & Co. Ltd. in Ottawa, Ontario, Canada. He sells soymilk and tofu processing equipment. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

11884. Harrigan, Brian. 1999. Update on the work of ProSoya Inc., especially in Russia (Interview). *SoyaScan Notes.* May 11 and June 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya gives 10% of their revenue (not their profit) from the SC-20 to Child Haven, the charitable organization which purchased the very first SC-20 SoyaCow from ProSoya. Child Haven now has a SoyaCow Resource Center in India near New Delhi. The managing director [Ratan Sharma, PhD], a scientist, uses the Center to train people, and he goes on the road and shows the various places that have SoyaCows how to use them. SoyaCows are now also be purchased by private companies who make commercial soymilk; they are also assisted by a Child Haven scientist.

Actually, the name of the SC-20 has now been changed to VS-40. VS can stand for various things in various languages, such as *Vaca Soya* (in Spanish) or *Vache à Soya.* But the main reason for the name change was that ProSoya wanted to have a number that reflected the capacity of the machine in liters per hours. In the SC-20, the "20" referred to the size of the cooking vessel, which was 20 liters. The machine has always been able to produce about 40 liters/hour of soymilk, using a batch process–a little more 13 liters per batch and three batches per hour.

In Russian *EsKa Vacit* means "SC-20" and *Soya Karova* means "Soya Cow." A program called "Feed the Children," is an American charitable NGO headquartered in Oklahoma City, with branches in about 14 countries. They have bought

© Copyright Soyinfo Center 2013

200 SoyaCows (the VS-40) recently for Russia and they want to buy 800 more next year. There are now more than 500 SoyaCows in Russia–all over the country. Feed the Children buys these SoyaCows from a Russian company named ASSOY, in Krasnodar, run by Mr. Podobedov; these SoyaCows are made in by ASSOY in Russia under license from ProSoya in Canada–part of a technology transfer agreement signed about 3 years ago. The agreement says that ProSoya will get a small royalty on each system sold. ProSoya declined the offer to own part of the ASSOY business. Feed the Children buys the SoyaCows using money from USDA that was earmarked by Congress as part of the billion dollar U.S. Food Aid Program to Russia. This is the only non-food item in the program. Feed the Children got soybeans from USDA, monetized them by bartering them, then used the money to but SoyaCows from ASSOY in Russia. ProSoya in Canada receives nothing from the deal–except eventually (hopefully) its small royalty each machine sold.

Feed the Children, true to its name, places most of the SoyaCows it buys in social institutions, with the main objective of feeding kids. Brian would estimate the breakdown at 30% monasteries, 20% orphanages, 20% hospitals, 20% schools, and 10% prisons. Monasteries are one of the few social institutions that the Russian people still trust; they have generally remained honest and free of corruption. These monasteries include 50 Russian Orthodox Christian monasteries, which have long run soup kitchens and shelters to serve the hungry and homeless. The main monastery in Moscow, which is the home of the patriarch of the Orthodox Church, has a SoyaCow and now feeds soymilk and tofu (among other things) to more than 600 people a day–plus their own staff of 80 monks and 200 associates. The social institutions typically run their SoyaCows 20 hours/day and sell any excess soymilk to the public consumers. The SoyaCow comes with a cutter mechanism which transforms it into a SoupCow, and enables it to make a thick well-cooked vegetable soup in 20 minutes–starting with water and any mixture of raw vegetables (carrots and potatoes are popular). Okara is often added to these soups–to make them thicker and more nutritious.

This has also created competition. Four different companies are making machines similar to SoyaCows (some are *very* similar, which raises breach of patent issues). One of these competitors is the largest aerospace company in the ex-Soviet Union. They used to build fighter jets; now they make SoyaCow knock-offs.

In Russia, many SoyaCows are owned and operated by small entrepreneurs. They would read an article in a magazine or newspaper, or see the SoyaCow on TV, get the address of ASSOY in Krasnodar, and make contact. With Russia's current food shortages, this is one area rich with opportunities. An estimated 60% of the entrepreneurs bring the SoyaCow into an existing business (especially a food-related business) while the other 40% start a new business based on the SoyaCow. Entrepreneurs are looking for food sources that make them less dependent on food shortages and unreliable distributors.

About 95% of the SoyaCows in Russia make soymilk that is not packaged. Rather, it is sold hot, directly to consumers, either in little plastic cups or the consumers bring their own containers so they can take the soymilk home. Most SoyaCows are operated in the back of small fresh food stores, or in specialized little Soya Shops (Soyushka in Krasnodar). The fresh, hot soymilk is put into a large, clean metal container or drum. Typically two flavors are sold, each in its own large container: Dairylike contains granulated sugar and a little salt; chocolate is dairylike with added cocoa. In Russia, soymilk retails for about $0.12/liter; this is about one-third as much as cow's milk which costs $0.35/liter. Yet cow's milk is not readily available. A lady behind the counter uses a measuring cup to ladle out the hot soymilk (at about 70ºC) out of the pot and into the customer's container.

Through all of this, ProSoya in Ottawa is aiding Russia's transition to a market economy. Brian concludes: "This is a fantastic program! It's unique, has a bright future, and we love it." The presence of ProSoya as a partner in Canada gives important legitimacy and credibility to ASSOY, assuring organizations like Feed the Children that ASSOY is not a "fly-by-night" outfit. They have "milked that relationship to the fullest–which is fine with us." Indeed ASSOY provides soybeans, training, infrastructure, and marketing aid in addition to SoyaCows. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11885. Inobe, Dean. 1999. Okara is becoming a bigger and bigger nuisance in Japan (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center. [1 ref. Eng]

• ***Summary:*** An article about okara appeared in the March 13, 1999 issue of the *Nihon Ryûtsû Keizai Shinbun* (in Japanese) stating that the Japanese Supreme Court declared tofu to be a public nuisance. The defendant was a tofu manufacturer from Osaka, who was accused of dumping okara without a permit. The court noted that the entire tofu Japanese industry was struggling with the problem of okara disposal.

Miki is a Japanese prune company, but Mr. Inobe is working with an American company that has developed a powder which can be used, instead of whole soybeans, to make tofu which has no okara as a by-product. This product is not yet on the market. It contains some additives and the soymilk must be homogenized before it is made into tofu. Address: Managing Director, Miki USA, 1333 N. California St., Room 570, Walnut Creek, California 94596. Phone: 925-932-3994.

11886. Klien, Gary. 1999. King of tofu getting ready to make a run: New Age meets the new millennium. *Marin Independent Journal* (*Novato, California*). May 14. p. 8. In special "Marin's 2000 Commerce" section.
• ***Summary:*** Wildwood Natural Foods produces about 30,000 lb/week of tofu, and sells it mostly along the West Coast. The company presently employs 65 workers at its plant in Fairfax, and 30 workers at its other plant in Santa Cruz. Billy Bramblett (president of Wildwood) and his three partners are planning to expand their business beyond the region. Bramblett, the tofu king of Marin County, is a longtime cooking enthusiast. He first started using tofu in 1974 and he founded Wildwood six years later.

In 1983 Bramblett composed and recorded "Tofunction," a song extolling the virtues of tofu. The recording can be heard at Wildwood's Web site, www.wildwoodnaturalfoods.com. The lyrics are given in full. Photos show: (1) Bramblett, at the Fairfax plant, stirring a vat of sweet and sour sauce to be poured over tofu cooked by employee Mario Marin. (2) Wildwood label for Organic Medium Tofu. Address: IJ Reporter.

11887. Seshan, Sekhar. 1999. No milk–we're veg! *Business India.* May 3-16. p. 158.
• ***Summary:*** Dakini Health Foods, run by Seemo (H. Shapira) and Kairava (J. Spaelstra), has a gleaming new plant on the outskirts of Pune [Puna], where they make vegan products–peanut butter, brown and white tahini, and the soy foods tempeh and tofu. All are high protein, natural and healthy. They also use none of the "Permitted Class II preservatives." Shapira notes that the unusual versatility of tempeh, which can be textured like any meat, enables it to be used as a meat substitute in a wide range of Indian, western, and oriental-style recipes. Dakini produces two tonnes per year (tpy) of tempeh, 5 tpy of peanut butter, and 6 tpy of tahini.

Shapira is an Israeli who was being groomed to be an admiral, "escaped" and got into catering, especially vegetarian foods, in Germany, before coming to India. There he tried his hand at making New Age jewelry, but got bored after a few years, and the "business got too serious." In 1995 he decided to get into the food business in India; he noticed that although India is a vegetarian country, many of the good vegetarian foods found in the West are not available in India. He started with tempeh, then expanded into peanut butter. Dakini is now expanding its tofu production capacity to be 100 tpy by June, and tempeh to be 12 tpy by the end of 1999. Dakini now also has a recipe book. Marketing is not a problem, insists Shapira. He sells mainly to the import substitution market, like "Osho-ites" [disciples of Rajneesh] and other transient foreigners who want vegetarian food but can't get the quality they are used to. Moreover, a network of hotels all over India contacts him for non-perishables. His perishable foods, like tempeh and tofu, he sells locally.

A photo shows Shapira and Spaelstra (his female partner) seated at a table behind samples of their many innovative products. The caption: "Health is a major commitment for Shapira (and Spaelstra)."

Note: Dakini does not yet have a recipe book.

11888. ProSoya Inc. 1999. SoyaWorld Inc. acquires So Nice soy beverage brand: Leading soy beverage company also secures a strategic interest in ProSoya Inc. (News release). ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 2 p. May 17.
• ***Summary:*** "Vancouver-based SoyaWorld Inc., a leading manufacturer and marketer of fresh soy beverages, has acquired the So Nice soy beverage brand and a strategic interest in *ProSoya Inc.* Through this transaction the company has also acquired soymilk extraction plants and equipment in Ottawa and Vancouver. Terms of the acquisition were not disclosed.

"'So Nice is an organic soy beverage for health-conscious customers. SoyaWorld will re-launch the product in Canada and the United States as *So Nice Soyganic,* an organic soy beverage fortified with calcium and other essential nutrients. *So Nice Soyganic* will complement the company's successful flagship product So Good [based on soy protein isolates, licensed from Sanitarium Foods of Australia], the mainstream soy beverage and nutritional alternative to milk.

"'*So Nice Soyganic* is an organic beverage, that will be targeted to health conscious customers through distribution in the health food stores and natural food sections of major grocery stores nationwide," said Maheb Nathoo, general manager and chief executive officer of SoyaWorld Inc. 'The new *So Nice Soyganic* beverage is a natural extension of SoyaWorld's business and a quality addition to our portfolio of dairy-free beverages.'

"SoyaWorld will also assume the ownership of the licensor rights of So Nice brand for soy beverages that are currently marketed in the UK.

"SoyaWorld secures exclusive license to ProSoya soymilk technology: ProSoya Inc., an Ottawa-based soymilk technology company controlled by Dr. Raj Gupta, develops technology and equipment for production of 'non-beany' soymilk using a patented 'air-less cold grinding' process. The ProSoya technology, which provides the soy base used in the manufacture of *So Nice Soyganic*, will now be licensed exclusively to SoyaWorld Inc. in North America, with rights in certain other countries as well.

"In addition, SoyaWorld Inc. gains access to ProSoya's international patents and advanced technology used to extract soymilk from soybeans. A table top version of the ProSoya soy extraction technology was recently tested by the Johnson Space Centre and was determined to be suitable for use in soymilk production on NASA's first manned mission

© Copyright Soyinfo Center 2013

to Mars.

"Soy beverage industry grows: The soy beverage market is one of the fastest-growing beverage categories in Canada. Dollar volume growth for soy beverages increased 106 percent in 1998 over 1997 with Canadians consuming more than 10 million litres last year.

"SoyaWorld Inc. is jointly owned by Dairyworld Foods of Vancouver, one of Canada's leading dairies, and *Sunrise Soya Foods,* Canada's largest tofu company. Formed in 1996, SoyaWorld is Canada's largest manufacturer and marketer of dairy-free beverages, with production facilities in Vancouver, British Columbia; Brampton, and Ottawa, Ontario.

"Contact information: SoyaWorld Inc. Maheb Nathoo, general manager and chief executive officer. (604) 420-0162.

"ProSoya, Inc. Dr. Raj Gupta, President. (613) 745-9115." Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11889. Lee, Jenny. 1999. Burnaby-based SoyaWorld tightens grip on market: Patented technology acquired in purchase. *Vancouver Sun* (*British Columbia, Canada*). May 18. p. D1, D12. Business section.

• ***Summary:*** On Monday, May 17, SoyaWorld, based in Burnaby, British Columbia, tightened its grip on Canada's $25 million a year soy beverage market. From International ProSoya Corp. of Surrey (near Vancouver) the SoNice brand, and soymilk extraction plants in Vancouver and Ottawa.

SoyaWorld also acquired a strategic interest in ProSoya Inc., an Ottawa-based company which developed the technology and equipment for producing a good-tasting soymilk using a patented grinding process. Financial terms were not disclosed.

SoyaWorld is jointly owned by Dairyworld Foods–western Canada's largest food company–and Sunrise Soya Foods, one of Canada's largest tofu manufacturers. Both companies are located in Vancouver.

A photo shows Maheb Nathoo, general manager and CEO of SoyaWorld, as he holds up new packaging for SoNice.

Note 1. Talk with receptionist at Dairyfoods World. Their official name is Agrifoods International Cooperative Ltd. They are a cooperative owned by dairy farmers in Canada. Their address: 6800 Laugheed Hwy., Burnaby, BC, Canada V5A 1W2. Phone: 604-420-6611.

Talk with George Conquergood of IPC. 1999. May 28. The date that SoyaWorld officially finalized its deal with IPC was Monday, May 10. May 17 was the date that SoyaWorld sent out its news release.

11890. Byrd, Deborah. 1999. Tricks with tofu: Student's quest for vegetarian protein leads to bowls of chili, plates of pesto. *Contra Costa Times.* May 19. p. G1, G2. [1 ref] Address: Times Food Editor, California.

11891. Gupta, Rajendra ("Raj") P. 1999. Update on ProSoya Inc. Background on Raj Gupta (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Raj is very happy with the fact that Vancouver-based SoyaWorld Inc. has acquired the SoNice brand and a strategic interest in ProSoya Inc. Raj has 5-6 U.S. patents on his process and equipment. The first patent was issued in about 1990 and has a life of 18 years, so it will be valid until about 2008.

About 35 SoyaCows (VC-40s) are now in operation in India–most of them in private businesses making tofu (soya *paneer*) rather than soymilk. Three or four of these are in New Delhi.

Raj's formal name is Rajendra Prasad Gupta. He was born on 18 Oct. 1942 in Sahranpur, Uttar Pradesh, India. He received all of his formal education, including his PhD degree in India. He married Rashmi in 1975 and is still married; she is very interested in his work with soy.

Grant Wood is a Canadian mechanical technologist who was Raj's colleague at the National Research Council. Raj had approached many people, but they were unable to build the machine he wanted. He told Grant Wood that he was trying to make a small (SC-20 type) soymilk machine, and that he was doing this for humanitarian purposes and for Child Haven. He asked Grant if he could help. As soon as he heard "humanitarian" he immediately got interested. He volunteered all his time, and a great deal of it, with no offer or promise of any future reward. Raj paid all expenses for materials. He had an excellent workshop in the 2,500 square-foot basement of his home in Ottawa, and there he built the first prototype and assembled the first twenty SoyaCows in a workspace on which he paid no overhead. As ProSoya became more of a commercial establishment, in recognition of his generous and selfless work, Raj issued Grant about 10% of the company's shares. He still owns those shares, and he will benefit as the value of the company rises. He is not interested in cash now. He and his wife can get $1 million tax free.

It was not until 1994 that ProSoya outgrew the basement workshop and moved into the first commercial building on which the company had to pay rent.

ProSoya Inc. manufactures soymilk equipment and licenses technology. The brand "So Nice" cannot be registered as a trademark; it can be written as either "SoNice" (pre-1999) or "So Nice" (now). Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11892. Bramblett, Billy. 1999. SunRich in Minnesota is now a major supplier of fresh soymilk base (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This liquid soy base is made from whole

© Copyright Soyinfo Center 2013

soybeans. Wildwood is starting to buy this base and use it to make their soymilk; their first run will be next week. According to the people that Wildwood has been talking to, SunRich is shipping 16 truckloads a week; each truck contains 6,000 gallons. Billy thinks the quality is excellent. He thinks SunRich may use the airless cold grind to make this soy base; it is his understanding that is the only way you can get the non-beany taste. He is not sure exactly what process SunRich uses, but he knows that the flavor is really good and very similar to that of the original White Wave Silk. White Wave now gets the soy base for their Silk soymilk from SunRich.

They can get up to 15% solids in the base using some kind of vacuum process; Wildwood then dilutes it back down to about 4% solids for their soymilk.

Wildwood sees soymilk as its "crossover" product–the one that will get the company into mainstream stores. They plan to follow behind the soymilk with their bakes and burgers. Wildwood has been meeting with people like Albertson's who want to take the company's products nationwide, but Wildwood is not quite ready to make that leap yet. Plus they want a free fill in ever store–a free case of product for each SKU introduced–and those freebees alone would cost Wildwood some $30,000 to $40,000. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11893. Bramblett, Billy. 1999. Wildwood's good, long-standing relationship with Safeway supermarkets in California (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Wildwood first started selling its products in Safeway supermarkets in California in late 1987 or early 1988. Safeway was very nice to Wildwood. They allowed Wildwood to "cherry pick," meaning to pick 30 the stores they wanted to service themselves. Rock Island will service any other ones that Wildwood doesn't want to serve. Wildwood picked the stores based on their location and demographics, and on Wildwood's driving routes and schedules. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11894. Bramblett, Billy. 1999. Update on Wildwood Fairfax and Wildwood Santa Cruz (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Wildwood no longer makes any sandwiches. The 65 people employed at the Fairfax facility include all of Wildwood's driving staff, accounting staff, production staff, and support staff. Santa Cruz is basically a production facility, though three drivers and several administrators operate out of Santa Cruz. Santa Cruz produces all the tofu, and the YoSoy traditional soymilk. Second generation products made at Santa Cruz include the bakes, the burgers, and the tofu cutlets. If it comes in a vacuum-packed bag or a water-pack tub it is made in Santa Cruz. If it comes in a cup (as 18 products do), it is made in Fairfax–including 5 flavors of braised tofu, 2 tofu salads, etc.

Wildwood believes that it makes the best-tasting tofu on the West Coast. It has also been innovative in developing many delicious products, which some other companies are now trying to imitate.

Wildwood has long been in a big crunch making 30,000 lb/week of tofu; about half of this is sold as tofu and half goes into making second generation products. But they could sell twice that much tofu if they had the capacity to make it.

Last year Wildwood started making Baba Ganooj for Trader Joe's (TJ). The project started as a sort of side deal to the Hummus, making maybe 700 units a week. Within a month, Wildwood was making 5,000 units as week for TJ. Bill had to add two shifts and make many other arrangements. TJ liked it and asked what other products Wildwood had. They came and visited, and Wildwood showed them its various products. TJ then asked if Wildwood could make baked teriyaki tofu for them. Billy agreed on the condition that they not order more than 5,000 units/week; TJ agreed. Their buyer for that section is a really great person named Kimberly Sprinkle Kruell, who Wildwood trusts. She told Wildwood that she and TJ like Wildwood and their products, and want to work with the company.

So in an effort to make more "secondaries," Wildwood went to tofu makers it knows and trusts, and ordered a pallet (several thousand pounds) of tofu. They couldn't do it; they were unable to come up with the volume, the quality, and the shelf life that Wildwood needed. So Wildwood concluded that they have to make the tofu themselves.

Wildwood's fresh soymilk in gable top cartons is now selling well. It looks like they might be doing that for Trader Joe's too. "If that happens, it's gangbusters–outstanding!"

Wildwood was working with Ted Nordquist, who was making their soymilk base; he and Jeremiah have been friends for more than twenty years. But Wildwood "divorced" Ted and went to another supplier of soymilk base. He is very good at making non-dairy products, but he's a character, and working with him is very difficult. He is an enigma, and he doesn't seem to know what he wants. He and Wally Rogers were buddies and partners for many years, and all of a sudden they just split up. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

11895. Bramblett, Billy. 1999. Thoughts on soy yogurts (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Of all the soy yogurts, Billy likes the one made by Nancy's in Oregon best–far better than White Wave's Silk, and also better than Ted Nordquist's product. Billy really likes the drinkable yogurt called "Yono" which is made by Soyfoods of America and was developed by Tim

• ***Summary:*** Their "Cooking with Soy" department debuted in May 1996. This article begins: "Soy is hot. Like a cult movie that eventually shows up on prime time TV, soy has become a mainstream American commodity, an ingredient in everything from hot dogs to apple pie... The boom goes on, and for good reasons–Nutrition and taste; versatility and economy... It's no fairy tale–soy is a magic bean worth swapping a cow for." This article is a collection of recipes from other sources, or from back issues of Veggie Life. Address: Food editor, Veggie Life.

11898. Schinner, Miyoko Nishimoto. 1999. Japanese cooking: Contemporary & traditional–Simple, delicious, and vegan. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. Index. 21 cm.
• ***Summary:*** Contents: Introduction (incl. Japanese attitudes towards nutrition, vegetarianism and animal rights, the recipes, the Japanese meal). Sample menus (by season). Glossary: Ingredients, kitchen concepts, and tools. Rice dishes. Soups and stews. Cooking with tofu. Fried dishes. Salads and cold vegetables. Noodles. Meals in a pot. Stewed and braised dishes. Meals in a bowl. Everyday favorites. Nouvelle Japanese cuisine.

Terms in the Glossary include: Abura-age, agar agar, atsu-age, azuki, fu (made from wheat gluten), goma (sesame seeds), goma-dofu (a tofu-like cake made from sesame butter), hijiki, Inari-zushi (sushi), kanten, konbu, kuzu & kuzu-ko, miso, mochi, natto, nori, okara, sesame oil (goma abura), shoyu, soba, soy sauce, tofu ("Perhaps the most misunderstood food in Japan... Americans might call it bland; the Japanese prefer to think of it as delicate in flavor"), umeboshi, wakame, yaki-dofu, yuba.

This vegan cookbook is filled with many soy-related recipes, both traditional and new. Examples of new: "Fishy Tempura Tempeh. Crispy Fried Tempeh (Kara-Age).

"Trying to dine out in a strictly vegan fashion in Japan can present challenges. Although dairy products are not found in traditional Japanese cuisine, fish-based stocks appear in a range of dishes from appetizers to soups to entrees... My advice to vegan or vegetarian visitors to Japan: find a temple or restaurant that serves traditional *kaiseki*-style *shojin-ryori* (Buddhist vegetarian cooking)–and splurge big time. You won't regret it" (p. 10).

On the rear cover is a biographical sketch of Miyoko. "She was born in Yokohama, Japan, and graduated from St. John's college in Maryland. Her bilingual bicultural background has endowed her with the creativity and originality of the West and the aesthetic sense of the East." She has been a vegetarian since age 12. Address: Owner, Now and Zen Bakery and Vegetarian Restaurant, San Francisco.

11899. Tibbott, Seth. 1999. Adventures in tempehland: American tempeh maker visits the motherland [Indonesia]. *Vegetarian Journal* 18(3):8-9. May/June.
• ***Summary:*** Seth, who has been making tempeh professionally for 18 years, was invited to present a paper on the American tempeh market at a recent International Tempe Symposium in Bali. He traveled there with his wife, Sue, and 5-year-old son, Luke. The symposium was held at the Five-star Kartika Plaza Hotel on Kuta Beach, Bali. He learned that one-sixth of the world's languages are spoken in Indonesia, the world's fifth most populous country. Two factors distinguish Bali from the rest of Indonesia: (1) It's cultural roots are Hindu, whereas the rest of Indonesia is predominantly Muslim. (2) The impact of tourism is greater.

In the conference keynote address, Mr. Joop Ave, the Indonesian Minister of Telecommunications and Tourism, tried to create a new image for tempe "He told of a recent movement to 'Indonesianize' the presidential palace and proudly serve tempe to heads of state as an example of Indonesian ethnic food. He fervently extolled the virtues of eating tempe and tahu (tofu)."

While in Indonesia, Seth visited three different sized tempe shops. The smallest, in Ubud, Bali, makes about 100 lb/day of tempe. The middle-sized shop, Tempe Murni, in Denpassar, Bali, makes 1,650 lb/week (about 275 lb/day). The largest, Pak Pedro Sudjono's factory in Yogyakarta, Java, makes 5,000 lb/day in a 1,500 square foot area. Seth gives details on each shop he visited, and on the Pasar Bedang market in central Denpassar. He found that, on a per ounce basis, relative to average per capita income, tempe in Indonesia is about four times as expensive as it is in the USA.

At the symposium, Seth learned that Yogyakarta has the highest per capita consumption of tempe of any city in Indonesia–200 gm/week compared with only 75 gm/week on Bali. He found the local market in Yogyakarta to be "totally inundated" with a large variety of tempe products, but uncooked cakes of tempe and prepared tempe in various sauces. The main supplier of these products is Pedro Sudjono, a local actor and politician, as well as the owner of the most innovative tempe factory Seth visited. A unique

© Copyright Soyinfo Center 2013

barter system exists here. The main business is run by a paid staff of 24 people, but the filling of inoculated soybeans into small plastic bags is almost all done by local women who sit on the floor as they fill, then seal the bags–sometimes over an open flame. The women then load the packages onto their bicycles, pedal home, incubate them for several days, then take the finished tempe to market and sell it! Address: CEO, Turtle Island Foods [Hood River, Oregon].

11900. Mukherjee, Anjali. 1999. To your health: Soya beans, the elixir of youth. *Times of India* (*The*) (*Bombay*). June 3. p. A7.
• ***Summary:*** "A cup of soya milk a day can keep aging at bay." This might be the maxim of the new millennium. The humble soya bean has been found to contain enough properties and power that can retard aging, fight cancer, reduce blood cholesterol and sugar, and reduce the risk of osteoporosis–to name a few.

This article discusses each of these health claims, with emphasis on cancer prevention and its mechanism.

Although the soya bean has long been a part of diets throughout East Asia, it is relatively new to the Indian palate. "You can consume soya bean protein through various soya bean products like soya milk, soya bean flour, whole soya beans, soya bean chunks, soya bean granules [textured soy flour]. Sadly, soya bean sauce and soya oil, familiar to the Indian palate, do not offer the same benefits."

For best results, try to include in your daily diet a cup of soya milk or 80-100 grams of tofu or about 50 grams of soya flour. Encourage your children to eat soya beans.

The writer then gives ten specific suggestions for ways to adopt soya beans into a family's daily diet: (1) When making chappati [chapati] dough, use equal parts soy flour and wheat flour. (2) For tasty rotis, add a little soya flour to the dough. (3) When baking, replace about one-third of the regular flour with soya flour. (4) Use soya milk as often and in as many ways as possible. (5) Roasted soya nuts, which are sold in both salty or sweet flavours, are a delicious, nutritious snack for both children and adults. (6) When making a fruit shake, use either soya milk or tofu. (7) Use tofu in place of paneer in your favorite recipes. (8) Add soaked whole soya beans to soups, stews, or casseroles. (9) Make Soya khakras in place of regular khakras. (10). When making biscuits, substitute soya flour for part of the wheat flour. Address: Diet and obesity consultant. Runs the Obesity Centre in Colaba and Bandra [in Bombay].

11901. Gorman, Christine. 1999. The joy of soy: Worried about high cholesterol? This versatile bean may be just what the doctor ordered. *Time.* June 7. p. 68-69.
• ***Summary:*** Begins with the story of a woman, age 67, who volunteered for a study to determine whether or not drinking a soy protein shake could lower blood cholesterol. She was delighted when her cholesterol level fell from 245 mg/dl to 205 mg/dl, and her LDL or "bad cholesterol" level fell from 170 mg/dl to 130 mg/dl. Now that the study is over, she still sprinkled soy protein on her breakfast and continues to see results–as more than 25 scientific studies have shown. Every little bit counts; a 1% drop in total cholesterol leads to a 2% drop in the risk of developing heart disease. For best results consume soy in minimally processed forms. Many Americans find boiled soybeans (edamame) to be delicious. Tofu is good if you find the right seasoning. Soy milk is nice on cereal but will ruin a cup of coffee. Miso soup contains quite a bit of salt. Soy powders (soy protein isolates) can be added to shakes or sprinkled on cereal. Soy isoflavone supplements are best avoided.

Many Americans are discovering that soybeans aren't just for vegetarians and livestock anymore. They may be able to fight cancer and build healthy bones. Later this summer or fall the FDA is expected to put soy on its short list of foods (like whole grains, and fiber-containing fruits and vegetables) that may actually reduce one's risk of heart disease.

Scientists are still not sure why soy lowers cholesterol levels. It may be the isoflavones or the soy protein or a combination of both.

In Japan, the incidence of breast cancer is much lower than in the USA [about one-sixth] and other industrialized countries. One reason may be the soy in the Japanese diet; the isoflavones in soy may act as antihormones, like the drug tamoxifen. Yet this is not yet clear. In the worst case, soy might even negate the protective effects of tamoxifen.

Photos show: Two large pods of edamame. A cake of tofu which is "a great source of nutrients." Japanese consume more than 50 lb of tofu per person per year.

11902. Kantor, Roy. 1999. Re: The six largest tofu manufacturers in Israel. Letter (fax) to William Shurtleff at Soyfoods Center, June 8. 1 p. Typed, with signature on letterhead.
• ***Summary:*** The follow companies are listed in descending order of the amount of tofu they produce: 1. Shizen Tofu in Kfar Sava. 2. Jerusalem Tofu in Jerusalem. 3. Japanese Tofu in Natanya. 4. Kafri Bari (Healthy Countryside). 5. Ishuzuki Tofu in Ashdod. 6. Taam Ha Chaim (Taste of Life) in Dimona.

Note: Roy's company, Kanero, imports soymilk from Europe. They distribute the Distriborg line. Address: Kanero Group Ltd., 18, Hamelacha St., Solel-Bone Bldg., Suite 208, Raanana I.Z. 43661, Israel. Phone: 972-9-740-9398.

11903. Pierce, Michael. 1999. How Rolf Barthof (Prabuddha) learned to make tofu and founded Soto in Germany (Interview). *SoyaScan Notes.* June 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In March 1982, Peter Wiegand started an early German tofu company named Auenland Tofu und Soja Produkte located at Hub 2, 8210 Prien-Chiemsee, West

© Copyright Soyinfo Center 2013

Germany. He introduced seven tofu products the day he started. Within 2-3 months after Peter started, Rolf Barthof began to stop by about once a week to help out and watch the process. He became a friend, and Peter slowly taught him how to grind the beans, make tofu (with help from others) and to clean up the shop afterwards. Michael does not know what Rolf's main occupation was in those days; he might have been a musician. When Peter opened Auenland, it was already too small for the demand, so Peter may have been hoping that Rolf would go to work for him; there was no thought of him becoming a competitor.

Before Peter's business failed, Rolph started collecting some tofu-making equipment and making small batches of tofu. Michael visited him one day–it was about one hour away by car, on the other side of the Lake Chiem (Chiemsee–the largest lake in Bavaria), located about 40 miles east southeast of Munich. On an island in the middle of that lake is Herrn Chiemsee, the beautiful castle build by King Ludwig and modeled after Versailles. After Peter's business failed, Rolf apparently got some financiers and enlarged his shop. Today he has a big, mechanized plant.

Both Michael and Peter were followers of Taka Singh, the successor of Kirpal Singh; they wore regular clothes, no robes. Rolf was a follower of Rajneesh. Address: Graphic designer, P.O. Box 238, Farmington, Georgia 30638. Phone: 706-769-0558.

11904. *Times of India* (*The*) (*Bombay*). 1999. Off the shelf. June 21. p. A6.
• ***Summary:*** Three different cheeses were purchased for this column. The first, named Soyfit, was actually a type of soya paneer; 200 grams cost Rs. 20. It is said to be high in protein and low in fat, with zero cholesterol. It has an off-white colour and a much lighter texture than regular dairy paneer. Soyfit works quite well in sauces and gravies where spices camouflage the taste of soya. It holds its shape well in Paneer masala.

11905. Murphy, Patricia A. 1999. A new database on the isoflavone levels in foods, commercial ingredients, and soybeans (Interview). *SoyaScan Notes.* June 24. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** In April 1999 a new database became available on the Internet at www.NAL.USDA.gov/FNIC/FoodComp / Data/Isoflav/Isolfav.html. There are several files which are downloadable. Data are given for 160 foods, most of which are soy-related. Many individual branded products are included, such as Gimme Lean! or Lightlife Lean Links or Mead Johnson's Prosobee (infant formula). Soy oil is also included–just to show that it contains no isoflavones.

For each food, data may be given for daidzein, genistein, glycitein (pronounced gly-SEE-tun; if available), and total isoflavones. For each of these four information may be given on: Average, mean, and maximum, standard error, sample size, confidence code (A=best, C=least). of all published data. Finally a list of the numbers of all the references used to get this data. So there might be 7 references used to generate the mean value for tofu.

Soybeans themselves are also included, with data given for food-type soybeans, commodity-type soybeans, plus reports from Japan, Korea, Taiwan, etc. But there is no data on individual soybean varieties. Supplements are not included. For each food, some data is given on the isoflavone content The information in the database comes from published scientific studies and from work at Iowa State University's project on national sampling of foods. The food composition lab people will be updating the data as it is collected. There is also a separate file for items which are more typical of clover and alfalfa, which have different isoflavones.

The person in charge of the project is Gary Beecher, in the USDA Beltsville Lab. [Maryland], food composition group. David Haytowitz is the statistician. The funding came from the U.S. Army, Medical Branch, Breast Cancer Research Initiative. This year Congress, "in its wisdom," couldn't give any more money to HHS (the U.S. Department of Health and Human Services), so they gave a large amount of money to the Defense Department for work that would typically be done by NIH (National Institutes of Health). But the army has run this huge program very well–perhaps better than some NIH programs.

Note: NIH is under the Public Health Service, within HHS. Address: 2312 Food Sciences Building, Food Sciences and Human Nutrition Dep., Iowa State Univ., Ames, IA 50011.

11906. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*). 1999. Services of the Canadian Grain Commission–Export soybeans. 13(1):1-3. June.
• ***Summary:*** Contents: Introduction to the CGC. Inspection services: Vessel shipments, truck, rail and container shipments. Special analyses. Oil and protein content. Monitoring services. Entomology services (insects). Verification/audit services. Genetic testing. Weighing services.

Concerning genetic testing: "The Chatham office is in the process of implementing test procedures aimed at the identification and certification of GMO/non-GMO (Roundup Ready) soybean shipments. Initially, testing will involve an ELIZA based method which, after internal evaluation is known to provide reliable detection at levels above 0.3%. In the longer term, the CGC will explore and move to alternative methods that will enhance its abilities in this area."

A photo shows Jim Lowe of the CGC as he shows samples of Canadian soybeans to members of the Japanese Tofu Association.

11907. Messina, Virginia; Schumann, Kate. 1999. The convenient vegetarian: quick-and-easy meatless cooking. New York, NY: Macmillan USA. viii + 184 p. Illust. Index. 24 cm.
• ***Summary:*** This is a vegan cookbook. The index contains 9 entries for tofu, 9 for textured vegetable protein (TVP), 3 for soy food products (soy foods) 3 for soybeans, 2 for tempeh, 1 each for miso, soy cheese, soymilk, soynuts, and soy yogurt. Address: 1. MPH, RD, coauthor of *The Vegetarian Way.*.

11908. Morinaga Nutritional Foods, Inc. 1999. Input Mori-Nu :) (Ad). *Natural Foods Merchandiser.* June. p. 72.
• ***Summary:*** This full-page color ad shows many packages of Mori-Nu Tofu arranged to spell out "Y2K" against a large white background. The text reads: "Mori-Nu is the 'Perfect Tofu in the Perfect Package'–even for life's unexpected moments. With Y2K, your customers will be looking for convenient foods they can store in their cupboard. Mori-Nu is the answer." Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

11909. *Natural Foods Merchandiser.* 1999. First family tastes joy of soy. June. p. 71.
• ***Summary:*** President Bill Clinton and First Lady Hillary, America's most famous baby boomers, are taking interest in the health benefits of soy. A White House executive chef recently contacted Fantastic Foods to order Tofu Scrambler for the First Family's breakfast table. Isoflavones in soy have been shown to have numerous health benefits.

11910. *Ontario Soybean Growers' Marketing Board Newsletter.* 1999. 1999 Project SOY winners announced. June. p. 8.
• ***Summary:*** Winner of the Diploma division was Ben Arnold with his Soyf's Up flutterboard [kickboard] made from soy-enhanced polyerethane. A photo shows Ben holding his board.

"Second place was awarded to the creator of Water Lily soy oil soaps. Spreadable butter made with soy oil captured third place.

"The undergraduate / graduate category was won by Valerio Primomo for his Soylight soybean candles. An edible soy protein coating used to protect foods from absorbing too much fat during deep frying, was awarded second prize. *SoyWorks,* a soybean research publication and SoYummy SoyPops, a tofu-based frozen fruit bar, tied for third place honors." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

11911. Ontario Soybean Growers' Marketing Board. 1999. Tofu... Simply delicious (Brochure). Chatham, ONT, Canada. 12 panels. 21 x 10 cm each.
• ***Summary:*** This attractive color brochure features "8 simple and delicious recipes to tempt even the Tofu Timid." With each recipe is a color photo, a nutritional analysis, and a tofu preparation tips. Contents: Introduction. Buying and storing tofu. Choosing the right tofu. Tofu for your health. Tofu nutrition. Recipes: Tofu appetizer trio, Potato dill soup, Tofu & vegetable rice (with 2½ cups chicken broth), Tofu lasagna roll ups, Tofu tacos, Tofu chili, Tofu frosted chocolate cake, Peachy tofu pudding.

This brochure was created in partnership with Agriculture and Agri-Food Canada / Agriculture et Agroalimentaire Canada.

Note 1. A front-page article in the *Ontario Soybean Growers' Marketing Board Newsletter* (Aug. 1999), titled "New tofu brochure makes debut" states that this brochure "was completed in June, and mailed out to over 645 dietitians across Canada who had requested soy information from the Board in the past 18 months. The response has been phenomenal. These dietitians have already requested 30,000 brochures to hand out to their clients. That means that 30,000 more people will get ideas on how to use tofu, and they may come to appreciate this versatile product made from Ontario's number one cash crop." A black-and-white photo shows the cover of the tofu brochure.

Note 2. A second article in the *Ontario Soybean Growers Newsletter* (Oct. 2000, p. 9), titled "Soyfoods corner" states that since this popular recipe brochure was introduced in June 1999, over 85,000 have been distributed across Canada. A recipe for Peachy tofu pudding is given. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: (519) 352-7730.

11912. *Soybean Digest.* 1999. Global Soy Forum: A roundup of the world's best soybean research. June. p. 5-7, 10-13, 16-17, 20, 22, 24-25, 28, 30, 32, 34, 36-37, 39-42.
• ***Summary:*** This special issue previews the forthcoming Global Soy Forum '99, to be held in Chicago August 4-7. It summarizes key papers to be presented. Contents: Let's face the challenge (p. 5). A special invitation to *Soybean Digest* readers, by co-chairs Dave Erickson and Long (p. 6). Program (p. 7). Genetic improvement (p. 10-13). Crop & soil management (p. 16-17, 20, 22). Pest management (p. 24-25, 28, 30). Processing and utilization (p. 32, 34, 36-37). Management & marketing (p. 39-42).

A pie chart (p. 5) shows world soybean production in 1997: USA 47%, Brazil 20%, Argentina 11%, China 10%, India 3%, Canada 2%, Paraguay 2%, EU [European Union] 1%, other 4%.

Note: This event is surrounded by an amount of hype usually not found with professional agricultural conferences. On page 6, co-chairs Erickson and Long state: "In August, you have an opportunity to be part of an event that soybean farmers will be talking about for years to come. Global Soy Forum '99–the first worldwide assembly of the soybean industry... this is truly the event of the century

© Copyright Soyinfo Center 2013

for our industry. We're expecting 1,000+ participants, representing more than 45 countries..."

