"Installation of the equipment for the factory in Dining Hall 36 was started last week.

"The products will not be for sale. They will be manufactured solely for dining hall consumption.

"Gonshiro Harada, who operated a 'tofu,' 'miso' and 'shoyu factory prior to evacuation, will head the project. He will be assisted by Mineso Yamagami.

"The manufacture of 'shoyu' or soy bean sauce, in the factory may also be started in the near future, according to Dee Jay Hudson, mess management head."

1883. Idaho death index, 1911-1951: Saizo Ohta. 1943.
• ***Summary:*** Death certificate number: 133452. Date of death: 1 April 1943. Place of death: Hunt, Jerome Co., Idaho. Date of birth: 14 April 1881.

Note: Saizo died in Minidoka, in the internment camp in Idaho, for West-Coast Japanese during World War II. We are not told the cause of death.

1884. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1943. Vital statistics. 3(7):2. April 10.
• ***Summary:*** "Deaths: Ota, Saizo, 62, 35-12-B, April 1."
Note: We could find no obituary for this man who, with his wife, founded a tofu shop in Portland, Oregon. Such a brief (and therefore cold) mention of a man's death, without even the cause given, gives us a deep insight into the harsh and unrespectful nature of the "internment" camps.

1885. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1943. Production of tofu starts in Unit I. 11(24):1. April 14.
• ***Summary:*** "With successful test runs of tofu manufacturing processes made last Fri. and Sat. in Unit 1, located in the Industrial District South of Blk. 61, factory officially went

• ***Summary:*** This invention relates "to a process for

© Copyright Soyinfo Center 2013

imprisoning undesirable substances contained in the soya seed coat and germ.

"It is well known that the soybean is without peer as a valuable and wholesome source of dietary elements. For example, the soybean is the richest in protein of all the known feeds except dried egg white. It is also the source of many valuable products such as flour, bean cake, sauce, cheese [tofu] and oil.

However the soybean seed coat and germ contain, in addition to coloring matter, many other substances which impart undesirable properties to these final products... Most of these substances are either volatile or diffusible in the presence of moisture.

"These substances are present in the outer or so-called 'palisade' layer of the coat of the bean, which includes the region of the hilum (navel) where the palisade layer is double. Moreover, they are found in the germ of the bean and in fibrovascular bundle which binds the germ of the bean to the hilum.

"It is also known that approximately 1.0 per cent by weight of the palisade layer, and 2.0 per cent of the germ and fibrovascular bundle consists of phosphatides of an unstable type. This instability is caused by the presence in these compounds of highly unsaturated fatty acid radicals having as many as three or four double links [double bonds]. The oxidation of these compounds tends to impart rancidity to the finished product.

"For the above reasons soybeans in bulk tend to deteriorate rapidly and become rancid if the skin or germ is damaged."

The process: Treat the soybeans with a salt such as calcium sulphate in any suitable manner such as by dipping the beans in a solution of the salt. Then temper the heated beans by heating without cooking. This fixes the undesirable substances in the palisade layer and hilum of the seed coat and germ of the bean where, after storage and just before use or exposure to moisture, they can be removed by dehulling. Address: Chambersburg, Pennsylvania.

1895. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1943. Tofu for Rivers a possibility. 2(75):1. June 24.
• ***Summary:*** "The manufacture of 'tofu,' a form of food made from soy-bean curd, became a possibility as the project advertised this week for a 'tofu' manufacturing machine."

1896. Sakata, Fay. 1943. Center-made tofu wins favor here. *Denson Tribune* (*Jerome Internment Center, Denson, Arkansas*) 1(34):3. June 25.
• ***Summary:*** "Tofu is made from soy beans by Gonshiro Harada, a supervisor, and 12 helpers in Dining Hall 36.

"Divided into two shifts these 13 men work from 3 to 10 a.m. and 10 a.m. to 4:30 p.m. daily to prepare this food, so that every dining hall may have it on its menu once a week.

"With all equipment generously offered by Harada, production is about 600 cakes daily made from two sacks of soy beans."

1897. *Denson Tribune* (*Jerome Internment Center, Denson, Arkansas*). 1943. These fellows know their 'soybeans' (Illustration with caption). 1(35):3. June 29.
• ***Summary:*** This large illustration shows the inside of the tofu shop at the internment camp. The lower caption reads: "The manufacture of tofu for the Center's 33 kitchens is shown in the above sketch by a staff artist [A.K.]. Under the direction of Gonshiro Harada, 600 cakes of the soybean product are made daily. The factory is located in Dining Hall 36. Thirteen men are employed on the project."

• ***Summary:*** This book sells for $0.55 by mail. Address: 3477 West 6th St., Los Angeles, California.

1899. *Soybean Digest.* 1943. Japs eat rice and bean curd. June. p. 5.
• ***Summary:*** "The Japanese soldier in the field eats a highly nutritious, scientifically balanced diet particularly well adapted to his special needs and considerably better than the customary diet of the Japanese civilian, according to studies of captured Japanese army rations made at the Board of Economic Warfare. Food items tested include the standard ration biscuit, a health drink called "Mirin" containing lactic acid, a yeast preparation called "Florylin," wheat germ tablets, and a tinned ration labeled 'rice and soybean curd.'

"Rice and bean curd is a mixture of cooked rice and soybean protein flavored with shoyu sauce. Soybeans ground in water yield soluble proteins which form a solution known as 'soybean milk.' When boiled this forms a surface skin [yuba] due to the coagulation of proteins, and the skin when totally or partially dried is highly nutritious, containing valuable proteins which are considered a satisfactory substitute for fish or meat.

Note: The writer is confused about the difference between tofu and yuba. This food has nothing to do with yuba. It is probably vinegared rice in deep-fried tofu pouches (*Inari-zushi*).

"The rice and bean curd ration used by the Japanese thus offers an excellent combination of carbohydrate and protein. It is, in fact, a sort of cooked sandwich, in which boiled rice takes the place of bread and the soybean protein takes the place of meat."

1900. *Granada Pioneer* (*Camp Amache / Granada Internment Center, Granada, Colorado*). 1943. Tofu manufacture to get underway. 1(82):7. July 14.

© Copyright Soyinfo Center 2013

• ***Summary:*** "Kenzo Amamoto, 6E-4C, is currently supervising the construction here of equipment to manufacture tofu. Persons interested in working with Amamoto are asked to report to him or to the mess division immediately, announced Project Steward William Wells."

1901. Worden, William. 1943. Army's 'sleeping bag tester' earns admiration during junket in Alaska. *Hartford Courant* (*Connecticut*). July 20. p. 18.
• ***Summary:*** Lieutenant Robert D. Orr, of Evansville, Indiana, was a military inspector. He traveled to "bloody Attu," Alaska, Amchitka, and other inhospitable, freezing places. In Attu he was assigned to collect complaints about American equipment and souvenirs. His third and most important assignment was to collect "at least one of everything the Japanese soldier ate, wore or used in battle.

"He collected piles of everything, soy bean cakes, bayonets, rifles, fur-lined leggings, even the thousand stitch belts most Japanese soldiers wear as a sort of luck charm around their stomach."

Note: These soy bean cakes might be cakes of dried frozen tofu, which are light in weight, high in protein, and not perishable.

1902. *New Yorker.* 1943. Meat without bones. 19(24):14-15. July 31.
• ***Summary:*** A humorous article. "Governor Dewey's announcement that only the soy bean stands between New Yorkers and starvation made the soy as timely as Badoglio" [Pietro Badoglio, and Italian soldier and politician. As Prime Minister of Italy, replacing fascist dictator Mussolini, he signed an Armistice with the Allies].

"We immediately sent out our man with instructions to get the soy story and spare no expense doing it, and he has submitted the following facts. In the first place, it is true that a diet of soy beans and water will sustain life indefinitely; Governor Dewey could live on soy beans and water until he becomes president." This year the acreage will probably double or triple as "the result of the soy's publicized ability to take the place of meat and other protein foods that are now hard to get. In this country the soy is considered chiefly an article of civilian diet, but it is also included in military rations as an ingredient of such things as soups, gravies, and pie crusts."

"In China as well as Japan, soy bean curds are called 'meat without bones.'"

Soy bean oil can be used for pretty much any purpose, including a butter substitute and artificial rubber (which won't stretch but works fine as a doormat). The beans may be served as a "green vegetable. Put in a warm, steamy place, they shoot out sprouts, which make a nice salad. Soy-bean flour makes good muffins. Mixed with ten parts water, it turns into a palatable milky drink. From this milk several kinds of cheese and something like buttermilk may be produced. The dried bean can be used as a breakfast cereal, or, roasted and ground, as a coffee substitute.

"Soy meal with the oil removed has dozens of uses in industry... Soy-bean glue is now the preferred adhesive for pine and fir plywood, from which the Mosquito bomber is made. Soy beans can also, of course, be put in beanbags."

Note 1. This is the earliest document seen (June 2012) with the phrase "Meat without bones" (or a similar phrase) in the title; it is used to refer to tofu.

Note 2. Notice the interesting use of the terms "the soy's publicized ability..." and "the soy is considered..."

1903. *Manzanar Free Press* (*Manzanar Internment Camp, California*). 1943. Manufacture of tofu commences following delay. 3(62):1. Aug. 4.
• ***Summary:*** "Commencement of the manufacturing of tofu (bean cakes) got under way this week at block 1-20 after months of delay, according to the Industrial Division."

"Schedule planned: The Mess Division announced that a schedule has been planned whereby tofu may be distributed on block by block basis, beginning from block 1, since only about five to six blocks can be served daily.

"Tofu section is headed by S. Okugawa and assisted by Henry Toda."

"Shoyu production: Production on shoyu (bean sauce) got under way this week after weeks of experimentation and shoyu will be distributed to the Mess Division by the end of this week for local consumption, it was also reported.

"Out of five different brands of shoyu, a committee, consisting of Project Director Ralph P. Meritt, block leaders and mess hall chefs chose brand No. 2. Every brand was given a taste and cooking test, the Manufacturing division declared."

"Output unknown:... Rumors circulating around the center stating that Shoyu Supervisor Nobutaro Nakamura has turned in his resignation has been confirmed by this division. The name of the new supervisor has not as yet been disclosed."

1904. *Manzanar Free Press* (*Manzanar Internment Camp, California*). 1943. Residents taste home-made tofu. 3(63):1. Aug. 7.
• ***Summary:*** "Tofu, the first to be manufactured and distributed here, was distributed and served at the first five blocks on Wednesday, the Industrial Division announced."

"Alteration of the shoyu plant is now under way and the division hopes to get production started by the end of the week."

1905. *Topaz Times* (*Topaz Internment Camp, Topaz, Utah*). 1943. Around the circuit. 4(19):2. Aug. 14.
• ***Summary:*** From Manzanar Free Press [California]. "After months of delay, manufacturing of tofu (bean cakes) got under way, according to the industrial division.

1908. Hodges, Leigh Mitchell. 1943. Are you neglecting the wonder bean? Wartime food economy underlines multiple soybean values for both consumers and millers. *American Miller.* Aug. p. 36, 38.
• ***Summary:*** Discusses the work of Clive McCay at Cornell University, the Soya Corporation of America which is milling soya flour by a new process in Hagerstown, Maryland, and Dr. Artemy Alexis Horvath, "who under a Rockefeller grant, spent eight years in the Peking Union Medical College studying the more than 5000 different varieties of soybean which have been developed in China."

"The German scientist, Furstenberg, had a gift of prophecy in 1917, when he visioned the soybeans as 'the plant that is going to revolutionize the nutrition of humanity.' At that time Germany was importing more of them than any other country, mostly from Manchuria. One of Hitler's first acts after coming to power was to plan a 2,000,000-ton soybean reserve. He also arranged for vast soy plantings in Rumania and other Balkan countries. Part of this huge reserve has been used in the making of explosives and other chemicals. But most of it has been milled into flour which has proved invaluable in piecing out insufficient supplies of animal foods."

A photo shows students at Madison College in Tennessee making tofu and other commercial soybean products for general sale to the public.

1909. *Let's Live.* 1943. Japs eat rice and bean curd. Aug. p. 5.
• ***Summary:*** "The Japanese soldier is well fed according to the Board of Economic Welfare which has analyzed rations captured. Items tested were a standard ration biscuit... and a ration labeled 'rice and soybean curd.' This latter offers an excellent combination of carbohydrates and protein."

1910. *Granada Pioneer* (*Camp Amache / Granada Internment Center, Granada, Colorado*). 1943. Tofu factory near completion. 1(96):2. Sept. 1.
• ***Summary:*** "The center tofu factory is now nearing completion, and as soon as needed equipment arrives, tofu will be manufactured and served in the mess halls, announces Supervisor Kenzo Aamoto."

1911. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1943. Tofu debut seen in near future. 3(28):1. Sept. 4.
• ***Summary:*** "To be situated in the Blk. 22 laundry room the tofu plant will be operating by the end of next week, according to M. Yuki, foreman of the plant.

"With five persons working, approximately 600 cakes of tofu will be produced daily."

1912. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1943. Tofu manufacture begins Monday. 3(30):1. Sept. 18.
• ***Summary:*** "Manufacturing of tofu will get under way this Monday in the Blk. 22 [Block 22] laundry room, according to M. Yuki, foreman of the plant.

"Six workers will be turning out 500 to 600 cakes of tofu a day and distribution of the 'bean cake' will start from D.H. 1" [Dining Hall 1?].

1913. *Manzanar Free Press* (*Manzanar Internment Camp, California*). 1943. Reporters learn process in tofu making tedious. 4(12):4. Oct. 16.
• ***Summary:*** "Overcome by curiosity, three members of the Free Press staff recently visited the tofu factory at 1-20 to obtain first-hand information on tofu manufacturing."

The two supervisors explained that approximately 450 tofu cakes are being made daily by the eight split-shift workers who begin work as early as 5 a.m. Each cake is 3½ by 3½ by 3 inches. "Approximately 22 pounds of Virginia or Carolina grown soy beans are used daily."

The seven basic steps in the process are described. The soybeans are soaked, then finely ground in a grinder. This material is "put in a copper kettle measuring about 42 inches in diameter and about 22 inches deep and boiled in a 200 degree F. mixture" of water, lime, and oil for about one-half hour and stirred constantly. [After filtering] the hot liquid "is placed in a settling tank and mixed with brine. In about 15 to 20 minutes the mixture is ready to be poured into a form box where cloth has been applied and the water is forced out by pressure. After 20 to 25 minutes, the bean curds harden and are cut into squares and placed in cool water tanks, ready for mess hall distribution."

The food value [nutritional value] of tofu is given.

1914. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1943. Poston may get soybean milk. 16(8):3. Oct. 22.
• ***Summary:*** "Poston will soon have ersatz milk made from soybeans to alleviate the lack caused by the nation-wide milk shortage, if all goes well with the equipment which the Steward's department has obtained from Phoenix.

"At present it is planned to experiment with the milk substitute in Unit III only, in conjunction with the tofu industry which will supply the soybeans. If the milk agrees with Poston palates, arrangements will be made to have the milk made available to the other units.

"Soy bean milk has a higher protein content than cow's milk and is said to be richer in minerals."

1915. Kollmorgen, Walter M. 1943. The soybean goes to college. *Tennessee Planner* 4(1):15-20. Sept/Oct.
• ***Summary:*** The author was invited to lunch at Madison by E.M. Bisalksi, who is in charge of the food research and production program. The menu, typical of the meatless meals served on the campus, included: Meatless meat balls (Yum), fresh soymilk, Zoy-Koff (coffee substitute), margarine (75% soybean oil), and bread (made in part from soybean flour). "It should be noted that in the above menu animal foods and animal products are completely absent, with the exception of a small portion of cream used in the Zoy-Koff... Cans of Madison Foods substitutes for milk and meat carry the words "Contains no animal products." These food were not developed to stretch meat ration points during the war; some of them are nearly 20 years old.

Large photos on a 2-page spread show the following Madison products: Wheatasoy, Kreme O'Soy (sliced bread), Kreme O'Soy (canned soymilk), bottled soymilk, Yum, Zoyburger, Soy Cheese, Kreme O'Soy Butter Muffins, Stake-Lets, Not-Meat, Vigorost, and Zoy-Koff.

"Dr. Floyd Bralliar, Vice President of Madison College, has for years conducted experiments with soybean varieties. In this work he is closely associated with experts in the United States Department of Agriculture. Dr. Bralliar believes that Tennessee farmers can profitably devote more acreage to the soybean. He holds that canneries will do well to can more fresh soybeans..." Address: Research Director, Tennessee State Planning Commission.

1916. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1943. 'Tofu' manufacture in Rivers soon. 3(36):1. Nov. 13.
• ***Summary:*** "Equipment for the manufacture of tofu at Rivers has been purchased in California and should arrive within the next week, stated Project Director Leroy H. Bennett."

1917. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1943. Mess 45 to be turned into tofu factory. 3(39):5. Nov. 20.
• ***Summary:*** "Mess 45 has been chosen as the site for the tofu factory, announces John C. Doucha, assistant project director of operations.

"Equipment has already been purchased from Los Angeles, and is scheduled to arrive in a week.

"With steady procurement of soybeans, production will start at the rate of 1,000 lbs. per day as soon as plans for the general set-up are readied.

"H.E. Keadle, project steward, will temporarily supervise this project until Hoyt Martin, supervisor of industries, assumes full charge.

"The tofu factory crew will consist of six persons."

1918. *Granada Pioneer* (*Camp Amache / Granada Internment Center, Granada, Colorado*). 1943. Large-scale production of tofu to start. 2(7):1. Nov. 20.
• ***Summary:*** "The mess division promises to satisfy the appetite of tofu-hungry residents beginning next month when the center tofu factory will swing into full scale operation.

"Since last Saturday the tofu plant has only been producing a small supply of tofu which filled the needs of six mess halls at one time under the supervision of T. Nakagawa, states Ted Nakagawa, assistant project steward.

"Tofu, which is to be produced in the factory located in warehouse number 12, is made from ground soy beans and then prepared with 'ni-ga-li' [nigari]. The combined ingredients are placed in trays or boxes to form cubes. Tofu are [sic] always kept in water until distribution, K. Amamoto, foreman, revealed."

• ***Summary:*** "Tofu equipment has been shipped from California and should arrive here in a day or two, stated Project Director Bennet, who returned Sunday from a procurement trip to California."

1920. *Rohwer Outpost* (*The*) (*Rohwer Internment Center, Rohwer, Arkansas*). 1943. Production of tofu and miso starts here. 3(42):1. Nov. 24.
• ***Summary:*** "Production of tofu at the local factory in Block 42 will begin tomorrow. Distribution of tofu to the Mess halls will start next week.

"With about 600 cubes of tofu estimated to be produced in a day, delivery to each Mess hall may average about 100 cubes, once a week.

"At the Miso factory, seven 60-gallon barrels of miso are now being processed. Miso will be ready for delivery about the middle of January."

1921. *Gila News-Courier* (*Gila River Internment Center,*

© Copyright Soyinfo Center 2013

Phoenix, Arizona). 1943. Tofu factory progressing. 3(43):1. Nov. 30.
• ***Summary:*** "Tofu machinery for the forthcoming tofu factory in mess 45 arrived Friday, announced John C. Doucha, assistant project director of operations.

"Miscellaneous equipment, such as presses, work tables, benches, and the like, have yet to be built before the tofu production can commence. Requisition for the materials necessary the construct the equipment has been submitted and approved.

"A crew of two men, assisted by the mess 45 crew, is now working on the conversion of the mess to a tofu factory."

1922. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1943. Keadle gets facts on tofu delivery. 3(44):4. Dec. 2.
• ***Summary:*** "Project Steward H.E. Keadle returned Tuesday night from a trip to Poston [Arizona] where he went to get necessary data on tofu consumption and distribution.

"Poston has a smooth mess operation, according to Keadle. They are making soy bean milk as well as tofu, and Rivers will soon be making them too, he said."

1923. *Science News Letter.* 1943. Soybean curd makes good cottage cheese substitute. 44:360. Dec. 4.
• ***Summary:*** "Now that cottage cheese production has been curtailed, soybean curd can be used as a good substitute." This curd, made from soybean milk, can be "added like cheese to omelets, Welsh rabbit and creamed hard-boiled eggs, or served with other vegetables in hot dishes. Its mild, somewhat cheese-like flavor and soft texture" makes it a good as a stuffing for celery, pepper rings, or tomatoes, a garnish on salads, or mixed with salad dressing. It can also be rolled into balls and served on crisp lettuce.

There follows a description of how to make soybean milk and soybean curd on a home kitchen scale.

1925. Drown, Marion Julia. 1943. Soybeans and soybean products as food. *USDA Miscellaneous Publication* No. 534. 14 p. Dec. [1 ref]
• ***Summary:*** Contents: Introduction. Nutritive value of soybeans: Why soybean protein is important, minerals and vitamins of soybeans, the fat of soybeans–soybean oil. Recent increase in soybean production [in the USA]. Soybean products: Soya flour, soya grits, flakes and meats, soya with sausage and in soup. Soybeans as a green or dried vegetable: Varieties, growing and harvesting, preparation and cooking. Soybean "milk." Soybean curd. Soybean sprouts. (Note: A description is given of how to make the three previous foods at home.) Other edible soybean products (Soy sauce, Worcestershire sauce, soya crackers and breakfast foods, a coffee substitute, and salted soys [soynuts]).

"In 1942 nearly 210 million bushels of soybeans were produced on about 11 million acres [yield = 19.1 bushels/acre]. If the 4.6 million acres on which soybean plants were grown for forage and other purposes are added to this figure, only five other crops–corn wheat, hay, oats, and cotton–occupied more land in the United States in that year. These figures contrast strikingly with those of 1924, when less than 5 million bushels of soybeans were harvested from 448,000 acres" [yield = 11.16 bushels/acre]. Figure 1 shows soybean production in the USA (in million bushels) from 1924 to 1942. The rapid increase in production began in 1934. In 1942 production doubled as a result of wartime needs.

"Soybean meats are split or coarsely ground soybeans, dehulled and debittered. They are chiefly used in place of roasted peanuts in confectionery and baked goods, but they can also be cooked and eaten like navy beans.

Vegetable soybeans make an excellent Victory Garden crop. "The most suitable varieties for green shelled or dried beans have straw-yellow or olive-yellow seeds that cook easily and have a mild flavor." A table (p. 8) shows: "Some of the desirable garden varieties for green and dried beans, classified as to their length of growing season" (from Morse & Stuart, Nov. 1943). State experiment stations can usually supply information about the "seeds of vegetable varieties of soybeans... Many State experiment stations furnish pure cultures of soybean bacteria at cost, and commercial seed firms also sell them" (p. 9).

"When soybeans follow corn on fertile land, they should produce a good crop without direct application of fertilizers. The use of fertilizers, however, is recommended on sandy soils or soils of low fertility, the best results being obtained with stable manure or superphosphate and muriate of potash. Wood ashes may be used if the potash is not available."

Note: This is the earliest English-language document seen (May 2005) that uses the word "debittered" (or "debitter," "debitters," or "debittering") in connection with flavor problems in soybeans. Most early documents that used the term were written in German. Address: Associate editor, Bureau of Plant Industry, Soils, and Agricultural Engineering.

1926. Morse, W.J. 1943. Introducing the soybean. In: U.S. Food Distribution Administration, War Food Administration, ed. 1943. Soybeans and Soya Products. Program for Meeting of Interdepartmental Nutrition Coordinating Committee. 25 p. See p. 1-2. Dec. 7. [1 ref]
• ***Summary:*** The soybean has many uses. Fermented, it

© Copyright Soyinfo Center 2013

yields different sauces; "pressed, it gives oil for cooking; sprouted, it gives a fresh vegetable rich in vitamins; picked when green, it makes an excellent green vegetable; ground dry, it makes flour; soaked, ground, and with water added, it provides milk; and the curdled milk furnishes the famous bean curd–the boneless meat of the Orient–used in the form of various cheeses and as a meat substitute."

Note. This is the earliest English-language document seen (April 2013) that uses the term "boneless meat of the Orient" refer to tofu.

"Strange to say, the first published use of the soybean in the United States, other than for forage purposes, was as a coffee substitute by the Indiana Experiment Station in 1892 [sic, 1894]. It was revealed that an Indiana farmer and his neighbors had been using the roasted beans for coffee for about 8 years. During the past two years, as many of you know, the soybean has been sold as 'Coffee Berry", and 'Coffee Plant', and used extensively to blend with coffee."

"The soybean was first used for food in America, beginning about 1910, as a flour prepared chiefly for infant foods and for persons requiring a food of low starch content" [diabetics].

"In 1925 the American Soybean Association held its annual meeting in Washington [DC] and in the exhibit of products, the only articles of food shown were canned baked soybeans, diabetic and infant foods, soy sauce, and health soy flour. At the present time more than 50 different foods made wholly or in part from soybeans by about 200 manufacturers are on the market."

"Vegetable soybeans led the list of new vegetables planted in the rural gardens in 1942 in South Carolina. Approximately 2000 home demonstration club women in 44 of the 46 counties in South Carolina planted them in the vegetable garden for the first time. In the winter and spring of 1943, 10,000 one-pound packages of dry vegetable soybeans were sold throughout South Carolina." Address: Bureau of Plant Industry, Soils, and Agricultural Engineering, Agricultural Research Administration, USDA, Washington, DC.

1927. Horvath, A.A. 1943. The protein-phosphatide compounds of the soybean. In: Berkeley, California: University of California Press: Proceedings of the Pacific Science Congress. Vol. 6, No. 6 (Public Health). 747 p. See p. 449-51, 465. *

• ***Summary:*** It is popular food in Manila and in places where there are Chinese who manufacture it for sale. Soybean curd, on account of its high fat, protein, and mineral salt content, is called by the Chinese "meat without bones," or "the poor man's meat." This curd is known by a number of different names.

Note: Pacific Science Association is listed as the Corporate Author.

1928. Concepcion, Isabelo. 1943. Significance of soy bean in the dietary of Filipinos. In: Proceedings of the Sixth Pacific Science Congress of the Pacific Science Assoc. See vol. 6, p. 437-47. Held July 24-Aug 12, 1939. Berkeley, CA: Univ. of California Press. [26 ref]

• ***Summary:*** Contents: Foreword. Soya–The dispenser of work and bread. Botanical description of the soybean. Cultivation and manuring of the fields. Seeds and sowing. Nutritional composition and food value. Harvest, storage and use as silage. Enemies of the soybean. Economic significance of the soybean. Preparation of the soybean for use as food. Soya minestra (an Italian dish, also consumed in Switzerland). Soya beefsteak. Soya cutlets. Tomatoes stuffed with soya. Soy sauces–Japanese shoya [sic, shoyu] and Shimosa. Vegetable cheese [tofu]. Miso-cheese. Natto cheese. Soy coffee. Soy flour (Soja-Mehle, made by Morga S.A. or Ennat-Kappel, Switzerland). Soya cakes. Soya salad. Green vegetable soybeans (*Soja-Gruengemuese*). Soya Muesli. Soya Kasha (*Soja-Kascha*, the newest food for soldiers, athletes, and heavy laborers. It consists of a mixture of soy flakes, rolled oats, corn flakes, sugar, salt, and powdered milk). Soymilk (The first soymilk in Europe was made in Paris in 1882). Soy yogurt (*Soja-Yoghurt*). Soy cream for the tropics (*Soja-Crème-Tropenmilch*). Address: Dr. and veterinarian, villa Bel-Air, Corseaux (Vaud), Switzerland.

1930. Lee, M.P. 1943. Chinese cookery: A hundred practical recipes. London: Faber and Faber. 74 p. With decorations by Chiang Yee. 20 cm. Published in the USA in 1945 in New York, NY, by Transatlantic Arts, Inc. (74 p.).

• ***Summary:*** The Introduction (p. 12-13) notes: "The third important factor in Chinese cooking is the seasoning... There is an erroneous idea that soy bean sauce is indispensable to every dish of Chinese food. Soy bean sauce is only essential in braising, but Bovril, Oxo or Marmite, which has a vegetable basis, can be a good substitute when soy bean sauce is unobtainable. Soy bean sauce is not used in stewing at all. In semi-frying there are two styles, namely, the 'white' in which salt is used, and the 'brown' for which soy bean sauce is required. The most satisfactory way of applying soy bean sauce is to coat the meat slightly with very thin cornflour paste first and to apply the sauce in small doses a few minutes before serving. Soy bean sauce has a strong flavour of its own and would destroy the original taste of food if it were applied too liberally."

Page 69 gives a recipes for Bean curd with mushrooms and spring onions, seasoned with soy bean sauce. Page 72 lists the names and addresses of 7 Chinese restaurants and 2 Chinese food shops in London. Address: London.

1931. Mathews, R.H. comp. 1943. A Chinese-English dictionary. Revised. American ed. Cambridge, Massachusetts: Harvard Univ. Press. Published for the Harvard-Yenching Institute. xxiv + 1226 p. Index. 26 cm. [3 ref]

• ***Summary:*** This excellent dictionary, which romanizes Chinese words using the Wade-Giles system and arranged them in alphabetical order by sound, is a condensed version of the multi-volume dictionary by Giles, and a revised version of Matthews' 1931 dictionary. Soy-related characters include:

Chiang (No. 661, p. 90)–Soy [sauce], pickled vegetables, pickled bean curd (*chiang toufu*) [fermented tofu].

Fu (No. 1930, p. 285)–Tofu.

Ju (No. 3144, p. 473)–Milk. The breasts; a teat, a nipple. To suckle. *Fuju* ("rotten milk")–A milky preparation from beans. [Note: Probably fermented tofu].

Shih (No. 5805, p. 813)–Cantonese soy [sauce], salted beans [fermented black soybeans] eaten with rice, gruel, etc.

Note: This is the earliest English-language document seen (April 2012) that contains the term "Cantonese Soy," which apparently refers to soy sauce made in Canton, China.

Tou (No. 6478, p. 939-40)–See No. 6481.

Tou (No. 6481, p. 940)–Beans, oil expressed from beans, young bean plants, bean stalks, bean flour, bean curd, dried cakes of bean curd usually flavored with soy, underlings = bean curd officials, soft hearted, bean sprouts [mung]–used as a vegetable, bean pods, soy [sauce], bean-cake, four kinds of soya beans (ta-tou, hei-tofu, huang-tou), (*Glycine hispida*).

Note: At Mao (No. 4357, p. 614, meaning "hair") there is no entry for *Mao tou* = "green vegetable soybeans." Address: China Inland Mission, Shanghai.

1932. Rebelo Hespanha, Jaime. 1943. A soja: Cultura e utilizacao dos seus produtos [The soybean: Cultivation and use of its products]. Lisboa, Portugal: Livraria Rodrigues. 42 p. No index. [Por]

• ***Summary:*** Contents: Part I: Soybean culture. 1. Introduction: History and origin, botanical description, advantages of its cultivation for farmers. 2. Soybean culture: Climate, terrain, types of culture, seed and sowing, varieties and sub-varieties, seed characteristics, time of planting, manuring and fertilizing, precautions during cultivation, harvest. 3. Yields.

Part II: The products of soya and its utilization. 1. As human food: As a green vegetable (*como legume*), flour (*farinha*), milk (*leite*), cheese (*queijo-caseina* [tofu]), oil (*oleo*), the hulls (*bagaço*). 2. Feed for cattle. 3. Industrial products.

In Spanish the soybean is called "Soja, Soya, Haba, or Guisante de Japan."

In the section on soybean culture, pages 10-11 state: "For 20 years [i.e. since 1923], the soybean has been cultivated in Ribatejo, with the only goal of providing feed for cattle. The soybean is now being cultivated technically in Alentejo, in Baixo-Minho, and in parts of Estremadura. [Note 1. Ribatejo, Alentejo, Estremadura, Baixa, and Minho are all provinces of Portugal, according to the U.S. Board of Geographic Names for Portugal, 1961.] The land in these areas is well suited for growing soybeans. The most admirable initiative for the cultivation of soybeans in Portugal was undertaken by the Malange [Malanje] Agricultural Station (in Angola), which obtained a yellow variety that had been given an excellent classification in Germany.

"Soybean cultivation in Angola could be extensively spread, even among European farmers. The growing period does not exceed 145 days, and the yield averages 700 kg of seeds [per hectare], bringing a price of $25 (0.25 angolares) per kilogram. It would be good if the example given by the Malange Agricultural Station would spread to the [area around the] cities."

Note 2 This is the second earliest document seen concerning soybeans in Portugal, or the cultivation of soybeans in Portugal. This document contains the second earliest date seen for soybeans in Portugal, or the cultivation of soybeans in Portugal (1923 in Ribatejo). The source of these soybeans is unknown. The author was born in 1891.

Note 3. This is the earliest Portuguese-language document seen (April 2013) that uses the term *queijo caseina* to refer to tofu. Address: Major do S.A.M., Portugal.

1933. Ricino, soja y sesamo: Siembra, cultivo, cosecha e industrializacion de estas tres plantas oleaginosas. 2nd ed. [Castor-oil plant, soybeans and sesame: Sowing, cultivation, harvesting, and industrialization of these three oleaginous plants. 2nd ed.]. 1943. Buenos Aires, Argentina: Editorial Atlantida, S.A. 148 p. See p. 41-150. Illust. 17 cm. (Biblioteca de "La Chacra" Dirigida por Waldemar Martínez Pintos). [Spa]

• ***Summary:*** Contents: Introduction. Products obtained from the soybean (chart). As a human food. The seeds (*los porotos;* the soybean is called *poroto soja*). Green vegetable soybeans (*porotos verdes*). Soy flour. Soy oil. Soy sauce. Soy sprouts (*vastagos*). Soy milk (*leche vegetal*). Tofu (*queso*). Curd (*cuajada*). For livestock or cattle destined for slaughter. For sheep and poultry. Preparation of the seeds for obtaining oil. Utilization of the oil. Defatted soybean flour (*harina de torta*). Soybean cake for animals. Soybean cake for fertilizer. Other uses of the cake. The soybean for hay. For pasture. For silage. Address: Buenos Aires, Argentina.

• ***Summary:*** Contents: Introduction. The production of soya beans, by A.R. Saunders. The economic aspect, by S.J. de Swart. Use as livestock feed, by W.F. Bergh and L.L. Roux. Nutritional value and domestic use, by D.J.R. van Wyk and Miss T. Hoek (Mrs. P.J. Serfontein) (Composition, mineral content of selected foods, comparative analyses of selected foodstuffs, soya bean bread. Soya beans on the menu: 41 recipes). The industrial preparation and uses of soya bean products, by P.W.G. Groene woud (Edible soya-bean flour, oil, plastics). Address: South Africa.

1935. *Topaz Times* (*Topaz Internment Center, Topaz, Utah*). 1944. Construction of tofu plant begins. 6(2):1. Jan. 4.
• ***Summary:*** "The foundations of the tofu plant east of the hospital laundry began yesterday, according to George Shimamoto, construction engineer.

"The 20' x 60' [20 foot by 60 foot] plant is being built from a CCC [Civilian Conservation Corps] building." Note: The *Topaz Times* is printed using a mimeograph machine.

1936. *Sentinel* (*Heart Mountain Internment Center, Heart Mountain, Wyoming*). 1944. Tofu factory in operation. 3(2):8. Jan. 8.
• ***Summary:*** "A familiar food item on mess hall tables from the first of the year will be tofu, which is now being produced on a fairly large scale in one-portion of the bakery plant.

"A trial batch was made at the end of December, and tofu made its appearance on the New Year menu. Regular production got under way last Monday. The daily output is 800 squares.

"The staff of 12, which includes one woman, is divided into two shifts that work from 8 a.m. to 11 p.m. Supervisor of the plant, is Kichizo Umeno, former operator of a tofu firm in San Francisco."

1937. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1944. Tofu factory shifts to high. 3(63):1. Jan. 15.
• ***Summary:*** "A total of 3,515 cakes of tofu is being produced weekly at the tofu factory as mess 45 swings into full blast with its crew of 10 men, according to H.E. Keadle, chief project steward.

"Tofu is being distributed to Canal on Tuesdays, to Butte on Thursdays, to special diets everyday, and on Mondays, Wednesdays, and Fridays to the hospital. Nine hundred and twenty cakes are made on Tuesday for Canal, and 750 each on Wednesday and Thursday, 1500 in all for Butte, to be distributed on Thursday.

"Purchased from Colorado and now on hand are enough soy beans to supply the factory for six months ahead."

1938. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1944. 12,849 tofu cakes made here during Jan. 2(49):1. Jan. 29.
• ***Summary:*** "Supplying the center demand for the Japanese bean cake, the tofu manufacturing plant, located in the Blk. 22 laundry room, sent 12,849 cakes to the mess management during the last month. The plant is staffed with 8 workers.

"A pickling plant located adjacent to the hospital is making twice weekly deliveries of... *nappa tsukemono* to mess halls."

1939. *Rohwer Outpost* (*The*) (*Rohwer Internment Center, Rohwer, Arkansas*). 1944. Food: Tofu and miso top output. 4(8):1. Jan. 29.
• ***Summary:*** "Production reports from the Tofu and Miso factory for January were released through L.A. May, Head of Mess management.

"Ably headed by Foreman J. Yamaguchi, and staffed by 11 workers, the Tofu factory manufactured and distributed some 12,595 pounds of tofu for local consumption.

"Under Foreman G. Miyano, and aided by four employees, the Miso section produced 2,109 pounds of miso."

1940. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1944. Canal to start making tofu. 3(77):5. Feb. 17.
• ***Summary:*** "Tofu, which is being produced at mess hall 45 in Butte, will soon be in production at Canal, too, stated Mets Ando, chairman of the Canal Community Council.

"Ando had appointed a committee of three councilmen, Errol Ishii, Ben Iida, and J. Kirihara, to investigate ways and means to start production. The steam boiler and all equipment except a grinder are ready to go at the old dehydration plant, Ando said. He also hinted the possibility of making miso and shoyu."

1941. *Sentinel Supplement* (*Heart Mountain Internment Center, Heart Mountain, Wyoming*). 1944. Tofu, miso distributed to local residents. No. 176. March 2.
• ***Summary:*** "Distribution of green tea and miso from the Japanese Red Cross to the residents of the center will be completed this week-end, according to Minejiro Hayashida of the community council food committee.

"All blocks with the exception of 7 and 25, will receive 268 packages of tea and 70.56 pounds of miso."

1942. *Topaz Times* (*Topaz Internment Center, Topaz, Utah*). 1944. 1800 cakes of tofu distributed to mess halls. 7(4):3. April 12.

© Copyright Soyinfo Center 2013

• ***Summary:*** "The first batch for 1800 cakes of tofu made at the center tofu factory was distributed to the mess halls last Friday, according to Harry Konda of the industry section.

"The tofu plant... will produce enough tofu for the residents twice a week. Konda stated that there is approximately 7500 pounds of soy beans at the commissary tofu be used in the making of tofu. Tofu will me made on Mondays, Tuesdays and Fridays."

Note: By 12 Aug. 1945 tofu was still being made at the Topaz camp.

1943. *Granada Pioneer* (*Camp Amache / Granada Internment Center, Granada, Colorado*). 1944. Tofu factory needs help. 2(60):5. May 31.
• ***Summary:*** "Center tofu factory may have to curtail production unless five men are added to its deleted [sic, depleted] staff immediately, stated Yoshio Tsuruda of the mess division yesterday... Those interested are asked to apply at mess personnel office, or the employment office."

1944. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1944. Fire destroys tofu factory. 19(12):1. June 17.
• ***Summary:*** "An early morning fire destroyed the Unit I Tofu and Age factory at 5:30 a.m. Friday morning suspending the output of the beans products in Camp I. The fire started from the cooking oil where abura-age was being made by the early morning crew, according to Harley Woodhouse, assistant fire chief."

1945. Barthélemy, M. 1944. Contribution a l'étude du soya en France [Contribution to the study of soya in France]. Clermont-Ferrand, France: Jean de Bussac. 91 p. June 20. Based on his thesis, Strasbourg Univ., Faculty of Pharmacy. [34 ref. Fre]
• ***Summary:*** This is a published thesis, presented to the Faculty of Pharmacy at Strasbourg. Contents: Introduction. Part I: The cultivation of soybeans. 1. History of cultivation (its origin and importance). 2. Botanical characteristics. 3. Soybean cultivation in detail. 4. Conclusions. Part II: Chemical composition of soybean seeds. Proteins, lipids, oil and lecithin, carbohydrates (*glucides*), minerals, diastases, vitamins, sterols–soyasterol.

Part III: Utilization of soya as a food and in industry. 1. As food (nutritional value, whole soybeans, soy sprouts, roasted soybeans, soy coffee, condiments liquid and solid, soymilk, Li Yu Ying, products derived from soymilk {kefir, yogurt, tofu}, shoyu, miso, natto, soy flour, soy confections, recipes and formulas). 2. In industry: Oil, lecithin, cake. 3. Other uses of the plant.

Part IV: Laboratory work. 1. In human nutrition. 2. Animal feeds for the farm. 3. In industry. General conclusions. Address: Univ. of Strasbourg, France.

1946. Beau, Maurice. 1944. La caséine du soya (Glycinine) est-elle de la caséine? [Soybean casein: Does it contain casein?]. *Lait* (*Le*) 24(234-236):97-108. April/June. [14 ref. Fre]
• ***Summary:*** Contents: Soya milk and soya cheese (tofu). Soy caseine: Composition and properties (nutritional composition, amino acid composition), types and methods of preparation, various ways of utilization. Conclusions. Address: Ingénieur agronome.

1947. *Gila News-Courier* (*Gila River Internment Center, Phoenix, Arizona*). 1944. Tofu for peptic ulcers: Dr. Lawson. 3(139):5. July 11.
• ***Summary:*** "Dr. Grace Lawson, chief dietician, returned to the project Friday, after visiting the Topaz Relocation Center, Chicago, and Pittsburgh, Pennsylvania.

"Dr. Lawson attended the American Women's Home Association conference in Chicago at the Hotel Stevens, where she spoke on 'Tofu for the Hungry World.'"

1948. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1944. Diet patients to get tofu. 19(29):2. July 29.
• ***Summary:*** "The diet distribution (?) center at Block 21 40-A began distribution of tofu manufactured in Unit III, to the special diet patients of Unit I, Monday July 12."

1949. Anderson, George K. 1944. Make way for soy in your diet. *Hygeia* 22:525-26, 528, 530. July.
• ***Summary:*** Subtitle: "The little bean with the big reputation is here to stay–so you should know its many good nutritional qualities." In the Orient, soybeans are known as the "poor man's meat." "Others have called them the 'cow of China,' because the fluid milk or curd made from these beans has served as the only source of milk ever known to most Chinese babies aside from their mother's milk."

In 1943 the soybean was America's "fourth largest pay crop, with a total of 290 million bushels."

"More recently the cultivation of edible varieties or 'vegetable types' is gaining in popularity... They can be eaten either as a fresh vegetable, in the form of dried baked beans, or as any of the prepared products such as soy flour... Perhaps the easiest way to become acquainted with the soybean is to raise it right in your own garden... The shelled beans serve as a fresh green vegetable for table use and taste much like fresh lima beans."

Also discusses whole dry soybeans, soy sprouts, soy milk and curd, soy oil, margarine made from soy oil, soy flour, industrial uses of soybeans, and the nutritional value of the soybean and soyfoods. Soybeans now sell for approximately 12 cents per pound in most sections of the country and the flour is priced at 12 cents per pound. Soy flour is used in military rations and in Lend-Lease food supplies.

1950. *Gila News-Courier* (*Gila River Internment Center,*

© Copyright Soyinfo Center 2013

Phoenix, Arizona). 1944. Tofu factory to open again. 3(150):3. Aug. 5.
• ***Summary:*** "Canal's tofu plant is about to start again under the supervision of Yaiichi Nishi, who operated the tofu factory in Jerome, stated Hoyt Martin, superintendent of industries."

1951. Naval Medical Research Institute, Bureau of Medicine and Surgery 1944. Far Eastern nutritional relief (Japanese culture). OPNAV 13-18. Civil affairs guide. Restricted. Washington, DC: Office of the Chief of Naval Operations. vi + 19 p. See p. 4-13, 15-16. Aug. 15. 18 cm.
• ***Summary:*** From the title page: "Prepared by the Naval Medical Research Institute, Bureau of Medicine and Surgery, for Military Government Section, Central Division, Chief of Naval Operations." At the top of every page is written the word "RESTRICTED," which is also underlined for added emphasis.

Note: On 6 Aug. 1945 the U.S. dropped the first atomic bomb on Hiroshima, Japan. This manual was prepared about one year before that event. Therefore it appears that the U.S. believed, a year before the war was over, that it would win the war.

Page 4: Table 3. Proposed basic rations (daily intake per person). In the left column are the basic foodstuffs needed. Across the top are: Weight, calories, calcium, iron, vitamin A, thiamin, riboflavin, niacin. Soy sauce can be used as a source of salt. "Provisional emergency nutritional plan"–when the optimal diet is unavailable but a bare subsistence diet is all that is possible–for 2-3 months.

Page 5: Table 4, "Recommended emergency nutritional plan" includes soybeans and groundnuts as types of "Pulses"–of which 100,000 people will need 9.0 long tons per day.

Page 6: The basic Japanese food habits may be summarized as follows:

"(a) All Japanese, rich and poor, eat fair quantities of three types of food: rice, which provides bulk and carbohydrates; beans, especially the soybean, which provide protein and some fats; and pickled vegetables and fruits, which provide vitamins.

"(b) Fish is eaten by all, but only the more well-to-do eat it in quantity. It never replaces rice.

"(c) Fresh vegetables are common in the diet of all Japanese, although (as in other countries) the farmer probably eats more than the poor city dweller does.

"(d) Meat is not a major article of diet, although its popularity has increased greatly in recent years."

Azuki bean paste is also used as a covering on some rice cakes. As for salads: "A Japanese dressing of vinegar, soy sauce, and sugar on thinly sliced cucumber or cold, boiled spinach would be more in keeping with Japanese food habits."

Page 7: "Fried bean-curd (*age*) is sometimes served with boiled rice (*gohan*)." Discusses various types of sushi.

Page 8: Including inarizushi (with fried bean curds).

\ Note 1. This is the earliest English-language document seen (April 2013) that contains the word *inarizushi* (one word without hyphenation). "3. Beans (*Mame*). Beans are almost as important as rice in the Japanese diet. The two most important beans are the soybean (*daizu*), and a small red bean (*azuki*)."

Page 9: "The soybean forms the basis of the salty miso paste which in turn is the basis of bean soup or misoshiru. This bean soup, together with rice and pickles, is the standard breakfast throughout the country, and is eaten as part of dinner by millions of Japanese. Added to the thick salty soup are various bits of vegetable and fish which the housewife may have available.

"In cities miso is made by specialists and sold in small food shops, but each summer in the country every housewife makes her own annual supply.

"Soy sauce or shoyu is of vital importance in the Japanese diet. This is used as a sauce for fish, for rice dishes, and for meat dishes. It is to the Japanese what salt is to us, an indispensable adjunct to any meal. Any strange food might be made palatable if there were soy sauce to go with it.

"Tofu is a third important soybean product. This is a bean-curd cake. As a rule it is prepared in square blocks by special tofu makers who peddle it to the neighborhood. It forms a substitute for fish at a modest meal. The flavor and consistency of tofu vary with the region and maker. Tofu makers often raise pigs on the waste products of tofu making.

"The small red azuki beans are made into paste and used as stuffing for rice cakes, and the beans are sometimes mixed with rice on festival occasions. Azuki beans are in the nature of a minor special treat."

"Most farmers grow at least part of the beans they need.

"4. Pickles (Tsukemono or okoko. 'fragrant thing'). Almost nothing is served in Japan without some pickled product to go with it as an appetizer. Thus, pickle is served with all ordinary meals, with boxed lunches (bento), or often together with tea or wine at meals.

"The commonest form of processed pickle purchased in shops is pickled radish or daikon. (The pickle itself is called *takuan*). Another common form is pickled plum or umeboshi."

Page 10: "Fish and shellfish often form a part of sushi, which is plain rice flavored with vinegar, with slices of fish, shellfish, or omelet laid on top or rolled in seaweed or fried bean-curd. Fish are also eaten in soup, especially a clear soup with chunks of the fish in it."

Page 11: Fruits and vegetables include "(f) Konnyaku (paste made from the starch of the plant 'devil's tongue')." "Konnyaku is boiled and processed into squares and sold–then cooked in soy sauce or soup. It is also used in shredded form."

© Copyright Soyinfo Center 2013

Other vegetables include "(d) Bean sprouts (*moyashi*)."

Page 12: "Most vegetables are boiled and eaten with soy sauce and a little sugar. They are frequently put into soup, cooked into a stew, chopped up and mixed with rice, or pickled."

Page 13: "Salt (brine production) is used generously in making miso and green vegetable pickles. Salt is a government monopoly and is sold at little or no profit."

"8. Meat. Such meat dishes as sukiyaki, using either beef or chicken, are common in middle and upper-class urban families. Soy sauce is an important element in cooking sukiyaki. In general, before the war beef and pork were coming to be eaten more and more among the poorer classes, especially in cities."

Page 14: "Major Japanese dislikes" include:

"(a) Entrails and internal organs of cattle or pigs, e.g., livers, tongue, or brain. (b) Lamb (said to smell). (c) Mutton. (d) Cheese (strongly disliked by most Japanese). (e) Milk and butter would be hard to make acceptable. This applies to foods fried in butter..."

Page 15: "11. Field recommendations:

"(a) Basic food habits are ingrained early in childhood. Food is a center of anxiety and fear. In times of war and calamity. Thus, food will be subject to wild rumor and constant criticism.

"(b) The cultivation of gardens should be encouraged.

"(c) So far as Japan is concerned, a general supply of fresh pickled vegetables and shoyu will go a long way toward making even the handouts of a conqueror palatable.

"(d) Because food habits are often difficult to change, it would probably be helpful to enlist local assistance in the preparation and distribution of food supplies. Cooks make excellent anthropologists. Given any food, a Japanese cook would manage to Japanize it. For instance, in cooking vegetables Japanese use soy sauce and sugar, not salt and butter. Similarly, spaghetti in tomato sauce or macaroni in cheese would not be acceptable. Cooked in soy sauce, sugar and dried bonito shavings, however, it would probably be eaten, as in this form it would be similar to Japanese soba or udon."

Table 5, "Composition of Japanese foods per 100 grams (Ready to be eaten)" includes: "Bean-curd omelet. Pea curd. Bean curd (*Tofu*). Bean residue [okara]. Sprouted beans (5% protein)."

Page 16: Table 6 (8 columns), "Production and consumption of foodstuffs in Japan proper–1936" includes rice, wheat, barley, other cereals, soybeans, other beans,... For each food is given: Name of food. Area (1,000 acres). Value of production (million yen). Production (million pounds). Exports (million pounds). Imports (million pounds). Total (million pounds). Consumption per capita (pounds; Rice: 350.9. Wheat 42.2. Barley 36.3. Soybeans 27.2. Fish 67.3. Meat 4.8. Eggs 5.9. Dairy products 0.8, but fresh milk, of which consumption amounted to 1.04 gallons per capita, has not been included). Extensive notes accompany Table 6.

1952. Taylor, Demetria M. comp. 1944. The soy cook book. New York, NY: Greenberg. 215 p. Index. 21 cm. [2 ref]

• ***Summary:*** Emphasis on recipes using soy flour, sprouts, and whole dry soybeans. Contains one of the most complete early listings of commercial soyfoods products, with product name, and manufacturer name and address.

Contents: 1. Soy–The wonder bean. 2. Growing soybeans in Victory Gardens. 3. How to sprout soybeans. 4. How to cook soybeans: Green soybeans preservation, canning, dehydration, quick freezing, dried soybeans, soybean pulp or "mash" (cooked, crushed or finely chopped soybeans), soybean milk and soybean curd or "cheese," recipes for dried soybeans, recipes for canned soybeans, recipes for soybean pulp, roasted soybeans or soynuts (p. 45), soynut butter (p. 47), recipes for soybean milk and mash [okara]; "It makes a good base for macaroon-type cookies" (p. 50), recipes for soybean curd or "cheese" (tofu). 5. How to use soy flour. 6. Using soy grits and flakes. 7. Stretching meat with soybeans. 8. Using other soy products. List of [commercial] soybean products (p. 199-202). Key to recipe sources.

Chapter 2, "Growing soybeans in Victory Gardens," states (p. 4): "In general, all varieties may be classified under two main types: the field type and the edible or vegetable type. The latter type is the one which is of interest to the Victory Gardener, although a few field varieties, such as Illini or Manchu, are satisfactory for eating purposes." Varietal trials (p. 5-8) with four type-A vegetable varieties (suited for cooler, northern climates) show: In mountainous Colorado, all four varieties matured seed at altitudes of 5,000 to 7,000 feet. In Idaho, all four varieties matured seed at altitudes of 1,700 to 3,745 feet. In Montana, Giant Green soybeans matured seed at altitudes of 3,000 to 4,900 feet. In Wyoming, Giant Green was the only variety to mature seed in Campbell county (4,600 feet) and in Park county (4,600 feet). But all four varieties matured seed in Johnson county at an altitude of 3,750 feet. Giant Green also did well in Utah and New Mexico at altitudes of 7,000 to 8,000 feet. In California, 11 counties reported success with vegetable-type soybeans. In Tucson, Arizona, 8 varieties were grown under irrigation at an altitude of 2,400 feet, all with satisfactory yields. Some varieties also did well in Canada. In St. George, Ontario, Giant Green, Bansei, Fuji, and Willomi all matured seed before killing frost. Bansei was the best producer. In Barrington Passage, Nova Scotia, Fuji was the only variety that produced pods before frost. At Bogot, Manitoba, only Giant Green matured seed before frost, but Fuji reached edible condition. At Swift Current, Saskatchewan, the season was evidently too cool for soybeans. Page 142 states: "Soy grits and soy flakes are made from soybeans in much the same way that soy flour is made. However, they contain almost no fat, and are ground more coarsely. Grits are like

© Copyright Soyinfo Center 2013

corn meal in texture, while flakes resemble rolled oats. Grits and flakes both contain less than 45 per cent protein."

Note 1. This is the earliest English-language document seen (Dec. 2012) that contains the word "soynuts." On pages 45-49 the book gives recipes for: Cream of soynut soup (using 1 cup Co-Op soynuts), Soynut rice loaf. Soynut honey buns. Soynut brownies. Soynut butter. Economical soynut brownies. Soybean brittle (using 1 cup chopped roasted soybeans).

Note 2. This is the earliest English-language document seen (Dec. 2012) that contains the term "soynut butter," used to refer to a product resembling peanut butter that is made from roasted soybeans. The recipe for "Soynut butter" (p. 47) states: "Grind 2½ cups of roasted Vee-Bee soybeans and mix with 2 tablespoons of salad oil. Use in place of butter or as a sandwich spread." On p. 197 is a recipe for Mull-Soy "ice cream."

1953. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1944. New tofu plant replaces ruins. 20(17):2. Sept. 9.
• ***Summary:*** "Reconstruction work on the tofu factory is going forward, announces C.E. Snelsor, chief steward.

"Because the plant was destroyed by fire earlier this year (June 17, 1944), tofu production had been discontinued in Unit I.

"Under the supervision of Henry Miwa, tofu foreman, the old building will be torn down and a new tofu factory will be constructed at the former site."

1954. Butler Food Products. 1944. New foods from the wonder bean (Ad). *Soybean Digest.* Sept. p. 11.
• ***Summary:*** A full page ad. "Mean a greater demand for soybeans and high prices for soybean growers." "Butler's Soya Butter was developed to meet the specific need of those who have allergic reactions to dairy products and for those who wish to maintain a strictly vegetarian [vegan] diet. Only Butler's Soya Butter can fill the above specific need. Butler's Soya Butter is available only to Health Food Stores and other outlets catering to those whose diet requires specialty foods." Photos show cans of each of these five Butler products: Butler's Soya Cheese [tofu]. Butler's Vegeburger. Butler's Soya Nut-Loaf. Butler's Vegetarian Chops. Butler's Soya-Butter.

Note: This is the earliest English-language document seen (Jan. 2007) that uses the word "Vegeburger" to refer to a meatless / vegetarian burger. Address: Cedar Lake, Michigan.

1955. **Product Name:** Butler's Soynut Cheese.
Manufacturer's Name: Butler Food Products.
Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.
Date of Introduction: 1944. September.
Wt/Vol., Packaging, Price: 1 lb can.
New Product–Documentation: Ad in *Soybean Digest.* Sept. p. 11. "New Foods from the Wonder Bean." Sold in 1-lb cans. Company founded in 1939 by Howard O. Butler.

1956. Loosli, J.K. comp. 1944. Manufacturers and distributors of soybean products (Brochure). In: New York State Emergency Food Commission. 1944. 4 p.
• ***Summary:*** The names and addresses, of sources most readily available to the New York State trade, appear under the following headings: Soy flour and flakes: Manufacturers, wholesale distributors. Flour mixes for pancakes, muffins, etc. Dry soybeans: For cooking, for sprouting. Canned soybeans. Sprouted soybeans (LaChoy Food Products, Inc., Archbold, Ohio. Most Chinese restaurants).

Note: This is the earliest document seen (Jan. 2013) stating the LaChoy Food Products sells sprouted soybeans.

Macaroni, spaghetti, noodles (The Pfaffman Co., 6919 Lorain Ave., Cleveland, Ohio). Beverages. Bakery products: Soy bread, Soy cookies, crackers, wafers, etc. (Incl. Cubbison Cracker Co., 3407 Pasadena Ave., Los Angeles, California. Tom Soya Foods, Inc., P.O. Drawer 510, Williamsport, Pennsylvania). Breakfast cereals (Soyawheat, Soyawheat Co., Red Wing, Minnesota. Tom Soya Puffs and Exploded Soybeans, Tom Soya Foods, etc.).

Soybean curd [tofu] (International Nutrition Laboratory, P.O. Box 326, Mt. Vernon, Ohio). Meat-like products (The Battle Creek Food Co., Battle Creek, Michigan. Madison Foods, Madison College, Tennessee. Natural Health Products, 143 W. 41st St., New York, New York). Soups. Soy nuts (Dewey Food Products, Inc., 2251-3 N. Knox Ave., Chicago, Illinois. La Choy Food Products, Inc., Archbold, Ohio. Soybean Products Co., 9025 Monroe, Chicago, Illinois. Tom Soya Foods, Inc., etc. Vegetable Products Co., Rochester, New York). Spreads. Address: Vice-Chairman, Soybean Committee, Cornell Univ., New York.

1957. Moulinier, André. 1944. Essai d'utilisation de la graine de soja dans la fabrication des milieux de culture [Attempt to use soybean seeds in making culture media]. Lyon and Villeurbanne, France: Printed by Association Typographique. 59 p. 25 cm. [19 ref. Fre]
• ***Summary:*** The title pages states that this is the published version of the author's PhD thesis at the University of Lyon, Faculty of Medicine and Pharmacy–No. 357. The work was done at the university's Laboratory of Hygiene. The thesis was presented and defended before the Faculty of Medicine and Pharmacy (section of pharmacy) on 13 Dec. 1944 to obtain the degree of Doctor of Pharmacy. The author was born on 23 April 1920, at Firminy (Loire).

Contents: Preface. Part I. 1. Principal vegetable media used in bacteriology. 2. Overview of the soybean: Botanical origin, geographical origin and distribution, cultivation, chemical composition.

Part I: Experiments. 3. Attempts to use the soybean in

© Copyright Soyinfo Center 2013

bacteriology: Soy bouillon, solid media, bouillon of soy peptone, attempt to use all of the albumins, soymilk–its preparation and utilization, tofu (*petit lait de soja* = little soymilk). Interpretation of results. Conclusions. Address: Pharmacy intern at the Hospital of Lyon (France), certified in microbiology and hygiene, ex-monitor of practical hygiene works.

1958. Anderson, Hans Steele. 1944. The new food therapy: Diet and the healing art. Maitland, Florida: Printed by The Academy Press. 165 p. See p. 37-38, 64-66, 85-86, 89, 118-19. 23 cm.

• ***Summary:*** This is a rewritten and enlarged edition of the author's *Food Therapy: Diet and the Healing Art*, published in 1942. The author, apparently a Seventh-day Adventist, was born in 1877.

Pages 37-38 contain a discussion of soya bean products (including Soya Lac, which is alkaline in reaction, and is made by the International [Nutrition] Laboratory, Mt. Vernon, Ohio). There are home-scale recipes for: Soybean milk no. I (made from soybean flour). Soybean milk No. II (made from powdered soybean milk–Soya-Lac). Soy butter substitute No. I (made by blending soybean flour, soybean oil, and a few drops of dandelion butter color with a Dover beater). Soya bean butter substitute No. II (made by blending Soya-Lac powdered soybean milk with soybean oil; refrigerate). Soybean cheese, made by curding hot soybean milk with a little citric acid. "Season with rich soybean milk and salt as you would flavor ordinary cottage cheese and serve."

Pages 64-66 give nutritional information on soybeans and soy-products, and compare soybean milk with cow's milk. "As a source of wholesome food constituents, the soybean probably has no peer... Soya bean milk contains more food mineral and vitamins than cow's milk; is alkaline in reaction; has a greater proportion of calcium; and forms into smaller curds in the stomach. Soya milk, moreover, is far cheaper than cow's milk and may be prepared fresh as required, and can be seasoned to suit anyone's taste."

Other soy-related recipes include: Soybean-wheat muffins (p. 85-86). Use of soy bean flour in wholewheat bread (p. 89; it can be substituted for up to 25% of the wheat flour).

In the chapter titled "Diet and the healing art," under "Lecithin," pages 118-19 note that "there is a new food factor called lecithin which promises to become a factor of importance on account of its being essential for reconstruction and for the maintenance of vital organs, including the brain, nerve forces, heart and liver. Oil that is contained in the soybean is comparatively rich in lecithin and vitamin A and in this respect it is said to resemble butter. Cow's milk proves rather deficient in lecithin whereas soya milk is fairly rich in this essential constituent. Nutritional anemia which has been brought about through an exclusive use of cow's milk may be quickly eradicated by a liberal use of soybean milk."

1959. Bordas, Jean. 1944. Le Soja: Agronomie du soja, utilisations agricoles et alimentaires, usages industriels, économie du soja, état actuel de la question en France. Dieuxème ed. [The soybean: Agronomy, agricultural and food uses, industrial uses, economics, and present status in France. 2nd ed.]. Montpellier, France: Dubois et Poulain. 32 p. The 1st edition (36 p.) was published in 1937. [39 ref. Fre]

• ***Summary:*** Contents: 1. Introduction (he notes that World War II is "the war we have just lost"). 2. Soybean agronomy: Botanical characteristics, varieties (in Japan, China, Manchuria, USA), acclimatization trials in Europe, soybean cultivation (incl. inoculation), 3. Food and agricultural uses of soya: Chemistry of the soybean, alimentary physiology, as a feed for animals (soybean cake, forage, soybean seed and flour, soymilk mixed with 25% animal milk), other agricultural uses, as a human food (soy sprouts, tofu, fermented tofu, smoked tofu, how to make tofu), condiments–sauces (soy sauce, miso, tuong of the Annamites, soy coffee, provisions / rations), human therapy (incl. infant foods).

4. Industrial uses: Soybean oil, casein, plastic materials (Sojalithe), vegetable lecithin, cellulose, sterol.

5. Soy in the economy: Production, imports and exports.

6. The present state of the soybean question in France–Conclusion.

A full-page table (p. 7) shows varieties developed and acclimatized to various countries. France: Rouest 29. Rouest 250. Rouest 104. Rouest 14. Rouest 71. Rouest 60. Rouest 178. Rouest 16. Rouest 36. Rouest 85. Rouest 6. Rouest 67. Rouest 40. Rouest 500 M. Rouest 13. Vilnensis.

On page 8 is an interesting map of France which shows: (1) Twelve centers of agronomic research. (2) A shaded zone which is the area of optimal production of soybean seeds. It is in the southeast of France and along the eastern side of France all the way to the northern border. This zone includes (from southwest to northeast) the following centers: Toulouse, Montpellier, Avignon, Antibes, Clermont, Dijon, and Colmar (in Alsace).

Pages 5-6: The first trials made by the agronomic stations in France date from 1901. Mr. Lechartier, director

© Copyright Soyinfo Center 2013

of the station at Rennes, concluded at the end of his observations, that the production of soybean seeds would be more advantageous in a climate that was drier and warmer than that of Brittany (Bretagne).

These were the same conclusions that Mr. Brioux, director of the agronomic station at Rouen, arrived at some years later.

Starting in 1924 the agronomic station at Avignon, the central station for plant improvement at Versailles, in 1935 the stations at Colmar, Clermont-Ferrand and Dijon, and in 1940 the School of Merle (Bouches-du-Rhône), established soybean [germplasm] collections which originated in many different places, in order to test the earliest and most productive varieties that were adapted to each region.

Rouest and Rondet in the south of France, Dr. Balzli in Alsace and de Guerpel in Normandy were the main agronomists and selectionists who were passionately interested in the cultivation of Soya in France.

Note: Rouen is the historic capital city of Normandy, in northern France on the River Seine. Address: Ingénieur Agronome, Directeur de la Station Régionale de Recherches Agronomiques d'Avignon, France.

1960. De Gouy, Louis Pullig. 1944. The bread tray. New York, NY: Greenberg. vii + 463 p. Foreword by Dorothy Thompson. 21 cm.

• ***Summary:*** This is a book about bread. The 1st chapter is "A short history of breads." The chapter titled "Soy flour breads and biscuits" (p. 401-24) includes the following (p. 404-05): In New York's Chinatown, stroll inquisitively along Mott, Pell, and Doyer Streets, and you will see how important the soy bean is in everyday Chinese life. "Fresh bean sprouts–some from soy and some from other beans–stand in large hampers in the shops; on the shelves around them are jugs and bottle of soy sauce, for the kitchen or the table."

In Chinese shops corresponding vaguely to our delicatessen stores you will see *Teou-fu,* or *tofu,* made fresh daily, in cream-white cakes like Philadelphia cream cheese, kept cool and moist in pans of water. It is made from soy bean milk much as cheese is made from cow's milk or goat's milk, and it was a staple commodity in Chinese cities more than two thousand years ago. The Chinese prepare it for breakfast, dinner or supper in many ways, and a favorite form is ready for you in the shops–*Tsa tofu,* the little cheeses fried in deep fat [deep-fried tofu puffs], that look like well-browned and rather robust doughnuts without holes. You can get them hot from the kettle and eat them with syrup or without; a Chinese laborer finds them sustaining and satisfying as a noon-hour meal."

Note: This is the earliest English-language document seen (April 2013) that contains the term *Tsa tofu,* a type of deep-fried tofu.

"*Tofu nao* is of custard consistency and is eaten in soups and as a custard; *Chien chang,* or thousand-fold *tofu,* is made in thin layers rolled together and cut up like noodles for soup or fried in sesame oil. A brown, dry *tofu, Hsiang khan* [pressed tofu] is colored and flavored with caramelized millet sugar and eaten with soups and salads. There are many forms of preserved *tofu cheese:* smoked, salted, spiced and packed in wine and brandy to be used in cooking or as a delicacy like cheeses of the Western World. *Yuba,* as old as soy beans from which it is made, is the dried creamy film from boiling soy milk, sold in flakes or sheets, or rolled into "bean sticks" [dried yuba sticks], and it has been one of the most popular commodities in China and Japan for centuries."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "preserved tofu" or the term "tofu cheese" or the term "preserved tofu cheese" to refer to Chinese-style fermented tofu. Address: Chef Steward, Consulting food editor of *Hotel Management* and *Restaurant Management* magazines, food columnist of *Gourmet* magazine and author of various cook books.

1961. Hauser, Bengamin Gayelord. 1944. Diet does it. New York, NY: Coward-McCann, Inc. 248 p. Index. 20 cm. Rev. ed. 1951 (117 p., 28 cm), and 1952.

• ***Summary:*** In the preface, the author states that for 20 years he has been a pioneer in the field of scientific eating. The author does not advocate a vegetarian diet, but he does recommend use of soya beans, and consumption of plenty of vitamins and whole (unrefined) grains. For example, at the start of chapter 3 titled "Normal Nutritional Regime" is a section on "Proteins Come First." It says: "Protein foods are of two kinds, spoken of as first class and second class proteins. The first class proteins keep the body in excellent repair. Such proteins are found in egg yolk, cheese, milk, yogurt, and glandular meats such as liver, kidney, brain, and sweetbreads. The muscle meats which we eat as roasts, chops, and steaks are also first class proteins but are less valuable to the body than glandular meats. A few vegetable foods contain first class protein: soya beans, nuts, wheat, especially wheat germ..." An active man should eat 75 gm of protein daily to maintain buoyant health. Half of the amount should be supplied from animal protein. "Recent studies have revealed that about 60% of the people in America obtain too little protein to build full health. With the higher costs of eggs, fish, and meat, protein deficiencies of a more severe nature may be expected. For that reason you should acquaint yourself with 'the honorable soya bean' or the 'meat without bones' as it is called in the Orient. Prepared correctly as directed in the 'New Health Cookery,' Chapter 20 [sic, 21, of this book], soya beans can be delicious and fortunately contain first class protein."

Cooked soya beans are a good source of vitamin B-1 (p. 32). "Buy only whole wheat or soya bean macaroni, spaghetti, and noodles which are sold at stores specializing on health-building foods. Use brown rice rather than the

© Copyright Soyinfo Center 2013

white variety. Eat soya beans, baked, in "meat" loaves and patties" (p. 34).

Soy-related recipes include: Cream of soya soup (with cooked soya beans, p. 217). Soya nut croquettes (with baked soya beans mashed, p. 224). Soya bean loaf (p. 224). Soya and peanut butter patties (with cooked soya beans, p. 224). Delicious soya muffins (with soya flour, p. 228). Soya cream waffles (with soya flour, p. 229). Soya nut waffles (p. 229). Delicious soya cake (with soya flour, p. 229). Soya cookies (with soya flour, p. 230). Whole soya flour pie crust (p. 232; with "½ cup whole wheat flour and 1½ cups soya flour" etc.). Soya bean sprouts (homemade, p. 234; "They are also often used with soya bean curd and vegetables in chop suey."). Soya bean milk (homemade, p. 235). Address: Beverly Hills, California.

1962. La soya: Excellente alimento para el hombre como para el ganado y valiosa materia prima de numerosos usos industriales: Indicaciones para su cultivo y aprovechamiento [The soybean: Excellent food for people and for livestock and valuable raw material with numerous industrial uses. Remarks on its cultivation and utilization]. 1944. New York, NY: Reader's Digest. 32 p. [Spa]*
Address: New York City, New York.

1963. Matagrin, Am. 1944. Le soja: Culture et utilisations [Soya: Cultivation and utilization]. Paris: Gauthier-Villars. 72 p. Illust. No index. 28 cm. [Fre]
• ***Summary:*** Contents: Introduction: Why does soybean culture remain little known in France? 1. What is the soybean (*le Soya*)*?* Why should it be cultivated?: The plant and its varieties, the soybean (*la fève de soya*) and its general characteristics, alimentary interest in soya, agricultural interest in soya, industrial [non-food] interest in soya.

2. Soybean cultivation: The question of climate, choice of the variety to cultivate, choice and preparation of the land/soil, fertilizers for soya, soya in crop rotations, seeds, sowing, and seedlings, mixed cultures or intercropping, soybean vegetation and crop management, maturation, harvest, yield, and storage.

3. Use of the soya plant and its seeds: Soya in agriculture and livestock feeding, soya in human foods, recipes, industrial uses of soya, people and organizations connected with soya, contracts for growing soybeans in 1944. Table of contents.

The section on soya in human foods, based on the author's 5-6 years of personal experience, discusses, with recipes: green vegetable soybeans (*soya en légume vert*), whole dry soybeans (*soya en légume sec*), soy sprouts (*germes de soya*), fermented soy condiments (shoyu, miso, natto), soy flour (bread containing soy flour was made at Paris and even at Vichy in 1939), soymilk and tofu (*lait de soya et fromage végétal*), roasted soybeans and a coffee substitute (*soya grillé, substitut de café*), soy oil (*huile de soya*). Address: France; In 1946: Technical Consultant to Bureau Francais du Soja.

1964. Saillenfest, Jean. 1944. Le Soya: Sa culture et ses utilisations [The soybean: Its culture and uses]. Paris: Editions de Montsouris, 1 rue Gazan, Paris XIV. 96 p. 19 cm. Series: Collection Rustica. Preface by Pierre Chouard. [10 ref. Fre]
• ***Summary:*** Contents: Preface. Foreword. 1. The soybean worldwide and in France. 2. The plant: Botanical description, varieties, vegetative cycle, climate, area of cultivation. 3. Soybean culture: In fields (fertilizer and soil amendments, symbiotic bacteria, sowing, soya forage), in the garden. 4. Diseases and enemies of the soybean. 5. Soybean utilization: Table of uses, main industrial uses, uses on the farm, the soybean in the family cuisine (green vegetable soybeans [*graines de soya vertes*], soy sprouts [*germes de soya*], soaking soybeans, cooked ground soybeans [*pâté de soya*], soya desserts (dry roasted soynuts [*Soya grillé*], soy cakes and confections with roasted soy flour), soy coffee, how to make soy flour at home, soymilk, tofu [*fromage de soya*]). 6. Regulation of soybean varieties: Table of varieties: The role of G.I.O.M. (*Groupement interprofessionnel des oléagineux métropolitains*), growing contracts, classification and catalog of varieties, prices of seeds, how to obtain seeds. Address: France.

1965. Shih, Kuo-hêng. 1944. China enters the machine age: a study of labor in Chinese war industry. Cambridge, Massachusetts: Harvard University Press. xxiv + 206 p. See p. 95. Index. 21 cm.
• ***Summary:*** In Chapter 7, "Social accommodations," the section titled "Mess hall" states (p. 95): "On one occasion a badly cooked Chinese bean-curd cheese was served in the unskilled workers' mess hall; after a disturbance, workers brought this dish to the shop to show the engineer and asked how they could eat such food and work."

Page 97: "The calcium intake [of the workers' diet] might be adequate if the soy bean curd and pickled vegetables are taken into account." Address: National Yunnan Univ., China.

1966. Union Nacional de Cooperativas del Campo. 1944. Instrucciones sobre el cultivo de la soja y sus aplicaciones. 2nd ed. [Instructions on the cultivation of the soybean and its applications. 2nd ed.]. Madrid. 16 p. [Spa]
• ***Summary:*** Pages 12-14 list industrial uses of soybeans, give a nutritional analysis of white and black soybeans (Soja blanca, Soja negra) done by the Central Agricultural Station (*Estación Agronómica Central*) using samples from Granada, and briefly describe several soyfoods, including soy flour, soymilk, and tofu (*queso de soja*). Thus section concludes: "Outdoing the known anecdote of Permantier, who offered Louis XVI a succulent feast in which all the dishes were

© Copyright Soyinfo Center 2013

made of potatoes, today one could make a menu that was more varied, rich and select in which the delicacies as well as the serving utensils would all be derived from soya." Address: Madric, Spain.

1967. White, Julius Gilbert. 1944. Abundant health: Expounding the Learn-how-to-be-well system of daily living. 4th ed. Madison College, Tennessee: Published by the author. xix + 437 p. Illust. 24 cm. [21+ ref]

• ***Summary:*** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Meat not necessary (p. 150-52; 13 quotes from authorities). Denmark's food experiment under Dr. Hindhede during World War I (p. 152-53). Sixteen reasons for vegetarianism (p. 153-). The animal kingdom a reservoir for disease (p. 165-). Note that Madison College is a Seventh-day Adventist college and sanitarium.

Soya is discussed on the following pages: Soybeans and soybean products as a replacement for meat (p. 151-52). One section titled "The Soybean: The Wonder Food" (p. 345-59) discusses many aspects of soybeans and how to use soybeans: In baking. In general cooking. As beans. As beans ready-cooked. As meat. As milk (gives 3 recipes for making soybean milk and ways for using "the pulp left after making milk"). As cream. As cheese ("A very satisfactory soybean cheese is now available in the health food stores. It has a texture something like cottage cheese..."). As butter. As oil. As home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired). As home-made soy mayonnaise (based on the above home-made soy butter). As soy acidophilus milk (also often called soy buttermilk). As greens (soy sprouts). As soy sauce. As coffee. As substitute for egg white.

On page 389 begins a long treatise on the safety of aluminum in connection with cooking and foods, a subject which is causing much debate. Address: Madison, Tennessee.

1968. Williams-Heller, Annie; McCarthy, Josephine. 1944. Soybeans from soup to nuts. New York, NY: The Vanguard Press. 119 p. Foreword by Walter H. Eddy, Ph.D., Professor Emeritus of Physiological Chemistry, Columbia University. Index. 20 cm.

• ***Summary:*** Dedication: "To the soybean pioneers, American and Chinese."

Contents: Introduction. Part 1. The soybean: Vegetable of tradition and high nutritional value, "fresh green soybeans," dried soybeans, sprouted soybeans, soybean oil, soybean flour, soy grits and soy flakes, soybean milk and curd, soy sauce, soy nuts. Part 2. How to prepare soybeans: General directions; fresh green soybeans, dried, and sprouted soybeans; soybean milk, curd, pulp or mash; soy grits and flakes. Part 3. Recipes: Appetizers, soups, meat stretchers, meat substitutes, croquettes and fritters, side dishes, salads, salad dressings, sauces, sandwich spreads, breads and quick breads, desserts, soybean-milk drinks, soybean nuts. Part 4. "One soybean dish a day" (Menu suggestions).

The section titled "Soybean-milk drinks" (p. 107-08) contains 5 interesting recipes: Banana soybean-milk shake (with 4 cups soybean milk, 1 ripe banana, 1 tablespoon honey, and 1 teaspoon lemon juice or vanilla or almond flavoring, to taste; it used no ice cream). Eggnog (with 4 cups soybean milk, 3 eggs, 3 tablespoons honey, nutmeg and cinnamon to taste, and flavoring to taste). Hot cocoa with soybean milk. Spiced soybean milk (with 4 cups soybean milk, 2 tablespoons honey, ½ teaspoon cinnamon, and a pinch of nutmeg, or mace [somewhat like chai]). Vanilla soybean-milk shake (with 4 cups soymilk, 2 tablespoons honey, vanilla flavoring to taste).

About the authors: "Annie Williams-Heller, a former Austrian and now an American citizen, has had international experience as a consultant and author in the field of nutrition and food. She holds diplomas from several European schools and has undertaken graduate academic studies in this country. She is an active member of both the New York Dietetic Association and the Soroptimist Club of New York and an associate member of the International Federation of Business and Professional Women.

"Broadcasts and many publications in leading newspapers and magazines here and abroad are indicative of Mrs. Williams-Heller's desire to create a bridge between scientific knowledge and its practical application for the public and housewife.

"In this connection she became interested in the soybean. She studied this miracle food from the soil to the kitchen at a time when its qualities were known only to pioneers in the field.

"Josephine McCarthy, a graduate of San Francisco State Teachers' College, has had twenty years experience as an executive in various of the country' largest restaurant and bakery chains. In hotel work she has supervised the training of food workers from chefs on down.

"For the past five years she has been broadcasting on food preparations and news of the home. At present, as Home Economist for the American Institute of Food Products, she is known as 'Ella Mason' to millions of devoted fans, and is heard daily with Doctor Walter H. Eddy on the 'Food and Home Forum' over Radio Station WOR, emanating from New York City" (inside rear dust jacket).

Note: This is the earliest document seen (Dec. 2003) that contains a recipe (in standard format with the amount of each ingredient) for a non-dairy soybean-milk shake, or for soy eggnog. It is also the earliest English-language document seen (Dec. 2003) that contains the term "soybean-milk shake." Address: 1. Nutritionist and Food Consultant; 2. Home Economics Director, American Inst. of Food Products ("Ella Mason" on the Dr. Eddy Food and Home Forum). Both: USA.

1969. Ecuador Ministerio de Economia, Subsecretaria de Agricultura. 1944? El Ecuador produce Soya, el alimento ideal, nutritivo y barato. Cultive y consuma soya [Ecuador produces soya, the ideal food, nutritious and inexpensive. Grow and eat soya (Poster)]. Quito, Ecuador. 1 p. 2 x 3 feet. Undated. [Spa]
• ***Summary:*** A remarkable poster. Request seeds for your planting from the Undersecretary of Agriculture, Quito, Ecuador. But soya from the national distributor. "It yields well in sheltered places." With soya, you can make tortillas, empanadas, tostado, bread, soup, soymilk (*leche vegetal*), tofu (*quesos*), fideos, etc.

An illustration shows an Ecuadorian man, woman and child, in traditional dress, on a hill overlooking their fields, with a basket of whole soybeans beside them, and snow-caped mountains in the background. Address: Ecuador.

1970. Gotham, Lucille J. 1944? Allergy to certain foods. *Madison Health Messenger* (*Madison, Tennessee*) 6(1):1-2. Undated.
• ***Summary:*** A reader writes to ask: "I am on a diet eliminating wheat, milk, and eggs. What products and foods can I substitute for them while I am experimenting?" The author answers: "Milk is the hardest problem. Through the years nut milks and soy milks have been developed, and they may be used in cooking in place of cow's milk, with satisfying results for almost everyone. They are also very nutritious. The soy milks are liquid or dry... If you make your own nut or soy milk you had better ask your physician about the advisability of adding some dicalcium phosphate with viosterol and some vitamin A. These additions will not change the flavor noticeably, and they will safeguard your health.

"You will like soy cheese in place of real cheese. Health food stores have these special foods." The following recipes are then given: Nut milk (almonds make the best milk). Soy milk (made from soy flour). Plantation cocktail (with soy milk). Creamy soup (with soy milk and Savita [a product made from brewer's yeast]). Soybean apple crisp (with soy flour). Soy cookies (with soy flour). Creamy rice pudding (with soybean milk). Soy piecrust (with soy flour). Corn soy mush (with soy flour). Mayonnaise (with soy flour). Address: Dietitian.

1971. **Product Name:** Agé.
Manufacturer's Name: Slocan Soya Co.
Manufacturer's Address: Slocan, BC, Canada.
Date of Introduction: 1944?
New Product–Documentation: Note: Slocan is in the southeast part of British Columbia. Letter from Edward and Danette Westlind. 1989. Aug. 14. "My wife and I are purchasing a small tofu and agé business on September 1, 1989. Slocan Soya Co. was started during the second World War when there was a large population of Japanese Canadians interned in the Slocan Valley. For roughly 30 years, agé was the only product made by Slocan Soya. Twelve years ago Slocan Soya Co. was sold to a local Caucasian woman who started producing tofu to supplement her income. From the 1940s until now there has been very little in equipment upgrading and the business has been gradually declining due to lack of interest on the part of its owner. We are confidant that with new energy and enthusiasm on our part the business can be revived."

1972. Spencer, Cornelia. 1945. The Chinese people at home. *Chicago Daily Tribune.* Jan. 11. p. 14.
• ***Summary:*** Chapter three: The section titled "Soy bean curd" begins: "A man is making soy bean curd and setting it out for sale. It stands in shivering squares of white on a cloth which lines the flat bamboo tray." Why is this artistic? Well, behind the man is "brown dried, pickled bean curd" which is used to enhance flavors. Also beautiful are the "brilliant red bean curd cubes hot with red pepper," which add zest to breakfast. Also framed in the scene are "jars of soy sauce." Making this sauce is an art unto itself, for the kind of water used, the amount of fermentation, etc. each affect the finished soy sauce, which is the foundation of Chinese cooking.

An illustration shows a handsome and vital "Horse," by Ju Pei-hung, part of an exhibition titled "Fifteen Contemporary Chinese Painters," organized by the East and West Association, New York. Address: Author of "The Exile's Daughter," "Made in China," etc.

1973. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1945. 1,500 tofu cakes to be made daily. 4(45):1. Jan. 20.
• ***Summary:*** "Beginning January 17, the tofu plant doubled its output of tofu cakes manufacturing approximately 1500 cakes daily, M. Yuki, tofu plant supervisor said this week. To meet this increased production an additional 10 men were added to the personnel making a total of 19 men employed."

1974. Morse, W.J. 1945. Soybeans in the land of our enemies. *Soybean Digest.* Jan. p. 6-7.
• ***Summary:*** Text of a letter to the American Soybean Assoc., Guelph, Canada, written from Tokyo, Japan on 20 July 1929. This is the first ASA meeting Morse has missed. He and Dorsett, comprising the Oriental Agricultural Exploration Expedition, arrived in Japan on March 18 and set up headquarters in Tokyo. "It is amazing, the extent to which the soybean is used for food in Japan." For details, see Morse 1929 ("Letter from Dr. Morse"). Address: USDA Bureau of Plant Industry, Washington, DC.

Produced by the Soybean Committee of the New York State Emergency Food Commission. [38 ref]

• ***Summary:*** Contents: A potential food resource: Introduced into the United States, new American industries. Composition and food value of soybeans: Proteins, fats, carbohydrates, minerals, vitamins, the enzymes of the soybean. How to use soybeans and soy products (contains many recipes): Fresh green soybeans (how to cook, how to can, how to freeze), dry soybeans (how to cook, how to can, how to freeze, 3 recipes, salted soybeans [oil-roasted soynuts], how to prepare bean pulp {by running drained cooked soybeans through a meat chopper}, 4 recipes), sprouted soybeans (vitamin C forms during sprouting, exposure to light does not affect vitamin C, riboflavin and niacin are also increased, how to sprout soybeans at home {9-step process}, store sprouts in refrigerator, how to freeze sprouted soybeans, how to cook sprouted soybeans, illustration of apparatus [equipment] for sprouting soybeans in quantity, 6 sprouted soybean recipes), grits, flakes and flour (protein equivalents {one pound of low fat soy flour is equal in protein value to two pounds of cheese, 2 pounds of navy beans, 2½ pounds of beefsteak or chicken, 3 dozen eggs, 5 pounds of bread, or 12 pints of milk}, a little soy flour with wheat flour improves protein quality, amount of protein, iron, and calcium also increased, 23 soy-grits and flour recipes {divided into 3 main dishes, 3 quick breads, 17 desserts}), a stronger staff of life–bread (rats fed bread containing only 5% soy flour grow much better than those eating white bread, does soy bread taste good?, little change required in baking with soy flour, 6 yeast bread recipes), soybeans in large-quantity cooking (6 recipes), other soybean products (soybean curd, soybean milk, soy sauce). Production, varieties, and culture of soybeans. Soybeans in animal feeding: For cattle, for sheep, horses, swine, and poultry, soybean hay a substitute for alfalfa, for dogs and fur-bearing animals. References. Index.

Contains nine bar charts in the form of illustrations / pictorial drawings / symbolic graphics (which may be by Kenneth Washburn).

How to sprout soybeans at home (p. 26-27):

"1. Select a stock of clean, bright, new-crop soybeans of one of the field varieties. The yellow seeds have less conspicuous skins than do the black beans, although the black beans may be preferred. The garden varieties are not satisfactory because the sprouts break off easily, but the exact variety is unimportant so long as the seed is good.

"2. Handpick the seed thoroughly, and discard everything except clean, whole beans.

"3. Wash the beans and place them in a suitable container for sprouting, such as a one- or a two-quart glass fruit jar. The bean sprouts increase to about six times their original volume.

"4. Cover the seeds with at least four times their volume of lukewarm water and let them stand for a few hours, or at most overnight, until they are swollen.

"5. Pour off this water, and wash or rinse the swollen beans thoroughly, then pour off the last wash water.

"6. Cover the top of the jar with a piece of cheesecloth or other thin cloth, and tie it on securely. Quarter-inch mesh screening also makes a good cover.

"7. Invert the jar and place it in a cupboard or dark place, in a slightly tilted position, so that the excess water can drain away.

"8. At least three times a day, or better every four hours, place the jar under the water tap or pour on plenty of cool water, thus thoroughly and carefully washing the swelling and sprouting seeds, so that bacteria or molds which may have developed are carried away. The better the washing, the better the sprouts. After washing, place the jar back in its slanting position.

"Chlorinated lime water to kill fungus growth is not needed if the seed is well selected. If such a solution is used (1 tablespoon of chlorinated lime in 1 gallon of water), it should not remain on the seeds longer than for ½ hour; the soybeans are injured by a longer exposure.

"9. In from three to four days at room temperature, the sprouts will be from 1 to 2 inches long and ready for use. Then pour the sprouts into clean cold water and shuck off the skins if this is desired. With the yellow-seeded varieties, however, the skins are not conspicuous and need not be removed. If a flower pot or similar receptacle is used for sprouting with a piece of cloth over the bottom hole for drainage, be sure that the surface of the beans is also covered with a piece of moist cloth to prevent drying; otherwise the sprouts will be tough and will not be uniform.

"It is not wise to attempt sprout production in the summer, because good sprouts will not be produced in warm weather unless the place where they are sprouted can be kept at about 70ºF. The sprouting of old, badly cracked, discolored or shriveled soybeans should not be attempted, for this only causes trouble. Soybeans packaged for cooking and baking are not likely to sprout too well. When in doubt, one should make a preliminary trial. If, after the first day, or after soaking, the beans become soft or soggy, they are probably unfit for sprouting.

"The commercial production of soybean sprouts in large quantities proceeds along the same lines as outlined, except that larger sprouting devices or tanks are used and the process is more carefully controlled. An apparatus with an automatic watering device developed at Cornell University to sprout a large quantity of beans is shown in figure 6.

"Store sprouts in refrigerator: Sprouts not used immediately must be stored in a covered container in the refrigerator, as is any fresh, crisp vegetable, for as long as a week. They must be kept moist; otherwise they will wilt or discolor. If kept longer, they must be blanched for 2 minutes, then canned as a green beans, dried, or frozen."

Tables show: 1. Proximate and mineral composition of

© Copyright Soyinfo Center 2013

soybeans and soy flours. Essential amino acids in servings of certain protein-rich foods (lean meat, eggs, cooked soybeans). 3. Calcium, iron, and B vitamins (thiamine, riboflavin, niacin) supplied by common serving portions of certain foods. 4. Vitamin composition of 7 soy products. 5. Food values of sprouted soybeans and of some common vegetables per 100-gram edible portions. 6. Thiamine, riboflavin, and niacin content of soybeans during sprouting, storage, and dehydration. 7. Soybean milk, cow's milk, and human milk (typical nutritional analyses). 8. Composition of some [seven] soybean products used for food in the Far East. 9. Varieties of soybeans most suitable in New York State for animal feed and human food (For green vegetables: "Garden varieties such as Green Giant, Hokkaido, Jogun, Bansei, Fuji, Tortoise Egg, and Willomi").

Concerning "Fresh Green Soybeans: When gathered from the garden while the pods are still greenish and the seeds are still soft but fully developed, the soybean is a new green vegetable that some persons say is more attractive and delicious than the fresh lima bean. Many Victory gardeners have grown them for the first time, and they may be purchased commercially canned as are green peas."

Note: This is the earliest English-language document seen (Aug. 2003) that contains the term "protein quality." Address: New York.

1976. Beck, Mrs. Fred. 1945. Farmers market... (Ad). *Los Angeles Times.* March 3. p. 2.

• ***Summary:*** There used to be quite a few "Yopanese" gardeners around. They "discovered they could grind [soy] beans to a fine powder, and, when water was added, a milky emulsion was produced. This mess, it developed, was capable of turning sour, like real milk. By adding calcium salts to this bean milk, darned if the Yops didn't find themselves with a grayish white curd that could be processed into cheese.

"Yep–'tofu'–(that's Yop for 'cheese') is strictly a phony proposition.

"Now that is no way to treat good self-respecting beans." Don't try to make cheese out of beans; make 'em into baked beans instead.

1977. *Poston Chronicle* (*Poston Internment Center, Arizona*). 1945. Persons on special diet may get tofu. 22(18):3. March 3.

• ***Summary:*** "In addition to the issuance of baby food and advice to mothers, the diet office at Blk. 21-10-A, will begin to issue tofu on Mondays and Thursdays to about 150 persons who are on special diet.

"The diet list includes those who have ulcers, diabetes, and other digestive ailments."

1978. Olmsted, Fred L. 1945. Who's who and why [Herbert Marshall Taylor and Delsoy]. *Detroit News.* April 16. p. 4.

• ***Summary:*** Herbert Marshall Taylor is a native of Canada. When "hail, frost, and influenza" put an end to his farming in Alberta, he returned to Toronto, where he had received a university degree 6 years earlier. "He acquired American rights to a gadget which British housewives had bought in quantity to make cream from butter and milk through homogenization. He sold 30,000 in the United States, but it wasn't a big-time success.

"By 1937 Taylor had perfected a product using a milk base and vegetable fat. And he had motorized the gadget. He started selling the product to bakers in New York. It saved them $1 a gallon on whipping cream. The idea spread to other cities."

In Nov. 1942 the War Food Administration issued an order prohibiting the sale of whipping cream in America. After dairy interests forced Taylor to leave Chicago, he picked up a partner, Eric R. Swanson, who is still with him, and in Dec. 1943 started a business in Detroit. [Note: Swanson lived most of his life in Dearborn.] Though dairy people continued to oppose him, his "business soared. In 1944 it jumped from 1,400 to 20,000 gallons a month. He sold at wholesale, then added half pints for the home trade. Now he claims 1,500 independent distributors here [in Detroit]. But along came a War Food Administration order placing a 19 per cent limit on all fats–animal or vegetable–used in his product [which combined a milk base with vegetable fat]. WFA also cut his milk quota. So he started using soy milk as a base, producing an all-vegetable product.

"Taylor drew the fire of OPA [Office of Price Administration], too. He says it is demanding damages for overcharges which would put him out of business. But Taylor isn't through. He grossed $267,000 last year. He added a plant in Dearborn to his start in Detroit. He's planning to market soy milk, butter, cheese [tofu?], and frozen dessert [soy ice cream]. There is an indication that Henry Ford is interested."

Note 1. This is the earliest English-language document seen (March 2007) that uses the term "frozen dessert" to refer to soy ice cream.

Note 2. Herbert Marshall Taylor learned how to make soymilk and soy-based whipped topping from Bob Smith and Rex Diamond at Henry Ford's George Washington Carver Laboratory in Dearborn.

"'The dairy lobby in Washington [DC] is powerful,' says Taylor. 'But I've been fighting the dairy interests for 12 years. They'll never stop me.'" A photo shows Mr. Taylor.

An ad below this article (not in *The Detroit News*, but in Rex Diamond's scrapbook; original source and date unknown) is titled "What is Delsoy? It's the dessert topping that's winning the enthusiastic approval of housewives by the hundreds of thousands. Delsoy is the original topping made of natural vegetable products." The ad shows illustrations of two non-dairy whip toppings: (1) In the foreground, "Delsoy Super Whip: Instant Dessert Topping" which is sold

© Copyright Soyinfo Center 2013

in a pressurized can. The ad states: "Introduced in August 1944, the first product of its kind, Delsoy dessert topping has gained tremendous popularity. Continuing to grow by leaps and bounds..." (2) In the background, "Delsoy: A delicious whip," a refrigerated perishable product which is sold in a half-pint paper container shaped like a truncated cone.

1979. Dorsett, P.H.; Morse, W.J. 1945. Soys in the Orient. *Soybean Digest.* April. p. 10-12. Text of a letter written July 1930.

• ***Summary:*** Reprinted from: *Proceedings of the American Soybean Assoc.* 1930, p. 96-100. The article was originally titled "Soybeans in the Orient." One large photo shows Morse with several richly illustrated boxes of black miso [Hatcho miso]; smaller photos show abura-age [deep-fried tofu pouches], and tofu kasu [okara]. Address: Dairen, Manchuria.

1980. Shelledy, F.H. 1945. Japanese trade studies: Soybeans. *U.S. Tariff Commission, Special Industry Analysis* No. 13. 6 p. May. [3 ref]

• ***Summary:*** Contents: Foreword. Introduction and summary. Description and uses. Production. Imports. Post-war problems.

This "report is one of a number which were prepared during 1944 and 1945 for the Foreign Economic Administration..." Most of the data "were taken from official and semi-official Japanese sources." Errors and inconsistencies in these data have frequently been detected.

"Japan is not important as a world producer of soybeans. It is, however, normally the world's principal soybean importer. Its annual production during 1928-39 was only 10 to 14 million bushels. By comparison, the production in the United States was 90 million bushels in 1939 and more than 190 million bushels in 1943 and 1944; the average annual production of soybean in Manchuria during the thirties was more than 150 million bushels annually.

"Prior to the present war Japan took most of the exportable surplus of Manchuria, the principal world exporter of soybeans, as well as substantial quantities from Korea, a country which produces almost twice as many soybeans as does Japan. During the 10 years 1928-1938, Japanese imports averaged 26 million bushels annually, approximately double its own production."

"If an annual per capita consumption of 0.5 bushels [30 lb] of soybeans were to be maintained in Japan in the post-war period," Japan would require a total supply of about 37 million bushels/year, based on a 1940 population of 73.1 million. An estimated 10-14 million bushels could be produced in Japan in the short term period after the war. The rest must be imported.

Uses of soybeans include miso, soy sauce or shoyu, and tofu. The main center of soybean production in Japan is the island of Hokkaido. The soybean is the principal oilseed imported into Japan.

Tables show: (1) Soybeans: Production, imports, exports, and apparent consumption, Japan Proper and Karafuto, 1928-39. Columns show: Production. Imports from Empire. Other imports. Total imports. Exports. Apparent consumption: Total and per capita. (2) Soybeans: Imports into Japan from principal sources, average 1928-32, annually 1933-39. The graph has two main parts: Quantity (1,000 bushels), and value (1,000 yen). Empire areas: Manchuria (incl. Kwantung), Korea, Formosa, total. Non-Empire areas. Grand total. Source: Monthly and annual returns of foreign trade of Japan, Korea, and Formosa. Address: U.S. Tariff Commission, Washington, DC.

1981. King, Pei-Sung. 1945. Chinese soy sauce and cheese. *University of Wisconsin, Fermentation Journal Club, Report* No. 22. p. 1-4. June 27. [15 ref]

• ***Summary:*** Contents: Introduction. Review of the literature. Making soy sauce: Laboratory procedure, grades and composition of soy sauce (there are 3 grades; the lower the grade, the lower the specific gravity of the soy sauce). Soybean cheese (sufu).

The laboratory procedure for making soy sauce involves three steps:

1. Mold culture, growing *Aspergillus oryzae* or *A. soya* on 30 grams of rice that has been steamed and is incubated at 30ºC for 4 days.

2. Yeast culture, growing *Zygosaccharomyces soya* on one sterilized culture medium at 30ºC for two days and *Lactobacillus delbrückii* on another at 37ºC for 2 days.

3. Fermentation, using four basic raw materials: Soybean (or bean cake) 300 gm, whole wheat (or other starchy material) 200 gm, NaCl (table salt) 280 gm, and water (including steeping water) 1600 ml. Details of the process are given. "It usually takes from two to three months for fermentation to become complete, but it is possible to be fermented completely within three weeks. A table shows the chemical composition of 3 grades of soy sauce. The source of this information is cited as: "(13) King, P.S. Bulletin No. 115, N.B.I.R. [National Bureau of Industrial Research], China 1941.

Note: This is the earliest document seen (April 2012) that describes how to make fermented soy sauce at home or on a laboratory scale–that will actually work. All known previous descriptions on this scale omitted the "mold culture" or koji stage.

"An important microorganism for making soybean cheese is *Mucor sufu,* which was first isolated by N.S. Wei [sic, Wai] (J. of Chinese Agr. Soc. 1926). Other useful microorganisms for making this product are Monascus (e.g., *M. anka, M. purpureus, M. faligiosus* [sic, *M. fuliginosus*], *M. major,* and *M. pilosus*), yeasts and bacteria. Some of these have been isolated by the writer in the *National Bureau of Industrial Research,* China (Bulletin No, 126, 1941).

© Copyright Soyinfo Center 2013

The procedure for making soybean cheese is described, starting with 300 gm of whole soybeans. After pressed tofu cubes are inoculated on the surface with any of various mold species, they are incubated at 25ºC for 3 days. Then 600 ml of a 16% solution of table salt (NaCl) is added. The 2nd fermentation "usually takes two months after which the cheese and liquid are bottled, sterilized, and marketed."

Note: This is the earliest document seen (Nov. 2011) that describes how to make fermented tofu at home or on a laboratory scale. Address: Univ. of Wisconsin.

1982. Gattoni, Luis A. 1945. Frijol soya [Soybeans]. *Honduras Agricola* No. 8. p. 5-7. June. English-language summary in Soybean Digest, March 1946, p. 29. [Spa]
• ***Summary:*** The diet of the people of the tropical countries of America is composed almost exclusively of rice, bananas, corn, and beans. The author believes that the ideal daily diet consists of daily consumption of 1 pound of meat and a half liter of milk. However since the people cannot afford such a diet, especially with the rapid population growth, Mr. Gattoni believes that these countries are faced with a postwar nutrition crisis.

As a partial solution, he recommends that they produce soybeans on a large scale, both to be consumed as whole soybeans, and to be made into oil and flour. He proposes that the schools, radio, movies, conferences, etc. be used as mediums for educating the people about soybean production. He points out that soybeans can be cultivated satisfactorily in areas where corn, beans, and peanuts are grown. In Honduras, the best soil and climate for the crop exists in the tropical zone of the coast. Some interesting experiments with adapted varieties are being conducted at the Pan American agricultural school of El Zamorano.

In the area of La Lima in the department of Cortés (a "county" in northwest Honduras), according to a report of the Office of the Institute of Inter-American Affairs, 9 soybean varieties have been tested (see USDA Farmer's Bulletin 1520 of 1939). "In the Experimental Grains department of the Institute of Inter-American Affairs at Toncontín, Comayagua (35 miles northwest of Tegucigalpa), and Danlí (45 miles east of Tegucigalpa), the following edible yellow varieties were sown, besides some forage types: Mammoth Yellow, Bansei, Funk Delicious." Yields were good when the soybeans were inoculated.

In Santa Ana, Wallace Farm, Costa Rica, 11 varieties (Fuji, Hahto, Hakute, Gogun [Jogun], Kanro, Kura, Sato) were tested. Seed yields ranged from a high of 3,186 lb/acre (53.1 bu/acre) for Hahto No. 20, down to 868 lb/acre for Hakute.

On May 15 the following varieties were planted at Toncontin: Ogden, Arksoy, Ralsoy, Volstate, Cherokee, Delsoy, Tastee, Hahto, Rokusun, Aoda, and Woods Yellow.

The author then discusses soybean cultivation, soils, bacteria that fertilize the plants, planting, harvest, and yield. He concludes: "Note: The National Commission on Food and Agriculture encourages all people interested in soybean cultivation to apply to them, indicating the quantity of seed that they wish to cultivate so that, for one-time trials to find the best-yielding and most useful varieties in Honduras, we can tell how much we need for planting in September, which is the most appropriate time for its cultivation."

Photos (black and white) show: (1) An experimental plot of inoculated soybeans cultivated at the Central Project of Toncontin [near Tegucigalpa]. The development and yield have been satisfactory. (2) The same soybean varieties planted in the same soil but without inoculation; the results are noticeably inferior.

Note 1. This is the earliest document seen (Jan. 2011) concerning soybeans in Honduras, or the cultivation of soybeans in Honduras. This document contains the earliest date seen for soybeans in Honduras, or the cultivation of soybeans in Honduras (May 1945). The source of these soybeans is unknown. It seems likely (but not certain) that the soybeans described in this paper were planted in Sept. 1944.

Note 2. This is the earliest document seen (June 2009) that mentions the soybean variety Delsoy. Note: It seems like there must be an earlier record announcing this variety in the USA. Address: Ingeniero Agronomo del Instituto de Asuntos Inter-Americanos (Inst. of Inter-American Affairs), Honduras.

1983. *Rocky Shimpo* (*Denver, Colorado*). 1945. Hayanos opening tofu factory in Minneapolis. 12(85):1. July 18.
• ***Summary:*** Evacuees in the Twin Cities area of Minneapolis / St. Paul, Minnesota, are welcoming Toraji Hayano, formerly of Heart Mountain, Wyoming, who plans to manufacture tofu in the area. Prior to evacuation, the family resided in Mt. Vernon, Washington [state].

1984. *Colorado Times* (*Denver, Colorado*). 1945. Tofu factory set up in Minn. [Minnesota]. 31(4338):1. July 19.
• ***Summary:*** Mr. and Mrs. Horaji Tom Hayano, an Issei couple, formerly of Heart Mountain [Japanese incarceration camp in the northwestern corner of Wyoming], have purchased a home at 2735 Colfax South in Minneapolis [Minnesota], where they plan to establish the business of manufacturing tofu for the three Japanese restaurants in Minneapolis, as well as for resettlers here. "To date the only source of supply for tofu has been Chicago, Illinois, and the local restaurants have complained that Chicago does not ship tofu during the warm months.

"The Hayano family, prior to evacuation [during World War II], were residents of Mt. Vernon, Washington [state]. While at Heart Mountain, Mr. Hayano supplied tofu to Center residents for a period of seven months."

1985. *Gila News-Courier* (*Gila River Internment Center,*

© Copyright Soyinfo Center 2013

Phoenix, Arizona). 1945. Minneapolis has tofu factory. 4(58):5. July 21.
• ***Summary:*** "Evacuees in the Twin Cities area in Minnesota welcome a new enterprise, the manufacture of tofu, established by an Issei couple.

"Mr. And Mrs. Toraji Tom Hayano, formerly of Heart Mountain have purchased a home at 735, Colfox South in Minneapolis, where they will manufacture tofu for Japanese restaurants in Minneapolis and for resettlers."

1986. *Manzanar Relocation Supplement* (*Manzanar Internment Camp, California*). 1945. Hayano's tofu factory opens in Minneapolis. 1(15):4. July 28.
• ***Summary:*** "Minneapolis–Mr. and Mrs. Horaji Tom Hayano, formerly of 20-14-E, Heart Mountain Relocation Center, have purchased a home at 2735 Colfax South in Minneapolis [Minnesota], where they will establish the business of manufacturing tofu for the three Japanese restaurants in Minneapolis, as well as for resettlers here, the Chicago WRA office announced."

1987. Holt, Jane. 1945. News of food: Morsels tempting to exacting palates offered in Chinese restaurant here. *New York Times.* Aug. 2. p. 22.
• ***Summary:*** Those who know say the best authentically Chinese food in New York City is served at The Chinese Rathskeller, owned by Chew Quan. For Americans, there is both an á la carte menu and a table d'hote menu. Many Americans prefer ingredients that are "more familiar than shark's fins and soy bean curd," and on their first visit are timid about trying anything new, their idea of Chinese food "being limited to chop suey and chow mein."

1988. *Madison Survey* (*Madison, Tennessee*). 1945. Madison health foods. 27(16):3. Aug. 29.
• ***Summary:*** "A letter written some weeks ago from Addis Ababa, Ethiopia, by Mrs. Della Hansen, housekeeper in the Emperor's palace, addressed to Madison Foods, says:

"'His Majesty, the Emperor of Ethiopia, has seen your advertisement in *Life and Health,* and has asked me to write requesting a sample of each of your products.'

"Samples of Zoyburger, Yum, Vigorost, Soy Cheese [tofu], Stakelets, Not Meat, and Soy Koff were sent to the Emperor via the Ethiopian minister in Washington [DC].

"Never before in the history of the food manufacturing department of Madison has there been such evident interest in foods that meet the protein needs of the family dietary."

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (canned meatlike products from Madison Foods) in Ethiopia. This document contains the earliest date seen for soybean products in Ethiopia (1945); soybeans as such had not yet been reported by that date.

1989. Miller, Carey D. 1945. Thiamin content of Japanese soybean products. *J. of the American Dietetic Association* 21(7):430-32. Aug. [10 ref]
• ***Summary:*** The approximate amount of thiamin retained in various soybean products is as follows: Raw soybeans, 100%. Soybeans pressure cooked for 60 minutes at 121ºC, 26% (i.e., 74% of the thiamin is lost). Soybean "milk" (*tonyu*), 74%. Soybean curd residue (*kirazu*), 19%. Soybean curd (*tofu*), 18%. Tofu contains 54 mcg. thiamin per 100 gm. About 7% of the thiamin in tofu appears to be destroyed by the cooking process, about 20% remains in the residue (*kirazu*), and the remainder of the thiamin (almost 60%) is lost in the discarded liquid which drains off when the protein in precipitated and pressed.

The author acknowledges the help of the Yokoyama Tofu Factory. *Kirazu* may be used as a human food in combination with vegetables, etc. "However, in Hawaii most of the *kirazu* is fed to pigs. To make tofu, hot soybean milk "was mixed with a liquid containing magnesium and calcium sulfates, a by-product obtained in the manufacture of salt from sea water, which precipitated the tofu as a flocculent curd."

Note: This is the earliest English-language document seen (Aug. 2011) that contains the term "Soybean curd residue" or that uses that term to refer to okara.

Aburage (a fried soybean curd) loses additional thiamin as a result of the cooking process. "Miso, made from cooked soybeans and fermented rice, which is allowed to age in huge wooden vats for 2 months or longer, is a relatively good source of thiamin," containing about 130 mcg. per 100 gm. But since relatively small amounts are used, even by people who favor this food, its contribution to the daily thiamin need is not great. Address: Nutrition Dep., Hawaii Agric. Exp. Station, Univ. of Hawaii, Honolulu.

1990. Arnold, Julean. 1945. Soy–China's Cinderella. *Soybean Digest.* Sept. p. 36-37, 69.
• ***Summary:*** In the summer of 1937 masses of Chinese refugees poured into Shanghai in frantic efforts to escape Japanese armed forces. The immediate problems were food and shelter. One relief agency, China Child Welfare, Inc., with which the author worked, helped to establish 220 refugee camps to accommodate 250,000 people. Since tofu is too concentrated for infants, the group turned to soybean milk. "Fortunately the Peking Union Medical College of the Rockefeller had several decades earlier carried on extensive research with the soybean under the direction of a Russian scientist Dr. A. A. Horvath. He became a great enthusiast on the nutritive properties of the soybean. He found that by adding a certain amount of calcium lactate, sodium chloride [table salt] and sugar to the soybean milk, it would be possible to produce a substitute for cow's milk, and at a fraction of the cost of cow's milk. Chinese trained under him carried on research experiments.

© Copyright Soyinfo Center 2013

"Thus when we were interested in preparing a scientific, sanitary, and standardized soybean milk we looked for assistance to Doctors Ho and Tso who were trained at the P.U.M.C. but later came to Shanghai to join the Lester Institute where they continued their work on soybean nutritive products. So we impressed them into service. We also secured much aid from Dr. W.S. Fu, who supervised a Chinese children's hospital in Shanghai. He gave us accommodations for setting up a small plant for the manufacture of soybean milk in one of the court-yards of his hospital." A description of the equipment and process used is given. After boiling the soymilk for 20 minutes, calcium lactate, sodium chloride, and sugar were added. The soybean milk was served hot to the children in the camps. The plant was managed by Miss Nellie Lee, a Chinese who graduated from Mt. Holyoke College and had studied dietetics and social science.

After taking the milk from the soybean, there is a residue [okara] very rich in protein. We found by adding 40 percent coarsely ground wheat flour which is also plentiful in China, plus the other ingredients above mentioned, we could make a biscuit which when baked in an oven proved to be very palatable. It represented probably the greatest food value for the cost obtainable. A Chinese department store baked them for us. We distributed millions of them to the refugee camps.

"In order that our committee might take the fullest possible advantage of the very able assistance we received from Chinese scientists, doctors and others we organized the China Nutritional Aid Council with Chinese and American members for the express purpose of popularizing a properly prepared soybean milk and other soybean nutritional products." This council, backed by China Child Welfare, Inc. of New York, launched a campaign to share with people in other parts of China "the advantages of our experiences in providing soybean milk for from 25,000 to 37,000 children daily in the refugee camps in addition to several millions of soybean biscuits furnished the refugees."

"Another American medical missionary, Dr. H.W. Miller, went much further in his experiences with soybean milk products. He became so enthusiastic about their possibilities that he set up a modern plant in Shanghai for their manufacture, with facilities for producing qualities acceptable to those whose palates rebelled against the ordinary types of soybean milk."

After the Japanese bombing of Pearl Harbor, the China Nutritional Aid Council and its soymilk plant moved to Chung-king [or Ch'ung-ch'ing, a city in southern Szechuan province; the Kuomintang made it the political capital of China from Oct. 1938 until the end of World War II]. Nellie Lee has worked for 5 years "spreading the gospel of soybean milk for the great masses in that country."

"When John D. Rockefeller Jr. came to Peking about 25 years ago to dedicate the Peking Union Medical College of the Rockefeller Foundation, he told me that he found it harder to spend money than to make it." A large photo (p. 36) shows a Chinese mother feeding her children "soy milk and soy cakes at a food shop where highly nutritious foods are made and sold at cost prices."

Note 1. This is the earliest document seen (July 2012, one of two) that uses the word "Cinderella" in connection with the soybean. The author, however, does not elaborate on this idea. This is the earliest document seen (July 2012) with "Cinderella" in the title.

Note 2. In the winter of 1937 K.S. Lo of Hong Kong, age 27, happened to be in Shanghai on other business. There he attended a talk by Julean Arnold titled "Soya Bean: The Cow of China." This talk inspired Lo to establish the Hong Kong Soya Bean Products Co., Ltd. in March 1940. This company later made the world-famous Vitasoy soymilk. If the date and title of this talk are correct, this would be the earliest date seen (Aug. 2002) for the use of the term "Cow of China." Address: Berkeley, California.

1991. *Madison Health Messenger* (*Madison, Tennessee*). 1945. Madison Foods–Madison College, Tennessee. 7(1):4. Undated.

• ***Summary:*** A full-page photo shows the following canned products, with a brief description of each and the price: Stake-Lets (a combination of gluten and soy beans). Not-Meat (a meatless loaf for cutlets, roasts, patties, croquettes, salads, etc.). Yum (a mild Bologna flavor. Contains soy beans, wheat gluten, and seasonings). Zoyburger (excellent for sandwich spreads or served like a steak with onions). Vigoroast (a vegetable steak). Wheatasoy (an alkaline breakfast food, ready to eat. Contains rich grain malt, whole wheat, and soy-bean flour). Zoy-Koff (Prepare like coffee. No trace of caffeine. No nerve stimulants. Two grinds–regular and fine). Kreme O'Soy (a soy milk for those allergic to cow's milk and for special diets. A liquid not concentrated). Soy Cheese (soy curd (tofu) seasoned for croquettes, salads, sandwich spreads, etc.).

A separate photo across the top of page 1 of this issue shows a ground-level view of the "Madison College Campus, Home of Madison Foods."

1992. Weigle, Edith. 1945. Japanese close-ups. *Chicago Daily Tribune.* Oct. 10. p. R6.

• ***Summary:*** Tokyo–In the early morning, at about 5:30 or 6:00 (it's still dark in winter), "there comes the song of the boy selling nato [natto]." He calls out the word three times, with two notes to each word. In the key of C, the notes would be E-G, G-A, E-G. "Nato [sic, Natto], pronounced nah-toe, is a bean [fermented soybeans] used in the morning one-dish meal. When it is mashed, seasoned with raw egg and finely chopped onions, and heated, the Japanese eat it in quantity, washing it down with green tea." They are now ready for the day.

© Copyright Soyinfo Center 2013

In the early after, the "tofu (bean curd) seller, also rides a bicycle and makes a querulous wailing sound that apparently has the appeal of the Pied Piper, for small children inevitably follow his slow progress down the lanes."

1993. War Relocation Authority (WRA). 1945. Incarcerees making tofu. Oct. 24.
• ***Summary:*** On 24 Oct. 1945 WRA photographer R.H. Ross shot five black and white photos of Japanese incarcerated at Tule Lake incarceration camp, California, making tofu. The original WRA captions read: (1) "Note: The markings on the blackboard, upper right, show the Japanese way of counting in fives to show number of buckets of beans processed. The bucket on the lower right contains soy beans which are soaked over night and then poured into this centrifugal 'masher' which revolves at comparatively high speed. The white, crushed bean substance drops down into the container below in a white paste-like form."

(2) "The paste-like crushed bean mash [*gô*] is cooked thoroughly in the big vat shown in the picture and constantly stirred. This tofu (pronounced To-o-fu) factory is operated by the Tule Lake Co-op."

(3) "The cooked beans are poured into a fine-meshed sack and water is added. Squeezing the sack the fibrous substance is held back and the rest of the precipitate is squeezed into a barrel. Into this strained mash or curd, brine is added to cause it to precipitate. This factory is operated by the Co-op."

(4) "The precipitate is put into forms and pressed. Later it is cut into smaller cakes and kept in water as shown. Tofu is a kind of 'bean curd' considered essential to the Japanese diet. Other pictures in this group show the various processes in the manufacture of this product. To preserve it is kept in water until used."

(5) "This product called 'Age' is made from the bean curd. This is shown in the picture. The curd is fried in deep soy-bean fat until browned." Photos courtesy of the National Archives and Records Administration (Number 210-C-B-20; 210-CL-B-24).

1994. *Times of India* (*The*) (*Bombay*). 1945. The fact that milk prepared out of soya bean can be used in exactly the same way as cow's milk for ice cream or curds [tofu]... Oct. 30. p. 5.
• ***Summary:*** "... is suggested in a note prepared by Prof. V. Subramanian [Subramaniam, Subrahmanyan] and Dr. S.S. De, of the Indian Institute of Science, Bangalore." The say that 1 lb. of soya bean will yield 6 lb. of milk having about the same nutritional composition as cow's milk.

Note: See *Times of India,* 13 Sept. 1945.

1995. **Product Name:** Tofu.
Manufacturer's Name: Korean Tofu Co.?
Manufacturer's Address: Los Angeles, California.
Date of Introduction: 1945.
New Product–Documentation: Mildred Lager. 1945. The Useful Soybean. p. 86-87. "In another part of the same city [Los Angeles], a Korean has found a market for a firmer cheese [tofu] and is already packaging and selling it to some of the best known restaurants of Hollywood, where it is served as soybean curd or custard."

1996. **Product Name:** Tofu, and Agé.
Manufacturer's Name: [Tom Amano Tofu Co.].
Manufacturer's Address: S.W. 4th Ave., Ontario, Oregon.
Date of Introduction: 1945.
New Product–Documentation: Talk with Jim Kanetomi. 1988. Nov. 17. Phone: 503-889-6392. The tofu company that he bought and later renamed Kanetomi's was founded in 1945 by Tom Amano, his father in law. Tom was born in Japan and had learned to make tofu on his own. As long as Tom ran the company, it never had a name or a sign, not even when Jim took over the company (he didn't actually buy it) in 1958. Then Jim went 7-8 years with no name or sign until the local people gradually started calling the company Kanetomi's.

Tom Amano always made tofu, abura-age, konnyaku, and high-quality fat noodles with plenty of eggs. In about 1955 there was a bad fire in the shop. So Tom moved the shop to 366 S.W. 5th Street, into a building that he partially owned; the other part was owned and occupied by a laundry run by Jim Kanetomi. After Jim took over the company he continued to make the same products, and did not introduce any new ones. Jim sold the company in 1982 to Kuni and Vickie Kobayashi.

1997. Chao, Buwei Yang. 1945. How to cook and eat in Chinese. New York, NY: The John Day Co. xviii + 262 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index (of both recipe numbers and page numbers). 21 cm. An Asia Press Book. New editions, 1949 and 1963.
• ***Summary:*** A superb, funny, authentic Chinese cookbook. The "Author's note" begins: "I am ashamed to have written this book. First, because I am a doctor and ought to be practicing instead of cooking. Secondly, because I didn't write the book... You know I speak little English and write less."

The section on "Conventions and hints" states: Clear-simmering is slow cooking without soy sauce. Red-cooking is slow-cooking with soy sauce (p. xvi).

In Chapter 2 titled "Eating materials," the section on "Grains" (p. 21-22) notes: There are two important supplementary starchy foods in the Chinese diet: Sweet potatoes (the poor man's luxury) and "beans: red beans [probably azuki], horse beans, and above all soy beans and their products. Bean milk and bean curd [tofu] are regarded in this country [America] as specialties. But in China, cabbage and bean curd mean a poor family's home cooking.

© Copyright Soyinfo Center 2013

Soy beans not only give starch, but are also the most important source of protein, since most people cannot afford much animal food."

In Chapter 3, "Cooking materials": "The commonest vegetable oils in China are [soy] bean oil and peanut oil" (p. 24). Soy sauce is a "salter," which is not freely exchangeable with salt. It is never used in the white kind of cooking but it is used (sometimes with salt) in red-cooking and red-stir-frying (p. 25).

"Flavorers.–The most important flavorer of Chinese food is soy-bean sauce or soy sauce for short. With soy sauce you can cook an untiring series of Chinese dishes with nothing but those foods you can get at any American chain market. In fact even pretty good soy sauce can now be bought at such chain markets. Chinese dishes are called red-cooked or white-cooked according as soy sauce is or is not used. But even in the white-cooked dishes, especially the slow-cooking ones, the morsels, or rather the chopstickles [chopsticks], of food are often dipped in soy sauce before eating. One thing we never do, however, is to pour soy sauce on rice. When Americans do that, it looks funny. It must taste funny too.

"Soy sauce is made from fermented boiled soy beans in which salt is added. Several kinds are now seen in this country. The least useful is called in Cantonese *chü-yau,* "pearl sauce," a dark thick sauce without too strong a taste, which lends much color to the dish and is much used in restaurants. Next is *shang-ch'au* "raw extract," which is light brown, tastes very fine, but is not colorful enough for red-cooking and not available in any great quantity. The sauce most suitable for general purposes is called *ch'au-yau,* "extracted sauce," which fortunately is made by several manufacturers in this country and Canada. All varieties of soy sauce are also called by the general name *shi-yau* in Cantonese.

"Similar to soy sauce is a soy jam [chiang], which is much thicker in consistency. In China, fermented flour jam is even more common. Good samples of such jams are scarce in this country.

"There is a whole class of whitish savory powder made mostly from gluten of flour. We shall call it **taste powder** in the recipes. The oldest form of this is made from the dried fermented muscle-of-flour (flour gluten), often made in old Chinese households. Almost thirty years ago the Japanese manufactured, from hydrolized gluten, a powder called *ajinomoto,* 'prime element of taste.' Later a Chinese firm manufactured *ve-tsin* [*vetsin*], "essence of taste, which is still found on some shelves of Chinatown. 'Pickup' and *mee boan* taste powders are made in this country and sold mostly in Chinatown.

"You will note that relatively few recipes in this book call for the use of taste powder." "Other common flavorers are oyster sauce, sesame oil, and soy bean cheese (*fu-yü*) (p. 27-28).

Chapter 6, "Methods of cooking," includes a discussion of red-cooking (stewing with soy sauce, which gives a reddish color. "Red-cooking is the typical family cooking." Cooking time varies from 2-6 hours) and clear simmering (without soy sauce).

Soy-related recipes include: Bean curd stirs meat slices (p. 61). Bean curd stirs shelled shrimps (p. 118). Meat sauce meets lobsters ("Variation: As done in Chinese restaurants in America–Get from Chinatown 2 tb-sp salted small black beans [fermented black soybeans]. Wash off visible salt, boil 10 minutes, crush, and add to the stirring sauce," p. 125). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 156-57).

Note 5. This is the earliest English-language document seen (April 2013) that contains the term "fried puffy bean curd." It refers to a type of Chinese deep-fried tofu. "Get in Chinatown. The best is to get them ready fried,..."

Plain stirred bean curd (p. 158-59). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 159-60). Pot-stuck bean curd (p. 160). Bean curd and meat-slice soup (p. 164). Huichou pot (with fried bean curd [large triangles or small cubes], p. 181-82). Sandy-pot bean curd (p. 183). Soy jam noodles (p. 201-02, with ½ can *yünshi* soy jam {get in Chinatown}; this is typical northern food).

Page 158 states: "Bean curd is made of soy beans. It has only a faint flavor of its own. That is why it can be easily combined with other materials. Bean curd has the same nourishment value as bean, but in a much more digestible and palatable state and forms an important ingredient of the food for the poor people in China. It is cheap and easy to prepare. Those who can afford fancy dishes often combine it with meat, fish, and other sea foods. But just plain (Chinese) cabbage and bean curd connotes home sweet home. Bean curd is a versatile cooking thing. It can be boiled plain, with a little of any flavoring. It can be fried in deep oil by whole pieces so that the outer surface will become browned. We often stuff seasoned ground meat inside it like stuffed cucumber and then red-cook the whole thing. Bean curd can even be eaten as part of an American salad." The Chinese characters for all recipe names are given on pages 232-46. Address: Cambridge, Massachusetts.

1998. Lager, Mildred. 1945. The useful soybean: A plus factor in modern living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. Illust. General index. Index of recipes. 22 cm.

• ***Summary:*** One of the most important and innovative books on soyfoods ever written. Contents: Preface. 1. Agriculture's Cinderella: America discovers the soybean, our wonder beans, soy as a food in the United States, soy in rehabilitation food programs, soybeans as an emergency crop, soybean terminology. 2. World-wide use of soybeans: A real antique, monarch of Manchuria, soybeans in mechanized

© Copyright Soyinfo Center 2013

warfare–Germany, soybeans in other countries (USSR, Italy, Spain, Belgium, Holland, Norway, Denmark, Sweden, Great Britain, Canada), soybeans in Lend-Lease and United States Agricultural Marketing Administration, Food for Greece, soybeans and the Mexican Indian, soybeans in Hawaii (Mr. C.G. Lennox). 3. Soybeans and industry: The versatile soy, uses of soybean in industry, soybean paint (from soy oil, incl. Duco finishing), soybean protein (used in making plywood, plastics, water paints, paper sizing, leather finishes, and insecticide sprays), Henry Ford and soybeans, soybean glue (I.F. Laucks and the firms he has licensed turn out some 30,000 tons of soybean glue annually), rubber substitute (Norepol), paper industry (Glidden), plastics, soy-cotton helmets, firefighting compounds, lecithin, fertilizers. 4. Nutritional nuggets: Food value of soybeans and soy products (vegetable or edible types of soybeans, protein, fat & carbohydrate, minerals, vitamins, lecithin, alkaline ash, economy, exaggerated claims), principal uses of soybeans and soy products (meat substitutes, meat enrichers, fortifying foods with soy flour). 5. From soup to nuts: Green beans, dry beans, frozen beans, roasted soybeans, sprouted soybeans, the cow of China–soy milk, the meat without a bone–tofu or soy cheese, the little giant among protein foods–soy flour, soy grits, puffed grits, soy oil, miscellaneous soy products (soy butter [soynut butter, p. 99-100], sandwich spreads, malts, coffee substitutes, soy sauce, soy albumen–a new product, greatly improved during the past two years, is now used to "replace egg albumen in candy manufacture" [as in marshmallows]).

Note 1. This is the earliest English-language document seen (March 2001) that refers to tofu as 'the meat without a bone.' In 1938 Horvath called tofu 'the meat without the bones.' Note 2. This is the second earliest document seen (Aug. 2002) in which the soybean is called the "cow of China."

Note 3. This is the earliest English-language document seen (Aug. 2003) that uses the term "soy albumen" (or "soy albumens") to refer to isolated soy protein as a product.

6. The blazed trail: Introduction (history and pioneers), our tardy acceptance, food pioneers (health-food stores, Dr. W.D. Sansum of Santa Barbara and soy bread, allergy studies, vegetarians, Seventh-day Adventist food companies, meatlike products, Madison College of Tennessee, Loma Linda Food Co., the International Nutrition Laboratory and Dr. H.W. Miller, special dietary concerns and diabetic diets), establishing soybeans in the kitchen (The Edison Institute and Henry Ford, the USDA and the U.S. Bureau of Home Economics, the Agricultural Marketing Administration, U.S. railroads, the Soy Products Division of the Glidden Co., the Soy Flour Association). 7. The challenge of nutrition: The dangers of hidden hungers, nutrition and health, corrective nutrition, starch-restricted diets, meatless diets, allergy diets, bland diets, building diets, reducing diets, acidophilus culture, lecithin. 8. Our wonder crop: Jack and the beanstalk, early history, new varieties, aids to the industry (Regional Soybean Industrial Products Laboratory, American railroads, American Soybean Association, Fouts Brothers of Indiana, *Soybean Digest* and George Strayer in Hudson, Iowa, Soy Flour Association with Edward Kahl as first president, Soya Kitchen in Chicago (Illinois) opened in Jan. 1943, National Soybean Processors Assoc., National Farm Chemurgic Council), educational program, restrictive regulations. 9. Soybeans and the farmer: Varieties, sources of information, seeding and inoculating, harvesting, grading, soybean diseases, crop rotation, damaged beans. 10. Tomorrow: Acreage and production, soybeans on the farm, soybeans in nutrition, postwar industrial uses, future improvements. 11. A few suggestions for better living: Kitchen diplomacy, personal opinions, soybeans for everyone. Recipes: Green soybeans, dry soybeans, sprouted soybeans, roasted or toasted soybeans, meat-substitute dishes, soy-enriched meat dishes, soy noodles, macaroni, spaghetti, sauces and gravies, soups, salads, dressings, soy spreads, soy milk, tofu or soy cheese, soy butter, soy cereals, soy desserts, soy candies, soy beverages, soy-flour recipes, bread and muffins, pancakes and waffles, soy gluten recipes, baking-powder biscuits, pastry, cookies and doughnuts, cakes.

Contains recipes for "Soy milk molasses shake (p. 238). Soy puddings. Soy ice cream (p. 250; "Soy milk may may be used in place of milk in ice-cream recipes... adding whipped cream"). Soy fruit ice cream. Soy chocolate dessert (Eggless) (p. 250-51). Soy shake "(p. 254, made in a "liquefier or mixer").

The story of Allied aid to Greece [p. 24-26] is one of the great mercy stories of World War II. Starting in March 1942, as many Greeks were starving, the first mercy ship sailed to Greece with food and medicine. Up to Nov. 1943, the United States through Lend-Lease sent 82 million pounds of food to Greece. A number of these foods (including soup powders, stew mixes, and spaghetti) were based on soy flour and grits, and specifically developed to suit Greek tastes.

Concerning Henry Ford (p. 35-38), his "first experiments were made in a laboratory in connection with the Edison Institute in 1930. In these experiments, several tons of wheat were used, also several thousand bushels of carrots; sunflower seeds, which have a high oil content; cabbages; onions; and cornstalks. It was not until December, 1931, after a long series of experiments with the soybean, that Mr. Ford and his chemists felt that they were at last approaching a solution to the problem of finding a basic farm material from which the ordinary farmer could develop a commercially profitable product."

Note 4. This is the earliest English-language document seen (March 2007) that uses the term "Soy ice cream" (p. 250).

Note 5. This is the earliest document seen (July 2007, one of two) that uses the word "Cinderella" in connection with the soybean. The author, however, does not elaborate on

© Copyright Soyinfo Center 2013

this idea.

Note 6. This is the earliest English-language document seen (June 2011) that uses the term "soy-flour." Address: Southern California.

1999. Lager, Mildred. 1945. Madison College (Document part). In: Mildred Lager. 1945. The Useful Soybean: A Plus Factor in Modern Living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. 106-07.
• ***Summary:*** "There are several large and small Seventh-day Adventist food concerns in this country that manufacture a complete supply of soy products, most of which are cooked and ready to use.

"As pioneers, all these Adventist concerns have done considerable research on soybeans, and most of them employ chemists who have had firsthand experience with the beans in China. These men know the food value of the bean, what it has meant nutritionally elsewhere, and they strive to perfect formulas for well-balanced and complete vegetable protein foods to take the place of meat. Most of these concerns also manufacture soy milk, fortified to equal dairy milk in food value. Their meatlike products at first were for the use of their own people, their hospitals and institutions; but demands for vegetable protein have brought them into health-food stores and food specialty shops. Sales on these products have been steadily increasing with a rapid rise in the last 3 years, climaxed by meat and cheese rationing..."

"Perhaps the best known of the pioneer institutions is Madison College, Tennessee. It is doing an outstanding job in maintaining a self-supporting college and a sanitarium and in developing a complete line of soy products that are being sold on an international scale. Madison's curriculum includes 27 campus industries run by the students to support the college and themselves. A 900-acre college farm is operated entirely by student labor and is also self-supporting. The student canning factory was started when the college was in its infancy, almost forty years ago; and several years of research in food chemistry have resulted in many new products built around the soybean. Madison College is largely responsible for making soybeans appetizing. They have developed a soy milk that has received world recognition; observers have come from Africa, India, and other countries where milch cows are scarce, to study the methods of Madison's soybean dairy. They also make soy cheese [tofu] and several meat substitutes, as well as a soybean beverage. These foods are now well distributed over the United States and some foreign countries, including South Africa." Address: Southern California.

2000. Lautensach, Hermann. 1945. Korea: Eine Landeskunde auf Grund eiener Reisen und der Literatur [Korea: A geography based on the author's travels and literature]. Leipzig, Germany: K.F. Koehler Verlag. xv + 542 p. Illust. (black & white photos). Maps (part folding, part color). 24 cm. Series: Geographische Handbücher. [1038* ref. Ger]
• ***Summary:*** A superb, scholarly work, with a huge bibliography, printed just as Germany was losing World War II.

Chapter 6, titled "The anthropogeographical character of ancient Korea" (p. 141+) contains extensive information about agriculture and food. Page 154: In wealthier sites, the farm buildings enclose a courtyard, to which an entrance gate gives access (Fig. 21e, p. 151). Some enclosures are so complete that a square courtyard results. In some corner or other of the courtyard stand the huge brown earthenware jars, in which soy sauce (*Sojabohnensosse*, jap. *shoyu*) is prepare and stored.

Page 176-77: In East Asia, after cereal grains, pulses / legumes are the next most important crop. In Korea, by far the most important is the soybean (*Sojabohne*, jap. *daitsu* [*daizu*] = large bean) which makes few demands on the soil. Korea's climate is ideal for soybeans (Tanaka 1931, p. 18); it is even better than Manchuria's climate, because of the large amount of precipitation during the summer. Today, soybeans are an indispensable part of the various dry-field crop rotations. After planting of the paddies has finished, soybeans are planted on the ridges too; there they grow extremely well without being fertilized. Soybeans are grown throughout Korea, but least in the Kaema upland because of the warmth they require. In northern Korea, on dry fields, they are planted between the end of March and beginning of May. Toward the south, planting is delayed until the end of June. They are generally harvested in October, except in Chejudo, where they are not harvested until early November. Soybeans are the crop that is left standing the longest, and they are not harvested until their leaves have turned brown and started to fall.

Soybeans are used as a very nutritious food for both humans and horses. Also, cooked soybeans are used as a fertilizer for the rice paddies. Above all, though, the hot brown soy sauce (*Shoyusosse*), which is never lacking on any Korean or Japanese table, is made of them, using salt and pepper and a process of fermentation. Bean curd (*Käse*, jap. *tohu* [*tofu*]) and soybean paste (*Mus*, jap. *miso*) are also made of them."

Page 180: The place of soybeans (*Soja*) in rotations, such as soya / hemp is mentioned. The winter crops consist of wheat, barley, or rye; the summer crops of soybeans, other beans or cotton. Page 181 mentions soybeans as a summer crop. Page 196: Soybeans are planted on the bunds of the rice fields. Page 199. Those who farm in central Manchuria are likely to grow soybeans. Page 224: Soybeans are mentioned several times.

A fold-out map facing p. 400 shows the distribution of soybeans in Korea. They seem to be slightly more densely grown in the south than in the north.

Page 435: Soybean oil mills (*Sojabohnenmühlen*) are

© Copyright Soyinfo Center 2013

mentioned. Page 460: Discusses imports and exports of soybeans. The main beans exported from Korea to Japan are soybeans, amounting to a weight of 1.3 to 1.9 million dz. in 1939. Note: One dz (*doppelzentner*) = 100 kg. Exports to other countries was small. By comparison, Manchurian soybeans were exported to the northern harbors of Germany and England. In addition, a significant amount of Manchurian soybeans were imported to Korea (0.29 to 1.02 million dz.). Also, a significant quantity of soybean products made in Korea were exported to Japan (Soy oil up to 11,550 dz. and soybean cake up to 1.2 million dz.). Likewise, up to 3,210 dz of soy oil and up to 1.3 million dz of soya cake were imported to Manchuria from Korea.

Page 466-67: A comparison of soybean production in Korea and Japan is given. 85% of the imports of soy oil to Japan came from Korea.

Page 473. Soybeans are grown in the deep valleys of Korea.

Facing p. 144: A photo shows a man carrying a large, empty, pottery soy sauce jar on a rack on his back.

Hermann Lautensach lived 1886-1971. Korean place names are the old ones in the Japanese system. Address: PhD, Prof. of Geography at the University of Greifswald [northeastern Germany].

2001. Longrée, Karla. 1945. Soybeans and peanuts: With 51 original recipes worked out by students in experimental classes at Hampton Institute. Hampton, Virginia: Hampton Institute Press. 47 p. Summarized in Soybean Digest, Feb. 1946, p. 22. [19 ref]

• ***Summary:*** Dr. Longree, who joined the staff of Hampton Institute in 1941, is a native of Germany and has been in the USA since 1933. She became an American citizen in 1939. She earned PhD degrees at both the University of Berlin and Cornell University. The many soy-based recipes include those made with whole soybeans, "soyflour, soygrits, soymilk, and sprouted soybeans." Address: Prof. of Foods & Nutrition, Hampton Inst., Hampton, Virginia; PhD Univ. of Berlin and Cornell Univ.

• ***Summary:*** "The beginning and foundation of the Library of Congress Orientalia Collection was the great Chinese encyclopedia, the *Ssu k'u ch'uan shu*, a gift of the Empress Dowager of China.

"About 1914, Dr. Swingle, then head of the Office of Crop physiology and Breeding, Bureau of Plant Industry, U.S. Dept. of Agriculture, was able to secure the services of a Cornell graduate, Dr. Hing Kwai Fung, to make abstracts and/or translations of information in the *Ssu k'u ch'uan shu* regarding economic plants. Dr. Swingle interested Dr. Herbert Putnam, Librarian of Congress in increasing the holdings of Chinese books, especially gazeteers [sic, gazetteers] which contain local information. When Dr. Fung returned to China, he was given a modest sum for purchasing books. Dr. Fung was able to persuade the Commercial Press (the largest publishing firm in China, located in Shanghai) to act as receiving agent for books for the Library of Congress, and to ship them to Washington [DC]. Soon after, Dr. Swingle was sent to the Orient–in March 1918–by the Dept. of Agriculture." There he made arrangements for collecting books in Tokyo and Shanghai.

"As American merchants and missionaries gradually penetrated into China, they sent home more and more plants and trees. The Arnold Arboretum, organized and directed by the great tree expert, C.S. Sargent, financed extensive trips to the Orient to obtain botanical specimens and seeds of ornamental trees and shrubs as well as photographs of them as they grew in their native habitat. These trees and shrubs revolutionized the garden and park plantings of the northern parts of the United States. The illustrated popular books of E.H. Wilson, who made many trips to the Orient for the Arnold Arboretum, helped to arouse interest in the very rich arboreal flora of China...

"The Plant Introduction Service of the U.S. Department of Agriculture was organized by David Fairchild in 1897; he did very extensive exploring for foreign economic and ornamental plants from 1898 on, and directed the Plant Introduction Service from 1909 to 1928. I was fortunate enough to be one of the first 'agricultural explorers.'" Of these men Frank N. Meyer and P.H. Dorsett were outstanding, not only for the number and value of the plants they secured, but also for the detailed and accurate descriptions of every plant they sent to Washington.

"P.H. Dorsett some years later, during the twenties, traveled widely in North China taking many fine photographs of Chinese crop plants and writing descriptions of the culture, harvesting and curing of each. On these trips he collected many varieties of soy beans largely through the utilization of a new and potent method of securing the willing cooperation of all educated Chinese people. A complete translation, prepared by Michael J. Hagerty under my direction in 1917 of the chapter on soy beans contained in a standard Chinese work on economic plants (the *Chih Wu Ming T'u K'ao* by Wu Ch'i-chun) had been furnished the plant explorers looking for soy bean varieties. This translation, covering eighty-two pages, discussed several hundred varieties, telling where they were largely grown. In

© Copyright Soyinfo Center 2013

all cases the name of the variety and the name of the locality where it was grown were not only spelled out in English but also written carefully in Chinese characters. An index made it easy to turn to any variety under discussion and see what was said about its culture.

"This was a turning point in field explorations in China. Such indexed translations in the hands of foreign plant explorers insured the attention of all educated Chinese, who gladly directed the explorer to the nearest source of the various named varieties. I had learned this at first hand in 1915 when studying varieties of Citrus in southern China. Surprise and skepticism about the foreigners knowledge of Chinese books gave way to astonishment and warm approbation."

"The soy bean is a striking example of the introduction of a new crop... Soy beans were sent from China to France as early as 1740 and from 1779 were grown in the famous Botanic Garden of Paris. Benjamin Franklin, who had been a member of the French Academy of Sciences since 1772, sent seeds back to the United States and urged that they be given a trial. But in spite of his plea, the soy bean remained merely a curiosity in this country for more than a century.

"In the late eighties [sic, 1890] Prof. C.C. Georgeson brought soy bean seeds from Japan, where he had been teaching at the Agricultural College at Komaba, and planted them in a field on the campus of the Kansas State Agricultural College. I could see the stunted soy bean plants from the windows of the botanical laboratory where I was a teen-age research assistant. This variety, adapted to the perpetual spring climate of Komaba near Tokyo, did not do well on the bare Kansas hills, often swept by hot dry winds. And nothing happened. Soy beans did not arouse interest among Kansas farmers until many years after this failure.

"In the third decade of the twentieth century Dorsett sent to Washington more than 800 named soy bean varieties from China, Manchuria and Japan. These together with shipments secured by Dr. David Fairchild from his numerous correspondents in the Old World, especially in Asia, amounted by 1928 to a total of more than 2800 packages of soy beans, almost all named varieties but many of them duplicated, some of them many times. Meantime tests made by W.J. Morse, in charge of soy bean culture for the Bureau of Plant Industry, showed that many varieties had a narrow range of adaptability. Accordingly, from 1929 to 1931, Morse joined Dorsett in the Orient and these two experts, with trained Chinese helpers, brought to this country the largest single collection of soy bean varieties ever assembled. As soon as Morse returned from studying soy beans in Asia and attacked the problem of finding which Asiatic varieties adapted to the different regions and selecting and breeding to make them fit various American soils and climates, a remarkable change occurred in soy bean culture. Yields went up and plantings increased year by year...

"One of the best-known industrial uses for soy bean proteins is for making water-resistant glue. No less than 30,000 tons of soy bean glue were made in 1942 by a single firm and its licenses annually, most of it being used in the rapidly growing plywood industry. Soy bean proteins have been enthusiastically used by Henry Ford in his automobiles, being mixed with the more expensive phenolic resins, thereby reducing costs and also yielding a more plastic, freer-flowing mixture which takes dyes better...

"As long ago as 1917-1918 Dr. Yamei Kin set up under my general supervision for the U.S. Department of Agriculture a soy bean mill in New York City in the hope of supplying tofu to increase the bulk and food value of meat dishes served to soldiers in training at near-by camps. Dr. Kin succeeded in making excellent tofu. She even served to a group of army officers a meal composed entirely of soy bean dishes! However, it proved impossible to test tofu on a large scale at that time, since we could not get priority for transportation of soy beans from North Carolina, then the nearest region where they were grown on any considerable scale.

"A splendid example of a double fermentation is the soy bean cheese called *nam yüe* by the Cantonese and *sufu* in North China. It is preferred even to the best Roquefort as a salad dressing constituent by those who have had the opportunity to try it. It is made by Chinese masters of the cheesemaker's art who believe that its fermentation is an insoluble mystery.

"Shih Chi-yien, then working in the American University of Soochow, published in 1918 the first English account of the most important fermented bean foods. He traced the making of *tofu* from soy beans back to the Han dynasty (A.D. 22). Ten years later Wai Ngan-shou [Nganshou], one of the first scientifically-trained Chinese microbiologists and fermentation experts, was able to isolate and identify as a new species of Mucor the mold that makes possible the *nam yüe* fermentation. It is a curious fungus, *Mucor sufu*, distantly related to the miraculous *Penicillium notatum* whose marvelous curative action has only recently been discovered. A third fermentation expert, Shih You-kuang, studied another soy bean fermentation product, *meitauza*, made by another species of Mucor, and published an illustrated account of it in German in 1937. In his review of the literature of Mucor fermentations, Shih You-kuang cites no fewer than thirty articles by eighteen authors all based on Chinese fermentations...

"Miss Elizabeth Groff, under my direction in 1918, made a thorough study of the fermentation of soy sauce in the famous factories of Canton, China, and published the first detailed account of the process in the *Philippine Journal of Science* for 1919."

"It has been my privilege to assist in building up a great Chinese library in the Library of Congress, under the enlightened policy of Dr. Herbert Putnam, beginning in 1912. The Orientalia Division, headed by Dr. Arthur Hummel,

© Copyright Soyinfo Center 2013

is now the largest Chinese library outside of Asia and is probably larger than all the European libraries of Chinese books combined. It now contains, Dr. Hummel estimates, about 230,000 Chinese volumes (*Chüan*) and some 20,000 more will soon be added in the form of bibliofilm [a type of microfilm] copies of very rare works from the Chinese National Library, sent to Washington for safekeeping."

Note 1. This is the earliest secondary document seen that mentions the early introduction of soybeans to America by Benjamin Franklin.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term *nam yüe* to refer to Chinese-style fermented tofu. It is 2nd earliest English-language document seen (Oct. 2011) uses the word "sufu" to refer to Chinese-style fermented tofu, and the first such document written by a Westerner. Photos show Dr. Walter Tennyson Swingle, and his wife Maude K. Address: Collaborator, Bureau of Plant Industry, USDA; Consultant on Tropical Botany, Univ. of Miami, Florida.

2004. Komaki (Joe T.); Kalifornians Enterprise. comp. 1945-. Chicago nisei business directory. Chicago, Illinois: Californians Enterprise. 28 cm. [Eng]*
• ***Summary:*** Two-page spread in Chicago Japanese American year book. 1949. Photos of the covers of two editions suggest that that first edition was 1945 (2,000 copies printed); For the 1946 edition, 4,500 copies were printed. Address: Chicago, Illinois.

2005. Colombia. Servicio Cooperativo Interamericano de Salud Publica. Seccion de Nutricion. 1945? Un alimento maravilloso: la soya [A marvelous food: The soybean]. Bogota, Colombia: Aire Libre. 8 p. Undated. [Spa]
• ***Summary:*** Contents: Have you heard talk about soya? A little history. Soy preparations: Soymilk, how to prepare soymilk and okara (*el afrecho de soya; afrecho* means "bran"), soy cheese [tofu], whole soy flour. Some soy recipes: Arepa with corn and soya. Maizena with soymilk. Arequipe with soymilk. Soy sprouts (*tallos alimenticios de soya*). Bread with corn and soya. Bread with wheat and soya. Soya galletas. Soya ponqué. Soya bollos. Soy soup.

Note: This is the earliest Spanish-language document seen (Oct. 2001) that mentions okara, which it calls *el afrecho de soya.* Address: Colombia.

2006. De, S.S.; Subrahmanyan, V. 1946. Processing of soya bean for the preparation of milk and other food products. *Indian Farming* 7(1):17-19. Jan.
• ***Summary:*** Contents: Introduction. Industrial and other uses of soya bean (soy milk, butter, and bean curd [tofu], Russia). Soya bean in India (unsuccessful attempts to use like dhal). The soya milk (The Chinese method, the improved method). The flavour and taste of soya milk. Nutritive value of soya milk. Possibilities of soya bean in India (to supplement the supply of cow and buffalo milk, which may be decreasing on a per capita basis). Uses of soya milk (sour curd, sweeter curd [tofu]). Production of soya bean [in India]. Other soya products.

"In Russia there is very intense propaganda for the use of soya bean. Soya bean dishes have been introduced in restaurants and homes. A Soya Research Institute has been organized in Moscow and in a special exhibition of soya food, 130 varieties of soya dishes including cutlets, pastry, salads, candy, and beef were shown. A dinner prepared entirely of soya bean was served to representatives of trade unions, factories, the Red Army and the Soviet press. The food was unanimously declared to be excellent."

"Over a considerable part of India, the chief dairy product used by a large section of the population is only the sour curd or the butter milk. Owing to the high cost of cow's milk, the corresponding curd and buttermilk are now becoming increasingly difficult to obtain. Even at the present high price of the bean (roughly 4 as. per lb.), the soya milk cost only about one-fifth of that of cows milk, so the curd obtained from it would come within easy reach of a large section of the population."

"An important step would be the establishment of a soya foundation in order to promote the creation of a National Organization for Soya Research an example of which already exists in the U.S.S.R." Address: Dep. of Biochemistry, Indian Inst. of Science, Bangalore.

and reaping

No. 17: Method of harvest. Curing the pasture or hay. Baling the hay. Exhaustion of the soil. Harvest and preparation of the grain. Time of gathering. Methods of reaping. Curing and manipulation. Threshing.

No. 18: Special machines. Exhaustion of the soil. Storage of the seeds. II. Uses of soybeans. Introduction: The plant. The flour made from the seed. Green vegetable soybeans and sprouts (*Las soyas verdes y grillos*). Dry soybeans (*Las soyas secas*) and products made from them. The oil and its uses. The soybean as a human food: Introduction, dry soybeans, green vegetable soybeans (*Soyas frescas*). Soy sprouts.

No. 19 & 20: Introduction. Flour. Oil. Soy sauce. Soymilk. Soy curds or tofu (*Cuajada o requesón de soya*). Soybeans as food for animals. Soy oil. Extraction of soy oil.

Issue No 21: Uses of the oil. Soybean meal (*pulpa, o bagazo de soya;* which remains after extraction of the oil). Use of soy meal [or flour] in human foods. The meal as a feed for livestock, for poultry, and as a fertilizer. Soy hay: For fattening cattle, for dairy cows, for mules and horses, for other animals. Soya pastaderos. Fresh soy forage. Soya for ensilage. Soy straw. Soya as a green manure.

On page 10 of this last part is a full-page cartoon of a woman with fruits and a cooked chicken. "Soya is the ideal food for children; it nourishes more and costs less. It is a good source of proteins, oils, carbohydrates, and vitamins. It can serve as a substitute for milk, eggs, meat, fruits, and pulses or vegetables (*legumbres*)." Page 11 states that people interested in planting soybeans can contact Prof. Raul Zaldivar, Director of the Rural School at Toncontin for Training Elementary Teachers (*Director de la Escuela Normal Rural de Toncontin*), Tegucigalpa, Honduras. Address: Honduras.

2009. Lager, Mildred. 1946. The meat without a bone. *Soybean Digest.* April. p. 22.

• ***Summary:*** "To anyone interested in unusual foods soy cheese is indeed fascinating. While it will never become popular in this country it is worth knowing about and trying at least once.

"Soy cheese or curd is known to the Chinese as tofu and it has been aptly described by them as 'the meat without a bone.'... The bean curd or soy cheese is the coagulated casein of the soybean and is made from soy milk very much as we make cottage cheese. The result is a white, very soft, watery substance, that can be pressed into a cake or soft cube. It is an easily digested food, fairly high in protein, and can be used as a meat, egg, or fish substitute, as a cheese, or as a topping or dessert.

"Every Oriental settlement has its tofu factory or factories which supply the restaurants and markets with fresh cheese. The methods used in some of them are very crude and primitive but the result is an excellent cake of cheese. There is an interesting little place in the heart of new Chinatown in Los Angeles run by two old Chinese who claim no knowledge of English, and can't be bothered with curious visitors. They did, however, allow me to watch from a distance. A large size coffee mill run by a little motor ground the beans. The curds were cooked in a clean wash tub and the cakes were pressed between two boards held down by a wooden bar which was attached to the wall at one end and weighted at the other end with a pail of sand. Naturally their output was limited but their product was excellent. Here was the old world working in the midst of the new making an ancient food that was yet new and novel."

Describes how to make tofu at home (vaguely), how to store it, basic preparatory techniques, and serving suggestions. It is delicious as a dessert "Some ingenious cooks even use it for cheese cake." Canned tofu is more in demand than fresh because it is more widely available. "Canned it is known as soy cheese, soy food or soy curd and the taste, texture and moisture varies with the different brands."

"Soy cheese will never become popular in this country. A certain amount will always be used, however, by the vegetarian, especially by those who do not use any animal products whatsoever [i.e., vegans], and by those who have developed a taste for it. It is an unusual food that does not appeal to everyone. It is becoming more and more popular in corrective nutrition because it often fills a need in the special diet.

"'The meat without a bone' is one of the interesting variations of the versatile bean. This ancient food is gaining a toe hold in our American diet and is filling a dietary need for many persons."

A photo shows a woman in a Korean market selling cakes of tofu on a round woven bamboo tray. Address: Author of "The Useful Soybean" [California].

2010. Smith, A.K.; Beckel, A.C. 1946. Soy or vegetable milk. A resume and bibliography. *Soybean Digest.* May. p. 18-23. First published in Chemical and Engineering News, 24:54-56. [123 ref]

• ***Summary:*** The 123 references comprise the most extensive bibliography on this subject up to this time. A photo shows A.K. Smith. Address: Oil and Protein Div., NRRL, Peoria, Illinois.

2011. Marquis, Arnold. 1946. The Pacific story. Radio broadcast. National Broadcasting Company (NBC). Hollywood, California. June 2. 30 minutes. 23 p. transcript.

• ***Summary:*** This radio broadcast is a fascinating story–told by many voices–of how the Japanese scientifically developed soybean production, utilization, and export in their puppet state of Manchukuo, and, how the USA intends to capture the soybean export markets lost by the Japanese when they lost World War II.

© Copyright Soyinfo Center 2013

The Chinese speak of the soybean this way: "It is the poor man's meat. It is the cow of China. It is meat without bones. The Japanese speak of it this way: If we could have held Manchuria, it would have guaranteed that Japan could never be starved out. American nutritionists speak of it this way: It is high in protein. It is rich in vitamins–in A, B-1, C, G, and E–and also in the bloodclotting vitamin K. Weight for weight it contains several times as much B-1 as beefsteak. And as for minerals: One-half cup of soy flour contains as much calcium as a whole cup of milk... [and] as much phosphorus as two cups of milk. And weight for weight, it contains as much iron as liver, twice as much iron as molasses, and three times as much iron as whole wheat flour. The soybean is a wonder food. One pound of soy beans is almost a complete one-day ration for an adult."

The USA is now developing two famine-relief foods based on soybeans. The first contains 50% soybean, plus split peas, wheat flour, and a little peanut-meal, onion, salt, and fish-oil. Four million pounds of this mixture and twelve million pounds of another soy-based mixture are being sent "to the famine areas of China." In other words, soybean are being sent from the USA to the land of their origin, "where they have been a mainstay for five thousand years."

Discusses: The growing of soybeans in Manchuria. The Japanese takeover and extension of their control via the South Manchuria Railroad, whose terminus is Dairen. The importance of Manchurian soybeans to Japan. The Japanese Central Laboratory at Dairen and its research on soybeans. The two Japanese agricultural experiment stations in Manchukuo. Development of the benzine [benzene] solvent extraction process for soybean oil, "until there were 200 large bean plants in southern Manchuria." Soybeans as a livestock feed in Manchuria. Use of soybeans as food in China: "Tofu is bean-curd... This is fermented tofu. It is very good. Tofu is eaten in several forms. Fresh, fermented, dried or frozen. Just about any way it is prepared, its food value is preserved... We also use the oil of the soy bean. And with the soy bean we make soy sauce." Many Asiatic peoples also use soybeans to "make bean milk and bean flour." "They roast them for confections [kinako]. They eat them green [green vegetable soybeans]. They sprout them [soybean sprouts] and they even make drinks of them.

Note 1. This is the earliest English-language document seen (Oct. 2011) that contains the term "fermented tofu.

Industrial uses of soybeans in America. How Dairen became Japan's great center of the soy bean industry in Manchuria, and the Mixed Storage System. "About 55% of the soybeans grown in Manchuria are used for human food."

"You see, its all tied together. The growing of the bean, the processing, the transportation, and the export. Since 1937, the economy of Manchuria has been developed for the benefit of Japan." The Japanese and the Bank of Manchukuo (which is an instrument of the powerful Mitsui and Mitsubishi financial combines) are "buying up all the soybean business" and trying to eliminate the major European companies that were exporting soybeans before the Japanese moved in, such as Dreyfus Co. (France), and Wassard Co. (Denmark). Although the Japanese claim that Manchukuo is an independent nation, other nations realize it is a puppet state. The Chinese Eastern Railway, which was built by the Russians and has its terminus at Vladivostok, is in competition with the Japanese-controlled South Manchuria Railroad for the soy bean business of Manchuria. The latter uses rebates (kickbacks) to try to eliminate competition.

In 1937, after 6 years of dominating Manchuria, Japan invaded China proper–using Manchuria to supply their troops. "By 1941, Manchuria was yielding some four million tons of soybeans. The Japanese controlled every pound of it. And by 1941 they had fostered the growing of soybeans in Korea, and also in Japan itself. Also, by this time, the Japanese had seized a good part of the soybean country of China proper. But by Pearl Harbor [7 Dec. 1941], the United States was also growing soybeans: Over 3 million tons in 1941. By 1945 it was nearly 6 million tons."

Now that the war is over, the Japanese have lost the entire soybean industry in Manchuria–including the laboratories, bean oil mills, Dairen, the South Manchuria Railroad, and the Bank of Manchukuo which controlled it. China, which now controls Manchuria, "will consume much of the soybeans which, before the war, were exported to European countries, and to Japan." The United States has begun to supply this soybean export demand, and in fact "is already shipping soybean products back to the Far East–to the famine stricken areas of China."

America Doctor: "So far most of our soybeans have gone for feeding livestock. But now we known what they can mean to man. Narrator: Now, in this great crisis, we are learning what the Chinese have known for thousands of years. Chinese: It is the poor man's meat. It is the cow of China. It is meat without bones... Announcer: This is the story of the wonder food and the part it has played in our time."

Next comes a 5-minute segment in which W.J. Morse of the USDA Bureau of Plant Industry (Beltsville, Maryland) talks about the significance of the soybean and its development, and the new Pacific Program. Then the conclusion: "For a reprint of this program, send ten cents in stamps or coin to University of California Press, Berkeley, California. The Pacific Story is written and directed by Arnold Marquis. The original musical score was composed and conducted by Thomas Peluse. Your narrator–Gayne Whitman... This program came to you from Hollywood. This is N.B.C.–The National Broadcasting System." Note 2. A cover letter accompanies this manuscript. It is from Arnold Marquis, Writer-Producer, The Pacific Story, to Mr. John Baker, Department of Radio, USDA, Washington, DC. The letterhead reads: National Broadcasting Company, Inc., A

2012. Krishnaswamy, N.; De, S.S.; Subrahmanyan, V. 1946. Digestibility of soya milk (Letter to the editor). *Science and Culture* (*Calcutta*) 12(1):51-52. July. [4 ref]

• ***Summary:*** "Soya-bean milk is a highly digestible product. Experience in different parts of the World has shown that it is more easily digested than cow's milk. In America and other countries, persons who are allergic to cow's milk or otherwise experience difficulty in digesting it, experience no such discomfort when using soya-milk. In Canada, where there is no milk shortage, the sweet soya curd is flavoured for feeding children as it produces no digestive disorders.

"Our recent experience with feeding soya milk in child welfare centres has shown that even very young children can drink fair quantities of the milk without any discomfort. Even babies have been fed on soya milk without any ill effect."

"Soya milk forms a soft curd which disperses readily on either side of the iso-electric point. Cow's milk curd remains as such over a wider range."

"Further work bearing on the digestion of soya milk in the animal system is in progress. It is hoped that this study will throw fresh light on the digestibility of other vegetable milks as well." Address: Dep. of Biochemistry, Indian Inst. of Science, Bangalore.

2013. *Soybean Digest.* 1946. The culture of soya in France. Aug. p. 6, 16.

• ***Summary:*** "Information concerning the status of the soybean in France used in the accompanying article was kindly supplied to us by Am. Matagrin, formerly scientific librarian at Lyons and technical advisor to the National Soya Center. Mr. Matagrin is author of *La Culture du Soja* and other books." A portrait (illustration, line drawing) shows Matagrin, bearded and with monocle.

"Soy sprouts were furnished to the Parisian markets in 1875. In 1900 French physicians were prescribing soy bread for diabetics. Prior to the first world war a Chinese scientist [Li Yu-ying] was running a small factory near Paris which manufactured such soy foods as oil, flour, milk and cheese... During the first world war Am. Matagrin was collecting all the information he could find on soybeans in the English, French, German, Italian and Spanish languages. In 1936-38 he was growing a large number of varieties from different countries in Choutagne...

"But in spite of all the effort by enthusiasts there was little general interest in soybeans until France was defeated by Germany in 1940 and began to go hungry. Then an excessive interest in the crop developed. But most attempts to grow soys were ill advised and failed... Newspapers carried extravagant accounts of the returns that might be obtained from soya. People quickly bought out editions of books on soybeans by Matagrin and the author Rouest. (The puppet Vichy government prohibited reprinting of Matagrin's book, since it looked on him as a 'resistant.')

"The National Soya Center (C.N.S.) was founded by Jo Philippart, a big oil miller. The large mills of Chartres and soybean cooperatives at various places encouraged farmers to grow the crop. Many organizations distributed seeds. There was a surprising increase in garden plantings, or 'little cultures' as the French call them. Garden and horticultural societies distributed over 125,000 packets of soybean seed in 1943, while Matagrin personally gave away more than 200 kilograms of selected seed in small lots.

"A monthly magazine, *Revue Internationale du Soja,* began publication in 1941. It is still being issued. Thus the soybean became almost fashionable under German occupation. But growers were disappointed as in most cases returns were small... But one-fourth of the French people became acquainted with the soybean during the war–a great advance... In 1945 the total crop amounted to perhaps 5,700 tons.

"[Matagrin] asserts the French soybean will always cost too much to produce for technical uses, and will be grown preferably for fine food products. France is adapted to intensive rather than extensive production."

2014. Miller, Harry W. 1946. Feeding the world with soya (Continued–Document part II). *Soybean Digest.* Sept. p. 56, 58, 61.

• ***Summary:*** Continued. "The green edible soybean offers an additional line for canneries and freezing plants packing peas, lima beans, corn and other vegetables. It also offers another tasty item to the cook to adorn the dinner plate.

"Green soybeans can be canned with exactly the same equipment that all canneries have and can be shelled with the same sheller that is used for peas. The canning season is not in conflict with that of any other product unless it be sweet corn. The varieties can be planted so that they will not seriously interfere with this product. There is nothing we can put into the cans exported to other countries and for the areas of large population of our own country that will give people greater returns nutritionally than the immature green soybean. It has a nutty flavor and does not in any way harbor the beany taste that lingers in the minds of some people who think of soy foods.

"Canned sprouts: Canneries could develop a very fine winter industry by canning soybean sprouts. Or the frozen food people could very well add a package of frozen soy sprouts to their lines. These could very nicely come into our markets as a fresh vegetable along with Brussels sprouts, lettuce and other raw foods, to be incorporated into salads and cooked dishes. The sprouting of the soybean again removes the characteristic taste and gives a nice vitamin-yielding food, along with its rich content of minerals. Any

© Copyright Soyinfo Center 2013

good field variety may be used for sprouting.

"There is much to be learned from the Orient regarding usages of soybeans in the diet, in the many forms in which they prepare them. They first make a water extraction of the protein, curdle it and make cheese [tofu]. With this bean they can make foods simulating milk, fish, fowl and meat in appearance and taste.

"Already, in this land hundreds of infants have been started from birth using modified soy milk. A very large group of others who are allergic to animal milk are substituting soy milk for the dairy milk. It is being made into varieties of delicious cheeses, and has possibilities in the cheese industry the equivalent of cow's milk curd. The lactic acid soy milk is the most pleasing beverage. The acidity of the milk covers wholly any semblance of the characteristic beany flavor.

"Albumen sheets: We now have albumen powder made from the soy extraction flakes utilized like egg powder by the big candy industry in ever increasing amounts. The soy albumen sheets [yuba], because of their labor and painstaking requirements, have not been made in this country as they are in China. However, we are finding ways of providing for their manufacture.

"A halt has been made on the production in Michigan of a competitive margarine called soy butter. Still, there is available to every housewife a method of making a butter with far less work than churning cow butter. Such a butter is made from soy oil and soy milk which is colored with carotene oil and salted to taste.

"Dry mature soybeans can be readily transported to any part of the world without requiring refrigerator space. They are a form of concentrated nutrition the world can easily be taught to use. Seventeen dollars worth of soybeans at 5 cents per pound will supply enough protein for a family of five for an entire year.

"In a paper such as this it would seem to be in place to give a few concrete suggestions on what might be done to help solve the world food shortage.

"l. Encourage more soybean production in America. This could be done if soybeans were given their proper economic value.

"2. Forward seed to various countries in the world, encouraging its production through helpful instructions in growing, processing and using. There are very limited areas where soybeans have proven entirely unsuccessful when given a fair trial.

"3. We should devote more time on experimental work in cooking and preparing the food and overcoming any objectionable features that seem to prevent its widespread use. The feeble efforts that have thus far been put forth have really done wonders in furthering the adoption of the soybean in the diet.

"In closing, allow me to say that with the present world yield of soybeans, if used exclusively to relieve human starvation, relief could come to all the destitute areas of the world." Address: M.D.

2015. Stahel, Gerold. 1946. Foods from fermented soybeans as prepared in the Netherlands Indies. I. Taohoo, a cheese-like substance, and some other products. *J. of the New York Botanical Garden* 47(563):261-67. Nov.

• ***Summary:*** Contents: Introduction. Sprouts and milk from soybeans. Cheese-like products. How taohoo is made. Condiments made with Aspergillus.

In East Asia–as in Surinam–people have developed "means for overcoming the rather bitter taste of soybeans and their failure to cook soft. They have learned to ferment the soybeans with quick-growing fungi, thus making several palatable and wholesome foods.

"Most important of these foods are *taohoo* and *tempe;* also *taokoan,* a cheese made from *taohoo; taotjo,* a fermented paste-like condiment, and *ketjap,* which is soy sauce. Soybean milk is also made, but without a fungus, and sprouted soybeans are widely used by orientals."

"In the Netherlands East Indies [later Indonesia] sprouted soybeans are called *tokolán* or *taogé.* They are one of the ingredients of every 'rijst-tafel' (rice table, or combination of dishes) and therefore are never lacking in the 'passar' (market). Even in our Paramaribo market *tokolán* is displayed every day."

In China, soy milk is used in the same manner as cow's milk. It is also consumed in the United States, though on a very limited scale. In the Netherlands East Indies, soy milk "is only slightly known as food, but it is produced in large quantities for the manufacturing of soy cheese, called *taohoo* or *tahoo."*

The curd [tofu] "is either eaten fresh or baked in oil or lard. In China it is sometimes processed further into a kind of real cheese by impregnating the curd with turmeric and reducing the water content by heavier pressing. This cheese, called *taokoan* [Chinese: doufugan], has a yellow color and can be shipped abroad."

"After tempe [made with *Rhizopus Oryzae*], taohoo is the most common form of soybean product eaten in the Netherlands East Indies. In China, it is the most important soy product. Taohoo is manufactured here in Surinam only on a very limited scale, by a single Chinese store-keeper close to the Paramaribo market-halls along the Surinam river. Twice daily, between 2 and 4 o'clock in the morning and again in the afternoon, he manufactures 11½ kilograms of taohoo, to be sold after 6 o'clock the next morning." A detailed eyewitness description of the tofu-making process is then given.

Describes briefly how to make taotjo (a kind of paste) and ketjap (soy sauce) with *Aspergillus oryzae,* another fungus. Taotjo is not made in Surinam, but ketjap is. "To make taotjo, boiled soybeans are mixed with roasted meal of wheat or glutinous rice. The mass is wrapped in hibiscus

© Copyright Soyinfo Center 2013

leaves, which commonly harbor the *Aspergillus* fungus." After 2-3 days the moldy mass is immersed in brine, where it is kept for several weeks. "Palm sugar is added at intervals. Taotjo must be made in the dry season, because every day it has to be brought outside into the sun and air for hours." This dish is eaten in East Asia with the 'rijst-tafel.'"

To make ketjap, soybean are boiled, cooled, then wrapped in hibiscus leaves–but without mixing in roasted meal. After fermenting for 2-3 days, the mass is immersed in brine, as with taotjo. Each day, for one to several months, it is exposed to the sun. A little palm sugar is added at intervals. Then the fluid is filtered off and the solid residue is cooked several times with fresh water to extract all the soluble material. "The fluid is then concentrated by slow boiling. Spices and other piquant materials are added, according to the *specialité de la maison.* These may include galangal, ginger, cloves, Jew's ear fungus, and dried and ground fish and chicken meat."

Photos show: (1) Chinese kitchen [shop] equipped with implements for tahoo manufacture, with hand-turned millstones, soybean mash flowing into cheesecloth bag hanging in wooden barrel, press, earthenware pot filled with brine for the "coagulation of the curd." (2) Four pieces of fresh taohoo, four-fifths natural size. (2) Four pieces of freshly baked taohoo, four-fifths natural size.

Note: This is the earliest English-language document seen (April 2013) that uses the word "taohoo" or "taokoan" to refer to tofu. Address: Agric. Exp. Station, Paramaribo, Surinam.

2016. **Product Name:** Tofu, and miso.
Manufacturer's Name: Aoki Tofu Co.
Manufacturer's Address: Berkeley, California.
Date of Introduction: 1946.
New Product–Documentation: Leviton. 1983. Soyfoods. Summer. p. 35. "Profile: Azumaya Tofu Company." Jack Mizono recalls that Aoki Tofu opened in Berkeley in 1946. The company made tofu and miso.

Note: Existing documents show that Aoki Tofu may well have opened in nearby Oakland in 1946; see separate record.

2017. **Product Name:** Tofu.
Manufacturer's Name: Aoki Tofu Seizo-sho (Aoki Food Product Co.) (Merit Food Product Co.).
Manufacturer's Address: 519 Chestnut, Oakland, California. Phone: TW. 3-2746.
Date of Introduction: 1946.
New Product–Documentation: Entry in Nichi Bei Times. 1948. Evacuation-Resettlement Report. Directory of manufacturers, p. 26 (top left). In Japanese: Aoki Tofu Seizôsho. In English: Merit Food Product Co., 510 Chestnut, Oakland, California. Phone: TW. 3-2746.

and 5th), San Diego, California.
Date of Introduction: 1946.
New Product–Documentation: Talk with Haruki Koba, former owner of Oriental Groceries. 1989. Oct. 25. In December 1947 he and his wife, Haruki, bought an existing tofu business (on Island St., between 4th and 5th) from Mr. Yoshio Kawamoto, a second-generation (nisei) Japanese, who made tofu and agé, and had been making them, but not very profitably, for 1½-2 years. He cannot recall the business name.

Letter from Haruki and Michiko Koba. 1989. Nov. 30. This company was located at 418 Island Ave., San Diego, California 92101. They think the company was started in 1946. "Mr. Yoshio Kawamoto was in the U.S. Army. He and Mr. Fred Sugimoto started the business. Yoshio is deceased and we do not know the whereabouts of the Sugimotos."

2020. **Product Name:** Tofu.
Manufacturer's Name: San Jose Tofu Co.
Manufacturer's Address: 175 E. Jackson St., San Jose, CA 95112. Phone: 408-292-7026 or 408-297-9072.
Date of Introduction: 1946.
How Stored: Refrigerated.
New Product–Documentation: San Jose City Directory. 1949-50. First listing for San Jose Tofu Co. (Yoshito Nozaki, Takakaichi Taira), bakers, 175 Jackson St.; 1954 listing same but only Yoshito Nozaki is now listed; 1960 listing same but only Chan Nozaki is listed; 1965-70. Same but only Takeshi Nozaki is listed.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. Owner: Kenny Takeshi Nozaki.

1986. San Jose Business Journal. July 28. p. 1, 18. "San Jose Firm Makes Tofu the Old Fashioned Way." Talk with Kenny Nozaki. 1988. Aug. 25. The company was started in 1946 by his uncle, Yoshizo Nozaki, and a Mr. Taira at the present location. Before them, there was one tofu company at the Dobashi Market in San Jose, but they closed before World War II. Kenny joined the company in 1952. His son, Chester Akira Nozaki, is now the main tofu maker, carrying on the tradition of fresh, hand-made tofu. But Kenny still works each day too.

2021. Hauser, Gayelord. 1946. The Gayelord Hauser cook book: Good food, good health, good looks. New York, NY: Coward-McCann, Inc. viii + 312 p. Illust. 21 cm.
• ***Summary:*** This is a health food (but not a vegetarian) cookbook; it uses meats, poultry, and fish. Soy-related recipes include: Soya tomato soup (with soya flour, p. 48). Soya soup (with soya flour and soy sauce, p. 49). Soya cheese sticks (with soya grits, p. 111). Roasted soybeans (p. 115; p. 114 notes that the soybean is a first-class protein food). Cranberry soya pudding (p. with soya flour, p. 154). Caramel soya custard (with soya milk, p. 163). Rice pudding (with soya milk, p. 164). Soya ice cream (with soya milk and agar-agar, p. 167).

In the chapter on baked goods, p. 179 shows that soya flour is rich in protein, vitamin B-1, riboflavin, and niacin. And pages 180-81 give a detailed discussion of the benefits of soya flour and how to use it. Page 182 discusses gluten flour. Recipes include: Whole-wheat soya bread (p. 183). Soya nut waffles (p. 186). Soya muffins (p. 188). Steamed soya bread (p. 189). Four nutritious sandwich spreads with ½ cup soya flour (p. 191). Delicious soya cake (p. 193-94). Quick service cake (p. 195-96). Soya-flour pie crust (p. 197). Soya cookies (p. 204). Soya sand tarts (p. 206).

Fletcherizer (p. 221, a type of electric blender). Fletcherized drinks: Cream of soya milk (with soya flour, p. 222), vege-nut milk (with soya flour), almond-, pecan-, walnut-, filbert-, or cashew milk. Cream of soybean soup (p. 224).

In the chapter titled "Yogurt, brewer's yeast, and other special foods" is a long section on soybeans and gluten (p. 237-42) including basic information on soybean oil, soya flour and grits, soy flakes, soy meats (split or coarsely ground soybeans), soybeans as a vegetable [fresh-green soybeans], soybean milk, and soybean curd or tofu. Instructions are given for making soybean sprouts at home. Recipes include: Boiled soybean sprouts. Fried soybean sprouts. Green soybeans. Baked soybeans. Soybean milk. Soybean parsley croquettes. Soybean nut croquettes. Vanilla soya ice cream. Homemade gluten dough. Gluten steaks or chops. Address: Beverly Hills, California.

food in the world: How to eat soya]. Special number. 34 p. Undated. [Fre]
• ***Summary:*** Includes a remarkable assortment of ads and descriptions of commercial soyfoods, plus many recipes. Address: Bureau Français du Soya, 15 rue Cauchois, Paris 18eme; Societe Francaise des Produits du Soja, 6 rue Cave–Levallois-Peret. France. Phone: Pereire 23-80.

2023. Chin, Kuo-Chun. 1947. Nature du soja, viande végétale [The nature of soybeans, the vegetable meat]. *Comptes Rendus des Seances de l'Academie des Sciences* (*Paris*) 224(1):62-64. Jan. 6. [Fre]
• ***Summary:*** This and the following two papers prepared by Mr. Chin were presented by M. Louis Blaringhem. Here Chin refers to tofu as "vegetable meat" (viande végetale). It was first prepared by the Chinese philosopher Whai-Nan-Tze before the Christian era. Its production has been described by Champion (1862-66), Prinsen (1896), Bloch (1907), and others. Chin gives a summary of the process, using magnesium chloride as the coagulant. An analysis made by the municipal laboratory in Paris shows that this "vegetable meat" contains 78.2% moisture, 13% protein (N x 6.25), 7.6% fat, and 0.76% minerals. 100 gm provides 56 calories from protein and 71 calories from fats. By comparison, beef contains 61-77% moisture, 17% protein, 4% fat, and 110.7 calories per 100 gm. Both are free of carbohydrates.

2024. *Soybean Blue Book.* 1947-1966. Serial/periodical. Hudson, Iowa: American Soybean Assoc. Annual. Titled Soybean Blue Book from 1947-1966; Soybean Digest Blue Book from 1967-1979; Soya Bluebook from 1980 to present.
• ***Summary:*** A directory and information book for the soybean production and processing industries–but with much greater emphasis on processing and utilization. One of the most valuable sources of worldwide information on soybeans. During the period from 1947 to the 1960s, the Blue Book was usually published in March or April of each year.

In the 1966 Blue Book (p. 28-29) are two full-page tables titled "World Soybean Production." The first gives acreage in 1,000 acres, yield in bushels per acre, and production in 1,000 bushels. The second gives hectarage, yield in kilograms per hectare, and production in 1,000 metric tons. Figures are given for: 1950-54 (average), 1955-59 (average), 1963, 1964, and 1965. Statistics are given for the following countries: North America: Canada, United States. South America: Argentina, Brazil, Colombia, Paraguay. Europe: Italy, Rumania, Yugoslavia, Other Europe (excluding USSR). USSR (in Europe and Asia). Africa: Nigeria, Rhodesia, Tanzania. Asia: Turkey, China (Mainland), Cambodia, China (Taiwan), Indonesia, Japan, Korea (South), Thailand. Estimated world total. Address: Hudson, Iowa.

2025. **Product Name:** Hinode Tofu [Japanese-style Soft, and Chinese-style Firm].
Manufacturer's Name: Hinode Tofu Seizo-sho (Hinode Tofu Co.).
Manufacturer's Address: 706 E. Sixth St. (at Towne Ave.), Los Angeles, California. Phone: TU. 3592.
Date of Introduction: 1947. March.
New Product–Documentation: Los Angeles City Directories. 1938 and 1941. No listing for either Matsuda or Hinode Tofu companies.

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 310. Under "Food Manufacturers." In Japanese: Hinode Tofu Seizô-sho. In English: Hinode Tofu Co., 706 E. 6th St., Los Angeles, California. Phone: TU. 3592.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 679. Directory entry, under "Food Products Mfg." In Japanese: Hinode Tofu-ten. In English: Hinode Tofu Co., 600 E. 4th St., Los Angeles, Calif. Phone: MA4-9067.

Talk with Shoan Yamauchi in at Soyfoods Center (Lafayette, California). 1982. Aug. 11. The former owners of Tomoe Tofu Co. (Mr. Tomoe and probably a partner) started Hinode Tofu Co. in March 1947 at Sixth St. and Towne Ave. They made 1,500 cakes of tofu a day. Mr. Shoan Yamauchi and his wife, Shizuko, purchased the company in late 1947. When they began production in Nov. 1947 at 6th St. and Towne Ave., they made only three products: Japanese-style soft tofu, Chinese-style firm tofu, and agé (deep-fried tofu pouches). Six years later he moved the company to 4th St. and Towne Ave.

Interview with Bill Lee of Wy Ky. 1982. June 29. "Wing Chong Lung was the first Chinese company to try to break into the Los Angeles tofu market, which was controlled by Matsuda-Hinode. They tried in 1952 but Hinode kept them out. They now make bean sprouts." Note: Both this company and the Hinode Rice Co-op had the same brand for many years, but the rice co-op has the earlier trademark. In 1983 they told Hinode Tofu to cease and desist from using the trademark.

Pantry Supermarkets. 1983. "Double coupons!" (Ad). *Los Angeles Times.* Feb. 24. p. SG3. The section titled "Oriental foods" states: "Hinode Japanese tofu 19 oz.–59¢... Hinode Chinese tofu 20 oz. 59¢."

Talk with Shoan Yamauchi. 1988. Oct. 23. This product was introduced when they started the business in 1947.

Talk with Art Mio of Morinaga. 1990. March 9. Hinoichi tofu is good quality because it is stored under dairy refrigeration temperatures from the time it is made until it is sold. Southern California is the only area in America that merchandises tofu properly, in the dairy case–even though most people think it sells better in produce. Mr. Yamauchi

© Copyright Soyinfo Center 2013

of Hinoichi insists that any tofu of his sold in Los Angeles be sold in the dairy case. When Hinoichi makes tofu, as for Frieda's Finest, they pack it in a wax coated case and put ice on top of it, so when it gets on the truck going out across America it is in good shape.

2026. *Revue Horticole: Journal d'Horticulture Pratique* (*Paris*). 1947. Le grand congrès du soya à Paris [The great soya congress in Paris]. 119(2140):277-78. April. [Fre]
• ***Summary:*** On Monday, March 16, 1947, at 2:30 p.m., at the City University, the first Grand Soya Congress ever held in Europe took place. It was organized by the French Bureau of Soya (*Bureau Français du Soya*), the Laboratory of Soya Experiments (*Laboratoire d'Essais du Soya*), and the France-China Association (*l'Association France-Chin*). Mr. Marius Moutet, the Minister of French Colonies and Territories (*Ministre de la France d'Outre-Mer*) presided. The two presidents were Prof. Blaringhem, president of the Academy of Sciences, and his excellency the Chinese Ambassador to France.

It was indeed a brilliant assembly of numerous scientific and agronomic personalities, including Mr. Lévèque, delegate from the Belgian Soy Group (*Groupement Belge du Soya*).

Includes a brief summary of the presentations by the following people: René Brochon, president of the French Bureau of Soya (*Bureau Français du Soya*). Mr. Schad, director of the Agronomic Research of Clermont-Ferrand (*la Station de Recherches Agronomiques de Clermont-Ferrand*). Mr. Simonet, Director of Scientific Research for Vilmorin (*Etablissements Vilmorin*), who discussed the varieties he had developed at the Center for Agronomic Research of Antibes (in southeastern France). Mr. Salaberry, an agronomic engineer. Mr. Blanchard, head of works at the Station for Seed Trials at the Ministry of Agriculture. Mr. Chouard, Prof. of Agriculture at National Conservatory of the Arts and Crafts. Messrs Brochon and Matagrin discussed the nutritional value of soy.

Mr. Chin Kuo Chun, director of the Laboratory of Soya Experiments (*Laboratoire d'Essais du Soya*), discussed the results of his work on manufacturing soymilk, tofu, and soy sauce in France, using traditional Chinese processes. Prof. Gounelle, Director of the Foch Hospital gave a brilliant discussion on the use of soy flour to combat nutritional edema and diabetes. Mr. Boutroux showed brilliantly that soymilk can successfully replace cow's milk in the feeding of defective babies.

Mr. Siao Yu, former Chinese Minister of Agriculture, recounted how Mr. Li Yu Ying, presently vice-chancellor (*recteur*) of the University of Peking, established in 1908, near Paris, a soyfoods factory; it made soymilk, tofu, cakes, etc. He saluted with emotion the members of this first Soy Congress to be held in Europe.

Mr. Villars, director of a cooperative for the production of soybean seeds. Mr. Matagrin, technical consultant to the French Bureau of Soya. Mr. Vançon, president of the Family Association of the Gardens of the north of France (*du Nord de la France*).

The Congress was closed by three excellent speeches by conference leaders Blaringhem, Bineau, and the Chinese Ambassador.

A reception in honor of China, cradle of the soybean, was then held and a buffet was served consisting of soy pastry and cakes, soy chocolates, and soymilk.

2027. *Revue Internationale du Soja.* 1947. Congrès du Soja [Soy Congress (Europe's first, held in Paris, March 16, at the City University)]. 7(37-38):30-31. March/April. [Fre]
• ***Summary:*** Li Yu-ying (President of the National Peiping Research Academy) was there, along with a luminous throng of the greatest soy devotees in France, including: M. Brochon (President du Bureau Français du Soja), M. Simonet (director of scientific research at Etablissements Vilmorin), M. Blanchard (chef de travaux à la Station d'Essais de Semences of the Ministry of Agriculture), and M. Chouard.

Mr. Chin Kuo Chun (director of the laboratoire d'Essais du Soja) discussed the results of his work on the production in France of soymilk, tofu, and soy sauce using the traditional Chinese processes, and of projects to organize family gatherings to taste these products. Prof. Gounelle (director of the Foch Hospital) showed how soy flour can be extremely beneficial in curing edema and malnutrition, and is perfectly suited for diabetics. Mr. Boutroux showed brilliantly that soymilk (*lait de soja*) is beneficial in replacing cow's milk in the diets of undernourished babies, and spoke of the industries presently producing soy products (*produits au soja*) in France. Note: This is the earliest English-language document seen (Nov. 2002) that uses the word "undernourished."

Mr. Siao YU, former Minister of Agriculture in China, recalled how Li YU Ying created in 1908 near Paris a factory for food products from soya: milk, cheese (tofu), cakes, etc. He saluted with emotion the First Soy Congress to be held in Europe. Address: Paris, France.

2028. Tsien, Tai. 1947. Allocution [Concluding remarks]. *Revue Internationale du Soja* 7(37-38):34-35. March/April. [Fre]
• ***Summary:*** It is an honor and a great pleasure for me to say a few words at the end of your soya congress, which has been honored by the presence of the French Foreign Minister (M. le Ministre de la France d'Outre-Mer), Mr. Marius Moutet; and by my compatriot, Prof. Li Yu Ying, president of the Academia Sinica.

I would like to thank the *Bureau Français du Soja*, the *Laboratoire d'Essais du Soja*, as well as the *Association France-Chine* for having organized this interesting congress. At this congress we have learned about soymilk, pressed

2031. Morse, W.J. 1947. The versatile soybean. *Economic Botany* 1(2):137-47. June.
• ***Summary:*** An excellent overview of the multifaceted soybean, by the world's leading expert on the subject, written at about the time of his retirement. Contents: Introduction. Nomenclature. History. Present day production. Diseases. Use as food. Use as a source of oil. Soybean meal.

In oriental countries, the soybean is used mainly for food; "pressed, it gives oil for cooking; sprouted it gives a fresh vegetable rich in vitamins; picked when green, it makes an excellent green vegetable; ground dry, it makes flour; soaked and ground with water, it provides milk, and the curdled milk furnishes the famous bean curd or tofu–the boneless meat of the Orient–used in the form of various cheeses and as a meat substitute; roasted beans are used as salted beans and in cakes and candies; roasted beans and bean flour enter into numerous health drinks [resembling coffee]; fermented bean pastes are used in soups and for preserving vegetables; and boiled beans are eaten with millet, rice, or kaoliang."

Contains 11 photos. Address: USDA.

2032. **Product Name:** Tofu.
Manufacturer's Name: Shimabukuro (Kamehachi) Tofu. Later Tofu Fountain and Aloha Tofu Factory.
Manufacturer's Address: 802 Dillingham Blvd., Honolulu, Oahu, Hawaii.
Date of Introduction: 1947. June.
New Product–Documentation: Honolulu City Directory. 1951. Kamehachi Shimabukuro Tofu (Kamehachi Shimabukuro, proprietor). 802 Dillingham Blvd., Honolulu. Not listed 1952. Note that the Tofu Fountain/Aloha Tofu Factory sprang up out of this location in 1953. Letter from Kazu Uehara. 1982. The company he bought in 1950 first started making tofu in June 1947, and was founded by Kamehachi Shimabukuro.

Planting. Care of the crop. Harvesting and production: For day, for seed. Cost of production. Uses of soybeans. Diseases. "In the big cities in the Islands, many of the soybean products like soy sauce or toyo, tokua, tajuri [fermented tofu], tojo [soymilk curds], miso, etc. are becoming more popularly used by the Filipinos, and will be more so as their nutritive values become more fully realized. Already, in some sections of the country where soybean is being grown, the seed is used either as a green or as a dry vegetable. The dried bean is roasted and is eaten offhand or is used in adulterating coffee, and the bean in the dough stage is boiled and eaten like peanut" (p. 2).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the word *tajuri* to refer to fermented tofu.

Table 1 shows annual imports (in kg) of soybeans and soybean products into the Philippines from 1929 to 1940, including dried beans, soy sauces, soybean meal, tausi (fermented black soybeans, salted), paste (miso), and total. By far the leading import (by weight) from 1929 to 1937 was dried soybeans. In 1929 some 4,574,497 kg were imported. This figure rose gradually (with ups and downs) to a peak of 5,660,575 kg in 1937, then fell sharply to only 237,666 kg in 1940. Soybean sauces were the No. 2 import, starting with 606,231 kg in 1929, rising to a peak of 1,441,563 kg in 1932, then remaining above 1,000,000 for most years thereafter. Imports of soybean meal started in 1935 with 660,699 kg; they reached a peak 1,023,303 in 1936 (the next year), then remained near 1,000,000 thereafter. Tausi was first imported in 1940, the amount being 151,571 kg.

Table 2 shows the value of these items (in pesos). In 1940 the imports of greatest value were soy sauces (120,346 pesos), soybean meal (50,682), and tausi (20,280).

"In the Philippines, while the plant has been under cultivation since the Spanish regime [1571-1898], it has not gained much headway due mainly to the lack of a variety suitable for commercial planting, and perhaps due to want of interest among farmers" (p. 4-5). The Philippine Bureau of Plant Industry has, to date, introduced more than 200 soybean varieties to the Philippines from the USA, China, Japan, Hawaii, Java, and India, but it presently recommends only a few varieties for commercial planting. These include Ami, which has long been cultivated there and is well adapted to the varied soil and climatic conditions.

Based on the results of a number of years' trials in different regions of the Islands, the following varieties have been found to be productive: Yellow Biloxi Hybrid (introduced from Hawaii in 1936), Mis 28 E.B. Str. 3910 (introduced from India in 1937), Mis 33 Dixi (introduced from India in 1937), Head Green (introduced from the USA in 1935), and American Black. All of these varieties are good for May and June planting, and all but Yellow Biloxi Hybrid are good for September to December planting (dry season).

"In the Philippines, the green but fully developed pods are harvested, and the seed is cooked and eaten in practically the same way as lima bean or patani... In Lipa, Batangas, soybean in the dough stage is boiled in the pod and sold and eaten offhand" like peanuts. The more common soy products made in the Philippines are soy sauce or *toyo*, tokua [tofu], tausi [fermented black soybeans], and miso. "Soybean milk is being manufactured by the Bureau of Plant Industry in a limited scale and a big modern firm has started putting soybean milk and other products in the local markets" (p. 15-16).

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the word *tausi* to refer to fermented black soybeans. Address: Chief, Horticulture Research Section, Bureau of Plant Industry.

J.D. 1981. *Reader* (San Diego, CA). Nov. 25. p. 3. "Nofu" The Koba family of Oriental groceries has been producing handmade tofu in San Diego for 33 years, since

© Copyright Soyinfo Center 2013

late 1947. They will be forced to stop in early 1982, when the city tears down their building to make a park.

Talk with Gary Stein. 1988. Feb. 17. He started an 18 month apprenticeship with Mr. Haruki Koba in about 1977. Mr. Haruki Koba said at about that time that he had been making tofu for 30 years, probably in San Diego. The original tofu recipe had come from Japan. Wayne is now involved with computers. Mr. Koba lives at Point Loma, a suburb of San Diego.

Talk with Gary Stein. 1989. Oct. 25. No one ever considered changing the name of Oriental Groceries to San Diego Soy Dairy (SDSD). Rather they talked about starting a new company named SDSD, affiliated with Oriental Groceries but aimed at marketing tofu to the Caucasian market. This never happened, at least never on labels, legally or officially. The first time SDSD was used was when Gary started his own company. Gary was very clear with Mr. Haruki Koba and his son, Dwayne (who did the day to day teaching) that he and his friend Todd Takeuchi wanted to start their own tofu company, but that they did not intend to compete with the Koba family in the Oriental market (Japanese and Chinese restaurants and food stores, plus drop-in customers). Gary and Todd went out and started getting new customers; they took production from 90 lb/day to 300 lb/day in about 1979. But there were personal and ethnic problems between Todd (who was an Americanized Japanese) and the Koba family and Todd found it difficult to stay. There were many communication problems and misunderstandings, but no ill will. Dwayne wanted to get out of the company. Just when they got a packaging machine, the whole thing fell apart. Gary and Todd left in late 1980, and their first product, tofu was on the market in April 1981 at 2965 5th Ave. It did not compete with Oriental Groceries' tofu. Oriental Groceries remained in business under the Koba family's management until about 1982, when the building was torn down. By that time Haruki wanted to retire anyway. Gary bought their packaging machine.

Talk with Haruki Koba, former owner of Oriental Groceries. 1989. Oct. 25. (1488 Guizot St., San Diego, CA 92107: Phone 619-222-3692). In May 1945 Germany surrendered, ending World War II in Europe. That month Mr. Koba was discharged from the U.S. Army–he had fought in France and Italy. In December 1947 he and his wife, Michiko, bought an existing tofu business (on Island St., between 4th and 5th) from Mr. Yoshio Kawamoto, a second-generation (nisei) Japanese, who made tofu and agé, and had been making them, but not very profitably, for 1½-2 years. He cannot recall the business name. Mr. Kawamoto stayed with the Kobas for a few weeks and showed them how to make both tofu and agé, but they improved on the process quite a bit. The Kobas made only those two products for the next 33 years. They quit in Feb. 1982, when the city torn down their building, Oriental Groceries. He has no old articles about his work with tofu.

Letter from Haruki and Michiko Koba. 1989. Nov. 30. When they bought this company, in Dec. 1947, it was located at 418 Island Ave., San Diego, CA 92101. They never moved the location. They renamed it to "Oriental Groceries" in 1948. They have no articles, labels, or other documents about the company.

2038. **Product Name:** Tofu.
Manufacturer's Name: Sakara-fu Tofu-ten (Sacramento Tofu Co.)
Manufacturer's Address: 1521 Fifth St., between O and P streets. After about 1949: 1915 Sixth St., Sacramento, CA 95814. Phone: 916-447-2682.

Interview with Alvin Kunishi. 2006. Aug. 10. "Early history of Sacramento Tofu Co." Alvin's mother (whose husband, Hiroshi "Tom" Kunishi, was a founder of the tofu company) often told him that the company was founded in 1947. But he has no written or documentary proof of this date.

2039. Blumenthal, Saul. 1947. Food products. Brooklyn, New York: Chemical Publishing Co., Inc. ix + 986 p. See p. 134-35, 335-36, 378-85. Index. 23 cm. [soy ref]
• ***Summary:*** The following soy products are discussed: Soy milk (p. 134). Soy curd (bean curd or tofu, p. 134-35). Fried soybeans (p. 335-36). Health foods (p. 337).

Concerning fried soybeans, this is the earliest document seen (Dec. 2012) that discusses this subject scientifically and in some depth, since most similar products had previously been dry roasted. (For exceptions see Stoddard 1917, Parsons 1939, and Hale 1941). "The fried soybean is a pleasing nut-like confection, which will prove a product of sufficient interest to many lovers of nut meats." The best soybean for fried food purposes is Illini; other good varieties are Rokusun, Mammoth Yellow, Dixi, Easy Cook [Easycook], and Hahto. By writing the National Soybean Oil Manufacturers Association, Box 388, Taylorville, Illinois [Note: This Association may have been affiliated with the Allied Mills soybean crushing plant in Taylorville; it was probably not affiliated with NSPA], all information on the bean and sources of supply can be acquired.

"Before frying the soybean, it should be washed in water to remove particles of dirt that may be adhering. In order to obtain a good product with a nut-like texture, the bean is allowed to swell by soaking in boiling water for a period of 10 minutes. The water is drained off and the beans are cooled and fried. The beans are then placed in a proper wire basket, with 5 pounds of fat, previously heated to 370 to 380ºF. The addition of the bean to the fat will cause a drop in temperature to about 340 to 355ºF, at which point most of the frying takes place. Temperature control is important since frying at high temperatures produces a bean with a scorched flavor, while frying at too low temperatures produces a product with a beany instead of a nutty flavor. After frying, the beans are drained, salted and cooled in the same manner as other fried nut meats.

The section titled "Health Foods" states: "Nuts and soybeans are good substitutes for meats, fish, eggs and sea foods. Pistachio nuts are non-acid-forming and are rich in organic salts and vitamins... Their high percentage of alkaline minerals makes them an alkaline-yielding food."

Acidophilus milk (from dairy milk) is discussed on pages 130-32, and Kefir (from dairy milk) on pages 132-33. Address: Food Technologist and Consultant, Shirley Laboratories, New York, NY.

2040. Bragg, Paul C. 1947. Paul Bragg's health cookbook [1st ed.]. New York, NY: Alfred A. Knopf. xii + 402 + xxx p. Index. 21 cm.

and mushrooms. Soybean recipes ("for preparing the magic soybean"). Green soybeans (in pods). Dried soybeans. Canning recipes. Soybeans used as meat substitutes. Soy milk. Soybean cheese [tofu].

Chapter 9: Vegetarian entrees and dishes. Lentil loaf with milk or soy milk. Soybean loaf (with WDS and soy milk). Soybean macaroni loaf. Vegetable and soybean stew. Soy vegetable roast (with 1½ cups cooked soybeans). Vegetable hash (with soy sauce). Boston baked soybeans. Stuffed peppers with soybeans. Vegetarian sausages (with cooked soybeans). Vegetarian chop suey (with soy sauce and gluten steaks). Soybean cheese (homemade tofu made from soy milk allowed to curdle in a warm place; cut and serve with soy sauce).

Whole-wheat soy bread (with soy flour, p. 195). Soybean waffles (with soy flour, p. 212). Whole-wheat soy pie crust (with soy flour, p. 213). Canned [green vegetable] soybeans (p. 324, 336). Soybean waffles (wheatless, with soy flour, p. 369). For those with food allergies: Soy milk and Soybean cheese (see p. 95).

In this book, Bragg uses the word "aminos." "The link between protein and body tissues is the amino acids. When the aminos enter the blood stream, they are carried to every part of the body, where they set to work repairing, rebuilding, and maintaining body tissue, building up rich red blood, and 'conditioning' the various organs" (p. 6).

Note 1. Throughout his life, Paul Bragg seems to have had an ambivalent feeling about eating and recommending red meat and poultry. In his later years, fish became his favorite flesh food.

Note 2. This book contains no autobiographical information about Paul Bragg. Address: P.O. Box 428, Burbank, California.

2041. Fritzsche, Curt. 1947. Die Sojabohne: Anbau und Verwertung [The soybean: Cultivation and utilization]. Lueneburg [near Hamburg], Germany: Metta Kinau Verlag Nachf. 48 p. Series: Kurzschriften fuer Landwirtschaft, Gartenbau und Siedlung. 11. [Ger]
• ***Summary:*** Contents: Introduction. 1. Origin of the soybean (in Asia and Europe, including the work of Haberlandt in central Europe, plus instructions for making Chinese-style chiang, soy sauce, and tofu). 2. Hope for the founding the "Society of Soybean Producers and Friends of Soya" (*Gesellschaft der Soja-Anbauer und Sojafreunde*). 6. The different methods of soybean production. Growing soybeans in a small garden.

On page 15 the author uses the term "Sojaspeisen" to refer to soyfoods. On page 17 he uses the term "Gruenbonen" to refer to green vegetable soybeans. Address: Herwegstr. 5, Stuttgart, Germany.

2043. Komaki (Joe T.); Kalifornians Enterprise. comp. 1947-. Chicago Japanese American year book. Chicago, Illinois: Californians Enterprise. 28 cm. [Eng]*
• ***Summary:*** Two-page spread in Chicago Japanese American year book. 1949. Photos of the covers of two editions suggest that that first edition was 1947 (6,500 copies printed); For the 1948 edition, 9,000 copies were printed.

Talk with Karl Matsushita, director, Japanese-American National Library in San Francisco. 2008. Feb. 1. These directories were first published after World War II. His library has one two volumes of this periodical: 1949 (5th ed) and 1950 (6th ed). This would suggest that the 1st edition was published in 1945. Not at OCLC / WorldCat. Address: Chicago, Illinois.

2044. **Product Name:** Tofu.
Manufacturer's Name: Hashimoto Tofu.
Manufacturer's Address: 943 E Street, Fresno, CA 93706.
Date of Introduction: 1947?
New Product–Documentation: Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Nov. 28. He thinks this company became Star Tofu. It was run by a Mr. Joe Hashimoto, a nisei.

Talk with Mr. Hashimoto of Nichibei Nichi in Fresno. 1990. Nov. 29. He thinks this shop started shortly after World War II, in about 1947. The owner may have been Mr. Tokubo Hashimoto.

2045. Liang Shih-chiu [Shiqiu]. ed. 1947? Zui xin shi yong Han Yin ci dan A new practical Chinese-English dictionary. The Far East Book Co. Ltd. 1355 p. See p. 1037-38. 22 cm. [Eng; Chi]
• ***Summary:*** Gives the Chinese characters and their pronunciation for the following soy-related terms: Soybean cake; bean curd; a semi-transparent film formed on the

surface of soybean milk; a store where bean curd is made for sale; spiced and dried bean curd; soybean cheese; legume; (said of girls) in teens; the pods of beans or peas; soybean milk; fermented beans in paste form; residue of soybeans in making bean curd; fermented and seasoned soybeans; pisolite [bean + stone]; legumin; bean sprouts as a vegetable; soybean oil. Address: Editor in Chief.

2046. **Product Name:** Tofu.
Manufacturer's Name: Nii Tofu.
Manufacturer's Address: Dinuba, Califorina.
Date of Introduction: 1947?
New Product–Documentation: Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Dec. 4. He has heard from Japanese-American old-timers now living in Fresno that a tofu shop name Nii Tofu was in business in Dinuba after World War II. Dinuba (pronounced dai-NU-bah) is located 30 miles southeast of Fresno.

2047. Cort, Mabel Gilson. 1948 Personal report of Mabel Gilson Cort for the year 1947. Chiang Mai, Thailand. 2 p. Unpublished typescript. Undated.
• ***Summary:*** She has spent the entire year of 1947 at home in Chiengmai [Chiang Mai], Thailand, doing mainly dietetic work, but also some evangelical work. She has developed special diets for patients with particular diseases. "Because of the high cost of living and the scarcity and high price of such foods as milk and eggs and the number of orphan babies we have in the hospital and the number of patients requiring milk diet, we have used quantities of soy bean product to increase our milk protein and supplies. Every day we make great quantities of white soy bean milk which is used to feed the babies, make cream soup, egg nogs, custards and even ice cream occasionally. We make tasteless soy bean flour, which I learned to make at home. We also use the ground browned soy bean flour [kinako] to feed babies, to make a beverage we call soy bean coffee, which is drunk as a beverage, using coconut milk and sugar. It is used in many hospital diets and the nurses drink it. We enrich it with sugar, starch and calcium, thus making it nearly equivalent to milk in value. We make soy bean flour, rice bran and rice flour muffins for beriberi and soy bean flour and rice bran muffins for diabetes. We also send out the browned soy bean flour to mothers in the country to make soy bean milk for their babies as the browned flour will keep indefinitely and country mothers have not the facilities for keeping the white milk which sours very easily. We buy bean curd from a Chinese merchant. We use this in curries, soups, etc. We have also increased the value of the protein in our diets and the use of the bean products are increasing every where. We think this is good public health work. All this requires a great deal of reading and compiling from books from China, Malay, the Philippines and America."

Note: Mrs. Mabel Gilson Court worked was a Presbyterian missionary in Siam (later called Thailand) from 1903. Her husband was a physician and fellow missionary. They were married in 1910. In 1915 Dr. Cort took charge of McCormick Hospital in Chiang Mai, and Mrs. Cort took charge of dietetics at McCormick Hospital.

experiments. *Indian J. of Medical Research* 36(2):145-48. April. [1 ref]
• ***Summary:*** When cow's milk curd protein, fed along with a poor South Indian rice diet, is replaced by an equivalent amount of soya bean protein, the mixed proteins of the diet in both cases are utilized to about the same extent. By following the nitrogen balance method on two adult subjects, they reported that the average digestibility coefficient and the biological value of soya-bean milk protein compared to egg protein are 96.6 and 94.0 respectively.

The calcium of soya-ban milk curd (tofu) fed to 6 adult subjects along with a basal low calcium ration was utilized about 90% as much as the calcium of cow's milk curd. Address: Dep. of Biochemistry, Indian Inst. of Science, Bangalore.

2055. Morse, W.J. 1948. Soybeans yesterday and today. *Foreign Agriculture* 12(5):91-95. May. Summarized in

© Copyright Soyinfo Center 2013

Soybean Digest, June 1948, p. 32.
• ***Summary:*** A good overview of soybeans and their history in China, Manchuria, Korea, and Japan (the principal regions of world soybean production), plus thoughts on their relatively recent introduction to the Western world.

"In China, the soybean is one of the leading and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage and production is confined largely to 3 northern Provinces, Shantung, Kiangsu, and Honan. China consumes practically all its production, estimates indicating 55% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% of the total cultivated area of Manchuria and is a dominating factor in the life of that country. As a cash crop, it provides fully half the total volume of freight handled by Manchurian railroads. Estimates have indicated that from one-third to two-thirds of the production of soybeans was exported; 15 to 20% utilized for food, feed, and planting; and the remainder processed for oil and oil meal.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to the central and northern areas, because southern Korea, growing chiefly cotton and rice, seems less well adapted to soybean-seed production. The entire seed production is used for food, stock feed, export, and planting, none being used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all its own production and imported large quantities of seed from Manchuria and Korea. Since World War I, production of soybeans in Japan has decreased to some extent, more emphasis being placed on the greater production of rice. The proportion of soybeans used by Japan for various purposes was: Miso (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; bean curd, 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous 0.5%.

"In the Soviet Far East the soybean is said to be one of the chief industrial crops and in some districts to constitute 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in the Khabarovsk territory.

"Previous to 1935 soybean oil in the United States was utilized chiefly in soap, paint, and varnish. Since that time, however, 70 to 85% of the soybean-oil supply has been used in the food industries... The soybean has become one of the most valuable, if not the most valuable, of China's gifts to the Western World."

Photos show: (1) Manchurian soybean in bags being loaded on a freighter at the Dairen wharves for shipment to European oil mills. (2) Two horses pulling a plow, and a 2nd man planting soybeans on ridged rows in Manchuria. (3) Soybean plants growing along the edges of rice paddies, as is common in oriental countries; the green beans will be used for home consumption. (4) Two Korean men threshing soybean plants in a courtyard with bamboo flails. "In Korea, as well as in many other oriental countries, bamboo flails are used in threshing soybeans." (5) A man with a sickle in a field of dried soybean plants. "Soybeans are harvested by hand in all the soybean-producing countries of the Orient." (6) A combine harvesting soybeans in the USA. It has "been one of the important factors in the economic production of soybeans in the United States." (7) "General view of a Chinese oil-mill yard in Manchuria, showing mill, storage of soybeans in osier bins, and steel tanks." Address: Principal Agronomist, USDA Div. of Forage Crops and Diseases, BPI [Bureau of Plant Industry], SAE [Soils and Agricultural Engineering], ARA, Beltsville, Maryland.

2056. *Times of India* (*The*) (*Bombay*). 1948. New treatment for plague: Research in India. June 17. p. 5.
• ***Summary:*** Field trials were conducted in Bengal and Bihar to test the effectiveness of sulphaguanadine, a new drug for combating plague.

Research on nutrition is being carried out at a number of centres across India under the auspices of the Indian Research Fund Association. "Experiments to determine the nutritive value of soya-bean milk and soya-bean curd [tofu] have been conducted at the Indian Institute of Science, Bangalore." Feeding trials now being conducted in Bangalore suggest that soya-bean milk and its products can provide an inexpensive and nutritious substitute for cow's milk.

2057. Miller, H.W. 1948. Survey of soy foods in East Asia. *Soybean Digest.* June. p. 22-23.
• ***Summary:*** The primary objective of Miller's company "was to develop a milk built up to formula for babies, children, and adults that could be utilized by Oriental populations where animal milk is not available, and which for economic reasons can never be a dependable source of food supplies for the masses.

"Before the war the Laboratory had branches both in Manila, Philippine Islands, and Shanghai, China. The war saw the plant in Shanghai completely demolished and the equipment destroyed. In Manila, the building was left, but all the equipment was removed. Therefore we have been busy since the end of hostilities in restoring these plants.

"In 1946 and 1947 and during this last January and February the writer made trips and spent time in connection with these institutions. I am glad to report that on my last visit to the Philippine Islands I was able to see the plant there start its operations. The machinery and equipment are practically restored.

"At the present time there are no soybeans under cultivation in the Philippine Islands... though certain parts

© Copyright Soyinfo Center 2013

are very well adapted to the growth of the southern type of soybeans.

"The Manila plant is interested in marketing bottled 'Soyalac' (soy milk) both in natural and chocolate flavors, and also in entering the production of soy ice cream–we are permitted to call it that in the Philippines.

"From Manila I went to Hongkong where 8 years ago a small company known as the Hongkong Milk Factory made a beginning in homogenizing a constituted soy milk. On this last trip to Hongkong, K.S. Lo, the manager, took me through their plant. He informed me that they are now serving to each of the school children a half-pint bottle of the soy milk, both in the natural and the chocolate flavors, at their noon lunch.

"The Hongkong Milk Factory is in reality a soybean dairy. As you view the equipment including the bottle filling machine and the refrigerating unit, you would not know you were not in an American dairy. Mr. Lo informed me that if they had refrigeration they could be putting this soy milk out in many of the other cities of China on a very large scale.

"The firm obtains it beans from China, mostly from the province of Chang Tung, though some come from Manchuria. The beans are not of a very fine quality."

At Shanghai there were two soybean enterprises that particularly attracted my attention. The one for which we helped secure the machinery and equipment is being run under the name of the International Nutrition Products Co., Ltd. It is to be run very much like the Manila plant in the manufacture of liquid soy milk. The company will develop along with it a soy margarine and soy spread in the form of a mayonnaise dressing.

"The other enterprise is being undertaken by the government. The Chinese Army Quartermaster Department has purchased a property where ice cream, dried eggs and butter, and also candy were made. This large property has a splendid group of buildings with refrigeration." Here the Chinese Army intends to run a "soybean factory and a vegetable dehydration plant.

"The Chinese Army has secured the help of my son, Harry Willis Miller, Jr. He is there at the present time erecting this plant. It is perhaps the largest soy protein processing plant we know of at present. The firm has bought equipment for large-scale production of a spray-dried soy milk powder. This is to be included in other rations of a dehydrated character for use of the Chinese Army."

In Japan, the author found the people to be "greatly undernourished, especially in regard to protein. Soybeans are scarcely to be had... Bean curd plants are all closed down... I know of nothing that the Japanese nation needs worse than soybeans... I found the Japanese people, even to the advisor to the Emperor, whom I met, pleading with us to establish a plant similar to that which we have in China and the Philippines. However we have no financial interest in those plants. They are carried on wholly by local capital. Our part is simply the 'know-how' in setting them up and transmitting the processes to them."

Note: This is the second earliest document seen that uses the term "soy foods" in the title. Address: International Nutrition Lab., Mt. Vernon, Ohio.

2058. Lieberman, Henry R. 1948. 300,000 starving in Mukden's siege: Long Communist blockade causes increase in blindness among poor. *New York Times.* July 2. p. 5.
• ***Summary:*** The blockade has cut off Mukden by land from China proper. "Chinese dispatches to Peiping said there was great suffering among the 500,000 residents of isolated Changchun (W.-G. Ch'ang-ch-un), Manchurian capital, according to the Associated Press. The rich are living on rice, the well-to-do on rice gruel, the poor on soy bean cake, the very poor on the bark of trees." Refugees are pouring into the city from Communist-controlled areas.

Note 1. This "soy bean cake" is probably the protein-rich (but relatively inedible) cake that results when soy beans are crushed to make oil and cake.

Note 2: On 1 Nov. 1948 Mukden was occupied by Communist forces; it served as a base for conquest of the rest of China.

2059. *Times of India* (*The*) (*Bombay*). 1948. Research in India: Research on nutrition. July 17. p. 5.
• ***Summary:*** "Experiments to determine the nutritive value of soya-bean milk and soya-bean curd have been conducted at the Indian Institute of Science, Bangalore." Feeding trials now being conducted in Bangalore, indicate that soya-bean milk and its products can provide an inexpensive, nutritious substitute for cow's milk.

This nutritional research is being conducted under the auspices of the Indian Research Fund Association.

2060. Banks, George Heartsill. 1948. South goes east [to Korea]. *Soybean Digest.* Oct. p. 16-18.
• ***Summary:*** Mr. Banks, formerly associated with Ralston Purina Co., recently returned from a governmental mission of almost 2 years in Korea. In this paper, presented at the American Soybean Convention in Memphis, Tennessee, tells of soybeans in Korea, where there is no national debt, no income tax, and where women do all the work. South Korea is about the size of Arkansas. 75% of the land is steep and mountainous, and thus entirely unsuited for crops. On the remaining small area of arable soil struggle about 20 million Koreans. The farms are small; in some provinces they average less than 2.5 acres. In South Korea every farmer grows some soybeans but one has "to look hard and long to find even a small field of soybeans. They are grown in gardens, on the dikes in the rice-paddies, and among the trees. The most widely grown varieties are large-seeded yellow beans with a short, stiff stalk. Almost all of the beans are consumed at home. Soybean processing [i.e., crushing]

© Copyright Soyinfo Center 2013

plants as we know them do not exist... The Koreans eat soybeans in many ways, including soysauce, soy sprouts, soy curd, and green soybeans. They press out some oil in the home or farm village and use the oil for cooking and the meal for feeding farm animals." Rice is the predominant crop. "Korea, along with its neighbors in the Orient, is definitely a 'have-not' nation." They waste nothing, recycle everything, and use human wastes (night soil) for fertilizer. Agriculture is run by hand-power.

2061. Fairchild, David. 1948. Early experiences with the soybean. *Soybean Digest.* Nov. p. 14-15. [2 ref]
• ***Summary:*** "It was not until 1897 that I first saw soybeans growing... I found my friend Merton B. Waite had been trying to grow soybeans on his farm outside Washington [DC, in Maryland; see Fairchild, Oct. 1948], but with little success. They had been sent in by some American consul or missionary, I believe. At about the same time Dr. George T. Moore [who by 1903 was Physiologist in Charge of the Lab. of Plant Physiology, Bureau of Plant Industry, USDA, working on soybean root bacteria] in working on the root nodules of leguminous plants had discovered that the nodules contained bacteria. Waite and I talked over the matter of the failure of his soybeans and wondered if they might require special bacteria, so I wrote out to Japan and imported several pounds of soil from a soybean field.

"We made a little experiment, planting alternate rows of soybeans with and without the addition of this Tokyo soil. The effect of the imported soil was immediately apparent as the plants grown in it made a far better growth and had their roots covered with bacterial nodules, whereas the control were practically without any.

"Photographs had yet to come into any general use as records of agricultural experiments, but Waite had taken up photography as a hobby and made excellent photographs with his stand camera. So at harvest time he pulled up an equal number of soybean plants from the soil-treated rows and from the controls, and the only photographic record in existence of this little experiment (the first of its kind, I suppose, in the world) is this negative taken by Waite in the autumn of 1897.

"Although these experiments did not at the time lead to more extensive trials, they indicate the awakening of our interest in soybeans.

"In that fall of 1897 it was my privilege to organize the office of plant introduction in the Department of Agriculture. We began introducing a great number of different kinds of plants, among them, as I see from our inventories printed at the time, occasional small collections of soybeans from China and Japan. They were obtained mostly through correspondence with missionaries and consuls stationed there.

"At that time the Department had no testing ground near Washington where we could grow miscellaneous vegetables, including these soybean collections. It was not until several years had passed that facilities were provided on the so-called 'Potomac Flats' [in Washington, DC] and James H. Beattie, an enthusiastic young horticulturist, took over the planting of our introduced seeds.

"The soybeans did well and Beattie soon had on his hands a quantity of seeds. But we didn't know just what to do with these strange beans. When cooked in the way other beans were prepared they had a strange flavor that nobody seemed to like...

"It was not, I think, until the office of forage crop investigations was organized and C.V. Piper took charge that the soybean as a forage crop attracted attention and Beattie's experiments came to be looked upon as important. We planted larger patches of soybeans on a tract of land near Bethesda, MD...

"And then we ran into the difficulty of harvesting the soybeans. P.H. Dorsett of the office, one of the most ingenious and most indefatigable workers I have ever known, and his friend Rankin, who was running the little experimental farm, put their heads together and adapted a bean picker then in use–in California I think–and discovered that it was perfectly possible to harvest soybeans mechanically...

"I went out exploring again and my travels with Mr. Lathrop this time took me into the soybean fields of Japan. The tremendous importance of the crop as I saw it there made a great impression on me. Also the almost universal use of soy sauce, which Americans were just beginning to appreciate, fixed my interest...

"Dr. Yamei Kin, an extraordinary Chinese woman whose acquaintance I had made on the boat returning from Japan, made a visit to Washington and captivated us all by her enthusiasm over soybeans. She introduced us to 'tofu,' a delicate cheese which has not even yet attracted the attention it deserves from the American public.

"In 1903 A.J. Pieters came to me one day and told me of an amazing young Hollander who had been a gardener of the great geneticist, Hugo de Vries. He was then on his way back from a trip on foot to Mexico, and I wired him to come to Washington. For 13 years, as agricultural explorer of our office, Frank N. Meyer tramped from village to village over much of China. He gathered soybeans whenever he saw them, for he felt it was important to secure all the local varieties he could for our plant breeders before they should have disappeared as the result of the spread of standard varieties he thought was bound to come.

"The importance of getting as many as possible of these local varieties and these, or selections from them, form, I believe, the basis of the very extensive soybean breeding that has been done by the various plant breeders of America."

Note: According to Vivian Wiser of the USDA and to the Washington D.C. Historical Society (13 Feb. 1991; phone 301-785-2068, Mrs. Offut), in 1897 Merton Waite lived in

© Copyright Soyinfo Center 2013

downtown Washington, D.C. in a built-up area. There is no record of his owning a farm outside Washington D.C., but he may have owned the farm as a sort of summer home or he may possibly have worked with the group at the USDA farm at Somerset, Montgomery County, Maryland. He was a plant pathologist and physiologist, in charge of diseases of orchard fruit trees, especially pears and peaches. There is a collection of David Fairchild's materials at Coconut Grove. His personal residence, The Kampong near Coconut Grove, is still (as of 1998) well preserved and open to the public. Address: "The Kampong," Coconut Grove, Florida.

2062. *Madison Health Messenger* (*Madison, Tennessee*). 1948. Soybeans–A wonder food: Madison College works with the soybean. Fall. p. 1, 3-4.
• ***Summary:*** The soybean originated in China. However this "food of the ancients now seems destined to turn its antiquity into one of the most valuable foods in the modern world.

"The first actual mention in the literature of this wonder bean is recorded in Emperor Chen Nung's Materia Medica, written under date 3838 B.C. In the Legendary period of China the story of bandits attacking a merchant caravan has been handed down through generations in which it is said that the miracle wonder food, soybeans, were the lifesavers of some merchants, who, being surrounded and besieged by bandits until their own provisions were exhausted, noticed a vinelike plant bearing a legume which they had never seen before from which they made flour and baked cakes. Energized therewith, they fought off the enemy until help came. So the legend goes, soybeans became the staff-of-life in the great nation of China which still ranks first in population in all the world."

Soybean "oil is used extensively in Margarine in which it is used up to 80% in certain brands (Sure Good, sold by A. & P., and Nu-Maid, sold by Kroger)." Many brands of margarine contain 20-80% soybean oil.

Discusses the work of Henry Ford with soybeans and soyfoods. "His research staff made soybean milk and cheese, soybean-nuts, canned green soybeans, soybean sprouts, and a hundred other things."

"With the knowledge of widespread disease in the animals used for food by man, the founders of Madison College adopted a vegetarian diet supplemented with dairy products and eggs. For over 44 years this has been strictly adhered to in the food preparation for the students, faculty, workers, and patients at its 165 bed sanitarium and hospital... For over 30 years [since 1918 or before] Madison has been growing soybeans. They have occupied a place of prominence in its menus for many years." Then Madison began to manufacture soybean food for the public. More and large equipment was added. "In 1941 a new plant was started and today Madison Foods are produced in a fine daylight plant of modern design and construction..."

A list of Madison's foods is given, together with the weight of the can or bag in which each is sold: Kreme O'Soy, Zoy-Koff, Stake-Lets, Yum, Zoyburger, Vigorost, Not-Meat, Soy Cheese [Tofu].

2063. Nichi-Bei Jiji Shinbunsha / Nichi Bei Times. 1948-1971. Nichibei jiji jûshoroku [Japanese American directory]. San Francisco, California: Nichi-Bei Shinbunsha. 500+ p. 22 cm. [Eng; Jap]*
• ***Summary:*** Note: the 1948 directory is in the 1948 Evacuation Resettlement Report. Address: Ellis Street, San Francisco, California.

2064. **Product Name:** Tofu, and aburage.
Manufacturer's Name: Asato Shokuryohin-ten (Asato Soy Bean Food Shop).
Manufacturer's Address: 149 W. Division St., Chicago, Illinois. Phone: DElaware 7-1816.
Date of Introduction: 1948.
New Product–Documentation: Hokubei Shinpo-sha. 1948. *Nyuyoku Benran: Tsuketari jushoroku, 1948-1949 nendo* [*New York Japanese American directory: 1948-1949*]. Ad section in middle of book. p. B-15. In Japanese: The original food store in Chicago. All Japanese foods. Makers of tofu and aburage. Ask for Asato brand tofu and aburage if you buy them in other stores. High grade California rice–Smith No. 500. They also ship food packages to Japan.

The all-English directory at back of book states under Chicago–Groceries (p. 6): Asato Soy Bean Food Shop, 147 Division St. (10), DElaware 7-1816.

2065. **Product Name:** Tofu.
Manufacturer's Name: Matsuzaki (Sui) Tofu.
Manufacturer's Address: Wahiawa, Oahu, Hawaii.
Date of Introduction: 1948.
New Product–Documentation: Honolulu City Directory. 1947-48. Sui Matsuzaki Tofu (Sui Matsuzaki, proprietor). Wahiawa, Honolulu. Not listed 1951.

2066. **Product Name:** Tofu.
Manufacturer's Name: Nakamoto (Yonosuke) Tofu.
Manufacturer's Address: 971a Akepo Lane, Honolulu, Oahu, Hawaii.
Date of Introduction: 1948.
New Product–Documentation: Honolulu City Directory. 1947-48. Yonosuke Nakamoto Tofu (Yonosuke Nakamoto, proprietor). 971a Akepo Lane, Honolulu. 1951 Directory. Changed to Mrs. Matsue Nakamoto Tofu (Mrs. Matsue Nakamoto, widow Yonosuke, proprietor). Address same. Not listed 1954.

2067. **Product Name:** Tofu.
Manufacturer's Name: Sumie (Hideo) Tofu.
Manufacturer's Address: 1337 N. King, Honolulu, Oahu, Hawaii.

© Copyright Soyinfo Center 2013

Date of Introduction: 1948.
New Product–Documentation: Honolulu City Directory. 1947-48. Hideo Sumiye Tofu (Hideo Sumiye, proprietor). 1337 N. King, Honolulu. Not listed 1951.

2068. **Product Name:** Tofu, Aburaage
Manufacturer's Name: Asato Soy Bean Food Shop.
Manufacturer's Address: 149 West Division [Chicago, Illinois]. Phone: DElaware 1816.
Date of Introduction: 1948. January.
New Product–Documentation: Chicago Shimpo, Inc. 1948. Chicago Japanese American directory. p. 40. A large photo shows the shop, looking in through the big glass window and open door. A sign over the window bears the name of the shop, but the smaller sign in decals on the window reads "Asato Food Shop. T.N. Asato, Proprietor."

To the left of the photo is a handwritten ad, entirely in Japanese, which states: *Asato Shokuryôhinten* [the name of the store in the photo]. *Shokuryô-hin issai, Sengyo. Oroshi. Kouri. Tofu, aburage wa saishin-shiki kôjô de mainichi seizô. Shio-senbei. Mochigashi.* In English: Asato Food Shop. All food products. Fresh fish. Wholesale and retail. We make tofu and aburaage everyday in our newest plant. Salted rice crackers / senbei. Japanese mochigashi sweets [mochi filled with sweet azuki paste (*an*)].

2069. Engelbeen, M. 1948. Le soja au Congo Belge [Soya in the Belgian Congo]. Brussels, Belgium: Ministere des Colonies. 94 p. 25 cm. [200 ref. Fre]
• ***Summary:*** Contents: Preface. 1. The soybean: Habitat and acclimatization: Genus and species, sub-species and varieties, habitat and acclimatization. 2. The principal factors in soybean production: Climate, nature of the soils, symbiotic bacteria, selection and hybridization, cultural methods, enemies and diseases. 3. Seed storage and multiplication. 4. Nutritional value of soya: Generalities, soymilk, tofu, okara (*tourteau de soja;* the pulp remaining after filtering off soymilk), soy oil, soy flour. 5. Industry and commerce. 6. Perspectives on soya in the Belgian Congo. Summary. Bibliography consulted.

The section titled "Introduction and Acclimatization to the Belgian Congo (p. 30) states: "Known in Africa for 30 years, the cultivation of soya has not yet passed the experimental stage. Numerous introductory trials were conducted with multiple varieties which originated in East Asia and the United States.

"Soya was mentioned for the first time in the Belgian Congo by Commandant Lemaire [Charles François Alexandre Lemairé], who first encountered them at Stanleyville [later renamed Kisangani] in 1908. It was introduced, shortly afterwards, to the Eala botanical garden (near Coquilhatville). The first agronomic trials took place in 1915; the agronomist Mestdagh, at Lusambo (Sankuru [Kasai]) harvested 1,472 kg of yellow soybeans and 1,786 kg of black soybeans."

Note 1. I.N.E.A.C. stands for Institut National pour l'Étude Agronomique du Congo Belge.

Note 2. This document contains the second earliest date seen for soybeans in Zaire (1908). The source of these soybeans is unknown. These soybeans were probably being cultivated in 1908, but we cannot be sure. Address: Ingenieur agronome colonial Lv., Chef du Bureau d'Etudes de l'I.N.E.A.C.

2070. Geechoun, Roy. 1948. Cooking the Chinese way. Melbourne, Australia: W.D. Joynt. 59 p. 19 x 12 cm. Illust. by Ruth Shackel. *
• ***Summary:*** Book has 34 recipes written with ingredients listed. Contains short essays on bean curd and soy bean sauce.

2071. Hokubei Shinposha. 1948. Nyuyoku benran: Tsuketari jushoroku, 1948-1949 nendo [New York Japanese American directory: 1948-1949]. New York, NY: Hokubei Shinposha. 53 + 33 + 99 + 33 p.. Illust. 24 cm. [Eng; Jap]
• ***Summary:*** This book, which is read from "back to front" (except for the last 33 pages, which are in English) is approximately 70% in Japanese and 30% in English. It is divided into the following sections, each paginated separately: (1) Pictorial history (53 p.).

(2) Who's who (33 p. One person per page, with a photo and a brief biography in both Japanese and English). (a) A full-page biography of Mr. Shinsaku Nagano (p. 11) states: "Soy bean sauce" was virtually unknown in the USA until 1906, when it was introduced and subsequently popularized by an enterprising Issei [first generation] pioneer from Chicago, Shinsaku Nagano. He was the first to successfully commercialize "shoyu," and today he continues to direct the vast commercial enterprises of his Fuji Trading Co., founded 32 years ago. This company, a large scale manufacturer and canner of "soy bean sauce" and Oriental foods, is now located at 441-459 W. Huron St. [at N. Hudson Ave.], in central Chicago, Illinois. "A native of Shizuoka prefecture [Japan], which he left in 1906, Nagano gained prominence for relief work during the Depression years of the 1930s when he opened his factories at huge expense to house the unemployed. This magnanimous gesture, duly noted by the *Chicago Tribune*, was deserving of the paper's story in his honor." He is now anxiously waiting for resumption of trade with Japan. In the meantime he continues his hobby, working energetically, which is also the story of his success. Note 1. It is not clear from this biography (in English or Japanese) how Mr. Nagano introduced soy sauce to the USA, when he started making it in Chicago, and what the first name of his soy sauce manufacturing company was. He may have begun by importing it (in 1906) through Fuji Trading Co. When he saw that it was selling well, he may have constructed a factory to make it in Chicago. His facing biography in

© Copyright Soyinfo Center 2013

Japanese says that in 1910 he started "large scale production and sales" (*tairyô seisan hanbai*)*;* if this is referring to soy sauce, then he started making it by 1910.

(b) A full-page biography of Mr. Kaijiro Tanaka (p. 22) states: A native of Fukuoka prefecture, Mr. Tanaka has the distinction of being the only Japanese tofu manufacturer in New York. He also owns two stores that sell general merchandise and Japanese foods (such as senbei / Japanese rice crackers). In 1906 he first arrived in the USA in San Francisco, California, where he was greeted by the great earthquake and fire. He moved to Denver, Colorado, where he became the city's first Japanese chauffeur. In 1914, after a brief visit to Japan, he returned to the U.S., settling in New York, where he soon entered his present business. He continued the tofu shop until the outbreak of World War II. In 1942 he moved into his present shop at 159 East 53rd St [between Lexington and 3rd Ave.]. He continued his pre-war business and also ran another business (*Tanaka Shokai,* Japanese Export and Import) at West 65th St. He is a member of the executive committee of the New York Japanese American Committee for Japan Relief Inc. and during the war was also on the executive committee of the Red Cross War Fund campaign, Japanese division. He is also a director of the Japanese Christian Institute. Note 2. It is not clear when (probably in about 1914) and at what address he began making tofu in New York–nor what the name of his tofu company was. On the facing page (p. 23) is a biography of Mrs. Kikue Tanaka. Born in Kumamoto prefecture, she came to New York in 1919 while a very young girl. For about 20 years she has been a successful woman restaurateur, owning and managing Suehiro's at East 29th St. Note 3. There is no indication that she is related to Mr. Kaijiro Tanaka, the tofu maker.

(3) Nyuyoku Benran, 1948-1948, published by Hokubei Shimpo-sha (99 p., all in Japanese). On page 29 of this section is a subsection on tofu business. See Tanaka 1914. (4) Ads at back (p. A1 to A13, B1-B18). (5) Classified business directory (33 p. all in English, numbered in the opposite direction as most of the book. Encompasses points as distant as Ohio and Florida). There are ads between most sections of the book. Address: New York City, New York.

2072. Koens, A.J. 1948. Peulgewassen [Leguminous crops]. In: C.J.J. van Hall and C. van de Koppel, eds. 1948. De Landbouw in de Indische Archipel [Agriculture in the Indonesian Archipelago]. 'S-Gravenhage: N.V. Uitgeverij W. van Hoeve. Vol. IIA. 905 p. See p. 241-42, 258-274, 473. In collaboration with G.G. Bolhuis. [79 ref. Dut]

• ***Summary:*** This chapter on Leguminous plants has three parts: (1) Peanuts. (2) Soybean. (3) Kratok.

The part on the soybean (*Sojaboon*) has the following contents: The plant. Varieties. Selection. Soil and climate. Methods of cultivation. Insects and diseases. Economics. Planting. Utilization. Value as a food (source of nutrients) for the people of Indonesia (*Indonesië*). Trade and commerce (*Handel*). Contains an excellent bibliography.

The section on "Utilization" mentions (and describes briefly how each is made): green vegetable soybeans (*de halfrijpe planten*), whole dry soybeans, roasted soybeans, ketjap (or soja or shoyu or taoyoe), tofu (*tao-hoe, bonenkaas*), baked tofu, firm tofu (*tao koan;* also simmered with *Curcuma longa*), sprouts (*taogè. Taogè of katjambah bestaat uit kiemplantjes van sojabonen*–which means "Taogé or sprouted seeds consists of germinated soy beans"), Indonesian-style miso (*tao-tjiong*), fermented black soybeans (*tao-dji*), tempeh (*tempe*), MSG (*Vetsin*), soybean meal (*sojameel*).

Note. This is the earliest Dutch-language document seen (Jan. 2013) that gives a name to soy sprouts; it calls them *kiemplantjes van sojabonen.*

2073. Komaki (Joe T.); Kalifornians Enterprise. comp. 1948. Shikago Nenkan Chicago Japanese American year book. Chicago, Illinois: Joe T. Komaki, KE. 176 p. 22 cm. [Eng; jap]

• ***Summary:*** This directory is mostly in English.

It contains advertisements for: Showa Shoyu Brewing Co., Glendale, Arizona (p. 38-39). "Club" Shoyu, distributed solely by Pacific Mutual Sales Co., San Francisco, California (p. 40). Tofu–Ageh [Agé] Manufacturer. Asato Soy Bean Food Shop (p. 40). Mori Tofu Co., Chicago: Manufacturers of tofu (p. 43).

The pages in the 1948 Year Book are numbered continuously from beginning to end (p. 176), but the pages that contain bleed photos do no bear numbers. Very little of the 1948 Year Book is in Japanese; any Japanese appears under an English head. The 1948 Year Book does not contain alphabetical listings of businesses. The 1949 Year Book does, but the only apparent businesses that make soy products are Asato and Mori. Address: 1833 N. Bissel St., Chicago 14, Illinois.

2074. Li, Ch'iao-p'ing [Qiaoping]. 1948. The chemical arts of old China. Easton, Pennsylvania: Journal of Chemical Education. viii + 215 p. See p. 170-80. Illust. 24 cm.

• ***Summary:*** Chapter 14, titled "Soybean products," begins: "Three kinds of soybean products, fermented soybean, soybean sauce and soybean curd, have been largely produced in China and Japan and exported to other countries where they are used to a smaller extent. The first kind called in China 'chiang' or 'shih' (1 Cc = Chinese character of each is shown), the second 'chiang yu' or 'chih-yu' and the last one 'tou-fu' (2 Cc) are all considered by the Chinese and Japanese as important articles of diet.

"Both the fermented soybean and soybean sauce are made by the fermentation of either soybean alone or the mixture of soybean and wheat flour in salt solution. Their manufacture originated in the Chou Dynasty [pinyin: Zhou,

© Copyright Soyinfo Center 2013

1045-256 BC]. It is stated in *Chou li* [pinyin: Rites of the Zhou dynasty, ca 300 BC] that an officer, i.e. the Imperial Cook, was appointed to take charge of making and providing one hundred and twenty of the fermented soybean per year for imperial use. According to another book, the invention of this condiment was attributed to the Duke of Chou. The History of the Han Dynasty 91.7 and the *Shih shi* 129.15 also say that many merchants enriched themselves or obtained titles by the sale of these products in the time of the Ch'in [pinyin: Qin, 221-206 BC] and the Han [202 BC to AD 220] dynasties. From this it is obvious that they were already largely consumed by the Chinese people in ancient times.

Bean curd also had its origin in early times. It is said to have been made first by Liu An (2 Cc) (died 122 B.C.) and was early known as *li-ch'i* (2 Cc) *Shih wu yüan hui* 30.6, Materia Medica 25.2.

"During recent years a considerable amount of scientific investigation of soybean sauce has been carried on in China. Methods of manufacture described in early Chinese texts have been modified in many respects..."

"The ancient method of preparing fermented soybean:" A detailed (2¼-page) translation is given of the method for making jiang and shih described in the *Ch'i min yao shu* 8.2b-7a.

The introduction to the translation states: "The process of making the fermented soybean consisted of subjecting the mixture of soybean and wheat flour to the action of certain species of mold and mixing and storing the product with brine in a large container to allow the fermentation to take place."

Note: This book was first written in Chinese, entitled "History of Chemistry in China," and published by the Commercial Press Ltd., Shanghai, China. The 1st edition appeared in 1940 and the 2nd ed. in 1941. It was also translated into Japanese and published there in 1941. Address: 10A Hua Yuan Ta Yuan, Fu Ch'ien Chieh, Peiping, China.

2075. **Product Name:** Tofu.
Manufacturer's Name: Mori Tofu Co.
Manufacturer's Address: 4325 S. Drexel Blvd. (rear), (15) Chicago, Illinois. Phone: LIvingstone 8-8541.
Date of Introduction: 1948. January.
New Product–Documentation: Hokubei Shinpo-sha. 1948. *Nyuyoku Benran: Tsuketari jushoroku, 1948-1949 nendo* [*New York Japanese American directory: 1948-1949*]. The all-English directory at back of book under Chicago–Groceries (p. 6) gives this name, address and phone number.

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 517. Under "Groceries-Retail." In Japanese: Mori Tofu Seizô-sho. In English: Mori Tofu Co., 4325 S. Drexel Blvd., Chicago. Phone: LIV. 8541.

Chicago Shimpo, Inc. 1958. Chicago Japanese American directory. Page 43. A space ad (¼ page) states: "Mori Tofu Co., 4325 South Ellis. Manufacturers of tofu. Fresh fish for sashimi. Delivery service. A. Mori, proprietor."

2076. Rotondi, Pietro. 1948. Vegetarian cookery. 2nd ed. Hollywood, California: Published by the author. 150 p. Recipe index. 21 cm. 1st edition was 1942.
• ***Summary:*** This book is identical to the original 1942 edition except that: (1) It is now published in paperback by the author; (2) A color photo of the smiling author, standing at the door of his office by a sign "Dr. P. Rotondi, Chiropractor, Nature Cure," appears on the front cover; (3) The author's business card, which includes the address of his chiropractic office, appears at the bottom of the copyright page; (4) The last page of the index, p. 151, was accidentally not printed. Address: 1916 Vista Del Mar Ave., Hollywood, California. Phone: 463-2972.

2077. Harris, Robert S.; Wang, F.K.C.; Wu, Y.H.; Tsao, C-H. S.; Loe, L.Y.S. 1949. The composition of Chinese foods. *J. of the American Dietetic Association* 25(1):28-38. Jan. [12 ref]
• ***Summary:*** Pages 32-33 give a description of (including the place purchased and processing method) and page 35 gives the nutritional composition of the following products: Soybean cheese = Ch'ou tou fu lu. Soybean curd = Tou fu (coagulated with lime). Soybean curd, fermented = Tou fu lu. Soybean curd sheet = Ts'ian chang tou fu. Soybean curd, smoked = Tou fu kan. Soybean, fermented = Tou chi [fermented black soybeans]. Soybean, milk clot (oil skin) [yuba] = Yu pi. Soybean sprouts = Huang tou ya. Soybean, yellow (dried) = Ta tou. Soybean, yellow (fresh) = Mao tou.

A glossary on page 38 gives the Chinese name (in both Chinese characters, and in Wade-Giles romanization) for the soyfoods mentioned above.

"Soybean cheese, *Ch'ou tou fu lu.* Purchased in a shop in Sha Ping Pa. This curd is made by putrefying soybean curd, then sealing it in a preserve jar with wine and spices. After one month it can be eaten with sesame seed oil without cooking. The curd has a very strong odor and flavor and it is used as a appetizer by the wealthy and as a main dish by the poor in many provinces."

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term "tou fu lu" or the term "Ch'ou tofu fu lu" to refer to fermented tofu. Use of the character for "Ch'ou" may well indicate "stinky tofu."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "Tou fu kan" [pinyin: doufugan] to refer to smoked tofu. Address: Nutritional Biochemistry Laboratories, MIT, Massachusetts.

2078. Smith, Allan K. 1949. Oriental use of soybeans as food: Notes on Oriental farming practices. II. China. *Soybean Digest.* March. p. 26-28, 30, 32, 34.
• ***Summary:*** Contents: Soy sauce in China. Sweet flour

© Copyright Soyinfo Center 2013

paste–Tien Mien Chang [Chiang]. Soy or vegetable milk (incl. Willis Miller, yuba). Soybean curd or tofu (incl. use in Buddhist restaurants to look like meat, poultry, or fish dishes).

Soybean cheese [fermented tofu]. Fen-t'iao from mung beans (vermicelli). Fermented soybeans [fermented black soybeans] (made from small black soybeans). Vinegar fermentation process. Address: Northern Regional Research Lab., Peoria, Illinois.

2079. Culbertson, Raymond E.; Smith, Allan K. 1949. Oriental uses of soybeans as food: With attention to fermented products. Notes on Oriental farming practices. V. Korea. *Soybean Digest.* June. p. 15-18, 20, 22.
• ***Summary:*** Contents: Introduction. Breeding work. Topography. Land use. Soybean varieties. Climatic relations. Soils of Korea. Cultural practices. Marketing. Soybeans as foodstuff. Soya sauce. Green pods on the bush. Bean sprouts. Parched beans. Curd (soybean curd [tofu]) and milk. Kochuchang. Other uses.

"Prior to World War II, North Korea planted (1940-44 averages) slightly more than 905,000 acres of soybeans annually which yielded some 7,700,000 bushels. During the same 5-year period South Korea was planting 626,000 acres which yielded a little over 5 million bushels. The latest available figures (1947) for South Korea show a production of 4,480,000 bushels from 662,000 acres."

Concerning food uses of soybeans in Korea: "Soya sauce:... is found on the tables of all Koreans, where it is used quite generally on rice, sukiaki [sukiyaki], fish, chicken, and other meats and for the flavor it adds to the soup. It is a very popular appetizer. Most families make soya sauce and are allocated 2.7 kilograms of salt per person annually for this purpose. Yearly consumption is about 6 liters per person. In addition to homemade soya sauce, a supply is also available from many small factories making it. There are more than 10 plants in Seoul, the capital city. Making soya sauce in the home starts about January or February. It is the custom at this time to take a batch of beans and boil them in water until soft, following which they are mashed and formed into a ball, placed in a rice-straw bag and hung up in a heated room to ferment for a 3-month period. Following fermentation, the ball is cut open, broken into pieces and allowed to dry in the sun. When dry, water and salt are added, inoculant (yeast) introduced and the mixture allowed to stand in an earthen crock 2 to 3 months. The liquid is then poured off, boiled about 2 hours and filtered, following which it is considered to be sauce. The sediment remaining in the crock is known as paste. This is used primarily for making soup. In both home and commercial production of soya sauce parched and browned wheat or barley is frequently used in conjunction with the soybeans.

"Green pods on the bush: It is common practice to market early beans on the bush. The plants are pulled, dirt shaken from the roots and the leaves removed. The braches are tied with a string (usually hemp) and the plants are taken to market where they are sold by the bunch. The housewife prepares them for eating by picking off the pods and boiling, and the plant stem is used for fuel.

"Bean sprouts: Bean sprouts are much in demand especially during the winter months. They are used in combination with meat, Chinese cabbage, spinach, turnips, soups and various other cooked dishes. Sprouts are nourishing and supply much-needed vitamins to the Korean's usual polished rice diet. In some instances the beans are left on the sprouts, in others they are removed. The beans are sprouted in central places and usually peddled in two-wheeled, man-drawn carts. Sprouting requires about a week. They are sold on a weight basis.

"Parched beans: For parching, soybeans are simply placed in a pan over a fire and heated slowly until the skin breaks and part of the beans are slightly blackened. They are eaten like peanuts or mixed with other foods. Most varieties are quite palatable and well liked for parching. Note: The Korean name for parched soybeans is *kong*.

"Curd and milk: Soybean milk is consumed in Korea but not so extensively as in China. The milk is made in a manner similar to the Chinese method which was described in an earlier report.

"A large percentage of the soybeans' growth in Korea are consumed as soybean curd. In addition to the huge quantities made at home, curd is also made in literally hundreds of small factories. In Seoul alone there are more than a hundred. Small units, which on the average employ five men, can work up about 10 bushels of soybeans daily.

"Kochuchang: Practically every Korean family makes kochuchang. Boiled [soy] beans are mashed and hung up in sacks to cure well for 2 or 3 months. This material is then broken up, dried in the sun, and ground to a fine powder, usually in an old type hand-operated stone mill. Red peppers are ground fine, the lot is mixed and salt and water added, then it is allowed to stand in crocks 2 to 3 months. To prepare kochuchang for the table, it is taken from the crock and boiled with the addition of ground meat and sugar, if the latter is available."

Note: This is the earliest (and only) English-language document seen (March 2009) that uses the word "kochuchang" to refer to Korean-style red pepper and soybean paste (miso).

Photos show: (1) A man standing in a field of sorghum interplanted with soybeans in Korea. (2) A Korean woman examining different varieties of soybeans in woven baskets in the market place in Seoul, Korea (Aug. 1948). (3) A boy carrying a wooden bucket on each end of a wooden shoulder pole. The buckets are used for transporting night soil to the land in Korea. (4) Soybean curd (cut into cakes) and vegetables in the market place at Seoul, Korea (Aug. 1948).

An outline map of South Korea and its provinces

© Copyright Soyinfo Center 2013

shows the principal varieties of soybeans grown, the section where each variety is grown, acreage and production. A chung or chungbo is 2.45 acres, and a suk is 5 bushels. The yields appear very low but this may be due to the custom of interplanting soybeans with other crops.

Tables show: (1) The 15 chief varieties of soybeans grown in Korea. For each is given: The name of each variety (romanized, with a translation of each word). Days to maturity. Flower color. Stem length. Color of seed coat and hilum. Weight of 1,000 seeds. Yield per acre. Rank in test. Year approved (1921-1939). For example: Chang Tan Paik. "Chang Tan" is the name of a town in Korea; Paik means "white."

(2) Analytical data for improved varieties of soybeans on the basis of the size of the bean. The 3 sizes are large, medium, and small. Examples of locations are: Southeast Korea. Northeast Korea. Central Korea. Southeast Korea. Address: Northern Regional Research Lab., Peoria, Illinois.

2080. *Madison Health Messenger* (*Madison, Tennessee*). 1949. Summer foods for health. Vol. 49-2. p. 1-3. Undated.
• ***Summary:*** Note: This issue of the *Madison Health Messenger* is smaller than its predecessors–only 20 cm (vs. 28 cm) tall but still 6 pages. Some recipes are featured–as for Zoyburgers. New products include Yum (made from soybeans, gluten, and soy cheese [tofu]) and Bite-Size Stake-Lets (made from gluten and soybeans). A chemical analysis of 8 Madison products is given.

2081. Smith, Allan K. 1949. Oriental methods of using soybeans as food: With special attention to fermented products. Notes on Oriental farming practices. *USDA Bureau of Agricultural and Industrial Chemistry.* AIC-234. June. 40 p.
• ***Summary:*** Page 1 states: "The text of this bulletin, with slight revisions, is as it appeared serially in *The Soybean Digest*, issues of February through June, 1949, although many additional photos appear herein. It is processed with the publisher's permission." Note: An enlarged 65 page edition was issued in July 1961.

Photos show: (1) Nine people in a field cultivating soybean with hoes near Nanking, China. All of these workers but one are women. July 1948. (2) "The three-man shovel, Korean version of the turning plow. The motive power is supplied by the mean holding the ropes." (3) A man and donkey threshing wheat with a stone roller. (4) A water buffalo and man pumping water from the rice fields. All parts of the pump and elevator are made of wood. Near Nanking, China, July 1948. (5) Windmill used for pumping water. The sails or vanes are mats woven from grass. (6) Children with baskets of soybean sprouts and inflated Chinese national currency in the market place at Canton, China. Aug. 1948. (7) Soybean milk for sale on the streets of Canton, China. Aug. 1948. It is in bottles, carried using a shoulder pole. (8) A wedge press for oilseed operations at Canton, China. Preformed disks of the flaked or ground meal are inserted in the slot and turned clockwise in the hollow log; pressure is applied with wooden wedges. July 1948. (9) Equipment for steaming soybeans preparatory to making soy sauce. Steam is passed upward through the wooden tanks from a boiler beneath. Peiping, China. 1948. (10) Soy sauce preparation. Steamed soybeans are placed in woven baskets or trays for 3 to 7 days to permit the growth of the mold *Aspergillus oryzae*. Nanking, China. July 1948. (11) Many earthenware jars for soy sauce production in a courtyard surrounded by houses. "Following the growth of a thick mold on the soybeans, they are mixed with parched and cracked wheat and placed with salt solution in earthenware jars for fermentation, which lasts 3 months to 2 years. Soy paste [chiang] is fermented in a similar manner but it contains less water and the fermentation period is about 3 months. Shanghai, China. Aug. 1948." (12) "Soybean curd and vegetables displayed for sale in market place, Seoul, Korea. Aug. 1948." (13) Squares of soybean curd covered with white mold on round, woven bamboo trays. "This is the first step in making soybean cheese. Canton, China, Aug. 1948." (14) Two rows of large hydraulic presses in the mill of the China Vegetable Oil Company, Shanghai. June 1948. (15) Men loading round, hydraulic-pressed soybean cakes onto a truck, on the Bund. Shanghai, July 1948. (16) Men and an ox preparing a seed bed at a Japanese agricultural experiment station near Tokyo. 1948. (17) "A miso plant in Tokyo. The large tubs [vats] in foreground are used for the fermentation of miso. A part of this plant was destroyed by bombs during the war. Aug. 1948." (18) Three men standing by presses destroyed during bombing raids over Tokyo. These presses formerly were used for filtering monosodium glutamate. July 1948. (19) Many stacked wooden tubs of ajinomoto (monosodium glutamate) ready for shipment at a plant located between Tokyo and Yokohama, Japan. Aug. 1948. This plant had a maximum production of 7.5 million pounds of ajinomoto in 1937. (20) Agricultural Experiment Station near Seoul, Korea. This station was built by the Japanese during their occupation of Korea. Later it was taken over and administered by the newly formed Korean Government. Aug. 1948. (21) A Korean boy standing in a field of sorghum interplanted with soybeans; this is a common practice in Korea. 1948. (22) A boy using a shoulder pole to carry two wooden buckets of night soil to the land. Korea. 1948. (23) A wooden shopper looking over the different varieties of soybeans in the market place at Seoul, Korea. Aug. 1948. (24) Outline map of Korea showing where principal varieties of soybeans are grown, the section in which each variety is found, the acreage, and production. Address: Head of Meal Products Investigations, Oilseed Crops Lab., Northern Utilization Research and Development Div., Peoeia, Illinois.

2087. *Madison Health Messenger* (*Madison, Tennessee*). 1949. The story of Madison Foods. Vol. 49-3. p. 1-6. Undated.
• ***Summary:*** "Over 45 years ago [actually in 1904] a group of educators founded an institution in Madison, Tennessee, where special study was given to healthful living. They began by operating a school on a farm. Later a sanitarium was built. And, finally, a food production department was opened, now known as Madison Foods... People who came to the sanitarium were helped by the treatments and the plain wholesome food. However, because when they returned to their homes, they were unable to obtain some of the foods which proved helpful, many sent their orders to us for these foods. The popularity of the foods increased and now they are available in many stores throughout the 48 States."

"In 1941 a building program was started to completely rebuild the Madison Foods plant on the original site. Modern offices, adequate storage and shipping facilities, a five story production section, complete revamping of processing equipment, and a re-arrangement of the plant were realized

step by step, and now the Madison Food plant, built of concrete, blocks, and steel, with tile and plastered interior, and a building of modern design for greater efficiency, stands as a monument to the devotion of its founders and the perseverance of those who carried the torch onward.

"A character builder: As part of the vocational training program at Madison College, Madison Foods is primarily concerned with building strong physical bodies and strong minds."

Photos show: (1) East side view of the new Madison Foods plant. (2) A can (with label) of Stake-Lets (the original gluten-soy product, a complete protein food, sold in 14, 20, and 30 oz sizes). (3) A young man standing next to a large autoclave used for cooking canned foods. (4) Four young ladies hand picking peanuts to insure quality. (5) Front view of the new Madison Foods plant ranging from 2 to 5 stories in height. (6) A can of Yum (14 oz, made with grains, legumes, and vegetables). (7) A young man operating an homogenizer that is homogenizing Kreme O'Soy. (8) A student operating a machine that is labeling cans.

Page 5 contains a description of the various products, with their ingredients, made by Madison Foods: Zoy-Koff–an alkaline beverage used in place of coffee. Contains no coffee–no nerve stimulants. Two grinds–regular and fine. Prepare like coffee. Ingredients: Soybeans, bran, brown sugar. 1 lb bag.

Kreme O'Soy–a rich-bodied, homogenized soy beverage. May be used in place of milk. Ingredients: Soybeans, soy oil, dextrose, calcium phosphate, sodium chloride. 20 oz cans.

Zoyburger–excellent for sandwich spread, serve like steak with onions. Ingredients: Soybeans, gluten, raw peanut meal, vegetable seasonings. 14 & 20 oz cans.

Stake-Lets–a combination of gluten and soybeans sliced in meatlike sauce. Ingredients: Gluten, soybeans, soy sauce, seasonings. 14, 20 & 30 oz cans.

Not-Meat–a smooth-textured loaf for vegetable roasts, salads, sandwiches, etc. Ingredients: Whole peanut meal, soybeans, and seasonings. 14 & 20 oz cans.

Vigorost–a fibrous-textured vegetable steak used like meat. Also for sandwiches, salads, etc. Ingredients: Gluten, soy cheese, whole peanut meal, seasonings. 14 & 20 oz cans.

Yum–a mild bologna-like-flavored, meatless loaf, used hot or cold. Ingredients: Soybeans, gluten, soy cheese, whole peanut meal, seasonings.

Cheze-O-Soy–a curd made from soybean milk, to be used in salads, sandwiches, spaghetti, etc. Ingredients: Coagulated soybean proteins, seasonings. 14 & 20 oz cans.

Bite-Size Stake-Lets–gluten and soy bits in rich sauce simulating stewed bits of beef in rich gravy. A choice food. 20 oz cans.

"A statement of ingredients, use and recipes is on each package and can of Madison Foods."

2088. Chatfield, Charlotte. 1949. Food composition tables for international use. *FAO Nutritional Studies* No. 3. 56 p. Oct. [158* ref]
• ***Summary:*** A table on page 11 shows "Food composition in terms of retail weight ("as purchased") for soybeans and various soybean products: Whole seeds, dry; Flour, full fat (seed coat removed); Flour, low fat–grits, flakes (partially defatted); Curd, tofu (yield 3.5); Fermented beans–Japanese natto; Fermented beans–Chinese tsiang [chiang]; Soybean milk (yield 7.5); Paste, miso (made with small amounts of rice or other starchy materials) (yield 2.5); Shoyu sauce (yield 3.5). The following are given for each product: Calories per 100 gm, percentage of protein and fat, and yield from 1 kg of soybeans.

Similar but expanded information is given on p. 25, including carbohydrate, fiber, ash, and refuse. Address: Nutrition Div., FAO, Rome, Italy.

2089. *Vegetarian News Digest* (*Los Angeles*). 1949. Health in the news: The soy bean–wonder food of many uses. 1(9):21. Sept/Oct.
• ***Summary:*** "Allan K. Smith of the Northern Regional Research Laboratory, Peoria, Illinois, recently returned to the United States from the Orient where he learned of countless uses for soy beans. In China, Japan and Korea he found soy beans being fermented, ground, and processed in various ways. In its motherland, Smith discovered, the soybean is a source of flour and cake, oil, bean sprouts, vegetable milk, various sauces and pastes, curd, cheese, and several other foods." Describes how soy milk is made in China. One restaurant that Smith visited prepared more than 25 different dishes from soybeans.

2090. Bailey, Sydney D. 1949. Dr. Wang's treatment centre. *Manchester Guardian* (*England*). Nov. 28. p. 3.
• ***Summary:*** While playing bridge with Dr. Wang and two of his friends in China, during World War II, the writer discovered that they were involved in a racket and a sort of smuggling ring. "Wang was opening the tins [of milk from Hanoi, Vietnam], mixing the contents with soya bean curd and buffalo milk, canning the resulting mixture, and selling it to the missionary community in Chunking."

2091. Kagawa, Aya. 1949. Japanese cookbook (100 favorite Japanese recipes for Western cooks). Tokyo: Japan Travel Bureau. 162 p. Illust. (line drawings, and color-, and black and white photos). 19 cm. Series: Tourist Library No. 11.
• ***Summary:*** Contents: Preface. General remarks (The why of Japanese food, its nutritive value, table utensils, an ordinary meal, meals for guests, table etiquette, kitchen utensils, how to cut up fish and vegetables, glossary {incl. aburaage, miso, shoyu, tofu}). Japanese cookery: Table of measures, soups, boiled foods, broiled foods, fried foods, saucepan foods, steamed foods, *hitashimono* (boiled greens in soy [sauce]),

© Copyright Soyinfo Center 2013

aemono (dressed vegetables), vinegared foods, sliced raw fish (sashimi), rice foods, sushi (vinegared rice foods), pickles, seasonal menus, New Year's foods, Girls' Festival foods. How to make Japanese cakes (incl. bean paste from red beans).

Many recipes call for "shoyu" [soy sauce]. Soy related recipes: Scrambled egg soup (with shoyu or Worcester sauce, p. 42). Tofu and Japanese leek soup (p. 49). Miso soups (p. 50-51). Broiled egg-plants (with miso, p. 70). Beef sukiyaki (with tofu, p. 79-80). Fish stew (with tofu, p. 81). Odamaki mushi (with yuba, p. 85). Boiled greens in soy (p. 91-92). Dressed food with white sesame [seeds] and vinegar (and aburaage {fried beancurd}, p. 96). Dressed carrot and kidney beans in pod (with tofu, p. 97).

On p. 14 we read: "Soy beans are used very much in Japanese food; especially in hilly regions where fish is scarce, or in vegetarian menus (in connection with Buddhism). Beans are not only simply boiled but eaten in various ways. They are made into *tôfu* (beancurds), *aburaage* (fried tôfu), *nattô* (steamed and fermented beans), *shôyu*, *miso*, [azuki] bean-paste used in cakes, etc." Key flavorings are miso, shoyu, sugar, and vinegar. Sake, mirin, dashi and ajinomoto (seasoning powder) are also important. "Seaweeds are usually eaten dry. Nori (seasoned laver), kombu (tangle), wakame (lobe leafed undaria), hijiki (spindle-shaped bladder-leaf), and so on, are rich in iodine,..."

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried tôfu" (with diacritics).

"Of flavorings, *miso*, *shôyu*, sugar and vinegar are the most important. *Sake* (Japanese wine), *mirin* (a sweet kind of *sake*) and *dashi* are used in this way to give flavor. Properly speaking, *dashi* is formed by boiling shaving [sic, shavings] of *katsuobushi* (dried bonito) or *kombu* (tangle, a kind of kelp), but *ajinomoto* (seasoning powder) may take its place. Usually, however, *dashi* is not made, and instead *niboshi* (a small dried fish) is boiled together with the food to give it flavor. Besides, ground walnuts sesame, peanuts etc., are used to dress vegetables. In addition to these, mustard, red pepper, horse radish [wasabi], the leaves and berries of *shiso* (a kind of highly flavored leaf), the leaves and berries of *sansho* (Japanese pepper), Japanese leeks [negi], *myôga* (myôga ginger [*Zingiber mioga* Roscoe]), ginger [shôga, the root of *Zingiber officinale*], are used as flavorings, being found growing in most kitchen gardens."

"Our special thanks are due to Dr. R.H. [Reginald Horace] Blyth, professor of Gakushin University, who translated the original Japanese manuscript into English." Aya Kagawa was born in 1899. The book was first published in December 1949 but not copyrighted until 1952. The almost identical 9th printing appeared in April 1955. Only the color photos were changed (upgraded) by 1955. The first true revision and 2nd edition was the so-called "Fourteenth & revised edition" of 1962. Address: M.D. and president of Joshi Eiyô Tanki Daigaku (Women's Nutrition College), Tokyo, Japan.

2092. **Product Name:** Tofu.
Manufacturer's Name: Soya Food Products Co.
Manufacturer's Address: 2356 Wyoming Ave., Cincinnati, OH 45124. Phone: 513-661-2250.
Date of Introduction: 1949.
Ingredients: Soybeans, water, solidifier (calcium sulfate or natural nigari).
Wt/Vol., Packaging, Price: 1 lb packed in water.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 398. Owner: Ben and Nina Yamaguchi, Edward Willwerth.

Label. 1979, undated. 4 by 5 inches. Red and green on clear film. "Est. 1945." Leviton. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Ben & Nina Yamaguchi. Edward Willwerth, manager. 1982. Soyfoods. Summer. p. 36. Ben Yamaguchi and Yoshio Shimizu started a canned bean sprouts operation in 1945, then added tofu production and an Oriental Grocery in 1949, bean sprout salad and fried tofu pouches in 1955, then Ed Willwerth as general manager in 1978. In 1981 the firm made 300-400 lb/week of tofu.

Talk with Chieko Kimbel of Chieko Tofu, Inc. in Cincinnati. 1993. Feb. 7. Soya Food Products Co. no longer exists. The company was shut down and the building sold about 1½-2 years ago. Talk with David Kimbel of Sunsprout of Cincinnati. 1993. Feb. 8. After he decided to start making tofu, he considered buying his equipment from Ben and Nina Yamaguchi of Soya Food Products Co. in Cincinnati. They were going out of business but their equipment was too old–a stone mill, cooking in buckets with a primitive steam wand, pressing out of a bag with a hydraulic press, homemade pressing boxes on a 2 pressing station homemade press with the paint chipping off, into a cooling tank with warm water, and 2 small packaging machines that were unreliable, an old, small boiler, etc. They went out of business in about Aug. 1991, six months before David started making tofu–and that hurt David. Ben and Nina were getting a divorce, Ben's father grew old, and their son (Paul, who worked for a while making tofu after school) graduated from school and moved to Canada. The success of David's company knocked Soya Food Products, run by Ben & Nina Yamaguchi, out of business; 16 years ago he took over their alfalfa sprout account from Castellini Co., a big Midwest distributor (the Yamaguchi's sole distributor, who bought sprouts only from them), and 10 years ago he took over their mung bean sprout business. They grew their sprouts in buckets, they weren't green, they lasted only 2-3 days, and they often were unable to fill all orders. David came in with trays, green leaves, 2-week shelf life, and nice labels. They had a retail store at

© Copyright Soyinfo Center 2013

their plant selling Oriental foods. Now the building is used by a business that caters food to day-care centers.

2093. Blyth, R.H. (Reginald Horace). 1949. Senryu: Japanese satirical verses. Tokyo: The Hokuseido Press. iv + 230 p. Illust. No index. 21 cm. [1 ref]
• ***Summary:*** These verses were chosen, translated and explained by R.H. Byth. Contents: Preface. Introduction. Haiku and senryu (17 chapters, each on a different subject; e.g., Nature and man. All and one. Simple and complex. Sex. Zen. Religion. Is senryu poetry?). The origins and technique of senryu (vocabulary and syntax, poetic brevity, personification, colloquialisms, the composition of senryu, customs and manners, postscripts, anonymity, principle of selection, conclusion). Senryu (14 chapters, each on a different subject; e.g., Women. Children. Mothers. Fathers. Wives. Husbands. Mothers-in-Law. Other relations. Professions. Animals. Things. Historical. Psychology. Pictures of life).

The Preface begins: "Rightly or wrongly, I feel that the appropriate way to appreciate senryu is through the understanding of haiku... haiku preceded senryu by about a hundred years." Haiku and senryu together give "a fairly complete idea of the nature of the Japanese people, their spirituality and idealism on the one hand, and their thorough-going realism on the other... the 'world of calm delight' and the 'strife divine.'" "The average Japanese and especially the so-called intelligentsia, has a low opinion of senryu. This is quite unjustified."

The Introduction begins: "Senryu are expressions of moments of vision into, not the nature of things, but the nature of man."

In the 14 chapters of the section on "Senryu," each entry has four parts: (1) The senryu itself, written in Japanese characters. (2) Romanization of (1). (3) Translation of (1) in the form of 3 lines with 17 or fewer syllables. (4) Blyth's commentary on this senryu. In addition, many senryu are accompanied by an illustration. The great majority of these illustrations are by Mr. Sobun Taniwaki, who died in 1947.

Page 90 (chapter on "Wives"):

"'To the cook she says
"A hundred times,
"Don't forget the bean-curd water.'"

Comment: "The water bean curd is boiled in is supposed to be good for washing clothes in. The mistress keeps telling the maid-servant, ad nauseum, not to throw away the water after the bean curd is cooked. In this repetition, this persistence about a small thing, is seen a whole world of the human mind."

Page 117 (on "Professions"):

"Holding the *dengaku* in his hand
"The pack-horse driver
"Comes out to scold the horse."

Comment: "*Dengaku* is baked bean-curd covered with *miso*, a kind of sauce. The horse gets tired of waiting for his master in the pub, and begins pawing the ground... This is a road-side scene of Old Japan." Address: Author, Tokyo, Japan.

2094. Chang, Irene C. 1949. Nutritive value of soymilk and soybean curd. PhD thesis, Washington State University. 25 p. In: Doctoral Dissertations Accepted by American Universities, 1949. *
Address: Washington State Univ.

2095. Crane Portland [Oregon] directory. 1949. Portland, Oregon: Crane Direct Mail Service. See p. 12.
• ***Summary:*** "NW 5th–322 Soy Bean Cake Co. *"

Note 1. This is actually the Ota Tofu Co. See *Nichi-Bei Nenkan.* This is the earliest known year that the words "soy" or "soybean" are mentioned in any Caucasian-owned directory in connection with the Ohta / Ota family or their tofu making company–even though the company was founded in Portland in 1911.

Note 2: The title page states: "Contains a list of passenger car owners residing in Portland, Oregon, and rural routs operated from Portland; also a list of residents who are not registered automobile owners.

"Directory shows make of automobile and year of manufacture opposite each owner's name, and also indicates by * those who have a telephone." Address: Portland, Oregon.

• ***Summary:*** "Foreword: The purpose of this little book is to serve as a guide in the study of simple facts about nutrition and healthful cookery, primarily prepared to be used in community nutrition classes." The guidelines, in outline format, are also helpful in teaching the principles of healthful vegetarian nutrition and cookery.

Also discusses: Soybeans as a good source of high quality protein (p. 29). The meatless diet: Meat is not a nutritional necessity, disadvantages of flesh foods (animals are diseased; rich in nitrogenous waste products, which kidneys must eliminate. These act as a stimulant; poor source of most vitamins and calcium; expensive), importance of knowing how to make proper substitution when discontinuing a meat diet, protein content of average servings of some [non-flesh] foods (including soybeans) (p. 31-33). Homemade Vegex (with ½ pint soya sauce, p. 113). Protein foods (gives the composition of soybeans, p. 118). Loma Linda Foods (nutritional composition of their commercial products; Vegemeat Burger, Vegemeat Steaks, Nuteena, Proteena, Peanut butter, Vegex; p. 119). Calcium

content of foods (incl. turnip greens, mustard greens, soy bean curd, kale, dry soybeans; p. 120). Iron content of foods (incl. mustard greens, soybean curd). Address: Loma Linda, California.

2097. Saito, Akio. 1949. [Chronology of soybeans in Japan, 1927 to 1949] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 14-15. [Jap]
• ***Summary:*** 1927 Sept. 15–Noda Shoyu [Kikkoman] has the longest strike in pre World War II Japan. The labor system becomes more modern and employer-employee problems start to be handled in new ways.

1928–The production of soy oil reaches 38,000 tons, passing rapeseed oil which is 30,000 tons. Soy oil is now Japan's leading vegetable oil.

1931 Sept.–Japan invades Manchuria, using the Mukden incident as a pretext. 1932–Japan attacks China. By early 1932 Japan had conquered all of Manchuria.

1932 Feb.–The Rikagaku Kenkyujo in Tokyo makes salt-free shoyu for the first time.

1935–At about this time, systematic cultivation of soybean seeds begins.

1938–The average retail price of good quality shoyu is 62 *sen* for 18 liters (10 *sho*).

1938 Sept.–The *Kokusaku Daiyohin Fukyu Kyokai* is founded. This organization encourages the substitution of less expensive or more abundant ingredients in shoyu, such as barley for rice, millet or barn yard millet grass (*hie*) for barley, or the chrysalis of a silkworm for soybeans and wheat in making HVP shoyu (*amino-san shoyu*).

1939–The first soybean is registered in Japan; it is named "Ministry of Agriculture and Forestry, Number 1" (*Norin ichi-go*).

1939 Dec.–The Japanese government puts its energy into controlling the rising prices of rice, miso, shoyu, salt, matches, fresh produce, etc. (i.e. essential foods for daily life).

1940 March–The "Central Price-Fixing Organization" (*Chuo Bukka Iinkai*) sets ceiling prices for the following to control inflation: soy oil, soybean cake, Japanese soybeans mixed with Manchurian soybeans, salted salmon, salted trout, dried nori, and eggs.

1940 April–The "Price Setting Central Committee" (*Kakaku Keisei Chuo Iinkai*) decides to use a ticket (rationing) system for ten items including rice, miso, shoyu, salt, matches, charcoal, and sugar.

1940 June–The Ministry of Agriculture and Forestry (*Norinsho*) and the Ministry of Commerce and Industry (*Shokosho*) proclaim the new revision of the regulation for controlling excessive profits (*Borikoi Nado Torishimari Kisoku Kaisei*), and on responsibility relating to prices.

1940 Sept.–Even though people are under control, summer resorts become crowded and people take home rice and miso and souvenirs. The government asks them not to do this.

1940 Oct.–The Japan Soybean Control Corporation (*Nihon Daizu Tosei K.K.*) and the Cooperative Soybean Products Marketing Corporation (*Daizu Seihin Kyohan K.K.*) are founded.

1941 June–The home use food oil ticket (rationing) system starts.

1941 Dec. 7–Japan attacks Pearl Harbor. War with the USA begins. 1942 Feb.–The ticket rationing system starts for miso and shoyu.

1943 June–The regulations for emergency food production are decided. They start to use unused lands for production of various small grains and legumes (*zakkoku*).

1943 Nov.–A record book rationing system is established for tofu, to ensure fair distribution.

1945 Aug. 14–Japan surrenders to the USA in World War II after atomic bombs are dropped on Hiroshima and Nagasaki (Aug. 6 and 9).

1945–Because of unusually cold weather, Japan's soybean production drops dramatically, resulting in one of the smallest crops since 1878. It is only 170,400 tonnes, 36.3% lower than the previous year.

1947–The production of shoyu this year is only 1,868,500 *koku.* Since there is not enough shoyu, a lot of substitute shoyu and powdered shoyu (*kona shoyu*) appear; neither of these two products are regulated.

1947 May 3–A new constitution is adopted in Japan in which the country renounces the right to wage war, the emperor gives up claims to divinity, and the Diet becomes the sole law-making authority.

1948 Oct.–At about this time, the food situation in Japan starts to improve. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

[probably dried yuba sticks]–10 cases–Insects. "Salted Bean Curds–2 cases–Labeling incomplete and filthy." Note 1. This could well be fermented tofu.

Note 2. This is the earliest English-language document seen (Oct. 2012) that uses the word "Dried bean sticks" (regardless of capitalization) to refer to what are probably dried yuba sticks.

Page 149: Port of San Francisco. "Bean Sauce–1,440 lbs.–Insect larvae. "Dried Bean Curd–1,800 lbs.–Insects, insect larvae. Note 3. This could be either dried yuba or pressed tofu (*doufu-gan*).

2100. Loska, Stephen J., Jr.; Melnick, Daniel. 1950. Laboratory procedure for evaluating the curd-producing capacity of soya products. *Cereal Chemistry* 27(2):127-40. March. [7 ref]

• ***Summary:*** The use of soy products in relief feeding both in Europe and the Orient has created new problems in description and control of products manufactured for different purposes, In Europe soya is used to enrich wheat flour, as a meat extender and as a major ingredient for low cost food preparations. In the Orient it is used for the manufacture of soy sauce derived from the hydrolysis of protein, for tofu or soy curd prepared by the precipitation of water-extractable protein and for miso or soy paste.

The evaluation of soy products utilized in the preparation of curd presented one of the greatest problems.

Quartermaster Food and Container Institute for the Armed Forces has developed a procedure for rating soy products as sources of soy curd. It employs the essential steps of Asiatic soy curd processing. It involves the aqueous extraction of the soy protein and its precipitation as a curd on the addition of magnesium chloride.

It has been found that curd volume is an accurate index to the percentage of soluble protein in the soy flours.

Note: Summary from *Soybean Digest*, July 1950. p. 26. Address: 1. Quartermaster Food & Container Inst. for the Armed Forces, Chicago, Illinois; 2. Best Foods Inc., Bayonne, New Jersey.

2101. Van Duyne, Frances O. 1950. Recipes for using soybeans: Fresh green soybeans and dry soybeans. With directions for growing in the home garden. *Illinois College of Agriculture, Extension Circular* No. 662. 16 p. June.

• ***Summary:*** Contents: Why use soybeans: An excellent food, easy to grow in home garden. Green soybeans: Shelling and cooking, recipes, freezing, canning, drying. Dry soybeans: Using the cooked beans, using soybean pulp ("This pulp is made simply by passing cooked dry beans through a meat grinder."), roasting soybeans, making and using soybean milk, making and using soybean curd, soy sprouts. Contains 25 recipes.

Note: This is the earliest English-language document seen (June 2004) that uses the term "Fresh green soybeans" in the title. Address: Assoc. Prof. of Foods, Univ. of Illinois.

2102. *Soybean Digest.* 1950. Japan shifts from whole beans to meal. Nov. p. 24.

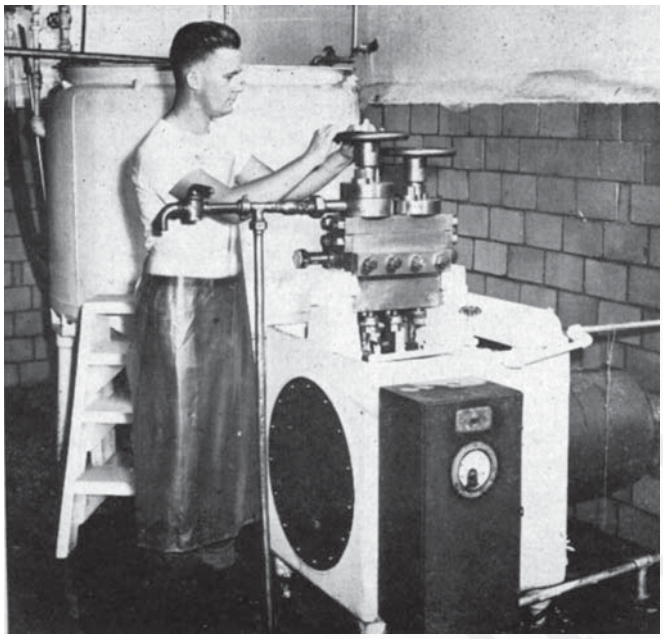
• ***Summary:*** Two pie charts show Japanese usage of soybeans in 1940 and 1948. In 1940 the Japanese were consuming about half of their 562,000 tonnes of soybeans as whole soybeans used to make various foods such as shoyu, miso, and tofu. But by 1948 nearly all their soybeans were being used in the form of soybean oil meal, especially to make miso, shoyu, and amino acids. Consumption of miso and shoyu have greatly increased, while other uses

© Copyright Soyinfo Center 2013

(especially tofu) have shrunk.

"During the 10 years preceding the end of World War II, Japan imported an average of about 700,000 tons of soybeans, chiefly from Manchuria. This inflow of soybeans was stopped almost entirely immediately after the war, which resulted in critical protein and oil supplies. But imports since then have increased, overcoming the extreme shortage. About 80 percent of total soybean imports during 1946-48 were from the U.S."

2103. *Soybean Digest.* 1950. Soy foods from a unique college [Madison]: This little Tennessee college has long been noted for its soy foods. Nov. p. 14-15.



• ***Summary:*** This is the second in a series of articles by the Soya Food Research Council. Photos show: (1) "Attractive packaging of soy foods which have been pioneered by Madison College." These include: Kreme O'Soy (sliced bread), Stake-Lets, Kreme O'Soy (canned soymilk), Cheeze-O-Soy, Zoy-Koff, Yum, Not-Meat, Zoyburger, Vigorost, Kreme O'Soy Muffins. (2) Dr. E.A. Sutherland, standing, writing in a notebook. (3) A young man operating an homogenizer that is homogenizing Kreme O'Soy.

2104. *Indian Farming.* 1950. Research on soya bean in the Punjab. 11(11-12):547-48. Nov/Dec.

• ***Summary:*** Discusses soybean breeding, agronomy, chemical composition, and utilization in the diet (as flour, soybean milk, and tofu). "Soybean milk has a peculiar flavour and taste but the curd prepared from it is palatable."

"A scheme for research on soyabean has been in operation at Lyallpur, in the undivided Punjab, from 1944 to 14 August 1947; after the partition [of the Punjab between India and Pakistan], it was transferred to Ludhiana, and it finally terminated on 31 March 1950." About 90 soybean varieties collected from India and abroad were tested during the years 1947-50. The erect and compact varieties ripened earlier than the erect and loose; the viny creeping types were late maturing. The yellow-seeded varieties had a higher protein content than the black, chocolate, or green-seeded ones. Natural shattering was absent in Behrum varieties. Varietal trials showed that Punjab-1 was much superior to the other varieties and yielded as much as 2,791 lb/acre. Average field germination of 50% was increased to 80% by soaking the seed in water for 12 hours before planting. Address: India.

2105. **Product Name:** Star Tofu. Soybean Curd Cake.
Manufacturer's Name: Star Tofu Mfg. Co.
Manufacturer's Address: 608 Weller St., Seattle, WA 98104. Phone: MA 6217.
Date of Introduction: 1950.
Ingredients: Soybean, water, bittern or nigari–an extract of seawater.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Seattle City Directory. 1951. First listing for Star Tofu Mfg. Co. (Sakanioto Noboru), soy bean cake. 608 Weller; 1965 listing same but person is now Tom E. Watanabe at 608 S. Weller; 1973 listing same but people are Yoji and Mrs. Elinor Maeda, food products.

shokumotsu-shi [History of Japanese foods]. Tokyo: Yuzankaku. 480 p. [Jap]
• ***Summary:*** Best book seen on the history of Japanese foods. The following appears in chapter 8. Edo Period:

"Amazake and Shirozake (p. 375-76). In ancient times there was Kozake and hitoyo-zake (one-night sake). They became known as amazake at a later date. But kozake was different from subsequent amazake; sometimes it was made using sake instead of water in the fermentation. The term 'amazake' first appeared in the literature of the Keicho period, which started in A.D. 1596. Later, during the Kan-ei period (1624-1630) there was Shirakawa Amazake.

"In Rokujo, in Kyoto, the Yamashiro-zake was very old and famous. Within the city of Edo (today's Tokyo), in the Yokayama-cho section, during the Temmei period (1781-89), Sangoku Ichi Amazake was sold. After taking it home, the consumer would add an equal amount of boiling water to the amazake and stir while simmering. The names Sangoku Ichi (three countries are one) and Shirayuki (white snow) came from the fact that it was sold in a container with a plum flower crest drawn on it (*umebachi*) and also Mt. Fuji was drawn in the shop. This was because the goddess of the Mt. Fuji shrine is named *Konohana Sakuya Hime* ("Tree Flower Blooming Princess"); she got pregnant overnight. Since amazake was known as "one-night sake" in ancient times it was connected with this goddess.

"Amazake used to be sold only in winter. Around the Bunka period (1804-1817) it was sold year-round. There were 5-6 amazake shops in Edo (Tokyo). Among them, the one in front of the Asakusa Honganji temple was famous. Although at that time amazake was sold during the summer, it later returned to being a winter drink."

2107. Brown, Helen Evans. 1950. Chafing dish book. Los Angeles, California: The Ward Ritchie Press. [21] + 141 + 8 p. Index. 16 x 16 cm.
• ***Summary:*** This stylish little cookbook reflects the growing influence of Asian (especially Chinese) culture and cuisine in California–and the author's enthusiasm for it. The recipe for sukiyaki (#93) calls for "a soy bean cake" [a cake of tofu]. A footnote to the recipe for Chinese spinach (#117) states: "The Chinese would add a piece of fermented bean cake to this; a piece of bleu cheese gives much the same effect."

Helen Brown uses "soy sauce" to season all of her Chinese- and Japanese-style recipes: Nos. 32, 60, 64, 73, 77, 87, 89, 91, 93, 117. Address: Pasadena, California.

2108. Coorengel, G.B. 1950. Katjang kedelai [The soybean]. Jakarta: Balai Pustaka. 34 p. 20 cm. [Ind]
Address: Jakarta, Indoensia.

2109. Feng, Doreen Yen Hung. 1950. The joy of Chinese cooking. New York: Greenberg. 227 p. Illust. Index. 24 cm.
• ***Summary:*** The section on "Ingredients" describes each basic ingredient, and gives the Cantonese name plus Chinese characters, including: (1) "Soya sauce" (*jeung yow*) is an absolutely essential basic ingredient. It "can nowadays be found in almost all neighborhood delicatessen or grocery shops" (p. 21). (2) "Bean sprouts" (*dow ngaah*). "They are usually golden yellow in color and possess a strong flavor and a rather crunchy texture." An illustration shows these sprouts, which appear to be soybean sprouts (p. 22-23).

(3) Two types of dried yuba (*fooh jook* and *tiem jook*), both illustrated. When soya bean milk is boiled, it separates into various layers; "the rich cream that rises is called *fooh jook*, and the settling sediment is called *tiem jook*. When dried, they look like stiff boards glazed with enamel, but after they have been cooked they become creamy and gelatinous. *Tiem jook* is used in fish dishes; while *fooh jook* is usually cooked in soup" (p. 30-31).

Note 1. This is the earliest English-language document seen (Oct. 2021) that uses the term *fooh jook* to refer to dried yuba sticks.

Note 2. This is the 2nd earliest English-language document seen (Oct. 2012) that uses the term *tiem jook* to refer to sweet dried yuba–specifically to the thicker, sweeter, less expensive bottom yuba, called *ama-yuba* in Japan. In the illustration, the shapes of the two types of dried yuba are completely different. The *tiem jook* looks like a stiff rectangle about 1/4 inch thick.

(4) Chinese sauces (*jeung*) come in bottles or cans (p. 32): (4a) Soya sauce (*jeung yow*) is an almost black sauce made from soya beans. The best substitute is Maggi. (4c) Bean-curd cheese (*fooh yü*) [fermented tofu] "Grayish-white little cubes of pressed bean-curd fermented in strong wine." It may be used in cooking. (4d) Bean-curd cheese, Eastern style (*naam yü*) [fermented tofu]. Fermented in a brick-red sauce, it is usually used for cooking. (4f) Tiny black fermented beans (*dow see*) [fermented black soybeans]. In cooking, these are generally crushed and used to season other strong-smelling ingredients such as fish. They add "a delightful spiciness to the sauce."

Note 3. This is the earliest English-language document seen (Oct. 2011) that uses the terms "Bean-curd cheese" (with hyphen) or "fooh yü" or "naam yü" to refer to fermented tofu.

Note 4. This is the earliest English-language document seen (Nov. 2011) that uses the term "black fermented beans" to refer to *dow see* or fermented black soybeans.

(4g) A famous red sauce (*hoy sien jeung*) [Hoisin sauce]. This famous red sauce is often used in cooking shellfish and duck; it is widely served with Peking roast duck.

Note 5. This is the earliest document seen (Oct. 2012) that mentions Hoisin sauce, which it calls *Hoy sien jeung* (Cantonese). Chinese name is also romanized as *hai-hsien chiang* (Wade-Giles) or *haixian jian* (pinyin). A major ingredient is soybeans.

There follows a description (p. 33) of how to make

© Copyright Soyinfo Center 2013

bean-curd cheese from fresh bean curd. (5) Oils and fats, incl. vegetable oils like soya bean oil, peanut oil, or sesame oil.

Soy related recipes include: Pig's feet soya bean soup (*Jüh gerk fooh jook tong,* with yuba, p. 80). Oyster sauce bean curds (*Ho yow dow fooh,* with fresh bean curd, p. 155). Many other recipes use soya sauce as a seasoning.

Note: This book was first published in 1950 by Greenberg in New York City (227 p., 24 cm). It was next published in 1952 by Faber and Faber in London (227 p., 23 cm). Grosset & Dunlap (1954) appears to be the third.

2110. Hedrick, U.P. 1950. A history of horticulture in America to 1860. New York: Oxford University Press. xiii + 551 p. Illust. Index. 24 cm. [213* ref]
• ***Summary:*** Concerning the soybean, page 90 notes that Benjamin Franklin, who had corresponded with John Bartram, sent him various seeds in 1769. In 1770 Franklin sent him some "some Chinese Garavances, with Father Navaretta's [Navarrete's] account of the universal use of the cheese made of them, in China."

Hedrick then observes: "'Garavance' is a Spanish name for the chick pea [or garbanzo bean], but it is doubtful if the Chinese had the chick pea, *Cicer arietinum,* from Spain; however, it is well known that they long have made a sort of cheese out of the soybean, *Glycine Max.* Can it be that Benjamin Franklin introduced the soybean, now of so great value, in America?"

Also contains information on the following: Johnny Appleseed (born Jonathan Chapman in 1774 in Leominster, Massachusetts; p. 310-11), John Bartram (1699-1777, Darby, Kingsessing, and Philadelphia, Pennsylvania; see index), William Bartram (son of John Bartram, 1739-1823, Pennsylvania; see index), Samuel W. Cole (Chelsea, Massachusetts; 247, 489), Peter Collinson (1694-1760, FRS, gardener and botanist of England, p. 85-89, 112, 153), Henry Leavett Ellsworth (1791-1858, 1st U.S. Commissioner of Patents, started seed distribution; p. 254, 371), Andrew H. Ernst of Ohio (1796-1860, German-born nurseryman and pomologist, who conceived the plan of the Spring Grove Cemetery in Cincinnati, p. 314), John Fothergill (1712-1780, English physician and botanist, patron of William Bartram; p. 91), Benjamin Franklin (1706-1790; p. 81-83, 86, 90, 117, 149, 468, 472, 499, 511).

2115. Morse, W.J. 1950. History of soybean production: 5. World distribution (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 10-14.

• ***Summary:*** "The production of soybeans, which for many centuries was confined to the countries of Asia, spread rapidly after World War I to the western world, and since World War II practically all leading nations have become more and more interested in the culture and production of the crop. Agricultural experiment stations throughout the world have become engaged in the development of varieties suited to their soil and climatic conditions through introduction, selection, and hybridization. Successful results have been obtained in many countries and, in a few, acreage and production have increased to the extent that the crop has become an important factor in that nation's agriculture. This is especially true of the United States, Netherland Indies, Rumania, U.S.S.R., Austria, Bulgaria, and Poland.

"The principal zones of soybean production in the Orient are China, Manchuria, Korea, and Japan. In Manchuria, the soybean occupies about 25% of the total cultivated area and is a dominating factor in the economic life of the country. As a cash crop it provides fully half the farm income in the north and more than half the total volume of freight handled by the railroads. It is estimated that from one- to two-thirds of the production of soy beans is exported; 15 to 20% is utilized for food, feed, and planting, and the remainder is used for oil extraction.

"In China, the soybean is one of the principal and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage is confined to three northern provinces, Shantung, Kiangsu, and Honan. China consumes practically all of her production, estimates indicating more than 50% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% for planting.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to central and northern Korea, as southern Korea, which grows principally cotton and rice, seems to be less suited to the successful production of soybeans. The entire Korean production is used for food, stock feed, planting and export, and none is used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all her production and has imported large quantities from Manchuria and Korea. Acreage and production of soybeans in Japan have decreased since World War I and greater emphasis has been placed on increased production of rice. The proportions of soybeans used by Japan for various purposes are: 'miso' (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; soybean curd [tofu], 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous, 0.5%.

"In the Soviet Far East, the soybean is said to be one of the chief industrial crops and in some districts constitutes 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in Khabarovsk territory, the largest seed-producing area.

"South of China, the soybean is cultivated to some extent in the Netherland Indies, India, Siam, Cochin China, Philippines, and Australia. Until 1932, the production of soybeans in the Netherland Indies was not sufficient to meet the domestic demand. Since then, acreage and production have gradually increased until soybeans began to be exported to Holland about 1936. The soybean has been widely cultivated for a long time by the natives of the hilly regions from the borders of Afghanistan eastward to Burma, to northern Siam, and French Indo-China. The crop in India has been grown for its forage and food value rather than for commerce. Although successful results have been obtained in some of the provinces with varieties of good oil content, the growing of the crop as an oil seed does not appear to have been popular with the native farmers. In Australia successful results with American varieties have greatly increased acreage and production, especially in the states of Queensland, New South Wales, and Victoria.

"Although attempts to grow soybeans in European countries have extended over many years, it is only within the past few years that there has been any appreciable production. At present, production is confined largely to European U.S.S.R., Bulgaria, Yugoslavia, Austria, Rumania, and Czechoslovakia, production being largest in Rumania, Bulgaria, and Yugoslavia. In the development of adapted varieties, some progress has been made in Sweden, Poland, Netherlands, and Hungary. Because of the economic importance of the soybean, scientists of the U.S.S.R. have carried on extensive experiments with it, especially in the development of adapted varieties and utilization. At present, the principal areas of production are Ukraine, Moldavia, and

© Copyright Soyinfo Center 2013

certain regions in the North Caucasus.

"Experiments have been conducted with the soybean in nearly all regions of Africa but as yet it is an unfamiliar crop to the majority of African farmer. It has been grown successfully in the upland, midlands, and coastal districts of Natal [South Africa] and throughout Gambia, Nigeria, Egypt, the Gold Coast Colony, and also in the corn- and cotton-growing districts of the Belgian Congo.

"Although the soybean has been the subject of considerable experimental work in practically all countries of the Americas, little progress has been made in commercial culture except in the United States and Canada."

Note: This is the earliest document seen (Oct. 2010) that clearly refers to soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan. This document contains the earliest clear date seen for soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan (long before 1950). The source of these soybeans is unknown. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

2116. Morse, W.J. 1950. History of soybean production: 2. Ancient history (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 4-6.

• ***Summary:*** "The early history of the soybean, like most important food crops, is lost in obscurity. Story tellers of the Far East for centuries have related with untold variations story book tales of the remarkable history of the soybean. One of the oft-repeated tales tells of the saving of a bandit besieged caravan from starvation by the food of the beans of a wild vine-like plant–a plant then unknown but later identified as the wild soybean. From that date the soybean is said to have become the very staff of life of China.

"Ancient Chinese literature reveals that the soybean was extensively cultivated and highly valued as a food for centuries before written records were kept. It is said to be one of the grains planted by Hou Tsi, one of the gods of agriculture. The first written record of the plant is contained in the books *Pên Ts'ao Kong Mu*, describing the plants of China by Emperor Sheng-Nung in 2838 B.C. The soybean is repeatedly mentioned in later records and was considered the most important cultivated legume and also one of the 'Wu Ku' or five sacred grains–rice, soybeans, wheat, barley, and millet–essential to the existence of Chinese civilization. Seed of the soybean was sown yearly with great ceremony by the emperors of China, and poets before the Christian era extolled the virtues of the soybean in its services to humanity.

"Many of the early writings record the advice of agricultural experts on soil preferences, proper time of planting, methods and rates of planting, the best varieties to plant under different conditions and for different uses, time to harvest, methods of storage, and utilization of the many varieties for different purposes. Some of this expert advice goes as far back as 2207 B.C., indicating that the soybean was perhaps one of the oldest crops grown by man.

"The soybean was included in the second class of drugs in many of the old Chinese books and was regarded as having many medicinal virtues. It is learned from a materia medica text written about A.D. 450 that the soybean was not poisonous but was regarded as a specific remedy for the proper functioning of the heart, liver, kidneys, stomach, and bowels. It was also used as a remedy for constipation, as a stimulant for the lungs, for eradication of poison from the system, improving the complexion by cleaning the skin of impurities, and stimulating the growth and appearance of the hair. In the older records the fresh or green beans were said to be used as a remedy for dropsical affections, gastric fever, bladder trouble, improper circulation of the blood, catarrh, or improper flowing of the fluids of the vital organs, heart, liver, kidneys, and stomach."

"The earliest mention of making 'Tou fu,' or soybean curd, is found in the Han Dynasty Taoist work, Huai Nan Tsu, or writings of Liu An (a prince of Huai Nan, who died 122 B.C.). 'Tou fu' was regarded as an excellent delicacy among foods and was considered suitable for offering in sacrifice. The loyal and honest officials were said to enjoy this food as much as they did the fresh-killed lamb.

"The making of 'Shih' (a bean relish or paste [fermented black soybeans]) was mentioned in records 33 B.C. to A.D. 23. Soybean sprouts have been in use for many centuries in both the green and dried forms... A fundamental rule of farming was to count the number of persons in the family and plant five acres of soybeans for each person.

"In reviewing the old records it is most interesting to note that many of the qualities attributed to the soybean as a food and as a remedy for certain human ills by the Chinese have been proved by modern scientific research in America and Europe. Further research by medical and nutritional workers may revel many more valuable qualities of the soybean mentioned in early Chinese literature."

Note 1. This early history of the soybean was written before truly scholarly and critical study of the subject was begun by Hymowitz in 1970. Many of the statements above have subsequently been shown to be without basis in historical fact and incapable of being documented. Unfortunately, because Morse was probably the world's leading authority on the soybean at this time, the above statements were later cited or quoted repeatedly.

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the word *Shih* (alone) to refer to fermented black soybeans. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils,

and Agricultural Engineering, USDA, Beltsville, Maryland.

2117. Morse, W.J. 1950. History of soybean production: 9. Varieties and variety improvement (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 17-23.

• ***Summary:*** "Varieties of soybeans are very numerous [especially in East Asia], no doubt because of the fact that the soybean seems to be peculiarly sensitive to changes of soil and climatic conditions." Differences in behavior of the same pure-line variety in different locations are often so striking that it is difficult to believe that the variety is the same.

In China, soybean varieties are quite numerous and "are classified according to color, size, shape, time of planting, method of planting and use. The local names of varieties differ in different localities so that it is very difficult to obtain a variety which is widely known." There has not been much organized research on soybean varietal improvement in China. "The University of Nanking has done more work of this kind than any other organization."

Although many soybean varieties are grown in Manchuria, only three types are distinguished: yellow, green and black. This has apparently been found adequate for commercial purposes. In detail, these three groups are:

(1) Hwang Tou–yellow beans. (a) Pei Mei (white eyebrow, pale hilum). (b) Chin Huang (golden yellow or golden round). (c) Hei Chi (black belly), dark hilum. These three varieties are highly prized for the quality of their oil, but Pei Mei and Chin Huang are also valued for the soybean curd [tofu] made from them.

(2) Ching Tou–green beans. (a) Green with yellow germ or cotyledon. (b) Green with green germ or cotyledon. The green bean with the yellow germ yields more soybean curd but of an inferior quality compared to that of the yellow varieties. The green bean with the green germ is preferred for making sprouts.

Hei Tou or Wo Tou–black beans. (a) Ta Un Tou (large, black), green germ. (b) Hsia Un Tou (small, black), yellow germ. (c) Puen Un Tou (flat, black), yellow germ. The Ta Un Tou is used for oil, the Hsia Un Tou for oil and Horse feeds, and the Puen Un Tou for salted fermented soybeans [fermented black soybeans].

"Most of the varieties grown by Manchurian farmers consist of a mixture of varieties of which more than 90% are yellow-seeded types." The distribution throughout Manchuria of the various types is discussed. Native Korean soybean are classified into eight different groups.

Since 1898 the USDA had brought into the United States more than 10,000 introductions from China, Manchuria, Korea, Japan, India, Netherland Indies [Indonesia], South Africa, and several European countries.

Table 1 (two pages) shows the "Characteristics of soybean varieties most generally grown in the United States," arranged into seven groups from very early to very late maturity. For each variety in every group is given: Seed color (black, brown, green, olive or greenish yellow, straw yellow), hilum color (black, brown, dark brown, light brown, pale), seeds per lb., oil %, protein %, iodine value (range: 119 to 140), pubescence color (gray, or tawny), flower color (purple, white, or purple & white), shattering (little, medium, or much), and use (commercial {grain or oil and meal}, forage, or vegetable). The groups are: (1) Very early: Agate, Capital, Cayuga, Flambeau, Goldsoy, Habaro, Kabott, Mandarin, Mandarin 507, Mandarin (Ottawa), Minsoy, Ontario [developed in USA], Pridesoy, Sac.

(2) Early: Adams, Bansei, Earlyana, Hawkeye, Illini, Kanro, Lincoln, Manchu, Manchu 3, Manchu 606, Manchukota, Mendota, Montoe, Richland, Seneca.

(3) Medium Early: Chief, Dunfield, Hokkaido, Hongkong, Jogun, Mandell, Mingo, Mukden, Scioto, Viking.

(4) Medium: Aoda, Boone, Funk Delicious, Gibson, Kingwa, Macoupin, Mount Caramel, Patoka, S100, Virginia, Wabash, Wilson.

(5) Medium late: Arksoy, Arksoy 2913, Haberlandt, Laredo, Ogden, Ralsoy.

(6) Late: CNS, Mamloxi, Mammoth Yellow, Palmetto, Roanoke, Tanner, Tokyo, Volstate, Woods Yellow.

(7) Very late: Acadian, Avoyelles, Gatan, Otootan, Pelican, Seminole, Yelnando.

"Varieties now grown in the United States may be divided into three general groups, namely commercial (grain), vegetable, and forage. Varieties for commercial seed production are preferably yellow-seeded and are used largely for processing for oil, meal, and soybean flour, but these varieties may also be used for forage purposes if heavier rates of seeding are used. The varieties used principally for forage and green manure are the black- and brown-seeded varieties, which for the most part are low in oil but yield a finer and heavier forage than the commercial and vegetable varieties.

"The term 'vegetable varieties' has been applied to varieties introduced from oriental countries where they are used solely as green vegetable or dry, edible soybeans. In extensive tests of the quality of the green and dry beans made by the Bureau of Human Nutrition and Home Economics, Department of Agriculture, and by departments of home economics of various agricultural colleges, the vegetable varieties have proved much superior to the field or commercial varieties in flavor, texture, and ease of cooking. Many of these vegetable types have been found through experiments to be superior to commercial types for soybean milk, soybean flour, soybean curd, salted roasted soybeans, and other food products. (See Chapter XXV). The varieties used for processing and forage purposes usually do not cook easily and have a raw 'beany' flavor. Nearly all vegetable varieties cook easily and have a sweet or bland nutty flavor.

© Copyright Soyinfo Center 2013

The most suitable vegetable varieties are those with straw-yellow, greenish-yellow, or green seed, although a few black, brown, and bicolored varieties do have superior qualities as green shelled beans. Vegetable varieties, ranging in maturity from 75 to 175 days, have been developed for all soybean-producing areas in the United States.

"Several commercial companies have canned large packs of the green shelled beans of the vegetable varieties. Quick-frozen green shelled beans alone and in succotash have been placed on the market by several companies, the frozen product being highly satisfactory in color, texture, and flavor. For canning or quick freezing in the green stage, the yellow- and green-seeded varieties make a more attractive product than the black-, brown-, or bicolor-seeded varieties. Vegetable varieties have also become quite popular with the home gardeners and many seedsmen in various sections handle two or more varieties" (p. 22).

Listed from very early to very late, vegetable varieties include: Agate, Sac, Bansei, Kanro, Mendota, Hokkaido, Jogun, Aoda, Funk Delicious, and Seminole. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

2119. Worth, Miklos. 1950. Soyabeans: The fabulous food that supplies meat, milk, cheese, proteins, amino acids, vitamins, minerals. New York, NY: Ideal Health Books. 62 p. A MacRichard publication.
• ***Summary:*** This book consists of many short chapters. Contents: The bean that is not a bean. A therapeutic substance. Chemical requirements of life. Natural foods supply basic needs. Disease–A disturbance of mineral salt balance. Essentials in man's diet. The big five. A balanced mineral supply. Soybean oil valuable to health. Carbohydrates in soybeans. A storehouse of vitamins. How vitamins are to be used. Soyabeans in Rheumatism. Nervous exhaustion. Rickets. Gastro-intestinal disorders. A perfect food for invalids. Constipation. Obesity–An easy way to reduce. Loss of weight. Dandruff and loss of hair. Eczema and other skin disorders. Sciatica. Hardening of the arteries. Excellent food for diabetics. An excellent blood builder. Soyabeans influenced civilization. The poor man's meat. Introduction to America. Revolutionizing modern economy. Soyabeans could enrich the diet. How to make soya milk. Soyabean sprouts. Soyabean curds. Soyabean coffee. Soyabean oil. How to cook soyabeans. Soyabean flour in baked products. Its use in green salads. Soyabean sauce. Health through soyabeans.

Chapter 1 begins: "Soyabean, the wonder-plant of the Far East that has given sustenance to the peoples of the Orient since time immemorial, is not only a nourishing food, but plays a host of roles in natural health because of its medicinal and therapeutic properties... There is no other single plant known to man which yields such bounty of goodness. All the essential ingredients for health and long life are gathered and packaged in this singular food."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "soyabean curds" to refer to tofu.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "soyabean sprouts" to refer to soy sprouts.

Note 3. This is the earliest English-language document seen (Nov. 2012) that uses the term "soyabean coffee" to refer to soy coffee.

Note 4. This is the earliest English-language document seen (April 2012) that uses the term "soyabean sauce" to refer to soy sauce.

Note 5. This is the earliest English-language document seen (Oct. 2001) that uses the term "soyabean flour."

• ***Summary:*** "Ancient Chinese literature recording the advice of agriculturists on the best varieties of soybeans to

© Copyright Soyinfo Center 2013

plant under different soil and climatic conditions and the utilization of certain varieties for specific purposes, indicates that the soybean was perhaps one of the oldest crops grown by man [sic]. Varieties of soybeans are very numerous in oriental countries, especially Korea. There during agricultural explorations by the United States Department of Agriculture in 1929 to 1931 more varieties showing a wider range of color, size, and shape of seed and plant characters were found than in China, Manchuria, and Japan.

"The soybean is peculiarly sensitive to changes of soil and climatic conditions and this explains undoubtedly to a very great extent why practically every locality in the soybean regions of eastern Asia has its own varieties. Explorations in small villages in China and Korea revealed that nearly every family had its own favorite varieties for different uses.

"It is noteworthy that of the large number of varieties introduced into the United States from the Orient the same variety has rarely been secured a second time unless from the same locality. Obviously, centuries of experience aided by natural crossing and selection have brought about the development of the vast number of varieties for special purposes under local conditions in China, Korea, and Japan.

"Prior to the introduction of numerous varieties of soybeans by the Department in 1898, not more than eight varieties had been grown in the United States. The culture of these was limited to a few well-defined areas. During the past 50 years the Department has made several thousand introductions of soybeans from China, Korea, Manchuria, Indonesia (Java), and India, representing many hundreds of distinct types.

"This large collection, ranging in maturity from 75 to 200 or more days, has shown wide differences in color, size, shape, composition and quality of seed, plant characters, utilization, and in adaptation to the various soil and climatic conditions in the United States.

"In a recent review of all introductions received from eastern Asia, it was noted that a large number of those from China, Korea, and Japan were sent in under their native varietal names, the translation of which revealed some very interesting and perplexing names. It was interesting to note among the oriental names three–Chief, Chestnut, and Hawkeye–that breeders in the United States have assigned to varieties developed for their own local conditions.

"The many peculiar oriental varietal names of soybeans suggested the title of this article. It was thought that American soybean breeders and growers would be interested in knowing the sort of varietal names soybeans have in other parts of the world.

"It is obvious that the oriental breeder or grower, in naming some of the varieties, must have been in a poetic frame of mind in assigning such names as 'Heaven's Bird,' 'White Spirit of the Wind,' 'Flower Garden,' and 'Clasped Hands.'

"The large number of varietal names is quite understandable as they indicate various seed and plant characters, temples, villages, prefectures, animals, birds, uses, and occasionally a breeder's name. This will be noted in the following lists and selected classification of varieties.

"It is not to be assumed that these lists of names represent all of the varieties grown in these countries. In fact, they are only a selected number from the varieties introduced into the United States during the past 50 years. It was interesting to note that some of the Chinese varietal names were the same as those in Chinese literature dating back 100 years ago."

"Selected classification of Chinese soybean varieties:

"Seed Color: Black Belly, Chicken's Foot Yellow, Crow's Eye Yellow, Crow's Skin Green, Flesh Yellow, Musk Deer's Skin Yellow, Parrot Green, Raven's Eye Yellow, Tiger Skin.

"Seed Size: Great White, Large Black, Large Green, Large White Eyebrow, Small Golden.

"Seed Shape: Flat Black Golden Round, Large Round Black, Pearl Shape, Round Pearl, Small Round Green.

"Hilum (Seed scar): Flowery Eyebrow, Large White Eyebrow.

"Maturity: August Green, Autumn Azure, Burst Pods in Six Months, Eighth Month White, Filth Month Yellow, Melon Ripe, Midsummer Yellow.

"Pods: Five Month Broad Pod, Four Grain Green, Four Grain Yellow, Iron Pod Green, Three Bean Pod, White Podded Green.

"Leaf: Long Large Green Leaf.

"Pubescence: Hairy Green, Red Hair Green, Sixth Month White Hairy, Yellow Hair Green.

"Utilization: Black Curd, Follow Rice, Round Cattle Feed, Vegetable.

"Odd Names: Entwined Silk, Moon Tooth, Sparrow's Cackling, Unknown Water."

"Selected classification of Korean varieties:

"Seed Color: Barbarian Blue, Black Chestnut, Castor Bean Skin, Golden, Indigo, Lacquer Black, Red Striped, Rich Black, Widower (Black and White), Yellow Dragon's Eye.

"Seed Size: Big Green, Large Black, Small Blackeye, Small Blue.

"Flower: Early White Flower, Large White Flower, White Flower Pure Yellow.

"Hilum: Chotan White Eye, Green Eye, Purple Mouth, Rensen Brown Eye, Small Blackeye, White Eye.

"Maturity: Aid For New Land, Black Sprout, Black Vegetable, Edible, Millet Friend, Plant In Millet, Plant in Wheat, Plant Between Crops, Rainy Season, Roasting, Sprout.

"Habit: Climbing.

"Leaf: Bamboo Leaf.

"Birds: Crow's Early, Domestic Geese, Pigeon, Skylark,

© Copyright Soyinfo Center 2013

Swallow, Water Rail.

"Animals: Deer, Horse, Mouse, Red Rat, White Horse.

"Village: Anpen, Chotan, Tansen.

"Superior Varieties: Great Happiness, Plentiful, Prolific, Rich, Rich and Virtuous.

"Odd Names: Beheaded, Clasped Hands, Cow's Knee, Flying Fish, Flower Garden, Peaceful, South Sea, Spirit of the Wind, Turtle Nest, White Priest's Foot, Wild Boar's Hip."

"Selected classification of Japanese varieties:

"Seed Color: Black Autumn, Black Saddle, Brown Spotted, Green Fool, India Ink, Mink Skin, Pretty Flesh Color, Silver White, Yellow Jewel, Yellowish White Blackeye.

"Seed Size: Large Green, Large Jewel, Large White, Large White Ring, Small Blackeye, Small Bullet, Small White.

"Seed Shape: Gingko Seed Shape, White Ball, Water Caltrop Shape.

"Hilum (seed scar): Blackeye, Green Eye, No Eye, White Eye, White Mouse Eye.

"Pods: Black Eye Long Pod, Black Pod Gold, Four Seeded Yellow, Fox Pod, One Seed, Red Pod, Three Seeded Pod, Two Seeded Pod, Yellow Pod, White Pod.

"Pubescence: Early Smooth, Green Non Hairy, Half Smooth, Middle Season Smooth, Naked Devil, Non Hairy, Smooth White, Smooth Devil, White Hair.

"Stems: Fan Shape Stem, Red Stalk, Single Stalk, White Stem.

"Leaf: Five Leaf Saddle, Monbetsu Long Leaf.

"Habit of Growth: Akita Bunch, Bunching Maiden, Doesn't Touch The Earth, Dwarf, Very Bunched Pods.

"Maturity: August, Black Autumn, Early Gold, Middle Season, October, Very Early Abundant, Yellow Fall, Midseason Fox, Through Frost, White Autumn.

"Utilization: Devil Chaser [for roasted soybeans–irimame], Forage, Miso, Natto, Paddy Field Boundary, Produces in Shady Places, Soy Sauce, White Sprout.

Superior Varieties: Abundance, Abundant Pods, Brings Treasure, Early Increase, Excessive Yield, Fortune, Heavy Yield, One Hundred Percent Good, Small, Fortune, One Thousand Pod.

"Animals: Early Fox, Mink, Mouse, Small Donkey, Tiger.

"Birds: Crane's Friend, Dove, Dove Killer, Sparrow, Wild Duck, Wild Goose, Young Crane.

"Persons: Bingo's White, Chichanari, Hachiya.

"Prefectures (states): Aizu, Chiba, Echigo.

"Shrines: Goshanari, Miyashiro, Zankonji.

"Villages: Chizuka, Hachirihan, Iwakiri.

"Odd. Names: Covered with Frost, Bright Country, Elder Brother, Enter Priesthood, Heaven's Bird, Old Woman's Cane, Pretty Girl, Through the Water, Under The Snow, White Dog's Foot."

Photos show: (1) Bean curd [tofu] cakes being sold by vendors on streets in Peking, China. In the Orient special varieties of soybeans are used in the manufacture of bean curd and many other soy products. (2) Korean farmers' market day held weekly in the small villages. This offers a rich source of soybean varieties. (3) Japanese farm girls planting seed of the Azemame (Paddy Field Boundary Soybean) variety on the land bounding a rice paddy. The beans are used in making miso (salty soy paste), soy sauce, and other foods for human consumption.

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term "salty soy paste" to refer to miso. Address: Retired Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, Agricultural Research Administration, U.S. Dep. of Agriculture, USDA.

2128. Nicholls, Lucius. 1951. Tropical nutrition and dietetics. 3rd ed. London: Baillière, Tindall and Cox. ix + 476 p. Feb. Illust. 24 cm. [40+* ref]

• ***Summary:*** Table XI (p. 22), "Chemical and biological evaluation of proteins for growing rats," contains 6 columns: Foodstuff, digestibility, Biological Value, Net Utilisation [NPU], Protein efficiency ratio, chemical score, and limiting amino-acid. "There is agreement in all methods of the high value of milk, eggs, and other foods of animal origin, and among those of vegetable origin, the proteins of soya bean flour hold a high place." Values for soya bean curd [tofu] are also included. The next section is on supplementing proteins.

The long section titled "Pulses (legumes)" (p. 219-35) has this contents: Introduction. Dhals (Dals; peas which have been shelled, split and polished). Peanut. Bambara earth pea (*Voandzeia subterranea*). Soya bean: Importance in Asia, used in may forms: Nearly-ripe seeds [edamamé or green vegetable soybeans], dry seeds, soya bean emulsion ('Milk'–contains a detailed description of how soya milk [Vitasoy] is made in Hong Kong, including exact amounts of all ingredients for 800 oz and the nutritional composition (%)), soya bean curd (may be smoked or dried), fermented curds [fermented tofu], fermented beans (témpé), soya bean sauce, sprouted soya beans, soya bean flours, mixtures of soya beans and cereals, milk substitutes (for infant feeding in China). The genus Phaseolus may be divided into two types: Those of Asian origin and those of New World origin (Americas). Cow pea (*Vigna sinensis, V. unguiculata, V. sesquipedalis*). Egyptian kidney bean (Dolichos lablab). Horse gram. Chick pea. Cluster bean (*Cyamopsis psoralioides*). Four-angled bean or Goa bean (*Psophocarpus tetragonolobus*). Locust bean (*Ceratonia siliqua*). African locust bean (*Parkia biglobosa, P. filicoidea*). Sword bean (*Canavalia gladiata*). Jack bean (*Canavalia ensiformis*). Velvet bean (*Mucuna* spp.). Honey locust (*Prosopis juliflora*). Garden pea (*Pisum sativum*). Broad bean (*Vicia faba*–not a tropical plant). Yam bean (*Pachyrrhizus erosus*). West Indian locust (*Hymenæa courbaril*). Madras thorn

(*Pithecellobium dulce*).

Phaseolus–Asian: *Phaseolus aureus:* green gram [mung bean]. *Phaseolus mungo:* black gram. *Phaseolus calcaratus:* rice bean. *Phaseolus actinifolius:* moth bean. *Phaseolus angularis:* adzuki bean. New World: *Phaseolus lunatus:* lima bean. *Phaseolus vulgaris:* kidney bean. *Phaseolus multiflorus:* scarlet runner. The subsection titled "Substitutes for milk" (p. 231-35) discusses soya milk. Goitrogenicity of [raw] soya beans (p. 376). Saponins in foodstuffs (incl. soya bean; p. 385). Table 62 (p. 404-05) gives the botanical name and composition of pulses, incl. soya bean, soya bean curd, soya bean milk, carob bean, Goa bean, tepary bean. Table 66 (p. 410-11) does the same for fresh legumes, incl. broad bean, French beans, pea, pea nuts, and sprouted soya. Table 67 does the same for nuts, oil seeds, and miscellaneous seeds, incl. almonds, coconut, coconut "water," coconut "milk," linseed, pumpkin seed, sesame (gingelly), sunflower seed, and sunflower seed (kernel).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term "fermented curds" to refer to fermented tofu.

Note 2. The title C.M.G. (Companion of St. Michael and St. George) is an honor conferred upon those for distinguished service in the British colonies or commonwealth.

Also discusses: Marmite (autolysed yeast, p. 158, 302). Fluorine in teeth and fluorosis (p. 170, 38). The many species of millet and sorghum (p. 216-18). Coconut, coconut milk, palm oil, red palm oil benniseed of Nigeria, gingelly oil, sesame, sim-sim, til (p. 254-60). Yeast (dried; Torula utilis, Brewers' yeast, Bakers' yeast, Marmite) (p. 302-03).

Lucius Nicholls was born in 1884. Address: C.M.G., M.D., B.C., B.A. (Cantab.). Late Director of Bacteriological and Pasteur Institutes, and Director of Div. of Nutrition, Ceylon; Lecturer in Nutrition, Ceylon Univ.; Late Lecturer on Tropical Medicine, Ceylon Medical College; Nutrition Adviser to Commissioner General, South East Asia. Presently at Cookham Dean [just west of London, England].

2129. Porterfield, W.M., Jr. 1951. The principal Chinese vegetable foods and food plants of Chinatown markets. *Economic Botany* 5(1):3-37. Jan/March. See p. 5-9. [68 ref]
• ***Summary:*** The soybean "is referred to by Chinese as 'the poor man's meat and the poor man's milk.'" In New York City, soybeans are sold in Chinese shops in three main forms: seeds [whole dry soybeans], bean sprouts, and bean curd. Soy sauce and soybean oil are also available. Soy sauce "is a heavy dark fluid which is used as a condiment to supply saltiness that brings out flavor,..."

When soybean milk is heated, a skin [yuba] such as forms on milk rises to the surface. Other [Western] uses of soybeans include soybean flour, meal, lecithin, shortenings, and margarine.

Nitrogen fixation takes place in the nodules of the soybean plant, which makes it useful as a green manure. Crude soybean oil goes into the manufacture of soap (both soft and hard). Soybean meal can be used to make plastic and "protein fibers" which are called "soybean wool. "During the war about 1,000 pounds of soybean wool were produced each day, and all of it went into the winter uniforms of the armed forces."

Some 36 different varnishes with 100% of their oil content as soybean oil have been developed and given exposure tests. A rubber substitute named "norepol" has been developed and can replace rubber in "insulation, shoe heels, fruit-jar rings, gaskets, and tubing." Soybean protein has been used as a stabilizer in fire-fighting foam. Other industrial uses, which are too numerous to mention, include enamels, printing ink, linoleum, foundry cores, glycerin, notepaper, and billiard balls. In the United States, soybean crops and products create an annual income of $45 million.

Tables show: (1) Nutritional composition (on an "as-is" basis) of: "Bean cheese (Tou-fou; 13.5% protein). Soybean milk (3.13% protein). Bean oil (Tao-yu; 7.49% protein). Soy sauce (Tao-jung; 12.67%). (2) Nutritional composition of soybeans.

Half-page photos (each with a black background) show: (1) Bean sprouts ready for cooking. (2) A square of firm "Tou-fu, bean curd, a cheese made from soybeans." Address: 3334 Prospect Ave., N.W., Washington &, DC.

• ***Summary:*** "The first action of the new regime when it came into power in 1949 was to lower the standard of living, not only in respect to food, but also in respect to clothing and manner of life. This was not a gradual development; it was immediate, brought about in part by decree, but carried into effect by an overwhelming wave of patriotic feeling that made it unbecoming for anyone to be found eating food better than that available to laborers and farmers... The dietary of the Chinese people has been the subject of considerable study. It is essentially vegetarian, with approximately 90% of the calorie intake in the form of cereals; in south China the cereal is rice, in north China, wheat, millet, maize, and kaoliang. The amount of meat or animal food is in general very small, and only about 5% of the protein intake is animal protein... The amount of milk and milk products consumed is practically nil... The average intake has been estimated at 2,200-2,400 calories per capita per day." Address: Dep. of Biochemistry, Peking Union Medical College; Then School of Medicine, Yale Univ., Connecticut.

• ***Summary:*** About Joe Oyama's Oriental Food Shop at 2791 Broadway (at 107th St.) in New York City. The many Japanese foods he sells include: (1) Pickles of "cucumber in bean paste" [miso]. (2) Burdock root, which is "sometimes fried in bean oil seasoned with red pepper and soy sauce." (3) "Gomoku-no-moto–a combination of [diced] carrots, bamboo shoots, lotus roots, fried bean curds [agé], and Japanese mushrooms."

During World War II he shipped parcels of such foods as rice, soy bean paste [miso], and pickled radishes [daikon] "to the Japanese-Americans, who comprised the famed 442d Regimental Combat Team."

2132. *Times of India* (*The*) (*Bombay*). 1951. High nutritive value of soya beans: Interesting facts revealed by research. Oct. 30. p. 2.

• ***Summary:*** The U.S. Department of Agriculture requested from India seeds of improved soya bean varieties; herein lies a tribute to research work conducted by the Indian Council of Agricultural Research [ICAR].

Note: This is the earliest document seen (Sept. 2010) that mentions the Indian Council of Agricultural Research. A search on Google Books (Advanced) for "Indian Council of Agricultural Research" and (soya or soyabean or soyabeans) from 1928 to 1955 gets 25 hits / results; the earliest is dated 1939. The main focus of research was on the soyabean as a fodder crop, although soyabean flour was also studied.

Investigations sponsored by ICAR and conducted on soya-bean cultivation in the Punjab have been highly successful. The purpose of these investigations was to introduce soya bean varieties from outside the area, acclimatise them to local conditions, and select the most suitable varieties, considering both their agricultural and dietetic properties.

ICAR collected about 90 soya bean varieties from places as distant as Manchuria and the United Kingdom. All these beans could be divided into two types by growth habit: (1) Erect and compact types; (2) creeping types. The erect and compact varieties generally proved superior; they ripened earlier. Yellow seeds had, in general, a higher protein content than black, chocolate, or green coloured seeds. Small seeded varieties tended to have hard seeds and to cook poorly.

Eventually, a yellow-seeded variety was selected from a variety that came from Nanking, China. It is high yielding, ripens early, and has good tasting seeds, which contain 43.2% protein and 19.5% oil. "Above all, this variety has proved to be the best for the production of soya bean milk, flour, biscuits, confections and other edible products." The best time of planting and rate of planting are discussed. The Punjab was found to be best suited for hilly tracts; it yielded more than 34 maunds (1 maund = about 82.28 pounds or 37.32 kg) per acre.

Wide variation in the nutritional composition was noticed in the 25 varieties of soya beans grown at Ludhiana–in the Indian state of Punjab.

The Punjab experiments have shown that up to 25% of soya bean flour can be mixed with wheat flour without any change in the appearance or flavour of the blended product–which is good for making confectionery. Milk made from the soya bean was found to have a peculiar flavor, but the curd [tofu] was found to be palatable.

Experiments conducted at the Indian Institute of Science, Bangalore, have shown that the nutritive value of soya beans can be conserved and even enhanced by proper processing and storage.

2133. **Product Name:** Tofu.
Manufacturer's Name: Higa (Mrs. H.A.) Tofu.
Manufacturer's Address: 964 Robello Lane, Honolulu, Oahu, Hawaii.
Date of Introduction: 1951.
New Product–Documentation: Honolulu City Directory. 1951. Mrs. H.A. Higa Tofu (Mrs. H.A. Higa, proprietor). 964 Robello Ln., Honolulu. Note that this used to be the location of Genji Oyama, tofu manufacturer. 1954 Directory. Higa Tofu-Ya (Takeshi Higa, proprietor). Address same.

2134. **Product Name:** Tofu.
Manufacturer's Name: Higa (Richard M.) Tofu. Later becomes the Better Food Tofu Factory.
Manufacturer's Address: 1337 N. King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1951.
New Product–Documentation: Honolulu City Directory. 1951. Richard M. Higa Tofu (Richard M. Higa, proprietor). 1337 N King, Honolulu. 1953 Directory. Richard M. Higa's residence given as 2117 Kamehameha IV Road.

2135. **Product Name:** Tofu, Aburage (Deep-Fried Tofu Pouches).
Manufacturer's Name: Kanai Nissei Shokai. Formerly Hiroyuki Kanai Tofu, and Teikichi Kanai Tofu. Renamed Kanai Tofu Factory by 1973.
Manufacturer's Address: 515 Ward Ave., Honolulu, Oahu HI 96814. Phone: 808-538-1305.
Date of Introduction: 1951.
How Stored: Refrigerated.

2136. **Product Name:** Loma Linda Vege-Chee (Canned Tofu. Spelled Vegechee in 1960 and VegeChee by 1964) [Plain, or Pimiento].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce Place, Arlington, California.
Date of Introduction: 1951.
Wt/Vol., Packaging, Price: 16 oz can.
New Product–Documentation: 1938 Price List. "Vege Chee, plain or pimiento." Wholesale price list. 1951. "Vege-Chee." Soybean Blue Book. 1954. p. 106.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual.* 1st ed. p. 95. Vegechee contains 11.53% protein, 7.31% fat, and 3.31% carbohydrate.

Today's Food. 1964. Autumn. p. 5. "VegeChee."

Loma Linda Food Co. 1969. "Wholesale Price List." VegeChee is now sold in 16 oz cans, which retail for $0.52 each.

2137. **Product Name:** Twin Dragon brand Chinese Style Bean Cakes.
Manufacturer's Name: Main On Co.
Manufacturer's Address: 1111 So. Stanford Ave., Los Angeles, CA 90021.
Date of Introduction: 1951.
Ingredients: Water, soy beans, 1/10 of 1% calcium sulphate, 1/10 of 1% soy oil and food grade lime.
Wt/Vol., Packaging, Price: 16 oz packed in water.
How Stored: Refrigerated.
New Product–Documentation: Label. 1978, undated. 4 by 5 inches. Red and blue on clear plastic. Illustrations of two dragons. Interview with Shoan Yamauchi. 1988. Oct. 23. Main On started making tofu in Los Angeles in about 1950-51. They were a small competitor then, but are now a big competitor.

2138. **Product Name:** Tofu.
Manufacturer's Name: Norio Co. (Norio Miso Tofu Seizô-sho).
Manufacturer's Address: 1532-34 Polk St., San Francisco 9, California. Phone: WEst 1-8672.
Date of Introduction: 1951.
New Product–Documentation: Hokubei Mainichi Year Book. 1951, p. 9. Ad (½ page, vertical). Top 1/3 of the ad is in English. "Norio Company, 1532-34 Polk St., San Francisco 9, Calif. Tel. WEst 1-8672. Soy bean products." Below that is the large "Maruman" logo. In Japanese: Maker and wholesaler of Maruman brand miso and koji. Also sells soybeans and nigari. Directory entry, under "Food Products: Wholesalers" (p. 37), and under "Food Products" (p. 38). Norio Miso Tofu Seizô-sho (Norio Co.), 1534 Post St., WE 1-8672. Note that they now make tofu!

• ***Summary:*** Contents: 1. Soybean flour, grits, and flakes: Introduction, early history, types of soybean flour–standard definitions, amount of soybean flour and related products produced, methods of manufacture, soybean flour in bread, soybean flour in other baked goods, soybean flour in the meat industry, soybean flakes in breakfast foods, soybean flakes and derived peptones as brewing adjuncts, miscellaneous uses of soybean flour. 2. Isolated and modified soybean proteins: Aerating agents for confections and related products, neutral spray-dried soybean protein [isolates], soybean protein in [whipped] toppings, soybean protein and flour in confections, soybean protein and flour in ice cream, soy sauce, monosodium glutamate from soybeans, soybean vegetable milk, tofu, miso, yuba, and other Oriental soybean foods (incl. natto and Hamanatto).

The soy flour industry in the U.S. has grown steadily in recent years. Deliveries of soy flour "from the years 1930 to 1940 averaged about 25 million pounds annually. The deliveries have increased considerably since 1940 partly as a result of an increase in domestic use and partly as a result of deliveries of soybean flour to various government agencies, largely for export. In 1941, Federal purchases amounted to about 10 million pounds of soybean flour. In 1943, the amount increased to 170 million pounds when large shipments were made to Great Britain and the U.S.S.R. under lend-lease. Purchases of soybean flour by the Federal government decreased for several years, but increased in 1946 to an estimated 200 million pounds under the UNRRA [United Nations Relief and Rehabilitation Administration] program. Total soybean flour deliveries for 1946 were approximately 380 million pounds. In the domestic market the bakery industry was the largest consumer. About 40% of the domestic sales of soybean flour were for bakery use. Since the Bureau of Animal Industry has legalized the use of soybean flour as a binder in meat products, about 20% of domestic sales are to the sausage industry. The balance is used in prepared dough mixes, macaroni, candy, and in institutional feeding.

"In 1947, domestic sales of soybean flour were over 60 million pounds. This amount, plus government purchases and exports, amounted to about 415 million pounds. Two-thirds or more of the present domestic consumption of soybean flour is by the bakery, meat processing, and pet foods industries."

Table 155 (p. 953) shows Bushels of soybeans used for U.S. soy flour production (1942-1947). In 1942-43, the amount of full-fat soy flour produced in the USA was roughly 40% of the amount of defatted. In 1944-45 it was about 49%, but thereafter the percentage dropped rapidly to only 5% in 1946-47.

Note: These statistics relate to Soya Corporation of America, Dr. Armand Burke, and Dr. A.A. Horvath.

Concerning soybean flakes and derived peptones as brewing adjuncts (p. 974-77): "Soybean flakes and grits have been employed by the brewing industry to improve the body and flavor of beer, to increase foam stability, and to stimulate yeast growth.

"Improvement in foam stability and flavor can also be attained by adding directly to the finished beer a hydrolyzed soybean protein which has been broken down to the peptone and proteose stage...

"The early history of the use of soybean products as whipping agents is of interest since this work stimulated the development of processes which eventually led to the production of the present soy albumens. In 1939, Watts and Ulrich pointed out that an active whipping substance could be prepared from solvent-extracted soybean flour in which the protein had not been heat denatured, by leaching it at the isoelectric point of the protein. This extract was found to whip more readily and to a much greater volume than suspensions of the original flour... The active principle in the whipping substance prepared by Watts and Ulrich was probably the nonprotein nitrogenous material present in the soybean flour which is soluble at the isoelectric point of the

© Copyright Soyinfo Center 2013

protein."

Tables show: (155) Soybeans used in the production of low-fat and full-fat flour and grits (1942-1947, 1,000 bushels). (156) Peroxide value of fat extracted from pastries stored at -17.8ºC. (0ºF.), containing different percentages of soybean flour for periods of 0-6 months. (157) Analysis of uncooked liverwurst emulsion and of processed (water-cooked) sausage containing added soybean flour and water. (158) Losses in cooking liverwurst containing added soybean flour and water. (159). Analysis of frankfurter emulsion and of smoked sausage made with 3.5% of various binders. 2143. Ciancio, Pedro N. 1951. La soja y el problema alimentario del Paraguay [The soybean and Paraguay's nutritional problem]. Asunción, Paraguay: Edit. "El Grafico." 505 p. No index. 25 cm. Contains a 17-page English-language summary. Ciencia de la Nutrition (Metabolismo). [50 ref. Spa; eng]

• ***Summary:*** On cover: *Ciencia de la nutrición* (*metabolismo*). Contents (from English-language summary, p. 477-94): 1. Report on the soybean, presented at the First Interamerican Congress of Medicine (*Primer Congreso Interamericano de Medicina*), sponsored by the National Academy of Rio de Janeiro [Brazil], September 7-16, 1948 (the soybean was the 6th subject on the program; the report by Dr. Pedro Ciancio, which emphasized the nutritional benefits of soya as a protective and basic food, was unanimously approved by the scientific assembly). 2. The "Paraguayan Soybean," a new variety (developed after 20 years of cultivation in Paraguayan soil). 3. The nutritional value of soy in the light of modern science. 4. Deficiencies in the dietetic regimen in Paraguay and how to correct them; particular importance of the soy bean to correct these deficiencies. 5. Peculiarities of the biochemical structure of the soybean and the medical applications deriving therefrom. 6. Soy cultivation ("Paraguayan soil is excellent for the cultivation of soy... The average output ranges from 1,500 to 2,000 kilos per hectare but in some regions of Caazapá (Rosario, Charará, Buena Vista, etc.)... I obtained the enormous output of 4,000 kilos per hectare, and this without any inoculation whatever!"). 7. The place of soy in the diet. 8. World production of soy. 9. Conclusion. More about soy milk (p. 493).

The author emphasizes the many nutritional benefits of using soy flour (he used the term "whole soy flour," p. 493), toasted soy meal, and soy milk in the Paraguayan diet. He believes that soya can be used to improve the diet without increasing its cost. In 1950 the author conducted experiments, in collaboration with the distinguished biochemist Prof. Dr. Ramón Codas of the Faculty of Chemistry and Pharmacy (Asunción), feeding soy milk to undernourished families living in the Department of Caazapá. When 1 liter/day of soymilk was added to the usual diet for 2 months, "most of the groups had increased their weights, and better coloring and greater activity could be noted in all the members of the groups under observation. He recommended using the resulting okara in soups or tortillas.

Chapter 8, "World production of soy," states (p. 490): "Cultivation of soy began in 1921, the year in which I introduced the plant to our country. Although its cultivation is only slowly increasing, at the present time there are already many villages where soy is cultivated, though on a small scale."

In 1950 a group of renowned scientists (Bergmann, Weizmann, and Willstater) at Weizmann's Institute of Science at Rehovoth, Israel, confirmed the importance of soy in banishing world hunger. They developed a soy powder and Bergmann wrote a report about it.

Note 1. This document contains the earliest date seen for soybeans in Paraguay, or the cultivation of soybeans in Paraguay (1921). In 1989 E.R. Alvarez-Britos wrote: "In 1921, Dr. Pedro N. Ciancio, considered the apostle of soybean cultivation in Paraguay, introduced the varieties Hollybrook, Manouth [Mammoth?], Pekin [Peking], and Shanghai, from Argentina, the USA, and Japan."

Note 2. Much of this book was written between 1940 and 1942. Address: Prof., Dr., Asunción, Paraguay.

2144. Hui Manaolana Foundation (formerly Niji-no-Kai). 1951. Japanese foods (Tested recipes). Honolulu, Oahu, Hawaii: International Institute, Y.W.C.A. 122 p. Illust. (some colored). Index. 24 cm.

• ***Summary:*** The Hui Manaolana was formerly named Niji-no-Kai and is affiliated with the International Institute of the Y.W.C.A. The book was inspired by Mrs. Isaac M. Cox (Catherine E.B. Cox), an educator and volunteer advisor to the Y.M.C.A. Almost all the recipes in this book have been submitted by members of the group, and that woman's name appears next to the recipe title. Shoyu is called for in many recipes.

Following a preface and an introduction, the recipes are organized by type. The many interesting ads related to

© Copyright Soyinfo Center 2013

soyfoods, scattered throughout the book, are cited elsewhere. Helpful hints (p. 12): "To prevent tofu from crumbling, soak in salted water for a while before using." On p. 15 are 4 menus each for breakfast, lunch or supper, and dinner. Soups: Chiri (Fish & tofu soup). Kenchin (Vegetable soup with tofu). Basic miso soup. Satsuma jiru (Miso soup with chicken & vegetables). Oio fish dumplings in miso soup. Miso soup with long rice. Rice: Azuki meshi (Rice with red beans). Sekihan (Steamed azuki rice). Inari zushi (Sushi rice in aburage).

Fish and seafoods: Ebi no teriyaki (Barbecued shrimp. The sauce consists of: 3/4 cup shoyu, 1 teaspoon gourmet powder [Ajinomoto], ½ cup sugar, 1 teaspoon grated ginger, 1 clove garlic [crushed]. Mix well). Katsuo no miso yaki (Tuna broiled with miso sauce). Katsuo teriyaki (Broiled fresh tuna). Meat and chicken: Sukiyaki (with tofu). Pork and tofu. Tofu: Gan modoki [Ganmodoki]. Ankake tofu (Boiled tofu with thick sauce). Tofu with crab meat egg roll. Tofu tempura. Okara (Bean curd residue dish). Iri dofu. Okara nira (with aburage). Yudofu with goma [sesame] miso sauce. Fried tofu cooked in miso. Koya dofu (Frozen soybean curd cooked in shoyu).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "Koya dofu" (regardless of capitalization) to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term "Gan modoki" (regardless of hyphenation); it refers to deep-fried tofu burgers.

Vegetables: Kiriboshi and aburage. Nikomi oden with yakidofu. Cabbage with mustard & miso sauce. Shira ae–Watercress (With tofu dressing). Shira ae (Vegetable with tofu sauce). Daikon sumiso ae (Turnips in miso). Nikomi oden (Vegetables with miso). Nishime (with tofu). Nasu no shigiyaki (Fried eggplant with miso sauce). Negi–nuta (Green onions with miso sauce). Green pepper–miso yaki. Kuromame (black soybeans). Noodles: Kitsune udon (With aburage). Relishes: Konbu no tsukudani (Seasoned seaweed). Tekka miso (Fried miso with gobo). Kaibashira no tsukudani (Scallops cooked in shoyu). Shoyu turnips. Desserts: Ohagi (rice cake with bean paste and kinako). Many with kanten, azuki beans, and azuki koshi an (Sweetened bean paste).

Glossary (p. 97-98) includes: Aburage (fried bean curd). An (red bean paste). Azuki (red beans). Edamame (soybeans). Fu (gluten cake). Gourmet powder (mono-sodium glutamate). Kanten (gelatin made from agar-agar). Karashimiso (mustard miso). Kinako (yellow soy bean powder). Kirazu (bean curd residue). Konbu (seaweed). Kuromame (black soy beans). Miso (fermented rice and soy beans). Nori (sea weed). Okara (bean curd residue). Shira-ae (vegetables with mashed tofu). Shoyu (soy sauce). Sumiso (vinegar and miso sauce). Sushi. Tare (thick shoyu sauce). Tempura (fritters). Teriyaki (barbecue). Tofu (bean curd). Ume (pickled plum). Wakame (sea weed). Yakitofu [yakidofu, broiled or grilled tofu].

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "Yakitofu" to refer to grilled tofu.

Note 4. This is the earliest English-language document seen (Aug. 2011) that contains the term "bean curd residue" or that uses that term to refer to okara.

Note 5. This is the earliest English-language document seen (Nov. 2012) that uses the term "yellow soy bean powder" to refer to kinako [roasted whole soy flour]. Address: International Institute Y.W.C.A., Honolulu, Hawaii.

2145. Law, James Thomas. 1951. Law's grocer's manual. 4th ed. Edited and revised by W.G. Copsey. London: William Clowes and Sons, Ltd. xv + 814 p. See p. 467, 510. Illust. 22 cm. With a foreword by W.R. Austen Hudson, M.P., F.G.I.
• ***Summary:*** Page 467, under the heading "Soy bean," discusses soy sauce, tofu, natto, miso, and soy milk. Page 510 gives more details on tofu and describes (quaintly and inaccurately) how to make this "fresh bean cheese." "The beans are soaked in water for 3 or 4 hours, cooked, and reduced to a paste. The milky fluid is strained through a coarse cloth to remove stalk and fibre [okara], and when cooled is precipitated by the addition of crude salt. The precipitate, which is rich in protein and fat, is then kneaded and pressed into cakes called fresh Tofu. They are then dipped into a solution of curcuma." Address: W.G. Copsey is Secretary of the Inst. of Certified Grocers; Hudson is President of the National Assoc. of Multiple Grocers.

2146. Pappas, B.B. 1951. A high protein food–the soybean. *Healthful Living* (*New York City*) 7:33-34.
• ***Summary:*** "The United States Department of Agriculture recognized its value and set up a separate Soy Bean Research Laboratory to find new dietary and industrial uses for this wonderful bean. It has now been proven that the protein of the soy bean can very well replace the protein of meat, eggs and dairy products, and many manufacturers have taken advantage of this knowledge to produce a fine group of soy bean foods. Today we have such foods as soy bean cookies, roasted soy beans (crunchy and delicious), soy bean milk powder, malt and soy drinks, soy flour, soy spaghetti, macaroni and noodles, soy bean bread, soya salad oil, soy sandwich spread, soy bean meat in cans, etc., etc. The number and variety of items now being made from the soy bean is extraordinary. The American people have come to a full realization of the value of this miraculous bean and are making it an integral part of their daily food.

"Soy bean cheese: The soy bean is used by the Chinese not only in place of milk but it is also made into cheese. Tofu, or soy bean cheese, is extensively used in China and has the advantage over cheese prepared from cow's milk in that it is not putrescent. This bean also serves as a substitute for eggs–containing as it does, protein and fat (including

© Copyright Soyinfo Center 2013

lecithin) equivalent to that supplied by the white and yolk of the egg. Kellogg says that Tofu omelette is more palatable and wholesome than an ordinary egg omelette.

"Most proteins are what is known as 'incomplete proteins' and therefore not capable of supporting life alone. The tests made by the United States Department of Agriculture show that soy bean protein appears to be as valuable as the casein in milk. Osborne and Mendel, two of the most famous investigators and research workers in nutrition in the world, show that the soy bean furnishes a 'complete protein' of high nutritive worth which may be used as a substitute for animal protein. This protein is highly digestible and has twice as much as meat, for example. The soy bean likewise has a high fat content but practically no starch.

"It resembles a nut more than a bean, and is superior to nuts as a protein because of its alkalinity. Most nuts are acid-forming.

"We have spoken of soy bean milk. This does not necessarily mean liquid milk, for a perfectly fine soy bean milk is made by mixing dry soy bean milk powder with water to get an excellent tasting beverage. This is superior to cow's milk because of its much greater capacity to counteract intestinal putrefaction. Soy bean milk is not only free from putrefactive bacteria but furthers the development of Bacillus Acidophilus which counteracts the putrefactive type of bacteria. It is certain that it will keep the intestinal tract of a child in a purer state than cow's milk.

"Please don't get the impression from this that soy bean powder is strictly an infant food. Far from it. That is only one of its many uses.

"Three thousand years before the Christian era millions of Chinese were living–and thriving–on a vegetarian diet that was based on the soy bean as its principal food. This miraculous oriental bean was used in place of meat, fowl, eggs, butter, cheese, fish and milk. Often in their long experience the Chinese were saved from starvation and extinction by the soy bean.

"Protein substitute: In the Orient the soy bean still replaces both the cow and the chicken, being used as a substitute for such proteins as milk, butter, cheese and eggs. As a matter of fact, a milk made from the soy bean is used for infant feeding because of its easy digestibility and its lack of putrefactive agencies. As the famous Rout said: 'The properties of soy bean milk and curd are similar to those of milk obtained from cows, and the action of the rennet, etc., is the same. Lactic ferments also act upon it in the same way, also the ferments of certain European cheeses. Throughout China, vegetable milk is extensively used for infant feeding, and is, bottled and delivered each day to regular customers. Investigators in America and Europe indicate that vegetable (soy bean) milk can be successfully used to replace cow's milk.

"A vitamin food: The soy bean is also high in alkalinity. The lima bean was considered a high alkaline food, or bean, but Becker has proved that the soy bean stands higher than all vegetables in this respect. The soy bean is also rich in Vitamin D, which is one of its many striking characteristics. Outside of egg yolk and cod liver oil very few foods have any of this valuable vitamin."

2147. Ray, Georges. 1951. Technologie laitière. 2e éd. [Dairy technology. 2nd ed.]. Paris: Ed. Dunod. vii + 743 p. See p. 703-09. Illust. Index. 25 cm. [Fre]

• ***Summary:*** The chapter on "Milk substitutes" (p. 696+) contains a subchapter titled "Soymilk (*Lait de soya*)" (p. 703-09), which has the following contents: Introduction. General rules to follow in the preparation of soymilk. The North Vietnamese (*Tonkinoise*) method. Method of preparation used in dairies in the Far East: Castagnol process. Modern methods for the preparation of soymilk. Composition of soymilk. Properties of soymilk. Fermented soymilk (using *Bacillus acidophilus*, British patent No. 441,574, 22 Jan. 1936). Concentrating / condensing and drying soymilk (including yuba). Soymilk curds (*Caillebotte de soya*). The future of soymilk.

Contains two full-page ads by Alfa-Laval for dairy milk equipment.

Vegetable milks have certain advantages over animal milks. They are easily made in a state of microbial purity, free of tuberculosis bacteria. Their casein precipitates more rapidly than that of cow's milk and does not coagulate in the same manner in the stomach. And it can be sold at a lower price. Later: It contains no cholesterol, and makes better use of world food supplies. Disadvantages: It has a lower calcium content and many Westerners prefer the flavor of animal milks.

Here is a quick review of the processes for making soymilk, described at length in a monograph (written under the direction of G. Ray) by D. Kaltenbach and J. Legros [1936]. Precise information about the soya industry is assembled is a more recent work by A. Matagrin. Soymilk pioneer in France were [Li Yu-ying], L. Rouest, and H. de Guerpel (p. 703).

The Castagnol process was developed by Ray at the agronomic research Institute in Indochina (p. 704).

Starting in 1910, a Franco-Chinese society was founded for the study of the utilization of artificial milk from the soybean. The experiments were abandoned in 1912. In 1916 Prof. O. Laxa of Prague recommended for making soymilk on a small scale. Note: It is not important (p. 705).

In London, before World War I, a synthetic milk syndicate launched a type of [soy] milk adapted to European tastes. It applied the process of F. Goessel [of Germany]; 100 liters of soymilk were obtained from 10 kg of ground soybeans, 5 gm of sodium phosphate, 2.4 kg of lactose [milk sugar], 2 kg of sesame oil, 6 gm of salt, and 60 gm of sodium bicarbonate [also known as baking soda or bicarbonate of

© Copyright Soyinfo Center 2013

soda]. Melhuish, an Englishman, patented a process for enriching the [soy] milk with various oils that did not change its taste. Some years after World War I, Bertrand received a patent for the manufacture of deodorized soymilk. Among the American processes are those of Horvath and Kloss (p. 705).

In Germany, the Soyama factory in Frankfort makes a fresh soymilk very similar to cow's milk but with a different flavor. A table shows the nutritional composition of three different types of milk. After standing, the cream of Soyama soymilk separated. This soymilk has a more neutral and softer flavor than that of cow's milk. Bread made with this soymilk is excellent. In 1932 the French engineer Max Adler patented a process for soymilk without the characteristic flavor and odor (p. 706).

In China during World War II, soymilk was used extensively in refugee camps and saved many lives, especially those of children (p. 708).

The Annamites are fond of soymilk during the hot season. Each morning soymilk merchants can be seen circulating through the streets of the native villages of Hanoi. The product is consumed sweetened or unsweetened, cooked with rice, or added to various soups (p. 708).

Fermented soymilk: John H. Kellogg received a British patent for acidophilus soymilk. No. 41,574. 22 Jan. 1936. Yuba is the concentrated film of dried soymilk lipo-proteins (p. 708).

In France, Rene Jarre is specializing in the preparation of soyfoods (*produits alimentaires à base de soja*). In Monahan and Pope (1915) added to soymilk powdered malt, cacao and chocolate–U.S. patent 1,165,199 of 21 Dec. 1915 (p. 709).

The future of soymilk: The main challenge now is to find a way to deodorize soymilk. Note: And to remove the flatulence factors (p. 709). Address: Honorary Prof. (Tunis, Rennes, Grignon), former Head of Technical Services, International Institute of Agriculture, Rome (Ex-Chef du Service Tecnique, a l'Institut d'Agriculture de Rome).

2148. Rombauer, Irma S.; Becker, Marion Rombauer. 1951. The joy of cooking. Indianapolis and New York: Bobbs-Merrill Co. 1011 p. Illust. by Ginnie Hofmann. Index. 22 cm.
• ***Summary:*** This is the earliest known Rombauer-Becker edition of this famous cookbook. Marion Rombauer Becker is the daughter of Irma von Starkloff Rombauer. A large percentage of the recipes contain meat, fish, or poultry. Soy-related recipes and descriptions include: Soybean cheese (p. 192, made from soybean milk curded without a coagulant like cottage cheese. Season with salt, cinnamon or chives, and caraway). Suggestions for the use of soybeans (similar to the 1943 edition) with the following recipes for cooked soybeans: Soybean loaf. Soybean dinner in one dish. Soybean soufflé. Soybean salad. Then some ideas for "Peanuts as a meat substitute." Soybeans (p. 269; "Young vegetable type, not field varieties of beans, must be used. The pods should still be green"). Roasted soybeans. Cooked dry soybeans (p. 269). Sweet and sour milk substitutions and equivalents (p. 502-03; "If you use Soya Milk, page 817, substitute 1 cupful for 1 cupful of milk"). Soya bean milk (p. 817).

There is a nice, early chapter titled "The Electric Blender" (p. 895-98), which begins: "Throw away your tamis cloth and hair sieve, if you still have these relics of a by-gone age, and replace them with a piece of equipment that makes them obsolete, the electric blender." Includes 4 paragraphs about blenders. This chapter includes recipes for cocktails, cream soups, eggnog, beverages (incl. cold fruit sherbets and a "Blender health drink"), puréed vegetables, custard, and ice creams. For the sherbets: "A fairly creamy result comes from a fresh peach, a banana or canned pineapple juice. A velvety concoction is: 1 small banana, 1 cup milk. Add vanilla or rum, no sugar needed. You may add to this 1 tablespoonful chocolate sirup [syrup] or 4 tablespoonfuls vanilla ice cream. Also try stewed or canned apricots with milk, apricot, pineapple and lemon juice with cracked ice cubes, frozen strawberries with sour or sweet cream."

The chapter titled "Nutrition and calorie chart" states (p. 931): "Proteins are known to contain amino acids. These complex acids are still being studied by chemists, but it is known that some of them are essential to growth and life. All of these acids are not found in complete form in all protein foods. They are most fully represented in meat, fish, eggs, milk and cheese. They are present but less well represented in nuts, legumes and cereals. Since the vegetable groups are incomplete in themselves, it is wise to draw half to two thirds of the daily protein intake from the animal sources given above."

Note 1. In the *Betty Crocker Picture Cook Book* (1950, General Mills), no mention is made of the electric blender. A hand-turned rotary beater is used to make a milk shake.

Note 2. In *Joy*, there is no index entry for milk shake or organic (as "organic gardening"), or vegetarian. Address: 1. St. Louis, Missouri; 2. Cincinnati, Ohio.

2149. Tawada, Shinjun. 1951. Okinawa yakuyo shokubutsu yakukôzan [Medicinal uses of Okinawa pharmaceutical plants. 2nd ed.]. Naha, Okinawa: Kyûyôdô. 178 p. See p. 90. Illust. 1st ed. 1931. [Jap]
• ***Summary:*** Page 90 discusses: "Daizu (mame, miso mame). *Glycine max* Merrill. Toofu maami, ufuchijaa ufuchizaa." This book is handwritten in Japanese, with the names of the plants given in Latin. It discusses the uses of many species, which are systematically arranged. Mimeographed in Okinawa. Address: Japan.

2156. Morse, W.J.; Cartter, J.L. 1952. Soybeans for feed, food, and industrial products. *Farmers' Bulletin* (*USDA*) No. 2038. 41 p. Feb. Supersedes Farmers' Bulletin No. 1617 (Morse 1930, 1932).
• ***Summary:*** Contents: Importance of the soybean and its byproducts. Direct use of soybeans on the farm: Soybean hay (for dairy cattle, beef cattle, horses and mules, sheep, swine, poultry), soybeans for pasturage (hogging down soybeans, sheep, beef and dairy cattle, poultry on soybean pasturage), soybean for soilage, for silage, for soil improvement, for livestock feed (feed for swine, dairy cattle, beef cattle, horses, sheep, poultry, wild game {quail, pigeons}), soybean straw (feeding value, fertilizing value).

Soybeans processed for meal and oil: Processing

© Copyright Soyinfo Center 2013

methods, meal for livestock (for dairy cattle, beef cattle, poultry, swine, sheep, dogs {in dog-food industry}, rabbits, fur-bearing animals, quail and pheasants), meal as fertilizer, for industrial purposes, in food products, use of oil (in food products, industrial uses such as paints and varnishes). Soybeans and products for human consumption: Vegetable soybeans, dry soybeans ("Other uses of the dry soybean {principally of oriental origin} are in the preparation of soybean milk, soybean curd, soybean sprouts, beverages, salted, roasted soybeans), soy flour, grits, and flakes, Oriental soybean foods, soy milk, soy curd, soy sauce, soy sprouts, soy beverages. Miscellaneous uses of the soybean: Honey production (the soybean as a honey plant, soy flour for honey bees), soy flour and grits in dog food, soy flakes in brewing beer, soy flour for insecticides.

Under "Soybean utilization," page 3 notes: (1) The roots and coarse stems are used as fuel in China, Manchuria, and Korea. (2) In many parts of China the plants, when 3 to 4 inches high, are used as greens. (3) In Manchuria and Korea, the leaves are cured and smoked as tobacco.

Under "Soy milk," page 38 states: "The ground soybean pulp or mash [okara] left after separating the liquid from the solid material is still of good nutritive quality, but it has very little flavor. It can be dried and made into flour for human food, combined with foods of more pronounced taste, or used for animal feed."

Under "Soy curd" [tofu], page 38 states: "Chinese and Japanese markets and restaurants in many cities in the United States sell fresh soy curd. Several firms in the United States can soy curd."

Under "Soy sprouts," page 40 states: "Soybeans and several other species of beans, especially the mung bean, are sprouted and used as a green vegetable in the Far East. Soy sprouts (fig. 18, D) can be produced successfully in the home, and a year-round fresh vegetable that may be used raw or cooked can be obtained by sprouting soybeans in a flower pot, a glass fruit jar, or a strainer.

"In producing sprouts, select a stock of clean, bright beans of the latest crop. Any of the field varieties may be used, but the yellow-seeded varieties have less conspicuous skins, though black-seeded varieties, such as the Cayuga, Peking, Wilson, and Otootan, seem to germinate more quickly and uniformly. Carefully hand-pick the seed, discarding everything except the clean, whole beans. Wash the beans thoroughly, cover with lukewarm water, and allow them to soak for a few hours (or at most overnight) until they are swollen. Place the beans in a container and cover them with dampened cheesecloth. Rustproof wire-mesh screening or cheesecloth can be used to cover the bottom of the container to allow for drainage. In using a glass fruit jar, cover the top with a piece of cheesecloth and tie it on securely. Invert the jar and place it in a dark spot at room temperature.

"Tilt it slightly so that excess water can drain away promptly. Pour plenty of water on the beans 3 to 4 times a day, thereby insuring thorough washing. The beans may be sprinkled each evening with chlorinated lime solution (1 teaspoon of calcium hypochlorite dissolved in 3 gallons of water) to keep down mold growth and spoilage. Chlorinated limewater is not needed to kill fungus growth if the seed is of good quality. In 3 to 4 days the sprouts will be 1 to 2 inches long and ready to use. Bean sprouts increase about six times their original volume. The commercial production of soy sprouts proceeds along the same, lines, except that larger sprouting tanks or trays are used and the process is more carefully controlled.

"Soybean sprouts can be used in many ways and are cooked and served with the bean attached. They are a fair source of thiamine, riboflavin, and ascorbic acid. The sprouts may be served raw in salads, cooked in various ways, and used in such dishes as omelets, stews, fricassees, and chop suey. They are very tender and lose their crispness if put into hot dishes more than a few minutes before serving.

"A few companies have successfully canned soy sprouts [in the USA]. The New York (Cornell) Agricultural Experiment Station found that sprouts lend themselves admirably to quick-freezing." Address: USDA.