Note: What nonsense! In fact, this is the sixth World Soybean Research Conference. The constitution of the World Soybean Research Conferences states that they will be held "about every five years to consider research progress since the previous conference." The first such conference was held on 3-8 Aug. 1975 at the Ramada Inn in Champaign, Illinois (USA), and sponsored by four U.S. organizations, including the University of Illinois; 622 people from 48 countries attended. The second was held in 1979 at North Carolina State University (USA). The third was held in Aug. 1985 at Iowa State University, Ames, Iowa (USA); 1,050 persons from 66 countries attended. The fourth was held in March 1989 in Buenos Aires, Argentina–for the first time outside the USA. The sixth was held in Feb. 1994 in Chiang Mai, Thailand.

Like most past World Soybean Research Conferences, this one focuses on soybean production, and has relatively little about soybean utilization or soyfoods. One paper in the Utilization section is titled "Is tofu safe to eat?"

11913. **Product Name:** Garlic & Dill Everyday Tofu Spread.
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1999. June.
Ingredients: Tofu (filtered water, organic* soybeans, magnesium chloride), organic* canola oil, organic* cider vinegar, lemon juice, garlic, organic* dill, salt. * = Grown in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Two Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in June 1999. Label #1 of June 1999. "Garlic & Dill Everyday Tofu Spread." 3 inches diameter. Self adhesive. Dark green on beige. Illustration shows a tofu shop on stilts near the ocean with a tree arching overhead.

Label #2 of Oct. 2002. "Organic Garlic-Dill Tofu Spread." 3½ inches diameter. Self adhesive. Dark green and orange-yellow on white. A handsome, impressionistic watercolor illustration shows a tofu shop on stilts on a cliff with a tree arching overhead. "Low in saturated fat. Cholesterol free. Contains 170 mg Omega 3 fatty acids per serving."

11914. **Product Name:** Hot Habañero Carrot Tofu Spread.
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1999. June.
Ingredients: Tofu (filtered water, organic* soybeans, magnesium chloride), carrots, onions, organic* canola oil, organic* cider vinegar, lemon juice, habañero peppers, sugar, garlic, salt, xanthan gum, peppercorns. * = Grown in accordance with the California Organic Food Act of 1990. Featuring hot pickled carrots from Arcata Pickle Co.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Two Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in June 1999. Label #1 of June 1999. 3 inches diameter. Self adhesive. Reddish brown on light green. Illustration shows a tofu shop on stilts near the ocean with a tree arching overhead.

Label #2 of Oct. 2002. "Organic Habañero-Carrot Tofu Spread." 3½ inches diameter. Self adhesive. Orange, orange-yellow, and black on white. A handsome, impressionistic

watercolor illustration shows a tofu shop on stilts on a cliff with a tree arching overhead. "Low in saturated fat. Cholesterol free. Contains 170 mg Omega 3 fatty acids per serving."

11915. **Product Name:** Sweet Pickled Beet Tofu Dip.
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1999. June.
Ingredients: Tofu (filtered water, organic* soybeans, magnesium chloride), organic* beets, canola oil, cider vinegar, lemon juice, sugar, garlic, salt, xanthan gum, allspice, clove. * = Grown in accordance with the California Organic Food Act of 1990. Featuring sweet pickled beets from Arcata Pickle Co.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Matthew Schmit. 2002. Sept. 9. The product was introduced in June 1999. 3 inches diameter. Self adhesive. Beet red on pink. Illustration shows a tofu shop on stilts near the ocean with a tree arching overhead. Discontinued Aug. 2002.

11916. U.S. Postal Service. 1999. We have more than 33,000 post offices to serve you (Postcard). Washington, DC. 1 p.
• ***Summary:*** This 4¼ by 6-inch card is printed blue on white. We cite it here to note that the number of tofu shops in Japan is approximately equal to the number of post offices in the USA. Address: Washington, DC.

11917. **Product Name:** [VeggieFresh Bratwurst, Mild Tofu Hot Dogs, Hot Veggie Hot Dogs, Mild Jumbo Smoked Hot Dogs].
Foreign Name: VeggieFrisch Bratwuerste, Tofu Knacker, Toscaninis, Real Jumbos.
Manufacturer's Name: Viana Naturkost GmbH.
Manufacturer's Address: D-54578 TofuTown Wiesbaum, Germany. Phone: +496593 9967-0. Fax: 6593 9967-225.
Date of Introduction: 1999. June.
Wt/Vol., Packaging, Price: 250-300 gm pack.
How Stored: Refrigerated.
New Product–Documentation: Color packages sent by Bernd Drosihn. 2004. Nov. 15. Size: 9.5 by 11.5 by 2.3 cm. Paperboard boxes. Various colors. Color photo of the dish, ready to eat, on a white plate. Each of these Viana-brand products is a meat alternative, ready to heat and serve, introduced in June 1999. The packaging is very attractive. On the front panel: 100% made from plants. 0% cholesterol. 100% veggie power. 100% Organic. Ingredients are listed in 5 languages: German, French, English, Spanish, Italian. Nutritional facts are given in German and English. On the rear panel: "Good source of soy protein. 30 mg isoflavones per serving."

11918. Bender, Karen. 1999. Work with soybeans, tofu, and biotechnology (Interview). *SoyaScan Notes.* July 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Karen has done considerable research trying to find which compositional properties of soybeans contribute to tofu yield and organoleptic quality. Her research (like that conducted at Iowa State University) could find no variable or combination of variables that correlated positively with higher tofu yields.

She did considerable work with Korea, trying to find a way to get the Korean government to accept shiploads of special soybeans for tofu–but could not get them to make any changes in their strict rules. The cost of shipping identity preserved (IP) soybeans in containers is too high.

IFIC is a non-profit group based in Washington, DC, funded by large food and agribusiness companies, that tries be a source of accurate and fair information on biotech foods. Karen believes they do a good job.

This coming October, a potentially very interesting and important conference on biotechnology and food will be held in Chicago, Illinois. Sixty people have been invited to attend, representing agribusiness, academia, and consumers. It will closed to those not invited.

In one of its next 2-3 issues, Consumer Reports will publish an entire issue on genetically engineered foods. Address: Dep. of Agricultural and Consumer Economics, 1301 W. Gregory Drive, 304c Mumford Hall, Univ. of Illinois at Urbana-Champaign, IL 61801. Phone: 217-333-1694.

11919. Berkoff, Nancy. 1999. Why soy is hot: Appearing on more menus as a meat / dairy alternative. *Foodservice Director.* July 15.
• ***Summary:*** "Soy is in, it's hot, it's healthy, and your customers want it NOW!"

"Tofu is probably the most familiar soy product. It is nothing more than curded soy milk (think: cheese making)." Address: Rd, EdD, CCE.

11920. McLennan, Neil. 1999. Re: Upgrading tofu equipment at Clean Bean Tofu in London, England. Letter to William Shurtleff at Soyfoods Center, July 25. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Neil is currently considering buying a ProSoya VS200 system made in Ottawa, Canada. Address: 37e Princelet St., London E1 5LP. Phone: 0171 247 8349.

11921. Seemo (H. Shapira). 1999. Re: Dakini Health Foods Pvt. Ltd. recently moved into a new factory in Pune/Puna, India. Letter to William Shurtleff at Soyfoods Center, July 29. 1 p. Typed, without signature on letterhead.
• ***Summary:*** Seemo (Mr. H. Shapira from Israel), Kairava (Mrs. J. Spaelstra from the Netherlands), and the "Dakini

© Copyright Soyinfo Center 2013

crew" have been "intensively busy setting up our factory." They raised money through loans, brought in a new partner, got all the required government approvals, bought a plot of land, "navigated between impossible contradicting rules and regulations and corrupt officials." Then, with the help of an architect, they put of a 6,000 square foot building. They dug the first foundation in May 1998 and moved in in Feb. 1999. The process has been frustrating at times. To get an electrical connection, for example, took months, involved hundreds of signed documents, and "thousands of dollars in baksheeshes" [bribes].

They set up a pressure cooker plant for making tofu, first tested it on 17 July 1999, and "got a huge fantastic delicious cake of tofu." They plan to do a "soft launch" on Aug. 2 to some hotels, restaurants, institutions, etc., while getting their packaging systems ready. They plan to start selling to the retail trade in about two months. Their tofu production capacity is now about 200-400 kg/day.

"All this time we kept our little incubator busy supplying a small but loyal and growing clientele about 10-30 kg of tempeh weekly." Their new incubation room (12 by 11 feet) started operation today, with the first 15 kg batch of tempeh. They estimate a capacity of 60-70 kg maximum and are planning to start with 20-25 kg batches. They also have new clients waiting. Le Meridian in Pune has already put tempeh on their buffet, and will soon include it on their menu; now they want tofu as well! "It's a great adventure." Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

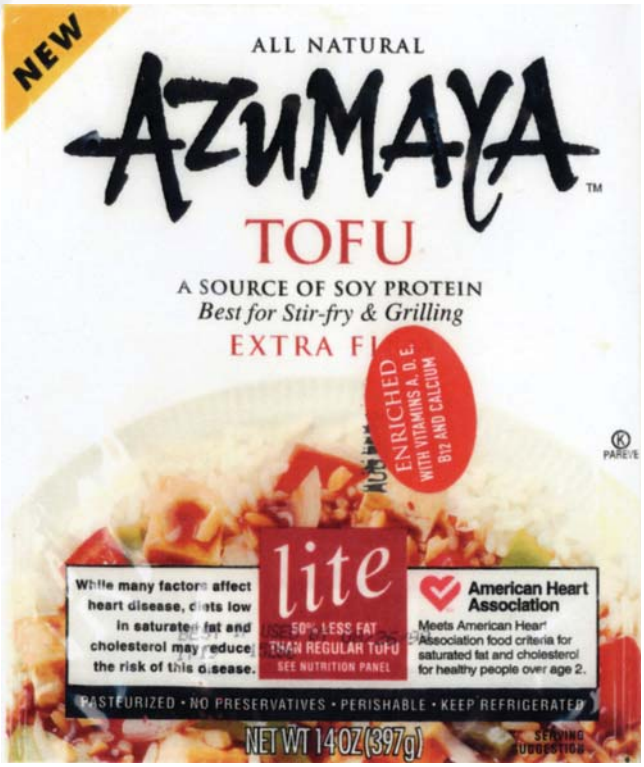
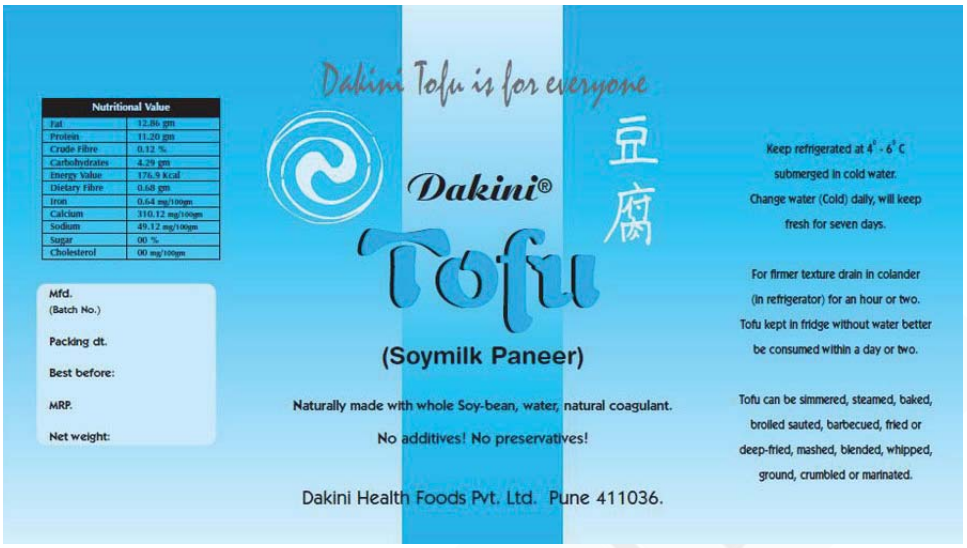
11924. *Vegetarian Times.* 1999. Ladies' choice–Delicious ways to get the five healthiest foods into your diet. July. p. 30, 33-34, 36.
• ***Summary:*** The five healthiest foods are broccoli, tofu, canned tomatoes, garlic, and flaxseeds. Tofu, the most versatile of all soyfoods, is a gold mine of phytonutrients. A recipe for Greek-style tofu salad is given. A color photo shows cubes of tofu.

11925. **Product Name:** Azumaya Tofu: Lite Extra Firm–Enriched.
Manufacturer's Name: Vitasoy USA Inc.
Manufacturer's Address: 1575 Burke Ave., San Francisco, CA 94124. Phone: 1-800-328-8638 (= Eat Tofu).
Date of Introduction: 1999. July.
Ingredients: Water, whole soybeans, isolated soy protein, tricalcium phosphate, calcium sulfate, magnesium chloride, vitamin E acetate, vitamin A acetate, vitamin D-2, vitamin B-12.
Wt/Vol., Packaging, Price: 14 oz (397 gm) packed in water in molded plastic tray (No. 2 HDPE) with heat-sealed, peel-off plastic film lid. Retails for $1.39 (1999/07, Lucky supermarket, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 2.8 oz (79 gm): Calories 60, calories from fat 20, total fat 2 gm (4% daily value; saturated fat 0 gm),



© Copyright Soyinfo Center 2013

cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 3 gm (dietary fiber 2 gm [8%], sugars 0 gm), protein 9 gm (17%). Vitamin A 30%, calcium 30%, vitamin D 30%, folate 6%, vitamin C 0%, iron 8%, vitamin E 30%, vitamin B-12 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Lucky supermarket in Lafayette, California. 1999. July 23. Red and black on white. Photo of a tofu stir-fry on white rice on a white plate on a white background.
The text on the from panels reads (from top to bottom): "All natural. Azumaya. Tofu. A source of soy protein. Best for stir-fry & grilling. Extra firm. Lite: 50% less fat than regular tofu–See nutrition panel. While many factors affect heart disease, diets low in saturated fat and cholesterol may reduce the risk of this disease. Meets American Heart Association food criteria for saturated fat and cholesterol for healthy people over age 2." American Heart Association logo showing a white check on a red heart. "Pasteurized. No preservatives. Perishable. Keep refrigerated." An self-adhesive oval sticker (white letters on red) on the front panel states: "Enriched with vitamins A, D, E, B-12 and calcium."



The back panel, attached to the bottom of the plastic tray, gives nutrition facts, ingredients, UPC / bar code, and additional information. Text in upper left corner: "For recipes and product information please write to us at: Vitasoy USA Inc.–Azumaya, Post Office Box 2012, South San Francisco, California 94083. Or visit our website www.vitasoy-usa.com. If you are not completely satisfied with this product, notify our Customer Service Department toll free at 1-800-EAT-TOFU / 1-800-328-8638. Unused portions: Add water and store covered in refrigerator. Change water daily and use within 5 days."

Product with Label purchased at Safeway supermarket in Lafayette. 2003. Dec. 3. A 14 oz pack retails for $1.79. Label is quite similar to 1999 label, however the word "Enriched" is gone and there is no back panel on bottom of HDPE plastic tray.

11927. *Whole Earth* (*San Rafael, California*). 1999. Soy access. No. 97. Summer. p. 90.
• ***Summary:*** Contains a nice overview of and praise for *The Book of Tofu* and Soyfoods Center.

11928. **Product Name:** Tofu (Soymilk Paneer).
Manufacturer's Name: Dakini Health Foods Pvt. Ltd.
Manufacturer's Address: S.N. 33, Bhoiwastai, Keshavnagar, Mundhwa, Pune 411 036, India. Phone: 020-613985.
Date of Introduction: 1999. August.
Ingredients: Water, soybeans, calcium chloride coagulant.
Wt/Vol., Packaging, Price: Packaged in bulk in water-filled pails.
How Stored: Refrigerated.
New Product–Documentation: Letter from Seemo and the Dakini crew. 1999. July 29. They studied the book *Tofu & Soymilk Production* (by Shurtleff & Aoyagi) and are now setting up a new factory of about 6,000 square feet which includes a "pressure cooker plant" they made for producing tofu. It has a 200 liter cooker, a steam boiler (big story) with steam injection system, screw press, curding barrels, pressing boxes, a good water chilling unit, and a few cooling sinks. They got a 3 horsepower steel hammermill which does a great job but is terribly noisy. "We tested the system for real on 17 July 1999 and got a huge fantastic delicious cake of tofu. We are finishing up some details and planning to do a soft launch on August 2. At first we will supply hotels, restaurants, institutions, etc., while getting our packaging systems ready for the retail market." They should be ready in about 2 months. They now have tofu production capacity of about 200-400 kg/day. E-mail: dakini@vsnl.com.

Letter (fax) from Kairava and Seemo. 1999. Aug. 22. They started making and selling tofu on Aug. 2. Some technical hiccups are still being sorted out, and they are working on packaging equipment and containers. While improving their tofu-making skills, they have been getting a very good response to their tofu sold in bulk to restaurants, etc. They are also selling (very well) tofu in polyethylene bags (not so aesthetic) "in one selected shop frequented by Japanese customers and their response is absolutely

© Copyright Soyinfo Center 2013

flattering. In all we are producing now only 3-4 days a week a total of 250-300 kg. We could and are planning to produce and sell much more; soymilk is also on the list.

Letter (fax) from Seemo. 1999. Aug. 24. They coagulate their tofu with calcium chloride, which they buy from a chemical supply house in Mumbai (Bombay); they have never tried nigari as they have not been able to locate a reliable source. Nor have they ever tried sea water since the ocean is 200 km away. Getting soybeans has been very difficult, but now they have some good connections and in a few days they will be getting 3 tons of hopefully good quality soybeans (cleaned, size graded, and good yielding) sent from a good supplier they found in the Ratkan district of Madhya-Pradesh. Some soybeans are grown in the area of Pune, but the seeds are small and they are sometimes irrigated with sewage water, so they avoid them.

Letter and Label from Kairava, Seemo and the Dakiki crew. 2000. July 12. One week ago they got their new tofu package (in 250 gm and 500 gm sizes) on the market, after a year of selling tofu in polyethylene bags. Since starting production, they have sold 12 metric tons of tofu. "We went through a lot of technical problems (mainly boiler problems), improved our production techniques a lot, trained a small dedicated crew, and we feel very blessed doing it all. For the coming year we are determined to double sales. The people here love tofu!" The film label, 5 by 4.5 inches, is various shades of blue, and black, printed on clear film. In the upper left is a yin-yang spiral, in the upper right the word "tofu" written in Chinese characters. "Naturally made with whole Soy-been [bean], water, and natural coagulant. No additives! No preservatives! Keep refrigerated, water covered. Good for 10 days in original pack. When unpacked, changing water (cold) daily will keep Tofu good for two more weeks." The Dakini letterhead is also shown.

Letter (e-mail) from Seemo in Brazil. 2012. Feb. 11. We started making tofu in Pune, India, on 2 Aug. 1999. Some Tofu was always sold fresh on order... and a lot of it in 2003-2005 when we ran our own retail outlet in town–a very successful Soya milk bar and soya foods operation (see separate record). We did all our Tempeh and Tofu distribution ourselves so as to be sure the cold chain was maintained. We had a delivery van, a smaller vehicle and a small fleet of delivery motorcycles mounted with insulated boxes which were the most efficient in the anarchic Pune traffic situation! For coagulants since the year 2000 or 2001 we had a very good contact for excellent quality magnesium chloride, from a good company in the Indian state of Karnataka and for the equivalent of under US$1.50 per kilo including delivery at our gate!

11934. Mair, Amy Tyler. 1999. Appetizing growth: Profile–Yves Potvin. Yves Potvin's meatless cuisine is North America's best-seller. Now he's looking for the recipe for a winning, healthy fast-food restaurant. *Business in Vancouver* (*Canada*). Aug. 10-16. p. 23.
• ***Summary:*** Yves Potvin, age 43, never uses the word

© Copyright Soyinfo Center 2013

"vegetarian" in his speeches or marketing materials. He is a "semi-vegetarian," who eats little red meat and is looking for healthy food choices. He now runs a business that does an estimated $46 million per year in sales. Earlier this spring he opened fast food restaurants in Kitsilano and South Granville, Vancouver. There he serves only meatless foods, such as tofu hot dogs, soy burgers, meatless lasagna, and baked fries [French fries]. Fourteen years ago, the Quebec native, a chef and amateur cyclist, "was living in Vancouver and dishing up buttery sauces at former French restaurant Le Chef et Sa Femme. Disillusioned with the high-stress low-paying job," he looked for a way to be more independent. "With $10,000 of his own money and $30,000 borrowed from friends and family," Potvin developed a tasty meatless hot dog.

"The next several years were difficult after Potvin sold 40% of his company to finance growth." He later bought back the shares and today owns 100% of the company. The company also took a hit when it spent $600,000 in R&D for a new veggie burger that went nowhere. 1992 was the year of "take-off"–the "year they crossed a major threshold and really began to grow." In 1985, when Yves Fine Food opened, the company saw its first product, a tofu wiener, as a "fusion food and adopted a sun logo to symbolize the marriage of East and West." Last year the company adopted its current logo, which shows a "French chef sporting a red beret and holding a basket brimming with fresh vegetables."

A large photo shows Yves.

11935. Kairava (J. Spaelstra); Seemo (H. Shapira). 1999. Re: Update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 22. 1 p. Typed, without signature on letterhead.
• ***Summary:*** Gives details on their work with tofu and tempeh. They do not yet have a recipe book nor do they vacuum pack their tempeh. They are, however, developing a nice label. They have contacted Raj Gupta of ProSoya by e-mail about soymilk equipment.

"The nutrition situation in this country and on all income levels is no good–from severe protein deficiency on the lower income rungs to fancy diseases for the rich. Developing soyfoods production here is most crucial, urgent, and possibly also a good investment!

"At a later stage, to avoid spreading ourselves too thin right now, we are interested in trying our hand at more fermentations such as Taucho, Miso, Soysauce. We are looking for more material to study." A copy of the recent article from *Citadel Pune* (full of errors) is attached. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

11936. Seemo (H. Shapira). 1999. Re: Another update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 24. 1 p. Typed, without signature on letterhead.
• ***Summary:*** Their company started business in April 1996 making white tahini. Sometime later they introduced peanut butter.

The third partner in their business is Bodhi Yahaan; they call him Yahaan, and he has been with the company for nearly two years. Like Seemo, he is from Israel where his name was Mr. Natan-Ran Diamant; now he lives in Pune. He does not work in the factory, but he does get the computer to work. He brought in the much-needed finance and also organizes loans when the banks fail. "He owns 50% of the company's shares and a very good friendship is growing."

"Mr. Donnelly (our Indian partner) resigned near the end of 1996, and since last year we got all government permissions to run the company without any Indian partner."

In Goa, "a friends couple of ours, Lisa Camps and her French friend Richard, are making tofu and tempeh on a small but interesting scale. This year they are growing and opening their own retail outlet with a delicatessen counter and a salad bar. We managed to convince them to invest in a good grinder, a small screw press, and a simple dehulling device for their tempeh. Also, I am building them an incubation cabinet so they will no longer mysteriously lose so many cakes of tempeh. Also, since last year, we are supplying their tempeh starter, and, from this year, their soybeans. Their address: Lisa Camps, H.S. No. 1684 Ouneachem Baht, Anjuna Bardez, Goa, India." Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

11937. Bernard, Richard L. 1999. Good tasting soybeans vs. large seeded soybeans (Interview). *SoyaScan Notes.* Aug. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Not all good-tasting or "edible" soybeans are large seeded. Rather small seeded soybeans may make good tofu or soymilk.

Note: According to the SoyaScan database, the four largest-seeded soybeans are Hahto (1,250 seeds/pound), Hiro (1,312), Suru (1,320), and Hokkaido (1,328). By contrast, the four smallest-seeded vegetable type soybeans are Bansei (2,004 seeds/pound–the smallest), Higan (1,962), Toku (1,952), and Nanda (1,952). Address: USDA/ARS Soybean Germplasm Collection, Room 229 EASB, 1101 W. Peabody Drive, Univ. of Illinois, Urbana, IL 61801.

11939. IITA. 1999. Annual report 1998. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 94 p. 28 cm.

• ***Summary:*** A color photo (p. 3) shows Lucas Brader, Director General of IITA; he writes the introduction. A color outline map of Africa shows the three main agroecological zones in tropical Africa: Humid forest, moist savannah, and midaltitude. The very interesting section titled "IITA and Japan bring tofu to sub-Saharan Africa" (p. 8-10) states that "Tofu... is on its way to becoming an indigenous food in Nigeria, Africa's most populous country. The soy cheese is replacing the traditional dairy product, *wara,* made from cow's milk, which has become increasingly costly, making it out of reach of many consumers... Tofu is inexpensive, nutritious, and versatile in use. Because of its bland taste and porous texture, it can be used with virtually any food."

"Before IITA's Soybean Utilization Research Project initiating research on tofu, there was little information on tofu making and use in Nigeria. *Wara,* which is similar, was produced by housewives in the northern states and in some southwestern states. *Wara* is a simple, soft, white, unripened cheese made by coagulating unpasteurized cow's milk with the juice from sodom apple leaves. The food is popular in the diets of the poor and low-income groups. With the rise in cost of fresh cow's milk–a major source of protein–IITA realized that intervention was required.

"IITA turned to the Japanese International Cooperation Agency (JICA) for assistance and funding. Dr. O. Nakayama, a food technologist and tofu expert, was sent to IITA by JICA to work on tofu. He began by developing a method to make tofu using local food processing technologies; specifically, finding an inexpensive coagulant. In Asia, tofu is traditionally made with calcium sulphate or magnesium chloride. These chemicals are expensive and not readily available in Nigeria; especially in rural areas.

"Nakayama developed a procedure for making tofu using the same local coagulant (juice extract from sodom apple leaves) that housewives were using for making *wara.* He also found that other coagulants can be used, such as lime/lemon juice. Having been exposed to the tofu making process through their ingenuity, Nigerian tofu makers discovered that the fermenting liquor from cereal (maize, millet, and sorghum) wet processing, formed when preparing a fermented gruel, could be used as a coagulant, tamarind extract, was also being used.

"These coagulants have become very popular and are regularly used in Nigeria for making tofu. Nakayama later helped to improve on the yield of tofu based on these new coagulants and developed an alternative procedure–hot milk extraction. Now an emerging market is developing side by side with *wara.* Today, tofu consumption has increased in many parts of Nigeria. Tofu making has become an income generator for many housewives. It is fried and hawked on the streets and consumed as a snack or as a meat substitute in stews and soups.

"IITA provides training in production of tofu in many villages. It is envisaged that tofu making will develop into a cottage industry in Nigeria. With the scarcity and high cost of dairy products in Nigeria, consumption will likely diversify and displace the traditional *wara.* The future of tofu in Nigeria is bright."

Color photos show: (1) A Nigerian woman in Kano State, in tradition dress, slicing tofu with a knife. "Tofu making has become an income generator for many housewives. IITA provides training in its production in many villages." (2) A woman and her child seated in an outdoor market selling fried tofu. (3) The home page of IITA's website: www.cgiar.org/iita (p. 11).

On p. 94 is a list of acronyms appearing in this report. Address: PMB 5320, Oyo Road, Ibadan, Nigeria.

11940. Little Tokyo Service Center. 1999. Fourth Annual Tofu Festival–1999 (T-shirt). 231 East 3rd St., Los Angeles, CA 90013.

• ***Summary:*** This blue-green large T-shirt is 100% heavyweight cotton. On the front, over the left breast, is written "Tofu: Little Tokyo Service Center" next to the Center's logo. Above and to the right of the word "Tofu" are three stylized cakes of tofu, one chartreuse, one orange, and one purple.

On the back is written in much larger black letters: "Fourth Annual Tofu Festival–1999." The same three colorful cakes of tofu appear inside a vertical black rectangle. On the right sleeve is written "House Foods," a major Festival sponsor. Address: Los Angeles, California. Phone: 213-473-1602.

11941. Photographs taken at Dakini Health Foods' new factory in Pune / Puna, India, showing steps in the tofu-making process, the inside of the factory, and the owners–Seemo and Kairava. 1999. Pune, India.

• ***Summary:*** Sixteen color photographs (each 4 by 6 inches) were sent to Soyfoods Center on 14 Aug. 1999 by Seemo and Kairava, owners of Dakini Health Foods. The photos were accompanied by a brief handwritten letter on Dakini's letterhead, and both were in a Dakini business envelope.

The photos themselves were all taken on 2 Aug. 1999–the company's first day of production. They show: (1) Seemo (a man, originally from Israel, wearing a white t-shirt, turban, and beard) watching as cold water runs into the soaked soybeans in the hopper of the stone mill. As they are ground by a stone mill, the white slurry falls into a stainless steel tank. The 2-story building has a white interior, with windows on both levels. (2) Kairava (a woman, originally from the Netherlands, dressed in a green dress with necklace) standing by the stone mill. An Indian man is standing behind the stone mill. (3) The boiler. (4) The hand-turned screw press and pressure cooker in the foreground, Seemo by the

stone mill in the background. (6) A panoramic view of the interior of the shop showing two stainless steel vats for soymilk and Seemo by the cooling tanks to the far left. (6) A similar view but another man (Bodhi Yahaan, the company's third partner; in his native Israel his name was Natan-Ran Diamant) is turning the screw press as soymilk runs into a cloth-covered steel barrel. And Indian woman in a green sari is to the far left. Ordinarily Mr. Yahaan does not work in the plant, but he does help with the computer. (7) A close-up of soymilk running from the press into the cloth-covered barrel. (8) Another panoramic shot, with Seemo (looking very happy) standing by the cooker, Kairava (with arms folded looking very satisfied) standing to the left, and three Indian employees standing in the middle. (9) Seemo and Kairava standing by the press watching the soymilk come out of it. (10) Curds and whey in a metal curding barrel. (11) Kairava folding the white cloths over the curds in the shallow metal curding boxes. (12) Seemo ladling curds into a cloth-lined forming box. (13) Seemo (looking very happy), wearing rubber gloves, standing by a cooling tank, and holding up a large cake of tofu. (14) Seemo leaning against a cooling tank, in which is a large block of tofu under water with the cloths around it. In the background is a rack on which are many shining stainless steel pots. (15) Both halves of a cooling tank filled with cut cakes of tofu under water. (16) Kairava reaching one hand into a cooling tank. A blue pipe runs from a water chilling unit on one wall into one tank. Address: Dakini Health Foods Ltd., S.N. 33, Bhoiwastai, Keshavnagar, Mundwa, Pune / Puna 411 036 India. E-mail: dakini@vsnl.com. Phone: 020-613985.

11942. ProSoya Inc. 1999. Introduction to ProSoya (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 8 minutes. Aug.

• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in August 1999, it begins: "The soybean is a powerhouse of high-quality protein and other nutrients. Soyfoods have been proven to reduce the risk of cancer, heart disease, and other ailments. These health advantages, coupled with relatively low infrastructure and production costs, make soybean processing a fast-growing industry–and we can help you make this a wonderful business opportunity in the 21st century. Welcome to ProSoya, a world leader in advanced soymilk technology.

"Dr. Raj Gupta, a scientist formerly with the National Research of Canada and McGill University, is the president and founder of ProSoya." He appears and says: "Our objective is to help you produce nutritional* soya foods and beverages that consumers will enjoy because they taste good."

"ProSoya creates innovative and cost-effective processing systems that produce an excellent soymilk base naturally from the raw soybean. The first soymilk systems were small, designed primarily for humanitarian aid, hospitals and small businesses. Today, ProSoya offers the widest range of soymilk production capacities, from modest 30 liters-per-hour batch processors to large, fully automated industrial plants with capacities up to 4,000 liters per hour. The smallest system is a 2-liter prototype that NASA tested for its manned space mission to Mars. ProSoya offers individual production components or complete turnkey plants, and can also assist in the formulation and packaging of soymilk beverages and foods.

"ProSoya's commitment to its customers is demonstrated by its vigorous research and development program. In addition to its own in-house R&D team, ProSoya engineers work closely with researchers in various government laboratories and other industry partners around the world. At the heart of all ProSoya systems is the patented airless cold-grinding process–a truly revolutionary technology invented by Dr. Gupta... The resulting soymilk is free from the beany flavor or chalky mouthfeel. Bill Shurtleff, world-renowned expert on soyfoods and author of over 50 books comments: 'I have no hesitation in saying that ProSoya's airless cold-grind process is one of the best for making soymilk.'

"The soymilk base can be used as is, or to create a whole range of healthy, nutritious, high-quality soyfoods, including beverages, tofu, yogurt, ice cream, soymilk powders, and

© Copyright Soyinfo Center 2013

mayonnaise."

There follows a list of systems designed and sold by ProSoya. "ProSoya delivers reliable equipment and prompt technical support." "Brian Harrigan, an engineer with an MBA degree, is the executive vice-president and director of marketing. 'At ProSoya we don't just sell equipment. We build relationships. Our pride is in the contribution we can make to the success of our clients.'"

"ProSoya technology is presently being used in more than 30 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 500 other small to medium-scale plants are benefitting people on five continents. This is what some of our clients have to say." There follow three glowing testimonials.

"In Canada, the retail sales of soy beverages increased from $12.1 million in 1997 to $25 million in 1998, a growth rate of 106%. Are you ready to take advantage of the booming soyfoods industry? ProSoya, with its market-leading technology, continuing R&D, and highly trained personnel can be your ideal partner in pursuing the opportunities which await us in the new millennium." Address: Ottawa, Ontario, Canada.

11943. South Dakota Soybean Research & Promotion Council. 1999. Favorites from the heartland. Sioux Falls, South Dakota. 81 p. Illust. Recipe index. 22 cm. [1 ref]
• ***Summary:*** A full-color, glossy and very original spiral-bound cookbook–loaded with full-page color photos of dishes prepared from recipes. Contents: Why eat soy? Practical ways to incorporate soy into your diet. How to cook soybeans. Breads (incl. prize-winning Carrot tofu muffins, and Tofu herb bread). Soy flour tips. Main dishes. Green soybean (Sweet Bean [green vegetable soybean]) tips. Salads. Desserts (incl. prize-winning Glistening cheesecake, and Pineapple cake). Beverages and snacks (incl. prize-winning Tofu shake). Soy products: Dried soybeans, tofu, soy milk, soy flour, fresh green soybeans, textured vegetable protein (TVP). Soyfoods substitutions (from meat and animal products). For more information: 1-800-talk-soy, or www.soyfoods.com.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in the summer of 1999. Many of the recipes were adapted from local favorites, and all these were tested in the office. Some also came from the winners of a recipe contest sponsored by the South Dakota Soybean Board. Address: Sioux Falls, South Dakota. Phone: 605-330-9942.

11944. Tapuria, Nidhi. 1999. Nourishing, nutritious & natural. *Citadel Pune* (*India*). Aug. p. 76-78.
• ***Summary:*** The subtitle reads: "They are adding a new flavour to the Indian taste buds. Dedicated to manufacture quality natural foods, they propagate the healthy way of living that has taken the world by storm. 'Citadel' has a slice of the action at Dakini Health Foods."

Besides tahini, sesame butter, and peanut butter, Dakini manufactures a product range that includes soya foods like tempeh and tofu. Contains a brief description of tempeh.

Seemo tried his hand at everything before getting bitten by the vegetarian bug. He used to have the best-selling felafel shop in Israel, but he gave it up and moved to Germany where he finally got into catering vegetarian food. When he came to India he learned patience. The response from his customers has been very encouraging, especially from the Oshoites at Koregaon Park, who keep thanking him for making foods that are not available in India, and asking him to make more. In Pune, a restaurant named Zen has at least 20 items on their menu made from tempeh. Seemo wants to expand his tofu capacity to 100 tons per year; that will make big news. He believes that Indian food lacks the proteins which tofu can supply–in a vegetarian form. Five photos show Seemo, Kairava, and their new food factory.

11945. *Vending Times* (*New York City*). 1999. House Foods tofu meets demands of vegetarians. Aug.
• ***Summary:*** Garden Grove, California–House Foods America Corp. provides tofu for the foodservice market in an array of patron-pleasing varieties.

"The company's tofu is available in extra-soft, soft, regular, firm and extra-firm varieties. Also available to add a special touch to vegetarian dishes are Tofu Cutlets and Tofu Fritters."

A photo shows Frank Hsu and Mariko Shibata, who prepared recipes using House Foods' many tofu varieties at the JFC International booth during the Fancy Food Show.

11946. Harrigan, Brian. 1999. Re: Overview of utilization ProSoya's equipment abroad. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 22–in reply to inquiry. 1 p. .
• ***Summary:*** 1. Commercial vs. non-profit: Of the machines ProSoya has sold directly, about 80% were sold to commercial firms and the remaining 20% to non-profit organizations. If we include the machines that have been made and sold by the Russians and Indians under license from ProSoya (over 500 SoyaCows), these can be estimated at 70% commercial and 30% non-profit.

2. Type of product produced: Soymilk beverage production 50%. Tofu production 40%. Other soyfoods 10%.

Use in developing vs. developed countries: In terms of value, about 75% is in developing countries. In terms of number of liters, about 90% is in developing countries.

There are presently about 250 locations or clients using ProSoya's equipment worldwide, with about 175 of these in Russia alone. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

11947. Froding, Joy. 1999. Key ingredient of success: Isoflavones are opening doors in the nutriceutical and food industries. *Bluebook Update* (*Bar Harbor, Maine*) 6(3):4-5. July/Sept.
• ***Summary:*** Schouten USA Inc. in Minneapolis, Minnesota, (a division of the Royal Schouten Group in the Netherlands) and ADM are major suppliers of soy isoflavones. Laurent Leduc, International Marketing Manager for Schouten USA, says his company was the first that saw an emerging market for isoflavones because of their health benefits. In the early 1990s a Schouten researcher perfected a unique method for capturing soy isoflavones to produce a 100% natural concentrate. Introduced in 1995 to the vitamin and supplement industry, SoyLife was the first product of its type. Schouten sells two different soy isoflavone products, each with a different concentration: SoyLife 25 (containing 3% isoflavones) and the more potent SoyLife 150 (containing 15% isoflavones). The latter product is presently used in about 300 supplement applications in Europe, North America, Asia, and Australia.

In Sept. 1998 ADM introduced NovaSoy isoflavone concentrate. It is made by washing soybean flakes with alcohol to give soy molasses and soy protein concentrate. The isoflavones are then extracted from the soy molasses. NovaSoy contains 40% isoflavones with the same proportions of genistein, daidzein, and glycitein as found in soybeans or soyfoods like tofu. A photo shows a bottle of NovaSoy soy isoflavones (30 tablets).

11948. Grogan, Bryanna Clark. 1999. Soyfoods cooking for a positive menopause. Summertown, Tennessee: Book Publishing Co. 192 p. Sept. Index. 23 cm. [31 + 49 websites ref]
• ***Summary:*** On the front cover: "Reduce the discomforts of menopause naturally. Lower your cholesterol. Reduce your risk of heart disease and cancer. Over 150 family pleasing recipes." Eating a diet rich in soyfoods may alleviate many of the discomforts of menopause.

Content: Introduction. Glossary. 1. The soy prescription. 2. Soy for strong bones and weight loss. 3. Preventing the number one killer of women-heart disease. 4. Can soy prevent cancer? 5. A soyfoods primer. 6. Baking and cooking with soyfoods. 7. Breakfast foods and beverages. 8. Condiments, sauces, dips, dressings, and spreads. 9. Appetizers, salads, and soups. 10. Lunch, supper, and side dishes. 11. Dinner entrees. 12. Desserts. Bibliography and websites. Sources for ingredients.

11949. Nasoya Foods, Inc. 1999. "Now he asks, 'Can I have tofu?'" (Ad). *Vegetarian Times.* Sept. p. 7.
• ***Summary:*** This full-page ad shows a black-and-white photo of a light-skinned African-American boy smiling above the title. Below the title is a recipe for Sloppy Joes a color photo of the prepared dish. "Nasoya: We're putting tofu on America's tables."

Note: This ad also appeared in the April 2000 (p. 63) issue. Address: One New England Way, Ayer, Massachusetts 01432.