2157. *Christian Science Monitor.* 1952. Open letter from Korea: A navy man writes home. April 23. p. 19.
• ***Summary:*** Previously, while in Japan, Bob (the writer) and a friend (Brooks) visited the Usami family in the suburban town of Atumi, near Kobe. "They had a big Sukiyaki dinner waiting for us." They sat on the floor, with their legs under the table, in the center of which and sunken was a charcoal hibachi. "Thin slices of beef, spinach, onions, Hakusai (Chinese lettuce), Tofu (bean curd), mushrooms, and other ingredients are put into the pan over the hibachi and flavored with soy sauce, sugar, and so on. The bubbling food is picked out of the pan by the individuals, with chopsticks.

"You have a little bowl with a raw egg in it, and you dip the hot slices of beef into that before eating. Everything was very good... and it was all most enjoyable."

2158. Melo, Maria de Lourdes. 1952. O que é a soja [What is the soybean?]. *Boletim de Agricultura, Departmento de Producao Vegetal* (*Belo Horizonte*) 1(6):63-71. June. [Por]
• ***Summary:*** Gives recipes for and/or using soymilk, okara (*u-no-hana* in Japanese), soya croquettes (*croquete de soja*), soya with rice, salted, roasted soynuts (*soja torrada em graos, salgadinhos*), tofu (*ricota de soja*), and soy flour in bread, biscuits, cakes, and bolos.

Note 1. This is the earliest Portuguese-language document seen (Oct. 2001) that mentions okara, which it calls *massa* and *flor de sabugueiro.* The okara is used to make Farofa, a popular Brazilian dish made of manioc meal browned in a frying pan with grease or butter. Sometimes mixed with bits of meat, crisp fat, chopped eggs, etc. it is

© Copyright Soyinfo Center 2013

much used as a stuffing for roast turkey.

Note 2. This is the earliest Portuguese-language document seen (Dec. 2012) that mentions salted, dried roasted soybeans / soynuts which it calls *soja torrada em graos, salgadinhos.* Address: Dietista de Secretaria de Saude e Assistencia, Brazil.

2160. Dunkel, Joan. 1952. The effect of vitamin B-12 on a certain vegetarian diet. *Walla Walla College Publications of the Department of Biological Sciences and the Biological Station* 1(4):59-64. Dec. 10. [18 ref]
• ***Summary:*** The introduction gives a brief history of the discovery of vitamin B-12 starting in July 1947. "Summary: A vegetarian diet [supplemented with vitamin B-12] has been developed which has produced five generations of rats, inferior to omnivores only in that their size was somewhat decreased. However, this diet was unable to sustain the animals beyond the seventh generation. Supplementing the diet with vitamin B-12, either oral or parenteral, did not result in any appreciable increase in the growth rate" (i.e. did not make the rats gain more weight in the same time). The five main ingredients in this diet were ground whole wheat (40%), rolled oats (10%), rye flour (10%), soy curd (10%), and brewer's yeast. This research was conducted in the physiology department of the College of Medical Evangelists, Loma Linda, California. Address: Walla Walla College, Washington.

2161. **Product Name:** Tofu.
Manufacturer's Name: Hagiwara Tofu-ten (Hagiwara Tofu Co.).
Manufacturer's Address: 314 N.W. Everett Street, Portland, Oregon.
Date of Introduction: 1952.
How Stored: Refrigerated.
New Product–Documentation: Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 410. Under "Stores." In Japanese: Hagiwara Tofu-ten. In English: Hagihara [sic, Hagiwara] Tofu Co., 314 N.W. Everett St., Portland, Oregon. No phone number given.

2163. Allen, Ida Bailey. 1952. Solving the cost of high eating: A cookbook to live by. New York, NY: Farrar, Straus & Young, Inc. viii + 545 p. Index. 22 cm.
• ***Summary:*** Chapter 10, "Good bread is good food," discusses enriched white bread, and Cornell Bread (developed by Dr. Clive McCay of Cornell Univ., New York; it contains soy flour and no adulterating chemicals, p. 94), and gives recipes for: Soy yeast bread (with soy flour, p. 99-100). Soy muffins (p. 100). Also: Gravy thickened with soy flour (p. 352).

Chapter 31, titled "Legumes, nuts and brewers' yeast" contains a section on "Soybeans" (p. 386-92) with the following contents: Introduction. Plain-cooked soybeans (boiled, or pressure cooked if possible). Soybean entrees (from home-cooked soybeans): Baked soybeans, Savory soybeans, Baked vegetables stuffed with soybeans, green peppers, tomatoes, turban squash. Soybean salads. Soy grits. Soybean curry (glamor dish). Soy products: Soy flour, Corn Soya cereal, soy macaroni, soy egg noodles (plain or containing carrots, tomato, or spinach), soy spaghetti, "canned meat alternatives based on soybeans," soy cookies, soybean milk powder, soybean curd or cheese, suggestions for using soybean curd or cheese. Soybean sprouts. Soy flour and how to use it. To use soy flour instead of wheat flour: In baking, as thickening, in meat and fish loaves, in spoon bread. Multi-Purpose Food: Pioneer in nutrition ("a spectacular and inexpensive pioneer food containing soy, developed at California Institute of Technology to be used in mass feeding in war stricken countries. It is also on sale in this country at health stores. It is 100 percent vegetable, violates no religious or dietary precept, comes in dry form, and keeps indefinitely"). The Introduction to soybeans (p. 386) begins: "This legume really deserves to be called a 'miracle' food. Soybeans are the only perfect vegetable alternate for meat." Also contains a section on peanuts and peanut butter (p. 392-96).

Note 1. This is the earliest English-language document seen (Jan. 2013) that contains the term "meat alternatives" (or "meat alternative"–with any combination of quotation marks).

Note 2. The author is well known for her 40+ books on food, cooking and the home that have sold 14 million copies, and her syndicated daily food column which is followed by 35 million readers. This book contains "1,300 taste-tested recipes–With glamour foods at budget prices for everyone." A photo on the inside rear dust jacket shows Ida Bailey Allen.

2164. Amaral, Afranio do. 1952. A Soja na alimentacao popular do Brasil [The soybean in popular Brazilian nutrition]. Rio de Janeiro, Brazil: Servico de Alimentacao da Providencia Social (SAPS). 35 p. No index. 18 cm. Colecao Ensaio e Debate Alimentar, no. 1. [Por]

© Copyright Soyinfo Center 2013

• ***Summary:*** Mentions soymilk (*leite de soja*) and tofu (p. 31). Address: Brazil.

2165. Brown, Helen Evans. 1952. Helen Brown's West Coast cook book. Boston, Massachusetts: Little, Brown and Company. xvi + 443 p. See p. 396. Index. 21 cm. [85* ref]
• ***Summary:*** Reflects the history and ethnic diversity of West Coast cookery, including the Asian (especially the Chinese) influence–and the author's enthusiasm for it. For Helen Brown is a superb writer!–as much an artist with words as she is with foods. This informal book is a labor of culinary love, about the foods she has cooked and enjoyed in three Pacific Coast states–California, Oregon and Washington.

Soy related recipes: Sukiyaki (p. 108-09), with "soy bean cake [tofu] (if desired), cut in cubes." At each place put "small dishes for soy [sauce] (shoyu, to the Japanese),..." Sculpin Serisawa (p. 160-61). Sculpin is a type of fish. To make the basting sauce, "mash a cake of Fu Yu (soy bean cheese [fermented tofu], available in Oriental markets) or 2 tablespoons of blue cheese, and add 2 tablespoons of soy sauce,..." Chinatown spinach (p. 396), calls for "a slice of fermented bean curd if it is available. (If not, 2 tablespoons blue of cheese may be substituted–it's not the same but has a similar sharp flavor").

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term "Fu Yu" to refer to fermented tofu.

Soy sauce is called for in Asian (mostly Chinese) recipes on the following pages: 17, 19, 82, 102, 103, 140-41, 142, 160-61, 163, 165-67, 171, 173, 198-99, 253, 255, 262, 273, 276, 288, 297, 298, 301 307, 311, 331, 337, 352, 363, 369, 370, 376.

A large photo of lovely Helen Brown in her kitchen adorns the rear dust jacket.

Talk with Akasha Richmond. 2004. Feb. 19. Helen Evans Brown and James Beard were very close friends. He wrote a nice passage of praise for this book on the dust jacket and their collected correspondence has been published as a book. When Beard died, Janet Jarvitz bought his superb book collection, opened a bookstore in the Los Angeles area, and preceded to sell it. Helen Brown married a cookbook collector, Philip, who was also her skilled editor. She made good use of his vast collection in developing her own recipes.

Note 2. Before she met her husband, Philip, Helen Evans Brown had a career as a successful caterer and was running a restaurant in New England. Philip courted her and persuaded her to head to the West Coast with him. Married for almost 30 years, they lived in Pasadena, California, from 1937 until her untimely death in 1964. In Southern California, Helen started work as a consultant to a Hollywood bakery and Philip began working in an antiquarian bookshop. Philip did much to build Helen's book collection. He also acted as a taster, research assistant, and typist on book projects. Address: Pasadena, California.

2166. Lockwood, Lewis B.; Smith, A.K. 1952. Fermented soy foods and sauce. *Yearbook of Agriculture* (*USDA*) p. 357-61. For the year 1950-51. Crops in Peace and War.
• ***Summary:*** Contents: Introduction (The whole soybean is not usually eaten. In East Asia, the people favor mostly fermented soy products). In East Asia people live largely on a vegetable diet (In China it is estimated that meat and eggs comprise less than 3% of the food of the peasants, compared with 21% among Americans. An estimated 95% of the protein consumed in China is of vegetable origin, and much of it comes from soybeans, which constitute about 20% of the basic diet in northern China).

Japanese soy sauce or shoyu. Soybean paste. Soybean cheeses are made by fermenting soybean curd. Chinese soy sauce–a two-step fermentation and its organisms (the process is described in detail). Making soy sauce by the chemical method. How to make miso (red miso, black miso). Soybean cheeses–how to make them: Sufu, Red sufu, Chee-fan (a brownish soft cheese made with Shaoshing wine), Tsue-fan, Honfan. Soy sauce in the United States.

"Red sufu is a red cheese. It is prepared in much the same way that sufu is, except that the curd cubes and red rice are placed in alternate layers in deep vessels where the brine fermentation is started. The red rice is a Chinese product made by growing the mold *Monascus ruber* in the grains of polished white rice until the entire grain is permeated with the coloring matter. The red rice contributes a pleasant taste and aroma to the red sufu cheese.

Note: This is the earliest document seen (Oct. 2011) that uses the term "Red sufu" or the term "red sufu cheese" refer to fermented tofu.

Note: By 1975 Lockwood was at the Biology Dept., Western Kentucky Univ., Bowling Green, KY (see Smith & Berry 1975). Address: U.S. Dep. of Agriculture (Smith; NRRL, Peoria, Illinois).

• ***Summary:*** The section on the soybean (*Soja hispida* Moench, p. 276-81) includes the vernacular names: Vietnamese: *Dau nanh. Dau tuong, Dau hon, Dau xa.* Cambodian: *Sandek sieng.* Laotian: *Mak toua kon, Ta ton.*

Discusses: Whole dry soybeans, green vegetable soybeans (*Elles peuvent... être consommées à l'état jeune à la façon des flageolets,...*), soymilk (*elles donnent une sorte de lait mousseux et crémeux,...*), nutritional composition, tofu (*le graines sont utilisées pour la préparation d'un fromage, le Teau-fou des Chinois, le dau-phu des Vietnamiens*), composition of fresh and moisture-free tofu, soy oil and its

© Copyright Soyinfo Center 2013

properties (In Europe, above all in England, this oil is used to make soap and margarine. Its drying properties enable it to be used to make paint), soybean cake (used as animal feed; it is rich in lysine), lecithin, vitamin B, the Agronomic Institute of Ankara, Turkey, has found soya to be superior as an animal feed to all other legumes cultivated in Turkey, defatted soybean meal, useful in diabetic diets, Haberlandt of Vienna suggests use as human food, fermented soy products and rice koji, natto, miso, shoyu, *Tsao Yu* of China, tuong dau of Vietnam, Japanese natto, MSG.

Note. This is the earliest French-language document seen (April 2013) that uses the term *Teau-fou* to refer to tofu. Address: Chargé de Cours à la Faculté Mixte de Médecine et de Pharmacie de Saigon [Vietnam].

2168. Stern, Arthur Marvin. 1952. Studies on the physiology of *Mucor mucedo* and its role in the fermentation of soybean curds. PhD thesis, University of Illinois at Urbana-Champaign. 112 p. Page 485 in volume 12/01 of Dissertation Abstracts International. [50+ ref]*
Address: Illinois.

2169. Takenobu, Yoshitaro. ed. 1952. Kenkyusha's new Japanese-English dictionary. Tokyo: Kenkyusha. iv + 68 + 2266 + [2] p. 19 cm.
• ***Summary:*** This interim edition, between the 1931 second edition and the 1954 third edition has two dates written in Japanese in the front matter: March 1931 and April 1949. On the last page, the publication date is given in Japanese as 1 Feb. 1951.

This edition has two main parts: (1) "New Words (1949) consisting mostly of mostly English language words that entered the language due to the social and cultural influence of the American occupation of Japan. The words, a mini-dictionary on 68 pages, include words such as aakeedo = arcade (written in both rômaji and katakana). There are also some new Japanese words.

(2) The entire content of the 1931 second edition– exactly the same, page for page.

New words related to soy: daizu [abura]: [soy] bean oil. Address: General editor, Japan.

2170. Nickerson, Jane. 1953. Good balance in a diet. *New York Times.* Feb. 1. p. SM38.
• ***Summary:*** An excellent new booklet is titled "A Balanced Diet," by Lucille J. Bowser, Martha F. Trulson, and Dr. Frederick J. Stare of the department of nutrition, Harvard School of Public Health (Massachusetts). It is available for $0.25 from the Nutrition Foundation, Chrysler Building, New York, NY.

A good balanced diet is one that supplies all of the food essentials needed for good health in the right amounts and right relationships to each other. The basic essentials are carbohydrates, fats, protein, and vitamins and minerals. Meeting these requirements depends on the food supply and food customs of a country. "In China, one might consume bird's nest soup, soy bean curd, kumquats and a variety of what seems to us exotic products."

In the United States, one should choose from the seven groups of available foods pictured on one page. A large photo shows many of foods from the seven food groups. Address: Los Angeles.

2171. Inoue, Norimasa; Kitagawa, Shiro. 1953. Tôfu no eiseigaku-teki kenkyû [Sanitary studies on tofu (soybean curds)]. *Eiyogaku Zasshi* (*Japanese J. of Nutrition*) 10(6):182-83. April. [Jap; eng]
• ***Summary:*** The number of coli bacillus was 10-100 per gm in early March and 1,000 to 10,000 in early July. Address: Kokuritsu Eiyo Kenkyusho (National Inst. of Nutrition, Japan).

2172. Watanabe, Tokuji. 1953. Re: Questions about isolated soy protein. Photographs of the process for making Kori-Tofu. Letter to Allan K. Smith, Northern Regional Research Laboratory, Peoria, Illinois, about May 1. 2 p. Handwritten, with signature. [Eng]
• ***Summary:*** Dr. Watanabe received, with many thanks, the sample of isolated soybean protein prepared in the pilot plant at Peoria, Illinois, and sent by Dr. Smith. It will be very useful for his research. He asks Dr. Smith to please tell him the procedure used in preparing the sample and the method for determining the degree of denaturation of the protein.

He sends Dr. Smith seven small black-and-white photos plus two small illustrations (drawn by him) showing the process for preparing "Kori-Tofu, which is consumed in western Japan." Below each is an explanation. "Although the procedure is very primitive as you see," it is an interesting way to make soybeans more digestible and nutritious. If Dr. Smith is interested, Dr. Watanabe will send him more information about foods prepared from soybeans in Japan.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *Kori-Tofu* (regardless of capitalization) to refer to dried-frozen tofu.

The photos show the interior of a fairly small commercial tofu shop. The captions read: (1) Boiling of aqueous extract of ground soybeans. (2) Precipitation of protein by adding calcium chloride to the boiled extract. (3) Precipitate is poured into the frame [curds into forming box] and pressed. The result is tofu. (4) Tofu is preserved [kept fresh] by dipping in water. (5) The tofu is cut into slabs, and placed on wooden benches or tables outdoors in the winter; here it is exposed to the cold, dry air all night long. The slabs are then kept (aged) in a frozen state for 2 weeks. A freezer can also be used. (6) The pieces of frozen tofu are thawed by immersion in running water in a large sink. (7) The sponge-like tofu is pressed using a screw press to dehydrate it. (8) The dehydrated tofu is dried on racks by heating and

© Copyright Soyinfo Center 2013

ventilation. (9) The final products spread on tables where they are selected and graded.

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "sponge" or the term "sponge-like" to describe the texture of dried-frozen tofu.

Note 3. Allan K. Smith earned his PhD degree in physical chemistry from Columbia University in New York City. Address: National Food Research Inst., Food Agency, Ministry of Agriculture and Forestry, Fukagawa-Hamazonocho 2, Koto-ku, Tokyo, Japan.

2173. Martinez, Margarita C.B. de. 1953. Derivados de la leche de soya [Products made from soymilk]. *Tierra* (*Mexico*) 8(6):482-83. June. [Spa]
• ***Summary:*** Gives a number of recipes for using soymilk, including tofu (queso de leche de soya, coagulated with vinegar or lemon juice), vanilla ice cream. Also contains recipes using whole soybeans and soy flour.

Note: This is the earliest Spanish-language document seen (March 2007) that mentions soy ice cream, which it calls *Helados de leche de soya.*

2174. Loring, Patricia. 1953. Hawaii has varied food for visitors. *Chicago Daily Tribune.* Nov. 29. p. F7.
• ***Summary:*** "Japanese food, for me, was the most difficult to manage. Miso soup (made from soybeans), kidney beans, and cabbage for appetizers were edible. Beef tofu, kamaboko (fish cake), miso yaki [fish coated with miso, then broiled] were all questionable."

2175. Delvaux, Edgar. 1953. Les protéines de coton et de soya dans l'alimentation humaine au Congo Belge et au Ruanda Urundi: Relation d'une enquête aux E.U. [The proteins of cottonseed and soya in human foods in the Belgian Congo and in Ruanda Urundi: Report of an investigation in the USA]. Louvain: U.S. Foreign Operations Administration. Operations Mission to Belgium and Luxembourg. 26 p. No. TA 32-101. Aug/Sept. 53. [68* ref. Fre]
• ***Summary:*** Contents: 1. Current state of food and nutrition of the indigenous people of the Belgian Congo and of Ruanda Urundi–Results of an investigation by FAO, OMS, and UNICEF. 2. Vegetable protein and animal protein in human nutrition. 3. Vegetable material rich in protein and available in the Belgian Congo–Cotton and soya. 4. Acceptability of a food. Conclusions.

Substituting vegetable protein for animal protein could help alleviate the shortage of animal protein that exists for certain categories of infants and adults, and that can lead to kwashiorkor. Cassava, the main food of these countries, is rich in carbohydrates but low in protein. The use of soy flour or cottonseed flour could add valuable protein to the diet. The soy flour could be used, as it has been elsewhere, to make soymilk for infants, tempeh, tofu, breads (add 35), or Multi-Purpose Food (Meals for Millions). Address: U.S. Foreign Operations Administration. Operations Mission to Belgium and Lexembourg.

2176. Niwa, Soichi; Katayama, Nobu. 1953. Tônyû no kakô ni kansuru kenkyû. II. Tônyû o genryô to shita nyûyô shokuhin no kakôhin [Studies on the preparation of bean milk. II. Manufacturing methods of milky foodstuffs by using bean milk]. *Eiyogaku Zasshi* (*Japanese J. of Nutrition*) 11(3):68-69. Dec. [1 ref. Jap; eng]
• ***Summary:*** As Japan has little available land for dairy farming, sufficient milk production cannot be expected. Bean milk, which is one of Japan's own soybean products, is rich in nutrients and is sold very cheaply as a by-product of the manufacture of Japanese tofu. For this reason, attempts have been made to use bean milk as a substitute for dairy products.

However, bean milk tastes of what is called "aokusai" (green and unripened). It is also impossible to sterilize it enough without coagulating it with the heat, so it can easily spoil, especially in the summer. Because of these weaknesses, it is hard to supply this bean milk to consumers, especially in summer. If these shortcomings could be eliminated, bean milk would become a very valuable high-protein nutritious food which could serve as a substitute for dairy products. Address: Aichi-ken Eisei Kenkyusho (Sanitary Inst. of Achi prefecture).

2177. **Product Name:** Tofu.
Manufacturer's Name: Fujii (Tadao) Tofu.
Manufacturer's Address: 2851a East Manoa Road, Honolulu, Oahu, Hawaii.
Date of Introduction: 1953.
New Product–Documentation: Honolulu City Directory. 1953. Tadao Fujii Tofu. 2851a East Manoa Rd., Honolulu.

2178. Nakashima, Kyozo; Tamura, Tsuruo. 1953. Kôri-dôfu seizô kôtei ni kansuru kenkyû. I. Tôfu no tôketsu ni tsuite [Studies on the production of dried-frozen tofu. I. The tofu freezing process]. *Osaka Furitsu Kogyo Shoreikan Hokoku* (*Reports of the Industrial Research Institute, Osaka Prefecture*) No. 5-3:10-15. [5 ref. Jap; eng]
• ***Summary:*** Kôri-dôfu (also called Kôya-dôfu) is made by freezing, ageing, thawing, and drying firmly pressed tofu. The resulting product has a dry, sponge-like texture. The freezing process, which plays a very important part in determining the quality (and thus the price) of the final product, was investigated thermometrically and micrographically.

Commercial dried frozen tofu is frozen quickly. This imparts a fine-grained texture to the surface of the tofu, but requires prolonged aging (20-30 days) to restore the lost elasticity. Home-made frozen tofu, freezes more slowly outdoors in cold, snowy weather, which gives it a coarse-

© Copyright Soyinfo Center 2013

grained texture; it requires less aging (5-7 days).

Note: Accompanying this article is a 7-page, double-spaced, typed English-language translation by Henry Sasame, a Japanese-American who worked at NRRL in Peoria, Illinois, for about 5 years. Address: Osaka, Japan.

2179. **Product Name:** Tofu.
Manufacturer's Name: Tofu Fountain. Later becomes Aloha Tofu Factory.
Manufacturer's Address: 802 Dillingham Blvd., Honolulu, Oahu, Hawaii.
Date of Introduction: 1953.
New Product–Documentation: Honolulu City Directory. 1953. Tofu Fountain (Uyehara Kamesaburo, proprietor). 802 Dillingham Blvd., Honolulu. Not listed 1961-62 as Kamesaburo takes up the Aloha Tofu Factory. Note that 802 Dillingham Blvd. was occupied in 1951 by Kamehachi Shimabukuro Tofu.

2180. David-Perez, Enriqueta. comp. and ed. 1953. Recipes of the Philippines. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Philippines). 124 p. Illust. by S. Serna. No index. 23 cm.
• ***Summary:*** Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods, especially *toyo* (soy sauce). The glossary (p. 121-23) states: Misu is miso–a paste made of fermented rice and soy beans. Tajure is "fermented soy beans, caked" [fermented tofu]. Tausi is "fermented [black] soy beans" with salt [fermented black soybeans]. Tokua is "soy bean curd" [tofu]. Toyo is Filipino-style soy sauce. Recipes followed by an asterisk (*) call for toyo.

Soy-related recipes include: Chicken relleno–I * (p. 15). Chicken pastel * (p. 27). Lengua (with soy sauce, p. 20). Morcon * (p. 21). Pancit molo * (p. 22). Adobo * (p. 24). Arroz caldo with chicken (with 3 tbsp. patis or soy sauce, p. 28). Bañgus en tocho–I (with 1 cube tajure, p. 34), Bañgus en tocho–2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua cut into pieces 3/4 inch long and 1/8 inch wide, p. 35). Bulanglang–1 (with 1 cup tokua, cubed and fried, p. 38). Burong isda (with 1 tbsp. angkak–fermented red rice, p. 39). Sauce for pipi-an (with 1 small jar peanut butter, p. 41). Escabecheng apahap (with 4 pieces tokua, p. 46). Escabeche–Macao style * (p. 71). Escabeche with papaya * (p. 48). Fritada * (p. 50).

Kari-karing pata (with ½ cup ground toasted peanuts or peanut butter, p. 51). Lengua estofada * (p. 53). Lumpia labong–Bamboo shoot (with 5 bean cakes–tokua, p. 55). Lumpia sauce (with ½ cup toyo sauce, p. 56). Lumpia with papaya * (p. 56). Lumpia with peanuts (with 2 squares tokua–diced, 2 tbsp. toyo–soy sauce, and 1 cup ground peanuts, p. 57). Lumpia with ubod–2 (with 2 cakes tokua, and toyo to taste, p. 58). Meat balls with "sotanghon" * (p. 59). Menudo de rabo * (p. 60). Misu-tomato sauce (with 2 tbsp. misu–soy bean paste, p. 61). Paksiw na pata * (p. 64). Paksiw–pork (with soy sauce, p. 64). Paksiw na lechon (with 3 tbsp. soy sauce, p. 65). Pancit guisado * (p. 65). Pancit "luglug" (with ½ cup soy bean cake–tokua–cut into small cubes, p. 66). Pork tapa * (p. 72). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 80). Pastillas de mani (with 1 can ground peanuts, p. 89).

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is "red-colored grains of rice used as coloring for fermented fish."

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the word *tajure* to refer to fermented tofu, or the word *misu* to refer to miso.

Note 2. On the title page is printed "4th printing–May 1956." Address: P.O. Box 3288, Manila, Philippines.

2181. Pritchard, Florence; Pritchard, Edgar W. 1953. A scientific meatless diet: Being the principles and practice of lacto-vegetarianism based on the latest scientific discoveries, with original recipes. 4th ed. Marryatville, South Australia: Published by the authors. 19 p. 22 cm.
• ***Summary:*** Discusses the advantages of a lacto-vegetarian diet, with recipes.

Concerning soya beans, page 7 contains a paragraph which states: "These beans deserve much more attention than they have hitherto received... In China and Japan they are a staple food, being made into innumerable dishes including soya bean milk and cheese [tofu]." There are also recipes for Boiled soya beans (p. 9), and Soya bean rissoles (p. 11). Address: 31 Yeronga Ave., North Kensington Park, Marryatville P.O., South Australia.

2182. Chatfield, Charlotte. 1954. Food composition tables: Mineral and vitamins, for international use. *FAO Nutritional Studies* No. 11. 117 p. March. [539* ref]
• ***Summary:*** Table 1 gives "Food composition in terms of the retail weight, ("As purchased"). The section on "Pulses, nuts and seeds" (p. 13-14) includes values for: Groundnuts, peanuts. Soybeans (*Glycine max*) and soybean products–Whole seeds, dry. Flour, full fat (seed coat removed). Flour, low fat; grits, flakes (partially defatted). Curd, tofu. Fermented beans, Japanese natto. Fermented beans, Chinese tsiang [jiang]. Soybean milk. Paste, miso (made with small amounts of rice and other starchy materials). Shoyu sauce. Sprouts: See No. 86a.

Also: Broad beans. Common beans. Hyacinth, lablab, and twinflower beans. Jack beans and sword beans. Lima beans. Mung beans and urd beans. Voandzeia (without shell). Chickpeas. Cowpeas. Lentils. Peas. Pigeonpeas (*Cajanus* spp.).

Table 2 gives "Composition of the edible portion (E.P.)

© Copyright Soyinfo Center 2013

and refuse in the material as purchased (A.P.).” The section on “Pulses, nuts and seeds” (p. 31-33) gives values for the same foods listed in Table 2.

These tables contain corrections to the Food Composition Tables of Oct. 1949. On pages 52+ is an index to the scientific names of plants in the tables. Address: Nutrition Div., FAO, Rome, Italy.

2185. Inoue, Yoshiyuki. 1954. [A stable, vitamin containing dried tofu (soybean cheese)]. *Japanese Patent* 2482. May 6. (Chem. Abst. 49:1990c). [Jap; eng+]*

• ***Summary:*** During the manufacture of kori-dofu, the water-soluble vitamins originally contained in the soybeans are mostly destroyed, and the remaining small amount of vitamins are damaged by the deterioration of fats during preservation of the dried tofu.

Soybean curd is dehydrated by freezing and thawing, immersed for 10 minutes in an aqueous solution containing 200 mg per 100 gm vitamin B-1 hydrochloride and a small amount of amino acid or thiourea, dehydrated by centrifuging, sprayed with 0.5% aqueous solution of tannin, kept at 0-5ºC for a while, dried *in vacuo*, and treated with ammonia gas to pH 8. Address: Biochem. Lab., College of Agriculture, Kyoto Univ., Japan.

2186. Balu, V. 1954. There need be no shortage of lactic foods in India now that scientists & research workers have succeeded in milking the ground-nut. *Times of India* (*The*) (*Bombay*). Aug. 1. p. 5.

• ***Summary:*** “Milk is a perfect and satisfying food.” Dr. E.V. McCollum, the famous U.S. nutritionist of Johns Hopkins University, said in the early 1920s: “The people who have achieved, who have become large, strong, vigorous people, who have reduced their infant mortality, who have the best trades in the world, who have an appreciation of art, literature, and music, who are progressive in science and in every activity of the human intellect, are the people who have used liberal amounts of milk and it’s products.”

But there is an acute shortage of cow and buffalo milk in India, and it is unequally distributed.

Vegetable milk has been part of the diet in Far Eastern countries for thousands of years. The soya bean had attracted public attention in India by the early 1930s. “Even Mahatma Gandhi, the Father of the Nation, experimented with it for a brief period during the early days of the Gramodyog Sangh (Village Industries Association), since it is one of the most concentrated and nutritive of foods known to man.”

As early as 1945, Dr. V. Subrahmanyan and co-workers in Bangalore found that the quality and digestibility of soya bean are greatly improved when it is soaked in water, drained, germinated [sprouted], made into a paste and then processed to make soya milk. They also found that if it is suitably fortified with calcium, soya milk is about 90% as good as cow’s milk in its over-all nutritional value.

The smell and taste of the curd [tofu] and butter-milk prepared from soya milk resemble those of animal milk products.

Scientists at the Central Food Technological Research Institute [CFTRI], Mysore, after more than 3 years of intense research, have also developed a good, fortified vegetable milk from ground-nut. While the soya bean is new to India and not grown extensively, India is the world’s largest producer of ground-nuts–3.5 million tons a year.

Since 1951 CFTRI in Mysore has been making vegetable milk from ground-nuts on a semi-large scale and distributing it to locally to the public through hotels and catering services. It has been well accepted.

In early 1954 CFTRI set up a vegetable [ground-nut] milk plant for a private firm in Mysore. During his election tour, Mr. Nehru visited the plant, tasted the curds and butter-milk prepared there, and expressed his appreciation of them.

2187. *Hartford Courant* (*Connecticut*). 1954. Street hawker remains familiar figure in Tokyo. Oct. 24. p. D14.

• ***Summary:*** No longer seen in the USA, street hawkers do a brisk business in Tokyo. The sellers of each product have their unique call. “The juvenile vendor is likely to be repeating ‘Natto,’ ‘Natto’ in young and earnest tones. He is selling fermented beans, which are served with soya sauce over warm cooked rice.”

“’To-fu ya-san’ appears with bean curds’” [tofu].

The ‘chin-don-ya-san’ is a one man band and children’s theater. The ragman, and the peddlers of shell-fish and bamboo poles can also be heard.

[108 ref. Eng]
• ***Summary:*** This was one of the surveys made by United Nations agencies in the late 1940s and early 1950s which showed the prevalence of protein-calorie malnutrition. Pages 61-63 discuss the soybean as a rich source of protein that may be prepared in a variety of ways. A brief review is given of work with soy in Uganda, Mexico City, India, El Salvador, and Guatemala.

"Acceptability tests with soybean milk were carried out successfully in 1951 in schools and community dining rooms in Mexico City, under the supervision of the Institute of Nutrition (according to a 1951 personal communication from J. Calvo de la Torre and J. Diaz Barriga). The milk was prepared from non-bitter varieties of soybeans developed by the Agricultural Research Department of the Ministry of Agriculture, with the assistance of the Rockefeller Foundation, and cultivated in Mexico under the direction of the Maize Commission, which plans to grow soybeans in rotation with maize" (p. 62)

"The Government of Indonesia, with the financial aid of UNICEF and the technical assistance of FAO, plans to construct a plant for the preparation of an infant food made from dried soybean milk. Other countries, such as Thailand and the Philippines, are now considering similar projects" (p. 62).

The fortification of tortillas with soybeans or soy flour looks very promising. "In an attempt to modernize tortilla making, the Industrial Research Department of the Bank of Mexico has set up a pilot plant to make powdered dried *nixtamal* from suitably treated maize. When this powder is reconstituted with water, it gives the *masa* or dough which can then be rolled out into cakes and baked at home. In addition to several economic and hygienic advantages, the new technique makes it possible to incorporate either whole or partly fat-free soy flour in the *nixtamal* powder. Experiments carried out on this product have been seen by one of the authors; the *tortilla* with 10% soy flour added was still excellent.

"In towns, where *tortillas* are the staple food, there will be no difficulty in introducing soybean once the preparation of *nixtamal* is concentrated in a few large industrial plants instead of scattered among thousands of mills. However, if the Government were to make soybean-maize mixture obligatory now, control would be difficult. In the rural areas the preparation of *tortillas* is a family operation, and it will be necessary to teach the women to add soybeans to the maize grains in the preparation of the *tortillas* by giving practical demonstrations. This will be a long-term and exacting task, but it must be undertaken because mature soybeans cannot be used in the same way as other beans, as they require prolonged cooking.

"The use of the classic fresh soybean curds [tofu] calls for long education of the public, as does that of certain special preparations such as *tempeh* (fungus-fermented soybean cheese), the preparation and nutritive value of which have been studied by Van Veen" (p. 63).

"This Study is being published in French in the Bulletin of the World Health Organization for November/December 1954, and in Spanish in the Bulletin of the Pan-American Sanitary Bureau."

Note: This is the earliest document seen (Nov. 2002) concerning world protein shortages. Address: 1. D.Pharm., Senior Nutrition Officer, Nutrition Div., FAO, Rome, Italy; 2. M.D., Assoc. Member of INCAP.

2189. Meade, Mary. 1954. Japanese dish, sukiyaki, should be prepared at table: Chafing dish or hot plate can be used. *Chicago Daily Tribune.* Nov. 16. p. A5.
• ***Summary:*** The recipe for Beef sukiyaki calls for "12 pieces tofu (soybean curd) in 1 inch cubes... Sauce: 1 cup shoyu (soy sauce), ¼ cup sake (rice wine), 1/3 cup sugar." Eat sukiyaki with bowls of rice.

2192. **Product Name:** Tofu.
Manufacturer's Name: Hanato (Tamao) Tofu.
Manufacturer's Address: Kealakekua (Hanalo), Kona, Island of Hawaii.

© Copyright Soyinfo Center 2013

Date of Introduction: 1954.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1954. Tamao Hanato Tofu (Tamao Hanato, proprietor). Kealakekue, Island of Hawaii. Not listed 1957. Note, does this later become the Hanao or Hanato Tofu Factory in Honalo, Island of Hawaii. Hawaii Directory of Manufacturers: Tofu (bean curd). 1964. T. Hanato Tofu Factory. P.O. Box 23, Kealakekua-Kona, Hawaii. Phone: 237183. Hawaii Directory of Manufacturers. 1969. p. 17. T. Hanato Tofu Factory, Kealkekua, Island of Hawaii.

Talk with Paul Duchesne. 1989. Oct. 27. On the Big Island he visited a Japanese-run tofu shop that has been there for 30-40 years. A relative of the owner located across the street is Mrs. Tashima of Tashima's Restaurant (Phone: 808-322-9140). Most of the tofu is sold locally.

Talk with Tashima's. 1989. Oct. 28. The shop is called Hanato Tofu Shop. It is owned by Mrs. Tashima's brother, but run by his son and daughter (Tamayo). The phone is 322-9932 or 322-2422.

2193. **Product Name:** Tofu.
Manufacturer's Name: Higa (Shigeru) Tofu.
Manufacturer's Address: Hawi, Island of Hawaii.
Date of Introduction: 1954.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1954. Shigeru Higa Tofu (Shigeru Higa, proprietor). Hawi, Island of Hawaii. Not listed 1960.

2194. **Product Name:** Tofu.
Manufacturer's Name: Hoori (Sawanori) Tofu.
Manufacturer's Address: 725 Kilauea Ave., Hilo, Island of Hawaii.
Date of Introduction: 1954.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1954. Sawanori Hori Tofu (Sawanori Hori, proprietor). 725 Kilauea Ave., Hilo, Island of Hawaii. 1957 Directory. Changed to Hori's Tofu Factory. Address same. Not listed 1960.

2195. **Product Name:** Tofu.
Manufacturer's Name: Kozaa Tofu Factory.
Manufacturer's Address: 2471 South King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1954.
New Product–Documentation: Honolulu City Directory. 1954. Kozaa Tofu Factory (Ryoson Kuba, proprietor). 2471 S King, Honolulu. Not listed 1955.

2196. **Product Name:** Tofu.
Manufacturer's Name: Loma Linda Food Co. Eastern Div.
Manufacturer's Address: P.O. Box 388 (Wooster Road), Mount Vernon, Ohio.
Date of Introduction: 1954.
New Product–Documentation: Soybean Blue Book. 1954. p. 106. No brand name is given. Also listed in 1965.

2197. Nakashima, Kyozo; Tamura, Tsuruo. 1954. Kôri-dôfu seizô kôtei ni kansuru kenkyû. II. [Studies on the production of dried-frozen tofu. II. Coloring]. *Osaka Furitsu Kogyo Shoreikan Hokoku* (*Reports of the Industrial Research Institute, Osaka Prefecture*) No. 5-3:10-15. [5 ref. Jap; eng] • ***Summary:*** Recently, manufacturers of dried-frozen tofu have been working to improve its color. The color of typical samples, collected at Osaka City central market in the summer of 1953, was measured with a Beckman photometer. It was found that the color of the finished product is influenced by the soy bean oil in the tofu. The higher the percentage of reflectance (and thus the whiter the color of the product), the higher the market price.

Note: Accompanying this article is a 5-page, double-spaced, typed English-language translation by Henry Sasame. Address: Osaka, Japan.

2198. **Product Name:** Tofu.
Manufacturer's Name: Oshiro (Yoshiichi) Tofu. Later Oshiro Tofuya and Oshiro Tofu Factory, 1962.
Manufacturer's Address: 391 Kilauea Ave., Hilo, Island of Hawaii. Phone: 808-935-6973.
Date of Introduction: 1954.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1954. Yoshiichi Oshiro Tofu (Yoshiichi Oshiro, proprietor). 391 Kilauea Ave., Hilo. Not listed 1954. 1962 Directory. Date of Introduction: 1954.
New Product–Documentation: Hawaii, Maui, Kauai Island Directory. 1954. Hakaru Ueda Tofu (Hakaru Ueda, proprietor). 39 Kapena Ln., Hilo, Island of Hawaii. Not listed 1957. 1960 Directory. Changed to Ueda Tofu Factory, 29 Kapena Ln., Hilo, Island of Hawaii. Not listed 1962.

2201. Chang, Yet-oy. 1954. Soybean products as supplements to rice in Chinese diets with special reference to their protein and calcium content. PhD thesis, Columbia University, New York. 67 p. Page 1201 in volume 14/08 of Dissertation Abstracts International. [30+ ref]
• ***Summary:*** The diet containing "soybean curd (Tou fu)" gave the best growth and calcification, followed by diets containing "dried yellow soybeans (Ta tou),... soybeans, fermented (Tou chi) [fermented black soybeans], then soybean fermented curd (Tou fu lu)" (also called "fermented soybean curd" in this abstract) [fermented tofu], last. Soybean curd production is encouraged where animal proteins are in short supply.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "soybean fermented curd" to refer to fermented tofu. Address: Columbia Univ.

2202. Davis, Adelle. 1954. Let's eat right to keep fit. New York, NY: Harcourt, Brace & World. 322 p. Index. 21 cm. [14 ref]
• ***Summary:*** Advises Americans to eat more vitamins, minerals, and protein–as well as wheat germ and tiger's milk [Tiger's Milk]–to reduce their risks of possible deficiencies. Meats, fish, and fowl are considered excellent sources of protein. "Other superior sources are eggs, fresh milk, buttermilk, yogurt, powdered milk, cheese, soybeans, and powdered yeast" (p. 26). "Proteins from brewers' yeast, certain nuts, soybeans, cottonseed, and the germ of cereals are complete proteins (p. 29). A table (p. 32-33) lists good sources of protein including: Low fat soybean flour (1 cup has 60 gm of complete protein). Cooked soybeans (½ cup has 20 gm of complete protein).

"If milk, cheese, or eggs are disliked or unobtainable, getting adequate protein becomes a serious matter indeed. When the complete proteins of wheat germ, soybeans, brewers' yeast, and nuts are eaten, it is possible to obtain sufficient amounts of essential amino acids, provided the diet is planned with utmost care. Some of the world's leading athletes and scholars have been vegetarians. Unless a vegetarian is trained in nutrition, however, he usually becomes an unhealthy vegetarian."

Lecithin and its benefits are described on pages 38, 41, 78, 80, 115, and 219. "When oils are refined or hydrogenated, lecithin is discarded." Soybeans are a good source of pantothenic acid (p. 86) and vitamin B-1 (p. 101).

"If there is no health-food store in your community, you can purchase stone-ground flour from El Molino Mills, Alhambra, California; Paul Keene, Walnut Acres, Penns Creek, Pennsylvania; Great Valley Mills, Kellers Church, Bucks County, Pennsylvania; Elam Mills, Chicago, Illinois; Wight's Grist Mill, Old Sturbridge Village, Sturbridge, Massachusetts; Stone Buhr Milling Company, 3509 Evanston St., Seattle, Washington; Whole Grain Flour Mills, 2611 North Jones St., Chicago 47, Illinois; Huni Health Products, 207 East 87th St., New York City; The Vermont Country Store, Weston, Vermont" (p. 107).

"At first it may seem complicated to get your B vitamins from natural foods. Perhaps I can help you most by telling you how I have solved the problem in my family. I have had no white flour in the house for perhaps 20 years. All my flour is stone-ground whole wheat; [Sources of such flour, nationwide, are listed.] it is usually 'organically grown,' that is, grown on soil rich in humus, without commercial fertilizers. Such flour has a flavor infinitely more delicious than that of ordinary varieties... So-called 'enriched' flour is my idea of outright dishonesty... I rarely serve cereals because they contain so much starch... Soy flour, which supplies protein, cholin, inositol, and some anti-stress vitamins, I use in tiger's milk (p. 114) and the best hotcakes" (p. 109).

"Many authorities believe that the deficiency of calcium is more widespread than that of any other nutrient; milk is the only dependable source in the America diet... A certain amount of calcium can be obtained from mustard and turnip greens, soybeans, and blackstrap molasses, but these foods are rarely eaten daily... Certainly there are healthy people who do not drink milk, but each has a source of calcium; the Hawaiians' source is poi; the Orientals', soybean curds [tofu]."

"During hot weather, salty foods, such as salted nuts or soybeans, cheeses or potato chips, should be kept near the drinking water, and at least one well-salted food should be served with each meal." Address: Los Angeles, California.

2203. Feng, Doreen Yen Hung. 1954. The joy of Chinese cooking. New York: Grosset & Dunlap. 226 p. Undated. Illust. Index. 21 cm.
• ***Summary:*** This hardcover Chinese cook book retails for $3.95. The contents and pagination are the same as in the original 1950 edition of the same title.

2204. Katsumata, Senkichiro. ed. 1954. Kenkyusha's new Japanese-English dictionary. Entirely new ed. [3rd ed.]. Tokyo and Kyoto: Kenkyusha. xvi + 2136 p. 24 cm.
• ***Summary:*** Soy related words:
aburaage: see aburage.
aburage: fried beancurd.
age: a piece of fried bean-curd.
ama-miso: slightly salted bean paste.

© Copyright Soyinfo Center 2013

atsuage: not listed.

Daitokuji natto: not listed.

daizu: a soya (= soy) bean. daizu kasu: a [soy] bean cake [a co-product of soy bean oil]. daizu abura: [soy] bean oil.

dengaku: bean curd baked and daubed with miso. dengaku-zashi ni sareru: to be transfixed; to be pierced through (as with a spear).

edamame: green soybeans.

ganmo: not listed.

ganmodoki: not listed. Hamananatto: not mentioned. Hamanatto: not mentioned.

inarizushi: fried bean-curd stuffed with boiled rice.

kogoridôfu = kôyadôfu.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term *kogoridôfu* (written as one word, with diacritics) which it says is the same as kôyadôfu [dried-frozen tofu].

Note 3. This is also the earliest English-language document seen (April 2013) that uses the term *kôyadôfu* to refer to dried-frozen tofu.

koikuchi: not listed.

koikoku: a carp cooked in bean (= miso) soup.

kôji: malt (mugi); yeast; leaven (kôbo); kôji-ya: a maltster [a maker of kôji]. kôji ni suru: to malt something.

kôridôfu: a frozen bean curd.

kuromame: a black soy bean.

miso (chomiryô = seasoning): bean paste; miso. miso o suru: to mash the miso [as in a suribachi]. miso kakeru: to put miso on something (as food). (2) (tokui to ten) sore ga kare no miso da: that is what he takes pride in [that is what he is good at]. (3) (hikakuteki-ni) miso o kakeru (shuppai suru): to make a mess (=sad work) of something; to make a miserable (=poor) showing. miso o suru (hetsurau): to flatter [someone, as one's superiors]. [Modern is goma suru; kare, shatcho ni goma shitte-iru: he is flattering his boss. A grinding gesture goes with it. goma-suri: a person who flatters]. kuso miso ni iu: to speak meanly of a person; to speak of a person in the most disparaging terms. miso mo kuso mo isshoni suru: to mix up good and bad things. miso no miso kusaki wa, jô miso ni arazu: The secret of art lies in concealing art [Akiko never heard this saying]. soko ga miso darô: perhaps that's the point he takes pride in [=the key point].

misokoshi: a *miso* strainer. [misokoshi de mizu o sukuu]: weave a rope of sand; attempt impossibilities [literally, to try to scoop up water with a miso strainer].

miso-mame: soy (= soya) beans.

misuzu-dofu: not listed.

momen: no meaning related to tofu is listed.

nama-age: fried bean curd.

Note 4. This is the earliest English-language document seen (April 2013) that contains the term *nama-age* which refers "fried bean curd."

nattô: fermented soybeans. nattô uri: a vendor of fermented soybeans. nattô-jiru: miso soup with ground fermented soybeans.

nigari, nigashio: bittern; brine.

nori [no tsukudani]: laver boiled down in soy [sauce].

oboro: not listed.

okabe: = tofu.

okara: bean curd refuse.

shimidôfu = kôridôfu [frozen tofu].

Note 5. This is the earliest English-language document seen (April 2013) that contains the term *shimidôfu* (written as one word, with diacritics) which it says is the same as kôridôfu.

shitaji (7): soy [sauce].

shôyu: soy [sauce].

tamari: [a kind of] soy; soy sauce; sauce from refined soy.

tôfu: beans curds (=cheese); tôfu. [tôfu itcho; in characters]: a piece (=cake) of bean-curds. [tôfu-ya]: a bean-curds dealer (=seller). [yaki-dôfu]: roasted bean-curd. kare ni iken shita totte, tôfu ni kasugai da: advice to him is like water sliding off a duck's back = It's a mere waste of words (=It is like pouring water into a sieve) to advise him. [tofu-ya e ni ri, saka-ya e san ri to iu tokoro da]: there is no human habitation within five miles of the place. [It's out in the boondocks].

tônyû: bean soup; soya-bean juice [sic, soymilk].

u-no-hana: (1) flowers of the *Deutzia scabra.* (2) [tôfu no kara] bean-curd refuse.

yuba: dried bean curds [sic, the film that forms atop soymilk when it is dried]. Address: General editor, Japan.

Held 19-27 Nov. 1952 at Fajara, Gambia, under the auspices of the Commission for Technical Cooperation in Africa South of the Sahara (CCTA). [8 ref]
• ***Summary:*** "Most workers engaged in nutritional or paediatric studies in tropical countries have early in their careers an urge to produce a substitute for human or cow's milk. It would, in my view, be much more desirable to devote attention to two other problems: firstly, the study of how the mother should be fed so as to enable her to feed her infant adequately from her breasts, and secondly, the determination of the value of foods suitable for continuing the practice of mixed feeding." On the latter subject, the author favors the use of soya bean curd [tofu] rather than of the "milk" [soya milk] made from these beans. Address: Prof., Director of Medical Research Council's Human Nutrition Research Unit and of the Applied Nutrition Unit, and Head of the Dep. of Human Nutrition, London School of Hygiene and Tropical Medicine, London, W.C.1., England.

2209. Thorpe, Jocelyn Field; Whiteley, M.A. 1954. Soya bean. In: J.F. Thorpe and M.A. Whiteley. 1937-1956. Thorpe's Dictionary of Applied Chemistry. 12 vols. 4th ed. London, New York, Toronto: Longmans, Green & Co. See vol. XI, p. 46-48. 23 cm. [15 ref]
• ***Summary:*** The section titled "Soya Bean" has the following contents: Introduction. Composition of soya beans. Soya-bean products: Oil, cake and meal, flour, milk, soy sauce ("known in Japan as 'Shoyu' and in the west under such names as 'Worcester Sauce,'..."), miso, tofu, immature soya beans, roasted soya beans (eaten like peanuts), coffee substitute, chocolate substitute. Agricultural uses (green fodder, hay, silage, bean pods and straw). Sir Jocelyn Field Thorpe lived 1872-1940.

2210. Thorpe's dictionary of applied chemistry. 4th ed. Revised and enlarged. Vol. XI. Soil–Z. 1954. London, New York, Toronto: Longmans, Green and Co. x + 1145 p. See p. 46-48. Illust. Index. 23 cm. [16 ref]
• ***Summary:*** The entry for "Soya bean" (p. 46-48) was written by A.W. Marsden, M.Sc., D.I.C., A.R.C.S., F.R.I.C., Director, Commonwealth Bureau of Dairy Science, Shinfield, near Reading, England. Contents: Introduction. Composition of soya beans. Soya-bean products: Oil, meal, flour, soya-bean "milk," soy sauce, Worcestershire sauce, miso, tofu, immature soya beans (eaten, after shelling and cooking, just like green peas), sprouts, roasted soya beans (eaten like peanuts), coffee substitute, chocolate substitute. Agricultural uses. Soya bean oil (see Vol. IX, 27a, 29a, 53c, 55c). Address: London, England.

2211. Trowell, H.C.; Davies, J.N.P.; Dean, R.F.A. 1954. Kwashiorkor. London: Edward Arnold. xii + 308 p. Illust. 22 cm. [625* ref]
• ***Summary:*** This is the classic book on kwashiorkor, which is severe malnutrition, especially in infants and children, that is caused by a diet high in carbohydrate and low in protein. Contents: 1. Reports of kwashiorkor in children and a discussion of terminology (p. 1-11). 2. The history of kwashiorkor (p. 12-46). 3. Kwashiorkor in children. 4. Protein malnutrition in adults. 5. Implications of kwashiorkor in children and of protein malnutrition in adults.

In the chapter on "Kwashiorkor in Children," in the section titled "The Treatment of Kwashiorkor," there is lengthy discussion of the treatment with plant protein diets, including those containing soybeans. At Kampala, Uganda, rats and then children with kwashiorkor were fed a diet of sweet bananas and a paste of cooked whole soybeans, sucrose, and vitamins. "A day's food for a child weighing 6 to 8 kg. might consist of 300 to 400 gr. of the mashed banana, 300 gr. of the soya preparation, 25 gr. sugar (sucrose) and 2.0 gr. of the vitamin mixture. This diet

© Copyright Soyinfo Center 2013

provided a little more than 500 gr. protein, and about 1000 calories. It also provided nearly 25 gr. fat, but apprehensions of the danger of giving so much fat, based on some unfortunate experiences with full-cream milk that had shown only too clearly the fat intolerance of severe kwashiorkor, proved to be largely unjustified: the soya fat, possibly because its fatty acid composition was very different from that of milk fat, seemed to be easily absorbed and did not cause any gastro-intestinal upsets, even in moderately severe cases." The banana-soya diet was low in cost and results were satisfactory. Address: 1. 2212. Millstein, Gilbert. 1955. On a Sunday in Chinatown. *New York Times.* Feb. 27. p. SM22-23, 53.
• ***Summary:*** A fascinating study of New York City's Chinatown on a typical Sunday. It takes place on Mott Street, and Pell, Doyers, Bayard, and the Bowery; there the Chinese gather to talk, shop, visit, and eat. People typically enjoy a late breakfast, which is large and with many dishes, including "*dow foo sui mei* (bean curd and meat bun)." One may also visit a coffee shop, tiffin house, or noodle shop. When finished, "the Chinese then goes to his family association. The outstanding family associations in Chinatown are those of the Chins, the Lees, the Wongs, the Ngs, the Leongs, the Chus,..." Chinese laundrymen may visit their laundrymen's association.

While visiting Chinatown, visitors can buy "brown bean sauce, black bean sauce,... soy sauce,... and oyster sauce."

2213. Nickerson, Jane. 1955. Sukiyaki and tempura. *New York Times.* April 24. p. SM50.
• ***Summary:*** Describes how to prepare each of these famous Japanese recipes. The recipe for sukiyaki is adapted from one used at the Miyako, the oldest Japanese restaurant in New York. Like most such recipes it calls for "soybean curd (tofu)..." "The soy sauce (shoyu) used in the dish should be Japanese; it has a marvelous intensity which makes it different from other such sauces." *Suki* means "plow" and *yaki* means "roasted." The legendary history of the dish is given.

For tempura, the traditional Japanese sauce is composed of soy sauce heated with dashi and other ingredients–including "monosodium glutamate, the vegetable protein seasoning sold here under such trade names as Accent and known in Japan as *aji-no-moto.*" Japanese make tempura from shrimp, seaweeds, string beans, eggplant, mushrooms, and many other kinds of vegetables. Four photos show views of these two dishes.

2214. Owen, June. 1955. News of food–Chinese dishes: Oriental foods are now being prepared for take-home trade. First supermarket that features Chinese items opens its doors. *New York Times.* June 15. p. 27.
• ***Summary:*** A good, early history of Jeno Paulucci and his company Chun King Sales. "Several years ago, when Jeno F. Paulucci was traveling about the country as sales representative for a food company, he noted that virtually every city and town of any size had a Chinese restaurant or one that claimed a Chinese cuisine."

Mr. Paulucci, age 37, is a native of Minnesota. Growing up in Hibbing, Minnesota, he helped his mother with her Italian catering business.

Eight years ago, in an improvised Quonset hut in Duluth, Minnesota, Mr. Paulucci and 20 employees started canning chow mein. Today his company, Chun King Sales, produces twenty products and is the largest plant for the production of oriental foods in the country.

Mr. Paulucci's products are meant for Americans. not for people of Chinese ancestry.

Another young man with a commercial interest in Chinese foods is Raymond C. Tong. He recently opened China Food Fare, the first supermarket in New York City dealing in oriental groceries (at 20 East Broadway, Chinatown). His customers are mainly those of Chinese ancestry; his store sells "bean curd and what may be the widest selection of soy sauces" in New York City. These sauces are made in Hong Kong, Japan, Korea, and the USA. The two basic types are light and dark. "The light is used in cooking and in marinating foods." The dark is meant to be used at the table, to be sprinkled on dishes as each person desires. Mr. Tong says that a fine soy sauce is neither too bland nor too salty. It should have a good savory or meaty flavor.

2215. Lager, Mildred. 1955. Suggestions for the arthritic, with menus and recipes. Burbank, California: Published by the author. 46 p. Aug. No index. 20 cm. Saddle stitched.
• ***Summary:*** The dedication page states: "Dedicated to all arthritics–everywhere." Copyright 1938 by Mildred Lager. Seventh edition (Revised and enlarged) May 1948. Eighth edition [printing] January 1951. Ninth edition May 1952. Tenth edition August 1955.

Contents: Part I. Introduction. Types of arthritis (inflammation of the joints; rheumatoid and osteo-arthritis). Causes of arthritis. Suggestions. Foods for the arthritic (diet can make a big difference). My own case. Juice diet. Kind of juices. How to take juices. Limited diet: Breakfast, lunch, dinner. Salisbury diet. General diet: Breakfast, lunch, dinner, dessert. Other suggestions: Heat, baths, sweats, etc., massage, digestive aids (natural laxative foods and bulky foods), supplements, vegetarian diet. Mental attitude (positive mental attitude and healthy emotions are very

© Copyright Soyinfo Center 2013

important). Additions August 1955 (p. 28; "It is now more than 30 years since I began my battle with arthritis... Thanks to my diet I have led a very active life. I am still on the fundamental diet because I do not know of anything better... Cortisone and ACTH have been heralded as miracle drugs. I do not believe these drugs are the solution to the problem. In many cases they have brought temporary relief...").

Part II. Menus (p. 29-31). Vegetarian menus (p. 31-32). Approximate carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes (p. 33-46).

"My own case" (p. 10-14). Note: Mildred M. Lager was born on 19 Dec. 1900 at Superior, Wisconsin, of Swedish parents, who immigrated to America. In 1925 she started her lifelong battle with arthritis. "As diet was the greatest factor in my recovery, I am going into detail about my experience." After graduating from college, she began teaching. She continued trying every possible cure for more than two years. "As a last resort, I half-heartedly turned to diet. I found, to my surprise, that when I left out starches and sweets I felt better, but I still did not realize that I must make an about face and a complete change in my eating habits. I became very interested in food, however, and read every book and article I could read on the subject... I don't know how long I would have continued in this half way stage had not my doctor bluntly told me *the truth* as he put it He said that nothing could be done and I might as well know it. By this time my elbows were locked (ankylosed)" and my wrists, hands, knees, ankles, and feet were badly affected. "I felt as if my body were nothing but 'sore joints.'"

So she started a strict diet of natural unsweetened fresh fruit juices only. She found orange, grapefruit, tomato, pineapple, and apple to be the best for her. One month later she took a teaching job in northern Michigan, arriving there in twenty degrees below zero. Within 9 months she had won her battle. There follows a list (p. 13) of six foods to avoid plus two general tips. Also, when using dried fruits, use only the unsulphured kind. "Liquified [sic] drinks: A liquefier is a blessing to any one who for some reason cannot tolerate raw green leafy vegetables" (p. 35).

By 1955 Mildred had already authored two books on soybeans and soyfoods, the first one (*The Useful Soybean*, 1945) a classic. This book contains soy in many of the menus and recipes: Soy oil for salad dressing (p. 18-19). Soybean melba toast (p. 20, 29, 31). The best sources of vegetable protein in a vegetable diet include soybean protein (p. 27). Baked soybeans for dinner (p. 31). Cooked soy grit cereal for breakfast (p. 32). Soy melba toast with avocado for lunch (p. 32). Recipes for: Soy bread, soy melba toast, soy gluten bread (p. 37). Meat substitute dishes (p. 39-42): Cooked soybeans with soy sauce. Canned or baked soybeans (available in most markets and all health food stores). Soy loaf (with cooked soybeans and melba toast crumbles). Soy grits. Cooked soy grits. Soy vegetable hash. Soy cheese or tofu. Tofu steak. Mock fish tofu. Gluten steak. Nut butters. Almond butter. Pecan spread. Nut sauce or gravy. Cashew gravy. Almond hamburgers.

Note. This is the earliest English-language document seen (April 2013) that contains the term "Tofu steak." Address: Burbank, California.

2216. Sethi, Madhu. 1955. Punjabi paneer. *Times of India* (*The*) (*Bombay*). Oct. 16. p. SM1.

• ***Summary:*** "Panir [paneer] is home-made cheese, and is much-used by Punjabis. It is a highly nutritive, easily obtainable form of protein for those who eschew fish, eggs and meat from their diet."

To make it at home: Bring milk to a boil. Add either milk curds (2 ounces to 1 seer milk) or one dessertspoon of fresh lime juice, then continue to boil until the whey (a watery liquid) separates from the white curds. Remove pot from fire and let the milk cool. Cover another vessel with a thin, clean piece of muslin. Pour the curdled milk onto the cloth so that the panir is held on top and the liquid drains through into the other vessel. Tie up the cloth and suspend it, so that any remaining liquid gradually drops out. After a short time the panir in the cloth will be firm and ready to cut into any size pieces required.

Recipes for four popular Punjabi panir dishes are given, including Pilau and Bhurji. Cubes of fresh panir are often fried in ghee as part of the recipe.

The recipe for "Sag panir" calls for "3 bundles of palak leaves, 1 bundle of soya leaves,... Cut the palak leaves and the soya leaves together and wash them three or four times."

Note: The meaning of "soya leaves" is not clear; it is also unclear whether or not these leaves come from the soybean plant.

2217. Strayer, George M. 1955. Why Japan wants clean soybeans. Blow to U.S. exports to Japan. *Soybean Digest.* Dec. p. 4-5.

• ***Summary:*** "Japan is a country of over 80 million people. Total area is about the same as California. Only a very small part is tillable."

"Last year Japan imported a total of about 750,000 metric tons of soybeans (27.5 million bushels). About 250,000 tons were crushed in oilseed mills. The remainder went directly into foods usage, producing soy sauce, soybean paste [miso], and soybean curd [tofu]. Over 90% of the flakes from the soybean crushing at the oil mills went to these same food plants.

"Soybeans are the life blood of Japan. They are an absolute necessity, for they are the food of the people. They are used directly, not indirectly, as is our soybean meal in the form of livestock products.

"There are over 3,000 vegetable oil mills in Japan, all except about 30 of them small community plants. Only 33 are on the list to receive imported soybeans. There are over

© Copyright Soyinfo Center 2013

6,000 manufacturers of soy sauce in Japan. There are over 50,000 manufacturers of tofu or soybean curd, and there are several thousand small manufacturers of soybean paste or miso.

"These small plants do not and cannot have cleaning facilities. They must use the soybeans as they come. They prefer domestic beans, second choice is Chinese beans, and next come our beans. Why? Only one answer–foreign material. Their reaction is exactly as would be yours under similar conditions. They merely ask–why can you not sell us clean soybeans?"

The Japanese are importing more and more soybean from Red China. The Ministry of International Trade and Industry (MITI) favors increased trade with China. "Authorized imports of soybeans [to Japan] to 335,000 metric tons. Of these, 203,000 metric tons were allocated directly to oil mills and food manufacturers. They may be purchased on a global basis–wherever the buyer can buy at the lowest price and find acceptable supplies. Oil millers will favor U.S. beans because of higher oil content, while food manufacturers will probably buy Chinese beans when available.

"The remaining 132,000 tons were allocated to import firms. If a firm had a record of U.S. imports during the previous year the quota for that firm is based on 50% of the tonnage handled. But if a firm imported Chinese soybeans during that same period, the firm's quota is based on 100% of that tonnage.

"As soon as I discovered the content of the allocation I called it to the attention of embassy officials here in Tokyo, and a protest was filed with the Japanese government. However, at this writing much more work remains to be done.

"As closely as can be figured about 9 million bushels of soybean business was lost by the U.S. in this one allocation.

A large photo shows George Strayer standing behind a podium, addressing a room full of men seated in chairs. A movie projector is visible in the center aisle. The caption reads: "Strayer addressing meeting of 110 representatives of the soybean industry in Japan at the University Club in Tokyo Nov. 14. Invitations were issued by W.D. Termohlen, Agricultural Attache in the American Embassy, to the leadership of oilseed crushers, miso, soy sauce and soybean curd associations of Japan. At his side is Hiroshi Nakamura of Honen Oil Co., who served as interpreter. Mr. Nakamura was a Fulbright scholar in the United States during the 1954-55 university year."

Note 1. This article was written by Strayer in Tokyo, where he is conducting a marketing study for the U.S. Department of Agriculture.

Note 2. This is the earliest document seen (March 2001) concerning the activities of the American Soybean Association in Asia, in East Asia, or in Japan. This is also George Strayer's first trip to Japan.

2218. Morohashi, Tetsuji. 1955-1960. Daikanwa jiten [Chinese-Japanese historical dictionary]. Tokyo: Taishukan Shoten. 12 vols. + index (alphabetic by phonetic Japanese pronunciation). Cites earliest references (usually in Chinese documents) for Japanese words. [25+ ref. Jap]

Color of Koya-dofu (continued)]. *Osaka Furitsu Kogyo Shoreikan Hokoku* (*Reports of the Industrial Research Institute, Osaka Prefecture*) No. 7-1:31-37. [9 ref. Jap; eng]

• ***Summary:*** The color of Koya-dofu (dried-frozen tofu) turns from white to yellow during the manufacturing process. This change in color is caused mainly by the structural change in the tofu during processing. The faster the product is frozen, the whiter the color of the final product. The yellowish tint comes from the soybean oil which oozes out of the tofu due to internal stress. Auto-oxidation of oil or protein has little to do with the product's color.

The small amounts of genistein were found in the tofu deepen the color while the tofu is being treated with ammonia.

Commercial frozen tofu is frozen quickly which imparts a fine-grained texture to the surface of the tofu, but requires prolonged aging (20-30 days) to restore the lost elasticity. Home-made frozen tofu, freezes more slowly outdoors in cold, snowy weather, which gives it a coarse-grained texture; it requires less aging (5-7 days).

2223. **Product Name:** Fried tofu pouches.
Manufacturer's Name: Soya Food Products.
Manufacturer's Address: 2356 Wyoming Ave., Cincinnati, Ohio.
Date of Introduction: 1955.
New Product–Documentation: Leviton. 1982. Soyfoods. Summer. p. 36. Ben Yamaguchi and Yoshio Shimizu started a canned [mung] bean sprouts operation in 1945, then added tofu production and an Oriental Grocery in 1949, bean sprout salad and fried tofu pouches in 1955.

2224. Adachi, Isamu. 1955. Kinsei Nihon shokumotsu-shi [Recent history of Japanese foods]. Tokyo: Takahashi Shoten. 483 p. [Jap]

• ***Summary:*** Soyfoods are discussed on the following pages: Tofu (p. 52-53, 68-69, 150, 178-79, 188, 190-91, 194, 196-97), fried tofu–hiryozu and ganmodoki (p. 88–deep-fried tofu burgers), fried tofu–aburage or deep-fried tofu pouches (p. 96-97, 150), black soybeans (p. 140).

Note: This is the earliest (and only) English-language document seen (April 2013) that contains the word *hiryozu;* it refers to Kyoto-style deep-fried tofu balls.

2225. Glacken, Clarence J. 1955. The Great Loochoo: a study of Okinawan village life. Berkeley and Los Angeles, California: University of California Press. xvi + 324 p. See p. 280. Illust. Maps. 23 cm. [134 endnotes]

• ***Summary:*** A very interesting study in human geography and culture, and of the details of life in three villages (incl. Hanashiro and Matsuda) on the island of Okinawa starting

© Copyright Soyinfo Center 2013

in 1951. This book is doubly interesting because by the year 2000 Okinawans were widely considered to be the longest-lived and healthiest people in the world (Willcox 2001).

The author decided to select a village whose economy was based on agriculture–this meant primarily the cultivation of rice, sugar cane, sweet potatoes, and soybeans (p. vii).

Okinawan villages have a striking "dependence on plants, not only for food but for other uses" (p. 3). Chapter 1 is about the geography and cultural history of Okinawa, which has long been pulled between and paid tribute to China and Japan. Okinawa is the largest and most populous of the Ryukyu islands. These islands are generally divided into four island groups (*gunto*)*;* the Okinawa, Amami, Yaeyama, and Mikado groups. Three maps and a table (p. 8-16) shows these relationships. Naha, the capital of Okinawa island, is in the southwest.

Bean paste [miso] or bean curd [tofu] are used in the cooperative ceremonies of housebuilding (p. 70-71).

The most typical shops in rural Okinawa include import stores, which carry rice, flour, soybean sauce, and wheat (p. 74). Small retail shops sell foods, including soybean oil and Ajinomoto (p. 76).

"In the farming areas, sugar and rice are the only significant sources of cash income. Sweet potatoes, rice, eggs, and soybeans may be sold," but they do not provide much cash. The farmer "can produce much of his food and need spend little money if he is willing to subsist on sweet potatoes, bean curd, and bean-paste soup" (p. 86).

Chapter 7, titled "Agriculture" states: "Soybeans, grown for home consumption, are used for making bean curd (*tôfu*) and bean paste (*miso*)*"* (p. 131, 151). For soybean cultivation and crop rotation, see pages 136, 138, 151. Soybean plants are harvested with a small sickle and threshed by a flail; the residues are used for either fertilizer of fuel. Whereas soybeans are always used to make tofu or miso, soy sauce is always purchased.

Another type of bean is the "red dwarf bean (*adzuki*)*"* (p. 151).

Table 16 (p. 153) shows that soybeans are grown as a dry-land (rainfed) crop; in Hanashiro in 1952 they occupied 19.2% of the total land area; sweet potatoes occupied 50.8% and rice 15.5%.

The term "waste bean curd" (*tofu no kasshu* [*kasu*]) is used to refer to okara (p. 158-59); it is fed to horses and oxen.

When a person dies, if his descendants are devoted, his life will be remembered and celebrated periodically until 33 years after his death (p. 204).

Page 280: "One of the most significant links between family, village, and school is the annual athletic meet (*undôkai*)... There is much bustle, laundering, hair washing and cooking in a village the day before the meet. Special lunches including rice dyed red, bean curd, slices of fish paste, beef or pork are prepared." The infant is with the mother "when she is turning the quern to make bean curd" (p. 204).

The main difference is the basic diet is that the poor eat more sweet potatoes and less rice. For most people, breakfast includes a "soup made of hot water and bean paste, perhaps with bits of other foods. For dinner: "Bean-paste soup, rice or sweet potatoes, bean curd and tea" (p. 223).

"Home-made bean curd (*tôfu*)*"* and bean paste (*miso*) are an important foods, but miso is the more important of the two. in the daily diet. The present diet is better than before the war, when it consisted of mostly of the sweet potato and bean-paste soup. The latter usually has a few shred of shreds of fish or meat in it. "In times of scarcity, or if the family is poor, only the paste is used; when it is dissolved in hot water, it makes a kind of clear bouillon which is jokingly referred to as 'mirror soup' (*kagami miso*) because one can see his face in it; it is also called 'nothing in it soup' (*nnshiru*)*"* (p. 224)

The method of making bean curd is described (in part incorrectly). The remaining whey is used for pig food. "Bean curd, fried, boiled in a soup, in a mixture with vegetables, or as an ingredient in *sukiyaki* is always served at a party."

"Most families serve bean-paste soup (*misoshiru*) every meal every day. It [miso] has four basic ingredients: soybeans, rice or barley–occasionally the cycad, salt, and water. Recipes differ considerably among families... It is put in a large jar (*tsubo*) which is placed in the kitchen or in a storeroom and allowed to stand for at least a year, sometimes for three. With age, the paste becomes sweeter and is considered to be better; when ready for use, it is very soluble in water" (p. 225).

An excellent photo (p. 239) shows a woman making bean curd using a hand mill.

In observances in memory of the dead, when the "tomb is revisited on the seventh day, rice cakes [mochi], bean curd, favorite foods of the deceased, and a little sake may be taken as offerings" (p. 248).

After New Year, the next public holiday is *Jûrokunichi* (literally, sixteenth day), the 16th day of the first lunar month (Feb. 21, 1951); it "is a day of devotion and prayer at the family tomb." In Hanashiru, food is taken in two lacquer boxes (*jûbako*), the second of which includes bean curd (p. 253).

In historical times, Okinawan culture was for centuries exposed to Chinese culture, especially from the 14th to the early 17th centuries, "The most significant borrowings, either directly from China or via Japan," have included "articles of diet, such as bean curd" (p. 298).

Soybean or soybeans are mentioned on pages vii, 74 (soybean sauce), 76-77 (soybean oil), 86, 138 ("The second month (March 8 to April 5, 1951) is devoted to soybean planting which continues until about the middle of the month..." The soybean plots are weeded), 131 ("Four crops are the mainstays of Okinawan agriculture: rice, sweet potatoes, soybeans, and sugar cane"), 135-36 (soybeans in

© Copyright Soyinfo Center 2013

crop rotation), 138-39 (Soybeans are harvested in the fifth month, June 5 to July 3, 1951), 151 (After the soybean, the daikon is the most important of the minor crops grown for home use. Soybeans are planted once a year), 297 (sweet potatoes, soybeans, and sugar cane can be grown freely on land unsuited for rice). Address: Geographer, Berkeley, California.

2226. Griffin, Stuart. 1955. Japanese food and cooking. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 167 p. Illust. No index. 19 cm.
• ***Summary:*** This basic introduction by an American contains about 70 Japanese recipes. The best known of these in the USA is Sukiyaki. The chapter titled "Ingredients" states (p. 3-4) that ingredients available in the USA include *"fu,* or wheat gluten; *tofu,* or bean curd; *yuba* or dried bean curd [sic]; and *udon,* or macaroni... sugared red beans [azuki],... bean paste squares and jellies, seaweed rice-cakes [probably mochi], painted with *shoyu* sauce." Sauces and flavorings are very important to Japanese cookery. "Foremost among these is *shoyu,* or soy sauce, made from wheat or barley, soybeans, salt, and water A dark, inky, thirst-provoking liquid, it is similar to that found in Chinese restaurants. The wheat is grilled in a big iron pan until burnt-brown in hue. It is then crushed. [Soy] Beans are boiled in an adjacent cauldron, with a heavy weight on the lid. Boiling lasts three to five hours, then the fire is put out, and the beans are kept in the kettle overnight. Steaming may be used as a method of bean preparation. This process lasts for five or six hours. The grilled wheat and boiled beans are mixed and placed in a malt-room [sic, koji room] where malt seed [sic, koji starter] are added The mixture turns to malt [koji] in a few days. Salt water is put over the malt and left for a few more days, being stirred occasionally until fermentation takes place. This overall mixture is pressed, and the [soy] sauce obtained is bottled.

"*Miso* is another necessity. This is a mixture of malt [koji], salt, and mashed soybeans, the liquor of which is drained off in tubs and allowed to ferment. *Miso* will be discussed later in the soup chapter" (see p. 64). Soy sauce and Aji-no-Moto are frequently mentioned. Soy-related recipes: Chirashi-zushi (with beancurd, p. 31-34). Sashimi (with shoyu, p. 36-41). Miso soups (p. 49, 64-69). Bean curd soup (p. 52-53). Roasted on a plough (sukiyaki with bean curd, p. 70-81). Vegetables, white sesame & vinegar (salad, with "1 *aburaage,* a kind of fried Japanese bean curd," p. 1124-25). Shoyu spinach (salad, p. 134). Turnips in shoyu (p. 134-35). Sweet soy beans (a festival dish at New Year's, p. 154-55).

Also mentions: Red rice (with azuki beans and glutinous rice, p. 17-18). Norimaki-zushi (sushi wrapped with nori, p. 27-30). Red bean cake (*yokan,* with bean paste, made from red kidney beans, and agar-agar, p. 145-46). Red kidney bean soup cake (*shiruko* [with azuki beans and mochi], p. 148-49). Bean & jam cake (*kuzumanju,* [with azuki bean paste and kuzu], p. 150-51). Address: [Japan].

2228. *Indian Council of Medical Research, Special Report Series.* 1955. Milk substitutes of vegetable origin. No. 31. 48 p. (New Delhi). [216 ref]
• ***Summary:*** Contents: Importance of milk in human dietary. Soya bean research in India. Vegetable milk from groundnut. Preparation of milk substitutes–soya bean milk. Groundnut milk and related products. Other milk substitutes. Summary and conclusions. References.

"During the Bengal Famine of 1943, Guha and Saha prepared a mixture of soya-bean, groundnut and malted barley from which a milk was prepared, which fortified with calcium and shark liver oil, was fed to a large number of infants and children who liked this feed and responded well to it. Experiments with rats showed that this milk gave better growth than ordinary bazaar milk but slightly less than genuine cow's milk."

"During the past 3 decades, several attempts were made in India to popularise the use of soya-bean as an article of human food... Experiments carried out at Coonoor by Aykroyd and Krishnan (1937), showed that the pulse did not have any advantage over the commoner pulses as already consumed in the country. Subsequently a more intensive programme was carried out in 4 Laboratories (Dacca [in today's Bangladesh], Bombay, Lahore and Coonoor) in accordance with a plan drawn up by the Soya-bean Sub-Committee of the Nutrition Advisory Committee. The report of that Sub-Committee (1946), generally confirmed the earlier Coonoor results and showed that, in spite of its higher protein content, soya-bean did not reveal any superiority over the commoner Indian pulses as a supplement to the typical Indian diets. The Sub-Committee stated, therefore, that it was 'not in a position to advocate *immediately* the encouragement of the production of soya-bean on a wide scale in India for use as a substitute for Indian pulses. The question should, however, be reconsidered if and when further evidence on the nutritive value of soya-bean becomes available.'

"When preparing the above report, the Sub-Committee had before them the results of the Dacca experiments which showed that while the bean itself, cooked as a pulse, had no supplementary value to the simplified rice diet, the milk prepared out of the bean had a definite supplementary value which was only slightly inferior to that of cow's milk. There was also a detailed report from the Indian Institute of Science, Bangalore, which indicated that the digestibility and the biological value of the fraction of soya-bean protein which was in stable emulsion as a result of processing were

© Copyright Soyinfo Center 2013

considerably higher than the corresponding values for the whole soya-bean protein. The latter report also outlined an improved method of preparing a stable and adequately fortified soya-milk which had already been used for trials in Bangalore.

"As the above observations were rather suggestive, a fresh programme of investigations was initiated at Bangalore under the auspices of (i) the then Indian Research Fund Association (now Indian Council of Medical Research), for assessing the nutritive value of processed soya-bean milk as compared with cow's milk at different levels in the case of both experimental animals and human subjects, (ii) the then Food Department, (now Ministry of Food & Agriculture) for pilot plant trials on the production of soya-milk and related products, and (iii) the then civil and Military Station, Bangalore, for mid-day school feeding of about 6,000 school children with rice and soya milk curd as compared with rice and skimmed milk curd. In these programmes the Indian Institute of Science conducted the preparatory studies and the animal experiments, while the Nutrition Research Laboratories collaborated in the field studies and made the necessary health observations. The trials which were conducted over a period of 3 years (1945-48) showed that, unlike the whole soya-bean, the milk or curd prepared out of it was acceptable, had a high digestibility and a definite supplementary value to the poor cereal diet as consumed in South India." Address: ICMR, New Delhi, India.

2229. Jelliffe, D.B. 1955. Infant nutrition in the subtropics and tropics. *World Health Organization Monograph Series* (*Geneva*) No. 29. 237 p. [313 ref]
• ***Summary:*** Contents: Introduction. 1. Evolution of infant feeding in the Western world. 2. Present infant-feeding practices in the subtropics and tropics. 3. Present status of nutritional disease among infants in the subtropics and tropics. 4. Methods of improving infant feeding in the subtropics and tropics. 5. Prevention of kwashiorkor. Acknowledgements. Annexes: 1. Summary of suggested methods of infant feeding in the subtropics and tropics. 2. Questionnaire for use in investigating methods of infant feeding. Illustrations. References. Index.

Soya-bean products are mentioned on pages 47 (tempeh and "tahu" [tofu]) and 49 (soya curd [tofu] and tempeh).

In the chapter titled "Prevention of kwashiorkor," pages 160-62 review and discuss the use of the soya bean to prevent protein deficiency in infant nutrition: (1) Soya-bean emulsion is "also known as soya 'milk.'" Work in the USA, Philippines, Hong Kong, Thailand, and Indonesia is discussed. (2) Soya-bean curd, "also known as soya 'cheese'" [tofu], is rich in calcium but is lacking in the vitamin-B complex. "Nevertheless, it can be an extremely valuable food, and, according to Platt (personal communication) is far superior to other soya products in infant feeding." (3) Fungus-digested soya beans or tempeh from Indonesia contains vitamin B-12 and is not expensive. It is very digestible and can be ground up and added to steamed rice for feeding older infants. (4) "Miscellaneous. Various other prepared soya products are of great nutritional value, but are probably unsuitable for infants." These include miso and soy sauce. "A simple method of preparation which requires further investigation is that of grinding the roasted beans into a flour, which can be added to gruels or soups. The roasted bean is certainly palatable but its digestibility for children is unknown, as is the effect of roasting on the trypsin inhibitor and on the amino-acid composition." Address: WHO Visiting Prof. of Paediatrics, All-India Inst. of Hygiene and Public Health, Calcutta. Formerly, Senior Lecturer in Pediatrics, University College of the West Indies, Jamaica. Nutrition Consultant, World Health Organization.

2230. Lager, Mildred. 1955. How to use the soybean: A plus factor in modern nutrition. Burbank, California: Published by the author. Printed at La Sierra College Press, Arlington, California. 115 p. Index. 23 cm. Lay-flat comb bound.
• ***Summary:*** Contents: Preface. Nutritional nuggets–food value of soybeans. The versatile soybean. Soup to nuts–soybeans and soy products. Recipes: Green soybeans. Dry soybeans. Sprouted soybeans. Roasted or toasted soybeans. Meat-substitute dishes. Soy-enriched meat dishes. Soy noodles, macaroni, spaghetti. Sauces and gravies. Soups. Salads. Dressings. Soy spreads. Soy milk. Tofu or soy cheese. Soy butter (made from finely ground soybeans or soy flour, it may be raw or roasted, and resembles peanut butter; p. 73-74). Soy cereals. Soy desserts. Soy candies. Soy beverages. Soy-flour recipes. Breads and muffins. Pancakes and waffles. Soy gluten recipes. Baking-powder biscuits. Pastry. Cookies and doughnuts. Cakes. Contains 350 recipes.

A so-called "second edition" of this book was published in 1959, but it was identical to this first edition.

Ad in *Let's Live.* 1960. April. p. 39. Mildred Lager Publications [perhaps her home] is now located at 4118 Warner Blvd., Burbank, California. Mildred died in Aug. 1960. Address: Burbank, California.

2231. Williamson, Jessie. 1955. Useful plants of Nyasaland. Zomba, Nyasaland: Government Printer. 168 p. See p. 60-62. Edited by P.J. Greenway. Illust. by G. Jackson. 25 cm. [2 ref]
• ***Summary:*** *Glycine javanica* L. (called *Yembe* in ciCewa), is a perennial herb with slender climbing stems that are thinly pubescent. The leaves are frequently cooked as a side dish in Nyasaland [named Malawi after 1964]; they are not slimy and are much used.

The soybean (*Glycine max.*) is grown in considerable amounts in the southern province of Nyasaland. "The beans contain a saponin, which is poisonous and which is found in varying amounts in the different kinds." Among the many varieties suitable for eating are Herman, Easy Cook [Easycook], and some of the non-shattering Hernon varieties.

© Copyright Soyinfo Center 2013

Methods of cooking soy soya beans: 1. Boiled as a side dish. 2. Boiled and mashed beans with skins removed as a side dish (called *cipere*). 3. The use of soya bean meal [soy flour] to improve the food value of porridge (*nsima*)*:* Introduction, use of roasted meal [roasted soy flour], use of unroasted meal [soy flour]. 4. Roasted soya [soynuts] as a substitute for groundnuts in side-dishes. 5. Soya bean milk and curd [tofu; a method is described for making soya bean milk from pounded soya beans that was in use at the Jeanes Training Centre in 1942; a method for making tofu from this milk is also described]. 6. Fresh [green] soya beans as an extra food [snack]. 7. Roast soya beans as an extra food.

Concerning the "Use of roasted meal: The beans should be roasted for some minutes and then ground or pounded. The resulting flour is palatable and also stores well. It may be used in amounts of up to 20 per cent. (10 per cent. is recommended) to mix with any other kind of flour. It makes a very palatable product with cassava flour, the latter is of such poor nutritive value on its own, as it consists almost entirely of starch, that the addition to it of protein-rich meal is important." Address: Member of Nutritional Survey and Nutritional Investigator, Nyasaland.

2232. Fearn Soya Foods. 1955? Money saving recipes for using Dr. Fearn's Pure Soya Bean Powder (Leaflet). Melrose Park, Illinois. 3 panels each side. Each panel: 22 x 9 cm. Undated.

• ***Summary:*** On the front panel of this leaflet (black ink on yellow) is an illustration of woman holding up a glass of (probably) soya milk. Below that is written: "Meatless. No starch. No salt. 42% complete protein. For vegetarians, athletes, restricted diets." When we open the leaflet, across the top is written: "How to use Dr. Fearn's Pure Soya Bean Powder." Below that are about 20 recipes and suggestions for use. On the back 3 panels are 15 more recipes.

One other front panel is titled "New recipes to try." It includes: Tiger's milk–homemade. Baby formula. Soy yogurt. Soy cheese–Tofu. The bottom half of this panel lists seven pamphlets from Fearn Soya Foods "available at your health food store (see Foods, Health in the Yellow Pages). Send us a self addressed stamped envelope if your store does not handle them." They are: "(1) The Fearn Chart–Lists all the vitamins and minerals of most common foods. (2) How to Get Slim and Stay Slim–Describes a satisfying 22 cent per day reducing diet. (3) About the Soya Bean–Describes its nutritive values and the hexane solvent menace. (4) You Cannot Live Without Protein–Tells function and importance of protein. Of special interest to vegetarians and body builders. (5) Recipe Folder: Soya Powders–Includes bread, soy milk, puddings, etc. for restricted diets. (6) Recipe Folder: Soya Granules–Lists many money saving recipes based on this high protein food. (7) Recipe Folder: Soybeans–Tells how to use our cooking and sprouting organic soybeans."

The third front panel is titled "Try these Dr. Fearn's Foods.

"Dr. Fearn's High Protein Food–47% protein. Makes pleasant tasting drinks with cold water. Vanilla or root bear flavors. 1 lb.

"Dr. Fearn's Wholewheat & Soya Pancake Mix contains the finest stone ground wholewheat with soya powder. It is quite digestible, higher in protein and lower in starch than the usual run of similar products. 1 lb.

"Dr. Fearn's Regular Pancake Mix is the same as above except that unbleached white flour is used. 1 lb.

"Dr. Fearn's Wheat Cereal & Soya is a cooked type cereal, made with the finely chopped Northern wheat and soya granules. It contains over 30% complete protein and less than 55% starch. A satisfying breakfast for the entire family and usually keeps hunger away until the noon meal. 1 lb.

"Dr. Fearn's Pure Soya Bean Powder for making soya milk. Contains 42% complete protein and no starch. Can be used for enriching various drinks, baked foods and meat dishes. 10 oz. and 2 lbs.

"Dr. Fearn's Soya Granules, contain 52% complete protein, no starch, 5% fat. Can be eaten as is, cooked, or added to meats, soups and other foods. 1 lb.

"Dr. Fearn's High Lecithin Soya Powder same as regular Soya Powder except 15% Lecithin has been added. 10 oz.

"Dr. Fearn's Low Fat Soya Powder. Same as regular Soya Powder except fat has been reduced to 5%. 10 oz.

"Dr. Fearn's Corn Bread & Muffin Mix with soya, makes light muffins and corn bread, very tasty and nutritious. Excellent for a surprising change. 1 lb.

"Dr. Fearn's Organic Soybeans. Organically grown without chemical fertilizers and poisonous insecticides. 1 lb.

"Dr. Fearn's Wheat Germ Powder. A fine toasted powder with most oil removed. Excellent added to drinks. Readily blends with most any other food."

Note 1. This leaflet was found inserted in *Mrs. Hauser's Recipe Book* (1938), purchased by Soyfoods Center from a used book store in Spokane, Washington. This booklet seems to show that Mrs. Hauser's Food Products Company (4617 Melrose Ave., Los Angeles, California) purchased Soya Bean Flour (and probably some other soy products) from Fearn Soya Foods.

Note 2. This is the earliest English-language document seen (Sept. 2012) that contains the term "Soy yogurt." Address: 1206 North 31st Ave., Melrose Park, Illinois.

2234. Strayer, George M. 1956. We must remember, U.S. soybeans are food for the Japanese. *Soybean Digest.* Jan. p. 8-10.
• ***Summary:*** This is the first in a series of reports by the editor covering his recent marketing study for the USDA in East Asia. Above all, Japan wants clean soybeans from the U.S., with less foreign material. New U.S. standards allow No. 2 soybeans to contain up to 2% foreign material. U.S. standards classify all particles of soybeans which go through a 8/64-inch round hole screen as foreign material. Manchurian standards classify such broken particles of soybeans as unsound soybeans but not as foreign material. An estimated half of U.S. foreign material is these broken particles–which still end up making adequate soy products. "Because Manchurian [soy] beans have for years arrived with a foreign material content of ½% or less, the approximately 3,000 oil mills, 6,000 soy sauce plants, 5,000 soy paste [miso] plants and the 50,000 tofu or soybean curd plants in most cases do not have cleaning facilities... The role played by milk, meat, and eggs in the diets of America is taken by soybeans in the diets of Japan." The industries that uses soybeans are well organized, and each has its own trade association.

Photos show Strayer with the heads of the Yokkaichi oil mill and the Japan Oil and Fats Manufacturers Assoc., the plant of the Hohnen Oil Co. at Shimizu which processes only soybeans into edible oil, glue, flour, and flakes for miso and tofu production (capacity 300,000 tons/year), K. Sugiyama, chairman of the board of Hohnen Oil Co. receiving a medal, and examining soybeans at Takeya miso plant.

2235. Strayer, George M. 1956. Japanese tofu makers don't like green beans or foreign material: Third of a series of reports by the editor covering his trip to the Far East. *Soybean Digest.* March. p. 20, 22.
• ***Summary:*** Contrary to general opinion, the Japanese are relatively well fed. "Theirs is a vegetable diet [largely meatless, near vegetarian, except for fish] out of necessity, for the concentration of nearly 90 million people on a small area of land less than the size of California and only about one-tenth of which is tillable makes a vegetable diet a necessity. They cannot afford the luxuries of an animal diet.

"Soybean protein fills the place in the Japanese diet that milk, meat and eggs occupy in our economy." Describes how tofu is made (8 photos show key steps in the process), and gives information based on an interview with Mr. Yamamoto of the Japan Tofu Association. Tofu originated in China where it has been made for at least 1,300 years. "In Japan the records show the production of tofu for something over 400 years... Today the tofu industry in Japan is using about 300,000 metric tons of soybeans per year, of which about 200,000 are produced in Japan and the remaining 100,000 tons are imported.

"A portion of the imports has been coming from the United States, some of them from Manchuria, and some from Brazil." "There are nearly 50,000 small tofu plants scattered throughout Japan. They buy their soybeans in small lots, and it is utterly impossible for them to provide adequate cleaning facilities in each of those plants. They must use the beans as they come to the plant, although I did see in my visits some efforts to screen the beans by hand and blow the light materials out of some lots. As can be easily imagined, morning glory seeds, foxtail, seed, cockleburs, corn and sticks and stems do not make good tofu. It is easy to understand why the plant operators want clean soybeans, and why over a period of time they are going to insist on having them.

"Managers of the tofu plants quickly point out that they consider the high foreign-material content of No. 2 beans a disadvantage from the standpoint of the quality of their product, and also from the standpoint of transportation on those materials. They would like, they continually point out, to buy clean soybeans, recognizing that they will cost more money.

"The tofu association buys some of the bean supplies coming from imported sources for its members. They want as light a yellow color as possible–in fact a nearly colorless or white bean is their preference. They want light-colored hilums, and greatly disapprove of the black hilum varieties because of the effect upon the color of the tofu. They want yellow interior color and yellow seedcoat, and dislike the green seedcoated beans which they sometimes get from the U.S. as U.S. No. 2 yellow beans."

2236. Walley, Ersel. 1956. Osaka soybean exhibit a success: Soybean marketing development program project No. 1. *Soybean Digest.* June. p. 6-8.
• ***Summary:*** "Japan was indeed a most logical location for our first truly International Exhibit of soybeans and soybean products." "Our exhibit at the Japan International Trade Fair in Osaka, April 8-22, 1956, was complete in every detail to tell the story of American soybeans from planting to ultimate utilization in the U.S. and Japan. A panorama of large photographs lined the wall of the exhibit telling the entire story through captions printed in Japanese." Two American films telling the entire story of American soybeans, in Japanese, were shown regularly in the small theater in the American pavilion, and proved of great interest. At least 500,000 people streamed through the American pavilion and viewed the exhibit.

Special thanks must be given to Shizuka Hayashi, managing director of the newly formed Japanese-American Soybean Institute, and to Marion Hartz of Stuttgart, Arkansas. Photos show: (1) Marion Hartz, Shizuka Hayashi, and Ersel Walley standing in the U.S. exhibit. (2) Long lines of people waiting to get into the American pavilion at the Osaka Trade Fair. (3) Ersel Walley demonstrating soybean cleaning equipment for many Japanese onlookers. (4) A

Japanese trade group inspecting the soybean exhibit. (5) Mr. Hayashi with a group of Japanese tofu makers visiting the Trade Fair.

2237. *Washington Post and Times Herald.* 1956. Anne's trading post: Travelers bring recipes from afar. July 29. p. F14.
• ***Summary:*** Sukiyaki is the most popular of saucepan dishes. This recipe is taken from the *Japanese Cookbook* published by the Japan Travel Bureau. The ingredients include Soy sauce, 3 tablespoons and Tofu, 4 ounces. "Tofu is a bean curd which can be purchased here [in Washington, DC] however I omit it because it doesn't appeal to American palates."

2238. Owen, June. 1956. Food news: Other lands offer menu. *New York Times.* July 31. p. 26.
• ***Summary:*** "Oriental: Oriental Food Shop, 2791 Broadway, offers all the ingredients necessary for Japan's most noted dish, sukiyaki. These include tinned bean curd, bamboo shoots, and Japanese soya sauce."

Katagiri, 223 East 59th Street, is another good source for imported Japanese foods, especially canned, ready-to-eat products, including "scallions in soya sauce."

2239. Pineda, Felix A. 1956. The economic value of soybeans and its manufacture for food products. *Agricultural and Industrial Life* (*Manila*) 18(June):8-9, 30; 18(July):8-9, 37.
• ***Summary:*** Contents: Introduction. Economic food value of soybeans. The manufactured food products from soybeans and their utilization. Methods of food preparation from soybeans: Soybean-rice, Soyalac or soybean milk, soybean cheese [fermented] or cheap meat, soybean cocoa or Nutribean, soybean coffee, toyo sauce or toyo [includes detailed instructions for making this Philippine-style soy sauce], salted beans or tau-si [fermented black soybeans], "soybean flour or soyaflour," soybean sprouts, dried and green beans ("The green soybeans with pods can be used for gulay, like the green mongo."). Conclusion and recommendation.

"Soybean milk" is suitable for the diabetic. Its food value approaches cow's milk.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the word "soyaflour." Address: Sugar Agronomist, Philippines.

2240. Walley, Ersel. 1956. The Japanese-American Soybean Institute: Soybean marketing development program project No. 2. *Soybean Digest.* July. p. 12-13.
• ***Summary:*** Under agreement with the USDA's Foreign Agricultural Service, the American Soybean Association is charged with carrying out a year-round soybean marketing development program in Japan. This is the first such project to be conducted by an American commodity group in foreign sales promotion–so there were few guidelines or examples of how to proceed.

Walley went to Japan and initiated the first project, the soybean exhibit at the Osaka Trade Fair. The next project was the formation of this institute [JASI]. Mr. Shizuka Hayashi was hired as managing director. He "enjoys unusual respect and prestige throughout the entire Japanese soybean industry. He speaks and writes English excellently." He has devoted most of his life to oils and fats, and has visited the United States.

The Japanese members are the manufacturers of oil and fat, miso, tofu, and shoyu, plus the fat and oil importers-exporter associations.

Photos show: (1) Walley and Hayashi. (2) Signs above the American soybean exhibit at the Osaka Trade Fair. A large round sign shows two pods filled with soybeans plus soybean leaves at the top. Two rectangular signs read "Soybeans" in Japanese and English.

Note: According to a report titled "The Evolution of the Market Development Programs and the Public / Private Partnerships," by the U.S. Agricultural Export Development Council (USAEDC) concerning the cooperator program: "The first cooperative agreement was signed with the National Cotton Council in 1955, followed quickly by one with the Oregon Wheat Council. Soon the agreements expanded to include tobacco, soybeans, dairy, millers, poultry and rice in 1956, followed by prunes, raisins, Florida citrus, Sunkist (California / Arizona), canned peaches, red meat, tallow and grease, hides and skins in 1957 and Northwest apples and pears and a small feed grains project in 1958." Address: Special Representative and Past President of the American Soybean Assoc.

2241. Platt, B.S. 1956. The soya bean in human nutrition. *Chemistry and Industry* (*London*) No. 32. p. 834-37. Aug. 18. [25 ref]
• ***Summary:*** The author worked in China during the period in 1933-37, and there had "some experience of preparations made from the soya bean in infant feeding; also rarely a day passed in that period when I did not eat something of one or more of the Chinese soya bean food products–sauce, oil, bean curd or sprouts."

The author gives figures to refute the common misconception that "millions of Chinese have lived for centuries on a diet of rice and soya beans. For example (according to Buck 1938) in northeast China (Manchuria) where soya beans were used most, "very little rice was eaten, 25% of the calories in the diet came from wheat, and 5% from the soya bean... Only 2% of the calories in the Chinese farm diet were derived from vegetable oils which included oils from groundnuts, rape seed, sesame, and soya bean; the first three together occupy rather more than the acreage under soya bean crops. Learmonth (1956, p. 360) has stated that the soya bean has only been grown as an oil-bearing

© Copyright Soyinfo Center 2013

crop since the 19th century. There is, however, a Chinese work dated A.D. 1637 called 'The exploitation of the works of nature,' the second volume of which is devoted to oils and fats. From this work it may be deduced (according to information supplied by Dr. G.D. Lu) that the soya bean was grown for its oil as early as the third century A.D. According to Buck's data on most frequent yields, broad beans and field peas yield on average 18 bushels per acre compared with 14 bu/acre for soya beans. Peanuts or groundnuts give 64 bu/acre but it is not clear whether they are shelled or not.

"Anyone who, at a Buddhist feast, has eaten the delectable dishes made from the soya bean cannot but agree that, gastronomically, the merits of a wide range of soya bean products are outstanding. The 'vegetable' varieties of soya bean are, in fact, often simply immature ones. They are green and look like young lima beans but they have a richer and a distinctive and more delicious flavour... Soya bean curd (tou fu) is used in a variety of dishes. It is prepared from the mature beans, not usually in the home, but by the village 'specialist.'... With appropriate culinary treatment, it can be made to imitate a variety of meat dishes; traditionally it is given to young Chinese children."

The author also discusses soy sauce, tempeh, soy oil, and soya "milk".

"I recently had a visit from a professor of pediatrics at a hospital in Djakarta [Jakarta], Indonesia, who reported that about 50 infants put on a soya milk preparation, *all*, after two months, had some gastro-intestinal disturbances; none of them was thriving. In my view, it is still too early to replace human milk for infants and certainly not by a vegetable substitute for animal milk...

"In my own experience soya bean curd is a suitable product for feeding young children and I suggest that its superiority over soya milk may be the separation in the 'whey' of substances that have been shown to be toxic for animals.

The contents of this paper were first presented as a contribution to the discussion on "Soya in the Field of Nutrition" by E.M. Learmonth, published in *Chemistry and Industry* on 12 May 1956. The author mentions an ad for "Sun Spot" soya milk.

The article begins with a poem written by "a medical nutritionist and his wife": "'Little Soybean who are you / From far off China where you grew?' / I am wheels to steer your cars, / I make cups that hold cigars. / I make doggies nice and fat / And glue the feathers on your hat. / I am very good to eat, / I am cheese and milk and meat. / I am soap to wash your dishes, / I am oil to fry your fishes, / I am paint to trim your houses, / I am buttons on your blouses. / You can eat me from the pod, / I put pep back in the sod. / If by chance you're diabetic / The things I do are just prophetic. / I'm most everything you've seen / And still I'm just a little bean.'"

Note: This poem, written by Dr. and Mrs. J.W. Hayward, was first published in the *Proceedings of the American Soybean Assoc.* 1940. Aug. p. 6. Address: C.M.G., Ph.D., M.B., Ch.B., Human Nutrition Research Unit, Medical Research Council Laboratories, Holly Hill, London, N.W. 3.

2242. Nickerson, Jane. 1956. Japan big contributor to American table: Products sent here to go on exhibition.–Recipes offered. *New York Times.* Oct. 25. p. 38.
• ***Summary:*** Japan exports more than 80 food products to the United States–more than the writer had expected. The variety of Japan's food contributions to America will be the subject of the Japanese Food Show, which opens to the public next Tuesday at the Japan Trade Center, 393 Fifth Ave., Manhattan. About 50 imported foods will be on display, some will be for sale, and the preparation of popular recipes (such as sukiyaki) will be demonstrated.

Imports to be displayed include "shoyu (soy sauce)."

Three Japanese specialty foods shops plan booths at the show: the Oriental Food Shop (2791 Broadway), Katagiri (224 East 59th St.), and Tanaka (144 West 65th St.).

A recipe for "Beef teriyaki" calls for: "½ cup shoyu (Japanese soy sauce)... 1 cake tofu (soy bean curd), cut into cubes..."

2243. *New York Times.* 1956. Food: Two foreign restaurants. Oct. 31. p. 38.
• ***Summary:*** It is a welcome sign that New Yorkers are becoming interested in Chinese dishes other than sweet and sour spareribs. Sun Luk, an exciting Chinese restaurant at 143 West Forty-ninth Street, offers an original and delicious dessert: "soy bean curd sweetened and flavored with almond."

Note: This well-known Chinese dessert, called "Almond bean curd" in some Chinese cookbooks, typically contains no soy; it is made with almond milk, gelled with agar, then refrigerated. It is cubed and served with a sweetened sauce flavored with almond extract (see Mei and Adams 1963, p. 121).

2244. Hayashi, Shizuka. 1956. The work of the Japanese-American Soybean Institute. *Soybean Digest.* Nov. p. 20.
• ***Summary:*** This Institute was established in May 1956. The initial work has concentrated on a study of the condition of soybean from the USA and other countries when they arrive in Japan. Additional studies have been made of the shoyu and miso industries in Japan.

The Japanese soybean crop this season has been a poor one, estimated now at about 170,000 tons, far below the earlier estimate of 220,000 tons. These domestic soybeans are preferred by makers of miso, shoyu, tofu, glue, and feeds. To make up the total requirements of 954,130 tons, some 784,130 tons must be imported. This includes 10,000 tons of Brazilian soybeans and at least 86,000 tons of Chinese soybeans–both depending on the price.

© Copyright Soyinfo Center 2013

New-crop U.S. soybeans purchased by Japan are estimated as follows: 60,000 tons for October shipment, 110,000 tons for November shipment, and 30,000 tons for December shipment. Total: 200,000 tons. The average price is about $112 to $113/ton, C&F Japanese ports. A small photo shows Shizuka Hayashi. Address: Managing Director, JASI, Tokyo.

2245. *Chicago Daily Tribune.* 1956. Musical sounds abound when you're in Japan. Dec. 9. p. F18.
• ***Summary:*** In the early morning "the natto seller peddles his fermented beans with a musical call of 'Natto, Natto.'"

Another food vendor "sells tofu (soybean curd). He does his advertising with a horn and his call of 'tofu!'"

2246. **Product Name:** Tofu.
Manufacturer's Name: Chong Tofu Manufacturing Co.
Manufacturer's Address: 3220 Waialae Ave., Honolulu, Oahu, Hawaii.
Date of Introduction: 1956.
New Product–Documentation: Honolulu City Directory. 1956. Chong Tofu Manufacturing Co. 3220 Waialae Ave., Honolulu. 1957 Directory. Now listed as Chong's Tofu (K.C. Chong, proprietor), same address.

2247. **Product Name:** Tofu.
Manufacturer's Name: Maili Tofu Factory.
Manufacturer's Address: 87-364 Farrington Highway, Maili, Honolulu.
Date of Introduction: 1956.
New Product–Documentation: Honolulu City Directory. 1956. Maili Tofu Factory (Gilbert Y. Uyehara, proprietor). 87-364 Farrington Highway, Maili, Honolulu. 1958-59 Directory. Name changed to Maile Tofu-Ya. 1960 Directory. Name changed to Maile Grocery. Address same.

2248. Chao, Buwei Yang. 1956. How to cook and eat in Chinese. London: Faber and Faber. 286 p. Illust. Index. 21 cm.
• ***Summary:*** The basic information about soy in this 1956 British edition is quite similar to that in the original 1945 American edition except: (1) British spelling is used (e.g., flavour instead of flavor), and additional information about European ingredients or substitutes; (2) The same (or almost the same) text appears on different pages. See pages 20-21 (Vesop is very much like soy sauce. Clear-simmering is slow-cooking without soy sauce. Red-cooking is slow-cooking with soy sauce), p. 43-44 (red beans, [probably azuki], horse beans, soy beans and their products, bean milk and bean curd [tofu]), p. 46 ([soy] bean oil and peanut oil), p. 47 (soy sauce), p. 49-50 (soy-bean sauce, soy sauce or *shi-yau* in Cantonese, "Acceptable substitutes for soy sauce in the order of preference, are as follows: 'Vesop' sauce (Italian), 'Maggi' (German), and 'Kub' (French))." "Similar to soy sauce is a soy jam, fermented flour jam, "In Cantonese the soy jam is called *mo-shi."* Oyster sauce, sesame oil, soy bean cheese (*fu-yü*).

Soy-related recipes include: Bean curd stirs meat slices (p. 84-85). Bean curd stirs shelled shrimps (p. 144). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 180-81). Plain stirred bean curd (p. 181-82). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 182-83). Pot-stuck bean curd (p. 184). Bean curd and meat-slice soup (p. 188). Huichou pot (with fried bean curd [large triangles or small cubes], p. 204-05). Sandy-pot bean curd (p. 205-06). Soy jam noodles (p. 224-25, with ½ can *yünshi* soy jam {also called *mo-shi* in Chinese foodshops}).

Pages 181-82 discuss bean curd. The Chinese characters for all recipe names are given on pages 257-71. Address: Cambridge, Massachusetts.

2249. Chen, Philip S.; Chen, Helen D. 1956. Soybeans for health, longevity, and economy. South Lancaster, Massachusetts: The Chemical Elements. xii + 241 p. Illust. Index. 21 cm. 2nd ed. Jan., 1962, 242 p. [24 ref]
• ***Summary:*** A comprehensive review of the subject. Contents: Preface, by the author (South Lancaster, Massachusetts, July 1956). Foreword, by Geo. M. Strayer, Vice-President and Secretary-Treasurer, American Soybean Association. Introduction. Part I: Nutritive value of the soybean. 1. Protein (incl. Dr. Wolfgang Tiling of Hamburg, Germany; Dr. Harry Miller). 2. Fat (incl. phosphatides, sterols and hormones). 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease (incl. Dr. Wolfgang Tiling of Germany).

Part II: Soy products. 8. Soybean oil: Composition and properties, processing and refining, reversion, uses, phosphatides, margarine, mellorine (vegetable frozen dessert). 9. Soybean oil meal: Heat treatment, Gelsoy, Multi-purpose Food. 10. Soy flour: Uses, soy bread vs. enriched white bread. 11. Soy milk. 12. Soy cheese (or soybean curd, "aptly described by the Chinese as 'the meat without bones'"–incl. pressed tofu sheets and yuba). 13. Soy sauce: Preparation of kojis, brine fermentation, production yields, microorganisms are available. 14. Soybean sprouts.

Part III: Soybean culture and preservation. 15. Soybean culture: Two types of soybeans (commercial field vs. edible or vegetable varieties), inoculation, fertilizer, cultivation, harvest. 16. Preservation of soybeans: Shelling, canning, freezing, dehydration, harvesting dry mature soybeans.

Part IV: Recipes. 17. Soybeans and soybean pulp: Green or fresh soybeans, dry soybeans, soybean pulp ("prepared by pressing cooked soybeans through a coarse sieve or by grinding them in a food grinder"), recipes (incl. Soyburger, Scalloped green soybeans, and Roasted soybeans–dry roasted

© Copyright Soyinfo Center 2013

or deep-fried (p. 151). Describes how to make wheat gluten at home and praises monosodium glutamate for its ability to improve the flavor of recipes–though its use is called for only in the recipe for Soyburger). 18. Soy flour: Breads, cakes, cookies, pies, soups, other recipes (A recipe for Wafers, p. 180, calls for "½ cup roasted soybeans, finely chopped").

19. Soy grits and soy flakes. 20. Soy milk. 21. Soy cheese. 22. Soybean sprouts.

Appendices: A. Soybean utilization (chart). B. Manufacturers and handlers of soy foods (Source: 1956 *Soybean Blue Book*). C. References.

Chapter 1, "Protein," begins: "The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15).

Chapter 15, "Soybean Culture," describes how to grow soybeans in a garden. Pages 126-27 discuss the two types of soybeans: the commercial field type and the edible vegetable type. Five major differences between the two types are discussed (p. 126). The edible varieties are larger in size, do not yield as heavily (though they yield more heavily than snap beans or lima beans), are more prone to shatter as they near maturity in the field, are superior in flavor, texture, and ease of cooking, and some edible varieties are also superior in the manufacture of soybean flour, soybean milk, roasted beans and other products. Table 31 (p. 130) lists eleven varieties of edible soybeans: Very early–Giant Green. Early–Bansei, Fuji. Midseason–Hokkaido, Jogun, Willomi. Late: Illington, Imperial, Funk Delicious, Emperor, Higan. Commercial–Illini.

Chapter 16, "Preservation of Soybeans," describes how to preserve "green soybeans" by canning, freezing, and dehydration.

Photos show: (1) A sack of Lincoln soybeans (facing p. 1). (2) Soybean plants, showing pods and leaves (p. 3 and 4). (3) A beam balance with a small amount of soy flour balancing many animal products. "The protein value of soy flour: 1 lb. of soy flour contains protein values equal to 2 lbs. beef, or 34 eggs, or 6 quarts milk." Source: Health and Character Education Institute (p. 6). A similar photo (p. 24) states: "1 lb of soy flour contains food calories equal to 3½ lbs beef, or 3 quarts milk, or 29 eggs. (4) Two views of a child. Left, suffering from marasmus. Right, after six months on a soy milk diet. Courtesy Dr. Wolfgang Tiling (p. 62). (5) A machine at the Northern Utilization Research Branch of USDA treating soybean oil with alkali (p. 72). (6) The distribution of MPF [Multi-Purpose Food] to starving Indian children (p. 91; Courtesy Meals for Millions Foundation). (7) Quaker City No. F4 grinding mill (p. 102; Courtesy Straub Co., 4059 Ridge Ave., Philadelphia, Pennsylvania). (8) Early soy cheese (tofu) production in the United States (p. 108; perhaps at Madison Foods). (9) The Northern Utilization Research Branch, Agricultural Research Service, USDA– shows outside of the huge building (p. 113). (10). How to grow soy sprouts in a glass jar at home (p. 119). (11) Well nodulated soybean roots (p. 129; Courtesy The Nitragin Co.). (12) Baked soybeans in a crock (p. 144). (13) Soy flour used in numerous baked products (p. 159; Courtesy ADM). (14) Griddle cakes [pancakes] made with soy flour brown quickly (p. 173). (15) Soy peanut butter cookies (incl. peanut butter and soy flour; p. 185). (16) Soy grits in a glass jar (p. 198). (17) Freshly-cooked crisp soybean sprouts in a raw vegetable salad (p. 219).

Note 1. The first printing of this book (1956) was dedicated "To Li Yu Ying and William J. Morse, *The Soybean Champions of the Eastern and Western Hemispheres,"* but by the second printing (April 1957) the dedication had changed "To William J. Morse and Harry W. Miller, *The Soybean and Soy Milk Champions of Our Time."*

The publisher of this third printing was unable to sell all the books printed, so Chen apparently arranged for a company named "Outdoor Pictures" (Box 1326, Escondido, California) to sell them. On the title page, Outdoor Pictures pasted their name and address over that of "The Chemical Elements."

Note 2. According to the *National Union Catalog*, Philip Stanley Chen was born in 1903. The rear cover states that he was born in China and is now a naturalized U.S. citizen. He is a graduate of Emmanuel Missionary College [in Berrien Springs, Michigan] and Michigan State University. Before writing this, his first book on diet, health, or soybeans, he wrote several books on chemistry: (1) The Chloro Derivatives of *m*-cresol. 1933. Easton, Pennsylvania: Mack Printing Co. 7 p. (Abstract of his PhD thesis, Michigan State College of Agriculture and Applied Science); (2) *The Chemical Elements, Rev. ed.* 1948. South Lancaster, Massachusetts: Chemical Elements (fold chart). (3) 500 Syntan Patent Abstracts, 1911-1950. 1950. South Lancaster, Massachusetts: Chemical Elements. 125 leaves. (4) Syntans and Newer Methods of Tanning. 1950. South Lancaster, Massachusetts: Chemical Elements. 128 p.

In 1962 Chen wrote *A New Look at God*, published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

2250. Chen, Philip S.; Chen, Helen D. 1956. Tables (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South Lancaster, Massachusetts: The Chemical Elements. 241 p. [24 ref]

• ***Summary:*** Tables show: (1) Soybean production in the United States, 1924-1958 (p. 2). (2) Essential amino acid content of some foods (calculated as percent of amino acid in sample). Foods include: Extracted soybean oil meal, whole milk, whole eggs, beef loin, patent wheat flour (p. 8). (3) Protein efficiency of a number of proteins (incl. whole milk 2.9, cottonseed flour 2.0, peanuts 1.9, soybean flour 1.8, casein 1.7, patent flour 1.00) (p. 11). (4) Biological value of

© Copyright Soyinfo Center 2013

food proteins for human adults (incl. whole eggs 78, milk 74, meat 72, soy flour 65, peanut flour 42, white flour 41) (p. 11). (5) Supplemental values of soy flour and milk for wheat flour (p. 12). (6) Nutritional quality of soy flour and milk solids in bread (p. 13). (7) Fat content of several common foods (p. 16). (7A) Chemical composition of vegetable oils (in per cent) (p. 18). (8) Carbohydrate content of soybeans (Street & Bailey) (p. 21). (9) Caloric values of various cereals and legumes (p. 22). (10) Mineral content of soybeans (p. 25). (11) Calcium, phosphorus and iron content of soybeans (p. 26). (12) Availability of iron in different foods (p. 27). (13) Availability of iron in several Hawaiian foods (p. 28). (14) Alkalinity of various foods (p. 29). (15) Vitamin content of soybeans and soybean oil meal (p. 32). (16) The vitamin B-1 content of some common foods (milligrams per 100 grams) (p. 34). (17) The vitamin B-complex content of soy flour as compared with wheat flour (per 100 grams of flour) (p. 35). (18) Choline content (dry weight basis) (p. 37). (19) Production of fats and oil in the United States in 1953 (p. 67). (20) Physical and chemical characteristics of soybean oil (p. 68). (21) Chemical composition of soybean oil (p. 69). (22) Protein concentrates used for feed in the United States, 1954-1955 preliminary (p. 83). (23) Correlation of volume of loaf and urease content of soy flour used in making bread (p. 86). (24) Analysis of nutritive elements (p. 92). (25) Soy flour standards (p. 94). (26) The growth-promoting values of the proteins of soybean flour, peanut flour, and cottonseed flour and their values as supplements to the proteins of patent wheat flour (p. 99). (27) Composition of soy milk and cow's milk (p. 103). (28) Some precipitating agents for soy milk (p. 107). (29) Composition of soybean curd (p. 109). (30) Composition of soy bean sprouts vs. mung bean sprouts (p. 122). (31) Eleven varieties of edible soybeans (p. 130). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

2251. Chen, Philip S.; Chen, Helen D. 1956. Soy cheese (Document part). In: P.S. Chen and H.D. Chen. 1956. Soybeans for Health, Longevity, and Economy. South Lancaster, Massachusetts: The Chemical Elements. 241 p. See p. 106-10. Chap. 12.

• ***Summary:*** "Soy cheese" is tofu. Starts by describing how to make tofu. A very interesting photo (p. 108) shows "Early soy cheese production in the United States" (probably at Madison College in Madison, Tennessee).

"Soybean curd contains 7 to 9 percent of highly digestible protein with little carbohydrates and no crude fiber, and therefore has been aptly described by the Chinese as 'the meat without bones'" (p. 108). "From the soybean curd are derived three products of which the Chinese are very fond. They are Tofu Kan [pressed tofu], Tofu P'i [pressed tofu sheets] and fermented soybean cheese [fermented tofu]. These are briefly described below.

"Tofu Kan, or dried soybean curd, is made by filling a small straw or cloth bag with soybean curd and subjecting it to great pressure to reduce further the water content. The product [each cake] measured about 2½ by 2½ by ¼ inches and has the consistency of a soft rubber eraser. The dried soybean curd thus prepared may be seasoned with burnt millet-sugar or soy sauce flavored with tea or other spices.

"Tofu P'i, or soybean curd skin, is formed by pressing soybean curd between sheets of cloth under great pressure. The formed Tofu P'i is like a sheet of canvas about one foot square. It is generally used as a wrapper for sausage.

"Fermented soybean cheese is made in several forms and with different flavors. They are prepared by exposing cubes of soybean curd (from ½ by ½ by ¼ to 1½ by 1½ by ¼ inches) on matting to mould for a week or longer, and then placing it is salted rice wine or salted soy sauce to age for 6 months to a year.

"Besides soybean curd and other soybean products, another food product derived from soy milk that is popular among the Oriental people is Yuba. The Yuba is the name given to the protein film that forms on the surface of soy milk when the latter is heated nearly to the boiling point. It is removed with sticks, hung on a line and dried in the form of sheets or sticks. Before being use, it is wetted back by soaking in water. The Yuba in sheet form is like Tofu P'i and finds similar uses."

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term "protein film" to refer to yuba.

Note 2. This is the earliest document seen (Nov. 2010) in which the Chinese author (Philip S. Chen, Ph.D.) uses the Japanese word "Yuba" to refer to this delectable soyfood, which is popular in both China and Japan. Its Chinese name makes no sense when translated into English–"bean curd skin." Dr. Chen was a Seventh-day Adventist. Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

2252. Chiu, Y.T. 1956. Meditations of a Christian Chinese. New York, NY: Pageant Press. [5] + 101 p. No Index.
• ***Summary:*** The author says that he has previously written 24 books in Chinese. This, his first English-language book, includes a compilation of much of his best material in Chinese. Soy is mentioned in two chapters.

Chapter 7, titled "Child welfare in China," states (p. 22-26): "Very few mothers [in China] know how to feed their babies. If the infant were fed with mother's milk, it would be better for the child." Cow's milk is so expensive in South China that very few mothers can afford to buy it for their children. "The writer has analyzed several kinds of milk substitutes made locally and sold in the stores in Canton and found that they consist of starch and a little sugar (less than one-half of one per cent of this substituted milk is protein). In North China soya bean milk is used in feeding babies. This is much cheaper than cow's milk." A brief description is given of how this soya milk is made. "One pound of soya beans would make seven or eight pounds of bean milk. As soya bean milk is deficient in fat, sugar, and calcium, the latter should be added to the bean milk to increase its food value. Dr. Siddall [1931] used this milk to feed a baby in the Canton hospital and got pretty good results. If soya bean milk is prepared in a sanitary condition, it should be a good and cheap food for poorer babies."

Superstitions are widespread in South China. "Some people think that bean curd, a product made from soya bean, should not be given to infants lest they have an offensive odor on their breath."

Chapter 18, titled "Feeding a hungry world," states (p. 57-61) that the price of food in South China is now 5 to 10 times higher than before the war, while wages and salaries have not increased proportionally. "The increase in food prices is so great that the average family in China does not have enough to eat and many of them suffer malnutrition" and nutritional deficiency diseases. "As milk is so expensive in Hong Kong and China, children have to be contented with soya bean milk which has been used to feed babies in China for two thousand years." In times of famine, some parents have "had to sell their children in order to have money to buy food. Because of poverty, ninety percent of the parents in China cannot afford to send their children to school and these youngsters must either stay home to work or work as servants in the homes of the rich or in the factories."

"Poorer people in China and Hong Kong eat rice, soya beans, [mung] bean sprouts, bean curds and salt fish or green vegetables. The poorest people have only rice, sweet potatoes, which are cheaper than rice, and soy sauce made from soya beans."

Talk with Luke Fetters of Huntington College, Indiana. 2005. May 23. Luke is writing a biography of the author for this PhD thesis. Chiu wrote this book at about the same time he graduated from the seminary at Huntington College. "He was a Renaissance man. He was an educator, a scientist, a theologian." Luke's field is missiology, the study of missions. He believes that too much mission history has been written about the missionaries; not enough has been written about the heroes and hard-working people within the host culture. Address: Rev., Dr. (PhD.), Assoc. Prof. of Chemistry, Huntington College, Huntington, Indiana.

2253. Council of Scientific and Industrial Research. 1956. The wealth of India: A dictionary of Indian raw materials and industrial products. Raw materials. Vol. IV: F-G. New Delhi, India: CSIR. See p. 142-50 (Glycine), plus p. XIII-XXI (bibliography). [51 ref]
• ***Summary:*** "Attempts to popularise and extend soybean cultivation in India have not met with much success so far. Various reasons have been assigned to this. The market demand for the seeds is not steady and there are few indigenous industries based on soybean. Further, there are other pulse and oilseed crops adapted to varied climatic and soil conditions in India which satisfy the dietetic habits of the people. It is considered, therefore, suitable for introduction only in regions where pulses are not grown at present, e.g. regions at elevations about 5,000 ft. This view has been considered by some to be based on incomplete data."

Table 2, titled "Estimated acreage and production of soybean in some Indian states," gives statistics for 1948-1952. The leading state is Jammu and Kashmir (India's northernmost state). In 1948-49 (the latest year for which complete data is available) Jammu and Kashmir produced 502 tons of soybeans on 1,757 acres. Corresponding figures for other states, ranked in descending order of acreage, are Assam (208 tons/1,230 acres), Orissa (147/988), West Bengal (147/800), Madhya Pradesh (12/67), and Uttar Pradesh (1/33).

Note 1. This is the earliest document seen (Jan. 2009) that gives soybean production or area statistics for South Asia.

"Soybean is grown in India mainly for food and forage. It is generally raised as a *kharif* crop, sown at the outbreak of the monsoon in June or July and harvested in December-January... Soybean is raised either pure or in mixture with maize; in some parts of Assam it is grown along with *aus* paddy. Being a legume, soybean can be cultivated with advantage as a rotation crop with potato, as in Assam, or with sugarcane, as in Bihar. It is grown as a green manure or cover crop in tea estates...

"Uses: Soybean ranks high among the leguminous crops of the world. It is grown mainly as a food crop in China, Japan and other countries of east Asia. The seeds are consumed green, dry or sprouted, whole or split. Green seeds are used as vegetable; roasted and salted seeds are used in cakes and candies. The seeds are ground into flour and used for bakery products. They are also processed to give a milk-like product, curd or cheese. A variety of fermented products is prepared, including sauces which furnish the basic

© Copyright Soyinfo Center 2013

flavouring in Chinese and Japanese dishes. Soybean has been used as a raw material in a variety of processing industries in U.S.A. The fatty oil extracted from the seeds is used for edible and industrial purposes...

"In India, soybean has not attained much importance as a food crop. The seeds are consumed locally after splitting as *dal*. They are also parched and used as *bhunja* or ground into a meal (*sattu*) and used in food preparations; a fermented product is prepared from soybean in Manipur. Soybean possesses a characteristic nutty or beany flavour which is not much favoured in India. Efforts have been made to select types devoid of the flavour and to popularise the use of soybean in non-cereal catering organizations for such preparations as porridge and biscuits. Considerable work has also been done to popularise the use of soybean 'milk'."

A detailed discussion is given of each of the following "soybean products: Soyflour, soysprouts (Sprouted soybean is used as a green vegetable [but not in India] and is reported to possess high nutritive value), soymilk, soybean oil, soybean lecithin, soybean meal." Table 5 (p. 148) gives the "composition of some soybean products," based on earlier publications: "Soyflour (defatted or full fat), soysprouts, soycurd."

Note 2. This is the third earliest English-language document seen (May 2006) that contains the word "soymilk" (one of two documents).

Note 3. This is one of the earliest English-language documents seen (Sept. 2006) that uses the term "soy bean" in a new way–as a singular noun, like corn or wheat, not preceded by "the." Examples: "... there are few indigenous industries based on soybean." "Estimated acreage and production of soybean in some Indian states." "Soybean is grown in India mainly for food and forage." This usage originated in developing countries. Address: India.

2254. Hokubei Shinposha. 1956. Nyuyoku benran: Tsuketari jushoroku, 1956-nen [New York Japanese American directory: 1956]. New York, NY: Hokubei Shinposha. 277 p.. Illust. 25 cm. [Eng; Jap]*
• ***Summary:*** Contains 12 leaves of plates and portraits. Address: New York City, New York.

2255. Shefferman, Maurice. 1956. Foods for longer living. New York, NY: Whittier Books, Inc. 181 p. No index. 22 cm.
• ***Summary:*** This is a book about diet and nutrition by one of the founders (in New York City) of Balanced Foods, the major health food distributor. Although it contains few original ideas, it helped to introduce soybeans as a healthy food, and meatless meals, during the late 1950s.

Contents: Preface. 1. Living a balanced life. 2. How well nourished are we? 3. Who gets our best food? 4. Your bloodstream is your lifeline. 5. Vim, vigor and vitamins. 6. A vitamin primer. 7. Minerals in your diet. 8. Cook, spare those nutrients. 9. Natural seasonings. 10. Fresh juices are staple foods. 11. The five basic foods. 12. Everybody needs more vitamin C. 13. Overweight–Our national health problem. 14. Don't live on your nerves! 15. Are you tired? 16. Relax and invite your health. 17. "Having a wonderful time!" 18. Your summer diet. 19. Design for winter living. 20. Recipes.

Shefferman wrote this book so it "would make sense to a lot of people who have a very hazy idea that right food has any direct relationship to their health." The "eating habits of the average American family, or individual, are not good." Many foods "have been depleted of much of their valuable nutrients; we eat too much," too many hot and highly spiced foods, and too much meat. The "vegetarians eat entirely too much starchy foods and are usually, as a result, on an unbalanced diet. As a nation we have retrogressed from the days when our forbears lived on natural, live, whole foods." "I believe that my viewpoint on 'natural' foods will find ready acceptance by intelligent people who are genuinely interested in helping themselves to maintain sound health all the days of their life" (Preface, p. 5).

Also discusses: The growing interest in the practice of organic gardening in the USA (p. 25). "Acid conditions of the soil are as unhealthy as acidity in the human system" (p. 26). "Under ideal conditions we can obtain all the vitamins and minerals we need through natural foods and correct eating." Yet today our soils are depleted of minerals and excessive processing further reduces the nutritional value of our foods (p. 35).

The human body is composed of about 66% oxygen, 18% carbon, 10% hydrogen, 2% nitrogen, and the remaining 4-5% is made up of minerals and trace elements. "Under ideal conditions, a perfect diet which includes the four main minerals–calcium, phosphorus, iron, and iodine– in abundance, will furnish all the other trace elements in sufficient amounts. The lesser minerals are sodium, potassium, magnesium, manganese, chlorine, and sulphur (p. 38, 52). Soy beans are a good source of thiamin (vitamin B-1, p. 42), riboflavin (B-2, p. 43), folic acid (p. 46), and choline (p. 46).

There "is always the possibility of getting too much of the proteins in the diet, especially proteins of meat, and that is one of the best reasons in the world why all persons should change over to meatless meals as often as possible. Now this is not an appeal for the reader to become a vegetarian, for it is the writer's form belief that meat and fish foods are vitally necessary to complete the diet. On the other hand, it is an appeal to meat eaters not to eat an excess of animal foods, for this may throw too much of a burden upon the system,... Among the better known protein foods are soy beans, dried beans, lentils, nuts, cheese, eggs, milk, mushrooms... All of these are less costly than animal foods and certain varieties of fish and other sea foods" (p. 61).

Brown rice is an excellent food. It was used in an 1897 experiment "which was to mark a high point in modern nutritional history." It proved that beri-beri could be cured

© Copyright Soyinfo Center 2013

by substituting whole rice for polished rice (p. 62-63). One of the best sources of lecithin in the soy bean. Its benefits are discussed. Realize that "proteins of all kinds are being made from this alkaline-producing soy bean..." It cultivation has been promoted by the USDA, thereby making it a major crop. Soy beans are discussed at length. "The protein of soy beans is used in meat replacement dishes," Soy cheese [tofu] and "soy bean drinks" [soy milk] are good protein sources. For lunch, use "soy sandwich spreads" and "soy bean and wheat germ bread..." The main body of your meatless dinners can be made up of various combinations, including "soy bean loaf, "gluten steak," "green soy beans," "whole wheat or soy bean macaroni or spaghetti, or eggs "on soya toast." Use soya flour as a binder or serve baked soy beans with tomato sauce (p. 64-67).

Natural seasonings include "soy seasonings and natural herbs and spices." Use herb teas and herbs in cookery (p. 68-69). The five basic foods are blackstrap molasses, brewer's yeast, skim milk powder, wheat germ, and yogourt. They are "wonder foods" (p. 81). The Metropolitan Life Insurance Company's ideal weight chart shows, for example, that a man 6 feet tall should weigh 152-164 lb (small frame), 161-173 lb (medium frame), or 169-185 lb (large frame) (p. 97).

Shorter working days and modern labor-savings devices have transformed most Americans into a new "leisure" class (p. 108). Scientific experiments by Dr. Fisher at Yale University [New Haven, Connecticut] have shown that a meatless diet can provide sufficient protein for the body's needs. "Vegetable protein such as almonds and soybeans are excellent protein foods. Soybean products supply essential amino acids without creating the toxic end-products of the meat diet. The residue from the digestion of meats is acid and toxic forming. Vegetable proteins leave a neutral or alkaline ash. Vegetable entrees are wonderful meat replacements for the summer menu. A savory vegetable steak or roast is just as hearty, just as satisfying as meat and a good deal easier on the digestive system. The deliciously rich flavor of meat substitutes is particularly appealing when appetites need tempting during the summer months" (p. 125-26).

People with a definite allergy to cow's milk–as is quite common among children and adults–"can use soy bean milk or goat's milk." Soy bean milk is "an excellent substitute for milk products of animal origin. Crushed soy beans have been used as a source of milk by the Chinese for centuries. Soy milk is approximately the same chemical composition as dairy milk. It resembles cow's milk in consistency and appearance, and its calcium content is about equal to human milk. For infant feeding, in cases of special diets, digestive ailments and malnutrition, soy milk has proven highly beneficial. Soy bean milk is definitely alkaline and easily digested. The soy curd prepared from the milk is eaten as a soft, cottage-cheese -like food" (p. 128).

"Far too many individuals eat too much starch and not enough of the fresh fruit and vegetables." The "one man who should know better–the strict vegetarian–is often the worst offender" (p. 129). Recipes (p. 135-81) include: Soy casserole (meatless main dish, with cooked soy beans, p. 134). Cheese-bean casserole roast (p. 139). Baked soy beans (p. 151). Soy bean salad (with 2 cups "drained green canned soy beans," p. 158).

2256. Sia, Mary Li (Mrs. Richard H.P. Sia). 1956. Mary Sia's Chinese cookbook. Honolulu, Hawaii: University of Hawaii Press. 148 p. Illust. Index. 23 cm. [Eng; chi]
• ***Summary:*** A recipe (p. 48) for "Steamed fish with black beans" calls for "1 T. [tablespoon] preserved Chinese black beans, 1 tablespoon chopped ginger, 1 button garlic, crushed."

In this edition, tofu is called "taofu" instead of "bean curd" as in previous editions. There is paragraph about taofu (p. 21-22). Other soy related recipes: Taofu and shrimp eggs (p. 30). Oxtail Soup (with black beans, p. 36). Taofu, egg and chicken blood (p. 38). Taofu and pork soup (p. 38). Turnip and taofu soup (p. 39). Prawns and taofu (p. 55). Pork and red bean curd (red fermented tofu, p. 98). Pork hash, taofu and peas (p. 102). Red roast pork and taofu (p. 102). Roast pork and taofu (p. 103). Bean sprouts and dried taofu (with pressed tofu = doufu-gan, p. 110). Monk's food (with red bean curd = red fermented tofu, p. 113) Stuffed taofu (p. 130).

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "taofu" to refer to tofu.

Note 2. An almost identical edition of this book was published in 1959 by the same publisher. The recipe for black beans (p. 48) cited above also appears on page 48 of the 1959 edition.

2257. Soetan, Sanif. 1956. Kedelai [Soybeans]. Jakarta: Dinas Penerbitan Pustaka. 23 p. [Ind]
• ***Summary:*** Contains descriptions of the preparation of tempeh, tautjo (Indonesian-style miso), ketjap (soy sauce), and tahu (takoa; tofu).

Note: This is the earliest English-language document seen (Feb. 2009) that uses the word "tautjo" to refer to Indonesian-style miso. Address: Indonesia.

2258. Nakashima, Kyozo; Tamura, Tsuruo. 1957. Kôri-dôfu seizô kôtei ni kansuru kenkyû. IV. Tônyû no gyôseki ni tsuite [Studies on the production of dried-frozen tofu. IV. Coagulation of the soybean milk]. *Osaka Furitsu Kogyo Shoreikan Hokoku* (*Reports of the Industrial Research Institute, Osaka Prefecture*) 17:78-84. March. [3 ref. Jap; eng]
• ***Summary:*** The effect of temperature, time, and stirring speed on the coagulation of soymilk were studied, and the quantity of calcium chloride required to coagulate the milk was determined. Each of these variables is critical. If the temperature is too high when the coagulant is added, there

© Copyright Soyinfo Center 2013

is danger of having a "crust" due to the rapid coagulation. If too little coagulant is added, some of the soymilk will remain uncoagulated and the whey will be milky in appearance. When just the right amount of coagulant is added, the whey or supernatant will become transparent–but this correct amount may differ from one soybean variety to the next. The required amount of calcium chloride can be determined from the specific gravity of the soymilk. The rate at which the coagulant is added and the rate of stirring while it is added affect the final quality and yield of the tofu–as well as the size of the curds. Thus, for a given soybean variety, both the rate of adding and the speed of stirring should, ideally, be mechanized.

Note: Accompanying this article is a 12-page, double-spaced, typed English-language translation by Henry Sasame. Address: Osaka, Japan.

• ***Summary:*** This report is based on four articles on the same subject by the same authors published from 1953 to 1957 in the *Osaka Furitsu Kogyo Shoreikan Hokoku* (*Reports of the Industrial Research Institute, Osaka Prefecture*). Contents: Introduction: What is dried-frozen tofu?, composition of soybeans, composition of soymilk. 1. Soaking and grinding: The process of soaking, the process of grinding, the process of extraction. 2. Curding: Optic curve of curding, elements that determine curding, required amount of coagulant, concentration of coagulant. 3. Freezing: Curve of freezing and time required, speed of freezing and the resulting composition of the tofu. 4. Effect of storage temperature. 5. Drying. 6. Process for softening. 7. Color of frozen tofu: Determination of color and factors affecting it, color of frozen tofu, nature of color, abnormal coloring of frozen tofu. 8. Tofu and microorganisms: Types of microorganisms. Closing remarks. Address: Osaka, Japan.

2260. Nelson, Nancy S. 1957. Tokyo timepiece. *Christian Science Monitor.* May 22. p. 18.
• ***Summary:*** Tokyo–The writer has discovered a delightful way to tell time in Japan, by the sounds and sights of her street. "From one street to the next, as the tofu peddlers pass, the 'shush' sound of the amado (wooden shutters) follow, as they are slid back into the walls to let in the warm light of the [morning] sun." There "is an occasional screech of brakes when a housewife stops a tofu peddler to buy for breakfast.

"When echoes of the [small brass] tofu horns have faded, other merchants, as if this is their cue, make their appearances." There are the sellers of bamboo, goldfish, soba, and fish, the trash / rag man, and the kamishibai (children's theater).

"And with evening the tofu sellers return. Their plaintive horns seem to sound dusk across the city sky. Amado are dragged back across windows, electric lights go on, and a Tokyo day disappears.

"I feel that instead of selling bean curd, the tofu peddlers are really town criers heralding the night with their call meaning 'all's well.'"

• ***Summary:*** Honolulu, Hawaii–"Terruyaki [teriyaki] steak is an island favorite [but no recipe is given]. "Japanese Hekka soon becomes as commonplace to the Haole (Caucasian) table as hot dogs and mustard. A recipe for "Meat Hekka" includes: "1 cup diced soy curd (Tofu), optional... ¼ cup soy sauce." "Add the rest of the vegetables in individual piles and mix the Tofu with the meat."

2262. Nickerson, Jane. 1957. Japan sets the table. *New York Times.* Aug. 18. p. SM25.
• ***Summary:*** "Japan is helping Americans set their tables in unusual, appetizing fashion, exporting to the United States an increasing variety of delicacies."

Before World War II, U.S. food imports totaled $25 million. By last year this figure had increased to $60 million–more than double.

A recipe for Yosenabe (a meal-in-one-dish), whose name in Japanese means "gathered in one pan." The basic recipe calls for "3 pieces bean curd, sliced one-quarter inch thick." The Broth for cooking calls for "½ cup Japanese soy sauce" and "3 three-inch squares seaweed (kombu)."

2263. Kotwal, Lalita Kumarappa. 1957. Prodigious achievements of the Japanese people: Industries and handicrafts. *Times of India* (*The*) (*Bombay*). Aug. 20. p. 6.
• ***Summary:*** "Part of the dwelling serves as the factory and members of the family are generally the employees." Power machinery is not commonly used, as only simple tools are needed. "Typical products of such small enterprises are *tofu* (bean curd), noodles, *sushi* (rice and fish), *mochi* (rice cakes), *tatami* (floor mats), *shoji* (screens), and *gets* (wooden shoes)." These cottage industries are found throughout Japan.

2264. Hayashi, Shizuka. 1957. Tofu takes large volume of soybeans. *Soybean Digest.* Aug. p. 26-27.
• ***Summary:*** "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use 1,070,000 tons of soybeans, including approximately 350,000 tons for shoyu, 230,000 tons for miso, 160,000 tons for tofu, and 120,000 tons for other foods. But the Tofu Association says 308,000 tons will be used for tofu.

• ***Summary:*** On the cover of *Today's Food Guide,* is a photo of Kay Westfall in her kitchen, preparing her American version of Japanese sukiyaki. The recipe, which is given, includes: "1/3 cup soy sauce. 1 cake soy bean curd, sliced thin." The main ingredient is steak.

2266. United States Department of Agriculture. 1957. USDA announces study to promote wider use of U.S. soybeans in Japan (News release). Washington, DC. 1 p. Sept. 12. USDA 2775-57.
• ***Summary:*** "The U.S. Department of Agriculture announced today that it will send a a specialist to Japan to work with private trade groups and Government officials there to promote wider and more direct use of United States soybeans in Japanese diets.

"Although this country has been exporting about 20 million bushels of soybeans annually to Japan in recent years, only a relatively small quantity of the beans have been used in making such food products as 'tofu' and 'miso,'which utilize the whole soybean and not just the oil or the meal.

"Tofu and miso are a primary source of protein in the Japanese diet. The former is a custard-like curd eaten in soups, and the latter is a paste eaten in many food preparations.

"Dr. A.K. Smith of USDA's Northern Utilization and Development Division Peoria, Illinois, will go to Japan to study the reasons for the Japanese preference for their own and Chinese soybeans in the manufacture of products such as tofu and miso. His purpose will be to determine what differences exist between Japanese and Chinese soybeans and American soybeans, and why they occur. He also will seek to determine how foods can be made from United States soybeans which will be more acceptable to the Japanese.

"Success in his investigation can mean a broader market for United States soybeans in Japan.

"'USDA's Foreign Agricultural Service and the American Soybean Association of Hudson, Iowa, for some time have been conducting an overall program to promote the market for United States soybeans in Japan. That program has been expanded to include USDA's Agricultural Research Service, which has made Dr. Smith's services available." Address: Washington, DC.

2269. Hayashi, Shizuka. 1957. The Japanese-American Soybean Institute. *Soybean Digest.* Sept. p. 33-34, 36.
• ***Summary:*** Subtitle: "The Japanese know the quality of U.S. soybeans is improving. Mr. Hayashi expects every Japanese family to include soybeans in the daily diet as a result of the Institute campaign."

"Membership in the Japanese-American Soybean Institute [JASI] is made up of the Japanese Oil Processors Association, the Japan Soy Sauce Association. the Japan Miso Industry Association, the Japan Tofu Association, and the Oil and Fat Importers and Exporters Association–in other words all groups connected with the soybean industry in Japan. The American Soybean Association is also a member of the Institute.

The Institute carries out a variety of research and educational programs. Under the initial agreement, JASI was established in April 1956 for a period of 1 year with a total budget of $75,000; it began functioning on 1 May 1956. Each of the Institute's main projects and contracts signed during the first year is described. The production of a movie film, approved by USDA's Foreign Agricultural Service (FAS), is now in progress. "This will be a documentary colored film in three rolls of about 24,000 feet long. The theme of this film involves grammar school children working on a special subject of soybeans in their practical science room."

Before JASI was established, most Japanese did not realize that soybeans were grown in the U.S.–except on a small scale. "Before the war [World War II] we knew that Manchuria, China, was the only major soybean growing country. I was in Manchuria for more than 10 years before the war as an exporter of soybeans to Europe and Japan. We [Japan] imported about 1.5 millions tons of soybeans annually from China. Production in China was then around 6 million tons. In 1948 I visited this country [USA] and was surprised to learn for the first time of America's huge production of soybeans. After the war when Japan was still under the SCAP's [Supreme Commander Allied Powers = General Douglas MacArthur] control, soybeans were not available from China. It was then that Japan received soybeans from America for the first time in history. It is since then that Japan has gradually become familiar with American [U.S.] soybeans.

"However, soybeans coming into Japan right after the war were very bad. They contained enormous amounts of foreign material, worm-eaten damaged beans, broken beans;

© Copyright Soyinfo Center 2013

besides sizes were irregular and color was bad. The quality of American beans was so bad that it gave Japanese users the impression that U.S. soybeans were not comparable with Chinese soybeans. Everywhere we went we received complaints of foreign material." No makers of miso or tofu wanted to buy them.

Now, a year after JASI was established, the situation has improved. Everybody in the soybean industry now knows about U.S. soybeans, and knows their quality is improving. JASI sends these people a newsletter, the *Soybean Digest Late News*, translated into Japanese. A photo shows Shizuka Hayashi. Address: Managing Director, JASI, Tokyo.

2270. *Soybean Digest.* 1957. USDA sending soy specialist to Japan. Oct. p. 16-17.
• ***Summary:*** About Dr. Allan K. Smith's upcoming trip to Japan. A portrait photo shows Dr. Smith.

2271. *Manchester Guardian* (*England*). 1957. Bean curd maker sentenced. Nov. 2. p. 5.
• ***Summary:*** Ipoh [Malaysia], Nov. 1–"Chay Mun (64), a bean curd maker, was to-day sentenced to five years' imprisonment for having coffee powder 'which raised a reasonable presumption that it was intended for terrorists.'"

Mr. Justice Shepherd in the High Court told him he was an enemy of society. The coffee powder was found wrapped in paper inside a bucket of cement on his bicycle–Reuter.

Note: Malaysia attained independence from British colonial rule in 1956-45. The terrorists referred to here were the Communists.

2272. *Gourmet.* 1957. You asked for it! Recipe for homemade soy bean curd (Letter to the editor). 17(11):95. Nov.
• ***Summary:*** The section titled "You asked for it!" contains letters to the editors. H. Von Poven of Lombard, Illinois, is experimenting with Oriental cooking and "would like to secure instructions for making soy bean curd."

Answer: "The making of tofu, or soy bean curd is a process to try the patience of a scrutable Occidental, but here goes:" Soak the soybeans, then crush or grind between stones while adding water. Bring to a boil in a pot, simmer for 3 minutes, then strain through several thicknesses of muslin. Add a coagulant (calcium chloride or a solution of magnesium- and calcium-chloride; the amounts are not specified). The protein will precipitate in the form of curds, much like cottage cheese. "Mold the curd in a wooden frame and press it with weights to drain off the water.

An easier way to get soy bean curd is to write the Oriental Food Shop, 2791 Broadway, New York. They will send you an 11-ounce can of baked bean curd called *yakidofu* for 59 cents. It is too fragile for mail delivery.

Note: This is the earliest article on soy seen (Aug. 2002) in *Gourmet* magazine.

2283. **Product Name:** Tofu.
Manufacturer's Name: Sunrise Market Ltd.
Manufacturer's Address: 300 Powell St., Vancouver, BC, V6A 1G4, Canada. Phone: 604-685-8019.
Date of Introduction: 1957.
New Product–Documentation: Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Owner: Mr. Leslie Joe.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Leslie Joe.

Talk with Michael Weiner. 1987. June 12. Sunrise in Vancouver has a history going back to the 1950s, and is the largest tofu manufacturer in Western Canada. Mandarin is second largest. He will ask Sunrise to send me a history. Another talk. Dec. 16. Peter Joe is the present owner of Sunrise. His father, Leslie Joe, started making tofu in the 1950s. Letter from Peter Joe. The company started to make soyfoods in 1955. Form filled out by Peter Joe. 1988. May 20. Gives date as 1960. Apparently company started in 1955 but did not make tofu until 1960? In 1984 the company moved to 729 Powell St.

Talk with Peter Joe. 1993. March 12. This company was started in about 1955 by his father's uncle. His father (Leslie Joe, who lives nearby) started to work for the company in about 1956-57. In about 1957 Leslie Joe took over the company. Peter does not know the name of the company at the time it was founded; it may have had a Chinese name but no English name. The company was at some other address on Powell Street initially (such as 360 Powell St.) before it moved down to 300.

Note: This is the earliest known commercial soy product made by Sunrise Market Ltd.

2284. Zerfing, Sally D. 1957. Sally's recipes. Glendale, California: Published by the author. vi + 221 p. Illust. No index. 25 cm.
• ***Summary:*** A remarkable vegetarian cookbook with a Christian message and references to many Biblical passages. It would be vegan, except for the use of honey. The author may be a Seventh-day Adventist since (1) Ellen G. White is quoted on page 2, (2) it contains so many soy recipes at a relatively early date, and (3) it mentions some brands of soy products (e.g. Madison Health Food Company's Cheze-O-Soy = tofu) made by Adventist companies. Page 14 has a short section on soy oil and page 14 a long section on soy beans, including soy milk. Soy-related recipes include: Soy beans (p. 44). Soy paste (with soy milk powder, p. 50). Soy-whole wheat noodles (with soy flour, p. 62). All purpose soy milk no. 1, no. 2, and no. 4 (made with El Molino Soya Milk Powder, p. 66-67). All purpose soy bean milk no. 3 (made from whole soybeans). Hot carob drink (with soy milk, p. 66). Almond milk. Cashew nut milk. Sesame milk (p. 67. "Liquefy together: 1 cup sesame seeds and 2 cups water. Then strain the milk through a fine cloth; squeeze to get out all the milk. Then liquefy with a little honey, salt, oil, or liquid lecithin").

Note: This is the earliest English-language document seen (Aug. 2007) that contains the term "sesame milk"–or a recipe for making it at home.

Scrambled tofu (with Chef Bonneaus Aminotone, p. 73). French toast (with soy milk, p. 73). No. 2 health burgers (with tofu, p. 79). Scrambled tofu sandwich (p. 80). Creamed tofu and nut spread. Soy cream and olive sandwich on Boston bread (with soy creamed cheese, p. 80). Cheze-O-Soy sandwich (p. 81). Sesame tahini cheese spread (with Sally's Soy Mayonnaise, p. 81). For other tahini recipes, see p. 82 and 111. For other sesame seed recipes: Sesame cream cheese (p. 82). Sesame salad dressing (p. 85). Sesame wheat

© Copyright Soyinfo Center 2013

germ candy (p. 148).

Soy creamed cheese (p. 82). Soy mayonnaise. Thousand island dressing (with soy mayonnaise, p. 83). Cucumbers with tofu cream dressing (p. 90). Homemade tofu cottage cheese (p. 91). Tofu cottage cheese (p. 91). Tofu vegetable jello-salad (p. 92). Tofu and rice croquettes (p. 100). Soy and rice patties (with ground soybeans, p. 101). Soy and eggplant patties (with ground soybeans, p. 101). Tartar sauce (with Sally's Soy Mayonnaise, p. 104). Baked macaroni and soy cheese (with tofu). Cheze-O-Soy and millet hash. Baked soy beans (p. 104). Soy and millet loaf (p. 105). Thanksgiving loaf–Wheat, tofu and nut combination (p. 107). Cheze-O-Soy patties (p. 108). Spanish-style scrambled tofu (p. 115).

Note: This is the earliest document seen (Feb. 2012) that contains the term "Scrambled tofu" or that contains a recipe for "Scrambled tofu." The book actually gives 3 recipes for scrambled tofu (pages 73, 80, and 115).

Ravioli (noodles made with soy flour and filling made with Cheze-O-Soy, p. 116). Bean sprout entree (with Cheze-O-Soy, p. 117). Scalloped corn (with tofu). Tofu Chick Pea Foo Young (p. 117). Wonder of the sea loaf (baked, with tofu, p. 118). Chew mein vegetarian style (with soy sprouts, p. 119). Tofu and Sally's homemade tofu (p. 118-19; curded with lemon juice and sea salt). Homemade soy cheese (made with El Molino Soya Powder, p. 119). Tofu gravy (p. 120). Non-dairy ice creams (p. 149-53; most recipes call for 2 tablespoons El Molino soya milk powder). Banana split, Maple nut sundae, Fruit Sundae (each topped with soy whipped cream, p. 151). Date shake (with soy milk, p. 152). Carob soy malt (p. 152). Ice cream pie (topped with soy whipped cream, p. 153). Carob-wheat germ banana shake (with soy milk, p. 153). Soy pie crust (p. 154). Baby's soybean formula (p. 196). Composition of ¼ cup soy powder (p. 196). Tofu for babies (p. 200). A photo on the front cover shows Sally Zerfing. Address: 24629 N. Arch St., Newhall, California.

2285. Tsukada, Toyoaki; Yamada, Yasuo. 1957? Frozen tofu (dehydrated tofu). Japan. 4 p. Undated. 28 cm. [Eng]

• ***Summary:*** This is a report on the Misuzu plant in Nagano City and the Daiya plant in Suwa City, Nagano prefecture, Japan. "The name 'frozen tofu' is somewhat misleading as the final product is a dried cake with the approximate dimensions of 2½ x 2 x 3/4 inches. The freezing of the tofu is a step in the process which develops certain desirable elastic property to the wet cake. It becomes like a sponge.

"The frozen tofu plants at Nagano and Suwa had essentially the same process but the Suwa plant was the more modern of the two in respect to engineering equipment. The Suwa plant had two completely separate units for making tofu, each one approximately the size of the Nagano plant.

"The Nagano plant reported they had used quite a few American soybeans until two years go when they changed to Chinese soybeans. In his opinion the best frozen tofu is made from Nagano beans but Nagano raises insufficient soybeans to supply the demand. The qualities desired in this product are good color and smoothness (including gloss) and bland flavor. In his process the American soybeans give equal color and smoothness but not flavor to the Chinese beans. American soybeans process as well as other beans. Some soybeans have a soft smooth taste whereas others leave a taste on the tongue. They described Brazilian soybeans as good for making tofu but not for miso. American soybeans give a high yield.

"The owner of the Suwa Plant said they could use up to 20% American soybeans in their process without loss of quality in their product.

"These frozen tofu plants operate on a large scale, of the order of 5-10 tons of beans per day. The frozen tofu process is much more readily adaptable to large scale operation than fresh tofu. All fresh tofu plants are small and usually process in the range of 100 to 200 pounds of beans per day. Because of the wide difference in scale of operation the retail price of frozen tofu is the same or even a little less than fresh tofu. While the frozen tofu plants have adopted more modern equipment than any of the other food processing plants, there is still much room for further modernization and improvement in efficiency of operation.

"The owner of the Suwa Plant recognizes the need for further research and development and made the following suggestions in the order indicated.

"1. Improve the freezing process–to produce an elastic type material in less time.

"2. Use of centrifuges for classification of original extract and also perhaps to concentrate the curd. Dorr thickener should be considered at the stage.

"3. Mechanization of trimming the tofu cakes to size and shape. Common problem to all frozen tofu makers.

"He did not make any suggestions on where research should be done, but mentioned of a certain person in Osaka Prefectural Institute of Industrial Promotion, Dr. K. Nakajima, who specializes in frozen tofu chemistry. Also mentioned Irie Co. of Osaka, which he suggested as a place for developing trimming and packing equipment. Following is a flow diagram of the process for making frozen tofu." Address: 1. Director, Misuzu Co., Nagano City; 2. Director, Daiya Co., Suwa City. Both: Nagano prefecture, Japan.

2286. *Times* (*London*). 1958. A truly festive season: New Year exchanges of hospitality in Japan. Jan. 25. p. 8, cols. 6-7.

• ***Summary:*** "From a correspondent." The writer gives a detailed, accurate description of New Year in Japan. Once the caller has entered a house, he must be offered food and drink, which includes: "[black soy] beans in sugar; lotus root in soya sauce; and bean curd [tofu]. The great New Year delicacy is mochi, or rice cake, made from boiled, pounded rice..." Also sake.

2287. Koss, Mayburn. 1958. Food: From Japan. Store on the Upper West Side offers wide variety of Far East delicacies. *New York Times.* March 12. p. 37.
• ***Summary:*** About the Oriental Food Shop at Amsterdam Ave. and 124th St., run by Joseph Oyama.

"Soy sauce from Japan, lighter and less sweet than the American and Chinese varieties, comes in bottles and tins in a wide range of sizes. The most popular brand is Kikko Man" [Kikkoman].

"The foods most frequently requested at the Oriental Food Shop are those that go into Sukiyaki, probably the best known Japanese dish among foreigners." It can be cooked quickly, and at the table. Ingredients called for in a recipe include: "1 Tofu (fresh bean curd)... ½ cup soy sauce... ½ teaspoon Aji-No-Moto (monosodium glutamate)."

2288. Spier, Robert F.G. 1958. Food habits of nineteenth-century California Chinese. *California Historical Society Quarterly* 37(1):79-84. March; 37(2) 129-36. June. [40 ref]
• ***Summary:*** Large-scale immigration of Chinese to California began in 1850, shortly after gold was discovered. In California, the Chinese continued to eat their customary foods, which were imported from China. In 1857 J.D. Borthwick wrote, with reference to the period 1851-1854 (when he traveled in California), that Chinese stores were stocked with Chinese foods. Spier examined the records of the U.S. Custom House at San Francisco and found that "As early as 1852, substantial shipments of foods arrived from Hongkong, consigned to Chinese firms" in San Francisco. Items listed on the invoices included "salt beans" [probably fermented black soybeans], "dry bean curd," "shrimp soy" [soy sauce with shrimp], "bean sauce," as well as dried seaweed, oranges, bamboo shoots, plus staples such as rice, noodles, sugar, tea, and vinegar. "A check of invoices in this collection covering the years 1850 through 1854 reveals that the majority of the shipments from the Far East contained food or potables (tea, brandy, etc.). Specifically, food or drink appeared on 79 of 118 invoices."

Within 2 decades of their landing in force, the Chinese on the West Coast were growing considerable amounts of food. "By 1872 Nordhoff wrote that the Chinese were producing two-thirds of all vegetables eaten in California... Seaweed was collected by members of the Monterey fishing colony before the turn of the century...

"One receives the general impression... that during the 1850's and 1860's, the Chinese laborers ate a better diet than did whites in substantially the same lines of work." A Caucasian schooner captain in southern California told Nordhoff that, in his estimation, the Chinese fishermen he knew lived "far better, and at any rate have a more varied bill of fare, than most of the ranchmen in California." On the railroads, the Chinese drank mostly tea, while their white counterparts drank large amounts of alcoholic beverages. "Virtually every western town had its 'Chinatown,' large or small, which was essentially a self-contained separate entity."

Note 1. This is the earliest document seen (March 2011) concerning soybean products (soy sauce, and probably fermented black soybeans) in California. This document contains the earliest date seen for soybean products in California (1852); soybeans as such had not yet been reported by that date.

Note 2. Most of these Custom House records were destroyed by fire. Spier is no longer living. Address: California Historical Society, 2090 Jackson Street, San Francisco, California.

2289. Manners, Marian. 1958. Japanese have diversified menus typical of place, season, occasion. *Los Angeles Times.* April 17. p. A7.
• ***Summary:*** A recipe for Beef sukiyaki calls for: "1 block tofu (bean curd), cut into cubes... 2 cups shoyu (soy sauce)." One dish eaten by Japanese families every day is "bean-curd soup."

Note: "Bean-curd soup" probably refers to miso soup with many small cubes of fresh tofu in it.

soybeans and hand cleaning for making kinako. (7) Soybean varieties: Lincoln, White Hilum Iwate, and Acadian (six photos, showing each variety wet and dry). (8) Wooden vats used for fermenting miso; each stands a little taller than a man, and is bound with 4 bamboo hoops. (9) Miso in wooden tubs [kegs] ready for market. (10) Hand assembly of wooden tubs for shipping miso and shoyu. (11) Stone mill for wet grinding of soybeans to make tofu. (12) A modern tofu shop, with boiler, pressure cooker, filter, and precipitation vat. Photos 11 and 12 courtesy of Sugiyama Chemical Research Inst., Tokyo. (13) Deep fat frying of tofu for making aburage. (14) Wooden kegs used for fermenting hamanatto. Stone weights are used to compact the beans during fermentation.

Other figures: (1) Flow diagram of the miso manufacturing process (incl. koji). (2) Table showing total production of miso in Japan (about 1957) as reported by All Japan Miso Industrial Association. Factory made miso consists of: Rice miso 379,000 tonnes (metric tons), barley miso 146,000 tonnes, soybean miso 58,000 tonnes, total factory made 583,000 tonnes. Homemade miso of all types is 391,000 tonnes (67% of factory made). Total factory and home made: 974,000 tonnes. Ingredients used in this grand total: Soybeans 361,000 tonnes, rice 115,000 tonnes, barley 58,000 tonnes, salt 159,000 tonnes. (3) Table showing nutritional composition of rice miso, barley miso, and soybean miso. (4) Table showing composition of sweet miso, salty miso, and enriched miso. (5) Diagrammatic sketch of equipment used in making fresh tofu. (6) Flow diagram of a frozen tofu factory.

Note: The author was in Japan from Oct. 24 to Dec. 24, 1957. The principal localities visited were: Tokyo, Yokohama, Tochigi City, Nagano, Matsumoto, Suwa, Hamamatsu, Nagoya, Kyoto, Osaka, Fukuoka, Kumamoto, Nagasaki, and Sendai. His trip was sponsored by the Agricultural Research Service and the Foreign Agricultural Service of the USDA, and the American Soybean Association (Hudson, Iowa).

Note: This is the earliest document seen (July 2000) that mentions "barley miso"–a type of miso made with barley koji, soybeans, and salt. Address: Head of Meal Products Investigations, Oilseed Crops Lab., NRRL, Peoria, Illinois.

2292. *Washington Post.* 1958. Menu boasts Far East flavor: Anne's reader exchange. May 9. p. C6.
• ***Summary:*** A reader sends in a recipe for Sukiyaki, which calls for "1 cake bean curd (tofu), cut in small squares." It should be cooked in "cooking soy sauce," which includes "½ pint Japanese soy sauce."

2293. *Journal Star* (*Peoria, Illinois*). 1958. Two Japanese scientists here to study soybean processing. Oct. 30. p. A-5.
• ***Summary:*** A large photo shows C.W. Hesseltine and A.K. Smith of the USDA Northern Utilization Research and Development Division [NRRL], and visiting Japanese scientists Tokuji Watanabe and Kazuo Shibasaki. The two Japanese scientists have arrived in Peoria to start a year's search for ways to increase the use of U.S. soybeans in Japanese foods–especially tofu and miso. The studies will conducted under an agreement between the Agricultural Research Service (ARS), the USDA's Foreign Agricultural Service, and the American Soybean Association. The research is part of USDA's research and development program to find new outlets for U.S. farm crops.

Dr. A.K. Smith of the Northern Division spent several months in Japan last year studying soybean utilization. He found that Japanese prefer U.S. soybeans for oil-mill processing, which accounts for about half of all Japanese soybeans. The other half is used to make traditional foods, and only a limited quantity of U.S. soybeans are used in this way.

"Dr. Shibasaki is an associate professor in the department of agriculture chemistry at Tohoku University, Sendai, Japan, and an adviser of Miyagi Prefecture Miso and Shoyu Industry Association.

"Mr. Watanabe is chief of the grain processing section of the Food Research Institute, Ministry of Agriculture and Forestry."

Note: Soyfoods Center owns a copy of this black-and-white photo (8½ by 11 inches); it was a gift of the USDA National Center for Agricultural Utilization Research (Peoria, Illinois), which owns the photo.

• ***Summary:*** A recipe for Beef sukiyaki (Tokyo style) includes "1 tofu (soy-bean cake)," and "8 ounces (1 cup) soy sauce."

Monosodium glutamate is mentioned in the recipes for Suimono (Clear soup) and Tempura sauce. Address: Staff writer.

2299. *Soybean Digest.* 1958. Japanese scientists start work at Peoria. Dec. p. 21.
• ***Summary:*** "Two Japanese scientists, Kazuo Shibasaki and Tokuji Watanabe, have arrived at the Northern Utilization Research and Development Division, Peoria, Illinois, to start a year's search for ways to increase the use of U.S. soybeans in Japanese foods...

"Dr. Shibasaki and Mr. Watanabe will study the use of U.S. whole soybeans in making tofu and miso, traditional Japanese foods... Dr. Shibasaki is an associate professor in the department of agricultural chemistry at Tohoku University, Sendai, Japan, and an adviser of Miyagi Prefecture Miso and Shoyu Industry Association. Mr. Watanabe is chief of the grain processing section of the Food Research Institute, Ministry of Agriculture and Forestry."

2300. **Product Name:** Tofu.
Manufacturer's Name: Tanaka Tofu Mfg. Co.
Manufacturer's Address: 1358 N. Clark (rear), Chicago, IL 60626. Phone: WH 4-3938.
Date of Introduction: 1958.
How Stored: Refrigerated.
New Product–Documentation: Chicago Shimpo, Inc. 1958. Chicago Japanese American directory. Page 19: 1/8 page ad for: "Tanaka Tofu Mfg. Co., 1358 N. Clark (rear). WH 4-3938." The top 30% of the ad is in English; the rest is in Japanese. Page 46: Under "Food manufacturers" and again under "Food markets and groceries" are listings (entirely in English) for Tanaka Tofu Mfg. Co. at the address and phone shown above. Plus: "After 2 pm call DI 8-9703."

2301. **Product Name:** [Tofu].
Foreign Name: Tahoe.
Manufacturer's Name: Vanka-Kawat.
Manufacturer's Address: Dr. Augustijnlaan 40, 2283 CH Rijswijk Z.H., Netherlands.
Date of Introduction: 1958.
New Product–Documentation: Letter from Bernard Storup. 1984. March 22. Says Vanka-Kawat is the biggest tofu company he knows of in Europe. Talk with Bernd Drosihn of Soyastern. 1987. Nov. Says that Linn is the second largest tofu company in Europe, after Heuschen. Letter from Bernard Drosihn. 1990. May 10. He says that Linn still makes tofu but he doesn't know where the company is located.

Letter from Marianne Westra of Vanka-Kawat b.v. 1990. June 1. Vanka-Kawat started making tofu in 1958. They discontinued tofu production in March 1985 after coming to an agreement with Heuschen-Schrouff, because it was more economical for Vanka-Kawat to let Heuschen-Schrouff (which had all the equipment and knowledge) produce the tofu which Vanka-Kawat sold.

Inedible oilseed meals, by Don S. Bolley and Raiford L. Holmes (castor, tung, aceituno, other). 32. Plant residues and pomaces, by E.G. Kelley. 33. Amino acid composition of foodstuffs. Appendix: National average food supplies.

Note: This is the earliest publication seen written by Aaron Altschul about soya. Address: USDA, New Orleans, Louisiana.

2303. Anson, M.L. 1958. Potential uses of isolated oilseed protein in foodstuffs. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 277-89. Chap. 11. [12 ref]

• ***Summary:*** Contents: Introduction. Preparation and advantages of isolated protein: Conditions for consumption of oilseed protein by man, soybean products eaten by man, oilseed components and isolation of the protein, advantages of protein isolation, soybean curd, modern possibilities of utilizing isolated soy protein, isolated soy protein. Uses of isolated protein: Fortification of bread and cereals, products like animal protein products (products like milk products, meatlike textures, nutrition and flavor, no necessity for perfect imitation of existing protein products), special uses for young mammals and the sick (isolated protein for young mammals, isolated protein for infants, isolated protein for the sick). Cost of isolated protein: Cost of protein for man, limitation of soy flour. Fermentation products. Cheap animal products: Fish protein, skim milk powder. Summary.

"The only oilseed protein consumed by man on a large scale in any form is soy protein. This has been done for thousands of years in the Orient as a basic part of the way of life for large populations, but only because methods were discovered for converting soybeans into acceptable products by radical processing beyond the mere removal of oil."

Soybean curd: "The ancient Chinese discovery of the technology of producing curd was a great historic step in the direct utilization of oilseed protein by man and has made possible a great protein nutritional experiment on many millions of subjects.

"Modern possibilities of utilizing isolated soy protein: The traditional manufacture of soybean curd, which is still carried out on a vast scale in the Orient, points the way to a modern technology of using soy protein for man based on the separation of the soy protein from the other components of the bean. The wonder is that the oriental experience has been so long neglected." (p. 279).

Concerning products like milk products: "For a while during World War II, the Ford Motor Company, as a result of Henry Ford's interest in soybean products, sold soybean 'ice cream' in its cafeterias. All the usual ingredients of ice cream were replaced by soy ingredients." Note: This is the earliest document seen (April 2000) that mentions soy ice cream in connection with the Ford Motor Co.

"My own opinion is that, just as the conversion of oilseeds to oilseed meals through processing created a revolution in animal feeding, so the further processing of oilseed meals into isolated protein and into complex foods containing isolated protein will create a second revolution. The millions of tons of oilseeds throughout the world, the basic complex raw materials which neither man nor beast can synthesize cheaply, are readily available as a starting point for the new technology." Address: Cambridge, Massachusetts (Present address: 100 Eaton Square, London, S.W. 1, England).

2304. Caleva, Harry. 1958. Chinese cookbook for quantity service: Authentic professional recipes. New York, NY: Ahrens Publishing Co., Inc. 169 p. See p. 150-53. Index. 24 cm.

• ***Summary:*** This is basically a Cantonese cookbook; the Chinese words are Romanized in Cantonese.

The chapter titled "Sauces" (p. 150-53) includes recipes for the following: Soy sauce (light) (*Yuen You*). With 1½ lbs. soy beans (crushed). Soy bean jam (*Mien-Shee Ding*). With 1½ lbs. soy beans. Rice jam (*Dow-Ding*). With 1¼ lbs. roasted soy beans (mashed). Subgum sauce (Sweet and sour) (*Sub Gum Tien-Soon Wu*). With "1 tsp. soy sauce (heavy)." Oyster sauce (*Hoo You*). With ¼ cup soy sauce (light). Chinese brown gravy. With 1 tsp. soy sauce (heavy). Onion sauce, Cantonese style. With 3/4 cup soy sauce (light).

Black soy sauce (*Chow You*). With soy bean 1½ lbs. Salt 2 tbs. [tablespoons]. Water 3 quarts. Molasses 1 pint. Rice wine ½ cup.

"1. Combine soy beans, salt, and water; bring to a boil and simmer for five hours; remove and strain. Pour into a jar and seal airtight, then age in the sun for six months.

"2. At the end of six months, add remaining ingredients, reseal and let age in the sun another six months.

"Note: This sauce is used for seasoning food. Not used in cooking."

Note: None of the many recipes that call for months of aging in the sun will work; they do not contain koji (*Qu*). Glossary of Chinese terms [Cantonese] (p. 161-64): *Dow Foo*–Bean curd. *Dow Ngaah*–Bean sprouts. *Dow See*–Black bean sauce [sic, fermented black soybeans]. *Foo Jook*–Soy bean cream [dried yuba sticks]. *Foo Yu*–Chinese cheese

© Copyright Soyinfo Center 2013

[fermented tofu]. *Gee Yeou*–Black sauce. *Gna choy*–Bean sprouts. *Jeung*–Sauces. *Jeung Yow* (*you*)–Soy sauce. *Jook*–Congee. *Mien See*–Brown bean sauce. *Naam Yu*–Red bean curd cheese in red sauce. *Nom Yu*–Red cheese. *Saang See Jeung*–Red bean sauce (thick). *See Yeou* (*you*)–Soy sauce [fermented black soybean sauce]. *Tiem Jook*–Dried bean curd [sweet dried yuba]. *Woo Dow*–Dried black [soy] beans.

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term *Foo Jook* to refer to dried yuba sticks.

Note: This is the earliest English-language document seen (April 2012) that contains the term "Soy sauce (light)" plus its Cantonese name (*Yuen You*) or the term "Black soy sauce" plus its Cantonese name (*Chow You*).

2305. Chicago Shimpo, Inc. 1958. Chicago Japanese American directory. Chicago, Illinois: The Chicago Shimpo, Inc. 30 cm. [Eng; jap]

• ***Summary:*** In Japanese characters at the top left of the cover: *Nikkei-jin Shikago Jushoroku.* This directory, which sells for $1.00, also contains many space ads. On the cover is a photo of the Chicago skyline behind a public park in which there is a white band shell (a bandstand having at the rear a sounding board shaped like a huge concave seashell) and in the distance a fountain.

Page 14: Half-page ad for: "Pacific Trading Co. General importer and exporter. 884 W. Erie St., Chicago 22, Illinois. They also have offices in Los Angeles (119 S. Central Ave.) and New York City (57-10 38th Ave.). Items they import include Kikkoman shoyu, Ajinomoto, and rice.

Page 15: Half page ad for Aji-no-moto (Tokyo, Japan) titled "Mother knows best." "When it comes to cooking food with hearty, old-fashioned flavor, mother knows best–she always seasons with Aji-no-Moto." "99+% pure monosodium glutamate."

Page 19: 1/8 page ad for: "Tanaka Tofu Mfg. Co., 1358 N. Clark (rear). WH 4-3938." The top 30% of the ad is in English; the rest is in Japanese. Same page: ¼ page ad for Fujimoto & Company, 302 South 4th West, Salt Lake City, Utah. Tel. EMpire 4-8279. Illustrations show: (1) The company's Kanesho brand; (2) A Japanese woman kneeling behind a porcelain mortar (*suribachi*), holding a wooden pestle (*surikogi*), and using it to grind miso until it is smooth. The top 25% of the ad is in English; the rest is in Japanese. The company also makes and sells koji.

Page 46: Under "Food manufacturers" and again under "Food markets and groceries" are listings (entirely in English) for Tanaka Tofu Mfg. Co. at the address and phone shown above. Plus: "After 2 pm call DI 8-9703."

Talk with Karl Matsushita, director, Japanese-American National Library in San Francisco. 2008. Feb. 1. He thinks these directories were first published after World War II. His library has only one volume of this periodical published in 1985; he does not know when the first volume was published. The War Relocation Authority (WRA), after World War II, pushed Japanese to relocate in Chicago and the Midwest, where they felt there would be less anti-Japanese sentiment. Address: 1310 N. Wells St., Chicago 10, Illinois. Phone: WHitehall 3-2326.

2306. Circle, S.J.; Johnson, D.W. 1958. Edible isolated soybean protein. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 399-418. Chap. 15. [93 ref]

• ***Summary:*** Contents: Introduction. Isolated soy protein compared to soy flour. Availability and forms of edible soy protein isolate: Soy protein and soy proteinate, modified forms of soy protein isolate, partial isolates of soy protein and by-products. Properties of unmodified isolated soy protein: Methods of dispersing protein and proteinate, viscosity behavior–effect of high temperature, flavor. Nutritional value of edible isolated soybean protein: Nutritional value for human beings and animals (isolated soy protein, soybean oil meal, soybean milk, soybean curd, and Oriental products), amino acid composition, supplementation (mutual supplementation, isolated soy protein as a source of lysine). Food uses of edible isolated soy protein: Dairy-type products (including recipes for All-vegetable coffee "cream," All-vegetable whipped topping, All-vegetable "cream cheese," Non-milk chocolate frozen dessert [ice cream], All-vegetable high-protein chocolate drink, All-vegetable high-protein non-starch chocolate pudding) meat-type products (including recipes for All-vegetable "meat loaf," and All-vegetable "frankfurters"), baked and cooked products based on dough, cereal-type products, macaroni-type products, oriental-type foods, specialty foods, confections and preserves, coatings, feed uses, modified soybean protein products, summary and conclusions. Address: The Glidden Co., Chicago, Illinois.

2307. Dean, R.F.A. 1958. Use of processed plant proteins as human food. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 205-47. Chap. 9. [99* ref]

• ***Summary:*** Contents: General considerations: Early sources of protein for human food, competition for food between man and his domestic animals, vegetarianism and vitamin B-12, protein requirements (of children, of adults). Plant proteins now in use: Foods that can be prepared in the home (cereals, legumes {incl. groundnuts, soybean}, sunflower seed, sesame), plant foods used after factory processing (cereals, legumes, sunflower seed meal, cottonseed meal). Other forms of plant food: Plankton, algae, food yeast, leaf proteins (p. 237-38). Future extensions of the use of plant proteins: The theoretical basis of selection, assessment of the value of foods intended for human consumption, practical measures for the future.

In 1957 some 160,000 tons of soybeans were used to

© Copyright Soyinfo Center 2013

make tofu in Japan. "Magnesium or calcium salts are the precipitants of the curd from the soybean milk; the product is eaten by nearly every family in Japan with its breakfast miso-soup."

During World War II, the attempt was made to introduce soya as a food crop to Uganda. But "no instruction was given in the necessary details of preparation, with the result that the crop was very reasonably declared inedible by the Africans. They retain a violent prejudice against it and are suspicious that it has been added to any food, such as yellow corn meal, that they find distasteful.

"One of the most interesting methods for making soya edible has evolved in Indonesia and was described in full by Van Veen and Schaeffer (1950). It takes advantage of the ability of the mold *Rhizopus oryzae* to grow on the bean and alter its constituents... The product made from soya is called *tempeh kedelee* (kedelee = soybean)." Details of the production process are given. A description of natto and its composition is also given (p. 218).

The section on algae gives detailed information on chlorella, a type photosynthetic single-cell protein. As early as 1954, Morimura and Tamiya in Japan were experimenting with the use of powdered *Chlorella ellipsoidea* in foods. Note: This is the earliest document seen (Aug. 1997–one of two documents) that mentions the use of algae or other photosynthetic single-cell protein as food.

The section on leaf proteins (p. 237-39) begins: "Protein synthesis is one of the chief activities of the leaf, and proteins are comparable to animal proteins in their amino acid composition (Lugg 1949). The young leaf is especially rich in protein..." Pirie (1953) has suggested a process for recovering the leaf protein from the fibrous residue left after mechanical separation; the protein is usually very difficult to free. Pirie (1953) has also described the likely structure of an efficient plant. "There are also obvious possibilities in such abundant and little-used material as the leaves of sugarcane, cassava, and bananas" (p. 238-39).