11950. Ontario Soybean Growers. 1999. Canadian soybeans (Ad). *Soya & Oilseed Bluebook* 2000. p. 104.
• ***Summary:*** This one-third page black-and-white ad states: "High quality, food grade soybeans for the production of tofu, miso, natto, soymilk, soy sprouts, soy sauce, tempeh and other soya products. Soybeans for the crush market. Identify preserved (I.P.)–Specialty soybeans. Organic and transitional soybeans. Container–Bag/bulk. Bulk vessel.

"Trusted, reliable, supplier of soybeans to the world for over 25 years.

"For more information or a list of suppliers contact: Canadian Soybean Export Association." Address: P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

11951. **Product Name:** More Than Tofu (Marinated) [Garlic Shiitake, Porcini Herb, Italian Herb, Savory Portabella].
Manufacturer's Name: Sunergia Soyfoods.
Manufacturer's Address: P.O. Box 1186, Charlottesville, VA 22902. Phone: 804-970-2798.
Date of Introduction: 1999. September.
Ingredients: Garlic Shiitake: Tofu (water, soybeans*, nigari), textured soy flour*, garlic flakes*, cracked black peppercorns. Marinade: Tamari soy sauce (water, soybeans*, salt), shiitake mushrooms, yeast extract. * = Certified organic by OCIA.
Wt/Vol., Packaging, Price: 10.5 oz. (300 gm). Reclosable square vacuum pouch about 3/4 inch thick. Retails for $2.99.
How Stored: Refrigerated.
New Product–Documentation: Labels sent by Jon Kessler. 2000. Oct. 5. These two products were in local retail stores on 1 Sept. 1999.

11952. **Product Name:** Frozen Tofu Cubes.
Manufacturer's Name: Tendore.
Manufacturer's Address: Wakayama prefecture, Japan.
Date of Introduction: 1999. September.
How Stored: Frozen.
New Product–Documentation: Talk with Christine, co-worker with Michio Kushi. 2000. Oct. 20. Tendore makes frozen tofu. They add starch, which enables it to stay soft when added to hot miso soup. Then they flash-freeze it for about 20 minutes. Trader Joe's has carried the product.

Talk with manager of Trader Joe's in Lafayette, California. 2000. Oct. 20. This product, imported from Japan, was sold on a one-time trial basis by Trader Joe's. They discontinued the product in about April 2000 because it did not sell very well.

11953. Tree of Life, Inc. 1999. She's gotta have it. And she's gotta have it from you (Ad). *Natural Foods Merchandiser.* Sept. p. 61.
• ***Summary:*** This full-page color ad (see next page) shows a lovely young lady, photographed from above, dressed in blue jeans, holding a package of Tree of Life Baked Organic Tofu. Next to the Tree of Life Logo is the tagline: "Our brand is your brand."

This ad also appeared in the March 2000 (p. 97) issue of this magazine. Address: P.O. Box 410, St. Augustine, Florida. Phone: 1-800-260-2424.

11954. White Wave, Inc. 1999. Another evening in Tofutown (Card). Boulder, Colorado. 4 panels. 16 cm.
• ***Summary:*** On the cover of this printed, folded invitation card (each panel is 6¼ by 4½ inches) is written "Another evening in Tofutown," in red on the marquis of the historic Boulder theater.

On the inside left panel we read: "Join us on Saturday evening, October 16th, in the Boulder Theater, from 6:30 p.m. to 1:00 a.m. at 14th & Pearl (as if it could be anywhere else). On the right inside panel: "You are cordially invited to another evening in Tofutown with White Wave, in celebration of the nearly rabid success of the industry, and our fair town of Boulder, the hip-notic center of the Natural Foods Jujuniverse. Hors d'oeuvres & dancing, featuring the infectious Nigerian Juju-based rhythms of Kotoja. It'll happen this way: Doors open 6:30. Grub pops 7:00. Socks spin 8:30. Doors snap 1:00. 'Cause we're all old now. If the music don't move ya... you're probably dead."

On the back: "Hey, if we'd tried to do this thing anywhere but Boulder, we might still be making tofu in the bathtub." White Wave logo. TofuTown cards. "When you are enough to send the veggie-est!" Sent 25 Sept. 1999.

Note: This is in part to celebrate the recent alliance between White Wave and Dean Foods. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: (303) 443-3952.

11955. Flagg, Michael. 1999. A local price war turns analysts sour on Vitasoy: U.S. prospects aren't enough to sway opinion. *Asian Wall Street Journal* (*Hong Kong*)**.** Oct. 20. [Eng]
• ***Summary:*** Vitasoy International Holdings sells soy milk in Hong Kong, the U.S. and China. In 1998, the company bungled the opening of its U.S. factory, a converted shrimp processing plant near Boston, Massachusetts [Nasoya]. The state-of-the-art production line for tofu experienced many start-up problems, which drove Vitasoy profits down 13%. In 1996 profits plunged 75% following a recall in Hong Kong. A graph shows that Vitasoy stock, selling at HK$3.4 in Nov. 1998, has plunged to a 52-week low of HK$2.15 today.

But there are grounds for optimism. In the USA soy milk sales, which were US$2 million 20 years ago, are expected to reach US$300 million this year. Yet Vitasoy's big problem is a price war in Hong Kong, where the company still gets two-thirds of its sales.

11956. Food and Drug Administration, U.S. Department of Health and Human Services. 1999. FDA Approves new health claim for soy protein and coronary heart disease. *FDA Talk Paper* T99-49. Oct. 20.
• ***Summary:*** "On October 26, 1999, the FDA will authorize use of health claims about the role of soy protein in reducing the risk of coronary heart disease (CHD) on labeling of foods containing soy protein. This final rule is based on the FDA's conclusion that foods containing soy protein included in a diet low in saturated fat and cholesterol may reduce the risk of CHD by lowering blood cholesterol levels.

"Coronary heart disease, one of the most common and serious forms of cardiovascular disease, is a major public health concern because it causes more deaths in the U.S. than any other disease. Risk factors for CHD include high total cholesterol levels and high levels of low density lipoprotein (LDL) cholesterol.

"This new health claim is based on evidence that including soy protein in a diet low in saturated fat and cholesterol may also help to reduce the risk of CHD. Recent clinical trials have shown that consumption of soy protein compared to other proteins such as those from milk or meat, can lower total and LDL-cholesterol levels.

"Foods that may be eligible for the health claim include soy beverages [soymilk], tofu, tempeh, soy-based meat alternatives, and possibly some baked goods. Foods that carry the claim must also meet the requirements for low fat, low saturated fat, and low cholesterol content except the foods made with the whole soybean may also qualify for the health claim if they contain no fat in addition to that present in the whole soybean.

"Scientific studies show that 25 grams of soy protein daily in the diet is needed to show a significant cholesterol lowering effect. In order to qualify for this health claim, a food must contain at least 6.25 grams of soy protein per serving, the amount that is one-fourth of the effective level of 25 grams per day. Because soy protein can be added to a variety of foods, it is possible for consumers to eat foods containing soy protein at all three meals and for snacks.

"An example of a health claim about the relationship between diet and the reduce risk of heart disease is:

"Diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of (name of food) provides ____ grams of soy protein.

"This new health claim rule responds to a petition submitted to the FDA by Protein Technologies International. This rule is based on the proposed rule that was published in the Federal Register on November 10, 1998, and comments received by the FDA. Use of the claim in food labeling is

© Copyright Soyinfo Center 2013

© Copyright Soyinfo Center 2013

authorized immediately." Address: Public Health Service, 5600 Fishers Lane, Rockville, Maryland 20857.

11957. Lin, Wendy. 1999. Have your soy and like it, too: Addictively delicious beans make it easy to swallow. *Newsday* (*Long Island, New York*)**.** Oct. 20.
• ***Summary:*** Soy contains much of what Americans need. Yet many Americans shun foods like tofu in droves. Now, however, a new product "stands a fighting chance of being welcomed into the American home. Green soybeans–called edamame in Japanese–are expanding out of the specialty and health food stores and into area supermarkets." Cookbook author Lorna Sass says she can't stop eating them; yet a year ago they were largely unavailable in New York City. Others describe them as "outrageously delicious." Soy cookbook author Dana Jacobi, adds that not only are they delicious, they have all the benefits of soy. She thinks they might win a prize as "the cutest vegetable."

In 1997 SunRich introduced frozen, shelled green soybeans under the trademarked name Sweet Beans, but the product didn't do very well. In the spring of 1999 they reintroduced it under a new name–Sweet Soybeans. SunRich also supplies Birds Eye with green soybeans for its Baby Broccoli Blend, a mix of frozen vegetables sold in supermarkets. A large photo shows shelled edamame. Address: Staff writer.

11958. Riccardi, Victoria Abbott. 1999. Enjoying soy: You know it's good for you. Now learn to like it. *Boston Globe.* Oct. 20.
• ***Summary:*** When people hear the word "soy," different images come to mind. "For devotees of sushi, it might be emerald green soybeans. For the Woodstock generation, it could be custardy blocks of tofu. And for juice bar addicts, it might be soy milk for smoothies." But whoever you are, soy has "likely crossed your radar screen. And pretty soon its going to be on every channel."

Peter Golbitz, president of Soyatech Inc. (Bar Harbor, Maine) has just completed a market study. In 1998 total soyfoods sales were $1.78 billion, up 18% from 1997. They are projected to be $2.6 billion by the year 2000.

Gives a good profile of two local mom-and-pop companies: Health-Trip Foods Inc. of Concord, owned by Eileen Moriarty and Dan Sanford, makes soynut butter. 21st Century Foods Inc. of Jamaica Plain, owned by Rudy and Lovin Canale, makes 800 lb/day of tofu. Before coming to the USA, Rudy ran a health food restaurant in Italy. He came here in 1977 to study macrobiotics at the Kushi Institute in Becket, Massachusetts. In 1981 he and an Italian friend started making tempeh in Brookline. Soon they added tofu products, using tofu made by another company. When the cost of the tofu became prohibitive, they started making their own. Now he and his wife, Lovin, do all the work and delivery. Last year they had $175,000 sales, and even with no advertising they make a profit.

11959. Jacobi, Dana. 1999. Impressions of the Natural Products Expo in Baltimore, Maryland (Interview). *SoyaScan Notes.* Oct. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Expo was great! There were an unusually larger number of new companies selling soy products; Dana picked up many sell sheets. The Soyfoods Association had a meeting at the Expo at which Peter Golbitz announced that the FDA health claim concerning soy protein and heart disease will allow traditional, whole soyfoods (such as tofu and soymilk) to bear the claim–even though they contain more fat than allowed under the claim. This was an unexpected development–and very good news. The claim says that 25 grams of soy protein in a low-fat diet may reduce the risk of heart disease. The Association also presented a new position paper on genetically engineered soybeans in soyfoods, stating that foods containing GMO ingredients should be so labeled. The Association did not oppose the use of GMO soybeans in soyfoods, noting that genetic modification will be used for many different purposes, some of which may have health benefits.

Two prepared soy puddings were debuted at the Expo–one from Westbrae and one from Zen Don. Both came in two flavors: chocolate and vanilla. The chocolates were both delicious; the vanillas were not so good. Zen Don is run by a young man age 30-32 who has introduced a soymilk under the brand Zen Don, which has a picture of a panda on the package, and which he has positioned for the mainstream market to compete with Silk. Dana believes that with this name and graphics, the product is mispositioned; moreover she finds it much too sweet.

White Wave debuted Silk eggnog in quarts. They were also dispensing Silk in four new flavors from a cooler and asking for comments: Lemon (which Dana found delicious), strawberry, chai, and cappuccino.

Abbott Laboratories (Chicago, Illinois) is now the mother company for HealthSource (formerly Health Source, from a subsidiary of Protein Technologies International–PTI), the protein powder drinks from Ross Products. This is not cleared stated on sales sheets.

Dana did not see the FDA health claim in today's (Tuesday's) *New York Times.* It will probably be in the Wednesday edition, which has a special food section–as do many other major newspapers. Address: New York City.

11960. Brasher, Philip. 1999. Soy becomes healthy option: Under new rules that allow health claims, the milk alternative is expected to find a wider audience despite its relative lack of flavor. *Contra Costa Times.* Oct. 27. p. C1, C4. Business/technology section. Wednesday.
• ***Summary:*** The U.S. government is now allowing food labels to tout soy's ability to lower cholesterol, so a new

© Copyright Soyinfo Center 2013

surge of interest is expected–and not just in traditional soy-based foods such as tofu and soy milk. To qualify for the label claim, a food must contain 6.25 gm of soy protein per serving; this is one-fourth of the 25 grams of soy protein daily that studies have shown is needed to have a significant cholesterol-lowering effect. Carlos Gutierrez, president of the Kellogg Co., says soy is a big food opportunity. Sales of soy-based foods are expected to reach $2.14 billion this year, up from $852 million in 1992, according to Soyatech. Address: Associated Press.

11961. *Denver Post.* 1999. Soy labels expected to boost sales. Oct. 27. *

11962. Egan, Jeanette Parsons. 1999. Soy! Soy! Soy! Enjoy soyfoods' benefits in delicious recipes. Tucson, Arizona: Fisher Books. xxx + 162 p. Oct. Illust. Index. 23 cm. Simply Healthy Series.
• ***Summary:*** This is a soyfoods cookbook. Contents: Dedication. Acknowledgments. Why I love soyfoods: Why eat soyfoods?, soy's health benefits, reduces heart disease, helps prevent cancer, soy for your bones (osteoporosis), to flash or not to flash (menopause), what about soyfoods allergies, how much soy should I eat? (soy protein, isoflavones), where to purchase soyfoods, how to add soy to your diet, important notes about eating soy. A soyfoods glossary: Black soybeans and yellow soybeans, green soybeans (edamamé), meat alternatives or analogs, miso, soy cheeses, soy cream cheese, soy flour, soy grits, soy milk (soy beverages), soybean oil, soynuts, soynut butter (roasted soybean butter), soy protein concentrates, soy protein isolates, soy sauces (tamari, shoyu), soy yogurt, tempeh, textured soy protein (TSP), tofu. Appetizers. Soups. Salads. Main dishes. Side dishes. Breads. Breakfast dishes. Desserts. Mail order sources for soyfoods. Other sources.

Contains 8 full-page color photos showing recipes. This is not a vegetarian cookbook. Recipes call for the use of chicken (4 recipes), ground beef, ham, crab meat, etc.

11963. Fallon, Sally; Enig, Mary G. 1999. Nourishing traditions: The cookbook that challenges politically correct nutrition and the diet dictocrats. 2nd ed. Washington, DC: New Trends Publishing Inc. xvi + 668 p. Illust. by Marion Dearth. Subject index. Recipe index. Menu index. 26 cm. [200* ref]
• ***Summary:*** Contains over 700 recipes. Contents: Preface. Introduction: Politically correct nutrition, fats, carbohydrates, proteins, milk & milk products, vitamins, minerals, enzymes, salt, spices & additives, beverages, about food allergies and special diets, parting words, guide to food selection (nourishing traditional foods, compromise foods {such as tofu}, newfangled foods {such as soy protein isolates and commercial soy milk}), a word on equipment, kitchen tips & hints, references (188). Mastering the basics. Great beginnings. The main course. A catalog of vegetables. Luncheon and supper foods. Grains & legumes. Snacks and finger foods. Desserts. Beverages. Feeding babies. Tonics and superfoods. Appendixes (A-F). About the authors.

Some of the basic recommendations in this book fly in the face of modern nutritional science: Eat more meat. Eat dairy products made from raw milk; pasteurization harms the milk. The worst fats are *trans* fatty acids, produced by hydrogenation; cholesterol and saturated fats do not cause heart disease. Consume plenty of enzymes. Meat should be eaten raw, rare, or braised in stock. Moreover, the authors propose a conspiracy in which doctors, researchers, nutritionists, and spokesmen of various government agencies are giving bad nutritional advice to the American public (p. 2). The authors wish, sentimentally, for the return of the small American farm. Moreover, they do not examine some the non-dietary issues related to a diet based on meat and dairy products: What is its impact on the environment? How would it affect the ability of the Earth to feed more than 6 billion people? What right do humans have to kill animals?

However the authors also make a number of recommendations that many people would agree with: Eat more natural, traditional, fresh, and unrefined foods instead of refined and processed foods. Avoid sugar and hydrogenated fats. This book is strongly influenced by the observations of Dr. Weston Price, a dentist, whose important book *Nutrition and physical degeneration: A comparison of primitive and modern diets and their effects,* was published in 1939.

Concerning soyfoods, the authors favor the use of small amounts of fermented soyfoods (such as traditionally fermented soy sauce and miso) but are strongly opposed to the use of non-fermented soyfoods such as tofu and soymilk.

Soy-related recipes and information: Commercial soy formulas are low in saturated fats and devoid of cholesterol (p. 6). Today most of the fats in the American diet are polyunsaturated and derived from vegetable oils such as soy (p. 10). The cheapest oils, such as soy oil, are often hydrogenated; this creates *trans* fatty acids (p. 14-15). Cows lose valuable Activator X when fed high-protein soy-based feeds. Lecithin is found in butter (soy, the main source of lecithin worldwide, is not mentioned). Mother's milk is high in cholesterol because it is essential for growth and development (p. 16-17).

Omega-6 (bad) and omega-3 (good) fatty acids in soybean oil (p. 19). Fermented soy foods contain compounds that resemble vitamin B-12 but they are not absorbed by humans (p. 28). Isolated protein powders made from soy are usually obtained by a high-temperature process that over-denatures the proteins to such an extent that they become essentially useless, while increasing nitrates and other carcinogens. These isolated soy proteins can cause osteoporosis (p. 29).

Beef should not be fed soy meal for protein, but rather

© Copyright Soyinfo Center 2013

animal parts (p. 31). Avoid farm raised fish [aquaculture] that have been fed soy meal (p. 32). Cultured soybean products from Asia, such as natto and miso, are a good source of food enzymes if they are eaten unheated (p. 47). The natural glutamic acid in soy sauce and miso gives these foods their rich, meat-like taste (p. 49). Many processed foods contain MSG or hydrolyzed protein, "especially soy-based concoctions" (p. 50).

Heavily yeasted foods, such as soy sauce and Worcestershire sauce, often exacerbate the symptoms of chronic yeast [candida] infection (p. 56). Beans cause digestive problems because they contain two complex sugars, farrinose [sic, raffinose] and stachyose (p. 60). The macrobiotic diet and soybeans: Use only as fermented products like miso, natto, and tempeh. Problems with tofu, soy milk, and phytoestrogens in soy (p. 62). The sickening effect of soy on ruminants (p. 87). In Japan, a typical meal contains miso, soy sauce, and pickles, all fermented products. In Indonesia, they eat tempeh (p. 94).

Ode to naturally brewed tamari soy sauce and teriyaki sauce (p. 147). Soy products increase the body's need for vitamin B-12 (p. 164). Soy in Chinese history. Miso soup. Tofu in fish stock and soy sauce broth (p. 201). Macrobiotic diets (p. 343). Soy foods block zinc absorption (p. 348). Eat natural salmon; farm-raised salmon are fed inappropriate soy meal (p. 418). Problems with soy flour and modern soy products: phytates, antinutrients, omega-3 fatty acids, disagreeable taste, phytoestrogens, phytic acid, enzyme inhibitors (p. 477, 495).

Soybeans are low in two essential amino acids (p. 496). Textured soy protein contains three antinutrients: Phytic acid, trypsin inhibitors, and isoflavones (p. 502). Person fed soybean milk as an infant had a spleen filled with ceroid (p. 546). Infants should not be fed soy-based formulas which contain phytic acid and estrogen compounds (p. 599, 603-04).

Note: The first edition was apparently published in 1995 by ProMotion Publishing (San Diego, California). Address: California. Phone: (877) 707-1776.

11964. Mans, Jack. 1999. Pacific Foods of Oregon–High-tech aseptic: At the forefront of the boom in soy-based and other nutritional beverages and packaging. *Dairy Foods.* Oct. p. 57-58, 60, 62, 64, 66.
• ***Summary:*** Pacific Foods was founded in 1987 to make tofu using a new, automated process. But they quickly found that soymilk was their main product, sold in aseptic cartons. Many of these are now packaged in one-quart aseptic cartons with resealable flip-top spouts.

The company, which recently expanded, now has nine buildings totalling 250,000 square feet on its 21-acre site. Three of the buildings are dedicated to processing, packaging, and office space; the rest are for warehousing, maintenance, etc.

This year Pacific Foods introduced a new type of soymilk in a new type of carton. Named Milk & Soy Blend, it is 100% lactose free and comes in plain and vanilla flavors, sold in a square aseptic carton with a screw-top cap. Even though the product does not require refrigeration, it is being marketed to supermarket dairy cases–to get more attention from consumers. Pacific Foods is the first company in the USA to use the new screw-top aseptic package. Address: Plant operations editor [Chicago, Illinois].

11965. Stewart, Kim. 1999. Dean Foods buys minority share in White Wave. *Natural Foods Merchandiser.* Oct. p. 21.
• ***Summary:*** Dean Foods (NTSE: DE), America's No. 1 producer and distributor of fluid dairy products, announced in August that it has purchased a minority share in privately held White Wave Inc. White Wave plans to place its Silk brand soymilk and yogurt, plus various tofu and baked tofu products, in the more than 17,000 supermarkets that Dean Foods presently supplies. During the year 2000 White Wave's goal is to reach 10,000 of those stores or "10K by 2K," according to Steve Demos.

Data from SPINS shows that Silk brand soymilk products are the most popular of the 10 leading brands, and that sales of the Silk brand grew 74.7% during the past year (June 1998 to Jun 1999). During that time, 70% of White Wave's income came from the natural foods marketplace. The company predicts that this will drop to 50-60% during fiscal year 2000 as Silk moves into the mass market.

White Wave's two plants in Boulder, Colorado, now have about 43,000 square feet in two locations; the company plans to increase that by 15,000 square feet or 34%. The existing facilities were designed to produce about 12 million units of product a year, but are now producing about 15 million.

A color photo shows Steve Demos smiling as a pours a glass of Silk brand soymilk. Note: Talk with Bob Gerner of Berkeley Natural Grocer. 1999. Oct. 18. White Wave often shorts Bob on his orders of Silk; he almost never gets as much as he orders.

11966. **Product Name:** Tofu (Curded with Calcium Sulfate) [Regular Organic, or Soft Organic].
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 1999. October.
Ingredients: Filtered water, organic* soybeans, calcium sulphate (gypsum from the earth). * = Grown in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 14 oz packed in water in molded plastic tray.
How Stored: Refrigerated.
New Product–Documentation: Two Labels sent by Matthew Schmit. 2002. Sept. 9. The product was introduced

© Copyright Soyinfo Center 2013

in Oct. 1999. 4½ by 3½ inches. Self adhesive. Red or green, black, and orange-yellow on white. A handsome, impressionistic watercolor illustration shows a tofu shop on stilts on a cliff with a tree arching overhead. "Good source of calcium. Crafted in small batches from whole soybeans for a sweet, delicate flavor. Low in saturated fat. Cholesterol free. Contains 170 mg Omega 3 fatty acids per serving. Made in Humboldt."

11967. Tofu Shop Specialty Foods Inc. 1999. Tofu Shop: Organic Tofu Products (Signs). Arcata, California. 3 p.
• ***Summary:*** These three promotional signs on thick glossy white paper were sent by Matthew Schmit. 2002. Sept. 9. They were introduced in Oct. 1999–at the same time as the company's new label for firm organic nigari tofu. Sign #1 is vertical 8½ by 11 inches, #2 is horizontal 7.75 by 11 inches, and #3, designed as a little table tent, has two identical images, each 4¼ by 5¼ inches. Each sign uses the same colors: Blue, orange, and green on white. Down the left side of each is a handsome, impressionistic watercolor illustration showing a tofu shop on stilts on a cliff with a tree arching overhead. Across the bottom of each sign is printed in blue: Tofu Shop Specialty Foods, Inc., Arcata, California.

Sign #1 (large and vertical) text: "Tofu Shop: Organic Tofu Products. Quality: Crafted in small batches from the finest organic ingredients. Nutrition: Good protein, low saturated fat, cholesterol free. Variety: Available fresh, baked, smoked, or spreads."

Sign #2 (horizontal) text: "Tofu Shop: Organic Tofu Products. Crafted in small batches from the finest organic ingredients."

Sign #3 (table tent) text: "Tofu Shop: Fine Tofu Products. Crafted in small batches from whole, organic, GMO-free soybeans." Address: 100 Ericson Ct., Suite 150, Arcata, California 95521.

11968. **Product Name:** Smoked Tofu Flavors [Lemon Garlic, or Herbs & Spices].
Manufacturer's Name: Tree of Life, Inc. (Marketer-Distributor).
Manufacturer's Address: P.O. Box 410, St. Augustine, FL 32085-0410. Phone: (904) 825-2095.
Date of Introduction: 1999. October.
Wt/Vol., Packaging, Price: 18 oz (510 gm) plastic jar.
How Stored: Shelf stable.
New Product–Documentation: Short in *E–The Environmental Magazine*. 1999. "Tools for Green Living: New life to tofu." Sept/Oct. p. 52. Tree of Life offers tofu in "a new line of smoked flavors. Lemon Garlic and Herbs & Spices have been added to the Original and Hot & Spicy line."

11969. **Product Name:** Tofurky "Giblet" Gravy.
Manufacturer's Name: Turtle Island Foods, Inc.
Manufacturer's Address: P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031.
Date of Introduction: 1999. October.
Ingredients: Water, unbleached flour, expeller pressed non genetically engineered canola oil, Tofurky Giblets (water, vital wheat gluten, organic tofu...)... natural vegetarian flavor, spices, organic cane juice, sea salt, onion, garlic, autolyzed yeast, caramel color, non-dairy lactic acid culture.
Wt/Vol., Packaging, Price: 14 oz plastic tub. Retails for $3.29 (2003/12, Lafayette, California).
How Stored: Frozen or refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 2003. Dec. 3. Paperboard sleeve has a round color photo of a boat of gravy on a wooden table surrounded by natural foods, against a blue background. "100% vegan. 'The world's best vegetarian gravy.'" Soyfoods Center taste test: Poor flavor and texture–especially compared with previous versions of this once-delicious gravy. Very bland. The "giblets" are very small. The texture is lumpy.

Talk with Seth Tibbott of Turtle Island. 2003 Dec. 4. This product was introduced 4-5 years ago. It is very popular and many people have said how much they like it. This year Turtle Island has sold more than 8,000 cases, up from 6,700 cases last year.

11970. United Soybean Board. 1999. National report on consumer attitudes about nutrition–1999-2000. Seattle, Washington. 8 p. Oct. 22 cm.

• ***Summary:*** This sixth annual nationwide survey, commissioned by the United Soybean Board, was conducted in July 1999 by an independent research firm in Seattle, Washington. It included telephone interviews with 1,028 randomly selected consumers and primary household shoppers of all ages throughout the USA. They were asked a series of up to 23 questions. The standard margin of error for the study is ±3.1%.

Contents: Concern about nutritional content of food (1996-99). Americans changing eating habits due to concern about nutrition (1996-99). Specific dietary changes (Big changes: Reduce fat 49%, more vegetables 25%, more fruit 18%, less red meat 17%). Importance of nutrition in selecting groceries and restaurants. Americans recalling stories on health and nutrition issues.

Consumer perceptions of genetically modified food, biotechnology, and labeling: Aware of the term "genetically modified food"–42% in 1999 vs. 48% in 1998; aware of "biotechnology"–36% in 1999 vs. 41% in 1998. "Consumers continue to view biotechnology more favorably than genetically modified. When asked if they would continue to purchase a product with these terms on the label, 71% said yes or maybe to the term biotechnology, while 58% said yes or maybe to the term genetically modified."

Consumer perception of cooking oils: "More consumers (89%) perceive soybean oil as being healthier than any other oil"–followed by olive oil (87%) and canola (86%). "However most Americans (78%) are unaware that vegetable oil is often synonymous with soybean oil."

The healthiness of soy and soy products: "The number of consumers who perceive soy and soy products as very healthy increased significantly to 71% from 67% in 1998 and 59% in 1997.

"Forty percent of consumers are aware of specific health benefits of soy, such as reducing the risk of heart disease (14%), lowering cholesterol (10%), reducing the risk of breast cancer (8%) and prostate cancer (5%) and relieving or reducing the symptoms of menopause (7%)."

Consumer awareness and use of soy products: "Consumers report they are eating more soy products. Of those who have tried soy products, 68% report using them regularly. Twenty-four percent report using soy products once a week or more, compared to 15% in 1998. More consumers also report that they eat soy occasionally, about once a week.

"The three products that ranked highest in consumer awareness are tofu (78%), soy veggie burgers (72%) and soy milk (63%).

"Tofu and soy veggie burgers continue to receive the highest level of trial among consumers at 43% and 38%, respectively."

Consumer perceptions of *trans* fat and hydrogenation. "Over half of consumers are aware of *trans* fatty acids (58%) and hydrogenation (54%). Fifty-three percent understand what the term *trans* fatty acids represents and 64% are familiar with the term hydrogenation.

"Most consumers view hydrogenation either neutrally or positively (56%), while 44% view the term negatively.

"Consumers seem to be confused about the healthiness of *trans* fatty acids. Forty-five percent think of *trans* fatty acids as somewhat or very healthy while 55% view it as somewhat unhealthy or very unhealthy.

"Consumers are also split between their likeliness to purchase a product with *trans* fatty acids listed on the Nutrition Facts label. Forty-five percent are either very likely or somewhat likely to purchase a product with a *trans* fatty listing on the label and 55% would be somewhat or very unlikely to do so. This split also seems to indicate confusion among consumers about the term *trans* fatty acids."

Talk with Vicki M. Nesper of United Soybean Board / Publicis Dialog, in Seattle, Washington. 2002. May 2. This survey was conducted in July 1999, about 3 months before the FDA issued its health claim. The preliminary results were released at the IFT convention that summer. The report itself was published in October–as it is each year.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

11971. Houle, Barbara M. 1999. Oh boy, soy! *Telegram & Gazette* (*Worcester, Massachusetts*). Nov. 3.

• ***Summary:*** Elizabeth M. Ward of the American Dietetic Association discusses the new FDA heart health claim for soy. Food include whole dry soybeans, fresh immature soybeans [edamame], roasted soy nuts, tofu, and textured soy protein. Large photos show: Green soybeans in the pods, roasted and salted soy nuts, and many cartons of soymilk. Address: Food Editor.

11972. Kluger, Jeffrey. 1999. What's for dinner? Our chef whips up a tasty meatless meal that's good for you–and for nature. *Time.* Nov. 8.

• ***Summary:*** In the "health and environment" section: The article begins: "If the human race becomes vegetarian in the next century, animal-rights activists will be ecstatic. But what about the rest of us? Can we possibly enjoy a meat-free, dairy-free [sic] future when hunter-gatherer appetites will still be hard-wired into our genes?"

Time has chosen Louis Lanza, executive chef at and

© Copyright Soyinfo Center 2013

owner of Josie's Restaurant and Juice Bar in New York City, to prepare a dinner for the year "2025 that would be good for the body–and the planet. In his tasty menu, liver pate gives way to lentil pate, steak is replaced by tofu cutlet and a banana-and-ice-cream dessert is made with rice milk instead of cow's milk."

The dinner includes: "Soup and salad: Chick-pea miso soup with salad of organic baby greens, heirloom tomatoes and toasted soy nuts.

"Entree: Seared tofu cutlets in an orange chipotle glaze with mushrooms, butternut squash and wheatberries." For dessert is a sundae of rice "ice cream" [Rice Dream].

11973. Kawata, Ayumi. 1999. The LA Tofu Festival on 14-15 August 1999 (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This year's Tofu Festival was the biggest and most successful yet. More than 26,000 people came. The Little Tokyo Festival was part of the 59th Nisei Week Japanese Festival, the longest-running Japanese festival in the USA. Nisei Week began in 1934 during the Great Depression, when the Nisei (second-generation Japanese-American) community established the first festival to create goodwill in the local community and attract businesses to Little Tokyo. The festival continued until 1941, when West Coast Japanese were relocated to internment camps. Even though the Japanese community returned to the area in 1945, the festival didn't start again until 1949. It is now one of the leading ethnic festivals in the United States.

This year they created a lovely Tofu t-shirt. Ayumi will send the official program booklet and a packet of press clippings. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1602.

11974. Bossert, René. 1999. Tofu-Absatz waechst weiter [Sales of tofu continue to grow]. *Badische Bauern Zeitung* (*BBZ, Germany*)**.** Nov. 20. No. 46. p. 20. [Ger]
• ***Summary:*** In 1999 Life Food purchased the organic, non-GE soybeans from 115 hectares (ha), mostly from the Rhine valley of southern Baden. In the year 2000 they plan to expand this to 140 ha. Sales of tofu are also growing. The company sells basic tofu and 30 products made from tofu such as patties, terrines, and smoked tofu. This year the company will produce about 800 metric tons of tofu.

The company now gets about half of its soybeans from Hungary and France. This year it paid its German contract farmers 1,250 German marks per metric ton for soybeans.

A portrait photo shows Wolfgang Heck, managing director (*Geschäftsführer*) of Life Food GmbH ("Taifun").

11975. Creamer, Beverly. 1999. Tofu linked to dementia, study says: 2 servings a week may be harmful. *Honolulu Advertiser.* Nov. 20. p. A1, A5. [1 ref]
• ***Summary:*** "Eating tofu more than twice a week in midlife may diminish brain function in old age, and lead to Alzheimer's disease, according to ground-breaking research by Hawaii scientists." Alzheimer's affects 2% of America's 65-year-olds and up to 16% of 80-year-olds; this is the first time scientists believe they have found a risk factor for the disease.

The team, led by Dr. Lon White, draws its findings from a database of long-term information (starting in 1965)–that of the 3,734 Japanese-American men in the Honolulu Heart Program. White, who was invited to speak, presented his findings at a recent conference in Washington, DC, sponsored by the nation's soy industry. With funds from the National Institute on Aging, White has been working on the tofu connection for several years as part of the Honolulu-Asia Aging Study and the Honolulu Heart Program.

White compared the dietary habits of 3,734 Japanese-American men whose tofu consumption ranged from zero to many servings a week. He found that those who ate the most scored lower than those who ate little on a standard cognitive function test for determining dementia.

Moreover, autopsies conducted on the brains of 300 members of the study who have died showed that the brains of those who consumed two or more servings of tofu a week weighed less than those who consumed fewer than two servings.

These cause of the problem is not yet known. Dr. Helen Petrovich, a co-investigator, theorizes that tofu might be slowing down production of estrogen in the brain, or interfering with its natural binding in the brain. Yet moderate amounts of tofu are still thought to bring health benefits.

Note: White has submitted his research to various scientific journals, but none have accepted or published it. The journals *Nature* and *Science* turned it down. Address: Dr., Pacific Health Research Inst., Kusinki Medical Center, Hawaii.

11976. Schultz, Stacey. 1999. Pass the tofu tacos: Soy-based foods are disease fighters, but they can taste pretty weird. *U.S. News and World Report.* Nov. 22. p. 77-78.
• ***Summary:*** Another typical soy article: Soy is healthy, sales are booming, the stuff tastes awful. During the past year, soyfood sales have increased 35% to $494 million, largely because of reports of soy's health benefits–many of which are caused by isoflavones. Studies show that older women who consume soyfoods are likely to benefit. In one recent study, post-menopausal women who ate 40 grams of isolated soy protein a day for 12 weeks experienced a 45% decrease in the number of hot flashes.

A sidebar titled "How to fit soy into your diet" gives short descriptions of some "whole soy foods" and the number of grams of protein per serving: Soy milk, whole soybeans (edamame or cooked dry soybeans), miso, textured soy protein, and tofu. A large photo soys many types of

© Copyright Soyinfo Center 2013

prepared soyfoods (not in packages). Contains several factual errors, e.g. soy nuts are high in cholesterol, etc.

11977. Greenfield, Beth. 1999. Yo! Soy! The road to enlightenment is easy to discover in India. Finding tofu is another matter. *Long Island Voice* (*New York*) 3(46):11. Nov. 18-24.
• ***Summary:*** The author, a vegetarian, hungered for tofu as she traveled in sun-drenched Goa on the southwestern coast of India. An Indian state since 1987, Goa used to be a Portuguese colony, and the capital of Portuguese India. Suddenly she discovered a new-looking restaurant named "Bean Me Up," started by Lisa Ann Camps (age 37) of Islip, Long Island.

In 1984 Lisa had come to Goa from Florida to take care of an ex-boyfriend who had broken his arms and legs in an accident. She never left. And the reason was Goa–not the ex-boyfriend. During the late 1960s, Goa had been made popular as India's southern beach resort by wandering Western hippies in search of enlightenment and sunny escapism. Always resourceful, Camps began by starting her own lingerie company named Ooh La La. But as a vegetarian, she missed tofu. So she learned how to make her own soymilk and tofu. Then last year (1998), at the urging of veggie tourists, she started her own tofu shop using soybeans imported from the northern state of Himachal Pradesh. Since local restaurants were reluctant to carry her tofu and since she had restaurant experience from Florida, she decided to start her own place to serve the tofu she made. Camps, now an apostle of tofu in India, hopes to introduce this vegetarian source of protein to rich and poor alike who come to enjoy India's Riviera.

Photos show: (1) The sign announcing Bean Me Up; the words are written across a large circle with a figure seated in meditation at the center. (2) Lisa Camps, in Indian-style dress, seated at a table in her restaurant. Address: New York.

11978. Savidge, Mariella. 1999. Bean curd bird: Allentown's Fresh Tofu Inc. says customers flock to its meatless Thanksgiving treat. *Call* (*Allentown, Pennsylvania*). Nov. 24.
• ***Summary:*** Gary Abramowitz, age 47, owner (with his wife, Andrea) of Fresh Tofu Inc. in Allentown, Pennsylvania, now makes Tofu Turkeys for Thanksgiving. A large color photo shows him and an employee with six of them. Gary has been a vegetarian since the early 1970s. He used to be head chef at the High Street Cafe, a vegetarian restaurant in Morristown, New Jersey; there he met Jeff Connerton, who owned a tofu company named Fresh Tofu Inc., which had started operation in Easton, Pennsylvania, in Nov. 1984. In March 1985 he bought half of Connerton's tofu Company. The two worked together until Oct. 1988, when Abramowitz bought out Connerton's shares and became sole owner.

In about 1990, while still enjoying the meatless side-dishes at his family's Thanksgiving dinners, he began to think about an alternative. That year he created the prototype Tofu Turkey; it weighed about 14 pounds and measured 14 inches across. Fresh Tofu started producing the tofu-based Turkeys in 1992. The number sold grew steadily each year. In April 1999, to support the new growth, the company moved into an 18,000-square-foot building, part of the Bridgeworks business incubator [at 1101 Harrison St. in Allentown. Phone: 610-433-4711] Fresh Tofu now has 17 employees. Address: Food Editor. Phone: 610-433-4711.

11979. Duke, James A. 1999. Isoflavones in kudzu, soybeans, and other plants (Interview). *SoyaScan Notes.* Nov. 25. Conducted by William Shurtleff of Soyfoods Center. [2 ref]
• ***Summary:*** In a recent search of his FNF (Father Nature's Farmacy) database, which is now available free of charge at the USDA website, Dr. Duke found that kudzu ("the plant that ate Alabama") is *the* richest known source of daidzein, a key isoflavone, which could be used to treat osteoporosis. Ipriflavone, a synthetic compound widely used for osteoporosis in Europe, turns into daidzein in the gut. Dr. Duke has kudzu growing on his hillside in Maryland–which his neighbors don't appreciate. "I think if we could find yet another use for kudzu, we might harvest it for estrogenic isoflavones instead of spraying it with estrogenic pesticides. That's been a theme of mine for five years. It also rich in genistein." Dr. Duke and his coworker Peter Calhoun recently looked at 75 legumes in the FNF database for their content of genistein plus daidzein. *Psoralea* is the richest source of daidzein–50 times richer than the soybean–though it is not normally eaten; yet it is used in Indian and Chinese medicine. The soybean is roughly in the middle in terms of total genistein plus daidzein. The statements that the soybean is "the richest source of isoflavones" or "a unique source of genistein, are simply not true.