The section titled "Sesame" (p. 219-20) states that the Zande people of southwestern Sudan steep the seeds in water for a few minutes, then pound them lightly to loosen the outer coat. They then dry the seeds and the outer coat is sieved or winnowed away. The seeds are then roasted and ground to a paste, which is sometimes used to make a sauce (Culwick 1950). "The use of sesame as a sweetmeat or condiment is fairly widespread in the Near East. A sweetmeat called *tahinya* or *tahina* is made in the Gezira [Sudan] by cooking the roasted seeds in sugar; sometimes the seeds are crushed before the cooking, and sometimes not" (Culwick 1951). Describes how to make the condiment. Address: Medical Research Council, Mulago Hospital, Kampala, Uganda.

2308. Ford, Herbert P. 1958. The life story of Dr. Harry W. Miller. Unpublished manuscript. 169 p. Unpublished manuscript. 28 cm.

• ***Summary:*** This manuscript is the slightly edited second draft of the transcript of a single 7-8 hour interview that Mr. Ford did with Dr. Miller in 1958 in Chicago. According to Mr. Ford, Dr. Miller later gave a copy of the manuscript to Raymond S. Moore PhD, a Seventh-day Adventist educator, with the understanding that Moore would use it as the basis for a book. The book, titled *China Doctor,* was published in 1961. Dr. Miller was not very happy with the way the book turned out.

Pages 122-35 give a much more detailed account and history of Dr. Miller's work with soy milk, tofu, yuba, other soyfoods, meatlike products, and wheat gluten than is found in the finished book, *China Doctor.*

Concerning wheat gluten: Dr. Miller's company in Mt. Vernon, Ohio, International Nutrition Laboratory, "had protein foods in which they used wheat gluten and made meat patties and various kinds of stews, sprouted the green soybeans and made a chili with them and wheat gluten." They also developed a vegetarian wiener [Veja Links] containing raw vital wheat gluten, soy flour, seasonings, and flavors. They stuffed these into wiener casings, submitted them to a smoke house and to cooking, then peeled off the casings/skins and canned the wieners. He developed these at the Mt. Vernon slaughterhouse.

"Soy milk manufacture in the U.S.A. (p. 131). In 1939 Dr. Miller returned to the United States having been so thoroughly convinced that soy milk was destined to have world-wide acceptance... His son, Harry Willis Miller, Jr. had returned preceding his father and had started a small soy milk plant in Utica, New York, where he made and bottled soy milk and also made and canned some of the protein foods out of wheat gluten for which they had developed recipes. This plant was later moved to Mt. Vernon, Ohio, after they started the soybean plant at Mt. Vernon. The plant was rather small at first as their capital was very limited. They had to build up the food plant out of his surgery earnings. As these products were mostly for export, the firm was called the International Nutrition Laboratory. It was called International because they didn't think of having any particular market for soy milk in the United States but anticipated making and packing soy powder which they could ship over to China, Japan, Korea, and other fields. Since the United States is a dairy country, they just thought they would have all kinds of difficulty getting it introduced over in America. They gave their attention largely in the early part of the work to making some products that went over quite well, which could be sold locally such as meat patties–vegaburgers. They would take the wheat flour, wash the starch from it, and make gluten patties. They actually built up a very fine product that was netting them earnings. The earnings of that, together with Dr. Miller's medical and surgery fees, to finally get together a spray dryer which they built with the aid of the know-how assistance of the Rogers Company, who sold these spray

© Copyright Soyinfo Center 2013

dryers... and through this home-made outfit they daily spray dried considerable powdered soy milk and placed it on the market. They made some ice cream mixes and they shipped out in barrels to the Philippines soy milk powder and also shipped consignments of the powder to Shanghai where they had formerly introduced a soy milk to the Shanghai Settlement. Thus they kept soy milk going up until the time of the world war in 1941 which cut them off from shipping to the Orient."

In the United States they found "an interest on the part of doctors in feeding babies that were covered with various kinds of rashes which they called atopic dermatitis. Many of these babies had asthma, diarrhea, projectal vomiting, nervous irritability and were unhappy babies, all because of the allergy to cow's milk formula." Doctors began to realize that babies with allergies and other sicknesses responded well to soybean milk; the market soon increased. Eggs and milk are the chief causes of allergy, but some vegetable proteins like wheat, corn, and some legumes also cause allergic reactions in some cases. Then doctors began to ask for evidence that the milk was safe. They suggested that it be submitted to the American Medical Association [AMA]. So at once Dr. Miller contacted Dr. Earl Baxter, Professor of Pediatrics at the Ohio State University Medical School, and he agreed to conduct some feeding experiments with soy milk. These studies showed that "babies could be nourished as well on soy milk." In Tokyo, Dr. Choei Ishibashi (later president of the Japan Medical Society) also did meticulous feeding tests with infants, using the powdered soy milk Dr. Miller had sent after World War II. Over a period of many months, he compared the blood, measurement, and growth records of babies fed soy milk with those fed animal milk [cow's milk]. Then Dr. Miller took the results of the studies in Japan and at Ohio State and submitted them to the Council on Food and Nutrition of the American Medical Association. The Council has 15 members, the very best scientists on food and nutrition. "They examined the [soy] milk, examined the claims for it, looked over the research, and then gave the seal of approval which was placed on every can of soymilk thereafter."

"Now that they had this seal of approval, they went to medical conventions and canvassed the doctors; the sale of soy milk grew very rapidly." The plant began to get larger; it made great demands and there were many details to look after. These facts and his lack of capital to carry on this work adequately made Dr. Miller realize that he must do one of two things. He must either organize a corporation, issue stock, and enlarge the company greatly, or he must dispose of the plant and give his time and attention to research.

During this time, Dr. Miller received valuable help from the U.S. Department of Agriculture [USDA]. Dr. J.A. LeClerc (Senior Chemist, Agricultural Chemical Research Division) and Mr. L.H. Bailey, who investigated the use of "soybean milk in making breads" and made the results and analyses available to Dr. Miller. "Thus they got themselves very well established in this country as having a milk for people who did get along with cow's milk."

However the secretary of the AMA told Dr. Miller that he should not claim or advertise that his soy milk was a good alternative to cow's milk for all babies, but only "for those babies who do not do well on cow's milk." However he added: "If you can take care of babies that cow's milk does not take care of, there is no reason why you could not take care of the other babies that cow's milk does agree with too." This was his diplomatic way of counseling them not to make unfriendly comparisons with cow's in a dairy country–even if those claims are valid. By following his advice, Dr. Miller was able to work well with the dairy industry without any conflicts.

The Loma Linda Food Company in California showed an interest in acquiring Dr. Miller's company in Ohio. "They had been making some soy milk in the liquid form, but they were interested in getting an Eastern branch." So in 1950 they purchased the [soy] milk plant in Mt. Vernon and have been operating since that time. This took a great burden off Dr. Miller's shoulders and left him free to do medical and nutritional research work. "It was then decided to start the International Nutrition Research Foundation and Dr. Miller was asked to be the Director of this Foundation. He placed a larger part of the purchase price of the factory into this Foundation, which would be devoted to food research only. From the day this research institution was started it has attracted a great deal of attention from all parts of the world; among those interested parties has been the World Health Organization of the United Nations. They came to the conclusion that soy milk had great possibilities in countries of low economic conditions where they could not afford to buy imported [cow's] milk," and in protein-deficient countries. They came to Mt. Vernon to investigate both the soy milk plant and the experimental research. Dr. Miller educated them on the many benefits of using protein from soybeans instead of from animals. As a result, the United Nations constructed a large soy milk plant in Djojakarta [Jogjakarta / Yogyakarta] Indonesia. It was built with the advice of Dr. S.S. De (who has headquarters in Bangkok, Thailand) and the support of the Government of Indonesia, FAO, UNICEF, and WHO.

2309. Motoyama, Tekishu. 1958. Inshoku jiten [Encyclopedia of food and drink]. Tokyo: Heibonsha. 604 p. Illust. 27 cm. [Jap]

• ***Summary:*** Includes listings for the following soy-related terms: Aburage (deep-fried tofu pouches), aemono (Japanese-style salads), agedashi-dofu, daizu (soybeans), dengaku, fu (wheat gluten; but the term "seitan" is not listed in this book), ganmodoki (tofu burgers), gisei-dofu, goma-dofu (sesame tofu), goma-miso (sesame miso), inari-zushi, iri-dofu (scrambled tofu), kenchin-jiru, miso, namemiso,

© Copyright Soyinfo Center 2013

natto, oboro-dofu (soymilk curds), oden (stew), okara, shira-ae (tofu salad), shoyu, sukiyaki, tekka, teriyaki, tofu, tonyu (soymilk), tsuto-dofu, unohana (okara), yakimiso (broiled miso), yuba.

Separate entries, with detailed information, are given for some of the above words or terms.

2310. Nippon Shokuhin Kyokai. 1958. Tôfu no eisei [Tofu sanitation]. Tokyo: NSK. 97 p. 19 cm. Series: Shokuhin eisei sosho; Tofu no maki. [Jap]*
• ***Summary:*** This is the first book on this subject, indicating that the microbiological safety of tofu was probably a matter of fairly widespread concern at the time.

2311. Richards, Janet; Richards, Charles. 1958. Basic Chinese and Japanese recipes. 3rd ed. rev. and expanded. San Francisco, California: City Lights Books. 75 p. Index of recipes. 17 cm.
• ***Summary:*** Contents: Introduction (General. For epicures, vegetarians, and dieters). Chinese recipes. Japanese recipes. General information: Buffet, party foods & hors d'oeuvres. To brew tea. Special imported ingredients. Where to get ingredients & equipment.

Introduction: "Most of the recipes in this book appear constantly on the menus of the Chinese and Japanese restaurants of San Francisco, New York, and a few other cities that have a population segment with Chinese or Japanese ancestry." Many recipes call for "soy sauce" and up to 1 teaspoon "MSG powder."

The section "For epicures, vegetarians, and dieters" states: "Of the special foods of the Orient, the most versatile is the soy bean. The number of widely differing foods made from soy beans is very large, including bean thread, noodles, soy sauce, soy milk with its derivatives such as dofu, the fermented nam yu and fu yu of China and miso of Japan. Western food technology has also added to the list."

Soy-related recipes–Chinese: Lo han chai (with dofu and seaweed, p. 19-21). Dofu with oyster sauce ("1 block of Japanese tofu, or 2 cakes of Chinese tofu," p. 22). Steamed fish with dofu (p. 29-30). Chicken in soy (with 1 cup soy sauce, p. 31-32). Chinese sauce [commercial]: Foo yü (sharp thick sauce [fermented tofu]). Jeung yow (soy sauce).

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms "nam yu" or "fermented nam yu" or "Foo yü" to refer to fermented tofu.

Japanese recipes: Miso soup (with tofu. Miso is "fermented soy beans," p. 48). Konbu salad (with soy sauce, p. 49). Egg plant with miso (p. 50). Turnips in soy (soy sauce, p. 50). Misoyaki (p. 54-55). Joints of chicken teriyaki (with Teriyaki sauce, p. 56). Beef sukiyaki (with tofu, p. 59-60). Beef teriyaki (cook on a hibachi, p. 60). Teriyaki sauce (p. 61; Ingredients: ½ cup table syrup {light cane molasses}, 1 quart shoyu {high quality Japanese soy sauce}, 3/4 lb. sugar, 2 pieces dashi konbu {dried kelp} 6 inches long, ½ teaspoon MSG powder, 2 tablespoons sake). Quick teriyaki sauce (p. 61; Ingredients: 3/4 cup soy sauce, 3 tablespoons sake {or sherry}, ¼ cup sugar, 1 teaspoon grated ginger, ½ tsp. MSG powder). Buta dofu (with "soy bean curd," p. 63).

Special imported ingredients (p. 68-71): Japanese–Canned foods: Bean curd, prepared black soy beans. Packaged foods: Miso (the light variety, fermented soy bean paste). Bottled foods: Fuyü (Chinese bean cake; Order top quality such as Quong Hop brand). Shoyu (soy sauce; Order top quality such as Kikkoman, Higeta, or Marukin). Chinese–Bottled foods: Soy sauce. Black beans (Dow Shee; for black bean sauce).

2312. Tan, Boe Han. 1958. Technology of soymilk and some derivatives. PhD thesis, Agricultural University of Wageningen, Netherlands. 132 p. [10+ ref]*
• ***Summary:*** Includes soymilk, evaporated soymilk, soy curd, soy yogurt. Maps, tables, and statistics for 1955 are given. Address: Proefschrift–Wageningen.

2313. Toyosawa, Isao. 1958. Shokuhin oyobi shiryô no korin ni kansuru kenkyû. II. Tôfu oyobi seizo haieki no korin ni tsuite [Studies on the choline of foods and fodders. II. Choline content in commercially prepared soybean curd and its waste liquor]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 10(6):272-74. [13 ref. Jap; eng]
• ***Summary:*** Retention of total choline was: Okara 10%, soymilk 83%, tofu 45%, and whey (waste liquor) 30%.

2314. *Kurashino Techo* (*Notebook for Living*). 1958? Tofuya no rappa. Aru nihonjin no kurashi [The tofu maker's horn. The life of one Japanese]. p. 157-65. Undated. Illust. [Jap]
• ***Summary:*** A poignant photographic essay showing the many activities in the life of a traditional tofu maker. Depicts an era that is rapidly vanishing from Japan.

2315. Hayashi, Shizuka. 1959. Seek suitable U.S. food varieties [of soybeans]. *Soybean Digest.* Jan. p. 25-26.
• ***Summary:*** "Nagano prefecture with about 320 miso manufacturers is the largest miso producing area in Japan. Its annual output is approximately 140,000 tons, more than one-fourth of the total Japanese production. Nagano miso is popularly known as 'Shinshu miso.' It is lighter in color than the miso produced in other areas."

Miso made from U.S. soybeans sells for a lower price than that made from Japanese or Chinese soybeans. "The biggest objections to U.S. soybeans were that they contained morning glory seeds, corn and other foreign material not found in beans of other origin. U.S. soybeans take much longer time in cooking to obtain the required softness. Due to the extra time required in steaming the color of the miso produced becomes darker. Further, the irregularity in size of the U.S. soybeans causes unevenness in softness when they are cooked. Broken beans are objectionable for this reason.

© Copyright Soyinfo Center 2013

Above all, the 'taste' of the soybeans after they are cooked is claimed to be unsatisfactory as compared with other beans, and this affects the sweetness or flavor of the miso produced."

Japanese miso makers used to import significant amounts of soybeans from China, but since the breakoff in trade between Japan and China last April, Chinese beans are no longer imported to Japan. So manufacturers of miso and tofu will have to rely more on U.S. soybeans. "Even the largest frozen (dried) tofu makers in the Nagano area are using U.S. soybeans." They met recently in Nagano city to discuss ways of getting better quality soybeans from America. A photo shows Mr. Hayashi speaking at this meeting. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome, Yuraku-cho, Chiyoda-ku, Tokyo, Japan.

2316. Claiborne, Craig. 1959. Expert suggests dishes for Oriental celebration. *New York Times.* Feb. 5. p. 34.
• ***Summary:*** Enjoying a New Year's feast is an old Chinese custom. This is the year 4,657 according to the ancient Chinese calendar. Calvin Lee has suggested the menu and recipes. The excellent book *Chinese Cooking for American Kitchens*, by Calvin Lee was recently published by Putnam. One of the four recipes given is Bean curd soup (Dow foo tong), whose ingredients include "1 brick bean curd (dow foo)" and "½ teaspoon monosodium glutamate (Ac'cent)," plus chicken gizzard, liver, and heart, pork, bok choy, and canned bamboo shoots. Two other recipes call for "soy sauce."

2317. Winter, Ella. 1959. Lambs' tails and goats' horns. *Manchester Guardian* (*England*). Feb. 23. p. 3.
• ***Summary:*** In China she enjoyed "bean curd spices such as *min seeh* (soya-bean jam) and *mei jing*, a shorter name for... monosodium glutamate."

2318. Walley, Ersel. 1959. India a logical protein market: Soybean Council of America, Inc. *Soybean Digest.* Feb. p. 20.
• ***Summary:*** "From an address before the Delhi Rotary Club, New Delhi, India, Jan. 8. Mr. Walley of Fort Wayne, Indiana, chairman of the market development committee of the American Soybean Association, and Howard L. Roach, president of the Soybean Council of America, Inc., were in charge of the soybean exhibit at the U.S. Trade Fair in New Delhi, Dec. 10 to Jan. 10.

"The soybean crop, introduced into the United States from the Orient at the turn of the century, did not assume commercial importance until after World War I. The estimated production for 1958 was 574 million bushels, and increase of 70-fold in 30 years.

"As a pioneer grower it was my privilege to be identified with this very important and significant development in American agriculture."

"In 1935 your own Mr. Gandhi said, 'The soybean stands at the top of all known articles of diet..."

"My personal enthusiasm for the extended use of soybean products for direct human consumption began in Germany in 1948 when I saw the remarkable results secured from adding full fat soy flakes to the diet of emaciated men being returned as released war prisoners from the slave labor camps of Siberia. This interest in promoting the use of soybeans as an economic and valuable source of protein and fat for those whose diets are deficient in these essential elements has continued since that time.

"In the past 3 years it has been our privilege to cooperate with the Japanese soybean industries in promote the use of soybeans as food in Japan through increased use of such foods as tofu, miso, soya sauce and many other soya products more generally known. Hundreds of nutritionists have been trained to carry the story of soy proteins and fats to Japanese households."

In Europe, the Soybean Council of America, Inc. is teaching processors how to blend "soybean oil with olive oil to produce an acceptable and cheaper cooking oil which will be available in larger quantities to more people."

"Another important achievement in Europe is the increased use of soy flour in bread. Adding 5% soy flour greatly increases bread's protein content and value.

"You may ask why we came to India. India is important. Here you have one-seventh of the world's population and one-fifth of the free people of the world. Your future holds great promise. As you industrialize we feel you can and will need to import additional proteins and fats for food." Address: American Soybean Assoc.

2319. Miller, Harry W. 1959. Why Japan needs soy milk. *Soybean Digest.* April. p. 16-17.
• ***Summary:*** "It was an opportunity greatly appreciated to study the needs of the Japanese people nutritionally during my 7 months' responsibilities as surgeon and physician at the Tokyo Sanitarium and Hospital... The idea of a soybean beverage and milk from the soybean for soups and cooking was something altogether new... We set us a small pilot plant where we made soy milk, soy cream, soy ice cream, and soy spread... After seeing the ready acceptance by the nursing staff and patients of the Tokyo Sanitarium and Hospital of soy milk and soy cream made daily from a small fabricated plant of equipment procurable in Japan, we conceived the idea of such additions to be made to the tofu plants... We fitted up a small tofu plant out in a rural district with a homogenizer and a few utensils for milk handling. The milk is being bottled and capped there, and the local community is most appreciative. Since it sells at half the cost of fresh dairy milk it leaves a modest profit for the local shop."

2320. Kalnay, Francis. 1959. Soybean has all the answers (or

© Copyright Soyinfo Center 2013

nearly all). *House Beautiful* 101:174-75, 207-12. May.
• ***Summary:*** The opening 2-page spread contains photos of many commercial soyfood products available in America at the time: Dr. Fearn's Soy-O pancake flour (one with whole wheat and soya, and the other with just wheat and soya), Pure soya bean powder, and Soya bean granules, Wuest's soya-protein bread, Wuest's cookies, Wel-Pac kinako [roasted soy flour], Yamasa shoyu, Kikkoman shoyu, Oliver Tonkatsu Sauce (Tonkatsu are breaded pork cutlets), Hain soy oil (cold pressed), Amoy soy sauce, Prosperity soy sauce, Golden Sang Chan soy sauce, Madison Zoy-Koff, Hime aka-miso (Pacific Trading Co.), Hime yakidofu, Hime frozen bean curds, Delicious Edamame (Packed by Tokai Kanzume Co. Ltd., Nagoya, Japan), Quong Hop & Co. bean cake [tofu], Schiff soy lecithin, Oriental food shop black soybeans, Climax wheat and soy pure egg noodles (The Pfaffman Co., Cleveland, Ohio), and Prince Veta-Roni (Mezzani or Spaghetti; Prince Macaroni Co.).

The subtitle reads: It's a choice gourmet food. It's as nutritious as vitamin pills. It comes in a dozen forms and makes a hundred dishes.

The author uses soy-related words in a very modern way: "Have you ever noticed the way people who know food pronounce the simple word 'soy'? Their facial expression changes instantly, and their tone of voice turns positively lyric. There are two serious reasons for their extraordinary respect for a bean so little and so innocent. The soybean is enormously rich in protein. This wealth of protein is apparent in both quality and quantity... And because soy oil is high in unsaturated fatty acids, it fits well into today's popular low-cholesterol diets.

"In our country soy is relatively new... Soy is the most versatile legume imaginable... The glittering star in soy's troupe of players is soy sauce (also called soya and shoyu)... The soy food industry is still in its infancy in the U.S. Yet the variety of soy products available is impressive."

Note 1. This is the earliest publication seen (April 2001) that mentions Quong Hop & Co. in connection with tofu.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "soya-protein" (or "soya-proteins").

2321. **Product Name:** Hime Brand Yakidofu: Baked Bean Curd.
Manufacturer's Name: Pacific Trading Co. (Importer, Distributor). Made in Japan.
Manufacturer's Address: San Francisco, Los Angeles, New York.
Date of Introduction: 1959. May.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable; refrigerate after opening.

armed forces of the Republic of Korea. *J. of Nutrition* 68(Supplement 1):1-80. June. See p. 12-13. [42 ref]
• ***Summary:*** An endless variety of soups (which are thick like U.S. stews) are served, mostly in winter; they usually contain some soy products. Seaweed is a delicacy, used in cooking or served with soy sauce. A recent survey based on food disappearance, conducted by the USDA Foreign Agricultural Service, calculated average civilian calorie intake at about 2,058 per day, of which 81% comes from cereals, 5% from meat, fish, eggs, and milk, 4% from oilseeds, oils and fats, 4% from white and sweet potatoes, 2% from fruits and nuts, 1.6% from vegetables and seaweed, and 1% from sugar (p. 8).

The typical formula for Korean Army soup, in grams per man for one meal, is: Cabbage 70, soybean curd [tofu] 30, soybean mash [probably soybean paste, doen jang] 30, large white radishes [*daikon, Raphanus sativus*] 30, red pepper mash [kochu jang] 10, salt 10, onion 3, melchi (small dried fish) 2, and red pepper powder 1 (p. 9).

The section titled "Soybeans and soybean products" (p. 12-13) states: "Soybean products are extensively used in the Korean diet and by the ROK Armed Forces." Soybean curd (Japanese: tofu), which is precipitated with calcium or magnesium salts, is used almost daily in making thick soups. It is also "fried in deep fat and used in a composite ROK Army food called 'seasoned vegetable and bean curd' containing small fish (12%), soy sauce (23%), bean curd (25%), seaweed (16%), dry radish (14%), and red pepper, sugar, and cottonseed oil. This latter product was observed in one ROK Army mess only."

Soybean sprouts are a favorite and very nutritious civilian food in Korea, but their "use in troop feeding is limited, presumably because of the low germination of the soybeans available at the time of our visit."

Fermented soybean sauce is a widely used and nutritious seasoning.

"Seasoned soybeans are a delicacy much liked by Koreans and obtained by boiling soybeans in sweetened soybean sauce. The weight proportions used in the preparation are said to be cooked and roasted soybeans 70%, soybean sauce 25%, and sugar 5%.

"Soybean mash [*doen jang*] and pepper mash [*kochu jang*] are fermented foods popular in this part of East Asia. Barley is cooked. allowed to cool and then treated at about 90ºF for one day with a commercially prepared enzyme made from *Aspergillus oryzae.* [i.e., barley koji is made]. The barley is then milled together with cooked soybeans and salt, and fermented in concrete tanks for about 3 months. The finished paste-like product is rich in amino acids and protein and is extensively used directly and in cooking. Pepper mash is a similar preparation which contains in addition 10% powdered red pepper." Address: National Institutes of Health, Bethesda, Maryland.

2326. Hayashi, Shizuka. 1959. Japanese users react to U.S. beans. *Soybean Digest.* Aug. p. 34.
• ***Summary:*** "The fact that soybean in Japan are used 100% as food should by now be well realized by those in the soybean industry as well as by the growers. It has been repeatedly emphasized that soybean trade between the United States and Japan is to be based on the complete understanding of this fact."

One of the first projects of JASI "was to find out the causes of the unpopularity of U.S. soybeans among the Japanese users, especially the manufacturers of soybean products." The major complaints concern excessive "foreign material, broken beans, irregularity of sizes, and mixture of different varieties received. All these problems have been time and again called to the attention of interested parties in the United States." Considerable improvement has been made but there is still work to do. "The writer believes in the very near future specific varieties can be chosen for different food manufacturers and business will be done on the basis of [those] specific varieties."

A list gives the specifications for soybeans desired by Japanese oil processors (6 specs), miso manufacturers (3 specs), shoyu makers (3), tofu makers (2), frozen tofu makers (1), kinako makers (3), and natto makers (3). For example, for miso: (1) Soybeans with white hilum with rich protein content and of big size are preferred. (2) Soybeans should be stored separately by varieties [identity preserved]. (3) Foreign material, especially seeds of other plants, sand and stones should be eliminated.

And for tofu: (1) Soybeans should be rich in protein content with thin seedcoat. (2) Soybeans should be free from foreign material, especially that of poisonous seeds of other plants.

A photo shows Shizuka Hayashi tasting miso made from the U.S. soybean varieties Dorman, Mamloxi, and Jackson at the Inamari miso factory in Shizuoka city. Arthur Rollefson, U.S. assistant agricultural attache, is also shown.

Note: This is the earliest document seen (Feb. 2010) that introduces the concept of "identity preserved" ("Soybeans should be stored separately by varieties"). Address: Japanese-American Soybean Inst., Tokyo.

2328. Nakano, Masahiro. 1959. Traditional methods of food processing. Paper presented at Regional Seminar on Food Technology for Asia and the Far East. 15 p. Held 1-8 Aug. 1959 at Mysore, India. [Eng]

• ***Summary:*** Contents: General. Soybean foods: Miso, syoyu (soy sauce), aspects on the miso and syoyu, natto, tofu, kori-dofu. Technological methods of food processing: Koji, miso, syoyu [shoyu] (soy sauce), natto, tofu. Conclusion.

Note: This paper was sent as a gift, with note and autograph, to Dr. A.K. Smith of the Northern Regional Research Lab., Peoria, Illinois. Address: Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

2329. Sapin, P. 1959. Le soja dans le monde [The soybean in various countries of the world]. *Bulletin Agricole du Congo Belge et du Ruanda-Urundi* 50(4):897-948. Aug. [39 ref. Fre; dut]

• ***Summary:*** This articles focus on soya at Yangambi in the Belgian Congo. Content: Introduction. 1. Historical and worldwide distribution. 2. Climatic adaptation: Comparison of the climates in Harbin (central Manchuria) and Yangambi (near the equator), photoperiodic and thermal characteristics of soybeans, comparative study of the behavior of soya at Yangambi and its main zones of cultivation, eco-climatic chart of soya, classification of soybeans (*des sojas*) into fundamental climatic types and directives for the realization of their introduction to Yangambi.

3. Selection: Classification of the soybean varieties, genetics, and selection. 4. The cultivation of soya. 6. Characteristics of the seed and its utilization: Composition of the seed, Oriental preparations based on soya (soy sprouts, soymilk, tofu, natto, Hamanatto, yuba, miso, soy sauce or shoyu), soy oil and by-products, soybean cake, use of soya in the West. 7. A glance at soybean production. 8. The situation in the Belgian Congo.

The author identified a number of soybean varieties adapted to different ecological zones in the tropics, which helped soybeans spread to tropical countries, especially in Africa. Address: Assistant à la Division des Plantes Vivrières de l'INÉAC, à Yangambi [Belgian Congo].

2330. Smith, Allan K. 1959. Research on the increasing use of U.S. soybeans in Japan. *Soybean Digest.* Sept. p. 62-65.

• ***Summary:*** "In 1956 the American Soybean Association in collaboration with the Foreign Agricultural Service of the U.S. Department of Agriculture started a market development program on soybeans in Japan."

Late in 1957 Dr. Smith "spent 2 months in Japan studying the products and processes where U.S. soybeans are competing with Japanese and communist Chinese beans." He found that the traditional foods of Japan are processed from whole soybeans, whereas in the USA the use of whole soybeans has, until recently, "received no commercial recognition for food, feed, or industrial application. Also the traditional food processors of Japan value the protein more highly than the oil which is the reverse of the emphasis in this country."

The results of Dr. Smith's investigations were published in April 1958 under the title "Use of United States soybeans in Japan." "The problems raised by the Japanese are briefly summarized as follows: 1–Composition: It was generally stated that Japanese soybeans are higher in protein than our soybeans. 2–U.S. soybeans are slower to absorb water than Japanese beans and absorb water unevenly. 3–Our soybeans cook unevenly and consequently they may not support uniform fermentation. 4–Products from U.S. soybeans are darker in color than those made from Japanese soybeans. 5–Food products from U.S. beans do not have as good a flavor as from Japanese soybeans. 6–The Japanese do not like the amount of foreign matter, split and broken beans, and other crop material in U.S. soybeans.

Following Dr. Smith's investigation in Japan, a research project was initiated at the Northern Regional Research Laboratory in Peoria, Illinois. The immediate objectives of the project are: 1–To investigate the reported differences between U.S. and Japanese soybeans and to evaluate their significance. 2–To compare approximately 30 U.S. and 6 Japanese soybean varieties in miso and tofu, two most important Japanese foods, and to determine which U.S. varieties are suitable for making these foods. 3–To study the processing methods used by the Japanese and to modify their processes for better adaption [adaptation] of our soybeans to their use...

"Two Japanese scientists, Tokuji Watanabe and Kazuo Shibasaki, accepted invitations to come to the Northern Laboratory to work on these projects."

In the 9 months that Dr. Shibasaki and Mr. Watanabe spent at the NRRL they made progress on all the 6 problems listed, though the project is still underway. They found two U.S. soybean varieties, Jackson and Lee, that make tofu very similar to that made from Japanese soybeans. Other promising varieties are Blackhawk, Comet, Dorman, Ottawa, Mandarin, and Acme.

"Composition: It was reported, and generally assumed to be true, that Japanese soybeans were higher in protein and lower in oil than U.S. soybeans. We have accumulated data (all on a moisture-free basis) to determine whether this report is true. Table 1 shows the protein and oil content of eight Japanese soybean varieties grown in various parts of Japan during 1957 or 1958. The name often indicates the area grown: Aomori, Hokkaido Akita, Kumamoto, Miyagi, Nagano, Hagi-Dani, Hokuho, and White Hilum Iwate. These

© Copyright Soyinfo Center 2013

8 Japanese varieties contained an average of 40.5% protein and 17.2% oil in 1957 and 42.3% protein and 16.8% oil in 1959.

Table 2 shows the protein and oil content of 15 U.S. [and Canadian] soybean varieties grown in various parts of the USA during 1956, 1957 or 1958: Acme, Adams, Blackhawk, Chippewa, Clark, Comet-1, Comet-2, Dorman, Dortchsoy, Harosoy, Hawkeye, Jackson, Lee, Lincoln, and Norchief. These 15 U.S. varieties contained, on average, 41.8% protein in 1956, 40.1% in 1957, and 40.7% protein and 20.2% oil in 1958. Comparing these two tables, Dr. Smith concludes that U.S. and Japanese soybeans contain about the same amount of protein, but that U.S. field-type soybeans contain about 3.7% more oil than Japanese soybeans.

Table 3 shows the maturity group, protein and oil content, and weight in grams of 100 seeds for 33 recommended U.S. and Canadian varieties. This data is based on Cooperative Uniform Soybean Tests. These 33 varieties are grown in all the major soybean growing areas of the USA; Groups 00 to IV inclusive are grown in the North Central States, approximately north of Cairo, Illinois, to northern Minnesota; groups V to VIII inclusive are grown south of Cairo. The 33 varieties, sorted by ascending maturity group, and within each group alphabetically by varietal name are: Acme (00, Canadian), Crest, Flambeau, Capital (0), Comet, Grant, Mandarin, Norchief, Blackhawk (I), Chippewa, Adams (II), Harosoy, Hawkeye, Lindarin, Ford (III), Lincoln, Shelby, Clark (IV), Perry, Scott, Wabash, Dorman (V), Dortchsoy, S-100, Hood (VI), Ogden, CNS-4 (VII), Jackson, Lee, Bienville (VIII), Improved Pelican, J.E.W. 45 [Wannamaker], and Yelanda. This table shows that the oil content increases slightly as one moves from north to south

Smith then discusses garden- or vegetable-type soybeans. “U.S. vegetable soybeans: There is no clear definition for distinguishing the field-type from the garden-type beans. The distinctive features of the garden beans are in their superiority in flavor, texture, and ease of cooking–properties that make them preferred for food use... Most of our so-called vegetable-type soybeans we are growing in this country are Japanese garden varieties that came directly from that country; the Kim and Kanrich were developed in this country. Serious disadvantages of garden-type beans which restrict production are the tendency to shatter from the pods when ripe and the consequent large loss with mechanical harvesting... the yields of some varieties are also lower than for field beans. It has been stated frequently that the garden-type bean is higher in protein and lower in oil than the field type.

Table 4 shows the protein, oil, weight of 100 seeds in grams and hilum color for 14 “garden-type soybeans” on a dry basis. The source of the data for all the varieties except Kanrich, Kim, and Easycook is the University of Illinois Bulletin 453 by J.W. Lloyd and W.L. Burlison 1939 [“Eighteen varieties of edible soybeans: Their adaptability, acceptability, culture and characteristics”]. “For these data the protein values are no higher than for present-day field types and the oil values are only 0.77% lower” than typical field types soybeans shown in table 3. The weight in grams of 100 seeds, in descending order of seed weight and size, is as follows: Hokkaido 31.9, Funk Delicious 31.7, Willomi 31.1, Jogun 29.9, Emperor 29.7, Giant Green 29.4, Kim 28.7, Imperial 28.4, Kanrich 27.3, Fuji 25.9, Illington 25.9, Higan 23.4, Bansei 21.2, and Easycook 16.2.

Conclusion: It “appears that claims for high protein values for garden type soybeans may be exaggerated.” A portrait photo shows A.K. Smith.

Note 1. This is the earliest document seen (Dec. 1998) concerning the breeding or selection of soybean varieties for food use–in this case tofu for Japan.

Note 2. This is the earliest English-language document seen (June 2009) that contains the term “garden-type soybeans” or “vegetable-type soybeans.” The two terms as synonyms. Address: NRRL, Peoria, Illinois.

• ***Summary:*** UNICEF stands for the United Nations International Children’s Emergency Fund. Appendix 3 (p. 48-51) titled “Data on some nutritious food products that have been developed in Asia and the Far East,” discusses Saridele, groundnut extract curd [tofu made from peanut

© Copyright Soyinfo Center 2013

milk], Indian Multipurpose Food (MPF, developed by CFTRI), miso, natto, and tempeh.

"'Saridele' is the name that has been given to a spray-dried soybean extract combined with an extract of sesame, or peanut, with or without the addition of malt. Vitamins and calcium are added to saridele in order to make its nutritive value similar to that of cow's milk or to enhance its nutritive value. Flavorings such as vanilla or chocolate are also used, which make the product highly acceptable.

"A plant having a capacity of about 800 kg./day has been erected in Indonesia with the financial assistance of UNICEF and the technical assistance of FAO. Saridele is manufactured from a mixture of soybeans and decorticated sesame in the proportion of 4:1. Malt extract from maize may be used to replace 50% of the cane sugar used. Soybean and sesame are soaked for about six hours and then disintegrated finely, together with 7 volumes of hot water. The slurry is stirred vigorously and then filtered. The filtered liquid is heated under pressure for 10 minutes at 120ºC., then flashcooled and formulated with Vitamin A, in oil solution, and malt, if desired. The formulated liquid is homogenized, concentrated in a vacuum evaporator to about 22% solids, then spray-dried. The powder finally is sifted and blended with finely ground cane sugar, and calcium carbonate, riboflavin, ascorbic acid and Vitamin B_{12} added; the mixture may be flavored with vanilla or chocolate." A table compares the nutritional composition of whole dried cow's milk and Saridele (based on a leaflet from Saridele Ltd., Indonesia). Address: FAO, Rome.

• ***Summary:*** Foods marked with an asterisk (*) are exported from Japan to the USA. Many recipes include "soy sauce" and monosodium glutamate (Ajinomoto). Soy related recipes include: Aburage * ("fried soy bean curd"–4 recipes). Broiled soy bean curd [*yakidofu*] (3 recipes. Sukiyaki, Yasainabe, Osechi). Chu-miso paste * ("made from soy beans, salt and rice malt [koji], seasoning for miso soup"–2 recipes). Ganmodoki * ("fried soy bean curd and vegetables"–Nikomi oden). Nama-age ("half fried soy bean curd"–Boiled vegetables).

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried soy bean curd" or the term "half fried soy bean curd."

Okara ("soy bean curd leftovers"–Yoshino sushi). Red miso paste * ("made from soy beans, salt and rice malt [koji], seasoning for miso soup"–2 recipes). Soy bean (3 recipes). Soy bean curd * (14 recipes, incl. Gizeidofu / Gisei-dofu, p. 39). Soy bean powder * [kinako] (2 recipes; Kinakomochi, Kushi dango). Soy sauce ("Kikkoman"). White miso paste ("made from soy bean, salt and rice malt [koji], seasoning for miso soup"–2 recipes). Worcestershire sauce (Skewer nibblers).

Other interesting recipes include: Amazake. Azuki-sarashian ("red bean powder"–7 recipes). Black sesame seed (in Sekihan). Mochi rice. Red bean [azuki] (Sekihan). Rice cake ("made of mochi rice"). Seaweeds (kanten / agar-agar, kombu / konbu, nori / green laver & purple laver, wakame). White sesame seed. Yamaimo ("Japanese yam"). Tomi Egami was born in 1899. Address: [Japan].

2341. Lee, Calvin. 1959. Chinese cooking for American kitchens. New York, NY: G.P. Putnam's Sons. 190 p. Illust. by Mabel Wong Lilienstein. Index. 22 cm.
• ***Summary:*** An excellent book, says Craig Claiborne. The many styles and forms of Chinese cooking "can be grouped into five schools: Canton, Fukien, Honan, Shantung [incl. Peking], and Szechuan. Cantonese cooking is the most popular, even in China itself." This is a Cantonese cookbook. "Fukien probably produces the best soy sauce in China" (p. 20). Canton is known for its steamed bass with black bean sauce (*Jing yu*) (p. 22).

Soy related recipes: Steak à la Lee (with "2 tablespoons Worcestershire sauce," p. 33). Pork chops à la Lee (with "2 tablespoons Worcestershire sauce," p. 35).

"Perhaps the most interesting of the condiments used in authentic Chinese cooking is the lowly soy bean." It is a rich source of oil. "The pulp of the bean is ground to make a curd extremely high in protein content. These bean curds (dow foo) look somewhat like little rectangles of white custard and can be boiled, stir-fried, or baked. Some of the fresh bean curd is permitted to ferment, making a richly aromatic and tangy cheese. Commonly called Chinese cheese, foo yu [fermented tofu] is sold in bottles and does not require any cooking." "Dow see [fermented black soybeans] are small fermented [soy] beans which are used commonly for seafoods such as strong-smelling fish, shrimps or lobsters. They have a delightful spicy flavor and should be rinsed in water and crushed before using" (p. 46-47).

Vegetables: "Bean sprouts (ngar choy). Sold fresh by the pound. Also sold in supermarkets canned." Used in many recipes (p. 50). Note 1. It is unclear what type of bean is used to make these sprouts.

"Black beans (dow see)." Sold by the ounce. Wash and soak for 10 minutes before using. Recipes: Lobster Cantonese (Chow lung har). Beef with green peppers and tomatoes (Fon care lot tzu ngow). Pork with tomatoes (Fon care gee) (p. 50).

Seasonings and sauces: Bean curds (dow foo). Sold fresh or canned in Chinese or Japanese groceries. Recipes: Beef with bean curds (Dow food ngow). Steamed fish with bean curds (Dow foo jung yu). Bean curd soup (Dow foo tong) (p. 52). Brown bean sauce (mien see). Sold canned in groceries (p. 52). Haisien sauce [Hoisin sauce]. Sold canned or bottled in Chinese groceries. Used chiefly as a condiment.

Fried fish with bean curds (Dow foo jeen yu, p. 106). Steamed fish with bean curds (Dow foo jing yu, p. 107). Soy sauce cooked chicken (See yow gai, p. 116). Beef with bean curds (Dow foo ngow, p. 135). Roast pork with bean curds (Dow foo char shu, p. 145).

Note 1. Most recipes call for ½ to 2 teaspoons "monosodium glutamate."

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "See yow" to refer to a type of Cantonese soy sauce. Address: [New York City].

Soya *docinhos* with condensed milk, croquettes, Adventist roast. 4. Dishes made with whole soy flour. Recipes excerpted from "A Soja" (Serviço Social da Industria, Departamento Regional do Rio Grande do Sul). Address: Porto Alegre, Brazil.

2344. Taira, Hirokadzu; Ebisawa, H.; Sugimura, K.; Sakurai, Y. 1959. Daizu kakô-hin no amino-san in kansuru kenkyû. I. Shoshu shihan daizu seihin no zen amino-san ganryô [Studies on amino acid content of processed soybeans. I. Total amino acids of soybean products]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 11(6):351-54. [12 ref. Jap; eng]
• ***Summary:*** The total amino acid content of 16 kinds of soybean products were determined by microbiological assay method. These included tofu, fried tofu pouches (abura-age), okara, dried-frozen tofu, yuba, kinako (roasted full-fat soy flour), natto, and nyu-fu (fermented tofu). Address: National Food Research Inst., Tokyo.

2345. Taira, Hirokadzu; Ebisawa, H.; Sugimura, K.; Sakurai, Y. 1959. Daizu kakô-hin no amino-san in kansuru kenkyû. II. Tôfu seizô kôtei ni okeru amino-san no suii [Studies on amino acid contents of processed soybeans. II. Transfer of amino acids during "tofu" processing]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 11(6):355-57. [1 ref. Jap; eng]
• ***Summary:*** The amino acid pattern of tofu was quite similar to that of the soybeans from which it was made, except that a significant amount of tyrosine ends up in the okara, as do smaller amounts of methionine and tryptophan. Address: National Food Research Inst., Tokyo.

2346. Thompson, Edna. 1959. The yoga cook book. New York, NY: Philosophical Library. 156 p. Index. 19 cm.
• ***Summary:*** The Yoga diet, as presented here, is not vegetarian. This book contains recipes for meat (liver, heart), fish, and shellfish. "Yogans" are said to eat at least some food each day which carries the life principle (fresh, raw food), to prefer whole foods in modest amounts, to avoid inert demineralized foods (such as white flour and white sugar), and alcohol. Yoga is not a religious movement; its followers practice self discipline in eating, without fasting. The rear dust jacket states: "This book banishes the idea that the modern Yogin as an ascetic with caveman dietary habits." The true Yogin regards his food as sacred and has heightened powers.

Soy-related recipes include: Soybean soup (p. 18). Shoyu sauce (soy sauce, p. 26). "Auxin" salad (freshly sprouted mung beans sprinkled with soy oil, etc., p. 48). Eggs foo yung (with bean sprouts, water chestnuts, green onion, celery, 4 beaten eggs, salt to taste. "Brown desired size patties of the mixture in soy oil." Serve with a brown sauce made with cornstarch, soy sauce, monosodium glutamate, sugar, and salt. p. 58-59). Vegetable sukiyaki (with Tofu {bean curd} and shoyu sauce, p. 65). Soyburgers (with mashed cooked soybeans, p. 66). Vegetable chop suey (with soy oil, bean sprouts, and soy sauce, p. 68). Korean soybean noodles (made with soybean flour, p. 72). Soy spoon bread (with soy flour and soy oil, p. 97-98). Making soy bean cheese (tofu, coagulated with vinegar, p. 104). Yoga puddings and desserts (white flour is replaced by soy flour and lard is replaced by soy oil, p. 114). Chinese sweet soy beans (p. 122). Manchurian soy bean milk drinks (p. 136).

Also discusses: Japan yokan cakes (with red beans [azuki], p. 116-17). Oat peanut butter wafers (p. 123). Red bean cake (Korea, with red kidney beans [azuki], p. 131-32).

Note: This is the earliest document seen (Jan. 2009) that describes the use of soy ingredients in Korean-style recipes outside Korea.

2347. **Product Name:** [Serimpie Tofu Coagulant].
Foreign Name: Serimpie Stremming / Batu-Tjina.
Manufacturer's Name: FA. L.I. Frank: Frank Soya.
Manufacturer's Address: P.O. Box 46, 7390 AA Twello, Netherlands. Phone: 05712-2141 or 2131.
Date of Introduction: 1959?
How Stored: Shelf stable.
New Product–Documentation: Soya Foods. 1984. Nov. p. 2.

2348. Raheja, P.C. 1960. So many uses has the soybean. *Indian Farming* 9(10):18-19. Jan. Series 2.
• ***Summary:*** Contents: Introduction. Green manure. As fodder. Soybean oil and cake. As human food. Food include "the green pods," soybean flour, soy milk, and "soy curd" or tofu. "Soy curd is prepared out of soy milk by adding milk curd to it. You can also add acetic acid instead of milk curd." Address: Indian Agricultural Research Inst., New Delhi.

2349. Spears, Robert G. 1960. Nature's miracle bean. *Times of India* (*The*) (*Bombay*). Feb. 14. p. 7.
• ***Summary:*** "The author is a member of the Agricultural Mission at the U.S. Small Industries Exhibition now on view in Bombay. The Soyabean Council of America, Inc. has a very interesting section at this Exhibition."

The article begins: "The soyabean is among the most valuable foods known to man, because of its high protein and fat content." The USA is the world's largest producer and exporter of soyabeans. Most of the soybeans produced in the USA are yellow in color. The protein quality of the soyabean is higher than that of other legumes.

"Body-building: It is well known that soyabean eaters [such as Japanese, Chinese, and Koreans] are of greater stature and have more stamina than people who subsist largely on rice, millet, or other grains."

In many countries soyabean curd [tofu] and milk furnish good nutrition. The soyabean can be fermented to

© Copyright Soyinfo Center 2013

yield various sauces and seasonings, pressed to yield oil for cooking, sprouted to furnish a fresh green vegetable that is rich in vitamins, only ground dry to make a flour (soyaflour) that is used in baked goods and confections. During the early 20th century the soyabean first became important and popular in the Western World.

Many countries now buy U.S. soyabeans and make them into "their own soya foods."

Note: This is the earliest article or ad seen (Aug. 2010) in *The Times of India* that contains the term "soya foods." Today soya bean oil is used in the manufacture of more than 50 food products in the United States.

2350. McNaughton, Jean W. 1960. The soya-bean–Its properties and nutritive values. *Rural Missions* No. 112. p. 8. Winter. [1 ref]
• ***Summary:*** As human populations increase, animal populations decrease increasing the need for plant proteins. This article focuses on soya milk. "Details of the step by step processing of the soya-bean in its various uses may be obtained from FAO, 1325 C Street S.W., Washington 25, DC." Address: Regional Nutrition Officer, FAO, Washington, DC.

2351. *Soybean Digest.* 1960. USDA research may put more U.S. soybeans in Japanese foods. Feb. p. 20-21.
• ***Summary:*** Photos show: (1) A.K. Smith, NRRL chemist, and Tokuji Watanabe, visiting Japanese scientist, examining a cake of tofu. (2) Watanabe wet-grinding soybeans to be used in making tofu.

In 1959 Japan imported an estimated 35 million bushels of U.S. soybeans, almost 10 times the quantity imported in 1950. "About half the soybeans used in Japan are eaten as traditional foods, most of which are made in processes that begin with whole soybeans... Recognizing that Japanese whole-bean processors use limited amounts of our soybeans, Dr. Smith recommended studies of U.S. beans in Japanese food processes. The work began at the Northern Utilization Research and Development Division [NRRL] in Peoria, Illinois Research on miso was performed by Dr. Hesseltine, NRRL microbiologist, working with Kazuo Shibasaki, on leave from Tohoku University, Sendai, Japan. Research on tofu was conducted by Dr. Smith and A.M. Nash of Peoria, working with Tokuji Watanabe, on leave from the Japanese Ministry of Agriculture and Forestry.

"Japanese processors say our beans absorb water, cook, and ferment more unevenly than their own. They also object to foreign matter, split and broken beans, and other crop material in our beans and to the color and 'beany' flavor of products made from them... U.S. soybeans, introduced from the Orient, have for 25 years been bred for yield, oil content, pest resistance, and similar characteristics but not for food processes that begin with whole beans–about half the total use in Japan."

2352. Inagaki, Choten; Fukuba, H.; Miyakawa, T.; Iwata, S. 1960. On the combination of protein and thiamine [in frozen tofu]. *J. of Vitaminology* (*Kyoto, Japan*) 6(1):43-51. March 10. [1 ref. Eng]
• ***Summary:*** On the disappearance of thiamine when soybean curd is frozen and thawed. Address: Lab. of Nutrition Chemistry, Ochanomizu Univ., Bunkyo-ku, Otsuka, Tokyo.

2353. *Cotton Gin and Oil Mill Press.* 1960. USDA research with Japanese foods shows promise for U.S. soybeans: May mean greater exports. 61(6):65. March 19.
• ***Summary:*** U.S. soybeans are not widely used in Japanese food processes that start with whole beans–even though total Japanese imports of U.S. soybeans in 1959 were estimated at 35 million bushels–almost ten times as many as imported in 1950. Recognizing this, Dr. A.K. Smith of the Agricultural Research Service, recommended studies of U.S. soybeans in Japanese food processes at the Northern Utilization Research and Development Division, Peoria, Illinois. About half of the soybean used in Japan are eaten as traditional foods, and the other half are crushed to make oil and meal. Most U.S. soybeans are crushed. About 20% of the soybeans are used to make miso.

Dr. Clifford Hesseltine and Dr. Kazuo Shibasaki developed a new miso process in which the soybeans are cracked into grits. A photo shows Dr. Tokuji Watanabe (on leave from Japan's Ministry of Agriculture) and A.M. Nash of the Northern Division as they work with typical Japanese equipment and study the process of making tofu from U.S. soybeans.

2354. American Soybean Association. 1960. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 144 p Advertisers' index. 22 cm.
• ***Summary:*** Contents: American Soybean Association. Japanese American Soybean Institute. National Soybean Processors Association. Soybean Council of America. U.S. Soybean oil meal and cake production, supply and utilization, 1924-1959 (1,000 tons). (12) Soybean oil, meal and cake production and stocks by states, 1955-1958. (13) Oilseed cake a meals, supply and distribution, Oct. 1950-59. Incl. soybean, cottonseed, linseed, peanut, copra, total. (14) Production of protein concentrates (cake and meal), 1937-41 (avg.) to 1951-59. Incl. soybean, linseed, cottonseed, copra, gluten feed and meal, tankage and meat scraps, fish cake and meal, dried milk products (dried and concentrated skim milk, buttermilk, and whey used for animal feed), other milk products (fed on farms), total. Note: In 1953-54,395,000 tons of dried milk products were fed to animals. (15) U.S. soy flour production. (16) Production and exports of soy flour and grits (incl. full fat, low fat, and defatted products, exported commercially or to military). (17) Production of mellorine [frozen dessert where vegetable oil replaces butterfat], 1953-59, by month. (18) U.S. fats and oils production, 1937-41 (avg.) to 1959. Incl. Butter, lard, edible beef fats, total edible animal fats, corn oil, cottonseed, edible olive oil, peanut oil, soybean oil, total edible vegetable oils, inedible oils. (19) Soybean oil utilization, 1931-1959 (million lb). Incl. Foods: Margarine, shortening, other, total, Non-food products: Soap, paint & varnish, other drying oil products, miscellaneous, loss, total, total domestic disappearance. (20) Same as No. 19 but in percentages.

(21) Utilization of soybean products, 1955-56 to 1958-59. Incl. meal and oil: Livestock feed, industrial, fertilizer, export. (22) Prices of U.S. soybeans, by month and season average, 1923-1959. (23) Same as No. 22 but only for No. 1 yellow: Chicago, Illinois country shipping points, Minneapolis. (24) Same as No. 21 but soybeans for crushing, No. 2 yellow. (25) Value of U.S. soybean crop, 1925-59 (thousand dollars) in these states: Total USA, Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota. (26) Soybean price support operations, 1932-33 to 1959-60. Started in 1941-42 and has continued to the present, with a peak of $2.56 per bushel in 1953-55. (27) Price spread, soybeans and end products, 1945-1958. Spread between price received by farmers and value of products. (28) Prices of U.S. soybean oil meal (44% protein), 1929-1959 by month. (29) Prices of U.S. crude soybean oil, by month, 1929-30 to 1959-60. (30) Imports, exports, soybeans, oil and meal.

(31) Soybeans: Inspections for export, 1957-59, with country of destination and port of departure. (32) U.S. trade in soybeans, fats and oils. (33) Oil and fat exports under P.L. 480. Total, cottonseed oil, soybean oil, Oct. 1954 to Sept. 1959. Incl. country of destination, the top four being Turkey, Pakistan, Israel, and Egypt. (34) Imports, exports cake and meal, 1929-1958, incl. cottonseed, soybean, linseed, peanut, copra. Exports incl. country of destination. (33) Soybeans: Crushings and yields of oil and meal. (35) Bar chart: Major markets for U.S. soybeans since 1953: West Germany, Netherlands, Other Europe, Japan, Canada, Other. (36) Composition of soybean seeds, by variety, incl. Maturity Group No., % protein, % oil, weight of 100 seeds in grams. (37) Amino acids of soy protein. (38) Composition of Lecithin. (39) Composition of soybean oil, by variety. Incl. linolenic acid, linoleic acid, oleic acid, saturated acids.

Official standards for soybeans, Revised effective Sept. 1, 1955. Soy flour standards, for full-fat, low-fat, and defatted. Densities of various soybean products. Map of the USA showing the best adapted soybean varieties for each major soybean producing state. Directories: Processors of soybeans, by state, with address and names of officers (p. 56-74). Canadian soybean processors (p. 74). Manufacturers of 50% protein soybean meal (by state, p. 76). Foreign soybean processors, by country (p. 78-81). Refiners of soybean oil, by state (p. 82-84). Manufacturers and handlers of soy foods (p. 86-93): Beverages, breakfast foods, canners of green vegetable soybeans, canners of mature soybeans, cookies, crackers, toasts and wafers, frozen desserts (companies that make vegetable oils used in frozen desserts), health food store & supply houses, lecithin, macaroni, spaghetti & noodles, margarine, meat substitutes, proteins (Griffith Labs, Gunther, Worthington Foods), pudding powders (Brockville, Ontario, Canada), Salad and cooking oils, shortening, sausage binders, seasonings, soups, soybean oil, soybeans for cooking and sprouting, soy butter (Town Food Co., Riverside, California, makes “Town: soy lecithin spread; Shedd-Bartush Foods, Detroit, Michigan, makes “Willow Run” soy spread), soy cheese [tofu], soy flour, grits and flakes, soy flour mixes, soy milk, soy sauce, sprouts, vitamins, whipping agents.

Manufacturers of industrial products employing soybeans (p. 94-95): Caulking compounds & floor tile, coated papers & leather dressing, fire-fighting foam, glues, plywood & adhesives, insecticides, laminating, lecithin, oilcloth and coated fabrics, paints and varnishes (13 companies), paper sizings, wallpaper and wallboard coatings, resins, soaps, soybean fatty acids (8 companies), soybean oil. Services for the industry (p. 96-109): Analysts, appraisals, brokers, commission merchants & jobbers, consultants, engineering services, export elevators, exporters & importers, export warehousing and handling, farm management, field warehousing, futures market, market analysis, mill construction contractors, milling service, miscellaneous services, oil transports, transportation.

Equipment and supplies for the soybean industry (p. 110-32): Aspirators, bagging equipment, belting, chains, conveyors, elevators, defoliants, drying and aeration equipment (farm driers, grain driers, meal driers), dust control systems & dust collectors, elevator buckets, fans, farm equipment, fertilizers, fumigants, fungicides, germinators, grain and seed cleaning and separation equipment, grain grading equipment & moisture testers, grain handling equipment, granulators, grinding & mixing equipment, herbicides, insecticides & pesticides, inoculants, laboratory equipment, man-lifts, material level indicators,

2355. Hayashi, Shizuka. 1960. Public relations seminar by JASI. *Soybean Digest.* March. p. 20.
• ***Summary:*** At this seminar JASI taught Japanese manufacturers of soybean [food] products how sales of these products can be much increased through the use of public relations, including marketing research. "This is particularly true of marketing new products." Previously, these very manufacturers have lacked interest in public relations because they "have been enjoying a reasonably profitable business under the funds allocation system, which has afforded them a sort of protection."

At JASI's first seminar on PR [public relations] and marketing, held recently in Tokyo, about 40 companies and organizations from various parts of Japan participated. "There were two lectures. The first was by Professor Naoyoshi Horikawa on public relations and top management. The other, by T. Shimizu, was on sales promotion. Never in the history of the soybean industry [in Japan] has there been a gathering like this where the so-called 'big shots' of leading organizations sat side by side at the table."

A table shows estimated consumption of soybeans (S) and soybean meal (SM) during 1961 as planned by the Japanese government (tonnes = metric tons). The totals are 1.467 million tonnes of soybeans and 707,000 tonnes of soybean meal. Details: Oil processing: 928,000 S. Livestock feed: 303,000 SM. Tofu and fried tofu: 280,000 S + 20,000 SM. Shoyu: 29,000 S + 200,000 SM. Miso: 130,000 S + 50,000 SM. MSG: 73,000 SM. Other miscellaneous foods: 20,000 S + 40,000 SM. Frozen tofu: 40,000 S. Natto: 30,000 S. Other uses: 21,000 SM. Kinako: 10,000 S.

Note 1. This is the earliest document seen (Nov. 2012) that contains industry or market statistics for kinako or roasted whole soy flour by geographical region.

Note 2. This is the 2nd earliest document seen (Jan. 2012) that contains industry or market statistics for natto by geographical region.

A large photo shows about 13 Japanese men seated at a long table at JASI's recent public relations seminar. The name and position of each man is given. They represented the following organizations: Miso Association. Tatsuno Shoyu. Shoyu Association. Frozen Tofu Association. Masuko Miso. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1-Chome Yurakucho Chiyoda-Ku, Tokyo, Japan.

2356. Ohsawa, George S. 1960. Zen macrobiotics. New York, NY: Ohsawa Foundation. 103 p. Undated. 28 cm.
• ***Summary:*** This bound, hardcover book was owned by Herman Aihara, and is now (April 2011) in the library of the George Ohsawa Macrobiotic Foundation in Chico, California (President: Carl Ferre). The size is 8½ by 11 inches. The cloth cover is pea green and on it, near the top, is written (on two lines): "Zen macrobiotics" with the word "Zen" in large bold capital letters. In the middle: "George S. Ohsawa," the author. And near the bottom (on two lines): "Ohsawa Foundation: New York–Paris–Brussels–Tokyo."

The book consists of leaves and the text is typewritten. All of the leaves in this edition are edited, some heavily, in two colors of ink: red edits by George Ohsawa, and blue by Lou Oles (According to Herman Aihara). There is no table of contents or copyright page. On the first leaf, near the top, the title is typewritten again on two lines: "Zen Macrobiotics." Then the book begins: "Two ways to happiness through health. Happiness is the goal of everyone in the world. But what is happiness?... In the Orient happiness was defined by sages some thousands of years ago as consisting of five factors, as follows: 1. The first fundamental factor of happiness is joyfulness, an amusing, interesting, brilliant and healthy longevity. 2. The second, not to be worried about money. 3. The third, instinctive capacity to avoid accidents and difficulties that would cause premature death. 4. A loving

© Copyright Soyinfo Center 2013

realization of the order of the infinite universe at all levels. 5. Not to become the first as you will become the last. But try to become the last so that you will become the first forever.

"... School education is completely unnecessary, and even detested. All great men are autonomous and self-made..."

Note 1. This section (two leaves) becomes the Forward in the next edition, which was printed in Japan.

The third leaf is a title page: Like the cover, it has text on 3 levels, but is typewritten. Title: "Macrobiotics: The Biological and Physiological Foundation of Zen Buddhism." Author: George Ohsawa. Publisher: Ohsawa Foundation: New York–Paris–Brussels–Tokyo.

Note 2. The relationship between this title page, the title page of the mimeographed edition, and the cover is unknown.

The next two leaves, are titled "Health to Peace" and numbered "i" and "ii." Note 3. They become the Preface in the next edition, which was printed in Japan.

Next is "iii" which is the Foreword in this mimeograph edition but becomes Chapter 1 in the next edition, printed in Japan.

Next are leaves "iv" through "xxii" which are the Introduction in this edition, but become Chapter 1-3 in the next edition printed in Japan. After leave xxii, the leaves are numbered "8" through "86," and after that is the back cover. The last section of the book is titled "The Case of Mr. E" (leaves 77-86). Note 4. It becomes the first appendix in next edition printed in Japan, which also contains a second appendix titled "The Pro-Forma Death Certificate..."

The mimeograph edition is thus missing pages 3-7. Moreover, all the pages are renumbered by Ohsawa by hand in the upper right corner. In Ohsawa's numbering there are no pages numbered 1, 2, 5, 6, 7, 8, 10, 33 and 34 (a total of 9) and thus his page is numbered 112.

Because the mimeograph edition is bound, it appears that the pages were rearranged after typing but before publication and distribution.

Page 19: "With the conception of Principal Food and that of secondary food clearly distinguished, people of the Orient could live a happy, free and peaceful life from the beginning up to the importation of the brilliant Occidental civilization, more or less violent, with its industrial and scientific instruments... The Principal Food should occupy at least 60% of your eating."

This bound, mimeograph book contains many recipes, all of which are numbered. Soy-related recipes include the following: In the section titled "Beans": 117. Boiled soy beans with miso (the soy beans are first roasted until they pop). 118. Boiled beans ("Boil soy beans until tender. Seasoned with soy sauce and salt. Boil until liquid is gone. Prepare black beans in the same way)." Note 5. Later writings by Ohsawa show that by "black beans" he meant black soy beans, *Kuro mame* in Japanese. 119. Gomoku beans (boiled soy beans with vegetables). 120. Gozu soup (Gôjiru; ground soaked soybeans with vegetables). 121 and 122. "Aduki" beans. 159. Hiziji with age (seasoned with "soyu" [sic, shoyu]). 160. Hiziki [Hijiki] and soyabean (seasoned with syoyu [shoyu]).

In the section titled "Miso and syoyu preparation": "Both miso and syoyu should be of traditional make." 201. Sauce miso (miso-tahini sauce). 202. Miso cream. 203. "Muso" (miso and tahini with minced orange peel). 204. "Miso" soup (5 persons). 205. Carrot and onion au "miso" (15 persons). 206. Vegetable au miso. 207. "Oden" au miso. 208. Buckwheat "dango" au "miso." 209. "Miso-ae." 210. "Tekka" no. 1 (miso with minced yang vegetables–lotus root, burdock root, ginger–fried in sesame oil until very dry. Good for all yin diseases).

In the section titled "Syoyu": Recipes 212-221 are seasoned with "syoyu" (shoyu, traditional fermented soy sauce). "Use the traditional syoyu in all cooking (vegetables and fish). Syoyu diluted with a little water is very good for 'Sasimi' [sashimi] and fried oyster, 'Tempura', fish 'Sukiyaki', 'Tohu' ([tofu] vegetable cheese of soya beans), etc."

803. "'Tohu' plaster. Squeeze 'tohu' (white soya bean cheese) add 10% of flour; stretch this directly on the front or any part painful with inflammation. All pain or inflammation will go away soon." Note 6. This book does not use tofu in any recipes, probably because Ohsawa considered it too yin. However Ohsawa was the one person most responsible for introducing the word "tofu" to popular American culture; his later writings and especially his students and admirers spread the word to the four corners of the United States.

Note 7. This is the earliest macrobiotic document seen that mentions tofu.

Note 8. This is the earliest English-language document seen (July 2000) that mentions "Tekka" (spelled that way, which is now the proper romanization) or that gives a recipe for making it.

Note 9. This is the earliest English-language document seen (March 2006) that uses the word "aduki" beans to refer to azuki beans. This spelling was subsequently widely used, but only in macrobiotic publications.

Note 10. This is the earliest macrobiotic cookbook seen (Jan. 2012).

Also discusses: In the section on "Egyptian beans" (p. 30): Pois "chiche" (chickpeas, basic preparation by boiling). "Beignet" pois chiche (deep-fried balls of mashed chickpeas mixed with flour). Pois chiche croquette (chickpea croquettes).

Publication: "Published by Ohsawa Foundation, 331 Riverside Drive, New York City, U.S.A. (Secretary Aihara, 44 W. 96th St., New York City, U.S.A.)." Underneath this is "Printed in Japan."

Note 11: Concerning the date of publication, we read: "My first two books in English will arrive beginning

of November: *Zen Macrobiotics* and *The Philosophy of Oriental Medicine."* (Source: G.O. [George Ohsawa]. 1960/09. "Letter from the editor." *Macrobiotic News* (New York, NY). No. 6. Sept. p. [7]). Address: New York, USA.

2357. Ohsawa, George. 1960. Zen macrobiotics [Continued, Part II]. New York, NY: Ohsawa Foundation. 103 p. Undated. 28 cm.
• ***Summary:*** This mimeograph bound book with the pea green cover, the only known copy of which is owned by the George Ohsawa Macrobiotic Foundation in Chico, California, raises many interesting questions about the publication history of this and closely related titles.

Carl Ferré, an expert on this subject, believes: (1) That there were several "printings" of mimeographed edition and that "printings" may vary. (2) There is a strong possibility that the first editions were sold in Jan., Feb., and March of 1960, before there was any editing on them. (3) It is unlikely that any books were sold with only Ohsawa's red edits on them. (4) It is probable that no books were sold with both Lou Oles' blue editing and George Ohsawa's red editing on them.

Was there a printed edition prior to and different from this edition?

Does anyone own such a copy?

How many pages did it contain and how were the pages arranged? For example, did the original book start with the title page, followed by ages i, ii, iii, etc?

Were the original pages reshuffled to create this bound edition? In this edition, why are there xxi pages of front matter numbered in roman numerals followed by pages 8 through 86 in Arabic numerals.

Why do some pages seem to be missing from this edition. Carl Ferre believes that someone typed the entire book, then Ohsawa decided to move some of the pages around, which they did before they bound and sold the books (for $0.50 each) at Ohsawa's lectures.

How did they bind the books? Did they bind the books by themselves or send them out to a professional bookbinder? Or did a person (who attended the lectures) who was in the bookbinding business offer to bind the books free of charge so they could be sold for only $0.50 each. Was it originally hardcover or paperback? Is the pea green book in Chico simply an example of all the books sold in 1960 at Ohsawa's lectures? Or is it unique–one of a kind? When and where did Ohsawa make all this handwritten changes in red? Was someone suggesting the changes to him? If yes, who?

Why is the title on the cover different from the title on the title page.

Why was the original title page numbered "9" in Ohsawa's handwriting.

What do the Japanese characters under the handwritten "9" mean?

Why is there content before the title page?

We are told the original mimeograph edition was duplicated and bound in the Aihara's apartment in New York City; how was it bound?

Carl Ferre reminds us (e-mail of 2 May 2011): Lou Oles took the recipes out of *Zen Macrobiotics* to create a separate book, *Zen Cookery.* "The problem that has always existed is that *Zen Macrobiotics* has numbers in it that refer to numbers in *Zen Cookery* and they have never corresponded. For example *Zen Macrobiotics* says "See *Zen Cookery* No. 103" and you go to *Zen Cookery,* find that number, and its something totally different–or even nonexistent." Address: New York, USA.

2358. Hayashi, Shizuka. 1960. A visit to a leading tofu factory. *Soybean Digest.* May. p. 26.
• ***Summary:*** This factory, which makes frozen tofu, was just completed on the outskirts of Nagano City. It uses 12 tons of U.S. soybeans a day, approximately 4,000 tons a year. There are three other large manufacturers as well and about 3,400 smaller ones making frozen tofu. Many belong to the All-Japan Frozen Food Tofu Manufacturers Assoc.

Note: This is the earliest document seen (April 2001) that contains tofu industry or market statistics for tofu for individual larger companies. Address: Japanese-American Soybean Inst., Tokyo, Japan.

2359. Chiu, Wen-Chiang. 1960. Soy curd can add variety to diet. *Soybean Digest.* June. p. 8.
• ***Summary:*** "Vegetable soybeans and many soy products can be used as human food. And research at the University of Illinois with soy curd, one of these edible soy foods, should expand the use of soybeans.

"Soy curd, a cottage-cheese-type food, is made from soybean milk, which is extracted from dry mature soybeans. The curd may be eaten raw or cooked with vegetables or meat.

"Mrs. Wen-Chiang Chiu, a graduate student in the department of home economics, has experimented with several recipes using soy curd. These products have received high ratings from the members of the taste panel who judged these foods. They may some day add variety to American diets.

"However, Mrs. Chiu, whose home is in Formosa, is chiefly concerned with the calcium content and quality of soy curd made from several varieties of soybeans. She hopes this research will result in a high-quality soy curd with increased calcium content.

"This calcium is important to people living in the Orient. Cow's milk is not readily available and is high priced. Soy milk is not a good source of calcium, but soy curd may be. To make soy curd, a calcium salt is added to soy milk to precipitate the curd. It is the amount of calcium that stays in the curd after the whey is drained off that counts.

"Mrs. Wen-Chiang Chiu is doing her research under the

© Copyright Soyinfo Center 2013

direction of Dr. Frances Van Duyne, head of the foods and nutrition division of the department of home economics.

"Soy curd was displayed along with green vegetables and dry mature soybeans used in various ways during the recent University of Illinois Farm and Home Festival." A portrait photo shows Mrs. Chiu at work. Address: Univ. of Illinois.

2360. Grepke, Eva M. 1960. Soybean. *Natural Food and Farming* (*Atlanta, Texas*) 7(2):14-15, 34, 36. July. [4 ref]
• ***Summary:*** Contents: Introduction. High in protein and oil. Rich in vitamins and minerals. Most Orientals sprout eaters. Certain precautions required. Meat without a bone (Tofu or soy cheese, with homemade recipe). Proof of anti-enzyme factor.

The article begins: "The history of the soybean is a fascinating story. This little round bean has literally been a golden nugget to the oriental world. For centuries,... it has served as meat, cheese, bread, milk and oil to the people of Asia."

2361. Hayashi, Shizuka. 1960. Discuss problems of soybean usage. *Soybean Digest.* July. p. 26.
• ***Summary:*** Japanese "soy food manufacturers" were addressed by Charles Elkinton, U.S. agricultural attache. During fiscal year 1959 the total quantity of soybeans used by Japanese crushers and food manufacturers amounted to 1.2 million metric tons or 46.7 million bushels, up 12% over the previous year. Japan's total imports during fiscal 1959 were 1,073,477 metric tons of which 1,010,444 metric tons came from the USA.

The total amount of soybeans used by Japanese food manufacturers is as follows, in metric tons. Makers of tofu and frozen tofu used 340,000 tons in 1959/60 rising to 370,000 tons in 1960/61. Shoyu makers used 218,400 tons in 1959/60 rising to 220,537 tons in 1960/61. Miso makers used 186,400 tons in 1959/60 rising to 177,180 tons in 1960/61.

Oil processors crushed 768,870 metric tons or 28,218,000 bushels in 1958/59. A photo shows "Japanese soy food manufacturers," seated on cushions on tatami mats at two long tables, as they are addressed by Charles Elkinton. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building No. 1, 1-Chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

2362. Smith, Allan K.; Watanabe, Tokuji; Nash, Arlo M. 1960. Tofu from Japanese and United States soybeans. *Food Technology* 14(7):332-36. July. [8 ref]
• ***Summary:*** Most of the U.S. soybeans exported to Japan are processed for oil and meal that are used for making food products. A survey conducted in 1957 in Japan by A.K. Smith ("Use of U.S. soybeans in Japan," published April 1958) indicated that at least 25 million bushels of whole soybeans were used in making traditional Japanese foods such as miso, tofu, and natto, and that the Japanese wished to use more.

This paper describes pilot plant investigations comparing U.S. and Japanese soybean varieties to determine which U.S. varieties make the best tofu. Lee and Jackson varieties appeared to make tofu equal in yield, flavor, texture, and color to Japanese soybeans. "When such varieties are known to U.S. exporters and Japanese importers, more soybeans may be exported to Japan 'identity preserved' at some increase in cost over the U.S. No. 2 yellow beans" (p. 332-33).

Note: This is the earliest document seen (Feb. 2010) that uses the term "identity preserved" to refer to soybeans. Address: 1. NRRL, Peoria, Illinois; 2. Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

2363. *Times* (*London*). 1960. Quick lunch [in China]. Aug. 29. p. 11, cols. 3-4.
• ***Summary:*** "In the West you go to the quick lunch counter. In the East it comes to you. Two quick lunch purveyors pass our gate each day." "One crier is a woman, typical of the Chinese coolie class, barefoot, weatherbeaten, in jacket and trousers... Across her shoulders a wooden yoke supports two panniers whose weight makes her stagger, walking gracelessly with knees bent and thrown out. There is food in both: bean curds, [mung] bean sprouts, squid, cucumbers with rice and the like,..."

2364. *Food Science* (*Mysore, India*). 1960. Soyabean products. 9(8):289. Aug.
• ***Summary:*** In response to a letter from a person in Jubbalpore, the magazine gives a table showing the nutritional composition of soyabeans, then gives a brief description of each of 3 products than can be manufacture from soyabean: Soyabean flour, soyabean milk, and soyabean curd ("well known as 'Tofu' in Far Eastern countries").

2365. Farlow, David R. 1960. The Japanese American Soybean Institute. When Automatic Allocation goes into effect you will see the full impact of JASI's promotion work. *Soybean Digest.* Sept. p. 35-36.
• ***Summary:*** JASI is starting to get involved with soy milk in Japan. There are about 60,000 tofu makers in Japan and they can readily make both tofu and soy milk. Dr. Harry W. Miller "has long been a strong advocate of the utilization of soy milk to aid in the increased consumption of protein and fat by the Japanese people... K.S. Lo of the Hong Kong Soybean Co. showed me his plant last fall, and I saw huge amounts of soy milk being manufactured and bottled for the Hong Kong area alone. Pepsi Cola is bottled in the same plant and Mr. Lo informed me that soy milk was outselling Pepsi Cola by about two to one in the Hong Kong area. I drank a bottle and I have to admit that much to my surprise it was delicious."

The increase in exports of U.S. soybeans to Japan

© Copyright Soyinfo Center 2013

has been accomplished under a "controlled allocation system"–controlled by the Japanese government. "When the Automatic Allocation system goes into effect, and the consumer alone decides the amount of soybeans and soybean products that are consumed, you will see the full effect that the promotion work that we have done has had." A small portrait photo shows David Farlow. Address: Asst. to the Executive Vice President, American Soybean Assoc.

2372. Hayashi, Shizuka. 1960. The Japanese American Soybean Institute: We can supply the Japanese market with another 26 million bushels of soybeans if we seriously desire it. *Soybean Digest.* Sept. p. 31-32, 34.
• ***Summary:*** Contents: Introduction. Severe criticism (of U.S. soybeans by soybean users in Japan, and work to overcome this bad impression). Next on the consumption and import of soybeans. Now about the future outlook. Possibility of cutting down cost of oil prices. Price of soybean oil can be reduced. Soybean meal as a mixed feed has a big potential market. Soy flour expected to increase.

Before World War II "the soybean requirements of Japan were taken care of mostly by soybeans from Manchuria and China. Soybean oil and low-quality soybean meal were imported into Japan from Manchuria for use mostly as fertilizer." Whole soybeans were used for make shoyu and miso, and for crushing.

"The Japanese soybean industry has stepped into a new era since the war. The crushing industry has been shifted from Manchuria to Japan and it has developed quickly to the present important and prosperous stage. With expanded crushing capacity, the need for soybeans has increased and the major part of the requirements has been supplied by soybeans from the United States, with only a limited quantity

© Copyright Soyinfo Center 2013

from China."

"The break in trade between China and Japan since 1957 has given a chance for U.S. soybeans" to overcome their bad image in Japan.

"Consumption of various soy foods has shown substantial increase" and so have total soybeans imposts into Japan, and the U.S. percentage share of total imports. Table show: (1) Consumption of soybeans and oils in Japan (metric tons), annually from 1955-56 to 1960-61, for tofu and frozen tofu (increased from 319,000 to 370,000), miscellaneous (increased from 167,000 to 214,000), shoyu (increased from 248,000 to 272,000), oil mills (increased from 505,000 to 760,000), and per capita daily (increased from 7.52 gm to 10.80 gm). (2) Imports of soybeans to Japan (metric tons) annually from 1955-56 to 1959-60. In 1955-56: Total 767,099. From USA 571,612. U.S. share of total 74.5%. In 1959-60: Total 1,073,477. From USA 1,010,444. U.S. share of total 94.1%.

"Soybeans have now become the largest item volumewise of all U.S. agricultural products imported into Japan." They now top cotton, which had been the largest. Of all U.S. imports to Japan, soybeans are the second largest after scrap iron. This shows that the market development for U.S. soybeans in Japan has been successful–even under the present controlled currency allocation system which limits imports.

Four years ago the expression "P.R." [public relations] was known by very few people and there was little investment in P.R. in Japan. Today almost everyone in Japan knows what P.R. means. As an example of this change among soybean groups, the Miso Association had no budget for P.R. activities 3 years ago. Today its budget for fiscal year 1960 contains approximately 32 million yen or $90,000 for this purpose. "The same can be said of shoyu, tofu, and other groups." The "Shoyu Association has decided to send a team of 7 top executives of the leading shoyu makes to the United States in October 1960 to study the soybean industry. They are doing this at their own expense but with the cooperation of American Soybean Association.

The total investment in the soybean market development program in Japan over the past 4 years by Foreign Agricultural Service has been $425,000 and the contribution by various Japanese groups has been about $257,000 in cash and services combined.

A 1958 survey showed that the 1,368 oil mills in Japan were operating at 36.8% of capacity. This low percentage is due to the fact that 1,210 oil mills (about 90% of the total) are small factories with a daily processing capacity averaging 10 metric tons; they produce oil mainly from domestic rapeseed at low efficiency.

"If the import of soybean becomes free under the "Automatic Allocation system it is obvious that soybean oil production will be concentrated in the larger oil mills (61 crushers) occupying 85% of the nation's total daily extraction capacity of 8,289 tons. This will bring down the price of edible oil for Japanese consumers. A table shows that 159,000 tons of oil are made in Japan from domestic materials as follows: Rapeseed oil 65%. Fish and whale oil 25%. Rice bran oil 6%. Hog grease 4%. Since Japan has little possibility of increasing oil production from domestic raw materials, it must rely on imports. The price of domestic rapeseed is supported by Japan's government.

Another table shows the rapid growth in production of "concentrated feed" in response to the government's policy to encourage livestock production and the dairy industry. In 1955 it was 509,279 metric tons, rising to 1,310,098 tons in 1958, with 2,000,000 projected for 1960. The percentage of soybean meal used in mixed feeds has been about 4.5% because of the priority given to miso, shoyu and other food industries. However the Livestock Bureau has been requesting an increase in the import of soybeans for feed. Hayashi ends by estimating potential import growth of 700,000 metric tons or 26 million bushels, and by urging U.S. soybean growers to seize the opportunity. "If more funds for market development become available, first preference should be given to soybeans to meet the need for more oil, for more soy flour in bread, and for soybean meal as animal feed."

Photos show Shizuka Hayashi and Hiroshi Nakamura (delivering Hayashi's speech). Address: Managing Director, Japanese American Soybean Inst., Tokyo.

2380. Aljat, -. 1960. Food & utilization of food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 65-68. Held 14-24 Nov. 1960 at Karachi, Pakistan.
• ***Summary:*** Gives detailed instructions for making the following soybean products: tempeh (tempe, soya-cake, moulded), tofu (tahu, soya curd, coagulated with gypsum / sakow powder), miso (taotjo), and sweet Indonesian soy sauce (Ketjap [perhaps ketjap manis], made with black soybeans). Also describes how to make onchom (ontjom) from peanuts, plus krupuk, and lempers. Table 1 compares the nutritional composition of powdered Saridele and cow's milk. Table 2 compares the amino acid composition of various mixtures containing soy.

Note: This is the earliest English-language document seen (April 2012) that uses the term "sweet Indonesia soy sauce" to refer to what is probably *kecap manis.* Address: Nutritional Inst. Labs., Djakarta, Indonesia.

2381. Hayashi, Shizuka. 1960. Soft tofu offers U.S. market. *Soybean Digest.* Nov. p. 24.
• ***Summary:*** Mr. Hayashi has recently learned that American soybeans are the best for making "soft tofu," which is rapidly becoming popular in Japan. The characteristic of soft tofu is that during coagulation there is very little loss of water soluble protein compared with ordinary tofu. Therefore the yield of soft tofu is much higher. After this discovery, the American Soybean Institute began to sponsor tofu making contests to encourage tofu makers to gradually shift to soft tofu. The first such contest was held in April 1959 in Osaka, jointly sponsored by the All Japan Tofu Press Co. The All Japan Tofu Association has over 40,000 manufacturers as members. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building No. 1, 1-Chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

2382. Ohsawa, G. 1960 Zen macrobiotics: The art of longevity and rejuvenation. New York, NY: Ohsawa Foundation. Printed in Japan. 218 p. Undated. Index. 17 cm.
• ***Summary:*** This is the earliest known printed edition of Zen Macrobiotics. The cover is gray. The author is George Ohsawa. The content is basically the same as the original mimeograph edition, however it has been edited and several of the parts have been rearranged and renamed to create a Forward [sic] (p. 3-5), a Preface (p. 6-8), and Chapters 1-3 (p. 15-43). At the end are two appendixes: One, which was titled "The Case of Mr. E," appeared at the end of the mimeograph edition. The second, which has been added is titled "The Pro-Forma Death Certificate of the American World Empire and its Gold Dynasty."

Concerning the date of publication: Although the date is not given in or on the book, the periodical *Macrobiotic News* announced it as being available in November 1960.

Distinguishing marks of this printing: Page 3: "Forward" is misspelled. Page 7: "... hundreds of ways of cookin [sic] and eating. They are all aim [sic] to create..." Page 62: "The yellow part is most yound [sic],..."

These four errors were corrected in the next printing.

Both printings have 218 pages. However, pages 217 and 218 are different in the two books.

At least two printings were done in Japan. As of April 2011, Carl Ferré, President, George Ohsawa Macrobiotic Foundation (Chico, California) has one original of each.

Carl adds (e-mail of 30 April 2011): "Page 218 of the book you have (*Macrobiotics: The Art of Longevity and Rejuvenation,* by G. Ohsawa) appears to be exactly the same as the second Japan printing. It seems to confirm my hypothesis of a first printing in Japan in 1960, a second printing in Japan around 1962, and a third printing of the same edition in the U.S. after the 1962 Japan printing (and might even be the 1964 book referred to in Yin Yang). I believe the first reference in Macrobiotic News to a printed book is November 1960. Because editions of *Zen Macrobiotics* may have been printed at the same time as *Philosophy of Oriental Medicine,* we may need to look into that title as well in order to determine the full story." Address: Ohsawa Foundation: 331 Riverside Dr., New York City. Secretary Aihara, 44 W. 96th St., New York City, U.S.A.

2383. Prawiranegara, Dradjat; Rawi, Ihsan el. 1960. Food & utilization of natural food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 55-63. Held 14-24 Nov. 1960 at Karachi, Pakistan.
• ***Summary:*** This is a relatively early publication by an Indonesian author on soyfoods, especially tempeh. The first author's name is incorrectly listed on the document as simply Dradjat. "Protein rich food. Soya beans: In order to increase the protein consumption of the people more soya

© Copyright Soyinfo Center 2013

bean should be made available, and soya products should be popularized and manufactured on large scale." After praising the nutritional properties of soybeans, the authors continue: "In order to render soya protein utilizable, both destruction of the cell walls and heat treatment are necessary. Crushing the beans such as in the manufacture of soya milk and 'tahu' or the action of fungi which partly digest and break the cell wall such as the case with 'tempeh' are means of improving the nutritional value of soya. All these foods are heat treated both during the manufacture and on preparation for the table, and the enzyme inhibitors are destroyed. Tempeh, tahu [tofu], tautjo [Indonesian-style miso], ontjom, soya milk, etc. [are excellent foods. A meal] which gives the maximum biological value contains soya proteins and rice protein in the ratio of about 2.3. Therefore an adult who receives little or no animal food should get 15 or 20 gm soya protein with his rice. A medium size family should get 75 to 100 gm of soya protein. Unfortunately, soya preparations such as tempeh and tahu are comparatively expensive. For example 100 gm of soya protein in the form of tempeh costs about 5 rupiahs. This is why it is necessary to find a simple way of using unprocessed soya beans. The preparations of 'fried soya' is one such way. Fried soya is simply prepared as follows. Soya is soaked overnight in water with a little salt added, ground to a paste. The stuff is pleasant smelling, and tastes good. It can be used in many different ways, both in adults and in children's food. It costs little, compared to tempeh or tahu, and its nutritional value is high, specially when mixed with rice or corn. It is certain that the introduction of fried soya to the Indonesian family's daily diet will appreciably improve the nutritional status of the people. Three times as much soya protein can be consumed for the price paid for tempeh or tahu. Recent work on tempeh (which is soya bean product subjected to the action of certain fungus) have shown that the product is of a higher nutritional quality than heat-treated soya bean. Apparently the fungus growth on the soya favourably alters the biological value of its protein. More work is needed on the subject in order to find out the reason for such improvement. It was suggested that tempeh should be investigated as infant food. (P. Gyorgy's recent report to W.H.O. Protein Advisory Group).

Note: This is the earliest English-language document seen (March. 2009) uses the word "tautjo" to refer to Indonesian-style miso.

"'Saridele' is an imitation milk of vegetable origin. It is made from soya sesame combination. It is available as spray-dried powder. The composition is similar to cow milk powder. Animal trials have shown that the protein of the product is somewhat inferior to cow milk, but the biological value improves considerably when mixed with rice. Trials with infants showed that Saridele is well tolerated by older infants and it is a valuable addition to the diet after the age of 6 months. In case of emergency, when no cow milk is available, saridele may be used as food for infants over 4 months of age (will be published by Children Dep. Medical School, Univ. Indonesia)." A table lists gives the nutritional composition of soybeans, tempeh, tofu, fish flour, fresh cassava leaf, and dry cassava leaf. Address: 1. M.D., M.P.H., Director, National Nutrition Inst., Dep. of Health, Djakarta; 2. FAO Food Chemist.

2384. USDA ARS Northern Utilization Research and Development Division, Peoria, Illinois. 1960. Definitions of foreign foods of current interest (Brochure). Peoria, Illinois. 4 p. Dec. 13. 28 cm.

• ***Summary:*** The first section, titled "Japanese foods from soybeans" (p. 1-2) includes: Aburage, frozen tofu, Hamanatto (Hamananatto), kinako (A form of full-fat soy flour made by grinding roasted soybeans), koji (A culture prepared by growing *Aspergillus oryzae* on cooked rice, wheat or other cereal for a few days. Serves as a source of enzymes for making miso, soy sauce, saki [saké, sake] and other fermented foods), kori tofu, miso, monosodium glutamate (a seasoning compound first isolated from soy sauce), nama-age, natto, satsumage [satsuma age], soybean milk or tonyu, soy sauce or shoyu, tofu, yaki-dofu, yuba.

The second section, titled "Indonesian fermented foods" (p. 3-4) includes: Arak, ketjap (soy sauce made with black soybeans), ontjom, ragi, sajur asin, tapé ketan (fermented glutinous rice), tapé katella (fermented arrowroot), tempeh (or témpé or témpé kedelé), tuwak. Address: Peoria, Illinois.

• ***Summary:*** In Chapter 7, titled "Food, 'Sake' and Tobacco" (p. 275-331) the following may be of interest: Asakusa-nori (includes shoyu), azuki (incl. soybeans, tofu, miso, shoyu, natto), bento and kashi, cattle, chameshi, chawan-mushi ("somewhat similar to Western custards." Make katsuobushi {shaved dried bonito} soup stock, cool, pour into individual *chawan-mushi* bowls {each has a cover}. Mix in an equal quantity of beaten eggs. Add additional flavoring ingredients, cover, and steam until set. "One of the few Japanese dishes

© Copyright Soyinfo Center 2013

that resemble Western dishes in taste").

Chazuke, cooking (incl. sukiyaki and tempura), daikon (incl. miso), drinking cups and customs, eel-eating day (eels are broiled, steamed, then put in a specially prepared shoyu and broiled again), ginnan (ginkgo nuts), gobo (burdock, incl. miso soup and shoyu), gohan (boiled rice), kabayaki (eel), kamaboko, kashi (confections and sugar), katsuo-bushi (incl. shoyu), kawara-senbei (incl. miso), konnyaku (its shredded form, called shirataki, is used in sukiyaki), manju, matsutake mushrooms (widely used in sukiyaki in the fall), menrui (noodles, incl. soba, udon, shoyu), mikan (mandarin oranges), misoshiru (miso soup, incl. tofu, shoyu, tekka-miso, tai-miso, yuzu-miso, wakame), mochi, mochi-tsuki (pounding), myoga (*Zingiber mioga*), oden (with tofu, miso, and shoyu), one-sided fish, red rice (*sekihan*, made with azuki = red beans), ringo (apples), sakana (fish, incl. shoyu and tofu), sake drinking, sake eating, sashimi (incl. shoyu and mirin), satsuma-imo, seaweeds (sea vegetables), shincha (new tea), shoyu (Japanese-style soy sauce; per capita consumption is nearly 4 gallons a year), snake eaters, soba (incl. shoyu), souvenir cakes, sugar, suimono (clear soup, incl. miso and shoyu), sukiyaki (incl. tofu and shoyu), sushi (incl. Inari-zushi made with fried tofu), sweets in season, tea varieties, tea water, tempura (incl. sesame oil and shoyu), tobacco tradition, tofu (incl. bittern/nigari, yaki-dofu, aburage, ganmodoki, Koya-dofu, fried tofu, hiyayakko, sukiyaki, dengaku, miso, miso-shiru, shoyu), tokoroten (kanten, tengusa), tsukemono (pickles, incl. miso), umeboshi, wasabi (incl. shoyu), yasai (vegetables), yokan, and yonaki-soba. Note: Different types of yokan (yôkan, a paste made of azuki beans and sugar) include: mizu-yokan (soft azuki-bean jelly) and mushi-yokan (steamed yokan). Yokan-iro is a liver or rusty color.

Other subjects related to soy: Home cures (p. 66-67, for burns, apply the white of an egg or shoyu). Setsubun (p. 119, incl. mame-maki or throwing roasted soybeans). Brother mountains (p. 192, the most loved one, Fudo-iwa, was fed azuki or red beans but the unloved Gongen-yama was fed soya beans). Fox messengers (p. 207-08, aburage or fried tofu). Kuyo (p. 373-74, incl. hari-kuyo or mass for broken needles–but tofu is not mentioned). Azuki (p. 276-77). Red rice (sekihan, p. 303). Lunar calendar (p. 400, setsubun and bean throwing). Bamboo (p. 410, incl. bamboo shoots served with shoyu). Hi-no-kami (p. 474, incl. amazake). Sacred rice (p. 504, incl. setsubun and throwing roasted soybeans). Shoulder-chipped Jizo (p. 517, concerns the stone statue of Jozo at the Kiunji Temple, Tozaki-machi, Bunkyo-ku, Tokyo, and foxes and a tofu shop). Inari-san (p. 616-17, Inari-sushi and aburage). Address: Japan.

2394. Joya, Mock. 1960. Sukiyaki (Document part). In: Mock Joya. 1960. Things Japanese. Tokyo: Tokyo News Service, Ltd. [vi] + 782 + xliv p. See p. 316-17.

• ***Summary:*** Sukiyaki is mentioned throughout this book, on pages 281 (Cooking, Japanese), p. 293-94 (Konnyaku, incl. shirataki), p. 295-96 (Matsutake, a mushroom used in sukiyaki in the fall), and p. 325-26 (Tofu, a typical ingredient in sukiyaki).

The main entry for sukiyaki (p. 316) states: "Sukiyaki is a modern addition to the Japanese menu, and although it is only about 80 years old, it has become one of the most popular dishes of the people. Furthermore, sukiyaki has now become famous all over the world. Sukiyaki and tempura are pointed out by foreign visitors as the two outstanding dishes of Japan.

"There are a few controversies over the origin of the name, and the most commonly accepted theory is that formerly it was cooked on blades of plows, and therefore this way of cooking was called sukiyaki or plows, roasting. However, there is no proof that this story is authentic.

"Sukiyaki is the cooking of sliced beef, pork, chicken or duck meats over thick iron pans. Beef is the most common meat used for sukiyaki, but chicken and pork are equally good.

"In making sukiyaki, the first requirement is the flat thick iron pan, as when the pan is thin, it is impossible to make good sukiyaki. In the Imperial duck hunting party, small individual thick iron pans are used in cooking the duck meat. This pan is oblong in shape and extremely thick, and its top is almost level with only a slight depression to hold the meat. This pan reminds one of the shape of the Japanese plow, and there might be some relation between sukiyaki and plow (*suki*) as generally believed.

"There are different ways of cooking sukiyaki. The method used in cooking duck meat at the Imperial hunting parties may be the original one. Slices of duck meat are put into a mixture of *shoyu* and *mirin* (sweet sake), and then put on the heavy iron pan placed over a charcoal fire, when the pan becomes hot. The meat is almost instantly cooked, and it is turned over swiftly and eaten. It is extremely delicious. This method is believed to be the original way of cooking sukiyaki. The same method can be used in cooking the ordinary sukiyaki at home in the common sukiyaki pan with beef or pork.

"Then, the next method is to melt the fat of meat or butter on the hot pan, and then cook the meat on the pan. The cooked slices of meat are eaten with *shoyu* or salt. This method is quite new, but yet it is liked by many persons. This method, however, enables the people to eat enormous quantities of meat, as the thin slices will just melt in their mouths.

"The third method is the most common one. In the sukiyaki pan is first put a specially prepared sauce made with *shoyu, mirin, kombu* or *katsuo-bushi.* Then sliced Japanese onions, *tofu, shirataki* (kneaded devil's tongue and root), other vegetables, and sliced beef are added to be cooked. When they are cooked, the people sitting around eat from the pan. In autumn, *matsutake* and other mushrooms are

© Copyright Soyinfo Center 2013

also cooked together with meats. Beef, pork, duck meat, and other kinds of meat are cooked in the same manner.

"The last-mentioned is the most popular way of cooking sukiyaki, but originally perhaps, slices of meat were merely cooked on heated iron pans.

"There is no other new dish that has become so popular throughout the country within such a short period. At present, sukiyaki is a national dish, and particularly preferred by foreigners to other dishes of the country." Address: Japan.

2395. Joya, Mock. 1960. Inari-san (Document part). In: Mock Joya. 1960. Things Japanese. Tokyo: Tokyo News Service, Ltd. [vi] + 782 + xliv p. See p. 616-17.
• ***Summary:*** "Japan is a land of shrines, which are not only extremely numerous, but also play a big role in the people's life. Inari shrines, are, however, the most popular and numerous." Throughout Japan, in rural villages and in big cities, you can find Inari shrines, noted for the bright vermilion color in which their *torii* (gates) and buildings are painted. Inari was originally the guardian shrine of farmers. "But city dwellers too are all worshipers of Inari. They entertain such respect for Inari that they never call it plainly Inari, but always say *O-inari-san*, with the double honorifics."

"A *kitsune* or fox sculpted in stone or wood is always placed in front of them."

"To Inari shrines the people still bring various foods as offerings. Particularly *aburage* or fried tofu is believed to be the most favorite food of foxes of Inari shrines... Because of the reputed fondness of foxes for *aburage*, a kind of sushi wrapped up in *aburage* is commonly called *O-Inarisan.*

Note: This is the earliest English-language document seen (April 2013) that contains the words *Inari-san* or *O-Inarisan* in connection with *Inari-zushi*. Address: Japan.

2396. Leach, Bernard. 1960. A potter in Japan, 1952-1954. London: Faber and Faber Ltd. 246 p. Portrait. Illust. Index. 22 cm.
• ***Summary:*** The author is as fine a writer as he is a potter and artist. June 15, 1953 (p. 98). Near the great extinct volcano of Daisen on the borders of Tottori Province, the author and friends climbed up the old rough stone-paved pilgrims' way to the Kongoin temple. "There we were served the best meal I have eaten in Japan, vegetarian priests' food, over which infinite pains had been taken... mountain potatoes, crisp fried bean curd and some soft curd mixed into a paste with crushed sesame seed."

July 1, 1953 (p. 105): "A great feed of Continental sausages and Chinese riceballs stuffed with mincemeat and 'Funiu.' The last is a strange and fascinating decoction of fermented bean curd something like a smoky Camembert in taste and texture."

August 19, 1953 (p. 132). In Nagano, Japan, the author and friends visited the very large and famous temple of Zenkoji. They noted "all the commercialized signs of Buddhist decadence, as far from Sakya Muni [Shakyamuni, the Buddha] as Rome from Christ... the vulgarized business of popular religion is equally sickening, East or West.

After that they made their way to a soba shop and the author ordered Soba Gaki which was not on the menu. "This was a kind of porridge no longer in fashion... We ate it first with shoyu sauce and then with sweet adzuki beans."

Oct. 22, 1953 (p. 166). In Toyama the author and his friends had "lunch at a Buddhist vegetarian restaurant [probably serving *shojin ryôri*] which made me wish once again that I could share the meal and its setting with artist and craftsman friends in the West. The manner of serving surpassed all, it was the service of the heart. There is a saying that the Chinese eat with their stomachs and the Japanese with their eyes. The sheer beauty of each tray or dish of food, the quiet discretion. This represents a peak of culture and its home is in Japan." Address: Japan.

2397. Lin, Tsuifeng Liao; Lin, Hsiangju. 1960. Secrets of Chinese cooking. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. xviii + 238 p. With an essay by Lin Yutang. Illust. (line drawings by Siu Lan Loh). 21 cm.
• ***Summary:*** Lin Tsuifeng is married to the well-known author Lin Yutang, and Lin Hsiangju is their daughter. Both worked to popularize Chinese cuisine in the United States. "This book is the result of many years spent away from China,..." The introductory essay by Li Yutang is titled "The art of cooking and dining in Chinese" (p. ix-xviii). In it he says (xvi-xvii): "Soya sauce is pretty well known; its quality and its possibilities in combination with sugar, wine, vinegar or sesame oil is not yet known." "There are other important ingredients which a good Chinese cook cannot do without. Among these are the pickled black beans (*toushi*), essential in preparing sea bass... They just fit in like a perfect match. This *toushi* appears as tiny black spots in the sauce of 'lobster Cantonese style' and is essential to its peculiar flavor. There is wined bean curd (*fuju*, or *toufuju*), tasting like an exotic cheese, but unlike any other flavor known before... There is the seafood sauce (*haishientsiang*) [hoisin sauce] which strengthens the flavor of any food that takes sweet and sour well... But above all I place the greatest importance on *toushi*, pickled black beans, one of the greatest creations of Chinese cuisine. It helps digestion to the extent that it takes away all feeling of heaviness after a sumptuous dinner. Given a bit of this crushed black bean, the stomach has a feeling of positive happiness in doing its duties."

Soy related recipes: Soy sauce fish (with "3 tablespoons soy sauce," p. 41-42). Soy sauce chicken (with "1 cup soy sauce," p. 92). Soy sauce eggs (p. 111-12). Fried eggs with soy sauce (p. 113).

Chapter 9, "Seasonings and sauces," notes (p. 135, 137): "Monosodium glutamate is a marvelous discovery which has recently been introduced to America from the

© Copyright Soyinfo Center 2013

Orient. In the United States, it is sold under such trade-mark names as Accent, Enhance. Unlike salt or sugar, it has no individual or original taste, but it enhances the flavor of the food it seasons... This will do much to restore the taste of frozen foods, or foods otherwise altered by new methods of packaging..."

Soy sauce contains both salt and monosodium glutamate... Soy sauce has been for years an ingredient of Worcestershire Sauce, but it has only recently come into its own in America. The soy sauces available in Chinese groceries are on the whole more full-bodied than those sold elsewhere.

"The Chinese way of making soy sauce is to boil soybeans, mix the beans with roasted wheat and introduce a mold. Three kinds of mold may be used. When the molds have developed sufficiently, the mixture is placed in a salt solution,..."

Black beans [fermented black soybeans] are sold in cans. They are very salty and have a pungent odor. Use only about 2 tablespoons to season 2 or more cups of food. "Bean Cheese or Bean Cakes [Fermented tofu] are a kind of vegetable cheese made from the fermentation of boiled soybeans and crushed rice or barley. The cakes are sold in jars in a semi-liquid form. The taste closely resembles that of Camembert cheese, being strong and pungent. This is a ready-to-eat condiment which is often served in a little dish along with salted peanuts, pickles, scrambled eggs, or as an accompaniment to congee" [rice gruel].

More recipes: Bean curd soup (with "1 or 2 cakes bean curd," p. 153-54). Fried bean curd ("Drain on absorbent paper, 4 cakes bean curd," p. 171-72). Bean curd salad (p. 172). Pressed bean curd (How to make at home from regular bean curd, p. 173). Spinach or watercress with bean cheese [fermented tofu] (with "1 tablespoon bean cheese mixed with 1 tablespoon water," p. 173). Sea bass with bean cheese [fermented tofu] (and bean curd [tofu], p. 174). Fish with black beans [fermented black soybeans] (p. 174-75). Address: USA.

2398. Ma, Nancy Chih. 1960. Mrs. Ma's Chinese cookbook. Rutland, Vermont; Tokyo, Japan: Charles E. Tuttle, Publishers. 178 p. Illust. 27 cm. [1 ref]

• ***Summary:*** About the author: Because she was born in a Manchurian banker's family, she never had the opportunity to prepare even a single Chinese dish while in China. Only after her arrival in Japan did she become enthusiastic about learning how to prepare Chinese dishes. She did most of her study in Hong Kong. In 1957 her first Chinese cookbook, *Chugoku no Katei Ryori* [Chinese Home Cookery] was published in Japan by Fujin no Tomo. This book is a translation of the Japanese edition.

The section "Sizes and amounts of ingredients" (p. 15-16) mentions "Bean curd," which is called *tou fu* in Chinese and *tôfu* in Japanese.

The section "Spices and flavourings" (p. 17-18) mentions: "Bean paste (*mien chiang* in Chinese, *miso* in Japanese): Thick, syrupy paste made from soy beans and used for added flavor in such dishes as Pancake Rolls." Monosodium glutamate (and its many names). Soy sauce.

Recipes include: Braised salmon with soy beans (soak 1 cup dry soy beans overnight, p. 49). Fish with bean curd (with 2 cakes bean curd, cut into 1-inch squares, p. 49). Chilled bean curd with shrimp (p. 56). Braised shrimp with bean curd (p. 58). Bean curd with ground beef and chili peppers (and soy sauce, p. 76). Bean curd with sliced pork and chili pepper sauce (and bean paste {*mien chiang*}, p. 85). Molded steamed bean curd (p. 90). Pressed bean curd with assorted meat (p. 112-13). Braised bean curd (p. 116).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "braised bean curd" but it does *not* refer to grilled tofu. To make the recipe: 1. Wrap 2 cakes "bean curd in cheesecloth and press gently to drain off liquid. Cut each cake into 8 square pieces. Mix flour, eggs and salt to form batter. 3. Heat 6 tablespoons oil. Coat bean curd squares with batter and fry on both sides to light brown. Remove to plate...

Bean curd paper sheet rolls (with 3 rolls dried bean curd {*tou fu pei chüan*} in Chinese, dried yuba in Japanese, p. 118). Spiced soy beans (with 3 cups green soy beans, unshelled [edamamé], p. 126). Pancake rolls (with bean paste {*mien chiang* in Chinese, *miso* in Japanese}, p. 133. Note 2. These rolls are used in many different recipes).

The section titled "Foodstuffs" (p. 171-72) is a glossary of major Chinese ingredients, with the name of each given first in English (they are arranged in alphabetical order), then in Mandarin (Wade-Giles), then in Chinese characters. These foods include: Bean curd, *Tou fu.* Bean paste, sweet, *Tou sa* ("bean + sand." Note 3. This appears to be azuki bean paste). Oil, soybean, *Tou yu.* Soy bean paste *Chiang.* Soy beans, green *Mou tou* [*Mao tou*]. Soy beans, dried *Ta tou.* Soy sauce *Chiang yu.* Address: [Japan].

2399. Ouei, Mimie. 1960. The art of Chinese cooking. New York, NY: Random House. x + 242 p. Illust. by Jeanyee Wong. Index. 21 cm.

• ***Summary:*** The author was the daughter of a diplomat and she learned how to cook from the family's chief cook (*Ta Shih Fu*) who always traveled with them–and from whom she learned the recipes in this book.

"There were no recorded recipes of the Chinese cuisine until the twentieth century, and even then only in Western countries. In China, cooking was done by feel and taste, and its secrets were passed on from one generation to another" (p. 4).

One chapter titled "Soy beans and bean curd" (p. 171-83) begins: "The story of the soy bean: This miracle bean is a legume..." Tells the legend of how, 2,000 years ago a party of explorers sailing up the Yangtze in a flat-bottomed boat,

© Copyright Soyinfo Center 2013

discovered accidentally how to sprout soybeans, when they found that some beans in a damp bag in the bottom of the boat had sprouted. "The soy bean is so nutritious it is known as the cow of China."

The next brief section, "How to sprout the soy bean," begins: "Mung beans are used to grow bean sprouts." No instructions are given for soy beans! And only "bean sprouts" are called for in the following recipes. Recipes are given for: Roasted soy bean nuts (Ts'an tou). Beef with bean sprouts (Tou ya niu jo). Bean sprouts and celery. Bean sprouts and pork. Soy bean milk (homemade; To fu chiang). Soy bean curd (homemade; Tou fu). Fried bean curd (Cha tou fu). Bean curd cheese (homemade; Fu ju). Stuffed bean curd (Tou fu chen jo, with "3 squares bean curd"). Bean curd with sea bass. Bean curd with flounder. Stewed bean curd. Braised pork with bean curd. Bean curd with braised pork. Bean curd with shrimps. Bean curd with scallions. Bean curd with mushrooms. Bean curd with eggs. Bean curd soup. Mushrooms and bean curd soup. Pork with red bean curd cheese (Nan ju jo, with "2 tablespoons red bean curd cheese in sauce {nan yu}").

Note 1. This is the earliest English-language document seen (April 2013) that contains the term *Cha tou fu,* a type of deep-fried tofu.

Also: Soy paste noodles (Cha chiang mien, with "6 tablespoons vegetable paste (Hoisin), p. 189).

The Glossary (p. 223-30) includes entries for: Beans, black [black beans] (*Hei tou*). Beans, black, fermented [fermented black beans] [fermented black soybeans] (*Tou shih*). Bean, yellow paste [yellow bean paste] (*Tou chiang*). Bean curd (*Tou fu*). Bean curd cheese (*Tou fu ju*). Bean curd cheese in sauce (*Nan ju*). Beans, red [red beans] (*Tou sha; Hung dow;* "For making sweet black bean fillings"). Bean sprouts (*Tou ya; Da dow ngah;* "Specially grown soy bean sprouts, gold in color"). Monosodium glutamate (*Wei ching; Mei ching;* "Brings out food flavors"). Soy jam (*Chu yu;* "A thick sweet and salty soy paste. Residue of soy sauce"). Soy bean skin (*Fu tsu; Foo jook;* "Creamy-colored dried bean curd skin").

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the term "fermented black beans" to refer to fermented black soybeans.

Note 3. This is the earliest English-language document seen (July 2011) that uses the term "Soy bean skin" to refer to yuba, or to Dried yuba sticks or rolls.

Soy sauce, light (*Chiang yu; pronounced jeung yow;* Used for cooking). Soy sauce, thick [thick soy sauce] (*Chiang yu; pronounced jeung yow;* "Imported and suited for table condiment or for special cooking"). Vegetable paste (*Hai hsien chiang; pronounced hoi sin*). Address: New York City, New York.

2400. Reischauer, Edwin O.; Fairbank, John K. 1960. East Asia: The great tradition. Boston, Massachusetts: Houghton Mifflin Co. xiii + 739 p. Illust. Index. 23 cm. First published 1958. [150+* ref]

• ***Summary:*** A masterful history of the subject, focusing on political history. Contents: 1. The setting of East Asian history. 2. Early China: The birth of a civilization. 3. Classic China: The golden age of Chinese thought. 4. The first Chinese empire: The Ch'in and Han dynasties. 5. The "barbarian" challenge and the regeneration of the empire. 6. The late T'ang and Sung: The golden age of Chinese culture. 7. China and the "barbarians": The Mongol empire. 8. State and society under the Ming. 9. Traditional China at its height under the Ch'ing (incl. Manchu Conquest, Tibet). 10. Traditional Korea: A variant of the Chinese cultural pattern. 11. Early Japan: The absorption of Chinese civilization. 12. Feudal Japan: A departure from the Chinese pattern. 13. Tokugawa Japan: A centralized feudal state. 14. East Asia on the eve of modernization.

Page 12 states that "many of the principal crops and animals of East Asia, notably rice, the soy bean, the chicken, the water buffalo and the pig, seem to have come from hot and humid Southeast Asia." Note: As of 1995 the soybean is thought to have originated in northeast China, not in Southeast Asia. Address: Harvard Univ.

2401. Sonnenberg, Lydia. ed. 1960. Everyday nutrition for your family. Los Angeles, California: Seventh-day Adventist Dietetic Assoc. 147 p. Illust. 4 tables on nutritional intake. 22 cm. [43 ref]

• ***Summary:*** Discusses the principles of a vegetarian diet for all age groups. Chapter 3, "The Basic Food Groups," lists five: Fruits, vegetables, bread and cereals, protein foods (including legumes, cottage cheese, eggs, soy cheese [tofu], prepared meat alternates, nuts and nut butters), and the milk group. A "soy cheese sandwich" is listed as "something hearty" in a month's suggestions for pack-it lunches. The chapter titled "Proteins on Parade" discusses soy milk as a good source of protein, "complete proteins," and the supplementary action of proteins (p. 46-47). It has a section titled "Soybeans Important" which praises soy flour and soy cheese [tofu].

Chapter 8, titled "Fats are Concentrated," has a table (p. 53) listing protein-rich foods of animal origin (with mostly saturated fat) and plant origin (mostly unsaturated): Soybeans, soybean milk, and soybean cheese are mentioned; they have 50-70% of their calories from fat. A "Gluten" type entree is low in fat. Chapter 21 is titled "The Vegetarian Diet." Address: Director, Dietary Dep., Loma Linda Sanitarium and Hospital and Assoc. Prof., School of Dietetics, College of Medical Evangelists.

2402. Yamashita, Akinori; Ogata, T.; Fukuda, T. 1960. Enden kansui-chû no yûki busshitsu. I. Enden kara no yûki busshitsu no konnyû [Organic materials in salt water in salt fields. I. Intermixing of organic materials from a salt field].

2403. Madison Foods. 1960? Everybody loves Madison Foods: Recipes. Madison, Tennessee. 32 p. Undated. 10 x 15 cm.
• ***Summary:*** Contents: The story of Madison Foods (a division of the famous Madison College located near Nashville, Tennessee). Tasty, healthful Madison foods (listing and photo). Vegetarian vs. meat diet. Vegetable fats vs. animal fats. Vegetable proteins vs. animal proteins. Nutritional analyses of Madison Foods products. List and description of Madison Foods. Recipes (at least one for each product; a photo accompanies each).

This little (6 by 4 inch) booklet focuses on the various innovative Madison Foods vegetarian products, which are packed in 14 oz, 19 oz, and No. 10 cans. The undated booklet was published after Jan. 1960, since page 6 cites an article from *Nutrition Reviews* published that month.

Madison's products are: Cheze-O-Soy (tofu), Com-Pro ("Madison Foods' latest and best." No ingredients given), Dinner Morsels (all-gluten, resembling chicken), Kreme-O-Soy, Madison Burger, Madison Links, Soy beans in tomato sauce, Not Meat (with peanuts and soybeans), Meatless Nu-Steak (all-gluten), Soyburger, Meatless Stake-Lets (with wheat gluten, whole wheat, and soy flour in a meatlike sauce), Vigorost, Yum, and Zoy-Koff (1 lb bags). Coming soon: Madison Links (hot dogs; photo shown).

Photos on the last two pages show: A student operating a canning machine. Madison Links on half-buns on a tray. The Madison Food factory. Dr. A. Perry Webber, food consultant, with Madison's products.

Note 1. This is the earliest English-language document seen (Aug. 2003) that uses the term "Madison Links" to refer to meatless soy hot dogs or sausages.

Note 2. This is the earliest document seen (Jan. 2013) that mentions "Com-Pro" or "Madison Links"–protein foods made by Madison Foods. Address: Madison, Tennessee.

2404. Fukamachi, Chiharu; Nakayama, Osamu; Suruga, Sachiko; Abe, Kazuyoshi; Watanabe, Tokuji. 1961. [Studies on the manufacture of tofu. Supplement]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 15. p. 120-29. Feb. [7 ref. Jap]
• ***Summary:*** Contents: 1. Tests on the suitability of various soybean varieties. 2. How to judge suitability as the raw material of silk-strained [kinugoshi] tofu and bagged tofu. 3. Utilization of phosphate for production of bagged tofu. 4. Utilization of phosphate for production of silk-strained tofu.

Table 1 shows properties and results of soybean tested. Japanese varieties: Shirosaya #1, Seikai #3, Kogane Daizu, Shirosaya #1, Satsuiku #3, Tokachi Nagaba, Toiku #95 and #96, Tokachi Kotsubu #2. American soybean varieties: Jackson, Hawkeye, Harosoy, Lee. Note: The top four varieties were all Japanese.

Note: The English-language translation of this article was done in Japan in 1961 as part of a cooperative research project with the USA. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

2405. Scalapino, Robert A.; Yu, George T. 1961. The Chinese anarchist movement. Berkeley, California: Center for Chinese Studies, Institute of International Studies, University of California. v + 81 p. Feb. No index. 23 cm. [155 ref. Eng]
• ***Summary:*** Contents: Author's preface. The origins of Chinese anarchism: The Paris group, influences upon the Paris group, the *New Century* and its message, Sun and the Paris anarchists, the mounting struggle against the government, the Chinese anarchist movement in Tokyo.

Anarchism and the national revolution: Shih-fu and his movement, the Society to Advance Morality and its impact, anarchist Communist themes–the prelude to Marxism-Leninism.

The work-study movement: "Frugal Study" in France, the "Diligent Work-Frugal Study" movement, the decline of the work-study movement.

The rising Communist tide: Communist-anarchist debate–Ch'en Tu-hsiu versus Ou Sheng-pai. A summing up. Notes. Glossary.

Between 1905 and 1920, anarchist thought was considered by Chinese intellectuals and radicals as "the most scientific, most 'progressive,' and most futuristic of all political creeds" (p. 1).

The Paris group: Paris became "the center of the early Chinese anarchist movement. When Sun Pao-ch'i went to France in 1902 as Chinese Minister, over twenty government and private students travelled with him. Included in this group were Li Shih-tseng and Chang Ching-chiang, both young men from prominent families Li was the son of Li Hung-tsao who, for some 25 years prior to his death in 1897, had been a powerful figure in the national administration. Li had come to France as an attaché in the Chinese legation, but he soon gave up this position to study biology and promote anarchism."

In 1902 Chang, who came from a wealthy family, used some of "his money to found the T'ung-yun Company as a Chinese commercial firm in Paris. Between 1902 and 1906, a number of young men from Chang's village came to Paris with assurances of work while they continued their studies... A Chinese restaurant-tea house was established under the auspices of Chang's 'Company' as an additional outlet for private students from China.

In 1906-07 the entrepreneurial activities of the young Chinese in Paris underwent further expansion. "A printing

© Copyright Soyinfo Center 2013

plant (Impremerie Chinoise) was organized in Paris in 1906 by Chang, Li, Ch'u, and Wu Chih-hui." In 1907 they began publishing a Chinese pictorial *Shih-chieh* (*The World*). But only two issues and one supplement were ever printed.

Also in 1907 "Li, Hsia Chien-chung, and several others organized the Far Eastern Biological Study Association, with a laboratory alongside the printing plant. Two years later [in 1909], after various chemical experiments with [soy] beans, Li established a bean-curd [tofu] factory which produced assorted [soy] bean products in addition to the traditional Chinese bean-curds. The idea of work-study was prominently involved in this experiment. In the evenings and when not on duty, the workers were to practice Chinese and French, as well as studying such subjects as general science. Smoking, drinking, and gambling were strictly forbidden. Initially, five Chinese were employed, but the number eventually reached thirty.

"These ventures had their very practical aspect; they represented attempts to finance the education of as many fellow countrymen as possible. But underlying them also ran a strong current of idealism and the ideological basis of this idealism lay in anarchism as it was currently being propagated in Europe. All the young Chinese associated with the enterprises noted above became ardent converts to the anarchist creed." And to espouse this creed, on 22 June 1907, Li, Chang, Ch'u Wu began the publication of a weekly known as *Hsin Shi-chi* (*The New Century*). "For three years this journal was to champion the causes of anarchism and revolution, reaching Chinese students and intellectuals in all parts of the world."

"Senior in age and experience, Wu Chih-hui became the primary organizer of the Paris Anarchist Group, although Li Shih-tseng was perhaps its driving spirit... Wu was born in 1864 in Kiangsu province. His early education was of the traditional Chinese type. He reached the Chih-shih examinations in Peking, but failed. (Li's father was one of the four examiners)." In 1906 Wu moved to Paris, where he lived with Li Shih-tseng and Ch'u Min-i. Li had first met Wu in Shanghai while en route to France in 1902." With their various enterprises and organizations, "the young conspirators were in a new business-that of turning out revolutionary propaganda.

"Influences upon the Paris group: Li Shih-tseng has given us some later recollections of the varied influences that played upon him and his colleagues during this period. [Note 12: Scalapino interviewed Li Shih-tseng on 16 July 1959 in Taipei]. Perhaps these can be divided into three major categories: the Chinese classical philosophers; Darwin and the Social Darwinists; and the radical libertarians, brought up to date by the anarchism of Proudhon, Bakunin, and Kropotkin. As we shall note, the Paris group were in certain respects fervent anti-traditionalists who decried any attempt to equate Lao Tzu with the modern Anarchists, or the ancient well-field system with modern communism Yet almost without exception, these were young men who had received an excellent classical education. They had been exposed to a range of political ideas almost as broad as that existing in classical Western philosophy."

"This was the age of Darwinism. Li now recalls how greatly he was influenced by the writings of Lamarck and Darwin, how these men opened new doors for him in history and philosophy as well as in science. The influence was especially strong upon a young man studying zoology, botany and biology, but Li would have felt the Darwinian impact, no matter what his field" (p. 5).

"And certainly no single work had greater influence upon the young Chinese Anarchists than Kropotkin's *Mutual Aid.* If their movement had a bible, this was it.

"It is easy to understand how men like Wu, Li, and Chang might make a personal identification with such figures as Bakunin, Kropotkin, and Reclus. Despite the seeming cultural chasm, there were many common bonds. These were aristocrats, by birth as well as by intelligence. They represented the most sensitive and concerned segment of the leisure class. Another bond was that of science. All of these men were committed to science–either as a profession or as a way of life. Kropotkin, for example, was an eminent geologist, Reclus a world-famous geographer, Li a budding biologist. Science, not Esperanto, was the true international language of this age."

The New Century and its message: The philosophy of this periodical "was Anarchist Communism, with some special Chinese emphases. It can best be set forth in terms of 'anti's' and 'pro's.' The young Chinese anarchists were anti-religion, anti-traditionalist. anti-family, anti-libertine, anti-elitist, anti-government, anti-militarist, and anti-nationalist. They were pro-science, pro-freedom, pro-humanist, pro-violence, pro-revolution, pro-communist, and pro-universalist" (p. 7).

Anti-libertine means that the young Chinese anarchists had a fairly rigorous ethical code. Theirs was a call to hard work and hard study, the protection of one's body, and in general, a Spartan life. The Anarchists were vigorously opposed to visiting prostitutes, smoking, drinking, and gambling, and as we have noted, these activities were prohibited in Anarchist-run establishments. Some Anarchists like Li Shih-tseng also espoused vegetarianism. Physical exercise was greatly encouraged. The contrast between these rules of personal conduct and those of the orthodox Chinese scholar-gentry class was striking. And in this sense, conversion to Anarchism was similar to religious conversion involving the attempt to follow a whole new way of life." This "'conversion' was an intensely personal act" (p. 9-10).

"The strength of anarchist faith in science can be indicated by the remark of Li Shih-tseng: 'There is nothing in European civilization that does not have its origin in science.' To the anarchists, science was truth, knowledge, and progress. It was the only legitimate cornerstone of

© Copyright Soyinfo Center 2013

education, the only proper basis of values. It separated the barbarian from the civilized man" (p. 14). Address: Center for Chinese Studies, Univ. of California, Berkeley, California.

2406. Teramachi, Yayoi; Nakayama, Osamu; Abe, Kazuyoshi; Watanabe, Tokuji. 1961. [Studies on the manufacture of tofu. II. Research on the standardization of the process for making aburage (deep-fried tofu pouches)]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 15. p. 130-34. Feb. • ***Summary:*** The latest thing in Tokyo is the "instant boom"–which includes "instant five-vegetable Chinese dishes, instant noodles and instant wonton soup, a novel on 'instant love' and instant bean curd."

2408. Andreas, Dwayne O. 1961. More jobs, more earnings, better buys and more revenue. *Chemurgic Digest.* Feb/March. p. 12.
• ***Summary:*** "Soybeans have become known as the 'miracle' crop of American agriculture. The record seems to support the title.

In the past 20 years the U.S. soybean crop has grown from 77 million bushels to over 500 million bushels today, and the farm value has increased from less than $70 million to around $1 billion today.

But anyone "who looks for a 'miracle' to explain the fantastic story of the soybean industry is in for a disappointment. Rather behind the success story in the 'work' story..."

For example, at USDA's Northern Regional Laboratory in Peoria, Illinois, "a new process has been developed for preparing two of Japan's most important foods–miso and tofu. Both use soybeans."

Congressmen "ought to support substantial increases in spending for utilization research." Address: President, Chemurgic Council.

2409. Diser, Gleason M. comp. 1961. Glossary of soybean terms. *Soybean Blue Book.* p. 61-64.
• ***Summary:*** This is the earliest known glossary with this title in the *Soybean Blue Book.* However in the first *Blue Book* (1947, p. 17-19) there was a somewhat similar section titled "Terminology: Definitions and product descriptions for the soybean industry."

The following terms are defined in this glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical pressing, hydraulic pressing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, soybean hay meal, soybean flakes, 44% protein soybean oil meal, dehulled soybean flakes, 50% protein solvent extracted soybean oil meal, soybean proteins, soy flour, soy grits, soybean oil meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting. Oriental soy foods: Soy sauce (shoyu), soy milk, miso, frozen tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts). Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

2410. Shurpalekar, S.R.; Chandrasekhara, M.R.; Swaminathan, M.; Subrahmanyan, V. 1961. Chemical composition and nutritive value of soyabean and soyabean products. *Food Science* (*Mysore, India*) 10(3):52-64. March. Published in 1961 as a 32-page book by the Soybean Council of America in Hamburg, Germany. [178 ref]
• ***Summary:*** Contents: Introduction. Chemical composition and nutritive value. Soyabean oil. Carbohydrate in soyabean. Minerals in soyabean. Vitamins in soyabean. Factors affecting nutritive value: Trypsin and growth inhibitors, heat processing, other factors. Digestibility and biological value: Animal experiments, supplementation with sulphur amino acids, human feeding experiments. Supplementary value to other food proteins. Processed foods from soyabean: Soyabean milk, dried milk substitutes from soyabean, malt foods containing soyabean, soyabean flour, multipurpose food (fortified soyaflour), dehydrated soup mixture, balanced food, soyabean protein isolate. Fermented soyabean products: Soy sauce, tofu or soyabean curd, miso, natto, tempeh. Conclusion.

Note 1. This is the earliest document seen (Jan. 2001) from India that mentions tempeh.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "soyabean protein" (or "soyabean proteins").

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the term "soyabean protein isolate" (or "soyabean protein isolates"). Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2411. Moore, Raymond S. 1961. China Doctor: The life story of Harry Willis Miller. New York, NY: Harper & Brothers. xiv + 215 p. Illust. (8 pages of photos). Index. 21 cm. 2nd edition, 1969. Pacific Press, Mountain View, California.
• ***Summary:*** A key but sometimes inaccurate source of biographical information. Contains many excellent photos of

© Copyright Soyinfo Center 2013

Dr. Miller, including an especially good portrait on the inside rear cover.

Contents: Foreword by Hollington K. Tong. Preface. Map: The Far East. The opium cure. Hallway to service. The medical buff. Young surgeon at work. Slow boat to China. From mufti to mao tze and queue. The penniless VIP. Strange horizons. Pigtail honeymoon. Wife hunt. Picture section. Some close calls. A key decision. Operating on the Siamese elephant. Conquering new fields. Return to the Orient. No recipes in China. High finance. Facing the medical boards. A doctor's choice. Travel by presumption. To bow or not to bow. Kidnapping the generalissimo. "Mayor" Miller. An ounce of prevention. Shanghai again. China's greatest honor. Benghazi brink.

The rear cover of the book describes it as follows: "What happens when a man gives himself and his talents to the service of God? Here are a few of the things that Dr. Harry Willis Miller has done and is still doing! At 23 gave up a promising medical career and quarter-million dollar inheritance in America. Went to China as a medical missionary and lived among the poor and sick. Immediately began building the first of 15 hospitals throughout China. With inventive genius performed daring operations and made new discoveries in preventive medicine. Was responsible for many cures of the dread opium 'sickness,' including the cure of the famed 'Young Marshal' Chang. Became perhaps the most widely practiced surgeon in the world. Invented and developed soybean milk, which is responsible today for saving thousands of lives in undernourished areas of the world. Had many dramatic encounters with bandits, wars, famines. Was so well-known and respected that during World War II the Japanese invaders permitted Dr. Miller to give sanctuary to Chinese soldiers in the hospital compound. Returned to the U.S. for a time. Was consulting physician to 3 U.S. presidents and personal physician to national figures, senators, ambassadors, etc. Was awarded the coveted Blue Star of China by Generalissimo Chiang Kai-shek. At 81 is still healing and caring for the people of the Far East."

An ad for the book in *Soybean Digest* (Nov. 1935, p. 35) begins: "The incredible biography of the 'Schweitzer' of the Orient."

Pages 180-89 describe Dr. Miller's work with soy milk, Soyalac and Soyagen, and other soy foods. In the Shanghai Sanitarium kitchen he learned how to improve the flavor and digestibility of soy milk by running steam directly into the milk. From the Philippine Refining Co., which transformed bad-smelling copra into good-smelling coconut oil, he learned that steam distillation was the key to the transformation. From a Filipino company that refined stale and rancid butter into a product that tasted as fresh as new, he learned the secret of flash pasteurization–which effectively killed bacteria. Back in China, Dr. Miller, with his older son, Harry Willis Miller, Jr., worked to apply these new discoveries to soy milk. They worked! He expanded his experiments with infants and children, and in 1936 his results were published in the *Chinese Medical Journal.*

Photos (p. 81-89, unnumbered) show: (1) An excellent full-page portrait of Dr. Miller at age 81. (2) Harry and Maude Miller in China, wearing the Chinese dress they adopted after their arrival in 1903. Maude's tragic death two years later–caused by sprue, a vitamin deficiency disease–gave added personal meaning to Dr. Miller's nutritional research. (3) A group portrait showing a meeting of Adventist Missionaries at Shanghai, China, in 1907.

(4) Harry and Marie Iverson Miller at the time of their marriage in 1908. A trained nurse, she served with him through 42 years of missionary activity, and helped rear their 4 children. (5) Shanghai Sanitarium, opened 1 Jan. 1928, the first of 15 hospitals to be established in China under the leadership of Dr. Miller, who also founded numerous smaller clinics. (6) Members of the Shanghai Sanitarium staff in the mid-1930s, standing in front of a one-engine plane, as they see him off for a visit to outlying places.

(7) Dr. Miller and Marshall Chang Hsüeh-liang at Hankow airport in 1935, two years after Dr. Miller had cured the young Marshall's opium addiction. (8) Dr. Miller carried out more than 18,000 operations. Here he performs a thyroidectomy at one of his frequent visits to hospitals in Manila, Philippines. (9) Wuhan Sanitarium and Hospital at Wuchang, one of the medical units established through the generosity of the Young Marshal. Twenty thousand refugees moved into the Sanitarium compound when Hankow capitulated to the Japanese in 1938.

(10) The ruins of the Wuchang city dispensary, destroyed by Japanese bombs in 1938. (11) Dr. Miller examines a soybean plant grown on his farm at Mt. Vernon, Ohio. (12) Dr. Miller demonstrates his small-scale soymilk processing machine, which can be operated by one person. "The goal of Japan's Ministry of Health is to install one of these in each of the thirty thousand village tofu (soy cheese) factories in Japan."

(13) A baby and nurse with a large can of Soyalac in Japan. (14) A soymilk booth in Hong Kong, where more soymilk is sold than any kind of soft drink. The bottles in wooden cases are stacked four high. (15) A baby, little Mohammed Ali, a Bedouin child suffering from malnutrition bordering on starvation, at the Benghazi, Libya, hospital. In 1956 Dr. Miller nursed him back to health. He soon grew strong and healthy and began to take a lively interest in the world around him.

(16) "Generalissimo Chiang Kai-shek greets Mrs. Mary Greer Miller while Madame Chiang congratulates Dr. Miller following the ceremonies held March 26, 1956, in which Miller received the Blue Star of China, that country's highest award, similar to the Congressional Medal of Honor in the United States." Address: Vice President, College of Medical Evangelists, Loma Linda, California.

2412. Claiborne, Craig. 1961. Shark's fin soup is just one of many exotic courses in Chinese dinner: Traveler and gourmet prepares nearly twenty dishes by himself. *New York Times.* May 4. p. 30.
• ***Summary:*** About Francis Guth, who, with his wife, spent a week preparing a Chinese dinner for five guests. Five recipes are given. Mongolian hot pot calls for "¼ pound fried tofu (bean curd, which may be purchased in Chinatown). 1 slice fresh tofu, cut into four pieces."

2413. Report on the progress of studies on "the manufacture of tofu from U.S. soybeans." 1961. Food Research Institute, Japan. 3 p. May 17. Typed, without signature (carbon copy). [2 ref]
• ***Summary:*** Stamped at the top right corner: "Japanese American Soybean Institute." Typed on the line below that: "R-568. June 7, 1961. Under Contract (1960–4)." Contents: 1. Choice of U.S. soybean varieties which are suited for production of tofu (Hawkeye and Lee are suitable; Harosoy and Jackson are not). 2. Effects of the changes supposed to take place during transit and storage of soybeans on their quality as a raw material for tofu (considerable variation in the pH of the milk was noticed, depending on the soybean variety and whey the beans were old crop or new crop). 3. Suitability of high-protein, high-fat soybeans as a raw material for tofu (study is ongoing). 4. Improvement of tofu production method for U.S. soybeans (a special coagulant was used; dehulled beans gave whiter tofu). 5. Popularization of the method for making Soft Tofu. Address: Japan.

2414. Smith, Allan K.; Wolf, Walter J. 1961. Food uses and properties of soybean protein. I. Food uses. *Food Technology* 15(5):4-6, 8, 10. May. [34 ref]
• ***Summary:*** Contents: Summary. Introduction. Commercial soybean protein fractions. Soybean foods: Soybean varieties (garden varieties vs. field varieties, main differences between them, U.S. soybean breeding program). Trends in protein requirements (worldwide protein shortage). Soybeans and fractions used in food: Whole soybeans, defatted soybean meal, isolated proteins, protein concentrate (called "protein concentrate 70" in the summary), Gelsoy.

Whole soybeans may be baked or boiled, or used to make sprouts, fresh or dried tofu, vegetable milk (or "soybean milk"), yuba, and many fermented food products, including "miso or soy paste, natto, hamanatto, shoyu (soy sauce), tempeh, and some less important foods."

"Protein concentrate: Extraction of dehulled and defatted meal with dilute acid (pH 4.5) removes soluble sugars, nonprotein nitrogen, and other low-molecular weight components and a small amount of protein. The flavors are also mostly removed in the extract or in drying. The dried concentrate contains about 70% protein unless soybeans containing above-average protein are used.

"This product, having a manufacturing cost between that of soy flour and isolated protein, has been introduced recently into the food industry. This protein concentrate is a combination of the acid-precipitated protein plus the residue normally obtained in isolating the acid-precipitated protein... A protein concentrate can also be made by extraction of SOM [soybean oil meal] with about 70% ethanol at 50ºC or higher. This type of product is finding its place in the food industry."

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term "protein concentrate 70" or the term "protein concentrate" to refer to a product containing 70% protein on a dry-weight basis. Address: NRRL, Peoria, Illinois.

2415. Hayashi, Shizuka. 1961. Soybeans in the nutrition of Japan. *Soybean Digest.* June. p. 31.
• ***Summary:*** "Japan, with a population of 95 million people on a land area smaller than that of the state of California, is confronted with the problem of how best to feed its population. With the population increasing at a rate of 1 million annually, the problem perhaps will become permanent. According to 1959 government statistics, the following amounts of soybeans (in tonnes or metric tons) were used to produce oil and soyfoods in Japan: Crushed for oil 840,583, tofu 318,150, shoyu (soysauce) 217,686, miso 173,933, frozen tofu 40,000, natto 35,000, kinako [roasted soy flour] 13,000.

Japan uses 420,000 tonnes of soybeans that are grown domestically and 1 million tonnes imported from the U.S. Of the 26.7 gm of fats and oils available to each Japanese daily, 7.6 gm (28%) is supplied by soybeans. Of the 67.7 gm of protein available to each Japanese daily, soybeans provide 10.6 gm (15.7%).

"Meat is not only scarce but the price is too high to meet the daily needs of average people. Annual per capita meat consumption in the United States is 237 pounds while in Japan it is only 2.3 pounds." "The Japanese intake of fats and oils is less than 10 pounds per capita in comparison with about 50 pounds in western countries."

"The Japanese live too much on carbohydrate foods. Rice eating must be minimized and more protein foods eaten. The obvious conclusion is the increased consumption of soybeans."

Note: This is the 2nd earliest document seen (Jan. 2012) that contains industry or market statistics for natto by geographical region. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building., No. 1-chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

2416. Watanabe, Tokuji. 1961. Intermediate report [on the progress of studies on "the manufacture of tofu from U.S. soybeans"]. Food Research Institute, Japan. 56 p. June. Typed, without signature (carbon copy). [2 ref]
• ***Summary:*** Stamped at the top right corner: "Japanese

American Soybean Institute." Typed on the line below that: "R-578. July 4, 1961." Written in ink to the right of that: "Under Contract (1960–4)." A cover letter dated 3 Aug. 1961 from George Strayer to A.K. Smith explains that this is a copy of Mr. Hayashi's R-578, which is an intermediate report on the work being done on tofu by Mr. Tokuji Watanabe of the Food Research Institute, Japan. Contents: On gelation and coagulation of soy milk (incl. 11 graphs and photos). Defatted soybeans as a raw material for tofu (incl. 3 tables and 3 graphs). Studies on the manufacture of soy milk (No. 1) (incl. 15 tables). Spray-drying of soy milk (incl. 8 tables). Address: Japan.

2417. Nicholls, Lucius. 1961. Tropical nutrition and dietetics. 4th ed. Revised by H.M. Sinclair and D.B. Jelliffe. London: Baillière, Tindall and Cox. xii + 457 p. July. Illust. Index. 24 cm. [100+* ref]

• ***Summary:*** Preface to the fourth edition: Nutritional science has advanced at an accelerating rate since the last edition. The section on protein malnutrition in infants has had to be rewritten; it is "now the most immediately practical problem of tropical countries." "The advance of nutritional science emphasizes the urgent need to carry it into the field through public health measures and especially health education."

"Now problems of even greater magnitude are created by the growth of population. The world's population of 2,800 million [2.8 billion] is expanding at a rate that will double by the end of the century... The problem if an increasing population in a world where already two-thirds of the population is underfed is the greatest challenge facing mankind today" (Oxford, Jan. 1961).

Contents of Chapter II, "Proteins:" Introduction. Chemical nature of the proteins (hydrolysis of starches and proteins compared, classification of the amino-acids). Building the proteins. The proportion of amino-acids present in various proteins. Nutritive value of proteins: Complete proteins (including glicinin [sic, glycinin] of soya bean), partially incomplete, incomplete proteins (zein of maize and gelatin). Theoretical protein requirements for maintenance and growth (Biological value, Net utilization). Limiting amino-acids giving a relative chemical score. Supplementing. Theoretical protein requirement during pregnancy and lactation. The effect of cooking on proteins. Specific dynamic action of proteins. The amount of protein in diets (high, low, vegetarian, true vegetarianism [avoids all foods of animal origin], lacto-vegetarians).

The contents of the section on "Pulses" (p. 227-43) is very similar to that in the 1951 edition:

A table from FAO (p. 260) shows that six oilseeds supply almost all of the world's vegetable oil: Soya bean 37.0%. Cottonseed 22.3%. Groundnut 20.2%. Rapeseed 9.8%. Sesame 2.7%. Sunflower 2.5%. The next section (p. 260-64) is "Palm nuts and oils."

Table 53 (p. 396-97) gives the botanical name and composition of cereals and bread. Table 54 (p. 398-99) gives the botanical name and composition of pulses, incl. soya bean, soya bean curd [tofu], soya bean milk, carob bean, Goa bean, tepary bean

Note: The title C.M.G. (Companion of St. Michael and St. George) is an honor conferred upon those for distinguished service in the British colonies or commonwealth. Address: C.M.G., B.A. (Cantab.), M.D., B.C. Late Director of Bacteriological and Pasteur Institutes, and Director of Div. of Nutrition, Ceylon; Lecturer in Nutrition, Ceylon Univ.; Late Lecturer on Tropical Medicine, Ceylon Medical College; Nutrition Adviser to Commissioner General, South East Asia.

2418. Smith, Allan K. 1961. Oriental methods of using soybeans as food. With special attention to fermented products and notes on Oriental farming practices. *USDA Agricultural Research Service.* ARS-71-17. 65 p. July. Illust. 27 cm.

• ***Summary:*** Contents: Part I: China. Introduction. Farming conditions in China. Oilseed production. Soy sauce in China. Sweet flour paste–Tien mien chang [chiang]. Soybean or vegetable milk (incl. Willis Miller and the Henningsen Produce Co. in Shanghai). Yuba. Soybean curd or tofu. Soybean cheese [fermented tofu]: Chee-fan ("cheese" + "small cube"), tsüe-fan ("drunken cheese"), hon-fan ("red cheese"). Fen-T'iao from mung beans. Fermented soybeans [fermented black soybeans]. Vinegar fermentation process.

Note: This is the earliest document seen (Oct. 2011) that uses the term "tsüe-fan" ("drunken cheese") to refer to a type fermented tofu.

Part II. China–Chinese Institutions. Henry Lester Institute (in Shanghai; Dr. Bernard Read). Academia Sinica (headquarters in Nanking). China Vegetable Oil Corporation (CVOC, Shanghai). The China Oils and Fat Industries Ltd. (Shanghai). National Bureau of Industrial Research. Catholic University (Fu Jen, at Peiping). Yen Ching University (Peiping). Agriculture Experiment Station (Peiping).

Part III: Japan. Introduction. Production of miso in Japan. Soy sauce in Japan. Trends in soy sauce production. Part IV: With Raymond E. Culbertson. Korea. Introduction. Breeding work. Soybean varieties. Climatic relations. Soils of Korea. Topography. Land use. Cultural practices. Marketing. Soybeans as foodstuff. Soy sauce. Acknowledgment.

Page 19 states: "The China National Government has taken an active interest in soybean milk for use by its army. Mr. Willis Miller, with offices and business connections with the Henningsen Produce Company in the Dollar Building (7th Floor) at 51 Canton Road, Shanghai, had just completed, at the time of my visit, the building of a soybean milk plant for the Chinese Government. The process is patterned after that of the International Nutritional Laboratories at Mt. Vernon, Ohio, for making a powdered or spray-dried

© Copyright Soyinfo Center 2013

milk. Mr. Miller also was supervising the installation of a vegetable canning plant for the same purpose."

The text of this bulletin was previously published, serially, with slight revisions, in *Soybean Digest,* from Feb. to June 1949. Address: Northern Utilization Research and Development Div., Peoria, Illinois.

2419. Strayer, George M. 1961. Re: Research on tofu being conducted in Japan by Mr. Tokuji Watanabe. Letter to Dr. A.K. Smith, Northern Utilization Research and Development Division, Agricultural Research Service, USDA, Peoria 5, Illinois, Aug. 3. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Allan: I am enclosing with this letter a copy of Mr. Hayashi's R-578, which is an intermediate report on the work being done by Mr. Tokuji Watanabe of the Food Research Institute [Japan]... you are at liberty to photocopy or otherwise reproduce any parts of it which you may want to retain. As soon as you have finished with this will you please return it to me so that we can dispatch it to FAS [Foreign Agricultural Service, Washington, DC].

Note: This American Soybean Assoc. letterhead is very interesting. Along the top is written: "An organization of those interested in the production and utilization of the soybean." In the center is the logo, consisting of the western hemisphere on the globe of a soybean. Around the bottom: "Founded 1920–Organized 1925." At the left top is the name and title (plus city and state) of each of 3 officers and 5 directors. At the right top are the names of ten more directors. Address: Executive Vice President and Secretary Treasurer, American Soybean Assoc., Hudson, Iowa.

2420. Meade, Mary. 1961. Steak, salad please a Chinese food expert. *Chicago Daily Tribune.* Aug. 15. p. B2.
• ***Summary:*** Yuan-shan Chi, a Chinese home economist from Taipei, Formosa, has been representing her government at the International Trade Fair. Her favorite American foods are steak and salads.

"'Before you know it, your people will be eating cheese!' I told her. The Chinese have a great liking for soy bean curd, which is their nearest product to cheese." A small photo shows Mrs. Chi.

2421. *Today's Food* (*Loma Linda Foods, Arlington, California*). 1961. [Commercial food products made by Loma Linda Foods]. 6(2):5-6, 8. Summer.
• ***Summary:*** Loma Linda food products include: Smokene. Savorex. Vegeburger. Nuteena.

Also mentioned as generic names are: Soy mayonnaise, and soy milk. Address: 11503 Pierce Place, Arlington, California.

2422. Lee, Dorothy. 1961. House & Garden's Chinese cook book part 1. *House and Garden* 120(3):149, 151-56. Sept. See p. 152.
• ***Summary:*** The introductory paragraph states: "... Following are the basic principles of Chinese cooking as well as recipes for soups, meats, fish, and vegetables. Part 2 of the H&G's Chinese Cook Book will appear in the October issue."

The section titled "Glossary of recipe terms, ingredients" includes: "Bean curd: Squares of tender white 'soy bean cheese' made by precipitating the protein from soy bean milk."

"Fen szu: Also called bean threads or cellophane noodles. Fen szu is made of pea starch [not soy]... When soaked in hot water, it resembles vermicelli but is translucent. When deep-fat fried in dried form, it puffs up light and crisp."

"Fu Ju (or Foo Yee): Fermented bean curd, preserved in wine-flavored brine."

On page 149 is a color photograph of a picture frame framing several Chinese food items with a Buddha figure in the middle background of the frame. The title of the article is across the top of the frame. The text starts on page 151 along with the author's name.

2423. Lee, Dorothy. 1961. House & Garden's Chinese cook book part 2. *House and Garden* 120(4):179, 181-86. Oct.
• ***Summary:*** Bean curd [tofu] is used in two of the recipes, and soy sauce also is used in several.

2424. *Soybean Digest.* 1961. The Peoria conference on soybean products for protein in human foods. Oct. p. 6-8.
• ***Summary:*** A photo (p. 8) shows F.R. Senti, R. Sabin, J.W. Hayward, and A.K. Smith tasting samples of miso, tempeh, and tofu which were served at the reception and made at the Northern Utilization Laboratory.

2425. Spilsbury, Calvin A. 1961. Japan's oilseed and fats and oils industry. *USDA Foreign Agricultural Service.* FAS M-120. iv + 52 p. Oct. Illust. 28 cm. [9 ref]
• ***Summary:*** Contents: Introduction. Summary. The fats and oils industry: Total supply of fats and oils, edible fats and oils industries (oilseed crushing and refining industry, rice bran processing, margarine and shortening, oilseed food industries), industrial fats and oils (the soap industry, paint and protective coating industry). Domestic production of oilseeds and oil-bearing materials: Soybeans (farm income and management, research), rapeseed, other oilseeds, rice bran, marine oils, including whale, animal fats. Foreign trade: Soybeans, other oilseeds, marine oils, animal fats, oilcake and meal, trade controls. Demand and price: Price supports. Consumption. Marketing and market development: Marketing vegetable oils, marketing oilseeds (storage, inspection, soybeans, rapeseed), market development. Bibliography. No names of Asian crushers are given.

Japan's margarine and shortening production in 1960 was 88,600 metric tons, nearly 4½ times that of 1950...

© Copyright Soyinfo Center 2013

Margarine production in 1960 was 43,000 tons. Shortening production was only 41,600 tons in 1960. The margarine and shortening industry in Japan consists of 26 manufacturers, but a large percent of plant capacity is found in only a few plants: 4 plants have one-third of the industry capacity, which is around 400 metric tons per 8-hour day... 67% of the oils used to make margarine and shortening in Japan are animal and marine oils, with whale oil being the most widely used (26% of the total) followed by tallow and lard (21%), then fish oil (20.0%). Palm oils comprise 19.0% of the total and vegetable oils 14.0%.

Concerning oilseed food industries (p. 17-20), in 1960 some 532,218 tonnes (metric tons) of soybeans were used directly as foods or manufactured into foods in Japan. Substantial amounts of peanuts and sesame seeds were also so used. "The Japanese American Soybean Institute in Tokyo is actively promoting U.S. soybeans for food uses and has promoted soybeans as the meat of the field because of the excellence of their amino acids."

Note: This is the earliest document seen (Jan. 2005) containing the phrase "the meat of the field." Notice that it refers to soybeans and was apparently coined by an American organization in Japan.

"More soybeans are used directly for food than are grown in Japan, and the cake and meal from an additional 420,000 tons of soybeans are now used each year. The main soybean foods are: Miso, shoyu, tofu, aburaage (fried tofu), frozen tofu, natto, kinako, monosodium glutamate (extract of fermented soybeans and rice used as a seasoning compound; a low-grade shoyu is a by-product), tonyu (soybean milk, cooked water-extract of soybeans, not widely produced in Japan at the present time).

Miso: There are about 3,200 to 3,800 miso plants in Japan, and a large amount of home-made miso is also produced. "About 117,600 tons of soybeans and 52,300 tons of defatted soybean meal (expeller cake is thought to be the best) are required by this industry. Miso consumption is estimated at 28.9 grams per capita per day." Domestic Japanese soybeans, such as white hilum soybeans from Aomori are preferred to U.S. beans, which cook unevenly because of their hard seed coats.

Shoyu: There are about 5,000 producers; some have very large plants but many are small. Per capita consumption is about 3 gallons per year. This requires about 18,500 tonnes of soybeans and 155,000 tonnes of defatted soybean meal per year. A small amount of soybean oil (about 1,000 tonnes/year) is skimmed off the top of shoyu and used for a cutting oil. The cake that remains after pressing out the shoyu contains 4% salt, but it is an ideal hog feed as well as a fertilizer. Around 80,000 to 100,000 tonnes a year are produced. A taru (4½ gallons) of shoyu wholesales for about $3.60. A large volume of soy sauce is now being exported to the USA.

Tofu: There are around 50,000 small tofu plants in Japan. Their demand for soybeans is large and increasing. In 1960 production of tofu and aburaage required 254,800 tonnes of soybeans and 20,000 tonnes of defatted soybean meal. More soybeans and meal are used to make tofu than any other food in Japan, followed by shoyu, then miso. About three-fifths of the soybeans used are imported. In 1960 production of frozen tofu required 27,100 tonnes of soybeans.

In 1960 about 22,800 tonnes of soybeans were required to make natto, 6,200 tonnes to make kinako, 64,800 tones of defatted soybean meal were required to make monosodium glutamate, and 10,000 tonnes of soybeans plus 30,000 tonnes of defatted meal were required to make other soybean food products [such as whole soybeans, soybean milk, etc.]. Address: USDA Fats and Oils Div.

2426. Tung, Ta-Cheng; Huang, P-C.; Li, H-C.; Chen, H-L. 1961. [Composition of foods used in Taiwan]. *J. of the Formosan Medical Association* 60(11):973-1005. Nov. 28. [27 ref. Chi; eng]

• ***Summary:*** Gives the nutritional composition (food calories, moisture, protein, fat, carbohydrate, fiber, ash, calcium, phosphorus, iron, vitamin A, thiamine, riboflavin, niacin, and ascorbic acid) of 384 foods commonly used in Taiwan. In the section on "Legumes, seeds, and nuts," the following soy products are included: Black bean (hei tou, black soybean; 37.1% protein, 15.2% fat), miso; soy bean (huang tou); soy bean curd (toufu); soy bean curd cake [pressed tofu] (toufu kan); soy bean curd cake, spiced (wu-hsiang toufu kan); soy bean curd cake, strip; soy bean curd, clot (toupi, yuba); soy bean curd, fermented (fermented tofu); soy bean curd, fried (yu toufu); soy bean curd, pickled (furu, hu-zu); soy bean, fermented (tou chi [fermented black soybeans]); soy bean milk (tou nai), soy bean extracted residue (okara). Address: 1-3. Dep. of Biochemistry, College of Medicine, National Taiwan Univ., Taipei, Taiwan, China; 4. Taiwan Provincial Hygienic Lab.

2427. Chiu, Wen-Chiang Liang; van Duyne, Frances O. 1961. Soybean curd: Preparation, calcium content, and palatability. *Illinois Research* (*Illinois Agricultural Experiment Station*) 3(4):6-7. Fall.

• ***Summary:*** "Tofu, or soybean curd, while practically unknown in the United States, has been an important food in the Orient for centuries. Such characteristics as low cost, high protein and calcium content, a desirable texture, and many uses have contributed to its popularity.

"It resembles cottage cheese, although there are differences in composition, form and palatability. Perhaps in the future, if more soybean curd becomes available, this nutritious, versatile product will play a greater role in the American diet."

Objectives of the present study are: "(1) to standardize a small quantity method of making soybean curd of good

© Copyright Soyinfo Center 2013

quality, (2) to compare the calcium content and palatability of curds prepared from field- and vegetable-type soybeans, and (3) to develop recipes in which soybean curd would be an appetizing and interesting ingredient."

Describes how to make tofu from 1 pound of dry soybeans using calcium sulfate as the coagulant. A sieve lined with cheesecloth was used for forming the tofu. Tofu was made from 4 varieties of soybeans: "Two of the varieties, Harosoy and Mandarin (Ottawa), are field-type beans, while the other two, Jogun and Kim are vegetable-type." Tofu was prepared from each variety at least 4 times. Jogun gave the highest yield of tofu (952 gm, or 2.1 times the weight of dry soybeans), with 84.6% moisture. Dry Jogun soybeans contained more calcium than the other varieties (254 mg/100 gm) and tofu made from Jogun soybeans also had the highest calcium content (256 mg/100 gm). The palatability of tofu made from the different varieties was tested, both plain and in a salad mixture. The following tofu recipes were developed: Tofu meat balls, fried tofu in mushroom sauce, tofu and beef stew, tofu appetizer, tofu sandwich, scrambled eggs with tofu, tofu and tomato soup, and tofu with pea soup. They were tested and "considered very palatable by the majority of judges. These recipes could be used to add variety to the American diet."

Note: This is the earliest English-language document seen (June 2009) that uses the term "field-type beans," which is contrasted with vegetable-type soybeans.

A photo shows Wen-Chiang Liang Chiu seated at a table behind a pile of soybeans. She "studied at the National Taiwan University in Formosa before coming to Illinois for graduate study. This article is based on her Master's thesis." Address: 1. Graduate student; 2. Prof. and head. Both: Foods and Nutrition Div., Univ. of Illinois.

2428. *Soybean Digest.* 1961. A.K. Smith of Peoria Lab on trip to Asia. Nov. p. 7.
• ***Summary:*** Dr. A.K. Smith, head of meal products investigations, oilseed crops laboratory, Northern Regional Research Laboratory (Peoria, Illinois), left Oct. 15 on a 2½ month trip to India, Japan, and Indonesia. "Dr. Smith will survey research laboratories in the countries to determine those that are qualified to do food research and development on soybeans, soybean products, and related agricultural products under the P.L. 480 program." In Japan, he will visit trade associations to encourage the use of U.S. soybeans in Japanese foods.

Research is needed in six areas: Use of soy flour to supplement bread and cereal products. Manufacture of soybean protein. Use of tempeh. Production and nutritional value of soy milk. Production of low-salt miso for feeding babies. Comparison of U.S. soybean varieties in commercial production of tofu. A portrait photo shows Smith.

2429. *Soybean Digest.* 1961. 4-H club girl wins with Japanese meal. Nov. p. 18.
• ***Summary:*** Joan Ruths, a 17-year-old 4-H club girl from Waterville, Minnesota, won a blue ribbon at the Minnesota State Fair for her demonstration titled "Entree Tofu Steak." She prepared and served a complete Japanese meal. Among the many dishes on her menu made from soybeans were tofu, miso soup, aburaage [deep-fried tofu], and soy milk. Joan closed her presentation by saying: "Soybeans for our nation's economy, food for millions, and peace for the world."

2430. **Product Name:** Cheze-O-Soy with Tomato Sauce (Tofu Entree).
Manufacturer's Name: Madison Foods.
Manufacturer's Address: Madison College, Madison, Tennessee.
Date of Introduction: 1961.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: An improved version of the tofu introduced in 1931.

2431. **Product Name:** Tofu.
Manufacturer's Name: Morishige's Store. By 1968 Morishige Tofu.
Manufacturer's Address: 2210 South King, Honolulu, Oahu, Hawaii.
Date of Introduction: 1961.
New Product–Documentation: Honolulu City Directory. 1960-61. Morishige's Store (Akiro & Mrs. Nakayo Morishige; tofu manufacturers). 2210 S King, Honolulu. Not listed 1962-63. 1967-68 Directory. Morishige Tofu, 2210 S. King St. Continues through 1970.

2432. **Product Name:** Kreem-Chee (Non-Dairy Cream Cheese) [White, or Pimiento].
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, Ohio. Phone: Tuxedo 5-5359.
Date of Introduction: 1961.

Wt/Vol., Packaging, Price: 6 oz. or 16 oz. can.
New Product–Documentation: Wholesale price list. 1961. May 1. Sold in 6 oz. or 16 oz. cans. Soybean Blue Book. 1961. p. 104. "Processing and packing a soy cheese." No longer listed in 1964. Note: This was the world's second commercial soy-based cream cheese.

2433. Chiu, W.C.L. 1961. The calcium content and palatability of soybean curd from field and vegetable varieties. MSc thesis, Dep. of Home Economics, University of Illinois, Urbana, Illinois. *
Address: Univ. of Illinois, Urbana, Illinois.

2434. Chiu, Wen-Chiang Liang; van Duyne, Frances. 1961. Soybean curd: Preparation, calcium content, and palatability. Waterloo, Iowa: Soybean Council of America. 17 p. 21 cm.
• ***Summary:*** "Reprinted from *Illinois Research*, Fall, 1961. published quarterly by the University of Illinois Agricultural Experiment Station,... Urbana, Illinois."

Page 17 lists the offices and address of the Soybean Council of America, Inc. The home office is in Waterloo, Iowa. The main international office is in Rome, Italy. Other overseas offices are in Antwerp, Belgium; Bogota, Colombia; Copenhagen, Denmark; Cairo, Egypt; Paris, France; Hamburg, Germany; New Delhi, India; Teheran, Iran; Jerusalem, Israel; Karachi, Pakistan; Lima, Peru; Madrid, Spain; Ankara, Turkey; London, United Kingdom.

Note: Why would the Soybean Council of America publish a booklet on soybean curd? Perhaps they thought it could become part of the American diet. Address: Univ. of Illinois, Urbana, Illinois.

2435. Hunter, Beatrice Trum. 1961. The natural foods cookbook. New York, NY: Simon and Schuster, and Pyramid Books. xvi + 296 p. Index. 22 cm. Pyramid Books pocketbook ed. published in 1967.
• ***Summary:*** This very early and important natural foods cookbook contains more than 2,000 recipes. The Introduction is written by Dr. Clive M. McCay, Professor of Nutrition, Cornell University, New York, and Dr. Jeanette B. McCay, nutritionist. The pages numbers are those in the original 1961 hardcover edition. The author calls tofu "soy cheese" and uses it in many recipes, including mashed in a recipe for "soy cheese sherbet" (p. 204). This book is not vegetarian (some recipes call for beef, chicken, fish, etc.), but was quite influential in the early days of the U.S. natural foods movement.

Soy-related recipes include: Soy spreads (p. 14-15): Soy flour spread. Soybean spread (in blender). Soy cheese [tofu] spread. Soy butter (made from soy flour, regular or roasted, and oil). Smoothies (p. 26-29). Soybean-cheese salad (p. 35). Soybean-vegetable salad. Soybean molded salad. Soy butter dressing (with soy butter, p. 41). Soy cheese dressing. Eggless mayonnaise (with soy flour). Soybean soup (p. 49). Cream of soy soup (with soybeans in blender). Soy-vegetable soup (with soy milk in blender, p. 54). Soy noodles (with soy flour, p. 59). Green soybeans in pods (p. 70). Steamed green soybeans. Soy grits stuffing (for fowl, p. 127). Homemade soy cheese (also known as soybean curd or *tofu;* from soy milk or soy flour, p. 137).

Soybeans (p. 142-44): Basic soybean filler. Broiled soyburgers. Soybean ring (in blender). Baked soybean croquettes. Soybean casserole. Baked soybeans. Soybean-lentil loaf. Stewed soybeans. Soybean soufflé. Soybean squares. Roasted soybeans (dry-roasted). Leftover soybeans. Soy-oatmeal porridge (with soy grits, p. 162). Soy-cornmeal porridge. Soy sprouts (p. 163). Soy breads (p. 179-80): Kneaded soy-wholewheat bread. No-knead soy-wholewheat bread. Soy spoon bread. Unraised soy biscuits (p. 184). Soy-gluten popovers (p. 189). All-soy pancakes (p. 192). Soy waffles (p. 195). Soy cheese sherbet (with tofu, honey, vanilla, and nutmeg, p. 204). Soy cookies (p. 238). Flourless soy cookies. Soy-wholewheat cookies. Soy-cheese piecrust (with soy flour). Spiced soybean pie (with boiled, pureed soybeans, p. 250).

The section titled "Smoothies" (p. 26-29) contains the following recipes (those followed by an asterisk {*} contain dairy products and no soy unless stated in recipe name; the directions for all recipes in this section is "Blend all ingredients"): Homemade soybean milk (from whole soybeans, or from soy flour). Spiced soy milk. Soy-fig shake (with soy milk). Milk-soy smoothie (with soy flour)*. Almond milk. Peanut milk. Cashew milk. Milk-wholewheat shake*. Orange-coconut milk*. Coconut milk. Milk fruit shrub*. Strawberry smoothie.* Apricot shake*. Anise milk*. Milk smoothie*. Fruit milk shake*. Banana smoothie*. Lemon egg nog*. Honey egg nog*. Carob milk*. Carob smoothie. The recipes followed by an asterisk contain 2-4 cups cow's milk and no soy. Note 1. This is the earliest document seen (Jan. 2005) that mentions "smoothie" or "smoothies" in connection with soy. All of the 22 recipes in the category titled "Smoothies" contain some kind of milk (either cow's milk or milk made from a seed–soy milk, almond milk, peanut milk, cashew milk, coconut milk, anise milk). About half of the smoothies contain fruits or fruit juices (orange juice, fresh berries, strawberries). None of the smoothies contain ice cream, frozen yogurt, or any other frozen dessert or frozen food. Therefore a smoothie seems to be like a milk shake but without the ice cream.

The recipe for "Milk-Soy Smoothie" (p. 27) reads: 4 cups milk. ½ cup soy flour. 4 tablespoons molasses. 2 eggs, raw. ½ teaspoon pure vanilla extract. 3 tablespoons nutritional yeast. Blend all ingredients. Serves 4-6.

The section titled "Nut butters (p. 29-30) gives a recipe for homemade peanut butter with "Variations: Homemade nut butter may be made from raw almonds, filberts, pignolias, walnuts (English and black), cashews, Brazil nuts, etc. Most of these nuts have enough oil so that no extra oil

© Copyright Soyinfo Center 2013

need be added." On p. 30 is a recipe for "Homemade peanut-sunflower seed butter."

By the time of the 19th printing, in Jan. 1974, this book had sold over one million copies.

Note 2. This is the earliest document or book seen (Dec. 2001) after 1960 with the term "natural foods" in the title.

Note 3. An advertisement for this book appeared in the July 1965 issue of *Natural Food and Farming* (p. 40). Address: White Mountains, New Hampshire [by July 1965: Hillsboro, NH 03244].

2436. Lin, Yutang. 1961. The red peony. Cleveland and New York: The World Publishing Co. 407 p. See p. 101. 21 cm.
• ***Summary:*** This book is fiction. A beautiful young Chinese woman named "Peony" is the central character in the book. She and her long-time lover Chin Chu are having their farewell dinner together in Hangchow.

"Neither was in the mood for a festive farewell dinner. She picked roast lamb served with kumquats and onions, and a dish of deep-fried bean curd. He asked for a half bottle of *shaoshing,* for he knew that she always enjoyed a little drink with dinner,..." (p. 101).

Note: This is the earliest English-language document seen (April 2013) that contains the term "deep-fried bean curd" (regardless of hyphenation).

Lin Yutang lived 1895-1976. After 1928 he lived mainly in the United States. His many works represent an attempt to bridge the cultural gap between the East and the West. He was nominated for the Nobel Prize in Literature several times in the 1970s.

2437. Mendoza, Jose M. 1961. Philippine foods, their processing and manufacture. Manila: Published by the author. 421 p. See p. 152-59. Chap. XV, Sauces and Similar Products. [7 soy ref]
• ***Summary:*** Contents of Chapter 15 titled "Sauces and similar products" (p. 152-58): Soybean sauce (*toyo*). Japanese soya sauce: Preparation of the starter, preparation of the material, inoculation, fermentation. Modified Chinese soya sauce. Coco sauce or coprameal sauce (The taste compares favorably with Chinese soy sauce and Japanese soy sauce). Hints and suggestions. Philippine bean sauces. The tao-si [fermented black soybeans], tokua [tofu, not fermented], tahore [taori, taore; probably fermented tofu], the tajo ([taho] unpressed tofu curds, usually served with medium brown sugar), mongo [mung bean] sprouts, soybean sprouts, Vetsin (contains 1 part monosodium glutamate, 7 parts lactose, and 3 parts salt). Includes a formula for Worcestershire sauce (which contains no soy sauce).

Note 1. This is the earliest document seen (April 2013) that contains any Filipino word (*tajo*) for unpressed tofu curds, usually served with medium brown sugar.

Note 2. The section titled "Tahore" (p. 157) states: "This product is simply taori whereby the already prepared taore is macerated to mass. Tokua [tofu] is used frequently with tahore. They are both popular food [sic, foods] among Chinese. The Chinese eat them with soft-boiled rice called 'barabasa.'" Address: Lecturer in Food Technology and Fermentation Technology, Manuel L. Quezon Univ., Manila.

2438. Mendoza, Jose M. 1961. Philippine foods, their processing and manufacture. Manila, Philippines: Philippine Educational Co. 524 p. See p. 186-93. Chap. XV, Sauces and Similar Products. [7 soy ref]
• ***Summary:*** The contents of this edition is basically identical to that of the other 1961 edition published by the author. However the typesetting and the page numbers are different. Address: Lecturer in Food Technology and Fermentation Technology, Manuel L. Quezon Univ., Manila.

2439. Montagné, Prosper. 1961. Larousse gastronomique: The encyclopedia of food, wine & cookery. New York, NY: Crown Publishers, Inc. 1101 p. See p. 925. Illust. Index. 26 cm. [Eng]
• ***Summary:*** The following are defined under "Soya Bean. *Soja"* (p. 925): Introduction. The soya bean is "the richest and cheapest source of vegetable protein." 1. Soya bean curd. *Fromage de soja.* Gives a completely inaccurate and useless description of how to make tofu at home. 2. Soya meat. *Viande de soja.* This "vegetarian meat," which resembles cooked ham, is said to be too complicated to make at home, but requires industrial equipment. 3. Soya milk. *Lait de soja.* 4. Soya sauce or extract. *Sauce, Extrait de soja.*

Note: This English-language edition is a translation from the original 1938 French-language edition by Nina Froud, Patience Gray, Maud Murdoch, and Barbara Macrae Taylor. Address: France.

2440. Ochse, J.J.; Soule, M.J., Jr.; Dijkman, M.J.; Wehlburg, C. 1961. Tropical and subtropical agriculture. 2 vols. New York, NY: Macmillan Co. Vol. 1, iv + 1-760 p. Vol. 2, xv + 761-1446 p. See vol. II, p. 1067-76. 22 x 14 cm.
• ***Summary:*** This is a truly prodigious work. The chapters in volume 2 deal with individual crops. The section titled "Soybean" (vol. II, p. 1067-76) discusses the following: Vernacular names in various languages. Overview of world production. Botany. Varieties. Breeding and selection. Climatic and soil requirements. Culture. Harvesting. Uses (incl. soy sauce, tempeh, and tofu). Future possibilities. Diseases. Ochse was born in 1891. Address: 1. Consultant, Tropical and Subtropical Agriculture, Research Consultant in Economic Botany, Univ. of Miami, Coral Gables; 2. Assoc. Prof. of Fruit Crops, Univ. of Florida, Gainesville; 3. Prof. of Applied Tropical Botany and Genetics, Univ. of Miami, Coral Gables; 4. Asst. Plant Pathologist, Univ. of Florida, Everglades Experiment Station, Belle Glade. All: Florida.

2441. Rodale, J.I. ed. 1961. The complete book of food and

© Copyright Soyinfo Center 2013

nutrition. Emmaus, Pennsylvania: Rodale Books. 1054 p. Index. 23 cm.

• ***Summary:*** J.I. Rodale recommends the consumption of natural meat and eggs. He discourages humans from consuming or using milk, chemicalized meats, added salt, sugar, chocolate, aluminium utensils, and heated or hydrogenated fats. Throughout this book, he uses scientific sources and cites them carefully.

Chapters 30-40 (p. 116-56) are a critique of cow's milk. Man has made the cow into a milk machine, with ever larger udders, which can produce 75 times as much milk per year as in Biblical times. For adults, milk may cause lactose intolerance, allergies and excessive tallness, and may contain undesirable antibiotics.

Chapter 40, titled "Nutritive substitutes for milk" (p. 154-55), mentions "soybean milk and Tahini milk which is a milk made from ground sesame seeds. Tahini milk appears to us to be an excellent substitute for milk in the diet because of its extremely high content of calcium" (p. 155).

Dr. Stefansson (p. 69-72) lived for one year in good health on meat alone. The discovery of cereal culture 2,000 years ago was the beginning of civilization and human degeneration. The human digestive tract has not had time to adjust to this change. It took humans 2 million years to adapt to the diet of the primitive human hunter (consisting mainly of proteins and animal fats) from the largely vegetarian diet of the anthropoids. "It is extremely difficult to plan a vegetarian diet in which the essential amino acids will all be represented in their proper proportion."

Chapter 127, "How to sprout beans" (p. 472-74), discusses mainly how to sprout soybeans, and their nutritional value. A table compares the vitamin and mineral content of soybean sprouts and mung bean sprouts; the former are much more nutritious.

Chapter 153, "Soybeans–The wonder food" (p. 536-41) has the following contents: Introduction. How nutritious are soybeans? ("Soybeans are one of the few non-animal proteins which are complete–that is, contain all of the essential amino acids in good proportion.") Sprouting beans for vitamin C. Soybeans are economical (says the best book on soybeans is *Soybeans for Health, Longevity and Economy,* by Philip S. Chen, Ph.D.). Soybean milk for infants. "Soybeans are richer in potassium than any other food except brewer's yeast which, of course, is eaten in much smaller quantities. They contain more pantothenic acid than any other food except egg yolk, brewer's yeast, liver, rice bran, and wheat bran. The iron in soybeans is 96 per cent 'available'–that is, digestible and used by the body." Chapter 154, "Soya milk and soya curds" (p. 541-42), by Dr. W. Kring, of Dusseldorf discusses: Use of soybeans in East Asia. Fresh soya milk for every household. Acidophilus soya milk–Soya curds. Making soya cheese or tofu [at home].

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "soya curds" in connection with tofu.

Note 2. This is the earliest English-language document seen (Sept. 2012) that contains the term "Acidophilus soya milk" (or "Acidophilus soymilk") regardless of capitalization, hyphenation, or spaces.

Chapter 178, "Eggs, meat and soybeans" (p. 675-77) gives a nutritional comparison of these three high-protein foods. One section titled "Meat substitutes" begins: "Soybeans should be a part of your diet as a substitute for meat." It continues: "Even though you include plenty of meat in your diet, make use of soybean protein, too. If your family does not know soybeans, get some and begin to introduce them to a wonder food."

Chapter 169, "Are chemical fertilizers harming our food" (p. 618-24) is part of a statement made by J.I. Rodale on December 15, 1950, to a Congressional Committee formed to investigate chemical fertilizers. He argues that the organic method is "far superior to the present general practice with respect to fertilizer usage, not only from the human health standpoint but from the point of view of preventing soil erosion and giving higher yields at a lower cost." Also discusses: History of the organic method. What is the organic method? What is a chemical fertilizer? The health aspect (experiments showing a much higher survival rate in mice fed organically grown food). More vitamins in "organic" food. Physicians praise the organic method. Rejection by our government (and request that agricultural experiment stations test and compare the two methods).

Chapter 173 titled "Investigating Primitive Diet" (p. 642-54) contains a detailed summary of the work of Weston A. Price. D.D.S., as described in his book *Nutrition and Physical Degeneration.* This book is available from the Lee Foundation for Nutritional Research, 2023 W. Wisconsin Ave., Milwaukee, Wisconsin.

Chapter 182, titled "When you use fats and oils" (p. 682-83) discusses margarine, which is made from vegetable fats which have been hydrogenated. Soybean oil is one of the oils use to make margarine. "As you know, we do not recommend using margarine, mostly because of the many chemical substances used in it, of which the synthetic vitamin A is only one. Artificial coloring, preservatives and so forth are also used. But, in addition, hydrogenating the oils to make them solid destroys most of the essential fatty acids which are the chief reason for eating vegetable oil. So margarine is no better than butter as a spread, in spite of the fact that it is made from substances that do not contain cholesterol." "Soybean oil is another popular vegetable oil." Rodale especially recommends "our old friend, sunflower seed oil"–which is rich in vitamin E and linoleic acid.

Chapter 183 titled "Heated fats can cause cancer" (p. 686-90) summarizes several scientific studies and notes that "Hydrogenated fats are everywhere" in our food supply. "Finally, don't buy hydrogenated shortenings (the solid kind)..."

© Copyright Soyinfo Center 2013

Chapter 198 titled "Who pays for nutrition research?" (p. 741+) begins: "'Dr. Stare's Nutrition Department (at Harvard University, Massachusetts) received from Food Industries and Foundations representative of their interests between and including the fiscal year 1950 to 1956 gifts totaling approximately $378,000, half of which was from the Sugar Research Foundation, supported by the sugar interests, and the Nutrition Foundation, supported largely by commercial food processors. A large portion of the other half was from the chemical and drug interests.

"This challenging statement sets the tone for a series of open letters from the Boston Nutrition Society, Incorporated, to Dr. Nathan M. Pusey, President of Harvard University. We think readers will find in these letters the answer to their puzzled query Ä 'Why?' Why must we eat doctored up, chemicalized, refined, cheapened food and above all, why must some of our top food scientists, men like Dr. Stare of Harvard, call everyone a faddist and a crackpot who points out that the modern American food is not everything it should be?

"The open letters hit at the very heart of the problem. Much university research on nutrition is being financed by the very folks who profit from selling this worthless food."

Chapter 199, "A British nutritionist takes stock," summarizes an article titled "Food and Health," by Dr. H.M. Sinclair (*British Medical Journal*, 14 Dec. 1957) about the dangers of feeding too much cow's milk to infants and children. Another article on the same subject by Dr. Milton J.E. Senn, was published in *McCall's* (Jan. 1958). Chapter 272 is "Kelp for trace minerals" (p. 1005-09) and Chapter 273 is "The value of seaweed nutrition" (p. 1010-12).

Chapter 39, "Miscellany on milk" (p. 146-54), documents many problems with cow's milk. Its contents: Introduction, detergents in milk, antibiotics in milk, some infants can't take milk at all, is milk the universal antidote?, an all-milk diet is hazardous, ulcer patients beware!, cavities caused by milk, DDT contamination, misuse of calcium, radioactive substances in milk, milk as a cause of goiter, a famous nutritionist speaks (Dr. Norman Jolliffe), milk's value questioned (by McCance and Widdowson), allergies to milk sugar, dermatologist criticizes both bread and milk, and old (1926) court decision on raw milk. Chapter 41: "Yogurt" (p. 156+). "Yogurt is probably the most popular of all so-called health foods". In the 19th century, Metchnikoff was the first to investigate it scientifically. Chapter 96: "Sesame seed–An ancient and nutritious food" (p. 342-44; Tahini milk makes a good milk substitute). Address: Emmaus, Pennsylvania.

2442. Shufu-no-tomo-sha. 1961. Ryôri hyakka [Encyclopedia of Japanese cookery]. Tokyo: K.K. Shufu-no-tomo-sha. 768 + 20 p. Illust. Index. 21 cm. [Jap] Address: Tokyo.

2443. Wong, Ella-Mei. 1961. Chinese cookery. London: Angus and Robertson. [xi] + 100 p. Illust. Index. 23 cm. *
• ***Summary:*** *Foo Jook* [dried yuba sticks] and "red bean curd" are mentioned. Address: [Australia].

2444. Watanabe, Tokuji. 1961? Studies on tofu production from U.S. soybeans (2). Food Research Institute, Japan. 11 p. Undated. Typed, without signature. [2 ref. Eng]
• ***Summary:*** Contents: 1. Experiments in the laboratory: Weight per 1,000 seeds, color of seed coats and color of hilum of U.S. and Japanese soybeans, speed of water absorption in U.S. and Japanese soybeans, protein and fat contents of U.S. and Japanese soybeans, water-solubility of protein in U.S. and Japanese soybeans, natures of soy milk obtained from U.S. and Japanese soybeans. 2. Production test of tofu: Production method of tofu, comparison between the tofu made from U.S. soybeans and that from the Japanese, choice of U.S. soybean variety suitable for tofu production. 3. Improvement of production methods.