Nowadays kudzu's scientific name is most widely given as *Pueraria montana* (formerly *Pueraria lobata*). Shortly he will be analyzing an Asian species of *Pueraria* that is also rich in isoflavones.

Fermentation can raise the level of isoflavones. If an alfalfa sprout is inoculated with or attacked by a fungus, it's genistein content will rise 100-fold. The attack makes the living sprout defend itself by producing or eliciting fungicidal compounds (primarily isoflavones) that protect the plant. This response of a plant producing protective / defensive compounds of various sorts is called "fungal elicitation." Most of the genistein data in his FNF database was based on this "fungal elicitation." A stressed plant naturally produces defensive compounds–not just isoflavones. Many legumes do not have a high genistein content until the are "hit with a fungus." Dr. Duke thinks that Asians might get more estrogenic isoflavones from sprouted legumes (such as mung bean or soybean sprouts) than from tofu or miso.

© Copyright Soyinfo Center 2013

Dr. Duke's favorite soy product is miso; he invariably orders miso soup when he goes to a Japanese restaurant, but he never uses miso at home.

Dr. Duke is considering filing for a patent on use of the daidzein or isoflavones in kudzu to treat osteoporosis. Such a patent might enable him to interest an entrepreneur in battling kudzu productively rather than destructively. Any royalties would revert to an Amazon foundation with which he works.

Jim knows a lactation consultant who firmly believes that longer lactation and breast feeding is one of the best ways of preventing osteoporosis. She thinks that is more important than estrogenic isoflavones in the prevention of osteoporosis. Traditionally, women breast fed longer than they do today. Address: 8210 Murphy Rd., Fulton, Maryland 20759. Phone: 301-498-1175.

11980. Buell, Paul D.; Anderson, Eugene N. trans. and ed. 1999. A soup for the Qan: Chinese dietary medicine of the Mongol era as seen in Hu Szu-hui's *Yin-shan Chêng-yao.* London: Kegan Paul International. 715 p. 25 cm. 2nd ed. 2010. [Eng]*

• ***Summary:*** The book of which this is a translation, published in 1330, is about the food and medicine of the Yuan (Mongol) dynasty (A.D. 1279-1368) court in Peking. During this dynasty, China was ruled by Mongols who had invaded China from the north. Contains a good introduction plus one reference to soybeans and tofu, and many references to jiang (though none of them are indexed under chiang, jiang, or sauce)–some of which were probably soybean jiang (for example, see p. 423; Bream gruel with sauce).

Section 3 (p. 515-17) states: "Soybeans are sweetish in flavor and neutral and lack poison. They decrease demon *qi,* control pain, and drive out water. They expel heat of the stomach, bring down blood stasis, and counteract the poisons of various drugs. They are made into tofu. Tofu is cooling and moves the *qi."* Address: 1. Seattle, Washington; 2. Dep. of Anthropology, Univ. of California, Riverside, CA 92521-0418.

11981. GeniSoy Products. 1999. The magic of soy: Healthy cooking with soy protein. Summertown, Tennessee: The Book Publishing Co. 128 p. Index. 23 cm. [18 ref]

• ***Summary:*** Contents: Introduction–Experience the magic of soy, about GeniSoy, about soy, soy and heart disease, prevention with soy, soy and cancer, soy and osteoporosis, soy and menopause, choosing soy products, make room for soy. Smoothies and shakes. Breakfast. Breads and baked goods. Sauces, gravies, dips, dressings, and spreads. Soups, salads, and sandwich fillings. Entrees. Desserts.

Contains many vegan recipes for using soy protein isolate, named GeniSoy Soy Protein Powder, made by GeniSoy. GeniSoy was founded in 1997 after its parent company (MLO Products) began to manufacture isolated soy protein products for use in institutional research studies. Address: Fairfield, California.

11982. Morinaga Nutritional Foods, Inc. 1999. Lite'n your holidays with Mori-Nu Tofu (Ad). *Vegetarian Times.* Nov. p. 29.

• ***Summary:*** The top half of the ad is a color photo of the tofu pumpkin pie, surrounded by pumpkins and vegetables and one package of Mori-Nu Silken Firm Tofu.

The recipe for "Dairy-free, low-fat pumpkin pie" is given in the lower right quarter of the ad. In the lower left quarter is a color photo of 5 different packages of Mori-Nu Tofu. Plus an invitation to: "Create delicious, low-fat, dairy-free holiday dishes with Mori-Nu Lite Tofu. Creamy-smooth Mori-Nu Lite has only 1 gram of fat per serving, 50% less calories than regular tofu and it's an excellent source of cholesterol-free protein." Address: 2150 W. 190th St., Suite 110, Torrance, CA 90504.

11983. Nasoya Foods, Inc. 1999. It's enriched, It's light. It's delicious. It's a whole new tofu (Ad). *Vegetarian Times.* Nov. p. 7.

• ***Summary:*** This full-page color ad shows a photo of salad with cubes of marinated tofu in a white bowl. To the left of the photo is the recipe. Photos at the bottom of the ad show the upper two-thirds of two packages of Nasoya Enriched Tofu (Firm and Silken). The text states that these products are fortified with calcium and vitamins A, D, E, and B-12–and contain 50% less fat than regular tofu. Address: One New England Way, Ayer, Massachusetts 01432. Phone: www.nasoya.com.

11984. Nasoya Foods, Inc. 1999. Its enriched. Its light. It's delicious. Its a whole new tofu (Ad). *Natural Foods Merchandiser.* Nov. p. 40.

• ***Summary:*** A full-page color ad for Nasoya Enriched Tofu, which comes in two types: Firm and Silken. A true functional food. www.nasoya.com. Address: One New England Way, Ayer, Massachusetts 01432. Phone: (800) 4-NASOYA.

11985. *Nutrition Business Journal* (*San Diego, California*). 1999. Soy protein is big news for suppliers. 4(10/11):5-6. Oct/Nov.

• ***Summary:*** The health claim for soy protein, approved Oct. 26, was granted under the Nutritional Labeling and Education Act (NLEA). The claim was submitted in 1998 by Protein Technologies International (PTI), a company of DuPont. On the day the claim was approved, PTI ran full-page ads in the *New York Times* and *Wall Street Journal*–a good idea since neither paper ran the story. Both Kellogg and General Mills are rumored to be developing a breakfast cereal containing soy protein.

In 1998 sales of soyfoods totaled an estimated $1.7 billion and should reach over $2 billion in 1999. During 1998

© Copyright Soyinfo Center 2013

sales of soy milk grew to almost $200 million (up 20%), tofu to $200 million (up 15%), and tempeh $17 million (up 5%)–according to Peter Golbitz of Soyatech Inc. In 1999, with interest in soyfoods skyrocketing, Golbitz predicts overall growth of 20%, with soymilk up nearly 40%, and meat alternatives, tofu, and other prepared foods containing soy gaining between 20% and 50%, depending on the product.

11986. Sando, Shirleen. 1999. Beyond low-fat baking: Cancer-fighting foods for the millennium. Dallas, Texas: Skyward Publishing, Inc. ix + 288 p. Illust. Recipe index. 22 cm. [12 ref]
• ***Summary:*** Contains reduced-fat recipes fortified with soy. Contents. Acknowledgments. Introduction, by Stephen A. Smith, M.D. Message from the author. Tofu for good health. Eat more grains. 1. No-fuss machine breads. 2. Those scrumptious breads. 3. Quick and easy breads. 4. Biscuits and scones. 5. Old time corn bread. 6. Healthy pancakes and waffles. 7. Pizza, flatbread, and focaccia. 8. Glorious cakes. 9. Special occasion cakes. 10. Fabulous pies. 11. Ever lovin' cookies. Appendix: More about soy. Address: President and Founder, Living Healthy Foods.

11987. Turtle Island Foods, Inc. 1999. Tofurky: America's #1 turkey alternative. Now with Wishstix and Tofurky "Giblet" Gravy (Ad). *Vegetarian Times.* Nov. p. 52.
• ***Summary:*** This one-third page vertical color ad introduces Tofurky with new features. Color photos show: (1) Tofurky sliced and served on a silver platter. (2) Three hands holding Wishstix. (3) Three packages of Tofurky Deli Slices in Original, Hickory Smoked, and Peppered flavors.

Note: The word "giblets" (pronounced JIB-luts), a word first used in the 15th century, refers to the edible viscera or entrails of a fowl / bird. Address: Hood River, Oregon. Phone: 888-TOFURKY or tofurky.com.

11988. **Product Name:** Nasoya Enriched Tofu [Firm, or Silken].
Manufacturer's Name: Vitasoy USA Inc.
Manufacturer's Address: One New England Way, Ayer, MA 01432.
Date of Introduction: 1999. November.
How Stored: Refrigerated.
New Product–Documentation: Ad in *Natural Foods Merchandiser.* 1999. Nov. p. 48. "Its enriched. Its light. It's delicious. Its a whole new tofu." Enriched with vitamins A, D, E, B12 and calcium. Spot in Health Products Business. Dec. 1999. "Rich Tofu."

11989. Tibbott, Seth. 1999. Update on Tofurky (Interview). *SoyaScan Notes.* Dec. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sales of Tofurky (vegetarian turkey alternative) are up about 20-23% over last year. Seth expects to sell about 56,000 to 58,000 by the end of the year, up from about 45% last year.

His new product, Tofurky Deli Slices, are doing surprisingly well, with total sales almost equal to those of Tofurky. His slices are based on tofu, whereas most competing products are based on soy protein isolates, which is not as natural an ingredient.

The "slow roast" is new way to cook Tofurky for the best flavor. Seth learned this from a customer. Put diced potatoes and carrots inside, and baste them with the Tofurky. Wrap in foil, then bake at 300ºF for 2 hours.

Seth gets lots of e-mail about Tofurky. Hot issues: (1) I've been a vegetarian for 15 years and I don't like it because it tastes too much like turkey. (2) Its too expensive. Seth's response: Ounce for ounce it is less expensive than Gardenburgers. (3) Does it contain genetically-engineered soybeans? (4) I like the new gravy. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: 541-386-7766 OF.

11990. Boreham, Simon. 1999. The tofu market in the United Kingdom (Interview). *SoyaScan Notes.* Dec. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The biggest tofu maker in the UK is Cauldron Foods, which has a turnover (sales) of about £4 million/ year. Address: Owner, Dragonfly Foods, 2A Mardle Way, Buckfastleigh, Devon TQ11 ONR, UK. Phone: +44 1364 642700.

11991. Israel, Cocavatiyah Baht. 1999. Re: Update on "Eternity" and Taste of Life vegetarian restaurants in Israel. Letters to William Shurtleff at Soyfoods Center, Dec. 12 and 10 Jan. 2000. 2 p. + 2 p. Handwritten, with signature. Plus leaflet. [1 ref. Eng; Heb]
• ***Summary:*** This group used to be known as "Eternity," an all vegetable ice cream parlor. Now they serve their vegetarian ice cream plus a menu "consisting of many various dishes (vegetable) that include tofu and the vegetable protein product seitan. We are vegan–no animal by-products, no artificial food coloring, no cholesterol. Kosher." They now have a second restaurant at Hakishon St. (across from Magen David), Tiberias, Israel. Phone: 06 671 2133. They also have a factory that produces the ice cream, tofu, and most of the take-out products and carob candies. The main dishes (entrees) and some vegetarian products are made in the restaurant daily. They make tofu at: Nature's Gate Ltd., Mivne Taaseya Haradash 76, Box 029, Dimona, Israel 86000. Phone: 972-7-655-7774. Fax: 972-7-655-7769. In 1986 they started to make and sell tofu as tofu. They sell their tofu at about 30 different places outside their two restaurants. Nature's Gate Ltd. own the factory and L'Haiem owns the restaurants.

They also make their own soymilk at Nature's Gate Ltd. Presently they produce the soymilk only for their own use,

© Copyright Soyinfo Center 2013

but in the future they hope to expand.

Enclosed is a one page recipe in Hebrew and English. The 12 food categories are: Desserts (incl. 9 flavors of non-dairy ice cream), candies, beverages (incl. soya milk), dressings, salads, breads, breakfast (incl. tofu links, scrambled tofu), sandwiches (incl. tofu cheese, marinated tofu, okara sticks, tofu falafel, tofu burger, tofu vege burger, stir-fry with tofu, stir-fry with seitan), steamed vegetables, take away (take-out), main entrees (incl. tofu teriyaki, tofu with gravy, tofu medley), a la carte (incl. tofu medley). Address: 60 Ben Yehuda St., Tel Aviv, Israel. Phone: 03 620 3151.

11992. Gaiser, Klaus. 1999. Update on soyfoods and seitan in Germany (Interview). *SoyaScan Notes.* Dec. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyfoods have been stagnant in Germany over the past 1-2 years because of concerns with the genetically engineered soybeans (*gen-soya*). The only company that seems to be growing is Taifun, in large part because they are exporting quite a bit. Klaus still makes some tofu spreads, but most of his products are based on seitan.

He has done a great deal of research and development with seitan, and has invented an original and unique line of seitan meat alternatives. He began developing products with seitan in late 1996, then really began moving forward during 1997. By fiscal 1998 his company, Topas, had doubled its turnover, based mostly on seitan products, from DM 450,000 in 1997 to DM 850,000 in 1998. This is projected to reach DM 1.1 million in 1999.

Klaus is deeply interested in a remarkable 19th century Christian prophet named Jacob Lorber, who lived in Austria in about 1815-1875. Address: Founder and owner, Topas GmbH, Bollbergstr. 41, 72116 Öschingen [near Tuebingen], Germany. Phone: 07473/25515. Fax: 07473/8320.

11993. Jones, Chad. 1999. Hold the burgers: Teens try to lead families into a life of vegetarianism. *Oakland Tribune.* Dec. 19.
• ***Summary:*** A recent Teenage Research Unlimited poll of young Americans ages 12-19 found that 29% of the girls and 15% of the boys say being a vegetarian is "in." These figures are nearly double what they were 10 years ago. Many teens become vegetarian because they care about animals or the environment; they are often motivated by compassion and positive reasons. The increase in teen vegetarians mirrors the increase in adult vegetarians in the USA.

A color photo shows two packages of tofu, a popular meat alternative for vegetarians. Address: Staff writer.

11994. August, Melissa; Castronovo, Val; Dan, Chen; Gray, Tam; Martens, Ellin; Orecklin, Michele; Rawe, Julie; Tyrangiel, Josh. 1999. Pie of the week. *Time.* Dec. 20.
• ***Summary:*** In the "Notebook" section: "Miss Rodeo America 2000, got smacked with a chocolate-tofu pie by Dawn Carr."

11995. Skiff, James. 1999. New Japanese law concerning labeling of foods made with genetically engineered ingredients (Interview). *SoyaScan Notes.* Dec. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is aware of this Japanese law, which was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the American Soybean Association office in Tokyo, told Jim about the law; Echle is extremely receptive to the needs of his Japanese customers, such as tofu makers. ASA is also getting more involved with issues involving identity preserved (IP) soybeans; they are organizing an IP conference on Jan. 17 in St. Louis, Missouri.

Skiff then faxes Shurtleff a provisional translation of the labeling guidelines, in the form of a 1-page table. The translation was done by ASA-Tokyo and sent to Skiff by Jim Echle. There are three columns: (1) Classification of food: A. Not equivalent to conventional foods with regard to composition, nutrients, or intended use. B. Equivalent to conventional foods, but modified DNA or protein produced therefrom remains after the manufacturing process. C. Equivalent to conventional foods, but modified DNA or protein produced therefrom is removed or decomposed and no longer exists in the in the final food. (2) Examples of the three types of foods: A. High oleic acid soybean oil. B. Tofu and tofu products, soybean sprouts, natto, soymilk, miso, soybean flour, roasted soybeans, corn, popcorn, potatoes, etc. C. Soy sauce, soybean oil, high fructose corn syrup. (3) Method of labeling: "Soybean (genetically modified),..." Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

11996. Brasher, Philip. 1999. USDA wants soy in schools (News release). Washington, DC. 2 p. Dec. 23.
• ***Summary:*** Federal officials, worried about the fat content of kid's school meals, want to start letting schools and day care centers serve tofu, veggieburgers, and other soy products as alternatives to meat in federally subsidized lunches–now consumed by 26 million children. In 1994 the USDA decided to start requiring schools to meet the government's dietary guidelines for fat and nutrients. That means that the average fat content in school meals cannot exceed 30% each week. The USDA is considering dropping its restrictions on how much soy can be used in meals. Currently soy can only be used as a food additive in amounts of less than 30 percent.

Of course, the meat industry is fighting the proposal. They believe, for good reason, that schools will probably use more soy and less meat in their standard dishes, such as burgers and tacos. Carol Tucker Foreman, Director of the Consumer Federation of America's Food Policy Institute,

© Copyright Soyinfo Center 2013

believes that allowing a higher soy content will make it easier for schools to keep meat on their menus. So the proposal could be a mixed victory for vegetarians. A final ruling is expected by Feb. 2000. Address: The Associated Press.

11997. *SoyaScan Notes.* 1999. Chronology of major soy-related events and trends during 1999 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** April–Kevin Cross sells Soy Power Co., Inc. in Santa Monica, California, to Nature's Best.

May 10–SoyaWorld Inc. of Burnaby, British Columbia, Canada, purchases the SoNice brand and two soymilk extraction plants from International ProSoya Corp. (IPC). SoyaWorld is jointly owned by Dairyworld Foods (the largest dairy and food company in western Canada) and Sunrise Soya Foods (Canada's largest tofu manufacturer). SoyaWorld plans to (and has the ability to–because of Dairyworld Foods) put fresh and Aseptic soymilk in every supermarket and grocery store in Canada. Then they will move into the USA. This is a very big story!

July 12–Deutsche Bank, one of its strongest advocates of ag biotechnology, issues a report in which it reverses its previous "buy signals" on many of the companies commercializing ag biotech (such as Monsanto and Pioneer Hi-Bred). It now urges caution, and signals the beginning of trouble for the ag biotech industry.

Aug. 18–White Wave (Boulder, Colorado) and Dean Foods (Franklin Park, Illinois) jointly announce that Dean Foods has created an alliance with White Wave by becoming a minority shareholder in White Wave. The two companies will work together to place Silk soymilk into the refrigerated dairy case of supermarkets across America–and try to get there before SoyaWorld of Canada. A very big story for soymilk in the USA.

Sept. 1–Stake Technology Ltd. (Norval, Ontario, Canada) acquires SunRich Inc. (Hope, Minnesota) in a stock-for-stock deal.

Sept.–In this month's issue of *Consumer Reports,* a 6-page article on genetically engineered (transgenic) foods titled "Seeds of Change" recommends that "federal officials should require that all foods containing genetically engineered ingredients be labeled as such, including milk with recombinant bovine growth hormone."

Oct. 1–DuPont (a large chemical company) buys the 80% share of Pioneer Hi-Bred International Inc. that it doesn't already own–a major move into biotechnology.

Oct. 4–The Kellogg Co., maker of breakfast cereals in Battle Creek, Michigan, agrees to buy Worthington Foods for $307 million. Worthington makes vegetarian meat alternatives.

Oct. 7–The *Wall Street Journal* runs a major front-page story on concern about and opposition to genetically engineered foods in the USA and Europe. Runs two more such stories on Nov. 30 and Dec. 14. Dec.–During the last 6 months of 1999 consumer awareness of and concern about genetically engineered food issues in the United States has increased dramatically. It has moved from a counter-culture to a mainstream concern, and fairly large amounts of money are now flowing into antibiotech organizations. GMO was a widely discussed issue in the breakdown of and mass demonstrations against the World Trade Organization talks in Seattle, Washington.

Oct. 20–The U.S. Food and Drug Administration (FDA) announces its approval of a health claim for soy protein and coronary heart disease. The claim, which goes into effect Oct. 26, can be used on food labels in either of two formats, the first of which is: "25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease. A serving of (name of food) supplies ___ grams of soy protein." This promises to have a huge, positive impact on the soyfoods market.

Dec.–General Mills acquires Small Planet Foods (Cascadian, Muir Glen) for $60 million.

Dec.–Kellogg Co. purchases Worthington Foods.

In 1999, for the first time in history, more acres were planted to soybeans in the USA than to any other crop. U.S. soybean acreage exceeded that of corn by 3% and that of wheat by 34%. Worldwide, the acreage planted to soybeans has increased fivefold since 1950.

11998. *SoyaScan Notes.* 1999. Soya Clips receives about 2,592 clips from Jan. 1 to Dec. 31, 1999 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** According to Scott Bynum, customer relations rep. at Luce Press Clippings, figures are available only for the last 7 months of 1999, as follows: June 164. July 188. Aug. 322. Sept. 140. Oct. 177. Nov. 233. Dec. 288. This is a total of 1,512 clips for 7 months, or an average of 216 clips per month. The equivalent for 12 months would be 12 x 216 = 2,592. This is a new record, topping the old record of 2,105 clips in 1989.

11999. *ASA Today* (*St. Louis, Missouri*). 1999. ASA supports growers' penchant for biotechnology. 6(2):2. Dec.
• ***Summary:*** Marc Curtis, president of the American Soybean Assoc., presented to the U.S. Senate Agriculture Committee a list of suggestions of what the federal government can do to "strengthen the commercial environment for biotechnology [genetically engineered] crops and products." U.S. soybean growers have lost sales in Europe this year.

"In Japan, a labeling law approved this year could affect up to 700,000 metric tons of soybeans shipped in bulk to the tofu market." Curtis believes it is "good news" that Japanese buyers are lining up Identity Preserved (IP) contracts with U.S. farmers.

Six suggestions are given. A video of Curtis' testimony is available at www.oilseeds.org.asa.video/.

© Copyright Soyinfo Center 2013

Note: See interview with Jim Skiff, president of US Soy. Dec. 22.

12000. Carroll, Allison. 1999. Soybean curd, anyone? *Backpacker* 28(9):35. Dec. *
• ***Summary:*** Purchasing and preparing tofu, and using it as a trail food. Includes recipes.

12001. Fisher, Kate. 1999. Varieties yield big business: Food-grade soybeans fuel new enterprises. *Soybean Digest.* Dec. p. 16-17.
• ***Summary:*** About soybean breeder Jerry Lorenzen of Oskaloosa, Iowa. He started researching and breeding food-grade soybeans after he graduated from Iowa State University fifteen years ago.

Earlier this year Lorenzen, now president of FTE Genetics, joined with growers and processors in several new projects, which include a processing plant to make fine soy powder (FSP). FTE is looking for about 100,000 acres of soybeans, according to John Pape, director of specialty operations.

Lorenzen and FTE partnered with Japanese businessman Zentaro Iwamoto and a small group of investors to create a 56-acre industrial park near Oskaloosa named the World Food Park. It will be home to a $4 million state-of-the art soybean conditioning and processing facility named World Food Processing. Two separate facilities will take up about 23 acres of the site. Some of the beans from the WFP conditioning facility will be made into tofu by Midwest Harvest at Grinnell, Iowa. The tofu will be used in Bratos, a tofu-pork bratwurst. Bratos, which are healthier than regular bratwurst, "will be served in 400 schools in Iowa."

Talk with soybean industry insider. 1999. Dec. 13. This looks to him like a scam. FTE says they can make a 1,000 mesh soy flour which is impossible. There is no way to sell soy flour from 100,000 acres of soybeans. FTE seems to have gotten some money from Iowa Economic Development.

12002. Key, T.J.; Sharp, G.B.; Appleby, P.N.; Beral, V.; Goodman, M.T.; Soda, M.; Mabuchi, K. 1999. Soya foods and breast cancer risk: a prospective study in Hiroshima and Nagasaki, Japan. *British J. of Cancer* 81(7):1248-56. Dec. [35 ref]
• ***Summary:*** The association between soya foods and breast cancer risk was investigated in a prospective study of 34,759 women in Hiroshima and Nagasaki, Japan. Women completed dietary questionnaires in 1969-1970 and/or in 1979-1981 and were followed for incident breast cancer until 1993. For miso soup, relative risks were 1.03 (0.81-1.31) for consumption two to four times per week and 0.87 (0.68-1.12) for consumption five or more times per week, relative to consumption once a week or less. Thus, women who consumed miso soup five or more times a week were 13% less likely to get breast cancer than those who consumed it once a week or less. The reason for this protective effect is not known. Address: 1. Imperial Cancer Research Fund Cancer Epidemiology Unit, Gibson Building, Radcliffe Informary, Oxford, OX2 6HE, UK.

12003. *SoyaScan Notes.* 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)–Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods–but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21–The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoy Milk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1–The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28–Tetra Pak International acquires Alfa-Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated $4-$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus

© Copyright Soyinfo Center 2013

some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

1998 Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

12004. **Product Name:** Soyco Tofu [Hi-Protein Firm].
Manufacturer's Name: Soyco Soyfood Product [Nutrisoy Pty. Ltd.].
Manufacturer's Address: 15 Hannon St., Botany NSW 2019, Australia. Phone: 02-9695-7755.
Date of Introduction: 1999. December.
Ingredients: Organic soybean, water, natural coagulant (magnesium chloride).
Wt/Vol., Packaging, Price: 750 gm.
How Stored: Refrigerated.
New Product–Documentation: Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in December 1999. Red, green, orange, yellow and black on pale white.

12005. *Whole Foods.* 1999. U.S. FDA authorizes soy protein health claim. Dec.
• ***Summary:*** During the 12 months ending June 1999, overall sales of soyfoods reached $494.4 million, up 34% over the previous year–according to statistics compiled by Spence Information Service (SPINS, San Francisco, California) and AC Nielsen. This included $117.9 in sales at natural foods stores (a 31.4% rise) and 376.5 million at supermarkets and mainstream food/drug/mass merchandise outlets (a 35.2% increase). Note that this growth took place *before* announcement of the FDA health claim.

A table (based on figures provided by SPINS) gives growth rates for selected soy subcategories and (in parentheses the growth rate for the entire subcategory): Soy supplements 120.8% (27.0%). Soy-based frozen desserts 98.4% (11.4%). Soy beverages (non-dairy) 45.7% (25.9%). Tofu 42.4% (all tofu is soy). Soy-based meat alternatives 16.4% (15.8%). Address: South Plainfield, New Jersey.

12006. Wildwood Natural Foods. 1999. Joymilk soyful holidays (Folded card). Santa Cruz, California.
• ***Summary:*** This very creative card arrived on December 16, shortly before Christmas and after Hanukkah–in a red plastic card with a "Greetings" stamp. It is in the shape of a two-dimensional Wildwood soymilk carton, with an identical front and back. In place of the typical Wildwood trees and birds motif are decorated Christmas trees. A sort of spout sticks out to one side near the top, and near it is written: "Pull festively to open." When you pull the tab, which is one point of a star, out pops a a white paperboard streamer, like the tail behind a shooting star. On one side is written: "Soyfoods–the protein source of the new millennium." On the other side: "Merry protein and happy isoflavones." Address: Wildwood Natural Foods, 135 Bolinas Road, Fairfax, California 94930.

12007. **Product Name:** Organic Veggie Bowl [Teriyaki Rice].
Manufacturer's Name: Cascadian Farm, Inc. (Marketer-Distributor).
Manufacturer's Address: Rockport, Washington 98283.
Date of Introduction: 1999.
Ingredients: Organic brown basmati rice, organic sauce (pineapple juice, water, organic soy sauce, organic sesame oil, organic sugar, organic rice vinegar, corn starch, garlic powder, spice, xanthan gum), organic peas, organic broccoli, organic baked tofu (organic soybeans, water, nigari, natural calcium sulfate, organic soy sauce, soy oil, spices, dehydrated garlic), organic carrots, organic mushrooms.
Wt/Vol., Packaging, Price: 9 oz tray in paperboard box. Retails for $3.69 at Safeway supermarket (1999/06, Lafayette, California).
How Stored: Frozen.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1999. June 14. 6 by 5 by 1.75 inch paperboard box. Red, brown, green, and yellow on white a light orange. Cascadian Farm logo–"Since 1972." A color photo shows a dark orange bowl of the product. Front panel text: "A tasty entree

© Copyright Soyinfo Center 2013

with basmati rice, peas, baked tofu, broccoli, carrots and mushrooms in a teriyaki-ginger sauce. Microwavable."

12008. **Product Name:** Hip Whip [Dairy Free Whipped Topping].
Manufacturer's Name: Now & Zen, Inc.
Manufacturer's Address: San Francisco, California. Phone: (415) 695-2805.
Date of Introduction: 1999.
Ingredients: Water, grape juice concentrate, expeller pressed high oleic canola oil, cocoa butter, tofu (soybeans, calcium sulfate), brown rice syrup, cashew butter, pure vanilla extract.
Wt/Vol., Packaging, Price: 7.5 oz tub.
How Stored: Frozen.
New Product–Documentation: Leaflet (glossy, color, two-sided; see next page) sent by Patricia Smith from Natural Products Expo in Baltimore, Maryland. 2000. Sept. Copyright 1999. "It's cooler than cool. The first real food dairy free whipped topping. 100% dairy free and vegan. All natural and delicious. Fruit juice sweetened–no hydrogenated oil." A color photo shows a tub of Hip Whip next to two desserts in stem glasses topped with Hip Whip. www.nowandzen.net.

12009. Soy City Foods. 1999. Soy City Foods: Specializing in great vegetarian burgers. Serving your vegetarian foodservice and retail needs since 1980 (Leaflet). Toronto, Ontario, Canada. 1 p. Front and back.
• ***Summary:*** On the front of this glossy color leaflet (see page after next page) are photos of the following products–with both the English and the French panels showing: (1) Veggie Burgers / Végé burgers (soy-based). (2) Super Soy Burgers / Super burgers au soja. (3) Falafels (chickpea and soy-based). (4) Grain burgers / Burgers aux grains.

On the rear, in addition to these four, tofu and tempeh are also described. All of these products are vegan.

Across the bottom: "Health is the most precious thing you have–Sustain it by eating good food!"Also: www.soycityfoods.com. e-mail: sales@soycityfoods.com.

12014. Astuti, Mary. 1999. History of the development of tempeh. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia. Singapore: American Soybean Association. xiv + 186 p. See p. 2-15. [17 ref. Eng]

• ***Summary:*** A superb, landmark history of tempeh in Indonesia. The best seen to date! Contents: Introduction. The origin of soybeans in Indonesia. The origin of tempe. Origin of the tempe inoculum. Consumers and producers of tempe. The development of tempe processing technology. Development of tempe inoculum: Leaf inoculum, semi-pure powdered tempe inoculum, pure strain *Rhizopus oligosporus.* Conclusion.

The origin of soybeans in Indonesia: "The modern Indonesian name for soybean is *kedelai,* but according to Winstedt's (1960) dictionary, *kedelai* comes from the Tamil language in southern India. Similarly Wilkinson's (1955) dictionary cites *kedelai,* to mean soybean or mung bean (Tamil)."

"In Javanese literature, the word *kedelai,* (written as *kadele* in Javanese), was first recorded in the Serat Sri Tanjung manuscript, believed to have been written in the 12th or 13th centuries. The manuscript describes the story of Sri Tanjung, wife of Ki Sidapaksa. In the story, Sri Tanjung was accused of committing adultery and, to prove her innocence, she threw herself into the river, from whence rose a beautiful fragrance, proving her innocence. As a reminder, the place where Sri Tanjung lived was given the name Banyuwangi, which means 'fragrant water.' The Sri Tanjung Manuscript (*Serat Sri Tanjung*) represents a legend of the town of Banyuwangi, and includes the mention of soybeans as illustrated in the excerpt below (in ancient Javanese):" A 3-line excerpt, which includes the word *"kadele,"* is given.

"A rough translation of the above is as follows: "The dwelling place of the teachers and the hermits was very beautiful, as were the gardens that were planted with peanuts, taro and sugarcane, soybeans and beans. There were tubers and ivory bananas beside them and 'cintamani' sugarcane as well as 'gunting' bananas that were also laid out in rows."

The word for "soybeans" is also found "in the Serat Centhini manuscript. This manuscript tells the story of Tambangraras, daughter of the king of Giri (a region of East Java near Surabaya), who fled with her brother from Giri when it was threatened by the armies of Mataram under Sultan Agung Anyakraksuma in the 16th century. They traveled with their servant, Centhini, throughout Java. Tambangraras told stories of their experiences and observations on the philosophy and culture of the Javanese which were recorded by Centhini. These stories, or Serat Centhini are also known as Suluk Tambangraras (after the daughter of Sunan Giri) and contain highly detailed analyses of the Javanese people, now regarded as reference works for the basis of Javanese knowledge and culture. In these accounts, they describe not only the regional cultures they came across in different parts of Java, but also the wide range of different foods that they were presented with. Although very little information was documented about how these foods were prepared, the ingredients are described in detail. As skills are largely handed down from generation to generation in Javanese society rather than being formally written down, it would not have been usual for a detailed recipe to be described. The original manuscripts were transcribed by Ronggo Sutrasno of the Palace of Surakarta by the order of Sultan Amengkunagara III. It was quite common at the time for such stories to be recorded by royal families in different areas and this one was also transcribed into verse in the Javanese calendar year 1724, (1814 AD).

"The word for soybeans appears first in section two of the Serat Centhini. This section describes the travels of Cebolang, son of Seh Akadiyat, from Purbalingga to Mataram, stopping at the home of Ki Amongtrustha. Here he was served dinner that consisted of a selection of foods including soybean porridge. In Mataram, Cebolang also obtained information about a special offering that was prepared by parents about to marry off a child. One such ceremony, witnessed by Sriyanto was about the *kacar-kucur.* Kacar-kucur contained kawak beans and mature soybeans, yellow rice, aromatic flowers and shiny metal coins. According to this well preserved ceremony, soybeans had been used in the kacar-kucur for traditional ceremonial purposes for a long time. It also reveals that the savory rice dish *nasi udeg* cooked with coconut for serving with chicken, was also served with fried black soybeans. Black soybeans evidently have a deep significance in Javanese culture."

"Etymology may also hold a clue for us." In Chinese (Cantonese), beans are called *tau* or *tao.* Therefore, in Indonesia, many foods made from beans have names with the prefix *tau* (or *ta*) such as: (1) *tauci / taosi / tau-dji* (modern and former spellings) (salted black soybeans). (2) *tauco / taucho / tautjo* (Indonesian-style miso). (3) *taugé* (bean sprouts). (4) *taujiong / tau-jiong* (soybean jiang). (5) *tahu* (tofu, by shortening *tau-hu*). (6) *tahua* (a by-product of tofu similar to yogurt in consistency). (7) *takua* (firm spiced tofu). Another fermented Indonesian soybean product is *kecap / ketjap* (soy sauce) which is *ke tsiap* in its native China. Notice that tempe, whose name is not derived from Chinese, does not start with the prefix *tau / tao.*

"The origin of tempe: The earliest written record of the word *tempe* comes from the Serat Centhini manuscript,

© Copyright Soyinfo Center 2013

Chapter 3. The excerpt of the manuscript describes the journey of Mas Cebolang when he traveled between Prambanan temple and Pajang, via Tembayat in Klaten regency (in Central Java). Here, Cebolang was served a hefty lunch by the prince of Bayat, which is described in its entirety, to include: *jae santen tempe,* a dish of tempe in coconut cream, and *asem sambel lethokan,* the main ingredient of which is over-fermented *tempe lethokan. Sambel lethok,* also known as sambel *tumpang* is nowadays still frequently made by the Javanese.

"Tempe made from soybeans was again mentioned in the Serat Centhini in chapter 12, which describes the journey of Jayengresmi and his group at Bustam village. Here they were hosted by Ki Arsengbudi, who served them a banquet which included *Kadhele tempe srundengan.*

"From the descriptions of the travels through Java of the Giri children and Cebolang, plus the numerous banquets served by their hosts, it can be seen that soybeans and tempe only appeared in Central Java. This was in the region of Mataram which includes the villages of Mataram, Mbayat and Bustam. In West Java (Bogor) fish was largely served as it was also in Surabaya (East Java)."

Origin of tempe inoculum: "The method of making ragi tempe was first described by Widagdo in a local magazine called *Guru Desa* (The Village Teacher), published in 1915, from Kulon Progo. According to Widagdo, making ragi tempe was easier than making ragi tape, and that one had to use pre-existing ragi tempe to make more ragi tempe. How the first ragi tempeh came to be is still a mystery..." Continued. Address: Gadjah Mada Univ., Faculty of Agricultural Technology, Jalan Socio Yusticia, Bulaksumur, Yogyakarta, Indonesia.

12015. Bladholm, Linda. 1999. The Asian grocery store demystified: A food lover's guide to all the best ingredients. Los Angeles, California: Renaissance Books. 234 p. Foreword by Jonathan Eismann. Illust. Index. 23 x 13 cm. Series: A Take it With You Guide.

• ***Summary:*** An original, well-researched and well-written book–though some of the terminology (such as "beancurd") is outdated. Soyfood products include: Beancurd noodles (p. 38). Kinako (p. 47. "A Japanese soybean flour, that is a light tan powder made by roasting and grinding soybeans. This flour is mixed with sugar and used to coat mochi (pounded rice cakes), ohagi (rice balls), and wagashi (a type of confection [Japanese confections]). Look for the Shirakiku brand and Assi roasted soybean flour, both in 1-pound bags"). Soy sauce, mushroom soy sauce, kecap manis (p. 53). Hoisin sauce (p. 54).

Chapter 10, titled "Soybean products" (p. 93-99) includes: Black bean sauce, dried soybeans, tempeh, beancurd (pressed beancurd, deep-fried beancurd, savory grilled beancurd {yaki-tofu}, freeze-dried beancurd [sic] {koyadofu}, bean curd sheets {fu pei, yuba, fu jook; the latter are "rolled-up, long, rumpled, cream-colored sticks of bean curd skin, bent in two"}), fermented beans (preserved black beans {fermented black beans, tau see}, bean sauce, toen-jang, chili/hot bean sauce, fermented beancurd), okara, edamame, soybean sprouts, soy milk.

Note: This is the earliest English-language document seen (March 2009) that uses the word "toen-jang" (or "toen jang") to refer to Korean-style soybean jang (miso).

Concerning preserved black beans: "Also called salted or fermented black beans or 'tau see,' this is made by steaming small black soybeans, then fermenting them with salt and spices. Used in a variety of dishes to add a pleasant rich aroma and salty taste... Crush or mash beans slightly to release more flavor or mix with garlic, fresh ginger, or chilies. Available in small glass jars, cans, and plastic bags. They should feel soft and not be dried out... Look for Pearl River Bridge brand labeled 'Yang Jiang Preserved Beans' in a 1-pound yellow canister, and Koon Chun Sauce Factory, Double Parrot, and Zu Miao Trademark brands all in 8-ounce bags." Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "tau see" to refer to Chinese-style fermented black soybeans (preserved black beans).

Concerning bean sauce: "Varieties of this Asian staple include yellow bean sauce, brown bean sauce, bean paste (tau jeong), or sweet bean condiment. All are made from yellow or black soybeans, fermented with salt and in the sweet Northern Chinese type, with sugar-sweetened crushed yellow [soy] beans. Two forms are found: whole beans in a thick sauce and bean paste, which is mashed, ground or pureed beans. The whole bean type has a rounder flavor and adds texture, while the pastes are very salty and should be used sparingly... The yellow bean paste is tau cheo... Sold in glass jars and cans. Look for Koon Chun Sauce Factory, Kon Yick Wah Kee bean sauce, Amoy, or Yeo's.

Chapter 18, titled "Japanese food products" (p. 168-81) includes: Tsukemono (pickled in miso), miso paste, shiromiso, akamiso, mamemiso, natto, miso soup, noodle dipping sauce base (memmi), tamari sauce, teriyaki sauce, tonkatsu sauce.