Tables show: (1) Properties of U.S. and Japanese soybeans (Japanese: Nagano, Hokkaido, Miyagi, Aomori, Kumamoto. U.S.: Harosoy, Hawkeye, Adams, Chippewa, Clark, Lincoln, Blackhawk, Acme, Ottawa Mandarin, Norchief, Comet, Lee, Jackson, Dorman, Dortchsoy, Ogden, Wabash, Monroe, S-100, Capital, Flambeau, Shelby, Ford, Hardome, Renville, Lindarin, Perry, Grant; For each variety is given: Weight per 1,000 seeds, color of seed coat, color of hilum, remarks). (2) Nitrogen content and nitrogen outflow of U.S. and Japanese soybeans. (3-1) Influence of the quantity of water added on the nitrogen solubility of soybeans. (3-2) Influences of the length and temperature of heating on the nitrogen solubility of soybeans. (4) Comparison between U.S. and Japanese soybeans in tofu production (for each variety is given: Percentage of protein and fat in the soybeans. Protein in laboratory soy milk {%}. Protein in factory soy milk {%}. Weight of tofu {kg from 1.8 kg of soybeans}. Yield rate of tofu {% of solids in soybeans appearing in tofu, dry basis}. Yield rate of protein {% of protein in soybeans appearing in tofu}. Protein in tofu {%}. Height of tofu {cm}. Moisture of tofu {%}. Hardness of tofu {using penetrometer; large value = soft tofu}. Properties of tofu–Coagulation, texture, color {3 = excellent, 2 = good, 1 = fair}). (5) relationship of water-soluble protein + fat in soybeans to weight, protein, and fat contents of tofu. (6) Volume and composition of okara. (7-1) Properties of tofu at various doses of coagulant and various tempos [speeds] of coagulation.

Note: A Japanese version of all tables is given on unnumbered pages at the end. Address: Food Research Inst., Japan.

2445. Chen, Philip S.; Chen, Helen D. 1962. Soybeans for health, longevity, and economy. 2nd ed. South Lancaster, Massachusetts: The Chemical Elements. xii + 242 p. Jan.

© Copyright Soyinfo Center 2013

Illust. Index. 21 cm. 1st ed. 1956. [24 ref]
• ***Summary:*** This book is identical to the original 1956 edition, third printing (the dedication is to William J. Morse and Harry W. Miller), except that: (1) Table 1, titled "Soybean production in the United States" (p. 2) gives statistics to 1960, instead of 1958. (2) Appendix B (p. 224-36) has been updated based on the 1961 *Soybean Blue Book.* (3) The dust jacket has been updated. On the rear dust jacket is a portrait photo of Dr. Philip Chen and a biographical sketch. (4) The paper is slightly thicker.

Note: In 1962 Chen wrote *A New Look at God,* published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

2446. *New York Times.* 1962. A choice of new books for the younger reader's library. Feb. 25. p. BR19.
• ***Summary:*** Contains a book review of *Taro and the Tofu,* by Masako Matsuno [a woman]. Elizabeth Hodges wrote the review for children ages 6 to 8. It begins: "One cold night in Japan when the peddler from whom Taro's mother always bought the tofu (bean curd) for the family supper did not appear, Taro went to the old man's shop." A large illustration from the book shows Taro.

2447. **Product Name:** [Tofu (Wet or Dried)].
Manufacturer's Name: Batford Foods Co.
Manufacturer's Address: Lot No. 1633, D.D. 449, Tsun Wan, N.T. Kowloon, Hong Kong.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

2448. **Product Name:** [Tofu (Wet or Dried)].
Manufacturer's Name: Chan Moon Kee.
Manufacturer's Address: 10 Chung Ching St. (Sai Ying Pun), Hong Kong.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

Note: Dried tofu is probably doufu-gan, which we call "pressed tofu."

2449. **Product Name:** Tofu.
Manufacturer's Name: Eng Hor Hin Co.
Manufacturer's Address: 96-A Sungei Road, Singapore 8, Singapore.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 37. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

2450. **Product Name:** [Tofu (Wet or Dried)].
Manufacturer's Name: Foo Lung Ching Kee Co.
Manufacturer's Address: 52 Queen's Road, West, Hong Kong.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

Note: Dried tofu is probably doufu-gan, which we call "pressed tofu."

2451. *Foreign Agriculture.* 1962. Soybean markets in Southeast Asia. 26(2):17. Feb.
• ***Summary:*** Four areas in Southeastern Asia–Hong Kong, Malaya, Singapore, and possibly Sarawak–are growing commercial markets for U.S. soybeans and soybean oil. Communist China has long been the main source of soybeans for Southeast Asia. The use of U.S. soybeans in the four areas is limited largely to those foods for which splits and broken beans are suitable–namely, soybean curd, soybean sauce, and soybean cheese.

2452. Fukamachi, Chiharu; Suruga, Sachiko. 1962. [Qualification of coagulating reagent for tofu manufacture. I. Method of qualification of coagulating reagent (Abstract)]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 16. p. 112. Feb. [1 ref. Jap; eng]
• ***Summary:*** Calcium sulfate is the main coagulant used in making tofu from soybean milk, but calcium chloride and magnesium chloride are also used, alone or with calcium sulfate.

Besides these salts, some other chemicals are also available for this purpose, but there are technical difficulties in applying them to the coagulation of soybean milk.

This paper reports on the establishment of a standard method for evaluating the suitability of soybean milk coagulants on a laboratory scale. By this method, calcium gluconate, as an examined, and was found to be unsuitable as a coagulant.

Reprinted from *Nosan Kako Gijutsu Kenkyu Kaishi* (*J. for the Utilization of Agricultural Products*) 8(3):129+ (1961). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

2453. Fukamachi, Chiharu; Suruga, Sachiko. 1962. [Qualification of coagulating reagent for tofu manufacture. II. Comparison of commercial coagulating reagents (Abstract)]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 16. p. 113. Feb. [1 ref. Jap; eng]
• ***Summary:*** In a previous paper, it was shown that coagulants with a fine crystalline structure were not suitable for making tofu, because they coagulated soymilk so quickly

© Copyright Soyinfo Center 2013

that control of the process was very difficult.

In this report, the pH of eleven tofu coagulants were observed in water. Coagulants with a low pH (such as 5.1) in suspension had limited latitude in the amount used and also gave low yields of tofu. It was concluded that such chemicals were not for making tofu.

Note: Dried tofu is probably doufu-gan, which we call "pressed tofu."

2459. Matsuno, Masako. 1962. Taro and the tôfu. Cleveland, Ohio, and New York, NY: The World Publishing Company. 32 p. Feb. Illust. by Kazue Mizumura. 26 cm.
• ***Summary:*** This story, set in Japan, is for children aged 6 to 8. Taro goes to market to buy tofu from a store. He discovers that he has been given too much change. A little voice inside his head tempts him not to return it, to buy some more candy; No one will ever know. But he resists temptation and does what is right, even though it is cold and windy outside, and promptly returns the extra money to the peddler. "He was so happy he wanted to run all the way home."

The dedication page states: "For my first son." Each right-hand page contains a large color illustration, including: (1) The old tofu peddler lifting a cake of tofu out of his box, about to put it into Taro's pail. (2) The tofu seller blowing his trumpet / horn as he carries his tofu in boxes using a shoulder pole. (3) The tofu man deep-frying his tofu.

2460. **Product Name:** [Tofu (Wet or Dried)].
Manufacturer's Name: Mee Chun Canning Co.
Manufacturer's Address: 128 Queen's Road, Central, 2nd fl., Hong Kong.
Date of Introduction: 1962. February.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

Note: Dried tofu is probably doufu-gan, which we call "pressed tofu."

2461. **Product Name:** Tofu.
Manufacturer's Name: Min Shing Chop.
Manufacturer's Address: 68 Wiltie Road, Singapore 9, Singapore.
Date of Introduction: 1962. February.

Note: Dried tofu is probably doufu-gan, which we call "pressed tofu."

2465. Spilsbury, Calvin C. 1962. Southeast Asia as a market for U.S. soybeans and vegetable oils. *USDA Foreign Agricultural Service.* FAS-M-126. 41 p. Feb. Summarized in Soybean Digest, March 1962, p. 26.
• ***Summary:*** Gives an excellent, detailed discussion, with many statistics, of the soybean markets in Hong Kong, Singapore, Malaysia, Indonesia, British Borneo (Sarawak, Brunei, and North Borneo [Sabah]), and Burma.

"The 350,000 Chinese of British Borneo are large consumers of soybean food products and fats and oils, but this market is small. Domestic production of soybeans in North Borneo is more than sufficient to supply domestic demand for that country, and some exports are made each year. Imports of soybeans into Sarawak and Brunei, though small, have been growing each year. In 1960 Sarawak's imports were 608 long tons, compared with 526 tons in 1959 and 403 tons in 1958. Thailand, Mainland China, Vietnam, and Cambodia are the main suppliers, as U.S. soybeans have been scarce in this market."

Burma: "The domestic production of soybeans in Burma has been small, but output is large enough to provide demands of the Burmese people in the Shan State, population approximately 500,000, who use soybeans for food." The peanut is the main oilseed crushed in Burma. The majority of peanut crushing mills are located in Rangoon, Insein, Mandalay, and Myingyan.

Table 6 (p. 29) shows imports (in piculs; 1 picul = 133 lb) of soybeans to Sarawak, by country of origin, annually 1958-1960. The main source countries are Thailand, Mainland China, and Indochina. Imports increased from 6,853 piculs in 1958 to 10,343 piculs in 1960.

Appendix: Hong Kong: Importers of U.S. soybeans, manufacturers of wet and dried bean curd for export to U.S., soybean sauce manufacturers. Singapore: Importers of U.S. soybeans, importers agents providing services to soybean importers, manufacturers of soybean curd, largest soybean sauce manufacturers, soybean milk companies. Federation of Malaya: Importers of soybeans, soybean sauce factories (Penang, Province Wellesley, Kedah, Perak, Selangor, Malacca, Negri Sembilan). Sarawak: Soybean importers and dealers (all of Kuching). Burma: Fats and oils importers (Rangoon), vegetable oil mills (Rangoon).

Note 1. Sarawak became part of Malaysia in 1963. Note 2. This is the earliest document seen (May 2010) concerning soybeans in Brunei. This document contains the earliest date seen for soybeans in Brunei (Feb. 1962). Address: Fats and Oils Div.

2466. Lee, Elinor. 1962. Goodwill grows in climate of culture: Food promotes friendship. *Washington Post.* March 22. p. C7, 20.
• ***Summary:*** In Washington, DC, the "Cultural Evenings in Asian Embassies" is a flavor venture, sponsored by the Buddhist Center of the U.S.A. to help promote international goodwill and understanding. The dinner menu at the Royal Thai Embassy on Saturday night will include "Kung Lon (Boiled coconut cream with shrimp and soya bean sauce)." The recipe is given. A second recipe, Mee Krob, which contains "3 tablespoons finely cut bean curd" and "soya bean sauce" to season, is also given. A third recipe, Yam Yai, includes ½ cup bean curd (cut fine). "Thailand's top recipes aren't in any cookbooks."

2467. *New York Times.* 1962. Japanese foods are available here. March 29. p. 26.
• ***Summary:*** Gives five Japanese recipes–most calling for monosodium glutamate. The recipe for "Bean soup" [miso soup] calls for "three tablespoons soy bean paste" [miso] and an unspecified number of "cubes of tofu (bean curd)."

2468. Hayashi, Shizuka. 1962. More U.S. soybeans in tofu. *Soybean Digest.* April. p. 25.
• ***Summary:*** There are more than 54,000 tofu makers throughout Japan. They use approximately 300,000 tons of soybeans annually. Address: Japanese-American Soybean Inst.

2469. Photographs of William Brandemuhl studying soyfoods in the USA and Japan. 1962. Japan.
• ***Summary:*** William Brandemuhl was a pioneer in studying and writing about soyfoods in Japan after World War II. According to Tomoko Brandemuhl these black-and-white photographs (each 4½ by 6½ inches) were taken by a Japanese newspaper or magazine photographer. All but the

first two were taken in Japan in 1963.

(a) The first time he saw soybeans, at the University of Wisconsin (April 1962). (b-d) Studying how tamari is made in Japan. (e) Checking and smelling koji made in small, traditional wooden koji trays. (f) Tasting shoyu or tamari. (g) Examining koji. (h) Cutting fresh tofu. (i) Unwrapping the cloth from freshly pressed tofu. (j) For transportation in Kyoto he used this scooter to visit various places that made or did research on soyfoods.

These photos were sent to Soyinfo Center in Aug. 2012 by Tomoko Brandemuhl (Stratford, Connecticut), his wife.

2470. *Christian Science Monitor.* 1962. The new and the old. May 10. p. B5.
• ***Summary:*** Contains a book review of *Taro and the Tôfu,* by Masako Matsuno. The review, by "M.S." begins: "The agonizing decision is, shall Taro return the extra change the old tôfu (bean curd) seller mistakenly gave him, or shall he keep it and buy some candy?"

2471. *Chicago Daily Tribune.* 1962. Gay fantasy for youngest readers. May 13. p. F4.
• ***Summary:*** Contains a book review of *Taro and the Tôfu,* by Masako Matsuno. The review, by "P.G." begins: "Taro is a little Japanese boy and tofu is a small white cake (bean curd) and an important Japanese food." "The child's first encounter with temptation is appealingly described." An illustration shows the cover of the book (Published by World, $3).

2472. Lee, Elinor. 1962. Japanese cooks are true artists. *New York Times.* May 20. p. L24.
• ***Summary:*** Describes how to make Sukiyaki over a hibachi (charcoal brazier). The recipe calls for "2 pounds of tenderloin beef cut into thin slices... and 12 pieces of tofu (soybean curd) cut into small cubes." Address: Staff reporter.

2473. Claiborne, Craig. 1962. Food news: Pizza vs. poi in Honolulu. *New York Times.* May 28. p. 32.
• ***Summary:*** East meets West on supermarket shelves in Hawaii. "More than half the population of the island of Oahu is of Japanese or Chinese origin..." The "endless kinds of exotic foods in plastic containers" include "tofu or bean curd, [mung] bean sprouts and poi, the poi made of arrow root..."

2474. Claiborne, Craig. 1962. Food news from Tokyo: Cuisines of virtually every country offered at all prices in restaurants. *New York Times.* May 30. p. 7.
• ***Summary:*** The article begins: "There is probably no city in the world today with a more fascinating and varied cuisine than Tokyo." The Imperial, perhaps the city's most famous hotel, offers a wide selection, including sukiyaki.

In Tokyo, the typical Japanese restaurant is small and does not offer a menu. It will often specialize on one or two full-course "dinners built around one particular food. That food may be game, for example, or raw fish, or tofu, which is soy bean curd, or beef."

Tofu is typically found in sukiyaki. For "batayaki, slices of matsuzaka beef, spectacularly marbled," are served with a dipping sauce, which includes "grated long radish [*daikon*] in shoyu (soy sauce), mustard and seven spices, including Japanese pepper, ground poppy seed, cayenne pepper, sesame seeds, seaweed, dried orange peel and hemp seed."

In recent years, "beer seems to have replaced sake as Japan's national drink." Address: Special to the New York Times.

dal. Soybean flour. Soybean milk. Soybean cake [for livestock feed]. Fodder and green manure. Industrial uses of soybean (Lecithin, derivatives).

Soybean acreage in India is almost negligible. "According to *ad hoc* estimates, only about 43,000 acres are planted to soybean in India, mainly in the hills of Uttar Pradesh, with an annual production of about 5,900 tons." Known there as *bhat, bharat,* or *botang,* it is commonly used as *muri* (roasted beans; just as roasted and salted gram and peas are eaten elsewhere in the country), or the beans are ground to make *sattu* for mixing with barley or wheat *sattu.* Occasionally *chapatees* [chapatis] are also made from a mixture of soybean flour with maize flour. However, due to its high oil content, soybean flour can keep well only for short periods, especially so in warmer locations."

In China and Japan, soybeans are made into soya milk and tofu (which corresponds to *panir*), "a popular milk product prepared at home and cooked into vegetable curries in India."

Note: This is the earliest document seen (April 2013) that contains the word "panir" (or "paneer") used in connection with tofu or soy. Panir is a soft, fresh dairy cheese, widely consumed in India. It is more expensive than tofu. Address: Indian Agricultural Research Inst., New Delhi, India.

2480. Olson, Harvey Stuart. 1962. Olson's Orient guide [1st ed.]. Philadelphia, Pennsylvania and New York: J.B. Lippincott Co. 1008 p. Illust. (by Cy Ferring). Maps. Index. 20 cm. 1st ed., 1962 [1963].

• ***Summary:*** In Chapter 5, "On dining out in the Orient," we read (p. 229): In Japan, much loved and widely consumed items include "bean sprouts and pastes [miso] and sauces made from soy beans." The Japanese, like many "foreign visitors are fond of sukiyaki made of thin beef strips simmered in a tasty soy sauce garnished with fresh vegetables, served with a raw egg, and accompanied by rice. They enjoy tempura, too,..." The dip is made of finely grated radish [daikon] "and spicy soy sauce."

The section on "Chinese cuisine" states (p. 236): "Cantonese which is the blandest, most subtle, and least greasy of the varieties of Chinese cooking..." Features "bean curd and minced pork."

The section titled "Japanese specialties" (p. 245+) starts with Sukiyaki (One "bowl contains small pieces of lotus root, scallions, bamboo shoots, bean curds, mushrooms, and other greens," p. 246). Also (p. 249) "Batayaki is the first cousin to sukiyaki," but with the difference that "batayaki is prepared with a sauce less pungent than that used for sukiyaki." This sauce has "a soybean base, but mixed liberally with butter" [*bata*].

The entry for "Soy sauce" (p. 252) taken from the Random House *American College Dictionary* "defines soy sauce as 'a salty fermented sauce much used on fish and other dishes in the Orient, prepared from soy beans.' I cannot emphasize too strongly how important a part this sauce plays in the Japanese cuisine. It is not only used in connection with fish but as a sauce for sukiyaki. It is also used generously in preparing chicken and steak and is utilized as a garnish as well as an ingredient.

"As a matter of fact I can think of no place where this tasty bit is not likely to appear. I. for one, like soy sauce." However. if you wish, you can ask your waiter to omit it.

The section on Thailand (p. 278-79) notes: "*Haw Mok,* a flaming hot Thai specialty, is made by pounding dry chili peppers, shrimp paste, lemon grass, onions, garlic and salt, and blending them with steamed coconut milk and soy sauce decorated with egg and slices of raw fish. It is served in a large banana leaf."

The section on night clubs in Osaka, Japan says of Yen Kyo (p. 312). "Another quality Chinese restaurant... Taste the spring rolls, the chicken in papers, and the vegetable bean curd dishes."

In Chapter 12, "Japan," the section on Tokyo states (p. 692): "One can eat squid, lotus roots, roasted sparrows (head, claws and all), raw lobster, embryonic eggs on a stick, cuttlefish painted with soy sauce, blowfish, mud eel, mock turtle, fermented bean curd, bamboo shoots, and quail's eggs,..."

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Mr. Haruhisa Yamamoto. Kate Bulkeley. 1988. Denver Business Journal. July 11. "Soy Products New Favor Spices Denver Tofu." Denver Tofu Inc., now owned by president Haru Yamamoto, is 63 years old. He bought the company in 1973, at which time he made about 150 one-pound pieces of tofu a day. Now he makes 2,000 to 3,000 pieces a day.

Talk with Mr. Yamamoto. 1988. Aug. 25. The company was founded in 1925 by a Mr. Sakurai, and was then located in downtown Denver. In about 1960 Mr. Kiichi Yoshida bought the company, and in 1973 he sold it to Mr. Yamamoto. At that time it was located on Larimer St. From the beginning only one product had been produced, a fairly firm tofu coagulated with calcium sulfate. Within 3 months, Mr. Yamamoto moved the plant to 6150 N. Federal St., a much bigger location. In July 1978 Wm. Shurtleff and Wataru Takai visited his plant. In April 1988 the company moved to 3825 Blake St., doubling its production space. It now makes 9 different tofu products plus Soy Drink.

Form filled out by Haruhisa Yamamoto. 1998. July 14. Denver Tofu Co., 3825 Blake St., Denver, Colorado 80205. Phone: 303-298-8638 (298-TOFU). Year and month the company started making and selling tofu: August 1973 [sic, 1925].

2483. Anson, M.L. 1962. Oilseed proteins in foods. *Archives of Biochemistry and Biophysics.* Supplement 1. p. 68-77. [23 ref]
• ***Summary:*** "A major occupation of man is to feed plant materials to animals and to use the animals as a source of animal protein foods. It is now possible, by applications of modern biochemistry and technology, to feed oilseed materials into a factory and to come out with protein foods similar to animal protein foods in nutritional value, taste and texture.

"Protein technologies were developed in the Orient thousands of years ago to produce products such as soybean curd and fermentation foods which still play a big role in the protein economies of hundreds of millions of people. The modern oilseed meals now produced at very low price give promise of being very useful in the fight against protein malnutrition in poor countries."

"During World War II, Henry Ford, who had the soybean religion, made large amounts of good 'ice cream' entirely from soy protein and fat, until he was stopped. The Chinese have a variety of cheese made from soybeans."

In the section titled "Ancient foods based on oilseeds," the author discusses soy milk and bean curd (tofu) in detail. He notes that traditional fermented foods serve primarily as a source of flavor, and perhaps of vitamins. "In Japan today scores of thousands of factories, big and little, make the traditional soy foods. These factories use up not only local soybeans but almost 10% of the huge American crop. The Japanese eat much more soy protein than meat protein." Address: 100 Eaton Square, London, S.W.1, England.

2484. Cummins, J.S. ed. 1962. The travels and controversies of Friar Domingo Navarrete 1618-1686. *Works Issued by the Hakluyt Society* (*Cambridge, England*) No. 118. cxx + 475 p. Series 2. 2 vols. See Vol. 2, p. 195-96. Index. 28 cm. [273* ref]
• ***Summary:*** This work contains the "earliest accurate description by a European of food use of soybeans" (T. Hymowitz). The author, Domingo Fernández de Navarrete, is referred to as "Navarette" throughout this book. For details, see Navarrete's 1665 journal entry. Cummins states (p. cxix): "This edition is not a translation of the *Tratados,* for it is limited to the sixth book, namely the autobiographical section of the *Tratados.* Yet the section on tofu is almost identical (except in capitalization, italics, and punctuation) to the first English translation published in 1704 by Churchill and Churchill. The title page notes that this work was "Edited from manuscript and printed sources by J.S. Cummins."

At the very end of Chapter XIII, titled "My journey to Che Kiang and stay there till the persecution," the author describes tofu in China. Note that Chekiang is today the name of a coastal province in eastern China, bounded on

© Copyright Soyinfo Center 2013

the north by Kiangsu province, on the south by Fukien [Fujian] province, and on the east by the East China Sea. Writing in the year 1665, Navarrete says (p. 195-96): "16. Before I proceed to the next Chapter, because I forgot it in the first Book, I will here briefly mention the most usual, common and cheap sort of Food all China abounds in, and which all Men in that Empire eat, from the Emperor to the meanest Chinese; the Emperor and great Men as a dainty, the common sort as necessary sustenance. It is call'd Teu Fu, that is, Paste of Kidney Beans.* I did not see how they made it. They drew the Milk out of the Kidney-Beans, and turning it, make great Cakes of it like Cheeses, as big as a large Sive [Sieve], and five or six fingers thick. All the Mass is as white as the very Snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dress'd with Herbs, Fish, and other things. Alone it is insipid, but very good dress'd as I say and excellent fry'd in Butter. They have it also dry'd and smok'd, and mix'd with Caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in China, and very hard to conceive there should be such abundance of Kidney-Beans. That Chinese who has Teu Fu, Herbs and Rice, needs no other Sustenance to work, and I think there is no body but has it, because they may have a Pound (which is above twenty Ounces) of it any where for a Half-penny. It is a great help in case of want, and is easy for carriage. It has one good Quality, which is, that it causes the different Airs and Seasons, which in that vast Region vary much, to make no alteration in the Body, and therefore they that travel from one Province to another make use of it. Teu Fu is one of the most remarkable things in China, there are many will leave pullets for it. If I am not deceiv'd, the Chinese of Manila [Philippines] make it, but no European eats it, which is perhaps because they have not tasted it, no more than they do Fritters fry'd in oil of *Ajonjoli* (a very small seed they have in Spain and India, which we have not**) which the Chinese make in that City, and is an extraordinary Dainty, of which Europeans do deprive themselves."

Footnotes: "*To fu, or beancurd, is made of the soya beans which were familiar to the servicemen in the East during the Second World War; few of them would 'leave Pullets for it (see Couling 46). **Ajonjoli, oil extracted from sesame (*Sesamum indicum*), used as an olive-oil substitute, a hair-dressing, and for medicinal purposes."

Near the end of Chapter 14, titled "My journey to the Imperial City, and residence there," Navarrete writes (p. 242-43, concerning the period 1666-1669): "19... My two Companions, three Servants and I continued in the Imperial City from the 28th of June till the 13th of September. During this time, bating Fish, Flesh and Wine, the Emperor allow'd all our Expence, as well as theirs; so that we had Rice, Wood, Herbs, Oil, and what they call Teu Fu [tofu] in abundance brought in to us; so that when we went away the Fathers of the Society that remain'd behind were stock'd for a great while with Rice, Wood, Oil and Vinegar." Note: The tofu, being a perishable food, would have been consumed within a day or two.

This first part of this book (p. xix–cxx) gives a detailed biography of Fernández Navarette. It begins: Few men have had more literate enemies and as many inventive biographers as Domingo Fernández de Navarrete (1618-86)..." The best of his life was spent working as a missionary in China, where he was a determined opponent of the evangelical methods of the 'Jesuit Mandarins.' On his return to Europe he wrote an account of China, the *Tratados... de la monarchia de China.* This is an enthusiastic compendium of contemporary knowledge of the Empire, which Navarrete constantly exalts as a Utopian state fit to be imitated by Europe... the author, wherever he went, had an observant eye, an open ear, and an ever ready pen... This edition of Navarette's travels is based on all of [his] writings, but principally upon the sixth book of the *Tratados"* an autobiographical account of his travels. Navarrete was born in 1618 in Castrogeriz, Spain (he was Castilian), and he died in 1686 on the island of Santo Domingo, where he was Archbishop and Primate of the Spanish Indies. In 1635 he became a Dominican friar in Peñafiel, Spain. In July 1645, at the age of 27, he volunteered for the Philippine mission. En route he spent 2 years in Mexico, from Aug. 1646. Landing in the Philippines on 23 June 1648, he did mission work among the Filipino Indians, then taught at the University, where his brilliant, curious mind was recognized. He then joined the Dominicans in China, arriving in Macao in 1658. "From the very beginning he seems to have fallen in love with China and its people," among who he now remained working until the outbreak of the persecution of 1664. He learned the Chinese language well–and loved it. He became very critical and accusing of the Jesuit missionaries in China–which later embroiled him in controversies with them. He reached Canton in March 1666, and spent the next 4 years under house arrest until Dec. 1669. Subsequently he travelled in many countries and underwent frightening adventures, finally arriving back in Spain in Dec. 1674. There, in Madrid, he wrote extensively–starting with his *Tradutos* [*sic, Tratados*] *historicos, politicos, ethicos y religiosos de la monarchia de China* (518 pages, divided into 7 Treatises) in the first half of 1675. In 1677 he was nominated Archbishop of Santo Domingo, where he arrived on 20 Sept. 1677. He died there of an illness in Feb. 1686. Address: King's College, Univ. of London.

2487. Hayashi, Shizuka. 1962. Problems involved in increasing world-wide use of soybean products as foods in Japan. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 200-06.

• ***Summary:*** Contents: Price. Quality. Margarine and shortening. Mayonnaise. Miso, shoyu, tofu. Soybean meal. Soy flour. Soy milk. Frozen tofu. Food sources of Japan.

The 400,000 tons of soybeans produced in Japan are used for foods. From approximately 1 million tons of imported soybeans, Japan produces 150,000 tons of oil and 700,000 tons of meal. "Japanese oil consumption is the poorest [i.e. lowest = best] among the world nations. We need to consume oil at more than 5 times the present quantity to reach the level of the western countries." In 1952 Japanese consumption of edible oils was 7.52 gm per person per day, increasing to 11.52 gm in 1960. Soybean oil supplies about 30% of Japan's total oil supply. The main obstacles to greater consumption are price and quality (due to flavor reversion). The leading oil is rapeseed oil. The main oils used in margarine and shortening are fish oil (35.8% of total), beef tallow (25.4%), whale oil (10.0%), and coconut oil (8.0%).

New developments with traditional Japanese soy foods include: Dried, powdered miso in instant form is now available. Soybean meal is now the main ingredient in shoyu, rather than whole soybeans. A few soy milk plants have been erected and bottled soy milk is now sold in the market in limited areas. A certain culture is used to eliminate the beany flavor. Today, soybeans and soybean products provide the average Japanese with 10.6 gm/day of protein (16% of total protein consumption of 67.7 gm), and 7.6 gm/day of fat (28% of total fat consumption of 26.7 gm). During the period 1934-38, average Japanese protein consumption was 54.9 gm per person per day and fat consumption was 13.2 gm (less than half what it is today). Address: Managing Director,

2488. Hilbert, G.E. 1962. Foreign research program of U.S. Department of Agriculture on soybean protein products under Public Law 480. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 93-98.

• ***Summary:*** "For many years, the Department was financing with dollars a farm research program abroad."

"A considerable expansion of our foreign research program was effected a few years ago under Public Law 480. This program of research is financed with foreign currency accruing to the United States from the sale of surplus agricultural commodities, and, in a sense, trades surpluses for research results. Research in the field of economics, forestry, farm, marketing and utilization is carried out under this program. Projects are selected for financing which are of direct interest to the United States and also of interest to the foreign country.

"At the present time, 195 grants or research agreements have been executed in 20 countries in Europe, Asia, and Latin America. Funds are available to initiate programs in an additional 6 countries. Proposals from most of these countries are being processed at the present time. The annual cost of the grants already executed amounts to about the equivalent of $2-2½ million in foreign currency annually. Substantial funds are available for the expansion of this program.

"The Public Law 480 foreign research program is being administered by the Foreign Research and Technical Programs Division, Agricultural Research Service, U.S. Department of Agriculture, in Washington. A regional office has been established in Rome, Italy, to negotiate the costs of grants and administratively supervise the program in Europe and the Near East. A regional office has been established in New Delhi, India, also, to carry out the same functions in the Far East.

"The technical phases of the program–that is, the approval of projects on which grants are executed and the review of progress reports–are handled by the various research divisions in the Department. For example, all projects on the utilization of soybeans fall under our Northern Utilization Research and Development Division. All those dealing with the nutritional aspects of soybeans as a food are under the jurisdiction of the Institute of Home Economics.

"Ideas for new research projects may come from within the Department, from research organizations abroad, from our Research and Marketing Advisory Committees, from national commodity organizations, or from the processing industry. We are indebted to The Soybean Council of America for the interest it has taken in developing our research program on soybeans abroad. The Council has stimulated many foreign research groups to submit projects on improving uses for soybeans. It has brought to our attention, also, important problems on soybeans that need attention.

"In developing a program on soybeans we have been faced with the problem that most countries in which we have funds have had practically no knowledge or experience on the uses of soybeans, and have conducted very little research on their utilization. The opportunity has been very limited for financing research on the utilization of soybeans in laboratories with background experience on its products.

"Fortunately, the activities of UNICEF and FAO, on increasing the protein level of the diet in the developing areas of the world, and the powerful market development program of The Soybean Council of America, have stimulated great interest in many countries on the usage of soy products in the diet. These efforts have facilitated the development of our research program on soy products.

"As the primary emphasis of this conference is on soybean products for protein in human foods, the research work we are financing on soybean oil and fatty acids will not be discussed here. My talk will cover only those projects dealing with soybean proteinaceous foods, and with minor components in soy flour or soybean products which may affect their food value. A dozen or more projects of this kind, in half a dozen countries, are underway or will be shortly.

"At the National Institute of Nutrition in Rome, Italy, we have executed a grant with Professor Visco to finance research on the use of soybean protein products as supplements to wheat flour production of pasta, such as spaghetti and macaroni. The southern part of Italy depends to a large extent upon cereal grains as the main staple of the diet. Raising the protein level and quality of the diet in Italy could be done readily by increasing the protein content of pasta with soy protein products. Professor Visco has set as his objective an increase of 10 percent in the soy protein content of pasta. He believes this amount of soy protein in pasta would provide all the essential amino acids necessary for good nutrition. The Institute has produced pasta containing 10 percent by weight of soy protein. Pasta containing the type of commercial soy protein used was unaltered in cooking quality, but had a slight gray cast and slight change in flavor. The effect of lowering the content of soy protein on color and flavor of pasta is now being investigated. The effect of other sources of commercial soy protein on color and flavor will be studied, also. Professor Visco is interested in following up these studies by conducting nutritional investigations on groups of school children, using pasta fortified with soy protein.

"In Japan, we are negotiating a grant with the Food Research Institute, in Tokyo, for research on dried tofu. Fresh tofu is the most important soybean food in Japan. On

© Copyright Soyinfo Center 2013

a dry basis, its protein content ranges from 50 to 60 percent, and fat content from 21 to 50 percent. It has a bland flavor. It is eaten as such usually with soy sauce. Slabs are deep-fat fried [tofu], also, forming an envelope which is stuffed with hot rice. Fresh tofu is made in thousands of small plants, many of them family-run operations. Fresh tofu has a relatively short storage life comparable to that of fresh milk. Dried tofu, which is a spongelike product, has come into production in recent years. It has a shelf life of 6 months or longer. However, the product is inferior to the fresh product in overall eating quality.

"Under the grant to be carried out at the Food Research Institute there will be studied the varietal effect of soybeans, and variation of processing conditions on the physical characteristics and flavor of dried tofu. Fresh and dried tofu have promise in supplementing the diet in the protein deficient areas of the world.

Miso is another important soybean food used in Japan. It is produced by the fermentation of soybeans with *Aspergillus oryzae*. The most popular use of miso in Japan is in soup. Miso soup plays an important part in the standard Japanese breakfast. Because of uneven uptake of water, not all varieties of soybeans can be used, or only with difficulty, in the traditional Japanese process for making miso. Most Japanese and Chinese varieties of soybeans are better than most American varieties. In preliminary experiments conducted at the Northern Utilization Research and Development Division, in cooperation with two Japanese miso experts, it was found that dehulled soybeans or soybean grits absorbed water uniformly and yielded excellent miso. Now we are interested in following up these studies on a pilot-plant scale using different varieties of soybeans, and carrying out the fermentation under various Japanese environmental conditions. A grant on this project is being negotiated with the Central Miso Institute.

"As it is produced at the present time, miso has a relatively high salt content. Salt is used in the process to control the microbiological population. Dr. Gyorgy informs me that miso with a greatly reduced salt content might make it more suitable for feeding infants and young children. The development of procedures for producing miso containing very little salt might broaden its usefulness." Continued. Address: Director, Foreign Research and Technical Programs Div., USDA, Agricultural Research Service, Washington 25, DC.

2489. Hilbert, G.E. 1962. Foreign research program of U.S. Department of Agriculture on soybean protein products under Public Law 480 (Continued–Document part II). In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 93-98.

• ***Summary:*** Continued: A related project on miso is under consideration in Israel. This is based upon producing a miso-type product from controlled amounts of oil ranging from none to that originally present in the bean. Japanese miso contains all the oil present in the bean.

"We are negotiating one other project with the Food Research Institute in Tokyo. This project deals with the development of procedures for producing a yogurt-type product from soy milk, and obtaining information on the changes that occur in the soybean components in the transformation. It is planned to have cooperative investigations on the nutritional value of the fermented soy milk conducted at the Institute of Nutrition Research under Dr. Arimoto. Although soy milk has been used for many years in the Orient as an infant food, the expansion of its use has been very slow, particularly in the underdeveloped areas of the world. At times, difficulties have been encountered in its large-scale production due either to lack of technical knowledge or to inadequate control methods. Soy milk may cause diarrhea or flatulence in some infants.

"It is possible that fermented soy milk may have advantages over soy milk. One potential advantage of fermented soy milk is that the acid may destroy undesirable microorganisms that too often occur under unsanitary conditions in underdeveloped areas of the world. The widespread use of yogurt in the original primitive areas of Northeastern Europe and Northern Asia may well have resulted from the comparatively greater safeness and stability of this product over milk. At the present time, 45 percent of all milk consumed in the USSR is in the form of yogurt, attesting its popularity and the fact that a taste for it can be acquired. Nutritional studies conducted in Europe have shown that yogurt is a highly nutritious product, and that digestibility is increased during the fermentation. Likewise, the fermentation of soy milk may lead to an improvement in its food value. At any rate, our hopes are high on this project.

"Fermented proteinaceous foods are produced and used in Indonesia. Three types are tempeh, ontjom, and ragi. Tempeh was just discussed by Dr. Steinkraus. Onjom is made by fermentation of peanut press cake with molds, probably the genus *Neurospora.* It is a popular food in West Java. Ragi is produced by a yeast-mold fermentation of rice flour and sugar. Little is known about the micro organisms effecting this fermentation. Ragi is not served as food. It is used in recipes for the preparation of other foods.

"More information on the microorganisms used in the fermentations to produce ontjom and ragi, and on the composition of these products, is needed. Similar types of products might be produced using other raw materials abundant in other underdeveloped countries. Knowledge on the quality of protein produced would be helpful in determining the usefulness of such products in upgrading the protein level of the diet.

"A grant is being negotiated with the Bandung Institute of Technology, Indonesia, on the isolation of pure cultures

© Copyright Soyinfo Center 2013

of microorganisms present in tempeh, ontjom, ragi, and other Indonesian fermented foods produced by different manufacturers in different parts of Java, as well as other islands of Indonesia. Variations of species used by different manufacturers and in different regions for the same type of food fermentation will be investigated under this grant also.

"Studies will be made of the chemical changes and physical transformations brought about by the pure cultures. This will involve an investigation of the products produced in the fermentations including the proteins elaborated in all except the tempeh fermentation which already is receiving a great deal of attention. Pure cultures of the isolated microorganisms will be studied further and characterized at the Northern Utilization Research and Development Division.

"A number of grants on soybean protein have been executed or are being negotiated with research institutes in Israel.

"One of these deals with the effect of processing conditions on the yield and quality of isolated protein. This grant is being negotiated with Professor Zimmerman, of the Israel Institute of Technology. A great deal of work has been done in the United States and Japan on the commercialization of soy products. Large quantities are being produced, and some are being used for food purposes. However, there is need for more information on processing and drying of soy proteins, and the effect of processing conditions on flavor and nutritive value. This is the kind of research to be carried out in Dr. Zimmerman's laboratory. Also, he will study the flavor and acceptability of isolated soy protein when used in various Israeli-type foods. The effect of processing on the nutritive value of isolated soy protein will be determined by animal feeding tests.

"Although much information has been obtained by Dr. Allan K. Smith and others in the United States on the physical and chemical properties of soy protein, little is known about the complexes of protein in the bean or in the meal. There has been neglected the problem of protein complexes in the native state or formed in soybean oil meal processing operations. Whether protein-phytate complexes exist in the bean or result from interaction during processing operations is unknown. No information is available as to whether nucleoproteins, lipoproteins, and mucoproteins exist in soybeans. we have no knowledge, either, as to the interaction with protein of pigments, metal ions, and carbohydrates during processing of the beans.

"However, these changes affect the color, flavor, and (in view of the sensitivity of lysine) the nutritive value of the protein. This problem on the chemical, physical, and biochemical properties of protein complexes in soybeans will be studied under a grant which is being negotiated with Dr. Katchalski at the Weizmann Institute of Science. Dr. Katchalski's team has a worldwide reputation for the fine work they have done on the structure and modification of proteins. It is an ideal group to investigate this difficult and very important problem, the solution of which may lead to the enhancement of the food value of soy flour and soy protein.

"A grant is being negotiated with Dr. Guggenheim, at Hebrew University, on the development and biological evaluation of protein-rich foods from vegetable sources. Various mixtures of cereals with combinations of soya, sesame, sunflower, and chick peas will be studied. The nutritive value of different combinations of proteins will be assessed on growing rats. In vitro methods of measuring the essential amino acids will be made, also, and compared with levels of amino acids present in the blood of the portal veins of rats following a protein meal. Nutritional evaluation of the protein mixtures on humans will be carried out at a later stage.

"There has been a real need for the development of a rapid chemical method for measuring the biological value of proteins. Such a test would be very helpful in measuring change in nutritive value of proteins, including soy protein or flour, during processing and on storage. we are financing two studies on the development of such a method. One line of work is being carried out at the Israel Institute of Technology under Dr. Zimmerman, and the other at the University of Cambridge, England, under Dr. K.J. Carpenter.

"We are financing three basic investigations on certain minor components of soybeans which may affect the nutritive value of soy products. One of these is a comprehensive study of the simple sugar and oligosaccharides in soybeans. This work is being done at the University of Caen, France. Another investigation deals with a detailed study of the polysaccharides of soybeans, and is being carried out at the University of Edinburgh, Scotland, under Professor Hirst. The third deals with the isolation and characterization of saponins in soybeans and various processed soy products. This study also will include the exploration of methods for inactivating saponins in the processing of soybeans. This work is being done by Professor Bondi, Hebrew University, Israel.

"In this discussion I have summarized, briefly, the various lines of activity we are sponsoring abroad under Public Law 480 on soy protein and proteinaceous soy foods, and related investigations affecting the food value of soy products. It is hoped these investigations in countries where no work on soybeans has been done previously will stimulate additional research on soybeans, and lead to an increased recognition of the importance of soy products in the diet. It is believed these investigations will provide information that should be helpful in guiding efforts to upgrade the diet in protein deficient areas of the world." Address: Director, Foreign Research and Technical Programs Div., USDA, Agricultural Research Service, Washington 25, DC.

2490. Miyashita, Akira. 1962. Kôri-dôfu no rekishi [History

© Copyright Soyinfo Center 2013

of dried-frozen tofu]. Tokyo: Japanese National Frozen Tofu Association (Zenkoku Kori-dofu Kogyo Kyodo Kumiai Rengokai). 591 p. Illust. No index. 28 cm. [Jap]
• ***Summary:*** This is the most comprehensive work ever published on the subject. Unfortunately there are few references to sources. However on page 48 is a list of early documents (mostly scrolls and books) in which Kori-dofu is mentioned, as follows: 1624-1643 *Ryôri Monogatari,* and *Kebukiso.* 1648-1651 *Teitoku Bunshu.* 1688-1703 *Wakan Shojin Ryôri-sho,* and *Honcho Shokukan.* 1711-1715 *Toryu Setsuryo Ryôri Taizen.* 1716-1735 *Ryôri Komoku Chomi-sho.* 1748-1750 *Ryôri Sankai-kyo.* 1772-1780 *Shinsen Ryôri Kondate Burui-shu.* 1781-1788 *Tofu Hyakuchi,* and *Tofu Hyakuchin Zokuhen.* 1801 *Ryôri Shinan Taizen,* and *Honso Komoku Keimo.* 1804-1817 *Nihon Ryôri-ho Taizen.* 1818-1829 *Shojin Ryôri-tsu, Ryôri-tsu,* and *Shojin Ryôri Kondate-shu.* 1830-1843 *Toyo Kondate Ryôri Hayashikumi,* and *Ryôri Dokukeiko.* 1848-1853 Morisada Manko (essays).

Concerning the origin of Shimi-dofu (p. 38-39), there is a legend that Takeda Shingen taught how to make Shimi-dofu as well as miso. The areas where Takeda Shingen lived and where Shimi-dofu is sold are about the same, so it seems likely that there is some connection. In the early Edo period (p. 41), when a money economy became more common among the people, Shimi-dofu became a side business for many farm households in the area. In 1638 in Kefukiso? (Haikai-shu), there was a mention of *Matsumaekoku Kan-dofu,* which is Shimi-dofu.

Contents: 1. Origin of kori-dofu. 2. Production of kori-dofu in the Edo period. 3. The group of kori-dofu makers in Kuzushiro of Kishu and the monopoly of selling kori-dofu in Hasa Yama-han and Ishikawa-han. 4. The leaping progress of production of kori-dofu during the Meiji period. 5. The great European war [World War I] and the natural koya-dofu industry. 6. Shinshu Koya style kori-dofu marching out to Kansai. 7. The invention of kori-dofu which expands and softens. 8. The height of prosperity of the artificial freezing method and the downfall of natural kori-dofu. 9. Kori-dofu after the Pacific Ocean war [World War II]. 10. The group of kori-dofu production workers from Tajima who work away from home. 11. Present-day kori-dofu production business. Appendix. Postscript.

Note: The history of kori-dofu as told in this book is summarized in *The Book of Tofu,* by Shurtleff and Aoyagi (see p. 226-29). Kori-dofu was highly valued as a way of preserving tofu, and as a source of work in cold, mountainous regions during the lean winter months.

• ***Summary:*** This is a modern version of the famous *Tofu Hyakuchin,* published in 1782. The author was born in 1907.

2497. Ohsawa, G. 1962? Zen macrobiotics: The art of longevity and rejuvenation. New York, NY: Ohsawa Foundation. Printed in Japan. 218 p. Undated. Index. 17 cm.
• ***Summary:*** This is the second printed edition of Zen Macrobiotics. The cover is gray. The author is George Ohsawa. The content is basically the same as the first printed edition, except that (1) Typographical errors on pages 3, 7, and 62 have been corrected; (2) A folded, undated insert, titled "Dictionary of Macrobiotic Terms" was found in this printing between pages 216 and 217 (for details, see below). The insert is 17.0 cm / 6.69 inches high by 30.0 cm / 11.81

© Copyright Soyinfo Center 2013

inches wide. Folded crosswise into thirds, it fits perfectly into these books; (3) The information on pages 217 and 218 is different and updated. The following appears on page 218: Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), U.S.A. (Ohsawa Foundation, 61, W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64, 5th Ave., Chico, California; Musubi, 61, W. 56th St., New York–Macrobiotic Restaurant).

Concerning the date of publication: Although the date is not given in or on the book, Carl Ferré (who owns an original of this 2nd Japan printing) notes (8 May 2011): "Chico-San is listed. This means it was after Nov. 1961 at the earliest and most likely very early in 1962. I say this because the address given is not the Mangrove Ave. one." "There is no 'Printed in Japan' in this book either but it is so similar to the earlier one that it has to be printed in Japan. It is also undated. It is not 'revised'..."

In the 3-column "Dictionary of Macrobiotic Terms" (insert), for each entry there is the word or term, its definition, and one page number on which that word appears. Because the page numbers refer to pages in this edition, the dictionary was probably published at about the same time as this book–or at the time of the previous edition in 1960. The following is a selection from the Dictionary, with pages given for soy-related words: Aduki: Japanese red bean. Ae: Dressing (vegetables) with soy bean paste [miso], orange juice, etc. (p. 96). Aemono: Japanese salad (p. 88). Age: Fried bean curd. An: Red [aduki] bean jam. Ankake: Pouring [aduki] jam. Bancha: Coarse green roasted a few minutes. Bansho: Bancha with soy sauce (p. 152). Daikon: Long, white Japanese radish. Dango: A dumpling. Dentie: Head of eggplant salted, kept, dried and then burned into a powder. Egoma: A type of sesame seed–most yang. Gobo: Burdock. Gomashio: Sesame salt. Goma Tofu: Sesame curds (p. 87). Goziru [gôjiru, gojiru]: Soup made of grated soy beans and vegetables ("Ziru" means soup in Japanese) (p. 84). Gyoza: A Chinese food–vegetable mixture wrapped in pieces of thin dough. Hako: A mold or box in Japanese. Haru Tea: A very yang herb beverage. Hiziki [Hijiki]: Spindle-shaped, small, black seaweed. Jinenjo: A wild potato or a Japanese yam. Karinto: A kind of deep-fried cookie. Kasha: Russian buckwheat grain preparation. Kayu: Thin rice preparation [porridge]. Kinpira: Burdock and carrots preparation. Kitune [Kitsune]: Boiled rice or noodles cooked with thin fried bean curds [*agé*] (p. 68). Kobu (or Konbu): A (sea) tangle coming from deep ocean waters. Kobu Maki: Kobu stuffed with vegetables. Koi-Koku: A special carp and miso soup (p. 109). Kokkoh: A creamed blended cereal. Konnyaku: A paste made from flour of this Japanese tuberose [tuber]. Kuzu: Powdered plant-gelatine obtained from kuzu plant. M.U. tea: A tea made of 15 blended herb's roots. Matuba [Matsuba]: Pine leaves. Miso: Soy bean paste (p. 65). Miso Ae: Boiled vegetables served with miso cream (p. 96). Misoni: Carrots and onions cooked with miso (p. 129). Mochigome: Glutinous rice. Moti [Mochi]: Rice cake. Musubi: A knot. Nisime [Nishime]: Same as Nituke. Nituke [Nitsuke]: Vegetables sauteed. Nori: Laver or sloke–a kind of seaweed. Ogura: Aduki (red bean) preparation. Omedato: Dessert made of roasted rice and red beans. Originally Japanese word for congratulation. Oshitashi: Boiled vegetables, served with Tamari (p. 97). Ransho: Egg–Tamari preparation. Renkon: Lotus root. Sashimi: Sliced raw fish. Sarashina: A kind of buckwheat dish. Originally it means the name of a place famous for producing good buckwheat. Siitake [Shiitake]: A kind of Japanese mushroom. Sio [Shio]: Salt. Sio Kobu [Shio Kombu]: A kobu (seaweed) preparation. Soba: Buckwheat. Sukiyaki: Fish (or beef) and vegetables cooked a la japonaise. Sushi: A rice preparation. Syo-ban [Sho-ban]: Coarse green tea with soy sauce (p. 101). Tahini: Sesame butter. Tai: A red snapper [fish]. Tamari: Traditional soy sauce (p. 62). Tekka: A preparation of minced lotus root, burdock root, carrot, ginger, and miso (p. 96). Tempura: Japanese process of deep-frying in oil. Tofu: White soya bean cheese (p. 134). Tororo: Wild potato [wild yam]. Udon: Wheat vermicelli or noodle or macaroni. Umeboshi: Japanese plum salted and conserved for years. Ume-sho-ban: Medicinal beverage [containing umeboshi and shoyu] (p. 156). Yannoh (Ohsawa coffee): A cereal coffee made of roasted rice, wheat, aduki, chick peas and chicory. Yomogi: Mugwort (or wormwood). Yuba: Soybean protein prepared into transparent paper-like sheets (p. 77). Zosui: A rice preparation. Zaru: A bamboo basket. Address: Ohsawa Foundation: 331 Riverside Dr., New York City. Secretary Aihara, 44 W. 96th St., New York City, U.S.A.

2498. Ontario Soya-Bean Growers' Marketing Board. 1962? About soybeans: "A know your industry presentation." Chatham, Ontario, Canada. 12 p. Undated. 23 x 11 cm.
• ***Summary:*** Contents: A message from Dick Smith, Chairman, OSGMB. The big three: Soybeans, soybean oil, and soybean meal. Other soybean products: Soybean flour, milk, cheese (tofu), sauce, and sprouts. Where soybeans are grown worldwide. The position of soybeans in world fats and oils production. The import and export pictures in 1961. Production of soybeans by county in Ontario. Marketing the crop. Soybean grades. Activities of OSGMB.

In 1961 Canadian soybean production accounted for only 30.5% of Canada's need for soybean oil, and 31% of the country's needs for soybean meal; the rest had to be imported. In 1954, in order to establish a healthy market situation, OSGMB initiated a soybean export program. "The establishment of this 'second market' has proven its intended worth in helping to maintain price levels in Canada. In 1961, Canadian exports of soybeans and the bushel equivalent of meal and oil totalled 11.7 million bushels." Address: Box 668, 143 Wellington St. West, Chatham, Ontario, Canada.

2499. Ishiguro, Kôzô. 1963. Studies on pantothenic acid intake. I. Pantothenic acid content in Japanese foods. *Tohoku J. of Experimental Medicine* 78:375-80. Jan. 25 (Chem. Abst. 59:2095). [8 ref]

• ***Summary:*** Tables show: (1) Pantothenic and 4'-phosphopantothenic acid content in foods (Pantothenic acid {Pa A}) is highest in slimy agaric 0.80 mg/100 gm, moderate in stone leek {white part}, stone leek {green part}, and Japanese radish ("Daikon"). 4'-phosphopantothenic acid is very low in the 10 foods listed.

Note: The "slimy agaric" is probably *Stropharia aeruginosa*, commonly known as the verdigris agaric, a medium-sized green, slimy woodland mushroom.

(2) Free pantothenic acid and total panthetine [pantethine] content in foods. The section of the table titled "Pulses" includes the following two values:

Soybeans, dried 0.86 / 0.08.
Azuki beans, dried 1.35 / 0.03.
Black soy beans, dried 0.76 / 0.24.
Soy bean curd ("Tohu") 0.10 / 0.02.
"Abura-age" 0.12 / 0.04
"Miso" 0.37 / 0.17.
Fermented soy beans ("Natto") 1.60 / 0.60.
Peanut 1.80 / 0.20.
Congealed "Tohu" [perhaps dried frozen tofu] 0.12 / 0.02.

The foods with the highest content of free pantothenic acid in this table are: (1) Rice bran 6.50. (2) Pine agaric, fresh 2.00. (3) Peanut 1.80. (4) Natto 1.60.

The foods with the highest content of total panthetine in this table are: (1) Rice bran 2.20. (2) Fresh kantake mushroom 1.20. (3) Natto 0.60.

Note: Pulses generally contain a substantial amount of free Pa A, but are rather poor in total panthetine; however natto is rich in the latter. Address: Dep. of Hygiene, Tohoku Univ. School of Medicine, Sendai [Japan].

2500. Brandemuhl, William. 1963. Soybean history: Aspects of Buddhist influence. Anthropology Dept., University of Wisconsin, Madison. 15 p. Jan. Unpublished manuscript. 28 cm. Summarized as "Early Soybeans Were Spread by Buddhists" in Soybean Digest, July 1963, p. 21. [52 ref]

• ***Summary:*** This research paper (which is not a thesis) was prepared for Anthropology 150a, taught by Dr. R.J. (Robert) Miller. Contents: Purpose of study. Method of study. Botanical history: Naming the soybean, the *Glycine ussuriensis* case, other genetic evidence, claim on the origin of the soybean. Initial utilization. Botanical dissemination. Soybean history–non-botanical: Legend, recorded Chinese soybean history, concluding notes on soybean origin and cultivation history. Buddhist influence on the development of the soybean: Soysauce or shôyu, miso, tofu, natto, ancient soybean food products, the soybean grows.

"Another principal concern of this paper is the Buddhist connection to soybean development. The introduction of soybeans, although an approximation at the very best, coincides quite closely with the spread of Buddhism in Japan. As shown later, Buddhism has a very close connection with soybean history and in many product sectors of soybean development, may have created or at least popularized them" (p. 1).

"Contrary to the above statement I submit the following data which I believe can easily be documented: 1. Emperor Sheng-nung is a mythical character (letter from Herbert W. Johnson, Research Agronomist, USDA / ARS Crops Research Div., Beltsville, Maryland, 30 Aug. 1962). 2. Emperor Shen-nung was a legendary character who cannot be pinpointed to a date of 2838 B.C. (letter from Jung-pang Lo, Research Asst. Prof., Far Eastern and Russian Inst., Univ. of Washington, 6 Sept. 1962). 3. Shen-nung is a mythical ruler, never living at the date attributed to him or at any other date (letter from Edward H. Schaefer, Professor of Oriental Languages, Univ. of California, Berkeley, 6 Sept. 1962). 4. A work attributed to Shen-nung is called *Shen nung pen Ts'ao Ching* but since it contains many Han Period facts (around the beginning of the Christian era) it is believed to be a Post-Han work. This work is first mentioned by T'ao Hung-ching (who edited it) early in the 6th century A.D. (Jung-pang Lo). 5-6. The *Pen Ts'ao Kang Mu* was written by L. Shih-chen (1518-1593) in A.D. 1596 or 1597 (Jung-pang Lo, Schaefer)... 9. The word 'Shiyu' cannot be found in Chinese dictionaries. The name for the soybean in China being 'Ta-tou,' meaning big bean (Jung-pang Lo)."

"Concluding notes on soybean origin and cultivation history: *The Book of Poetry* (Shih-ching) mentions boiling shu (pulse) and the *Erh-ya* (a Chou period lexicon, authorship attributed to Confucius or his disciples) mentions Jung-shu. Kao yu, the commentator, remarked that the Jung-shu (pulse of the Hu people) which was also known as Ta-tou (the soybean). Jung was a term used by the Chinese in the Chou period for the non-Chinese people of the North and Ju was a term used by the Chinese people of the North and West. This would seem to indicate that the soybean was introduced to China from the non-Chinese people of the North. Also supporting this is the *Chou-shu* by Hsi meng, in which there is a reference to Shan-jung shu (pulse of the Jung people of the mountains). A commentator explains that the Shan-jung were tribes in the Northeast (Manchuria).

"The Kuang-Tzu contains a passage saying that after Duke Huan of Chi (7 B.C.) defeated the Shan-jung the Jung-shu came to be known throughout China. Chia su-hsieh (5 A.D.) in his book *Ch'i-min Yao-shu* (Ts'tung-shu Chi-ch'eng, editor) quoted the *Shen-nung pen Ts'ao* as saying that Ta-tou (the big bean) was the Hu-Tou (Hu peoples' bean) which Chang Ch'ien brought back from his exploration of central Asia in the first century B.C., there being two varieties. In the Han period both Ts'ui shih and Fansheng in their books on farming techniques mention cultivation of the Ta-tou and

© Copyright Soyinfo Center 2013

its use in famine relief. The *Pen Ts'ao Kang Mu* (1596), mentioned earlier, has a long discourse on the medical properties of the Ta-tou (Jung-pang Lo)."

"Buddhist influence on the development of the soybean: Although references to the Buddhist influence on soybean development are particularly sparse I believe Buddhism deserves credit for initiating the spectacular expansion of soybean utilization in Japan which triggered utilization in the rest of the world. The Buddhist connection is certainly true if oil utilization is excluded. Below lie the reasons for my belief.

"Buddhism was introduced into Japan around 500-600 A.D. (Bush 1959, p. 28-29). Among the priests the traditional hate of flesh was present and agriculture of the field type was encouraged by the government (Tezuka 1936, p. 13). The introduction of soybeans fits well into this historical development. The recent finding of soybean seed in *Shôso In* (Japan) which was established in the Nara era for the storing of legumes of that era that were introduced from China (Nagata 1960, p. 97) proves as does the record of ceremony and taxation system of the Nara era (Nagata, p. 75) that soybeans did exist in Japan at that time.

"Soysauce or more properly shôyu, the now renowned Japanese flavoring, is said to have originated during the Chou dynasty (1134-246 B.C.) (Komiya 1955, p. 14) and was introduced into Japan when Buddhism was being established although not becoming popular until 1300 (Joya 1951, p. 31-33).

"Miso, soybean paste, is a much used breakfast and soup dish in Japan that was introduced to Japan from China or Korea (Horvath 1927, p. 83). It was definitely used by the priests when they first entered Japan, in fact they popularized it among their new vegetarian converts (Joya, p. 21-23).

"An ancient Chinese book states that the Philosopher Hamintze, a prince of the Han dynasty, was the inventor of Tofu or soybean curd (Horvath, p. 6) while another source attributes the tofu innovation to the Chinese Philosopher Whai Nain Tze (Piper & Morse 1923, p. 234). The manufacture of soybean curd (tofu) was started in China in 164 B.C. during Emperor Hwai Wen's reign by Liu An, duke of Hwai Nan. Liu An was a great friend of the Buddhist monks and it seems quite likely that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration." Note: Whai Nain = Huainan. Liu An was the duke (*tze*) of Huainan. So all of these people are one and the same person.

"Tofu was introduced into Japan from Korea for the first time during the Toyotomi government (Horvath, p. 73) and was undoubtedly introduced into Japan from China by the Buddhists (Piper & Morse, p. 234) being used for their daily food before it was generally used (Horvath, p. 73).

"The true Buddhist monk was carried through the period of childhood growth on a rather heavy diet of bean curd (Horvath, p. 17). Even the naming of soybean curd has its esoteric connotations as the Classical Chinese name for tofu is Li chi which probably means morning prayer (Horvath, p. 72).

"Natto, a sort of vegetable cheese prepared from soybeans has long been used by the Buddhists and is now used extensively by the Japanese (Piper & Morse, p. 224).

"Buddhism seems to have been a major reason for the development of Japan for main soybean products. With the existence of these products Japan opened the world to soybeans." Address: Univ. of Wisconsin, Madison, Wisconsin.

2501. Senti, F.R. 1963. Soybeans–Their future as a food and feed crop. *Soybean Digest.* Jan. p. 16-20.
• ***Summary:*** "A thorough survey of the present and potential markets for both the oil and meal fractions of the soybean." Discusses food uses of soybean oil, fats and oils used in margarine (1946-61; graph), sources of high-protein concentrates or livestock and poultry feeds (1937-61; graph), polyunsaturated fatty acids in the U.S. diet, feed and food uses of soybean meal, growth in oilseed meal consumption, tofu, miso, tempeh, UNICEF's clinical trial with soy beverage for infants in Taiwan, Public Law 480 and soya. To date 12 projects sponsored by the NRRL and funded by P.L. 480 on various food aspects of soybean utilization have been activated in Italy, Spain, Scotland, Finland, Israel, and Poland.

Figure 1, "Fats and oils used in shortening (1946-61)" is a graph showing that in 1945, soybean oil was the main oil used, followed by cottonseed oil, with animal fats a distant third. In 1961 soybean oil is still the leader (47.6% of total fats used), followed by animal fats (33.3%), then cottonseed oil (16.7%).

Figure 2 is a graph showing that per capita consumption of liquid edible oils increased from about 6.2 lb in 1945 to 11.2 lb in 1961.

Figure 3, "Fats and oils used in margarine (1946-1961)" is a graph showing the total increasing from about 450 million lb in 1946 to about 1,350 million lb in 1961. In 1946 soybean oil and cottonseed oil each accounted for about 50% of the total oil. In 1961 soy oil accounted for about 78% of the total, followed by cottonseed oil and corn oil. Address: Director, NRRL, Peoria, Illinois.

2502. Reuter. 1963. New uses of cottonseed oil: Contract for research. *Times of India* (*The*) (*Bombay*). Feb. 7. p. 1.
• ***Summary:*** Washington, DC, Feb. 26. The USDA yesterday announced the award of two contracts to Indian and Japanese scientists.

A 2-year contract worth $9,972 was awarded to the Japan Tofu Association of Tokyo. It would enable Japanese scientists to evaluate the suitability of U.S. Soyabean varieties for making fresh tofu, a major source of food protein in the Japanese diet.

• ***Summary:*** Spray-dried whole soybean milk has recently appeared on the market in Japan. Tofu made with this milk was found to be excellent in firmness and its ability to hold water, compared to tofu made from fresh soymilk. For making bagged tofu, it is recommended that a mixture of dried and fresh soymilk be used, with 40% of the solids coming from the dried soymilk. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

• ***Summary:*** Tofu was coagulated with calcium sulfate calcium chloride, and sulfuric acid to compare their hardness and volume. The quality of the curd made with the acid was similar to that made with calcium chloride. Although the curd made with calcium sulfate was very soft and voluminous, it became smaller and harder and smaller in volume when a small amount of acid was added. Various kinds of agents were added to the soymilk before precipitation by calcium chloride to try to get a soft curd. Among these agents, sodium citrate and sodium polyphosphate seemed to be effective in making tofu softer and more voluminous, probably because of their high pH and their ability to increase the water-holding capacity of soy protein. 2509. McEachern, Margaret. 1963. Symphony of sounds tells time in Tokyo: Centuries-old street calls. *Christian Science Monitor.* May 25. p. 15.
• ***Summary:*** Tokyo–The Japanese housewife doesn't need a clock to tell the time of day. She only needs to listen to the distinctive calls from her street.

"The day begins with the call, 'Natto... natto...' in a high youthful voice." That is the sound of a teen-age boy making his rounds as he sells his fermented [soy] beans–a little delicacy that is tasty and nourishing. Japanese housewives use natto in soup, seasoned with soy sauce, served over rice.

The Japanese may be the only people who enjoy soup in the morning. This soup, called *misoshiru*, "consists of 'miso,' or fermented bean soup [sic, fermented soybean paste] with vegetables and fish."

In the late afternoon one hears the eerie sound of the [soy] bean-curd seller. He carries his produce in wooden buckets attached to both ends of a long bamboo pole.

Note: The writer is apparently unaware that natto, miso, and tofu are each made of soybeans–for that word does not appear in the article. A photo shows a housewife shopping in Tokyo.

2511. Senti, Frederic R. 1963. Current status of soybean utilization research under P.L. 480. *Soybean Digest.* May. p. 28, 30-34.
• ***Summary:*** This is the third in a series of USDA research reports under the P.L. 480 program. Discusses progress on active projects: Soybean oil in Seville, Spain; Chemical changes in sterols during refining of soy oil by Prof. H. Niewiadomski in Gdansk, Poland; Flavor stability of soy oil in by Prof. Y. Toyama at Toyo Univ. in Japan; Improving the frying quality of soybean oil by Prof. G. Varela at Univ. of Granada, Spain; Meal constituents.

Oriental foods: Production of shoyu (soy sauce) using U.S. vs. Japanese soybeans, use of dehulled soybean grits for making miso, miso-type food in Israel, use of U.S. soybeans in making tofu, or soybean curd, by the Japan Tofu Association, Tokyo.

Industrial applications: Polymerization studied in Milan, Italy. Soybean constituents. Oriental foods #2: Dried tofu in Japan, *Saccharomyces rouxii* yeast in shoyu and miso, development of fermented products from soybean milk in Japan, fermented soybean cheese in Taiwan, fermented soyfoods (tempeh, ontjom, ragi) in Indonesia.

Domestic research for increasing imports: Work with soy oil, UNICEF trainees from Brazil studying tempeh, projects saponins, protein complexes, and isolated protein quality in Israel.

A small portrait photo shows F.R. Senti. Address: Director, Northern Utilization Research and Development Div. (also known as the Northern Regional Research Lab.), Agricultural Research Service, USDA, Peoria, Illinois.

2512. Strayer, George M. 1963. Development of the Japanese market for soybeans: The first and largest U.S. market development project for soybeans and soybean products. *Soybean Digest.* May. p. 13, 16.
• ***Summary:*** A good historical overview of the American Soybean Assoc. soybean program in Japan, from Strayer's speech presented at the Agricultural Trade with Japan conference in Chicago.

"For a long period of years Japan has produced a sizable tonnage of soybeans, a part of them in the northern island of Hokkaido, and a part of them grown on the other islands largely on the dikes or dividers around the rice paddies. But these supplies were not adequate to fill their needs, so considerable tonnage was imported from China and Manchuria each year.

Note: By 1886 Japan was producing 11.5 million bushels of soybeans a year; most were consumed as food (Tamari 1886).

The conquest of the Red Force [Red Army] in China, followed by the Korean episode [Korean war], cut off these Chinese supplies. The American military government shipped supplies of U.S. soybeans to Japan in the years immediately following World War II, as a source of protein for the Japanese people. The Japanese were also importing soybeans from Manchuria during these years, and at the same time Japanese interests owned processing facilities in Korea and in Dairen and Port Arthur of Manchuria. The Korean episode ended all that, and Japan found herself badly in need of a source of supply for her protein.

"During this same period things had been happening on American farms. At the start of World War II we were the world's largest net importer of fats and oils. The sea lanes were cut off, and we doubled and redoubled our soybean production as a means of supplying our requirements of fats and oils. We increased soybean production from 60 million bushels to over 180 million bushels during the war years. We learned what soybean oil could do in human foods and in industry, and what soy protein could do in contributing to economic livestock production. So, in the years since the war ended we have continued to increase soybean production from 180 million bushels per year to a predicted 725 million bushels in 1963. Today we are the world's largest net exporter of fats and oils and oil bearing materials.

"Early export troubles: As this process was going on Japan was restoring her economy, putting her people to work, increasing their incomes and their demand for food. Soybeans were being purchased from the United States but they were produced and handled mechanically, delivered in bulk, and the Japanese buyers were not accustomed to this type of handling and production nor happy with our beans. When I first went to Japan in 1955 we had a market for about 250,000 metric tons of soybeans but we were in trouble. I spent 6 weeks contacting the trades people, seeing for myself just what problems confronted us. A gentleman from the grain grading branch of the U.S. Department of Agriculture joined me, so that agency might understand our soybean sales problems. When we came home we agreed to try to do something about the situation.

"Exporters were appraised of the situation in meetings at export ports. Growers were told what the Japanese market demanded. Sampling and grading was tightened up. Japanese buyers were taught how to buy on our federal grade basis to get the desired quality. A Japanese firm was employed to make impartial samplings and grade determinations on the basis of our U.S. federal grades on cargoes as they arrived in Japan. By focusing much attention on our problems and their solutions we solved them–today U.S. soybeans are not only accepted but preferred in the Japanese market by most buyers, especially the oilseed crushers. Our quality is better, the oil content higher, our supply more dependable.

"In 1955 Japan was buying about 250,000 tons of soybeans per year from us. This seemed to be only a small portion of the potential, for per capita consumption of both oil and protein was far below levels necessary for proper nutrition. In early 1956 the American Soybean Association signed a contract with Foreign Agricultural Service to

© Copyright Soyinfo Center 2013

use some Japanese yen accrued under Public Law 480. A contractual working arrangement was worked out with the five trade groups in Japan representing the major users of soybeans plus the importers, and an office was established in Tokyo in April 1956. A campaign to increase per capita consumption of soybean food products was launched, using a variety of approaches.

"Working closely with the Ministry of Health, the Ministry of Agriculture, with private promotional organizations and with the miso, tofu, shoyu and oil trade groups a concerted campaign was carried on the educate the Japanese housewife on the functions of protein and oil in the human diet, and with the necessity of providing proper amounts of both in the meals prepared for her family. Very naturally, the Japanese, who had used soybeans for centuries, turned to soybean food products because of availability, price, and knowledge of how to use them."

Today Japan buys 1.2 million tons–42 million bushels– of U.S. soybeans a year, "and we visualize further increases to nearly double those figures by 1970."

"Last year Japan paid U.S. farmers about $100 million for soybeans."

Photos show: (1) A tofu maker in Japan selling tofu from a wooden box on the back of his bicycle to a group of laughing Japanese housewives. (2) Participants in the Agricultural Trade with Japan conference. Left to right: Ferenc Molnar, operations assistant, Soybean Council of America. V.H. Hougen, chief foreign marketing branch, fats and oils division, Foreign Agricultural Service, USDA; David G. Wing, vice president of the Soybean Council. Geo. M. Strayer, American Soybean Assoc. executive vice president. Howard E. Grow, assistant to ASA executive vice president. Address: Executive Vice President, American Soybean Assoc.

2514. Hackler, L.R.; Hand, D.B.; Steinkraus, K.H.; Van Buren, J.P. 1963. A comparison of the nutritional value of protein from several soybean fractions. *J. of Nutrition* 80(2):205-10. June. [6 ref]
• ***Summary:*** In PER studies, several soybean fractions were fed to weanling rats. The results were somewhat surprising in that they indicated that the "residue from water extraction," or water-insoluble fraction, was the most nutritious.

Unextracted [full-fat] soybean flour was prepared by soaking dry soybeans overnight at room temperature in 3 times their weight of water. The beans were dehulled using a vegetable peeler and water flotation. The dehulled soybeans were drained, steamed for 1 hour at 100ºC, frozen at -40ºC then freeze-dried whole. The beans were then ground finely (through the 023 screen of a Rietz Disintegrator) with water. The soymilk and solids were separated in a plate filter while the milk was still cold. The soymilk was then cooked for 1 hour at 100ºC, concentrated, frozen, and freeze dried.

The PER for the different fractions and for casein were as follows: Casein 2.86, residue 2.71, dehulled soybean 2.51, curd [tofu] 2.20, soymilk 2.11, whey 1.93. Address: New York State Agric. Exp. Station, Geneva, New York.

• ***Summary:*** Contents: Introduction (world food shortages). Technological assistance (by NRRL). Oriental traditional foods: Tofu, shoyu or soy sauce, miso or soy paste, monosodium glutamate, natto and kinako, soy beverage, tempeh (tempe). Recent food developments. Address: NRRL, Peoria, Illinois.

2516. *Hartford Courant* (*Connecticut*). 1963. Today we look for new ideas from the Japanese. Aug. 11. p. 1D.
• ***Summary:*** A glimpse of home life in postwar Japan, with six photos and an illustration of a mother with a baby on her back and a child standing beside her. A typical day's menu for a middle class family is: "Breakfast: bean paste [miso] soup, rice, pickled vegetables and seaweed, Tofu, which is a bean curd, like custard, and green tea."

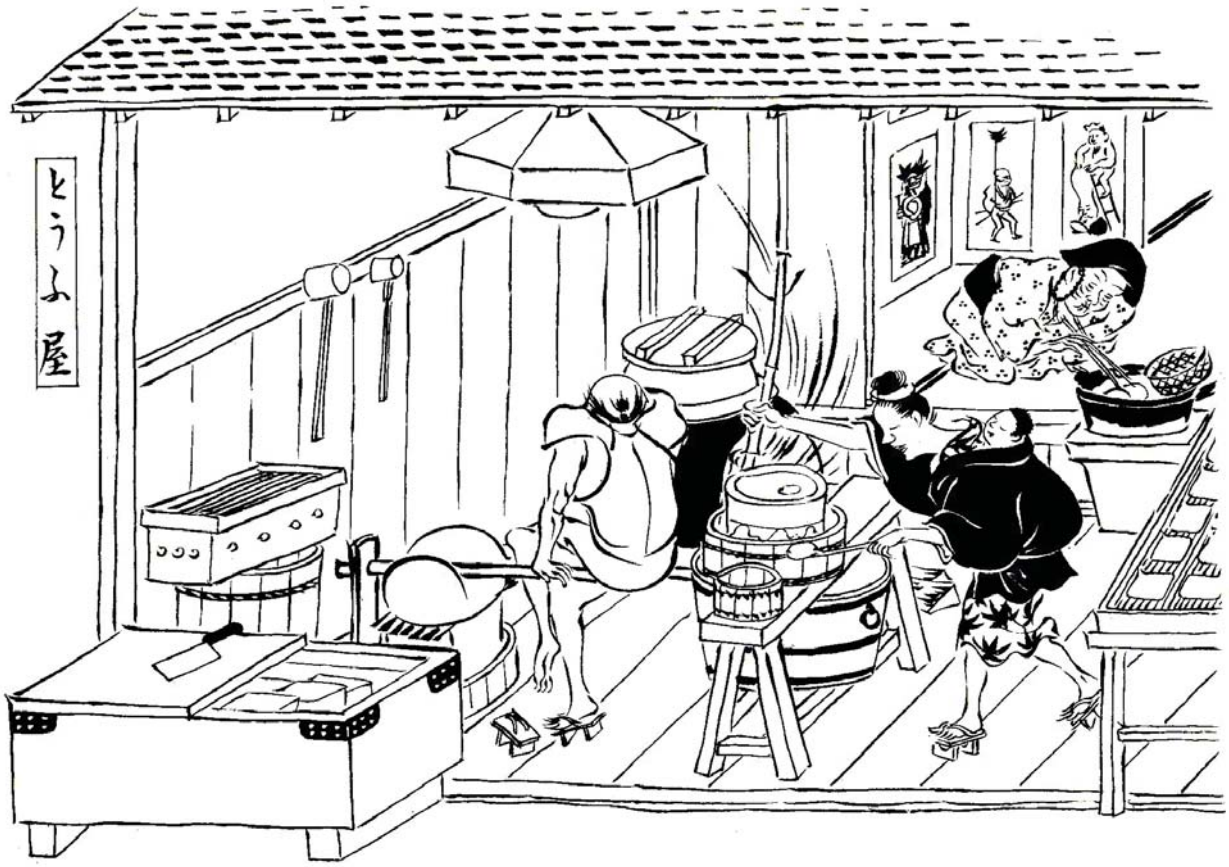
The evening meal, usually served Japanese style, includes "cooked or pickled vegetables, tofu bean curd custard, a clear soup and some fresh fruit... washed down with many tiny cups of green tea."

2517. Mitani, Kazuma. 1963. Edo shôbai zu-e [Illustrations of merchants, artisans and peddlers during the Edo period in Japan]. Tokyo: Seiabo. 271 p. Illust. No index. 20 x 27 cm. [Jap]
• ***Summary:*** A stunning book, filled with large, lovely illustrations (mostly wood-block prints or line drawings) from the Edo period (1600-1867) in Japan. Soy-related illustrations:

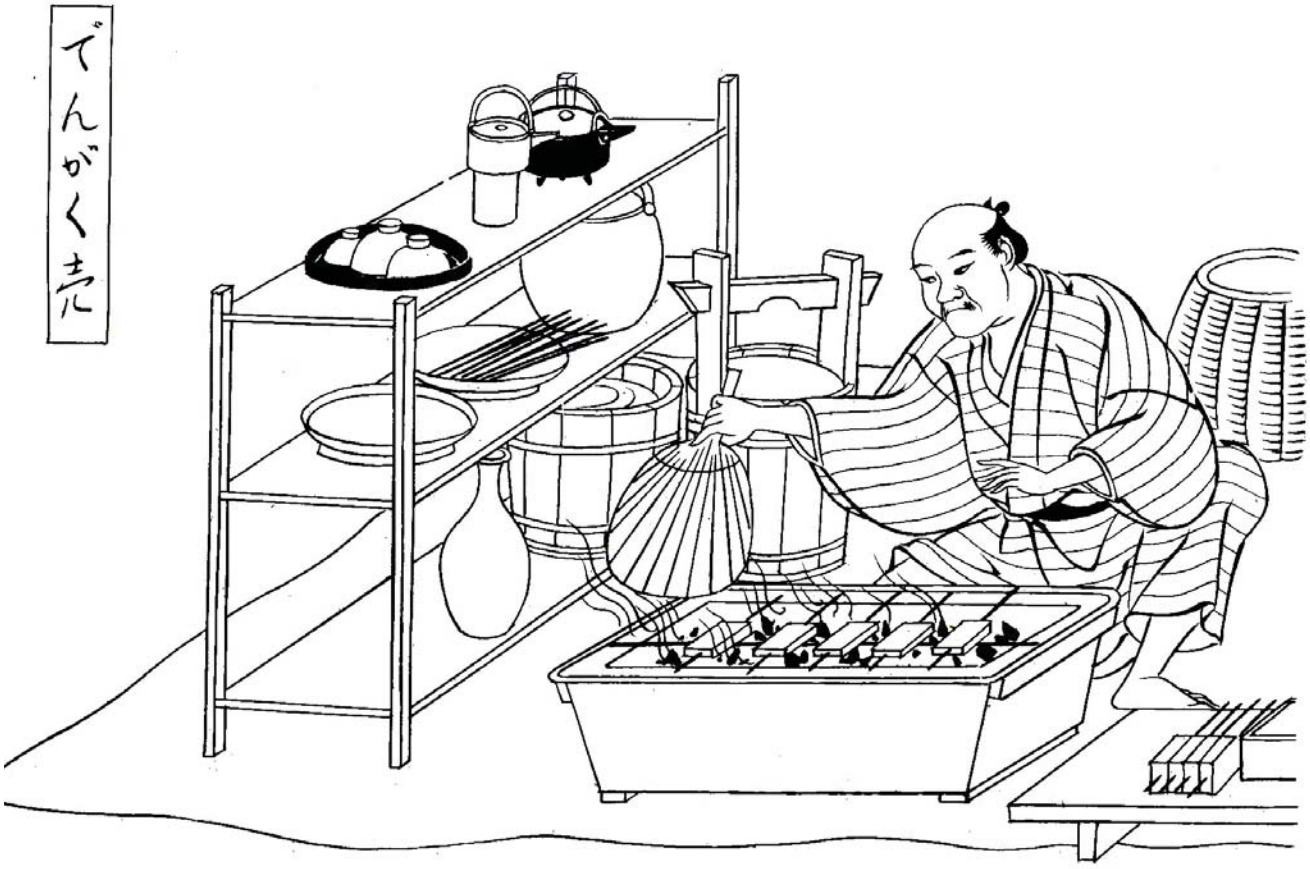
(1) A tofu shop (p. 18), showing a man sitting on a wooden lever-press pressing the soymilk out of cloth straining bag while his wife, with a baby on her back, turns a hand-turned stone mill that grinds soaked soybeans into a smooth puree, which falls into a wooden tub. Large blocks of tofu are shown immersed in cold water in a sort of wooden sink, with a tofu knife on top. In the background, up a step inside the house, an elderly person is deep-frying tofu.

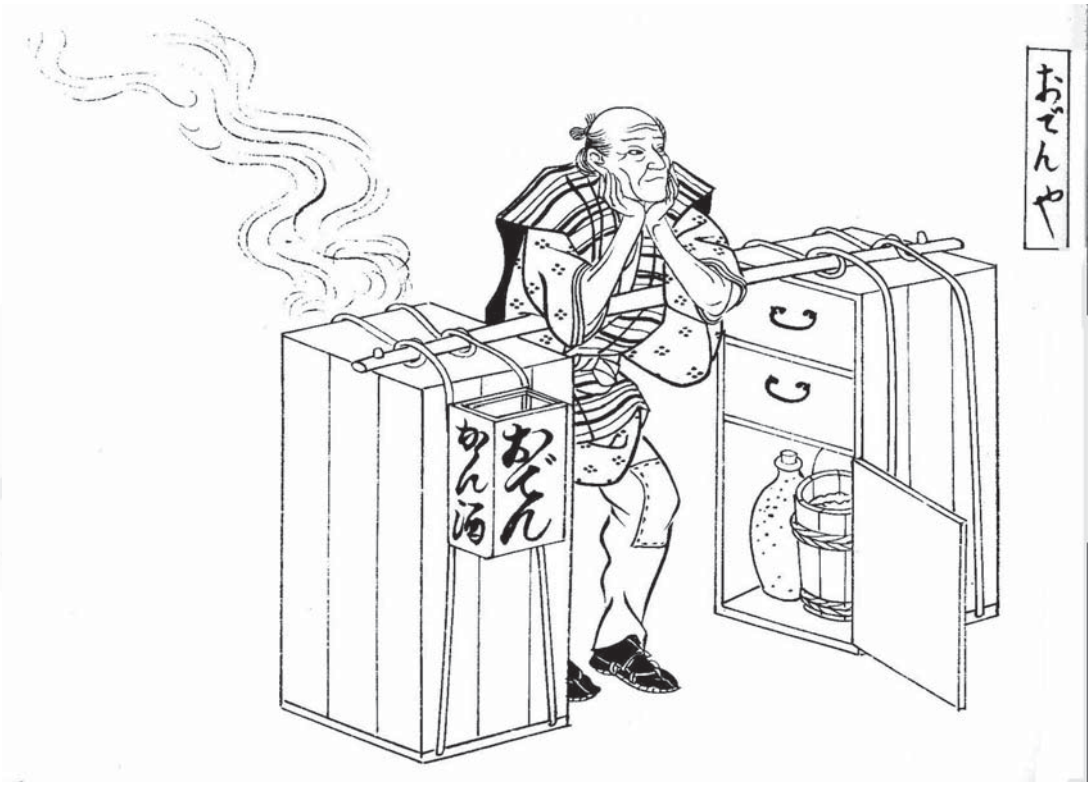
(2) A tofu seller (p. 19), walking in the street with two

© Copyright Soyinfo Center 2013



© Copyright Soyinfo Center 2013





© Copyright Soyinfo Center 2013

wooden tubs of tofu at both ends of a shoulder pole. He is wearing getas on his feet and a large round straw hat.

(3) A shoyu seller (p. 23), walking in the street from door to door with several layers of wooden tubs at both ends of a shoulder pole and a kerchief over the head.

(4) A man in a shop with Kinzanji hishio in wooden vats of various sizes, each bound by braided bamboo hoops (p. 26).

(5) A woman in a kimono (p. 26), serving two cups of amazake.

(6) A man selling dengaku (p. 28), skewered tofu above hot coals in a brazier. He is fanning the coals and hunkering behind the brazier.

(7) A seller of oden (p. 29). He is standing, resting on the shoulder pole, which rests atop two tall boxes.

(8) A man making Inari-zushi (p. 49) at a street stall. An illustration below the roof shows a fox running.

(9) A man selling woven bamboo baskets and miso strainers (*zaru* ya *miso-koshi*) (p. 210).

(10) A woman (*edamamé uri*) with a child on her back as she walks (p. 239), selling edamamé (green vegetable soybeans) in a basket under her right arm.

The author collected these illustrations from many sources; the source of each is given in an "accompanying source book"–which we have been unable to locate. He re-drew each of the old originals, but tried to be true to the original. He eliminated a few things that he felt were not needed in some illustrations and added a few more things to others to make them clearer for today's readers. There are no illustrations that he created. Most of the originals are from the mid-Edo period, especially the Kansei, Bunka, and Bunsei eras (1789-1830), with 2-3 things from the Kyoho period (1716-1735).

To make this book he went to many libraries, archives, and other places where historical documents are kept; he was helped by many other people. He was born on 15 March 1912 (Meiji 45). He graduated from Tokyo Bijutsu Daigaku. Nihon ga-ka (Tokyo Fine-Arts Univ., Japanese Art Dept.). He is a member of the Bijutsu Shuppan Renmei (Art Related Publishing Bureau). He presently lives at Setagaya-ku, Tokyo. The book has a detailed table of contents, but no index. Address: Japan.

• ***Summary:*** This vegan cookbook contains no foods from animal sources except honey. It was developed primarily to help patients with food allergies and cardio-vascular problems. Soy milk, soy flour, soy grits, and whole dry soybeans are used extensively throughout the book. Chapter 9, "Milk and Cream Substitutes," gives recipes for pecan milk, unsweetened walnut milk, almond cream, coconut milk, soybean milk, Loma Linda Soyagen (powdered), cashew cream, cashew milk, and walnut milk.

Chapter 11, "Entrees," contains recipes for: Creamed soy beans. Green soy beans. Supreme loaf (with Vegeburger plus Yeastex or Savita). Walnut roast (with rich soy milk). Scrambled "eggs" with Smokene (and soy cheese/To-fu). Scrambled "eggs" with chives (with soy cheese [tofu] and soy milk). To-fu with mushrooms. Baked rice and cheese (with to-fu). Scrambled "eggs" plain (with soy cheese [To-fu] and rich soy milk). Soy beans (boiled). Soy bean croquette. Soy bean loaf. Soy bean patties (with soy cheese [tofu]). Baked soy beans.

Chapter 19, "Foreign Dishes," contains a recipe for "How to make to-fu" (using Loma Linda Soyagen powder, curded with lemon juice), plus two tofu recipes. The companion volume to this book is titled *Nutrition for Life.*

• ***Summary:*** In the USA we think of pumpkins in connection with Halloween jack-o'-lanterns, pumpkin pie, and Cinderella. "In Japan the whole pumpkin, scooped out and filled with a mixture of minced chicken, sliced carrot, mushrooms, soy sauce, sugar, tofu, green peas, and eggs, is steamed." Address: Washington, DC.

2522. Muto, Shizuko; Takahashi, E.; Hara, M.; Konuma, Y. 1963. Soybean products as protein sources for weanling infants. *J. of the American Dietetic Association* 43(5):451-56. Nov. [12 ref]
• ***Summary:*** In Japan, the main protein sources for the weanling infant, in the form of solid food, "are *tofu* (soybean curd), *natto* (fermented soybean), and *kinako* (toasted soybean flour)."

Describes briefly how each is made commercially. For example, for kinako, the soybeans are dry heated in an oven for about 25 minutes. The temperature inside the beans at the time they are removed from the oven is about 105ºC. They are then milled into flour [probably after being allowed to cool to room temperature] and sieved through a 70-mesh screen. "The product has a pleasant odor, similar to fresh-toasted bread, and is brownish yellow in color. It is mixed with sugar and is used as a coating for rice cakes."

Nitrogen balance studies on infants fed these foods showed that they "can be substituted at least in part for animal foods in the solid diet of weanling infants with no appreciable drawbacks on growth, digestibility, and nitrogen retention."

Note: The researchers seem to assume that animal-based protein sources are nutritionally superior to plant-based sources. Address: Aiiku Research Inst. of the Mother and Child, Tokyo.

2523. Standal, Bluebell R. 1963. Nutritional value of proteins of Oriental soybean foods. *J. of Nutrition* 81(3):279-85. Nov. [18 ref]
• ***Summary:*** Hawaii imports 680-907 metric tons/year of soybeans from the United States mainland and most of it is used for food. "Oriental soybean products are used daily by all nationalities in Hawaii. They constitute important items in the diet. All soybean products used in these islands, e.g., tofu, natto, miso, shoyu, and sprouts, are prepared from the matured beans by the methods used in Japan and China. A certain amount of the beans is grown locally and picked green for use as will be described later" (p. 279).

The commercial process for making each product is described. Concerning natto: "The preparation had a characteristic cheesy odor which attracted flies and apparently stimulated the appetite of rats. Agar smears of the preparation show that it contained an almost pure culture of gram-positive rods in long chains, without spore formation for 2 days at 31ºC. Three brands of natto were available."

The Net Protein Utilization (NPU) values, at 10% protein in the diet for rats, were determined to be: powdered whole egg (control) 90.4, *edamame* (green soybeans; "picked green and used as a vegetable") 72.2 (the highest of any soyfood in this study), tofu 65.0, [soy] bean sprouts 56.0, natto 44.4, and mung bean sprouts (*Phaseolus aureus* Roxb.) 35.6.

"Natto, which was prepared from matured soybeans, gave NPU and PER values below reported values for the matured beans. It is possible that a substance or substances were formed during the incubation process which contributed

© Copyright Soyinfo Center 2013

to lower values of NPU" (p. 283-85). Address: Dep. of Nutrition, Hawaii Agric. Exp. Station, Univ. of Hawaii, Honolulu.

• ***Summary:*** Naka-no-Ya Tea House (2100 Lincoln Park West) will prepare a Japanese dinner at your table. First they brink a large copper cauldron, called a mizu taki, to the table, together with a large platter of artistically arranged vegetables, beef, and chicken.

"Chicken brother was kept simmering in the mizu taki. Dexterously using chopsticks, one young woman placed small portions of pea pods, giant black mushrooms, bamboo shoots, spinach, soy bean cakes [tofu]. Japanese cabbage, and the meats into the liquid." After simmering for only a few minutes, they were served steaming hot.

Stanford Ave., Los Angeles, California 90013. Phone: 213-624-3615 or 624-9067. Owner: Mr. Shoan Yamauchi. This is the largest and probably the oldest tofu shop in the Western world; a modern factory.

Soya Bluebook. 1980. p. 55. Matsuda-Hinode Tofu Co., 526 S. Stanford Ave., Los Angeles, CA 90013. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Shoan Yamauchi. FIND/SVP. 1981, May. "The tofu market: Overview of a high-potential industry." p. 64. The company now makes about 20,000 lb/day of tofu.

2530. Chao, Buwei Yang. 1963. How to cook and eat in Chinese. 3rd ed. New York, NY: Random House. xxvi + 249 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index. 21 cm.
• ***Summary:*** This edition is quite similar to the original 1945 edition, except that it has some new front matter (such as introductions to the second [1949] and third revised editions), new pages added here and there plus 16 pages of recipes added between pages 228 and 229, and new cooking techniques. The page layout is basically unchanged, but when new pages were added, they were numbered 160a, etc; thus the contents of page 203 is identical in all editions.

A new table (p. 29) lists widely used Chinese foods and seasonings in four columns: Chinese characters, Mandarin, Cantonese, and English. Soy related ingredients (in English, Mandarin, and Cantonese) are: (4) Oyster sauce: hao-yu, hou-yau. (6) Soy sauce (1): chiang-yu (M). Soy sauce (2): shi-yau (C). Soy sauce (3): ch'au-yau (C). (7) First quality soy sauce: sheng-ch'ou (M), shang-ch'au (C). Note 1. The first character means "fresh" or "live."

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "sheng-ch'ou" (Mandarin) or the term "shang-ch'au" (Cantonese) or the term "chü-yau" to refer to a type or grade of Chinese soy sauce."

(8) Flour jam: t'ienmien-chiang (M), t'inmin-cheung (C). (9) Bean sauce: Yuanshih chiang (M), yünshi-cheung (C). Note 3. The middle character (shih / shi) refers to fermented black soybeans. (10) Hoisin sauce: haihsien chiang (M), hoisin-cheung (C). Note 4. This is the earliest document seen (April 2012) that mentions Hoisin sauce.

However, among the new pages added, there is a nice new chapter 22 titled "Soybean Foods" (p. 228c-228h). Its

© Copyright Soyinfo Center 2013

contents: Introduction and Buddhist mock meats. Homemade tofu: Equipment needed (electric blender, form for setting), ingredients (curded with gypsum), grinding and straining, heating and setting, forming, bean curd recipes. Homemade soybean milk. Using soybean lees (okara; dregs are the leftovers you throw away and lees are those you keep). Frozen bean curd. Soy sauce beans [Soybeans baked in soy sauce]. Preserved soybeans: Homemade fermented black soybeans with salt, ginger, and optional hot chili powder or hot red pepper.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Preserved soybeans" to refer to fermented black soybeans.

The introduction (p. 228c) states: "Under various guises the soybean is used in vegetarian restaurants, often under Buddhist auspices, to produce sumptuous dinners, featuring "sliced chicken breast," "roast duck," "baked ham," that not only fool the eye, but also the tongue, almost, but as always, I want to concentrate on the important, everyday things and de-emphasize the fancy and elaborate. Dishes with bean curd are cheap and easy to prepare. Those who can afford fancy dishes can combine it with meat, etc., but just plain cabbage and bean curd connotes home sweet home."

Pages 158-59 contain 3 new soy-related recipes: Fried bean curd. Oyster sauce friend bean curd. Sweet-sour fried bean curd.

Recipe 14.27 (p. 155-56), titled "Red-in-snow stirs fava beans" begins: "Horse beans look like lima beans but are not. They are also called Fava beans and frequently sold by Italians. In China they are known as 'silkworm beans.'" Address: Berkeley, California.

2531. Chaves, Nelson. 1963. Proteínas vegetais e trópicos [Vegetarian and tropical proteins]. Recife, Brazil: Imprensa Universitária. 151 + 5 p. Illust. Series: Coleçao nordestina, 2. [75+* ref. Por]

• ***Summary:*** Soyfoods and their nutritional value are discussed on pages 65-67, incl. soymilk (*leite de soja*), tempeh, miso, tofu, shoyu, and natto.

Note: This is the earliest Portuguese-language document seen (Sept. 2011) that mentions tempeh, which it calls "tempeh." Address: Universidade do Recife, Instituto de Fisiologia e Nutricao.

2532. Kagawa, Aya. 1963. Japanese cookbook: 100 favorite Japanese recipes for Western cooks. [14th & rev. ed.]. Tokyo: Japan Travel Bureau. 198 p. Illust. (some color). Index. 19 cm. Series: Tourist Library No. 11.

• ***Summary:*** The first edition was published in 1949. This is actually the 2nd ed., which is 36 pages longer. Most of the information about soyfoods in the 1st edition is also in this 2nd edition, but often on different pages: Several examples: Long passage about soybeans and soyfoods (p. 16). Glossary (soy entries, p. 40-42). Nameko miso soup (p. 81). Miso-shiru (introduction, p. 82). Tofu and Japanese leek soup (p. 89). Four kinds of miso soup (p. 90-92).

The last two pages in the 1963 printing are devoted to full-page ads: (1) "Zest that's best with Kikkoman." "Brewed by Noda Shoyu Co., Ltd., Tokyo, Japan. Sole agent in U.S.A.: Kikkoman International Inc., 900 Marin St., San Francisco 24, California. 930 San Mateo St., Los Angeles, Calif. 11-31 31st. Ave., Long Island City 2, New York." Photos show a can and a bottle of Kikkoman All-Purpose Soy Sauce.

(2) "Try Aji-no-Moto: The super seasoning." "Just add a pinch of Aji-no-Moto before, during, or after cooking and see how it unlocks those hidden flavors in all foods–raw, cooked, dried, canned, or frozen." An illustration show an Italian chef with a white chef's hat (*toque blanche*), moustache, kerchief, and upward pointing right index finger. Illustrations show a small glass shaker and a metal can of Aji-no-Moto.

Aya Kagawa was born in 1899. Address: M.D. and president of Joshi Eiyô Tanki Daigaku (Women's Nutrition College), Tokyo, Japan.

2533. Kan, Johnny; Leong, Charles L. 1963. Eight immortal flavors. Berkeley, California: Howell-North Books. 246 p. Illust. (by Jake Lee). Index. 24 cm. 2nd edition 1980.

• ***Summary:*** An interesting book, by a master cook and an excellent researcher and writer. Full of new and useful information.

From the publisher's description: "This is the first cookbook–written by a Chinese-American to emanate from San Francisco's Chinatown–the mecca for both Oriental and Occidental gourmets. It is the only cookbook dealing strictly with Cantonese cookery." The Foreword, written by the famous food writer James Beard (of New York City) in Oct. 1963. notes that he grew up in Portland, Oregon, and was a close childhood friend of the Kan family and of their cousin Johnny Kan, who came to visit from San Francisco's Chinatown [in California]–a "city within a city." Kan's mother was an excellent and ingenious cook. Beard considers Kan's Restaurant "the outstanding Chinese restaurant today."

The "Eight Immortal Flavors" of Chinese cookery are *Hom*–salty. *Tom*–bland (like rice). *Teem*–sweet. *Seen*–sour. *Foo*–bitter. *Lot*–hot (as in chili peppers). *Heong*–fragrant (smell more than taste). *Gum*–golden (as in citrus peel or kumquat). They are always referred to in this order. Note 1. In Western cookery there are only four traditional flavors–sweet, sour, salty, and bitter. The Japanese add a 5th, "umami."

The chefs and cuisine of Kwangchow (the ancient name for Canton, now spelled Guangzhou) are considered the finest in all of China (p. 28).

The chapter titled "Native condiments, sauces, and ingredients" (p. 43-55) includes: Bean curd (*Dow Fu*)*:* "One of the most useful of Chinese ingredients," it is usually pressed into ½-inch by 3-inch squares. Bland in flavor, it is

© Copyright Soyinfo Center 2013

a great mixer for highly flavored foods. "It is even delicious in its fresh state with spicy condiments and is known as 'the meat without bones."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term *Dow Fu* (regardless of capitalization or hyphenation) to refer to Chinese-style tofu.

Black [soy] bean, Dried (*Woo Dow*).

"Soybean skin (*Foo Jook*)*:* Dried skin of soybean milk. Sold in packages, it is flat and thin, with a creamy-glaze appearance. Soak it before using in soups, or in smother-cooking recipes." It has an enjoyable chewy texture and slightly nut-like flavor.

"Soybean skin, sweet (*Teem Jook*)*:* Similar but thicker than *Foo Jook*, its taste is slightly sweeter."

Illustrations (p. 46-47) show: Soy bean skin (foo jook). Bean curd (dow foo).

Condiments (p. 51-54)–"Black beans, salted (*Dow see*)*:* Cured, fermented small black beans... Should be soaked briefly and washed before use. A common use is to mash beans with garlic, creating a seasoning popular for both seafood and meats."

Monosodium glutamate (*Mei Jing*)*:* This flavor accent powder had its origin centuries ago in old China. "A charming story, which we like to believe, involved a contest in which several monks with gourmet tastes competed with each other to produce the most delicious batch of *Loh Han Jai*, the standard monks' food consisting of a variety of various vegetarian ingredients... The winner had added one precious secret ingredient the others did not have–a powdered dried seaweed [*konbu, Laminaria japonica*] which was later discovered to be the first crude source of monosodium glutamate. It was not until 1908 that Dr. Kikunae Ikeda, the great Japanese scientist successfully extracted Glutamic Acid from edible seaweed and from it crystallized monosodium glutamate and marketed it under the name of *Aji-no-Moto.* Then in 1921 Chinese scientist Poo-Nien Wu of Shanghai developed a process for extracting monosodium glutamate from wheat protein and was marketing his discovery, Ve-Tsin, in China, Singapore, Malaya, and the Philippines to the amount of 350,000 pounds a year. Other raw material sources are corn, soybean protein, and desugared beet molasses.

Sauces (p. 54-55)–Bean sauce (*Min See Jeung*)*:* A brown salty bean paste. Oyster sauce (*Ho Yow*). Red seasoning sauce (*Hoy Sin Jeung* [*Hoisin Sauce*])*:* A thick red sauce that contains soybeans as an ingredient. "A table condiment for Peking duck."

Spiced red bean curd (*Nom Yee*)*:* "A variation of bean cake fermented." It has a slightly harder consistency, a brick-red color, and a pungent, aromatic flavor.

Soy sauce (*See Yow*)*:* "For Chinese cooking, soy sauce is the great all-purpose and most indispensable of all sauce." There are many grades and types. "For the 'red cooking' method, ingredients are incarnadined by the dark sauce. It may be used as a table dip, by itself, or mixed with mustard." Unlike salt, it has "the taste of a beef essence." It is made by the fermentation of cooked soybeans, roasted wheat, a yeast mold and salt. The best grades of Chinese soy sauce are still made by the old-fashioned, aged, natural fermentation process, rather than by the quickly made chemical hydrolysis method [HVP soy sauce]. The type know as *Sang Chau,* light and color and density, is the premier kind for flavoring and dipping." But unless you ask for it by name, "you will get the darker soy sauce or *See Yow.* There is no definitive record of the origin of soy sauce. "Reference to the sauce has been made as early as the Chou Dynasty [1045-256 BC], some 200 years before Christ!... Undoubtedly since its very origin soy sauce has been made in the home or as a village industry. As a manufactured product it started in 1688. With its long condimentary life, no wonder that, to the Chinese, soy sauce is the Sauce of Life."

Note 3. This is the earliest English-language document seen (April 2012) that uses the term "Sang Chau" to refer to light Cantonese soy sauce."

Vegetables (p. 81-87): Bean sprouts (*Ngah Choy*)*:* This common and inexpensive little vegetable is overused in some Chinese restaurants as a "filler." The name "literally means 'vegetable for the teeth,' implying a crunchy sensation. Bean sprouts are tiny shoots which grow from the soy bean. They are one of the trio of basic Chinese foodstuffs–bean sprouts, bean curd and soy sauce–derived from the wonder bean. The sprouts average two inches long, are opaque white and the bean head is yellow... Another variety of bean sprouts, germinated from a larger type of bean, is the Dow Ngah, or Big Bean Sprout. This variety grows a little longer, with a larger golden head, and the sprout is crunchier, but has a more raw 'beany' flavor. This variety is not used in Chinese restaurants."

Soy-related recipes: Spinach with foo yee sauce (Baw choy foo yee, with "2 preserved bean cakes (*Foo Yee*) mashed with 2 teaspoons juice from jar," p. 89). Shows how "any commonplace vegetable can be turned into an epicurean dish by simply adding preserved bean cake" [fermented tofu] and a touch of garlic. Try it "and you will discover why Foo Yee is often referred to as the miracle ingredient among Chinese condiments."

Bean cake sauteed with meat (Dow foo yuke, with "8 bean cakes (*Dow foo*). Slice each bean cake into 6 pieces," p. 99). Fresh asparagus chicken with black bean sauce (Lei soon gai kow, with "1 full tablespoon mashed fermented black beans (*Dow see*), combined with 1 clove mashed garlic and 1 tablespoon soy sauce, with a dash of monosodium glutamate," p. 100).

Note 4. This is the earliest document seen (Nov. 2011) that uses the term "black bean sauce" and clearly shows how to make it in the kitchen as part of preparing the dish.

Chinese cabbage with foo yee sauce (Siew choy foo yee, with "2 fermented bean cakes (*Foo Yee*) with 2 teaspoons

© Copyright Soyinfo Center 2013

juice from the jar," p. 107). Mustard greens with foo yee sauce (Gai choy chow foo yee, with "2 fermented bean cakes (*Foo Yee*) mashed with 2 teaspoons juice from the jar," and 1 teaspoon soy sauce, p. 109).

Steamed salmon with black bean sauce (Dow see jing sah-mon yee, with "2 tablespoons fermented Black Beans (*Dow See*), crushed to paste," p. 131). Prawns with black bean sauce (See jup hah kow, with "2 tablespoons Black Bean Paste (*Dow see*), p. 133). Steamed fish with black bean sauce (Dow see seen gee jing yee, with "2 tablespoons fermented Black Beans (*Dow see*), crushed to a paste," p. 141).

Dried oysters with bean curd skim (Ho see munn foo jook, with "6 sheets Bean Curd Skim (*Foo jook*) pre-soaked in cold water for 2 hours. Drain thoroughly. Cut in 2 to 3-inch pieces." p. 143).

Note 5. This is the earliest document seen (Dec. 2010) that uses the term "Bean Curd Skim" to refer to dried yuba sticks. Continued. Address: 1. Chef, Chinatown; 2. Historian of Chinese life in America.

2534. Kan, Johnny; Leong, Charles L. 1963. Eight immortal flavors (Continued–Part II). Berkeley, California: Howell-North Books. 246 p. Illust. (by Jake Lee). Index. 24 cm. 2nd edition 1980.
• ***Summary:*** Continued from page 146. Fish stuffed in bean cake (Jow yeong dow foo, with "8 square Bean Cakes (*Dow Foo*)," p. 146). Chicken wings with black bean sauce (See jup gai yik, with "¼ cup fermented black beans (*Dow See*). Rinse, drain and crush," p. 158). Soy sauce chicken (See yow gai, with "10 cups soy sauce," p. 170). Red bean curd chicken (Nom yee gai, with "2 tablespoons spiced red bean curd (*Nom Yee*),... 3 tablespoons soy sauce," p. 171). Soy squab red fried (Hoong siew bok opp, with "2 quarts soy sauce," p. 174). Taro root duck with nom yee sauce (Nom yee woo tow opp, with "1 square red bean cake (*Nom Yee*), mashed," p. 184).

Spareribs with black bean sauce (See jup pai gwut, with "2 teaspoons fermented Black Beans (*Dow See*), crushed into paste, p. 192). Spareribs with red bean cake sauce (Nom yee pai gwut, with "2 tablespoons Red Bean Cake (*Nom Yee*)," p. 193).

Winter chafing dish (Dah bin lo, with "Pure soy sauce (*Sin Cho*) devoid of caramel coloring {soy sauce, (*See Yow*), contains caramel coloring} and with "2 squares of bean cake [tofu] cut in cubes, p. 212-13).

Note: In 1953 Johnny Kan opened his de luxe Kan's Restaurant at 708 Grant Ave. in San Francisco, California. Address: 1. Chef, Chinatown; 2. Historian of Chinese life in America.

2535. Keys, John D. 1963. Food for the emperor: recipes of Imperial China with a dictionary of Chinese cuisine. Los Angeles, California: Ward Ritchie Press. xxii + 121 p. Introduction by Kee Joon. Illust. Index. 18 x 18 cm.
• ***Summary:*** See the edition published this same year by Gramercy Publishing Co., New York, NY. Address: San Francisco.

2536. Keys, John D. 1963. Food for the emperor: recipes of Imperial China with a dictionary of Chinese cuisine. New York, NY: Gramercy Publishing Co. xxii + 121 p. Introduction by Kee Joon. Illust. Index. 18 x 17 cm.
• ***Summary:*** This book is about the Mandarin or Peking school of Chinese cooking. Contents: Introduction, by Kee Joon. Food for the emperor (recipes; for each recipe is given the name written vertically in large Chinese characters, the Cantonese transliteration of that name, and the English translation of that name. On some left-hand pages are short translations from old books related to food). A dictionary of Chinese cuisine (arranged alphabetically by English name of food). Index to the recipes (by recipe type, and within that by English recipe name).

Almost all recipes in this book are based on meat, fish, or poultry. There are no soy-related recipes in this part of the book, although many recipes call for "soya sauce."

The Dictionary includes: Bean curd (dou foo, with 2 recipes). Bean curd cheese [fermented tofu] (the two varieties are white bean curd cheese {foo yoo} and red bean curd cheese {narm yoo}). Bean curd, dried (tim jook [sweet dried yuba; also spelled tiem jook]).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term *tim jook* to refer to sweet dried yuba.

Bean filling, sweet (*doe sha*, made from black soya beans, sugar, and a little oil. "This paste is available in Chinese bakeries, and is used in New Year's cakes and other sweet pastries").

Note: This is the earliest document seen (March 2011) that uses the term "Bean filling, sweet" to refer to a sweet paste, made of black soybeans, that is used as a filling like for cakes, like sweet red bean paste [azuki bean paste].

Bean sauce–see Soya bean condiment. Black bean sauce–see Soya beans, black fermented. Black beans–see Soya beans, black fermented. Brown bean sauce–see Soya bean condiment. Cheese, red–see Bean curd cheese. Fermented black beans–see Soya beans, black fermented. Red bean sauce (sharng she jerng; a popular canned cooking sauce consisting of mashed red soya {or often azuki} beans). Red cheese–see Bean curd cheese. Seaweed (purple laver, hair seaweed). Sesame oil (jee ma yo). Sesame seeds (jee ma).

Soya bean condiment (yewn she jerng. "Variously called soy jam and brown bean sauce, this condiment is prepared from the residue left when making soya sauce. Wheat is sometimes added to the condiment, which is fermented and then called Meen She Jerng. These condiments are most commonly use in cooking fowl; also in meat dishes).

© Copyright Soyinfo Center 2013

Soya beans, fermented black (doe she. "Tiny fermented beans which are washed, crushed, and used to add a pleasant spiciness to dishes. They are often used in fish dishes to alleviate any strong smell. It is a prime ingredient in Cantonese lobster").

Note: "Black bean sauce" is not explained here, as expected.

Soy jam–see Soya bean condiment. Soya sauce. "The general term in Cantonese for soya sauce is She Yo. There are three main subdivisions: (1) Shang cho: Light brown, fine taste, light color. Used in cooking delicate foods were a heavy soya flavor is not desired. (2) Cho yo: Dark and thick, containing molasses, yet not too strong a taste. Used mostly in restaurants. (3) Jew yo: Most suitable for general cooking purposes and for use at the table. Also: Japanese soya sauce, which is prepared with the addition of malt [koji], is much respected by the Chinese."

Sweet-sour sauce: The recipe, which is given, contains 1 teaspoon soya sauce.

Sweet vegetable sauce (hoi seen jerg [hoisin sauce]). "A canned red sauce prepared from soya beans, red rice, and garlic. It is used in preparing Peking Roast Duck, fish and shellfish dishes."

"Tomato Catsup: Tomato catsup originated in China, as can be seen from the pronunciation of the Cantonese (Kair = tomato; Jup = sauce). Used in some braised dishes such as Shrimp Braised in Tomato Sauce." Address: San Francisco.

2537. Lager, Mildred; Jones, Dorothea Van Gundy. 1963. The soybean cookbook: Adventures in zestful eating. New York, NY: Devin-Adair Co. xiv + 240 p. Foreword by Ruth Stout. Index. 22 cm.

• ***Summary:*** The copyright page states: "Note: This is a revised and updated version of a privately printed book, *How to Use the Soybean,* by Mildred Lager which was first printed in 1955 and reprinted in 1959." This lacto-ovo-vegetarian cookbook contains over 350 recipes, including 72 tofu recipes.

Contents: Preface to 1955 edition. Preface to 1963 edition. Part I: The versatile soybean. History of the soybean. Nutritional value. Abbreviations and special terms. Soup to nuts: Introduction, green soybeans [green vegetable soybeans], dry soybeans, roasted soybeans, sprouted soybeans, the cow of China–soy milk (kinds of soy milk), "the meat without a bone"–tofu or soy cheese, the little giant among protein foods–soy flour, soy grits and bits (puffed grits), soy oil and soy butter, meat replacement foods, sandwich spreads, malts, coffee substitutes, soy sauce, other soy products (soy albumen, Glidden's product that contains on a dry basis 96.6% protein [soy protein isolate]).

Part II: Soybean recipes. Green soybeans. Dry soybeans. Roasted or toasted soybeans. Sprouted soybeans. Meat replacement dishes. Soy noodles, macaroni, and spaghetti. Sauces and gravies. Soy soups. Salads. Soy spreads and soy butter ["a butter resembling peanut butter may be made from finely ground soybeans or soy flour... Roasted soy butter is made from the roasted beans that have been ground into a fine flour."]. Soy milk. Tofu or soy cheese. Soy cereals and breakfast dishes. Soy desserts. Soy candies. Soy flour breads: Full-fat soy flour, low-fat or fat-free soy flour. Pastry. Cookies. Cakes. Extra tips. Appendix. Menus.

The chapter titled "History of the Soybean" (p. 3-7) discusses: W.J. Morse and the U.S. Department of Agriculture, Dr. J.A. LeClerc, the American Soybean Association (which has held a national convention every year since it was founded in 1920), its publication *Soybean Digest,* Henry Ford and his work with both industrial and edible soy products, T.A. Van Gundy, Harry W. Miller, M.D., Dr. Clive McCay of Cornell University (Ithaca, New York), and the Sept. 1961 Conference on Soybean Products for Protein in Human Foods (held at Peoria, Illinois).

Concerning T.A. Van Gundy we read (p. 5): "The father of one of the authors, T.A. Van Gundy, became interested in the nutritional value of soybeans while attending the World's Fair in San Francisco in 1915, where they were featured in the Oriental exhibits. Upon going home he purchased some soybeans and began experimenting in them. As far as we know he was the first person on the Pacific Coast to develop a line of commercial foods from this wonder bean. By 1927 he had developed a number of palatable products which he manufactured and sold through health food stores. Soybean foods were virtually unknown at this time, and it took courage and perseverance to put them across."

Recipes for "Soy Ice Cream" (p. 175-76) now include vanilla, maple nut, orange, and strawberry flavors. A recipe for "Granola" (p. 161) calls for 1 cup soy flour. The rest of the ingredients (such as wheat and barley flour) appear to be similar to those found in the earliest granola recipes of the mid-1800s. Address: Southern California.

2538. Mei, Yu Wen; Adams, Charlotte. 1963. 100 most honorable Chinese recipes. New York, NY: Thomas Y. Crowell Company. xi + 140 p. Illust. by Wen Mei. Index. 24 cm.

• ***Summary:*** Contents: Introduction. Chinese ingredients. Chinese cooking utensils and Western equivalents. Some tips on Chinese cookery. Menu for a Chinese dinner party. Daily dishes. Cold wine dishes. Hot wine dishes. Main dishes. Soups. Rice dishes. Desserts. General recipes. Mail order shops. Geographical locations of honorable recipes.

This is a collection of the greatest classical recipes of China. All five major "schools" of Chinese cooking are represented: Shanghai, Peking, Yang Chow (120 miles northwest of Shanghai; pinyin: Yangzhou; Wade-Giles: Yang-chou), Szechuan, and Canton. Yu Lin Chuan, one of Old China's most renowned restaurateurs, has selected these recipes, all of which were translated by his daughter, Yu Wen Mei, and carefully tested by Charlotte Adams–to ensure ease

© Copyright Soyinfo Center 2013

of preparation by American homemakers.

The chapter on "Chinese ingredients" describes the following soy-related ingredients: Agar-agar, bean curd (fresh, or fermented), Hoisin sauce, laver (seaweed), red beans [azuki] (tiny beans used for making sweet bean paste), sesame oil, soy bean paste (very salty, or lightly salted). Hoisin sauce is "A delicious, thick, dark-brownish-red condiment, often used as an ingredient in cooked dishes, also as a side-dish sauce for dipping" (p. 2).

The chapter titled "Some tips on Chinese cookery" states (p. 7). Peanut oil is the preferred type of oil. If food is truly fine, "there is no reason whatsoever to add monosodium glutamate to it, and you will note that it is required in none of the recipes." "We strongly suggest that you buy imported soy sauce by the quart. The soy sauce made here is much saltier than that which comes from Hong Kong, and its use therefore alters the recipes." Many recipes are seasoned with soy sauce or soy bean paste

Soy-related recipes: Shrimp and bean curd (Yang Chow; p. 24). Crabmeat and bean curd soup (p. 94). Shrimp ball, ham, and bean curd soup (p. 103). Red roast pork (Yang Chow, with soy sauce; p. 113). Almond bean curd (Peking; p. 121). Red bean paste I and II (p. 127-28). Address: New York City.

2539. Rombauer, Irma S.; Becker, Marion Rombauer. 1963. Joy of cooking. Indianapolis/New York: Bobbs-Merrill Co. [x] + 849 p. Illust. by Ginnie Hofmann and Ikki Matsumoto. Index. 24 cm.
• ***Summary:*** One of the great American cookbooks. A classic and an all-purpose cookbook, this is the earliest known authorized edition prepared by Marion Rombauer Becker–who transformed the book. Irma, her mother, died in 1962.

Soy-related recipes: Chop suey or Chow mein (with soy sauce, p. 229-30). Soybeans, green (p. 260). Shrimp teriyaki (with "½ cup pineapple juice" and "2 to 4 tablespoons soy sauce"–but no recipe for teriyaki sauce, p. 377). Sukiyaki (with "½ cup 3/4-inch squares bean curd: Tofu" and "2 cups bean sprouts or cooked, drained Shirataki," p. 402).

Vegetable milks (incl. soy bean milk, almond milk, p. 487-88). About non-wheat flours (incl. soy flour, corn meal, rice flour, rye flour, potato flour, tapioca and sago flour, arrowroot flour or starch, barley flour, cotton seed flour, peanut flour, oat flour and oatmeal, bean flour, p. 498-501). About commercial sauces (incl. soy sauce and Worcestershire sauce, p. 542. Note: Soy sauce is not mentioned as an ingredient in Worcestershire sauce). Cornell Triple-Rich flour formula (with 1 tablespoon soya flour, p. 556).

Also discusses Whole-grain or Graham flour (p. 498). And how to make "coconut milk" and coconut cream. "Coconut milk and cream are very sensitive to high heat. For this reason they are added to hot sauces at the last minute or are cooked over hot water." They are prized in curries [and many Indonesian tempeh recipes].

Note: There is no entry for "Sprouts" (or "soy sprouts") in the Index. However there is an entry for "Bean sprout, salad, p. 80; cooked, p. 259." On page 80 the recipe titled "Oriental beans sprout salad" calls for "1 cup drained bean sprouts." On page 259 the recipe for "Cooked bean sprouts" calls for "4 cups sprouted beans, Mung or edible soybeans or lentils."

2540. Tanaka, Heihachi; Nicholas, Betty. 1963. The pleasures of Japanese cooking. Englewood Cliffs, New Jersey: Prentice Hall, Inc. viii + 247 p. Illust. Index. 22 cm.
• ***Summary:*** Contents: Introduction. 1. A chat about Japanese food: Seasonings and flavorings, table settings and utensils, kitchen utensils, etiquette, cooking and serving a Japanese meal. 2. Appetizers. 3. Soups. 4. Broiled dishes. 5. Steamed dishes. 6. Saucepan foods. 7. Fried foods. 8. Salads. 9. Vegetables. 10. Rice and noodle dishes. 11. Thirst-quenchers. 12. Desserts. 13, Festival foods. Glossary [of Japanese foods and utensils]. List of retail outlets for Japanese food products (national chains and alphabetically by state in the USA).

The book begins (p. 1): "To many Westerners, the cuisine of Japan consists almost entirely of *sukiyaki*, *tempura*, rice and soy sauce. Nothing could be further from the truth."

Vegetables "are harvested at the height of their season," when tender and full of flavor, then cooked lightly and used (for example) "as an ingredient in *misoshiru* (thick soup [miso soup]) or pickled" (p. 3).

"If one were to single out the most important vegetable cultivated in Japan it would be the soybean. For this legume,... is such a versatile food that it is served in some manner at practically every Japanese meal.

"In the hilly interior of the country where fish is scarce, or in the vegetarian menus of the Buddhists, soybeans are called the 'fish of the field' and relied upon as a valuable source of protein. A favored way of preparing the green soybean is simply to boil and hull it. Dried soybeans are ground [sic], soaked in water, cooked and mashed, sieved through silk, and finally cooked again to produce bean curd or *tofu.*

"Steamed and fermented beans become *natto. Miso*, a bean paste made by boiling soybeans, mashing them, adding wheat ferment [sic] and salt and allowing this mixture to ferment for several months, lends itself to use in countless dishes. *Moyashi*, the tender young sprouts of the soybean, are cultivated on indoor racks to conserve precious space in the fields." In a few days, a single cup of soybeans will produce 3-4 pounds of succulent sprouts (p. 3-4).

"Queen of Japanese seasonings is *shoyu* or soy sauce, a dark, red-brown. thirst-provoking liquid made from wheat or barley, soybeans, salt and water. *Shoyu* is loved by the Japanese for its piquant flavor and its use is so extensive that almost no dish is conceivable without it." A brief history of

© Copyright Soyinfo Center 2013

shoyu and its forerunner, *hishio,* and the process for making shoyu are given. Shoyu "mash is allowed to ferment and mature naturally for a full eighteen months when it is pressed and the sauce obtained pasteurized to become refined *shoyu.*

"Another multi-purpose seasoning and foodstuff is *miso,* a paste made from fermented rice and soybeans." Most miso "lasts for years without spoiling or deteriorating. There are two types of *miso*–red and white. Both are widely used in Japan but western palates seem to prefer the white type. Both are highly nutritious and are used in literally hundreds of ways: as a seasoning, a main dish and the basis of many hearty, potage-type soups" (p. 5-6).

"For centuries [sic] Japanese cooks have used a dashi of *aji-no-moto,* a seaweed or vegetable protein derivative, to intensify the natural flavors of the foods they cooked. Translated, *aji-no-moto* means 'essence of taste' (it is often referred to as taste powder) because the minute white crystals heighten the inherent flavors of foods,... but lending no flavor of their own" (p. 6).

Yakimono are broiled foods. "Flavor broiling includes *yakitori* (broiled chicken), *teriyaki* (fish marinated in a sauce containing shoyu and then broiled),... Miso-broiling is used for such vegetables as eggplant as well as for fish or meat" (p. 13).

"Inasmuch as *shoyu,* or soy sauce, is such an all-important seasoning and is called for in almost every Japanese recipe, it should be noted that the use of genuine *shoyu* is quite essential. Most other soy sauces, while excellent for other types of cuisine, really don't do justice to Japanese cooking" (p. 19). Also discusses wasabi, sesame seeds, sesame oil, katsuobushi, konbu, sake, and various mushrooms (p. 20-22).

"*Tofu,* or soybean curd, is such a versatile foodstuff–it may be boiled, fried, steamed, sautéed or marinated–that it is included as an ingredient in many recipes in this cookbook. Fresh *tofu* is sold in cakes; refrigerated, it will keep about one week. It is also available in cans and, while the processed product is not quite as tender as the fresh, it does make a satisfactory substitute. The consistence of *tofu* resembles thick custard and it should be handled carefully to avoid breaking and crumbling. Western taste buds seem to find *tofu* bland and a bit flavorless, but when deftly sauced it is very delicious–and also nutritious. Note: *tofu* must not be overcooked or it will toughen and develop a rubbery texture" (p. 24).

Recipes include: Norimaki-Sushi (with nori, shoyu, and sashimi). Tiny teriyaki (ingredients: 2 pounds beef tenderloin, 1 cup shoyu, 3/4 cup water, ½ cup mirin, 3/4 cup honey, 1 clove garlic, crushed, and 1 one-inch piece fresh gingerroot, grated; p. 46). Liver tsukudani (with shoyu; p. 55). Fish and tofu stew (p. 69). Oyster miso (p. 71). Vegetable and noodle miso (p. 72). Shrimp or prawn miso (p. 73).

Chapter 4 is titled "Broiled foods." "... almost all cooking in Japan is done over a charcoal fire,..." "Without a doubt, the most popular of all broiled dishes with the Japanese people is *yakitori,* or broiled chicken... Almost as popular as *yakitori* is *teriyaki,* usually fish marinated in a *shoyu* sauce, arranged on long skewers, and then broiled over charcoal. *Teriyaki* means 'glaze broiled'–*teri* meaning 'shiny' and *yaki* 'broiled' or 'roasted.' Actually any meat may be *teriyaki,"* but all have in common "the marinade of shoyu, sake, and sugar" (p. 75-76). Recipes include: Salmon teriyaki. Shrimp teriyaki. Stuffed beef teriyaki (p. 88-90). Shoyu marinade basting sauce (p. 93). Sukiyaki (with tofu and shoyu; p. 110). Tempura sauce (with shoyu, p. 121). Fried tofu with sauce (p. 127). Pickled seaweed (with konbu and shoyu, p. 140). Sesame-shoyu dressing (p. 151). Vegetables with tofu sauce (p. 154). Cabbage with mustard-miso sauce (p. 157). Eggplant with miso sauce (p. 164). Azuki meshi (red beans and rice; p. 181). Domburi soboro (with tofu; p. 182-83). "Red bean paste (sweetened)." Ingredients: "2 cups red beans (azuki). 2 cups sugar. 2 teaspoons salt." (p. 203.) Also called "sweetened red bean paste" (p. 200; Jap. *azuki an;* p. 200-203). Yokan (with "1½ cups strained red bean paste"–*koshi-an;* p. 204). Hikishamanju (Bean jam buns with strained red bean paste; p. 207). Shiruko (Red bean soup [azuki] with rice cakes {mochi}; p. 209). Zoni (Rice cake soup, with mochi; p. 215-16). Sweetened soybeans (for New Year's, p. 217-18).

The glossary includes abura-age, azuki ("red beans"), azuki-an ("red bean paste"), daizu (soybean), ganmodoki, kanten, konbu, konnyaku, miso (aka miso, shiro miso), misoshiru, mochi, mochigome, mochiko, nori, shiru-miso, shoyu, teriyaki, tofu, wakame, yakidofu.

Note: This is the earliest English-language document seen (March 2006) that uses the term "sweetened red bean paste" to refer to sweet azuki bean paste [*azuki-an*] or that uses the term "strained red bean paste" to refer to strained azuki bean paste [*koshi-an*]. Address: 1. Head Chef, Japanese Cuisine, Japan Airlines.

2541. Teriyaki and sushi: Selected 72 recipes. 1963. Elmsford, New York: Japan Publications Trading Co. 58 p. Illust. Index. 21 cm.

• ***Summary:*** On title page: "Compiled by the Japanese cooking companions." The 12th printing was Jan. 1976. Contents: Rice dishes (incl. How to cook delicious sushi rice, oshi zushi, norimaki). Vermicelli dishes (incl. tsukejiru, kakejiru, somen, soba, udon). Soups. Broiled dishes (inc. teriyaki). Marinated dishes. Boiled dishes. Steamed dishes. Fried dishes. Casseroles. Tart dishes. Pickles. Confectionery. Glossary. Note: Brands promoted in the recipes throughout this book, by appearing in large boldface type, are: Kikkoman soy sauce. Aji-no-Moto, Manjo mirin (sweet rice wine).

Soy-related recipes include: Kenchin-jiru (with "½ tofu (bean curd) (1/3 lb)," p. 17). Miso soup (with 4 tbsp. bean

© Copyright Soyinfo Center 2013

paste (miso)" and "2 aburage," p. 19). Konnyaku (devil's tongue) and carrots with white bean curd paste dressing (with tofu, p. 29-30). Bean curd with liquid starch (with tofu, p. 32). Meat and vegetables in aburage-bags (with "2 large aburage, p. 34). Bonito cooked with bean paste (with miso, p. 35). Steamed squid ("stuffed with tofu and vegetables," with "1 tofu (bean curd)," p. 38-39). Sukiyaki (with "2/3 lb. broiled bean curd," p. 46). Yudofu (with "1 lb. bean curd," p. 47). Yosenabe (with "1/3 lb bean curd," p. 47).

Note 1: This is the earliest document seen (April 2013) that calls for the use of grilled tofu ("broiled bean curd") in sukiyaki. That is the standard way of making sukiyaki in Japan.

The recipe titled simply "Teriyaki" (p. 22) states: "Teriyaki is fish or meat marinated in a mixture of mirin and saké, sugar and soy sauce and roasted directly over fire. This method of roasting is most suited for oily fish, fish with thick meat, chicken and beef." The sauce contains: "2 tbsp. Kikkoman soy sauce, 2 tbsp. Manjo mirin, 1 oz. ginger, and sweetened vinegar (mixture of 1 tsp. vinegar, 1 tsp. sugar, and a few shakes of salt)" (p. 22-23).

The Glossary (p. 47) includes: "Aburage–fried soy bean curd. An–[azuki] bean jam [also called 'red bean jam' in index]. Miso–bean paste. Misozuke–pickles in bean paste. Tofu–bean curd. Yudofu–boiled soy bean curd."

2542. Yang, Hao-jan. 1963. The development and rational utilization of soybean. *U.S. Joint Publications Research Service. Translations from Communist China's Agriculture, Animal Husbandry and Materials* 41:39-51. Translated from *Ta Kung Pao* (Peiping), 11 March 1963, p. 3. [Eng]
• ***Summary:*** A general article about the problems connected with the utilization of soybeans as food, feed and for industrial purposes. Contents: Introduction. The functions of soybeans on the development of agricultural production. Several problems of the development of soybeans. The rational utilization of soybean resources.

Note: This "is a translation of an article by Yang Hao-jan (2799 3185 3544) in *Ta Kung Pao,* Peiping, 11 March 1963, p. 3." Address: China.

2543. Sklarewitz, Norman. 1964. Japan may seek freer trade with U.S. in annual joint review that opens today. *Wall Street Journal.* Jan. 27. p. 5.
• ***Summary:*** "Tokyo–Japan is worried about its economic prospects and may start pressing the U.S. for some special concessions." Inflation is a major concern, with the government's consumer price index up 20% from 1960. "Some illustrations: A cake of tofu bean curd, a staple of the Japanese diet, went up 20% in the past year alone." Imports exceeded exports and Japan ran up the 3rd largest trade deficit in its history. Address: Staff reporter.

2544. André, Émile. 1964. Sur l'utilisation des graines de soja dans l'alimentation humaine par les populations d'Extrême-Orient [On the dietary utilization of soya beans in the Far East]. *Oleagineux* 19(1):37-39. Jan. English-language summary p. XXVIII. [1 ref. Fre; eng]
• ***Summary:*** The author gives the results of his research on lipoxidase, initially inspired in early 1931 by a young Chinese student M. Kiawo Hou. He also discusses soymilk (lait de soja or téou-jou), tofu (fromage de soja or téou-fou), yuba (téou-fi), soy oil (huile de soja), soy sauce (tsing yeou [sic, tsiang yeou?]), miso (miso de soja), and soy sprouts (germes de soja). The residue from making tofu and soymilk (okara) is fed to poultry and pigs. Soya oil is made by an archaic process that is very inefficient. "The residue, not perfectly separated from the oil, is consumed by the poorer classes." Address: France.

2545. James, Isabel. 1964. Domestic science bureau. *British Vegetarian.* Jan/Feb. p. 37-39.
• ***Summary:*** The article begins with a question from a reader: "Can you please tell me something about the value and use of soya bean and soya flour?" The author gives a Bircher Benner recipe for Soya Pancakes (with soya flour), and notes that Soyolk and Hi-Soy soya flours are sold in Health Food Stores. The latter product is made by The British Arkady Co. Ltd. and is good for use in confectionery.

She then discusses soya milk and tofu. In the UK, Dr. Frank Wokes, of the Nutritional Research Centre, has done a great deal of work on the "preparation of a soya based vegetable "milk" that would be a suitable substitute for cow's milk and acceptable to children who could not take cow's milk. Largely as a result of this work *Velactin* is now available from Health Food Stores, made by Messrs. A. Wander Ltd." She then gives a recipe for home-made Soya Cheese (also known as Soybean Curd or Tofu), made from full-fat soya flour and coagulated with lemon juice.

She also mentions soya sauce and gives details on growing soya beans in England. "If the crop matures some of the green beans may be used in salads or as green vegetables." Address: B.A.

2546. André, Émile; Hou, Kia-Wo. 1964. La lipoxydase. Sa découverte dans le résidu de la préparation du lait de soja [Lipoxidase. Its discovery in the residue by-product of soybean milk production]. *Oleagineux* 19(3):187-93. March. English-language summary, p. XXVII. [Fre; eng]
• ***Summary:*** "The cheese called *Teou-fou* in China is somewhat consumed in Paris and the region surrounding it, where the number of Chinese restaurants is greater than one could believe." Of the total restaurants in this area, about 35 are Chinese restaurants, 10 at Vietnamese, and only 5 are Japanese. They are visited both by people of those countries and by western consumers who are curious to taste exotic foods. "There were, and still are, two or three shops in and around Paris, where tofu (fromage de soja) is prepared daily

and delivered to the restaurateurs who have ordered it. Mr. Kia-Wo Hou had friendly relations with one of the two established at Colombes and was able to easily procure the materials he needed."

Note: In about 1910 Li Yu-ying, a Chinese soyfoods pioneer, established a soyfoods manufacturing company named Usine de la Caséo-Sojaïne, at Vallées, near Colombes, outside of Paris. It is not clear how the current companies at Colombes are related to the earlier company. Address: 1. Conseil scientifique a l'R.H.O.; 2. Docteur es-Sciences de l'Universite de Paris.

2547. National Food Research Institute (Shokuryo Kenkyujo). 1964. Daizu tanpakushitsu shokuhin no bussei [Physical characteristics of soy protein foods]. *Shokuryo: Sono Kagaku to Gijutsu* (*Food: Its Science and Technology*) No. 7. p. 55-65. March. [Jap]
• ***Summary:*** Discusses soymilk, tofu, aburage, soy protein gel and curd, Gelsoy, isolated soy protein (bunri tanpaku). Address: Tokyo.

2548. Abe, Kumazo. 1964. Outlook for fewer tofu producers, more production. *Soybean Digest.* May. p. 48.
• ***Summary:*** "It is commonly believed that about 300,000 tons of soybeans are consumed yearly by the tofu industry in Japan. This consumption may be analyzed as follows according to the statistics announced by the Food Agency: In 1961 actual consumption of soybeans and soybean meal for production of tofu was recorded respectively at 271,100 tons and 30,000 tons, and consumption during 1962 was recorded respectively at 269,700 tons and 30,000 tons, or a slight decrease. But consumption in 1963 was estimated to total 285,100 tons of soybeans and 65,000 tons of soybean meal, indicating a considerable increase. Consumption in 1964 is expected to increase to 287,700 tons of soybeans and 70,000 tons of soybean meal.

"In terms of purely soybeans, the share of tofu in the consumption for food uses, which includes miso and shoyu, is about 60%. Of this consumption, about 10% is said to be Japanese soybeans and the remainder consists of imported soybeans, chiefly from the United States.

"Soybeans are mostly purchased by tofu producers from local grain dealers, but there are many cases of joint purchase by the Japan Tofu Association through trading firms on port of landing basis. There are also cases where the Prefectural Tofu Association makes purchase of about one-third of its yearly requirement on a long-term contract with the importing firm.

"It is commonly believed that there are about 50,000 tofu producers in the country, but their number changes from year to year according to the annual license statistics announced by the Welfare Ministry. They totaled 51,600 in 1960, but they were below 50,000 as of the end of June 1963.

"In Tokyo, tofu producers have increased by more than 200 as compared with 1959 due to population growth. But in Kagoshima there are 450 producers less than in 1959.

"Tofu producers are of such small scale that they have been considered as representative of small enterprises since olden times. A producer having four or five employees may be in the best class. But the scale of business has a tendency to become larger gradually as is shown from the decrease in the number of producers and the increase in consumption of tofu. Amalgamation has been taking place in various areas. Equipment is being mechanized and factories are adopting automation.

"On the other hand, production of bagged tofu increases year by year. Influential tofu producers in many areas have started its production, and enterprises in the other fields have also fixed eyes on its production and started." Address: President, Japan Tofu and Arburaage Assoc.

2549. Platt, B.S. 1964. Biological ennoblement: Improvement of the nutritive value of foods and dietary regimens by biological agencies. *Food Technology* 18(5):68-73, 75-76. May. [34 ref]
• ***Summary:*** The most common vitamin deficiency worldwide is probably riboflavin (B-2). The amount of riboflavin is increased in the preparation of various fermented foods. Riboflavin is synthesized by a wide variety of microorganisms, notably by a yeastlike organism, *Eremothecium ashbyii,* which has been grown with a high yield on wheat bran and on the refuse (*tou cha* [*okara*]) from the manufacture of soy bean curd (toufu).

"Riboflavin is also increased in the fermentation of a variety of seeds, notably the seed of the African locust bean (*Parkia filicoidea*)." Boil the seeds for 24 hours to soften the seed coats, then remove the coats. Boil the kernels again for about 2 hours, then set them aside, cover with leaves, and allow to ferment for 2-3 days. Pound the fermented mass into a paste, form it into small balls, then dry these in the sun. The resulting product, "which is found widely throughout West Africa, is known as *dawadawa* or *uri*, keeps well if properly dried, and may contain 0.2 to 0.8 mg riboflavin and 37% of protein" (Platt, 1962).

Note: No mention is made of soybeans being used to make dawadawa. Address: Prof. of Human Nutrition, London School of Hygiene & Tropical Medicine, London, W.C. 1, England.

2553. Wai, Nganshou. 1964. Soybean cheese. *Bulletin of the Institute of Chemistry* (*Taiwan*). *Academia Sinica* No. 9. p. 75-94. July. [5 ref. Eng]
• ***Summary:*** One of the best publications on fermented tofu, this work was supported by a grant (FG-Ta-100) from the USDA Agricultural Research Service. Contents: 1. Introduction. 2. Experimental. Microbiological investigations (using sufu made at 3 factories in Taipei, Taiwan. All three used the same strain of *Rhizopus chinensis*). Many photos (magnification to 70 x to 700 x) show *Rhizopus chinensis* var. *chungyuen, Mucor hiemalis* and *Mucor silvaticus.* Procedures and results. Analyses. 3. Discussion. Mucor is the preferred mold. Summary of newly developed method. Appendix: (1) History of tofu. History of sufu. The ancient process for making fermented tofu. Salting. Table showing five varieties of sufu and their nutritional composition.

"Soybean cheese (sufu) has been produced in China for many centuries." "Which kind of fungus is adaptable for the preparation of sufu is one of the keystone problems in studying this vegetable cheese." The mycelial mat, grown on the cubes of firm tofu, should ideally be white (or slightly yellowish white), and "the mycelial mat should be dense and tenacious so that a film will be formed on the surface of the 'pehtze' to serve as an envelope to protect the finished sufu from distortion in its shape. ('Pehtze' means the bean curd freshly grown with the fungus but not yet processed and aged to become sufu)" (p. 75).

In Taipei, Taiwan, sufu is made in three factories; all three used the same strain of fungi, which we will designate as *Rhizopus chinensis* var. *chungyuen.* Sufu is also made at home. "It is well recognized by Chinese housewives that when soybean curd is covered with rice straw it will at last become pehtze of sufu. This may be explained by the fact that a kind of fungus naturally inhabiting on the rice straw may have the chance to grow on bean curd under favorable conditions." Two strains of fungi were isolated from the rice straw: *Mucor heimalis* and *Mucor silvaticus.* Many photomicrographs of all three molds are shown. Kaoliang wine is preferred is the typical solution of 12% NaCl and 10% ethanol (generally added as rice wine or distilled liquor) (p. 76-83). "As to soybean cheese (sufu) it is not known when it first started. The *Food Encyclopedia,* written by Wang Su-Hsiung [pinyin: Wang Suxiong] (1861) of the Ch'ing Dynasty [Qing / Manchu dynasty, 1644-1912] describes [the food] as follows:" Hardened tofu is difficult to digest and it is not good for children, old people or patients [ill persons]. Sufu, which is prepared from tofu, is very good for patients. "Therefore, we may presume to say that soybean cheese has been put for sale [sold] long before the Ch'ing Dynasty" (p. 92).

The five varieties shown in the table are: Rose sufu (to which some rose essence is added), Fermented rice sufu (tsao sufu, to which some pressed residue from rice wine {also called "fermented rice mash"}, cloves and orange peels are added), Red sufu (to which "red koji and soy mash" [red rice koji and sake lees] are added; red koji is boiled rice grown with *Monascus anka* [*angkak*]), and Kwantung Sufu [sic, Kwangtung Sufu from Kwangtung province in southeast China] (to which salt, red koji, red pepper and anise are added), and Yunnan sufu.

Note 1. This is the earliest English-language document seen (Feb. 2007) that uses the terms "rose sufu" "tsao sufu" "fermented rice sufu" "red sufu" "Kwantung sufu" "Kwangtung sufu" or "Yunnan sufu" to refer to different types of fermented tofu. It is also the 2nd earliest English-language document seen (Feb. 2007) that contains the term "fermented tofu."

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the word "pehtze" to refer to "bean curd freshly overgrown with the fungus but not yet processed and aged to become sufu." Address: Inst. of Chemistry, Academia Sinica, Taiwan.

2554. Jones, Dorothea Van Gundy. 1964. Quick 'n easy dishes for picnics or patio. *Today's Food* (*Loma Linda Foods, Riverside, California*) 9(2):7-8. Summer.
• ***Summary:*** Loma Linda ingredients in the recipes (p. 7) include: Vegeburger. Kidney Beans. Linketts. Garbanzos. Boston Style Baked Soybeans. Smokene. Soyagen milk. A photo (p. 8) shows nutritionist Dorothea Van Gundy Jones standing by a table.

2555. Smith, A.K. 1964. The Mount Fuji meeting. An international symposium on oilseed protein foods. *Soybean Digest.* Aug. p. 18-20.
• ***Summary:*** The symposium, sponsored by the International

© Copyright Soyinfo Center 2013

Institute of Food Technology, was held on May 11-15 at the Mt. Fuji Hotel, Lake Yamanaka, Japan. "The 85 technologists participating in the program represented 20 countries and included 30 from Japan and 20 from the United States. An additional 26 technical observers represented the Japanese food industry." "The Mount Fuji symposium was a historic occasion for the advancement of oilseed protein foods, being the first time an international conference was devoted solely to this subject."

"Dr. Y. Sakurai of Tokyo University and George F. Stewart of the University of California, Davis, were co-chairman for the meeting. Dr. T.M. Anson, assisted by others, developed the program. Dr. Masahiro Nakano was chairman of a committee to collect and display oilseed protein foods."

"Soybeans, peanuts, cottonseed, sesame, and coconut were the five oilseeds included in the program as sources of food proteins. Because of their long history and extensive use for food, soybeans were the topics of a major part of the papers and discussion."

"Among the newer developments in the Orient, K.S. Lo of Hong Kong reported on his successful commercial operation in the daily production of 24,000 cases of soybean milk in his two plants. His milk is made from well-washed and dehulled soybeans. It contains about 3% protein, 2-3% fat, and 5-7% carbohydrates, with added vitamins and calcium. Mr. Lo's methods for marketing soymilk are unique; he is also a large dealer in bottled soft drinks, and he markets soy milk as a soft drink. His milk competes with soft drinks rather than with other forms of milk or other health foods. Regardless of his method of marketing, he feels that the product is serving an important nutritional function in the Hong Kong area." Note: Vitasoy is once again being fortified with vitamins and calcium.

Dr. Tokuji Watanabe of the Food Research Institute reported on new ways of making tofu, such as "packed or bagged tofu" which is increasing in popularity. The soymilk is coagulated with calcium sulfate inside a polyethylene or vinylidene chloride plastic bag followed by heating in a water bath. This new process saves time and labor. Several plants are now producing 20,000 bags per day. Tofu is now also being freshly prepared in the home from spray-dried soy milk, coagulated with calcium. "More than 285,000 metric tons of soybeans and 65,000 metric tons of soybean meal are consumed annually for making fresh tofu in Japan, and because of low cost and high food quality, its consumption is said to be increasing.

Concerning miso, koji is now being made by a continuous method in 20-inch deep metal trays. Miso soup is now sold in a dried form. Shoyu production consumes 250,000 metric tons of soybeans of the equivalent as meal.

"The use of soy flour and grits in the United States for edible purposes was estimated at 200 million pounds and in England at 40 million pounds. The largest use of soy flour in the United States was estimated at 50 million pounds for bread and other baked products. In England, most soy flour is the full fat, enzymatic active type and is used at about 0.75% for improving color and flavor of baked goods."

"While isolated soybean protein for industrial uses has been produced since 1937, the production for food protein dates only from 1959. The production of industrial protein is carried on by two U.S. producers and annual production was estimated to be in the range of 40-50 million pounds. Four U.S. companies were reported to be producing or engaged in extensive research on isolated protein for food uses. The newest to be manufactured is referred to as a protein concentrate. It is prepared by washing soy flakes either with 80% alcohol or with water at the isoelectric point of the protein (pH 4.5). The concentrates must contain 70% protein whereas the isolate is 95% or more. The largest use of the isolate and concentrate is in comminuted or ground meat products, also referred to as sausage-type meats. Soy protein concentrate can be legally used in sausage-type meats up to 3.5% of the finished product." Address: NRRL, Peoria, Illinois.

2556. Chapin, W.P.G. 1964. Small sounds of Shimouma. *Christian Science Monitor.* Sept. 15. p. 8.
• ***Summary:*** The writer lives with his wife and children in Tokyo, in a part called Shimouma, in Setagaya-ku. "There are many peddlers. Some pull two-wheeled carts filled with their wares and all announce their presence by blowing a horn or by wailing."

"The men who sell *tofu* (bean curd) use horns with a reedy tone like that of a snake charmer. *Tofu* is popular, so the *tofu* man's progress is slow, and the thin, penetrating whine of his horn can be heard for hours through the day."

2557. Hardjo, Suhadi. 1964. Pengolahan dan pengawetan kedelai untuk bahan makanan manusia [Soybean processing and preservation for human consumption]. Paper presented at Seminar Kedelai (Soybean Seminar, Rapat Kerdja Kedelai). 14 p. Held 28-30 Sept. 1964 at Bogor, Indonesia. [Ind]*
• ***Summary:*** Describes several methods of processing and preserving soybeans in Indonesia, including the production of tempeh, tofu (tahu), soy sauce (kecap), tauco (soybean paste), koji, and soybean flour.

Note: This is the earliest document seen (March. 2009) uses the word "tauco" (spelled in that way) to refer to Indonesian-style miso.

2558. Kobatake, Yoshiki; Matsuno, N.; Tamura, E. 1964. Daizu kakô shokuhin no tanpakushitsu no eiyô-ka [Nutritional value of protein in Japanese soybean products]. *Eiyogaku Zasshi* (*Japanese J. of Nutrition*) 22(5):173-77. Sept. [7 ref. Jap]
• ***Summary:*** The Biological Value of tofu was 68.5, and dried-frozen tofu (kori-dofu) was 69.1. Both values indicate high nutritional quality. Even higher protein quality was

© Copyright Soyinfo Center 2013

observed in okara, a by-product of tofu. Its Biological Value was 84.9, though its absorption rate was 78.4%. The value for casein was 80.1, for salt-free miso 73.2, for low-salt miso 70.7, and for freeze-dried low-salt miso 60.5. Address: Division of Biochemistry of Nutrition, National Institute of Nutrition.

2559. Mustakas, G.C.; Griffin, E.L., Jr.; Allen, L.E.; Smith, O.B. 1964. Production and nutritional evaluation of extrusion-cooked full-fat soybean flour. *J. of the American Oil Chemists' Society* 41(9):607-14. Sept. [14 ref]
• ***Summary:*** The abstract begins: "A processing method for preparing full-fat soybean flours for human consumption by a new extrusion cooking method was developed." The paper continues: "The extrusion equipment described in this paper was used in 1961 to convert soybeans directly to full-fat meals for feed mixing. Swine feeding tests carried out on these meals at Purdue University [Indiana] were reported [Jimenez et al. 1961, in *Feedstuffs* 33(44):42] to give comparable weight gains and feed conversion efficiencies of regular defatted soybean meal with added fat.

"On the basis of the Purdue experiment, it was conceived that it might be possible to apply the cooker-extruder process to dehulled soybeans to produce an edible-grade full-fat soybean product which could be ground to a highly nutritious flour for human foods."

"A collaborative project was therefore sponsored by UNICEF, and undertaken by the Northern Utilization Res. & Dev. Div., ARS, USDA [NRRL], and the Wenger Mixer Manufacturing [Sabetha, Kansas] to develop and evaluate and evaluate a simplified extrusion cooking process for the production of full-fat soybean flour for edible uses." Contains an analysis of 12 soybean flours processed under different conditions. "The United Nations Children's Fund (UNICEF) has been improving local diets in the developing countries, especially of children and of pregnant and nursing mothers. Since [cow's] milk is a logical food for this group, UNICEF has assisted in building and equipping over 200 milk-processing plants in the developing countries to provide safe milk or milk powder."

"Asians have traditionally used soybean foods, generally in a moist form. Some of these are: soy milk (a water extract of the ground whole bean); tofu (a precipitated curd similar to cottage cheese); and tempeh (a fermented product of the decorticated bean). Because of their relatively short shelf life they are usually made locally each day as a cottage or small village industry."

The product flavor was evaluated. "The prevention of off-flavors and odors which result from fat deterioration is of major importance." Only one lot was stabilized with an antioxidant. Accelerated stability tests were conducted on two lots at 100ºF and 113ºF for 1-39 weeks. The higher-temperature lot began to show evidence of rancidity by its elevated peroxide value of 6.4 at the end of 15 weeks, and this rancidity was strong at the end of 26 weeks when the peroxide value reached 54. The fresh products had a desired nutty flavor, and the strong beany-bitter flavor had been removed.

"Proposed Clinical Testing. A 1,000-lb lot of the milled soy flour has been forwarded to the P.N. Sarihusada Co., Jogjakarta, Indonesia, where it will be formulated and packaged for acceptability testing in the areas now supplied by the plant with the dried water-extracted soya milk formulation. Clinical and acceptability testing is being done by the College of Medicine of the National Taiwan University, Taipei, Taiwan. It is part of a large-scale clinical test with infants up to 12 months of age to compare the extruded soy flour formulated as a milk, with various other soybean products." Two illustrations show the extrusion equipment, which was operated by LaVon Wenger.

Note 1. This is the earliest document seen (Dec. 1997) that discusses extrusion cooking in connection with soybeans for food uses. This appears to be the first production of full-fat soy flour (FFSF) by an extrusion cooker.

Note 2. This is the earliest document seen (Sept. 2000) that describes the equipment used to make soy flour. Address: 1-2. NRRL, Peoria, Illinois; 3. Food Conservation Div., UNICEF, United Nations, New York; 4. Wenger Mixer Manufacturing, Kansas City, Missouri.

2565. Jones, Dorothea Van Gundy. 1964. Soybean magic. *Today's Food* (*Loma Linda Foods, Riverside, California*) 9(3):4-6. Autumn.
• ***Summary:*** The author is on her way to Tokyo, Japan, where the American Soybean Association has asked her to participate in a soybean seminar and fair; she will lecture and demonstrate the use of soybeans in human nutrition.

"My interest in soybeans goes back many years when our family came in contact with them at the world's fair in San Francisco. They were featured in one of the Oriental displays. My father became so enthusiastic, he promptly bought a hundred pound sack of soybeans and we began experimenting. We discovered they were hard to cook and had a peculiar flavor. It was some time before we found a way to mask their beany taste and prepare them properly... My father [T.A. Van Gundy] became a real pioneer in introducing this king of the legume family and often was referred to as 'Soybean Van Gundy.'

"Many years ago, Loma Linda Foods became aware of the nutritional value of soybeans and began manufacturing a few products. Today there are twenty-five soybean foods under the famous Loma Linda label–some made entirely from soybeans and others incorporating them in some form. One of the latest additions to the Loma Linda line is Boston Style Baked Soybeans.

A photo shows Dorothea Van Gundy Jones with Miss Kojima, assistant manager of the Japanese Soybean Association [sic, Japanese American Soybean Institute], who is visiting the USA as part of her world tour to study uses of the soy bean.

Page 5 shows that the following Loma Linda brand soy products are now available: Soy Flour, Soyagen (All Purpose or Malt), Sandwich Spread, VegeChee, Smokene, Boston Baked Soybeans, and Soy Sauce. A photo on the cover of this issue of Loma Linda's quarterly magazine shows a can of Loma Linda VegeBits. Address: Nutritionist, Loma Linda Foods, 11503 Pierce Place, Riverside, California.

2566. Nichols, Teal. ed. 1964. Zen cookery. Chico, California: The Ohsawa Foundation. 83 p. Index. 22 cm. A second edition appeared in 1965.
• ***Summary:*** This is the earliest known macrobiotic cookbook written by an American, and its influence was profound.

Note 1. The Nov. 1964 edition of *Yin Yang* magazine, published in Chico, California, announced that the book had been published that month (Nov.).

"Acknowledgements: Our heartfelt gratitude goes to Lima Ohsawa, the foremost authority on Macrobiotic Cookery, without whose patient assistance and teaching this book would not have been possible. Many of the recipes appearing in Zen Cookery are from her collection in an earlier edition of Zen Macrobiotics. The Editor wishes further to thank the following people for recipes, suggestions, and invaluable comments: Joanne Hirsh, Dorothy Salant, Nina Bauman, Cornellia Aihara, Penny Smith, Shayne Oles, Betty Kennedy, and Jane Andrews."

"Zen Cookery is a collection of recipes gleaned from the files of many people, all of whom have adjusted their salt intake to suit their own needs. Their recipes reflect this."

Contents: 1. Grains. 2. Noodles. 3. Vegetables. 4. Soups. 5. Sauces. 6. Salads. 7. Inspirations from around the world. 8. Special dishes. 9. Miso soy bean paste. 10. Tamari soy sauce. 11. Breads. 12. Pancakes and crepes. 13. Pie doughs. 14. Desserts. 15. Beverages.

Note 2. This is the earliest English-language document seen (March 2012) that contains the term "tamari soy sauce." It is also the earliest English-language cook book seen that contains the word "tamari" or the term "tamari soy sauce."

Each recipe is numbered. Recipes mentioning soy in recipe name (and a few other recipes introducing foods new to the USA): 2. Rice with tamari soy sauce. 3. Rice with aduki beans. 4. Rice & aduki pudding. 7. Sesame rice. 9. Rice with chick peas (garbanzo). 21-28. Buckwheat recipes. 34. Bulghur. 48. Buckwheat noodles in soup (Soba with kombu). 50. Buckwheat noodles with fried bean curds [tofu]. 54. Buckwheat noodles with miso sauce. 55-56. Buckwheat noodles in kuzu sauce. 61. Udon with aduki. 62. Carrot sesame nituke [nitsuke]. 75. Scallion nituke with miso (soybean paste). 76. Carrot and onion nituke with miso. 77. Onion nituke with miso. 78. Vegetable miso stew. 79. Boiled pumpkin with miso. 80. Vegetable sauces with kuzu arrowroot (and tamari soy sauce).

81. Vegetables with tamari soy sauce and tahini. 98. Jinenjo (5 recipes). 101. Miso-vegetable relish. 102. Aduki beans, black [soy] beans, chick peas. 105. Baked chick peas. 106. Buckwheat-aduki pancakes. 107. Udon with aduki beans. 108. Chestnut-aduki gelatine. 109. Chick pea party dip (with tahini and tamari). 110-118. Sea vegetables (kombu, nori, hiziki, wakame, most with tamari). 119. Clear broth (with tamari). 122. Tamari-vegetable broth. or stock. 123. Miso soup (2 types). 124. Creamed miso soup. 125. Root vegetable soup with miso. 131. Soybean soup. 134. Wakame soup (with miso). 149. Sesame sauce. 150. Miso sauce. 151. Miso salad dressing. 152. Thick tamari soy sauce. 153. Tahini tamari soy sauce. 154. Onion tahini sauce (with tamari). 172. Wakame salad.

189. Clam miso. 190. Scallop miso-lemon. 203 Miso spread [with tahini]. 204. Miso sauce [with tahini and orange

© Copyright Soyinfo Center 2013

rind]. 205. Sauce for vegetables [with black sesame and miso]. 206. Scallion miso. 207. Miso salad dressing. 208. Miso-vegetable relish. 209. Miso soup. 210. Udon with miso sauce. 211. Rice porridge with miso. 212. Deep fried miso balls. 213. Carrots and onions miso. 214. Vegetables miso. 215. Tekka (2 types). 216. Tea with tamari soy sauce. 217. Tamari broth. 218. Stringbeans. 219. Dried radish (daikon). 220. Shredded sea vegetables (hiziki). 221. Thick tamari soy sauce. 222. Tahini-tamari sauce. 223. Vegetables with tahini-tamari soy sauce. 234. Aduki muffins. 238. Miso spread (for sandwiches). 239. Tahini-tamari spread. 246. Buckwheat aduki pancakes. 272. Aduki pudding. 273. Chestnut-aduki gelatine. 274. Kanten jello (with agar).

291. Grain Milk (Kokkoh [Kokoh]; a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds). 294. Tea with tamari soy sauce (syo-ban).

Note 3. This is the earliest document seen (Feb. 2005) that mentions Kokkoh (or Kokoh), a grain milk introduced by macrobiotics.

Note 4. Tofu, amazake, and seitan are not mentioned in this book. 287 is Ohsawa Coffee (Yannoh) and 288 is Dandelion Coffee.

Note 5. This is the earliest document seen (June 2000) that mentions the use of miso in a salad dressing (Nos. 151 and 207).

Note 6. In 1985, when writing a revised edition of this book titled *The First Macrobiotic Cookbook*, Herman Aihara wrote (p. v) that this 1964 edition, published by the Ohsawa Foundation of Chico, California, was first the edition of the various subsequent and very influential books with this title.

Note 7. This is the earliest document seen (March 2011) concerning Herman or Cornellia Aihara and macrobiotics (or soyfoods).

Note 8. Along with soyfoods, this cookbook (and its many successors) also introduced numerous other basic Japanese foods such as aduki [azuki] beans (3-4, 102, 106-08, 234, 272-73), sea vegetables of all types, and soba. Address: Chico, California.

2567. Hand, D.B.; Steinkraus, K.H.; VanBuren, J.P.; Hackler, L.R.; Rawi, I. el; Pallesen, H.R. 1964. Pilot-plant studies on soymilk. *Food Technology* 18(12):139-42. Dec. [7 ref]

• ***Summary:*** Contents: Summary. Introduction. Experimental methods [cold-water grind]: Spray-dried water-extracted soymilk, soymilk from [unsoaked] dehulled soybeans, soymilk from soaked dehulled soybeans, spray-dried acid curd, soymilk residue [okara]. Results and discussion: Interrelation of soybean fractions, indices of quality in relation to processing conditions, nutritional assessment, studies on flavor.

This investigation was made to develop improvements in the process for making dried soymilk from whole soybeans for use in developing countries, and especially in the process used at the soymilk plant in Indonesia equipped by UNICEF. The authors made a dry soymilk of excellent quality directly from whole soybeans without including the typical water-extraction step. The yield is higher and labor costs are reduced. A homogenizer is added to the processing line, but an evaporator and filter press are eliminated.

Figures show: (1) Flow sheet for water-extracted soymilk. (2) Flow sheet for soymilk from dehulled whole soybeans. (3) "Distribution of solids and protein as percentages in fractions from soaked soybeans." When whole soybeans are soaked, 98.5% of the solids and 99.5% of the protein remain in the soaked beans; the rest goes into the soak water. When the soaked soybeans are ground and filtered, 65% of the solids from the original dry soybeans and 83% of the protein remains in the soymilk; 33.5% of the solids and 16.5% of the protein goes into the residue [okara]. When the soymilk is made into tofu by cooking, precipitation with 4% acetic acid, and pressing the curd, 49% of the solids from the original soybeans and 74% of the protein remain in the tofu; 16% of the solids and 9% of the protein go into the whey.

(4) "Distribution of solids and protein as percentages in fractions from dehulled soybeans." When whole dry soybeans were steamed lightly, then dehulled, 10% of the solids and 4% of the protein were lost in the hulls. When the dehulled whole soybeans were soaked in 3 times their weight of water, 10% of the solids in the original dry soybeans and 4.5% of the protein was lost in the soak water. This 80% of the solids and 89.5% of the protein remained in the soaked dehulled soybeans.

Tables show: (1) Composition of soymilk samples (% of total). (2) Taste panel comparison of soymilk samples: The water-extracted soymilk received the highest (i.e., best) score for flavor (6.7) and consistency (8.1), followed by the soymilk made from dehulled whole soybeans (6.1 and 6.8), then the soymilk made from dehulled soaked whole soybeans (5.2 and 5.8). The acid-precipitated curd received a very low flavor score (1.8) and low consistency score (1.8) because of its grittiness.

(3) Pilot plant equipment list: Names and sources of 17 pieces of equipment,

Note: This is the earliest document seen (Oct. 2003) with the word "soymilk" in the title from Cornell University's Department of Food Science and Technology, Geneva, New York. This was the first group to consistently spell "soymilk" as one word–the modern spelling. Address: New York State Agric. Exp. Station, Cornell Univ., Dep. of Food Science and Technology, Geneva, New York.

2568. **Product Name:** Tofu.
Manufacturer's Name: Fuji Tofu Co.
Manufacturer's Address: 248 Jackson St., San Jose, CA 95112. Phone: 408-297-1666.
Date of Introduction: 1964.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. Owner: Reiso and Steve Kake.

Talk with Kenny Nozaki. 1988. Aug. 25. Reiso Kake started this shop in 1964 just down the street from and in competition with San Jose Tofu Co. The company was sold in 1987.

Talk with Tom Schmitz of San Jose. 1994. March 29. Linda Lam, who is Chinese-Vietnamese, purchased this company (now named Fuji Fresh Tofu Co.) 7 years ago. She is a native Vietnamese, the daughter of ethnic Chinese parents who moved to Vietnam. Both she and her parents are lifelong vegetarians. She learned how to make tofu in Vietnam at a Buddhist temple during the early 1960s. She would spend her school vacations there. Then she came to this country and went into the foodservice business. When she saw that the shop was for sale, and now contained new automated and semi-computerized equipment, she bought it from the Japanese owner, Mr. Kake, who was retiring. She still makes tofu using nigari as a coagulant.

2569. **Product Name:** Tofu.
Manufacturer's Name: Hawaiian Fruit Flavors.
Manufacturer's Address: 76 Kilauea Ave., Hilo, Hawaii. Phone: 54798.
Date of Introduction: 1964.
New Product–Documentation: Hawaii Directory of Manufacturers: Tofu (bean curd). 1964. Hawaii Directory of Manufacturers. 1969. p. 17. Hawaiian Fruit Flavors, 800 Leilani St., Hilo, Island of Hawaii, 96720. They make konnyaku and tofu.

2570. **Product Name:** [Tofu].
Manufacturer's Name: Heuschen B.V. Later renamed Heuschen-Schrouff B.V.
Manufacturer's Address: Geulle (Limburg), Netherlands.
Date of Introduction: 1964.
New Product–Documentation: Soya Bluebook. 1986. p. 108. This company is the largest tofu manufacturer in Europe. Order from Heuschen-Schrouff B.V. 1990. Feb. 21. Their address is now: Reeweg 137, 6374 BW Landgraaf, Netherlands.

Letter from Ike Van Gessel. 1992. Dec. 20. The town that used to be named "Ubach over Worms" is now named "Landgraaf." Heuschen-Schrouff B.V. is now located at: Reeweg 137, 6374 BW Landgraaf, Netherlands, The Netherlands. Note: This is the earliest record seen (April 2001) in connection with Heuschen-Schrouff B.V.

2571. **Product Name:** Hinode Natto.
Manufacturer's Name: Hinode Tofu Company.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013.
Date of Introduction: 1964.
New Product–Documentation: Interview with Mr. Shoan Yamauchi. 1982. June 29. He started making natto in 1964 and now makes 5,000 packages a week.

Pantry Supermarkets. 1983. "Double coupons!" (Ad). *Los Angeles Times.* Feb. 24. p. SG3. The section titled "Oriental foods" states: "Hinode natto (steamed soybeans) 5 oz.–49¢."

2572. **Product Name:** Tofu.
Manufacturer's Name: Horio Tofu Shop.
Manufacturer's Address: P.O. Box 87, Honomu, Island of Hawaii. Phone: 633461.
Date of Introduction: 1964.

2579. **Product Name:** Vigorost. Renamed Vigoroast by 1965.
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1964.
Ingredients: Wheat gluten, firm tofu and/or okara, whole peanut meal, seasonings.
Wt/Vol., Packaging, Price: 14 and 20 oz cans.
How Stored: Shelf stable.
Nutrition: Protein 19.4%, fat 8.6%, carbohydrates 12.3%, ash 2.1%.
New Product–Documentation: Madison Foods. Division of Worthington Foods, Inc. 1964. July 1. Wholesale price list–order blank. Lists Vigorost.

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual. 2nd ed.* p. 104. Vigoroast [sic, Vigorost] contains 12.70% protein, 8.00% fat, and 15.60% carbohydrate. One serving, ½-inch slice, weighs 80 gm.

2580. **Product Name:** Tofu.
Manufacturer's Name: Yamamotoya (Takiji) Tofu.
Manufacturer's Address: Koloa, Kauai, Hawaii. Phone: 746881.
Date of Introduction: 1964.
New Product–Documentation: Hawaii Directory of Manufacturers: Tofu (bean curd). 1964. Note: Mrs. Tomi Kataoka started a tofu shop in this same small town in 1935.

2581. **Product Name:** Tofu.
Manufacturer's Name: Yamasaki Tofu.
Manufacturer's Address: 936 Kekaulike, Honolulu, Oahu, Hawaii.
Date of Introduction: 1964.
New Product–Documentation: Honolulu City Directory. 1963-64. Yamasaki Tofu (Harry H. Yamasaki, proprietor). 936 Kekaulike, Honolulu. Same listing in 1966-67 directory. In 1967-68 address has changed to 930 Kekaulike St. Same in 1970.

2582. Aykroyd, Wallace R.; Doughty, Joyce. 1964. Legumes in human nutrition. *FAO Nutritional Studies* No. 19. xi + 138 p. Reissued by FAO in 1982 (152 p.). [119 ref]
• ***Summary:*** Contents: Preface. Introduction. History of legumes. Production and consumption. Composition and nutritive value. Methods of processing and cooking: Soybean preparations in East Asia (p. 48-52)–Germination (sprouted soybeans), soybean curd (tofu, incl. *chou tofu* or "stinking soybean curd"), soy sauce (shoyu), soybean paste (miso), tempeh, natto, hamanatto, soybean "milk," fermented preparations from groundnuts. Groundnut flour.

Effects of processing on nutritive value: Soaking, decortication, heating, germination, fermentation (mentions tempeh), effects of storage.

Toxic substances. Legume proteins. Observations on the value of legumes in human feeding. The place of legumes in human diets. Appendixes: (1) Legumes eaten by man. (2) Nutritive value of important legumes. (3) Amino acid content of legumes. (4) Account of lathyrism in central India by General Sleeman. (5) Bibliography of soybean (11 references). Some legume recipes. References.

Soybeans are also mentioned on pages 15 (Table 1, "Important legumes"), 23 (Indonesia, soybean curd, soy sauce, tempeh), 23-24 (Japan, miso, shoyu, natto, tofu, Korea, Taiwan), 39-40 (carbohydrates in soybeans include "galactans, pentoses, and hemicelluloses which are poorly utilized." Fats: only the groundnut and soybean are important sources of it), 55 (heating and trypsin inhibitor, methionine and cystine, raw unheated soybean meal, saridele), 58

(fermentation, tempeh, PER), 75-76 (protein values), 81 (Dean used soybeans to treat a protein deficiency), 84 (soybeans in India), 97 (soybean curd).

Appendix 1, titled "Legumes eaten by man" (p. 101-14), lists the various legumes by their Latin names. The entry for *Psophocarpus tetragonolobus* gives its vernacular names as "Goa bean, asparagus pea, winged pea, winged bean, sesquidillas."

Note: This is the earliest English-language document seen (Aug. 2007) that uses the word "sesguidillas" to refer to the winged bean. Address: 1. Dep. of Human Nutrition, London School of Hygiene and Tropical Medicine; Former Director, Nutrition Div., FAO, Rome, Italy.

2583. Choy, Jung Suck (Mrs.). 1964. The art of Oriental cooking. Los Angeles, California: The Ward Ritchie Press. xi + 156 p. Introduction by Dr. Lee Wok Chang. Illust. Index. 18 x 18 cm.

• ***Summary:*** Contents: Introduction. Korean food. Chinese food. Japanese food. Shopping guide for Oriental ingredients (1 p., with emphasis on the names and address of stores selling Oriental foods). For each category of food (such as Soup) and for each recipe, the name in English is given first, followed by the Asian name in parentheses. ½ to 1 teaspoon "monosodium glutamate" is called for in many recipes. Likewise "soy sauce" is used in many recipes.

The index to this book is not a typical index. For example, although "bean curd" is called for in many recipes, it does not appear in the index. So one must read the entire book and all the ingredients in each recipe to find which recipes call for bean curd.

The book has an unusually heavy emphasis on animal foods–meat, chicken, fish, shellfish, and eggs. Did people in Korea, China, and Japan really eat like this in 1964?

In Korean, bean curd is called dubu or do-bu (p. 13); bean curd is also called for on pages 45, 50, 54, 125, 136, 137, 138 Other ingredients used: Miso, p. 125. Red beans [azuki], p. 63.

Recipes include: Fish teriyaki, p. 134. Sukiyaki, p. 136. Mizu-taki, p. 137-38. Beef teriyaki, p. 140-41. Pork teriyaki, p. 141.

The shopping guide mentions: Bean curds. Chinese black beans. Miso. Monosodium glutamate. Sesame seeds. Sesame oil. Soy sauce.

Note: The author was born and raised in Korea. She and her husband joined the faculty of Seoul National University in 1947; she taught home economics. Since 1950 in the United States, she has been giving courses on Oriental cooking to various social and church groups. Address: Berkeley, California.

2584. Japan Dietetic Assoc. Corp. (JDAC). 1964. [Standard composition of Japanese foods]. Tokyo: Daiichi Shuppan K.K. 124 p. [Jap; Eng]

• ***Summary:*** The basic source of information on the nutritional composition of all Japanese foods.

2585. Jones, Dorothea Van Gundy. 1964. The soybean cookbook: Adventures in zestful eating. New York, NY: Gramercy Publishing Co., a divison of Crown Publishers Inc. Paperback published by Arco Publishing Co. Inc. xii + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the 1963 edition published by Devin-Adair except: (1) Mildred Lager, who died in Aug. 1960, is no longer listed as the author. Note: Mildred's husband, Ed Jones, married Dorothea Van Gundy, the present author. (2) The dust jacket is white, yellow, green and black on a blue background. A face, made of yellow and green soybeans, is wearing a chef's hat. (3) The publisher of the hardcover edition is now Gramercy rather than Devin-Adair. The copyright date (written in hard-to-read Roman numerals) is 1963, the same as the Devin-Adair edition. The date of publication is not given, but it must have been after 1963. We have taken the liberty of giving it as 1964. (4) The title of the second preface has been changed to "Preface to the revised edition" from "Preface to the 1963 edition." Both were written by Dorothea Van Gundy Jones of Arlington, California. Address: Arlington, California.

2586. Jones, Mary Lou. 1964. Better soybean recipes. Anacortes, Washington: Outdoor Pictures. 58 p. Index. 22 cm.

• ***Summary:*** This small book is primarily about soy milk–how to make and use it. Contents: Introduction. 1. Working tools. 2. How to make a portable stove with a portable oven and kerosene oil lamp. 3. Ingredients for recipes: Soybeans, lecithin, oil, calcium phytate, slippery elm, flax seed, herbs. 4. Preparation of soybeans.

5. Recipes (p. 21): Thickening (with slippery elm or lecithin), oil-lecithin mix, soy milk recipes (soybean liquid {"Refrigerate pulp to make Soy Cheese [p. 26], Cultured Cheese, or Soy Crackers [p. 31]," p. 23}, soy milk–basic, soy milk concentrate [the favorite, with salt, honey, and oil-lecithin mix], low fat soy milk concentrate, chocolate-like milk [carob], chocolate-like syrup [carob], soy cream, whipped cream [to ½ cup soy cream slowly add 2 tablespoons oil-lecithin mix in a blender], ice cream, custard pudding, basic soy cheese [not tofu, based on okara]), dressings and spreads (royal mayonnaise, salad dressing supreme [based on tofu], cheesy spread or dressing [based on tofu], soy butter or health margarine, royal soy margarine, butter spread [made with "soybean pulp" = okara], oil free butter spread [made with ½ cup soy milk, ¼ cup lecithin, a little salt, and one recipe of Soybean Pulp {okara; see p. 24}]).

Cereals (p. 30) (flax cereals [2 types], soy crackers [with soybean pulp], soybean and corn meal muffins [with whole

© Copyright Soyinfo Center 2013

soybeans], sprouted grain granola [breakfast cereal]). Soy bread recipes (eight-grain sprouted soy bread, whole wheat soy bread, bread recipes without soybeans, basic variable whole wheat bread, enriched whole wheat bread, bran whole wheat bread, carob bread, peanut bread, eight-grain sprouted bread), waffles (soy waffles, eight-grain soy waffles, pigeon feed waffles).

Entrees (p. 41) (gluten supreme [meat substitute], malt flavored ice cream, mayonnaise, salad dressing, concentrated dressing base, gravy, soybean souffle), dextrinizing (heating starchy foods to turn the starch into more easily digested sugar), suggestions for using prepared soybeans without using a liquifier [pickle cooked soybeans in concentrated dressing base], yogurt (soy-based medium for culture, yogurt made from soy milk), watermelon and cantaloupe seed, fresh kelp relish.

6. Sprouting seeds (including soybeans): Four methods, how to serve sprouts (incl. Sukiyaki). Some variations in making soy milk.

Page 22 is a directory of the names and addresses of major health food distributors in the USA: California: Kahan and Lessin Co. (Los Angeles, or San Francisco). Colorado: Health Food Sales Co. (Denver). Illinois: Health Food Jobbers, Inc. (Chicago). Massachusetts: Foods Inc. (Cambridge). Michigan: Health Food Distributors (Detroit). New York: Sherman Foods, Inc. or Balanced Foods, Inc. (New York City). Oklahoma: Akin Distributors (Tulsa). Oregon: Nu Vita Foods (Portland). Tennessee: Collegedale Distributors (Collegedale). Washington state: Kahan & Lessin Co. or Vital Foods Distributors (Seattle).

This book contains considerable information about gluten and the use of the gluten rinse water (as in breads or soups). Pages 41-42 contain a unique recipe for making 2 pounds of gluten at home from whole wheat flour. The gluten is then baked with a seasoning mix and the rinse water for 10 hours at 108ºF to make Gluten Supreme.

Concerning dextrinizing: "This process is acclaimed by many health authorities to be a more healthful way of eating some starchy foods. Many people who have digestive problems with starchy foods can eat them prepared by the dextrinizing process. This process is said to turn the starch into a more easily digested sugar." Breads, cereals, or flour can be dextrinized by baking at 225ºF until lightly browned.

Note: This is the earliest English-language document seen (Nov. 2005) that uses the word "soybean pulp" to refer to okara. Address: Box 1326, Escondido, California.

2587. Lager, Mildred; Jones, Dorothea Van Gundy. 1964. Suggestions for the arthritic. Recipes and menus. Riverside, California: Mrs. E.S. Jones. 68 p. 22 cm.

• ***Summary:*** Contents: Part I. Arthritis–The result of many conditions: Types of arthritis, causes of arthritis, suggestions, foods for the arthritic, my own case. General outline of the diet: Juice diet, limited diet, general diet. Other suggestions: Mental attitude, comments 1957, comments 1961. Part II. Menus. Carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes.

Mildred wrote that proper diet was the greatest factor in her recovery from arthritis. Based on her own experience and that of many others who she helped, she strongly opposed the use of dairy products, and thus used dairylike soy products in their place, especially soymilk, tofu, and soy flour or grits.

Mildred wrote in Aug. 1957 that it has been 32 years since she began her battle with arthritis. In a Feb. 1961 update to this book Dorothea wrote that Mildred died on 25 Jan. 1960. "Hers was a very remarkable life in that while still in her teens she was told, after examination at a noted medical clinic, that she had incurable arthritis and would never walk again, her feet and legs being completely ankelosed at that time. In spite of this verdict Mildred went home with a determination to show those doctors they were wrong, and show them she did, for before long she was back on her feet again. You already know her story. For the next forty years she battled arthritis, never quite winning but keeping it under control to the extent that she lived a normal life and made a remarkable contribution to the field of nutrition as, health food store owner and operator, author, lecturer, radio commentator and dietary consultant. She taught many arthritics how to overcome their handicaps, and if that was not possible, how to live with them. Her life made a real contribution and she left many friends as a result." Address: Riverside, California.