Interesting non-soy products include: Sesame paste (p. 57). Satay sauce (with peanuts), gado-gado-dressing (p. 58). Peanut oil (p. 64). Sesame oil (p. 65). Amaranth (vegetable, p. 72). Winged beans (p. 76). Pickled wheat gluten (p. 108). Sesame seeds, peanuts, roasted peanuts (p. 118). Red/azuki beans, agar-agar (p. 121). Wheat gluten (p. 127). Sesame candy, peanut roll (p. 136). Sesame seed and peanut cookies (p. 137). Sweet red bean paste (azuki *an,* p. 139). Coix seed (Job's tears, p. 165). Japanese seaweed and kelp (p. 169-70). Umeboshi (p. 171). Fu (dried wheat gluten cakes), mochi (p. 177).

Note: Although angkak / ang-kak is not mentioned by name, under "red yeast rice" part of the description is "Did you ever admire those glowing red ducks and spare ribs in

© Copyright Soyinfo Center 2013

Chinese restaurants? The red color comes from powdered red yeast rice which is an ingredient in the marinade and barbecue sauce." Since this product is made with a mold (*Monascus purpureus*) and not a yeast, we prefer the term "red rice koji" in English. Address: Writer, designer, illustrator and photographer, Miami Beach, Florida.

12016. Choi, Yangsook. 1999. New cat. New York, NY: Farrar, Straus and Giroux. Frances Foster Books. 32 p. Illust. (color). 29 cm.
• ***Summary:*** "Shortly after coming to America, Mr. Kim, owner of a tofu factory in the Bronx, gets a fluffy silver cat that makes her home in his factory." He found the cat at an animal shelter and named her New Cat. One night, while chasing a mouse in the tofu production room, the cat accidentally knocks over a bucket of tofu and thus saves the factory from burning down. Contains many full page color illustrations. Address: New York City.

12017. Coppin, Clayton A.; High, Jack. 1999. The politics of purity: Harvey Washington Wiley and the origins of federal food regulation. Ann Arbor, Michigan: University of Michigan Press. ix + 219 p. Index. 24 cm. [250+* ref]
• ***Summary:*** Contents: Acknowledgments. Introduction. 1. The theory of economic regulation. 2. The way we ate (before 1906 in the USA). 3. Competition and entrepreneurship in bureaucracy: Harvey Wiley's Bureau of Chemistry, 1883-1903. 4. The struggle for legislative dominance, 1903-4. 5. The struggle for legislative dominance, 1904-6. 6. Setting food standards by government regulation. 7. The whiskey wars. 8. Sulphur and benzoate of soda. 9. Corn syrup and Coca-Cola. 10. Administrative dominance under President Taft. Conclusion. Notes.

The Introduction states: "A study by the National Academy of Science found that most people ignore advice to eat healthier foods. People eat what is familiar, such as meat and potatoes, even when they know that bean sprouts and tofu are healthier." This book contains a detailed discussion of "The Pure Food and Drugs Act, which was passed by Congress and signed into law on 30 June 1906." The central figure in its passage was Harvey Washington Wiley, Chief of the Bureau of Chemistry at USDA. "He drafted most of the law, gave extensive testimony to Congress on its behalf, lectured tirelessly of its virtues, and built a coalition of businesses, bureaucrats, and politicians to support it. His influence was so great that the law was frequently called the Wiley Act." Wiley is the centerpiece of this book, but it is not a biography of him.

The book also analyzes food and drug laws as the "regulation of competition." In 1910 the White Cross was an organization whose purpose was to promote purity in foods.

Chapter 2, titled "The way we ate," begins: "The Pure Food and Drugs Act of 1906 reflected two broad trends of American life at the turn of the century: the move toward urban life and the increasing federal regulation of the economy." A "wave of creative destruction" swept through the U.S. economy after the Civil War. Despite the fact that margarine never posed a health problem, more laws were passed against it than any other food product in American history. There was also a battle between farm butter and creamery butter. Discusses "the revolution at the table," Sylvester Graham and his idea of bread, Auguste Escoffier and rationalization of the hotel kitchen, attempts to Americanize the diets of immigrants, W.O. Atwater, Mark Sullivan, scientific cooking and home economists (p. 28; new professionals in the late 1800s; food was given to people "primarily for the strengthening of their bodies, not for the gratification of their palates"), The Pure Food Movement and Harvey W. Wiley (p. 30-33). Adulteration often lowered the price of food for the working classes without lowering its nutritional value. However, like the scientific cooks of the period, pure food advocates "argued that the consumer was cheated when a cheap ingredient was added to a product." The pure food movement was populated largely by professionals and middle-class women who demanded "pure food for the mass consumer." But the mass-consumer was generally more interested in price than purity. The margarine vs. butter controversy is a good example. Margarine was popular among lower-income, working-class, urban Americans. The call to ban it came mainly from states and organizations that produced butter and saw margarine as competitor.

12018. Davidson, Alan. 1999. The Oxford companion to food. New York, NY and Oxford, England: Oxford University Press. xviii + 892 p. Illust. by Soun Vannithone. Index. 29 cm. [1500+* ref]
• ***Summary:*** The 2,650 alphabetical entries in this excellent encyclopedia and cornucopia represent 20 years of Davidson's work. The 175 illustrations by Laotian artist Soun Vannithone are superb. There are 39 longer entries about staple foods such as rice, noodles, and apples. A comprehensive bibliography provides access to further information. The book does not contain recipes.

Soy-related entries include: Bean sprouts (p. 64). Black beans, fermented (*chi,* p. 79). Kecap (Indonesian soy sauce, made "basically from soya beans and palm sugar only." "The word 'kecap' has passed into the English language as catchup or catsup and then as Ketchup, which now means something quite different." p. 429). Ketchup ("probably via the Malay word *kechap,* now spelled *kecap,* which means soy sauce. The word was brought back to Europe by Dutch traders who also brought the oriental sauce itself. The sauce has changed far more than has the word, although the name has appeared in a large number of variations such as catchup and catsup."

Tomato ketchup is now the best known and widely used–in fact almost the only ketchup left. Whereas tomato ketchup contains much sugar and vinegar, mushroom

© Copyright Soyinfo Center 2013

ketchup contains neither, and is basically a salted mushroom extract with a liquid, transparent consistency. The British food historian, C. Anne Wilson (1973), believes that mushroom ketchup was the first kind of ketchup in Britain; she argues that people used to pickle mushrooms, intending to use the mushrooms, but then started using the pickle too, and finally began using the pickle by itself.

"Oysters, mussels, walnuts, and many other ingredients have been used to make ketchup, and cold be blended with spices, garlic or onions, wines and spirits to vary the flavour" p. 430-31). Koji (p. 435). Lecithin (p. 447). Miso (p. 509). Natto (p. 530). Soybean (p. 739). Soy milk (p. 739-40). Soy sauce (p. 740). Tempe (or tempeh, p. 788). Tofu (p. 798-99), including plain tofu (doufu in Chinese), pressed tofu (*doufu-kan,* sic, *doufu-gan*)*, wu-hsiang kan,* cotton tofu or momendofu, kinugoshi or silk tofu, sui-doufu, freeze-dried tofu [dried frozen tofu], smoked tofu. Cooked forms of tofu: Deep-fried tofu, doufu pok, cha-dofu, abura agé or deep-fried thin slices which can be opened to make Inari-zushi, ganmodoki or deep-fried tofu balls, yaki-dofu or tofu which has been grilled. Fermented tofu: The generic term is doufu-ru. The most popular type is white doufu-ru, and there is red doufu-ru, tsao-doufu, ch'ou doufu [chou doufu], chiang doufu. In the Philippines fermented tofu is called tausi [sic, tahuri, tahuli; tausi is fermented black soybeans]. Miscellaneous: A specialty of Japan is *umesutsuke,* "tofu pickled in plum vinegar with a purple exterior." Note: As of Oct. 2011 not one hit / result for umesutsuke can be found on Google. Nor have we ever heard of such a Japanese tofu product.

Dofu nao (literally "bean brain") or smooth curds, yuba or "bean curd skin" or "tofu skin," okara or "presscake" (pulped skins of soya beans) (p. 798-99). Yuba (p. 860-61).

Also discusses: Alfalfa (p. 10). Almond (p. 12-13, incl. "almond milk"). Amaranth (p. 13). American cookbooks, history (p. 15-17). Azuki beans (p. 44-45). Barley, barley breads, and barley sugar (p. 58-60). Beef–BSE (mad cow disease, p. 68). Chia (p. 166). Cowpea (p. 230-31). Chufa (p. 185). English cookery books, history (p. 276-80). Five grains of China (p. 305). Gluten (p. 341). Groundnuts (or peanuts, p. 356-57). Hemp (p. 377-78). Hydrogenation (p. 391). Japanese culinary terms (p. 415-17). Kudzu (p. 437). Linseed (p. 454-55). Lupin (p. 463). Margarine (p. 478-79). Mung bean (p. 518). Nori (p. 534). Noodles of China (p. 537, incl. "Gan si {soya bean noodles}" and "Fen si {also fen-szu} {mung bean vermicelli})." Oncom (p. 553-54). Quark (p. 644). Quinoa (p. 645). Seaweeds (incl. hijiki, kombu/konbu, nori, wakame, etc., p. 712). Sesame (p. 713). Shortening (p. 721-22). Sprouts (no listing). Tahini (p. 779). Toast (p. 797, incl. Melba toast). Ume and umeboshi (p. 817). Winged bean (p. 849).

The entry for "Fermentation" states that the two main reasons for subjecting a food to fermentation are: (1) To "convert it from a form that will not keep, such a milk, to one which will, such as cheese." (2) To "make foods which are indigestible in their original state, such as wheat or soya beans, digestible by turning them into products such as bread or tempe." Other benefits include improvements in flavour. Many do not realize that fermentation is part of the process of making coffee, cocoa, vanilla, and many kinds of sausage. A brief biography and nice portrait photo of Alan Davidson, a man of extraordinary knowledge in the world of food, appear on the rear dust jacket.

Note: The paperback edition of this book (2002) is titled *The Penguin companion to food.* Address: World's End, Chelsea, London, England.

12019. Hagler, Louise. 1999. Meatless burgers: Over 50 quick and easy recipes for America's favorite food. Summertown, Tennessee: Book Publishing Co. 94 p. Illust. Index. 23 cm.
• ***Summary:*** A vegetarian cookbook. Contents: Introduction. Glossary of ingredients: Incl. (with a definition and description of each): Almond milk, arame, flaxseeds, hemp seeds, hulled, millet, miso, oat milk, quinoa, rice milk, shiitake, silken tofu, soy flour, soymilk, soy yogurt, tempeh, textured soy protein, tofu, vital wheat gluten.

Bean & grain burgers. Soyfood burgers: Tofu, tempeh, textured soy protein & soybeans. Vegetable burgers. Burgers with an ethnic flair. Accompaniments. Buns. Side dishes. Nondairy shakes. Address: Summertown, Tennessee.

Introductory articles by Wendy Hutton, San Lwin and Win Pe. Illust. (color photos by Luca Invernizzi Tettoni). Index. 21 x 23 cm.
• ***Summary:*** Contains 75 recipes collected from all over Myanmar. A glossy, full-page photo is on every other page. The most populated "upcountry" region of Myanmar is the Shan Plateau. One of the main foods grown here is soya beans. The soups from this area are often "thickened with powdered soya bean. One example of this is a Shan version of Burmese noodles (*kyaukswe*), which is based on pork in a soup thickened with powdered soya bean..." (p. 12-13).

"The Shan tribes also make a fermented soya bean product similar to the Indonesian *tempe,* which is often dried, pounded and used as a seasoning" (p. 13).

"The soya bean, a native of China, appears in many guises in Myanmar: soy sauce, fermented soya beans (sometimes pressed into a cake and dried) and beancurd [tofu]." The Shan people also make a unique type of tofu from chickpeas. Sprouts are made from several types of beans, including soya beans and mung beans (p. 15).

In Part II, "Cooking in Myanmar," the section on "Burmese ingredients" has three soy-related entries (p. 35): "Soya bean cake (*pè bya*)*:* Dried soya beans are steamed, fermented, and made into cakes or wafers, which are roasted or pounded to a powder. This powder is added to curries and soups, or mixed with tomatoes to make a dish similar to Myanmar curried *ngapi."* A small color illustration shows soya bean cake. "Soy bean preserve (*pè ngapi*)*:* Fermented soya beans are made into a paste and used as a condiment. Tinned soya bean paste is sold outside Myanmar and can sometimes be used as a substitute for the fermented soya bean products.

"Soy Sauce (*pe nganpya yay*)*:"* Light and dark soy sauce are both used in Burmese recipes; the light sauce is saltier and paler in colour.

Soy related recipes: Khayanchinthee pantwepyaw (Tomato sauce, with "2 slices dried fermented soya bean cake, 7 cm (3 inches) in diameter," p. 37). Wether ahchochet (Pork balls cooked in sweet soya bean sauce, with "2 tablespoons sweet soya bean sauce," p. 96-97). Kailun gyaw (Stir-fried kailan, with "1 tablespoon light soy sauce," p. 108).

12026. Mowe, Rosalind. ed. 1999. Southeast Asian specialties: A culinary journey through Singapore, Malaysia, and Indonesia. Cologne, Germany: Culinaria Koenemann. 319 p. Illust. (color photos by Günter Beer). Index. 26 x 22 cm.
• ***Summary:*** Translated from the German. Includes headings in Chinese. This book is a feast for the eyes, printed on glossy paper with informative color photos on almost ever page. The structure and content are also creative and very interesting; it has caught the heart and spirit and nuances of the culture. On some pages, however, the type is too small to read. The name of most recipes and ingredients is given in their native language. A 2-page map of Southeast Asia appears near the front. The basic structure: Singapore (p. 12-109). Malaysia (p. 110-215). Indonesia (p. 216-301). Glossary (p. 302-04). Introduction to Chinese nutritional theory, by Andrea Fülling (p. 305-06): Introduction, yin and yang, the three warmers, the warming effect of foods (the five energy states are hot, warm, neutral, refreshing, and cold), the five elements. Acknowledgements. Photo credits. Index.

The contents includes: Healing herbs (p. 26-29). Soup as medicine (p. 30-33). Soybean (in Singapore, p. 40-47):

© Copyright Soyinfo Center 2013

Introduction (familiar forms are sprouts, soy sauce, beancurd, tempeh; new disguises are "vegetable protein," emulsifier," "lecithin," "vegetable oil" which are found in dairy products, canned fish, candies, desserts, and much more), in the West soybeans are "often grown as monocultures, with the disadvantages that this entails, such as the use of chemical fertilizers and pesticides," and genetically engineered soybeans, great nutritional value yet rarely used as whole dry soybeans, most of the harvest in SE Asia is processed into beancurd and tempeh, importance of fermentation, soy milk resembles cow's milk and is an excellent substitute, soy sauce is used throughout this cuisine. Photo of green soybean plants with green pods.

Soybean sprouts: "Black soybeans are imported from Thailand and Myanmar (Burma)." After washing, the beans are spread out in deep baskets and kept in the dark for 6 days. "Before the baskets of sprouts can be sold, the top layer if green leaves is trimmed off. They are used as feed for chickens and ducks. One basket yields 154 lb (70 kg) and the output of a medium-sized business is 60 baskets a day." Soybean "sprouts should never be eaten raw, nor should they be cooked for too long." Mung bean sprouts are better known than soy sprouts, but both can be bought fresh.

Dou ban jiang ("Salted soya bean sauce." Photo of jar and Sinsin label). Dou chi ("Black bean sauce." Photo of jar and Sinsin label). Note 1. Typically Dou chi are named "Salted black beans." Photo of five glasses showing how dry soybeans are transformed into soymilk, then curds.

Tofu: Meat from the fields (p. 42-44). The best tofu is made from special types of soybeans that are different from those that are crushed to make oil and meal. Most of the tofu in Singapore is made from soybeans imported from Canada. Describes the basic process for making commercial pressed tofu or soft tofu, with 7 photos showing the steps. Implies that making yuba is part of the process for making tofu; it "is eventually sold as dried beancurd sticks (*fu chok*).

Soy milk products: Fu pei–dried tofu skin [yuba]. Fu chok–dried tofu sticks [dried yuba sticks]. Tim chok–sweet tofu pieces [sic, sweet dried yuba / ama-yuba].

Note 2. This is the earliest English-language document seen (Feb. 2012) that uses the term "Tim chok" to refer to sweet dried yuba, or that uses the term "dried tofu sticks" to refer to dried yuba sticks.

Tofu fa–soft tofu as a dessert [tofu curds]; a little tapioca flour may be added. "Served warm or cold with a syrup flavored with almond extract." Color photo shows yellow yuba atop hot soymilk, and a woman removing a slab pressed tofu from its mold.

Tofu recipes for every taste (p. 44-45): "Tofu on its own is rather bland in taste, but this is precisely its strength, since when it is combined with different ingredients and condiments it tastes new and different every time. Recipes: Niang dou fu (Fried beancurd pockets). Xia ren dou fu (Stir-fried beancurd with jumbo shrimp). Hong shao dou fu (Braised beancurd). Sui rou zheng dou fu (Steamed soft beancurd with ground pork). Dou hua (Sweet beancurd dessert). Zha fu pi juan (fried beancurd skin [yuba] roll). Color photos show the 2nd and last recipes.

Soy sauce (p. 46-47): A naturally fermented product made with mold cultures of *Aspergillus oryzae.* Describes the process for both light and dark soy sauce; the koji is made in shallow round trays, ready after 4 days. It is "then transferred into fiberglass tanks [or earthenware jars], covered with brine, and left to ferment for 3 months," after which the 1st extraction of crude soy sauce takes place [but not through pressure]. More brine is added and a second extraction takes place 1 month later; this process is repeated for the third extraction. "At this point, the paths of the different soy sauces diverge." The saltier, light-colored soy sauce is mixed with a preservative, pasteurized, "and stored in tanks to clarify before bottling." The dark soy sauce is mixed with both a preservative and caramel coloring, is allowed to mature for an additional 4 weeks, then is pasteurized and bottled. Note 3. What happens to the 2nd and third extractions? Color photos show five steps in the process, but a traditional earthenware vat is shown instead of the fiberglass tanks. Dark soy sauce is thicker than light. Recipes: Jiang you ji (Chicken in soy sauce, with marinade). Hong shao niu nan (Braised shoulder of beef).

Oyster sauce (contains no soy). Sesame oil (p. 49, with 7 photos).

Condiments (p. 50-51): Color photos show the front and label of 15 separate jars and bottles with a substantial description under each. Those containing soy are: Hoisin sauce. Dou chi (Fermented bean dried). Dou ban jiang (Tou cheong). Fu ru (Beancurd preserved). Jang qing (light soy sauce). Hei jiang you (Dark soy sauce). Tian jiang (Sweet sauce).

Peking duck (p. 62-65; soybean paste {no Chinese name is given} and Hoisin sauce are ingredients in the sauce). One key is the crisp skin. It is served in thin Mandarin pancakes.

Suckling pig (p. 86-87): Piglets are bred in Hunan province. Slaughtered at the age of 3-4 months. After a dead piglet has been patted dry, it is brushed with soy sauce, then coated with a marinade that includes fermented red bean curd and light soy sauce. As with Peking Duck, suckling pig is prized for its crisp, tasty skin. Six photos show the skewered baby pig.

Symbolic foods (p. 98-101): One of these is Moon Cakes from the mid-autumn festival (15th day of the 8th lunar month). "Traditional fillings include sweet black bean or lotus paste." Is the sweet black bean filling made from soy beans?

Instant cup noodles [instant ramen] (p. 48): Note 4. Wikipedia says at Momofuku Ando: ORS [Order of the Rising Sun], (lived March 5, 1910–Jan. 5, 2007) was the Taiwanese-Japanese businessman who founded Nissin Food Products Co., Ltd. He is famed as the inventor of instant

© Copyright Soyinfo Center 2013

noodles and cup noodles, which he launched on 25 Aug. 1958 (at age 48) under the name Chikin Ramen–after months of trial and error experimentation to perfect his flash-frying method. On 18 Sept. 1981 he launched his most famous product, Cup Noodle.

Beansprouts (p. 154-57): With a long introduction, a description of the process, beautiful photos, and recipes: Taugeh goreng kucai (Fried beansprouts with chives). Taugeh masak kerang (Fried beansprouts with baby clams). Tahu goreng (Fried tofu with beansprouts). Bihun goreng (Fried rice noodles). Urap taugeh (Fried beansprouts with grated coconut).

Nasi tumpeng (rice cone) (p. 220). Served with sambal goreng tempe (crisp-fried marinated strips of tempeh). Gudeg (rice with green jackfruit cooked in a sweet sauce, p. 221) is served with a side dish of tahu goreng bacem (tofu cooked with spices, then fried).

Tempeh (p. 228-29), soybeans fermented with *Rhizopus oligosporus* mold. Indonesians consume more tempeh than tofu. The process is described, with 4 color photos: Recipe: Tempe goreng (fried tempeh).

Glossary (p. 302-04) includes: Fermentation. Soy sauce ("Probably the best-known Asian seasoning agent,..."). Sticky rice (also known as glutinous rice). Tahu (Indonesian; tofu). Tempeh. Tofu (beancurd, incl. hard, soft, and smoked).

• ***Summary:*** A very interesting chapter about two key organizations. Contents: Introduction. History of KOPTI. The role of BULOG (National Logistics Office) in the development of Kopti. Pusat KOPTI or PUSKOPTI. Contributions of Kopti to the tempeh industry: Institutional aspects, business and capital, the managerial position, social welfare for its members. Achievements of Kopti in tempe development: Quality improvement, processing of waste products and environmental constraints, soybeans, tempe marketing. Challenges of Kopti and future prospects: Organizational targets, business challenges, industrial and technological challenges, investment capital challenges, challenges for human resource management ("to improve the image of and respect for the tempe industry as a skilled profession and to develop managerial skills").

"One of the key institutions involved with the tempe industry is KOPTI, the Co-operative of tempe and tahu makers of Indonesia. After a difficult start in the early 1980s, KOPTI has been successful in bringing the tempe industry into the cooperative structure it is in today."

"Kopti began its origins in 1975 in Jakarta, in response to the difficulties met by the tempe and tofu makers in obtaining soybeans. At that time they had to purchase soybeans from the open market which had unstable prices and supplies were temperamental, having to be bought from the only wholesale market in Jatinegara [a subdistrict {*kecamatan*} of East Jakarta, at the far western end of Java] which had a monopoly. In essence, there was no guaranteed soybean supply at a stable price. Those manufacturers who lived far from Jatinegara found it very inconvenient and incurred great expense to transport beans back to their factories. There was also a great variety of soybean grades; Ampenan, Lampung, Medan, Hijau, Balong, Argentina, America, China, Burma, Sumbawa and Aceh.

"In 1975/76, a group of leading tempe makers decided to form a body that would resolve the problems in obtaining their raw materials, and between 1976-1978 plans were made to put this into effect. Tempe makers from Pekalongan, Central Java joined together to devise a way by which soybean supply could be improved and also so that they could communicate their ideas and exchange information on tempe more readily.

"This first organization they formed was called the Federation of Indonesian Tempe and Tahu makers (HIPTI). However, in December 1978, HIPTI was disbanded, largely for legal purposes as it was necessary to re-form the organization in an official capacity as a co-operative that was recognized by the government. In the beginning of January 1979, a new co-operative of tempe and tahu members was created. The aims of the co-operative were primarily to serve the needs of the tempe and tahu makers and at that time it was represented only in the four districts of Jakarta. At that time, KOPTI was based in Utan Panjang II, Kemayoran, Jakarta Pusat [central Jakarta] with Achmad Rouzi Noor as its head, a man who was also director of the company P.T. Sangga Buana.

"The objectives of KOPTI were assigned as follows:

"a. To facilitate the supply of soybeans.

"b. To avoid extortion by middlemen.

"c. To obtain government assistance for legal protection and advice.

"d. To improve the poor image and status of tempe makers so that they may become respected members of society and their profession regarded as a craft passed on down the generations.

"e. Increase product quality and productivity.

"f. To aim to produce tempe and tahu at a price easily affordable by the general population.

"The Role of BULOG (National Logistics Office) in the Development of Kopti: Officially, Kopti was inaugurated on 11th March 1979 in Jakarta. Since 1977, however, the National Logistics Office (BULOG) had the responsibility for the procurement and supply of soybeans, which was to become the responsibility of Kopti, to the tempe and tahu manufacturers, KOPTI activities really only took off between 1979-1980, when 29 primary Kopti units were set up as

© Copyright Soyinfo Center 2013

its first offices and membership totaled 9,387. Although BULOG had a monopoly on soybean procurement, there were several reasons why they were interested in supporting the formation of Kopti.

"The tempe making technology employed by almost all the tempe makers was largely traditional and static in nature. The product also was well below any standard for quality and safety, and there was little regard for using clean water or a modern industrial environment.

"Tempe makers had a very weak position with regard to capital or collateral. As a result, they had a very poor bargaining position over the price of soybeans. This was because the soybeans available at that time were sold on the free market where the price fluctuated widely. Ultimately, the tempe maker was always in a loss making position with minimal profit on each transaction.

"In general, the capital available for use in the production process was very limited. The very poor were at the mercy of their creditors to lend them money to continue their businesses, which were largely unsuccessful. This situation continued for quite a long time and created a bad impression of the tempe industry. Moreover, the conditions under which the tempe makers themselves lived had a lot to be desired, living, as many of them did, in slums that were highly inappropriate for a food industry with a high risk of contamination."

"To become a member of Kopti, one has to fulfill the requirements of being a tempe or tahu maker as well as to adhere to the statutes of the primary co-operatives.

"Both social and economic benefits have been realized, including training and welfare programs, savings schemes and subsidized housing for its members."

Tables: (1) Growth in human resources of Kopti (until April 1993). The table is divided into 5 columns: Region. Total Primkopti, total members, total worker members, total Kopti employees. Kopti is now composed of 73 Primkopti, with 40,621 members, 117,487 worker members, and 1,473 Kopti employees. The largest (by far) of the six regions into which Indonesia is divided is Central Java which has 35 Primkopti, 21,360 members, 64,017 worker members, and 375 Kopti employees. It is followed by West Java (10,572 total members), Jakarta (4,450 total members), Yogyakarta (2,750 total members), etc. Palembang is by far the smallest of the six regions.

(2) Total capital belonging to KOPTI in Indonesia (up to April 1993). In the same six regions, KOPTI has Rp 23.031 billion of total working capital, R 44.554 billion of total investment capital, and Rp 71.575 total capital.

(3) Housing funds. In the same 6 regions, Kopti as a total of Rp 14.731 billion in housing funds in 10,465 housing units.

A photo shows the inside of a tempe shop in Indonesia where Kopti members are processing tempe. Address: Director of PT Soya Briket Niagatama, Indonesia.

• ***Summary:*** This case study surveyed 203 households in Benue State to determine the level of adoption of soybean using social impact assessment (SIA). The results showed soybean adoption rates rose from 9% of farmers in 1989 to 75% in 1997. The high adoption rates are attributed to improved material welfare, household income generation, and human capital development. This study also showed that soybeans were an acceptable substitute in traditional foods. Virtually all the farmers used soybean dawadawa, 90% used soybean akpupa, a steamed bean flour cake, and 60% used soybean akwese, fried bean cakes. Innovative soybean utilization, such as soymilk, and a local `tofu' were moderately adopted at 25% utilization (Summary by Shao 2002, p. 87). Address: 1, 3, 5. IITA, Ibadan, Nigeria.

12029. *SoyaScan Notes.* 1999. Hot soy-related topics in 1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1. Genetic engineering of soybeans. This is now a major issue in Europe, and starting to become one in the USA. Will "non-GMO soybeans" ever become as important to some consumers as "Organically grown soybeans"?

2. What will be the effect of the FDA announcement concerning health claims for soyfoods on small producers of traditional soyfoods? Will they benefit from the claim without changing their formulations? Should they mentions "With natural isoflavones" on their labels? Should they state how many grams of isoflavones per serving. 3. Beware the dangers of the media hype of the health benefits of soyfoods. Don't overdo your own advertising claims. The media may later start to debunk all the hype. 4. Beware the potential dangers to the soyfoods industry of concentrated isoflavones, such as the pills made by ADM. These could be marketed (over the Internet, for example) as pills to give small girls big breasts.

5. Take advantage of the publicity that will be created by big dairy companies getting into the soymilk market.

6. Lon White's cardiac research in Hawaii which indicate that tofu consumption is correlated with cognitive disorders.

12030. Tofu Shop Specialty Foods, Inc. 1999. Tofu Shop, Arcata, CA (T-shirt). Arcata, California.

• ***Summary:*** This beige T-shirt (large size), made by Ecoweave, is recycled fiber 100% cotton. On the front left, in 1 inch high bluish-green letters, is written "Tofu Shop, Arcata, CA" [California]. On the back, in a yellow bamboo frame, is printed in blue letters: "Tofu Shop: Fine Tofu

© Copyright Soyinfo Center 2013

Products. Crafted in small batches from whole, organic, GMO-free soybeans. Made in Humboldt County." Inside the frame, across the bottom, in yellow letters on a blue background: "Tofu Shop Specialty Foods, Inc., Arcata, CA. www.tofushop.com."

A large illustration in the lower left corner of the frame A handsome, impressionistic watercolor shows a tofu shop on stilts, with a yellow roof having an Oriental curve, on a cliff overlooking the ocean with a tree arching overhead.

Talk with Matthew Schmit of Tofu Shop Specialty Foods, Inc. 2002. Sept. 20. This T-shirt was introduced in 1999. Address: 65 Frank Martin Ct., Arcata, California 95521. Phone: 707-822-7401.

12031. Wakai, Kenji; Ohno, Yoshiyuki; Genka, Keiichiro; et al. 1999. Risk modification in lung cancer by a dietary intake of preserved foods and soyfoods: findings from a case-control study in Okinawa, Japan. *Lung Cancer* (*Amsterdam, Netherlands*) 25:147-59. [32 ref]

• ***Summary:*** Data were analyzed from 1988 to 1991 based on 333 cases and 666 age-, sex- and residence matched controls. Findings: The greater the intake of miso soup, the higher the risk (test for trend: P = 0.001 for males; = 0.043 for females).

Frequent consumption of soybeans was associated with a decreased risk in men (adjusted odds ratio {OR} 0.63, 95% CI [confidence interval]: 0.40-0.98 for once or twice a week or more, relative to less than once a month). Daily consumers of tofu were at a reduced risk, particularly for squamous cell carcinoma [a type of nonmelanoma skin cancer]; the OR (95% CI) is 0.55 (0.34 to 0.89) in males and 0.14 in females. These findings suggest deleterious effects of preserved foods and protective effects of soyfoods rich in isoflavones.

Isoflavones could well be another relevant dietary factor. They have been considered to exert anti-estrogenic effects in premenopausal women and estrogenic effects in postmenopausal women and in men. Thereby, they reduce the risk of some hormone-related cancers such as those of the breast and prostate.

Yet isoflavones also have non-estrogenic biological activities that may inhibit carcinogenesis. These include inhibition of tyrosine protein kinases, DNA topoisomerases and ribosomal S6 kinase activity, inhibition of angiogenesis, antioxidative properties and induction of malignant cell differentiation. Therefore it seems reasonable to hypothesize that isoflavones could be protective against not only hormone-related cancers, but also a wider ranger of malignancies including lung cancer. Address: 1. Dep. of Preventive Medicine, Nagoya Univ. School of Medicine, 65 Tsuramai-cho, Showa-ku, Nagoya 466-8550, Japan.

12032. Wakai, Kenji; Egami, Isuzu; Kato, Kumiko; et al. 1999. Dietary intake and sources of isoflavones among Japanese. *Nutrition and Cancer* 33(2):139-45. [35 ref]

• ***Summary:*** The dietary intake and sources of isoflavones (daidzein and genistein) among Japanese subjects were examined based on dietary records (DRs). The subjects comprised two groups: 1,232 who completed one-day DRs (Group 1) and 88 men and women who kept four four-day (16-day) DRs. For quantitative data on the level of daidzein and genistein in soy foods, the literature was thoroughly examined, particularly for Japanese soy foods, and adopted the median value for each food. The median intake of daidzein was 12.1 and 9.5 mg/day among Groups 1 and 2, respectively, while the corresponding values for genistein were 19.6 and 14.9 mg/day. About 90% of the daidzein and genistein in the Japanese diet comes from 3 soyfoods–tofu (including fried tofu), miso, and natto.

Table 2, titled "Estimated total daidzein and genistein contents of soy foods: Median values among results of food" lists these foods: Soybeans, dry. Soybeans, green [edamame]. Soybeans, boiled. Kinako (roasted and ground soybeans). Soybean sprouts. Tofu. Tofu, freeze dried ("kohri tofu"). Fried tofu, thin ("abura-age," deep-fried). Fried tofu, thick ("nama-age," fried briefly). Fried tofu and minced vegetables / seaweed ("ganmodoki"). Soy milk. Okara (tofu lees). Yuba (dried soy milk skim). Natto (fermented soybeans). Miso. Soy sauce. Address: Dep. of Preventive Medicine, Nagoya Univ. School of Medicine, 65 Tsuramai-cho, Showa-ku, Nagoya 466-8550, Japan.

• ***Summary:*** On the front cover is a large color photo of the three generations of women Grace's grandmother, Fung Tong Lai Lan, her mother (Mama), and Grace herself. On the first page of every chapter is an old family photo. The food and their names are Cantonese. Both of her parents were born in China. Growing up in San Francisco, Grace "observed that the principles of yin and yang–a balance of opposites–were integrated into our everyday fare. For example, vegetables considered cooling, such as bean sprouts, were stir-fried with ginger, which is warming" (p. xii). And she "ate Cantonese home-style food every day" (p. xiii).

The name of each recipe is written three ways: (1) In English. (2) In light-orange Chinese characters, vertically to the left of the English name. (3) In Cantonese phonetics (in

© Copyright Soyinfo Center 2013

small black letters).

Soy related recipes: Stir-fried asparagus with shrimp (and black bean sauce, p. 29). Beef chow fun (with black bean sauce, p. 31). Steamed spareribs with black bean sauce (p. 41). Steamed sole with black bean sauce (p. 43). Sandpot braised lamb (with dried yuba sticks {foo jook}, p. 42-43).

Sprouting soybeans (gives a good introduction to bean sprouts and describes how to make soybean sprouts at home) (p. 80-81). Includes many recipes for soybean sprouts: Grandfather's stir-fried soybean sprouts (p. 82). Soybean and spareribs soup (p. 212).

Stir fried clams in black bean sauce (p. 111). Buddha's delight (with fried tofu, dried yuba and red fermented tofu, p. 126-27). Soy sauce chicken (p. 174-75). Foxnut soup (with dried yuba sheets, p. 198). Homemade soymilk (from ½ cup dried soybeans, p. 209). Savory soy milk (p. 210). Gingko nut porridge (with dried yuba sticks, p. 222-23).

The excellent Glossary (p. 246-68) includes entries for: Adzuki beans (*zeck siu dul*). Barley, Job's tear (*ye mai*)*:* A different variety than Western barley. Bean curd: *See* Fried bean curd, Sheet dried bean curd, Stick dried bean curd, Tofu, and Wet bean curd [fermented tofu].

Bean sprouts (*gna choy*)*:* The two varieties of Chinese sprouts are mung bean sprouts (*gna choy*), which are more commonly available, and soybean sprouts (*dai dul gna choy*), which are more nutritious, being rich in protein. The head is the most nutritious part of the sprout. "Don't eat raw soybean sprouts, as they are toxic."

Chinese dried black beans (*dul see*)*:* Also known as salted black beans, fermented black beans, or preserved beans. Note: These are soybeans. "Before being used, the beans must always be rinsed in several changes of cold water." They are usually crushed with the handle of a cleaver or a wooden spoon and combined with soy sauce, garlic, or ginger before cooking. Her favorite brand is Yang Jiang Preserved Beans.

Fried bean curd (*dul foo gock*)*:* Also known as bean curd puffs, or fried tofu. "They are triangles, squares, or cubes of tofu that have been deep-fried." Sold refrigerated. Green mung beans, dried (*look dul*)*:*

Ground bean sauce (*meen see*)*:* "This chocolate-colored sauce is also known as brown bean sauce, bean sauce, brown bean paste, or yellow bean sauce." It is sold in cans and jars. She prefers the Lee Kum Kee brand. It is made from naturally fermented soybeans, flour and sugar. Refrigerate.

Hoisin sauce (*hoisin zheung*)*:* Made from sugar, soybeans, garlic, sesame seeds, chili peppers, and spices. A chocolate-brown sauce, mildly sweet and smoky. She prefers the Lee Kum Kee brand.

Red beans, dried (*hoong dul*)*:* Not to be confused with the elongated adzuki beans. These red beans are used in soups, red bean paste, and desserts.

Seaweed (*see choy*)*:* Also known as nori, roasted seaweed, or kizunori. Note: Many other types of seaweed / sea vegetables are used as food in East Asia.

Sheet dried bean curd (*bien foo jook*)*:* Also known as dehydrated bean curd, dried bean thread [or dried yuba].

Soybeans, dried (*wong dul*)*:* Also known as yellow soybeans.

Soy milk (*dul cheung*)*:* Although it looks like dairy milk, it has a completely different taste and consistency. To learn how to make it at home, see p. 208. The soy milk sold in Western health-food stores is generally different from that sold in Chinatown (which is available sweetened or plain).

Soy sauce (*see yul*)*:* Of the many varieties, the two are most essential for cooking are: (1) Black soy (*low zul*)*:* Also known as soy superior sauce or dark soy sauce. It is darker, thicker, richer in color, and slightly sweeter in taste. (2) Thin soy (*sang zul*)*:* Also known as superior soy, premium soy sauce, or light soy sauce. It has the most flavor but is saltier than Black soy. This soy is most often used in cooking. "The soy sauce sold in Western markets is generally thin."

Stick dried bean curd (*foo jook*)*:* Also known as dehydrated bean curd, dried bean thread [or dried yuba sticks]. The pieces are "ivory colored, about 12 inches long, and shaped like a giant horseshoe."

Sweetened red bean paste (*dul sah*)*:* To make it at home, see p. 139.

Tofu (*dul foo*)*:* Also known as bean curd. "Tofu is high in protein, cholesterol free, low in saturated fats, and rich in phytochemicals." The important types of tofu are: (1) Firm tofu (*dul foo*)*:* Comes in 3-inch squares, ½-inch thick. (2) Five spice tofu (*nmm hueng gul foo gawn*)*:* Also known as spiced tofu or flavored bean curd. (3) Silken tofu (*wat dul foo*)*:* "This is custardlike and more delicate"

Wet bean curd (*fu yu*)*:* Also known as fermented bean curd [or fermented tofu]. Sold in a brining liquor in jars (typically 1 pint). A favorite brand is Chan Moon Kee. The two basic types are (1) Wet bean curd, white (*bock fu yu*)*:* Often spiced with dried red chilies. (2) Wet bean curd, red (*nom yu*)*:* One-inch red cubes fermented in a thick red sauce.

Yellow mung beans, dried (*look dul hoy pay*)*:* "Also known as peeled mung beans," these look like small yellow split peas. "They are green mung beans that have been hulled." They are used in Savory rice tamales.

()*:* Address: A native of San Francisco, she currently lives in Manhattan with her husband Michael. For 16 years she has been the Test Kitchen Director and Director of Food Photography for Rebus, Inc., a New York Publishing Company.

12036. Asimov, Eric. 2000. Chinese cuisine with something old, something new: $25 and under. *New York Times*. Jan. 5. p. F9.

• ***Summary:*** This is a review of the Chinese restaurant Our Place Shanghai Tea Garden (141 East 55th Street, Manhattan, New York). This restaurant excels at tofu dishes: Recommended dishes include "the rich and delicious braised

bean curd with crab meat and spinach," knots of bean curd skin tossed with fresh soybeans and chopped mustard greens, and fresh bacon with bean curd skin.

This same information, in condensed form, appears in the 4 Feb. 2002 edition (p. E42) of this newspaper.

12037. Wild Oats Community Market; Alfalfa's Markets. 2000. The joy of soy: Resolve to evolve. This millennium, pick up a good habit. Your guide to soyfoods–True health food. Colorado. 8 panels. [10 ref]
• ***Summary:*** This is a chain store newspaper (published from time to time; copyrighted 1998), with this issue devoted to soyfoods. It contains ads for many soy products sold at the store, many of them on sale. "Soy strategy: 3 New Year's resolutions. 1. Get healthy. 2. Lose weight / cut down on bad fats. 3. Help protect the environment.

A sidebar titled "Cool beans! Top ten reasons to enjoy soy" states: "1. Soy protein helps reduce cholesterol levels, thereby reducing the risk of coronary heart disease, which accounts for more than 500,000 deaths in the U.S. per year.

"2. The soybean is the only vegetable to offer a complete protein profile, equal to both meat and eggs in its protein content.

"3. As a complete protein, soy contains all nine essential amino acids. (The human body needs twenty amino acids, only eleven of which are produced by our bodies).

"4. Soybeans are higher in essential, healthful fats than most vegetable foods.

"5. Soybeans are a good source of several vitamins and minerals, including calcium, zinc, copper, magnesium, iron and many of the B vitamins.

"6. One acre of soybeans provides about 30 times more protein than one acre devoted to raising beef.

"7. Soy is also the richest dietary source of isoflavones, which act as phytoestrogens that may help protect against cancer, osteoporosis and menopause.

"8. Soy may increase bone density and reduce the risk of osteoporosis.

"9. Soy may reduce menopausal hot flashes in women–good news for those women who do not wish to take hormone replacement therapy.

"10. Other heart-healthy benefits of soy include low saturated fat, high calcium content, high essential fatty acid (EFA) content, high vitamin E content and no cholesterol."

There are definitions of and information about: Miso, shoyu, tamari, tofu, tempeh, soy milk, soy yogurt, soy cheese, soy desserts, soy oil, soy flour, texturized soy protein, soy grits, soy nuts, edamame (soy in the pod), and meat alternatives.

12038. Wright, Allison. 2000. FDA health claim about soy will grow tofu category, says Mori-Nu's Mio. *Produce News* (*Fort Lee, New Jersey*). Jan. 10.
• ***Summary:*** "Recent approval by the Food & Drug Administration of a health claim linking consumption of soy protein to a reduced risk of heart disease will being increased awareness to the health benefits of tofu and will grow the category, according to Art Mio, national sales manager for Morinaga Nutritional Foods Inc. of Japan.

"The FDA health claim is permitted on foods that contain at least 6.25 grams of soy protein per serving." Mori-Nu Extra Firm Tofu contains enough soy protein to carry the new health claim. Several other Mori-Nu tofu products contain 6 grams of soy protein per serving, just barely missing the 6.25 gram mark set by the agency.

12039. Deane, Donna. 2000. Get more soy in your life: Doctors say soy is good for you. So come on, get started. *Los Angeles Times.* Jan. 12. p. H1, H3. Food section.
• ***Summary:*** Discusses tofu, miso, edamame, soy sprouts, and roasted soybeans, with recipes for each. *Edamame,* or soybeans in the shell, are becoming popular, partly because they are fun to eat, tasty, and rich in protein. They are showing up in Asian restaurants and appetizer menus, and can be found in specialty and health food stores, and in the produce section of some supermarkets and farmers markets. A photo shows edamame. Address: Times Test Kitchen Director.

12040. Schultz, Kevin. 2000. Soybean research may lead to a better tofu. *Land* (*The*) (*Mankato, Minnesota*). Jan. 21.
• ***Summary:*** Galena Genetics is a joint venture between Pioneer Hi-Bred Japan and North Country Seed (Ormsby, Minnesota; President, Joel Rabbe). Research director Steven Schnebly says the goal is to breed better soybeans for making tofu. Address: Land editor.

12041. Burros, Marian. 2000. Eating well: Doubts cloud rosy news about soy. *New York Times.* Jan. 26. p. F1, F11.
• ***Summary:*** Sales of soyfoods have been skyrocketing recently because preliminary research suggests that soy has many health benefits, from reducing loss of bone density to easing some menopausal symptoms. In October the FDA "put its imprimatur on soy" when it granted food companies the right to claim that soy protein reduces cholesterol and the risk of heart disease. Although other claims are unproven, soy is strongly promoted by its marketers as a panacea, and the U.S. media has been "almost unanimous in praising its safety and efficacy."

"Against the backdrop of widespread praise, however, there is growing suspicion that soy–despite its undisputed benefits, may pose some health hazards. The scientific world is still divided over many of the claims for efficacy [is it really effective] and over some safety issues." There is agreement on two points: (1) Soy can reduce cholesterol, and (2) There may be an increased risk of cancer when consuming soy isoflavones in pill form–especially for post-menopausal women; and for these women there may also

© Copyright Soyinfo Center 2013

be hazards in adding soyfoods to their diets. The two main isoflavones, genistein and daidzein, are phytoestrogens, or weak plant estrogens. They act in much the same way as regular estrogens in that they can both inhibit and stimulate the growth of certain cells.

"Not one of the 18 scientists interviewed for this column was willing to say that taking isoflavones was risk free." There is a big difference between consuming soyfoods and components of the soybeans, like isoflavone supplements.

During the 12 months ending October 1999, sales of soyfoods in supermarket chains were $420 million, up 45% from the previous year, according to SPINS scanner data. The biggest increase was in soy isoflavone pills, whose sales were up 246% during the same 12-month period. These supplements, which can contain more than 85 mg of isoflavones in a single pill, have much higher levels of isoflavones than occur naturally in foods. And some makers advise taking two pills a day. Some soy protein concentrate powders have up to 160 mg of isoflavones per serving. Scientists are concerned that typical consumers don't distinguish isoflavones from soy protein, and that they will overdose on the isoflavones. For this reason, Dr. Daniel Sheehan of the FDA's National Center for Toxicological Research (in Jefferson, Arkansas) opposed the FDA's soy health claim. No one knows what the maximum safe dosage of isoflavones is, because no human studies have been conducted. However, if people consume soyfoods instead of supplements, they will not overdose on isoflavones. In Japan, for example [where women's breast cancer rates are one-forth to one-sixth of those in the USA] the typical daily consumption of isoflavones is 25-50 mg, and most people consume soyfoods throughout their lives.

Dr. William Helfreich, associate professor of nutrition at the University of Illinois who specializes in diet and breast cancer, is concerned about the risk of soy isoflavones for post-menopausal women with estrogen-dependent breast cancer. Given early in life, he notes, they will prevent, but given late they may promote. Unfortunately the research in this area is very limited and the results are unclear and far from definitive. Fortunately, a number of studies that answer these questions are now being underwritten by the National Cancer Institute.

Many large companies are developing new soy products in response to the growing soy demand: Kellogg's, General Mills, Campbell's Soup, and ConAgra.

This article was reprinted, under the title "Rush to embrace soy products raises warnings about downside," in the *Oregonian* (Portland, Oregon; Feb. 8, p. FD10). On the same page was a recipe for a "creamy, dreamy" Tofu Cheesecake.

12042. **Product Name:** [Tofu Mayonnaise].
Foreign Name: Tofu Majoneza.
Manufacturer's Name: Annapurna.
Manufacturer's Address: Poljanicki, Prilaz 12, 10000 Zagreb, Croatia.
Date of Introduction: 2000. January.
How Stored: Refrigerated.
New Product–Documentation: Letter (fax) from Vlatka Kuzmic. 2001. Jan. 12. They started to sell tofu mayonnaise in Jan. 2000. Label sent by Vlatka. 2002. March.

12043. Annapurna. 2000. Annapurna: zdrava hrana [Annapurna: Healthy food (Leaflet)]. Zagreb, Croatia. 1 p. Front and back. Each panel 13.5 x 10.5 cm. [Cro]
• ***Summary:*** This small leaflet is printed in black ink on light green paper. On the front panel, the name of the company, Annapurna, is printed in yellow and orange. Below that are listed four tofu products and 3 seitan products, with the name, weight, and price given for each.

On the back panel are explanations of "What is tofu?" and "What is seitan?"

Note: This is the 2nd leaflet printed by Annapurna; the first one has been lost.

2011) that comes on CD-ROM. Address: 42 Conrad St., Methuen, Massachusetts 01844-2712. Phone: 978-681-6606.

12047. **Product Name:** Mori-Nu Tofu Hero (Seasoning mixes for making...) [Eggless Salad, Italian Herb Medley, Garden Scrambler, or Shanghai Stir-Fry].
Manufacturer's Name: Morinaga Nutritional Foods, Inc.
Manufacturer's Address: 2050 W. 190th St., Suite 110, Torrance, CA 90504. Phone: 310-787-0200.
Date of Introduction: 2000. January.
Wt/Vol., Packaging, Price: 1.1 oz (31.3 gm).
How Stored: Shelf stable.
New Product–Documentation: Ad (full-page color carton) in *Vegetarian Times.* 2000. Jan. p. 33. In the top horizontal panel of the cartoon a distraught blonde lady asks: "What do I do with my Mori-Nu Tofu?" A Superman-like character with a green mask replies: "Never fear! Tofu Hero is here."

In the middle horizontal panel the lady kisses the masked man saying, "Thank yooo. You are my Tofu Hero!"

In the bottom panel is a photo of the four different Tofu Hero seasoning packages and two cartons of Mori-Nu Silken Tofu. A box of text states: "Able to create great meals in a single pan. Faster than a hungry family. Vegan. All natural. Dairy-free. Tofu Hero and aseptically packaged Mori-Nu Tofu. Defenders of good taste." Below that is praise for Tetra Pak.

12048. **Product Name:** Trader Joe San Marinated Tofu: Tofu in a Soy Sauce and Red Wine Vinegar Marinade.
Manufacturer's Name: Trader Joe's (Marketer-Distributor). Made in El Cajon, California, by San Diego Soy Dairy.
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 2000. January.
Ingredients: Tofu (water, soybeans, nigari), marinade (water, soy sauce [water, soybeans, salt, wheat * alcohol], red wine vinegar {contains sulfites}, evaporated cane juice [natural milled sugar], granulated garlic, powdered ginger, red pepper flakes, sesame oil).
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray, with heat-sealed, peel-off plastic film top. Retails for $1.59 (2000/03, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 3 oz.: Calories 130, calories from fat 60, total fat 7gm (11% daily value; saturated fat 1 gm), cholesterol 0 mg, sodium 300 mg (13%), total carbohydrate 2 gm (dietary fiber 1 gm, sugars 0 gm), protein 13 gm. Vitamin A 0%. Vitamin C 0%. Calcium 6%. Iron 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2000. March 24. 5.75 by 4.75 inches. Black, white, dark red, and yellow on clear plastic film. "Perishable. Keep refrigerated. SKU# 032448.

Soyfoods Center taste test: Quite good. Talk with Gary Stein. 2000. March 28. He says this product was introduced in Jan. 2000.

12049. *Hawaii Hoichi* (*Honolulu*). 2000. Wakayama a health-food hotbed. Feb. 1.
• ***Summary:*** Hiroaki Iwamoto is president of Tendre Corp., Tanabe City, Wakayama prefecture. He obtained a patent on his frozen tofu in 1995. Tendre now makes about 2,500 tons/year of frozen tofu, worth 700 million yen.

12050. *Los Angeles Times.* 2000. Azumaya Tofu is healthy addition to variety of recipes. Feb. 2. Los Angeles–Long Beach Metro Area.
• ***Summary:*** "Azumaya has been producing top quality tofu in the United States for more than 60 years. All varieties of Azumaya Tofu are produced and pasteurized mechanically and monitored by an experienced quality-control team for increased sanitation."

12051. Mueller, Ray. 2000. 'Food grade' soybeans earn premiums for grower group. *Wisconsin State Farmer* (*Waupaca, Wisconsin*). Feb. 11.
• ***Summary:*** In 1999 the roughly 150 members of the Rock County Grain Co. shared the $2.4 million worth of premiums from the "identity preserved" or "food grade" soybeans they grew and sold largely to overseas buyers in Japan, Germany, Italy, and some other Asian countries. These soybeans are used to make foods like tofu.

12052. Purvis, Kathleen. 2000. Say soy! New foods and drinks keep sprouting from these magic beans. *Post-Dispatch* (*St. Louis, Missouri*). Feb. 14.
• ***Summary:*** Perhaps the tastiest form of soy is edamame. These green soybeans, boiled, salted, and served chilled, are the "latest craze in the chi-chi ["chic"] cocktail set." In Japan they are served as snacks with beer or sake.

In the six months before June 1999, sales of soyfoods have grown 34.4%, according to data from SPINS. Sue Havala notes that soymilk is now available at mainstream food stores / supermarkets. A full-page color photo shows bright green edamame, with the pods both opened and closed. Contains four recipes and a glossary of the following: Green soybeans, soymilk, soy flour, soy nuts, canned soybeans, soynut butter, miso, tofu, tempeh, soy sauce. Address: Knight Ridder Newspapers.

12053. Erickson, Marsha. 2000. Soy foods may lower cholesterol: In season. *News-Tribune* (*Duluth, Minnesota*). Feb. 17.
• ***Summary:*** "Editor's note: The American Heart Association has designated February as American Heart Month. Throughout the month, In Season is focusing on the 'right

© Copyright Soyinfo Center 2013

stuff' to feed your heart. Today the spotlight is on soy foods. Coming next week: Whole grains."

Soyfoods are good for the heart. They "are rich in special plant chemicals called isoflavones. These isoflavones may directly lower blood cholesterol. In addition, soy foods are low in saturated fat, high in soluble fiber, cholesterol-free and contain high quality protein.

"Food sources of soy include soynut butter, roasted soynuts, soy flour, miso, tofu, tempeh, textured soy protein and soymilk."

A black and white photo has a border of "green soybeans," both in the pods and shelled. The text, titled "Great soy sources," states: The FDA now allows products that contain at least 6.25 grams of soy protein per serving to say on the label that the product may reduce the risk of heart disease. Products that are good sources of soy protein per serving are:

4 ounces of firm tofu contains 12 grams of soy protein. 4 ounces of soft tofu contains 9 grams. 1 soy burger contains 10-12 grams. 8 ounces [1 cup] soymilk contains 10 grams. ½ cup cooked soybeans contains 16 grams. ½ cup green soybeans [shelled edamame] contains 10 grams. ½ cup tempeh contains 19 grams. ½ cup roasted soy nuts contains 39 grams. Address: Registered Dietitian, Miller-Dwan Medical Center; Duluth representative of the Minnesota Dietetic Assoc.

12054. O'Hara, Pam Smith. 2000. The soybean goes SoBe: Latest craze is edamame. *Miami Herald.* Feb. 27. Food section.

• ***Summary:*** Sitting in her favorite Japanese restaurant eating fresh green soybeans and tofu, the writer (a vegetarian for many years) reflected on how much things have changed since her favorite childhood dinners of baked beans and wieners. Called *edamame* in Japanese, these soybeans in the pods are "sweet, nutty, and irresistibly rich." They are an excellent source of both protein and fiber.

Note: SoBe refers to the South Beach Beverage Co. based in Norwalk, Connecticut. Started in about 1995, they make soft drinks such as Lizard Fuel, Karma, and Zen Blend. SoBe was purchased by PepsiCo in late 2000.

12055. **Product Name:** Regular Tofu, Savory Tofu, Almond Tofu, Mushroom Onion Tofu, Lemon Grass Tofu, Sweet Ginger Tofu, Soy Noodles, Soymilk [Unsweetened, or Sweetened], and Tofu Skins.
Manufacturer's Name: Ahimsa Gourmet.
Manufacturer's Address: 1520 International Marketplace, San Pablo, California 94806. Phone: 510-235-8343.
Date of Introduction: 2000. February.
New Product–Documentation: Talk with George Weissmann, founder of Veat Gourmet. 2000. April 12. About two months ago his partner, Van Thi Dang, who is Vietnamese, started a small business named Ahimsa Gourmet in San Pablo, California, where they make tofu, soymilk, and many other soyfood products.

Talk with Van Thi Dang. 2000. April 12. She and her business partner, Tony Tieu (who is Chinese-Vietnamese), founded this business in mid-Feb. of this year. Tony makes all of the soy products. Even though she and Tony are Vietnamese, they produce their soyfoods for everyone, without targeting any particular ethnic group.

12056. *Country Living's Healthy Living.* 2000. Soy solutions. Jan/Feb.

• ***Summary:*** A recent FDA ruling concerning heart-health claims allows soy product manufacturers to proclaim on labels that 25 grams of soy protein daily–as part of a diet that is low in saturated fat and cholesterol–may reduce one's risk of coronary heart disease.

A table shows the number of grams of soy protein per serving in nine popular soy products. For example: ½ cup edamame (fresh soybeans) 10 gm. One soy hot dog such as Lightlife Smart Deli Jumbos 16 gm. One GeniSoy Soy Protein Bar 14 gm. 4 oz firm or extra firm tofu–such as Nasoya 9 gm. A color photo shows many edamame–green vegetable soybeans in the pods. Address: New York, NY.

12057. Golbitz, Peter. 2000. Health claim to boost soy sales. *Bluebook Update* (*Bar Harbor, Maine*) 7(1):1-2. Jan/March.

• ***Summary:*** A study of the soyfoods market in the USA, conducted jointly by Soyatech and SJH & Co., shows that overall, sales of soyfoods have been growing at more than 20% a year for the past three years; some categories, such as meat alternatives and dairy alternatives are growing at more than 40% a year. Lightlife Foods has seen sales increase 33% during 1999. Nasoya also plans to use the health claim prominently on their tofu.

The U.S. claim may even help soyfoods in Europe–especially England. Peter Fitch, Director of the Haldane Foods Group in England, says that if the claim is properly handled, it could help restore the tarnished image of soyfoods–tarnished in the minds of UK consumers by problems related to genetic engineering of soybeans–and help get them back on the menu.

12058. Jaret, Peter. 2000. The joy of soy: Hailed as the king of all health foods, the mighty soybean has been touted as a weapon against heart disease and cancer. *Harper's Bazaar.* Feb. p. 152, 156.

• ***Summary:*** "Wonder foods come and go... But the new superfood of the moment promises to be different. Eventually it's going to get everyone's attention, because the health claims being made for it are just too big to ignore." "A stream of scientific papers have shown evidence that it can fight heart disease and cancer." Even those who hate tofu are finding that soy can taste pretty good. Many like edamame–those slightly furry green pods served at Japanese

© Copyright Soyinfo Center 2013

restaurants. You run them through your lips and suck out the smooth, slightly salty soybeans inside. "Edamame have become so popular, they're being sold in bulk stores from New York to California." At Trader Joe's, a nationwide retail chain, sales of frozen edamame now rival those of frozen corn and broccoli. Even soymilk is poised to go mainstream. A key reason for the health benefits of soybeans is that they are rich in isoflavones–substances that resemble the natural hormone estrogen. Isoflavones are also powerful antioxidants.

Color photos show: (1) Two large red chopsticks holding one cooked yellow soybean. The caption: "The soybean, Asian staple, may be a big reason why cancers of the breast and prostate are uncommon in Japan and China." (2) Edamame in the pods, topped with a sprinkling of coarse white salt, on a square bamboo tray. The caption: "Edamame, the salty finger food served at sushi bars, is so popular, specialty food markets are beginning to sell it by the pound."

12059. Sojafarm. 2000. Tofu: Meister der Verwandlung. Land des Ursprungs [Tofu: Master of transformation. Land of its origin]. Trechtingshausen, Germany. 16 p. 21 cm. Catalog and list of products. [Ger]

• ***Summary:*** This catalog has an attractive, glossy color front and rear cover. On the inside front cover is an introduction to tofu in Japan–the land of its origin. [Note: Tofu originated in China]. The inside, titled "Information, products, prices," consists of photocopied sheets. The company logo, on p. 1., consists of the Chinese character for "bean" over the company name. Below that is written in German: "High-quality, natural-food specialty products, made with pure spring water." In the catalog, each product is described with a list of the ingredients.

The products are listed in the following order on the price list (* = label enclosed): Tofu Natur*. Tofu mariniert. Tofu mit Kräutern (Kräuter-Tofu*). Gemüsetofu*. Tofu geräuchert (Geräucherter Tofu*). Tofu Frülingssterrine*. Tofu-Reisburger*. Tofu-Bratschnitte*. Nusstofu (tofu with hazelnuts)*.

Smoked specialties: Räuchertofu mit Champignon (Champignon Räucher-Tofu*). Räuchertofu mit Algen (Algen Räucher-Tofu*). Räuchertofu mit Rotwein.

Tofu Würstchen: Piccolino's (Frankfurter Art). Barbecue's (Thüringer Art). Gourmet Scheiben. Brotaufstriche. Tofu-Kräutercreme. Tofu-Edelcreme.

Fermate (Soy cheese): Fermate Pfeffer. Fermate mit Kräuter. Sauce Bolognese.

Frischware: Gemüserollen. Asia-Rolle. Tofu Burger. Tofu Lauchburger. Grünkernburger.

Seitan: Seitan. Seitangulasch.

Pasta de Tofu: Spiralen. Gabelmakkaroni. Bandnudeln. Mischkiste. Tofu Kochbuch.

Also enclosed is a letter and two business cards. Address: Im Paradis, D-55413 Trechtingshausen, Germany. Phone: 06721-6470.

12060. *SoyaScan Notes.* 2000. Chronology of soy sprouts worldwide. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 100 A.D.–Soy sprouts are first mentioned in China in the *Shen-nung Pen-tsao Ching* [Classical pharmacopoeia of Shen Nung, the Heavenly Husbandman]. Four Chinese characters [yellow + curls + big + bean] are used to refer to soy sprouts, whose use is mentioned only as a medicine, not as a food. The use of soy sprouts as a food in China did not become popular until the Sung dynasty (A.D. 960-1127). This pharmacopoeia was compiled starting in the Early/Western Han Dynasty [206 B.C. to A.D. 8] from material that had existed long before. Today it is considered by Chinese authorities as a genuine work.

1767–Soy sprouts are first mentioned in an English-language publication or in the American colonies by Henry Yonge of Savannah, Georgia. Yonge got his information from Samuel Bowen, for whom he grew the first soybeans [called Chinese vetches] ever cultivated in North America in 1765. Bowen got his soybeans while traveling in China. Yonge writes:

"They put about two quarts of the vetches into a coarse bag, or hair-cloth bag, that will hold about a peck [2 gallons], and after keeping them in it a little time in warm water, they lay the bag on [a] flat grating, or a wooden lattice, placed about half way down a tub; then every four hours they pour water on them, and in about 36 or 40 hours they will have sprouted about three inches in length; they are then taken out and dressed with oil and vinegar, or boiled as other vegetables..." Mr. *Flint* and Mr. *Bowen* having found them an excellent antiscorbutic prepared in this manner, was a principal reason for his introducing them in *America,* as it would be a most valuable remedy to prevent or cure the scurvy amongst the seamen on board his majesty's ships." Note that in America, as in China, soy sprouts are first recommended for use as a medicine; It is their vitamin C that prevents or cures scurvy.

1830–Soy sprouts are first mentioned in Europe by Philipp Franz von Siebold, an early traveler in Japan, in his book on the economic plants of Japan. In a large fold-out table, he states that soybeans (*Sooja Japonica,* Sieb.) can be artificially germinated to make "Mogasi" [sic, Moyashi]. He includes the word *moyashi* written in both katakana and Chinese characters.

1871–Frederick Porter Smith, a medical missionary from England living in China, states in his book *Contributions toward the Materia Medica and Natural History of China,* that soy bean sprouts (*Tau-ya*) are "artificially raised in large quantities for food in the winter" when green vegetables are scarce in China. This is the second earliest English-language publication that mentions soy sprouts.

1905-06–Soy sprouts are first produced commercially

© Copyright Soyinfo Center 2013

in the United States by two Chinese food companies in California: Wing Chung Long in Los Angeles, and Quong Hop & Co. in San Francisco.

1911–Soy sprouts are first produced commercially in Europe by Li Yu-ying, a Chinese scholar and soybean expert, at his plant *Usine de la Caseo-Sojaine* at Valles, Colombes, northwest of Paris, France.

1914–D. Bois in France publishes the earliest illustration seen of a soy bean sprout.

1917-1918–During World War I, interest in soy sprouts in the United States grows. Yamei Kin, a Chinese-American woman with an M.D. degree from an American college, is sent to China in June 1917 to study and report back on soyfoods–including soy sprouts, which she says can be used in a nutritious salad with fermented tofu.

Writing in *Country Gentleman* (28 Sept. 1918), Sam Jordan of Missouri states: "Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

William Morse, the USDA's soybean expert, writes in the *Yearbook of the U.S. Department of Agriculture* (1918) in a special section titled "Soy-bean sprouts" that in China soy beans are widely used for sprouting. "Bean sprouts can be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of heat and moisture. It is quite possible that sprouted soy beans utilized in various vegetable dishes would appeal to the American taste." A full-page photo shows a large basket of sprouted soy beans. Taken by Frank N. Meyer, it is the first photo of soy sprouts ever published.

1921–Dr. John Harvey Kellogg, in his book *The New Dietetics,* has a special section titled "Soy bean sprouts" in which he is the first to use the word "vitamins" in describing the nutritional benefits of soy sprouts, and the first to note that "Sprouted soy beans is one of the constituents of the famous chop suey."

1941-45–During World War II, awareness of soy sprouts again increases. Their champion is Prof. Clive McCay of Cornell University. His first brochure on the subject (April 1943) begins: "Our daily paper would surprise us if it carried an ad: 'WANTED: a vegetable that will grow in any climate, rivals meat in nutritive value, matures in 3 to 5 days, may be planted any day in the year, requires neither soil nor sunshine, rivals in vitamin C, has no waste (in preparation), can be cooked with as little fuel and as quickly as pork chop.' The Chinese discovered this vegetable centuries ago in sprouted soy beans."

Prof. McCay and his wife, Jeanette, worked closely with the New York State Emergency Food Commission, to publicize soy sprouts and other soyfoods during the war years. Governor Thomas E. Dewey hosted a famous "soy bean lunch" at the governor's mansion in Albany, New York, to demonstrate the value of mean substitutes. Soy sprouts were in two of the dishes served to the 67 media representatives.

1960s-2000–Soy sprouts benefit from the rapid growth of interest in all kinds of sprouts in the USA and Europe, and from the growing number of Asian-Americans.

12061. *To Your Health* (*Dr. John McDougall's Newsletter, Baltimore, Maryland*). 2000. Is the doctor in... Can soy make you sick? Feb. p. 6.

• ***Summary:*** This article begins with a question, apparently from a reader: "I read recently that studies have found a link between soy products and dementia. I thought tofu and other soy products were good for me. What's going on?" The response (from the unknown writer) discusses an article in the *Honolulu Advertiser* (Hawaii) on 26 Nov. 1999 (p. A1) discussing the work of Dr. Lon White of the Pacific Health Research Institute. While studying 3,734 Japanese-American men in the Honolulu Heart Study, he found that those age 45 or older were more likely to suffer cognitive loss if they ate tofu more than twice a week. White's study has not yet been published in a scientific journal.

White theorizes that the phytoestrogens in tofu may be interfering with the brain's ability to use human estrogen. Typically, human estrogen binds to brain cells. Estrogen has long been thought to improve brain function. White suggests that phytoestrogens may be clogging the brain's receptor sites, preventing human estrogen from attaching.

The writer adds that another possible reason for the association is the high aluminum content of soybeans. "Aluminum is the only known controllable source of Alzheimer's disease." Aluminum from the soil attaches to substances in the soybean, such as phytates, to make unabsorbable complexes. "However, the heating and processing of soybeans to make tofu may free up the aluminum so that it can be readily absorbed."

Readers are advised to go easy on soy products and use them only as condiments. One reason is that "tofu is 45 percent fat." Note: The writer intended to say that 54% of the calories in tofu come from fat. Tofu actually contains 4.3 to 5.3% fat, depending on the firmness. Thus, a 100 gm serving of tofu contains 4.3 to 5.3 gm of fat; this fat is vegetable oil, which is largely unsaturated.

12062. **Product Name:** [Chili with Veggie Minced Meat, Veggie Chicken Nuggets, Meatless Tofu Schnitzel, Bonanza Meatless Minced Meat Steaks, Greek-Style Pan-Fried Veggie Strips].
Foreign Name: Chili con Veggie Hack, Chickin Nuggets, Tofu Gemueseschnitzel, Bonanza Hacksteaks, Pfannen Gyros,.
Manufacturer's Name: Viana Naturkost GmbH.
Manufacturer's Address: D-54578 TofuTown Wiesbaum,

Germany. Phone: +496593 9967-0. Fax: 6593 9967-225.
Date of Introduction: 2000. February.
Wt/Vol., Packaging, Price: 200-250 gm pack.
How Stored: Refrigerated.
New Product–Documentation: Color packages sent by Bernd Drosihn. 2004. Nov. 15. Size: 10 by 18 by 3.5 cm. Paperboard boxes. Red, light green, dark green and black on beige. Color photo of the dish, ready to eat, on a white plate. Each of these Viana-brand products is a meat alternative, ready to heat, introduced in Feb. 2000. The packaging is very attractive.

12063. Schweitzer, Peter. 2000. Re: The Farm's two major contributions to American culture. Letter accompanying spring *Plenty Bulletin,* March 1. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Plenty Friends: When the history of the Farm community (where Plenty was founded in 1974) is written, two achievements will stand out as having a significant impact on American society, and no, I'm not talking about tie-dyes and longer hair: (1) Instigating and spreading the use of soybean foods, including milk, tofu and ice-bean; and (2) helping to propel the homebirth movement into the mainstream of US healthcare."

Website: www.plenty.org.

"Since 1985 Plenty has been engaged in the promotion of soy food technology in Belize. Soy is beneficial in areas where diets are lacking in good proteins and tillable land is scarce." Address: Executive Director, Plenty, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4864.

12064. Horowitz, Janice M. 2000. Organic Update. *Time.* March 20.
• ***Summary:*** In the "Your Health" section: "Today there are more meanings of the word organic than there are decent ways to prepare tofu."

12065. Essoyan, Susan. 2000. Trouble for titan tofu: A study in Hawaii finds that the health food favorite may accelerate aging of the brain. But critics note that the research creates more questions than answers, and no causal connection has been made. *Los Angeles Times.* March 23. p. B2. Metro section.
• ***Summary:*** Results from the Honolulu-Asia Aging Study, some of which were presented by chief investigator Dr. Lon White (of the Pacific Health Research Inst.) at a symposium in Washington, DC, in Nov. 1999, are scheduled for publication in the April issue of the *Journal of the American College of Nutrition.*

The vice president of medical and scientific affairs for the National Alzheimer's Assn. in Chicago (Illinois), Bill Theis, "considers the findings too preliminary to support any conclusions."

A clinical trial is underway to examine the connection between estrogen and Alzheimer's; it follows a survey which showed that women who took hormone replacement therapy after menopause were at lower risk for getting Alzheimer's. Dr. Kenneth Setchell, prof. of pediatrics at the Univ. of Cincinnati's Children's Hospital Medical Center (Ohio), disputed White's conclusions. His research shows that isoflavones have a positive effect on the brain. He asked: If soy is so bad, why are there not high rates of Alzheimer's disease in Japan and China? And why is there no association with any other soyfood? And why don't vegetarians, who typically consume plenty of tofu, get Alzheimer's?

"In stark contrast to White's findings, a 1993 study of 272 Californians enrolled in the Adventist Health Study, matched for age, sex and ZIP Code, found that those who ate meat were more than twice as likely to become demented as their vegetarian counterparts."

This article concludes with some market statistics from a study titled "The U.S. Soyfoods Industry," by Soyatech Inc. and Senechal, Jorgensen & Hale Co. U.S. tofu sales have grown from $108 million in 1992 to $238 million (forecast) in 1999. U.S. sales of all types of soyfoods have grown from $852 million in 1992 to $2,140 million (forecast) in 1999. Address: Special to Times.

12066. Mestel, Rosie. 2000. In light of troubling study on soy, moderation seen as key. *Los Angeles Times.* March 27. p. S1, S6.
• ***Summary:*** The "troubling study" is Dr. Lon White's study in Hawaii showing a correlation between tofu consumption and Alzheimer's–but no proof of causality. Address: Times Health Writer.

12067. Bittman, Mark. 2000. Faster than you can say soup: The minimalist. *New York Times.* March 29. p. F3, or p. B12 (National ed.).
• ***Summary:*** "It would be hard to find a more powerfully complex natural convenience food than miso." Miso, which is more intense than soy sauce, but not saltier, can be used to make dressings and sauces, or toppings for tofu. "But miso's most amazing feat is turning a cup of hot water into soup in about 30 seconds." Contains a recipe for "Nearly instant miso soup," with tofu, carrots and scallions.

12068. Messina, Mark J. 2000. Update on soy and nutrition (Interview). *SoyaScan Notes.* March 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Even though ABC's TV program 20/20 did a positive story about soymilk, they will soon be airing a very negative program on soy. They started by focusing on Lon White's study associating tofu and Alzheimer's in Hawaii. They then added the idea that there is a conspiracy between the soy industry and the FDA for the health claim. Mark has spent six hours on the phone with the 20/20 people, and he expects the program to be very negative. He is concerned.

© Copyright Soyinfo Center 2013

Another important negative article titled "Eating well: Doubts cloud rosy news on soy," by Marian Burros (*New York Times,* 26 Jan. 2000) concerns soy and breast cancer. She argues that soy may be contraindicated for breast cancer and quotes Steve Barnes as saying that women with ER-positive tumors (that means the estrogen receptors respond to estrogen) tumors should not consume soy. There was a second article on tofu and Alzheimer's by Rosie Mestel in the *Los Angeles Times* that was much more negative than the first article by Susan Essoyan. Moreover, Rosie is confused about what constitutes "moderation," because Lon White's study indicated that 2-4 servings of tofu per week caused brain problems, whereas most studies show that you must consume at least 1½ servings of tofu a day to get any benefits. In short, Mark believes that the media is and will be increasingly running negative stories on soy. Ken Setchell feels like "everybody has now jumped the soy ship and he's the only one still promoting it." "It's now hitting the fan right and left–so that we have gone to the other extreme." In July of this year, a panel on soy and safety is scheduled for the NNFA (National Nutritional Foods Association) show. The toxicity issues are now starting to take center stage–as Mark has been warning for several years. Mark does not see how any food company could consider coming out with a new soy product in the current atmosphere–with all the controversies being raised." The newspapers are carrying the negative stores because the magazine stories that are running now were written 6 months ago.

Over the past few years, many people in the soy industry have accused Mark of being an alarmist for presenting the whole truth–both sides of the issue. For example, Mark was telling dietitians that soy might be contraindicated for women with ER-positive breast tumors. Steve Barnes did not agree with Mark on this point. David Heber (a "big shot," M.D., PhD at UCLA) was hosting a soy meeting at UCLA on Jan. 20th 1998, in cooperation with PTI, to try to calm any concerns that some UCLA endocrinologists had about soy and breast cancer. It was a sort of "one-day dog and pony show" with five positive talks on soy by UCLA-associated people. He was very critical of Mark's position on the subject and even shouted at Mark on the phone for 10 minutes for scaring women away from soy when soy was so wonderful.

The last four studies on the ability of soy protein to lower blood cholesterol levels have shown no effect. We must be clear that there are two separate issues in these studies: (1) Does it work? and (2) Does it matter? If it does work, it probably doesn't matter, because those people with very high cholesterol levels would probably be put on drugs anyway.

In a recent position paper on women's health, the American Dietetic Association recommended that women avoid phytoestrogen supplements. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

12069. Annapurna. 2000. Annapurna: zdrava hrana [Annapurna: Healthy food (Leaflet)]. Zagreb, Croatia. 1 p. Front and back. Each panel 15 x 10.5 cm. [Cro]
• ***Summary:*** This small leaflet is printed in black ink on light peach-colored paper. On the front panel, below the name of the company, Annapurna, are listed four tofu products and 3 seitan products, with the name, weight, and price given for each.

On the back panel are explanations of "What is tofu?" and "What is seitan?" Note: This is the 3rd leaflet printed by Annapurna.

12070. CNN-FN (Financial News). 2000. Business unusual. Television broadcast. CNN. March 1. 4 minutes, 50 seconds.
• ***Summary:*** This interview with Steve Demos begins: "Well, it certainly isn't the usual path to business success. My guest was a '60s hippie who dropped out of American society, moved to India, and practiced yoga in the Himalayas–and lived in a cave, by the way. And when he finally dropped back in, he did so by practicing a philosophy of 'Wealth without guilt,' and launched White Wave, a multi-million-dollar enterprise built on, of all things, soy!"

Steve says that he realized that he wanted to contribute to our society, and to do so he had to keep score by "extracting wealth." He wanted to make a positive contribution, "Something the world was better off with, rather than without." He chose soy because it was a "nonviolent contribution that is nutritional." He started making tofu in 1977. The host (a woman) notes that "its really just sort of catching on more mainstream now in the U.S." Demos agrees: "This is how to get rich slow... Not the overnight success."

The host asks again about the route that he took, "back from a cave in India, doing yoga for days and meditating." Then: "What does your family think of you now?" Answer: They are much more approving. Steve notes that business for him is a philosophy, and he has a great passion for what he is trying to accomplish. White Wave had sales of $30 million last year and the company is forecasting $60 million this year. They expect sales to double for the next three years as a result of the FDA endorsement stating that soy is a "healthy benefits food." The host says she hopes that one day all Americans will be dunking their Oreo cookies in soymilk, then closes with "Keep up your principles."

12071. *Food Trade Journal U.S.A.* (*Ikegawa Food Specialists*). 2000. FDA as well as media help Japanese food industry: Soy products and green tea are highlighted. 10(2):1, 3-4. March. [Eng; Jap]
• ***Summary:*** Each article in this newspaper is published in both English and Japanese. Last October, the FDA gave its approval for U.S. companies to begin using a health claim on foods containing at least 6.25 gm of protein per

© Copyright Soyinfo Center 2013

serving. Except for traditional soy products (such as tofu), each serving must contain no more than 3 gm of fat, 20 mg of cholesterol, and 480 mg of sodium. The FDA believes that adults who consume 25 gm/day of soy protein could experience a decrease in their blood cholesterol, which reduces their risk of heart disease. The mainstream soyfoods that benefited from this announcement are veggie burgers, soymilk, tofu, and soy cheese. But now edamame has emerged as a big seller at supermarkets since a few years ago. A Japanese-style cartoon shows two blonde girls seated at a table. A boy, who is standing, says "I show you how to eat Edamame." Holding a pod of edamame in his right hand, he is popping the beans into his mouth. A circular inset, showing how his fingers hold the pod, is titled "Squeeze." Another cartoon shows Takuji Kimura [Mr. edamame in America], drawn by his son.

The article gives lengthy excerpts from two recent American articles: (1) Hesser, Amanda. 1999. "Bet you can't eat just one soybean." *New York Times.* Sept. 8. p. F3. (2) Deane, Donna. 2000. "Get more soy in your life." *Los Angeles Times.* Jan. 12. p. H1, H3. Food section.

According to Shigeru Shirasaka, president of House Foods (a leading U.S. tofu maker), his company shipped 29 million pieces of tofu in 1999, which is a 70% increase over 1995.

The last page of this article is about edamame, by Takuji Kimura, America's leading edamame broker, Concord, California. Japanese restaurants have been the showrooms for edamame, and they are part of the reason for its growing popularity. Tak Kimura started trying to sell edamame in 1994 at several natural food stores, but nobody seemed interested. He contacted the produce manager of Whole Foods in Berkeley–a woman–without an appointment. When he asked her to try his edamame, she said that she knew what it was–an appetizer at sushi bars! She liked it very much and had tried to find a source, but the restaurants would not disclose their sources. During his first demo day at Whole Foods he sold only 8 packs in 8 hours. But after 2 weeks sales started to increase. Then he got permission to sell edamame at other Whole Foods Markets, and then at the Wild Oats chain of natural food stores. In 1998 sales started to increase rapidly. Now the FDA is supporting edamame and major newspapers are doing stories, so sales continue to grown.