2588. Lin, Yutang. 1964. The flight of the innocents. New York, NY: G.B. Putnam's Sons. 320 p. See p. 112. Map. 22 cm. Reprinted in 1965 in paperback.

• ***Summary:*** "Foreword: The story, plot and characters are fictional, but the background material is authentic" (p. 9). This book describes how a family escaped from Communist China by swimming across a river near Canton.

Page 112: "'I'll have deep-fried bean curd, crisp and golden brown outside, soft and creamy inside. And I'll have West Lake duck, buttery soft and juicy, swimming in a rich, garnished sauce.' He relaxed and leaned back upon the bed."

Lin Yutang lived 1895-1976. Address: Novelist, born in Fujian, China.

2589. Vollmer, Marion W. 1964. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Revised ed. Nashville, Tennessee: Southern Publishing Association. 136 p. 23 cm.

• ***Summary:*** In this Seventh-day Adventist vegetarian cookbook, soy-related recipes include: Farmer soy breakfast hash (with Proteena, p. 34). Granola (with soy flour, p. 34). Bit o' soy waffles (with soy flour, p. 35). Cashew milk (p. 52). Soy nut milk (with soy milk powder, almonds & cashews, p. 52). Baked soybeans (with cooked whole

soybean, p. 62). Gluten–how to prepare and serve it (incl. Gluten stroganoff, gluten cheeseburgers, 64-67). Soy cheese–how to make and serve it (tofu made from full fat soy flour and curded with lemon juice, p. 67-68). Soy cheese loaf (with tofu, p. 69). Soy cheese croquettes (with tofu, p. 69). A note on p. 69 states: "Tofu is fresh soybean curd. Sold in blocks under water in Oriental and some other markets. Canned soy cheese called Vegechee, Cheez-o-Soy, etc., may be substituted." Note: An earlier edition was published in 1954.

2590. Watanabe, Minoru. 1964. Nihon shokuseikatsu-shi [History of Japanese food culture]. Tokyo: Kichikawa Kobunkan. 330 p. Illust. Index. 21 cm. [Jap]
• ***Summary:*** Amazake (p. 43), tofu (p. 3, 129), natto (p. 147), miso (p. 3, 88, 102, 130, 149, 203-05, 241, 288, 301, 314), shoyu (3, 149, 202, 241, 301).

Amazake: There were two types of fermented foods in Japan prior to the 8th century A.D.: The sake line and the hishio (*chiang*) line. The sake line used mainly rice as an ingredient but barley (*mugi*), broomcorn millet (*kibi*), glutinous mountain yam (*yama imo*), and fruits were also used. The hishio line led to miso and soy sauce. Both the early Japanese classics Kojiki (A.D. 712) and the Nihon Shoki (A.D. 720) mention sake. From burial mound tombs created during the period A.D. 300 to 600 have been excavated groups of stone burial objects which are thought to be sake making implements. The earliest sake was made from glutinous rice (*mochi-gome*)*;* it was quite sweet, thick, and glutinous/sticky, and was called "one night sake" (*hitoyo-zake*). It was thick like today's amazake base before it has been diluted, and was probably served on tree leaves and eaten, rather than being drunk as a beverage. After the arrival of foreigners in Japan bringing brewing methods, regular rice started to be used to make drinks with a high alcohol content. Salty and/or pungent condiments (*karami*) were also added. Japanese cedar or cryptomeria (*sugi*) or bamboo leaves may have been used as preservatives. All of these beverages were thick grogs, not clarified sake. Moreover, unlike in later eras, they were not used to add color/pleasure to people's daily life. Rather they were used mainly at religious festivals and ceremonies.

2591. *Daizu ni Kansuru Shiryo* (*Statistics on Soybeans and Soyfoods in Japan*). 1964--. Serial/periodical. Tokyo: Norin-sho, Engei Kyoku, Tokusan-ka (Japan Dep. of Agriculture, Forestry, and Fisheries). Annual. 26 cm. [30 ref. Jap]
• ***Summary:*** This annual publication of the Ministry of Agriculture, all in Japanese, is the single best unified source of statistical information on soybeans and soyfoods in Japan. By the 1970s the name of the publishing organization had changed to Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinkoka. The average length of a volume was 146 pages in the 1960s, increasing to 170 pages in the 1980s.

Table of Contents for the 1984 Edition reads: I. Finding where soybeans fit (in Japanese agriculture) (p. 1). 1. Changes in the size of area of the cultivated fields (p. 1). 2. Changes in usage of land (p. 2). 3. Changes in the rate of usage of cultivated fields (p. 6). 4. Converting rice fields to other crops (p. 7).

II. Production trends (p. 14). 1. Results of production (p. 14). 2. Present status of management (p. 28).

III. Grant money system (p. 56). 1. Outline of grant money system for soybeans and rapeseeds (p. 56). 2. Changes in the standard price of soybeans and the amount of soybeans subject to the grant money (p. 58). 3. Results of the regulated sales of soybeans (p. 59). 4. Monthly changes in the price of soybeans (p. 60). 5. Standards of inspection of soybeans (p. 62). 6. The present status of inspecting and ranking soybeans (p. 66).

IV. Outlines of the budget of the countermeasure of promoting the production of soybeans (p. 70). 1. Changes in the budget (p. 70). 2. Outline of budget of soy-related items in 1984 (p. 72). 3. The present status of enforcement of the enterprises (p. 82).

V. Varieties of soybeans (p. 86). 1. Table of the soybean varieties which were registered as Norin Bango (agriculture & forestry number) (p. 86). 2. Table listing the main existing varieties (p. 96). 3. Table of the varieties which each prefecture recommends (p. 102). 4. The status of planting different varieties of soybeans (p. 104).

VI. The present status of management techniques of cultivation (p. 109). 1. The season of soybeans in the main producing prefectures (p. 109). 2. Outline of the national association of promoting the improvement of management of beans in 1983 (p. 112).

VII. Trend of demand for soybeans (p. 132). 1. Changes in the demand for and the rate of self supply of soybeans (p. 132). 2. The status of demand for soybeans by year (p. 133). 3. Changes in the amount of soybeans imported for food use and the amount of soybeans used in various items (p. 133). 4. The results of production, shipping, and the usage of raw materials of miso and shoyu (p. 136). 5. The status of consumption of processed soybean products (p. 140). 6. Nutrients of soybeans and soybean products (= soyfoods) (p. 144). 7. Long term view (p. 150). 8. Changes in the rate of making soybeans as merchandise (p. 150). 9. The status of the production of soybeans in main producing countries (p. 151). 10. Changes in the amount of soybean production in the USA (p. 152). 11. The amount and the price of exported soybeans of main exporting countries, by countries (p. 153). 12. The amount and the price of imported soybeans of the main importing countries, by countries (p. 154). 13. The Japanese import situation for soybeans, by years and countries (p. 156). 14. The imported amounts, exported amounts, and the domestic prices by years (p. 162). 15. Changes in the soybean tax (p. 164).

2592. Ohsawa, G. 1964? Macrobiotics: The art of longevity and rejuvenation. New York, Paris, Brussel [sic], Tokyo: Ohsawa Foundation. Printed in the U.S.A. by Eastern Technical Publications (Boston & New York). 218 p. Undated. Index. 17 cm.

• ***Summary:*** This is the earliest known American printing of "Zen Macrobiotics." The word "Zen" was removed from the title at Michio Kushi's suggestion. The cover is yellowish tan. The author is George Ohsawa.

Contents: Foreword: Two ways to happiness through health. Preface: Health to peace. Books by the same author (7 in French, 9 in Japanese, one in English, plus 4 periodicals). Table of contents. 1. Macrobiotics and Oriental medicine. Why I have written this book. What is the philosophy of the Far East? 2. What is my therapy? Unhappiness, illness, crime. Incurable disease. Three categories of cure. What we must not cure. Satori. Courage, honesty justice. Tolerance. 3. The six main conditions of health and happiness. 4. Nothing shall be impossible to you. You should have infinite freedom. You must be your own doctor. 5. Ohsawa's macrobiotic cuisine. 6. Principal foods: Rice, buckwheat, udon etc., millet, raw rice etc. (p. 62-71, with recipes). 7. Secondary foods (p. 72-103, with recipes): Nituke, soup (lotus root ankake, kuzu gruel, cracknel yuba), pie, gyoza (piroshiki), chapati, jinenjo (wild potato, tororo). Egyptian beans (chick peas, *pois chiche*), beans (boiled soy beans with miso, gomoku beans, goziru [gojiru] soup, aduki beans), corn, aduki (ogura vermicelli), goma-tohu [sesame tofu], aemono (salads), varieties (chou farci, buckwheat crepe), wild vegetables, seaweeds (shi kobu [shio kombu], kobu maki, fried kobu, musubi kobu, kobu soup, matsuba kobu, salmon head kobu-maki, hiziki with lotus root, hiziki nitsuke, hiziki with "age," hiziki and soyabean, gomoku hiziki, hiziki rice), wild plants (dandelion leaves or root, aozu {wild spinach}, fuki), miso and tamari preparation (sauce miso, miso cream, muso [miso with tahini and orange peel], miso soup, carrot and onion au miso, vegetable au miso, oden au miso, buckwheat dango au miso, miso ae, tekka no. 1 and 2), syoyu [shoyu] (sakura rice, sauce au shoyu, sauce au sesame, bouillon au shoyu, ositasi [ohitashi], oatmeal cream, potage oatmeal, sauce bechamel a la sauce shoyu, mayonnaise a la sauce shoyu, sauce Lyonnaise; "Shoyu diluted with a little water is very good for Sasimi [Sashimi = raw fish] and fried oyster, tempura, fish Sukiyaki, tofu {vegetable cheese of soya beans}, etc."), beverages (rice tea, wheat tea, dandelion coffee, Ohsawa Coffee {Yannoh; incl. roasted and ground rice, wheat, aduki, chick peas, and chicory}, Kokkoh {incl. roasted rice, glutinous rice, oatmeal, soya beans, and sesame seeds}, Mu tea, syo-ban {coarse green tea with soy sauce}, kuzu [cream, with shoyu] {"A good drink for everyone"}, aduki juice, radish [daikon] drink no. 1 and 2, ransyo {one beaten egg + 50% of traditional Ohsawa shoyu}, soba tea, umeboshi juice, ume-syo-kuzu, special rice cream).

8. Special dishes. Desserts. 9. Yin and Yang. 10. Macrobiotic suggestions for various symptoms of disease (p. 131-36, with recipes): General suggestions (by disease), macrobiotic external treatment (tofu plaster, soya bean plaster, Dentie). 11. Specific curative dietary suggestions: Examples of diseases and their macrobiotic treatments. 12. Kokkoh: Macrobiotic food for baby. 13. On cooking. Salt. Folk medicine. Your history. Appendix: The case of Mr. E. (Cure in 10 hours). "Pro-forma death certificate of the American World Empire and its Gold Dynasty."

Ohsawa centers and friends (p. 217-18): England (Trustin Foods, London; Mrs. R. Takagi, London), France (Centre Ignoramus, Longue Vie, Guenmai [Genmai = brown rice], Yamato, Ohsawa-France; all in Paris). Germany (Miss M. Arnoldi, Heidelberg; Dr. P. Martin, Munich; Dr. Henning, Hamburg), Italy (Miss H. Onoda, Rome; Mrs. Baccolis, Rome), Japan (Nippon Centre Ignoramus, 8 Kasumi-cho, Minato-ku, Tokyo; Shinsekai, Osaka), Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), U.S.A. (Ohsawa Foundation, 61, W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64, 5th Ave., Chico, California; Musubi, 61, W. 56th St., New York–Macrobiotic Restaurant).

This book is undated, but it contains clues as to when it was published. On page 190 is reference to an article in *Time* magazine dated 7 March 1960 about the sad state of health in the United States. Then on page 189, Ohsawa states: "Upon my arrival in the United States last November, I began my lectures on the philosophy and medicine of the Orient. I gave some in Los Angeles and San Francisco [California], but mostly in New York institutes and schools such as the Universalist Church, The New School for Social Research, Columbia University, New York City College, and the American Buddhist Academy. I have postponed my departure twice. But I am very happy as I have confirmed my assumption: marriage between paradoxical philosophy of the Orient and the materialistic techniques of precision of American science, which must be realized for the infinite freedom of Man and for world peace" (p. 189).

Concerning the date of publication, which is not given in or on the book. One guess is about 1964, because when you do a printing of a book, you want to print enough to last for at least two years. This 1962 + 2 = 1964. A pretty weak reason! Carl Ferré (6 and 8 May 2011) states: I've done enough printing to know that the book printed in the USA uses the same plates as the second printing in Japan except for two changes. They added "Printed in the USA by..." (in a different type face) to the back side of the first page, which is blank; and, they whited out "Zen" and the smaller "Macrobiotics" on the cover and title page and replaced both with one word: "Macrobiotics" (again, in a different type face). The rest of the book appears to be exactly the same as the second printing from Japan."

"My thinking is that 1964 is a pretty good guess because I believe it may have been arranged by the East

© Copyright Soyinfo Center 2013

Coast Group–thus, the word 'Zen' was off the title and it was printed by a printer in Boston and New York. This would be about the time Michio Kushi was getting settled in Massachusetts."

Note 1. These lines almost certainly describe Ohsawa's first visit to the United States. He arrived in November 1959 and stayed well into 1960.

Note 2. All recipes in this book are numbered, from No. 1 (Unpolished rice, p. 162) to No. 816 (Rice plaster, p. 136). The recipe numbers are identical to those published in the mimeograph edition of *Zen Macrobiotics* (also titled *Macrobiotics–The Biological and Physiological Foundation of Zen Buddhism*), published in early 1960.

Note 3. The contents of this book is very similar to that of the earliest published edition of *Zen Macrobiotics,* which was printed in Japan and was 218 pages long.

2593. Morinaga Milk Products Company. 1965. [Deodorizing soybean milk]. *Japanese Patent* 3462. Feb. 23. 2 p. English-language summary in Soybean Digest, Feb. 1966, p. 53. [Jap]*
• ***Summary:*** "In a method for thoroughly deodorizing soybean milk, the raw aqueous soybean extract is inoculated with one or more of the following species of bacteria: Leuconostoc diacetylactease; Leuconostoc dextranicum; and Leuconostoc citrovorum. The inoculated milk is fermented at 20º-25ºC for a period of from 12 to 30 hours at a pH of about 6.5."

Note: This is the earliest document seen (March 2013) concerning Morinaga and soy.

2594. Diser, Gleason M. comp. 1965. Glossary of soybean terms. *Soybean Blue Book* 25(6):18-21. March.
• ***Summary:*** This is the last issue of the *Blue Book* that contains "A glossary of soybean terms" (p. 18-21), a valuable section that has remained largely unchanged since 1961. Address: Minneapolis, Minnesota.

2595. Nakayama, Osamu; Teramachi, Yayoi; Watanabe, Tokuji. 1965. Fukuro-dôfu yo gyôkozai toshite no gurukono deruta rakuton ni tsuite [Glucono delta-lactone as a coagulant of packaged lactone silken tofu]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of Food Science and Technology*) 12(3):81-84. [3 ref. Jap]
Address: 1. Fujisawa Yakuhin Kogyo K.K., Chuo-Kenkyusho; 3. Norinsho Shokuryo Kenkyusho, Tokyo-to, Koto-ku, Edogawa Hamazono-cho 2, Japan.

2596. *Soybean Blue Book.* 1965. Japanese American Soybean Institute. p. 10.
• ***Summary:*** Gives the address, name of the managing director, structure, sources of funding, purpose and goals, and major accomplishments in chronological order. The institute was formed in early 1956.

1963–"The Institute arranged for the testing of 27 U.S. soybean varieties for their suitability for production of tofu and miso by the respective associations."

2597. Abbott, J.C. 1965. Protein rich foods from oilseeds: Economic aspects. *P.A.G. News Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) No. 5. p. 19-38. April. [15 ref]
• ***Summary:*** Table 1 lists annual consumption (in metric tons) of oilseed protein foods in some main consuming areas. Column 1: Miso, tofu, tempeh and other fermented or cooked soybean products: Mainland China 3,736,000. Japan 2,536,000. Indonesia 200,000. South Korea 160,000. Taiwan 153,000. Hong Kong 15,000. Malaya 15,000. Singapore 15,000.

Column 2: Soy milks: Singapore and Malaya 1,300 metric tons, Hong Kong 1,000.

Note: This is the earliest document seen (Sept. 2002) that contains industry or market statistics for soymilk by geographical region. Address: Chief, Marketing Branch, FAO Headquarters, Rome, Italy.

2598. Hesseltine, C.W. 1965. A millennium of fungi, food, and fermentation. *Mycologia* 57(2):149-97. March/April. [38 ref]
• ***Summary:*** A landmark, widely cited work on indigenous fermented foods. Interestingly, it makes no mention of amazake, or kanjang (Korean soy sauce). Contents: Tempeh. Ragi. Sufu (describes process, mentions pehtzes and the mold *Actinomucor elegans* NRRL 3104).

Color photos (sent by Dr. Clifford Hesseltine) show: (1) Luxuriant growth of *Actinomucor elegans* mold on some skewered cubes of tofu in an incubator; on the top row are uninoculated cubes. (2) Cubes of sufu in their final form after removal from brine.

Thamnidium (meat tenderizer and flavor enhancer from the mold *Thamnidium elegans*). Miso. Shoyu (incl. tamari. "In China, shoyu is more of the tamari type, that is, more soybeans are used and less wheat,..."). Tea fungus. Ang-kak (red fermented rice [red rice koji], p. 179-81). Advantages of fermenting foods. The future of food fermentations.

The glossary gives brief descriptions of aga-koji, akakoji, amylo process, anchu, angkak, angkhak, ang-quac, anka, ankak, arack, arak, arrack, atsumandie, awamori, bagoong, bakhar, beni-koji, benikoji, braga, brem, busa, chao, ch'au yau (Chinese name for shoyu), chee-fan (a type of Chinese cheese or sufu), chiang (Chinese equivalent of miso), chicha, Chinese cheese (sufu), Chinese red rice (ang-kak), chiu-chu (Chinese yeast), chiu-niang (Chinese term for koji), chou [*ch'ü*] (Chinese equivalent of koji), dahi, dawadawa (made from African locust bean–*Parkia filicoidea;* soy is not mentioned), dhokla, dosai, fermentation of citron, fermented fish, fermentation of maize, fermented minchin (wheat gluten), fermented soybeans ("a Chinese

food prepared from small black soybeans." See A.K. Smith 1961 [fermented black soybeans]), fish paste, fish sauce, fish soy, fu-yu, fu-yue, fuyu (see sufu [fermented tofu] for all 3), ginger beer plant, grib, hamanatto, hon-fan [fermented tofu], hongo, hung-chu, idli, injera, jamin-bang, java yeast, jotkal, kaffir beer, kanji, katsuobushi, katyk, kefir, ketjap, kimchi, kishk, kisselo mleko, koji, kombucha (tea fungus fermentation), kome-miso, kuban, kumiss, kumys, kushik, kushuk, kvass, kwass, kyoku-shi, lao-chao, leben, lebeny, levain of khasia, levain of sikkin, lontjom (ontjom), magou, mahewu, maize fermentation of the maoris, mazun, medusen tee, meen, meitauza, meju (fermented soybeans of Korea), mén, mien (Chinese yeast), mirin, mish, miso, moromi, mugi miso, murcha, nappi, nata, natto, ngapi, nuoc-mam, nukamiso, ontjom, patis, paw tsay, peh-khak, pehtze, peujeum, peyem, poi, prahoc, pulque, raggi, ragi, ranu, red pepper sauce, red rice, red sufu, sajur asin, saraimandie, sekihan, shiro koji, shottsuru, shoyou, sho-yu, shoyu, soja japonais (shoyu), sonti (a rice beer wine of India), South African fermented corn, soy, soybean cheese [fermented tofu], soy sauce, sufu, su fu [both fermented tofu], sweet flour paste, taette, tahuli, tahuri [both "Philippine fermented soybean curd"], takuwan, tamari, tane koji, tao-cho [taotjo], taokoan [pressed or firm tofu, not fermented], tao dji (see taotjo {sic}), tao-si ([fermented black soybeans]; see Handbook of Philippine Agriculture. 1939. p. 132-43), tao-tjung, tao-yu, taotjo, tapej, tape ketan, tape ketella, tarhana, tea beer, tea cider, tea fungus, teekwass, teeschwamm, tempe, tempeh, tempeh bongkrek, tempeh kedelee, thamnidium, thumba, tibi, tien mien chang [chiang], tojo ("Philippine name for soybean curd"), tokua ("Philippine name for soybean curd"), torani, tosufu, toyo, trassi, tsue fan, tuwak, uri, u-t-iat, wunder pilz, yen-tsai.

Note 1. This is the earliest document seen (Oct. 2011) that mentions *Actinomucor elegans* in connection with sufu [fermented tofu]. In 1966 Hesseltine describes it as the best mold for use in making this fermented food.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the terms "fuyu" or "fu-yue" or "chao" to refer to fermented tofu.

Note 3. This is the earliest document seen (July 2000) that mentions "mugi miso"–a type of miso made with barley koji. By the mid- to late-1960s, macrobiotic companies in the USA were importing barley miso from Japan and labeling it "Mugi Miso."

Photos show: (0) Clifford W. Hesseltine (portrait). (1-3) *Rhizopus oligosporus* mold, used to make tempeh (3 views). (4) Skewered cubes of sufu in an incubator, with one skewer of uninoculated tofu cubes and three rows of tofu inoculated with *Actinomucor elegans* showing luxuriant growth of mold. (5) Cubes of Chinese cheese [fermented tofu] removed from brine. (6) Dilution plate of tane koji showing different types of *Aspergillus oryzae*. Address: NRRL, Peoria, Illinois.

2599. Manners, Marian. 1965. Thundering herd: U.S. stampedes for beef. *Los Angeles Times.* May 6. p. G1.
• ***Summary:*** Includes a recipe for Sukiyaki, with "3 or 4 cubes soy bean curd, optional" and ½ cup soy sauce. A large photo bears this caption: "Culinary adventure–Sukiyaki is an exciting dish to prepare in the patio or dining room. Ingredients to be assembled in advance include slices of beef, mushrooms, spinach, bamboo shoots, soy bean curd."

2600. Safeway International. 1965. Foods from the world over (Ad). *Washington Post, Times Herald.* May 19. p. A18.
• ***Summary:*** The "International favorites" section of this large ad includes: "Yaki Tofu Japanese, bean curd–9½-oz. can 49¢."

Note: This is the earliest English-language document seen (April 2013) that uses the term "Yaki Tofu" to refer to grilled tofu.

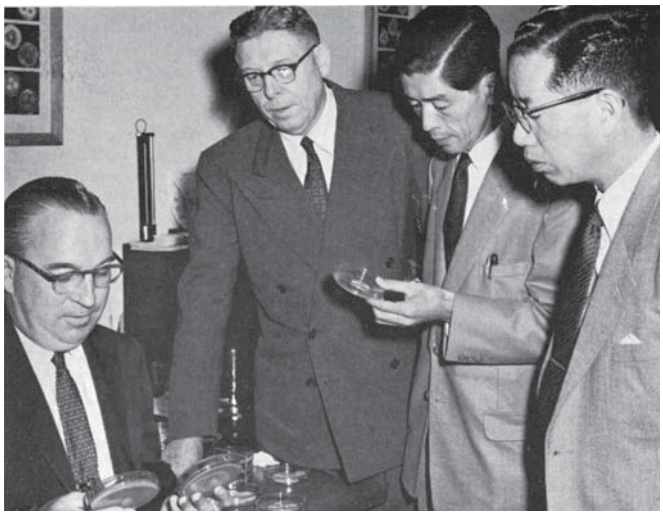
2601. Jones, Dorothea Van Gundy. 1965. Nutritionist Jones praises low-fat foods of Japan: To Tokyo for tofu. *Today's Food* (*Loma Linda Foods, Riverside, California*) 10(1):4-6. Spring.
• ***Summary:*** In the fall of 1964 Dorothea was invited by the American Soybean Association to travel to Tokyo, Japan, to participate in a soybean seminar and fair. It was held in August and sponsored jointly by the U.S. Government and the American Soybean Association. She also lectured and demonstrated the use of soybeans in human nutrition. This article describes the trip. Part of her time was taken up with television, radio, and newspaper interviews. Miss Kojima went along to interpret. On a side trip to rural Japan, they had the privilege to stay in a Japanese Inn. Photos show: (1) Nutritionist Dorothea Van Gundy Jones demonstrates Western cookery at a stove while Soybean Institute Vice-President Miss Kojima translates for the audience. (2) Ingredients for making sukiyaki (incl. Loma Linda Tender-Bits and Loma Linda Soy Sauce). (3) Dorothea Jones and her husband standing behind ace carvings at a banquet.

2602. *Soybean Digest.* 1965. Research leads to a new food market for soybeans. June. p. 16.
• ***Summary:*** "Acceptance of U.S. soybeans in traditional foods of Japan is growing as U.S. exporters and Japanese processors apply results of research, the U.S. Department of Agriculture reports.

"More than 10% of the nearly 49 million bushels exported to Japan during the 1963 market year went into production of three staple foods in the Japanese diet. These are shoyu, or soy sauce; tofu, a soft, white gelatin-like food used in soup or for frying; and miso, a food paste used in soup.

"Until about 6 years ago, Japan imported no soybeans from the United States for use in making these foods–all U.S. imports were processed into oil and meal.

© Copyright Soyinfo Center 2013



"Reinforcing this new Japanese food market is a new export industry in the United States–selecting soybean varieties for Oriental food processing and maintaining the identity of the selections during shipment.

"These developments are the direct result of research by USDA's Agricultural Research Service and Japanese institutions working under grants from ARS. The work was begun in 1957 at the Northern Utilization Research Laboratory, Peoria, Illinois, when ARS scientists, with the cooperation of two Japanese scientists on leave from their institutions, set out to find differences between U.S. and Japanese soybeans that might explain why Japanese food processors preferred domestically grown beans. Later, companion studies were initiated in Japan–by the Japan Shoyu Research Institute, the Japan Tofu Association, the Food Research Institute, and the Central Miso Institute. The American Soybean Association, through its operating arm in Tokyo, the Japanese American Soybean Institute, was active in initiating the project.

"These studies show that:

"1–U.S.-grown soybeans can be used to make traditional Japanese foods equal in quality to food made from Japanese beans.

"2–U.S. No. 2 beans–the most commonly available commercial grade–yield more shoyu than Japanese beans selected for shoyu production.

"3–Hawkeye variety is the best of 12 varieties tested for making tofu.

"4–Comet, Yelnanda, and Harosoy varieties are best for making miso.

"5–Characteristics required in soybeans for Oriental foods can be used as a basis for selecting and breeding U.S. varieties for this purpose.

"The Peoria scientists demonstrated for the first time that high-quality miso and tofu can be made from U.S. soybeans. The miso processing time was shortened by cracking the beans and removing the seedcoats. This dehulling reduces soaking and cooking time and increases protein content and uniformity of the finished miso.

"The Japanese scientists have found (1) that lower production costs and higher yields of shoyu make U.S. soybeans more profitable in Japan than domestically grown beans; (2) that Chippewa and CNS-4 varieties rank next to Hawkeye in tofu yields and quality and that a high protein content is essential to high tofu quality; and (3) that miso color is affected by cooking time before fermentation is started–better color is produced by shorter cooking.

"A laboratory test of soybeans for tofu production, now being developed, will be made available to U.S. plant breeders for screening and improving varieties for the export market.

"The grants to Japan, awarded under Public Law 480, were financed with foreign currency obtained by the United States from the sale of farm products abroad. This money cannot be converted into dollars for use in the United States, but a portion of it can be used to pay for foreign research that will benefit U.S. agriculture."

A photo shows: USDA scientists Dr. C.W. Hesseltine and Dr. A.K. Smith, and Japanese scientists Dr. Tokuji Watanabe and Dr. Kazuo Shibasaki (left to right). They started research in 1957 at the Northern Utilization Research Laboratory, Peoria, Illinois, on using U.S. soybeans in traditional Oriental Foods.

2603. De, Sasanka S. 1965. The present state of protein-rich food development in Asia and the Far East. *J. of Nutrition and Dietetics* (*India*) 2(3):166-76. July. [23 ref]

• ***Summary:*** Gives an excellent account of soymilk production in Asia during the mid-1960s and a brief history of the FAO/WHO/UNICEF/Protein-rich food program. "The First International Conference sponsored by FAO, WHO and Josiah Macy Jr. Foundation (New York) held in Jamaica in 1953, discussed the biological, technical and pathological aspects of protein malnutrition. The next Conference on 'Human protein requirements and their fulfillments in practice' held in Princeton in 1955 under the same sponsorship, gave detailed consideration to the testing of new protein rich foods before their use in child feeding was recommended.

"The Protein Advisory Group (PAG) was established by the Director-General of WHO in 1955 to 'act on behalf of WHO in rendering advice to FAO and UNICEF on the safety and suitability for human consumption of proposed new protein-rich foods.' The PAG... became a tripartite FAO/WHO/UNICEF Protein Advisory Group in 1961."

Soybean milk: "In 1939, K.S. Lo established a firm known as 'Hong Kong Soyabean Products' to produce sterilized bottled soya milk. The two plants of the firm in Hong Kong produce 12,000 cases (24 x 7-oz. bottles per case) a day."

Also discusses miso, natto, tempeh, full-fat soya flour, soya presscake and meal, groundnut protein isolate. Address:

2604. Dinshah, Freya. 1965. The vegan kitchen. Malaga, New Jersey: The American Vegan Society. 16 p. Index. 28 cm. Spiral bound. *
• ***Summary:*** The first edition of this pioneering vegan cookbook was published as part of a special issue of the Dinshah's magazine *Ahimsa*, issued in July 1965. *The Vegan Kitchen* runs from pages 4 to 19. It was first published as a spiral-bound book in Jan. 1967, with the third edition. As of 1991, the book has sold more than 30,000 copies.

A lifetime vegetarian, the author (whose photo appears on page 2) was born and raised in England, has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey.

2610. **Product Name:** Cheze-O-Soy.
Manufacturer's Name: Nutrition International Corp. (Formerly Madison Foods).
Manufacturer's Address: Box 415, Madison, TN 37115.
Date of Introduction: 1965.
Ingredients: In 1971: Soybeans, vegetable oil, tomato paste, onion, monosodium glutamate, hydrolyzed vegetable protein, seasonings, water.
New Product–Documentation: Soybean Blue Book. 1965. p. 114. Note new spelling of product name.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan.* 3rd ed. p. 160. Lists the ingredients in "Cheze-o-Soy (Madison)."

2611. Arimoto, Kinitaro; Sakurai, Yoshito. 1965. Food and nutrition in Japan. In: Martin S. Peterson and Donald K. Tressler, eds. 1965. Food Technology the World Over. Vol. II. South America, Africa and the Middle East, Asia. Westport, Connecticut: AVI Publishing Co., Inc. ix + 414 p. See p. 359-94. Illust. Index. 24 cm. [13 ref]
• ***Summary:*** This chapter, after the Introduction, is divided into two parts: 1, titled "Nutrition (p. 360-74)" by Arimoto, and 2, titled "Food technology" (p. 374-94)" by Yosito [Yoshito] Sakurai. In Part 1, table 110, "Food supply in Japan" includes average statistics on soybeans, miso, and shoyu in kg/year and gm/day for 1944-1948, 1961, and 1961. in kg/year for the three periods: Soybeans: 3.5, 5.4, and 5.0. Miso: 10.6, 8.1, and 7.7. Shoyu: 15.9, 13.0, and 11.1. Source: Ministry of Agriculture and Forestry, Balance Sheets. Surprisingly, supplies were greater for each during and immediately after World War II than in the early 1960s.

Table 116, "Intake of foods classified into food groups and type of work (gm per capita per day), 1963" gives statistics for the entire nation, agricultural households, and non-agricultural households, as follows: Soybeans: 1.3, 1.7, 1.0. Miso: 25.1, 30.1, 22.5. Soybean products: 37.3, 29.9, 41.5. Seaweeds: 4.6, 4.2, 4.7. Shoyu: 26.2, 30.0, 23.6. Soybean products as a source of high quality protein are discussed (p. 366).

Part 2 begins with a section on "Rice" (p. 374-77) which notes that rice supplies half the calories in the Japanese diet. Japan produces all of the rice it needs–about 13 million tons. Imported rice (about 150,000 tons) is used only as a raw material in confections and miso. Japan imports most of its soybean from the USA and China, and these soybeans are processed by characteristically Japanese methods to make tofu, miso, and shoyu (p. 377).

Animal husbandry is not widely practiced in Japan, largely because the land is hilly with few grazing lands. Thus most beef, pork, and chicken are imported. The production

© Copyright Soyinfo Center 2013

of cow's milk is gradually increasing; it is now 27 million hectoliters.

Packaging of foods has changed greatly during the past decade. Packaged foods are now common. Shoyu and miso, once sold by the measure, are now sold in bottles and plastic bags, respectively. Table 128 (p. 378), titled "Supply of raw materials and food consumption of their products in 1959 (Japan)" shows the following for soybeans (in metric tons = tonnes). Soybeans–Domestic supply: 410,000 tonnes. Imports: 1,000,000 tonnes. Miso consumption: 850,000 tonnes. Shoyu: 1,280,000 tonnes. Tofu: 640,000 tonnes. Aburaage 170,000 tonnes. Natto 60,000 tonnes. Meat 330,000 tonnes. Fishery products: 6,170,000 tonnes.

The section titled "Soybeans" (p. 380-86) has the following contents: Introduction. Miso, shoyu, natto, tofu, koritofu (dried tofu) [dried-frozen tofu], yuba. Photos show: (1) Shoyu brewing in tanks in a large factory. (2) Pressing and washing of tofu in koritofu manufacture in a large, modern factory. (3) Aerial view of a large, modern plant for koritofu production. (4) The thawing operation in making koritofu. (5) The drying operation in making koritofu. Address: 1. PhD, Director, National Inst. of Nutrition, Tokyo, Japan; 2. PhD, Prof., Dep. of Agricultural Chemistry, Faculty of Agriculture, Tokyo Univ., Tokyo, Japan.

2612. Brandemuhl, William. 1965. Soybean utilization in Japan. San Francisco, California. xxii + 478 p. Unpublished manuscript. Illust. No index. 28 cm. [189 ref]

• ***Summary:*** A superb, in-depth, pioneering study, based on extensive original field research in Japan. It is carefully documented with hundreds of original interviews and published sources properly cited in two different lists of sources (numerical and alphabetical) Contains 30 tables and 190 excellent photos–including 7 of the author.

Table of contents: Preface. Notes. List of tables. List of figures. Map. Part I: Background. 1. The soybean: Birth and spread (legend, botanical inception, Nagata's theory of origin, spread to Japan and beyond, the American story).

Part II: Japan's production and supply of soybeans. 1. Japan the country and supply of domestic soybeans (Japan the country, domestic soybean production, planting and harvesting, marketing domestic soybean). 2. Importation of Red Chinese soybeans (background, mechanics, advantages, and prospects). 3. Importation of U.S. soybeans (history, method and mechanics of importation, the American shippers, concluding comments on importation). 4. Distribution (use in brief, super-wholesaler, wholesaler, retailer wholesaler, Japan's grain exchange).

Part III: Soybean utilization in Japan. 1. Utilization of soybeans for oil and meal (oil crushing history, soybean source, delivery of soybeans, the crushing industry, liberalization of soybean oil and meal, oil utilization in Japan, meal utilization in Japan). 2. Tofu (history, use of soybeans, manufacture, the tofu factory, marketing tofu products, recently developed tofu products, tofu as food, concluding comments). 3. Miso (importation, home production of miso, quantity of miso produced, soybean used for producing miso, kinds of miso, fermentation time, comparison of miso firms, manufacturing, packing and marketing, price, instant miso, use of miso, miso consumption outlook). 4. Shoyu (introduction, production and manufacturers, manufacture, raw materials, preparation of raw materials for natural shoyu, preparation of materials for chemical method shoyu, preparation of materials for mixed method shoyu, fermentation, filtering and pressing, sterilization, bottling, price, use of shoyu, miscellaneous shoyu products, concluding comments). 5. Natto (description, history, Daitokuji natto, the natto industry, consumption, natto soybeans, processing, making cost and price, marketing, use of natto, problems, new ideas and natto products). 6. Frozen tofu (history, development, frozen tofu soybeans, processing, freezing, defrosting, drying, treatment with ammonia and packing, marketing, preservation, use). 7. Kinako. 8. Yuba (history and development, the plight of the yuba industry, soybeans for yuba, manufacture, classification of yuba, use). 9. Tsukudani and nimame (description, soybean tsukudani, nimame). 10. Hamanatto (history, manufacture, use). 11. Edamame. 12. Moyashi [bean sprouts] (manufacture, use). 11. Miscellaneous products (fermented soybean curd, MSG–monosodium glutamate, confectionary products {roasted soybeans for Setsubun, soybean candy, isonori, mameheto, shinseimame, suhama}, other products). Conclusion. Sources (numerically arranged). Sources (alphabetically arranged).

Tables: 1. U.S. soybean production, 1924-1963. 2. United States, Red China, and world production of soybeans (bushels), 1950-1963. 3. U.S. soybean importation, exportation and amount processed for oil and meal, 1924-1963. 4. U.S. exportation of soybeans (1,000 bushels) total, by continent, and to six largest importing countries, 1958-1962. 5. Japan's soybean acreage, production, and merchandising rate. 6. Japan's importation of soybeans, total, and Red China's portion, 1945-1963. 7. Japan's total importation of soybeans and U.S. portion, 1945-1963. 8. Soybean usage in Japan, 1963. 9. Japan's processing of oilseeds, 1963. 10. Crushing capacity of selected Japanese oilseed crushers. 11. Eight largest crushers of soybeans and amount of soybeans crushed per month in 1963. 12. Total quantity of soybeans crushed in Japan, 1950-1963. 13. Japan's daily per capita intake of edible fats and oils. 14. Japan's consumption of edible fats and oils, 1945-1961. 15. Use of soybean meal. 16. Chemical composition of tofu and aburaage. 17. Quantity of soybeans and soybean meal used for tofu-aburaage productions (all Japan), 1950-1963. 18. Miso production and quantity of soybeans and soybean meal used, 1950-1963. 19. Composition of miso. 20. Daily per capita consumption of miso in Japan, 1950-1963. 21. All Japan production of shoyu and use of soybeans and soybean

© Copyright Soyinfo Center 2013

meal, 1950-1963. 22. Composition of shoyu. 23. Yearly per capita consumption of shoyu, 1950-1963. 24. Composition of natto. 25. Production of frozen tofu and use of soybeans. 26. Composition of frozen tofu. 27. Yearly per capita consumption of frozen tofu. 28. Composition of kinako. 29. Composition of yuba. 30. Monosodium glutamate production and use of soybeans and soybean meal. Continued.

This typed manuscript was sent to Soyfoods Center in July 2004 by Tomoko Brandemuhl, the wife of the author. About the author (based on several interviews with Tomoko, July 2004): William Victor Brandemuhl was born on 30 Nov. 1940 at Iron Mountain, Michigan. He grew up in Florence, Wisconsin, then attended the University of Wisconsin at Madison. He roomed for 3-4 years with various Japanese cancer researchers at the university. He also became close to Tomoko Arai (born 12 Dec. 1937 in Tokyo), a Japanese woman, who was doing graduate studies in social work there as a Rotary International Fellowship student. William initially intended to graduate in June 1962, but stayed an extra year in order to pursue independent studies in Japanese language and soybeans. He became interested in the soybean and its history in an anthropology class taught by Dr. R.J. Miller; William finished his excellent research paper on soybeans in Jan. 1963. He also took one year of Japanese language instruction (night classes). William graduated in Jan. 1963 with a BSc degree in economics.

William obtained a grant (no strings attached) from Honeymead Products Co. of Mankato, Minnesota, to study soybean utilization in Japan. Only one American had studied this subject in Japan after World War II–Allan K. Smith of the USDA, who visited Japan and wrote short but detailed reports in 1948-49 and 1958. In Jan. 1963 Brandemuhl arrived in Japan and became a research fellow at the Department of Agricultural Economics, Kyoto University, Kyoto, Japan. Between Feb. 1963 and May 1964 (15 months) he conducted field research on soybean utilization in Japan. In June 1963 (after William had been in Japan for 4 months), Tomoko completed her graduate studies, graduated from the University of Wisconsin, and (since her scholarship was finished), returned to Japan–to be with William and to help him with his research in Japanese, which he spoke only moderately well. She traveled with him throughout Japan and translated for him during the many interviews he conducted. At each destination, she spoke about America to the local Rotary club–which paid her transportation, room, and board. William's monthly check from Honeymead paid for his room and board–but not for his travel and research, so he had to work part time doing English translation for a Japanese company. On trips, he took many photos using his expensive Nikon camera. Tomoko's family lived near Kobe, where she and William were married on 8 Aug. 1964–three months after he finished his field research. Several days after the marriage, they returned to the USA to visit his parents in Florence, Wisconsin, and enjoy a wedding party there.

William now knew he wanted to pursue a career in international business. He was soon offered a job at Crocker Citizen National Bank (International Division) in San Francisco, California. They drove to San Francisco and got an apartment at 1701 21st Avenue; he began work that fall, and was soon learning the basics of international business. Every evening after work at the bank he returned home to work on transforming his field notes into a manuscript. As he wrote the rough draft, Tomoko (a skilled pianist but not a skilled typist) typed it on a manual typewriter. The next day he would correct any mistakes and she would retype each page into final form. In 1965 he had the best carbon copy bound and sent it to Honeymead; he kept the original. It was never published and he received no academic credit for it.

On 26 May 1966 their first son and only child, Konrad Victor Brandemuhl, was born in San Francisco. They bought a house in Pacifica. In 1967 he was offered a job with Caterpillar Tractor Co. (International Div.) in Peoria, Illinois. In 1968 he moved with his boss to work at Allis-Chalmers Manufacturing Co., West Allis, Wisconsin. In 1969 he was transferred to Tokyo, Japan, as Far East Representative of the company. In 1970 he was transferred to Singapore as Far East Manager of the company.

William and Tomoko later lived for about 10 years near Tokyo, Japan (mostly in Mitaka), and for a while in Singapore. Over the years he showed his typescript on "Soybean Utilization in Japan" to many people, but nobody was interested. In 1986 he started his own trading company, specializing in textiles, natural rubber, latex thread, and various machine mechanisms. Tragically, William died on 2 April 1998 in Bangkok, Thailand, of pneumonia, during a business trip. He loved the excitement of international business and interaction with people of different cultural backgrounds. Address: San Francisco, California.

2613. Brandemuhl, William. 1965. Soybean utilization in Japan: Figures (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]
• ***Summary:*** 1. Black soybeans from Japan's Tanba region and American Harosoy soybeans. 2. Soybeans growing on a dike. 3. Soybean plants drying on rack. 4. Soybean plants drying just prior to harvesting. 5. Soybean plants drying just prior to harvesting. 6. Soybean harvester. 7. Depodding rack and pod filled stalk. 8. Depodding soybeans. 9. Entrance to the Red Chinese Trade Fair held in Tokyo, during April, 1964. 10. One of the agricultural exhibits at the Chinese Trade Fair (corn and soybeans). 11. Soybeans and soybean plants exhibited at the Chinese Trade Fair. 12. Soybeans and other bean products that Red China is capable of exporting (exhibition at the Red Chinese Trade Fair). 13. Soybeans on display at retail store. 14. Soybeans on display at retail store. 15. Barge unloading of soybeans at oil mill. 16. Barge unloading of soybeans at oil mill. 17 Soybean tank receiver at oil mill. 18. Multi-spout soybean feeder at barge side. 19.

An oil gift assortment.

20. Selling oil at a small oil retail shop. 21. Dispensing oil. 22. Selection of oil at oil retail shop (notice birds in cage at right). 23. Vegetable oil displayed with petroleum products. 24. Vegetable oil displayed with petroleum products. 25. Bottling facilities at oil wholesaler's. 26. Bottling facilities at oil wholesaler's. 27. Prepackaged oil products displayed at wholesaler's. 28. Seafood fried in soybean oil. 29. Selling soybean oil fried products. 30. Temperature controlled fryer. 31. At a chicken farm. 32. Handling 20 kilograms bags of chicken feed. 33. Soybean meal on top of other components of mixed feed prior to hand mixing. 34. Bag fastener for mixed feeds packed at wholesaler. 35. Fermenting agent for bakery (contains equal quantities of soybean flour, yeast, and water). 36. Silk worms eating mulberry leaves. 37. Silk worms eating soybean protein mixed with mulberry leaves. 38. Tofu. 39. Soybean grinder.

40. Soybean grinder. 41. Soybean grinder. 42. Open pit live steam cooker. 43. Open pit wood-stoked cooker. 44. Okara tank and press. 45. Outdated okara press. 46. Tonyu [soymilk] receiving tanks (precipitation tanks). 47. Removing water from precipitating curd. 48. Pressing tofu with stone weights. 49. Yakidofu. 50. Yakidofu being dippered into a shaping box. 51. Mechanical press for pressing yakidofu. 52. Cutting yakidofu. 53. Roasting yakidofu. 54. Kinugoshi tofu. 55. Aburaage. 56. Aburaage prior to being deep fried. 57. Frying sushiage, a product similar to aburaage. 58. Frying aburaage. 59. Hirosu: left front; atsuage: right front; sushiage: left rear; aburaage: center rear.

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "Hirosu" to refer to Kyoto-style deep-fried tofu treasure balls.

Note 2. This is the earliest English-language document seen (April 2013) contains the word *atsuage* or the word *sushiage;* they refers to types of deep-fried tofu.

60. Okara for use as cattle feed. 61. Okara for food use. 62. Overall view of production portion of tofu plant. 63. Tofu peddler. 64. Tofu on display. 65. Bagged tofu. 66. Miso-shiru soup. 67. Dengaku (yakidofu covered with miso and placed over low heat). 68. Aburaage formed as a bag with rice inside. 69. Yudofu, Japan's most famous but not often eaten tofu dish. 70. Yudofu. 71. Miso. 72. Fermentation starting material (rice inoculated with bacteria). 73. The first step in making home miso. 74. Mashing soybeans for home miso. 75. Rice koji being used for home produced miso. 76. Salt being added to soybean and koji for the making of home miso. 77. Mixing home miso components. 78. Mixing home miso components. 79. Freshly made home miso.

80. Home miso after one year natural fermentation. 81. Koji maker. 82. Koji filled boxes. 83. Autoclave for steaming soybeans. 84. Koji mixed with salt. 85. Wooden vat for miso fermentation. 86. Weights for pressing miso. 87. Removing miso from fermentation vat. 88. Mixing and grinding miso. 89. Degraining [grinding] miso. 90. Miso on display. 91. Miso packing and sealing instrument. 92. Packing miso in a plastic bag. 93. Beef and rice miso preserver. 94. Seafood and rice miso preserver. 95. Receiving soybean meal at shoyu factory. 96. Saline solution for shoyu production. 97. Fermenting moromi. 98. Equipment used for bubbling moromi. 99. Temperature control of moromi.

100. New moromi. 101. Moromi which has fermented nearly one year. 102. Hydraulic press for pressing moromi. 103. Running moromi into filter cloth. 104. Filter cloth containing moromi. 105. Raw shoyu storage tank. 106. Open press for previously pressed moromi. 107. Opening moromi filter cloth. 108. Removing shoyu kasu (shoyu presscake) from filter cloth. 109. Bagging shoyu kasu for sale as cattle food. 110. Quick method shoyu kasu. 111. Shoyu sterilization instrument. 113. Shoyu bottler. 114. Bottling shoyu by hand. 115. High speed labeling. 116. Hand labeling. 117. Preparing sauce for shipment. 118. Shoyu cold sauce. 119. Filling plastic bottles with shoyu for use in box lunches.

120. Broiled chicken coated with shoyu. 121. Fish marinated in shoyu. 122. Fish baked with shoyu. 123. Grilled eels basted with shoyu. 124. Daitokuji natto (look like raisins spread on a sheet of paper).

125. Cooker for steaming soybeans for natto. 126. Pressurized container for inoculating soybeans. 127. Inoculating soybeans for natto. 128. Traditional method of packing natto. 129. Traditional method of packing natto. 130. Incubation rack and traditional packages of natto. 131. Packaging inoculated soybeans prior to incubation. 132. Packaging inoculated soybeans prior to incubation. 133. Inoculated soybeans in recently introduced containers. 134. Natto incubation room. 135. Natto on display at egg shop.

136. Overall view of frozen tofu factory. 137. Precipitation containers for frozen tofu tonyu. 138. Smoothing frozen tofu curd. 139. Frozen tofu curd flowing into shaping box.

140. Shaping box for frozen tofu curd equipped with sheet metal guide. 141. Removing formed frozen tofu curd from sink. 142. Cutting formed curd into freezing size. 143. Sized curd in -20ºC freezer. 144. Sized curd in -5ºC degree freezer. 145. Defrosting frozen tofu. 146. Removing frozen tofu curd from centrifuge. 147. Inspecting frozen tofu curd for dryness. 148. Drying frozen tofu. 149. Grinding frozen tofu into marketable size. 150. Packing frozen tofu. 151. Frozen tofu on display. 152. Cooked frozen tofu displayed in food shop. 153. Cooked frozen tofu mixed with vegetables. 154. Packing kinako. 155. Kinako on display. 156. Covering pounded rice cake [mochi] with kinako. 157. Yuba. 158. Yuba hanging on rack above tonyu tank. 159. Lifting yuba from tonyu tank.

160. Fresh yuba. 161. Rolling fresh yuba into marketable form. 162. Combining fresh yuba with vegetables. 163.

Rolling dry yuba. 164. Yuba on display. 165. Shoyu vats at tsukudani factory. 166. Tsukudani cooker. 167. Cooling tsukudani. 168. Nimame being marketed. 169. Nimame with shoyu and shrimp. 170. Nimame with shrimp. 171. Selling nimame. 172. Nimame as served. 173. Hamanatto. 174. Sun drying Hamanatto. 175. Close-up of sun-dried Hamanatto. 176. Pressing Hamanatto. 177. Grading Hamanatto. 178. Hamanatto on display. 179. Edamame.

180. Sprouting soybeans. 181. Sprouting soybean covered with straw. 182. Close-up of sprouting soybeans. 183. Sprouting soybeans. 184. Wetting down sprouting soybeans. 185. Soybean sprouts. 186. Mappe sprouts [Note 2. "Mappe" is not a Japanese word; mappe beans are imported from Burma]. 187. Soybean roasting oven. 188. Roasting soybeans. 189. Soybeans and seaweed. 190. Black soybeans in pounded rice cake [mochi].

Map of Japan. Address: San Francisco, California.

2614. Brandemuhl, William. 1965. Soybean utilization in Japan: List of interviews (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• ***Summary:*** Between Feb. 1963 and May 1964 the author interviewed people from the following organizations (listed alphabetically) related to soybean utilization in Japan. In many cases he interviewed the owner, president, or managing director.

1. Agricultural Experimental Farm, Kamigori, Hyogo-ken. 2. Akutagawa Candle Co., Kyoto. 3. Aoki Miso Co., Nagano-ken. 4. Aoki Umbrella Co., Kyoto. 5. Aoyama Candy Co., Kyoto. 6. Bunge Far East Agent, Osaka. 7. Choko Shoyu Miso Co., Nagasaki. 8. Continental Overseas Corp., Tokyo. 9. Daiichi Trade Co., Kobe. 10. Dainihon Ink and Chemical Co., Osaka. 11. Dainihon Pharmaceutical Co., Osaka. 12. Daiya Frozen Tofu Co., Suwako-gun, Nagano-ken. 13. Daizu Yuryo Wholesale and Broker, Kobe. 14. Franceya Chocolate Co., Kyoto. 15. Fuji Oil Co., Osaka. Note: This is the earliest document seen (June 2009) concerning the work of Fuji Oil Co. (Osaka, Japan) with soy.

16. Genroku Brewing Co., Kyoto. 17. Gion Mameheto Candy Co., Kyoto. 18. Hamamoto Tofu Co., Kyoto. 19. Hamano Tofu Co., Kyoto. 20. Hanamura Bread Co., Kobe. 21. Harada Miso Co., Kyoto. 22. Hasegawa Oil Co., Kyoto. 23. Hashizume Tsukudani Co., Kyoto. 24. Hirota Sauce Co., Kyoto. 25. Hohnen Oil Co., Osaka. 26. Honda Miso Co., Kyoto. 27. Ishino Miso Co., Kyoto. 28. Itoh Trade Co., Osaka. 29. Itoh Trade Co., Tokyo.

30. Iwai Trade Co., Osaka. 31. Kaihara Natto Co., Kyoto. 32. Kamejirushi Shinshu Miso Co., Nagano-ken. 33. Kanegabuchi Chemical Co., Takasago-shi, Hyogo-ken. 34. Kanemasu Grain Wholesaling Co., Osaka. 35. Kanematsu Trade Co., Osaka. 36. Kansai Paint Co., Osaka. 37. Kansai Shoji Wholesale Co., Kyoto. 38. Kanto Miso Co., Kyoto. 39. Kasakura Natto Co., Tokyo. 40. Kato Kinako Co., Tokyo. 41. Kido Tofu Co., Tokyo. 42. Kobata Farm, Kyoto. 43. Kobayashi, Michiharu, Kyoto University, Kyoto. 44. Koya-san Frozen Tofu Co., Ito-gun, Wakayam-ken.

45. Kurosawa Miso Co., Nagano-ken. 46. Kyoto Prefectural Agricultural Cooperative, Kyoto. 47. Louis Dreyfus and Co., Tokyo. 48. Mame Masa Candy Co., Kyoto. 49. Marubeni Iida Trade Co., Osaka. 50. Meiji Chocolate Co., Osaka. 51. Midori Natto Co., Tokyo. 52. Mitsui Trade Co., Osaka. 53. Mitsui Trade Co., Tokyo. 54. Moriguchi Natto Co., Kyoto. 55. Morita Frozen Tofu Co., Sasayama, Hyogo-ken. 56. Moriwaki frozen Tofu Co., Taka-gun, Hyogo-ken. 57. Nagata, T., Dept. of Plant Breeding, Hyogo University of Agriculture, Sasayama, Hyogo-ken. 58. Nagoya Miso Co., Nagoya. 59. Nakai Wholesale Co., Osaka.

60. Nakamura Yuba Co., Kyoto. 61. Nakayama Farm, Kamigori-cho, Hyogo-ken. 62. Nakazawa Soap Co., Kyoto. 63. Namikawa Tofu Co., Kyoto. 64. Naruse Natto Bacteria Co., Tokyo. 65. National Agricultural Cooperative Assoc., Osaka. 66. Nihon Paint Co., Osaka. 67. Nikka Oil Co., Tokyo. 68. Nisshin Meal Co., Kobe. 69. Nisshin Oil Co., Yokohama. 70. Noda Shoyu Co., Takasago-shi, Hyogo-ken. 71. Nomura Meal Co., Kyoto. 72. Nomura Tsukudani Co, Kyoto. 73. Nunoura, Hiroshi, Kyoto Women's University, Kyoto. 74. Oguchi, K., Nagano-ken Shinshu Miso Assoc., Nagano-ken.

75. Ohashi, Taiji, Japan Soap Assoc., Tokyo. 76. Okazaki Natto, Tokyo. 77. O-mame Candy Co., Kyoto. 78. Osaka Grain Exchange, Osaka. 79. Osaka Prefectural Miso Assoc., Osaka. 80. Otsuya Agricultural Brokers, Kyoto. 81. Ryo Tofu Co., Kyoto. 82. Sawai Wholesale Co., Kyoto. 83. Senmaru Yuba, Kyoto. 84. Shimamoto Tofu Co., Kyoto. 85. Shinseimame Candy Co., Kyoto. 86. Sugimori, T., Marukin Shoyu Brewing Co., Kyoto. 87. Tada, H., Kyoto Prefectural College, Kyoto. 88. Taiyozakoku Wholesale Co., Kyoto. 89. Takeya Miso Co., Suwako-shi, Nagano-ken.

90. Tanaka Narazuke, Kyoto. 91. Tatsuno Higashimaru Shoyu Co., Tatsuno-shi, Hyogo-ken. 92. Tawa Chicken Farm, Kyoto. 93. Tofu Aburaage Assoc., Kyoto. 94. Toyo Menka Trade Co., Osaka. 95. Uchida Tsukemono, Kyoto. 96. Ueda Miso Assoc., Ueda-shi, Nagano-ken. 97. Uemura Suhama Candy Co., Kyoto. 98. Uno Tofu Co., Kyoto. 99. Yamajirushi Miso Co., Nagano-ken. 100. Yamamoto Farm, Taki-gun, Hyogo-ken. 101. Yamanaka Oil Wholesale Co., Kyoto. 102. Yamato Bean Sprout Co., Kyoto. 103. Yamaya Hamanatto Co., Shizuoka-ken. 104. Yazura Yahata, Kyoto Textile University, Kyoto.

105. Yoshihara Oil Co., Osaka. 106. Yoshimura, Hyogo University of Agriculture, Sasayama-shi, Hyogo-ken. 107. Yoshizabaru Retail Co., Kyoto. 108. Yubahan Co., Kyoto. 109. Yubakichi Co., Kyoto. Address: San Francisco, California.

Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 367-86, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** The section titled "Manufacture–Initial steps" begins with "Soaking and grinding: Soybeans are first soaked in well water for 6-8 hours in summer and 12-24 hours in winter. Checking the state of soaking is accomplished in the same way as with Tofu, that is, to examine the inside color of the soybeans, as well as the appearance of bubbles rising in the container used for soaking. If soybeans for Yuba happen to soak too much they become too sticky after cooking and too much Okara results. After soaking 5-10 kilograms (dry weight) of soybeans they are ground in the same way and with the same type of equipment that is used to grind Tofu soybeans except that more often the grinder will be smaller. When grinding, an equal quantity of water is added.

"Cooking: The ground soybeans and water are transferred to a live steam, oil, or sawdust heated cooker either by negative pressure in the case steam is used or by hand. Water in the quantity equal to the quantity of ground material may be added portion by portion before, during, and after cooking depending on the makers method for obtaining the most protein from the Okara.

"Use of an open pit steam cooker is rather limitedly used because of its cost. It is said by makers who cook in other ways that a steam cooker does not give the desired quality Tonyu [soymilk] but this seems to be a rationale for their financial inability to purchase same. Yuba makers that use open steam cookers believe that cooking under pressure would even be better but then a more skilled operator is required and considering the production economics of the Yuba industry such a operator would be difficult to find. Traditionally charcoal then wood was used to cook but now the common source of heat is pine sawdust. Its pitch content and intermediate hardness makes it an ideal inexpensive fuel. Commercial companies selling such sawdust receive $.28 (100 yen) for a bushel burlap bag. With a steam cooker cooking time is very similar to Tofu while heating with saw dust necessitates boiling the ground material for 30-40 minutes. Stirring is done a number of times to insure even cooking.

"Pressing: After the ground material is cooked, pressing is accomplished in much the same way as with Tofu. The cooked material is pressured, pumped, or hand dippered from the cooker to a course nylon filter which is placed in the press box. The press used to separate the Tonyu and Okara is seldom power driven but tends to be of an older kind than most Tofu presses. The pressing operation is an important part of manufacturing Yuba because as much Tonyu as possible is desired, while with frozen Tofu much more use of the Okara is the rule. After pressing the Tonyu flows through a very fine cotton filter into a 100 liter container (quantity of Tonyu is usually around 90 liters per batch). Bubbles that form on the top of the cooking liquid are removed because if allowed to remain they would make it difficult for film to form. At this point the similarity between Tofu and Yuba end as Yuba is not precipitated with magnesium sulfate.

"Film formation: After all the possible Tonyu is obtained for a batch it is transferred by hand to a large shallow wood partitioned tank as can be seen in Figure 158. Usually the tanks are made of brass but the more progressive firms use stainless steel because brass tarnishes and is easily damaged. The 2½ inch deep tank is usually partitioned into 20, 24, or 30 squares 18 inch square (or sometimes that large and slightly narrower) forming a double row 10, 12, or l5 squares long. The 24 square tank seems to be the most favored because one person can most efficiently manage lifting protein film from 24 squares. In former times Yuba was made in separate containers rather than the one tank with removable wood partitions as are how used. This caused very individual but ununiform production. At present Yuba is not made in separate containers. Underneath the 2-10 Tonyu tanks that the Yuba maker may have is another tank which acts as a double boiler when hot water is circulated through it. Before Tonyu for Yuba was heated directly but it was found that greater control could be exercised if the double boiler system was used. This type of heating tank is now used at all Yuba plants with the source of heat for the water usually being sawdust. Even the makers which use steam cookers used the slow burning sawdust to maintain the temperature of the circulating water at 90-95ºC for maintaining the Tonyu at 80-85ºC. Yuba Tonyu should not be heated to the boiling point as it would produce a final product that is hard, however if temperature were too far below boiling film would not form. After Tonyu is poured into such a tank it flows under the partitions to an even level. After the level is even bubbles if any are removed and the Tonyu in the tank is allowed to stand untouched for about 15 minutes at which time a thin yellow film can be seen on the surface of the Tonyu in each square.

Film removal: After the entire surface area of a square is covered with the film it is lifted off (see Figure 159) with a small wood shaft 12-18 inches in length. The shaft is first inserted into the Tonyu at the right near side of a square and slide underneath the surface to the rear along the right side partition. Then the shaft is gently lifted which also lifts the film. As the film is being lifted it is turned broadside to the maker and lifted entirely out of the squares The shaft with a piece of Yuba hanging from it is then attached to a rack above the tank as shown in both Figure 158 and 159. The method of removal varies with plant but all follow the above description in principle. After raising one piece of Yuba from the square the maker moves to the subsequent squares of the tank. When the last square is finished a film has again formed on the first one so that a maker can work almost continuously until the last of the Tonyu is gone. More likely he will add his available Tonyu when the level becomes low so that Yuba is never removed from the bottom until a days work is nearly

© Copyright Soyinfo Center 2013

finished.

"After the Yuba sheets have dried slightly they may or may not be rehung with two or more hung together, depending upon the way the sheet is to be folded as a final product. For certain forms of Yuba the lifting shaft may be inserted so that the sheet is doubled upon lifting. Lifting Yuba from the surface of Tonyu requires a great amount of manual work and it is believed that the lifting process can not be automated even if the remainder of operations were.

Note. This is the earliest document seen (Oct. 2012) that contains a detailed description of how to make yuba on commercial scale.

"Classification of Yuba: Although there are many subtypes there are only two different kinds of Yuba, that is fresh Yuba and dry Yuba. Fresh Yuba, only produced in Kyoto, is only allowed to remain on the rack above the Tonyu tanks until the unsolidified portion drains. Then it is removed and racked together as shown in Figure 160. The fresh Yuba remains in the rack until sale is expected or order for same is received. At that time from two to five sheets of fresh Yuba are hand rolled as shown in Figure 161 and wrapped in paper. Fresh Yuba may also be cut in particular size pieces and folded with cooked vegetables as shown in Figure 162. Fresh Yuba may also be fried with burdock wrapped inside" (Continued). Address: San Francisco, California.

2616. Brandemuhl, William. 1965. Yuba: Manufacture, classification and use (Continued–Document part II). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 367-86, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** Continued. "Originally all Yuba was made as fresh Yuba but as it only lasts a short time, drying began. At present only about 20 percent of total Yuba production is sold fresh. Fresh Yuba is very perishable lasting only two to four days in winter and for four to eight hours in summer. In summer it is only marketed at the Yuba shop. Yuba meant to be marketed as dry needs to dry on the rack only one to three hours in summer while 12-24 hours in winter. Rain in any season will lengthen the drying time required. For dry Yuba the process of making, drying, folding, and packaging usually requires one day so a certain day's production is usually marketed the following day.

"Part of the quality difference of dry Yuba stems from the fact that a Yuba sheet is lifted from the top of a Tonyu batch is lighter and of much better quality than subsequent sheets with the sheets lifted with Tonyu that has remained on the bottom very dark, relatively poor quality, sweeter tasting, and thicker. Of whatever quality, Yuba usually darkens as it dries although bottom lifted pieces become the darkest.

"If a sheet of Yuba is of such a size and consistency that it can be easily folded (see Figure 163) it is graded higher than a sheet which does not have these characteristics. Broken and cracked pieces are very often not even folded but just bagged. When folding, a sheet of Yuba that is slightly wet is used for shaping the dry Yuba with greater ease. The natural color of yuba is tan but often it is colored yellow for the purpose of food arrangement. It is for that purpose that some Yuba is colored blue but the people who appreciate Yuba the most prefer it in its natural color.

"Dry Yuba can be stored with no adverse effects for two to three years if humidity is not extremely high. This ability is one of its most important advantages but since it is such an expensive product, (290 grams for $.97 or 350 yen) Yuba cannot realize its inherent advantages. Fresh Yuba while being $.0.56 (20 yen) for one sheet is only available in the neighborhood of the Yuba shop.

"Use: Most Yuba sales are conducted at the Yuba retail shop usually located at the front of a factory or through telephone orders from steady customers. In Yuba production areas, department stores may stock Yuba (see Figure 164) even though it is a slow moving item. Outside the immediate area of production Yuba cannot be found except possibly at New Years. The above fact is somewhat the reason why at least 90 percent of the Japanese people do not know what Yuba is. The Shiga prefecture farmers who supply soybeans for Yuba have no idea of what the product is. Because of expense nation-wide promotion cannot be done and because of the present nature of the Yuba industry Yuba makers do not particularly desire to promote Yuba on a national basis because each Yuba shop has a large number of steady customers with rather set Yuba consumption patterns so he can easily predict expected sales and lead a relaxed life producing only that amount. This type of feeling is amazingly professed by the makers themselves.

"Yuba unlike Tofu, Natto, and Miso is not eaten every day by even a connoisseur of Yuba. Most Yuba consumers do not eat Yuba for its excellent food value (see Table XXIX) but rather for its taste and adaptability for traditional Japanese food. Traditional Japanese food is so closely connected with Yuba that Yuba is along with frozen Tofu an important component of the completely vegetable dish mentioned in respect to frozen Tofu usage. For traditional food purposes Yuba is often requested by telegram or mail order from parts of Japan where Yuba is not produced. With the gradual disappearance of such traditional foods it is hard to believe, as Yuba makers state, that Yuba consumption is increasing. This is amplified by the fact that most young people neither know how to prepare Yuba or like its taste. For the small group of people that appreciate the taste of Yuba or value it history Yuba may be prepared and used in the following way:

"Fresh uncooked Yuba is very often eaten with Shoyu and other seasonings. Dry Yuba must be precooked and, then for example, placed in the following foods as fresh Yuba might be directly placed: (1) Sukiyaki. (2) Yudofu. (3) Many types of soup. (4) Substitute for or complement to raw fish and rice. (5) Fried in Tempura.

© Copyright Soyinfo Center 2013

"A specialty product that Yuba makers have capitalized upon is in respect to the beer drinking habits of Japan. Most often when beer is ordered at places serving same, a small dish of food will accompany each order. The customer is usually charged for this even though he may not want it although sometimes it is served without charge. Of the hundreds of possible foods for this dish Yuba makers produce a fried Yuba with the basic material the dark waste Yuba that gathers on the shaft for lifting Yuba from the Tonyu tank. It is unfortunate however that the people who eat such food do not know it is Yuba.

"Yuba should not be precooked or cooked too much as with overcooking Yuba's taste becomes very bad. This fact makes it a food requiring delicate attention and therefore not considered suitable for use in the average meal.

"The fact that Yuba is light makes it an ideal traditional food for use by Japanese residing in other countries. A limited quantity of Yuba is exported for this purpose but an export market among the natives of any country is questionable as even most Japanese prefer other foods to Yuba."

• ***Summary:*** "History: Tofu, the coagulated protein and fat of ground cooked soybeans (see Figure 38) according to an ancient Chinese book was invented by a philosopher, prince *Hamintze* of the Han dynasty, while another source attributes the invention of Tofu to another Chinese philosopher *Whai Nain Tze.* Manufacture was supposedly begun in China in 164 B.C. during Emperor *Hwai Wen's* reign by *Liu an,* duke of *Hwai an. Liu an* was a good friend of the Buddhists monks so it is believed he started manufacturing Tofu, so as to give them a somewhat more varying diet. Tofu come to Japan (probably through Korea) for the first time during the Toyotomi period (880 years ago). Although not completely documented, Buddhist priests probably were the transmitting agents as the priests used Tofu long before it was in general use.

"Use of soybeans: Throughout Japanese history domestic soybeans were used to make Tofu, however Chinese soybeans began to be used after trade began between Japan and China. During and at the end of World War II all soybeans were in short supply, however in the early fifties U.S. soybeans began to be used for Tofu. This use developed so that now Tofu accounts for the largest Japanese food use of U.S. soybeans. The Tofu makers would use domestic soybeans if they were not too expensive however. Some makers still use a certain percentage of domestic beans although such practice is becoming less popular. More often used are U.S. specialty beans such as Illinois, Indiana, Ohio, Hawkeye, or select No. 2 ordinary even though such soybeans are higher priced then regular soybeans. Chinese soybeans are again starting to be used for Aburaage although because of custom U.S. soybeans are not likely be replaced in the foreseeable future. The existence of over 60,000 Tofu makers consuming over 200,000 MT of soybean per year with each maker consuming between 15-300 kilograms per day presents somewhat of a problem regarding soybean purchasing. Each particular maker is too small to purchase directly from anyone but the smallest wholesaler where the price of soybeans is too high for efficient operation. The Japanese people are association minded with the Tofu makers being no exception. The Tofu makers authorize their local association to purchase soybeans in large lots for future distribution to individual makers. The Tofu makers do not especially like to purchase through the association as the association charges for handling, however the makers have a desire to support the association so accept purchasing through it. The association deals with the importer, crusher, and large wholesaler, selecting whichever seller will give the best terms.

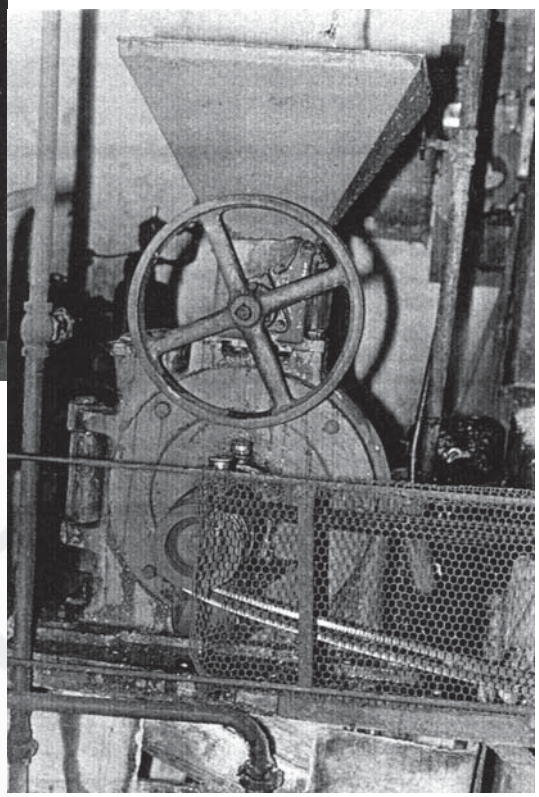
"The numerous Tofu makers that do not belong to the association (about 1/6) as well as members whose association does not purchase usually work out an arrangement with the smaller wholesalers. Soybeans are delivered to the maker by truck with the maker receiving material for a number of weeks each time he receives. The shipment is kept in bag form until the day before use.

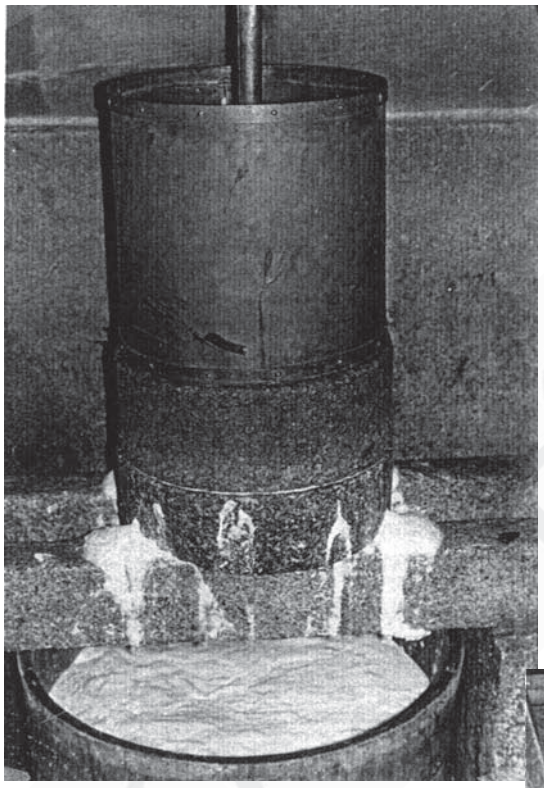
"Manufacture–Regular Tofu (white Tofu): The manufacturing procedure described below is for the most used type of Tofu, 'Shirodofu' (white Tofu) as is seen in Figure 38. Other related products such as Yakidofu, Kinugoshi dofu, Aburaage, Hirosu, and others are processed in much the same way. Additional or different methods of processing these latter products are described in respective sections.

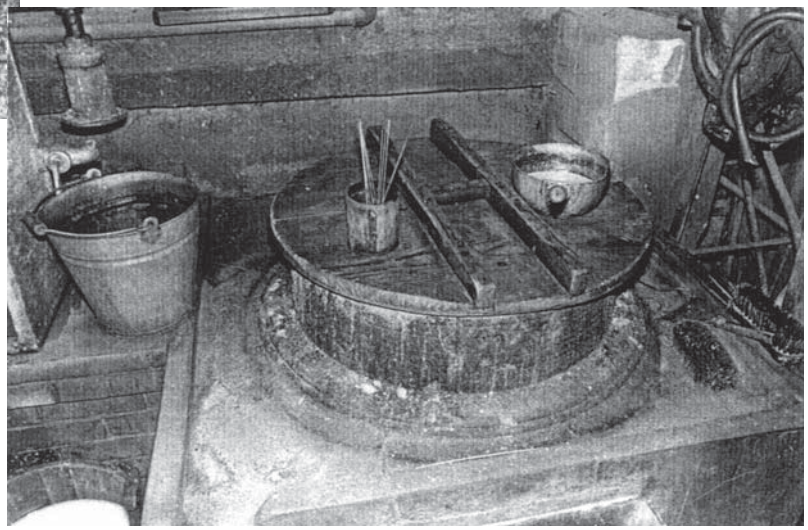
"The process of making Tofu consists of ten steps, that is, soaking, cooking, filtering, coagulating or precipitating, shaping, pressing, submerging [in water], cutting, and again submerging.

"Soaking: Depending upon season of year, 5-15 hours before processing, clean whole soybeans are put in containers of any size but most used are metal drums, wooden barrels or 20 liter tins. Water is added to the

© Copyright Soyinfo Center 2013







© Copyright Soyinfo Center 2013

container until the soybeans in the container are completely submerged. Although length of soaking is not such a strict factor, generally soybeans are soaked 10-l4 hours in winter and 5-10 hours in summer. Soybeans soaking in any one container should be of uniform size as soaking would not be even. Because of their small size, U.S. soybean are soaked for less time than Hokkaido soybeans. In winter Hokkaido soybeans may require as much as five additional hours of soaking. There seems to be to guides besides experience that indicate when soaking is sufficient, that is, the appearance of bubbles rising to the surface of the water and the whiteness of they inside of the soybeans.

"Grinding: Tofu processing usually begins at 3:00-5:00 in the morning so that the final product may be ready for use during that day. Processing is initiated by the removing of unabsorbed water from the containers. After that between five and eight kilograms of the soaked soybeans are put into an electric powered grinder of the types shown in Figures 39, 40, and 4l. The type of grinder pictured in Figure 39 is the most popular. Water is run into the grinder's intake container and the grinder is started. After ground as small as possible the soybeans in the form of thick white cream (see bottom of Figure 41) enter a container positioned at the outlet of the grinder. The cream could be called more paste-like than a liquid although it flows If it cannot water is added. If the cream is too thin, the residue after filtering will contain too much of the protein. For a batch of approximately seven kilograms of soaked soybeans the volume of creamy substance should be around 54 liters.

"Cooking: The type of cooker used depends upon the economic situation of the maker. Two of three types of cookers commonly used are shown in Figure 42 and 43. Although, wood (Figure 43) or oil stoked cookers are used, use of a steam boiler is slowly replacing all other methods. Either a small steam pressure cooker or a live steam open pit steam cooker (Figure 42) might be used if the factory has a steam boiler. To indicate that making Tofu is a cottage type industry very often makers with steam boilers will use same for heating their bath. The ground soybeans and water are usually drawn into the cookers by negative pressure but this procedure may also be done manually. Such is necessary if the maker does not have a steam boiler. After the cream is pulled into the cooker, water is added to the container to collect the residue remaining on the container's surface. This thin solution is also drawn into the cooker, Cooking lasts about four or five minutes or until pressure reaches approximately 10-12 pounds per square inch or the equivalent of it if another type of cooker is used. Cooking is very important for removing distasteful flavor, protein, causing good or bad cohesiveness and water holding capacity, although it is done without gauges, meters, or time control by the experienced Tofu maker. As an indication of the time of operation the cooking of 35-40 different batches may be completed by 6:00 a.m.

"Filtering: After cooking, a valve is opened. This valve is connected to a 1½ inch diameter pipe which bends upward so that it is positioned over a container usually around 24 inches square and made of metal although wood and tile are also used. A tile tank is shown in Figure 44. At the end of the pipe a course nylon bag is attached. The opening of the outlet value with pressure still fed to the cooker causes the cooked material to be forced through the looped pipe and into the nylon bag filter. Steam flow is then terminated then started again to force out what remains in the cooker.

"At some factories gravity may be used to remove the material from the cooker and such also might be accomplished by hand. The tank which the bag rests in also has an outlet at its bottom so the liquid (called Tonyu [soymilk]) which can readily pass through the coarse filter makes it way by pipe to a container. The temperature of this material is 100ºC when it leaves the cooker, however it drops to 80ºC by the time it reaches the container. The material that does not flow through the nylon filter is called Okara. As soon as all the material is forced out of the cooker and what liquid there is flows to the precipitating container a quantity of cold water (15-20 liters) stored in a tank above the container is dumped upon the nylon filter dropping the temperature of the Okara to 60ºC so that as much protein as possible can be removed. At some places this water may run directly into the cooker after the initial liquid was forced out.

Note 1. The author and his wife, Tomoko, did most of their tofu research in Kyoto. Companies they visited and observed in the spring of 1963 (listed alphabetically) were: Hamano Tofu Co., Hamamoto Tofu Co., Namikawa Tofu Co., Ryo Tofu Co., Shimamoto Tofu, and Uno Tofu. They also learned much from the Tofu-Aburaage Association (Kyoto). And they visited and observed Sasanoyuki Tofu Restaurant (Tokyo, 11 June 1963).

Note 2. The word *Shirodofu* is occasionally (but rarely) used to distinguish "white tofu" from non-white tofu (such deep-fried tofu, grilled tofu, dried-frozen tofu, etc.). This is the earliest English-language document seen (April 2013) that contains the word *Shirodofu.* (Continued). Address: San Francisco, California.

2618. Brandemuhl, William. 1965. Tofu (including Aburaage and related products): Manufacture (Continued–Document part II). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 137-201, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** (Continued). "As the water flows upon the filter it is worked over with a wooden club and then pressed. The press usually is like the one pictured in Figure 44 although an old fashion stone weight with lever may be used (see Figure 45) or as is becoming popular an electric driven press. It is important to get as much of the Tonyu out of the Okara as possible (because Okara is nearly a complete waste) so when pressing is finished the nylon filter may be stripped with the

© Copyright Soyinfo Center 2013

club before mentioned to remove the remaining Tonyu. Some makers are now using centrifuges but as a result too many bubbles appear so that a bubble suppressing agent has to be used although this agent affects the taste of final product. Some makers used this agent even though they do not centrifuge. After as much Tonyu is removed from the Okura as thought possible the nylon bag is unhooked from the pipe holding it and carried to a drum at which time the Okara is dumped (see Okara section for more information on its use). The nylon bag is then dipped into water and beat with a club while it is lying on the floor. After most Okara particles have been removed the bag is returned to its position at the end of the pipe and used again. All of the Tonyu which flowed from the cooker to the container to the next container is again filtered just before it runs into the latter as a fine cotton bag is attached to the pipe outlet. For this purpose a round wire screen bottom box may also be used.

"The bag or screen box collects the Okara that passed through the course nylon filter. Only a small quantity of Okara is collected at this time with what is collected being discarded. The container that the Tonyu flows into is pictured in Figure 46. One or two more cotton filter bags line such container. These filters are removed from the container with the one minute amount of Okara in it, and used again without removing the Okara from the bag. When the amount collected nears one pound it is discarded or re-pressed for further extraction. At this point the Tonyu looks somewhat yellow. The number of containers and number of outlets for inflowing Tonyu very often determines the scale of operation of a particular Tofu maker. A maker nearing retirement may have only one wood plugged outlet and two containers which have to be moved for every batch while other more progressive makers may have over 6 brass valve stoppered outlets. Most Tofu makers fall between that above two cases with the efficiency of operation seemingly directly related to the efficiency of this procedure. The material of these containers are either wood on metal (stainless) depending upon the final product. White Tofu makes use of wood more often but wood is not absolutely necessary. Wood is used because it maintains temperature better than metal for the adding of the calcium sulfate, the subject of the next section.

"Precipitation: When the Tonyu enters the precipitation at containers it is around 68ºC. If hotter, the temperature is reduced by adding cold water. Because of work with other portions of manufacture the Tonyu may be allowed to remain in the container to cool naturally to 68ºC or even lower. However if temperature became lower than 60ºC precipitation would begin to get difficult so generally the adding of calcium sulfate takes place while the Tonyu is between 60-70ºC with the most desired temperature being 66-68ºC. The amount of calcium sulfate added varies slightly with each maker and varies slightly with each batch as seldom is a scale used for accurate measurement, however the most usual quantity for the size batch mentioned above is around 200-300 grams. A guide seems to be to add about 30 grams for each kilogram of soybeans used. Methods of adding the precipitating agent also vary by place so that the below descriptions are only examples of many used. First 100 grams of the agent is mixed with cold water in a two liter pan. A wooden paddle is inserted into the Tonyu and using the near edge of the container as a pivot point the maker stirs the Tonyu in an up and down fashion five times while slowly adding the agent with water on the fifth stir. Then the solution is stirred three more times, when 100 more grams of agent is mixed with water in the same manner as before and the solution is once again stirred five times with the agent being added on the fifth stir. At the end of the fifth stir the wooden paddle is brought up breaking the surface of the solution. In each case the four first stirs are rapid while the fifth is rather slow.

"Another method of adding the agent may be to stir the solution is circular fashion for three complete rounds then dump the whole 200 grams of agent mixed in water into the solution in the opposite direction of the current. After this the solution is stirred each way two times at the end of which the paddle is used to quiet the current. At this time certain makers will add small quantities of certain chemicals to enrich their Tofu in order to have advertising advantage. Immediately after adding the agent, a change in the nature of the solution can be observed. At this time the experienced Tofu maker can tell if the batch under watch will be of good quality. After stirring, a cover is put on the tank and left to stand for precipitation about 25 minutes during which time supernatant solution forming at the top of the precipitating solution is removed by placing a light bamboo basket on the surface. The cracks between the bamboo straps allow water but not precipitating curd to enter the basket. The water that collects in the basket is dippered out. About 50 percent of the quantity of water contained in the curd is removed. A small stone is placed in the basket to increase the speed of collecting water.

"During the 25 minute precipitation period the solution may also be stirred although gently. The amount of agent added, the amount of water removed, and the amount of above stirring determines the softness of Tofu. Generally soft Tofu is desired although certain restaurants, schools, and other institutions, may request hard Tofu. The maker accommodates them by stirring more and removing more water so that the hard Tofu contains only 80 percent water instead of 90 percent as soft Tofu does. Stirring the Tofu divides the mass into more pieces allowing more water to be taken off whereas hard Tofu because of the adding of too much agent probably would be a mistake on the part of maker rather than a calculated effort however more of less calcium sulfate may be added in making related products.

"Although the method of removing water mentioned above is probably the most used, Figure 47 indicates the same process being accomplished with a cloth covered rack.

© Copyright Soyinfo Center 2013

After completion of the above process the curd is ready to be shaped.

"Shaping and pressing: After precipitation is completed one or two boxes (see Figure 48) made of wood or metal and having many 3/8 inch holes on all sides and bottom with side holes slanting downward for efficient water draining are prepared with a cross-shaped cotton filter cloth. This cloth is moistened for easy forming and positioning inside the box. More waster (usually the supernatant solution) is poured into the box to make the cotton filter cling to the sides. Precipitated curd is then dippered into the box with the maker first removing small pieces from the precipitation tank and gently pouring to the middle of the Tofu shaping box letting the curd run to the edges. If large pieces are dippered they are broken into small pieces by pouring from a greater distance away from the level of curd. About 18 liters of curd are poured into two boxes for each batch although some makers will only make one box from each batch. A block of formed Tofu weighs therefore between four and eight kilograms.

"If too much curd exists for the available box, an extension is added to one of the boxes. Because the curd is semi-solid at this time it can be added to the box higher than the height of the box, especially in the middle. The middle is always more densely packed then the edges as when pressed the middle receives more pressure. After the filled the box is allowed to stand for 10 minutes at which time the curd at the edges of the box is pushed to the center and then the portion of the cross shaped cotton filter remaining outside of the box is made to cover the top of the curd in a carefully folded fashion and a wooden cover that fits completely inside the box is positioned as are stone weights totaling about 20 pounds (see Figure 48). The boxes are then allowed to set for 40-90 minutes" (Continued). Address: San Francisco, California.

2619. Brandemuhl, William. 1965. Tofu (including Aburaage and related products): Manufacture of Yakidofu and Aburaage (Continued–Document part III). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 137-201, Unpublished manuscript. 28 cm. [18 ref]

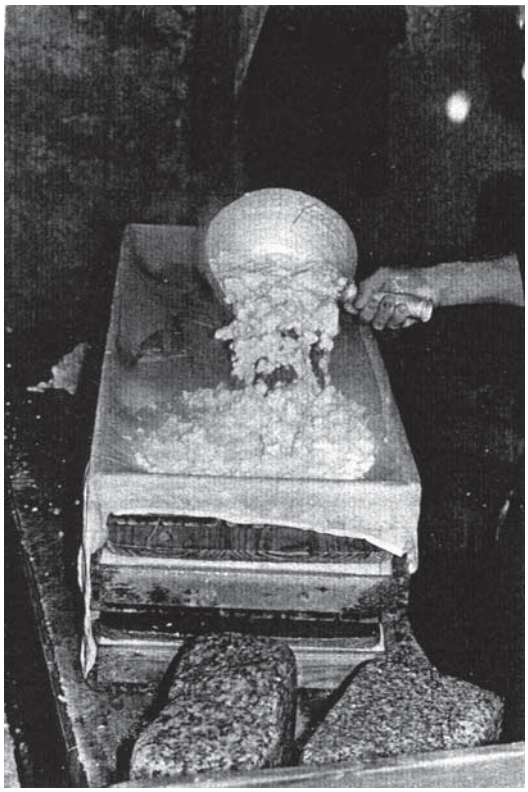
• ***Summary:*** (Continued). "Submergence, cutting and resubmergence: After pressing for the desired length of time the stone weights and cover are removed and the box is taken to a sink (stainless steel or tile) and submerged in a large quantity of water and then inverted so that the formed block of Tofu can slide out of the box into the water. Depending upon how busy the shop is the block may or may not be cut immediately upon being put into the water. When it is cut the block is brought near the surface and a wood frame with three to six nylon wires strung across it is put over the top of the Tofu block. The block is then inverted and the frame is quickly pulled upward cutting the Tofu into a number of pieces. These pieces may then be cut even smaller to the standard marketing size or may remain large for cutting to standard size at time of sale. At all times Tofu must be stored in water to maintain its form and also to improve taste. Optimum taste is achieved after three hours soaking although taste difference is not very great. One block when cut to marketable size (440 grams) makes about 80 pieces With dimensions equaling 2½ x 6 inches x 1 inch. Occasionally this type of Tofu is also sold without regard to shape as for a special order a certain quantity would be put into a cotton bag and delivered.

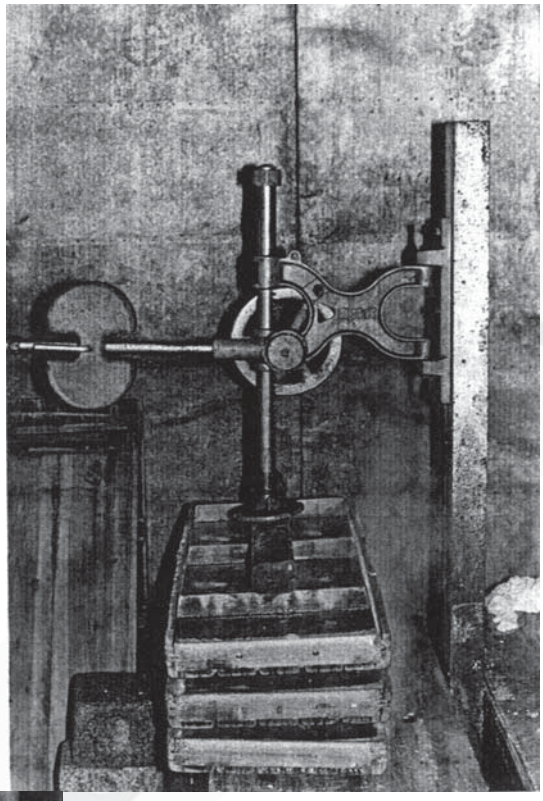
"After cutting Tofu into suitable shape for the ways it is marketed the manufacturing process is completed. Marketing and use treated after treatment of additional and different manufacturing processes of related products.

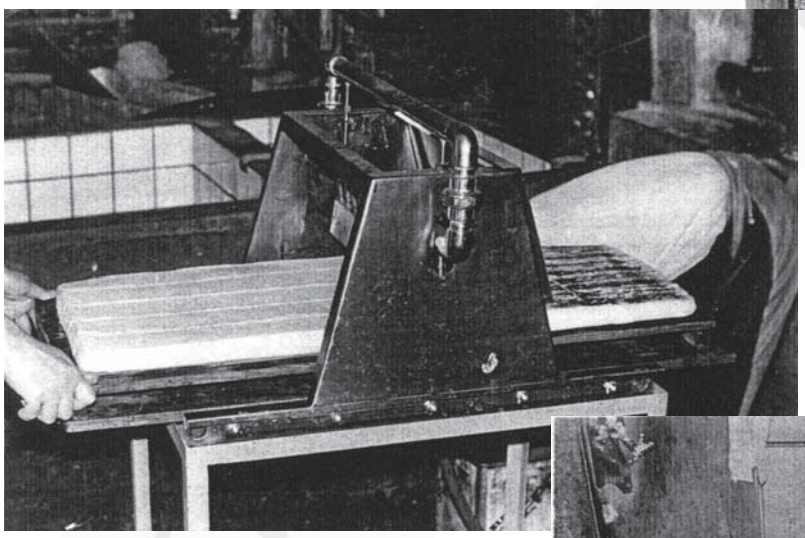
"Yakidofu (see Figure 49) is Tofu that is slightly surface roasted It is processed in the same way as regular Tofu except that it is cooked at a somewhat higher pressure and contains less water. While the wicker basket is resting upon the surface of a Yakidofu batch more water is removed and pressing is with greater pressure. Instead of being put into a box like regular Tofu (see Figure 48) one batch of Yakidofu is dippered into three filter covered wooden trays as shown in Figure 50, covered, and then pressed with a mechanical press as shown in Figure 51. The tray that holds Yakidofu is about 39 inches long, 14 inches wide, and 2½ inches high. There are many 3/8 inch holes in the bottom of this box and well as in the cover to drain excess water. The bottom is grooved so as to provide guide lines for cutting Yakidofu into pieces. The cover fits inside the tray with two ribs projecting 1½ inches from the upper side. These ribs make it possible to stack one tray upon the other and still be able to press effectively. Pressing is done for 15-20 minutes during which time the trays under press may be changed in order (as many as ten trays may be under the press at one time).

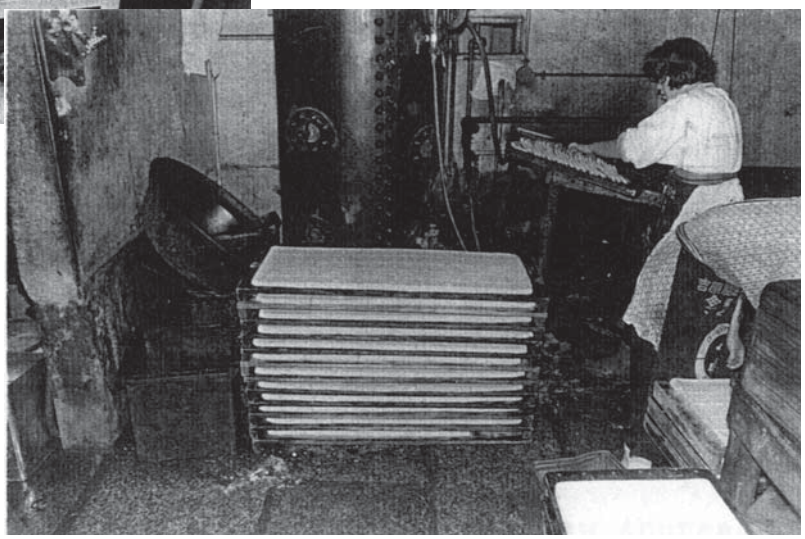
"After pressing is completed the cover is removed and the cloth filter is unwrapped from the top of the Yakidofu. A cover which completely covers the tray and has ribs on its end is placed on the tray and quickly turned over allowing the sheet of Yakidofu to position itself on the cover. The sheet is then cut into 25 pieces (see Figure 52) using the guide lines provided by the grooves in the tray. Cutting may be accomplished by such a knife as used in Figure 52 or with a gang knife. The kind of knife used is likely to be made of brass as supposedly its cutting properties are better than stainless steel. After cutting Yakidofu is put on a slanting rack to dry. Then when the majority of the morning's operations are finished the Yakidofu sheet is roasted by the instrument pictured in Figure 53. Many other methods of roasting are used such as gas torches moved over the surface of the sheet or a charcoal stove fanned by a blower. The later case necessitates the skewering of each individual piece, positioning and repositioning near the hottest area of the charcoal stove. This method is not very sanitary as

© Copyright Soyinfo Center 2013









© Copyright Soyinfo Center 2013

coke dust circulates and settles everywhere including on other products. After roasting, Yakidofu is slid into water and stored until time of sale, delivery, or pick up. Yakidofu is stored in water only after it has been cut into the standard consumer size, unlike regular Tofu. Because it remains out of water for so long and because of its method of cooking, Yakidofu is much harder than regular Tofu;

"Kinugoshi (see Figure 54) is slightly different than regular Tofu in that it is softer and smoother. The smoothness is the reason why the first few letters of Kinugoshi means silk filtered. In ancient times this may have been a possibility but at present silk filtered Tofu does not exist. The Tofu makers believing that the silk filtered rumor is worth the advertisement value so do not discourage the belief.

Note. This is the earliest English-language document seen (April 2013) that mentions silken tofu or uses the term "silk filtered tofu" or the string "Kinu" or the word "Kinugoshi" to refer to silken tofu.

"Kinugoshi is only produced in summer because it is eaten cold with green onions and Shoyu with a little ginger for flavoring Yakidofu Tonyu may be used for Kinugoshi although filtering is more carefully done, The Tonyu for Kinugoshi is not precipitated in the large containers however as each maker has a number of small metal boxes about 16 x 8 x 4 inches for such purpose. The boxes have a stopper outlet on their bottom for assistance in the removing of the Kinugoshi pieces at the appropriate time. When Kinugoshi is about to be made the inside walls of the box are coated with a minute quantity of rapeseed oil. After coating with oil enough of the precipitation agent needed for precipitating the amount of Tonyu put into the box of above dimension is added. Then Tonyu is poured into the box with the pouring active enough to cause slow precipitation of the Tonyu. The Tonyu filled container is allowed to set for 20-30 minutes and then is submerged in water (container included) for two hours. After two hours the box is brought to the surface of the water and the precipitated curd is divided into 24 pieces. The stopper at the bottom of box is then removed. This in combination with the oil coating allows the 24 pieces of Kinugoshi to slide out of the container into water;

"Aburaage–Initial processing: Although Aburaage treated as an end product is much-different than Tofu, until a certain point in the manufacturing process the procedure is nearly the same. Aburaage (see Figure 55) is Tofu deep fried in vegetable oil, being of various sizes but usually eight inches long, three or four inches wide and 3/4 inch thick. It is a soybean product that did not originate in China but was developed in Japan. Aburaage uses whole clean soaked soybeans as raw material but in addition soybean meal specifically manufactured for Tofu products may be added.

"Uses of soybean meal: A number of years ago oil crushers saw a possible market for soybean meal if it could be successfully used in the manufacture of Tofu. As mentioned before, meal promotion was conducted to convince Tofu makers to use soybean meal. Through experimentation it was found that soybean meal would not seriously effect the taste of Aburaage since oil is absorbed by Aburaage during the frying process. Since oil is an important taste factor, only small quantities of meal could be used with none used during prosperous times. As also mentioned before, the crusher now believes his meal market is better for cattle than for Tofu so he is trying to discourage an increase in demand for Tofu meal. And also since the crushers now sells select whole soybeans in great quantity to the Tofu maker he does not want to not be able to sell whole soybeans although this is somewhat unusual reasoning on the part of the crushers. After the advertising program conducted by the crushers, most Tofu makers because of economic reasons began to use soybean meal for Aburaage although not in the quantity advertised as acceptable. Usually for one batch of Aburaage 1 to 2.5 kilograms of meal might be added with places that produce poor quality Tofu products using a greater quantity although very few use 100 percent soybean meal. Soybean meal is mixed with the ground soybeans or is mixed with water and drawn into the cooker after the ground soybean substance. As long as taste of good Tofu remains a factor soybean meal will not likely become the main component of regular Tofu although if promotion continued, soybean meal would become more and more used for Aburaage, as meal has an advantage over whole soybeans in that it need not be soaked. If therefore an emergency order appeared the Tofu maker could comply.

"Cooking Aburaage material is the same as for regular Tofu but since Aburaage needs more cohesiveness (because it not stored in water) a harder material is produced by increasing the amount of precipitating agent (about 1/5 more), removing a greater quantity of water than for either regular Tofu or Yakidofu, and stirring more while precipitating to break the curd into small pieces so that more water can be removed. It is dippered, trayed, and pressed in the same way as Yakidofu. About four trays of Aburaage can be made from one batch giving 100 pieces of Aburaage. In contrast to other types of Tofu products if a portion of a batch remains it can be added to the next batch attesting to the fact that of all types Aburaage is the least delicate. After pressing it is cut in the same way as Yakidofu and stored for further drying, cover upon cover as shown in Figure 56.

"Although the process and appearance of Yakidofu and Aburaage are similar until this point the water content of Aburaage is much lower so they are not interchangeable" (Continued). Address: San Francisco, California.

• ***Summary:*** (Continued). "Frying Aburaage: Aburaage is usually fried in rapeseed oil with soybean oil being occasionally used. Frying is accomplished in two stages as Figure 56 indicates. The containers used to fry are usually housed with bricks and heated by oil and blower although wood is sometimes used. A wood stoked fryer has the disadvantage of uncontrollable temperature. The oil containers are provided with hoods but as seen in Figure 57 cleanliness is difficult to maintain.

"The number of double oil containers varies with the size of the maker with a slightly larger than average maker processing about 1,000 Aburaage at a frying rate of about 120-150 per hour so at least two vats are needed. Each of the double containers are about 28 inches square and 2½ inches deep. Although it seems that the containers are completely separated by a partition actually a three millimeter space exists between the bottom of the oil vat and the partition so that a certain amount of oil circulates between the two vats.

"Although most vats are as pictured in Figure 57 some have slanting sides for easier insertion of the raw Aburaage and conservation of oil. To insure even frying on both sides of the Aburaage as well as to increase speed of frying one of the two vats used for frying the same Aburaage has a wire mesh rack that is constructed to fit inside the vat. Such mesh is hinged to the container at the rear so by suitable attached wire or rope, the mesh can be easily controlled. A weight is put on the mesh so that the buoyancy of the frying Aburaage will not raise the mesh and defeat its purpose. In addition to the above equipment three hand utensils are used for frying Aburaage, one is a dipper (seen in foreground of Figure 57), for pouring oil over the Aburaage, another is a wire mesh spatula about 10 inches in diameter (see Figure 58) used to turn and individually press certain Aburaage, and the third is a long metal forceps for removing the Aburaage from the oil. Although equipment is supposedly cleaned everyday the oil in use is unusually dark although clean oil usually stored in a tank above the working area delivers large quantities of oil quite often.

"Given the above equipment Aburaage are fried in the following fashion. About 12 Aburaage are taken by hand four at a time from the trays shown in Figure 56 and inserted into the number one vat of oil. The oil in this vat has a temperature of around lOOºC. Immediately upon insertion the Aburaage sink to the bottom of the oil. Two and one half minutes later they rise to the surface and at that time another batch of Aburaage are inserted in the same vat but the latter do not interfere with the frying of the first batch because they sink. As soon as the first batch rises they are turned and selectively pressed with the wire mesh spatula and the dipper mentioned above is used to pour oil from vat number two at 180-21Oº C onto the uncooked side of the Aburaage. About five minutes after insertion the Aburaage are transferred to vat number two and pressed under the surface of the oil with the hinged wire mesh and weight. About three to four minutes later the golden brown Aburaage are removed with the metal forceps and placed on a slanting wire rack adjacent to the number two vat. The length of frying time varies with the temperature of oil that each maker might use so that generalizations cannot be made, however each maker attempts to produce the largest Aburaage possible given the size of raw Aburaage used. If frying is successful the Aburaage will first become very puffed and then collapse having then a skin-like surface. The void space may then be used after suitable cutting for holding rice, one of the most popular ways to prepare Aburaage. The 1.8 liters of oil that are absorbed into 100 Aburaage make the protein rich Aburaage very rich in oil also. One reason why the use of meal has been successful for Aburaage is that oil absent from raw Aburaage is replaced in great part by frying.

"After excess oil has dripped from the Aburaage on the wire tray, they are removed and placed on another wire tray and stored in a wooden rack until marketed. The form the 240 gram Aburaage takes is as shown in the center rear of Figure 59.

"Sushiage is made using exactly the same materials and procedures as Aburaage except that Sushiage is less than one half the size of Aburaage as can be seen when comparing both in Figure 59 and Figure 57 (Sushiage) with Figure 58 (Aburaage). Length of frying Sushiage has to be compensated so that total frying time is usually less than

© Copyright Soyinfo Center 2013

eight minutes.

"The Japanese people delight in consuming a slice of raw fish set upon a small ball of rice but since fish is expensive a quantity of rice packed inside a split Sushiage often acts as an inexpensive substitute.

"Atsuage (see right front, Figure 59) may best be described as being two different products although marketed as the same. Standard Tofu which cannot be sold on the day it is processed is on the next day cut into triangular pieces one inch thick with legs about two and one half or three inches long. This product when fried only in the hot oil vat for a short time is called Atsuage. Since it is small it can easily be used when a piece of Aburaage is too large for the required use. Demand for Atsuage is usually higher than what can be made from the varying quantity material remaining each day so Atsuage also has to be made from regular batches of Aburaage resulting in products of two different qualities but not distinguished as such. A little known fact is that Tofu makers make nearly as much profit on cutting old regular Tofu into four pieces, frying, and selling as Atsuage as they do on selling regular Tofu.

"Hirosu (also called Ganmodoki) is pictured in Figure 59 on the left front. It is composed of old regular Tofu, old Yakidofu (after the roasted surface is removed), the trimmings obtained when cutting Aburaage products, a shredded vegetable (usually carrots), ground yam, and sesame seeds. The first three materials are put into a cotton bag and pressed with a stone or the mechanical press if it is free so that a great portion of the water is removed.

"After removing the material from the press, the shredded carrots, ground yam, and sesame seeds (the sesame seeds may also be placed in the top of the material after formed) are mixed together by hand. Then the paste-like material is shaped into balls the size of one scoop of ice cream. In fact an ice cream scoop is sometimes used for shaping; otherwise it is done by hand. The balls are then put in the low temperature oil vat and allowed to remain submerged for a short while, then transferred to the high temperature oil (180-200ºC) and fried until golden brown. Hirosu is more often used by poor people than other Aburaage products but not limited to same.

"Okara, as mentioned before, is the residue of the various filterings [sic] of the raw Tonyu. It is usually sold to dairy farms for feed at $.01 (four yen) a kilogram. Figure 60 shows a farm owned truck with Okara from a number of Tofu shops located in the farm's milk market. Not all Okara is fed to cows however, as it is also a popular food for rabbits, and Tofu delivery people also carry it for selling as dog food. Although for cleaning purpose other commercial products have replaced Okara, it can be used as a floor and hand cleaner. A small amount is also sold for human food (see Figure 61) with very poor people accounting for most of the food use.

"Soybean milk: Although other places in Asia use soybean milk with large and small scale factories producing same for a milk deficient population, in Japan soybean milk is not significantly consumed, although one modern factory is producing a similar product, however initiation of production is too recent to tell if this product will be successful. The Tonyu of Tofu production would seemingly be marketed but it is not because of the availability of fresh milk. Such was not the case up to about 25 years ago when nearly every Tofu shop sold Tonyu for direct human consumption and even for enriching other food products such as bakery goods.

"The Tofu factory: Figure 62 shows the production area of a Tofu factory employing six persons and producing the following amount of Tofu per day:

"Products. Pieces
"Regular Tofu 560
"Yakidofu 150
"Aburaage 1,200
"Sushiage 2,700
"Atsuage 400

"This factory is much larger than average yet for the above Production only 140-200 kilograms of soybeans are used. It might be imagined that to employ six people, hand work is the rule rather than the exception" (Continued). Address: San Francisco, California.

2621. Brandemuhl, William. 1965. Tofu (including Aburaage and related products): The Tofu factory, marketing Tofu, preservation (Continued–Document part V). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 137-201, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** (Continued). Although all members of the family help the business in some way, labor cost is not yet so high (Tofu worker receive $60-75 per month live in salary) and the Tofu industry makes use of much inexpensive equipment. With the development and rapid expansion of food and other industries, Tofu production is becoming far behind with respect to modern methods so cost of production is increasing, forcing many Tofu makers into bankruptcy. The number of Tofu makers is decreasing in still another way and that is at present the sons of Tofu makers observe that making Tofu is not a desirable job, either prestige or condition wise, so are refusing to assume ownership of the shop at the suitable time.

"This creates somewhat of an advantage for the young people who do enter the business as the older men running their own business can neither maintain quantity of production as they increase in age or handle young employees to maintain same so the young producer can slowly increase his sales by capturing the local market from an old maker. Also young aggressive makers are in a much better profit position as the profit margin seems to be high but more volume than a few bushels a day is needed to insure

© Copyright Soyinfo Center 2013

a comfortable financial position.

"Although Tofu makers as a whole believe that modernization and automation cannot be accomplished with Tofu in the form it is because of its distribution, a few individual makers are making real progress, such as frying Aburaage while it continuously moves through an oil container on a stainless steel conveyor.

"Unfortunately as with many traditional industries in Japan, old methods are adhered to as if they were part of the maker. This is fact is partly true but such makers are going to suffer the most when innovation is finally realized. A traditional industry in Japan is bound by a great number of customs and rules that are not written but not bound as yet to scientific measuring, weighing, testing, and providing adequate sanitation, even though there is one government inspection per year. The latter seems to be especially important as Japan's large modern industries are showcases of sanitation but yet people do not have concern when they are handed a piece of Aburaage with the same hand that a moment before connected a fuel oil pipe to the boiler.

"Marketing tofu products: For Tofu products these are five chief sales places or ways of selling:

"(1) Directly at the shop

"(2) By Tofu peddlers (carrying particular sounding horns to announce their presence and pulling carts by hand or bicycle as seen in Figure 63)

"(3) Maker owned sales outlets in market places

"(4) At shops in and outside of markets where other foods are also sold (see Figure 64)

"(5) To institutions, school, and factories

"Because of the nature of Tofu, its manufacture is not conducted in the manufacturing section of a city or village but rather in an area of dense population. This indicates the lack of zoning laws that Japanese citizens live with but such is necessary for the Tofu maker. So located, the housewives of the immediate area stop at the Tofu shop on their way home from shopping for other foods, or as is the case in the morning, go directly from their home and buy Tofu, to put in the every day soup, *Miso-shiru.* Most often the housewife carries a pan to carry the wet Tofu, but at present a machine which seals plastic around an order for about $.006 (0.5 yen) is becoming popular. This machine is becoming used for a great number of foods although $.006 is still a high cost for packing Tofu.

"If a particular shop is small the owner himself may take care of peddling Tofu door to door. If somewhat larger his employees will do same and if in the wholesale class, independent peddlers will buy and sell for themselves. The independent peddler can buy Tofu from the wholesaler for $.041 (l5 yen) and sell it for $.056 (20 yen) so can make more money counting other related products than he could working in a factory. There is no equivalent of the Tofu peddler in the U.S. except possibly the milk deliverer but the Tofu man may pass each area three times a day and deals personally with his consumers although always maintaining the status of a peddler. More progressive Tofu makers may own one or more shops in a market place and have one or two employees handle his entire line. This type of venture probably earns the greatest amount of money for the maker as more people can be contacted with less effort and time. Unfortunately there are so few market places in relation to the number of Tofu makers in any particular area.

"The Tofu wholesaler and even retailer sells Tofu at wholesale prices to many shops such as the one pictured in Figure 64. This type of sale is not so profitable for the maker or for the end seller as volume is so small and delivery must be every day. As the number of markets increase this type of seller will decrease in number.

"Sales to hospitals, schools, and factories offer volume outlets but since such sales are so competitive, custom necessitates discounting, so profit is not large although demand is somewhat predictable. Many of the firms that only wholesale Tofu aim for this market. Food sales to factories assume an unusual proportion compared with counterpart industries in the U.S. because as job fringe benefits, dormitories, breakfast, lunch, and dinner are often provided. The quality of such benefits is somewhat debatable but it is sure that Tofu products are used so that less meat need be.

"Preservation: One of the greatest disadvantages of Tofu is that it cannot be stored for a great length of time. By test if regular Tofu is kept in water that is under 5ºC it lasts for one week, if stored in 10ºC water it will last two days. If stored in water above 15ºC it will only last for one day and except for certain winter days the latter is the most real case so every day delivery is necessary. Aburaage is easier to market especially in winter as it lasts about one week however in summer it lasts the same as regular Tofu. Besides taste, preservation is the only other major problem confronting the automation of the Tofu industry. Quantitative production could most likely be achieved but distribution would have to be conducted in the same way so increased delivery cost would most likely outweigh the costs of local production that is now prevalent. The only solution seems to be what numerous places have tried without success and that is for many small makers in one area to combine, incorporate, and construct an automated factory with each of the combined members assuming a directorship. Delivery is still within the area covered by the makers acting separately while economies of scale are achieved because of size and such a method is probably the only way that capital could be raised. Outside investors including most banks do not consider the prospects of the Tofu industry favorably so will not invest. An individual maker even if successful does not have but a small part of the money necessary for constructing and operating an automated factory. One problem that constantly exists wherever these combines are formed is that the individual maker after having decided all business matters himself for many years cannot adjust to group decision

© Copyright Soyinfo Center 2013

making by the corporate board. This problem has until the present caused the combines to fail

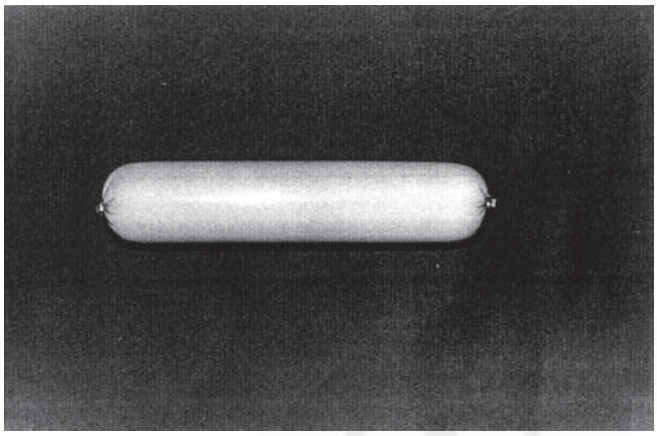
"Price: The price of Tofu has been increasing but it is still a low cost item on the food budget. Regular Tofu sells for $.06 (20 yen), production costs approximately $.03 (11 yen) with the wholesale price at $.042 (15 yen). This would seem to indicate that the makers who own outlets have quite wide profit margin while those that only wholesale have to operate on a much narrower margin. Such wholesalers producing around 560 regular Tofu per day would only earn $6.23 (2,240 yen) with quite a large amount of capital investment given the Tofu industry. Yakidofu although taking less time to produce has to be handled more (roasting) sells at the wholesale and retail level at the same price as regular Tofu. Yakidofu also contains less water. It is unsure why the makers make such sacrifice but probably demand for Tofu would decrease if that type was not available at the same price as Shiradofu [Shirodofu?]. Housewives could not substitute regular Tofu in the place of Yakidofu so they might very well substitute a completely different product. One of the 24 pieces of Kinugoshi contained in the Kinugoshi tank sells for $0.44 (16 yen). Aburaage retails at $.056 (20 yen) but because of the oil used in frying, cost of production is $.033 (12 yen) in contrast to $.03 (11 yen) for regular Tofu. This is compensated for by the fact that Aburaage lasts longer than regular Tofu so there is less waste. Both Hirosu and Atsuage wholesale for $.014 (5 yen) and retail for $.019 (7 yen).

"As mentioned previously profit margin appears to be adequate (considering all products over 35 percent) however volume is a real problem" (Continued).

Table 16 (p. 189) gives the chemical composition of tofu and aburaage (per 100 grams). Table 17 (p. 190) gives the quantity of soybeans and soybean meal used in Japan for making tofu and aburaage products (1956-1963, year starting April 1). The amount of whole soybeans used increased from 143,800 metric tons (tonnes) in 1956 to 285,100 tonnes in 1963. The amount of [defatted] soybean meal used increased from 3,200 tonnes in 1956 to 65,000 tonnes in 1963. Address: San Francisco, California.

2622. Brandemuhl, William. 1965. Tofu (including Aburaage and related products): Recently developed Tofu products, Tofu as a food, concluding remarks (Continued–Document part VI). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 137-201, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** (Continued). Recently two revolutionary Tofu products were developed improving some of the defects of Tofu in its present form. The first product (bagged Tofu; see Figure 65) is more akin to regular Tofu in that it can easily be made in the ordinary Tofu shop if a few additional pieces of equipment are procured. This equipment is now available commercially so most makers that are interested purchase it.

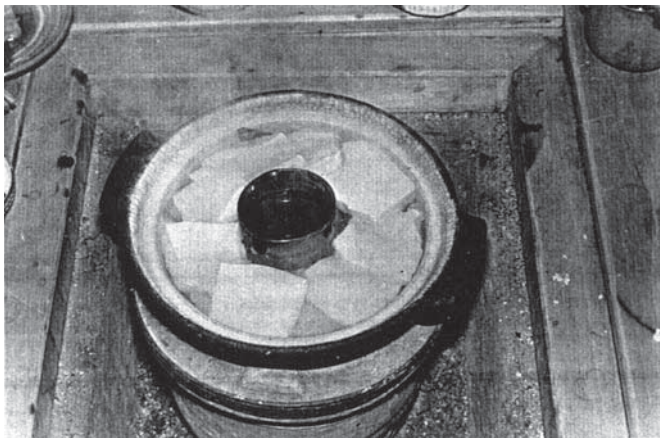


Tonyu is prepared in the same way as for regular Tofu and then stored in drums without being precipitated. It is then put into a machine that delivers a certain quantity of Tonyu at 20-25ºC into a plastic bag along with a small quantity of precipitating agent. The bag is then bound by wire with a manually operated machine or bound by hand with a multi-looped rubber band. With this process the Tonyu plus calcium sulfate is compressed into a tight round cylinder so that only a few air bubbles remain. Then a large number of the bags are put in a barrel of water heated with live steam and cooked for 30 minutes at a temperature slightly under boiling which precipitates the Tonyu into curd. The finished product is a very smooth round shaped piece of Tofu 250 grams in weight which need not be stored in water and lasts one week without deterioration. Such a product might retail for $.069 (25 yen), wholesale for $.O5 (18 yen) and costs about $.044 (16 yen) to make. If too much calcium sulfate is added the curd separates from the water and if too little the Tonyu does not solidify, however an element of standardization can be effected in making this product even in the small shop.

"Another product called "Proton" is very similar as an end product although a soybean meal processed specifically for Tofu is used to make the Tonyu and factories producing Proton operate on a automated mass production scale. Proton has most of the advantages of bag Tofu and many additional ones.

"Both of these products are experiencing only a small degree of success however as the tradition based Tofu industry is not supporting such products to any great extent, especially Proton which potentially could put many small Tofu makers out of business. In addition the taste of both bagged Tofu and Proton is supposedly inferior to regular Tofu and consumers greatly hesitate accepting a round shaped piece of Tofu in place of the usual rectangular one. In recent years Japan has increasingly accepted completely new products, however when such product is a substitute for a traditional one such new product only slowly gains acceptance. All of the above factors inhibit the growth of the enterprising firms that are developing new Tofu products,

© Copyright Soyinfo Center 2013



ones that with slight modification will become the future Tofu of Japan.

Tofu as a food: One might say that Tofu products can be used in nearly all Japanese food dishes although a few uses account for most of Tofu consumption. Both regular Tofu and Aburaage are used more than any other way in the every day breakfast soup Miso-shiru (see Figure 66) a dish that has Miso as a base with Tofu, Aburaage, and vegetables also contained.

"Nearly all Yakidofu is used in that famous Japanese dish Sukiyaki. Although it may occasionally be used as shown in Figure 67, that is, covered with Miso and placed over low heat for an item called Dengaku. Besides Miso-shiru, Aburaage in its various forms is eaten with rice shaped as shown in Figure 68 or in the same way that raw fish is eaten with rice. Another important way in which Aburaage products are used is as a protein source for the many types of noodle soups that exist in Japan. Aburaage is particularly suited for a 100 percent wheat noodle called Udon.

"A very famous regular Tofu dish (Yudofu) originated in a Buddhist temple and is now also often eaten at home. A large casserole dish is filled with water, heated (very often over charcoal in temples) while a sheet of dried sea tangle [konbu] clings to the bottom inside surface and a jar of Shoyu-based sauce standing upright in the center of the container (see Figure 69). A few minutes is all that required to cook Tofu (Tofu should not be overcooked as it becomes porous) after which it is put into a small bowl of the sauce which contains Shoyu, green onions, and ginger (see Figure 70). A small number of restaurants specialize in preparing only Tofu but although all quite famous by preparing 60 dishes made from Tofu. Such places are not common dining places as when served as an only food Tofu becomes boring even for the Japanese. Such traditional restaurants may be reserved two to three weeks in advance because of their uniqueness. Japanese housewives sometimes use the near tasteless Tofu as an extender putting it into meatballs, hamburgers, or scrambled eggs, while the fish sausage companies use Tofu as a fish extender for cheaper fish sausages.

"Kinugoshi is the only kind of Tofu which is usually eaten without cooking as it is served from ice water into a dish which contains Shoyu, ginger, and possibly green onions.

"The above indicated a great variety of uses for the easily digested Tofu products. In addition, Tofu or Aburaage may be used as the main ingredient of many other dishes as in the examples below,

"Tofu:
"Tofu pudding
"Whale meat rolled in Tofu
"Tofu and vegetables boiled with tomato sauce
"Tofu dumplings and meat,
"Tofu hamburgers
"Tofu vegetable soup
"Tofu salad
"Aburaage:
"Okara stuffed Aburaage
"Fried Hirosu with vegetables

"Concluding comments: Tofu the product that has survived hundreds of years of Japanese history is now experiencing somewhat of a crisis as Japan's economy and most industries are expanding at a rate that is without equal. Per capita demand for Tofu is decreasing so if population increase was not causing absolute quantity consumed to increase soybeans would slowly decline in importance as the chief soybean food. Japan's population growth has been quite high but efforts have been undertaken to stabilize growth so even Tofu may feel the effects.

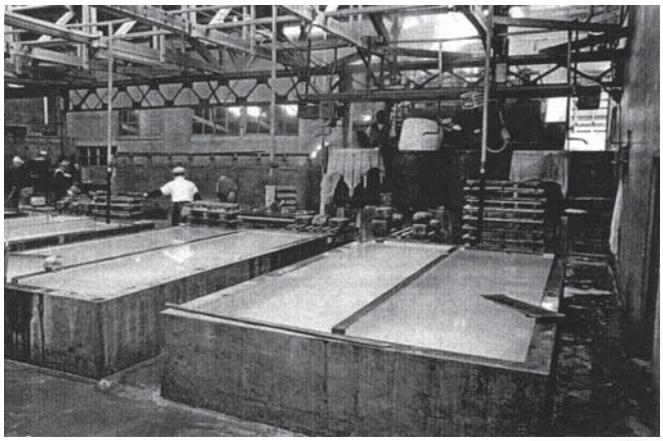
"Tofu being such a well known food never had to be advertised, but recently to compete with the heavily advertised western type foods Tofu producers have had to. For a small Tofu maker, advertising is impossible so the local association is used but its economic situation is not the best either so advertisement assumes a completely different form than the advertisement of the large food companies. The latter most often uses expensive television spots while it is doubtful whether Tofu has ever been advertised on television. Instead the Tofu association may solicit funds from their raw material suppliers (large companies) to publish a small pamphlet for distribution by the maker in proportion to his share of production relative to total production of all members. This is generally true however the large makers will support such advertisement even if the smaller maker is favored.

"Another method of advertising is to engage a temple to create a festival honoring an aspect of Tofu. This results in free newspaper space as most always such festivals are covered by a feature writer(a number are sure to be invited). How effective each advertisement is a debatable question but it is sure that such efforts will not eliminate the increasing need for modernization and rational business decisions. If such is not achieved economic factors will cause much suffering among thousands of Tofu makers. Tofu making

© Copyright Soyinfo Center 2013

can no longer remain the family business it is when a large productive unit such as a few that do exist successfully and efficiently produce if originally founded in a correct way. Progress may have been long in coming for the Tofu industry but the climb has started. The question that remain however is whether most Tofu makers will join." Address: San Francisco, California.

2623. Brandemuhl, William. 1965. Frozen tofu: History, development, frozen tofu soybeans, processing (Document part). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 328-359, Unpublished manuscript. 28 cm. [18 ref]



• ***Summary:*** This excellent chapter contains the most detailed information on frozen tofu to date. "Frozen Tofu (Koyadofu or Koridofu) is processed in the same way as regular Tofu until curd (although harder curd than regular Tofu) is formed at which time the curd, cut into small pieces, is frozen for a few hours at -20ºC, and then stored for two weeks at -5ºC. After it is removed from cold storage the pieces are placed in water for defrosting, centrifuged, dried in ovens and open air, trimmed, treated with ammonia, packed, and sold as a dry, highly preservable, high protein product for use in traditional Japanese dishes.

Note: This is the earliest English-language document seen (April 2013) that uses the word "Koyadofu" or the word "Koridofu" to refer to dried-frozen tofu.

"History: China supposedly has or had a product somewhat similar to frozen Tofu, although frozen Tofu as Japan knows it is completely of Japanese origin. Although a number of theories have been put forth regarding the method of origin it is agreed that the place of origin is the Koyasan Mountain in Wakayama prefecture. Connection between Koyadofu (frozen Tofu) and Koyasan is not coincidental as the name of frozen Tofu also originated in Koyasan Mountain. The most acceptable theory of method of origin seems to involve a priest, Kobodaishi, the originator of the Koyasan temples. Kobodaishi, journeyed to China as did scores of other priests, for the study of Buddhism. It was there that he learned about Tofu. When he returned he grew soybeans so that his priests and converts might eat the new product. Soon Tofu began to be used regularly and with that a piece of Tofu accidently remained outside during a very cold Koyasan winter about 800 years ago. Legend has modified this to state that a priest wearing wooden shoes was returning from the Tofu shop a dark slippery night, fell in the snow, lost a piece of the Tofu, and proceeded home. Whether the latter is true is highly questionable although whatever the reason for remaining outside overnight, the next morning the piece of Tofu, by that time frozen, was found and the priests then experimented with the possibility of freezing Tofu and in the process developed frozen Tofu into a dry cake after it has been frozen. After the priest developed foods that could utilize frozen Tofu they popularized such foods in the Koyasan area so that soon commercial production began, with consumption and then production spreading to other places in Japan.

"Although because of the availability of regular Tofu, frozen Tofu did not become as popular as regular Tofu except among the priests of certain temples particularly those at Koyasan. The Koyasan temples still use a large quantity of frozen Tofu for making a multi-course dinner (for themselves and visitors) in which Koyadofu is carefully prepared to appear as a large number of items such as fish, meat, or vegetables. The Koyasan temples are not the only place one might find this type of dinner but the type at Koyasan is the most famous.

"Development: The production of frozen Tofu is now partially automated with all freezing done by machine but such was not the case in the near past. Before the Meiji period only natural frozen Tofu was produced. Production was limited to areas with very cold weather and even in such places only in winter and high in the mountains; A few people produced Koyadofu at home (those living high enough), however the usual way in which commercial frozen Tofu was produced was for six or seven people to go to a suitable place on the mountain for about 90 days each winter producing approximately 700,000 pieces of Koyadofu. At present, frozen Tofu factories can produce that same quantity in three days. Since the Koyasan area was not the only area suited for making frozen Tofu other areas began production, notably the Nagano area, the same area famous for Miso. Production of natural Koyadofu although surviving until recently was too dependent upon environmental factors so a Mr. Nakahama, one time a Columbia University student, imported American freezing equipment and produced machine made Koyadofu for the first time in Yonago city in Totori prefecture in Meiji 43 (1910). This man some 18 years before had imported an ice-making machine and attempted to commercially produce and sell ice and frozen fish but failed. After receiving a patent for the machine frozen Tofu process Mr. Nakahama began production in the city of Osaka but found water in short supply and the cost of production too expensive for efficient operation so he

© Copyright Soyinfo Center 2013

moved to the Wakayama area. His success slowly prompted other producers to begin machine production. Although ten years ago natural production could be found, shortly after the end of World War II machine produced frozen Tofu accounted for the majority of production. Utilizing freezing equipment, frozen Tofu production is not limited to three months per year or only certain geographical locations and can be produced in much greater quantity for a given time period. Even though the machine process can provide a cheaper more uniform product, the consumers of frozen Tofu have just begun to accept that the machine process produces a better product. As in the Miso industry the number of factories is decreasing, although production of frozen Tofu is remaining constant or increasing. Until ten years ago there were many small producers operating only a short time each year. These have all but disappeared with approximately 45 plants now operating, all processing with moderately large and semi-automated facilities. Figure 136 indicates the scale of an average frozen Tofu factory. Although only the portion of the factory which operates similarly to tofu is shown it can be seen that Tofu and frozen Tofu processing are not similar in production scale.

"As Miso is developing in the Nagano area so is frozen Tofu. The scale of operations, outside of Nagano is not as large or as automated as one half of the frozen Tofu makers are located in Nagano and they produce over 80 percent of Japan's production of frozen Tofu. Nagano has the only frozen Tofu factory that is completely automated.

"Many of the frozen Tofu factories outside of Nagano are finding it difficult to compete with the large scale maker so are forced to curtail production because of lack of demand. Since the frozen Tofu factories represent a substantial capital investment it would be very inefficient to allow the factory to be nonoperative for part of the year so even the most successful October-June producer of frozen Tofu may now produce a summer demand product such as ice cream. The smaller producers may also rent freezer space to companies during the summer months. It remains to be seen if such companies will continue to operate profitably.

"Frozen Tofu soybeans: The National and Prefectural Frozen Tofu Associations, while not as active as the Miso Association, do purchase and distribute soybeans for most of their members. As domestic soybeans are priced much too high for frozen Tofu use, U.S. soybeans (No. 2 ordinary) began to be used in recent years. However with soybean trade with China restored, U.S. soybeans may well be replaced. At present the typical maker uses varying proportions of both U.S. and Chinese soybeans. Although considering the stable supply of U.S. soybeans, the makers prefer Red Chinese soybeans mainly because of price although the foreign matter present in U.S. soybeans also plays a part. Frozen Tofu producers can usually purchase sixty kilograms of Red Chinese soybeans $.84 (300 yen) cheaper. The selected types of U.S. soybeans would be ideally suited for frozen Tofu but price is prohibitive.

"The 45 frozen Tofu makers produce the quantity of frozen Tofu indicated in Table XXV and annually consume the amount of soybeans also denoted in Table XXV. Even in peak years use of soybeans total less than 30,000 tons so even if Red Chinese soybeans did come to be used it would not mean a great decrease in use of U.S. soybeans.

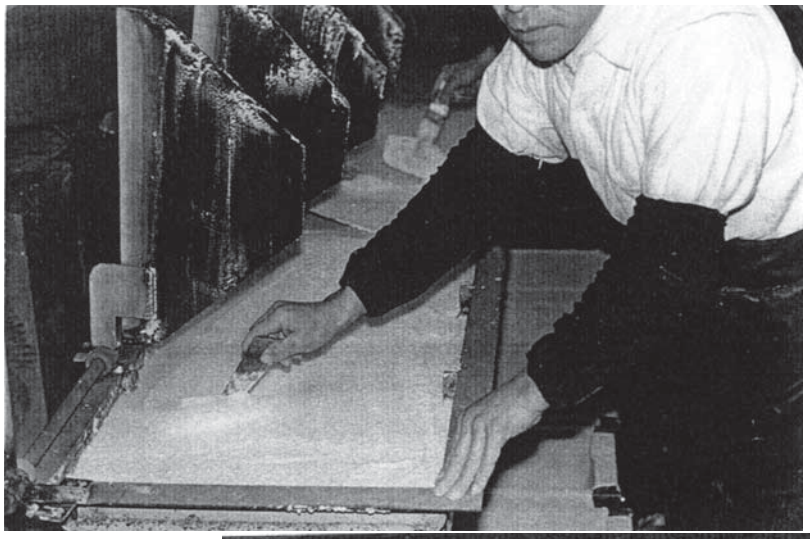
"Processing: For the production of frozen Tofu, soybeans are soaked, ground, and steamed in much the same way as regular Tofu except all procedures are conducted on a larger scale. Soybeans are soaked 8-20 hours depending on season, water ground as fine as possible, and steamed for 10 minutes at 6 kg per square cm or the equivalent of that in an open cooker. Okara is usually removed from the ground cooked substance in the same way as regular Tofu however use of a centrifuge for this purpose is much more popular. The Okara obtained is sold for cattle feed at $12.50 to $13.89 (4,500 to 5,000 yen) per ton. The Tonyu [soymilk] flows through nylon and cotton filters to precipitation containers that are similar to but larger than precipitation containers for Tofu (compare Figure 46 and Figure 137). At this point the efficiency of the frozen Tofu maker would greatly decrease if he used regular Tofu methods of adding magnesium sulfate, of removing water and putting curd into shaping boxes so generally the precipitation agent is added at 60ºC with an electric mixer and water is removed by mechanical means (pump) and shaping boxes may be filled simultaneously using a custom built apparatus as shown in Figures 138 and 139."

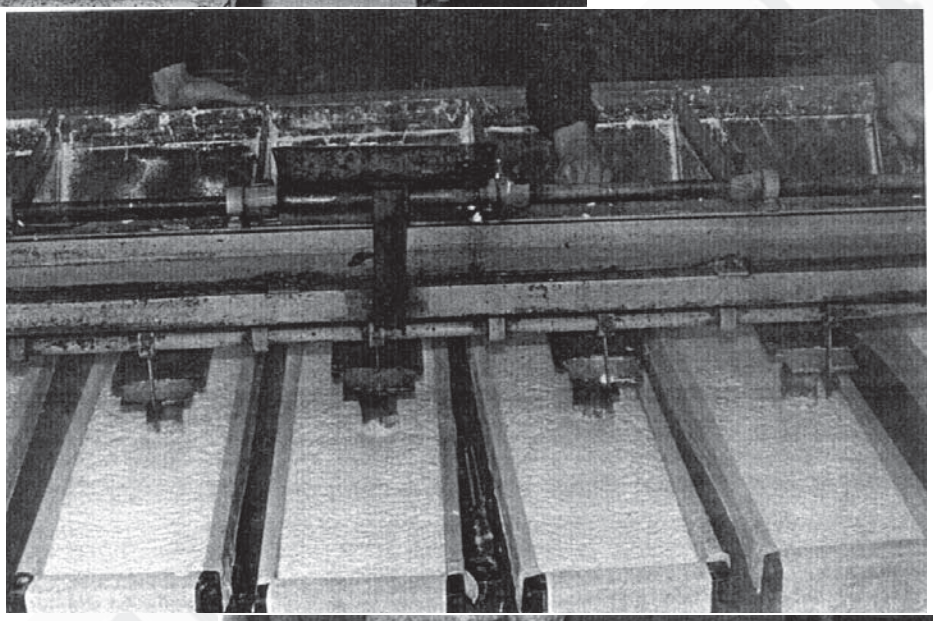
Note: Table 25 shows that production of frozen tofu in Japan increased dramatically from 150 million pieces in 1950 to 630 million pieces in 1963. The amount of soybeans used to make frozen tofu in Japan increased from 6,000 metric tons (tonnes) in 1950 to 25,300 metric tons in 1963 (Continued). Address: San Francisco, California.

2624. Brandemuhl, William. 1965. Frozen tofu: Processing, freezing, defrosting, drying, treatment with ammonia, packing, marketing, and use (Document part). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 328-359, Unpublished manuscript. 28 cm. [18 ref]

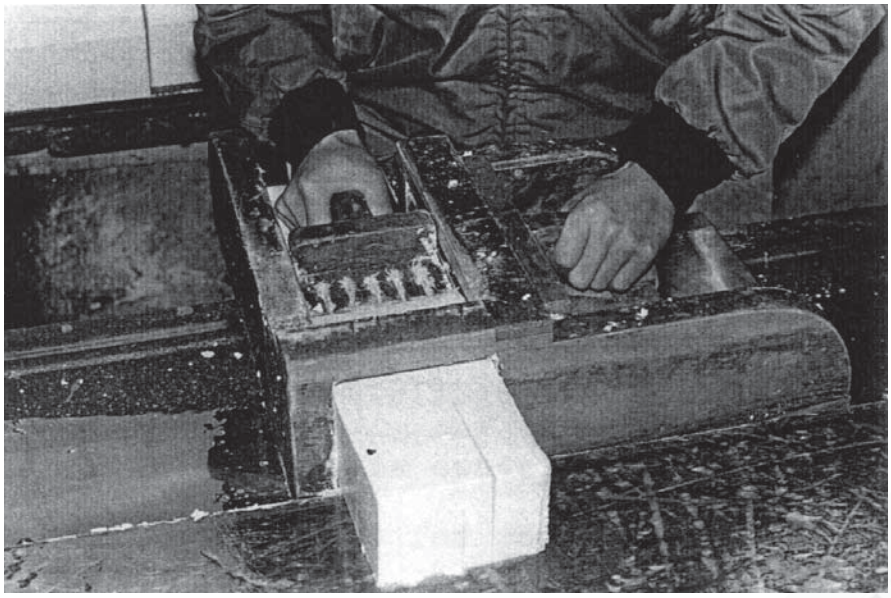
• ***Summary:*** Continued: "A great amount of labor is still required for this process but relative to Tofu the quantity placed in shaping box per man hour is significantly greater. Frozen Tofu Tonyu and curd are much less sensitive to handling than Tofu so they can be mechanically handled without adverse effects. Frozen Tofu curd is formed in a box that is 13 x 30 x 6 inches. It contains a cotton filter cloth and is pressed with a 10-20 kilogram weight (stone) for one to two hours in much the same way as regular Tofu although as the frozen Tofu industry is very interested in improving their methods of production, time saving devices such as shown in Figure 140 (curd foaming guide) are

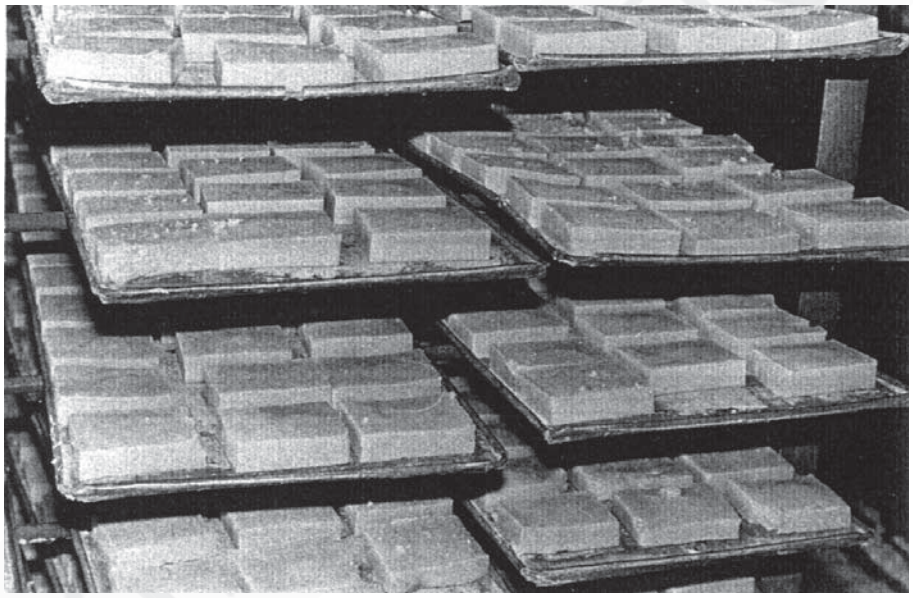
© Copyright Soyinfo Center 2013

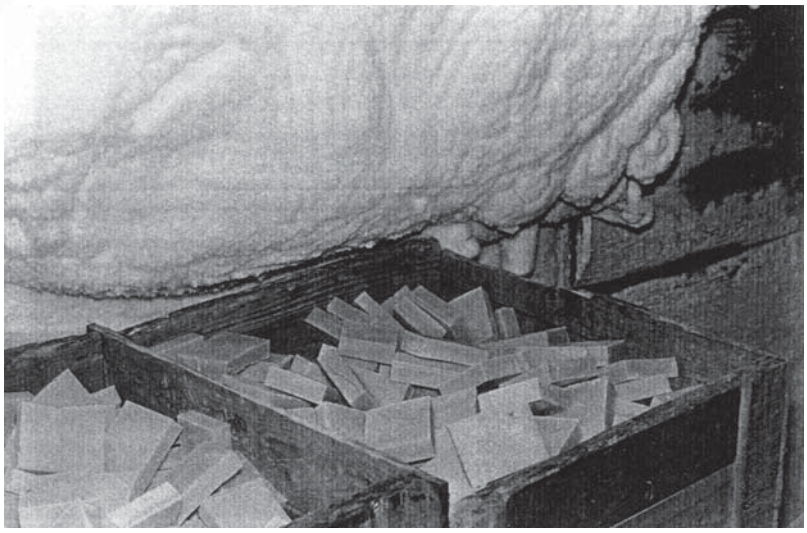




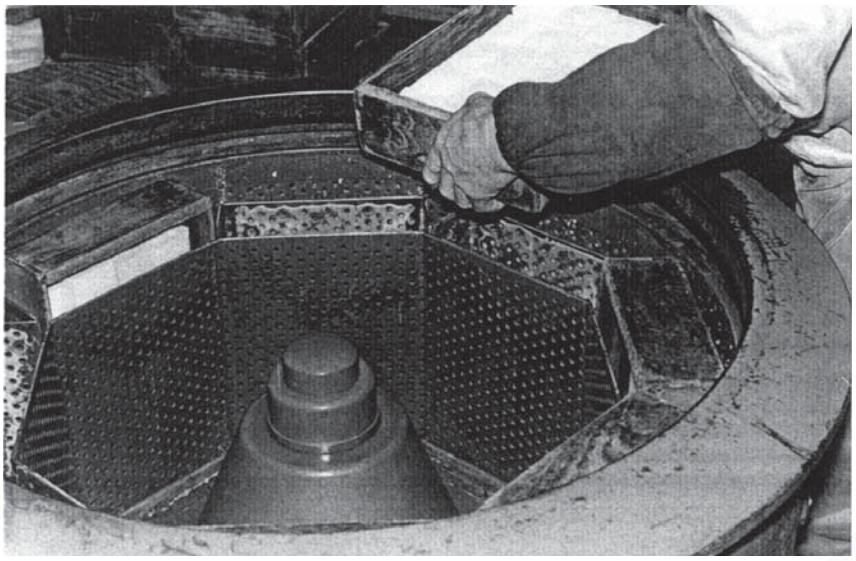
© Copyright Soyinfo Center 2013







© Copyright Soyinfo Center 2013



© Copyright Soyinfo Center 2013

utilized throughout the production process. More water is removed from precipitating curd and the curd is pressed with greater pressure than regular Tofu as a hard curd is desirable because frozen Tofu curd is handled while out of water and is to be frozen. After the curd is formed it is submerged in water. Usually the Tofu maker has one small sink in which to submerge Tofu, while frozen Tofu makers usually have a number of large sinks for this purpose (see Figure 136).

"From this point the procedure for Frozen Tofu differs from regular Tofu in that the submerged curd is removed (see Figure 141) only after soaking 24 hours while Tofu is removed and marketed only a few hours after. Since the final frozen Tofu product is storable manufacture is carried on only during the day, not in the early morning as Tofu. After the curd is removed from the water it is cut crosswise mechanically or manually in four to six pieces and then each piece is cut in small pieces 1 x 3 x 3 inches with a mechanical cutter as shown in Figure 142. A few factories have automated the entire cutting process but the method mentioned above is the most popular at the present. The cut pieces are then ready for freezing.

"Freezing, defrosting, drying, treatment with ammonia, and packing: After the formed curd has been cut into small pieces it is placed on trays (see Figure 143) in a freezer at approximately -20ºC for four hours. After quick frozen in such a way the pieces are removed from the trays and put in boxes as shown in Figure 144 and stored at approximately -5ºC for two weeks. Freezing at -20ºC is supposedly for insuring that the piece becomes completely frozen while the two weeks cold storage is for cohesiveness, porosity, maintaining size, and softness. The duration of both types of freezing vary with manufacturer although the above temperatures and time seem to be used the most frequently. After freezing for a desired period the pieces are removed from the freezer and placed in a tank of water for defrosting (see Figure 145). The soaking lasts for about five hours after which defrosting is completed and the now soft piece of curd are then centrifuged to partially remove the large percentage of water that is contained (see Figure 146). Centrifugation achieves this but for reducing same to 10-12 percent a hot air oven is used. For 13 hours the oven temperature is maintained at 110ºC then reduced to 45ºC for another three hours. After the oven treatment the frozen Tofu pieces are inspected by hand for relative dryness (see Figure 147) with pieces of like dryness shelved together and completely dry pieces stored as in Figure 148. Pieces with greater moisture are shelved so that adequate circulation may dry them properly. Until a few years ago natural drying was done in the open air on the roof of the factory or other suitable place however improved centrifugation and oven drying techniques have removed the need for such along with reducing the time required for natural drying from 27 to 20 days. Drying frozen Tofu outside is still practiced by a few makers although such will disappear completely within a few years just as natural freezing disappeared. In 1931 it was found that treating frozen Tofu with ammonia was advantageous in respect to softening after cooking, water absorption, and size increase.

"From its advent in 1931 ammonia's use with frozen Tofu increased in popularity so that at present virtually all frozen Tofu produced in so treated. After frozen Tofu is completely dry it is placed on racks in a small room that is saturated with ammonia gas and allowed to absorb ammonia for approximately one hour. Then frozen Tofu is allowed to aerate so that volatile ammonia can escape. After a certain time the pieces are trimmed as shown in Figure 149 and then graded into four to six grades. Packing frozen Tofu is very important with respect to storability so much care is taken to insure a tightly closed package for all except bulk orders as such are usually displayed in the open air at the market (see Figure 151). Besides in bulk, a box with 10 pieces of frozen Tofu packed in a plastic bag is available as are Cellophane packages (see Figure 150) containing six and 10 pieces. Broken pieces are very often packed in plastic bags. Because of price the broken sell quite readily. A little known fact is that the broken pieces also have the best cooking characteristics. Each type of package may be divided by quality into as many as three grades. Each grade usually can be distinguished by the consumer according to color, although while size is standard for all companies, colors with respect to grades are not.

"Marketing: After being packaged, except for what is marketed in the immediate proximity of the factory, frozen Tofu is trucked to the central markets of the larger cities which handles distribution to retail outlets as well as act as middlemen for the village and country wholesalers and retailers. For high quality frozen Tofu the manufacturer's price is approximately $.O139 (5 yen) with wholesale price about $.O18 (6.5 yen) and retail price about $.O22 (8 yen). The manufacturer considers it unfortunate that high quality frozen Tofu is the least demanded because poorer grades realize relatively less profit.

"Since production of frozen Tofu is no longer seasonal the quality purchased at one time is decreasing so that the 100 piece box is no longer in great demand except for Buddhist ceremonies, hotel cooking, and other special purposes. Households that do not lack money purchase the ten piece package while poor households purchase piece by piece from shops which very often display unpackaged frozen Tofu without covering as shown in Figure 151.

"The Frozen Tofu Associations at the prefectural level attempt to fix the price of frozen Tofu however with the many grades that exist, such is unsuccessful as it is too difficult to compare price of one company's frozen Tofu with another. With the existence of a competitive market, frozen Tofu is, coupled with its food value, a very inexpensive product. Its virtues are not well known however, as given the scale of even the largest company, national advertising

© Copyright Soyinfo Center 2013

cannot be conducted because of costs. This causes the item to remain a specialized product among older people and to be unknown among the younger people. It is thought by the various makers that greater emphasis should be put upon advertising, however they are not exactly sure how they can do this.

"If properly manufactured and packaged frozen Tofu is an extremely long lasting product. If stored in ideal condition, i.e. low humidity, stable temperature, et cetera, frozen Tofu would last many years. Ideal conditions very seldom exist especially in Japan so the frozen Tofu makers recommend that frozen Tofu should be consumed within three months in summer and within six months in winter. These recommendations may be for sales purposes, however in about three months the ammonia smell will disappear and supposedly that is a sign of decreasing taste. If the surface of frozen Tofu changes to dark yellow the piece has decreased further in taste but remains edible. If the piece becomes dark yellow throughout it should not be eaten. The preservation potential of frozen Tofu could most likely be increased through research and development of new methods of making and packing. At that time and even at present frozen Tofu seemingly would be ideally suited for use in parts of the world where environmental conditions are not suitable for fresh foods. Japanese frozen Tofu makers are too small to explore the possibilities of the export market but it is the hope of the makers that such a market will develop even on a small scale.

"Use: Frozen Tofu, a food product with composition as stated in Table XXVI is, as indicated, high in food value particularly protein, Unfortunately it is not a popular food nor well liked so its actual value to the Japanese diet is limited as per capita consumption for Japan is a whole is extremely low (see Table XXVII). Somewhat the reverse is true in rural areas especially those which do not have regular Tofu delivered. Rural consumption of frozen Tofu is double that of urban consumption" (Continued). Address: San Francisco, California.

2625. Brandemuhl, William. 1965. Frozen tofu: Use, closing comments (Document part). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 328-359, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** Continued: "Frozen Tofu is so identified with Buddhism such as Buddhist conducted funerals and other ceremonies that although the food is not considered sacred, it is considered to have a special role in religion. Liberalization from this role may be what is needed to develop the consumer market. The initial steps of preparing frozen Tofu is rather easy but subsequent steps to blend frozen Tofu with other foods are difficult. Consequently most young housewives do not prepare frozen Tofu. At first the desired number of pieces are placed in a pan of boiling water for 30 seconds and upon removal squeezed if possible. At this time the pieces are cooked with a number of foods. When cooking is completed the piece will have expanded 2½ times its original size, significantly increasing the water content from the 5-10 percent content before cooking. Because of the work involved, certain foods shops do sell cooked frozen Tofu (see Figure 152) but the price more than doubles. The most difficult part of cooking frozen Tofu however is making it taste like the food it is cooked with as frozen Tofu has very little inherent taste. If taste is not successfully added, partaking of frozen Tofu is similar to consuming a sponge. Cooked frozen Tofu mixed with certain foods is available in certain shops (see Figure 153) but it is not a popular carry home food item because of the price.

"For the experienced cook, especially a farmer's wife, frozen Tofu can be prepared in the following ways:

"(1) In Sukiyaki (some frozen Tofu makers market Sukiyaki size pieces).

"(2) As a breading for meat.

"(3) Simmered with boiled vegetables.

"(4) After a dry piece is crushed and soaked, fried with carrots.

"(5) After a dry piece is crushed, soaked, and sauteed, mixed with eggs for making omelets.

"(6) Lightly cooked with Shoyu and sugar (a dish liked by poor people).

"(7) After being cooked with Shoyu and sugar, fried with onions.

"For the most of the above uses, frozen Tofu does not add much or could easily be replaced with an easy to prepare substitute so the rushing urban housewife in fact uses the substitute. The progressive segment of the frozen Tofu industry believes that for expansion of use, modernization of the product is necessary.

"For this group modernization means an instant frozen Tofu most likely in powder form. Recently patents were procured on an initial type of instant frozen Tofu although such products are not ready to be marketed. As with Miso and Tofu, modernization involves a great change in the shape, appearance and other characteristics that are time honored and a part of the way of using. Instant frozen Tofu may have an advantage over Tofu and Miso though as instant frozen Tofu would definitely be easier to prepare than the traditional product. If instant frozen Tofu is technically impossible (which seems unlikely given the initial success) or if it is unaccepted it is quite possible that frozen Tofu consumption will gradually decline with the expiration of the aging segment of the population that now use frozen Tofu."

Note: Table 26 gives the composition of frozen tofu (100 gm) on a dry weight basis; it contains 53.5% protein, 26.4% fat, 480 calories, and 590 mg of calcium.

Table 27 gives the yearly per capita consumption of frozen tofu in Japan from 1950 to 1963. It grew dramatically from 1.8 pieces weighing 35 grams in 1950 to 6.6 pieces

© Copyright Soyinfo Center 2013

weighing 132 grams in 1963. Yet the absolute amount is still very small. Address: San Francisco, California.

2626. Ch'oe Pu's dairy: A record of drifting across the sea, translated with introduction and notes by John Meskill. 1965. Tucson, Arizona: University of Arizona Press. 177 p. See p. 73. Index. 24 cm. Series: The Association for Asian Studies: Monographs and Papers, No. XVII. [soy ref]
• ***Summary:*** The *P'yohae-rok* (A record of drifting across the sea), is the diary of a Korean official–Ch'oe Pu. In Feb. 1488, during the Ming dynasty, he and his crew were caught in a storm off the coast of Cheju, at the southernmost tip of Korea; they drifted for 16 days in an open boat, a terrible ordeal, to the southeast coast of China, landing near Ning-po. After being taken captive, he and his crew suffered many more ordeals, but were gradually sent to Peking, following the route of the Grand Canal. On the way, in Shao-hsing prefecture (south of the Huang [Yellow] River), the Regional Commander and the other two high officials served him tea and fruit, and wrote a list of twelve foods and drinks to be presented to him. The last item on the list was "One plate of bean-curd."

In Peking, his adventure attracted the attention of the highest authorities, who provided the means to return him to the border of his homeland at the Yalu River. In 1488 Ch'oe presented his travel diary to the Korean King, "who was pleased and ordered that it be put into the archives."

Also discusses: When Koreans are in mourning for their parents, they do not drink wine or eat meat, garlic, oniony plants, or sweet things for fully three years (p. 50). Korea no longer revered the Buddhist law, but honored only the Confucian system. All its families made filial piety, fraternal duty, loyalty, and sincerity their concern (p. 51). Many Chinese officials had both a wife and concubines (p. 64). Public examinations were given great importance in both China and Korea. Those who placed high in the exams were honored by the government with public stipends, banners displayed on their gates, and their rank written on their name cards. In China, high ranking people we often carried in a sedan-chair, borne on poles by two men (p. 66). Address: Meskill: Barnard College, Columbia Univ., New York City, New York.

2627. Cooper, Michael. ed. 1965. They came to Japan: An anthology of European reports on Japan, 1543-1640. Berkeley and Los Angeles, California: University of California Press. xviii + 439 p. Index. 24 cm. [30+* ref]
• ***Summary:*** This book is about the "Christian century" in Japan, which includes these key events (chronology): 1542–Portuguese arrive in Japan. 1549–Arrival of St. Francis Xavier. 1568–Nobunaga becomes ruler of central Japan. 1582–Hideyoshi succeeds Nobunaga. 1587–Edict issued expelling missionaries. 1598–Ieyasu succeeds Hideyoshi.

1614–General persecution of Christians begins. 1624–Expulsion of Spaniards. 1639–Expulsion of Portuguese. 1640–Unsuccessful embassy from Macao [to Japan].

This anthology is composed of selections / excerpts from the writings (original texts) of more than 30 Europeans who visited Japan during the period from 1542 to 1640. The material is organized into 23 chapters, by subject, including: The country. History. The people. Social relations. The language. Food and drink. Shinto. Buddhism. Temples and idols. Persecution.

In the chapter on "Food and drink" is a section (p. 190) titled "Their diet," by John Saris, in which he states: "... of Cheese [probably tofu] they have plentie, Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts."

Sources: "Saris, John. (1) The Voyage of Captain John Saris to Japan, 1613. E.M. Satow, ed. London, 1900. (2) The First Voyage of the English to Japan. Takanobu Otsuka, ed. Tokyo, 1941."

Another section (p. 191) titled "Three meals a day," by Jorge Alvares states: "Their food consists of rice, chick-peas [probably soybeans], mangoes, maize, Indian corn, yams and wheat, and I think all of it is served dressed with some paste [probably miso].

Source: "Alvarez, Jorge. 1547. Report in *Missoes dos Jesuitas no Oriente*, by Jeronimo P.A. Camara Manoel, p. 112-25."

The author, who was born in 1930, is a Jesuit who has written much on the early history of Japan. Address: S.J. [Jesuit], Campion Hall, Oxford [and Sophia Univ. (Jesuit), Tokyo, Japan].

2628. David-Perez, Enriqueta. comp. and ed. 1965. Recipes of the Philippines. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Quezon City). 86 + [14] p. Illust. No index. 22 cm.
• ***Summary:*** This is an expanded edition of the author's 1953 book of the same title. Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods (See Glossary at end). Misu is "a paste made of fermented rice and soy beans" [miso]. Tajure is "fermented soy beans, caked" (fermented tofu). Tausi is "fermented soy beans" [fermented black soybeans or fermented black soybeans with salt]. Tokua is "soy bean curd" (tofu). Toyo is Filipino-style soy sauce.

Soy-related recipes include: Chicken pastel (with toyo, p. 26). Arroz caldo with chicken (with 3 tbsp. patis or toyo, p. 45). Bañgus en tocho–2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua, cut into pieces 3/4 inch long and 1/8 inch wide, p. 54). Bañgus in soy sauce (with 2 tbsp. soy sauce, p. 54). Bulanglang–1 (with 1 cup tokua, cubed and fried, p. 57). Burong isda (with 1 tbsp. angkak–fermented red rice, p. 59). Escabecheng apahap (with 4 pieces tokua, p. 71). Escabeche–Macao style (with 3 tbsp. toyo sauce, p. 71).

© Copyright Soyinfo Center 2013

Kari-karing pata (with ground toasted peanuts or peanut butter, p. 79). Lumpia labong (with 5 bean cakes–tokua, p. 83). Lumpia sauce (with ½ cup toyo sauce, p. 84). Lumpia with peanuts (with 2 squares tokua–diced, 2 tbsp. toyo–soy sauce, and 1 cup ground peanuts, p. 85). Lumpia with ubod–2 (with 2 cakes tokua, and toyo to taste, p. 87). Misu-tomato sauce (with 2 tbsp. misu–soy bean paste, p. 92). Pancit "luglug" (with ½ cup soy bean cake–tokua–cut into small cubes, p. 97). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 118). Pastillas de mani (with 1 can ground peanuts, p. 133).

On the page facing p. 186 is a full page ad for Suki Soy Sauce, made by the Philippine Shoyu Co., Liloan, Cebu, Philippines. It is "Pure and fully aged."

Seven unnumbered pages later is a full-page ad for "Aji-no-Moto super seasoning... The purest vetsin ever."

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is "red-colored grains of rice used as coloring for fermented fish."

Note: On the title page is printed "10th printing–1965" but no original publication date is given. Address: Philippines.

2629. Koyanagi, Tatsuo; Oikawa, Keiko. 1965. Daizu seihin oyobi shoku-en ga nezumi no hatsuiku oyobi kôjo-sen ni oyobosu eikyô [The effect of soybean products or sodium chloride in diets on the thyroid and growth of rats]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 18(3):190-93. [17 ref. Jap; eng]

• ***Summary:*** Tests with rats showed that the feeding of heated soybeans, natto (fermented soybeans containing no sodium chloride), miso (fermented soybeans containing sodium chloride) or tofu (soybean curd) produced a high incidence of thyroid enlargement in the rats, but the enlargement was prevented by increasing the iodine content of the diets by a small amount.

The inclusion of sodium chloride in iodine-deficient diets at the 3% level caused a pronounced hypertrophy of the thyroid and weight loss in rats. In this case, the supplementation of iodine alone did not prevent the weight loss, but adding methionine plus iodine did.

Axelrod et al. have reported that thyroxine production in rats was increased with increasing sodium chloride intake. Thus, the effects of a large intake of sodium chloride resemble in some respects those of administration of thyroxine.

"It is well established that thyroxine increases the metabolic rate and oxygen consumption of animals and beyond small and very critical levels the thyroid hormone decreases growth and feed efficiency. Charkey found that all of these effects of thyroxine can be reversed by methionine. The present findings that methionine prevented the weight decrease of rats fed a diet of high sodium chloride content may be explained by the antithyrotoxic effect of methionine." Address: Tohoku Daigaku Nôgaku-bu, Eiyo Kagaku Kyôshitsu [Lab. of Nutrition, Faculty of Agriculture, Tohoku Univ., Sendai, Japan].

2632. Needham, Joseph. 1965. Science and civilisation in China. Vol. 4:2 Mechanical Engineering. Cambridge, England: Cambridge University Press. 816 p. See p. 206-210, plus Fig. 463.

• ***Summary:*** The Chinese pattern of presses was quite different from that used to press olives and grapes in Europe. "In China the most important type of press has probably always been the one which uses wedges driven home vertically or horizontally with hammers or a suspended battering-ram (cf. Fig. 463). This it is, at any rate, which is described in the *Nung Shu* [pinyin: *Nongshu*] at the beginning of the +14th century." Chinese horizontal presses, used for obtaining the large variety of vegetable oils (such as soya-bean oil) "were and are contrived from great tree-trunks slotted and hollowed out" (p. 206).

"The other main type of Chinese indirect lever beam press is distinctly different from any European form (see Fig. 462, 1c). Since this is used in a typically Chinese industry, the pressing of soya-bean curd, it is unlikely to have been an importation" (p. 209). Address: East Asian History of

Science Library, Gonville & Caius College, Cambridge, England.

2633. Needham, Joseph. 1965. Science and civilisation in China. Vol. 4, Physics. Part II: Mechanical engineering. Cambridge, England: Cambridge University Press. See p. 206-210.

• ***Summary:*** Concerning oil mills (p. 206-10): In Greece and Roman Italy (see Fig. 462), "after the -1st century, the large presses for olive pulp and grapes were equipped with screw mechanisms rather than the winding gear and weights which had before been used. Although the wedge press was known, ancient authors do not describe it, and it seems to have been used rather for the preparation of pharmaceutical products, essential oils, and papyrus."

"The Chinese pattern was quite different from this. In China the most important type of press has probably always been one which uses wedges driven home vertically or horizontally with hammers or a suspended battering ram" (see Fig. 463). This type of press was described in the *Nongshu* by Wang Zhen (1313). "But while the relatively small upright wedge-presses of Europe were constructed of a framework of beams, the Chinese horizontal oil-presses, used for obtaining a large variety of vegetable oils characteristic of that culture (e.g. soya-bean oil, sesame-seed oil, rape-seed oil, hemp oil, peanut oil), were (and are) contrived from great tree-trunks slotted and hollowed out. In these is placed the material to be pressed, made into discs ringed with bamboo rope and bound with straw (see Fig. 462, 4b); then the blocks are placed in position and the pressure increased from time to time by the wedges. This method takes advantage of the high tensile strength of the natural wood. It would seem to be ancient, indigenous, and without many parallels in the West."

The Chinese also use an "indirect lever beam press" which is distinctly different from any European design (see Fig. 262, 1c). "Since this is used in a typically Chinese industry, the pressing of soya-bean curd [tofu], it is unlikely to have been an importation" (p. 209). Address: Cambridge, England.

2635. Portrait photo of William Brandemuhl, American soyfoods pioneer in Japan. 1965. Japan.

• ***Summary:*** William Brandemuhl was a pioneer in studying and writing about soyfoods in Japan after World War II. His magnum opus, "Soybean Utilization in Japan" was completed in 1965. According to Tomoko Brandemuhl this black-and-white photograph (4½ by 6½ inches) was taken in late 1965, shortly after the book was completed

This photo was sent to Soyinfo Center in Oct. 2012 by Tomoko Brandemuhl (Stratford, Connecticut), his wife.

2636. Sakurazawa, Nyoiti [Ohsawa, George]. 1965. You are all sanpaku. English version by William Dufty. Secaucus, New Jersey: University Books. 224 p. Index. 22 cm. First

© Copyright Soyinfo Center 2013

paperback edition published in 1980 by Citadel Press, Secaucus, NJ.

• ***Summary:*** Contents: Introduction. The divine ritual. A land of sanpaku. Faith and medicine. The cause. The cure. The daily check-up. Food and sex. Prayer and fasting. The sacred act. About salt. About sugar. About milk. About liquids. About chewing. About principal foods. Soulfood: Brown rice, rice cream, buckwheat, buckwheat cream, wheat, cous cous, chapati, millet, raw rice, bread, gomasio [gomashio] (sesame salt), umeboshi plums, miso and shoyu, tahini, miso cream, about tea, coarse green tea (bancha), soya ban (coarse green bancha tea with soy sauce), mu tea, lotus tea, lotus tea, mint tea, thyme tea, Ohsawa coffee (Yannoh; made of rice, wheat, aduki beans, chick peas, chicory, and a little oil), Dandelio (dandelion coffee substitute), kokoh, kuzu, umeboshi juice, ume syo kuzu (umeboshi + shoyu + kuzu), aduki juice, radish drink (daikon #1 and #2), special rice cream, brown rice tea, wheat tea. The oneness of the universe [Ohsawa's profound and beautiful credo]. Tables: 1. Macrobiotic table of daily food in order of yin to yang. Note: The most yin foods are indicated by 3 downward-pointing triangles; the most yang foods by 3 upward-pointing triangles. Beans (except aduki) are quite yin, being symbolized by 2 downward-pointing triangles. Eggplant, tomato, and potato are the most yin vegetables. The most yang cereal is buckwheat, followed by rice. 2. Physical phenomena–Yin/yang table. Biographical note on Ohsawa (p. 213-18).

This was the first popular book in English to explain the principles of macrobiotics. "*Sanpaku* describes a condition in which they white of the eye can be seen between the pupil and the lower lid as the subject gazes directly forward. This, we quickly learn, connotes a grave state of physical and spiritual imbalance." It is the Oriental sign of impending disaster.

Soy-related recipes and information include: Soya bean plaster (p. 140). Tofu plaster (p. 141; tofu is called "white soya bean cheese"). Tekka [miso] for anemia and general weakness (p. 143). Miso and shoyu (p. 190). Miso cream (with tahini, p. 190-91). Soya ban: Coarse green bancha tea with soy sauce (p. 194). Ume syo kuzu (p. 199; a proven medicinal beverage [made from umeboshi, shoyu, and kuzu]).

About sugar (p. 165): "I am confident that Western medicine will one day admit what has been known in the Orient for years: sugar is without question the number one murderer in the history of humanity–much more lethal than opium or radioactive atomic fallout–especially for those people who eat rice as their principal food."

About milk (p. 169): "There is no reason for man to live on the milk of an animal–especially an animal inferior to him biologically and intellectually." People of the Orient avoid milk "because they respect the biological natural laws of the Order of the Universe... Once the young offspring of animals have their teeth and are weaned from nursing, they no longer drink milk... No animal ever does." "The quality and quantity of a mother's milk controls her child's destiny. In cases where the mother's milk is not available, babies can be fed with *Kokoh*–a macrobiotic cereal milk made with roasted rice, glutinous rice, oatmeal, soya beans and sesame seeds reduced to powered form" (see recipe p. 198).

Miscellanea: The Ohsawa Foundation at 317 Second Avenue in New York City, located on the first floor of an old tenement, had a 4-table restaurant in the front and a kitchen in the rear. There were several macrobiotic restaurants in Paris, plus a tiny macrobiotic food store named Les Trois Epis and the Librarie Ohsawa, both on Rue Lamartine Guy Massat was editor of the French monthly journal *Yin/Yang*. The author: "I could not remember a single doctor, out of dozens who treated me, who had ever shown the slightest curiosity about what I ate and drank."

"The stark facts presented to the President of the U.S. by his Special Commission on the Nation's Health in December of 1964 are staggering: In 1963 heart-artery disease caused 55% of all U.S. deaths, and cancer 16%. Strokes 210,000; diseases of arteries outside the brain combined with diseases of the heart to kill 793,000. Cancer killed 285,000" (p. 66). Occidental medicine is symptomatic medicine; it does not seek to cure the basic causes. And it is microscopic/analytical. It seeks the truth in a maze of details; but the "truth is whole." The "ultimate cause of every illness is violation of the order of the universe through ignorance or through arrogance,..." (p. 80-81). "Disease is a divine warning, a message from nature seeking to guide us to the correct path" (p. 98). The essential factor in the proper nutrition of the human body is the proper proportion of Yin and Yang. The best proportion of Yin/Yang or Potassium/Sodium is 5 to 1. All those foods whose K/Na ratio is greater than 5 to 1 are Yin. The books ends with a "Biographical Note: Sakurazawa-Ohsawa" who is said to have "published some 300 works in Japanese and more than 20 books in Western languages, principally French." His wife, Lima, is a professor of traditional Japanese music. There is a selected bibliography of Ohsawa's books, especially those published in French. Address: New York.

Tanpaku bunkai kôso-zai o kongô, konnetsu shita baai no daizu tanpaku no kasui bunkai ni tsuite [Hydrolysis of soybean protein by mixing with protease preparation]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 21. p. 129-35. Jan. [4 ref. Jap; eng]

• ***Summary:*** The action of several protease preparations on soybean protein was studied to elucidate the possibility of making cheese-like products from soybean. Dried frozen tofu (kori-dofu) was powdered then mixed with the protease solution, kneaded for 30 minutes, then allowed to stand for

© Copyright Soyinfo Center 2013

24 hours at 45ºC while digestion / hydrolysis took place.

Under the proper conditions, products with about the same level of total free amino acids as processed cheese can be produced. "Although some were good, most of them had a rather queer taste and dark color." The pattern of free amino acids in those products was somewhat different from that of cheese.

The possibility that these products could be "used as a cheese-like food or a raw material for some processed foods is discussed."

2639. Sutton, Horace. 1966. Japanese chefs dish it out. *Los Angeles Times.* Feb. 20. p. H11.
• ***Summary:*** In Tokyo there are many ways of getting a meal. For example, at most coffee shops (if you insist) you can order "a tray that includes miso soup with fried tofu, Japanese tamago yaki [omelet, fried eggs] with white radish [daikon], oshinko," etc.

Note: This article also appeared in the *Chicago Tribune* (Feb. 27, p. J11 and K11), and in the *Baltimore Sun* (March 6, H6).

2640. *Sunset* (*Menlo Park, California*). 1966. Cooking with *dow foo.* 136:190, 192-93. Feb.
• ***Summary:*** "The Chinese call it *dow foo;* the Japanese, *tofu.* Both terms refer to a soft, cheese-like food made of soybean curd. The picture below shows the three forms of fresh dow foo available in Chinese markets. The water bean cake (*suey dow foo*) has a high water content and is used in Chinese soups. The smaller, compressed cakes (*dow foo yuen*), with medium water content, are diced and sautéed with meat or vegetables. The little fried bean cakes (*dow foo bok*) can be sautéed whole or sliced, or stuffed with a meat mixture.

Note 1. This is the earliest English-language document seen (April 2013) that contains the term "fried bean cakes" or the term *dow foo bok.* Both refer to fried tofu.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term "water bean cake" or the *suey dow foo* [*shui doufu*]. Both refer to Chinese-style soft tofu. tofu.

"Japanese tofu is similar in texture and flavor to the Chinese dow foo yuen, and can be substituted for dow foo bok, although the tofu pieces are twice as large.

"Soybean cake has little flavor of its own, but it quickly takes on the flavors of foods with which it cooks, while its soft texture provides an interesting contrast."

Gives recipes for: Chinese soup with suey dow foo. Dow foo yuen with leeks. Dow foo yuen with oyster beef (uses oyster sauce). Dow foo yuen with chicken or pork (uses brown bean sauce). Sliced dow foo bok with steamed fish. Dow foo bok stuffed with pork.

Note 1. This is the earliest of many tofu recipes seen in *Sunset* magazine. This is also the earliest English-language document seen (Feb. 2004) that uses the term "soybean cake" or "dow foo yuen" to refer to tofu.

2641. Claiborne, Craig. 1966. New Yorkers take to tempura and chopsticks with gusto. *New York Times.* March 10. p. 22.
• ***Summary:*** "But gastronomically there has been no phenomenon in recent years to equal the proliferation of Japanese restaurants [in Manhattan], East Side, West Side and up and down the town."

There have been Japanese restaurants in New York for many years but in the early days, unless one spoke Japanese, the choice was between tempura and sukiyaki. Today the choice of dishes is almost unlimited.

The first of the "grand luxe Japanese restaurants" in Manhattan was the Saito; it offered tatami mat rooms (*ozashiki*). Next came the Kabuki, then the Nippon.

Mizutaki is "boiled chicken and vegetables served with soy and lemon sauce." Appetizers include "bits of tuna with soy [sauce] and ginger, and stashi, the traditional dish with soy and ginger." Kabayaki is [eels] "glazed with a light soy sand sugar sauce." Three recipes are given: Shabu-shabu calls for "2 pieces tofu (bean curd), each cut into four pieces." Ponzu sauce (Soy and lemon sauce) calls for ½ cup each lemon juice and "Japanese soy sauce, ¼ teaspoon ajinomoto (monosodium glutamate)..." Gomazu sauce (sesame sauce) calls for "4 ounces sesame seeds or one-half cup tahini (sesame paste...), ½ cup Japanese soy sauce. ¼ teaspoon ajinomoto (monosodium glutamate)..."

2642. Dosti, Rose. 1966. Eggheads make the kitchen scene: Food for thought. *Los Angeles Times.* March 31. p. F1, F8.
• ***Summary:*** The American Association of University Women (AAUM), says that some women are returning to the kitchen; others say they never left it. But the emphasis has changed. Gourmet clubs have mushroomed. Some branches are mixing learning and cooking–and members love it.

Today in Los Angeles, Mrs. Troup, who lived in Japan (where her husband was assigned) for two years, is serving a Japanese menu including Mizutaki, considered a "company dish" in Japan. The ingredients, including shrimp. mushrooms, and "soy bean curd" are artistically arranged on platters for each table. The Mizutaki recipe,

© Copyright Soyinfo Center 2013

which is given, calls for "Bean curd squares (Tofu)" as an ingredient, whereas the instructions say: "Add vegetables and soy bean curds,..." 1 teaspoon "monosodium glutamate" is an ingredient in three recipes. Two photos show groups of women cooking.

2643. Watanabe, Tokuji; Ebine, H.; Ohta, T. 1966. Daizu shokuhin no kakô gijutsu [Technology of soybean processing]. *Shokuryo Kenkyujo, Shokuryo Gijutsu Fukyu Shiriizu* (*National Food Research Institute, Extension Series of Food Technology*) No. 4. 61 p. March. [Jap]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan (Norinsho Shokuryo Kenkyujo).

2644. Meade, Mary. 1966. Raw chicken best in many oriental dishes. *Chicago Tribune.* April 4. p. C13.
• ***Summary:*** Japan Air Lines says there is much interest in authentic Japanese sukiyaki, but adds that it would be almost impossible to duplicate the dish as it is served in Japan.

"Tofu is bean curd." If not available, it may be omitted. "Shoyu is Japanese soy sauce. It is important to use this instead of American or Chinese soy sauce because it is less salty.

The recipe for Sukiyaki includes "12 1-inch cubes of tofu" and "½ cup shoyu."

2645. McCormick, Sally. 1966. Azuma Sukiyaki House: For leisurely dining in the Japanese manner–5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune.* April 7. p. H12.
• ***Summary:*** Next came the Sukiyaki. "Chieko glided in once more with an hibachi stove, large frying pan, and an attractive tray full of appetizing, fresh vegetables, thinly sliced prime rib, and soy cakes... She removed the suet and added generous slices of beef, fresh mushrooms, bamboo shoots, Tofu (soy bean cakes), Shiratake [Shirataki] (yam noodles) and assorted fresh vegetables." The restaurant also serves Beef Teriyaki, Chicken Teriyaki, and Salmon Teriyaki. Three photos show Azuma.

Note 1. This might be called an "advertorial."

This ad also appeared in the 29 Sept. 1966 issue of this newspaper (p. J9).

Note 2. Shirataki are thin noodles of konnyaku, a gelatinous paste made from the root of the devil's tongue plant, *Amorphophallus konjac.* Konnyaku has no flavor, and no nutritional value, because its starch is not digestible by the human body. However it is an excellent source of dietary fiber and is appreciated for its chewy texture.

2646. *SoyaScan Notes.* 1966. Chronology of Erewhon. Renamed Erewhon Trading Co. in 1967. 12 Dec. 1991. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1966 April 9–Erewhon opens as a small (10- by 20-foot) macrobiotic and natural foods retail store at 303-B Newbury Street (below street level) in Boston. Aveline and Michio Kushi are the founders, but Aveline is the sole owner. Evan Root is the first retail store manager. The origin of the natural foods industry and movement in America can be traced to this date. Erewhon is the first store of its kind in America and it soon serves as a model for many other similar natural food stores across the nation. Erewhon sells several soyfoods, mainly miso and shoyu purchased from Howard Rower's Infinity Foods or Japan Foods Corp., both in New York.

1967 Aug.–Paul Hawken takes over the management of Erewhon (one small retail store) from Evan Root. He changes the name to Erewhon Trading Co. (from simply "Erewhon") and starts to expand the business.

1968 May–Paul Hawken incorporates Erewhon Trading Company. Paul later states that he and Aveline Kushi each own 50% of the stock. However Aveline Kushi and her attorney, Morris Kirsner, agree that they offered him 50% of the Erewhon stock shortly before he left for Japan (in March 1969) but he did not accept it. To this day (Feb. 1999) Aveline has no idea why Paul did not accept such a generous offer.

1968 June–Hawken establishes his first supplier of organically grown grains, Ted Whitmer, a wheat farmer in Montana. By 1973 Erewhon had established and contracted with 57 farms in 35 states to provide the company directly with organically-grown foods.

1968 Aug.–Erewhon starts to import foods from Japan, initially from Muso Shokuhin, later by correspondence with Mr. Akiyoshi Kazama, who worked for an import/export company named Mitoku, which sold no food at the time. The initial orders contained red miso (made by Sendai Miso Shoyu Co.) and natural shoyu (made by Marushima).

1968 Nov.–On Thanksgiving day, Erewhon moves up and across the street to a much bigger and nicer location at 342 Newbury St. Paul had hired Bruce Macdonald, a carpenter, to remodel this store. The company now has 6 employees: Paul Hawken, Roger Hillyard, Bruce Macdonald, Bill Tara, Jim Docker, and Jean Allison. One day later, Bill Tara leaves to start a macrobiotic East West Center in Chicago. The original downstairs room is taken over by Tao Books, then Redwing Books. Tofu, curded with calcium sulfate and made by a Chinese company in Boston, starts to be sold.

1969 March–Paul Hawken and Evan Root leave for Japan. Bruce Macdonald takes over as general manager of Erewhon. Paul stays in Japan for 9 months, arranging for individual packaging of products that were formerly imported in bulk, and finding new items for Erewhon to import. He visits suppliers, works with Mitoku and Muso, and studies Japanese language and culture.

1969 spring–Erewhon starts wholesaling foods, under the direction of Bruce Macdonald. Their first wholesale product is natural sesame oil.

1969 Aug.–Aveline Kushi moves to Los Angeles where

© Copyright Soyinfo Center 2013

her youngest son, Hisao, undergoes traditional Japanese bone massage therapy. In Los Angeles, she establishes the first macrobiotic study house at 7511 Franklin Ave. Bill Tara arrives about a month later to set up a retail store, Erewhon West, which opens on 8001 Beverly Blvd. in about September.

1969 Oct. (early)–Bruce Macdonald leaves for Los Angeles with his new bride, Maureen Traill, to run the new Erewhon West retail store there. Roger Hillyard takes over as general manager of Erewhon in Boston.

1970 Jan. 1–Erewhon's earliest existing catalogue seen (wholesale and retail) lists 7 pages of natural food products–most of them imported from Japan. By March 1970 Erewhon lists 96 products in its catalog.

1970 July–Erewhon's rapidly expanding distribution business moves into a large (20,000 square feet) fifth-floor leased brick warehouse at 33 Farnsworth St., on the docks in South Boston. *East West Journal* and Tao Books soon move to the same area.

1970 fall–Erewhon receives its first shipment of brown rice from the Lundberg brothers in Richvale, California; it is "unsprayed" but not organic. Chico-San has exclusive rights to all Lundberg's organic brown rice.

1971 Jan.–*East West Journal* begins publication in Boston, Massachusetts.

1971–Erewhon Trading Company of Los Angeles has expanded and is now at 8001 and 8003 Beverly Blvd., Los Angeles, CA 90048.

1971 March–Roger Hillyard is replaced as general manager of Erewhon–Boston.

1971 March–Paul Hawken finalizes a contract with Carl Garrich of Lone Pine, Arkansas, to grow short-grain brown rice organically and exclusively for Erewhon. 330 acres are planted in April. That fall, Erewhon starts to retail and wholesale its first organic brown rice.

1971 May–Bruce Macdonald leaves Erewhon in a dispute over ownership of the company.

1972–John W. Deming Jr. plans to invest $150,000 in Erewhon in exchange for stock, and Advest Co. plans to conduct Erewhon's first public stock offering–but neither happens after Michio Kushi nixes the plans.

1972 fall–Erewhon first buys organic brown rice from Lundberg brothers of California; a fire that destroyed Chico-San's plant in early Aug. 1972 rendered their exclusive contract with the Lundbergs null and void.

1973 Aug.–Paul Hawken writes a critical history of Erewhon and its problems. Published in *East West Journal* it is titled "Erewhon: A Biography. The View Within." Shortly thereafter Paul Hawken resigns, saying that running Erewhon was a nightmare. Some say he sells his 25% ownership back to the company, which was subsequently managed by Bill Garrison, Tyler Smith, Jeff Flasher, and Tom Williams, in that sequence.

1974 July to 1977–Erewhon becomes the exclusive representative and agent for both the Muso and Mitoku companies in North America. The labels of all products imported from these companies must bear the Erewhon label.

Starting in late 1969 a number of macrobiotic and/or natural foods companies grew into distributors following the models established by and with help from Erewhon: Eden Organic Foods in Ann Arbor (started by Bill Bolduc on 4 Nov. 1969), Food for Life (started in 1970 by Bill Tara as a retail store on the 10th floor of a Chicago office building), Janus in Seattle, Washington (Jan. 1972, by George Gearhart and Blake Rankin, formerly of Spiral Foods), Essene in Philadelphia, Pennsylvania (by Feb. 1971), Laurelbrook in Maryland (Aug. 1971), Ceres in Colorado Springs (1973), and The Well in San Jose, California (1973, by Phil Parenti). These macrobiotic distributors had a strong influence on the numerous other non-macrobiotic natural food distributors, such as Lifestream (started in 1969 as a retail store), Westbrae in Berkeley, California (wholesale distribution: July 1970, by Bob Gerner; retail: Feb. 1971, Gerner). Shadowfax (New York, 1971), and Tree of Life in St. Augustine, Florida (retail: May 1971; wholesale distribution: Feb. 1972, by Irwin Carasso).

1975 Aug. 1–Erewhon sells all of its West Coast Division in California (Los Angeles and Culver City) to John Fountain and John Deming for cash and notes, realizing a net gain of $86,872.

1977 March 23–Erewhon sues natural foods retail stores in several states for boycotting Erewhon for selling to co-ops. Erewhon eventually wins the case, but its legal bills are something like $250,000. There was not enough money to pay these fees and Erewhon never recovered.

1978 (early)–Erewhon moves into a huge warehouse and office complex at 3 East St., Cambridge, Massachusetts 02141.

1979 April 27–The workers in Erewhon's production, trucking, shipping, and kitchen departments vote 42-19 to form a union affiliated with Local 925, the Service Employees International Union.

1979–John Deming steps in to liquidate all the assets of financially failing Erewhon–Los Angeles. Tom DeSilva, Tyler Smith, and Jeff Flasher buy the retail store at 8001 Beverly Blvd.

1981 Feb.–Erewhon currently lists 4,000 products in its catalog–in its bid to become a full-line distributor. It services 2,000 customers and provides jobs for 175 people in its warehouse and retail stores.

1981 Nov. 10–Erewhon files for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act because of debts totaling $4.3 million. At this time, Aveline Kushi is the sole owner of Erewhon. Stow Mills picked up the lion's share of the Erewhon business, with Westbrae also getting a significant part of it.

1982 May–A $1.3 million offer by Ronald Rossetti, president of Nature Food Centres, is accepted as the

© Copyright Soyinfo Center 2013

reorganization plan in the Erewhon, Inc. bankruptcy. Rossetti purchased Erewhon as an individual; it was never part of Nature Food Centres.

1986–Erewhon acquires U.S. Mills, which had been founded in 1908. In effect U.S. Mills and Erewhon were merged, and U.S. Mills was chosen as the corporate name, largely since it had been around longer.

1988 May–Chuck Verde (who was the president of Erewhon) and Cynthia Davis acquired the U.S. Mills / Erewhon business. They became the main joint shareholders. Address: 303-B Newbury St., Boston, Massachusetts.

2647. James, Isabel. 1966. The use of whole foods. *British Vegetarian.* March/April. p. 141-48.
• ***Summary:*** This is the revised text of a lecture given by the author at the 18th International Vegetarian Union Congress at Swanwick in 1965. After defining whole foods she discusses vegetarian protein foods, including nuts, pulses, and yeast. Under Pulses, the main variety discussed is the soya bean. "This is truly a Wonder Bean!" It can be used to make flour, milk, curds and cheese [tofu], and soy sauce. Or the beans themselves can be soaked and cooked for a long time. "The by-products of the bean are also valuable for pasturage, dry fodder and silage. It seems a pity that such a valuable food should also be used for the production of soap, paint and high explosives!" Address: B.A.

2648. Hayashi, Shizuka. 1966. There's an increasing trend to soybean oil in Japan. *Soybean Digest.* May. p. 68-69.
• ***Summary:*** In 1965-66 some 1,852,000 tonnes of soybeans were used in Japan. Of this, 1,341,000 tons (74.5%) were crushed, 297,000 tons (16.0%) were made into tofu and frozen tofu, 150,000 tons (8.1%) were made into miso, 32,000 tons (1.7%) were made into natto, and 32,000 tons were made into soy sauce and other soy products.

Crushing the soybeans yielded 1,073,000 tons of soybean meal. Of this, 736,000 tons (68.6%) was used for animal feeds (largely as a component of mixed feeds), 174,000 tons (16.2%) to make shoyu, 65,000 tons to make tofu, 63,000 tons for other food uses, and 35,000 tons for other non-food uses. Thus, a little over 50% of all soybeans used in Japan in 1965 were used to make foods–not including soy oil.

Per capita consumption of edible oil in Japan has increased dramatically, from 7.52 grams per day in 1956 to 18.44 grams in 1965. During the same period, total soybean oil consumption has risen from 74,010 tonnes to 219,967 tonnes. In recent years a number of the large soybean crushing companies, such as Hohnen, Nikkoh, Nisshin, Showa, and Yoshiwara have expanded their extraction plants. "The various soybean food processors including soy sauce, miso, and tofu are consolidating into fewer large-scale plants with financial support from the government for improvement and better efficiency." Address: Japanese American Soybean Inst.

2649. Purcelli, Marion. 1966. Japanese fare surprises Westerner. *Chicago Tribune.* June 3. p. B4.
• ***Summary:*** "Mention Japanese food and most people [Americans] think of tempura, sukiyaki, and steamed rice." But at homes in Japan, these dishes [except for the rice] are rarely served. A traditional, elaborate appetizer includes a platter of raw fish, "sauces for the fish, water lotus, noodles, egg and fish cakes, and baked soy bean curd."

2650. Abiko, Nobuo. 1966. Japanese teachers point to void. *Christian Science Monitor.* June 10. p. 5.
• ***Summary:*** One rural schoolteacher says that what Japanese need most and now lack in Japan is "deep religious feeling" to restrain and channel individualism. Before World War II "militaristic nationalism" bound Japan together, but now Japanese have nothing to unify them.

For Akira Miyashita, a teacher in a rural high school, the issue is acutely personal. He is also a cultural historian who is deeply interested in the history of tofu. In olden times, the religion of Japan was Buddhism. Today, he says, few people "realize that such uniquely Japanese foods as 'nori' (seaweed) and 'tofu' (strained bean curd) are bequests from the nation's Buddhist past, handed down from the ascetic diet of ancient Buddhist monks."

He believes "the humble diet tells the inner story of the Japanese people."

A photo shows Mr. Miyashita with his wife and two children.

Note: Miyashita's book, *Kôri-dôfu no rekishi* [History of dried-frozen tofu], published in 1962 in Tokyo by the Japanese National Frozen Tofu Association (Zenkoku Kori-dofu Kogyo Kyodo Kumiai Rengokai) (591 p.) is a unique and outstanding piece of historical scholarship.

• ***Summary:*** Nipponese cuisine is known for its eye appeal, and sukiyaki is a shining example of this. It is cooked at the table and the ingredients are arranged like flowers. Ingredients include "sliced mushrooms, cubed soy bean curd (tofu) and yam noodles (shirataki)" [thin konnyaku noodles]. Large photos show Sukiyaki.

2652. *Los Angeles Times.* 1966. Patio show-stopper in a Japanese mood. July 31. p. 16.
• ***Summary:*** Sukiyaki is a shining example of the eye appeal for which Japanese food–Nipponese cuisine–in famous. Although it is cooked at the table, the most impressive feature is the flower-like arrangement of the uncooked ingredients.

One of the ingredients is "cubed soy bean curd (tofu)." A key ingredient in the pungent sauce is "½ cup soy sauce."

© Copyright Soyinfo Center 2013

Suet is normally used, but vegetable oil can be substituted.

Note: Suet is raw beef or mutton fat, especially the hard fat found around the loins and kidneys. Suet is usually made into tallow in a process called rendering, which involves melting and extended simmering, followed by straining, cooling and usually a repetition of the entire process.

Several large photos show the arrangement of the uncooked ingredients like petals on flowers.

• ***Summary:*** Fred Endo, a sukiyaki expert, demonstrates the subtleties of his favorite recipe, which calls for "½ cake soy bean curd, cut into 1-inch squares." Three photos show Endo preparing sukiyaki; the caption of one states that he "adds neat and even slices of fresh bean curd to dish."

2655. Tonery, Susan J. 1966. Miss Tachibana will entertain at concert. *Hartford Courant* (*Connecticut*). Nov. 24. p. 48.
• ***Summary:*** Miss Tachibana is a superb dancer. She agreed to share two of her favorite recipes. Yosenabe calls for "2 cakes soy bean curd cut in 1 inch cubes." Sukiyaki calls for "2 cakes soy bean curd." Both also call for soy sauce and monosodium glutamate.

2656. Worthington Foods, Inc. 1966. Dealer wholesale price list–order blank. Worthington, Ohio 43085. 1 p. Dec. 1. 36 cm.
• ***Summary:*** New products in the Worthington Foods line include: Soyameat [or Soya-Meat] (Fried chicken, sliced chicken, diced chicken, sliced beef, diced beef, Salisbury steak). Bakon Yeast.

Worthington now owns the Madison Foods line of products including: Cheze-O-Soy, Dinner Morsels. Madison Burger, Not Meat (Regular or tomato). Nu-steaks. Yum. Zoy burger. Kreme-O-Soy. Infasoy.

Worthington now has warehouses in Battle Creek, Michigan; Dallas, Texas; Denver, Colorado; Los Angeles, California; Madison, Tennessee; South Lancaster, Massachusetts; Oakland, California (actually San Leandro); Portland, Oregon; Washington, DC. Address: Worthington, Ohio. Phone: 614-885-9511.

2657. [Commodity classification: Yearly amount of expenditures, quantities by commodities per household by cities, groups, districts, cities within prefectural government (all households)]. 1966-1981. Serial/periodical. Tokyo: Norinsho, Government of Japan. Serial/periodical. Tokyo: Norinsho, Government of Japan. [Jap]
• ***Summary:*** Gives statistics for the quantities consumed per household and the amount expended (in yen) for the following foods: Soybean products, tofu, fried tofu, natto, other soybean products, sea vegetables (nori, wakame, kombu), and umeboshi. Statistics are for the following groupings: (1) City groups (All Japan, all cities, cities with population of 50,000 or more, major cities, middle-sized cities, small cities, towns and villages); (2) Districts (Hokkaido, Tohoku, Kanto, Hokuriku, Tokai, Kinki, Chugoku, Shikoku, Kyushu, Okinawa); 49 major cities.

For example, for tofu in 1981: The average Japanese household consumed 86.91 cakes (cho). Consumption per household was highest in small cities (92.04 cakes) and lowest in major cities (84.19 cakes). In the districts, consumption per household was highest in Tohoku (northeast Japan, 101.91 cakes) followed by Chugoku (98.15), and lowest by far in Hokkaido (the soybean production center of Japan, 58.28 cakes). The major cities with the highest per household consumption are Toyama (capital of Toyama prefecture in northeast Japan, 118.96 cakes) and Morioka (capital of Iwate prefecture in northeast Japan, 118.42 cakes). The major city with the lowest per household consumption is Sapporo (capital of Hokkaido prefecture, Japan's northernmost island, 59.83 cakes).

For natto, the major consuming district was Tohoku, followed by Hokkaido, then Kanto. The city with the largest per household consumption was Mito, followed by Aomori, then Morioka and Utsunomiya. Address: Tokyo, Japan.

Ann Crosby. 1987. Aug. 17. Argus Observer (Ontario, Oregon). "Japanese cooking the tofu way." Discusses Kobayashi's Tofu in Ontario.

Talk with Jim Kanetomi. 1988. Nov. 17. Phone: 503-889-6392. The tofu company that he bought and later renamed Kanetomi's was founded in 1945 by Tom Amano, his father in law. As long as Tom ran the company, it never had a name or a sign, not even when Jim took over the company (he didn't actually buy it) in 1958. Then Jim went 7-8 years with no name or sign until the local people gradually started calling the company Kanetomi's. In about 1955 there was a bad fire in the shop. So Tom moved the shop to 366 S.W. 5th Street, into a building that he partially owned; the other part was owned and occupied by a laundry run by Jim Kanetomi. After Jim took over the company he continued to make the same products, and did not introduce any new ones. Jim sold the company in 1982 to Kuni and Vickie Kobayashi.

2664. Miller, Gloria Bley. 1966. The thousand recipe Chinese cookbook. New York, NY: Antheneum. First Grosset & Dunlap edition 1970. xiv + 926 p. Illust. magnificently by Earl Thollander. Index. 26 cm.

• ***Summary:*** This excellent, massive volume, by the blond-haired wife (a professional writer; photo shown on dust jacket) of a Greenwich Village sculptor, offers an in-depth introduction to Chinese cooking and ingredients, though it is unusually heavy on flesh foods and light on grain and vegetable dishes–as the following listing of recipes will show. In describing "The Chinese Diet" (p. 3-4) the author notes, "Meat does not predominate, vegetables do:... There are no dairy products: Butter, cheese and milk are practically unknown to Chinese cooking. (Cattle, few and far between, were more profitably put to work as beasts of burden.) Yet, with nutritional ingenuity, the Chinese created their own 'cow' which produced its own 'dairy' products. They took the lowly soybean, whose protein closely resembles that of meat, and transformed it in innumerable ways. They softened and ground the soybean, then mixed it with water, converting it first to milk, then to curd, and finally to cheese. (They also put it to many other uses: made it into sauce and jam; served its sprouts as vegetables; fermented, dried and roasted it; used it salty as a condiment, sweet in pastries.)"

Page 75 notes: Soy sauce should be used discreetly in light soups. If possible, it should be light soy. The dark variety can destroy a soup's lightness and clarity; its strong taste can overwhelm flavors.

Soy-related recipes include: Basic bean curd soup (p. 99-100). Basic cold bean curd (p. 114). Slivered bean curd and shrimp (p. 115). Stir-fried pork and bean curd (p. 133). Stir-fried pork with deep-fried bean curd. Stir-fried pork with pressed bean curd (p. 135). Stir-fried roast pork and bean curd I and II (p. 156-57). Basic steamed minced pork (with "fermented black beans," p. 167-68). Steamed sliced pork with ham and bean curd (p. 170). Steamed sliced pork with white cheese [white fermented tofu] (p. 171). Basic braised pork with bean curd (p. 174-75). Braised pork with red bean cheese (p. 176). Braised pork with chestnuts, mushrooms and ginkgo nuts (p. 176-77) has a variation that calls for "¼ pound dried bean curd sticks."

Note: This is the earliest English-language document seen (June 2011) that uses the term "dried bean curd sticks" to refer to dried yuba sticks. Braised pork and bean curd (p. 180). Braised five-flower pork and red bean cheese (p. 180-81). Red-simmered pork (with soy sauce, p. 186-88). Stir-fried spareribs with black bean sauce (with "1 to 2 tablespoons fermented black beans." "Soak fermented black beans... Mince garlic and scallion stalk, then mash with soaked black beans. Combine with sherry, water and soy sauce... Stir in black bean mixture" with other ingredients, p. 202-03). Steamed spareribs with black bean sauce ("Mince garlic and mash with soaked black beans; then combine with cornstarch, soy sauce and sugar. Pour mixture over ribs," p. 206). Braised spareribs with black bean sauce ("Mince garlic and ginger root, then mash with soaked black beans," p. 206). Braised spareribs with red bean cheese (p. 206). Stir-fried beef and bean curd (p. 215). Red-simmered beef (with soy sauce, p. 245-46). Red-simmered (or cooked) duck (with soy sauce, p. 267-71). Stir-fried chicken with soy jam (p. 325-26). Stir-fried chicken and tomatoes with black beans ["fermented black beans"] (p. 327-28). Stir-fried deep-fried chicken with brown bean sauce (p. 329). Stir-fried deep-fried chicken with soybean paste (p. 330-31). Red-cooked or soy chicken (p. 366-69). Steamed fish topped with black bean sauce ["fermented black beans"] (p. 411-12). Braised soy fish (p. 429-32). Braised fish with deep-fried bean curd (p. 434). Braised fish steaks with bean curd (p. 435). Deep-fried bean curd stuffed with minced fish (p. 448). Braised dried oysters with bean curd sticks [dried yuba sticks] (p. 483). Stir-fried shrimp with bean curd I and II (p. 496). Stir-fried shrimp with deep-fried bean curd (p. 497). Stir-fried shrimp with black bean sauce ["fermented black beans"] I and II (p. 500). Poached shrimp with ham and bean curd (p. 527). Basic omelet with bean curd I and II (p. 551-52). Fried eggs with soy sauce (p. 569). Soy eggs (also called pot-stewed or red-stewed eggs). Soy duck eggs (p. 574). Basic stir-fried bean curd (p. 593). Basic deep-fried bean curd (p. 594). Deep-fried bean curd with dried shrimp sauce. Steamed stuffed bean curd (with pork, p. 595). Miscellaneous bean curd (p. 595-96). Stir-fried spinach and white cheese [fermented tofu] (p. 618-19). Stir-fried string beans and white cheese [fermented tofu] (p. 620-21). Basic Buddhist vegetable dish (A vegetarian dish known as Lo Hon Ji or Lohan Tsai; "Variation: In step 4, stir 2 tablespoons Chinese red cheese, mashed, into the water-soy mixture;..." p. 623). Soy jam noodles (p. 660). Noodles in brown bean sauce (and hoisin sauce, p. 661). Dips (incl. Dip for deep-fried bean curd; many use soy sauce or hoisin sauce, p. 709-14). Soy-vinegar dressing. Soy-sesame dressing (p. 715, with soy sauce and sesame oil). Soy-oil dressing (with soy sauce and peanut oil, p. 716). Marinades (many use soy sauce, hoisin sauce, brown bean sauce, or red bean cheese, p. 717-24). Sauces (many use soy sauce or yellow bean paste, incl. Sweet-and-pungent sauces, p. 725-39).

The chapter titled "Other Useful Information" tells more about bean curd.

The extensive Glossary of Chinese Ingredients (p. 844-72) contains the following soy-related entries: Bean curd (bean cakes; note that recipes call for a certain number of "cakes" of tofu). Bean curd sauce (see cheese, Chinese white).

© Copyright Soyinfo Center 2013

Bean curd sticks (dried bean curd [dried yuba sticks = foo jook]; "Long, dried, cream-colored sticks, about ½ inch wide and 20 inches long, but bent in two. Are stiff and striated with an enamel-like surface. Sometimes called 'Second Bamboo' because they come from the residue or second layer of creamy bean curd [yuba]. Must be soaked; then they become chewy in texture, nutlike in flavor. Used as a vegetable with soup, steamed fish, stir-fried and braised pork... Other dried varieties include sweet bean curd sticks [tim jook or tiem joke], which are similar but thicker, and are used in fish and vegetarian dishes; and glazed bean curd skin in the form of stiff thin sheets").

Bean paste, yellow (yellow sauce). Bean sauce, brown (see brown bean sauce). Bean sprouts. Yellow soybean sprouts are larger and coarser than mung bean sprouts, and must be husked. "They also have a stronger, more woodsy flavor." Because of their crunchiness, Chinese call them "teeth vegetable." Beans, black (Type of beans not given. "Note: Sweetened black beans used as a pastry filling sold in Chinese bakeries"). Beans, black fermented beans (black bean sauce or salted black beans). Brown bean sauce. Cheese, Chinese red (red bean curd cheese, spiced red bean curd, or southern cheese). Cheese, Chinese white (bean curd sauce, white bean curd cheese, or white bean sauce). Five Spices (five-flavored powder or five-fragrance spice powder; star anise, anise pepper, fennel, cloves, cinnamon). Hoisin sauce (haisien sauce, Peking sauce, red seasoning sauce, red vegetable sauce, sweet vegetable paste, or sweet vegetable sauce; another variety is called Ten-Flavored Sauce). Pickles, Chinese (pickled vegetables; pickled in soy sauce). Red bean sauce. Soy jam (soybean paste). Soy sauce (light, black, or heavy varieties). Hoisin sauce (p. 855) is a "Thick, dark brownish-red sauce, made from soy beans, spices, garlic and chili. Sweet and spicy." Used in cooking and as a table condiment.

The chapters titled "Storing Information" and "Soaking Information" include such information on many of the foods listed in the glossary.

The chapter titled "Chinese terminology" (p. 886-91) is especially valuable because it gives the Cantonese names of Chinese foods. It contains the following soy-related entries: Bean curd: Dow foo or dau foo. Bean curd, deep fried: Dow foo pok. Bean curd, spiced: Dow foo kon. Bean curd, watery: Dow foo fa [literally "tofu flowers"; tofu curds]. Bean curd sticks: Foo jook or foo joke. Bean curd sticks, sweet: Tim jook or tiem joke. Bean paste, red: Dow sha or dow cha [azuki]. Beans, black: Woo dow. Bean paste, yellow: Wong dow sa [soy]. Beans, black fermented: Dow see or doe shee. Beans, sweet black: Dow sa. Beans, red: Hoong dow [azuki]. Bean sprouts, soy: Dow gna or dow ngah. Brown bean sauce: Min see jeung or mien see jeung. Catsup: Fon ker jeung. Cheese, Chinese red: Nom yee or Narm yoo [fermented tofu]. Cheese, Chinese white: Foo yee or Foo yoo [fermented tofu]. Hoisin sauce: Hoy sin jeung or hoy sien jeung. Oil, peanut: Far sung yow. Oil, sesame: Jee ma yo or jee ma yow. Peanuts: Far sang or far sung. Red bean sauce: Saang see jeung or shargn she jeung [azuki]. Sesame paste: Jee ma jeung. Sesame seeds: Jee ma. Soy jam [chiang]: Yewn she jeung. Soy sauce: See yu or shee yau or sho yu. Soy sauce, light: Sang chau. Soy sauce, dark: Chow yau or cho yo. Soy sauce, heavy: See yau or jeow yau.

Note: This is the earliest English-language document seen (April 2012) that uses the term "shee yau" to refer to Cantonese soy sauce, or the term "See yau" or "jeow yau" to refer to heavy Cantonese soy sauce.

Illustrations show: A bottle of Chou Soy sauce made by Amoy Canning Co. (p. 112). A brick-shaped can of "Thick Soy" made by Tung Chun Canning Co. (p. 126). An earthenware jug of "Ho Sang Yick Soy Sauce" (p. 203). A Mason-type jar of fermented bean curd made by Tung Chun Soy (p. 596). A bottle of Koon Chu* soy [sauce] (p. 715). Address: Greenwich Village, New York City.

2665. Milner, Max. 1966. General outlook for seed protein concentrates. *Advances in Chemistry Series* No. 57. p. 52-64. Chap. 5. World Protein Resources. [8 ref]

• ***Summary:*** "Seed proteins, particularly those of the cereals and legumes, are mainstays of human protein nutrition, providing several times more of this nutrient than animal proteins...

"World Protein Resources: The cereals contribute in round numbers 75 million metric tons of protein, of which wheat provides 25 million, rice 12 million and corn 20 million tons. The legumes, consisting of various beans, peas and lentils, in aggregate, provide, surprisingly, only about 8 million tons. Additional but minor plant sources of protein are tubers, including potatoes, and nuts. The world animal protein supply, including principally meat, milk, eggs, and fish, has been estimated to be about 20 million metric tons. And finally, the potential contribution of the oilseeds, which include principally soybeans, cottonseed, and peanuts, can be considered to be about equal to that of all the animal protein now available, 20 million tons per annum."

A long section titled "Soybeans" (p. 57-59) discuses soybeans and soyfoods, including tofu, miso, natto, tempeh, soybean milk, full-fat soybean flour, soy protein concentrates and isolates, and spun soy protein products. Address: UNICEF, United Nations, New York, NY; Present address: Office of Technical Cooperation and Research, Agency for International Developement, Washington, DC.

2667. Schenk, E.G.; Naundorf, G. 1966. Lexikon der tropischen, subtropischen und mediterranen Nahrungs- und Genussmittel [Dictionary of tropical, subtropical, and Mediterranean foods and food adjuncts (stimulants / enjoyables)]. Herford, Germany: Nicolaische Verlagsbuchhandlung Herford. xiv + 199 p. Index. 21 cm. Series: Manualia Nicolai 1. [200* ref. Ger]

• ***Summary:*** Pages 70-71 give a list of Japanese foods (after Mayerhofer and Pirquet 1926) in no apparent order, with the Japanese name followed by a translation of that name into German. Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu, fu [dried wheat gluten], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto–Bohnenkäse, Tofu–Sojatopfen, Tonyu–Sojamilch, azuki [small red beans], kwansen-fu, kinako–Sojabohnenmehl, geröstet, amasake–unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu–Sojasauce, yuba–eine Bohnenspeise. Plus many types of sea vegetables.

On pages 140-42 the following terms are defined in German: Soja [soya], Sojabohne [soybeans], Sojabohnenkäse [soy cheese or tofu], Sojabohnenmehl [soybean meal], Sojabohnenöl [soybean oil], Sojakäse [fermented soy cheese], Sojamilch [soymilk], Soja-Nahrungsmittel [soyfoods]: Koji, Miso, Tofu, Nato [sic, natto], kondensierte Soja-Milch [condensed soymilk], Japanische Verarbeitungen [Japanese processed foods: Japanische Soja-Sauce Shoju (Shoyu), Miso, Tofu], Soja-Nahrungsmittel, javanische [Javanese] soyfoods: Tao-Hoe, Tempeh, Ketjap, Tao-Tjiong [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], Sojatunken, Soja-Verarbeitungen: Sojamilch, Bohnenkäse, Teoufou (China), Tofu (Japan), Dan Phu (Vietnam), Natto (Japan), Tao-tehe (China).–Bohnenbrei Miso (Japan), Tao-tjiung (doujiang, China).–Sojasauce: Shogu [sic, Shoyu] (Japan), Tsiang-Yeou, Tao-yu (China), Ketjap (Java), Tuong (Vietnam).–Gärmittel: Kiut see (Japan). Then a table shows the nutritional composition of 8 of these foods.

Note 1. This is the earliest German-language document seen (April 2013) that uses the term *Sojabohnenkäse* ("soybean cheese") to refer to tofu.

Note 2. This book contains more than its fair share of errors and could be better organized. Address: 1. Prof. Dr. med. habil., Dr. phil. nat, Laurensberg ueber Aachen, Germany.

2668. Sun, Ying-Hsing. 1966. *T'ien Kung K'ai Wu:* Chinese technology in the seventeenth century. Translated by E-tu Zen Sun and Shiou-Chuan Sun. University Park & London: Pennsylvania State University Press. xiv + 372 p. See p. 24, 29, 31, 215-16. Illust. 28 cm. [3 soy ref. Eng]

• ***Summary:*** The *T'ien Kung K'ai Wu*, by Sung Ying-Hsing (pinyin: *Tiangong Kaiwu*, by Song Yingxing) was published in 1637. The title can be rendered as "The Creations of Nature and Man." This English-language translation of

© Copyright Soyinfo Center 2013

the 17th century work on Chinese technology contains 18 chapters, 151 superb illustrations, and extensive information on soybeans. The author concluded his preface in 1637 by warning "An ambitious scholar will undoubtedly toss this book onto his desk and give it no further thought; it is a work that is in no way concerned with the art of advancement in officialdom."

In Chapter 1, "The growing of grains," the section on "General terms" states (p. 3) that "the 'five grains' are sesamum, legumes, wheat, panicled millet, and glutinous millet. Rise is not included because the ancient sages who wrote on the subject were natives of northwestern China. Nowadays 70 per cent of the people's staple food is rice, while wheat and various kinds of millet constitute 30 per cent. Sesamum and legumes are used exclusively as vegetables as [for making] oil, although tradition still classifies them among the grains."

The section on "Hemp" (p. 24) notes that the seeds of hemp and sesame are only two kinds that can be used as grain or for oil. "Sesame is both delicious and nutritious; indeed it would be no exaggeration to say that it is the king of all grains."

The section on "Legumes" (*shu*, p. 24, 29, 31) states that one of these legumes is the soy bean, of which there are two varieties [colors]: the black and the yellow. They should be planted not later than the time of the Ch'ing-ming festival [in early April of the solar calendar] or thereabouts. There are three types of yellow soy beans: "fifth-month yellow," "sixth-month popper," and "winter yellow." "The yield of the first of these is small, while that of the last is always twice as much. The black variety is harvested invariably in the eighth month. North of the Huai River horses and mules that are used on long journeys must be fed this black soy bean before they can become strong and sturdy. The amount of the yield of the soy bean depends on the quality of the soil, the frequency of cultivation, and the amount of rainfall. All bean jams (*shi*) [fermented black soybeans], sauces (*jiang*), and curds (*fu*) [tofu] are made from soy.

"South of the Yangtse [River] there is another species known as 'long-legged yellow,' which is planted in the sixth month after early rice has been cut, and is harvested in the ninth or tenth month. The method of planting this bean in Chi-an, Kiangsi [Ji'an, Jiangxi], is quite amazing: After the rice stalks are cut the stubble is not ploughed over, but in the open end of each stalk are placed three or four beans, which are pushed down with fingers. The beans are nourished by the dew gathered in the stalk stubs; later when the beans begin to grow the stubs will rot, providing further nourishment for the growth of the new crop. Should the weather be dry after the shoots appear, one pint of water [per plant?] is fed to the plants. In all, one watering and two cultivations are sufficient to bring forth a plentiful harvest. Birds must be kept away after the beans have been planted and before the young shoots appear, and man is the only effective guard against them."

There are also "black-skin and brown-skin varieties of soybeans." "In cultivating the fields of soybeans and green lentils [sic, mung beans], the land should be lightly ploughed, because the roots of the legumes are short and the shoots straight. If the furrows are deep the clods will pile up, preventing half the seeds from growing. Our ancient agriculturists did not know that deep ploughing was not suitable for legumes" (p. 29).

Other legumes include: (2) The green lentil (*lüdou*) [sic, mung bean], "shaped small and round like a pearl." (3) The pea (*wandou, Pisum sativum*). "It is round like the green lentil, but it has a black spot and is larger in size." (4) The broad bean (*candou, Vicia faba*), "with its pod shaped like a silkworm and seeds larger than the soybean."

(5) The small lentil (*xiaodou*) [sic, azuki bean]. "The red variety (*chixiaodou*) is effective when used medicinally, while the white variety (*baixiaodou*) (also known as the rice bean), is good as a vegetable. Planted at the time of the summer solstice, this variety is harvested in the ninth month, and is prevalent in the Huai and Yangtse river regions."

(6) The black lentil (*lüdou*), "which is now a common garden vegetable in north China. Its flour, made into thin sheets, serves the same purposes as that of the green lentil [sic, mung bean]. In Peking the street peddlers cry their 'black lentil sheets' all day long, indicating that the amount produced is considerable.

"A further kind is the white bean (*baibiandou*) [*Dolichos lablab*], which grows along trellises and is also known as the 'eye-brow bean.' In addition there are long string beans, tiger-spot beans, knife beans (large French beans [jack beans, *daodou*]), as well as the black-skin and brown-skin varieties of soybeans, and so forth, which are too numerous to describe. In all, they can serve as a vegetable and take the place of grains in the feeding of mankind. How can students of Nature ignore them?"

In Chapter 4, titled "The preparation of grains," a section on "Preparing millet, sorghum, sesamum, and beans" describes (p. 106) how to separate beans from their pods using a flail or a stone roller pulled by an ox. These two processes are shown in full-page illustrations (p. 83, 105).

In Chapter 12, "Vegetable fats and oils," the section on "Gradation of vegetable oils" begins (p. 215-16): "For eating, the oils of sesame seeds, turnip seeds, yellow soy beans, and cabbage (also called 'white cabbage' [i.e., celery cabbage]) seeds are the best. Next in quality come *Perilla ocymoides* ([the plant] resembles *Perilla nankinensis;* the seed is larger than that of sesame) and rape-seed oil (in the South it is called 'vegetable seed'); next, camellia or tea-seed oil;... the last in quality is hemp-seed oil..."

The yield of oil (in catties per *tan*) is given (p. 216) for many Chinese oilseeds. The two oilseeds with the lowest / worst yields of oil are: cotton seeds 7, and yellow soy beans 9. By contrast, sesame, castor, and camphor seeds yield 40

© Copyright Soyinfo Center 2013

and rape seeds yield 30-40. In "Kiangsu [Jiangsu] the bean oil is used as food for humans, and the meal cakes are fed to pigs..." Note: 1 catty = 1 *jin* = 590 gm = 1.3 lb = 20.7 oz. 1 *tan* = ca. 180 liters. Thus, for soybeans, 9 catties = 5.31 kg of oil from ca. 180 liters of soybean seeds.

The next section in this chapter, titled "Methods and implements [for oil-extraction]" gives details of wedge presses and processes–but soybeans are not mentioned. Large illustrations show: Roasting and steaming oil seeds (p. 214). Press for making vegetable oils in China (p. 217). Pounding and grinding vegetable tallow tree seeds (p. 220).

Also discusses: Hemp seeds and oil (p. 24, 216). Sesame seeds and oil (p. 3-4, 24, 106, 215-16, 219). Address: China.

2669. Wong, Ella-Mei. 1966. Chinese cookery. New York, NY: Arco Publ. Co. [xi] + 100 p. Illust. Index. 23 cm.
• ***Summary:*** A charming book by an Australian born woman of Chinese ancestry, copyrighted in 1961. She presently "conducts the Chinese Cookery course at East Sydney Technical College... She has also published features in the *Australian Woman's Weekly."* The foreword is by D.W. Grover, 1961 Head of Food School, East Sydney Technical College.

Chapter 1, "Chinese ways and means," includes three sections on ingredients. The first such section, "Dried ingredients," has an entry for "Bean curd (*foo jook*) [dried yuba sticks] (p. 7). This is sold in sticks or sheets [yuba]; soak in warm water for 10 to 15 minutes. It has little flavor of its own but is highly nutritious and is served with other foods to absorb their flavours. Used in soups and braised dishes–the latter are served on days of fasting."

The third such section, "Sauces and seasonings," includes (p. 10-11): *"Hoysin jeung* [Hoisin sauce, *hoy sin jeung*]*:* Obtainable in tins. This is made of [soy] bean flour and spices, very rich in flavour and color. It is easy to become accustomed to this taste."

"Monosodium glutamate... It is of vegetable origin and used very sparingly and with discretion it enhances the natural flavour of foods. The Chinese version is a fine white powder called Ve-tsin. In Australia it is known as Zip."

"Red bean curd [red fermented tofu]: A soy bean product, obtainable in tins. The red colour is added."

"Soy sauce: Made from salted and fermented soy beans. No Chinese kitchen is ever without it. There are different grades, ranging from thin to thick, and the colour varies from light brown to dark reddish brown..."

"Taofu [tofu]: Made from soy bean curd, a similar texture to soft cheese. It has no flavour of its own, but is highly nutritious. It is usually cut into blocks about one inch by 3 inches. In its fresh state it has a milky colour and is also cut into one-inch cubes and deep-fried."

"White bean curd: Made from soy bean, salted and used as an appetizer or with vegetable dishes."

In Chapter 4, "Vegetables" (p. 31): "Bean sprouts can be cultivated in the kitchen by sprinkling green beans [mung beans] with warm water... The soy bean can also be sprouted, but usually the sprout is tougher." In this chapter, the recipe for "Fasting food" (*jie*) (p. 33) calls for "3 sticks bean curd (foo jook)" and "4 blocks bean curds (taofu)." "This dish is eaten during the Moon Festival and on the second day of the New Year." Each recipe has an English name and a Cantonese name.

In Chapter 7, "Seafood," the recipe for Steamed whole fish with black beans (*dow see jing yee*) calls for "1 tablespoon preserved Chinese black beans (dow see)" (p. 69).

Note 1. Soy sauce and monosodium glutamate (typically ½ teaspoon per recipe) are called for in many recipes in this book.

(2) Rice with red beans (*Hoong dow farn*) calls for "4 tablespoons red beans (*hoong dow*)*"* (azuki beans) (p. 87). Address: [Australia].

2670. Misuzu-Tofu K.K. 1966? Misuzu-dôfu no jôzu na tsukaikata [How to use Misuzu Tofu skillfully]. Nagano City, Japan. 8 p. Undated. Illust. 12 x 18 cm. [Jap]
• ***Summary:*** Contains 7 recipes for dried-frozen tofu, each accompanied by a black-and-white photo. On page 4 are five photos showing how the tofu is made inside the factory. On page 6 is an illustrated flow chart of the process. The steps are: Cleaning the soybeans, soaking, wet grinding, heating the slurry, filtering off the soymilk, pricipitation with the coagulant, filtering the curds, washing the curds, cutting the tofu into small cakes, freezing, cold storage, thawing in water, pressing out the water, drying, trimming, ammonia treatment, packaging. A photo shows the package. Steps translated into English by Eiji Yonemura of Misuzu Co.

On p. 7, a colored pie chart shows the nutritional composition of dried-frozen tofu. A second chart shows that Misuzu Tofu is much less expensive per calorie than other common foods such as eggs, meat, or fish. Cartoons by Hiro. Address: Nagano City, Japan.

2671. **Product Name:** Chickettes (Meatless Chicken).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966?
Ingredients: Incl. tofu, gluten, seasonings.
New Product–Documentation: Chickettes are based on Sam's Chicken (developed by Sam Yoshimura), which was made from tofu, gluten and seasonings. Worthington substituted soy protein for the tofu.

2672. *Soybean Digest.* 1967. Research grants: To search for the best tofu varieties. Jan. p. 28-29.
• ***Summary:*** "The best varieties of U.S. soybeans for making dried tofu and the best processing methods for manufacturing

© Copyright Soyinfo Center 2013

this traditional Japanese food will be sought by Japanese food scientists under a grant awarded by the U.S. Department of Agriculture.

"The grant will be paid for with foreign currency obtained by the United States from sales of farm products abroad under P.L. 480. This money cannot be converted into dollars for use in the United States.

"There are two forms of tofu–fresh and dried. The dried form also has other names, such as Kori, Koya. It is sometimes called frozen tofu because freezing is part of the drying process.

"Under the 3-year research grant of $35,802, paid in Japanese yen, food chemists at the Japan Frozen Tofu Association in Tokyo will experiment with numerous American soybean varieties to try to determine which are best suited for manufacturing dried tofu. They will also try to determine the effect of various processing methods on the yield, cost, physical properties, and flavor of dried tofu.

"Fresh tofu resembles cottage cheese in appearance, taste, and composition. Dried tofu, made with present processing methods, is darker than the fresh and has less desirable flavor and texture. However, fresh tofu is very unstable, having a shelf life comparable to that of fresh milk, While the dried product has a shelf life of more than 6 months and can be transported long distances without loss in quality.

"The Japanese tofu makers have been mixing a small percentage of American beans with the native varieties; but recently they have started using higher percentages of the American Hawkeye variety in both fresh and dried tofu.

"If they can find additional U.S. varieties that make good quality dried tofu and can improve processing methods, they may import more U.S. soybeans, as U.S. beans are cheaper than native varieties.

"Foreign agricultural research done under P.L. 480 is administered by USDA's Agricultural Research Service."

2673. Machida, Yoshiro. 1967. Tôfu gyôkai no genjô to shôrai [The present and future of the tofu industry]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 2(11):16-23. Feb. [17 ref. Jap]
Address: Tokyo, Japan.

2674. McCormick, Sally. 1967. Azuma Sukiyaki House: A bit of the Orient in the heart of Chicago–5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune.* March 23. p. E9.
• ***Summary:*** "We were then served Steak Teriyaki, a tenderloin steak, marinated in Teriyaki sauce and thinly sliced..." Next came Beef Teriyaki, with "soy bean cakes [tofu], soy sauce, dry onions and rice wine" stirred into the pan. Although its piece d'resistance is Sukiyaki, the restaurant also offers Chicken Teriyaki and Salmon Teriyaki. Three photos show Azuma Sukiyaki House.

2675. Hayashi, Shizuka. 1967. Serve Japanese soy noodles. *Soybean Digest.* March. p. 24.
• ***Summary:*** "A soybean exhibition was recently held for 3 consecutive days in Yokohama at the Takashimaya Department Store, one of the three largest department stores in Japan. The exhibit, devoted exclusively to soy foods, was under the sponsorship of the store, the prefectural government of Kanagawa, and various soybean groups.

"It was held to promote increased consumption of various soy products such as salad and cooking oils made from soybean oil, soy sauce, miso, frozen tofu, tofu products, and soy flour. Approximately 25 booths were used by manufacturers to display their products."

The Japanese American Soybean Institute set up a snackbar named "Protein House" (Tanpaku-an) and served Japanese udon noodles made with a mixture of 15% soy flour and 85% wheat flour. The noodles were very popular and crowds swarmed the booth. "It was emphasized that the soy noodle has over three times the nutritional value of an ordinary noodle." 7,000 people visited the 3-day exhibition and 381 entered the contents to name the noodle. The name selected by a committee was "Protein Noodle" (Tampaku-Udon). Address: Managing Director, Japanese American Soybean Inst.

2676. Loring, Kay. 1967. Tokyo Tea Garden, modest spot, but food's excellent. *Chicago Tribune.* April 2. p. E14.
• ***Summary:*** Located in the English basement at 2 W. Huron St., Tokyo Tea Garden serves "the bland little hiya yakko (soy bean cakes [tofu])..." "Of course its the sukiyaki (thin sliced beef cooked with vegetables) that most Americans associate with Japan,..."

2677. Krishnaswamy, M.A.; Shantha, T. 1967. Preparation and composition of a tofu like product from groundnut. *J. of Food Science and Technology* (*Mysore, India*) 4(1):6-7. April. [9 ref]
• ***Summary:*** "Freeze-dried *tofu* was sponge-like with a bland flavour, *tofu* from groundnut having better texture and more agreeable colour. Deep-fat fried *tofu* (both groundnut and soybean) were crispy and tasty."

Note: This is the earliest English-language document seen (April 2013) that uses the term "freeze-dried" in connection with tofu or that uses the term "Freeze-dried tofu" to refer to tofu that has been has actually been freeze-dried–"in a Stokes Vacuum freeze-drier..." Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2678. Sakurai, Yoshito. 1967. Request for review of PL 480 progress report. Japan. 2 p. April 25.
• ***Summary:*** To J.C. Cowan, sponsoring scientist, Oilseed Crops [NRRL, Peoria, Illinois]. Project title: "Evaluation of United States soybean and processing conditions for manufacture of dried tofu, to increase the use of United

© Copyright Soyinfo Center 2013

States soybean in Japan and other countries." Project No.: UR-All-(40)-32. Amount of current payment requested: ¥1,546,301. Grant or contract No.: FG-Ja-124. Name of institution: Japan Frozen Tofu Association. Report period: 1 Sept. 1966 to 28 Feb. 1967. Summary of progress: Experiments were carried out on three items: 1. On the preferred conditions in each step of preparing kori-tofu. 2. On the browning mechanism of kori-tofu during storage. 3. On the keeping quality of kori-tofu during storage. Director of research institution: Toyoaki Tsukada. Address: Principal researcher, Japan Frozen Tofu Assoc., Japan.

2679. De, Sasanka S.; Russell, J.S.; Andrè, L.M. 1967. Soybean acceptability and consumer adoptability in relation to food habits in different parts of the world. *USDA Agricultural Research Service.* ARS-71-35. p. 20-27. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [1 ref]
• ***Summary:*** Contents: Traditional soy products in the Far East: Soysauce, soy milk, bean curd, tempeh, natto and miso, roasted soy flour, kochu chang [Korean soybean miso], sprouted beans. Introduction [of soybeans] in other countries: Brazil, USSR, Africa, Latin America, Turkey. New types of products: Defatted soy flour, full-fat soy flour and beverages made from it developed by the Soybean Council of America. Justification: Cost of a pound of protein from different foods. Beef $4.60. Pork $4.30. Poultry $1.50. Nonfat dry milk solids $0.41. Dry beans $0.35. Soybeans $0.14. Attempted introductions: India. Factors involved in adoptability.

"Kochu chang is produced in every household in Korea from mashed boiled [soy] beans which are hung in bags for 2 to 3 months. The product is broken up, dried, and ground. It is then mixed with ground red pepper [plus salt and water] and kept for some time before use."

This paper was presented by Leon Marie Andrè.

Note 1. This is the earliest English-language document seen (Jan. 2007) that contains the term "roasted soy flour." We read (p. 22): "This product is produced in small amounts and consumed with rice cake [mochi]. There is hardly any information on the nutritive value of the product."

Note 2. This is the earliest English-language document seen (March 2009) that uses the word "kochu chang" (or "kochu-chang") to refer to Korean-style red pepper and soybean paste (miso). Address: 1-2. Food and Agriculture Organization of the United Nations, Rome, Italy; 3. FAO Liaison Officer and adviser to UNICEF.

2680. Fischer, R.W. 1967. The use of soy in food products. *Soybean Digest.* May. p. 29, 31-32, 35-36, 38.
• ***Summary:*** An excellent overview, with considerable history. Contents: Introduction. Grisly hand of hunger. Soybean oil. Oriental soy foods. Soy flour and grits (with a good history of Berczeller, A.E. Staley, Shellabarger, Allied Mills, J.R. Short Milling Co. and Wytase). Isolates and concentrates. The war years (during and immediately after World War II, soy flour and grits come to be widely disliked). New products and know-how.

"Oriental soy foods:... In the Orient soybeans have, for centuries, played an important part in human diets as soy milk for infants, shoyu, or soy sauce as we call it, miso, tofu, tempeh, kinako, natto, yuba, etc."

"Isolates and concentrates: In the mid-1930's processes for further refining the protein factors of soy began to appear. The first 70% soy protein concentrate was turned out by Mead Johnson Co. using the Bonato process of sulfur dioxide and sulfurous acid extraction, but was discontinued for lack of adequate markets for the product. In 1936 the Glidden Co. began working on the production of an isolated protein [90-100% protein] from extracted soy flakes for industrial uses. Glidden, as a major manufacturer of resin, wanted the isolate as a stabilizer for the resin used in sizing paper to provide wet strength. By 1939 Glidden was producing an enzyme hydrolyzed isolated protein to be used with egg albumen for its whipping capacity in producing food toppings... Over the years soy protein isolates have found their greatest application in the industrial field, particularly as paper coatings for high gloss products."

A photo shows cans of Worthington Choplets, Soyameat (3 varieties), and Numete–all made from spun soy protein fibers. Address: Soypro International Inc.

2681. Standal, Bluebell R. 1967. Amino acids in Oriental soybean foods: Determined by column chromatography. *J. of the American Dietetic Association* 50(5):397-400. May. [18 ref]
• ***Summary:*** The author used column chromatography to determine the amino acid content of various Oriental soybean preparations. Methionine was the limiting amino acid in all foods. Table 1 shows the amino acid content of the following foods: Tofu, edamame (green soybeans), soybean sprouts, natto, miso, mungbean sprouts (*Phaseolus aureus* Roxb) and whole egg. Table 2 shows the amino acid ratio, essential amino acids index, protein score, and net protein utilization (NPU) for each food. Eggs had the highest NPU (90.9), followed by edamame (72.2), tofu (65.0), soybean sprouts (56.0), and natto (44.0). The first three foods are sources are good quality vegetable proteins. Address: Div. of Nutrition, Dep. of Home Economics, Univ. of Hawaii, Honolulu.

2682. Wang, Hwa L. 1967. Products from soybeans: To meet rising processor interest, tofu process on a laboratory scale. *Food Technology* 21(5):115-16. May. [6 ref]
• ***Summary:*** Describes how to make tofu, coagulated with magnesium sulfate or calcium sulfate, from 300 gm of soybeans. Photos show: "A wooden box and handpress used for separating soybean curd from whey" for making tofu on a laboratory scale, using 300 gm of dry soybeans per batch.

Two cakes of finished tofu. Address: NRRL, Peoria, Illinois.

2683. Evans, Robert J.; Bandemer, Selma L. 1967. Nutritive value of legume seed proteins. *J. of Agricultural and Food Chemistry* 15(3):439-43. May/June. [27 ref]
• ***Summary:*** Discusses the following soybean varieties and products: Chippewa soybeans, Harosoy soybeans, Thailand soybeans, soybean curd (tofu).

Tables show: (2) "Relative nutritive values of seed proteins" (unheated and heated, based on weight gain in rats). (3) "Relative nutritive values of seed proteins supplemented with amino acids." (4) "Relative nutritive values of seed proteins and mixture with other seeds." Address: Dep. of Biochemistry, Michigan State Univ., East Lansing, MI 48823.

2684. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report* No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]
• ***Summary:*** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

"Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture."

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Oriental methods of processing soya beans: Kinako ("a flour made from ground toasted [soy] beans, used in making cakes"). Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers of soya milk are Promo Ltd. of the U.K. ("The product made by Promo is marketed under the brand name of 'Velactin' by the Wander company."), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden's Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Sept. 2002) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray's Inn Road, London WC1.

2685. Saio, Kyoko; Koyama, E.; Watanabe, T. 1967. Protein–calcium–phytic acid relationships in soybean. I. Effects of calcium and phosphorus on solubility characteristics of soybean meal protein. *Agricultural and Biological Chemistry* 31(10):1195-1200. June. [12 ref]
• ***Summary:*** Discusses the solubility characteristics of soybean meal protein as a function of pH. Phosphorus and calcium have a very significant effect on the solubility of that protein. It is difficult to increase the calcium content in soy milk, since soy protein is coagulated and precipitated by calcium-protein interaction. The coagulated soy protein is not suitable for beverages. Address: 1&3. Food Research Inst., Ministry of Agriculture and Forestry; 2. Japan Tofu Assoc.

2686. Weber, C.R. 1967. Three new and better large-seeded soybeans. *Iowa Farm Science* 21(12):3-5. June.
• ***Summary:*** Contents: Introduction. What they are. Why new varieties. The varieties. Adaptation and distribution. "Three new and improved large-seeded soybean varieties will be available to a few Iowa farmers in 1967. Developed by Iowa State University and the U.S. Department of Agriculture, the new varieties are: Disoy, Magna, and Prize." "The large-seeded types are superior to field types for special food uses as a whole bean or for more or less direct

© Copyright Soyinfo Center 2013

processing methods in making miso (a fermented product) or tofu (soy curd). In addition they can be used green by home gardeners, canners and frozen food processors as well as for deep-fat frying or as dry beans in soups. Or, they may be baked as mature dry beans."

"Large-seeded soybeans available to date, except for Kim and Kanrich, have had some limitations–poor seed yield and very poor shattering resistance (seed holding)." All the new varieties have yellow seeds and yellow hila.

Table 1 shows "Performance of new and old large-seeded and small seeded soybean varieties in Iowa, 1961 to 1966." The varieties are: Chippewa, Disoy, Blackhawk, Magna, Hawkeye, Prize, Kanrich. For Disoy, Magna, and Prize: Yield (bu/acre): 35.6 / 37.4 / 36.5. Seed size (grams per 100): 26.6 / 26.3 / 26.3. Seed protein content: 41.6% / 38.9% / 39.2%. Seed oil content: 20.4% / 20.4% / 20.3%. Address: 1. Asst. Prof. of Agronomy; 2. Research Technician, Crops Research Div., USDA-ARS. Both: Iowa State Univ.

2687. Murphy, Jean. 1967. She's gung ho for Oriental cookery: Marine's wife. *Los Angeles Times.* Aug. 31. p. E1.
• ***Summary:*** Meda Cruizat is now settled in Santa Monica, California. Her basic interest is in foods, and of the cuisines she knows well, her favorites are French and Chinese. She said she could live forever on either one and be quite happy, but she really wouldn't want to.

While living in Bangkok, Thailand, where her husband was on duty with the Marine Corps, she learned to enjoy many Thai foods, which (because of their curry basis) are more closely related to those of India than of China.

Here she offers a Thai menu, of which her favorite dish is Mee Krob ["crispy noodles"; also spelled "Meekrob"] made with fine Chinese rice noodles. One ingredient is "1/3 cup thinly sliced tofu (bean curd)."

2688. McCormick, Sally. 1967. Azuma Sukiyaki House: Enjoy an evening of dining Japanese style–5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune.* Oct. 26. p. J15.
• ***Summary:*** "Beef Sukiyaki cooked at the table over a Hibachi grill... made with thin slices of beef, fresh vegetables, soy bean cakes [tofu] and Japanese noodles." This deluxe dinner costs only $4.75 per person. They also serve Teriyaki and Tempura with soft Samisen [Shamisen] music in lovely, authentic Tatami rooms with sliding shoji screens.

2689. Firma Post & Teekman. 1967. Making tofu from U.S. soybeans in Holland (Letter to the editor). *Soybean Digest.* Oct. p. 17.
• ***Summary:*** "For several years we have been making fresh tofu from U.S. soybeans... The reason we eat tofu here is that there are a lot of people from the so-called Dutch Indies [Indonesia] living in the Netherlands. There are also many Chinese people in our country, and mostly they trade in restaurants or specialty shops. We hope we have given you a small idea of the little tofu country, Holland." Address: Venserweg 1, Demen, Holland.

2690. *Nutrition Reviews.* 1967. Soy fibers–A new approach to vegetable protein acceptability. 25(10):305-07. Oct. [6 ref]
• ***Summary:*** The subtitle summary states: "Fibers have been formed from soybean protein and incorporated into meat analogs. The process, its nutritional and economic aspects, and the mechanism of fiber formation are described."

Traditional foods made from soybeans include tofu, natto, miso, and tempeh. U.S. food manufacturers have developed a new process for making "fibers from isolated soy protein, and for incorporating these fibers into meat-like analogs which may find consumer acceptance as a meat substitute in this country. These products should be cheaper than meat and can be made as or more nutritious than meat by addition of the missing vitamins and minerals." The final products, meat analogs, typically contain (on a dry basis) 40% soy fiber, 10% protein binder (usually egg albumin), 0-50% fat and/or 0-50% flavors, colors, and supplemental nutrients.

2691. Hackler, L.R.; Stillings, B.R.; Polimeni, R.J. 1967. Correlation of amino acid indices with nutritional quality of several soybean fractions. *Cereal Chemistry* 44(6):638-44. Nov. [10 ref]
• ***Summary:*** The residue or water-insoluble fraction [from making soymilk, called okara] was the most nutritious fraction as measured by growth and PER; it contained more cystine and consequently more total sulfur amino acids than all other soybean fractions. Based on Clark soybeans ground with water, the residue contains 23.5% of the solids and 13.5% of the protein found in the original soybeans. The soy milk contains 65.0% of the solids and 83.0% of the protein.

The residue contains 23.1% crude protein, 17.3% lipid, and 4.5% water. Discusses the essential amino acid index (EAAI) and the requirement index (RI). The results of the amino acid composition of the soybean fractions (residue, soy milk, curd, whey protein, hulls, soak water) are reported in table 1 as grams of amino acid per 16 gm nitrogen. Table 2 gives the protein scores of the various soybean fractions based on essential acid index. Table 3 gives the protein scores of the various soybean fractions based on the requirement index. Table 7 shows that the residue contains the highest quality protein based on PER and EAAI, but second highest based on RI. Address: Cornell Univ.

Address: Tokyo.

2693. Bennett, Victor. 1967. The complete bean cookbook. New York, NY: Bonanza Books. 298 p. Preface by Senator Everett Dirkson. Index. 21 cm.
• ***Summary:*** The glossary (p. x-xii) defines bean curd (called *tou fu* in Chinese and *tofu* in Japanese). Soy-related recipes include: Salted soybeans (p. 8). Roasted soybeans (p. 8). Spiced soybeans (p. 10). Soybean milk soup (p. 38-39). Green soybean salad (p. 80; incl. "1 pound green soybeans, shelled, cooked, drained and cooled"). Molded sprout salad (p. 82, with sprouted soybeans). Soybean salad (p. 84). Soybean perfection salad (p. 84). Scalloped soybeans (p. 119). Scalloped green soybeans (p. 121; incl. "3 cups cooked green soybeans"). Soybean croquettes (p. 124). Bean stuffed peppers (p. 128, with "2 cups soybean pulp... prepared by pressing cooked soybeans through a coarse sieve or putting through a food grinder"). Bean stuffed tomatoes (p. 130, with soybean pulp). Scalloped eggplant (p. 131, with soy grits). Soy Welsh rabbit (p. 239, with soy flour). Soybean loaf (p. 239). Soybean curry (p. 240). Soybeans and salmon (p. 240). Soybean curd chop suey (p. 242). Soybean sprout casserole (p. 242). Soy cheese soufflé (p. 247, with soy grits or flour and 1 cup grated dairy cheese). Biscuits (p. 274, with soy flour). High soy yeast bread (p. 275). Yeast bread (p. 276, with full-fat soy flour). Coffee bread (p. 276, with low-fat soy flour). Currant nut bread (p. 277, with soy flour). Southern corn bread (p. 278). Whole wheat bread (p. 278). Doughnuts (p. 279). Bronze cake (p. 280). Griddle cakes (p. 280). Southern spoon bread (p. 282, with soy flour). Nut bread (p. 282). Nut mixture (p. 283, with soy grits). Dumplings (p. 283, with soy grits). Cherry pie (p. 284, with soy flour). Yeast rolls (p. 284). Spice cake (p. 285). Chinese almond cookies (p. 286). Butter crunch (p. 286). Orange cake (p. 287). Muffins (p. 288). Cocoa (p. 288, with soybean milk). Orange rolls (p. 289, with soy flour). Creamy rice with raisins (p. 289, and soybean milk). Waffles (p. 290, with soy flour). Egg nog (p. 290, with 2 cups dairy milk, 2 eggs, and 4 teaspoons soy flour). Molasses puffs (p. 291, with soy grits). Apple crisp (p. 291, with soy flour). Peanut butter cookies (p. 293). Brownies (p. 294, with "soyflour"). Oatmeal pudding (p. 294, with soybean milk). Peanut candy (p. 295, with soy flour). Boiled custard (p. 295, with soybean milk). Chocolate soufflé (p. 296, with soy grits). Apple betty (p. 296, with soy grits). Apple cobbler (p. 297, with soy flour). Fruit balls (p. 298, with soy flour). Sugar cookies (p. 298, with soy flour).

2694. Herbert, Jean. 1967. Shintô: At the fountain-head of Japan. New York: Stein and Day. 622 p. Preface by Yukitada Sasaki. Illust. Nap. 25 cm. [778* ref]
• ***Summary:*** Chapter 22, "Kami of the road, the house and the field..." states (p. 506): "Offerings to the Inari temples largely consist of food which is supposed to be agreeable to the fox: *aburage* (fried bean-curd or *tofu*), cooked rice, fish, meats, etc. Because of the reputed fondness of foxes for *abura-age*, a kind of *sushi* wrapped up in *aburage* is commonly called *o-inari-san."* Address: Japan.

2695. Hunter, Beatrice Trum. 1967. The natural foods cookbook. New York, NY: Pyramid Books. 368 p. Index. 18 cm.
• ***Summary:*** The content of this paperback edition is almost identical to that of the original 1961 hardcover edition, but the pagination is different. The Introduction by Clive and Jeanette is missing. On the cover of the 19th printing (Jan. 1974) is written: "Over a million copies sold." Address: White Mountains, New Hampshire.

2 cups soy bean threads, p. 269). Pineapple soy chicken curry (Polynesian, with Chicken Style Soyameat, p. 274). Polynesian soya meat with cling peaches (with Chicken Style Soyameat, p. 274). Address: Loma Linda Univ., School of Medicine, Los Angeles, California.

2700. Nelson, John H.; Richardson, Gary H. 1967. Molds in flavor production. In: Henry J. Peppler, ed. 1967. Microbial Technology. New York: Reinhold Publishing Corp. x + 454 p. See p. 82-106. [17 soy ref]
• ***Summary:*** In this chapter is a section titled "Flavor production by molds in Oriental foods" (p. 94-103) with the following contents: Background, mold species utilized in Oriental foods (*Aspergillus oryzae*, *Actinomucor* or *Mucor* species, *Rhizopus* species, koji culture production, tane koji), shoyu (soy sauce) production, miso (soybean paste) production, sufu (Chinese cheese) production, tempeh production, ragi production, ang-kak (red rice) production.

Introduction to chapter ("Mold-ripened cheese was shipped to Rome from southern France a early as 250 A.D." "Sufu, or Chinese cheese, is produced on a limited scale in Formosa [Taiwan]. Research has laid the foundations for large-scale production of tempeh, an Indonesian fermented soybean food).

Mold-ripened cheese: Background (This type of cheese was first made in France during the Roman era. The name "Roquefort" first appeared in the year 1070. Roquefort is a mold-ripened cheese made from the milk of female sheep {ewes}. The trade association of Roquefort makers is the Société de Roquefort manufacturers), species utilized for flavor production, characteristics of blue cheese flavor, production of mold-ripened cheese, a typical blue cheese manufacturing process. Production of blue cheese flavor by submerged culture techniques: Preparation of inoculum, flavor development, process modifications.

There are many "cheese varieties in which typical flavor development is principally dependent upon the internal and/or external growth of mold. Blue (Bleu, Blue-veined), Gorgonzola, Stilton, Wensleydale, Gammelost, Nu-World, Camembert, Neufchatel, Mycella, Niva and Brie are produced in many nations..." But Roquefort is made only in France.

Note: Roquefort (sometimes spelled Rochefort in English) "together with Bleu d'Auvergne, Stilton and Gorgonzola is one of the world's best-known blue cheeses. Though similar cheeses are produced elsewhere, European law dictates that only those cheeses aged in the natural Combalou caves of Roquefort-sur-Soulzon may bear the name Roquefort, as it is a recognised geographical indication, or has a protected designation of origin."

In 1411 Charles VI granted a monopoly for the ripening of the cheese to the people of Roquefort-sur-Soulzon as they had been doing for centuries.

"In 1925, the cheese was the recipient of France's first Appellation d'Origine Contrôlée when regulations controlling its production and naming were first defined. In 1961, in a landmark ruling that removed imitation, the Tribunal de Grande Instance at Millau decreed that although the method for the manufacture of the cheese could be followed across the south of France, only those whose ripening occurred in the natural caves of Mont Combalou in Roquefort-sur-Soulzon were permitted to bear the name Roquefort" (Source: Wikipedia at Roquefort, Oct. 2011). Address: Dairyland Food Laboratories, Waukesha, Wisconsin.

2701. Sung, Betty Lee. 1967. Mountain of gold: the story of the Chinese in America. New York, NY: Macmillan. viii + 341 p. Illust. Map. Index. 22 cm. Reprinted in 1971. [283 ref]
• ***Summary:*** A carefully researched and well written book about the Chinese in America: their struggle for survival, acceptance, and full participation in American life, from the Gold Rush to the present.

Chapter 9, "Chinatowns," states (p. 149): "The restaurants are powerful magnets... Dinner in Chinatown may also be an occasion to entertain guests or to get together with friends and family... Restaurants in Chinatown cater heavily to Chinese clientele. More than any other reason, the Chinese love of food will prolong the life of Chinatowns. If Chinese food is served at home, the basic ingredients must be purchased from Chinatown, for where else can one buy soy sauce, bean curd, dried mushrooms, snow peas, or bamboo shoots?"

Chapter 12, "Restaurants–A natural inclination" states (p. 206): "Add seasonings of fermented bean curd, salt, and a little soy sauce. Put in just enough water to keep the food from burning. Lower the flame slightly. Cover the frying pan until the water boils (about two minutes)..."

2702. **Product Name:** Tofu.
Manufacturer's Name: Lung Kee.
Manufacturer's Address: 2 Wharf, Fermoy Rd., Paddington, London, England.
Date of Introduction: 1967?
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. Talk with Craig Sams. 1991. Aug. 24. Starting in late 1967 or early 1968, his macrobiotic natural foods restaurant named "Seed" purchased fresh tofu and [mung] bean sprouts from a Chinese company named Lung Kee on Fermoy Road, Paddington, London, right on the banks of the canal. It was run by one Chinese man who employed about 15 West Indian/Jamaican women who made the foods. Bean sprouts accounted for most of Lung Kee's business. Craig has no idea when Lung Kee started making tofu. Call telephone operator in London. 1991. Aug. 26. Has no phone number listed for Lung Kee in London.

2703. Wai, Nganshou. 1968. Chung yang yen chiu yüan hua hsüeh yen chin so [Investigation of the various processes used in preparing Chinese cheese by the fermentation of soybean curd with mucor and other fungi]. Taipei, Taiwan: Institute of Chemistry, Academica Sinica. 90 p. Jan. Final technical report. USDA PL 480. Project no. UR-A6-(40)-1. On USDA grant no. FG-TA-100. [24 ref. Eng; chi]
• ***Summary:*** This report is quite similar to (but more detailed than) Wai's 1964 article titled "Soybean cheese." This report may have been published in Chinese as well as in English.

Contents: Summary. Detailed report. 1. Introduction. 2. Results: Manufacture of soybean cheese (description of the process), microbiological investigations, analyses (preliminary analysis, coagulation of soybean protein by calcium ion, changes of protein components during the preparation of soybean cheese, hydrolysis of lipids during aging of soybean cheese, some characteristics of the fungus *Actinomucor elegans*), machines of laboratory scale designed for the preparation of soybean milk and soybean curd used as raw materials for soybean cheese. 3. Discussion. 4. Conclusion. 5. Need for additional research. 6. List of publications. Appendixes. A. Historical (History of tofu in China). B. The ancient process (for making 5 types of sufu, and table showing the composition of each–Rose sufu, Tsao Sufu, Red sufu, Kwantung sufu, and Yunnan sufu).

Appendix C: Report on travel to Hongkong and Kowloon for the collection and investigation of fungi used for the manufacture of soybean cheese, by Shuh-Ming Chang and Shu-Chen Sung, Assistant Research Fellows of Institute of Chemistry, Academia Sinica, Taipei, Taiwan (p. 85-88). From 20-29 June 1964 they visited the following factories and collected mold samples from fresh pehtze: (1) Lo-San-Chi Sauce Factory at Sham-Chui-Po, Kowloon. It produces 3 types of soybean cheese ([fermented tofu]; *Fusu, Nan-su,* and Pepper-*Fusu*), soy sauce, and "other sauced products." A description of the process for making soybean cheese is given. (2) Ming-Jean Sauce Nan-su and Canning Company near Clear Water Bay, Sing-Jea, Kowloon. (3) Chen-Mang-Chi Nan-su Fusu Factory, Chung Ching St., Sai Ying Pung, Hongkong. Sufu is the company's only product. (4) Con-Ho Fusu Factory, Fuk Lo Tsun Road, Kowloon. (5) Kowloon Sauce Company, Queen's Central Road. It makes sufu, soy sauce, and sauced products. (6) Chu-Rong Sauce Factory at Kam Tin, Sing-Jea. (7) Liao-Mar-Chi Fusu Factory, Shanghai St., Kowloon. It is located inside a market and sells tofu and soybean milk at the same time.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms "Fusu" or "Nan-su" to refer to fermented tofu.

Summary: Four fungi suitable for making fermented tofu were isolated: *Actinomucor elegans, Mucor hiemalis, Mucor silvaticus,* and *Mucor subtilissimus.* "Although each fungus can be used for the fermentation, *Actinomucor elegans* is the best one. An improved method for the preparation of sufu was devised." It is described. Four different solutions (containing Kaoliang wine or ethyl alcohol, plus salt) were developed. The pehtze (freshly grown fungi on cubes of firm tofu) can be preserved in these solutions for more than one year. The various enzymes and their activities were studied.

Photos (photomicrographs) show: (1) Columella of *Actinomucor elegans.* Magnification 700x. (2) Sporangia of *Actinomucor elegans.* Magnification 180x. (3) Head of *Actinomucor elegans.* Magnification 70x. (4) Columella of *Mucor hiemalis* No. 28. Magnification 700x. (5) Sporangium of *Mucor hiemalis* No. 28. Magnification 700x. (6) Head of *Mucor hiemalis* No. 28. Magnification 70x. (7) Columella of *Mucor silvaticus* 508. Magnification 700x. (8) Sporangium of *Mucor silvaticus* 508. Magnification 700x. (9) Head of *Mucor silvaticus* 508. Magnification 700x. (10) Sporangiophores and sporangia of *Mucor subtilissimus.* Magnification 60x. (11) Sporangium of *Mucor subtilissimus.* Magnification 700x. (12) Columella of *Mucor subtilissimus.* Magnification 700x. (13) Spores of *Mucor subtilissimus.* Magnification 700x.

"The cheese fungi used in Hongkong and Kowloon have been isolated and investigated. The morphological photomicrographs (Figs. 14-17) show that the fungus is the same strain of *Actinomucor elegans* as that used in Taiwan.

(14) Sporangiophores and sporangia. Magnification 180x. (15) Sporangiophores and sporangia. Magnification 180x. (16) Columella. Magnification 700x. (17) Sporangium. Magnification 700x. Address: Principal Investigator, Research Fellow and Director, Inst. of Chemistry, Academia Sinica, Taiwan.

2704. Parsons, Cynthia. 1968. Americans report: Japanese school days. *Christian Science Monitor.* Feb. 3. p. 11.
• ***Summary:*** This article is about three American children who attend regular Japanese school in Kyoto. The instruction is in Japanese. Concerning lunch, one child said: "Today we had fried tofu, an apple, milk, and three pieces of bread with butter." Address: Education educator.

2705. Mattson, Marie. 1968. Visiting a Buddhist monastery at Koyasan. *Chicago Tribune.* Feb. 18. p. H15 or N15.
• ***Summary:*** Koyasan [Koya-san, "Mt. Koya"], "one of the most unusual communities anywhere on earth," is perched atop Mt. Kôya [Koya], in Wakayama prefecture south of Osaka, where it was founded over 1,000 years ago [in 819] by the Buddhist monk Kûkai (known posthumously as Kobo-Daishi), founder of the Shingon sect.

In the community today there are 120 buildings [many quite old] and a resident population of 9,000–making it one of the world's largest religious communities.

"The food at Koyasan is vegetarian, for strict Buddhists do not believe in killing any living thing. This even eliminates eggs... a vegetarian breakfast includes [miso] soup, rice, *tofu* (bean curd, which is a prime source of

© Copyright Soyinfo Center 2013

protein), fruits, vegetables, and tea."

Everyone goes to be early in order to be up at 6 a.m. for Buddhist service. Photos show: (1) A pagoda [*Konpon Daitô,* the central point of Mt. Koya]. (2) A wandering Buddhist monk playing his flute. A small map of Japan shows the location of Koyasan.

2706. Loring, Kay. 1968. Front views & profiles: Japanese adventuring. *Chicago Tribune.* March 8. p. C3.
• ***Summary:*** Includes a description to Kamehachi Sushi, a Japanese sushi restaurant in Chicago. Sushi is the most popular of all snack foods in Japan. Every neighborhood of each city in Japan has its tiny sushi bar. Dinner at Kamehachi "began with the traditional soy bean soup [miso soup], delicate and delicious... Also appealing to my taste buds was inari-zushi (soy bean pockets filled with a slightly sweetened rice)." There was also a bowl of "yu-dofu,... delicate bean curd squares. These were served in a bowl of steaming liquid and each person helped himself, transferring the curd to his plate, then dipping each bite of it into a sauce with dried fish base."

2707. McCormick, Sally. 1968. Azuma Sukiyaki House: Now you can enjoy an evening in Japan–5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune.* March 21. p. W10.
• ***Summary:*** "It was a pleasure watching her prepare Beef Sukiyaki... Then soy bean cakes [tofu], dry onions and rice wine were stirred into the pan." Azuma also serves Beef Teriyaki, Chicken Teriyaki, and Salmon Teriyaki. Three photos show Azuma Sukiyaki House.

2708. Saikowski, Charlotte. 1968. America's foods expand Japan's menu. *Christian Science Monitor.* April 19. p. 6.
• ***Summary:*** Orville Freeman, U.S. Secretary of Agriculture, wants to export more American products to Japan. In Tokyo, he and his wife attended the recent "American Festival of Fun, Food, and Fashion." He noted that "The Japanese diet is still low in protein..." which means a great market for American brooder chicks.

"Such traditional Japanese foods as 'miso' (soybean paste), 'shoyu' (soy sauce) and 'tofu' (bean curd) are made for the most part from American-produced soybeans." Address: Staff correspondent.

2709. Saikowski, Charlotte. 1968. America's foods expand Japan's menu. *Christian Science Monitor.* April 19. p. 6.
• ***Summary:*** At the recent "American Festival of Fun, Food, and Fashion" in Tokyo, Japan, officials of the USDA and their wives were on a "buy-American campaign" and on a campaign to encourage Japanese officials to reduce Japan's trade restrictions [such as protective import duties and tariffs]. Mrs. Orville Freeman, wife of the U.S. Secretary of Agriculture, said that America was trying to sell "nutrition, variety, and convenience."

Japan, which does not have enough land to met its own food needs, already depends heavily on America for its food needs, importing nearly $1 billion worth last year. "Such traditional Japanese foods as 'miso' (soybean paste), 'shoyu' (soy sauce), and 'tofu' (bean curd) are made for the most part from" soybeans grown in the United States.

2710. Saio, Kyoko; Koyama, E.; Watanabe, T. 1968. Protein–calcium–phytic acid relationships in soybean. II. Effects of phytic acid on combination of calcium with soybean meal protein. *Agricultural and Biological Chemistry* 32(4):448-52. April. [10 ref]
• ***Summary:*** Many molecules of calcium and phosphorus may be bound by a single protein molecule. More calcium is bound as the amount of phytic acid in the system increases. Address: 1&3. Food Research Inst., Ministry of Agriculture and Forestry; 2. Japan Tofu Assoc.

2711. *Los Angeles Times.* 1968. Mizutaki says sayonara to lengthy meal preparation. May 30. p. G22.
• ***Summary:*** A general recipe for Mizutaki ("water cookery") includes "Bean curd squares (tofu)." The dipping sauce includes "½ cup soy sauce" and "½ teaspoon monosodium glutamate."

2712. Hayashi, Shizuka. 1968. Japanese diets need still more oil and protein. *Soybean Digest.* May. p. 32, 35.
• ***Summary:*** For the first time in 12 years (since JASI started promoting U.S. soybeans in Japan in 1956), Japan's import of U.S. soybeans, figured on a calendar year basis, lost its momentum. In 1967 Japan imported 1.770 million metric tons of U.S. soybeans, down slightly from 1.772 million metric tons in 1966. Fortunately [for the American Soybean Assoc.] total Japanese consumption of oils and fats was 850,000 metric tons, up 11% over 1966–largely due to imports of sunflower seed from the USSR.

A table shows percentage consumption of various oils and fats in Japan in 1966 and 1967, with 1968 projected. For 1967: Soybean oil 32%. Other vegetable oils 42%. Animal fats and fish oils 26%.

The remedy: Three alternatives could turn the tide: (1) Lower the cost of U.S. soybeans to Japanese crushers. (2) Stop the import of competing oilseeds. (3) Increase Japanese consumption of oils.

Almost all of the U.S. soybeans imported to Japan are crushed to make oil and meal. "Of the total 1.77 million tons of U.S. soybeans imported last year about 1.6 million tons [90.4%] went for crushing." Other seeds widely crushed for oil and meal in Japan are rapeseed, sunflowerseed, safflowerseed, kapok, cottonseed, copra, sesameseed, corn, peanut, palm kernel, and rice bran.

JASI must persuade the Japanese government to share its promotional campaigns and programs. "The intake of oil and protein, especially oil, urgently needs to be increased.

© Copyright Soyinfo Center 2013

This is the guideline of the Japanese government," which is also encouraging the Japanese people to eat more green vegetables. "The future soybean program needs more emphasis on salad oil, vegetable margarine, and fried tofu (aburaage).

Fried tofu consumes 45% (152,000 tons or 5.5 million bushels) of the total soybeans used by tofu makers. In addition 30,000 tons of soybean oil (from 6.6 million bushels of soybeans) is required to fry aburaage. Fried tofu therefore presently uses a total of 12 million bushels of soybeans. "In fact it is one of the largest of U.S. soybeans. A nationwide campaign to double this consumption needs to be planned. A total of 18,000 sushi shops and 30,000 noodle shops are buyers if fried tofu." A photo shows Shizuka Hayashi. Address: Japanese-American Soybean Inst., Tokyo.

2713. Hurd, Frank J.; Hurd, Rosalie. 1968. A good cook–Ten talents. Chisholm, Minnesota: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 354 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]

• ***Summary:*** A very important, pioneering, indeed classic American vegan cookbook, which uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains more than 750 unique recipes (plus color photos), including many innovative soy recipes, including the first recipe for shakes made with soymilk ice cream.

In the Glossary (p. 11-17) are entries for lecithin (p. 13; "A food extracted from the soybean"), soybeans (p. 15-16), and tofu (p. 16), as well as agar-agar, almonds, carob, cashew nut, coconut, dulse, flaxseed, malted nuts (made from peanuts and cashew nuts with dry malt added), nuts, oils, peanut, sea kelp or dulse, sesame seed, and sesame tahini. A color photo (p. 55) shows soy sprouts. Soy-related recipes include: Homemade soy coffee (p. 66). Soybeans milks (p. 69; No. 1 costs $0.06/quart homemade. "Soybean pulp [okara] which remains can be made into various dishes. Try Soy Not-Meat," p. 202; No. 2 uses 1 cup plain soya starter). Banana milk shake (with chilled soy milk, p. 70). Banana carob milk shake #1 or #2 (with soy milk, p. 72). Molasses milk shake (with soy milk, p. 72). Soy-fig milk (p. 72). Milkless milk shakes (with non-dairy ice cream incl. soy milk powder, p. 72-73). Soy yogurt, cultured (p. 73-74; 3 recipes–made from whole soybeans, liquid Soyagen, or soy starter). Soya bread or rolls (p. 80). Vanilla ice cream (with soy milk powder optional, p. 125). Pineapple ice cream (with soy milk powder, p. 127). Banana soya ice cream (with rich soy milk, p. 128). Sesame soy cookies (p. 131, with 1½ cups raw sesame seeds). 7 grain granola (with 1 cup soy flour, p. 156). Easy granola (with soy flour, p. 157). Soy-millet patties or loaf (p. 182). Vegetable-nut loaf (with soy milk, p. 186). Green soy beans (p. 187; dry, green-seeded soybeans). Buckwheat, soy or whole wheat spaghetti (p. 192). Soybean curd #1 (homemade tofu using whole soybeans, curded with Epsom salt, p. 195). Soybean curd #2 (from soy flour, curded with lemon juice, p. 196). The tofu-making process is shown in six black-and-white photos. Ways to serve tofu (p. 196). "Scrambled eggs" (made with tofu, egg-free, p. 196). Tofu loaf (p. 198). Chinese nut loaf (with soymilk, p. 198). Vegetarian chow mein (with soy sprouts, p. 199). Peanut-soymeat (with soy flour, p. 200; steamed for 2-3 hours in greased cans). Soy not-meat (p. 202, with soaked ground soybeans or "the soybean pulp from the soy bean milk. This way the pulp is not wasted" [i.e. okara]). Peanut-soy round (p. 202). Soy meat (p. 203; made with 2 cups homemade gluten, 1 cup toasted ground peanuts, and 1 cup soaked blended soybeans, plus water, seasonings, oil and salt, steamed for 3 hours in greased cans). Soya peanut soufflé (p. 204). Soybean soufflé (p. 204). Tofu & rice croquettes (p. 206).

The chapter titled "Nuts, seeds, olives" (p. 209-20) includes: Glossary of nuts, raw nuts for your enzymes, nut notes, almond butter (king of the nuts), raw nut butters, cashew nut butter, cashew Brazil-nut butter, peanut butter, nut butter clusters, peanuts–oven blanched, dry roasting–soya nuts, malted nuts, browned sesame seeds, seed cereal topping (sunflower seeds, sesame seeds, flax seed), peanut butter-seed spread (tahini, sunflower seeds), peanut butter balls, simple sesame squares, sprouted sunflower clusters, olives, tree chestnuts, roasted chestnuts, roasted chick peas.

Green soy bean salad (p. 234; probably dry, green-seeded soybeans). Soybean sprouts salad (p. 234). Tofu cheese salads (p. 235). Tofu sun faces (p. 236). Pineapple tofu salad (p. 245). Pineapple tofu cottage cheese (p. 246). Lo-fat salad dressing (with soy yogurt, p. 251). Soy mayonnaise–eggless (4 types, p. 252-53). Soy butter (made with soybean flour, lightly dextrinized, p. 262). Soya starter (made with soy flour, p. 262). Soya yeast sandwich spread (p. 263). Super sandwich spread (with soybean pulp [probably okara, see p. 69], p. 264). Pimento-soy chee spread (p. 265). Sour cream–soy (p. 270). Soy whipped cream (p. 271; whirl in a blender ½ cup each soybean milk and soy oil, plus 1 tablespoon honey, ¼ teaspoon vanilla, and a pinch of salt). Tartar sauce, cheese (with soy mayonnaise and tofu, p. 273). Sprouts (p. 291-95). Fresh cucumbers with soy sour cream (p. 304). Celery and green soyas (p. 312; "2 cups green soy beans, frozen, canned, or fresh." Probably means green vegetable soybeans). Soya starter (base, made with soy flour, p. 326; keep a jar ready for quick use in making tasty spreads, milk and cream, mayonnaise, a binder when nut butter is not available. Dextrinizing the soy flour gives this Soya Starter a nutlike flavor).

Talk with Rosalie Hurd. 1991. June 3. *Ten Talents* is

© Copyright Soyinfo Center 2013

now going into its 44th printing. More than 250,000 copies have been sold. The latest was published by College Press in 1985. The first edition was published in May 1968. Frank, originally a chiropractor, is now a medical doctor. The Hurds now live most of the year in Fountain City, Wisconsin, where they run Alpine Springs, a live-in lifestyle program and center on 585 acres of land offering treatment and education in natural health.

Note 1. This is the earliest cookbook seen (May 2006) that contains a recipe for soy sour cream. For the basic recipe: Pour 3/4 cup soy bean milk into a blender. Gradually add 3/4 cup soy oil until desired thickness is reached. Stir in 1-2 tablespoons lemon juice and ¼ teaspoon salt. Chill. "Delicious on fresh cubed cucumbers with a dash of dill." An alternative recipe calls for the use of: ½ cup soy starter (not dextrinized, see p. 69, 262), ¼ cup water, and ½ teaspoon honey.

Note 2. This is the earliest English-language document seen (Nov. 2003) that contains the word "Soymeat" (p. 200), or the term "Soy Not-Meat," or the term "Soy Meat" (p. 203) as a recipe name.

Note 3. This is the earliest dated English-language document or book seen (Sept. 2012) that contains the modern term "Soy yogurt."

Talk with Rosalie and Dr. Frank Hurd. 2005. Feb. 9. Both have moved to Oregon to warmer weather. They have a daughter there. *Ten Talents* is now in its 48th printing. They are working on a revision. He was born in March 1936 and she in April 1937.

Talk with Rosalie Hurd. 2009. Jan. 19. Frank is still working as a doctor and she as his helper. They are both in good health. The greatly enlarged 40th anniversary edition of *Ten Talents* has been published and is now available.

The term "Ten Talents" comes from the teachings of Ellen G. White: "The one who understands the art of properly preparing food, and who uses this knowledge, is worthy of higher commendation than those engaged in any other line of work. This talent should be regarded as equal in value to ten talents; for its right use has much to do with keeping the human organism in health. Because so inseparably connected with life and health, it is the most valuable of all gifts" (Ellen G. White, *Counsels on Diet and Foods*, p. 251). Address: 1. D.C. [Doctor of Chiropractic]; 2. B.S. Both: Box 86A–Route 1, Chisholm, Minnesota 55719.

2714. Watanabe, Bunzo. 1968. The Japanese oilseed processing industry. *Soybean Digest.* May. p. 36, 38.
• ***Summary:*** Tables show: (1) Imports of soybeans to Japan during calendar year 1967 by country of origin: USA 81%, Red China 19%, Other countries 1%. Total imported: 2,169,000 metric tons (79,710,000 bushels). (2) Consumption of edible refined oils and fats in Japan (1963-1967). Per capita consumption rose from 13.58 lb in 1963 to 18.08 lb in 1967. (3) Total oils and fats production in Japan (1963-1967), imports and domestically grown, by oilseed type. Soybeans are by far the most important oilseed, followed by rapeseed. Rice bran is the main domestic source of oil. (4) Consumption of soybeans in Japan classified by utilization (1963-68, 1,000 metric tons). The following figures are for 1968 (1,000 metric tons): Crushed for oil 1,739. Foods: Tofu and aburage 294. Miso 170. Natto 50. Frozen tofu 40. Shoyu 15. Kinako 13. Other 70. The total used for food grew from 497 in 1963 to 652 in 1968.

Photos show: (1) American Soybean Association (ASA) executives seated around a table holding chopsticks at tempura luncheon with Mr. Watanabe, who is president of the Japanese Oilseed Processors Association, and other Japanese oilseed officials. From left, Shohei Takai, managing director Japan Oilseed Processors Association (JOPA); S. Yamada, manager oils and fats division, Ajinomoto Co., Inc; Scott Sawyers, ASA country director in Japan; Chet Randolph, ASA executive vice president; Mr. Bunzo Watanabe; and Hiroshi Higashimori, chief secretary JOPA. Tempura is a substantial outlet for soybean oil. (2) Portrait of Bunzo Watanabe. Address: Japanese Oilseed Processors Assoc., Japan.

2715. Shinoda, Osamu. 1968. O-tôfu no hanashi [The story of tofu]. *Rakumi* 6:4-8. June. [Jap]*
• ***Summary:*** An exhaustive search of the early Chinese food literature leads the author to believe that the world's earliest reference to the word *dofu* appears in the *Qing Yilu / Ch'ing I Lu* (Jap. *Seiiroku*), written by T'ao Ku in about A.D. 950, just before the Sung dynasty. This was more than 1,000 years after the supposed discovery of tofu by Liu An prior to 122 B.C. Address: Japan.

2716. Saio, Kyoko; Watanabe, Tokuji. 1968. Daizu shokuhin no bisai kôzô [Observations of the minute structure of soybean foods, as seen under an electron microscope]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of Food Science and Technology*) 15(7):290-96. [8 ref. Jap]
• ***Summary:*** Of the electron microscopic pictures taken in the investigation on protein bodies and the protein in soybean seeds, some were presented to elucidate their fine structures and their changes in processing. No change in protein bodies and spherosomes in intact cells of soybean cotyledons occurred as a result of soaking in water overnight, while remarkable changes, such as bursting of protein bodies, curdling of their protein in mass without dissolving, and converting of spherosomes into rather large oil droplets, were observed after successive heat-steaming and fermentation with *Bacillus natto.* In tofu gel, a network is formed with protein microgranules, and oil droplets located in groups along it. The meshlike structure of the fresh tofu used to make dried frozen tofu (kori-dofu) is denser than that of ordinary tofu. During freezing, protein microgranules are localized and denatured by the growth of ice crystals (from

© Copyright Soyinfo Center 2013

the online abstract at http://www.journalarchive.jst.go.jp/english/).

This is the earliest document seen (Jan. 2012) that describes the use of an electron microscope to examine soyfoods. Address: Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

2717. Murphy, Jean. 1968. Indonesian fare: Time is worth it. *Los Angeles Times.* Sept. 5. p. J8.
• ***Summary:*** Cooking Indonesian recipes typically takes more time than Western or even Chinese recipes. A recipe for Vegetable & shrimp soup calls for "1/8 bean cake (tofu), finely sliced." A recipe for "Pork sate (Saté babi manis)" calls for "1 tablespoon sweet soy sauce (ketjap benteng)."

2718. Associated Press (AP). 1968. Tofu is good for you. *Hartford Courant* (*Connecticut*). Sept. 29. p. 9E.
• ***Summary:*** Los Angeles (AP)–Tofu? Americans are familiar with many Japanese words such as sukiyaki, sayonara, jiujitsu [jujitsu], karate, etc. "But what or who is tofu?" Defined in the simplest terms "tofu is a soybean curd cake. It is of Japanese origin [sic; "tofu" is a Japanese word, but the food was invented in China] and is produced as a staple in Japan and many other Asian countries."

Although "tofu" is far from becoming a household word in America, "the number of Americans eating the product appears to be increasing, at least in Los Angeles.

"The sale of more than one million packages of tofu last year is an increase of 15 per cent over the previous year."

Although it is a good source of protein, it is low in cost, retailing for only 39 to 40 cents for a 20 3/4 inch package [= 30.5 cents a pound].

Two local hospitals serve it to heart patients as a substitute for meat.

Describes briefly how tofu is made. In America it is best known as white cubes in sukiyaki or as the "curd cake in clear soup."

2719. Sawyers, Scott. 1968. The soybean market in Japan, Taiwan, and Korea. *Soybean Digest.* Sept. p. 68, 70-72.
• ***Summary:*** The American Soybean Assoc. office in Japan, known as the Japanese American Soybean Institute, has concentrated on mass media and consumer promotions to increase the utilization of soybean oil, meal, and traditional foods prepared from soybeans. In Japan, this means liquid cooking oil, tempura oil, salad oil, vegetable oil margarine, miso, tofu, and soy sauce. Also, the growing preference for more meat, milk, and eggs in the Japanese diet requires the use of more soybean meal to support an expanding livestock and poultry industry. Efforts were made to popularize two slogans: "Take Oil Once a Day for Foods Cooked with Vegetable oil." And: "Take Oil for Health, Stamina, and Vitality." The key focus is to encourage the Japanese to consume more soy oil in their diet. A portrait photo shows Scott Sawyers. Address: Country Director, Japanese American Soybean Inst.-American Soybean Assoc., Tokyo.

2720. McCormick, Sally. 1968. Azuma Sukiyaki House: Dine graciously in the Oriental manner–5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune.* Oct. 24. p. G17.
• ***Summary:*** "Other Japanese dinners worthy of trying are New York Steak Teri-Yaki, Filet Mignon Teriyaki, Chicken Teri-Yaki, Fresh King Salmon Teri-Yaki, marinated in soy sauce and Mirin Sake and charcoal broiled, Fresh Rainbow Trout, charcoal broiled Sansho-Miso-Yaki style, Maine Lobster tail Teri-Yaki or Curry Yaki, Tuna or Sea Bass Teri-Yaki or Shio Yaki."

The dinner menu prices range from $4.35 to $6.15.

"The menu also features many side dishes with such exotic names as Cold Tofu, Miso Shiru, Chawan Mushi and many more."

Contains three photos featuring women taken inside the restaurant.

• ***Summary:*** An exhaustive search of the early Chinese food literature leads the author to believe that the world's earliest reference to the word *dofu* appears in the *Ch'ing I Lu* (Jap. Seiiroku), written by T'ao Ku in about A.D. 950, just before the Sung dynasty. This was more than 1,000 years after the

© Copyright Soyinfo Center 2013

supposed discovery of tofu by Liu An prior to 122 B.C.

Shinoda (born 1899, and considered by many to be Japan's greatest modern food historian) believes that after the middle of the T'ang dynasty (i.e., after about A.D. 750), the Chinese, who still had no dairy animals, began to make tofu instead of dairy cheese. By the start of the Sung dynasty in A.D. 960, tofu was popular all over China. After publication of the *Ch'ing I Lu*, reference to tofu began to appear in many other Chinese works.

On p. 35 of this article is a table showing the 12 earliest known Japanese documents that mention tofu. The table contains three columns: (1) The title of the document in Japanese. (2) The year it appeared. (3) The name given to tofu in the document (for example, Tofu-jiru, or shirakabe, or dengaku).

The following is our best effort to romanize and translate these. (1) *Kagenki.* [Record]. 1238. Taufu-jiru. (2) *Gion shigyô nikki* [Diary of the execution of Gion]. 1350. Mori. (3) *Inryôken nichiroku* [Daily records of Inryôken]. 1437. Dengaku. (4) *Jinson Daisôjô ki* [Record of Jinson Daisôjô]. 1457. Tôfu. (5) *Oyudono no Ue no nikki* [Diary of Oyudono no Ue]. 1477. Oden. (6) *Gohôkôin Konoe Masaie ki* [Record of Gohôkôin Konoe Masaie]. 1479. Shirakabe. (7) *Ninagawa Chikamoto ki* [Record of Ninagawa Chikamoto]. 1483. Shirakabe. (8) *Shoken nichiroku* [Journal of Shoken]. 1486. Dengaku. (9) *Inryôken nichiroku* [Journal of Inryôken]. 1487. Mura Dengaku. (10) *Rokuon nichiroku* [Journal of the Deer Garden]. 1489. Tofu. (11) *Tsuneatsu Hôin nikki* [Diary of Tsuneatsu Hôin]. 1532. Tofu. (12) *Shishinki* [Record of my heart]. 1534. Tengaku. Address: Japan.

2724. Claiborne, Craig. 1968. The banquet began with 4 kinds of eel. *New York Times.* Dec. 21. p. 42.
• ***Summary:*** Taipei, Taiwan–Chinese cooking is now "enjoying its greatest prestige in the history of the West." Yet it is ironic that when Americans think of Chinese cookery, they rarely think of Taipei or Taiwan.

When the instructor at a Chinese cooking class at the local Y.M.C.A. "used tofu, the common bean curd ingredient so frequent in Chinese cooking, a knowledgeable and well-oriented young American housewife told the story of how one of the military wives remarked: "'You can't even buy that here; at least we can't find it in the P.X.'"

Note: P.X. stands for "post exchange," a store operated by the Army and Air Force Exchange Service on US Army posts.

Claiborne also describes a traditional Shanghai restaurant, the Tung Sheng Lou, at 29-4 Jong Hwa Rd. in Taipei. They serve various unique dishes including "bean curd with 1,000-year-old eggs..." Crab "dipped into an excellent sauce of soy, vinegar and ginger. Followed... by an extraordinary and wonderfully inventive dish of fresh pork cooked with fermented bean curd and fresh spinach."

2725. **Product Name:** Tofu: Soy Bean Cake.
Manufacturer's Name: Azumaya Inc.
Manufacturer's Address: 855 Golden Gate Ave., San Francisco, California.
Date of Introduction: 1968.
Ingredients: Soy beans, water, calcium sulfate.
Wt/Vol., Packaging, Price: 21 oz (1 lb. 5 oz.) packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.

New Product–Documentation: Label. 1978, dated. 4 x 4.75 inches. Dated 1978. Red and blue on white. Azumaya logo. Little bean logo saying, "Hi, I'm Li'l Soy."

Profile: Azumaya tofu company. 1983. *Soyfoods.* Summer. p. 34-37. Azumaya started selling packaged tofu in about 1968.

2730. Borgstrom, Georg. 1968. Principles of food science: Food microbiology and biochemistry (Vol. 2). New York, NY: Macmillan. xiv + 473 p. Index. 26 cm. [9 ref]
• ***Summary:*** In Chapter 4, "Fermentation," is a section titled "soybeans" (p. 110-12) which discusses: Tofu or teou-fu, miso, sufu, natto, tempeh, taotjo and ketjap (shoyu / soy sauce).

"Frozen tofu (kori tofu, or koya dofu) is tofu that has been frozen for several weeks and dried. Aburage is fresh tofu dried in deep fat. Namage is fresh tofu that has been surface-fried."

In Chapter 10, "Trends in food utilization," is a section titled "Soybean" (p. 297-301) which discusses: Soybean products and fermented products ("These foods are all rather unknown among Western peoples, although they are eaten by millions of people and constitute some of the most common foods on earth." Yet some "typical oriental soy foods," such as tofu and tempeh, are finding acceptance in the West. One soy product that is widely used in most parts of the world is soy sauce. Soy flour and soy grits were first made commercially in the USA in the early 1930s. Milk made from the soybean is important in China {see Vol. I, Chap. 15}. Fermented products include taotjo, soy sauce or ketjap). Soybean protein, including soybean oil and defatted soybean oil meal (In 1961, 9.5 million tons of soybean oil meal was used in the USA, mainly for animal foods, with special grades used for food and industrial products, such as isolated soybean protein. Purified proteins extracted from dehulled and defatted meal, when toasted, are used in "Civil Defense emergency rations" and by the "international organization Meals for Millions." Some 90% of the processed soybean oil in the USA now goes into food uses. Soybean oil is now the most important ingredient in oleomargarine {see Fig. 10.1}. About one-third of the soybeans moved off the farm are exported; Japan is our biggest customer {taking about 57%} followed by Western Europe {27%}, Canada {8%} and Israel {5%}). Soybean uses (Despite its nutritive value, "the soybean is not looked upon with favor in many areas" for two main reasons: it does not soften well during cooking and it is difficult to digest. Many other legumes share these problems, but they are generally require less cooking. When soy flour is used, alone or with cereal flours, the drawbacks almost vanish. "Soybean milk is not comparable to animal milk or human milk except in protein content." And it usually has an unpleasant, bitter taste, but this can be removed at least cost by bulk processing. When soybean curd is made in the typical way, "many nutritious components are lost," yet it is easy to digest. Soy sauce can be used only as a condiment because of its high salt content. Germinated soybeans make an excellent vegetable, which is rich in vitamin C).

Table 10-1 (p. 300) shows utilization of soybean oil (in millions of pounds) (1947-49 to 1967). The columns are: Shortening (the largest use and steadily increasing), margarine, cooking, salad and other edible oils (No. 2), total for food uses, total nonfood uses.

Toasted soy protein (Made by General Mills, starting in Belmont, Iowa, and named Hi-Pro and Protein Plus. "The Belmont plant has been running at capacity to supply for American Civil Defense stockpiling of toasted soy protein"). MPF (Multi-Purpose Food) made by a joint venture between General Mills and the Meals for Millions foundation. Gelsoy (the "first vegetable protein found to have gelling properties"). Promine (an edible soy protein). Fibrotein (soy protein spun into filaments). Soybean oil (The initial purpose of the U.S. soybean crushing industry was to obtain oil. The residual meal was considered virtually useless).

Chapter 13, titled "The world food issue," is about world hunger, which is "an ever-present specter for 2.3 billion people of the present world population of 3.4 billion." These people are concentrated largely in warm parts of the globe. Also discusses "protein malnutrition" (the main problem) and the need for more animal protein. North America has an animal protein "intake nine times that of the Far East." A section on "Plant milks" (p. 428-29), which are made from pulses and cereals, includes a subsection titled "Soybeans" which begins: "Soybeans form the basis of the most widely used and successful plant milks in China, Hong Kong, Indonesia, and the Philippines. Such milk has recently become available in Europe and the United States, primarily for clinical purposes"–for children allergic to the proteins in cows' milk.

Notes: Many references, divided into English and non-English, books and papers, are given at the end of each chapter. Address: Michigan State Univ.

2731. David-Pérez, Enriqueta. comp. and ed. 1968. Recipes of the Philippines. Philippines: Zone Printing Co. xiv + 170 p. Plus 8 leaves of plates on unnumbered pages. Illust (some color). No index. 23 cm.
• ***Summary:*** Mentions *tokua* [tofu, also spelled *tokwa*] as an ingredient in Lumpia. The glossary (p. 169-70) mentions: "Misu–paste made of fermented rice and soy beans." "Tajure–fermented soy beans, caked." [brine fermented tofu]. "Tausi–fermented soy beans (fermented black soybeans)." "Tokua–soy bean curd [tofu]." Address: Philippines.

2732. Hahn, Emily. 1968. The cooking of China. New York, NY: Time-Life Books. 206 p. Illust. (many color photos). Index. 28 cm. Series: Foods of the World.

• ***Summary:*** Another superb work in this superlative series from the editors of Time-Life Books. This book is about cooking in China, where the author lived (in Shanghai), before the 1949 Communist revolution.

Contents: Introduction: The cooking of the world's oldest civilization. 1. An ancient and honorable art. 2. "Chinese cooking" in your own kitchen. 3. Secrets of savor and spice. A reverence for good food. 5. Oriental staff of life. 6. Gentle teas and strong spirits. 7. Feasts for festivals. 8. A cuisine for all continents.

China, the world's oldest existing civilization, has the world's most ancient cuisine–as well as one that is both great and profound (p. 6). When the Red Guards of China's Cultural Revolution appeared in the 1960s, they "attacked every symbol of what they regarded as bourgeois culture. Among the targets in Peking were the city's fine restaurants." In the process they destroyed much of China's culinary heritage–but only inside of China (p. 7). An article by Peggy Durdin in the *New York Times* was titled "Mao's great crime against cuisine" (p. 184). Chinese food is, of course, about life, but it is also about health, and it can resonate on numerous symbolic levels (p. 7).

The southern provinces of China, Fukien, Kwantung, Yunnan, and Kwangsi, enjoy tropical temperatures year round and more than 80 inches of rain. Here rice is the main crop. Yet China is a mountainous country, with 60% of its land at elevation 6,500 feet or higher; only 11% of its land can be cultivated (compared with 80% in the USA) (p. 10). Fukien, a coastal province to the south, makes the best soy sauce in China, and stewing is called "red cooking" because of the color imparted by the soy sauce (p. 16, 42).

Vegetable oil is very important in China because the Chinese rarely use butter (p. 29). "For protein the Chinese depend heavily on the soybean, which has for this reason been called the cow of the East." Soybean oil is used for cooking. Soybean milk is a good substitute for cow's milk. And "doctors, even Western doctors–prescribe it for babies who cannot get mothers milk and are allergic to cow's milk" [sic]. From soymilk one can make "bean curd, an exceptionally high-protein food known in China as 'the meat without bones.'" Bean curd is made by curdling soybean milk with gypsum, then pressing the curds into pieces about 3 inches square by ½ inch thick. "The thickened curd skin [sic, yuba] is a food by itself, with a more concentrated flavor. Fermented bean curd [fermented tofu] tastes much like cheese." Both soy and mung-bean sprouts are used in China, "In one form or another the soybean can be found in dishes eaten at every meal" (p. 29).

A two-page color photo spread and legend (p. 61-63) shows (numbered) basic Chinese ingredients, incl. "13. Fresh bean curd. 14. Dried bean-curd skin" [yuba]. Buddhist monks and nuns in China are strict vegetarians; special foods that simulate meat have been developed for them. These include vegetarian "duck made from crisp beancurd skin, colored and shaped to look like the bird's flesh" and "chicken roll in *hoisin* sauce, the 'chicken' made of soft soybean curd" (p. 64, 67, 70).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "beancurd skin," apparently to refer to yuba.

A full-page color photo and legend (p. 74-75) shows (numbered) Chinese sauces and condiments, incl. "1. *Hoisin* sauce. 3. Soy sauce. 8. Yellow-bean paste, or thick bean sauce. 11. Fermented black beans. 14. Red bean [azuki] paste." "Among the best known of Chinese seasonings is soy sauce, which was mentioned in several Confucian classics as early as the Fifth Century B.C." [sic]. Other condiments made from soybeans are bean paste (for preserving and flavoring meat) and *hoisin* sauce (widely served with Peking duck). "It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of superb soy sauce requires 'as much art in its preparation as good French wines"' (p. 74-75, 77).

The controversy over M.S.G. is discussed. "A really god Chinese chef considers it a questionable shortcut for giving taste to second-rate foodstuffs, but most Chinese cooks admit that its use in certain dishes is perfectly valid" (p. 77-78).

The emperor Chien Lung (1735-1796), 4th ruler in the Manchu [Qing] dynasty, wrote an *Ode to Tea* (p. 91). In China there is an intimate association between eating and health (p. 91).

Recipes: "Steamed bass with fermented black beans *Tou-shih cheng hsien yu* (with "2 teaspoons fermented black beans," soy sauce, Chinese rice wine, and shredded fresh ginger root, p. 104).

Most festivals (each with a feast) in China are based on events of agricultural importance; the two most important are New Years and the Moon Festival (p. 155, 162, 164-65). A Peking duck is "brought to the exact degree of plumpness and tenderness through force-feeding," then roasted slowly, suspended by hooks, in a mud-lined oven "until the thick, fat skin becomes golden in color. This crackled skin is the choice part of the dish." The skin, a piece of the meat, a spring onion, and thick, sweet hoisin are served enfolded in a thin wheat-flour "pancake" (p. 158, 15).

The history of chop suey (unknown in China) and chow mein (had an honorable origin in China) are discussed (p. 178-79).

The first wave of Chinese to America came with the gold rush and transcontinental railway. Most were laborers from southern China. The first Chinatown in the USA was established in San Francisco (1850s), followed by New York City (Manhattan, 1870s). Most early American Chinese restaurants reflected their social status, serving inexpensive

© Copyright Soyinfo Center 2013

foods. In the early 20th century, as China's Republican revolution was gaining momentum, a second wave arrived to study. These young people, also mostly from southern China, came from far more prosperous backgrounds than those in the 1st wave and they wanted better food. Restaurants were started or upgraded to suit their tastes. Thus, it "was the southern school of cookery that first spread over the world outside China" (p. 179).

China has three great regional cuisines: Cantonese (southern), northern, and Szechuan (p. 179). Six photos show "The Americanization of the fortune cookie: Assembly line at a factory in New York City's Chinatown." A two-page spread shows many of the "fortunes" found in fortune cookies (p. 195-97).

"A guide to ingredients in Chinese cooking" (p. 198-99) includes: Bean curd, fresh: Square. Bean-curd skin [yuba] ("Thin stiff sheets of dried bean curd. Sold by weight... {5 to 6 sheets weigh about 1 ounce"}). Bean sprouts ("Young sprouts of the mung bean"). Black beans, fermented ("Strongly flavored, preserved black soybeans." Sold in cans or plastic bags). Brown bean sauce ("Thick sauce made from fermented yellow beans [huang dou = yellow soybeans], flour and salt. Sold in cans of 1 pound or more"). Hoisin sauce ("Sweet, brownish-red sauce made from soybeans, flour, sugar, water, spices, garlic and chili for use in cooking. Sold in 1-pound cans and up"). Oyster sauce ("Thick brown sauce with a rich flavor, made from oysters, soy sauce and brine"). Red bean paste ("Thick, sweet paste made from red soybeans" [sic, azuki beans]). Salted eggs and thousand-year eggs. Sesame seeds and sesame seed oil. Soy sauce ("Pungent, salty, brown liquid made from fermented soybeans, wheat, yeast [sic, mold] and salt"). Vegetable steak ("A vegetarian food that looks like a small beefsteak but is made from wheat gluten. Sold in cans"). Address: Author, lives in England with her husband.

2733. Hahn, Emily. 1968. Recipes: The cooking of China. New York, NY: Time-Life Books. 119 p. Illust. (many color photos). Index. 23 cm. Series: Foods of the World. Revised ed. 1973, 1980, 1981. [1 ref]
• ***Summary:*** A recipe for "Shua-yang-jou–Mongolian fire pot (rinsed lamb)" (p. 28-29) calls for "1 tablespoon fermented red bean curd, mashed."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "red bean curd" or that uses the term "fermented red bean curd" (or "fermented red beancurd") to refer to red fermented tofu.

The excellent "Guide to ingredients used in Chinese cooking" (p. 115-19) is identical to that found in the larger companion volume, *The Cooking of China* (Hahn 1968, p. 198-99). Address: Author, lives in England with her husband.

2734. Hawkes, Alex D. 1968. A world of vegetable cookery: An encyclopedic treasury of recipes, botany and lore of the vegetable kingdom. New York, NY: Simon and Schuster. 274 p. See p. 213-14. Illust. by Bill Goldsmith. 29 cm.
• ***Summary:*** The section titled "Soybean" focuses on green vegetable soybeans, noting: "In the Orient and increasingly in such places as Hawaii and California in this country, green Soybeans are for sale as a fresh vegetable. The plants have pod-laden branches, each short, narrow, very hairy pod containing three or four edible seeds. The fresh Soybean pods are washed, then boiled in lightly salted water until they are soft. Drained, they are seasoned to taste with soy sauce and a bit of sugar, then served, the beans being shucked from the pods at table."

There is a casserole recipe named "Miss Diddley's Green Soybeans." Also discusses briefly dried soybeans, roasted soybeans "ground into a meal and into flours of various degrees of coarseness [roasted soy flour] and "even used as a substitute for coffee, sprouted soybeans (a recipe is given for "Soybean Sprouts Cantonese"), soy oil, soy sauce, tofu, and miso. The author notes: "I often prepare my own version of *miso,* using dried navy or other white beans (see p. 44), instead of utilizing the commercial imported variety."

"Tôfu is the curd of cooked, mashed white soybeans, which has been precipitated, then pressed into cakes. It is perishable, hence most conveniently bought in cans, water-packed. The rather soft but firm cakes–sometimes baked or even fried prior to canning, and respectively known as *yakidôfu* and *aburage*–have a bland flavor, vaguely reminiscent of a custard. It is just this suavity which makes *tôfu* so valuable, since it quickly absorbs the flavors around it in such things as soups, sukiyaki, and mizutaki, yet retains its exceptionally pleasant substance. *Tôfu* is to be found in many of our domestic markets, imported from Japan. With its high content of readily digestible protein, it should be better known by all Americans."

• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the original 1963 paperback edition by the same title except that this is a hardcover edition and the publisher is listed as Arc Books rather than Arco Publishing. The publisher's address is the same. Address: Arlington, California.

2736. Kikkoman Shoyu K.K. 1968. Kikkôman Shôyu shi [History of Kikkoman Shoyu]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. No index. 26 cm. [113 ref. Jap; eng+]
• ***Summary:*** This is the third (and best) major history of Kikkoman, written largely by Mr. Morio Ichiyama. Contents: Preface. I. Overview–1. Fermented foods. 2. Japanese shoyu. II. Present status: 1. Overview of Noda (p. 15): Location,

© Copyright Soyinfo Center 2013

overview photo of city area. 2. Main building and facilities (p. 18): Main office, Tokyo branch, Osaka branch, plant No. 7, Kansai plant, inside the fermentation plant, bottling plant, sake making plant, food manufacturing plant, Goyo Gura traditional shoyu facility, Central Research Center. 3. The distribution and view of the buildings (p. 36): Distribution chart of the main buildings in the Noda area, view of the plant, water providing facility. 4. Products (p. 41): Shoyu, products made by food manufacturing department and sake brewing department. 5. Sales and marketing (p. 44): Domestic, overseas. 6. Welfare facilities (p. 48): Health center house, attached hospital, cultural gymnasium, dormitory and company housing quarters. 7. Connected enterprises (p. 50): *K.K. Senshûya* (*Chiaki*), foundational juridicial person / (*kôfûkai*), foundational juridicial person / (*Noda Sangyo Kagaku Kenkyusho*), *Sôbu-Tsûun K.K.*, Kikkoman International, Inc., Tone Coca-Cola Bottling Co., Kikko Food Industry K.K., Seishin Seiyaku K.K. (pharmaceutical company), Mann's Wine K.K. 8. The staff members (p. 58).

III. History. 1. The history of shoyu (p. 61): History of shoyu, origin of character meaning shoyu, Daishokuzen and Shoin, Zashin of Shoin, the beginning of shoyu exports (p. 76), the first shoyu plant overseas, shoyu which was protected by the Lord of the Han (*Hanko*), references to Noda Shoyu in literature. 2. Trademarks (p. 86): The change of trademark, the origin of the Kikkoman trademark. 3. Management of the organization (p. 91): Changes in organization, changes in management, changes in bookkeeping. 4. Production (p. 118): History of the method, raw materials, processes, containers, sauce, new seasonings, various kinds of sake. 5. The plant (p. 231): Noda plant, Kansai (Osaka-Kyoto area) plant, sake making plant. 6. Research center (p. 265): History of the research center, achievements. 7. Businesses (p. 269): Sales, wholesale, business customs, export, transportation, prices, advertising, business offices, overseas activities. 8. Labor (p. 375): Changes in labor conditions, the labor union, labor relations board. 9. Welfare (p. 393): Health insurance union, medical facilities, dormitories for single workers and company housing quarters, day care center, travel club, fire department, committee for funerals, weddings, etc. (*Kyozaikai*), athletic association, cultural committee, Noda Shoyu co-op.

IV. Pre-history–Before the company's establishment. 1. Natural and environmental history of Noda (p. 415). 2. Development of the shoyu industry in Noda (p. 432). 3. Family tree (p. 440). 4. Brief description of the major contributions (p. 448, incl. Kotohira Shrine, Kameo Mogi's theory of business, founding of the Senshu-kai, the man who emphasized thrift and simplicity, the 1st president of the company, the 2nd president–Mogi-Honke, the 3rd president Chu-do Kikkoman Kuramoto).

V. Company history. 1. Developmental stage and established stage (p. 469): Outline, foundation of the company, beginning of the business, developments and labor problems, overproduction and the business world. 2. The new order and the controlled economy during World War II (p. 494): Outline, changes during the war, process under controlled economy during the war. 3. The U.S. occupation period (p. 519): Outline, development of democracy, danger of the business world, changes caused by international conditions. 4. Development period of new Japan (p. 547): Outline, quickening of economic growth, advancing technology, a step forward to modernization, diversification of the business.

Appendixes: 1. Company time table (20 p.). 2. Charts and graphs concerning the company's history (5 p.). 3. Food history and shoyu (193 p., including many old illustrations, photos, a 38-page chronology of Japanese food culture {p. 137-75}, and a bibliography {p. 191-93}). Closing remarks (2 p.). Contains many photos, illustrations, and copies of early documents.

Note: Ichiyama is not listed in this book as the author, even though he wrote it. On the copyright page the author is given as Kikkoman K.K. Continued. Address: Noda, Japan.

2737. Kikkoman Shoyu K.K. 1968. Kikkôman Shôyu shi [History of Kikkoman Shoyu (Continued–Document part II)]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. [113 ref. Jap; eng+]

• ***Summary:*** The section on the beginning of shoyu exports (p. 76) states that the exporting of shoyu from Japan began when a group of merchants were allowed to do business after the closing of Japan during the Kan-ei era (1624-30) of the early Tokugawa period. In 1641 a group of Dutchmen moved to Nagasaki from Hirado. At that time, two merchants already in business were allowed to conduct trade: Their names were Koyanagi Heizaemon and Sameya Hisazaemon. They established a stock company with 16 shares. The shareholders were called *Dejima shoshiki urikomi shônin.* To the original two merchants, in 1653 four more were added and in 1666 ten more were added, making a total of 16. These were called the "Comprador Merchant Guild" (*Konpura Nakama*). They started exporting shoyu from Japan. According to documents in the Hague: 1668–It was exported to Coromandel on the southeast coast of India. 1670–To Ceylon. 1699–To Ceylon, Bengal, and Nakabatanam. 1716–To Coromandel. 1717–To Suratt, in northwest India. Furthermore, the Dutch took shoyu to Europe. So we can see that in the late 1600s and early 1700s the people of Europe started to use shoyu.

The section on exports (p. 294-99) states that it is difficult to tell when shoyu from Noda was first exported from Japan. In 1879 a person named Domoto (?) got one Kikkoman brand and its logo (in the shape of a hexagon, but not the current Kikkoman logo) registered in California, and then he started to sell the product there. In about 1899

© Copyright Soyinfo Center 2013

the Saheiji MOGI family's Kikkoman brand shoyu began to be exported to Hawaii via Okada-shoten, a company with offices at Koamicho 3-5 in Tokyo. In 1907 the Verleysen-Nyssens company in Brussels, Belgium, began to import shoyu in large kegs. They repackaged it in grey ceramic bottles of their own design, then published a pamphlet in French (see p. 295) describing the product (which they called "Soya") and showing a photo of two sizes of bottles. A 1.2 liter bottled retailed for 1.75 francs. Page 296 shows a gift coupon from the year 1922 from America. When a person buys a bottle of shoyu, he or she gets this $0.50 coupon.

Excerpts from Appendix 3 (p. 152+): Chronology of food history. 1610–Tamari was made in Nagoya using only soybeans when the Nagoya Castle was built. 1615–Dried nori sheets invented in Edo.

1616–Shoyu started to be made in Choshi, Shimousa.

1661–Takanashi (1661) and Mogi (1662) families in Noda started to make shoyu and miso.

1666–Usukuchi shoyu started to be made in Tatsuno, Hanshu / Banshu by a certain man. And Bizen shoyu started to be made in Bizen.

1698–Shoyu wholesaler (*tonya*) first appeared in the literature in *Sonazaki Shinju,* by Chikamatsu Monzaemon.

1781–Kanro shoyu starts to be made. Mr. Takada offered shoyu to Yoshikawa-ko and received the admiration / appreciation of *kanro* ("sweet dew").

1810–Choshi Shoyu received the *gozengoyô* Tanaka-gen han bakufu.

1829–The Takanashi house of Noda received the Bakufu's order for shoyu (*goryomaru*). Address: Noda, Japan.

2738. Matsushita, Ryuichi. 1968. Tôfuya no shiki: Aru seishun no kiroku [The four seasons at a tofu shop: The record of a young man]. Tokyo: Kodansha. 313 p. 20 cm. [Jap]

• ***Summary:*** The author, a tofu maker and waka poet, gives a poetic description of his daily life, throughout the year, in a tofu shop. Address: Tokyo, Japan.

2739. Uphof, Johannes Cornelis Th. 1968. Dictionary of economic plants. 2nd ed., revised and enlarged. West Germany: Verlag von J. Cramer. 591 p. See Glycine max, p. 246. 25 cm.

• ***Summary:*** Lists briefly the many food, industrial, and feed uses of the soybean. For example: "Seeds are source of an oil, made into glycerine; used in enamels, varnishes, paints, waterproof goods, linoleum, hard soaps, liquid shampoo, paste soap for hospital use, oil cloth, used in metal moulding, foundry cores; used with rubber for manuf. mats, hose etc., rubber substitutes, lubricant, in printing inks. When refined used for cooking, salads, margarine, shortening." Address: Tampa, Florida. Emeritus Prof. of Botany. Formerly faculty member of the Michigan State Univ. and State Univ. of Arizona. Economic botanist to the Board of Economic Warfare, Washington, DC.

2740. Watanabe, Tokuji. 1968. Advanced technology in non-fermented soybean foods in Japan. *JARQ* (*Japan Agricultural Research Quarterly*) 3(4):9-13. [7 ref. Eng]

• ***Summary:*** A landmark article, filled with new and accurate information. Contents: Introduction. Tofu and derived foods: Fresh tofu (incl. "momen tofu," "kinugoshi," and "packed tofu." Glucono-delta-lactone has been known for the past several years as a coagulant for kinugoshi and packed tofu), aburage ("Thin sliced tofu"), kori-tofu (also called "dried tofu" it is made by freezing hard fresh tofu). Soybean protein concentrates: Dried soybean milk, 70% protein concentrates, soybean protein curd. Isolated soybean protein. Soybean protein fiber (a thick solution of alkaline isolated soybean protein is forced through spinnerettes into a batch consisting of an acid and salt mixture). Conclusion.

Note. This is the earliest English-language document seen (April 2013) that uses the term *momen* refer to a type of tofu.

Each year about 2,000,000 metric tons of soybeans are consumed in Japan. Most of these are imported from the United States or Communist China. Of this total, about 1,300,000 metric tons are crushed to make soybean oil and meal; about 75% of defatted soybean meal is fed to animals. Of this total, one million metric tons (included a portion of the defatted soybean meal) are used by the food industry to make human foods and condiments.

Although the demand for soybeans in Japan is increasing steadily, domestic production is decreasing, largely because imported soybeans are less expensive.

Traditional Japanese fermented soybean foods include miso, soysauce, and natto. Traditional non-fermented foods include tofu, aburage, koritofu, and kinako. Moreover a number of new foods or food materials are derived from defatted soybeans; they can be used in fish and meat products.

In fresh tofu, a nitrofuran derivative is permitted to be added as a preservative in amounts up to 5 parts per million.

Kinugoshi is made by mixing thick soybean milk at about 70ºC with calcium sulfate suspended in water in a box which has no holes. The milk coagulates into a homogeneous gel without separation of curds and whey.

Packed tofu is made by mixing cold thick soybean milk with a calcium salt in sausage-shaped plastic film bags. Each bag is then sealed closed and immersed in hot water at 90º C for 40 minutes. The soybean milk coagulates into a homogeneous gel like kinugoshi. "Packed tofu is more sanitary, transportable and preservable than momen or kinugoshi."

In some modern factories, aburage is made on a larger scale than momen tofu, using a continuous deep-fryer. There are more than 10-20 aburage factories in Japan which

© Copyright Soyinfo Center 2013

consume at least 600 kg of soybeans per day.

A detailed description of the process for making kori-tofu is given. Several kori-tofu factories consume at least 10 metric tons of soybeans a day.

Small photos show: (1) Fresh tofu soaked in cold water ready to be sold. (2) Continuous manufacture of packed tofu (made with GDL). (3) Equipment for making packed tofu from spray dried soybean milk. (4) Continuous deep-frying equipment for making aburage. (5) Bird's-eye view of a large-scale kori-tofu factory. (6) Soaking tofu cakes in cold water for pre-cooling and removing excess calcium chloride in making kori-tofu. (7) Continuous freezing of cut tofu cakes in making kori-tofu.

Flow sheets show: (1) Kori-tofu making. (2) Fresh tofu making. Address: Head, Food and Nutrition Div., Food Research Inst., Japan.

2741. Lee, Elinor. 1969. Elinor Lee's notebook: Sufu on rye? *Washington Post, Times Herald.* Jan. 30. p. D1.
• ***Summary:*** "If someone should ask you about Sufu don't be caught short. Tell them Sufu comes from Tofu, and the Chinese have known about it for centuries." And you can tell them that Sufu may soon be available in flavors such as garlic, wine, or vinegar.

"Sufu [fermented tofu] is a soybean cheese made from Tofu, a soybean curd." The Chinese have been making it for centuries. Recently a Taiwanese scientist has found a way to make Sufu without a beany flavor. And a USDA scientist says Western flavors can be added.

2742. Kawashima, Masao. 1969. Kôri-dôfu seizô gijutsu no kindaika to kogaku no ôyô [Modernization of and application of engineering to dried-frozen tofu production techniques]. *Shokuhin Kogyo* (*Food Industry*) 12(2):41-51. Jan. Illust. [Jap]
Address: Habutae Tofu K.K.

2743. Saio, Kyoko; Koyama, Emiko; Yamazaki, S.; Watanabe, T. 1969. Protein–calcium–phytic acid relationships in soybean. III. Effect of phytic acid on coagulative reaction in tofu-making. *Agricultural and Biological Chemistry* 33(1):36-42. Jan. Reprinted in English in Shokuryo Kenkyusho Kenkyu Hokoku 25:181-88 (1970). [9 ref]
• ***Summary:*** Phytic acid, which is naturally present in soybean seeds, or when added to soybean milk, had significant effects on the physical properties of prepared tofu-gel. The higher the content of phytic acid in soybean milk, the slower the coagulative reaction between soybean protein and calcium; a slow reaction is favorable for tofu gel formation. Address: 1&4. Food Research Inst., Ministry of Agriculture & Forestry, Fukugawa, Koto-ku, Tokyo, Japan; 2-3. Japan Tofu Assoc.

2744. **Product Name:** [Tow-foo-fah (Oboro), and Soymilk].
Manufacturer's Name: Super-Soy Specialty.
Manufacturer's Address: No. 19, Jalan Dato Teoh Siew Khor, Kluang, Johor, West Malaysia. Phone: 07-717558.
Date of Introduction: 1969. January.
New Product–Documentation: Form filled out by Richard F.C. Chan. The business was started on 1-9-1969. He uses 100 lb/day of soybeans. His business card describes him as a "Soycrafter. Soyfoods–Natural and Health Giving."

2745. *Washington Post, Times Herald.* 1969. Tofu: Anne's reader exchange. Feb. 13. p. D2.
• ***Summary:*** Describes how to make (at home) "soybean curd or Tofu from soya milk, canned or homemade," using lemon juice as a coagulant.

Also gives a very short recipe for making "soya milk from beans" at home.

2746. **Product Name:** Hinode Broiled Tofu.
Manufacturer's Name: Matsuda & Hinode Tofu Company.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013.
Date of Introduction: 1969. February.
Ingredients: Water, soy beans, 1/10 of 1% calcium sulphate, 1/10 of 1% soy oil and food grade lime.
Wt/Vol., Packaging, Price: 6 oz.
How Stored: Refrigerated.

New Product–Documentation: Label. 1979. 5.25 by 4.25 inches. Plastic film. Yellow and red on clear plastic film. Yaki-dofu written in Japanese characters on both sides.

Ad in Soyfoods. 1982. Winter. p. 51. "Tofu Has Been our Business for 39 Years." Shows: Hinode Yaki or Broiled Tofu (Grilled). Talk with Shoan Yamauchi. 1988. Oct. 23. This product was introduced at the time they moved into their present plant at 526 Stanford Ave. in Los Angeles,

Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi* (*J. of Food Science and Technology*) 15(7):290-96 (1968). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

2751. Spilsbury, Calvin C. 1969. Three stages in Far East soybean markets. *Foreign Agriculture.* April 14. p. 6-8.
• ***Summary:*** Today soybean markets in the Far East, the original home of the soybean, have emerged from time-honored Eastern patterns and have differentiated into what may be called three types–traditional, transitional, and industrial. In traditional markets soybeans continue to be sold and used chiefly for human protein foods, and volumes traded are comparatively small. Also, volumes processed by modern methods are small. Transitional markets are characterized by larger volume, the modern processing of considerable quantities of soybeans for oil for human consumption, and the developing use of soybean meal for human food products and for high-protein animal feeds for emerging livestock and poultry industries. In industrial markets very large quantities of soybeans are efficiently imported, marketed, and processed for oils and fats for human use and for meal for vigorous livestock industries; at the same time soybeans are still used in traditional foods and soybean meal is used to make a variety of new food products.

Korea is a traditional soybean market. Nearly all soybeans are processed into human protein foods such as synthetic milk, flour, paste for soup [miso], curd for consumption in more solid form, mash, sprouted beans, soy sauce, and even fermented "cheese". About 60 to 70% of the domestic crop of about 200,000 tonnes annually is sold in the country's food markets directly to private and commercial consumers. Total imports in 1968 were 28,000 tonnes–all from the U.S.

Most processing of soybeans for human use is done in individual homes by housewives. For example, nearly every Korean family makes a product known as kochojang, or hot bean mash, which consists of powdered, fermented soybeans mixed with red pepper, salt, and water. Some foodmaking (soybean curd and soy sauce) is organized into cottage industry. Most of the soybeans imported from the U.S. are made into traditional soybean foods for rations for the Korean army by one large food factory. Crushing soybeans and other oilseeds for oil is done by about 100 small mills throughout the country. The estimated capacity of all the mills added together is about 200,000 tonnes per year of oilseeds of all types. The largest mills have capacities less than 25 tons per day.

In Taiwan, very little of the imported soybeans are used to make traditional Far East foods. The larger crushing and extraction facilities are clustered around large cities–Taipei, Taichung, Tainan, and Kaohsiung. Only the last is a port, and even there no mills are located on deep water. Imported soybeans are discharged by ships' equipment onto docks, where they are bagged and then stored. Bagged beans are sent by truck or rail to inland processing plants. Modern deep-water bulk discharge facilities are to be built at Kaohsiung along with storage for soybeans and grain.

Japan is the giant of Far Eastern markets for U.S. soybeans. One of the most important recent improvements in soybean logistics has been the development of modern deepwater grain and soybean terminals where soybeans can

© Copyright Soyinfo Center 2013

be rapidly discharged from ships' holds directly to storage, interim transportation, or crushing mills. The first fast-discharge elevator on deep water for soybeans or grain was built by an American-Japanese company. At present four terminals have been built in the Tokyo and Kobe areas, and two more are under construction. Unloading is accomplished by pneumatic suction tubes with capacities of 600 to 800 tons per hour (about 6,000 tonnes per 8-hour day). In Korea and Taiwan, facilities for the fast unloading of large tankers do not exist. Many large, new crushing mills have been built on harbor frontage rather than inland so that they can benefit from bulk transportation methods. The annual capacity of the 15 large, modern mills in Japan is estimated at 1.8 million tons of soybeans. The first mills in Japan were in the mountains because most oilseed crops were grown there. Address: Fats and Oils Div., Foreign Agricultural Service.

2752. Banzon, Julian; Steinkraus, Keith H. 1969. How to use soybeans from your garden. College of Agriculture, University of the Philippines. 5 p. Mimeographed circular. Distributed through Los Banos Extension Dept.
• ***Summary:*** Introduction (the importance of protein, of which soybeans are a good source). How to grow soybeans in the Philippines, by Richard Bradfield of IRRI. How to make soybean milk and other nutritious soybean foods: Steamed green soybeans, mature dry soybeans, soybean milk, tokua–soybean curd, taosi (soybeans fermented with *Aspergillus oryzae* mold), tempeh.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the word *taosi* to refer to fermented black soybeans. Address: 1. Prof. of Chemistry; 2. Visiting Prof., Microbiology and Food Science. Both: Univ. of the Philippines, College of Agriculture, Laguna, Philippines.

2753. Binding, George J. 1969. The soya bean–a vegetable full of body-building protein. *British Vegetarian.* March/April. p. 155-57.
• ***Summary:*** The "soya bean has the highest protein content of any vegetable. As such it is God's gift to man and is a must for vegetarians. In the Far East it is known as 'the meat of the soil.'" The author spent many years in East Asia, where he studied the foods of the region. Soya beans can be used to make a wide variety of foods; the author briefly describes the following: Bean shoots [soy sprouts], soya bean milk, bean curd or vegetable cheese [tofu], yuba, natto, miso, soy sauce, and boiled whole soybeans.

Since World War II, America has become the largest producer of soya beans. Before that war, England was one of the largest importers of soya beans in the world. "All vegetarians should make certain of a sufficient daily intake of protein. There's no more effective and satisfying way of doing so than eating soya beans." Address: M.B.E.

2754. Dosti, Rose. 1969. Happy holiday for Japanese. *Los Angeles Times.* May 8. p. H20.
• ***Summary:*** On April 29th, the Emperor of Japan celebrated his birthday, and wherever Japanese live there were banzai cheers. The hurrahs were especially loud in Los Angeles, for more Japanese-Americans live here than in any other part of the United States.

A photo shows Japanese Consul General Kanji Takasugi, with his wife, Shinako. They hosted a party for 800 guests honoring the Emperor's birthday.

The meal is described and recipes are given for tempura and its dipping sauce (*tentsuyu*), based on soy sauce, mirin and grated daikon (white radish). "Plain rice is served with a thin soup called omiso [miso soup] to which soy bean cakes (tofu) and green onion pieces are added."

2755. Hewitt, Jean. 1969. Proof of the pudding is in the making for these young cooks. *New York Times.* May 29. p. 52.
• ***Summary:*** Home economics students in New York City high schools are preparing international recipes–and bringing them to school. A recipe for Beef sukiyaki calls for "4 ounces bean curd (tofu), diced."

2756. *Guardian* (*England*). 1969. Japan: Sculptures from a hard-boiled egg. July 16. p. 16.
• ***Summary:*** A recipe for Sukiyaki calls for "½ lb tofu (bean curd) in 1-in. cakes." The dipping sauce includes "12 tablespoons shoyu." Three suppliers of Japanese food products in London are listed. Mikadoya has two locations and Cydilda has one.

2757. Hansen, Barbara. 1969. Sukiyaki with a Yankee accent: 'Better than Japan version.' *Los Angeles Times.* July 17. p. F1.
• ***Summary:*** Taro Yashima, of East Los Angeles, is an artist who likes to cook sukiyaki, which he likes better than the traditional Japanese dish. In it he uses three types of tofu: regular tofu (packed with water in 12 oz blocks), age tofu ("puffy, French fried soy bean cakes"), and koya tofu ("which is labeled as frozen tofu"). "The frozen tofu is actually a dried product and is found on market shelves, not in the freezer." He uses 4 slices of koya tofu, split lengthwise. A photo shows Mr. Yashima making his style of sukiyaki.

2758. **Product Name:** Tofu Cheesecake or Tofu Pie.
Manufacturer's Name: Caldron's Well.
Manufacturer's Address: 308 E. 6th St., New York, NY 10014. Phone: 212-473-9543.
Date of Introduction: 1969. August.
How Stored: Refrigerated.
New Product–Documentation: *New York Times.* 1977. "Jewish Vegetarian Restaurants." Sept. 14. p. C4. The

© Copyright Soyinfo Center 2013

Caldron is a Jewish macrobiotic restaurant and store at 306 East Sixth Street (between First and Second Avenues), run by Martin and Gloria Schloss. Telephone: 473-9543. One of the popular recipes served is "beancurd pie" [tofu cheesecake]. "Caldron's Well, the restaurant's store, is next door at 308 East Sixth Street. It sells whole grains and flours, nut butters and other health foods as well as the desserts and breads served at the restaurant." Telephone: 533-2070.

Medoff, Marc. 1986. "A guide to the best tofu 'cheesecakes' in New York." *Whole Life*. April. p. 52-61. "And finally, the recently-gone-out-of-business *Cauldron* [Caldron] had a very good tofu cheesecake with fruit kanten topping, but it too is of course no more. Ah yes I have fond memories of those always snarling *Cauldron* waitresses literally throwing plates of tofu cheesecake in front of me as I ducked for cover. But hey, if I put up with such abuse for their tofu cheesecake, you know it had to be good. And it was."

Talk with Richard Sandler. 1992. May 26. The first tofu pie Richard ever saw was made by Danny Mount at The Caldron restaurant in New York City. Before working at The Caldron, Danny had worked at the Good Karma Cafe in San Francisco, California.

Talk with Murray Snyder. 1994. Sept. 19. When he thinks of early tofu desserts, Murray thinks of the cheesecakes made at Souen and at The Caldron–both in New York City. The Caldron was originally owned by a man named Marty Schloss, plus his wife, Glory, and mother, who were a good friend of Marcea Newman's. The Caldron had an extensive baking operation, and they may have made a tofu cheesecake even before Souen. Marcea would probably remember if The Caldron was known for making a cheesecake, and when and where they got the idea and recipe.

Letter from Marcea Newman Weber in Australia. 1994. Oct. "The Cauldron [sic, Caldron] (a restaurant in New York City started by Marty and Glory Schloss and his mother) also had a [non-dairy] cheesecake, which I think had tofu as a major ingredient and which was slightly different than mine. I remember trying to figure out how they made theirs but of course it was a trade secret. I'm not sure when their cheesecake was introduced. I remember seeing it either after I developed mine [in 1971], or at about the same time."

Talk with Richard Sandler. 1997. Sept. 16. "My first recollection of tofu cheesecake (or tofu pie) was 1969 in New York. The Caldron restaurant was started by Marty Schloss, his wife Glory, and his mother, Seena. I was the first cook at The Caldron; I set up the kitchen, the menu, the bookkeeping, etc. The Caldron first opened for business on 18 April 1969." About a month of two after The Caldron opened, its three founders started a natural-food grocery story and bakery right next door to The Caldron; it was named The Caldron's Well. Marty's mother, Seena, became the baker at The Caldron's Well roughly 6 months after April 1969. I think she invented and developed the tofu cheesecake that soon became very popular at The Caldron. A fellow named Danny Mount (who arrived after Richard and probably working with Seena) also made tofu cheesecakes at The Caldron. "I don't think Seena had any precedent for her discovery. My personal opinion is that, as in all great historical discoveries, there are often two or three people independently working on the same thing. It speaks to that fact that it is Nature that is producing this, speaking to a few minds. I firmly believe that. This is definitely my first recollection of seeing or tasting a tofu cheesecake anywhere."

2759. Sakurai, Yoshito. 1969. Fundamental investigation of evaluation of United States soybean and processing conditions for manufacture of dried tofu, to increase the use of United States soybean in Japan and other countries: Final report of research conducted under grant authorized by Public Law 480 for the U.S. Department of Agriculture Sept. 1966–Aug. 1969. Tokyo: Japan Frozen Tofu Association. 68 + [59] p. No index. 30 cm. Project no. UR-A11-(40)-32. Grant no. FG-Ja-124. Report period Sept. 1966–Aug. 1969. [Eng]

• ***Summary:*** Contents: Summary. Introduction. 1. Effect of processing conditions on the quality of final product in kori-tofu manufacturing. 2. Soybean protein denaturation by freezing. 3. Difference in physical properties of fresh-tofu and kori-tofu prepared from 7S and 11S soybean protein components. 4. Evaluation of soybean varieties as a material for kori-tofu making. 5. Studies on the browning of kori-tofu. 6. Texture changes of cooked kori-tofu: Influence of storage conditions of kori-tofu. 7. Studies on the development of swelling and elastic softening properties of rehydrated kori-tofu. Conclusion. Note Yoshito Sakurai was born in 1905. Address: Tokyo, Japan.

2760. Spilsbury, Calvin C. 1969. The U.S. soybean market in the Republic of China (Taiwan). *USDA Foreign Agricultural Service*. FAS M-209. 20 p. Aug. Summarized in Soybean Digest, Nov. 1969, p. 52.

• ***Summary:*** Contents: Foreword, by Howard A. Akers. Introduction. The market. The oilseed crushing industry: Organization and mill location, number and type of mills, crushing capacity. Soybean oil and foods: Soybean meal demand for swine, soybean meal demand for poultry. Domestic oilseed supplies: Soybeans, peanuts, rapeseed, sesame, minor oilseeds. Marketing: Discharging and handling facilities, freight costs, government controls, purchasing, credit, quality problems, crushing margins wide. Appendix: Directory of major soybean and oilseed crushing mills, by region.

The Foreword notes: "This small island made near-phenomenal strides in both agriculture and industry in the late 1950s and early 1960s, and by the mid-1960s was

© Copyright Soyinfo Center 2013

recognized as a growing dollar market for U.S. soybeans and soybean products." In 1965 Taiwan moved from aid to trade status. In 1966 soybeans were removed from controls, and with the booming economy of 1967-68, imports of soybean from the USA–all paid for in dollars,–leaped to record levels.

Today, Taiwan has one of the world's highest economic growth rates. Since the end of World War II, and especially since 1955, the Taiwan oilseed crushing industry has undergone a complete technological transformation. The country now boasts 36 solvent extraction plants, many of them with modern continuous systems.

In Taiwan today, per capita consumption of soybeans for food is estimated at around 5½ pounds/year, compared with about 4 pounds in 1958. Soybean oil is now Taiwan's major source of edible fats and oils; per capita consumption is about 6 pounds/year compared with 4 pounds/year for peanut oil. Total per capita vegetable oil consumption is about 12 pounds/year. Per capita consumption of animal fats is 6-8 pounds/year.

Domestic production of soybeans rose from 4,000 metric tons (tonnes) in 1935-39 to 72,997 tonnes in 1968. Historically, imports of soybeans and soybean products have been large. In 1938 over 45,000 tonnes of soybeans and about 164,000 tonnes of soybean cake were imported, mainly from Manchuria.

In 1950, Taiwan's vegetable oil crushing industry was first organized into a trade association by a group of 20 crushers using screw presses. By 1967 some 86 crushers were members; this included 35 solvent-extraction operators. Known today as the Taiwan Regional Association of Vegetable Oil Expelling and Refining Industries, the group is located at 82 Nan Yuan Street in Taipei. Today in Taiwan there are 99 oilseed crushing mills with a total crushing capacity of 1.3 million tonnes–up from only 400,000 tonnes in 1954-55.

As in many countries of East Asia, the Taiwanese consumer has a taste preference for crude peanut oil, sesame oil, and rapeseed oil, in that order. For this reason, soybean oil is often marketed as a blend with peanut or rapeseed oil.

The soybeans required for the manufacture of bean curd [tofu], soybean paste [jiang], [soy] sauce, milk, and other foods are largely produced domestically. In 1969 an estimated 40,000 tons of soybeans will be required for bean curd and 3,000 tons for soybean sauce. "In the rural areas of Taiwan, soybean milk cooperatives have been organized under government auspices. Members use their own soybeans and make their soybean milk at common soybean milk shops."

A map (p. 9) shows the island of Taiwan, each of its prefectures, and where each of four oilseeds (soybeans, peanuts, rapeseed, sesame) are produced. Tables show: (1) Production of four oilseeds in Taiwan from 1965-1968. Peanut production decreased from 88,000 to 74,000 tonnes. Soybean production increased from 66,000 to 73,000 tonnes but was still No. 2 after peanuts (p. 8). (2) Taiwanese soybean production, imports, and utilization from 1955 to 1968 (p. 11). Address: Fats and Oils Div.

2761. Funchess, William H. 1969. Soybeans saved my life. *Soybean Digest.* Sept. p. 32-33.

• ***Summary:*** He was captured on November 4 [probably in 1950]. The snow began falling the day after he was captured by the Communists in North Korea. Just before he was captured, he had been shot by a machine gun, so every step was like walking on nails. He had already seen the Communist Chinese shoot and kill one of his men who could not walk. After several days of walking in the freezing cold, wearing only light clothing, he and the other American POWs finally reached a temporary prisoner of war camp. "Snow covered the ground and the temperature was 10 to 20 degrees below zero. Thirty-six of us were assigned to a mud house that has a straw roof, dirt floors, paper windows, and no heat. There was a bundle of dried corn stalks for bedding."

One day he noticed soybean stubble extending several inches through the snow. He found a stick, hobbled out to the small soybean field near his hut, pried out the soybeans from the frozen ground, and collected them one by one in his pocket. When the guard left his fire, Funchess placed the beans on a piece of tin in an effort to roast them. When he saw the guard returning, he would grab his beans and move out of sight. Occasionally, however, when he was not quick enough, his beans were kicked into the fire.

He had never eaten soybeans before but he knew they had a high protein content and would sustain life, so he determined "to acquire as many of those little life-giving nuggets as possible."

His daily rations were a cupful of cooked millet or corn that he got twice a day. He received no additional water from Nov. 4 until sometime in February. But he could eat snow–if he could stand the stomach cramps that followed.

He did not get a grain of salt or any meat for nearly 5 months. By that time, however, the Communists would occasionally throw several handfuls of soybeans into the pot of millet. He was so hungry and thin that those soybeans tasted better than anything he had ever eaten. But many of his fellow prisoners died of starvation. His weight dropped to 105 pounds. He and his friends knew they had to improve their diet.

When he was made to carry bags of soybeans, he learned to "accidentally" tear the bags and fill his pockets during every work detail. Occasionally he found earthen jars of fermented "soybean paste" [miso]. It did wonders to the millet seed that he was constantly eating.

After the peace negotiations began [on 10 July 1951], some 8-9 months after he was captured, their food supply improved. Whole dry soybeans were added to the rations. First they tried boiling the beans in water; they enjoyed them

© Copyright Soyinfo Center 2013

seasoned only with salt. Then they cracked the soybeans and mixed them into their millet or rice. After a while they began to grow soybean sprouts, which they found very tasty–and when he enjoys to this day.

Finally they learned to make a product some of the men called "Tofu." The Communists gave them a coagulant, They added a small amount of tofu to everything they cooked–and he began to feel his strength returning. Then they learned to make soybean milk, which they also liked if they were careful not to scorch it. It was so rich, however, that they soon learned to drink only a few ounces at a time.

"Eventually a small amount of soybean oil was provided for cooking purposes... A small dish of oil and a cotton wick made an excellent light at night."

"Soybean oil worked well, too, for chapped hands. Some of us even found that it made pretty good hair tonic.

"While a prisoner of war I learned to appreciate the soybean for its life-giving characteristics. To me, the soybean became not a "way of life" but a "way to sustain life." Needless to say, I gained great affection for the little yellow bean that helped keep us alive in the prisoner of war camps of North Korea.

"Each fall at harvest I still collect some soybeans to roast. I always take great delight in offering roasted beans to my friends. Most people will accept only a few, but I can still sit down and enjoy them by the pocketful."

A portrait photo shows William H. Funchess. Address: County Agent, Allendale, South Carolina.

2762. Saio, Kyoko; Kamiya, M.; Watanabe, T. 1969. Food processing characteristics of soybean 11S and 7S proteins. I. Effect of difference of protein components among soybean varieties on formation of tofu-gel. *Agricultural and Biological Chemistry* 33(9):1301-08. Sept. Reprinted in English in Shokuryo Kenkyusho Kenkyu Hokoku 25:189-97 (1970). [10 ref]

• ***Summary:*** It was showed that the 11S and 7S protein fractions could contribute to the textural characteristics of tofu. Tofu made from crude 11S protein was much harder than tofu made from 7S protein. The crude 11S fraction contributed greatly to the springiness, chewiness, and gumminess of tofu. Address: 1&3. 2765. VJG. 1969. Advanced technology in non-fermented soybean foods in Japan, by T. Watanabe. *Food Science and Technology Abstracts* 1(10):1236. Oct. [1 ref]

• ***Summary:*** This is a summary (by VJG) of an article that appeared in *Japan Agricultural Research Quarterly* 3(4):9-13 (1968) [7 refs., Eng.].

The article discusses: "Preparation of fresh tofu, aburage (dehydrated and deep-fried tofu slices) and kori-tofu (frozen fresh tofu). Composition and methods of preparation of soybean protein concentrates (dried soybean milk, 70% protein concentrates, soybean protein curd),..."

Note 1. This is the earliest English-language document seen (April 2013) that contains the term "fried tofu slices" or the term "deep-fried tofu slices."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "frozen fresh tofu" to refer to dried-frozen tofu.

2766. Claiborne, Craig. 1969. New restaurant that offers Japanese fare. *New York Times.* Nov. 7. p. 54.

• ***Summary:*** At Daruma (310 Third Ave., between 23rd and 24th streets), the broiled eel and the teriyaki are excellent. "Even the sukiyaki, which is not cooked at the table as it should be, is above average in its seasonings, and there is an

© Copyright Soyinfo Center 2013

interesting dish called buta tofu [Pork tofu] made with pork and bean curd." There is also a sushi bar.

2767. Harrison, D.W. 1969. Analysis of the Uganda experience based on Africa Basic Foods Inc. Paper presented at United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use. 43 p. plus 6-page summary. Document: ID/WG.45/4. Held 17-21 Nov. 1969 at Peoria, Illinois.

• ***Summary:*** Africa Basic Foods (ABF) Ltd. was established in Uganda to develop soybeans as a food cash crop with small farmers, to produce and market low-cost soyfoods, and to educate the people about their value for good health. In 1965 ABF asked the Ministry of Agriculture at the Department of Agriculture at Makerere University to do research on soybean production. The company built a food factory 4 miles from Kampala, and by May 1966 was producing various soy-based foods, and marketed them throughout Uganda, especially to hospitals, schools, the government, and various institutions.

"The soya bean was introduced in Uganda from America and South Africa in 1938. Within a few years various varieties were tested and the crop distributed to the farmers. The crop increased in production as the demand from overseas grew during the wartime shortage of proteins in England.

"The highest acreage achieved during the Second World War was about 35,000 to 40,000 acres. After that time (about 1948) the acreage gradually dropped, due to lack of demand, to only a few thousand acres under cultivation by 1965.

"Since 1965, ABF Ltd. has been actively promoting the growth of soya beans. First, the Ministry of Agriculture initiated variety trials. Then in 1966 the University of Makerere Department of Agriculture started variety trials with over 50 varieties available. The crop production has grown very rapidly as the farmers heard of a local demand, and the price of 25 cents per pound (US¢ 3½). In 1968 about 12,000 to 15,000 tons were produced. A large share of this was used locally by the oil milling industry...

"Aside from the oil millers, there is an animal feed plant now operating in Uganda since about 1967, as well as our human food plant. The consumption from these two plants is small, about 352 tons and 120 tons respectively...

"Over 50% of the local production is perhaps exported."

By 1969 ABF was making the following (for each is given processing details, and the name and brand of equipment used): Roasted soybeans ground to a flour, soy milk sterilized in bottles (adapted from Dr. Harry Miller's method), soy cheese (tofu mixed with a little nonfat dry milk, curry, sage, and salt, packed into 1-inch diameter casings, pasteurized at 190ºF for 20 minutes, then cooled and refrigerated, p. 16-17), soy butter (like peanut butter, from soy flour, oil, sugar, and salt), soy bread mix (wheat flour fortified with 20% soy flour, plus sugar, nonfat dry milk, salt, and yeast), soy fortified maize flour (25% soy), school porridge, and soy porridge (soy fortified corn porridge).

Note: This is the earliest *published* English-language document seen (March 2007) that uses the term "soy cheese" to refer to a Western-style soy cheese.

In Dec. 1964 Dr. Harrison was hired by the government of Uganda, Buganda region, to serve as Director of Nutrition and Health Education, with emphasis on local, commercial production of high-protein foods (p. 28). Then ABF was registered in Uganda as a nonprofit corporation. Dr. Harrison and two of his government departmental employees "operate the entire scheme." Their salaries come entirely from the Uganda Government, so the government is to some extent helping to finance the project. The company has hired 3 other persons full time and one part time. They receive salaries from sales income. Address: President, Africa Basic Foods Inc., Kampala, Uganda.

2768. Teeter, Howard M.; Schaefer, Wilbur C. 1969. Food uses of soybeans: Research at the Northern Laboratory. *Soybean Digest.* Nov. p. 16-18. [3 ref]

• ***Summary:*** Contents: Introduction. Our research on edible soybean oil. Contributions to oil usage. Edible soybean meal and protein (soy protein foams for a stable whip). Soybean use in oriental foods: Tempeh, tofu, full-fat soy flour, extrusion cooking. Corn-Soya-Milk blend (CSM).

The use of edible soy products has been increasing at 5 to 7% per year. Address: NRRL, Peoria, Illinois.

2769. United Nations Industrial Development Organization (UNIDO). 1969. Expert group meeting on soybean processing and use. UNIDO Document ID/WG.45/3. Held 17-21 Nov. 1969 at Peoria, Illinois.

• ***Summary:*** Consists of ten papers by various authors, each cited and paginated separately. These proceedings were never published in bound form. Address: Vienna, Austria.

2770. Watanabe, Tokuji. 1969. Industrial production of soybean foods in Japan. Paper presented at United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use. 38 p. Document: ID/WG.45/3. Held 17-21 Nov. 1969 at Peoria, Illinois. [16 ref]

• ***Summary:*** Contents: Tofu and its industrial production: Process of tofu making, tofu production as an industry, equipment for tofu production, varieties of tofu, new materials of tofu, new types of tofu, aburage and other deep fried tofu.

Note 1. This is the 2nd earliest English-language document seen (April 2013) that contains the term "deep fried tofu" (regardless of hyphenation).

Kori-tofu and its industrial production: Process of kori-tofu making, kori-tofu production as an industry, equipment for kori-tofu production, distribution of kori-tofu, utilization of by-products.

© Copyright Soyinfo Center 2013

Yuba and its industrial production.

Kinako [roasted whole soy flour] and its industrial production. The Japanese word can be written either in hiragana or using two Chinese characters which mean "yellow flour." Kinako is made from whole soybeans. Sometimes the soybean hulls are removed before roasting. It is widely used as an ingredient in Japanese confections [such as kinako mochi or Abekawa mochi (toasted mochi in kinako); it was traditionally sold along the banks of the Abekawa River in Shizuoka, Japan]. About 12,000 metric tons of soybeans are used per year in making kinako.

New soybean food materials and their industrial production: New soybean food materials, usage of new soybean food materials, future of new soybean foods, other food uses of soybeans.

Natto and its industrial production: Process of natto making, equipment for natto production, natto production as an industry.

Miso and its industrial production: Varieties of miso, Process of miso making, miso production as an industry, industrialization of miso making, distribution of miso, future prospect of demand for miso, mycotoxins and fermented soybean foods.

Shoyu and its industrial production: Process of shoyu making, shoyu production as an industry, nitrogen utilization ratio in shoyu making, special shoyu.

Figures show: (1) Flow sheets of production of traditional soybean foods in Japan: Tofu, kori-tofu, yuba, kinako, natto, miso (with koji), shoyu. (2) NK-type soybean cooker (by courtesy of Kikkoman Shoyu Co. Ltd.). (capacity: 1 metric ton of defatted soybean meal). (3) (3) Continuous cooker of soybean meal (by courtesy of Yamasa Shoyu Co. Ltd.). (capacity: 1 metric ton of defatted soybean meal per hour).

Photos show: (1) Tofu soaked in water for sale. (2) Large-scale tofu factory (by courtesy of Tokyo Tofu Co., Ltd.). (3) Continuous cooker of ground soybeans (by courtesy of Masuko Sangyo Co., Ltd.). (4) Decanter, a kind of continuous centrifuge (by courtesy of Kokusan Seiko Co., Ltd). (capacity: 3,000 kg of ground soybeans per hour). (5) Factory of packed tofu from spray-dried soybean milk (by courtesy of Nippon Tanpaku Kogyo Co., Ltd.). (6) Continuous deep-fryer of aburage (by courtesy of Iwase Tekkosho Co., Ltd). (capacity: 1,000 to 1,500 pieces per hour). (7). Daiya Kori-tofu (Left one in the dish is swollen by hot water). (8) Bird's-eye view of large scale factory of kori-tofu (by courtesy of Misuzu Tofu Co., Ltd). (capacity: 10 to 15 metric tons of soybeans per day). (9) Soaking of large cake of tofu for precooling during making of kori-tofu (by courtesy of Misuzu Tofu Co., Ltd). (10) Continuous freezing equipment used in making of kori-tofu (by courtesy of Misuzu Tofu Co., Ltd). (11) Continuous thawing apparatus of frozen tofu (by courtesy of Misuzu Tofu Co., Ltd). (capacity: 10,000 to 15,000 pieces per hour). (12) Yuba plant (by courtesy of Ohara Co., Ltd). (13) Natto mixed up by chopsticks. (14) Inside of fermentation room for natto making (by courtesy of Suzuyo Kogyo Co., Ltd). (15) Two brands and varieties of miso, both in plastic bag and on dish. (16) Rotary cooker of soybean (by courtesy of Hinode Miso Co., Ltd). (capacity: 1 metric ton of soybeans). (17) Continuous rice cooker (by courtesy of Hinode Miso Co., Ltd). (capacity: 1.5 metric tons of rice per hour). (18) Rotary koji fermenter (by courtesy of Miyasaka Miso Co., Ltd). (capacity: 1.8 metric tons of rice in each fermenter). (19) Pasteurizer of miso (by courtesy of Nagata Machinery Co., Ltd). (capacity: 1 metric ton of miso per hour). (20) Fermentation tank of moromi [mash] (by courtesy of Kikkoman Shoyu Co., Ltd). (capacity: 1.5 metric tons of rice per hour). (21) Shoyu in large glass bottle and smaller plastic container. (22) (22) Large-scale koji fermenter (by courtesy of Yamasa Shoyu Co., Ltd).

Concerning natto: The surface of each natto "soybean is covered with a viscous sticky substance, which has the property of forming long stringy threads when mixed up (Photo 13). The longer the strings, the better the quality of natto." The texture of the cooked soybeans is softened by the enzymes of *Bacillus natto.* About 50,000 metric tons of soybeans are used each year to make natto. It is most popular in northeastern Japan (Tohoku region). Natto is fairly perishable, and excess ammonia will be produced by overfermentation. There are about 1,300 plants that make natto in Japan; the average plant consumes about 100 kg/day of soybeans. Recently, however, large, mechanized factories that consume 2-3 metric tons/day of soybeans have been constructed. From 10 kg of whole dry soybeans about 18 kg of natto can be made. One package of natto containing 100 gm costs 15-20 yen (about 4-6 cents U.S.).

Note 2. This is the earliest English-language document seen (Jan. 2012) that uses the word "sticky" to describe natto. Address: Food and Nutrition Div., Food Research Inst., Ministry of Agriculture & Forestry, Tokyo, Japan.

2771. Loring, Kay. 1969. Hancock cafe not ready, but others have fine view. *Chicago Tribune.* Dec. 7. p. F5.

2774. Shurtleff, William. 1969. The Tassajara food trip. Tassajara, California: Published by the author. 63 p. Dec. 28 cm. [8 ref]
• ***Summary:*** Each of the 167 recipes is numbered, all show a strong natural foods influence, and many show a macrobiotic influence. Soy-related recipes include: 60. Fresh daikon nitsuke with miso. 74. Squash in miso-tahini sauce. 76. Nori with tamari. 77. Basic soybean preparation. 78. Soybeans with hijiki. 79. Soybeans with hijiki and tahini (with miso). 80. Soybeans sauteed in miso. 81. Soybeans with lentils and buckwheat flour. 82. Soybeans with carrots and lentil sprouts. 83. Soybeans with dried daikon. 84. Soybean stew. 85. Broiled soyburgers. 86. Roasted soybeans. 87. Tofu sauteed. 96. Miso soup with tofu, carrots, burdock and mushrooms. 97. Miso soup with wakame. 98. Wakame soup with tofu. 99. Soy sauce & lemon soup. 101. Thick lentil soup with miso. 102. Thick lentil soup with miso & vegetables sauteed. 103. Lentil soup with miso and parsley garnish. 105. Aduki/azuki bean soup with miso. 107. Thick split pea soup with miso & vegetables. 110. Navy bean soup with miso. 115. Mushroom soup with dried tofu.

119. Misozuke pickles. 120. Kombu pickled in miso. 122. Bancha with tamari. 123. Kuzu cream with tamari. 125. Ume-syo-kuzu (with umeboshi, tamari and kuzu). 131. Basic soybean spread. 133. Lentil miso spread. 135. Garbanzo and miso spread. 138. Muso (miso-tahini) spread. 139. Peanut butter & tamari spread. 142. Peanut butter, miso, apples, carrot and parsley spread. 161. Sesame tofu (no soy). 163. Nut and seed loaf with miso.

San Francisco's largest natural foods store was New Age Natural Foods, 1326 Ninth Ave. run by Fred Rohé [Rohe]. Also recommended are The Food Mill, 3033 MacArthur, Oakland [founded in 1933 by John Denis, Sr.]; and Chico-San, P.O. Box 1004, Chico, California. Selling Spiral Foods miso and tamari in bulk; The General Store, 5th and Junipero in Carmel.

Note 1. This is the 2nd earliest document seen (Nov. 2010) concerning the work of William Shurtleff with soyfoods. He wrote the book on a typewriter while practicing at Tassajara Zen Mountain Center, made about 30 photocopies, and sent them to friends as Christmas presents. He did not meet Akiko Aoyagi until 25 Dec. 1971 in Tokyo, Japan.

Note 2. This is the earliest document seen (Dec. 2004) in the SoyaScan database concerning or under the subject heading "Soyfoods Movement." Address: Zen Mountain Center, Carmel Valley, California.

2775. **Product Name:** Tofu Sausages.
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: Tofu 96%, nonfat dried milk 2%, salt 1.0%, MSG 0.5%, curry powder 0.3%, sage 0.2%.
Wt/Vol., Packaging, Price: Packed into 1 inch diameter casings.
How Stored: Refrigerated.
Nutrition: Protein 15%, moisture 65%.
New Product–Documentation: Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 16-17. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982. The product was pasteurized at 190ºF (88ºC) for 20 minutes in the casings, cooled, and refrigerated.

2776. **Product Name:** Aburage.
Manufacturer's Name: Aloha Tofu Factory Inc.
Manufacturer's Address: 1020 Auahi St., Honolulu, Oahu, HI 96814.
Date of Introduction: 1969.
New Product–Documentation: Hawaii Directory of Manufacturers. 1969. p. 16. They make tofu and aburage.

2787. Pak, K.H.; Han, K.C. 1969. An analysis of food consumption in the Republic of Korea, 1964-1967, with projective trends, 1968-1971. Seoul, South Korea: Yonsei University. *
• ***Summary:*** A table shows production and food use of beans and consumption of some soybean products from 1964-1967 (reprinted in Wang 1976, p. 56-57). Bean production (see footnote) was 190,000 metric tons (tonnes) in 1964, increasing to 203,000 tonnes in 1965, then to 236,000 tonnes in 1967, with 361,000 tonnes projected for 1971.

The amount of soybeans used for food was 94,000 metric tons (tonnes) in 1964 (49.5% of the soybeans produced), increasing to 104,000 tonnes in 1965, then to 134,000 tonnes in 1967 (56.7% of production), with 206,000 tonnes projected for 1971 (57.1% of the soybeans produced).

Consumption of bean curd [tofu] was 223,000 metric tons (tonnes) in 1964, increasing to 243,000 tonnes in 1965, then to 290,000 tonnes in 1967.

Consumption of soybean sprouts was 227,000 metric tons (tonnes) in 1964 (1.8% more than tofu), increasing to 240,000 tonnes in 1965, then to 270,000 tonnes in 1967 (93.1% as much as tofu).

Consumption of bean sauce [soy sauce] was 57,400 metric tons (tonnes) in 1964, increasing to 61,000 tonnes in 1965, then to 69,700 tonnes in 1967.

Consumption of bean paste [Korean-style miso] was 22,900 metric tons (tonnes) in 1964, increasing to 24,300 tonnes in 1965, then to 27,700 tonnes in 1967 (only 39.7% as much as soy sauce).

Footnote: Based on the average production of the 4 years surveyed, the beans consisted of 85% soybeans, 8.5% red beans [azuki], 1.6% green beans [Mung beans], 1.3% peanuts, and 3.4% other beans. Address: South Korea.

2788. **Product Name:** Aburage (Deep-Fried Tofu Pouches).
Manufacturer's Name: Rural Food Products, Inc. Formerly Haruo Honda Tofu.
Manufacturer's Address: 117 Mango St., Wahiawa, Oahu, Hawaii. Phone: 808-621-5603.
Date of Introduction: 1969.
New Product–Documentation: Hawaii Directory of Manufacturers. 1969. p. 18. Rural Food Products, 117 Mango St., Wahiawa, Oahu, Hawaii 96786. They make tofu, aburage, and konnyaku.

2792. Brissenden, Rosemary L. 1969. South East Asian food: Indonesia, Malaysia and Thailand. Baltimore, Maryland, USA, and Harmondsworth, Middlesex, England: Penguin Books Ltd. 262 p. Index. 18 cm.
• ***Summary:*** Contents: Acknowledgements. A note on this American edition. Weights and measures. 1. Introduction to South East Asian Food. 2. Utensils, methods, ingredients, glossary. 3. Indonesia. 4. Malaysia and Singapore: Malay, Chinese, Indian, Miscellaneous Malaysian. 5. Thailand.

The glossary of ingredients contains descriptions of: Soya bean curd (fresh or dried), Soya sauce, and monosodium glutamate (also known as Ve-Tsin, Ajinomoto, Mei Ching, Taste Powder, Gourmet Powder, Accent, P'sst!, etc.). The 3 kinds of soya sauce used in this book are light soya sauce, dark soya sauce (which is thicker and heavier; these two kinds are available at Chinese grocers), and Javanese soya sauce, which is sweet and very thick. The latter is available in bottles named Ketjap Manis or Ketjap Benteng, under the Conimex label. To make your own "Javanese soya sauce," combine 1 cup dark soya sauce, ½ cup molasses, and 3 tablespoons brown sugar in a small saucepan over medium heat. Stir until the sugar melts. Keep in a covered jar.

Note 1. This is earliest English-language document seen (April 2012) that contains the term "Javanese soya sauce."

Note 2. This is earliest English-language document seen (April 2012) that contains the term "Ketjap Manis"

© Copyright Soyinfo Center 2013

(regardless of capitalization) used to refer to sweet, thick Indonesian-style soy sauce.

This book has a disproportionate number of recipes based on meat, fish, and poultry. Soy-related recipes include the following. From Indonesia: Ikan semur Djawa (Fish in soya sauce, p. 69, Java). Ajam semur Djawa (Chicken in soya sauce, p. 76-77, Java). Semur daging (Beef in soya sauce, p. 94). Tahu goreng ketjap (Fried bean curd with soya sauce, p. 105). Tahu pong (Bean curd omelette, p. 111).

From Malaysia and Singapore: Fried fish with soya beans (p. 149-50). Stirred tomatoes or silver beet with black beans (with Chinese black beans [fermented black soybeans], p. 169). Baked bean curd (p. 181). Steamed, dressed bean curd (p. 181-82). Address: Melbourne, Australia.

2793. Brothwell, Don; Brothwell, Pat. 1969. Food in antiquity: A survey of the diet of early peoples. New York, NY: Frederick A. Praeger. 248 p. Illust. Index. 21 cm. Series: Ancient Peoples and Places. [117 ref]

• ***Summary:*** This comprehensive book is arranged by food type. Contents: List of illustrations. Acknowledgments. 1. Introduction. 2. The vertebrates. 3. The invertebrates (mollusks, insects). 4. Sugars. 5. Fungi. 6. Cereal crops. 7. The vegetables (incl. pulses). 8. Fruits and nuts. 9. Olives, oils, herbs, and condiments. 10. Drinks. 11. Diet and disease. The plates. Notes on the plates.

In the chapter on "Vegetables," the section titled "Pulses" (p. 105-07) mentions the soy bean. "Not only is it eaten as a vegetable [green vegetable soybeans] but, having a high oil content, butter oil (?) and cheese of a kind [tofu] can be prepared from it." It still grows wild in China. "There is a reference to the soy bean in Chinese literature which takes its history back at least as far as 2800 B.C." [sic].

The authors conclude that primitive diets consisted primarily of animal products.

There have been two great population explosions in human history: The Agricultural / Neolithic revolution began about 10,000 years ago, and the Industrial Revolution began about 200 years ago (p. 14-16).

Also discusses sesame seeds (p. 146, 159), and peanuts (p. 151). Address: 1. Senior Scientific Officer, Sub-Department Anthropology, British Museum of Natural History, London; 2. His wife.

2794. Camargo, R. de. 1969. Contribuicao ao estudo de dois alimentos orientais–o Tempeh e o tofu–obtidos da soja (Glycine max (L.) Merrill) [Contribution to the study of two East Asian foods, tempeh and tofu, obtained from the soybean (Glycine max (L.) Merrill)]. Docent's thesis: Escola Superior de Agricultura "Luiz de Queiroz," Piracicaba. 78 p. [Por]*

Address: Brazil.

2795. Cooking good food. 1969. Order of the Universe Publications, Box 203, Prudential Center Station, Boston, MA 02199. 34 p. No index. 28 cm.

• ***Summary:*** A simple, concise source of the basic macrobiotic ideas adapted to the American way. Note 1. This booklet was written by Jim Ledbetter, a student of macrobiotic teacher Michio Kushi, although his name does not appear in it.

Contents: The traditional food of man. The way of eating. Salt and oil. Special foods. Useful kitchen items. Cooking brown rice. Cooking other grains. Cooking vegetables. Cooking sea vegetables. Cooking beans. Cooking soups. Cooking with flours (Cooking noodles, cooking creams, baking bread, variations with flour). Cooking animal food. Preparing salads. Preparing condiments. Preparing drinks. Cooking desserts. Plasters. Traveling and eating out. he manner of eating. The seven levels of cooking.

In Chapter 4, titled "Special Foods" is a section on "Soybean foods" (p. 6), which states: "The soybean has been called the 'Vegetable Cow' of the Orient. It is full of good vegetable quality protein (43%). It was not traditionally eaten without special preparation, because it is fairly yin, except by monks who wished to limit their sexual desires. When cured with salt, however, it was used as a daily food. You will find these traditional preparations very helpful in your kitchen.

"Tamari is the ancient form of soysauce, fermented for at least eighteen months from soybeans, salt, wheat or barley, and water, without chemicals or preservatives. It has a very distinctive, delicious taste. It is used mainly in cooking vegetables when it is added after salting and just before the end of cooking time, and in broths. It is rarely used directly on grains, but is often found on the table to use with deep-fried foods. Some women mix tamari with an equal amount of water to make it less strong.

"Miso is a paste made from the same ingredients as tamari. There are two varieties; one (Hacho) is a little harder and darker in texture than the other. It has many uses, especially in soups, in which case it is added towards the end of cooking time so that the wonderful digestion-aiding bacteria it contains will not be destroyed. (All of these soybean condiments produce their best flavor when cooked slightly.) Miso soup has a deep, satisfying bouillon flavor, and is often taken every day as a delicious source of energy. It is helpful to thin miso in a little water before adding it to soups and sauces.

"Morromi [sic, moromi] is the pulp from which tamari has been made. It has a very special tangy flavor, and is used like miso.

"Seitan or 'Protein X' is made from the same ingredients as the above condiments. A slightly different process produces a strong jerky which, when boiled or sauteed, resembles beef in appearance and taste. It is very good in soups" (p. 6). Note 2. This is the earliest document seen (March 2011) that mentions "seitan." It is also the earliest English-language document seen (March 2011) that contains

© Copyright Soyinfo Center 2013

the word "seitan." By placing seitan in the category of "Soybean Foods," the author is apparently emphasizing the importance of soy sauce as one of its two main ingredients. He seems to have tasted seitan, but it is not clear that he knows what its other main ingredients are (wheat gluten, ginger, sesame oil) or how it is prepared.

"Tofu is made from fresh soybeans. This curd or 'cheese' is a good quality, strong yin food which is very refreshing for occasional use in summer when it is cooked with tamari. It is helpful to store tofu in water. The more yang pulp, which is usually thrown away, can sometimes to obtained from the Oriental stores which make tofu, and used to make delicious casseroles or well-sauteed vegetable dishes."

The section on "Condiments" (p. 6-7) discusses Gomasio (Sesame salt), umeboshi (salted plums), and Tekka. The section on "Oriental vegetables" (p. 7) discusses lotus root, daikon, ginger root, Chinese cabbage, jinenjo (Japanese potato), and kuzu arrowroot.

In the chapter titled "Cooking Beans" the author considers "Aduki Beans" to be the "King of Beans."

"Black Beans: The imported Japanese black beans are higher nutritional quality and superior taste. They are very sweet, delicious beans. They should be soaked and boiled, because their skin can become loose and clog a pressure cooker spout."

"Miso Soup: This hearty bouillon is the staple everyday soup. Prepare vegetables and boil for at least one-half hour (if you want a really good soup); thin miso with a little of the stock in a bowl and add it to the soup towards the end. Do not boil the soup after adding miso or the beneficial digestion-aiding bacteria will be harmed. If it is simmered very slowly, it can be cooked from 5 minutes to one hour.

"Tamari Soup: Prepare as above using tamari instead of miso for flavoring. A simple tamari broth with onions or carrots and onions is often served over dishes such as noodles."

In the chapter titled "Preparing Condiments" (p. 27) we read: "Vegetable Miso. Slice vegetables finely and saute. Add diluted miso and water and cook. Scallions, chives, carrot tops and many other vegetables are good prepared in this manner. 'Tekka' is made from lotus root, burdock root and carrots. 'Sigure' [Shigure] ('November Rain') is prepared with lotus roots, carrots, and onions. A little freshly grated ginger is often added towards the end of the cooking. A small amount of these condiments is usually sufficient."

The chapter titled "Preparing drinks" (p. 28-29) discusses Mu tea, umeboshi tea, chicory, Yannoh [Ohsawa coffee], dandelion coffee, Bardan, Kokkoh, kuzu, ume-syo-kuzu, and daikon drink.

The chapter titled "Cooking Desserts" (p. 30) states: "Amasake (Homemade Rice Wine). For special occasions this drink is very smooth and sweet."

Tofu is also mentioned in the chapter titled "Plasters" (p. 31). "Tofu Plaster. Squeeze tofu (soy bean curd, see *Special Foods*) and mix with 10% flour to make it more manageable. Apply this to any painful, feverish, or inflamed area. Alternating tofu plasters with ginger compresses often helps stubborn cases."

Note 3 This is the earliest document seen (July 2000) that mentions "Hacho" miso (spelled that way). Subsequently, many macrobiotic publications used this word and spelled it that way.

The chapter titled "Cooking sea vegetables" briefly defines kombu, wakame, hiziki (the incorrect idea concerning "black rice" comes from a casual remark by Evan Root), arame, dulse, and nori (laver).

Note 4 One original edition of this booklet, sent to Soyfoods Center by Tim Redmond (a founder of Eden Foods), has one dark blue stalk of wheat against a light blue background. In the lower right corner of the cover the following has been stamped with a blue ink stamp: "Eden Organic Food Store, 514 E. William. Ann Arbor, Mich. [Michigan] 48104." Address: [Massachusetts].

2796. Cowan, J.C. 1969. Soybeans. In: Encyclopedia of Chemical Technology. Vol. 18. 2nd ed. New York: John Wiley & Sons (Interscience Publishers). See p. 599-614. 27 cm. [44 ref]

• ***Summary:*** Contents: Introduction: Composition, standards and trading rules. Handling and storage. Processing: Preparation, screw-press and extruder-cooker operations, solvent extraction. Soybean products: Oil, meal and meal products, soy flour and related products, soy sauce and other food specialties (soybean milk, tofu, miso, natto, tempeh, sprouted soybeans, green vegetable soybeans). Production and export. Bibliography.