12072. **Product Name:** Wholesome Valley (Organic Dairy Cheeses), Chunks [Cheddar, Mozzarella]. Slices [American, Mozzarella, Swiss, Pepper Jack].
Manufacturer's Name: Galaxy Foods Co.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-808-2325.
Date of Introduction: 2000. March.
Ingredients: American: Organic cheddar cheese (pasteurized milk, cheese cultures, salt, enzymes), water, organic butter, organic non at milk. sodium phosphate, etc.
Wt/Vol., Packaging, Price: Slices: 8 oz (224 gm) 12 slices per pack.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) from Natural Products Expo West. 2000. March. A photo shows the front panel of six Wholesome Valley Organic nondairy cheeses on a cutting board, with potted herbs and fresh vegetables in the background. 12 slices in each sliced variety. "Reduced fat. Pasteurized process cheese food. 1/3 less fat than process cheese food." "Good source of calcium & protein. No artificial ingredients. No rBST hormones or antibiotics."

On the rear we learn that these are dairy cheeses, made with organic cheese and organic milk.

12073. Good, Darrel; Bender, Karen; Hill, Lowell. 2000. Marketing of specialty corn and soybean crops. *Department of Agricultural and Consumer Economics, University of Illinois at Urbana-Champaign* AE-4733. 28 p. March.
• ***Summary:*** Includes results of a 1998 survey on marketing STS soybeans, tofu or clear-hilum soybeans, non-GMO soybeans, and organic or pesticide free soybeans. Address: 1. Prof.; 2. Senior Research Specialist; 2. L.J. Norton Prof. Emeritus of Agricultural Marketing. All: Dep. of Agricultural and Consumer Economics, College of Agricultural, Consumer and Environmental Sciences, 1301 W. Gregory Drive, 304c Mumford Hall, Univ. of Illinois at Urbana-Champaign, IL 61801. Phone: 217-333-1694.

health benefits: Isoflavones, heart disease, menopause & osteoporosis, cancer, allergies, diabetes & kidney disease, fat. Soyfood Descriptions: Meet the bean: Green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas, soy-based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour (50% protein), soy grits, soy protein concentrate, soy protein isolate (isolated soy protein, 90% protein), soy protein, textured (flour or concentrate), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk, soy beverages, soynut butter, soynuts, soybean oil & products, sprouts (soy), tamari (see soy sauce), tempeh, Teriyaki sauce (see soy sauce), tofu & tofu products, whipped toppings, soy-based, yuba. Helpful charts: Soyfood substitutions, soyfood isoflavone content. Soyfoods web site. Soyfood composition. Recipes using: Meat alternatives, textured soy protein, whole soybeans, soy flour, soynut butter, soymilk, tofu. Address: 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

12088. Miller, Wiley. 2000. Non sequitur: Tofu in hell (Cartoon). *San Diego Union Tribune.* April 6. Nationally syndicated.
• ***Summary:*** This cartoon shows hordes of gloomy, naked ghostlike people wandering along the cliffs of Hell. Several devils with long tridents sit atop tall pillars just offshore, ready to prod any who try to escape. In the foreground, where several skulls litter the ground, is a large sign that reads: "Eternal menu. Everything is caffeine-free, sugar-free, fat-free and made of tofu." One naked man with protruding belly says to another: "I knew it was going to be bad here, but I didn't think it would be this bad."

12089. Weissman, George. 2000. Founding Veat Gourmet (Interview). *SoyaScan Notes.* April 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** George founded this company in 1998; he was the sole founder. He came across the Taiwanese technology to make this very unique textured soy protein because his partner (Van Thi Dang) is Vietnamese, and she brought it home from a Chinese grocery store. He ran across something similar, but gluten-based in a Chinese monastery, where he was doing a Chan [Chinese Zen] Buddhist retreat. He is a practicing Buddhist. He was in academia at the time; he as a physicist having earned his PhD degree from Cal Berkeley. He worked on the foundations of quantum theory/paradigm. He started a group at the Lawrence Berkeley Lab in 1974 to discuss physics and spirituality. Fritjof Capra (Austrian by birth) was a member of the group, as was Gary Zukoff. After that he went to the Swiss Polytechnical University where he did a post-doctorate program. George is a vegetarian and is also very interested in issues related to world water usage and water as a limiting resource in food production.

About two months ago his partner, Van, started a small business named Ahimsa Gourmet in San Pablo, California, where they make tofu, soymilk, and many other soyfood products. Address: 4690 East 2nd St. #9, Benicia, California 94510. Phone: 1-888-321-8328 (toll free).

12090. *Oregonian* (*Portland, Oregon*). 2000. Tofu consumption linked to mental decline in later years, study says. April 19. p. A17. [1 ref]
• ***Summary:*** A study by Dr. Lon White (of the Hawaii Center for Health Research), published in the April issue of the *Journal of the American College of Nutrition,* found that men who ate the most tofu during their mid-40s to mid-60s showed the most signs of mental deterioration 30 years later. Consuming tofu two or more times a week was said to be detrimental to brain function. The more tofu eaten, the greater the likelihood of mental decline.

White and his co-workers believe that the link between eating tofu and decline of brain function is isoflavones. They affect an enzyme in the body called tyrosine kinase, which may block learning-related changes in the brain.

12091. Shaw, Ann. 2000. History of Avoset Foods, Morningstar Foods, and Suiza (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The plant in Gustine (where Ann has worked in research for 26 years) used to be called Avoset Food Corp. Avoset has been a pioneer in ESL products since the company started; this plant is almost 90 years old. Originally it was a creamery, owned by Foremost, then by Smith-Kline (a pharmaceutical company). In the 1940s, during World War II, Avoset pioneered ultra-pasteurized products for the U.S. military–such as whipping cream in little glass jars for use on submarines. In the 1950s they pioneered whipped toppings in pressurized squirt cans. In the mid-1960s Avoset was the first U.S. company to install a gable-top ESL (extended shelf-life) packaging machine, which packaged long-life whipping cream, and half-and-half. The non-ESL products had a shelf-life of 10-14 days and were considered "nuisance items" by fluid dairies and retailers. In about 1975 Smith-Kline sold Avoset to Anderson Clayton, which broke up the company and sold it to Quaker Foods, which sold it in June 1987 to Kraft, which sold it in about 1988 Morningstar–which was basically a group of venture capitalists from the Southland Dairies in Texas which bought specialty dairies (such as Bancroft Dairy) making value-added dairy products such as cultured foods, coffee creamers, whipping cream, half-and-half, etc.–products other than just fluid milk. Other branded Morningstar products included Second Nature (cholesterol-free eggs), International Delight (coffee creamers), etc.

In about 1997 (3 years ago) Suiza Foods Corp. purchased Morningstar. Suiza started with one dairy in

© Copyright Soyinfo Center 2013

Puerto Rico in the 1980s; then they started to buy other dairies, and became a major "dairy consolidator," putting together these many dairies under umbrella. Suiza was basically an acquisitions firm, which did not have any corporate structure beyond the people in the main office who were involved in acquiring new companies. One of the reasons they purchased Morningstar was for the corporate structure–human resources, research labs, etc. So all the research work for Suiza is done by Morningstar. After Morningstar bought Avoset, the technology, packaging, and formulations improved, but the basic business remained unchanged–until 5-6 years ago when Ted Nordquist arrived and Morningstar first began to work with soy. The first development of formulation for Silk soymilk was done at Gustine. Ann knows Ted extremely well.

On the front of the building where Ann works is written "Morningstar Foods" in large letters; below that in smaller letters is written "Avoset." Gustine is near Merced, California. Morningstar and Suiza have their corporate headquarters in the same building in Dallas, Texas. For information on Sun Soy (which is sold at Ralph's supermarkets in southern California), contact Patty Herbeck (phone: 214-303-3400) in Dallas. Wildwood soymilk is also made at the Gustine plant. They also package products for Trader Joe's. At Morningstar's yogurt plant in Fullerton, they package soy yogurts for Ted Nordquist and Trader Joe's. Address: Research Dep., Morningstar Foods (a Suiza Company), 299 Fifth Ave., Gustine, California 95322. Phone: 209-854-6461.

12092. Chen, Ingfei. 2000. Diet wisdom from the East: New research confirms it. The simple, mouthwatering meals that Asians have eaten for centuries hold disease-fighting secrets that we should all take to heart. *Health.* April. p. 126-31, 177-78.

• ***Summary:*** With recipes by Nina Simonds. Photos by Brooke Slezak. Nina, age 47, lives in a cozy brick home in Salem, Massachusetts. An author and expert on Asian cuisine, she has just prepared a small feast for her husband and a few guests. Walter Willett, head of the nutrition department at the Harvard School of Public Health, is "nibbling on boiled *edamame,* or soybeans. Nina's passion is the health benefits of Asian cuisines, which use less meat, more veggies, and less artery-clogging fat–with meals that are quick, simple, and delicious. These health benefits of an "almost-vegetarian" diet are being proven by the Cornell-Oxford-China study, directed by T. Colin Campbell, with vital assistance from Chen Junshi, a nutritionist from Beijing. They conducted huge studies in 1983 and 1989. The first study showed that the Chinese get only 15% of their calories from fat, compared with 34% in America. Moreover, the Chinese consume three times as much fiber and a third less protein. But 89% of their protein is from plant sources, whereas 70% of U.S. protein is from animal sources other than fish–such as meat, poultry, eggs, and dairy products. The conclusion: Americans out to be eating more plant foods.

In 1994 Willett and his colleagues at Harvard teamed up with the Oldways Preservation and exchange trust in Boston to introduce the traditional Mediterranean diet pyramid. A year letter, in 1995, a rival Asian diet pyramid based largely on Campbell's work, made its debut. They agree on several key points. Eat plenty of grains (ideally whole grains) and veggies, and cut way back on red meat.

Nina Simonds, hoping to ease her passage through perimenopause, has been adding "extra tofu and soy" to her meals. Soy-related recipes include: Wild mushrooms with ginger-soy dressing [with soy sauce]. Photos show: (1) Nina Simonds smiling. (2) Walter Willett nibbling on edamame. (3) A close-up of edamame in the pods.

A sidebar titled "Foods for lifelong health: From the Asian pantry" (p. 129) discusses the importance of balancing the body's yin and yang. One part states: "Soy–Ancient wisdom: Fermented black soybeans are used to treat lung and digestive problems. Tofu is said to boost energy, lubricate the intestines, detoxify the body," and prevent vomiting, intoxication, and high blood pressure. Modern research shows that soy protein can lower high blood cholesterol levels. Generous servings of isoflavone-rich soy may partly explain why prostate and breast cancer rates are so low in Asia. These isoflavones also appear to bolster bone density and may ease menopausal symptoms.

• ***Summary:*** Contents: Acknowledgments. Anecdote. Introduction. Yikes, its tofu! Types of tofu. Techniques for using tofu. Simple, basic tofu. Appetizers: tofu up front. Salads, sandwiches, and sauces. Soups. Stir-fries and sautés. Curries and braises. Pasta and noodles. Tofu for breakfast: "sausage" and eggs. Smoothies and shakes. Accompaniments. Inspired reading.

Also published as a Bantam Doubleday Dell trade paperback. Address: Santa Fe, New Mexico.

12097. Manson, JoAnn E. 2000. By the way, doctor... *Harvard Health Letter.* April. p. 8.
• ***Summary:*** Soy, a staple of the traditional Asian diet, is rich in two phytoestrogens, daidzein and genistein. Although the research is limited, there is no research that these–in the amounts consumed in soymilk, tofu, or other soy-based foods–are harmful to breast, uterine, or prostate tissue. "The jury is still out, however, on what will happen if people take large doses of these phytoestrogens as pills or supplements over long periods of time."

Soy has beneficial effects on cholesterol levels, which is good for the heart; it lowers harmful LDL cholesterol and raises protective HDL cholesterol. It has shown some promise in relieving the hot flashes of menopause. Conclusion: "Our understanding of soy is still very much a work in progress." Address: M.D., Dr.P.H., Chief of Preventive Medicine, Brigham and Women's Hospital.

12098. Morinaga Nutritional Foods, Inc. 2000. Anecdote. Antidote (Ad). *Vegetarian Times.* April p. 35.
• ***Summary:*** Below the big bold word "Antidote" is a photo of a shiny red apple. Below that, and below the equally large word "Antidote" is a package of Mori-Nu Extra-Firm Silken Tofu (Non-GMO).

The text across the bottom reads: "Update the 'apple-a-day' anecdote to 'a box of Mori-Nu Tofu a day keeps the doctor away.'

"The FDA agrees–'diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease...' One box of Mori-Nu Extra-Firm Tofu contains exactly 25 grams of soy protein. Cholesterol free Mori-Nu has only 1.5 grams of fat per serving. And now, Mori-Nu is made with Non-GMO soybeans. The aseptic package * means Mori-Nu doesn't need refrigeration until opened. All of which is why Mori-Nu Tofu may just be the antidote for heart disease, menopause and even cancer. Visit www.morinu.com for the latest information about the healthy benefits of Mori-Nu Tofu.

"For recipe suggestions, visit www.morinu.com or send a SASE to Mori-Nu, 2050 W. 190th St. #110, Torrance, CA 90504.

"Tetra Pak * In 1996, received the Presidential Award for Sustainable Development, the White House's highest environmental prize, Also named 'the most significant food science innovation of the last 50 years' by the prestigious Institute of Food Technologists (IFT) for increasing nutrient retention and flavor while ensuring safety. For more information, visit www.tetrapak.com."

• ***Summary:*** The decision in Oct. 1999 by the U.S. FDA to allow a heart health claim for soy has boosted sales and growth rates, but the real key to the growing interest has been the ongoing scientific research on the health benefits of soy. The combination of the two is impressive. According to SPINS, which collects scanner data from natural foods stores, sales of soy products were $184.3 million, up 37% over the previous six months. In mainstream stores, sales for the 12 months ended Oct. 1999 were $418.7 million, up 45% over the previous year. This mass market data was supplied in conjunction with ACNielsen.

Ranked by sales in natural products supermarkets, the top five soy products are (in million dollars for the 6 months ended Oct. 1999) are: (1) Soy beverages $58.7. (2) Meat alternatives $31.9. (3) Energy bars $25.5. (4) Tofu $32.1. (6) Frozen entrees $6.2.

Ranked by growth rate in natural products supermarkets, the top five soy products (for the 6 months ended Oct. 1999) are: (1) Energy bars 56%. (2) Soy beverages 34%. (3) Meat

12106. White, Lon R.; Petrovich, Helen; Ross, Webster; et al. 2000. Brain aging and midlife tofu consumption. *J. of the American College of Nutrition* 19(2):242-55. April. [56 ref]
• ***Summary:*** This study of Japanese men living in Hawaii found that those who ate tofu 2-4 times per week when they were around 45-65 years old had higher rates of mental deterioration (low brain weight, Alzheimer's disease, poorer cognitive function) in their later years when compared with men who ate less tofu. The authors speculate that isoflavones were responsible for the apparent adverse effect of tofu consumption.

Note 1. The statistical association or correlation found in this study does not prove cause and effect. In other words, this epidemiological study shows no causal relationship between soy and cognitive function, only a positive association or correlation. Even the director of the Alzheimer's Association (Chicago) was quoted as saying that the study does not warrant dietary changes. It is possible that other unknown factors affected brain function and that tofu consumption was associated with those factors and was not itself the risk factor.

Note 2. Lon White's study was rejected by two major journals before being published here. White was formerly employed by the National Institute on Aging, part of the National Institutes of Health. For more balance and perspective, see the editorial by Grodstein et al. published in this same issue. Address: 1-2. Pacific Health Research Inst., Hawaii.

12107. Goldman, Lea; Post, Tom. 2000. A cry in the wilderness: Steve Demos is selling something that's good for you–and tasty, too. Too bad a lot of people think its the

© Copyright Soyinfo Center 2013

yuckiest food in America. *Forbes* 165(11):322-24. May 15.
• ***Summary:*** About Steve Demos, White Wave, and Silk soymilk–with much incorrect information and a negative bias toward soymilk. Examples of incorrect information: (1) Demos learned to make tofu in India during the early 1970s while on a spiritual retreat. (2) Since then "he has been convinced he's found the path to entrepreneurial nirvana." (3) It's been a lonely quest.

On the right-hand page is an excellent full-page color photo of Demos holding up a half-gallon gable-top carton of Silk against a background of blue sky.

A graph shows annual sales (in dollars) of soymilk versus cow's milk from 1990 to 1999. Sales of cow's milk have been almost flat, rising from about $17 billion to $20 billion during the decade. Sales of soymilk have risen from $82 million in 1992 to $300 million in 1999.

Founded by Demos in 1977 with only $500 in startup, White Wave seemed in danger of crashing by 1986. The company had $200,000 in bank debt with sales stalled at $5 million.

White Wave launched Silk in 1996, packed in typical milk carton and sold refrigerated in the dairy case. But consumers didn't think to look for it there. As a result, White Wave lost $400,000 in six months. But consumers liked the product when they tasted it, so this year White Wave will give away 4 million half-pints of Silk to shoppers in 5,000 stores at a cost of $2.5 million.

Last year White Wave had profits of $1 million on sales of $30 million. This year Demos hopes to double revenues. He is also trying to block competitors like Suiza by signing exclusive agreements with his manufacturers.

Last summer Dean Foods, one of America's largest dairy companies, bought a 25% share in White Wave that is now worth $17 million. Demos' goal is to have a national brand of soymilk–a goal that has eluded dairy milk producers so far. "That would indeed be a triumph of tenacity over taste."

12108. Chiat, Jay. 2000. How will advertisers reach us? In every way, and in every place possible, says one of America's great ad creators. But here's his soft sell: you may even like it. *Time*. May 22.
• ***Summary:*** "That way you will be shown commercials for minivans, cheeseburgers and replacement dishwashers, all in Spanish, and not for roadsters, tofu and refrigerators, in English."

Marinated green soybeans and vegetables (with Baby Broccoli Blend). Roasted red pepper dip (with silken tofu). Three bean chili (with pre-cooked, canned black soybeans). Address: Freelance writer.

12111. Fallon, Sally W.; Enig, Mary G. 2000. Tragedy and hype: The Third International Soy Symposium. *Nexus* (*New Zealand*). April/May. p. 15-20, 69.
• ***Summary:*** Contents: Introduction. Marketing the 'perfect food.' Cinderella's dark side. Soy protein isolate: Not so friendly. FDA health claim challenged. Soy consumption and cancer. Phytoestrogens: Panacea or poison? Birth control pills for babies. Dissension in the ranks (Dr. Lon White of Hawaii on soy and Alzheimer's). Questions over GRAS status. The next asbestos?

The authors are highly critical of soyfoods. This 4-day [actually 2-day] symposium took place in Washington, DC, in Nov. 1999 [Nov. 12-13]. Several weeks earlier, on Oct. 25, the U.S. Food and Drug Administration announced a health claim for soy products which were low in saturated fat and cholesterol and 6.25 gm of soy protein per serving. Among the surprising statements in this article: Isolated soy protein is made from what was once considered a waste product–the defatted, high protein soy chips–which look and smell terrible. "Flavourings, preservatives, sweeteners, emulsifiers and synthetic nutrients have turned soy protein isolate, the food processors' ugly duckling, into a New Age Cinderella" (p. 15).

"The propaganda that has created the soy sales miracle is all the more remarkable because, only a few decades ago, the soybean was considered unfit to eat–even in Asia." Note: This is a preposterous and completely false statement. Read any Japanese or Chinese cookbook and you will find many tofu recipes. In the 1970s there were approximately 30,000 tofu manufacturers in Japan alone, plus many more in China, Korea, and Indonesia. In 1976 in Indonesia there were 41,201 tempeh manufacturers and 10,986 tofu manufacturers in Indonesia (Winarno 1976).

Note: No references appear with the printed version of this article, but 72 references are found with the article on the authors' website. Address: 1. M.A.; 2. PhD. Phone: 619-574-

12112. Jacobi, Dana. 2000. The joy of soy: 75 delicious ways to enjoy nature's miracle food. Roseville, California: Prima Publishing. xii + 244 p. May. Illust. Index. 22 cm. Series: The natural kitchen. [16 ref]
• ***Summary:*** This is basically a reprint of Dana's 1996 book titled *Soy! 75 Delicious Ways to Enjoy Nature's Miracle Food,* also published by Prima Publishing. It contains no new text and no new recipes; a few small errors have been corrected and the design of both covers and the title page is new. Address: Food writer, New York, NY.

12113. Kato, Hiroko. 2000. How to eat at a Japanese restaurant the vegan way. *Vegetarian Journal* (*Baltimore, Maryland*). May/June. p. 20-23.
• ***Summary:*** Describes how to avoid fish and bonito extract and flakes. Traditional Japanese vegan cuisine, called *shojin ryori,* was created by Zen Buddhists; it is very easy to enjoy beautiful and delicious Japanese vegan dishes at such restaurants. Sushi can include *natto maki, yuba maki,* or *inari-zushi* (rice wrapped in season aburage). Tofu dishes may include *yu-dofu, hiya yakko, tofu dengaku, agedashi-dofu,* and *goma-dofu* (made of sesame seeds; no soy). Other dishes: Edamame, miso soup, vegetable tempura, or *gyoza.*

12114. Lear, Jane Daniels. 2000. Kitchen notebook: Behind the scenes with *Gourmet's* cooks. *Gourmet* 60(5):255-58, 261. May.
• ***Summary:*** The title page announces that in this article you will learn "How to work soy into your everyday culinary repertoire." The full-page section titled "Toying with soy" (p. 256) observes that there has recently been an "explosion of soy." It's no longer limited to natural foods stores and Asian markets. In a typical grocery store or supermarket, you'll find tubs of tofu in the produce section, soy milk next to the cow's milk in the dairy case, and *edamame* soybeans in the frozen foods section.

"Well, the stuff is good for you." So Americans are learning how to cook with it and make it delicious–as many people in East Asia have long known how to do. Focuses on four foods: Edamame ("better than beer nuts"), miso, tofu, and Chinese fermented black beans (actually fermented black soybeans, sold in Asian markets and sometimes labeled "Preserved beans"). A large photo shows these four foods; the edamame are in a metal Japanese-style strainer.

"Perhaps the most irresistible, and nutritious, cocktail nibble going these days is edamame–young, tender soybeans usually eaten straight from the pod. (Gently suck the beans into your mouth, and when serving them, don't forget to provide a bowl for the pods.)"

One recipe is given: Kemp Minifie's panfried tofu with Chinese black bean sauce (with "2 tablespoons Chinese fermented black beans"–which is standard fare at her Sunday night suppers. "Her ten-year-old daughter loves it so much that she's requested it as her birthday meal for several years").

12115. Mangels, Reed. 2000. *Vegetarian Journal's* guide to burgers and dogs. *Vegetarian Journal* (*Baltimore, Maryland*) 19(3):27-29. May/June.
• ***Summary:*** When this magazine first looked at these foods 7 years ago, they found 7 veggie burgers and 6 veggie dogs. This year they found nearly 50 veggie burgers and more than 10 dogs. Both the quality and the nutritional value have gone up. These burgers and dogs are generally lower in calories fat, and sodium, and richer in protein, iron, and fiber, than their meat-based counterparts.

A two-page table gives the nutritional composition of many different brands and products per serving. Data is given for calories, protein, fat, and sodium. The products are ranked from lowest to highest fat, then from lowest to highest sodium. The taster's burger favorites were: Boca Burger Vegan Original, Whole Foods Vegan Burger, Gardenburger Roasted Garlic, Garden Vegan, Amy's California Veggie Burger, Nature's Chef Fajita Burger, and Soyboy Okara Courage Burger. Many of these products contain soy. Address: PhD, RD.

12116. Sears, Barry. 2000. The soy zone. New York, NY: HarperCollins (ReganBooks). x + 338 p. Index. 25 cm. [216 ref]
• ***Summary:*** Contents: Acknowledgments. Introduction. 1. The health benefits of soy. 2. Enter the soy zone. 3. Zoning your kitchen. 4. Soy zone cooking tips. 5. Soy zone meals. 6. Modifying your favorite recipes. 7. Fine-tuning the soy zone diet. 8. Your longevity report card: The tests you want to pass. 9. Insulin: Your body's Dr. Jekyll and Mr. Hyde. 10. Soy science. 11. How the soy zone diet stacks up against the traditional vegetarian diet. 12. Frequently asked questions. 13. World health implications for the soy zone diet. Appendixes. A. Technical support. B. Zone validation studies. C. Calculation of lean body mass. D. Zone food blocks for making soy zone meals. E. Synthesis of DHA. F. Glossary of terms. G. Resources. H. References.

Note: This book has all the hallmarks of a "quickie" written by a person who does not know his subject. Moreover, we believe the nutritional science and dietary philosophy are seriously flawed. Address: Ph.D., Swampscott, Massachusetts.

12117. **Product Name:** Melissa's Soy Easy Gourmet Spread & Dip (Made with Smoked Tofu) [Mediterranean Olive, Roasted Red Pepper, Slow Roasted Garlic].
Manufacturer's Name: World Variety Produce Inc. (Marketer-Distributor).
Manufacturer's Address: 5325 S. Soto St., Vernon, CA 90021. Phone: 323-588-0151.

© Copyright Soyinfo Center 2013

Date of Introduction: 2000. May.
Wt/Vol., Packaging, Price: 7.5 oz tubs.
How Stored: Refrigerated.
New Product–Documentation: Wright, Allison. 2000. "Melissa's / World Variety Produce introduces new soy products." *Produce News* (Fort Lee, New Jersey). Sept. 11. The Spread and Dip, which was introduced in May, makes it easier for consumers to incorporate soyfoods into their diets. It is ready to serve, and is ideal for parties and picnics.

12118. Skiff, James. 2000. Non-GMO and organic foods in British supermarket chains. US Soy offers a new service (Interview). *SoyaScan Notes.* June 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim just returned from a business trip to Europe. Britain is far ahead of the USA on issues related to GMO-free and organic foods. Iceland Frozen Foods was the first British supermarket chain to guarantee that all of their foods would be GMO-free. This move sent the company's stock sky high. The owner of the chain coined the term "Frankenfoods" in a media interview. Jim's contact is Bill Wadsworth, head of technical issues and marketing. Jim also met with the British Retail Consortium. Iceland is much smaller than the big-three British supermarket chains which are Tesco, Sainsbury's, and Safeway. Iceland recently said that all produce sold at its stores would be organically grown.

Jim has met a number of tofu makers in Europe who are not even aware of the concept of soybean varieties. So Jim is working with them to choose the best varieties for making tofu. One of his favorites is Proto, a small-seeded public soybean developed at the University of Minnesota specifically for making tofu. Another good variety is Stein.

Jim's company is now making and selling oil-roasted soynuts. Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

12119. Berkoff, Nancy. 2000. Mommy, get me edamame! Fresh soybeans are the healthful snack du jour. Getting fresh. *Orange County Register* (*Santa Ana, California*). June 25.
• ***Summary:*** "Fun to snack on, easy to eat, edamame are nature's answer to chips." It seems like everyone has "jumped on the joy-of-soy bandwagon. Coffee chains offer soy lattes, ballparks soy dogs and grocery stores stack the smoked tofu right next to the imported cheeses." Tells where to buy them, price, nutritional value, and how to cook them. A large color photo shows the bright green beans in and out of their pods. Address: Register columnist.

12120. *Camera* (*Boulder, Colorado*). 2000. White Wave achieves water compliance: Environment. June 30.
• ***Summary:*** A maker of organic soy foods including tofu, White Wave received "perfect compliance" with the city of Boulder's industrial pretreatment water program for 1999. This is not easy since making tofu requires a lot of water. "The city requires some manufacturing companies [including White Wave] to treat their water before it goes to the municipal waste water treatment plant."

The privately held company employs 91 and has annual sales of nearly $30 million.

12121. **Product Name:** Soy Deli (Tofu Entrees) [Tex Mex, Sweet & Sour, Italian, or Homestyle].
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 171 Beacon St., South San Francisco, CA 94080. Phone: 650-553-9900.
Date of Introduction: 2000. June.
Wt/Vol., Packaging, Price: Sold at Safeway supermarkets.
How Stored: Refrigerated.
New Product–Documentation: Two leaflets (glossy, color, two-sided) sent by Patricia Smith from Natural Products Expo (Anaheim, California). 2000. March. (1) "Presenting soy entrees." The front shows color photos of each entree. The back gives details and ingredients. Organic tofu is the main ingredient in each. (2) "The Soy Deli–Hand crafted by tofumasters since 1906." The front shows the labels of 20 Soy Deli brand products made by Quong Hop & Co. The back gives product specifications for each.

Vegetarian Journal. 2000 Sept/Oct. p. 29. "Wondersoys." These four new products, which contain chunks of tofu, are vegan and made with non-GMO soybeans. Talk with lady at Quong Hop. 2000. Sept. 8. These products were introduced in about June 2000 and are sold at most Safeway supermarkets. The company's mailing address is now 171 Beacon Street.

12122. Ross, Brain; Allyn, Richard D. 2000. 20/20–Soy: The untold story. Television broadcast. Friday, June 9. Channel 7. 10:00 p.m. ABC (American Broadcasting Co.). (California). 10:00 p.m.
• ***Summary:*** This program segment was divided into several parts, all on the theme that soy may not be great for everyone: (1) FDA scientists Daniel Doerge and Daniel Sheehan have stepped forward to criticize their own agency's heart health claim. Their long, well documented letter is available on the 20/20 website. The two explain that while soy may be beneficial to the heart, excess consumption could be harmful to people with thyroid disorders, or women who are at risk for breast cancer, or babies consuming infant formula (they are concerned that phytoestrogens in soy could interfere with normal human sexual development).

(2) Debate over phytoestrogen levels in soy-based infant formulas: Dr. Claude Hughes, director of the Women's Health Center at Cedars-Sinai Medical Center in Los Angeles, recommends that mothers who don't breast feed, should use as milk-based formula, and chose soy as a last resort. But Dr. Kenneth Setchell, a pediatrics professor at Children's Hospital in Cincinnati, Ohio, contends that hundreds of thousands of infants have been raised on soy

© Copyright Soyinfo Center 2013

infant formula and many are now adults, yet few problems have been observed. (3) Soy and breast cancer: Dr. Hughes notes that some studies show soy protects against breast cancer. But other studies indicated that, for certain women, the phytoestrogens found in soy may enhance a widely-found kind of estrogen-feeding breast cancer. It can speed up division of those estrogen-dependent cells that are already cancer cells.

(3) Lon White's study on tofu and brain aging and shrinking among elderly Japanese-American men in Hawaii. The soy industry counters that White's study shows only an association between tofu consumption and brain aging, does not prove that tofu causes this aging, and is in conflict with other studies on Asian populations and animals.

The report concludes: "While the scientific research on soy is still emerging and is often contradictory, there are now some serious questions being raised about this miracle food, and some of its staunchest defenders acknowledge that these questions need to be answered."

12123. **Product Name:** Kami Bento Box (Ready to Eat).
Manufacturer's Name: Trader Joe's (Distributor-Retailer). Made by Okami, Inc., Sun Valley, CA 91352.
Manufacturer's Address: South Pasadena, CA 91031.
Date of Introduction: 2000. June.
Ingredients: Soba noodles topped with sesame seeds, soba sauce, edamame (peel & eat), tofu pouches filled with vinegared rice [Inari-zushi], thinly sliced fresh gingerroot, shiitake mushroom rolls, Kikkoman lite soy sauce packet, "wasabi" (horseradish, water, artificial food coloring), etc.
Wt/Vol., Packaging, Price: 15 oz (424 gm) on formed plastic tray with clear plastic cover. Retails for $4.29 (2000/07, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Talk with Patricia Smith of Trader Joe's. 2000. June 20. She says this is an excellent new product. Product with Label purchased at Trader Joe's in Lafayette, California. 2000. July 6. Soyfoods Center evaluation. All parts of this Japanese-style Bento Box lunch (8.75 by 7.25 by 1.5 inches, with four compartments) are authentic and delicious, except for the tofu pouches, which have some extremely fiery "blow-your-head-off" spice inside. This is not authentic, and we find it almost inedible. The so-called "wasabi" contains no wasabi at all; thus it is mislabeled. The edamame are wonderful, as are the soba noodles, their sauce, and the mushroom rolls.

12124. **Product Name:** Trader Joe's Organic Baked Tofu [Teriyaki, or Savory].
Manufacturer's Name: Trader Joe's (Marketer-Distributor). Made by Wildwood Natural Foods in California.
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 2000. June.
Ingredients: Organic tofu (filtered water, organic soybeans*, nigari {magnesium chloride, a natural firming agent}), soy sauce (water, wheat soybeans, salt), rice vinegar, tomato paste, rice wine, Fruitrim (fruit juice, natural grain dextrins), brown rice syrup, garlic ginger, garlic powder, safflower oil, ginger powder, arrowroot. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Teriyaki: 7 oz (198 gm) vacuum pack. Retails for $2.99 at Trader Joe's (2001/01, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Jan. 25. 4 by 6 inches. Self-adhesive label on plastic bag. Black and white on orange and gray. "Marinated and ready to eat. Perishable. Keep refrigerated." Contains two servings. Soyfoods Center taste test: Delicious!

12125. **Product Name:** Tofurky Jurky (Hickory Smoked) [Original, or Peppered].
Manufacturer's Name: Turtle Island Foods, Inc.
Manufacturer's Address: P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).
Date of Introduction: 2000. June.
Ingredients: Water, vital wheat gluten, tofu (water, soybeans grown without herbicides, pesticides, or chemical fertilizers {and calcium sulfate coagulant}), white beans, garbanzo beans, lemon juice from concentrate, expeller pressed canola oil (GMO free), shoyu (water, non-GMO soybeans, wheat, salt), evaporated cane juice, granulated garlic, natural vegetarian flavors, spices, calcium lactate from beets. Peppered includes cracked peppercorns.
How Stored: Shelf stable.
New Product–Documentation: Product (Peppered) seen at Trader Joe's in Lafayette, California. 2000. Aug. 7. Retails for $3.09. Talk with Seth Tibbott, owner of Turtle Island. 2000. Sept. 5. This product was first sold in June 2000. It comes in two flavors: Original and Peppered (black pepper, not chili pepper). The product is doing well. Only the Peppered flavor is presently sold at Trader Joe's. Both products with Labels sent by Seth Tibbott. 2000. Oct. 12.

12126. Uhland, Vicky. 2000. New organic rules flawed, OTA says. *Natural Business* (*Colorado*) No. 49. June. p. 1, 10.
• ***Summary:*** According to Steve Demos, CEO of White Wave, the new organic standards do not include calcium sulfate, a naturally occurring coagulant used to make tofu. Many tofu makers also use synthetic defoamers, which are among the many synthetics excluded. Demos says these synthetics are accepted in the European organic standards, and hopes that USDA will follow suit.

© Copyright Soyinfo Center 2013

12127. Wollner, Joel. 2000. Mr. Kitani of Yamaki Co. in Japan has a huge new shoyu and miso factory that uses 100% organically grown ingredients (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In June 2000, on a trip to Japan and China, Joel (together with translator and guide Yoshi Nanabayashi) visited Mr. Tomio Kitani, owner of Yamaki Jôzô K.K. in Saitama prefecture, Japan. He is about age 60 and very healthy and vital. Several years ago he moved from the nearby town into the mountains, where he built a huge new factory where he makes miso, shoyu, tofu (fresh and instant), and pickles. The company's address is (written Japanese-style): Saitama prefecture, Kodama-gun, Kamiizumi Mura, Oaza Shimo, Akuhara 955. Phone: 0274-52-7000. Fax: 0274-52-7001. Plant manager: Morikawa Kazuhiko. The nearest railroad stop is Kodama station.

The company has about 80 huge shoyu vats filled with moromi. Most of his miso is short-term–1 to 3 months. His koji rooms are fully automated. Yamaki Co. is extremely important in the world of organic miso and shoyu in Japan. Joel thinks they make more of these products than Sendai Miso Shoyu, and may be the biggest such manufacturer in Japan. He also bottles and sells water from a spring he owns. His company is flourishing, and growing very rapidly. Some 90-95% of his market is in Japan; the rest is miso and shoyu exported to the USA. He is the 4th of 5th generation owner, and he hopes his son will take over from him within the next ten years or so. The main ingredient he uses is soybeans, but all of his ingredients are organically grown in Japan by MOA (Mokichi Okada International Association), a quasi-religious, quasi-cooperative organic farmers organization and movement. MOA is one of the pioneering and most important organic organizations in Japan.

Joel first visited Yamaki in 1985 when he, Bob Kennedy, and Herman Aihara were setting up Ohsawa America (after Kennedy had sold Chico-San to Heinz). Joel later brought in Martin Roth–who is now married, lives in Berkeley, and is head of a marketing company with Kristin Brun (who lives in El Cerrito). Ohsawa America, which traded with Ohsawa Japan, no longer exists. Address: 76 Florida Ave., Berkeley, California 94707. Phone: 510-524-4420.

12128. Cooper, Matthew. 2000. Watching a gadfly create a buzz: With Ralph Nader as leader, the Green Party hopes to affect Campaign 2000. *Time.* July 3.
• ***Summary:*** Ralph Nader, the leader of the Green Party, is "... more into fighting tort reform than promoting tofu, less into supporting animal rights than ending tax abatements from business."

12129. *New York Daily Challenge* (*Brooklyn, New York*). 2000. Menopausal women should eat tofu. July 11.
• ***Summary:*** The North American Menopause Society, a professional organization consisting of doctors and other health care providers, said its is a good idea to add some tofu to the diet but its too early to recommend taking soy supplements containing phytoestrogens.

12130. Associated Press and the Gazette Staff. 2000. Agribiz giant buys Lightlife Foods. *Hampshire Gazette* (*Northampton, Massachusetts*). July 18.
• ***Summary:*** "Lightlife Foods Inc., a 20-year-old homegrown vegetarian foods company that found greatest success packaging and marketing soybean derivatives in the familiar forms of hot dogs and burgers, as been bought by one of the world's largest food companies, ConAgra Inc."

In 1985 Lightlife borrowed $250,000 in order to move to a larger location in Greenfield. The company's name was changed to Lightlife Foods (from Tempehworks) and "it introduced the first vegetarian hot dog in the country, the Tofu Pup."

Note: Many vegetarian hot dogs had been launched before the Tofu Pup, including one made by Lightlife.

Two years ago [in 1998] the company relocated in a 60,000 square foot building on a 13 acre lot. Address: Staff writer.

12131. Bloomberg, Marcia. 2000. Lightlife Foods sold to ConAgra: Tofu Pups will join the stable of companies that includes Butterball turkeys and Healthy Choice frozen dinners. *Union News* (*Springfield, Massachusetts*). July 18.
• ***Summary:*** A long article. "Lightlife Foods, maker of Tofu Pups and Fakin' Bacon, has been acquired by ConAgra, Inc., one of the nation's largest food companies. The price was not disclosed."

Michael Cohen, Lightlife's CEO, said "the deal calls for Lightlife to remain at its new facility in the Turner Falls section of Montague [Massachusetts], to retain its 145 employees, and to preserve Lightlife's social mission."

Lightlife, which has annual sales of about $25 million, is the leading refrigerated brand of meat alternatives in the United States.

ConAgra, which is publicly traded, has $25 billion in sales in fiscal 2000; these sales were mainly to retail and foodservice companies.

A large photo shows Michael Cohen, CEO of Lightlife, and Chia Collins, president. Says Chia: "We were just two hippies in the 1970s. We did not plan on building this size of a company. That was not our objective at all. We were just into vegetarian eating, the wonders of the soybean, and we started out with tempeh.

Cohen says this acquisition is a really big deal for a company that started in 1979 in a 1,000-square-foot carwash. Address: Staff writer.

12132. Santacruz, Cecilia; Santacruz, Nestor. 2000. Re: More searching for the roots of soya in Colombia. New

© Copyright Soyinfo Center 2013

developments at Delisoya. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Typed, with signature. [1 ref]
• ***Summary:*** Cecilia traveled to Corpoica but was unable to obtain the 1930 Boletin by Durán Castro: Molina Garcés. All records of the Granja Experimental de Palmira were sent to ICA, and the ICA can't find them.

"Our small business demands a lot of time and we are not integrated; we make and sell the tofu in different places. We started a new activity (see the yellow paper) in Delisoya–making lunches. Gloria, my new partner, a young girl and I. Nestor keeps making tofu and soymilk."

Accompanying the letter is Deli Soya's daily lunch menu (black on yellow background) which includes: Brown rice mixed with tofu. Whole-grain lasagna with Italian tomato sauce, tofu and spinach.

In a handwritten note at the end, Cecilia says that she is studying Japanese, and has been invited to stay at the home of Japanese friends. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

12133. Sim, John. 2000. Update on Pulmuone (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter dated 14 July 1997.
• ***Summary:*** John Sim recently returned to Pulmuone as marketing director. His company sells 95% of its tofu to the Korean-American market. Their factory in Southern California now makes 24,000 18-ounce blocks/cakes of tofu a day. They sell these through a distributor and they retail for $1.05 per cake, which is a very low price.

Pulmuone's tofu is now in the Ralph's supermarket chain in Southern California, and they have been advertising it regularly with Ralph's and doing promotions where the tofu retails for $0.79 for an 18 ounce cake. This has shaken up the competition (such as House Foods), causing competitors to lower prices and start advertising as well.

In late May of this year Pulmuone introduced their first nigari tofu. Their customers love the great, fresh flavor. The label reads simply "Premium Tofu" but soon they plan the add the word "nigari"–a work that many Koreans understand.

Pulmuone has also developed a marketing innovation–a disposable [resealable] lid. They place this next to the pack of tofu, and give it away free of charge. A message will be printed on it.

John would like to get his tofu into more supermarket chains over a wider geographical area. Go works with a broker, who has access to the buyers and who makes the presentation; John goes along to supply expertise on tofu.

John is looking for statistics on the tofu market in the USA. Peter Golbitz has lowered the price of his report to $4,000. SPINS wants $12,000 for their data. Address: Marketing Director, Pulmuone, 4585 Firestone Blvd., Southgate, California 90280. Phone: 213-564-2000.

12134. Bawa, Ravinder. 2000. Straight answers: Jason Baker, Coordinator, People for Ethical Treatment of Animals (PETA), India. *Times of India* (*The*) (*Bombay*). July 26. p. A1.
• ***Summary:*** Baker answers four questions posed by Bawa. The third question is: "What are the alternatives to milk consumption?" Answer: You don't need to drink milk. However delicious alternatives, which are easy to make, include soya milk and nut milks. "Tofu (bean curd) makes great soya paneer."

12135. Davis, Richie. 2000. Local businesses profit from change in eating habits. *Recorder* (*Greenfield, Massachusetts*). July 31.
• ***Summary:*** About Tom Timmins of Laughing Grasshopper. And Michael Cohen, who began as a partner in Laughing Grasshopper, then started the company that became Lightlife Foods.

The giant distributor, United Natural Foods Inc. [UNFI], now in West Chesterfield, New Hampshire, "also got its start in Greenfield, in what had earlier in the century been a food warehouse on Bank Row. From there, Llama, Toucan and Crow grew to an Olive Street space [30 Olive St.], then to Brattleboro, Vermont, then back again to 33 Riddell St." [Greenfield, Massachusetts].

President Richard Youngman recalled that when he joined the distribution company at 33 Riddell St., in about 1980, it had sales of around $4 million. By the time Stow Mills merged with Llama, Toucan and Crow to form United Naturals 2½ years ago, sales were $250 million. This year Youngman expects sales to reach $900 million.

Note: Llama, Toucan and Crow, Inc. was apparently formed on 20 March 1974 in Greenfield, Massachusetts.

Last year South River Miso Co. produced about 36,000 pounds of miso. That is about 3 times what the company produced in 1981, when Christian and Gaella Elwell helped to move it to Conway, Massachusetts, from Ohio. Address: Staff reporter.

12136. House Foods America Corporation. 2000. Hinoichi and House Foods products: Tofu, age, konnyaku, natto (Leaflet). Garden Grove, California. 1 p. Front and back. 28 cm.
• ***Summary:*** Glossy color and dated. Appears to show a photo of the front of the package of all the different types of Hinoichi-brand and House-brand soy products made at this time.

(1) Tofu. Hinoichi brand: Soft tofu 14 oz, regular tofu 14 oz, firm tofu 14 oz, and extra-firm tofu 14 oz. Soft tofu 19 oz, regular tofu 19 oz, firm tofu 19 oz, and extra-firm tofu 19 oz. House brand: Tokusen kinugoshi tofu (Soft tofu) 10 oz, Sukui tofu (Extra soft tofu) 12 oz, Spoon tofu (Extra soft tofu) 12 oz.

(2) Organic tofu: House brand: Organic tofu soft 14

© Copyright Soyinfo Center 2013

oz, organic tofu regular 14 oz, organic tofu firm 14 oz, and organic tofu extra-firm 14 oz.

(3) Flavored tofu. House brand: Chef tofu original 19 oz, Chef tofu herb & garlic 19 oz, Chef tofu chili & vegie 19 oz.

(4) Tofu dessert. House brand: Shao mi tofu dessert (mango) 10 oz, Shao mi tofu dessert (lychee) 10 oz, Shao mi tofu dessert (tangerine) 10 oz.

(5) Age. Hinoichi brand: Agé (tofu pouches) 6 pieces = 1.5 oz total, Oagesan (tofu pouches) 2 pieces, Oagesan (tofu pouches) 4 pieces, Oagesan (tofu pouches) 100 pieces (institutional), Atsu-agé (tofu cutlets) 5 oz, jumbo atsu-agé (tofu cutlets) 9 oz, ganmodoki large (tofu fritters) 3 pieces = 5.4 oz total, ganmodoki small (tofu fritters) 8 pieces = 4.3 oz total.

(6) Konnyaku. Hinoichi brand: White ita konnyaku (yam cake) 10.5 oz, black ita konnyaku (yam cake) 10.5 oz, white shirataki bag (yam noodle) 8 oz, black shirataki bag (yam noodle) 8 oz, konnyaku (yam cake) 11 oz, shirataki (yam noodle) 9 oz.

(7) Natto. Hinoichi brand: Mamekozo natto (fermented soybeans) 5.4 oz, natto (fermented soybeans) 4 oz. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

12137. **Product Name:** Bratos [Bratwurst Made of Tofu & Pork–the Size of Hot Dogs].
Manufacturer's Name: Midwest-Harvest Corp.
Manufacturer's Address: 3635 Hwy 146, Grinnell, IA 50112. Phone: 515-236-5170.
Date of Introduction: 2000. July.
Ingredients: Incl. tofu & ground pork.
How Stored: Refrigerated.
New Product–Documentation: Talk with Deb Kenealy of Midwest Harvest Corp. 2000. Aug. 24. They now make Bratos, jointly with another company. A Brato is like Bratwurst made of pork and tofu. Each one is about 5 inches long–but it looks slightly bigger than a hot dog.

12138. Nasoya Foods, Inc. 2000. "Tofu? I don't know what they do with it but my customers keep buying it" (Ad). *Vegetarian Times.* July. p. 46.
• ***Summary:*** This 8½ by 11 inch ad shows a black-and-white photo of a grocer, wearing a grocer's apron, laughing above the title. Below the title is a photo showing all of Nasoya's soy-related products: Five dressings. Two Nayonaise. Six types of tofu. Six TofuMate flavors. "Nasoya: We're putting tofu on America's tables." Address: One New England Way, Ayer, Massachusetts 01432.

12139. *Ontario Soybean Growers Newsletter.* 2000. 2000 Project Soy winners. July. p. 8.
• ***Summary:*** "Judging for the Soybean Opportunities for Youth Contest, better known as Project SOY, took place last month. The annual contest requires students to develop new uses and markets for soybeans. There are two categories, one for undergraduate and graduate students, and one for diploma students." First place and $2,500 in the Undergraduate/graduate category went to three young ladies from the University of Guelph; they created Whole Hearted Bagels, which are loaded with soy protein. Second prize in this category went to "Soy Images," a line of lipstick and lip balms made from 100% soybean oil. There was a tie for third place with the developers of soynut butter cookies and tofu-based crackers.

In the diploma category, first place went to two ladies from Kemptvile College who created Equi-Soy, an equine [horse] shampoo, made with soy oil and enhanced with tea tree and lavender oils. A photo shows the three inventors of the soy-enriched bagels, flanked by Dr. Rob McLaughlin (Dean of Ontario Agricultural College), and Peter Hannam, President of First Line Seeds (a contest sponsor). Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

12140. **Product Name:** [Tofu Mayonnaise, Miso].
Foreign Name: Tofunesa, Miso.
Manufacturer's Name: Organica-ecotienda.
Manufacturer's Address: Xicotencatl 653-18, Col. Centro, Veracruz, VER 91700, Mexico. Phone: 29-31-30-83.
Date of Introduction: 2000. July.
New Product–Documentation: Letter and form filled out by Pat Hayward. 2000. Aug. 25. This company is managed by Pat Hayward and Claudia Gutierrez. In July 2000 they introduced Tofunesa and are now making about 4 kg/month. "My first ever miso was packaged yesterday and although it's not perfect yet, I was very excited that it turned out so well. It served to straighten out some kinks in the process (e.g., the problem here is not keeping the koji hot but how to keep it cool. Room temperature is about 31-34º C so I had to use my hair drier on cold blow to lower the temperature of the bundle). That batch was Red Miso, and now I'm set for the first trial of Mellow White. Will keep you posted!"

They are now developing shoyu, which they hope to start selling in Sept. 2000.

various NFLI (Nutrition for Life International) meatless soy products made from whole soy flour, such as: Harvest Beanuts, Heartful Gourmet Beef Chunks, Heartful Gourmet Beef Strips, Heartful Gourmet Chicken Chunks, Heartful Gourmet Chicken Strips, Heartful Gourmet Ground Beef, Heartful Gourmet Ground Turkey, Nutri-Flour Blend, Powdered Soymilk, or Vegetable Curls. Recipes also include traditional soyfoods such as shoyu, tofu. The name of the person who developed and submitted each recipe appears below the recipe title.

Contents: Salads. Soups. Pupus. Pasta & rice. Main dishes. Desserts and breads.

Proceeds (less costs) from the book go to HopeLine, the advice line for young people sponsored by Karing for Kids, a Christian charity. The HopeLine currently operates 8 hours/day on average. Its budget will enable 65,000 youths to call and receive help each year. Yet the goal is to make HopeLine available 24 hours a day, every day, year-round.

Letter (fax) from Ele Taira. 2002. Aug. 6. All the NFLI Healthful gourmet product are meatless and made from soy. For details visit the website at www.nutritionforlife.com. Address: Ele Taira, 1015 Ala Napunani Street #701, Honolulu, Hawaii 96818. Phone: 808-836-4994.

12143. Wolf, Walter. 2000. Soy-related documents–Business records (Archival collection). Peoria, Illinois.

• ***Summary:*** In July 2000 Dr. Walter Wolf, as he was preparing to retire from the Northern Center for Agricultural Utilization Research in Peoria, Illinois, sent to Soyfoods Center many file folders of soy-related documents that he had collected between about 1968 and the present. Most are in the field of soy protein, and none are confidential / proprietary. Each one is neatly dated, and the documents are in reverse chronological order in each manila file folder.

Dr. Wolf earned his PhD degree at the University of Minnesota, where he studied soy proteins. He began work at NCAUR in 1956; at that time it was named the Northern Regional Research Center. He worked as a chemist in the Meal Products Research Group. He did mostly pure research, rather than applied. At the time there was little interest in food uses of soy protein. One of his main contributions was collecting and publishing statistics on the annual production and price of soy flour, soy protein isolates, soy protein concentrates, and textured soy protein products.

The following files (listed alphabetically) were received by Soyfoods Center. Unless otherwise stated, only one file on each company or subject was received. A thin file contains less than about 20 sheets of paper; a thick one contains more than 20 sheets: ADM (Archer Daniels Midland Co.; 2 thick files 1970-2000). Anderson Clayton (thin, 1971-81). Cargill (thin, 1970-2000). Central Soya (4 thick files, 1959-1999). Dawson Mills (thick, 1974-1983). Edible Soy Products, Inc. (Hudson, Iowa; Maker of Pronuts; thin, 1971-78). EMI Corp. (Des Plaines, Illinois, thin, 1971-74). Erie Casein Co. (thin, 1966-73). Fuji Oil Co. Ltd. and Fuji Purina Protein Ltd. (of Japan, thick, 1972-1993). Farmland Industries and Far-Mar-Co (thin, 1970-1993). Food Ingredients–Dale Johnson (thick, 1964-1998). Garrison Products (extrusion, thin, 1977-78). General Foods (thin, 1974-1981). General Mills (thick, 1965-1976). Gerber Products (thin, 1969). Grain Processing Corp. (1968-1976). Griffith Laboratories (thick, 1968-1986). Gunther Products (purchased by A.E. Staley, thick, 1963-1975). Honeymead Products (Mankato, Minnesota, thin, 1978-1986). Industrial Grain Products (Montreal, Canada, thin, 1973-1975). Kikkoman (thick, 1972-1997). Kraft, Inc. (1965-1984). Lauhoff Grain (1 thin, 1973-86). Loma Linda Foods (thin, 1969-1986). Miles Laboratories (thick, 1970-83). Nabisco (1974-81). Meals for Millions Foundation (1 thin file, 1976). Protein Advisory Group of the United Nations, PAG Guidelines (thin, 1969-1978). Quaker Oats (thin, 1970-97). Joe Rakosky, consultant (1979-83). Ralston Purina Co. (4 files, very thick, 1962-1999). Soy protein products (2 files, thick, 1970-1986). Soy protein production statistics and estimates (two thick files, 1970-1996). Staley (A.E., 1 thick, 1969-1986). Swift & Co. (thin, 1961-1971). Takeda Chemical Industries (thin, 1970-1984). Textured soy proteins (1 thin, 1969-71). Tofu equipment (thin, 1970s). Tokuji Watanabe tofu studies at Peoria, Illinois (thick, 1960-61). United Nations Industrial Development Organization (UNIDO, thick, proceedings of Nov. 1969 meeting at Peoria, Illinois), Unilever (thin, 1974-79). Wenger Manufacturing Co. (thin, 1975-76). Worthington Foods (thick, 1965-1998). Address: NCAUR, Peoria, Illinois.

12144. White Wave, Inc. 2000. Five new leaflets from White Wave (Leaflet). Boulder, Colorado. 1 p. each Single sided. 19 x 14 cm.

• ***Summary:*** These playful, glossy color leaflet (or post cards) were sent to Soyfoods Center by Steve Demos on 1 Aug. 2000. Each contains a beige plate with a design on it against a different background color. On the bottom of each is a color photo of a ½-gallon carton of Silk Soymilk with the tag-line "Get your soy with Silk." (1) "Think globally. Spoon locally" (green). (2) "Its one of those soy meets girl love stories" (dark pink). (3) "Taste and nutrition co-habitate harmoniously" (dark red). (4) "A taste bud lovefest." (5) "Have a good life span."

An identical set of five cards is smaller (15 x 11 cm).

12145. Associated Press; State News Reports. 2000. Ann Arbor company recalls baked tofu: Possible salmonella threat detected during routine testing. *Ann Arbor News* (*Michigan*). Aug. 16.

• ***Summary:*** Rosewood Products Inc. is voluntarily recalling some of its 8-ounce packages of Savory Baked Tofu because of the possibility that they are contaminated with salmonella bacteria, which can cause food poisoning.

12146. Katibah, Tyler. 2000. Sales of tofu in Hawaii (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Dec. 1999 Ty, a maker of tofu and soymilk, and a distributor of natural foods, called to say that sales of his tofu in Hawaii dropped about 15% after publication of Dr. Lon White's research. Two other tofu makers in Hawaii have told him that their tofu sales have decreased 30-40%–for the same reason. He moved to his present new address in July 1999.

Recently he and other tofu makers in Hawaii have gone on the offensive. They developed some tofu commercials for television (they may be the first ever), bought some air time, and promoted tofu. The ads were very positive. Local celebrities talked about why they like tofu and how they prepare it. Several doctors discussed tofu as a heart-healthy food. The ads did not refer to the issues raised by Lon White. Address: Owner, Natural Pacific Tofu, 15-205 Wiliama Place, Keaau (near Hilo), Island of Hawaii, HI 96749. Phone: 808-966-9579.

12147. Holland, Norman. 2000. Update on Northern Soy, Inc. (Interview). *SoyaScan Notes.* Aug. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Northern Soy, still run by Norman and Andy Schecter, has outgrown its present plant in Rochester, New York. They recently purchased 6½ acres of land, where they hope to break ground with a new tofu manufacturing facility in late-September. Eventually the new plant is scheduled to be 85,000 square feet, but phase one will be about one-third of that area. They have hired an engineer (who has designed food plant for General Foods, Cadbury-Schweppes, etc.) to work with Norman and Andy to design the plant and equipment. They plan to have a state-of-the-art facility. Up until now Norman and Andy have done all of the equipment design–and they have "rigged up" a very original and efficient system. They are considering building their own tofu equipment (with local tool-and-die makers) to get to the next level; if they buy a tofu system like Nasoya has, they believe it would sacrifice the quality of their tofu.

They have survived as tofu manufacturers while many other pioneers have gone into marketing or out of business. They now make 1,200 lb/hour or 60,000 lb/week of tofu. But their old plant is bursting at the seams. The new plant will eventually able to make 5,000 lb/hour or 250,000 lb/week of tofu.

Northern Soy has survived and prospered in three areas: (1) By making private-label tofu–marketed by other companies. They make all or most of the tofu for Whole Foods Markets (East Coast, Midwest, Colorado), UNFI (United Natural Foods–Stow Mills label), Trader Joe's (East Coast), Tree of Life, etc. They also have their own SoyBoy label. (2) By making baked and flavored tofu–in four flavors: Italian, Caribbean, Tofulin (Oriental), and Baked-Seasoned-and-Smoked. They probably outsell White Wave 4 or 5 to 1 on these products east of the Mississippi River. And (3) by making tofu-filled ravioli. They just bought a new $90,000 ravioli machine. They hired a fellow who had been for 20 years the vice president at Rosetto Foods–the largest ravioli maker in the world. They are very committed to ravioli since tofu and ricotta cheese are almost identical–but tofu has better health benefits.

Northern Soy pays and treats all of its workers very well, and has a superb benefits package. The workforce is extremely diverse–Jamaicans, Vietnamese, Hispanics, etc.–and loyal. There is almost no turnover. They have always worked toward being a company where work is respected in every sense. One recent record was when the first Jamaican person in world history curded tofu at Northern Soy.

Norman is still a vegetarian and he continues to believe that tofu has immense "planetary benefits." These benefits show up in ways that people just can't understand. It's like what the Buddha said about karma–"Don't ask me to explain it; it just works." Norman and Andy haven't been involved with the Rochester Zen Center for about 10 years.

Rich Products of Buffalo, New York, has visited Northern Soy and is interested in working together. Address: 545 West Ave., Rochester, New York 14611. Phone: 716-235-8970.

12148. Lee, Ken. 2000. New developments with yuba, soymilk, and tofu at Soyfoods of America (Interview). *SoyaScan Notes.* Aug. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyfoods of America still makes yuba and, in fact, cannot keep up with the demand. The fresh frozen sheets is their best selling yuba product; it is sold mostly to restaurants, where it is used like an egg-roll wrapper. The dried yuba sticks are used in soups. Ken is developing the equipment and a process for automating the yuba-making process.

The company's best selling product of all is Furama soymilk, sold in both the Oriental and Caucasian markets in the USA. Ken no longer makes tofu; he has House Foods make it for him under his label, since they are the lowest-cost manufacturer.

Two weeks ago Ken's company introduced a cultured soy beverage under the Trader Joe's label, in peach and strawberry flavors. It was developed by Tim Huang. Ken will soon introduce a similar product under his SoyWise brand. Address: President, 1091 E. Hamilton Rd., Duarte, California 91010. Phone: 626-358-3836.

12149. Cooper, Kim. 2000. Growing identity preserved (IP) soybeans in Canada (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been "IPing" (growing identity preserved soybeans) for about 15 years (i.e., since about

© Copyright Soyinfo Center 2013

1985). The pioneers in growing IP soybeans were Paul King (age 50-55) and his father (who founded King Grain, and who is now in his 90s) and W.G. Thompson & Sons Limited (Blenheim, Ontario). Kim worked for King Grain for about 9 years. During his travels, Paul saw the need for consistent soybeans. He realized there was no way that Canada could compete with the USA for bulk shipments, so he proposed that Canada start to develop niche markets. He got very interested in soyfoods, because he believed there was a real opportunity for Canada to supply tofu makers with soybeans of consistently high quality year after year. Today Canada has the largest and most sophisticated IP system for soybeans of any country in the world.

When genetically engineered soybeans started to be sold, the Ontario Soybean Growers (OSG) got chastised by the American Soybean Association for growing non-GMO soybeans and for not helping the advancement of GMO soybeans. When the ASA suggested that Canada stop this, they responded that they were simply trying to fill a need in the market.

When customers started asking for non-GMO soybeans, they simply became another of Canada's IP products; the infrastructure was in place. OSG is basically selling a process, which they show to their customers–from seed to grower to elevator. The customers are quite satisfied that they will get the soybeans they want, whether it is 0.1% non-GMO or 1% non-GMO or whatever. For customers in Japan and the UK, non-GMO is very important; for those in Hong Kong, only about 50% want non-GMO. Ontario's IP production and exports have been increasing. This growth is hard to measure because the acreage is grown by individual companies. Kim has been doing some informal surveys, which show that 30-35% of the larger farmers are growing IP soybeans, which are also a value-added crop. Throughout Ontario province, Kim would estimate that IP acreage accounts for about 20-25% of total soybean acreage, compared with less than 5% of America's total soybean acreage. So Canada is way ahead of the USA in growing IP soybeans. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

12150. Skiff, James. 2000. Seminars on identity preserved (IP) soybeans and non-GE soybeans organized by the American Soybean Association in Tokyo, Japan (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A Japanese law requiring selective labeling of genetically engineered (GE) soybean ingredients was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the ASA office in Tokyo, is extremely receptive to the needs of his Japanese customers, such as tofu makers.

The first conference on this subject was held in April 1999 in Tokyo; it was Jim Echle's idea. In about Jan. 1999 Echle visited Jim Skiff's non-GE soybean facility in Mattoon, Illinois. He told Skiff that he was thinking about having a seminar on Identity Preserved and non-GE soybeans in Tokyo and asked Skiff if he would be willing to participate; Skiff said he would like to. He did not yet have a date or place, but he had the idea before he visited with Skiff, because he had been approached in Japan by trade associations and manufacturers who were interested in obtaining non-GE soybeans. Skiff then suggested that Echle talk with Dr. Dennis Thompson of the Illinois Crop Improvement Association, who Jim relied on to test for and verify non-GE soybeans. Skiff took Echle to meet Thompson. Echle subsequently scheduled Thompson to be the keynote speaker at the seminar in Tokyo. It was held in April 1999 in the afternoon in a university auditorium near the ASA offices. Several Japanese also spoke. An interpreter was present. The ASA went out of its way to make the subject of the seminar Identity Preserved (IP) soybeans and seed certification rather than non-GE soybeans, since ASA has pushed so hard to try to make GE soybeans acceptable. In fact, Echle told Skiff not to mention non-GE soybeans and not to have any signs that mentioned them. About 150-200 people attended the seminar, which lasted approximately 4 hours.

After the seminar, the attendees went to a larger meeting room down one story in the same building where there was a two-hour informal expo and social hour with snacks. About 7-8 American companies, such as Jim's, had tables or booths. Most were selling specific IP soybean varieties. Only Skiff was focused on non-GE soybeans. Peter Shortridge from Northland Organic had a both next to Skiff's. Sandra, the USDA Officer in Tokyo, gave a little introductory talk, followed by the president of the Japanese Tofu Association. Because of his position with the ASA, Echle had to downplay non-GE soybeans but he also knew genetic engineering was a big issue in Japan. Skiff feels that he has developed a good relationship with Jim Echle.

The second such seminar was held in early June of this year (2000) in Tokyo. Dan Burke of Pacific Grain and Soy was the keynote speaker. Jim was unable to attend because he had to be at a show in Europe; he is not aware of a third seminar. Jim thinks that the Tokyo office of ASA has been the most responsive of all ASA offices worldwide to the needs of its customers for non-GE soybeans. In Europe, ASA has lost many customers. The last ASA director in ASA's Brussels office lasted less than a year.

ASA has done a great disservice to soybean growers by presenting a one-sided and slanted view, and by not keeping them informed of anti-GE sentiments and legislation worldwide. With better information, more American farmers would have started growing IP or non-GE soybeans–and probably profited thereby. The Ontario Soybean Growers in Canada have done a much better job of following a two-track policy. ASA still argues that there are only a few nuts like

© Copyright Soyinfo Center 2013

Greenpeace who oppose GE soybeans for no good reason, and that all rational people believe genetic engineering is a boon to soybean farmers and the inevitable wave of the future. But how about the Japanese and their law requiring labeling of GE ingredients? ASA should have followed a two-track, customer oriented policy. You want non-GE soybeans? Buy 'em from us. You don't care if the soybeans are genetically engineered? Buy 'em from us. Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

12151. *SoyaScan Notes.* 2000. Vacuum packaging tofu: Potential problems (Overview). Aug. 29-31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Quite a few brands of tofu and tofu products are currently vacuum packed in the USA. For example, Wildwood Natural Foods, Inc. in California makes about 43,000 lb/week of tofu products, of which about 20,000 lb/week (47%) are vacuum packed, including its plain tofu, smoked tofu, baked tofu, tofu burgers, and tofu cutlets. White Wave, Inc., in Boulder, Colorado, makes more than 120,000 lb/week of tofu and other soy products, of which approximately 40% are vacuum packaged. Lightlife Foods, Inc. in Massachusetts, makes over 150,000 lb/week of soy products, 100% of which are vacuum packed. There are many more regional and local producers in the USA. In Europe, even more tofu and tofu products are vacuum packed.

One U.S. tofu manufacturer has been asked by his state health department to discontinue production and sale of vacuum packed tofu until he can prove that it is safe. This state has seven rules for "reduced-oxygen packaging" (including vacuum packaging) of foods. Rule 2 is the most difficult for regular tofu to pass: "Potentially hazardous and perishable foods shall not be packaged in a reduced-oxygen atmosphere unless it possesses one or more of the following characteristics:

(a) A water activity (A_w) below 0.91. (b) An acidity of less than 4.6 pH. (c) High levels of competing, non-pathogenic microorganisms that prohibit the growth of pathogenic organisms, such as in raw beef, raw poultry, hard and semi-soft cheese... (e) Kept frozen at 0 degrees Fahrenheit (-18 degrees Celsius) or colder. (f) Another method of preservation approved by and on file with the department."

Rule 4 states that the "recommended last date of sale" (the "sell-by" date) "shall not exceed 14 days from processing..."

Rule 7 says that foods such as vacuum-packed tofu "shall be kept refrigerated at 40 degrees Fahrenheit or below."

At the annual Soyfoods Association Conference held 7-11 July 1982 at the University of Washington in Seattle, Dr. York (of the University of California at Davis) and Dr. Clifford W. Hesseltine (a world-famous microbiologist at the USDA Northern Regional Research Lab, Peoria, Illinois) gave a class on tofu packaging. According to William Shurtleff's notes, vacuum packaging of tofu was discussed at length and many questions were asked by participants. These notes state: "The growth of gram-negative oxidative bacteria is greatly slowed by vacuum packaging, but lactic acid bacteria grow faster; they are the main spoilage organisms for tofu. For tofu, a vacuum package is not really a vacuum package; it is just a negative pressure environment. Facultative anaerobes can grow in this environment. Botulism bacteria have great heat resistance, but they are poor competitors. They only grow well when no lactic acid producers are present. There is no need to worry about botulism in vacuum packed tofu unless you try to pasteurize the tofu after it is vacuum packed; that can kill the competing bacteria. Tofu has an average pH of about 6.2 (neutral) and water activity of about 0.95 (high). The foods that are potentially the most hazardous are those that are rich in protein and have a high natural water activity. In the long history of tofu, East and West, there are no known reports problems from or outbreaks of botulism. Water packed tofu that has been pasteurized is potentially more dangerous than vacuum packed tofu; the manufacturer should probably add a little lactic acid inoculation.

The book *Food Microbiology,* by W.C. Frazier and D.C. Westhoff (1978) states: "Botulism is a disease caused by the ingestion of food containing the neurotoxin produced by *Clostridium botulinium.* Between 1899 and 1972 there were 672 recorded outbreaks in the United States, involving 1,731 cases and 963 deaths." None of these was from tofu. The organism, a rod-shaped soil bacterium, is saprophytic, spore-forming, gas-forming, and anaerobic. Seven types are distinguished on the basis of the serological specificity of their toxins. Note that an anaerobic bacterium lives in an oxygen-free environment. Vacuum-packed tofu is not such an environment.

12152. *ASA Today* (*St. Louis, Missouri*). 2000. Food grade soybeans in Japan: The market for high quality, non-biotech soybeans. 6(9):4-page insert after p. 4. July/Aug.

• ***Summary:*** Across the top of each page this insert: "Demand for identity preserved soybeans grows in Japan." In a colored box on the lower right corner: "A special guide to profit opportunities, from the American Soybean Association, August, 2000." A color photo in the lower left corner shows a huge soybean with the words "non GMO" branded on it in brown, against a blue sky with white clouds. The caption (in both English and Japanese): "The Tokyo Grain Exchange launched the world's first Non-GMO soybean contract on May 18, 2000." Across the bottom of page one: "This publication is sponsored by Bayer Corporation."

The article begins: "Japan, the single largest customer for U.S. soybeans, and the world's largest importer of food

© Copyright Soyinfo Center 2013

grade soybeans, has passed a biotech food labeling law that will affect foods containing soy protein. Beginning April 1, 2001, foods containing biotech ingredients will be required to display a label informing consumers that the product includes genetically modified materials.

"Rather than marketing a consumer product with a GMO ingredient label, Japanese importers are already sourcing from the United States Identity Preserved (IP), non-biotech soybeans for use in tofu, and other soy foods, in anticipation of the new labeling law."

A sidebar on p. 2 titled "Market size" states: "ASA estimates that demand for identity preserved non-biotech soybeans for the tofu market in 2000 will equal about 500,000-700,000 metric tons (18-26 million bushels)– around 15-20 percent of total U.S. exports to Japan. This does not include about 300,000 metric tons (MT) of organic and premium grade soybeans, which have been grown for the Japanese market under high-value IP systems by U.S. farmers for many years."

A color photo on page 3 shows seven people standing together at "ASA's 3rd Annual Food Soybean Conference" which was held in Tokyo on June 13. One of the seven is Dan Burke of Pacific Soybean and Grain (San Francisco, California).

Note: Throughout this article the term "food grade soybeans" is used.

12154. Ernst, Mathew. 2000. Profiles in agricultural entrepreneurship: Iowa Soy Specialties, LLC, Vinton, Iowa. Lexington, Kentucky: University of Kentucky, Cooperative Extension Service. 12 p. Agricultural Economics-Extension Series No. AEC-2001-01. [13 ref]

• ***Summary:*** Contents: Introduction. The idea: Gathering information. Financing: Business formation. Process development: A different process. Market development: A new product and a new company, first customers, educating the brokers. Regulations: Non-GMO, certified Kosher. Managing growth: Forming partnerships and new companies, Hy-Vee alliance, sales and service expertise, research and development (Flour / TSP, soy oil). Conclusion. Acknowledgments.

"More than five years of efforts seeking to add value to the agricultural production in Benton County, Iowa, resulted in the formation of Iowa Soy Specialties, LLC, in 1997. Today, Iowa Soy is housed in three buildings with over 18,000 square feet under roof on the north side of Vinton, Iowa. The company is actively expanding its soy product line around the globe, enjoying the burgeoning market for soy food products.

"Three Benton County farmers are the principal investors and serve as the company's officers: Dave Van Steenhuyse (President), Homer Showman (Vice President), and Marlyn Jorgensen (Vice President)." "They wanted people to 'realize the health benefits of soy without having to eat tofu,' and their original goal was to make and sell soy flour as a baking ingredient and provide soy oil for use by large companies. They would use a mechanical process to extrude the oil from the soybeans." "Iowa Soy's initial stock offering was bought by 33 local investors."

"Iowa Soy became a half partner is Specialty Proteins, LLC, a company which manufactures the line of textured soy proteins sold by Iowa Soy. The other partner in Specialty Proteins, LLC, is the company which makes the equipment used in producing textured soy protein. Production is presently well underway. To enter the soy milk market, Iowa Soy aligned itself with a Minnesota company and soy milk producer [SunRich]. Production there has not yet begun due to a buyout and restructuring of the Minnesota company. Most recently [spring 2000], Iowa Soy has formed an alliance with WholeSoy Foods," an LLC headquartered in Des Moines; it will market the new soyfood products under the Heartland Fields brand name.

Sidebars: (1) Iowa Soy Specialties products. (2) Industry focus: The soy foods explosion. (3) Industry focus: Natural and health food markets. (4) Program focus: REVAMP (Rural Economic Value-Added Mentoring Program) and VAAPFAP (Value Added Agricultural Products and Processes Financial Assistance Program). Both trace their existence back to 1991, the year that the Office of Renewable Fuels and Co-Products (ORFAC) was established by the Iowa Department of Agriculture and Land Stewardship. (5) Program focus: REVAMP. Directed by Pat Paustian. (6) Program focus: VAAPFAP. Directed by Joe Jones. (7) Process focus: Dry extrusion. (8) New organic product introduction. (9) The organic audit process. (10). Non-GMO food claims. (11) "Spin-ff" companies from Iowa Soy: Specialty Proteins, LLC (formed in 1999 in partnership with company [Triple "F" / Insta-Pro] that manufactures equipment used to make textured soy protein. Startup operating budget: $900,000). WholeSoy Foods (Formed in

the spring of 2000 to market new soy foods under the brand name "Heartland Fields." Startup operating budget: $3.9 million). (11) Chronology of Iowa Soy Specialties growth (1991 to Summer 2000; 10 entries).

Note: As of 2006, Specialty Proteins appears (by a Web search) to be located at 1601 West D St., Vinton, Iowa. Phone: (319) 472-4555. However the Nutriant R&D Center is actually located there. Address: Extension Associate, Cooperative Extension Service, College of Agriculture, Univ. of Kentucky, Lexington, KY 40546.

12155. Jaret, Peter. 2000. Sumptuous soy: If you think it still means bland cubes of tofu, you're in for a surprise. New products make it a pleasure to add just the right amount of this potent disease-fighter to your meals. *Health.* July/Aug. p. 112-17.

• ***Summary:*** About the health benefits of soy, with many wise comments from expert soy cook Dana Jacobi. The first page contains a full-page color photo of edamame, with the caption: "Japan's favorite finger food is becoming an American fad."

A sidebar titled "Should anyone take soy pills?," by Jaret, argues that consuming soy in concentrated form–such as isoflavone pills–is not a smart idea. Experts agree. Address: Contributing editor.

12156. Pence, Joanne. 2000. Die Tofu-Connection [The tofu connection]. Munich, Germany: Ullstein Taschenbuchverlag. 338 p. 18 cm. [Ger]

• ***Summary:*** This detective novel is a German-language translation of *Cooking up Trouble* (HarperCollins Publishers, New York). Spending a week at an exclusive vegetarian restaurant in picturesque northern California with her friend Paavo Smith, food writer Angie Amalfi starts to feel romantic. But instead of tofu, the two find themselves surrounded by trouble. Address: California.

12157. Sigler, Josie. 2000. Controversy over soy and health builds. *Bluebook Update* (*Bar Harbor, Maine*) 7(3):4-5. July/Sept.

• ***Summary:*** Begins by discussing the "Special investigation" news story aired on 9 June 2000 by ABC News' 20/20 which questioned whether there was any danger in consuming too much soy. Dr. Kenneth Setchell expressed frustration over the way that the safety of soyfoods was depicted, arguing that there isn't any evidence to support the claims put forth. But Sheehan and Doerge cite many animal studies using rats and monkeys. Sheehan disagrees, arguing that we cannot extrapolate animal studies to humans. He adds that 18 million infants are consuming soy formula in the USA alone. If there was a problem, surely pediatricians would have noticed it.

Then discusses Dr. Lon White's study on "Brain aging and midlife tofu consumption."

12158. Seemo (H. Shapira); Kairava (J. Spaelstra). 2000. Re: Photos of the new Dakini Health Foods Pvt. Ltd. food processing facility in Pune / Puna, India. Letter to William Shurtleff at Soyfoods Center, Sept. 2. 1 p.

• ***Summary:*** This packet contains no letter, only 13 color photos of the new food plant. Most of these photos show the Indian employees working with the modern- and very sanitary-looking equipment, making tofu and soy tempeh, in a clean plant with white walls, a high roof, and a tile floor.

Four of the photos show: (1) Two Indian men cooling the soybeans on a tray before inoculation to make tempeh. (2) Joined by a woman, they measure the inoculated soybeans into plastic bags. (3) A list of products sold by the company: White tahini paste. Sesame butter. Peanut butter. Soy-tempeh. Tofu. (3) Kairava (J. Spaelstra) standing by a sink with a glass in her hand. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, Maharashtra, India.

12159. DiMartino, Christina. 2000. Mori-Nu seeks to educate consumers about the benefits of tofu. *Produce News* (*Fort Lee, New Jersey*). Sept. 11.

• ***Summary:*** The article begins: "One sure way to take advantage of what interests consumers today is for a company to focus on the health benefits of its products." Morinaga Nutritional Foods is doing just that.

A photo shows 4 types of Mori-Nu organic tofu "packaged in aseptic boxes," which assures consumers that the tofu will be fresh.

12160. Wright, Allison. 2000. Melissa's/World Variety Produce introduces new soy products. *Produce News* (*Fort Lee, New Jersey*). Sept. 11.

• ***Summary:*** World Variety Produce Inc. is the company name and Melissa's is their brand name. The latest soy products to hit retail market shelves are: (1) Melissa's Soy Slices (American, Jalapeño, or Mozzarella flavors). (2) Melissa's Organic Tofu (Soft, Firm, or Extra Firm). (3) In May the company introduced: Melissa's Soy Easy Gourmet Spread & Dip (Mediterranean Olive, Roasted Red Pepper, Slow Roasted Garlic–all are made with natural smoked tofu). (4) Soy Loaf.

Since last year, Melissa's has doubled its organic line from 40 items to 80. The number one trend in American foods is organic.

12161. Wright, Allison. 2000. Vitasoy to take 'Azumaya' and 'Nasoya' brands mainstream. *Produce News* (*Fort Lee, New Jersey*). Sept. 11.

• ***Summary:*** Vitasoy USA Inc. is taking tofu to new levels according to Executive Marketing Director Denise Garbinski. Vitasoy will have two new launches for both the organic (Nasoya) and conventional (Azumaya) brands. Also

© Copyright Soyinfo Center 2013

each brand will have seven new SKUs. Garbinski said the Nasoya brand commands over 30% of the tofu market and remains the best-selling tofu in America, according to AC Nielsen data for the 12 months ending Dec. 1999. Vitasoy is also coming out with new packaging for many of its Nasoya and Azumaya products. The new packaging will be fresher, brighter, and more mainstream.

12162. Jaret, Peter. 2000. Sumptuous soy: If you think it still means bland cubes of tofu, you're in for a surprise. New products make it easy to add this disease-fighter to your meals (Ad). *People.* Sept. 27.
• ***Summary:*** This 2-page article was reprinted–as a special advertising supplement–from the July/August issue of *Health* magazine (p. 112-17). Photos show: Edamame. Veggie burgers. A tall glass of chocolate soy milk.

12163. Business Communications Co. 2000. Soyfoods: Trends and developments. Norwalk, Connecticut. 137 p. Sept. *
• ***Summary:*** This study of the soyfoods market, No. R2-419, retails for $3,450. One section is titled "Whole soybean products." By type of product: Largest share and fastest growth–Soymilk. Next largest share and fastest growth–Tofu. Good share: Soy sauce. By application: Largest share–Substitute meat products. Fastest growth–Substitute dairy products. Industry structure: Market influences–Consumers, age/gender, media messages, health benefits, retailing outlets. Driving forces–Regulations, technology, price, niche marketing. Most active manufacturers–Market leaders, industry environment.