"An estimated 50 million lb of soy flour was marketed in 1967. About one-half of this went into pet foods and the rest into foods for humans." Address: USDA.

2797. Day, Harvey. 1969. About yoga diet. London: Thorsons Publishers Ltd. 64 p. 19 cm. The "About" Series, no. 37.

• ***Summary:*** The yoga diet is a vegetarian diet. Chapter 3 titled "Vegetarians Need Protein," notes that soya beans contain 34% protein, and that the Chinese, "who live mainly on the soya bean," are among the toughest and hardiest of nations, noted for their stamina. The same chapter has a long section titled "Mahatma Gandhi–Food Reformer" (p. 20-28) which notes (p. 27) that Gandhi experiments with using soya beans as an article of diet.

Page 47 notes that London restaurants such as Cranks and The Vega serve delicious vegetarian food. Pages 47-48 have a section about the soya bean (p. 47-48) which states: "Major-General Sir Robert McCarrison said that if only Indians could be induced to make the soya bean their national food all their nutritional problems would vanish; and

© Copyright Soyinfo Center 2013

Dr. McCollum of Johns Hopkins University maintained that if Americans tempered their diet with soya beans there would be a drop of at least 20 per cent in their mortality rate." Pages 48-49 has a section on "Bean Curd" [tofu] which describes incorrectly how it is made (by adding gelatine from seaweed).

2800. Kwon, Shin Han. 1969. Soybeans and soybean products in Vietnam. Saigon: Republic of Vietnam: Ministry of Land Reform and Development of Agriculture and Fisheries, Agricultural Research Inst. (Saigon). 113 p. 28 cm. [60 ref. Eng]
• ***Summary:*** Contents: Map of South Vietnam showing all provinces and their names. Preface, by the author. 1. Introduction: History of soybean, production and trade in the world and in Vietnam, utilization of soybean (uses, nutritive value of the soybean). 2. Botany of the soybean plant: Seed, stem and pubescence, leaves, flower parts, root and nodule bacteria, genetics. 3. Ecological requirement: Germination, temperature, rainfall, day length, soil. 4. Cultivation and storage: Planting (land preparation, depth of seeding, methods of seeding, rate of seeding, time of seeding, rotation, erosion), fertilizer (manure, nodule bacteria, nitrogen, phosphorus, calcium, potash, molybdenum, application), insects (maggot fly, soybean insects found in Vietnam, control), diseases (root disease, foliage disease, seed disease), weed control, harvesting and threshing (harvesting time, methods of harvesting, drying). 5. Variety improvement: Aims of improvement (high yielding variety, disease resistance, insect resistance, day length, varieties tolerant to unfavorable soil conditions, seed size, seed color, oil and protein content in seed, palatability), introduction method, pure line selection method, breeding method (making the cross, pedigree method, bulk method), regional trials, variety purification and multiplication (breeder's seed, foundation seed, stock seed, extension seed, maintenance). 6. Seed certification standard. 7. Bibliography.

The author thanks for their help: Dr. Thai-Cong-Tung, Director of the Agriculture Research Institute, and Mr. Nguyen-Huu-Quyen, Manager of Eakmat Experiment Station.

"The history of soybean in Vietnam is meager, but the references by Loureiro (1790) and Rumphius (1747) mentioned the cultivation of soybean in Malaysia and Vietnam. Harmand (1877) collected wild soybean (*Glycine laotica*) in the Hue and Bassac areas, and the herbariums [herbarium specimens] are still available at the Agricultural Research Institute, Ministry of Agriculture, Vietnam." Since the history of Vietnam is closely related to that of China, it seems likely that the soybean has been cultivated for many centuries in what is today Vietnam (p. 1).

In Vietnam, the soybean is still not a very familiar crop to the majority of farmers. Although the acreage has gradually increased since 1958, production had not yet reached 10,000 tons by 1967. According to the *Agricultural Statistics Yearbook of Vietnam,* in 1966 in South Vietnam, total soybean acreage was 6,610 hectares and production was 7,585 metric tons, or 1.148 tonnes/ha (p. 7). The main soybean producing provinces are all in the southern half of South Vietnam: Long-Khanh (40% of total South Vietnamese acreage), An-Giang (20.4%), Chau-Doc, Kien-Phong, and Binh-Dinh (5%). In 1963 some 1,440 tones of soybeans were imported and in 1966 some 100 tonnes were exported (p. 6).

Table 4 shows an estimate of the costs and returns per hectare of growing soybeans at the Eakmat Agricultural Experiment Station in Ban-Me-Thuot in 1968. The net income or profit from one hectare was about VN$26,000, which is larger than for any other field crops, including: cassava (VN$22,766), mung beans ($20,267), sweet potatoes ($19,269), upland rice ($6,828), corn ($6,569), and peanuts (VN$5,100).

Uses: "In Vietnam, the soybean is not commonly used in daily food, but a number of foods such as soysauce, tuong [a soft kind of miso resembling Chinese chiang in consistency, and sold in crocks], bean curd, vermicelli, soymilk, soybean wine, chao [fermented tofu, sold in bottles], soybean oil, [soy] bean sprouts, and green pods [green vegetable soybeans] are available in the market and they are gradually becoming popular among Vietnamese.

Note: This is the 2nd earliest English-language document seen (Oct. 2011) that uses the word "chao" to refer to fermented tofu.

Photos (p. 11-12) show: (3) Bean sprouts and cooked beans with tomato sauce. (4) A shop that sells soybean products in a Saigon market. Soybean paste [tuong] is in big chars, chao [fermented tofu] is in bottles in front, and bean curds [tofu] are in the front left corner. (5) A Vietnamese girl frying bean curds in the market. (6) Bottles with labels showing various kinds of soy sauces made in Vietnam.

The highest yielding soybean varieties in Vietnam are presently Palmetto and E-32. In trials, they yield about 1 tonne per hectare. Address: FAO Agricultural Officer. Phone: Saigon 91.746.

(p. 52). Sukiyaki (with tofu, p. 186). Vegebits deluxe (with 1 no. 303 can Vegebits, p. 228). Soybean loaf (with cooked mashed soybeans, p. 228). Noodle entree (with 1 large can Choplets, p. 229). Creamed Skallops casserole (with 1 large can Skallops, p. 229).

The chapter titled "Emergency Meals" has a section on "Protein and Main Dish Foods" including "Canned vegetable proteins (Vegelona, Vegetable Steaks, Soyameat, Nuteena, etc.)."

2802. Loma Linda Food Co. 1969. Wholesale price list. Arlington, California. 4 p. Undated.
• ***Summary:*** The cover states: "Quality foods since 1906. Camp Meeting Prices 1968, 1969." Soy-related products include: Soy Flour. VegeChee [Tofu]. Soy Beans Boston Style. Soybeans T.S. Smokene (Shaker bottle). Soy Sauce (3 sizes, glass bottles). Other products [probably made mostly from wheat gluten and/or peanuts include]: Nuteena. Proteena. Vegelona. Vegelet 'n Gravy. Dinner Cuts. Dinner Rounds. Vegecuts. Vegeburger (regular or no salt added). Tender Bits. Linketts [Linkettes]. Big Franks. Little Links. Loma Linda Sandwich Spread.

Note: No mention is made of spun soy protein fibers. Address: Arlington, California.

2803. Rudzinski, Russ. 1969. Japanese country cookbook. San Francisco, California: Nitty Gritty Productions. xvi + 198 p. Illust. by Mike Nelson. 14 x 22 cm.
• ***Summary:*** An innovative but hard-to-read book printed with red ink on dark tan paper. The many illustrations (black line drawings) are excellent.

A surprisingly large number of the recipes in this cookbook contain soyfoods. Soy-related recipes include: Sukiyaki (with "1 block of fresh bean cake (*tofu*) or 1 can *tofu*, cut into bite-size squares," and shoyu, p. 5-10). Teriyaki (normally done on a hibachi grill; *teri* = shiny or glazed and *yaki* = broiled, p. 16). Miso shiru (p. 20). Chicken teriyaki with sesame seeds (with shoyu, p. 24). Chicken liver teriyaki (with shoyu, p. 26). Shrimp teriyaki (with shoyu, p. 28). Spicy shrimp teriyaki (with shoyu, p. 28-29). Tofu dengaku (p. 29). Tofu yaki (fried) (with tofu, miso and shoyu, p. 29). Tofu soup (p. 48). Kaki no miso suimono (Oyster soup with soybean paste, p. 55). Vegetable and noodle miso soup (p. 56). Shrimp miso (p. 56). Takara yaki (omelette with tofu, p. 65). Tofu-egg cakes (p. 66). Tofu-egg omelette with white toasted sesame seeds (p. 66). Fried tofu with egg (p. 67). Cabbage with miso sauce (p. 85). Horenso (spinach) with miso (p. 89). Karai nasubi miso (Spicy eggplant with miso, p. 94). Goma nasubi miso (Eggplant with miso and sesame seed paste, p. 95). Tofu sauce (p. 102). Inari sushi (with aburage, p. 110-11). Miso dango (meatless rice-based patties / balls, p. 117). Soba (buckwheat noodles) with miso sauce (p. 122). Tofu to niku donburi (bowl with meat and tofu, p. 127). Sakana no nitsuke (fish cooked with miso, p. 135). Shiroi sakana no nitsuke (white fish with miso, p. 136). Tofu to ebi no kuzu-ni (tofu and prawns in kuzu sauce, p. 139). Simple kaki (oyster) miso (p. 140). Kaki nabe (pot of oysters with miso, p. 141). Kaki to tofu nabe (oyster pot with tofu and white miso, p. 141). Yaki hamaguri (broiled clams with white miso, p. 143). Kawari tofu nori zuke (prawn dumplings with tofu, p. 148). Tori dango miso (fried ground chicken with miso, p. 162). Tofu, pork and vegetables (p. 167). Mashed tofu and ground pork (p. 168). Buta nabe (pot-au-pork with "4 fried tofu, fresh or canned, cut in strips," p. 168). Pork mizutaki (with tofu, p. 169). Beef mizutaki (with tofu, p. 175-76). Shabu-shabu (with tofu, p. 181). Shoyu is used in many, if not most, of the recipes in this book.

At the back is a glossary, which includes definitions of aburage, miso, shoyu, and tofu. Address: California.

2804. Saito, Akio. 1969. [Chronology of soybeans in Japan, 1950 to 1969] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 15-16. [Jap]
• ***Summary:*** 1950–The production of soybeans increases greatly to 446,900 tonnes (2.1 times more than in recent years).

1950–In March, the food ration system organization is closed. In July the ration systems for miso and shoyu are removed.

1951 March–The restrictions for soybeans and rapeseed are removed. From this time on, the number of natto makers increases rapidly.

1952–Soybean production in Japan reaches 521,500 tonnes, the largest since World War II.

1953 Jan.–Restrictions are imposed on imports of foreign soybeans paid for in foreign currencies.

1955. Rice production in Japan this year is 12,390,000 tonnes (up 35.9% over last year). This is the first time it has topped 12,000,000 tonnes. Irrigated rice cultivation (*suiden*) is 20% more than last year. The days of rice shortages are over and the black-market price of rice falls. The per-capita direct consumption of soybeans for the year is 4.5 kg (This information comes from *Norin Suisan-sho, Shokuryo Jukyu-ho*).

1955 April–Soybeans from Brazil are graded using the AA system (*Yunyu jido shonin sei*).

1956–A new natto container is invented, made of shaved wood (*kyogi*) lined with a polyethylene sheet.

1956 June 13–New regulations for agricultural products and price stabilization. Domestic soybeans are added to them.

1956 Oct.–The tax on imported soybeans rises to 10% and the no-tax system for soybeans is removed.

1959–The first instant miso soup is introduced by Yamajirushi Miso in Nagano. It contains dried green onions, wakame, dried tofu [probably dried-frozen tofu], etc.

1959–At about this time research begins on meat analogs made from soy protein.

© Copyright Soyinfo Center 2013

1960–Per capita consumption of shoyu drops to 13.7 kg. It has now fallen below 14 kg/person.

1960–Soybean imports rise to 1,128,000 topping the 1,000,000 level of the first time.

1961 July 1–The tax on imported soybeans is removed.

1962–A new natto container made of Styrofoam is invented (*PHP yoki, happo suchiroru*).

1963–In the USA General Mills starts to sell meat analogs made from soy protein.

1965–Per capita miso consumption drops to 7.8 kg, falling below 8 kg/person.

1965–Production of defatted soybean meal reaches 1,074,000 tonnes, passing the 1 million tonne mark for the first time. Production has risen 56% in during the past 5 years.

1966–At about this time meat analogs based on soy protein start to be sold commercially in Japan–to institutions.

1966–Soybean imports rise to 2,168,467 tonnes, passing the 2 million tonne mark for the first time.

1966–Production of soybeans in Japan drops below 200,000 tonnes for the first time. Japan now produces only 9% of the soybeans it consumes.

1966 May–Kikkoman starts selling low-salt shoyu. 1968–Meat analogs based on soy protein start to be sold to the general public in Japan.

1968 June–Research conducted by the *Mainichi Shinbun* shows that the size and price of tofu is now different in different areas. In Tokyo it sells for 25 yen per 300 gm or over. Cakes of tofu sold in downtown Tokyo (*shitamachi*) are smaller than those sold uptown (in the hilly sections) (*yamanote*). Some tofu shops that are not members of the tofu association sell it for 15 yen per 350 gm. In Nagoya it retails for 30 yen per 450 gm, and in Northern Kyushu 25 yen per 450 gm. Per capita consumption of tofu is 33 cakes (*cho*) a year.

1969–Per capita consumption of soy oil in Japan rises to 3.2 kg, passing the 3 kg mark for the first time. In 1969 it was 1.2 kg/person. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

2805. Shinojima, Chu; Ashihara, Tamako. 1969. Practical shoyu cooking: Delicious dishes with Japanese soy sauce. Tokyo: Japan Publications Inc. 61 p. Illust. No index. 26 cm. [Eng]

• ***Summary:*** Contents: Introduction. Helpful hints on how to use this book. Egg dishes. Beef and veal dishes. Okinawan dishes. Chicken dishes. Japanese soy sauce–Shoyu. Pork dishes. Modern Japanese cooking. Canned foods and salads. Desserts. Tofu dishes and soups. Fish dishes.

Contains many full-page color photos. The word "shoyu" is used throughout the book, and all recipes call for the use of "shoyu." The chapter titled "Japanese soy sauce–Shoyu" (p. 32-33) begins: "Shoyu is the single seasoning without which the art of Japanese cooking would be impossible. Its flavor and fragrance also blend beautifully with food of other countries, and shoyu is now in use throughout the world. Japan's largest shoyu producer, the Kikkoman Shoyu Company, exports its product to 51 countries around the world." It also notes that among the traditional influences on Japanese cooking, that "of Buddhism was especially strong in regard to developing a respect for the natural flavor of each food item. The best means of bringing out the flavor of each food was found to be through the use of shoyu."

2806. Steinberg, Raphael. 1969. The cooking of Japan. New York, NY: Time-Life Books. 208 p. Illust. General index. Recipe index (English). Recipe index (Japanese). 28 cm.

• ***Summary:*** A superb, elegant book, that (with its spiral-bound companion volume of recipes) captures in both words and photos (by Eliot Elisfon) the true spirit of Japanese food and cookery. Contents: Introduction: Solving the mysteries of Japan's marvelous cuisine, by Faubion Bowers. 1. The heritage of a remarkable past. 2. Foods to suit the seasons. 3. The logic of Japanese cookery. 4. The world's greatest seafood. 5. Simple, satisfying foods of home. 6. A ceremony that sired a cuisine (*kaiseki* or tea ceremony cooking, with roots in 13th century Zen Buddhism). 7. Eating out as a way of life. 8. Magnificent meals in elegant settings.

Soy-related: The writer of the introduction snacked on odorous, fermented soy beans (*natto*) at night before retiring (p. 6). His son said to him recently, "Please, Dad. Not *tofu* again!" (p. 7). Importance of the soybean (p. 16-17; China has had a huge impact on Japanese culture. "Perhaps the most important food innovation contributed by China was the soybean, which is various disguises is still the foundation stone of Japanese cooking"). Shoyu is the Japanese word for soy sauce (p. 26). Tofu (soybean curd), which is cooked with other foods throughout most of the year, becomes a dish in its own right during the summer, served on ice and flavored with soy sauce (as *hiyayakko*, p. 32). Photos of tofu, shoyu, green soybeans [*edamamé*] and akadashi miso in prepared festival dishes (p. 34-35). *Matsutake* mushrooms with tofu or shoyu. "The most important lesson to be learned deals with the ubiquitous role of the soybean. Generally considered by Westerners to be the most humble of vegetables, the soybean is in fact the king of the Japanese kitchen. One might almost say that Japanese cuisine is built upon a tripod of soybean products: *miso*, a fermented soybean paste; *tofu*, a custardlike soybean cake; and soy sauce, used both to season foods as they are being cooked and to make dipping mixtures that enhance the flavors of the foods as they are being eaten." Details about these three products and their uses is then given (p. 41-42). Teriyaki or "shining broil" (p. 43). Two-page color photo shows (p. 44-45): Azuki beans and *kuromame* (black soybeans), sesame seeds, sesame oil, *fu* (wheat gluten croutons), *aonoriko* (powdered green seaweed), Kikkoman shoyu, *aka miso*, *shiro miso*, *tofu*, nori

© Copyright Soyinfo Center 2013

and wakame.

Ponzu, a dipping sauce which is half soy sauce and half lemon or lime juice (p. 46). Sukiyaki (p. 46). Tempura (p. 49). *Aemono* and *sunomono* with tofu, miso, or soy sauce (p. 48). Photo of a tofu-slicing knife with a serrated blade (p. 50). Recipes: Clear soup with tofu and shrimp (*Sumashi wan,* p. 55). Miso soup with red and white miso (p. 56-57, 59). Miso-flavored pork and vegetable stew (*Satsuma-jiru,* p. 61). Soy and sesame-seed dressing with string beans (*Goma joyu-ae,* with "½ cup white sesame seeds, toasted and ground to a paste," p. 62). Tofu and sesame-seed dressing with vegetables (*Shira-ae,* p. 63; "Add the sesame seeds..., warm them until lightly toasted. Grind them to a paste in a *suribachi* {serrated mixing bowl} or, more easily, pulverize them at high speed in an electric blender with 1/8 teaspoon of soy sauce. Transfer the sesame-seed paste to a mixing bowl...)."

Two color photos show: (1) Toasted sesame seeds in a *suribachi* with a wooden pestle. (2) When ground, they "quickly release their oil and turn into a paste." White miso dressing (*Neri shiro miso,* p. 67). Photo of *zensai,* incl. miso-marinated asparagus, and abalone cooked in soy sauce (p. 72). Sashimi dipped in soy sauce (p. 81-83, 90-91).

Undersea vegetables: nori, kombu, wakame, hijiki (p. 88-89). Recipes: Sushi (p. 95-101). Tempura (p. 103). Mirin and soy dipping sauce for tempura and noodles (*Soba tsuyu,* p. 104). Deep-fried tofu in soy-seasoned sauce (*Agedashi,* p. 105).

Tofu is the Japanese word for soybean curd (p. 108). Umeboshi (p. 109). Miso soup (p. 109-10). Natto and miso (p. 115). Tofu and shoyu in *yudofu* (p. 116). Sekihan and azuki (red beans, p. 120). *Mame* ("beans") are served at traditional wedding feasts; the word also means good health. Mochi (p. 121). Recipes: Sekihan (p. 126). Fox noodles with deep-fried tofu (*Kitsune udon,* p. 127). Bubbling tofu (*Yudofu,* p. 132-33). *Sukiyaki* (p. 134, with tofu and soy sauce). *Shabu shabu* (with tofu, p. 135).

Tofu and miso in *kaiseki* cuisine based on Zen Buddhism and the tea ceremony (p. 146-49). Teriyaki, mirin, ponzu, tofu (p. 152). Tofu and shoyu (p. 159). Sasanoyuki restaurant in Tokyo (uses tofu as a main ingredient in every dish, p. 160-61). Sukiyaki, with tofu and soy sauce (photo, p. 166-67). Broiled mackerel in miso marinade (*Miso zuke,* p. 169). Dengaku tofu (p. 172-73, with color photo). Beef teriyaki (with shoyu, p. 174-75). Yakitori (with teriyaki sauce, p. 174-75). Grilled chicken with sweet soy-seasoned glaze (*Tori teriyaki,* p. 176). Black soybeans and tofu (p. 188). At a geisha house, shoyu is called *murasaki* ("the purple").

A guide to Japanese ingredients (glossary): Incl. aji-no-moto, aonoriko, azuki, fu, goma, goma-abura, hichimi (shichimi) togarashi, kombu, konnyaku, mirin, miso, MSG, nori, shoyu, soba, tofu, umeboshi, wakame, wasabi.

Note: The spiral-bound recipe book accompanying this volume contains the recipes in the parent volume and no new information; the binding makes it easier to use in the kitchen. Address: USA.

2807. Thurmon, Jimmie Joan. comp. 1969. Adventures in vegetarian cooking: Over 200 meatless main dish recipes. Nashville, Tennessee: Southern Publishing Assoc. 128 p. 23 cm.

• ***Summary:*** The author of this Seventh-day Adventist vegetarian cookbook is a woman. Interesting recipes include: Nut Cheese (no. 1 & 2, with peanuts or peanut butter and gluten flour, p. 11). Tomato Nuttose (with nut butter, p. 11). Homemade Nuttose (with nut butter, p. 12). Homemade Protose (with peanut butter and mashed beans (p. 12). Homemade Nutmeat (dark) (with gluten flour, peanut butter, and Vegex, p. 12-13). Homemade Nutmeat (light) (with raw nut/peanut butter and flour, wheat meal, or soybean meal, p. 13). Nuttolene (with peanut butter and eggs, p. 13). Homemade gluten (with Vegex or soy sauce, p. 14). Granola. Preparing and cooking dry soybeans (p. 15). This page describes how to make "soybean pulp," an ingredient is subsequent recipes. "Press cooked soybeans through a coarse sieve or grind in a food grinder. Use in making soups, croquettes, loaf, or soufflé. Cold, the pulp makes a nutritious and flavorful filling for sandwiches when mixed with chopped onion and enough salad dressing or milk to make it easy to spread. May be used like pumpkin or squash with milk, eggs, and spices as a filling for pie. May be used in place of burger in chili."

Soybean loaf (p. 19). Soybean cheese loaf (with 1 can (14 oz.) soy cheese [tofu] and Savita, p. 21). Gluten roast no. 1 (with gluten burger, p. 21). Soybean loaf, p. 27). Soybean-rice loaf (p. 28). Gluten roast no. 1 & 2 (p. 29). Baked soybean croquettes (with soybean pulp, p. 36-37). Soyameat patties (p. 37). Cheese-nut burgers (with VegeChee [tofu, made by Loma Linda Foods], p. 37). Soyameat tetrazzini (p. 52). Soybean casserole (with Wham, p. 52-53). Soybean souffle (with soybean pulp, p. 53). Tofu with mushroom sauce (p. 90; Tofu is "A fresh soybean milk curd obtainable at Oriental markets, or canned under the trade name VegeChee" [by Loma Linda Foods]). Puree of soybean soup (with soybean pulp, p. 110).

Pages 121-22 list "Vegetable protein brand names." All products are made by Seventh-day Adventist food manufacturers. Brand name codes: B = Battle Creek. C = Collegedale. L = Loma Linda. M = Madison. S = Sunnydale. W = Worthington. 1. Nut meats (canned): Not-Meat (M). Numete (W). Nuteena, Proteena, and Vegelona (L). Protose (B).

2. Gluten burgers: Choplet Burger (W). Collegedale Burger (C). Madison Burger, and Zoyburger (M). Prime Vegetable Burger (B). Redi-Burger, and VegeBurger (L). 2. Gluten steaks: Big Pat, and Fry Sticks (W). Chic-Ketts (S). Collegedale Chops (C). Dinner Cuts, Dinner Rounds, Vege Cuts, and Vegetables 'n Gravy (L). Vegetable Skallops, and

© Copyright Soyinfo Center 2013

Vegetable Steaks (B).

Note 1. This is the English-language document seen (Jan. 2007) that contains the term "Gluten burgers" (or "Gluten burger").

4. Wieners and sausages: Big Franks, and Linketts (L). Saucettes (B). Veja-Links (W). 5. Frozen foods: Chipped Prime, Prosage, Vegetarian Luncheon Slices (Chicken and Beef Style), Wham (W). Note 2. Worthington was the first Adventist company to make frozen meatlike products.

6. Soy meats: Soyameat (Diced Chicken Style, or Diced Beef Style) (W). VegeChee [Tofu] (L).

Frequently used seasonings in vegetarian entrées. (p. 122). Accent. Bac-O-Chips (General Mills). Bakon Yeast. Gravy Quik (L). G. Washington Broth. McKay's Chicken Style Seasoning. Savita. Savorex, and Smokene (L). Sovex. Tartex. Tastex. Vegex.

Update. 1995. Oct. 25. Jimmie Joan Thurmon, a Seventh-day Adventist, is retired and lives with her husband at 128 Mountain Ridge Dr., S.E., Cartersville, Georgia 30120-6951. Phone: 770-974-9218. She learned how to make wheat gluten from Seventh-day Adventist women, who had been making it for years. In addition Loma Linda Foods in California and Sanitarium Food Co. in Australia had many products containing wheat gluten on the market by the 1960s. Address: Nashville, Tennessee.

2808. **Product Name:** Tofu.
Manufacturer's Name: Yet Sing Co.
Manufacturer's Address: 11 Baldwin St., Toronto, ONT, Canada. Phone: 416-977-3981.
Date of Introduction: 1969?
New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Phone: 863-0818.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number.

Talk with Martha Gifford Thompson. 1989. April 11. The Toronto Zen Center, was an affiliate group nearby in Canada. In Toronto, which has a large Asian population, were at least three tofu shops: one very small family-run Korean shop, which had no name, was on Baldwin Street; it is no longer there. "The first room was stacked to the ceiling with soybeans. Down in the basement were many people slogging around making tofu. It was quite a scene, and nobody spoke any English." Talk with Jay Thompson. 1989. April 11 and June 9. He visited this company on 11 Baldwin St. many times to buy tofu for the Rochester Zen Center. The other tofu shop on Baldwin Street is no longer there.

Talk with Jon Cloud of Soy City Foods. 1989. May 3. Yet Sing is a tofu company at 11 Baldwin St. They may have been the first tofu company in Ontario. Started by the 1960's, they are still in business. Talk with a lady at Yet Sing. 1989. May 4. She barely speaks English, but thinks the company started about 20 years ago. The man who started the company has retired. They are still at 11 Baldwin Street, Toronto, ONT, M5T 1L1. Talk with Jhasun Koo, owner and founder of Pyung Hwa Food Co. 1989. May 4. He started making tofu in 1978 on Dundas St. In 1978 the only other tofu companies in Toronto were Yet Sing (probably the first) and Hwa Chang. Both were run by Chinese-Canadians and both are still in business.

2809. Claiborne, Craig. 1970. East meets West. *New York Times.* Jan. 4. p. 196.
• ***Summary:*** The Japanese dish named shabu-shabu "is sometimes called oriental fondue in this country." The Japanese word is "onomatopoeic; it imitates the sound of chopsticks as they swirl the broth." It is served as a communal dish at Saito (131 West 52nd St.) one of New York's best Japanese restaurants.

The recipe for Shabu-shabu calls for "2 pieces tofu (bean curd), cut into 4 pieces (eight pieces in all)." There are also recipes for Ponzu, Gomatare [Gomadare], and Dashi. In the first two of these, "soy sauce" is a key ingredient. In all three call for the use of "ajinomoto (monosodium glutamate), optional," up to 1 tablespoon in the Gomatare recipe!

2810. Hellendoorn, E.W. 1970. Onbewerkte en bewerkte peulvruchten in onze voeding [Unprocessed and processed legumes in our food]. *Voeding* 31(1):1-14. Jan. 15. [10 ref. Dut]
• ***Summary:*** The soybean (*de sojaboon*) and soyfoods (p. 6-7) include: Soybean meal (*sojameel*), soy oil (*de olie*), soy sprouts (*gekiemde sojabonen*, which are popular in Chinese dishes), tofu (*tahu*), soy sauce (*sojasaus*), miso, and tempeh.

Note. This is the earliest Dutch-language document seen (Jan. 2013) that uses the term *gekiemde sojabonen* to refer to soy sprouts. Address: Doctor, Centraal Instituut voor Voedingsonderzoek TNO, Zeist.

2811. Okumura, George K.; Wilkinson, Jack E. 1970. Preparation of vegetable protein-containing food products. *U.S. Patent* 3,490,914. Jan. 20. 4 p. Application filed 15 May 1967. [6 ref]
• ***Summary:*** "Water soluble protein is extracted by precipitation from de-fatted slurry of soy bean or other protein-containing vegetable material, and is then converted by a freezing step in a fibrous, sponge-like protein mass lacking the taste of soy or other starting material, which mass can then be further processed into a meat-like solid food or into a milk, or derivative of milk such as cheese, ice-cream, yogurt, etc., additional steps of finely comminuting the fibrous mass and adding water and other additives being utilized in producing the milk.

"This application is a continuation-in-part of our application Ser. No. 445,695, filed April 5, 1965, for Process

© Copyright Soyinfo Center 2013

of Producing Soy Milk from Sprouted Soy Beans, now Patent No. 3,399,997 and of our abandoned application Ser. No. 638,573, filed May 15, 1967, for Processing of Soy Food Products with Freeze Treatment." Address: 1. 3151 S. Elm Ave., 93706; 2. 2411 Divisadero St., 93721. Both: Fresno, California.

2812. Centre de Documentation Internationale des Industries Utilisatrices de Produits Agricoles (CDIUPA). 1970--. IALINE (Industries Agro-Alimentaires en Ligne) base de données [IALINE (Food and Agricultural Industries On-Line) database]. 1, avenue des Olympiades–91300 Massy, France. [271542 ref. Fre]
• ***Summary:*** This is the world's best database for French-language publications related to food and nutrition. It first became available for use in Jan. 1970, and that is also the date of the earliest record in the database. It is produced by the Center for International Documentation on Industrial Utilization of Agricultural Products (CDIUPA), founded in 1965 by the French Ministry of Agriculture. CDIUPA is administered by APRIA (*Association pour la Promotion Industrie Agricole*), which is a member of the International Commission of Agricultural and Food Industries.

The current contents of the database is published in a monthly journal titled "Industries Agro-Alimentaires: Bibliographie Internationale," which began under that title in Jan. 1983. It was preceded by *Bibliographie Internationale des Industries Agro-Alimentaires. Bulletin Bibliographique* (published from Jan. 1967 to Dec. 1982). In the monthly journal, the citations are grouped under 6 broad headings: 1. General (with 8 subcategories). 2. Agro-food industries (industries agroalimentaires; with 17 subcategories; Many documents on soyfoods are cited in subcategory N titled *"Protéines d'origine animale, végétale, microbiologique, algues et levures aliments"*). 3. Fermentation industries (with 6 subcategories). 4. Food microbiology. 5. Food toxicology. 6. Utilization and adding value to agricultural and food-industry by-products. Biotechnology. The journal contains 3 indexes: Subject index. Index of sources (periodicals [with journal names written out in full], acts of congress, books, theses). Author index.

Information related to soyfoods is likely to be found under the following headings in the subject index: Aspergillus oryzae; Farine de soja (incl. soy flour, and roasted soy flour or kinako); Huile de soja (soy oil); Koji; Lait de soja (soymilk); Miso; Nato (incl. natto); Produit à base de soja (incl. dawa-dawa, kinema, soy cheese [western style], fermented black soybeans / Hamanatto, soynuts, soy ice cream, soy yogurt, thua-nao, yuba), Protéine de soja (soy protein products); Protéine de soja, Produit extrudé (extruded soy products); Protéines d'origine animale, végétale; Sauce de soja (soy sauce); Soja (incl. green vegetable soybeans); Soja, germe (soy sprouts); Sufu (fermented tofu); Tempeh; Tofu. Address: Massy, France. Phone: (1) 69.20.97.38.

2813. **Product Name:** Tamari (Soya Sauce), Miso (Soya Bean Paste), Daiya Tofu (Bean Curd).
Manufacturer's Name: Hunzana Foods Limited (Importer-Marketer). Made in Japan.
Manufacturer's Address: 34 Dryden Chambers, 119 Oxford St., London, W.1, England.
Date of Introduction: 1970. January.
New Product–Documentation: Ad (full-page) in *The British Vegetarian.* 1970. Jan/Feb. p. 9. Hunzana imports these health foods from Japan. ½ litre of "Tamari (Soya Sauce)" sells for 6 shillings 9 pence (6/9). 1 lb of "Miso (Soya Bean Paste)" sells for 5/6. 188 gm of "Daiya Tofu (Bean Curd)" sells for 6/6. Hunzana also imports other foods from India, North Ireland, Eire, Germany, and Greece.

2814. Claiborne, Craig. 1970. Dining out in setting of books. *New York Times.* Feb. 27. p. 60.
• ***Summary:*** In a review of Three Six Nine Restaurant at 12 Elizabeth St. in New York City's Chinatown, the writer described "an excellent hot soup with fresh and cured pork plus bean curd skin [yuba] and bamboo shoots (Ningpo);... and a spiced chopped bean curd [tofu] dish with peas and hot pepper (Szechuan)."

2815. Saio, Kyoko; Koyama, Emiko; Yamazaki, Sadao; Watanabe, Tokuji. 1970. Protein–calcium–phytic acid relationships in soybean. III. 2818. **Product Name:** [Burgmate].
Manufacturer's Name: Morinaga Confectionery Co. Ltd.
Manufacturer's Address: Shiba 5-33-1, Minato-ku, Tokyo, Japan.
Date of Introduction: 1970. March.
New Product–Documentation: *Soybean Digest Blue Book.* 1970. p. 108.

2819. Ives, Bill. 1970. Traveling gourmet finds sukiyaki. *Washington Post, Times Herald.* May 7. p. C14.
• ***Summary:*** The ingredients in the recipe for Sukiyaki include "1 block tofu (bean curd) cut into one-inch cubes, optional," "1 cup soya sauce," and "1 teaspoon monosodium glutamate."

2820. Ives, Bill. 1970. Japanese housewife's burden–leaping inflation. *Christian Science Monitor.* May 29. p. 1.
• ***Summary:*** A large graph of consumer price indices for various countries, from 1963 to 1969, shows that inflation in Japan is growing the fastest (up 35% from 1963), whereas in West Germany and the United States it is growing the slowest (up 10-12% since 1963).

When the writer went shopping with Mrs. Masako Mogi in Tokyo he saw firsthand how fast the price of everything from baths to soups was rising. "In the supermarket she picked up a square of spongy tofu (Japanese bean curd) for 18 yen. She'd prefer [traditional] handmade tofu, rather than the mass-produced kind, but its almost double the price. Then came two strips of dried and fried tofu called age (pronounced ah-gay),..." Address: Tokyo–Staff correspondent for the Monitor.

2823. Meade, Mary. 1970. Serendipity potato salad is full of surprises. *Chicago Tribune.* June 10. p. B3.
• ***Summary:*** "The Japanese American Service Committee asked us to tell them which Japanese recipes are most requested by readers." The answer, of course, was sukiyaki. The committee's favorite sukiyaki recipe, which is given, calls for "1 tofu (soy bean curd), cut into 1-inch cubes," and "3/4 cup Kikkoman (soy sauce)."

2824. Hansen, Barbara. 1970. Former Miss America finds new frontiers in cookery. *Los Angeles Times.* June 25. p. 128.
• ***Summary:*** When Rosemary La Planche won the Miss America title in 1941, it was reported that she liked to cook. She is now married, lives in Sherman Oaks, California, and likes to cook creatively. Her recipe for Sukiyaki Rosemary calls for "1 cake tofu (bean curd), cut into bite-size pieces" and for "½ cup soy sauce."

2825. Noguchi, Masatoshi; Arai, S.; Kato, H.; Fujimaki, M. 1970. Applying proteolytic enzymes on soybean. II. Effect of Aspergillopeptidase A preparation on removal of flavor from soybean products. *J. of Food Science* 35(3):211-14. May/June. [23 ref]
• ***Summary:*** "Chemical and organoleptic tests showed that partial digestion of soybean curd and defatted soybean flour by aspergillopeptidase A preparation removed flavor compounds and fatty materials from these soybean products." Address: Dep. of Agricultural Chemistry, Tokyo Univ.

2826. Hewitt, Jean. 1970. A shop that sells table accessories along with cooking demonstrations. *New York Times.* July 15. p. 26.
• ***Summary:*** The shop is Tablerie at 1033 Third Ave., near 61st, in New York City, owned by Mary Ann Zimmerman. Today Mrs. Kenneth Ziegel, a home economist from Wilmington, Delaware, is demonstrating how to prepare Japanese dishes. Her recipe for "Miso shiru (Bean paste soup)" includes "1 tofu (fresh bean curd, cubed)" and "2½ tablespoons miso paste (fermented bean curd paste)."

Note: Describing miso as "fermented bean curd paste" is incorrect; "fermented soybean paste" would be better.

2827. Lee, Elinor. 1970. The art of sukiyaki. *Washington Post, Times Herald.* July 30. p. E1.
• ***Summary:*** Expo '70 is now underway in Osaka, Japan. One of the tastiest Japanese dishes and probably the most familiar to most Americans, "sukiyaki is a popular choice for patio or porch suppers. In Japan, sukiyaki is prepared at the table in a heavy iron skillet over a hibachi (charcoal brazier)."

This recipe "doesn't call for tofu (bean curd), but you can add tofu if you wish."

A large photo shows beautifully sliced sukiyaki ingredients surrounding a modern table-top cooker. Japanese cooks strive to please both the eye and the palate.

2828. Wenkam, Nao S.; Wolff, Robert J. 1970. A half century of changing food habits among Japanese in Hawaii. *J. of the American Dietetic Association* 57(6):29-32. July. [15 ref]
• ***Summary:*** In about 1885, a predominantly vegetarian diet was representative of the farming and laboring classes in Japan. "The three great staples were rice, barley, and soybeans." Those who could not afford rice consumed a less expensive grain such as millet, wheat, barley, buckwheat, or even sweet potatoes. Legumes, which were used universally, included soybean products, peas, mung beans and azuki. The main soybean products were tofu, miso, natto, aburage, and shoyu. Other foods in general use included daikon radish, several types of cabbage, marine algae such as nori, konbu, wakame. etc.

"According to statistics for 1880, total plant food consumption was proportioned as follows: rice, 53 per cent; barley and wheat, 27 per cent; tubers and vegetables, 6 per cent; fruits and algae, less than 1 per cent.

"The chief animal food was fish, much used near the sea, less in the interior. Poultry and eggs were used in small amounts. Beef, mutton, pork, milk, and butter formed a minor part of the diet. The amounts of animal food available per capita per year in 1900 were: meats, 1.3 lb.; fresh fish, 27 lb.; dried fish, 2.5 lb.; and imported meats and fish, 0.3 lb."

A bar chart shows that the daily intake of protein for Japanese adults in Japan and Hawaii has increased from 62 gm in the late 19th century to 101 gm today–an increase of 63%. During the same period, daily fat intake has increased from 10 gm to 87 gm–an 8.7-fold increase! Calories per day are about the same. Address: Dep. of Food and Nutritional Sciences, and School of Public Health, Univ. of Hawaii, Honolulu.

2829. **Product Name:** To-fu: Fresh Soy Bean Cake.
Manufacturer's Name: Wy Ky Food Products Co.
Manufacturer's Address: 235-237 San Fernando Rd., Los Angeles, CA 90031. Phone: 213-222-0779.
Date of Introduction: 1970. July.
Ingredients: Soy beans, water, 1/10 of 1% calcium sulphate.
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 392. Wy Ky is now at 237 San Fernando Rd., Los Angeles, California 90031. Phone: 213-222-0779. Owners: William and Ken Lee.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owners: William and Ken Lee.

Interview with Bill Lee of Wy Ky. 1982. June 29. Wy Ky started in July 1970. Label. 1980, undated. 4 by 3.5 inches. Plastic film. Blue and yellow on clear film. "No preservatives. Perishable–Keep refrigerated."

Soya Bluebook. 1983. p. 78. Owners are William and Ken Lee. Call from Ron Ho, owner of Wy Ky. 1988. Sept. 23. He bought the company from William Lee in 1984. He then bought tofu equipment from another company named Kawanishi in Japan. It doesn't work very well.

Talk with David Ho. His mother bought this company from Bill Lee in about 1983. The location has not changed.

2830. *Toronto Daily Star* (*Canada*). 1970. Sukiyaki made in five minutes: Japan (Ad). Aug. 19. p. 61. Women's section.
• ***Summary:*** In the lower right corner of this page is a recipe for Sukiyaki (with "2 cakes soybean curd, cut into 1-inch cubes").

"With the aid of the Dundas Union Store, one can buy all the authentic ingredients for an authentic sukiyaki for a very reasonable price..." Cook for no more than 4-5 minutes. Address: Toronto.

2831. Lee, Elinor. 1970. Sukiyaki, gift from Japan, pleases both eye and palate. *Washington Post, Times Herald.* Aug. 20. p. I26.
• ***Summary:*** The text of this article is very similar to that by the same writer first published in this newspaper on July 30, p. E1, however with several more recipes and without the photo.

2832. Strayer, George M. 1970. Basic problems haven't changed. *Soybean Digest.* Aug. p. 54-57.
• ***Summary:*** This is an interesting history of the American Soybean Association as seen through the eyes of its most important early member.

"Geo. M. Strayer served as executive officer of the American Soybean Assn. from 1940 until 1967, through the formative years when most of the present structure was established. His term of service on the board of directors started 3 years earlier and was probably longer than that of any other one man. Today he is secretary of Associated Hybrid Producers, as he has been for many years. He exports corn, soybeans, grain sorghum, popcorn, and other midwestern products through Agricultural Exports Inc. He is associated with his brother Gordon and other members of his family in Strayer Seed Farms. He recently was elected mayor of Hudson where he has resided for the past 30 years. The above sketch of Mr. Strayer as mayor is by Jack Bender of the Waterloo (Iowa) Daily Courier.

"Soybeans to me 52 years ago were just a lot of work–a novelty of which a small amount of seed had been secured by my father from W.J. Morse in the Department of Agriculture. Planted in the hills of a small patch of popcorn, they had to be pulled by hand, dried, and then threshed out by hand and

© Copyright Soyinfo Center 2013

with a flail. They were too late for complete maturity in our latitude–but we found out they would grow here!

"By the spring of 1924 there were enough varieties (all imports from the Orient) that my father, B.S. Strayer, in cooperation with USDA and the local Smith-Hughes agricultural instructor, planted a testplot of about 3 acres, and included some 15 or 20 strains of varying maturities. There were black, green, brown, yellow, and vari-colored varieties."

"First exposure to the American Soybean Assn. came in September of 1924 when my father attended the fifth meeting at Ames, Iowa. It was a 2-day meeting, in the days of dirt and gravel roads, and the 100 miles to Ames was a major journey taken the day prior to meetings. I heard the stories of the wonders of the soybean crop secondhanded–I was in high school, the meetings came after school started, and such meetings were no place for kids anyway!

"Wonders of the soybean world: It was not until 1930 that I had my first exposure to the American Soybean Assn., except for reading the proceedings of each of the annual meetings as mailed to all members. The sessions that year were held at the University of Illinois.

"Four of us drove over for the meetings. We stayed at a private home in Urbana. I was indoctrinated into the wonders of the world of such men as W.L. Burlison, J.C. Hackelman, Soybean Briggs, Bill Riegel, John T. Smith, W.K. Kellogg, Keller Beeson, W.J. Morse, Charlie Meharry, Taylor Fouts, Scott Wilkins, and others.

"Today, only Soybean Briggs is still living. But they were the men who had the vision and the foresight and the fortitude to preach and talk soybeans, to plant and harvest them, and to interest people in their possible uses.

"At these 1930 meetings, held while I was a college student, I found my real interest for future years. I believe it was in 1937 after graduating and starting to farm that I was first elected to the board of directors of ASA. My father had served several years ahead of me.

"In 1936 the ASA annual convention was held in Iowa, and I was a member of the committee given the responsibility for planning the program. The first day was held at Iowa State University at Ames, the second day at Cedar Rapids, where processing facilities could be visited, and the third day was held at Hudson on our farms.

"In preparation for the big event we had freshly painted our farm buildings with paint made with soybean oil."

Also discusses: The launching of *Soybean Digest* (Nov. 1940). First trips abroad (1949 with Jack Cartter as members of ECA Technical Assistance Mission No. 1 to Europe, especially Germany; in 1952 to visit potential customers in Western Europe at his own expense; in 1954 as a member of the official USDA-sponsored agricultural trade mission; in 1955 weeks with Paul Quintus, head of USDA's fats and oils division, to study the possibilities of selling soybeans to that country. "I spent 7 weeks in Japan meeting with processors, foods manufacturers, shoyu manufacturers, tofu makers, miso makers, and Japanese government officials").

"The Japanese American Soybean Institute was formed in early 1956, and became the first overseas market development project on soybeans or any oilseed.

"With soybean production zooming, and with the Japanese project well underway, it appeared logical to explore other possible markets. In May of 1956 Paul Quintus again asked me to serve as an emissary of USDA and the soybean industry, this time to survey market possibilities and potentials in 10 Western European countries. Given a free hand, I spent about 2 months on this assignment, came back convinced that we had both problems and opportunities in Europe.

"I recommended that an industry-wide organization be formed. The European market was not solely a soybean market. Some countries would use oil, others meal, still others soybeans. It was too big a job for the small American Soybean Assn. Processors as well as growers had a stake in that market. Out of the arguments, discussions and deliberations the Soybean Council of America was formed to do the market development work in Europe and eventually in South America and in parts of Asia, with both growers, through ASA, and processors, through the National Soybean Processors Assn., participating.

"The problems are the same: Today's problems are the same as those of 1945–creation of larger and larger markets for U.S. soybeans." Address: Former Executive Vice President, American Soybean Assoc. and former editor, Soybean Digest.

Ahimsa book series No. 2.
• ***Summary:*** With a bonus chapter: Why veganism? by Eva Batt. Page 6 notes that soya beans can be sprouted. The authors believe that the best way to eat cereal grains is to sprout them. In a section titled "About Vitamins" we read: "Some people, at least in the transition period, may wish to supplement the menus given, with a glassful of B-12 fortified soya-milk. In the USA, Loma Linda Soyagen and Worthington Soyamel are marketed in various flavors. In England there is Granogen, Velactin, and a leaf-protein milk known as Plantmilk or Plamil. (Plamil is now also being made available in North America)." Soy-related recipes include: Soya patties (with soya meal or flour, baked in an oiled dish, p. 20). How to shell green soya beans (p. 21). Soya loaf (with cooked soya beans, baked, p. 23). Soya milk (with soya powder/flour and dates, p. 24). Soya cheese Americana (tofu made with soya powder/flour and coagulated with lemon juice, p. 25). Australian soya cheese (tofu made with soya powder, coagulated with orange and lemon juice, jelled with agar-agar, p. 25). British Plantmilk cheese (tofu made with Plamil and lemon juice, p. 25). Vegan "mayonnaise" II (with soya milk and mashed potatoes, p. 26).

A lifetime vegetarian, the author has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey 08328.

2836. Knapp, Ronald G. 1970. Itinerant merchants in T'ai-Wan [Taiwan]. *Journal of Geography* (*The*) 69(6):344-47. Sept. See p. 345. [5 ref]
• ***Summary:*** The itinerant merchant or peddler (*t'iao-fan*) sells his wares from place to place, moving on foot (sometimes "toting his goods in two baskets hung from a rhythmically bouncing pole"), by bicycle, etc. He sometimes sells in periodic markets, so common in developing countries.

Page 345: "These hawkers may be selling home-grown vegetables, fish, bean curd, ice cream, bamboo baskets... The hawker of prepared foods is often at once his own producer, distributor, and, of course, salesman. Bean curd milk (*tou-chiang*) [soymilk] and fried sticks of twisted dough (*yu-t'iao*) offer breakfast fare (Figure 4). Later in the day 'stinky bean curd' (*ch'ou tou-fu*) is peddled as a late afternoon snack. (Figure 5). Punctuality characterizes the daily arrival of the seller of any of these light foods..."

Figure 5, a black-and-white photo, shows a man frying *ch'ou tou-fu* at a pushcart stand.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the word "stinky" or the term "stinky bean curd" to refer a special type of fermented tofu. Address: Asst. Prof. of Geography, State University College, New Paltz, New York 12561.

2837. *Los Angeles Times.* 1970. Mastering the menu: Learn how to order your Kaffee mit Schlagobers. Oct. 2. p. I2.
• ***Summary:*** For each of 15 countries where Americans travel, gives a list of words that are useful when ordering in a restaurant. Under Japan: "Kabayaki: Broiled eels. Miso: Bean paste [soy]. Natto: Steamed and fermented [soy] bean. Sashimi: Raw fish dish... Shoyu: Soy sauce. Soba: Buckwheat noodles. Sukiyaki: A quick-cooked meat stew [with tofu and shoyu]. Sushi: Flavored rice and raw fish [sic, many kinds without raw fish]. Tempura: Deep-fried shrimp, fish and vegetables. Tofu: Bean curd. Unagi: Eel."

Note: This same article appeared under the title "Are menus a puzzle? Master a few of those foreign food phrases" in the Oct. 6 issue (p. F16) of this newspaper.

2838. Wittner, Dale. 1970. Children of war: In Viet Nam the orphans come to live in a tiny village that lies uneasily between American and Viet Cong forces. *Chicago Tribune.* Nov. 8. p. 128-31.
• ***Summary:*** No child is turned away from the Minh-Tam orphanage. Everybody observes both Christian and Buddhist ceremony. Meat is never served and all heads are shaved. Those old enough to work are busy throughout the day. "Besides growing the vegetables that make up the bulk of their diet, the older boys grind rice and make soy bean curd that is sold in nearby markets." The girls weave mats on which the children sleep. Seven photos show the children.

2839. Holm, Jane Wang. 1970. Let's enjoy our soybeans. *Organic Gardening and Farming* 17(11):114-16. Nov.
• ***Summary:*** Describes how to cook "shelled green soybeans," and dried soybeans. The author notes that "old China dishes sound odd, but taste good. How about some fresh, tender dandelion shoots with soybean cake, or sliced frozen bean cake with eggs and dried seaweed soup? Dried soybean curd cooked with a fish head and tail, together with some fresh hot pepper tastes wonderful."

Note: The circulation of *Organic Gardening and Farming* is now about 580,000.

2840. Saint, Wint F. 1970. Soy foods–West. *Soybean Digest.* Nov. p. 32-33.
• ***Summary:*** With such a large number of people of oriental ancestry living along the Pacific Coast of the United States and in the islands of Hawaii–our 50th state–"plus the interest in oriental cooking by occidental people, it is hardly surprising that edible soybeans play a prominent part in the ingredients of many oriental dishes and prepared food products in the West."

"But very few people have ever heard of a food that has been a staple in the oriental diet for centuries–bean cake.

"Bean cake, which includes tofu and Chinese cheese,

© Copyright Soyinfo Center 2013

is an excellent food, high in protein, and containing all the essential amino acids."

"Being a soft-curd product, similar in consistency to our cottage cheese, fresh bean cake alone has no distinctive flavor. In fact, it is quite bland. However, it very quickly picks up the flavor of foods with which it is cooked... Thus it may be considered an 'extender' or 'food supplement.'"

Briefly describes how to make "fresh bean cake" on a commercial scale, with calcium sulphate used to coagulate the soy milk (also called "bean milk"). "The residue [okara] usually ends up at the local hog ranch."

The curded soy milk "is scooped into stainless steel trays, or forms, where any excess water is removed. The slabs are then put through another machine which, by means of wires or knives, cuts the cake into small cubes or rectangular pieces which are packed into jars or 'see-through' plastic trays with a very small amount of water. Printed heat-sealing cello tops are affixed along the top edges of the trays.

"The tofu-type bean cake is best when fresh, although if kept in water it will hold its freshness for several days in the refrigerator.

"During the early morning business hours the freshly packed product is delivered to the colorful oriental food shops and restaurants or western supermarkets of the Pacific Coast and Hawaii. A 1969 news release stated that this product accounted for close to $3 million is sales by about 20 U.S. manufacturers and that only slightly over 50% of the consumers were of Oriental descent.

"Fermented-type cake: The fermented-type bean cake–Chinese cheese–is also a soy-milk-based product, but its manufacture is somewhat more complicated, lengthier, and closely guarded than the fresh type. When the fermentation process–which is a matter of days rather than hours–has been completed,... the small yellow cubes are packed neatly in a solution of water plus alcohol, in hermetically sealed glass jars, to insure perfect keeping qualities. One large local producer [probably Quong Hop & Co.] is distributing his product in practically all the 50 states of the U.S. as well as shipping into Canada, South America, and even to Hong Kong!

"Of the fermented-type Chinese cheese, the most widely known, and used, is the yellow or Foo Yee, the taste of which can be compared to a mellow Camembert cheese, while the red, or Nam Yee, is more highly seasoned or spicy. The yellow is called for in many Chinese recipes. A jar will be found in most any Chinese-American kitchen, used mainly as a seasoning, as a cheese substitute, or a topping for macaroni or vegetable dishes.

"The red type–Nam Yee–being of a stronger, spicier flavor–is usually used as a condiment or a seasoning for flavoring roasts, steaks, or with fowl."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "Nam Yee" to refer to fermented tofu.

"Oriental recipes calling for the use of bean cake are varied and most interesting. Very simply: bean cake can be eaten 'as is' with just a bit of sugar sprinkled over it, or dipped in soy sauce, to give it flavor. Or, it may be diced and scrambled with eggs for a breakfast dish, or prepared with pork–known as Tofu Yuk–or with beef."

A portrait photo shows W.F. Saint. Address: W.W. Saint Co., San Francisco.

2841. Lansing, Elizabeth. 1970. The move to eat natural: New converts to organic food are sprouting up all over. *Life*. Dec. 11. p. 45-50, 52. Cover story. [2 ref]

• ***Summary:*** Headline on the cover: "Organic food: New and natural." A full-page photo shows model Gunilla Knutson, who owns a health food store. The blonde-haired young lady is wearing blue jeans and toting a large knapsack, overflowing with fresh vegetables and ears of wheat.

A growing number of people–most of them young, believe that we eat too much, and mostly of the wrong things. That "our food comes to us not as nature intended, but altered by man during both growth and processing; and this tampering has produced increasingly bad effects on man and the ecology." Many make every effort to insure that all their food is grown organically–without pesticides or chemical fertilizers–and that it contains no chemical additives. A new industry is growing up in America to meet these demands. Photos: A colorful array of loaves of whole-grain breads, leavened and unleavened, some with sesame, poppy, or sunflower seeds. Most of these come from a commercial bakery in Berkeley, California. (2) Top view of natural food staples in crocks, incl. black beans, millet, azuki beans, soy beans, unsulphured apricots, toasted kasha [buckwheat], sunflower seeds, red lentils. (3) A self-serve cafeteria at U.C. Santa Cruz where students may choose an organic vegetarian menu–including bean curd [tofu].

Other two-page spreads are titled: Filling the gap from earth to table. Photos show: (1) Saturday morning meeting of leaders of the Food Conspiracy in Berkeley, California. (2) Inside of Wholly Foods' store in Berkeley. Four proprietors under age 30 say success of the store has put them "on a capitalist trip." (3) Jim Baker's The Source restaurant in Los Angeles. His wife carries a try of tall glass of juices. (4) Model Gunilla Knutson on a ladder in the store Nature's Children, of which she is part owner.

Composting and ladybugs make it work. (1) Aerial view of the Garden Project on a 4-acre plot at the University of California at Santa Cruz. (2) Leaves collected by the city of Allentown, Pennsylvania, on their way to the Rodale Farm compost heap. (3) Organic rice plants in the field (600 acres) at Wehah Farms in Chico, California. A key part of organic gardening and farming is composting. For ages it has been a hit-or-miss process, but in the 1930s, Sir Albert Howard, an Englishman, turned it into a science, which he described

© Copyright Soyinfo Center 2013

in detail in *An Agricultural Testament* and elsewhere. Howard inspired J.I. Rodale and Rodale's magazine, *Organic Gardening and Farming*, started the organic movement in the USA. An estimated 5,000 farmers are now growing crops for sale organically, and the number is steadily increasing.

A handful of natural starters: Photos show and recipes tell how to make: (1) Unleavened soaked-wheat bread, and Corn pones. (2) Six beverages without added sugar, incl. Carob milk. (3) Meaty soups for the pot: Vegetable bean soup, and Egg and lemon soup. (4) Organic rice with 'bite': Skewered shrimp with rice.

An image to shed, more food to grow. The writer says that "a large part of the public believes" that the natural foods movement "is just wheat germ and molasses all over again, ingested chiefly by body builders and other exotics. Or worse–that natural foods and macrobiotic diets are synonymous. Agricultural colleges may be sympathetic to organic methods but they seldom teach them–probably because so much of their research is subsidized by the chemical industries.

Note: It looks like the natural foods movement has started to go mainstream.

2849. **Product Name:** [Tofu].
Foreign Name: Bhatmas ko paneer.
Manufacturer's Name: Tofu Shop.
Manufacturer's Address: Kathmandu, Nepal.
Date of Introduction: 1970.
Ingredients: Soybeans, water, lemon juice.
How Stored: Unrefrigerated and perishable.
New Product–Documentation: Letter from Mr. T.B. Gubhaju of Nepal Tofu Factory, Kathmandu, followed by phone call. 1992. Aug. 19 and Sept. 7. He believes that members of the family of Mr. Achutananda Vaidya had started selling tofu in Nepal long before 1983. He is still trying to collect specific information and he has Mr. Vaidya's phone number. Mr. Vaidya, who speaks good English, told him that members of his family began making tofu in Nepal in about 1974-1977–but Mr. Vaidya did not know the exact dates.

Letter from Mr. T.B. Gubhaju of Nepal Tofu Factory. 1992. Sept. 22. Mr. Achutananda Vaidya resides at 9/374 Bhedashing, Jamguthi, Kathmandu. Phone: 229130. His uncle, Mr. Raghubir Baidya, started making tofu in 1970, but had to stop after a few months. For further details, please contact Mr. Vaidya.

Letter from Mr. Achutananda Vaidya. 1992. Dec. 26. "My uncle, the late Raghubir Baidya, started making tofu in 1970 but had to stop after a few months. Mr. Baidya learned to make tofu from his Tibetan friend in 1969 during a 1-month visit to Tibet. Initially Mr. Baidya made tofu for consumption by members of his family only. Later he tried to make tofu on a small commercial scale but without success. He did not have any special equipment to make tofu; he used common household implements. For example, soaked soybeans were ground by hand using a flat stone and pestle device which is still in use today in some houses in Kathmandu and almost all houses in Nepalese villages. It is used to grind soaked black- or green gram into a paste and pan-fried in a thin layer. The ground soybeans were boiled in large copper utensils over a wood fire and the soymilk was coagulated using lemon juice. The coagulated product was pressed with a thin cloth then pressed again using wooden planks. After Mr. Baidya's success in domestic trial production, he tried to go to market on a very small commercial scale, without establishing a company or a brand name for his product. He tried for a few months but he was not successful because consumers in Nepal did not accept this totally new product; they did not know how to cook or consume it. All his products were returned and had to be destroyed because there were no refrigerators in the markets of Kathmandu. So, in this way, he gave up making tofu commercially after a few months of going to market. He passed away in 1973. There is not an exact word for tofu in the Nepali language. It is sometimes called 'bhatmas ko paneer' ('soybean curd')."

Note 1. This is the earliest known commercial soy product made in Nepal.

Note 2. This is also the earliest known commercial soy product made in connection with a person from Tibet. We are unaware of any commercial soy products actually made in Tibet.

2850. Abehsera, Michel. 1970. Cooking for life. Swan House, P.O. Box 638, Binghamton, NY 13902. xiv + 364 p. First Avon Flare Books printing, March 1972. Index. 21cm. • ***Summary:*** Contains many imaginative and joyous macrobiotic recipes. Acknowledgments: "This book could never have been completed without the help of my wife, Claude. Most of the recipes are hers; she cooked, tested and wrote them down... Jack Garvy completed the editing of the book and made definite English corrections. My exceptional friend William Dufty gave valuable advice. Finally, my brother Charles was very helpful..."

The author uses the term "black beans" and from his definition on page 18 it seems that he is referring to black soybeans: "Black Beans, twin brothers of the red aduki in size, are sold in Chinese, Japanese and natural-food stores. They are the milk and honey of the bean family, and their flavor and texture impart a delightful sweetness and richness to any soup or vegetable dish." No definition is given of soybeans. In the section titled "Condiments" (p. 20-21), the author defines soya sauce, miso, seitan, salted plums, tofu, kuzu, etc. "Tofu is another name for soya-bean curd. In Chinatown, you'll see it in wooden barrels. It looks like Feta Greek Cheese and some people would swear it tastes like chicken. It is excellent served with sauteed vegetables, sauces, fried or cooked in Miso Soup.

"Seitan: Your guests will almost certainly mistake this for meat. Teeth find it pleasant to chew. A combination of wheat gluten, wheat soya beans [sic], water and salt, it comes in handy when mixed with vegetables, sauces and soups."
Note 1. No recipe for making or using seitan appears in this book.

Soy-related recipes include: Cooking beans in a pressure-cooker (p. 66; "Do not pressure cook black beans. Their skins may come off and clog the pressure cooker spout. It is quite dangerous!"). Cooking beans in a pot (incl. soya beans, p. 67). Black-bean stew (with miso, p. 70). Soja jardiniere (with whole soya beans and miso).

In the chapter titled "Soups," the author tells the story of how the famous Japanese physician, Dr. Tatsuichiro Akizuki, used miso to strengthen his constitution and to survive the atomic bomb dropped on Nagasaki on 9 Aug. 1945. Under "Minerals" in that chapter he discusses other virtues possessed by miso, then gives a recipe for Miso soup (p. 86).

Radishes sauteed in miso (p. 114). Sandwich au gratin

(with miso spread, p. 114). Macrobiotic marbles (with miso, p. 155). Claudia's pizza (with miso, p. 158). Salade au cresson (with miso, p. 169). Nato [sic, Natto] (Japanese salad with natto, p. 171; Note 2. The author describes "Nato" as "sour soy-beans, bought in a Japanese store"). Miso sauce (p. 178). Miso spread (with tahini, p. 187). Oat-miso spread (p. 188). Scallion spread (with miso, p. 188). Miso pâté (p. 189). Komoku (with tofu, deep-fried and cut into strips, p. 212). O'Sushi (with tofu, p. 217). Kasha à l'Orientale (with tofu, p. 220). Bi-Cuan (Vietnamese recipe with fried tofu, p. 226). Kagetsu ice cream (with fine soya powder [perhaps Jolly Joan from Ener-G foods in Seattle], p. 334; "Kagetsu is a beautiful restaurant in Seattle"). Yellow pompidou (with soya bean powder, p. 336).

The Foreword states (p. 1-2): "Ten years ago I was a sick man, struggling to stay alive and to finish a novel. I suspected I might fail in both matters and the doctors of Paris agreed. They abandoned me as a hopeless case. It was then that I discovered a way of life called Macrobiotics. After a year of eating grains and vegetables, my health restored, I ventured to New York to discover America and finish my novel."

Note 3. *Webster's Dictionary* (1985) defines feta, a word first used in English in 1940, as "a white semisoft Greek cheese made from sheep's or goat's milk and cured in brine."

Fax from Jimmy Silver. 1991. Dec. 17. This was the first best-selling macro / natural food cookbook. Michel is head of a (the?) Jewish community in Montreal, Canada. He has 7-9 brothers and 1 sister. "His brother, George, founded the Nature de France clay based body care company–originally called Cattier but changed after they were sued by Cartier. I thought they would have prevailed in the suit but George didn't want to spend $500,000 to fight it even if he won." Address: New York.

2851. Barnard, W.G. 1970. Health via the carrot and other vegetables. St. Catharines, Ontario, Canada: The Provoker Press and Paul S. Eriksson, Inc. xiv + 144 p. No index. 19 cm.

• ***Summary:*** This is apparently a reprint (with several words missing from the title) of the original edition (which Soyfoods Center has never seen), published in about 1939 by the Natural Foods Institute of Cleveland, Ohio. This edition contains 37 short chapters on a variety of subjects such as: What causes good health and poor health? Personal experiences of the author. The natural laws that govern health–God's simple rules of natural living. About vitamins and minerals. Various health problems or diseases and testimonials of cures and prevention. Good and bad foods, etc. Enemies of health: Coffee, alcoholic liquors, tobacco, denatured foods, tea, cocoa, cola drinks.

The introduction begins: "One of the most wonderful gifts God gave to man is a healthy body. It costs not one penny to preserve your health, but it may cost you a fortune, untold suffering, yes, even life itself, once health is lost... Primitive man sustained himself on natural foods..." (p. ix). "In our opinion some of the worst enemies man has today are High Pressure Advertising of Denatured foods, drugs, etc... Through the powerful medium of radio, billboard, magazine, and newspaper advertising, the public has fastened themselves upon the use of aspirins, alkalizers, narcotics, pills, laxatives, seltzers, cold cures,... Some of the largest buildings in our cities are the hospitals... Oh, what tragedy!" Sadly man fails to recognize that he has brought all these diseases upon himself (p. xiii).

Chapter 3, titled "My personal experiences with carrots and other fruits and vegetables" (p. 11) begins: "For the past 14 years the writer has been lecturing in food shows, trade shows, and expositions on the proper preparation of foods. I lectured at the Century of Progress in Chicago [Illinois] in 1933 and again in 1934, and at the Great Lakes Exposition in Cleveland in 1936 and again in 1937. I am the founder of the Natural Foods Institute in Cleveland, Ohio. He has proclaimed the health-giving carrot to thousands.

"Up to ten years ago, I had been living the average life, eating anything and everything, drinking coffee, tea, cocoa, and colas. The base of my meal was potatoes and white bread. I acquired an excessive weight of 212 pounds. Heartburn followed every meal." He then describes a typical day's diet, loaded with meats, sugar, fat and refined foods–and the agony that followed. He lost his pep and ambition, and was refused life insurance because of sugar in his urine. His family became very concerned. A doctor warned him of the possibility of immanent death, and "prescribed a diet of milk, bananas, lots of raw vegetables and vegetable and fruit juices, which I heeded" (p. 14). He began to feel better from the first day. "Today I feel like a new man... at the age of sixty-six my recovery is so complete that I am now enjoying exceptionally good health" (p. 15).

"With the return of spirituous liquors [in Jan. 1934], cocktail recipes and cocktail bars are prevalent all over the land. We all know that alcoholic cocktails are injurious regardless of the content as long as alcohol prevails... There are cocktails however, that can be made from Nature's vegetables and fruits that are healthful, exhilarating and bracing." "A new machine called a liquefier propelled by electricity liquefies vegetables in from one to three minutes and marvelous Health-Cocktails can thus be prepared at least once each day for the entire family" (p. 16-17). He also mentions the "liquefier" on p. 34, and p. 53 ("liquefying machine"). So this book was apparently not written mainly to promote the liquefier. Note: This liquefier would later become known as a "blender" and Barnard's company would later make and market the Vita-Mix or Vitamix, a powerful type of blender.

"Constipation is a disease known mainly to the civilized races" (p. 29). Barnard regularly cites and summarizes the writings or Dr. John Harvey Kellogg.

© Copyright Soyinfo Center 2013

Essential for good health is a "pure, red blood stream created by natural foods, fresh air, sunshine, and exercise. Soy bean products, spinach, parsley, celery, cabbage and beets, as well as carrots help make good red blood. Eat a plate of salad made of three grated carrots together with orange juice dressing. Drink freely of carrot juice daily" (p. 49). "Carrot juice and other vegetable and fruit juices can be included in the diet of every child every day." In growing boys or girls, beware of "False Sugar Appetites."

"A strict vegetarian diet is used in the treatment of cancer with notable success..." (p. 88).

Like many in the 1930s, the author believes that an alkaline diet fights acidosis and promotes good health (p. 91). "Salt is a very harmful substance if not used in moderation" (p. 119).

Chapter 35, titled "Soy bean (the perfect protein food)" (p. 127-28) begins: "For centuries the Chinese have used the Soy Bean as a source of protein and fat and the necessary Amino acids that are found in flesh foods. In America the production of the soy bean is now running into millions of bushels and vegetable meat factories and milk factories are springing up all over the country.

"Henry Ford, who has done so much to educate the American people to the value of the Soy Bean, recently made the prophecy that the cow and hog were destined to oblivion and we will soon be eating our meat from the Soy Bean and drinking our milk from the Soy Bean. In other words obtaining our food direct from the soil first hand instead of second hand..." "It is the experience of the Natural Foods Institute that babies taken from the natural mothers milk thrive on soy bean milk and we have found no one allergic to it.

"Soy Meat substitutes, Soy Milk, Soy Flour, Soy Cheese [tofu], Soy Coffee substitutes, canned green soy beans, canned soy beans in tomato sauce, soya macaroni are fast becoming popular among health minded people."

In conclusion (p. 133-34): "In writing this book I have consistently followed one line of reasoning. It is agreed to by many physicians, dieticians [sic, dietitians], and food scientists, that vegetables and fruits are absolutely essential for maintaining good health, natural balance, and physical well being. I have tried to help those who are afflicted by giving this information." I also want to help those who are healthy to stay healthy. At the end of the book is a food dictionary and lists of acid-forming foods (bad) and foods with an alkaline reaction (good). Address: Cleveland, Ohio.

2852. Binding, George Joseph. 1970. About soya beans: Wonder source of protein and energy. London: Thorsons Publishers Ltd. 64 p. No index. 18 cm. About series, no. 35.
• ***Summary:*** A superficial introduction containing many errors. Contents: 1. Beans in general. 2. History of the soya bean. 3. Content of soya beans. 4. About lecithin–vital for retaining youth. 5. The soya bean in the Far East: Cooking in China, soya sauce, bean curd or tufu [sic, tofu], bean sprouts, soya bean milk, candied beans, Japan, natto, miso, Japanese soya sauce. 6. American influence on the soya bean. 7. Industrial uses in America. 8. The soya bean and world food shortage. 9. Soya bean recipes.

On page 10 we read: "For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea, and some areas of India. The ancient Yogis, who were among the world's first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet."

Note: Soyfoods Center has been unable (Aug. 2004) to find any documentation for the statement that the ancient yogis consumed soya beans. The earliest date we have seen (Aug. 2004) for the soybean growing in India is 1798 (Roxburgh 1832). The earliest document we have seen concerning the soybean in India is by Beckmann (1798). The earliest document seen (Aug. 2004) for soy products in India (soy sauce) is by Locke (1679). Address: England.

2853. Chang, Wonona W.; Chang, Irving B.; Kutscher, Helene W.; Kutscher, Austin H. 1970. An encyclopedia of Chinese food and cooking. New York, NY: Crown Publishers, Inc. x + 534 p. Edited by Lillian G. Kutscher. Charlotte Adams, Consulting Editor. Illust. Index. 26 cm. International Cookbook Series edition. [52 ref]
• ***Summary:*** This comprehensive work, the result of at least 25 years of collaboration, contains over 1,000 recipes. The 4th printing (March 1977) proclaims prominently: "The first Completely Safe Chinese cookbook compiled in accordance with latest food research without MSG (monosodium glutamate)." Following introductory chapters titled "Chinese Cuisine: Background," "Regional Chinese Cooking," "Utensils for Cooking, Serving, and Eating," "Cooking Preparations," and "Cooking Techniques," there is a detailed "Guide to Ingredients" (p. 22-57), which describes the following soy-related foods and gives Cantonese / Mandarin pronunciations / transliterations (see p. 22): beans, black (wu dow / wu do); beans–black salted fermented beans (dow si / do shih; used as a condiment or flavoring agent [seasoning]. Aroma: fragrant, appetizing); bean cake, fermented (fu yu / fu yu [fermented tofu]); bean curd (dow fu); bean curd, dried (dried bean curd [dried yuba], p. 25, 47–tiem jook or fu jook pei / t'ien ch'u or fu pi chi); bean curd cheese, red (nam yu / nan yu); bean filling, sweet (dow sa / do sa; made from red [azuki] beans or green / [mung] beans); bean sauce, brown or yellow (mien see jiong); bean sprouts (large, from soybeans) (wong dow gna / huang do ya); hoisin sauce (red seasoning sauce) (hoy sin jiong / hai hsien jiang); soy sauce (dark lo tsow / lao tsou; heavy–jiong yow / jiang yu [jiang you]; light–sang tsow / sheng tsou; table soy sauce–sin tsow / shien tsou) "Dark soy sauce has caramel added for coloring. Heavy soy sauce, which has a slightly sweet smell, is also known as black soy. Light soy sauce is the most delicately flavored

© Copyright Soyinfo Center 2013

and is light brown in color. Japanese soy sauce, somewhere between the Chinese light and heavy, is preferable to domestic brands but inferior to Chinese brands."

Vegetable steak (mien gon / mein jing) "Meat substitute made from wheat gluten. Shape: 3-inch square or round patty ½ inch thick." Brown, chewy, and firm. Sold in cans.

Photos (black and white, p. 47) show fermented black beans, fresh bean curd, pressed bean curd, bean curd sticks and bean curd sheets [both kinds of yuba, but "bean curd sheets" on p. 47 are called "bean curd, dried"], brown bean sauce, and large fresh bean sprouts.

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term "bean curd sheets" or the term "fu jook" or the term "fu jook pei" or the term "fu pi chi" or the term "t'ien ch'u" to refer to yuba or to dried yuba sticks.

Pages 58-60 contain a "Shopping list for Chinese cupboard." Foods are listed alphabetically in English, with the Cantonese term romanized and Chinese character forms. Next come the 1,000 Chinese recipes divided into chapters. One chapter is titled "Bean Curd" (p. 422-34), which includes Ma Po Dow Fu (p. 433); there are so many recipes for regular tofu (dow fu) in this book that we do not have room to list them all. The many other soy-related recipes are listed in the excellent index.

Recipes for "bean cake, fermented" [fermented tofu] are: Scrambled eggs with fermented bean cake (Fu yu don, Canton, p. 134). Duck with fermented bean cake (Fu yu ta, Adapted, p. 276). Steamed pork with fermented bean cake (Fu yu tsing ju yoke, Canton, p. 292). Stir-fried green beans with fermented bean cake (Fu yu tsang dow, Canton, p. 391). Lettuce and fermented bean cake (Fu yu sang tsoi, Canton, p. 392). Spinach and fermented bean cake (Dow fu bo tsai, General, p. 399). Watercress and fermented bean cake (Fu yu sai yong tsoi, Canton, p. 40).

Recipes for "black beans, salted" [fermented black soybeans] are: Pork with bitter melon and salted black beans (Fu gwa yoke si, Canton, p. 305). Shrimp with bitter melon and salted black beans (Fu gwa dow si har, Canton, p. 306). Steamed spareribs with salted black beans (Dow si pai gwut, Canton, p. 320). Beef with bitter melon and salted black beans (Fu gwa ngo yoke do si jiong, Canton, p. 340). Black bean sauce (Huk dow tsup, Canton, p. 436; with garlic and ginger.

Note 2. This is the earliest separate recipe seen {Nov. 2008} for "Black bean sauce").

Recipes for "bean curd, dried" [dried yuba] are: Pig's feet with dried bean curd soup (Ju gyok tiem jook tong, Adapted, p. 113; with "10 sheets dried bean curd." Soak sheets in hot water for 30 minutes. Drain, cut crosswise into pieces 1 inch wide, then add to soup). Spare ribs with dried bean curd soup (Pai gwut shiu tiem jook, Adapted, p. 321). Dried bean curd strips with soy sauce (Hung shu tiem jook, General, p. 424). Vegetarian ham dried bean curd (Sue ho twei dow fu, Shanghai, p. 429; with "20 sheets dried bean curd").

Recipes for "bean curd skin" (or bean curd sheets) [yuba sheets, fresh or dried] are: Red-cooked carp with bean curd skin (Fu pi hung sao yu, Shanghai, p. 158; with "bean curd skin to cover" carp). Red-cooked carp with bean curd skin–Approved ulcer recipe (Hung sao li yu dow fu pi, General, p. 158; with "¼ lb. dried bean curd skin {about 20 pieces, 1½ by 5 inches}. Soak for 30 minutes in hot water. Drain. Cut into 2-inch squares).

Recipes for "frozen bean curd" [frozen tofu]: Frozen bean curd with soybean sprout soup (Dung dow fu dow ya tong, Adapted, p. 90; with "2 cakes frozen bean curd" and "½ lb. soy bean sprouts." "Defrost frozen bean curd by covering with cold water, letting stand 2 to 4 hours before cooking. Then cut each piece into 10 to 12 thin slices"). Spareribs with frozen bean curd (Pai gwut shiu dung dow fu, Adapted, p. 320; with "4 cakes frozen bean curd"). Stir-fried frozen bean curd (Tsao dung dow fu, Peking, p. 422; with "6 cakes frozen bean curd. * Wrap 2 to 3 pieces fresh bean curd together in waxed paper, freeze until hard").

Recipes for "pressed bean curd" [pressed tofu]: Pressed bean curd shrimp (Sha tze gahn si, Shanghai, p. 178, with "4 pieces pressed bean curd"). Golden strips with pressed bean curd (La jiao tsao san sih, Hupeh, p. 313). Pressed bean curd and celery with stir-fried beef (Dow fu gahn ching tsai ro si, Shanghai, p. 357). Stir-fried pressed bean curd with pork (Dow fu gahn tsao ro si, Shanghai, p. 427). Stir-fried pressed bean curd with chicken (Dow fu gahn tsao gee si, Shanghai, p. 427).

Recipes for "soybean sprouts": Spareribs soybean sprout soup (Pai gu dow ya tong, General, p. 112). Beef shank soybean sprout soup (Wu hwa niu ro hwang dow ya tong, General, p. 112). Braised soybean sprouts (Hung sao hwang do ya, Shanghai, p. 376).

Note 3. This is the earliest English-language document seen (Jan. 2013) that uses the term "wong dow gna" or the term "huang do ya" to refer to soybean sprouts. Address: USA.

2854. Hooker, Alan. 1970. Vegetarian gourmet cookery. San Francisco, California: 101 Productions. 192 p. Edited by Helen Morrow. Illust. by Sara Raffetto. 21 cm.
• ***Summary:*** Pages 101-02 state that one of the easiest ways to get one's daily protein is by using soya flour, which can be added to many foods. Soy-related recipes include: Baked soy beans (p. 56). Tofu with tempura vegetables (p. 132). Page 181 recommends various vegetarian food products, including Vegeburger and Choplets (made by Loma Linda Foods), Kikkoman brewed Soy Sauce, Bakon Yeast, and Gravy Quik (which contains soy and other vegetable proteins).

2855. Kanthamani, S. 1970. Tasty recipes from soybean. Jabalpur, India: Directorate of Extension and USAID,

Jawaharlal Nehru Krishi Vishwa Vidyalaya. 100 p. Illust. 28 cm.
• ***Summary:*** The majority of the recipes use "full-fat soy flour." Lime juice is the coagulant used for making tofu. Textured soy flour is not mentioned.

Contents: Definition of terms. Substitutions. Glossary. Introduction. 1. Soybeans are rich food: Findings of nutrition research, soybeans are good for certain patients (diabetics, those with nervous disorders, those with acidity in blood tissues needing to be alkalinised), soybeans must be properly processed, how to make full-fat soy flour [at home]. 2. Fried soy products. 3. Soy sweets. 4. Roasted soy flour. 5. Baking. 6. Dals and vegetables. 7. Soy milk and milk products (including homemade soy milk and homemade soy paneer {tofu, p. 88-89}). 8. Miscellaneous. Appendix.

Note: This is the earliest document seen (April 2013) that contains the word "paneer" (spelled that way) used in connection with tofu or soy, or that contains the term "soy paneer." Paneer is a soft, fresh dairy cheese, widely consumed in India. It is more expensive than tofu.

Chapter 1 begins (p. 11): "A large proportion of the people of India are vegetarians who obtain only a small part of their protein from animal products, principally milk and milk products. Oilseeds are an important source of protein to such persons. Both groundnuts and soybeans are rich in protein. However the protein content of soybeans is higher than that of groundnuts and the protein of soybeans is nutritionally superior to the protein of groundnuts."

Note 1. This is the earliest English-language document seen (Dec. 2005) that contains the term "roasted soy flour."

Note 2. The page facing the title page announces a Hindi version of this book, by the same author, which will be published soon. Address: Extension Specialist, Home Science, Jawaharlal Nehru Krishi Vishwa Vidyalaya, Jabalpur, India.

• ***Summary:*** Contents: Derivatives for direct use in human nutrition: Soy oil, shortenings, margarines, lecithins, soy flours, soy flakes, soymilk, tofu. Derivatives for industrial utilization: Industrial protein. Address: Ing. Químico. Jefe Sec. Química E.E.A.T.

2858. Meyer, Edwin W. 1970. Soya protein isolates for food. In: R.A. Lawrie, ed. 1970. Proteins as Human Food. London: Butterworths; Westport, CT: AVI Publishing Co. xvii + 525 p. See p. 346-62. Proceedings of the 16th Easter School in Agricultural Science, Univ. of Nottingham, England, 1969. [57 ref]
• ***Summary:*** Contents: Introduction. Processing of soya protein isolate. Composition of soya protein. Properties of soya protein isolate. Food uses of soya protein isolate: Processed meat and meat-like products, bakery products, dairy-type products, miscellaneous food uses. Nutritional properties of soya protein isolates.

"The volume of soya protein isolate now being sold for food use in the U.S.A. is estimated to be about 15 million pounds per year. This is 50 per cent higher than an estimate reported in 1967 (Meyer, 1967). The isolate is now selling for about 35-40 cents per pound." Address: Central Soya Co., Chicago, USA.

2859. Robeau, Alec. 1970. Cooking the Indonesian way. New South Wales, Australia: A.H. & A.W. Reed. 160 p. Index. 21 cm.
• ***Summary:*** The Introduction has good, long definitions of many Indonesian ingredients including: Ketjap, ketjap manis, soya beans, tahu (tofu, and how to make it at home), taotjo ("These are salted soya beans and are readily available in all Chinese stores and shops." [Note: Taotjo is Indonesian-style miso]), tempe [tempeh].

Soy-related recipes include: Sajur oblok (Smoked fish and vegetable dish, with ¼ lb diced tempe, p. 34-35). Sajur gudek (Spiced vegetables and jackfruit dish, with ¼ lb diced tempe, p. 37). Sajur kangkung (Spiced watercress, with ¼ lb diced tempe, p. 38). Tahu Surabaja (Fried soya bean cakes with vegetables, with ½ lb diced tofu, p. 46). Kuah sate II (Spiced peanut sauce (with ketjap), p. 52). Babi ketjap (Pork in soyabean sauce, with 3 tablespoons soy sauce, p. 74-75). Sambal taotjo (Spiced chilli paste with taotjo, p. 119). Tempe goreng (Fried tempe, p. 128. Serve as a snack or side dish).

2860. Ross, Shirley "Wonderful." 1970. The interior ecology cookbook. San Francisco, California: Straight Arrow Books. 134 + 8 p. Recipe index. 22 cm.
• ***Summary:*** This pseudo vegetarian cookbook contains some fish recipes. Soy-related recipes include: Soybean loaf with tomato sauce (p. 35). Tamari & noodles (p. 55). Fried tofu (with sliced scallions and mushrooms, p. 72). Tofu salad (p. 102). Tamari sauce (with flour, margarine, milk, and mushrooms, p. 115).

2861. Shokuhin daijiten [Great Japanese encyclopedia of foods]. 1970. Tokyo. [Jap]
• ***Summary:*** Contains entries for amazake, miso, natto, shoyu, and tofu.

2862. Singh, Rajeshwari (Mrs). comp. and ed. 1970. Soyahar: Indian recipes of soybean. Pantnagar, Nainital, India: U.P. Agricultural University. xxviii + 216 p. Illust. 25

cm.
• ***Summary:*** Contents: 1. Acknowledgment. 2. List of contributors. 3. Preface (by Singh). 4. General information: Introduction, how to soak soybeans, how to make soybean milk (at home or commercially), how to make soybean curd [tofu] (at home or commercially), how to make soybean flour (at home or commercially), cultivation of soybeans in India. Tables show: (1) The amino acid content of various vegetable and meat products. (2) Nutritive value of important legumes–groundnut, pigeon pea (arhar), chick pea (Bengal gram), soybean. (3) Chemical composition of some soybean products (seed, meal, flour, full fat flour, protein concentrate, isolate, textured food, beef analogue). (4) Nutritional value of the soybean compares with selected other foods. (5) Composition of mature green soybean [green vegetable soybeans, 70% water]. (6) Composition of dry soybeans. (6) Uses of vegetable protein products (soybean flours, soybean concentrates, isolated soy proteins, textured foods–incl. simulated meats). 5. Milk products (including homemade soy milk, homemade soy curd {dahi}, homemade soy cheese {paneer}). 6. Cereals and lentils. 7. Soups, curries, vegetables, chutney & raita. 8. Snack foods. 9. Indian sweets. 10. Cookies and confections. 11. Meat products (mostly meatless / vegetarian). 12. Useful cooking information. 13. Glossary: Hindi-English and English-Hindi. Contains 221 recipes. 4 p. of errata.

Photos show: On the cover, a young Indian girl drinking soymilk from a large glass (color). (1) The seven women who comprise Pantnagar's Soybean Utilization Team. (2) Mrs. D.P. Singh, honorary leader of the Team explain a fine point to Prof. Alvin Nelson. (3) Many Indian ladies in traditional Indian clothing standing behind a long table on which are soybean delicacies prepared in a conventional Indian kitchen. There are many color photos of prepared dishes. (4) A soybean plant with pods and leaves. Address: Pantnagar, India.

2863. Soybean Utilization Project. 1970. Soybean in your kitchen. Pantnagar (Nainital), U.P. India: G.B. Pant University of Agric. and Technology. ii + 35 p. 24 cm. [1 ref. Eng]
• ***Summary:*** Contents: Table of equivalent weights and measures. Cultural hints (for cultivating soybeans in India. Best varieties: Bragg, Hardee, Semmes). Soybean to fight protein hunger. Soy milk (how to make it at home), soy curd (dahi; how to make it at home, with cardamom), soy cheese (paneer; how to make it at home, curded with lemon juice), soy flour (whole, dehulled, ground in a flour mill), soy dal. Sweets. Salty snacks. Cookies and cakes. Soups-dals-curries. Glossary.

2864. Steinberg, Rafael. 1970. Pacific and Southeast Asian cooking. New York, NY: Time-Life Books. 208 p. Illust. (color photos). Index. 28 cm. Series: Foods of the World.
• ***Summary:*** A superb book filled with beautiful recipes, text, and color photos. Accompanied by a 128-page spiral-bound book of recipes. Bean curd [tofu] is mentioned on pages 74 (in Indonesian *gudeg*) and 172 (in Vietnamese soup).

Recipes that call for *ketjap manis* (Indonesian sweet soy sauce) are Broiled skewered marinated chicken (Saté ajam, with 2 tablespoons *ketjap manis*, p. 88) and Spiced peanut sauce (Katjang saos, with 1 tablespoon *ketjap manis*, p. 93). The actual recipe for "Ketjap manis (Indonesian sweet soy sauce)" on page 106, which makes about 1 quart, calls for: 2 cups dark brown sugar, 2 cups water, 1½ cups Japanese soy sauce, 3/4 cup dark molasses, ½ teaspoon ground *laos*, ½ teaspoon ground coriander, and ½ teaspoon freshly ground pepper.

Note: This is the earliest English-language document seen (April 2012) that uses the term "Indonesian sweet soy sauce" to refer to *ketjap manis*.

The very interesting headnote (p. 106) states: "The ubiquitous American tomato ketchup, or catsup, gets its name but not its ingredients from the Malayan 'kechop' (in Chinese 'ketsiap') which originally was a pickled fish brine."

Tjolo-Tjolo (Moluccas, Broiled fish and vegetables with 3 sauces). "To prepare the ketjap sauce, mix ½ cup *ketjap manis* and 1 tablespoon of fresh lime juice in a serving bowl" (p. 107).

2865. Trager, James. 1970. The enriched, fortified, concentrated, country-fresh, lip-smacking, finger-licking, international, unexpurgated foodbook. New York, NY: Grossman Publishers. xv + 579 p. Illust. Index. 24 cm. [350+* ref]
• ***Summary:*** This hefty volume is packed with information about a multitude of interesting, little known, or bizarre subjects related to food. It is divided into 11 major chapters, each of which contains many mini-chapters, often with witty or enticing (but often undescriptive) titles such as "mushrooms take savvy" or "Farmer Jefferson." The extensive index is very useful, containing entries for such things as Accent/MSG (p. 445-48), prehistoric agriculture and food (p. 3-11), meat analogs and Bac*Os (p. 450-51, 457, 501), Archer Daniels Midland (p. 450), bean curd (p. 333, 362), Battle Creek Sanitarium (p. 460), Kellogg (p. 384, 460-61), miso soup (p. 362), soybeans (p. 21, 262, 382, 450-51, 518), soy protein (p. 450), vegetarianism and vegetarians (p. 3, 324, 343, 457-59).

In Chapter 10, titled "Nuts in the Fruitcake" (p. 455-86), the author takes the opportunity to make fun of anything he discusses related to health/natural foods or vegetarianism. To him, it all smacks of food faddism and extremists. There are sections about vegetarians past and present ("there are no convincing nutritional justifications for vegetarianism"), Sylvester Graham ("One of America's first home-grown food faddists"), Horace Fletcher, Dr. William Howard Hay and acidosis, Gayelord Hauser ("Perhaps the most prominent

© Copyright Soyinfo Center 2013

diet and health mythologist in recent years"), organic foods baloney ("DDT has not yet been shown to have harmful effects for humans"), Carlton Fredericks and Adolphus Hohensee, Tiger's Milk, aphrodisiac foods, and food and astrology. Address: New York.

2866. Wiener Bordow, Joan (Sita). 1970. Victory through vegetables: With a section of recipes from the macrobiotic diet by Barbara Thralls. New York, NY, Chicago, Illinois, and San Francisco, California: Holt, Rinehart and Winston. ix + 163 p. 22 cm.
• ***Summary:*** A vegetarian cookbook. The author, whose name on the title page is given as Joan Wiener, was born in 1944. Soy-related recipes include: Soybean milk and soy chaff [Okara] (p. 15). Bean curd and instant bean curd (homemade, p. 15-16). Cream of rice and soybean soup (p. 31). Soy nut salad (with soy nuts, p. 42). Bean curd sukiyaki (p. 49). Far Eastern dumplings (filled with cooked and mashed soybeans, p. 54). Macao noodles and vegetables (with bean curd and soy sauce, p. 56). Whole wheat role filled with bean curd (p. 59). Soybean tomato mix in stuffed peppers (with soy chaff [okara], p. 71-72). Soybean nuts (fried in butter, with salt, p. 93). Tahini miso spread (p. 136).

2867. **Product Name:** Authentic Snow-Dried Tofu.
Manufacturer's Name: Mitoku Co. Ltd. (Distributor). Made in Japan.
Manufacturer's Address: C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 33-201-6701.
Date of Introduction: 1970?
Ingredients: Tofu (soybeans, water and nigari–a natural coagulant extracted from sea water).
Wt/Vol., Packaging, Price: 2.45 oz (70 gm) plastic bag.
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased from Health Flavors (distributor), Brewster, New York. 2000. Nov. 10. 5½ by 9 inches plastic bag. Orange, gold, black, white, and red. "Mitoku macrobiotic Snow-Dried Tofu is hand-crafted in the snowy highlands of central Japan by one of the few hearty families who still use the traditional methods. The result is an all natural, delicious and concentrated convenience food that stores well and readily absorbs flavors."

Talk with Jan Belleme, Mitoku's representative in the USA. 2000. Nov. 21. This product has been available since about 1970.

2868. **Product Name:** Tofu.
Manufacturer's Name: Star Tofu Shop.
Manufacturer's Address: 943 E Street, Fresno, CA 93706. Phone: 209-268-1717.
Date of Introduction: 1970?
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 313. Goto Tofu Co., or Star Tofu Shop, 914 E St., 93706. Tel. 268-1717.

Fresno City Directory. No listing for Star in 1975 or before.

Talk with Brad Kubota of Fresno Tofu Co. 1990. Nov. 28. His company was formerly named Goto Tofu (run by Nagaki Goto), and before that it was named Star Tofu, run by Nagaki's elder brother, David Goto. Brad thinks that David bought the company in about 1970, or maybe before. Before that it was named Hashimoto Tofu, run by a Mr. Hashimoto. Before that it was named Tokubo Tofu, run by Mr. Tokubo.

2869. **Product Name:** [Tsuru Habutae Frozen Tofu].
Foreign Name: Tsuru Habutae Kôri-dôfu.
Manufacturer's Name: Tokiwa Reito Shokuhin.
Manufacturer's Address: Ina 5057, Ina-shi 396, Nagano-ken, Japan.
Date of Introduction: 1970?

2870. Carberry, James F. 1971. Our daily bread: Food faddism spurts as young, old people shift to organic diets. Concern on pesticides cited, but some see deception by quacks claiming cures. Yin and yang ice cream. *Wall Street Journal.* Jan. 21. p. 1, 12.
• ***Summary:*** Written from Hollywood, California, this article reports that "food faddism has been particularly prevalent lately." Kahan & Lessin Co., one of the nation's biggest distributors of organic foods, reports that its sales have doubled to $12 million a year from $6 million in 1968. New Age Foods of San Francisco [owned by Fred Rohé] recently opened a branch store in suburban Palo Alto, where it expects to gross $1 million during its first year.

"Health and organic food advocates say the popularity of such items–as well as the more conventional products grown under 'natural' conditions–reflects the growing public concern over pesticide poisoning and the publicity over the dangers of food additives, preservatives, and substitutes like cyclamates."

Richard Hansen is a sociologist at the University of California at Davis; he is researching the organic food movement.

"New insights into universe: Bruce MacDonald [sic Macdonald], president of Erewhon Trading Co., a Boston and Los Angeles concern that specializes in such exotic foods as hacho miso (a soybean paste), says that organic foods appeal to many dropouts from the drug culture. 'It's not just that the body's malnourished from being on drugs a long time,' he says. 'It's also that organic foods can give a person new insights into the order of the universe."

Warren Stagg, the bearded proprietor of H.E.L.P., a popular vegetarian restaurant, believes in the mystical, spiritual value of certain foods. A vegetarian diet can help elevate a person to a higher level of consciousness and bring him into harmony with the order of the universe, he says. Since 75% of H.E.L.P.'s clientele are nonvegetarians,

© Copyright Soyinfo Center 2013

the "restaurant offers some meat substitutes such as 'beef' stroganoff made from vegetable protein, mushrooms, scallions, bell peppers and sour cream sauce, and a 'vegeburger' sandwich that's also made from vegetable protein. Other dishes on its menu include braised tofu (soybean cake) with brown rice and a salad of cottage cheese, alfalfa sprouts, sunflower seeds, grated carrots, scallions, figs and apricots."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "braised tofu" to refer to grilled tofu.

"A group of young people following a macrobiotic diet live in an old Victorian mansion above Hollywood's Sunset Strip. They are students of the late Georges Ohsawa, a Japanese philosopher who taught about the delicate balance between yin and yang; they eat ascetic meals that include pressure-cooked brown rice and seaweed soup. There have recently been well-publicized cases of the deaths or severe illnesses of a few young people subsisting on only brown rice, the extreme form of the macrobiotic diet.

"Another famous food-faddist helped found a huge business in breakfast cereals. He was John Harvey Kellogg..." according to Ronald Deutsch, author of a history of food fads called "The Nuts Among the Berries." Deutsch then tells his inaccurate version of how Mr. [sic, Dr.] Kellogg got into the cereal business.

"One man who spends a great deal of time pooh-pooing various nutritional eccentricities is Dr. Fred Stare, chairman of the department of nutrition at Harvard University's School of Public Health." Dr. Stare discusses his pet peeves.

Note 2. Bruce Macdonald recalls (April 1992): "In early 1971 *The Wall Street Journal* ran a front-page feature story on the emerging new natural foods industry. A person from Merrill-Lynch came in and said, 'We could package this business and raise millions for you.'"

Advest Co. 1972. Dec. "A recent *Wall Street Journal* article named this industry as one of the ten highest growth industries for the 1970s." Address: Staff Reporter.

2871. Loring, Kay. 1971. Japanese restaurants–Tea rooms to sushi bars. *Chicago Tribune.* Feb. 7. p. F5.
• ***Summary:*** "The traditional sushi bar was introduced to Chicago by Kamehachi Sushi, 1617 N. Wells St., in Old Town." Particularly tasty in the writer's opinion is "inari-zuchi [sic, inari-zushi], soy bean pockets filled with slightly sweetened [and mildly vinegared] rice."

2872. Conversation with Farmer City Grain (Interview). 1971. Conducted by Dr. Walter Wolf of NRRL, Peoria, Illinois 61604, Feb. 22. 1 p. handwritten transcript.
• ***Summary:*** Mr. Louis West was out of town for 2-3 weeks. The person Dr. Wolf talked to said that Hawkeye and Kanrich are the major varieties used. M-I sold by Mico is Kanrich. Hawkeye acreage is decreasing and Beeson usage is increasing to supply soybeans to take the place of Hawkeye variety.

Magma, Prize and Kanrich are being used for miso [in Japan] while Hawkeye and Beeson are converted into tofu.

2873. Smyth, Jeannette. 1971. Stores do a healthy business in natural food. *Washington Post, Times Herald.* Feb. 28. p. 1291.
• ***Summary:*** The health food industry is divided into two categories: (1) Those the young people call "the pill stores," which sells mostly pills and supplements, not much food. They have been around for decades. (2) The newer natural food stores, run mostly by young people of today's counter-culture, who sell mostly foods and beverages. These stores are based on the philosophy of living in harmony with nature, rather than trying to conquer Nature. Oliver, Cheri, and Krispin are members of the collective which runs Beautiful Day, a natural foods store in College Park, Maryland.

"Bill Beal tries to eat raw fruit and vegetables because cooking, he says, reduces their nutritional value. A typical day's breakfast is cottage cheese of tofu (soy bean curd), mixed with home-made yogurt, brewer's yeast, wheat germ, dark molasses, and fruit–dried or fresh." Note: This article, with two photos, is written in an unsympathetic tone.

2874. Saio, Kyoko; Kamiya, M.; Watanabe, T. 1971. Tôfu no bussei ni kansuru ikkôsatsu [Statistical observations on the physical properties of tofu]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 26. p. 193-96. Feb. Reprinted from Nippon Shokuhin Kogyo Gakkaishi 17(5):207-10 (1970). [4 ref. Jap; eng]
Address: 1&3. Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan; 2. Japan Protein Industry Co., Ltd., Kodaira, Tokyo.

2875. Claiborne, Craig. 1971. To cook Japanese style, it helps if you have obliging butcher. *New York Times.* March 4. p. 41.
• ***Summary:*** Ayako Wakita, a slender young woman, is the wife of Aijiro Wakita, a Japanese painter and sculptor. They live in a Manhattan apartment in New York City where, she remarks, "in season" foods are not as widely available as in Japan. She cooks Japanese style twice a week when they entertain friends. Her recipe for Yosenabe calls for "6 or 8 one-and-one-half-inch cubes bean curd (tofu)." A photo shows beautiful Ayako as she arranges dishes on the family table.

2876. Shinoda, Osamu. 1971. Doufu kao [Thoughts / treatise on tofu]. *Ta-lu Tsa-chih* (*The Continent Magazine, Taiwan*) 42:172-78. (Also numbered p. 8-14). March 31. [12 ref. Chi; eng]
• ***Summary:*** A Chinese-language publication apparently

© Copyright Soyinfo Center 2013

similar in content to his 1968 Japanese-language publication by the same title.

A summary, translated into English by Ernst Wolff for Theodore Hymowitz in Jan. 1972, states: The word "tofu" first appeared in the Chinese document *Ching Yi Loo* (Pinyin: Qing Yi Lü) by Tao Goo (Tao Gu) in the early Sung Dynasty (960-1126 A.D.), although the Japanese believed that tofu technology was invented by Prince Liu An of Huai-Nan around 200 B.C. in China. Shinoda believes that the technology for making tofu was adapted from that of cheese making introduced to China by nomadic people, the so-called "Hoo." They migrated from the north into China during the period from the Six Dynasties (222-589 A.D.) to the T'ang dynasty (618-907 A.D.), in the time just before the Sung dynasty. Tofu was first a popular food among the middle and lower classes during the Sung dynasty. Then it also became part of the diet of the upper class, and was even served to the emperor and royal family during the Ming dynasty (1368-1662). Tofu was introduced to Japan by vegetarian Buddhist monks around the 12th century. On page 12 is an extremely interesting list of the 12 earliest documents (1238-1534), which Shinoda has been able to find, that mention tofu under various names. For each is given the title, the date it appeared, and the name used for tofu or the food in which it appeared. For details, see Shinoda 1968 (in *Fuzoku*).

Terms which are romanized or appear in English in this document include: Cheese, butter, yoghurt, casein, khorot, Suridofu, Hikizuri-dofu, Tofu-zu, Mori, Dengaku, tofu, Oden, Shirakabe, Mura Dengaku, Sakai, Okabe, Antofu, Ganmodoki, bean curd. A romanized Japanese verse reads:

Harusato wa Kabe no Tatoe ni Naradofu, Shiroki wa Tsuki no somuke zari keri.

Koisureba kurushikarikeri Udzidofu, Mamehito no Na o ikadetoramashi.

Note: According to Abe (1974, p. 99) this is one of Japan's earliest references to tofu; it is a waka-style poem that comes from a work titled either *Shichijû-ichiban Shokunin-zukushi Uta Awase* or *Nanajû Ichiban Shokunin Jin Utaawase* and appears in the section of poems about sômen noodle sellers. Address: Japan.

2877. Erhard, Darla. 1971. Nutrition education for the "now" generation. *J. of Nutrition Education* 2(4):135-39. Spring. [41 ref]

• ***Summary:*** Describes the author's efforts in Berkeley, California, to provide factual nutritional information to members of various San Francisco Bay Area counterculture groups, including Zen macrobiotics, the One World Family Commune, Krishna Consciousness devotees, and fruitarians.

"Food faddism–which used to be associated with older population groups–coupled with vegetarianism has now become the panacea for some members of the younger generation, often called 'hippies.'

"The majority of my information on the Zen Macrobiotic diet was derived from classes that I attended taught by a former pupil of George Ohsawa, believed by some to be the originator of Zen Macrobiotics. From these groups, I learned that the widely publicized, all-cereal diet originating from the seven levels of eating (dietary eating pattern with initial allowance of certain percentages of all foods with seven progressions to the ultimate all-cereal diet) was the result of mistranslation and misuse of the Zen Macrobiotic principles by the American public." The author then gives a fair and balanced description of a macrobiotic diet; miso, soy sauce and tofu are listed as part of a typical daily macrobiotic menu. Address: 323 Monte Vista Ave., Oakland, California 94611.

2878. Watanabe, Tokuji. 1971. [Process for production of packed tofu]. *Japanese Patent* 602654. April 12. [Jap]*
Address: National Food Research Inst., Tokyo.

Address: National Food Research Inst., Tokyo.

2880. Calloway, D.H.; Hickey, C.A.; Murphy, E.L. 1971. Reduction of intestinal gas-forming properties of legumes by traditional and experimental food processing methods. *J. of Food Science* 36(2):251-55. March/April. [18 ref]

• ***Summary:*** Tofu and tempeh have little flatus activity, i.e. they cause little gastrointestinal gas.

The two basic types of bean sprouts, soybean and mung bean, gave almost identical reactions. Both cause slightly more breath hydrogen, total flatus and bacterial gases in the flatus than the baseline treatment but somewhat less than the 100-gram doses of beans.

MPF [Multi-purpose food] is a high-protein food (containing 50% protein) with toasted soy grits as the only protein source. The size of the test dose (136 gm) contained the same amount of protein as 20 gm of soybeans. This amount of MPF contains only one-third the carbohydrate content found in soybeans (21 vs. 67 gm) a very little fat (1.4 gm). The gas forming property of the soybean was found to be "retained in proportion to the amount of carbohydrate present and was otherwise unchanged by the processes applied." Address: Dep. of Nutritional Sciences, Univ. of California, Berkeley.

2881. Hashizume, Kazumoto; Kakiuchi, K.; Koyama, E.; Watanabe, T. 1971. Denaturation of soybean protein by freezing. Part I. *Agricultural and Biological Chemistry* 35(4):449-59. April. [14 ref]

• ***Summary:*** Role of S-S bond in denaturation. Address: 1&4. Food Research Inst., Ministry of Agriculture and Forestry; 2. Inst. for Protein Research, Osaka Univ.; 3. Japan Kori-tofu Assoc.

2882. Meade, Mary. 1971. Exotic fare with ease. *Chicago Tribune.* May 1. p. S24, or N12.
• ***Summary:*** Contains a recipe for sukiyaki, which calls for calls for "3 cups soy bean curd (optional)."

2883. Dwan, Lois. 1971. Roundabout. *Los Angeles Times.* May 9. p. Q50.
• ***Summary:*** In a review of The Golden Dragon, a Cantonese restaurant, the writer enjoyed "fresh clams steamed in black bean sauce." Chicken was "combined with pressed to fu [tofu] and tree fungus,"

The chef added "whole chestnuts, ginkgo nuts, bean-curd skin, and fun see (transparent noodles) to a meatless vegetable dish,..."

2884. Fujimaki, Masao; Kato, H.; Arai, S.; Yamashita, M. Assignors to the USA as represented by the Secretary of Agriculture. 1971. Enzymatic improvement of soybean flavor and stability. *U.S. Patent* 3,585,047. June 15. 3 p. Application filed 30 Oct. 1968. [1 ref]
• ***Summary:*** The bitter and beany (astringent) flavors of soybean curd [tofu] or defatted soybean flour can be greatly reduced by applying a proteolytic enzyme. For example, suspend 10 gm of soybean curd in 1,000 ml of dilute hydrochloric acid (HCl) (pH2.8) and allow it to be digested at 50ºC with 0.1 gm of commercially obtained aspergillopeptidase-A (Molsin, made by Seishin Seiyaku Co. of Japan), produced by *Aspergillus saitoi.* After 2 hours, stop the digestion by neutralization with sodium hydroxide (NaOH), obtain a precipitate by filtration or centrifugation, and treat it with 10 times its weight of 50% ethanol to remove the liberated beany and astringent flavors. Remove the wash liquid by filtration and lyophilize the treated curd. Address: Tokyo, Japan.

2885. Saio, Kyoko; Kajikawa, Masahiro; Yamazaki, Sado; Watanabe, T. 1971. Food processing characteristics of soybean proteins. II. Effect of sulfhydryl groups on physical properties of tofu-gel. *Agricultural and Biological Chemistry* 35(6):890-98. June. [11 ref]
• ***Summary:*** "Changes in the amount of sulfhydryl groups by heating or treatment with urea were more rapid in 11S protein as compared with 7S protein." "Tofu-gel from 11S protein got harder and stronger as the amount of sulfhydryl groups increased.

"The results may suggest that tofu prepared from 11S protein has more disulfide bonds in its gel than that from 7S protein." Address: 1&3. Food Research Inst., Ministry of Agriculture and Forestry; 2. Food and Feed Research Lab., Takeda Chemical Industry, Ltd.

2886. Dimler, R.J. 1971. Dried tofu made from U.S. soybeans. *Notes from the Director of the Northern Division* (*Peoria, Illinois*) No. 1040. p. 1. Aug. 6.
• ***Summary:*** "Working under a PL-480 project sponsored by Dr. Cowan (Oilseed Crops), Prof. Yosito [Yoshito] Sakurai, Japan Frozen Tofu Association, Tokyo, developed a standardized procedure for making kori-tofu (dried tofu). Salient features of the method include rapidly chilling fresh tofu to -10ºC. in 1 to 2 hours and holding at -1º to -3ºC. for 13 weeks. Basic studies suggest that the ratio of 7S / 11S proteins is important for kori-tofu, but the optimum ratio was not determined. Laboratory evaluation of four U.S., two Chinese, and three Japanese varieties of soybeans indicated that Hawkeye, a U.S. soybean, was the best variety for making kori-tofu. Browning sometimes occurs during storage because in high humidities a reaction takes place between the protein and the products from the oxidation of unsaturated fatty acids. Low storage temperature and humidities are desirable in protecting dried tofu from browning.

"Kori-tofu is a traditional Japanese soybean food. Its production requires a 3-week process that is fairly complicated. According to Professor Sakurai, the variety of soybeans used as raw material is the most important of the many process factors that affect quality and yield. Therefore, the favorable results obtained with U.S. beans are significant. In the past, kori-tofu was made primarily from Japanese and Chinese beans, about 40,000 tons annually, but now more and more U.S. soybeans are entering this market." Address: Director.

2887. Clausen, E.E.; Nakayama, T.O.M. 1971. Carotenoid incorporation into soybean curd. *J. of Food Science* 36(4):632-34. July/Aug. [10 ref]
• ***Summary:*** Incorporation of carotenoid pigments as protein encapsulated beadlets, in solution in vegetable oil or as suspensions of microcrystals into soymilk prior to coagulation is reported. Address: Dep. of Food Science, Univ. of Georgia, Athens, GA 30601.

2888. **Product Name:** Tofu Blueberry Pie.
Manufacturer's Name: Crane's Call Bakery.
Manufacturer's Address: 112 Queensberry Street, Boston, Massachusetts.
Date of Introduction: 1971. August.
Ingredients: Tofu, fresh blueberries, agar, maple syrup.
How Stored: Refrigerated.
New Product–Documentation: Talk with David Kailin, founder and former owner of Crane's Call Bakery. 1992. May 14. He (alone) owned a bakery named "Crane's Call Bakery," located at about 112 Queensberry Street in the Fenway area of Boston. The bakery started in about the spring of 1970 as a macrobiotic bakery. He bought organically grown hard red winter wheat from Ted Whitmer in Bloomfield, Montana. In about Aug. 1971 he started making this product, a sort of tofu-blueberry cheesecake,

© Copyright Soyinfo Center 2013

at his bakery. He sold the 9 inch diameter pies wholesale to natural food stores, especially Erewhon in Boston. Erewhon would sell it by the slice. He made it only in the late summer when blueberries were fresh and in season. He conceived of the idea himself; it was not inspired by any other earlier product. There was an article about his company in an early issue of *East West Journal.*

Another early bakery in the Boston area was named Corners of the Mouth. Located at Inman Square in Cambridge, it was the first natural foods bakery in Boston. They started as much as a year before Crane's Call Bakery, were not macrobiotic, and made granola and whole-grain breads. David once shared a load of organically-grown wheat with them.

2889. Lappé, Frances Moore. 1971. Diet for a small planet. New York, NY: Ballantine Books. xiv + 301 p. Illust. by Kathleen Zimmerman & Ralph Iwamoto. Index. 18 cm. [90 ref]

• ***Summary:*** This one of the most important and influential books written about food, nutrition, and world hunger during the 1970s. It became a huge best-seller and influenced millions of people and many other authors. The idea for *The Book of Tofu* came directly from reading this book–in Japan. Published on 1 Sept. 1971, it introduced the concepts of "protein complementarity" and "eating low on the food chain" to countless Americans. By April 1973 the book had been reprinted 7 times. The book's roots lie in the University of California at Berkeley, where Ms. Lappé was enrolled in the School of Social Work in 1968. A committed community organizer of welfare recipients, she was frustrated in her inability to find an agenda that would truly end the people's suffering. So she began to study the political economy of food in the Natural Resources library. From this research came a 1-page handout, then a 5-page handout, then a 70-page booklet, and finally this landmark book.

Contents: Acknowledgments. Foreword. Part I: Earth's labor lost. Part II: Bringing protein theory down to earth. Part III: Eating from the earth: Protein theory applied. Part IV: Combining non-meat foods to increase protein values. Appendixes. Notes.

Key quotes: "This book is about PROTEIN–how we as a nation are caught in a pattern that squanders it... I propose that our meat-centered diet is at the very heart of our waste of the earth's productivity" (p. xi). "Fully *one-half* of the harvested agricultural land in the U.S. is planted with feed crops. We feed 78% of all our grain to animals. This is the largest percentage of any country in the world" (p. 5). We feed animals "89% of our corn crop, 98% of our grain sorghum crop, 87% of our oat crop, 64% of our barley crop, as well as 95% of our unexported soybean crop. To make beef or veal, "a cow must be fed 21 pounds of protein [from feed] in order to produce 1 pound of protein from human consumption."

This vegetarian book contains 125 pages of recipes and makes extensive use of soybeans and soyfoods–though mostly in the form of whole dry soybeans or grits (*) or soy flour (+), which are two of the least interesting ways of using soybeans. In the section titled "Getting the most protein for the least calories," subsection 5 on "Legumes" (p. 106) states: "Soybean curd (tofu) has the fewest calories for the amount of usable protein, largely because most of the fat is removed in its processing. Tofu is truly an excellent protein source. Lightly sautéed with a fresh vegetable accompaniment, one could easily eat 7 ounces of tofu and fulfill 25 to 30 percent of a day's need for proteinÄat the cost of only about 5 to 7 percent of a day's calorie allotment. I've included several tofu dishes among the recipes given later in this book."

Tofu is not mentioned in the index, but under "Soy Curd" we find one recipe titled "Leafy Chinese tofu (Soy curd)" (p. 144). It notes that soy + rice, and soy + sesame are complementary proteins.

The recipes are grouped by complementary combinations. Rice and soy (p. 140-45; combining in the proper proportions gives a 32% increase in usable protein): Crusty soybean casserole*. Stuffed cabbage leaves*. Curry rice*. Leafy Chinese tofu (soy curd). Sukiyaki (with tofu).

Rice and wheat and soy (p. 146-50; 24% increase in usable protein): Hearty vegetable soup (with miso and soy sauce)*. Sweet and pungent vegetable curry*. Mexican grains*. Rice-wheat "kasha"*.

Whole wheat and soy (p. 181-88; 32% increase): "Complementary" pizza+. Savory onion quiche+. Wheat-soy waffles+. Chameleon spice cake+. Wheat-soy pudding+.

Wheat, soy, and sesame (p. 189-94; 42% increase): Sesame crisp crackers+. Sesame dream bars+. Journey cakes+. Orange sesame muffins+. wheat-soy-sesame bread+.

Cornmeal and soy and milk (p. 202-08; 13% increase): My favorite cornbread+. Boston brown bread+. Pineapple-corn muffins+. Corn spice coffee cake+. Cornmeal-soy waffles+. Indian pudding*.

Soy, wheat, rice, and peanuts (p. 220-26; 15% increase): Curried soybeans and peanuts*. Nutty bean tacos*. Soybean croquettes*. Spanish soybeans over mixed grains*+. Deep dish vegetable pie*.

Soy and sesame seeds (or sunflower seeds) and peanuts (p. 227-32; 25% increase): Nutty noodle casserole*. Soy-sesame-peanut spread+ (with roasted soy flour). Peanut-sesame loaf supreme+. Soy-pea sesame snacks*. Bean burgers*.

This was one of the first popular books to show the connection between intensive livestock production and environmental degradation. Part I, titled "Earth's Labor Lost," shows how: (1) Animal wastes from huge feedlots cause water pollution (p. 15-16); (2) Growing crops for livestock feed and overgrazing leads to soil erosion, loss of topsoil, and soil depletion (p. 17-18); (3) The increased

© Copyright Soyinfo Center 2013

pressure on our land to grow livestock feeds has led to increased use of pesticides, which kill untargeted species and cause water pollution (p. 26-27). In short, a vegetarian diet "maximizes the earth's potential to meet man's nutritional needs and, at the same time, minimizes the disruption of the earth necessary to sustain him. It's as simple as that" (p. 3).

Also gives a recipe for "Crunchy granola" (p. 251, based on rolled oats, coconut shreds, sesame seeds, and wheat germ).

Note 1. As of Sept. 1991, this book had sold about 4 million copies, and of that 3 million copies in English-language editions.

Note 2. This is the earliest document seen (May 2002) concerning the environmental impact of a vegetarian diet. Address: California.

2890. Yamamoto, Kajiro. comp. 1971. Noren: Tokyo o shiru tame ni [Noren: In order to get to know Tokyo]. Tokyo: Shinto Manzo/Hato Basu (Bus) Kogyo K.K. 256 p. Illust. 18 cm. [Jap]

• ***Summary:*** *Noren* is the Japanese word for the decorative cloth, bearing the company crest or logo (*mon*), that hangs in the doorway of traditional Japanese shops, especially restaurants. This guidebook contains brief descriptions and sketches of famous, old, and interesting/colorful Japanese food companies and restaurants in Tokyo. Each description is by a different author, and is accompanied by a an illustration (line drawing) of the front of the restaurant. Those with a strong tie to soyfoods include Sasa-no-yuki (p. 76; founded 1703), and Shinoda-zushi Sôhonten (p. 87; founded 1872). At the back of the book is the address and phone number of each food company or restaurant, a chronology giving the year that each was founded, and several maps of Tokyo showing where each is located. Address: Tokyo, Japan.

2891. Visit to Pacific Grain Co. (Interview). 1971. Conducted by Dr. Walter Wolf of NRRL, Peoria, Illinois 61604, Feb. 22. 1 p. handwritten transcript.

• ***Summary:*** Pacific Grain [Farmer City, Illinois] now has 20,000 acres under contract for growing Beeson variety soybeans. Beeson averages about 10 bushels per acre better than Hawkeye. Beeson, however, has a tendency for the hulls to crack which leads to splits on handling after the beans have been cleaned.

2892. United Press International (UPI). 1971. Japan offers delicacy: Raw viper in blood. *Hartford Courant* (*Connecticut*). Nov. 26. p. 95B.

• ***Summary:*** Of course, this delicacy is an exotic repast in Japan. A more usual meal might consist of "tofu (bean curd) soup, fish, either raw or cooked, and a bowl of rice." Seaweed, chrysanthemum flowers (*kiku*), and baby bees are also consumed in Japan.

Note: This soup is usually called "miso soup with tofu."

2893. Abe, Koryu. comp. 1971. Tôfu hyakuchin to zokuhen [One hundred favorite tofu recipes, and supplement]. Tokyo: Shinshu Shorin. 280 p. Illust. No index. 22 cm. Facsimile of original 1782 edition, and modern translation. [1 ref. Jap]

• ***Summary:*** Contents: Introduction. Forward. Essay. About the author (autobiographical). Tofu Hyakuchin: Introduction, table of contents, recipes. Tofu Hyakuchin Zokuhen: Introduction, table of contents, recipes. Translations of Tofu Haykuchin and Tofu Haykuchin Zokuhen. Comments about cooking with tofu. Contains 100 recipes.

2896. **Product Name:** Tofu Cheesecake.
Manufacturer's Name: Souen.
Manufacturer's Address: 2444 Broadway, New York, NY 10024. Phone: (212)-787-1110.
Date of Introduction: 1971.
New Product–Documentation: Talk with Lenny Jacobs. 1992. May 27. In 1971 Marcea Newman created the first tofu cheesecake at the Souen (pronounced SUE-en) restaurant in New York City. The cheesecake was probably sold only at the restaurant. Marcea used to live upstairs of it, up on Broadway. Lenny thinks (but is not sure) that Kathy Bellicchi learned about Marcea's recipe later, then made her own tofu cheesecake in Boston.

2898. Black, Patricia Hall; Carey, Ruth Little. 1971. Vegetarian cookery. 5 vols. Mountain View, California, Omaha, Nebraska, and Oshawa, Ontario, Canada: Pacific Press Publishing Assoc. Illust. by Henry Rasmussen. Recipe index. 24 cm.

• ***Summary:*** These are lacto-ovo vegetarian cookbooks. "Most of the recipes in these cookbooks have been collected over many years. Some came from association in years past with Paradise Valley Sanitarium and Hospital and with White Memorial Hospital; others came from more recent association with Loma Linda University." The complete nutritional composition of each recipe is given in that back of each book. Note 1. Monosodium glutamate is used in many recipes (For explanation, see Introduction to each volume). Other interesting meaty seasonings include Savorex, Smokene, and G. Washington Broth. Apparently generic names for meatlike products are used ("gluten burger" rather than "Gluten Burger") when more than one Adventist company makes such a product.

Contents: Vol. 1. Appetizers, beverages, salads, dressings and relishes, cooking guides. Vol. 2. Breads, soups, sandwiches. Vol. 3. Main dishes, vegetables. Vol. 4. Pies, cakes, cookies, desserts. Vol. 5. Exotic foods, candies, cooking for a crowd.

Soy- and gluten-related recipes include: Vol. 1: Nut and Soyameat pinwheels (with light Soyameat, p. 16-17). Soyameat puffs (with canned Soyameat, p. 17). Soybean milk (homemade, p. 30). Green beans and gluten salad (p. 37; Skallops [also spelled Scallops, gluten based] or Soyameat may be substituted for diced gluten). Chop suey salad (with Soyameat, or light or dark nutmeat, p. 44). Note 2. This is the earliest vegetarian or health food cookbook seen (June 2004) with "Appetizers" as one of the recipe categories.

Vol. 2: Whole wheat soy bread (with soy flour, electric mixer recipe, p. 15-16; Sponge method, p. 17). Soy cheese spread (with canned tofu, p. 44). Soy cheese and egg filling (with tofu, p. 44). Gluten spread (with canned gluten burger, p. 45). Hot burger sandwich patties (with canned gluten burger, p. 46). Hot gluten sandwich (with canned gluten steaks, p. 46). Hot savory sandwich (with Proast or other nutmeat, p. 47). Nutmeat and olive filling (with Proteena or Nuteena, p. 47). Savory Soyameat filling (p. 48). Soyameat and egg filling (with light Soyameat, p. 48). Soyameat, nut and olive filling (p. 48). Grilled gluten sandwiches (p. 52).

Vol. 3: Homemade gluten (. 15). Gluten roast (p. 15). Gluten burger loaf (with canned "gluten burger," p. 16). Primeburger loaf (with Primeburger [gluten], p. 16-17). Normandy loaf (with Proteena, p, 17). Walnut Proteena roast. Holiday roast (with gluten burger). Oatmeal herb loaf (with Vegeburger, p. 18). Nut roast (with Proteena, p. 21). Cashew nut and gluten loaf (p. 22). Seaside loaf (with Soyameat, p. 23). Ocean fillets (with Soyameat, p. 23). Soy soufflé burger (with dry soybeans, p. 24). Savory soy loaf (with canned soy cheese [tofu], p. 24). Soy cheese (or tofu) loaf (p. 24). Tofu loaf (no eggs, p. 25). Tofu (or soy cheese) patties (p. 25). Browned tofu with mushrooms (p. 25). Nuteena balls (p. 26). Basic gluten balls (p. 26). Nutmeat and rice patties (with Proteena and Nuteena, p. 31). Cottage cheese gluten burgers (p. 31). Chum la King (with Vegesteaks, p. 33). Stroganoff (with canned Soyameat, p. 34). Gluten stroganoff (with canned gluten or Soyameat, p. 34). Savory gluten casserole (with canned Chickettes or other gluten preparation, p. 35). Scalloped Soyameat (with light or dark Soyameat, p. 36). Gluten steaks deluxe (with canned gluten steaks, p. 37). Gluten steaks with mushrooms (p. 37). Shish kebab (with gluten steaks or Tender Bits [made of gluten], p. 37-38). Hearty soybean casserole (with canned Zoyburger, p. 42). Garbanzo and cottage cheese loaf (with Vegeburger, p. 44). Stuffed green pepper (with canned Vegeburger, p. 46). Oriental rice casserole (with gluten or Chickettes, p. 49-50). Chop suey (with fresh tofu, p. 51). Quick chop suey or chow mein (with canned Soyameat, p. 51). Spaghetti marzetti (with canned Vegeburger and Smokene, p. 56). Lasagna (with gluten burger, p. 57). Tetrazzini (with canned white Soyameat, p. 57). Quick eggs Benedict (with beef-style smoked Soyameat, p. 61-62). Eggs con burger (with gluten burger, p. 62). Eggs Vienna (with 6 vegetable wieners, p. 63). Baked soybeans (p. 80). Soybeans creole. Soybeans southern style.

Vol. 4: Soy nut cookies (with 1 cup soy flour, p. 97). Vol. 5: Gluten stew (p. 14). Spanish gluten (p. 14). Gluten nut loaf (with canned gluten burger, p. 16). Ocean fillets (with gluten and Soyameat). Browned tofu (p. 22). Chop suey (with soy cheese [tofu], p. 23). Soy cheese patties (with canned tofu, p. 23). Gluten burger sandwiches (p. 31). Chinese sweet-sour gluten (with canned gluten steaks, p. 41). Sweet-sour Tender Bits (with canned Tender Bits or other gluten preparation, p. 42). Chinese evergreen tofu (p. 42). Japanese sukiyaki (with canned gluten, Tender Bits, or Scallops, p. 45). Scrambled tofu (p. 46). Philippine adobo (with gluten, Tender Bits, or Scallops, p. 48). Philippine

© Copyright Soyinfo Center 2013

gluten curry (p. 49). Philippine gluten escabeche (p. 49). Korean seasoned gluten (with canned gluten, p. 50). Indian gluten curry (with canned gluten, p. 52). Kurma (Indian, with Soyameat, p. 53). Soyameat Indian curry (with canned light Soyameat, p. 53-54). Brazilian Palmito soy loaf (with canned or cooked soybeans, p. 57). Brazilian-style gluten (p. 57).

Can sizes: Chickettes (20 oz). Gluten (14 oz or 20 oz). Gluten burger (14 oz, 28 oz, or 30 oz). Gluten steaks (14 oz). Nuteena (14 oz.). Primeburger (20 oz). Proteena (14 oz). Scallops (14 oz). Soyameat (9 oz or 13 oz). Soyameat, white (13 oz). Soy cheese (12 oz or 14 oz; tofu). Tender Bits (20 oz). Vegesteaks (14 oz). Zoyburger (19 oz). Address: 1. M.S.; 2. PhD.

2899. Brissenden, Rosemary L. 1971. Joys and subtleties: South East Asian cooking [1st American ed.]. New York, NY: Pantheon Books. A Div. of Random House. 262 p. Index. 19 cm.

• ***Summary:*** Contents: Acknowledgements. A note on this American edition. Weights and measures. 1. Introduction to South East Asian food. 2. Utensils, methods, ingredients, glossary. 3. Indonesia. 4. Malaysia and Singapore: Malay, Chinese, Indian, Miscellaneous Malaysian. 5. Thailand.

Ingredients include (p. 35-36): Monosodium glutamate (use sparingly), soya bean curd (incl. "dried bean curd [yuba], used only in Chinese cooking, comes in flat sheets or in twists"), soya sauce (the 3 types used in this book are light, dark {which is thicker and heavier}, and Javanese {which is sweet and very thick}. It is "sometimes available in bottles called Ketjab Manis [Ketjap Manis], or Ketjap Benteng, under the label of Conimex"). A recipe (p. 36) is given for "Javanese soya sauce" containing dark soya sauce, molasses, and brown sugar.

A table (p. 40) gives the name for 3 soyfoods in English, Indonesian, Malay, Chinese, and Thai, respectively. (1) Soya bean curd, tahu, tauhu, tow fu, taw hu. (2) Soya sauce (dark), ketjap, kichup or tauyu, see you, nam pla siiw. (3) Soy sauce (light), -, -, sung chow, nam pla siiw.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "tow fu" to refer to tofu.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "See you" to refer to a type of soy sauce.

Soy related recipes include: Ikan semur djawa (Fish in soya sauce, with "2 tablespoons Javanese soya sauce," p. 69). Ajam semur djawa (Chicken in soya sauce {Java}, with "dark soya sauce," p. 76-77). Saté ajam (Chicken saté, with "dark soya sauce," p. 77-78). Semur daging (Beef in soya sauce, with "2 tablespoons dark soya sauce," p. 94). Tahu goreng ketjap (Fried bean curd with soya sauce, with "6 squares soya bean curd," p. 105). Tahu pong (Bean curd omelette, with "3 cakes soya bean curd," p. 111-13). Fried fish with soya beans (with "2 oz. yellow soya beans {available at Chinese groceries in cans}, p. 149-50)." Baked bean curd (with "8 squares soft bean curd," p. 181). Steamed, dressed bean curd (with "1 lb. soft bean curd, roughly chopped and drained," p. 181-82). Address: Melbourne, Australia.

2900. De, Sasanka S. 1971. Technology of production of edible flours and protein products from soybean. *FAO Agricultural Services Bulletin* No. 11. 151 p. AGS: ASB/11. [37 ref]

• ***Summary:*** Contents: Preface. Introduction. Oil milling operations. Quality control of edible flour and grits. Process procedure for production of soya flour and grits. Production of full-fat soya flour: Wenger process, Buehler process, simple process for villagers. Protein isolate: Advantages, process, yield and quality, Alfa-Laval process, estimated cost and calculations on economic return. Production of other soya products: Soy milk, Saridele, Stork method of soy milk production, pilot plant production of tempeh, protein fibers and meat analogs, extrusion-expansion products (meat analogs), bean curd (tofu). List of equipment suppliers. Annexes: PAG Microbiological requirements. 27 tables. 23 figures.

Note: This is the earliest document seen (Aug. 2002) concerning Alfa-Laval's work with soy products (soy protein isolate). Address: Senior Food and Agricultural Industries Officer, Food and Agricultural Industries Service, FAO.

2901. Hirayama, Takeshi. 1971. Epidemiology of stomach cancer. In: Tadashige Murakami, ed. 1971. Early Gastric Cancer. Baltimore, Maryland: University Park Press. Gann Monograph on Cancer Research No. 11. viii + 301 p. See p. 3-19. (Tokyo: Tokyo Univ. Press). [18 ref]

• ***Summary:*** This paper outlines the results of an epidemiological case-control study of stomach cancer in Japan. Table 1 (p. 10) shows "Factors associated with the standardized death rate for stomach cancer in 46 prefectures in Japan." Many foods and nutritional elements are included. A negative association means: The more one consumes, the less one's risk of dying from stomach cancer in Japan. The author reported a significant negative association for tofu (-5.28), vitamin A (- 4.12), and calcium (-6.54), and a very significant negative association for milk (-9.19). Thus these foods and nutrients appear to protect against stomach cancer. There was a significant positive association for fermented soybeans (+4.90; probably natto) and with a large amount of highly salted foods, including highly salted miso, but not including soy sauce or regular miso.

"The number of deaths from cancer of the stomach is still on the increase in Japan. Most of the increase, however, was found to be due to the increase in population itself. When the change in age structure was taken into account, the disease was noted to be on the downward trend since 1958. The death rate for age 45-49 in 1970 was 29% less for males and 14% less for females than in 1955." The standardized

© Copyright Soyinfo Center 2013

death rate from stomach cancer for men in Japan (68.57) was the highest in the world, and over 7 times higher than for U.S. whites (9.42). By marital status, widowed men have the highest rate (376.3), followed by separated men (273.6), then married men (116.4), with single men (75.1) having the lowest rate.

"In an international survey of 24 countries, the decline in the death rate for stomach cancer in recent years was found to be closely correlated to milk consumption." Address: Epidemiology Div., National Cancer Center Research Inst., Tsukiji 5-1-1, Chuo-ku, Tokyo, Japan 104.

• ***Summary:*** A vegetarian cookbook. Soy-related recipes include: Stuffed cabbage with soybeans (p. 36). Salted soybeans (dry roasted soynuts, p. 82-83). Japanese Teri-Yaki sauce (p. 95). Homemade bean curd or tofu (p. 105; no coagulant is used. "Cover and let the soybean milk stand in a warm place until it thickens. Separate the thickened curd from the rest of the liquid, and put it into a pan with water to cover. Simmer for 5 minutes. Remove curd and drain through cheesecloth. Season with salt. Cut into pieces"). Address: Laguna Beach, California.

2906. Ohsawa, Lima. 1971. Makurobiotiku ryôri: Shokuyô katei ryôri 700 shu [Macrobiotic cookery: Food-cure home cookery–700 recipes]. Tokyo: Nihon CI Kyokai. xix + 7 + 200 + 6 p. Illust. (many color plates). Index. 26 cm. [Jap]
• ***Summary:*** This macrobiotic classic contains many chapters and recipes related to soyfoods and other interesting Japanese foods: Azuki and bean cookery (p. 96-98). Tofu cookery (p. 99-104). Miso cookery (p. 104-08; tofu, miso, and shoyu recipes are also scattered throughout the book). The chapter titled "Other Vegetable Cookery" (p. 110-24) contains many recipes for *kôfû*, a term used to refer to fresh wheat gluten. There are recipes for Kofu cutlets and Kofu croquettes (#419, p. 112). Skewered kofu cutlets. Kofu fukume-ni. Kofu rolls (p. 113). Deep-fried kofu chunks (#423, p. 114; it states that kofu can be purchased at Chinese grocery stores). Interestingly, there is no mention of seitan. The same chapter contains 9 yuba recipes (p. 121-22). Recipes for sea vegetables are scattered throughout the book, especially in the chapter on wild vegetables (p. 135-37). Two recipes using amazake as a sweetener appear on p. 152, and homemade amazake beverage is found on p. 169

An extensively revised English-language translation of this book was published in 1974 under the title *The Art of Just Cooking* by Autumn Press. Address: Tokyo.

2907. Rose, Carrie; Peterson, Melinda. 1971. The whole wheat heart of Yasha Aginsky: A vegetarian cookbook. New York, NY: E.P. Dutton & Co., Inc. 128 p. Illust. Recipe index. 31 cm.
• ***Summary:*** Contains 3 soy-related recipes: (1) "Tofu." A simple recipe for how to make tofu at home from full fat soy flour, using lemon juice as a curding agent. "Tofu, better known as bean curd, is rich in protein and mainly used in soups, much as are chopped vegetables. Save the residue [okara] to use in breads, casseroles, loafs or soup." (2) "Soy Nuts." Soaked soybeans fried a few at a time in 1 inch of hot oil, then drained and salted. "One handful gives you an enormous amount of protein." (3) "A Loving Soy Pat or Two." Deep-fried patties containing whole and chopped soybeans, miso, vegetables, tahini, and whole wheat flour.

2908. Sung, Betty Lee. 1971. The story of the Chinese in America. New York, NY: Collier Books. viii + 341 p. Illust. Map. Index. 21 cm. Originally published in 1967 under the title: Mountain of Gold: the Story of the Chinese in America. [283 ref]
• ***Summary:*** This 1971 edition is basically identical to the original 1967 edition titled *Mountain of Gold: The Story of the Chinese in America*–except for a new Foreword, which notes the repeal of the national origins quota

As in the original edition in American life, from the Gold Rush to the present.

Chapter 9, "Chinatowns," states (p. 149): "If Chinese food is served at home, the basic ingredients must be

© Copyright Soyinfo Center 2013

purchased from Chinatown, for where else can one buy soy sauce, bean curd, dried mushrooms, snow peas, or bamboo shoots?"

Page 206: "Add seasonings of fermented bean curd, salt, and a little soy sauce. Put in just enough water to keep the food from burning. Lower the flame slightly. Cover the frying pan until the water boils (about two minutes)..."

2909. Tseng, Chieh-hsin. 1971. The consumption and demand for soybeans in Taiwan, China. PhD thesis, Agricultural Economics, Ohio State University. xi + 160 p. Page 5975 in volume 32/11-A of Dissertation Abstracts International. 28 cm. [35 ref]

• ***Summary:*** Contents: I. Introduction: Background of agricultural economy, production, policy and importation of soybeans, soybean nutrition and utilization (soybean milk, soybean curd), problem identification and main objectives. II. Definitions, methodology, and procedures: Implication of consumption and demand, review of literature, factors identification and hypotheses, data collection and arrangement. III. Consumption of soybeans and their products: Consumption patterns and household expenditures (soybean oil, soybean curd, soybean seasoning, soybean made vegetarian food, soybeans, soybean milk, miscellaneous soybean foods, total soybean foods, soybean feeds), consumption of soybean foods–soybean equivalents, seasonal variation in soybean product consumption (soybean oil, soybean curd, soybean food products), substitutes for soybean products in Taiwan, Significance of Consumption function and elasticities. IV. Demand and marketing of soybeans: Trends in demand and price for soybeans, the demand function and its significance (results and significance), characteristics of soybean food products and their manufacturer (soybean curd, soybean oil and meal, the trends in demand), marketing of locally produced soybeans, projection of the future demand for soybeans. V. Summary and conclusions: Summary of findings, recommendations. Appendix A. Bibliography. Address: Ohio State Univ.

2910. Tsuji, Kaichi. 1971. Kaiseki: Zen tastes in Japanese cooking. Tokyo and Palo Alto: Kodansha International Ltd. 207 p. With 96 color plates. Original woodcuts by Masakazu Kuwata. 29 cm.

• ***Summary:*** Contents: Foreword by Yasunari Kawabata (winner of the Nobel Prize for literature in 1968). Foreword: The tea ceremony and kaiseki by Sôshitsu Sen (head of the Urasenke School of Tea and the 15th generation descendent of Sen no Rikyu, founder of the school). Utensils and Kaiseki by Seizô Hayashiya (chief curator of the Ceramics Department at the Tokyo National Museum). The twelve months of kaiseki. The kaiseki courses (defines and describes each course, such as Mukôzuke, Misoshiru [pages 168-71 give a fine description of miso and miso soup], Wanmori, Yakimono, Azukebachi, Hassun, etc.). Postscript. Notes on utensils. List of recipes. Glossary: Includes descriptions of miso, natto (incl. *Daitokuji-nattô,* p. 66), shoyu, tofu, and yuba, plus azuki and Dainagon-azuki, many types of wheat gluten (fu), kuzu, mochi, sea vegetables (konbu, nori, wakame), fresh-water algae (Kamogawa-nori, Suizenji-nori {= Kotobuki-nori}), and umeboshi.

This is a magnificent, beautiful book, the finest work available on Japan's highest form of haute cuisine, Tea Ceremony Cuisine, by a great Japanese Kaiseki chef. It was first published in Japanese by Tan-kôsha Inc. of Kyoto. Soyfoods are used throughout the book–especially miso, since one of the fixed courses in a kaiseki meal is miso soup (*misoshiru*). Many recipes use soy sauce, often the light colored type, usukuchi. Most recipes are shown in an accompanying full-color photo. The tea ceremony was developed at the court of the shogun in late Ashikaga times under such men as Soami, and his father and grandfather, Geiami (1431-1485) and Noami, who were painters, landscape gardeners, and poets in Kyoto. The greatest of the tea masters, under whom the tea ceremony (*chanoyu*) took final shape, was Sen no Rikyu (1521-1591). Zen preached the importance of the simple, uncluttered life. As a Zen priest and tea instructor, "Rikyu believed that amid the solitude of calm withdrawal from worldly cares sought by those who practice *chanoyu*, there should exist an element of creativity that leads to the serene enjoyment of beauty. The heart of this creativity, according to Rikyu's Zen aesthetics, lies in the careful avoidance of the trite, the obvious, and the emphatic. Beauty has its most powerful effects when it arises from suggestion and restraint...

"Centuries ago, it was a rule that Zen priests ate only two regular meals a day–morning and noon. But since the priests engaged in rather strenuous work, by evening they were often hungry, and to assuage this hunger they would eat a light meal, which was called *yakuseki* ('hot stones'). This term came from the practice of putting heated stones inside their clothing, by which the priests staved off hunger and cold during long sessions of meditation. When the tea masters developed the custom of serving a meal during the tea ceremony, they called it *kaiseki* ('breast stones'). By evoking the image used in the Zen term, they seasoned their specialty with religious connotations."

Soy-related recipes include: Miso soup (with aonorifu, azuki beans, and mustard, p. 29, plate 1, at Opening, the first of the 12 kaiseki months). Miso soup (with sesame custard, ginkgo nuts, and mustard), and Mukôzuke (with yuba and bonito flakes, p. 41, plate 9, at Evening). Miso soup (with wakanafu, kampyo [kanpyo], and mustard), and Azukebachi (hot dish, with sea cucumbers boiled in saké and mirin, boiled yuba, citron peel garnish, p. 53, plate 17 & 22, at New Year's). Miso soup (with Sanshu miso, roasted momen bean curd [grilled tofu], and black [soy] beans), and Hassun (with natto wrapped in sea bream fillets, and miso-pickled chisha stems, p. 65-66, plate 25 & 31, at Spring).

© Copyright Soyinfo Center 2013

Note. This is the earliest English-language document seen (April 2013) that contain the term "roasted momen bean curd;" it refers grilled tofu.

Miso soup (with icicle radish, temarifu, and mustard), and Azukebachi (hot dish, with octopus boiled in saké, and yuba, garnished with Japanese pepper, p. 77, plate 33 & 36, at Doll Festival). Miso soup (with yuba, warabi fern shoots, and mustard, p. 89, plate 41, at Flower Viewing). Miso soup (with walnut custard, trefoil, and mustard, p. 101, plate 49, at Brazier). Miso soup (with eggplants, bamboo shoots, and mustard) and Wanmori (abalone and bean curd custard, chisa leaves [a variety of lettuce], and grated ginger, p. 113, plate 57 & 59, at Off Season). Miso soup (with Sanshu miso, shiratamako, junsai) and Wanmori (with yuba and egg custard, asauri, and wasabi, p. 125, plate 65 & 68, at Morning). Miso soup (with Sendai and Sanshu-miso, koimo, and hojiso), and Yakimono (with deep-fried eggplant slices coated with white miso and broiled), and Hassun (broiled burdock wrapped in yuba, and deep-fried green peppers, p. 137-38, plate 73 & 76, at All Soul's Day). Miso soup (with namafu, shirouri, and mustard), and Azukebachi (hot dish, with deep-fried dumplings of bean curd and hamo {sea/conger eel}, and broiled eggplants), and Hassun (with abalone cooked in saké and miso, soy beans in the pod [green vegetable soybeans] p. 149-50, plate 81, 85 & 86, at Moon Viewing). Miso soup (with koimo, zuiki, and sesame seeds), and Mukôzuke (with abalone, bean curd, and sesame seeds), and Wanmori (with boiled pine mushrooms and bean curd, nori, citron peel, p. 161, plate 89 & 92, at Closing).

Interesting Glossary entries: (1) *Daitokuji-nattô*, a "variety to which extra salt has been added, from the Daitokuji temple in Kyoto where it was first made as a preserve to be eaten in times of famine." (2) "*Fu* is the general name for a light cake make of wheat gluten. The two basic types of this cake are uncooked (*namafu*) and baked (*yakifu*). The names that precede the suffix refer to what has been added to the gluten, the shape of the cake, or the area famous for a certain kind of cake. *Aonorifu* is baked and contains *Aonokiro. Chôjifu* is made long (=*cho*-) and cut to fit the bowl. *Daitokujifu* is fried cake that originated from the Daitokuji temple in Kyoto. *Temarifu* is a cake in the shape of a child's ball (=*temari*). *Wakanafu* contains several kinds of young greens (=*wakana*) that give it a fresh springlike color."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term *Daitokuji-nattô* (with a diacritical mark above the o -> ô, and hyphenated) to refer to this Japanese type of "fermented black soybeans." Address: Kyoto, Japan.

2911. Watanabe, Tokuji; Ebine, Hideo; Ohta, Teruo. eds. 1971. Daizu shokuhin [Soyfoods]. Tokyo: Korin Shoin. 271 p. Illust. Index. 22 cm. [134 ref. Jap; eng+]
• ***Summary:*** This is the best book published to date on soyfoods in Japan; however it is written in Japanese. Contents: 1. Classifications and varieties of soybeans (p. 1). 2. Physical characteristics of soybeans (p. 5). 3. Chemical characteristics of soybeans (p. 9). 4. Standards and methods of examining soybeans (p. 47). 5. Special characteristics and problems of using soybeans for food (p. 53).

6. Current status of the soybean industry in Japan (p. 63). 7. Soymilk and various types of tofu: Aburage (deep-fried tofu pouches), ganmodoki (deep-fried tofu burgers), kôri-dofu (dried frozen tofu), soymilk, and yuba (p. 75). 8. Fermented soyfoods: Natto (p. 123-40), shoyu (p. 141-67), miso (p. 168-95), fermented tofu (*rufu*) (p. 196-202). 9. Other soyfoods: Kinako (p. 203-04), soy sprouts or moyashi (p. 206-08), tempeh or tenpe (p. 209-17). 10. Quality and usage of defatted soybeans (*dasshi daizu*) (p. 219).

11. New food uses of soybeans and especially defatted soybeans (incl. 70% soy protein powder, soy protein curds, soy protein isolate, surimi gel, spun soy protein fibers) (p. 229). 12. Advice regarding supplying protein from organizations such as the United Nations and FAO (p. 257).

A 47-page translation of portions of this book (parts of Chapter 6 and all of Chapter 7) by Akiko Aoyagi and Chapters 8.1 and 8.2 by Alfred Birnbaum are available at Soyfoods Center.

Tokuji Watanabe was born in 1917. Hideo Ebine was born in 1921. Teruo Ota was born in 1926. Address: National Food Research Inst., Tokyo.

2912. **Product Name:** Chinese Rolls (With Tofu).
Manufacturer's Name: Health Valley (Marketer-Distributor). Made and developed by ChuChu Foods.
Manufacturer's Address: Los Angeles, CA 90021.
Date of Introduction: 1971?
New Product–Documentation: Talk with George Mateljan, founder of Health Valley. 1985. Oct. 20. His company was founded in 1970. One of his first products was Chinese Rolls, which contained tofu instead of fish. These were made for him by ChuChu Foods, a Chinese food company that developed the product for him.

Note: This is the earliest record seen (March 2002) concerning Health Valley and soy.

2913. Heindel, Max. 1972. New age vegetarian cookbook. 3rd ed. Oceanside, California: Rosicrucian Fellowship. 492 p. Index. 21 cm. 1st ed. 1968.
• ***Summary:*** Soy-related recipes: Soybean milk as a substitute for cow's milk (p. 14; it contains twice as much calcium, and has a higher protein value). About vegetarians (p. 17-18; the first law of occult science is "Thou shalt not kill"). Soy beans (p. 19-20; "Only in recent years has the soy bean gained acceptance in the Western World." Nutritive value, fresh green beans, sprouts, oil, soy flour, toasted soy beans [soynuts and soynut butter], shelled beans are nutritious as green vegetables, [whole dry] soybeans, soy

grits, making soy bean sprouts at home). Soya milk (from soya beans, p. 126). Soy milk (from soy milk powder, p. 126). Soya pineapple tonic (drink with soya powder, p. 128). Soya carob bread (with powdered soy milk, soya carob flour, and soybean oil, p. 141). Soya muffins (with soya flour, p. 146). Soya flap jacks (with sour soya milk, p. 156). Soy waffles–wheatless (with Soya Powder, p. 158). Vegetable soy milk soup (with soy bean powder and "soy butter," p. 182). Soy noodles (with soybean flour, p. 184). Soy sponge balls (with soy flour, p. 184). Pastitsio (with soy noodles, p. 200). Baked soy beans (p. 202). Soy cheese (tofu) (p. 203, made from soybean milk coagulated with lemon juice). Soy beans and zucchini (p. 204). Soy bean patties (p. 205). Soy beans and vegetables. Baked soy cheese supreme ([tofu], p. 205). Soy slice (with "soy nuts" and peanuts, p. 206). Soy bean loaf (p. 207). Soybean omelet (with soybean pulp [see p. 241–ground cooked soybeans], p. 222).

Vegetables–Soybeans: Introduction. Soybean medley (p. 239). Cooked soybeans (p. 240). Baked soybeans. Soybean casserole. Soybean pulp (p. 241). Soybean souffle. Soy waffles (p. 241). Soy gravy (with soy sauce, p. 318). Soybean stuffing (with canned soybeans, p. 331). Soy grits stuffing (p. 332). Soy bean butter (with soybean flour, water, and oil, p. 481).

Note: The author's name "Max Heindel" is printed on the spine but not on the title page or other front matter. He is also the author of numerous other books published by the Fellowship, advertised in the back of the book, such as: Occult principles of healthy and healing. The message of the stars. Mysteries of the great operas. Gleanings of a mystic. Simplified scientific astrology. The Rosicrucian cosmo-conception.

Also discusses: Almonds, nutmeat (mostly peanuts, some soybean meal), peanuts, sesame butter, sunflower seeds. Address: Rosicrucian Fellowship, International Headquarters, Mt. Ecclesia, P.O. Box 713, Oceanside, California 92054.

2914. Huang, Su-Huei. ed. 1972. Chinese cuisine: Wei-Chuan cooking book. Taipei, Taiwan: School of Home Economics, Wei-Chuan Foods Corp. 181 p. Illust. No index. 22 cm. [Eng]

• ***Summary:*** On each page is one recipe and a half-page color photo of the prepared dish. The title of the recipe is written in English in large bold letters and is also given in (to the right) in small Chinese characters, just above the number of servings. Most of the recipes call for ¼ to ½ teaspoon of MSG; many call for soy sauce.

On unnumbered pages at the front of the book are (1) A two-page color photo, on a light blue background, of 39 special ingredients, each numbered, with the numbers and names across the bottom of the pages. These include: "9. nori. 24. pickled plum (*umeboshi*). 25. bean curd noodle [pressed tofu noodles]. 30. bean curd wrapper (*pronounced 'bai ye'*) [pressed tofu sheets]. 35. bean curd skin [yuba in large, semicircular thin sheets].

(2) Description of some other special ingredients: "Hot bean paste (*pronounced 'la jiao jiang'*). This is made with red peppers [and soy beans] and has a very hot taste." "Sweet bean paste (*'t'ien mien jiang'*). This is made with steamed, fermented bread (black color)." Note 1. Why is this called "Sweet bean paste"? What kind of beans are used to make it?

"Soy bean paste (*'do ban jiang'*). This is made with fermented soy beans (black color)." "Fermented black bean (*'do shr'*). This is black [soy] beans which are steamed, then marinated in soy sauce or salt." "Pickled bean curd [fermented tofu] (*'do fu ru' or 'Chinese cheese'*). This is bean curd which is dried and then pickled; there are many different kinds with different seasonings."

(3) Helpful hints: "In all recipes you may substitute Worcestershire sauce for dark vinegar."

In Chapter 3, "Pork and beef," soy related recipes are: Shredded pork with sweet soy bean paste (with 1.3 tablespoons "sweet soy bean paste," p. 39). Note 2. This is the earliest document seen (Feb. 2009) that contains the term "sweet soy bean paste." See also p. 104 below.

Pork ribs with dried black fermented beans (p. 41). Pork in preserved bean sauce (p. 42).

In Chapter 4, "Sea Food," is a recipe for Steamed carp with fermented black beans (p. 64).

In Chapter 5, titled "Bean curd and eggs" (p. 102-15) are recipes for: Stewed bean curd (with "1½ squares bean curd"). Assorted dish with hot sauce (with "½ tablespoon hot soy bean paste, 1½ tablespoons sweet soy bean paste," p. 104). Bean curd stuffed with minced pork. Ma-Po's fried bean curd with pork. Bean curd leaf rolls with minced pork (With "bean curd wrappers"). Beancurd noodles with celery salad (with "4 oz. {store-bought} bean curd noodles"). Vegetarian chicken (with "16 bean curd sheets").

Also: Green peppers stuffed with chopped meat (p. 122, with "1 tablespoon fermented black beans, crushed"). Bitter gourd stuffed with fermented black beans (p. 126, with "2 oz. fermented black beans"). Eggplant with bean curd skin (p. 133, with "1 sheet beancurd skin" and "1 sheet nori" [sea vegetable]). Bean curd in earthen pot (p. 142, with "3 squares bean curd"). Address: 19 West Nanking Road, Taipei, Taiwan.

2915. Mahajan, N.C.; Peng, A.C. 1972. Soy milk and tofu: Food technologists test Oriental soybean foods. *Ohio Report on Research and Development* 57(1):14-15. Jan/Feb.

• ***Summary:*** Describes how to make soymilk and tofu on a home scale using an electric kitchen blender, a boiling water grind, and the use of calcium sulfate as a coagulant.

Table 1, "Protein content of soy milk," shows that: (1) When a cold water grind is used, 3.08 gm of protein end up in 100 ml of soy milk; 84.70% of the protein in the soybeans is recovered in the milk. The resulting residue [okara] weighs

© Copyright Soyinfo Center 2013

12.70 gm and contains 14.73 gm of protein. (1) When a boiling water grind is used, 2.88 gm of protein end up in 100 ml of soy milk; 79.20% of the protein in the soybeans is recovered in the milk. The resulting residue [okara] weighs 16.70 gm and contains 20.71 gm of protein.

Table 1, "Protein content of tofu," shows that: (1) When a cold water grind is used, 50 gm of soybeans yield 24.60 gm of tofu; 73.80% of the protein in the soybeans is recovered in the tofu. The resulting whey contains 10.50% of protein. (1) When a boiling water grind is used, 50 gm of soybeans yield 23.00 gm of tofu; 68.30% of the protein in the soybeans is recovered in the tofu. The resulting whey contains 10.25% of protein.

In short, the boiling water grind gives soymilk with a better flavor but lower recovery of protein. Address: College of Agriculture, Palampur, Hemachal Pradesh, India; 2. Ohio State Univ.

2916. Thio, Goan Loo. 1972. Introduction of soybeans for human nutrition, Republic of Zambia. Amsterdam, Netherlands: Royal Tropical Institute, Dept. of Agricultural Research. iii + 48 p. Feb. 28 cm.
• ***Summary:*** Description of workshops held at 8 places in Zambia in August and Sept. 1971, teaching preparation and use of traditional foods made from soybeans (soymilk, tofu, tempeh, okara). Contents: Summary. Introduction. Programme. Equipment and raw materials. Finance. Language. Workshops: Lusaka morning workshop, Lusaka afternoon workshop, Kabwe workshop, Ndola workshop, Solwezi workshop, Katete workshop, Mansa workshop, Kasama workshop, Monze workshop. Conclusions. Recommendations. Acknowledgments.

List of Annexes: I. Itinerary. II. Technical programme of soybean workshops. III. Soybeans, soybean products, and their applications (a brochure prepared for Zambia in June 1971; discusses soymilk, tofu, tempeh, fried soybeans [soynuts], boiled young whole soybeans [green vegetable soybeans], fried tofu, dried sliced tofu, soymilk residue flour [ground okara], soy croquettes (soyrolls, made from okara flour and soymilk), soy biscuits [made with okara flour], vegetable soysoup [with soymilk], tofu omelette, tofu salad with peanut sauce, soy-maize bread [with soymilk and tofu], average chemical composition of soybeans). IV. Examples of modified Zambian recipes with the addition of soybean products (using mostly tofu, soymilk, and okara flour). V. Preparation methods for soybean products adapted to village conditions: Soymilk, tofu. VI. Proposed training system.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term "soymilk residue" (or "soy milk residue") to refer to okara. Address: Senior Technologist, Royal Tropical Institute, Dep. of Agricultural Research.

2917. Dimler, R.J. 1972. Beeson replaces Hawkeye for tofu. *Notes from the Director of the Northern Division* No. 1065. p. 2. March 17.
• ***Summary:*** "During the past 2 years, Japanese associates of Lou West, Farmer City Grain Company and Pacific Grain Company, have investigated the suitability of the Beeson variety of soybeans for tofu. A pilot quantity of Beeson was tested in 1970, and a year later about 50 times this amount was used commercially. This year, Beeson has replaced Hawkeye completely in his company's shipments made thus far. Besides being satisfactory for tofu, one main advantage of Beeson is the higher yields per acre in the Farmer City area. Both varieties have Mukden and Richland in their parentage." Address: Director [NRRL, Peoria, Illinois].

2918. Aihara, Cornellia. ed. 1972. The *dô* of cooking (Ryorido). Vol. 1. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 109 p. Illust. No index. March. 25 cm.
• ***Summary:*** All recipes in this macrobiotic cookbook are numbered. Contains information on soy sauce and miso (p. 44-45). Soy-related recipes include: "Top of stove" casserole noodle soup (with "dry tofu" [dried-frozen tofu] and fried wheat gluten, p. 58). Fried whole wheat noodles (with seitan, p. 60). Homemade noodles with soup (and barley miso, p. 61). Onion miso (p. 62). Rolled cabbage with tofu (p. 63). Wheat gluten (p. 71, made from 10 cups whole wheat flour and 4 cups unbleached flour). Seitan (p. 72). Fresh wheat fu (2 versions). Serving recipes–boiled fu (p. 73). Fried fu–gluten cutlet. Shish kebab (with cooked fu, p. 73-74). Making tofu (at home using 3 cups soybeans and nigari, p. 75-76). Making nigari (p. 76). Quantity tofu preparation (using 10 lb soybeans). Okara or unohana (sauteed with soybeans and vegetables, p. 76). Tofu with kuzu sauce (p. 78). Fried tofu. Shinano-age (Fried tofu with buckwheat, p. 79). Kaminari Tofu (Thunder Tofu, p. 79). Nori-maki (Tofu rolled in nori, p. 80). Age-tofu (stuffed tofu, variation, p. 80-81). Miso salad dressing (p. 90). Bean sprout miso salad (p. 91; it is not clear what kinds of beans the bean sprouts are made from–probably mung beans). Gamodoki ([Ganmodoki] mock goose; p. 99-100).

Note 1. This is the earliest (and only) English-language document seen (April 2013) that contains the word *gamodoki* or the term "mock goose," both of which refer to deep-fried tofu burgers.

French bread made with gluten water (p. 104). Amazake is not mentioned. Some recipes call for chicken or fish as ingredients.

Note 2. This is the earliest cookbook seen (July 2005) that gives a recipe for making seitan, as follows: "1 T. [tablespoon] dark sesame oil. 1 T. minced gingerroot. 1-2 cups soy sauce. 5 cups cold cooked gluten. Heat oil in a sauce pan, add minced ginger (use only fresh ginger) and saute. The amount of soy sauce used depends upon how long you intend to store the Seitan. Use a larger amount

© Copyright Soyinfo Center 2013

of soy sauce for longer storing and refrigerating. Add soy sauce, bring to a boil, and drop in pieces of gluten. Cook on low heat for three hours, stirring frequently. Remove cover and continue cooking until excess liquid is absorbed and evaporated. Seitan is ideal as a seasoning in noodles au gratin, stews, cooked with vegetables, etc. It will keep for long periods of time in the refrigerator."

After Volume 2 of this series of four seasonal cookbooks was issued, Volume 1 was subtitled "Spring Cooking." Address: San Francisco, California.

2919. Hashizume, Kazumoto; Umeda, Keiji; Watanabe, Tokuji. 1972. [Effect of ionizing radiation on soybean protein. I. Effect of cathode ray radiation on frozen denaturation]. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 27. p. 151-54. March. [9 ref. Jap; eng]

2920. Saio, Kyoko; Kajikawa, Masahiro; Watanabe, Tokuji. 1972. Food processing characteristics of soybean proteins. II. Effect of sulfhydryl groups on physical properties of tofu-gel. *Shokuryo Kenkyujo Kenkyu Hokoku* (*Report of the Food Research Institute*) No. 27. p. 142-50. March. [11 ref. Eng; jap]
• ***Summary:*** Reprinted from *Agricultural and Biological Chemistry* 35(6):890-97 (1971). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

2921. Yasumatsu, Katsuhara; Toda, J.; Wada, T.; Misaki, M.; Ishii, K. 1972. Studies on the functional properties of food-grade soybean products. Part III: Properties of heat-coagulated gels from soybean products. *Agricultural and Biological Chemistry* 36(4):537-543. April. [9 ref]
• ***Summary:*** "Food-grade soybean products have various functional properties, such as emulsification properties, whipping properties, dough forming properties, gel forming abilities and so on."

It is already known that soybean protein has the ability for form a gel. For example, "tofu' (soybean curd) is a kind of Ca-coagulated gel of soy protein." There are also "heat-coagulated gels."

Note: This is the earliest English-language document seen (June 2009) that contains the term "food-grade soybean" (or "food grade soybean")–perhaps as a synonym for vegetable-type soybeans. Address: Food Research Labs., Food Products Div., Takeda Chemical Industries Ltd., Osaka, Japan.

2922. Wood, B. 1972. Making tofu. *East West Journal* 2(8):9. May 30.
• ***Summary:*** "Tofu is available in oriental markets but unfortunately loaded with sodium-based chemical."

Note 1. The Journal later apologized for this mistake. See 2(19):3.

Note 2. This is the earliest article seen (April 2013) in a popular U.S. periodical with the word "tofu" in the title.

2923. Farmilant, Eunice. 1972. Macrobiotic cooking. New York, NY: New American Library. 224 p. Foreword by Herman Aihara. May. Index. 18 cm. [31 ref]
• ***Summary:*** This pocketbook has a color (beige) photo on the cover of ears of wheat, one wooden spoon filled with soybeans and one filled with unpolished rice. It is "A basic introductory guide to cooking and eating the macrobiotic way." The author's interest in macrobiotics began in April 1968. Basic information on soyfoods (especially miso, tamari, and tofu) is given on pages 29, 33-38, 213-14. Soy-related recipes include: Wheat berries and black beans (i.e. black soybeans, p. 78). Sprouts (incl. soy sprouts, p. 82-83). Miso pickles (p. 124-25). Miso soup (p. 128-29). Cream of miso soup (p. 135). Black beans and wheat berries (p. 139).

There is an entire chapter on miso and tofu (p. 142-46) including: What makes miso so beneficial? Barley miso (nutritional analysis). Miso-vegetable stew. Miso-rice. Miso stew with vegetables. Miso-vegetable spoon bread. Homemade tofu (curded with fresh lemon juice).

Pizza–Macrobiotic style (with miso, p. 149). Chop suey (with tofu and miso, p. 151-52). Miso bechamel sauce (p. 159). Miso gravy. Simple tahini and tamari sauces (p. 160). Tempura dip (with tamari). Simple miso spreads (p. 161). Miso-vegetable spread. Miso-watercress spread.

There is a directory of macrobiotic stores and restaurants in the U.S. (p. 191-203, subdivided alphabetically by state, and within each state alphabetically by city). The following states have the following number of stores and restaurants: Alaska 1, Arizona 4, Arkansas 1, California 32, Colorado 4, Connecticut 18, District of Columbia 3, Florida 14, Georgia 7, Hawaii 2, Illinois 7, Indiana 2, Iowa 5, Louisiana 4, Maine 14, Maryland 7, Massachusetts 51, Michigan 12, Minnesota 3, Mississippi 2, Missouri 3, Nevada 1, New Hampshire 20, New Jersey 9, New Mexico 3, New York 61, North Carolina 5, Ohio 14, Oklahoma 3, Oregon 2, Pennsylvania 8, Rhode Island 5, South Carolina 1, Texas 4, Utah 1, Vermont 26, Virginia 4, Washington 3, Wisconsin 2.

There is also a directory of stores, restaurants, and centers outside the U.S. (p. 204-07, subdivided by country). The following countries have the following number of stores, restaurants, or centers: Australia 1, Belgium 2, Brazil 2, Canada 15, Denmark 4, France 29, Germany 1, Holland (Netherlands) 2, India 1, Italy 1, Japan 3, Portugal 1, Puerto Rico 1, Spain 1, Sweden 1, Switzerland 2, United Kingdom: England 13, Scotland 1, Vietnam 2.

A list of wholesale distributors in the U.S. (p. 208-09) includes Shiloh Farms (Route 59, Sulfur Springs, Arkansas;

[Warren Clough]), Erewhon Trading Co. (8003 W. Beverly Blvd., Los Angeles, California 90048), Chico San Foods (1262 Humboldt Ave., Chico, California 95926), Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Deer Valley Farms (Guilford, New York 13780), Infinity Food Co. (171 Duane, New York, NY 10013), Mottel Foods (451 Washington, New York, NY 10013), Juniper Farms (Box 100, Sugar Loaf, NY 10981), Pioneer Specialty Foods (Fargo, North Dakota 58100), Merit Food Co. (Pill Hill Lane, Box 177, Bally, Pennsylvania 19503), Essene (58th & Grays Ave., Philadelphia, PA 19143).

2924. Machida, Yoshiro. 1972. Tanpaku shokuhin toshite no tôfu [Tofu as a protein source]. *Daizu Kaihatsu, Shokuhin Kaihatsu* (*Soybean Development, Food Development*). May. p. 1-4. [Jap]
Address: Sugiyama Industrial Chemical Research, Tokyo, Japan.

2925. Lewis, David L. 1972. A bushel in every car! The versatile soybean and the inquisitive mind of Henry Ford produced one of the most interesting chapters in the annals of Ford Motor Company history. *Ford Life* 2:14-24. May/June. Also published as: "Henry Ford's plastic car." 1972. *Michigan History.* Winter. p. 319-30.
• ***Summary:*** One of the best articles seen summarizing Henry Ford's work with soybeans.

"... 30 years ago Ford unveiled the first car with a complete plastic body, thereby paving the way for 100 to 110 pounds of plastics to be built into today's autos.

"Ford's research into plastics was tied in with his promotion of farm chemurgy–an emerging agricultural concept which strove to put chemistry and allied sciences to work for agriculture–which in turn was keyed to his life-long efforts to improve the lot of the farmer...

"Ford planted 300 varieties of the soybeans on some 8,000 acres of his Michigan farms in 1932 and 1933. He also urged neighboring farmers to plant the beans with the assurance that his company would provide a market for them. By 1933, the industrialist's experimentation, at a cost of $1,250,000, had been rewarded with the discovery of soybean oil which made a superior enamel for painting automobiles and for oiling casting molds and a soybean meal which was molded into the horn button...

"Two years later a bushel of soybeans went into the paint, horn button, gear-shift knob, inside window riser knobs, accelerator pedal, and timing gears of every Ford car...

"By late 1937, Ford's research laboratory–under the direction of youthful, self-trained Robert Boyer–had developed a curved plastic sheet which Ford hoped would replace steel in automobile bodies." Ford unveiled his handmade car with complete plastic body on August 13, 1941, at the climax of Dearborn's annual community festival.

Early in World War II, Ford tried unsuccessfully to interest the armed forces in making uniforms out of soybean fabric. He finally sold his fabrication process and machinery to The Drackett Company of Cincinnati in November 1943. "Neither Drackett nor any other firm has been commercially successful in producing textile fibers from soybean protein.

"Ford's efforts to develop palatable foods and popularize recipes based on soybeans were no more successful than his experiments with fabrics. To develop the nutritional possibilities of the bean, Ford set to work his boyhood friend, Dr. Edsel Ruddiman, ex-dean of the School of Pharmacy at Vanderbilt University. Dr. Ruddiman prepared a soybean biscuit, described by one of Ford's secretaries as 'the most vile thing ever put into human mouths' (but which white rats liked and the auto king professed to like) and a variety of other recipes."

"... few of Ford's achievements pleased him more than to help prove that there was industrial magic in a beanstalk."

"During 1939, Ford Motor Company imports of wool were close to 250,000,000 pounds–approximately 35% of the total used–with the bulk of shipments coming from Argentina and Australia. Fearful of losing trade with Australia because of Pacific conditions, Ford stepped up production of soybean fibers."

Photos (from the Ford archives) show: (1) A tractor in a field of soybeans. (2) Henry Ford and Robert Boyer mixing ingredients. (3) Ford Soy Bean Processing plant, located in the River Rouge complex. (4) Cartoons about car bodies made from soybeans.

(5) A huge French Oil Mill hydraulic press in Ford's River Rouge Tool & Die Shop stamps out a short run of soybean plastic trunk lids for experimental work in 1940. Henry Ford installed one on his personal car in 1941. (6) Henry Ford, dressed in coat and hat, swinging an ax at his 1941 trunk lid made of plastic for the press to prove that the lid was ax resistant. The plastic was made from several common crops, including soybeans, wheat, hemp, flax, and ramie. (7) Film star James Cagney examines a souvenir gear shift knob made of a soybean compound during a visit to the Ford Building at the 1935 California Pacific International Exposition, held in San Diego, California. The illustrated knobs were sold to visitors for a nickel each and are much prized by collectors today. (8) Henry Ford's plastic car (white, with "Dearborn" written on the black license plate). At the wheel is Lowell Overly, the project engineer who designed the plastic body. The car was first unveiled to the public on 13 August 1941 at the climax of Dearborn's annual community festival.

(9) Inside the Ford Exposition Building at the 1939 World's Fair in New York. A turntable (called "the Ford Cycle of Production") 100 feet in diameter is topped by a circular platform on which is displayed a new Ford, Mercury, and Lincoln-Zephyr. Soybeans were a prominent part of the display. (10) A male worker assembling a soybean plastic

2927. The wedding of Kazuko Aoyagi and Travis Venters at International Christian University (ICU) in Tokyo and the wedding cake with tofu icing / frosting (Photograph). 1972.
• ***Summary:*** Two photographs of this wedding, which took place on 11 June 1972, are owned by Soyfoods Center. The first, 4½ by 3¼ inches, color, shows Travis and Kazuko standing in a room at ICU, dressed in wedding clothes. Standing behind them are 10-15 people. Standing to their left, dressed all in white, is Jeffrey Broadbent, who is reading from a book of scriptures. Standing to his left is Yoshiko Aoyagi. Bananas and pineapples are piled on two tables.

The second, 6 by 4 inches, black and white, taken 10-15 minutes after the first, shows Travis and Kazuko standing outside on the ICU lawn, with about 15 people standing close behind them, as rice is being thrown over them. Akiko Aoyagi is standing just to the left of Kazuko and William Shurtleff is standing just behind her. Everyone is smiling and having a good time.

A remarkable cake was served at this wedding–though no photograph of it can be found. It was made by Gretchen Broadbent. Gretchen, a very creative cook interested in natural foods and tofu, volunteered to make all the food for the wedding party. The centerpiece of her creations, which 5-6 people remembered clearly more than 25 years later (Jan. 1999), was the wedding cake. It was a sensation. The icing / frosting was made of tofu! No one had ever seen anything like it. It was a round layered cake, with each layer being a fruitcake that was slightly smaller than the one below it. Made entirely of natural foods, it contained whole-wheat flour instead of white flour and honey or fruits instead of sugar. Thus, it was rather heavy. Gretchen made the frosting–her own invention–by whipping firmly pressed tofu in a blender with honey. The cake even had a theme–evolution. Gretchen formed many small creatures out of dough, then deep-fried them. There were little crabs and starfish on the bottom layer, then little animals on the second layer, and finally on the top–guess what–human beings–our precious species. Because Gretchen did not have an oven in her apartment, she baked the cake on the ICU campus in an oven at the home of Steve and Marty Caldwell. She recalls: "I was really into that cake!"

2928. Webber, Ella V. 1972. Perry A. Webber: Pioneer missionary in true education to Japan. Chattanooga, Tennessee: Southern Missionary College. 87 p. *
• ***Summary:*** Perry A. Webber was born on 15 June 1890 in Northville, Michigan. His parents became Seventh-day Adventists (SDAs) during his early childhood. In 1904 the family moved to Berrien Springs, Michigan, and Perry was educated there. In 1911 Perry graduated with a BA from Emmanuel Missionary College [in Berrien Springs] and in 1912 he was married to Ella Mae Verney.

In 1913 he was appointed by the SDA General Conference Foreign Mission Board to go, with his wife, as missionaries to Japan. In Tokyo they studied Japanese language for 2 years, then began pioneering educational work in Japan until 1927. For 4 years (1915-19) they worked in Fukuoka (in northern Kyushu), then returned to Tokyo. A son, Alfred B. Webber, was born in Dec. 1919; he later became a medical doctor. In Tokyo they worked at a school in Ogikubo. By 1921 Perry was teaching about the virtues of brown rice. In 1923 Perry found 25 acres of land in Sodegaura; in September of that year the Great Tokyo Earthquake (*Kanto Daishinsai*) took place. Later in 1923 the family returned to California because of the wife's respiratory problems. Harry Webber was born in Glendale. After a year in Honolulu, Hawaii, in 1934, they returned to Japan in the summer of 1925 and moved the college into the country. In the spring of 1926 the students and teachers started to build their own self-supporting school, with Perry

© Copyright Soyinfo Center 2013

as principal. This school later grew into the Japan Missionary College (*Saniku Gakuin*). The Japanese name means "three-sided school" since equal emphasis was placed on mental, moral, and manual development.

During these years Perry grew very fond of Japanese food and especially of Inari-zushi (made of deep-fried tofu pouches filled with vinegared rice). On his way to language school, he used to stop in regularly at the Shinoda Sushi Shop in Kanda (in Awaji-cho by the 1970s) to enjoy their Inari-zushi. The shop once developed a special Webber Sushi, named after him, and they used his name in some of their promotional materials. He was also very fond of regular tofu and of miso soup.

In 1927 the Webbers returned to America to educate themselves in good health. At this time Adventists believed that the true remedies are "pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, and trust in Divine power (*Ministry of Healing*, p. 127). In the fall of 1928 Perry entered Michigan State University to study biological chemistry while his wife, Ella Mae, studied nutrition; both were deeply interested in understanding the principles of good health. By May 1929 Perry was considered "one of our teachers" by Madison College in Madison, Tennessee.

During the early 1930s and the Great Depression, many students' only hope of getting an education was to rely on their own efforts. Madison, which offered a work-study program, became a very attractive alternative school.

In Sept. 1930 the family moved to Madison while Perry finished his thesis. In June 1931 Perry was awarded his PhD degree in biological chemistry, with special interest in chemistry and soyfoods development. At Madison he became a instructor of chemistry with a strong interest in food chemistry. In the following years he became the main person at Madison responsible for the school's growing involvement with soyfoods. In Nov. 1931 Perry wrote a long two-part article for *The Madison Survey* titled "Facts Concerning the Soybean." During the early 1930s he put a great deal of creative energy into expanding Madison's line of commercial soyfood products. Most of the products that were introduced between 1931 and 1934 were the result of his work. In August 1933 Perry Webber and Frances L. Dittes attended the annual convention of the American Soybean Association (ASA) in Baton Rouge, Louisiana. Webber presented a lecture with slides about the importance of soyfoods in Asia and their potential in America. He also prepared an exhibition of Madison soyfoods that was displayed at the convention. Webber was secretary-treasurer of the ASA for one year at this time. He visited Edsel A. Ruddiman at the Ford Motor Company and gave a talk to him and other leading research scientists about soyfoods. He was also a close friend of Dr. John Harvey Kellogg. He visited Kellogg, talked about soyfoods, and did some work developing a preservative for some of Kellogg's crackers.

Perry Webber worked at Madison until Sept. 1935 when, after a big farewell party, he returned to Japan to serve as principal of the Japan Missionary College (Saniku Gakuin). There he taught a lot about nutrition and the value of a vegetarian diet. In about 1936 Webber visited Dr. Harry Miller in Shanghai, China, and helped him set up a sanitation and research lab for analyzing the Vetose soymilk products at his new plant.

From 1939 to 1943, during World War II, Webber was back in the USA, teaching at Madison as head of the chemistry department. He was also at Madison from 1946 to 1953 and from 1959 to 1962, each stay punctuated by work in Japan. While serving as an administrator at Madison Foods (1959-1963) he and Sam Yoshimura pulled the factory out of debt and put it several thousand dollars into the black in one year's time.

During his trip to Japan that began in the spring of 1953, he taught one food plant how to make gluten, soymilk, and soy croquettes. Also in 1953 he started a self-supporting organization at Mt. Akagi, about 125 miles northwest of Tokyo; there he worked for more than 7 years. In the winter of 1956 he suddenly became ill with pneumonia. He returned to America in the summer of 1958 and was found to have Parkinsonism; no medicine was prescribed until 1962. In 1966 Perry was an outpatient at the Madison Sanitarium / Hospital for a time, then he became a inpatient from Oct. 1967 to Jan. 1968. In Sept. 1968 he went to a convalescent home in Lodi, California. His son, Dr. Alfred B. Webber, was living and practicing medicine in Lodi. In 1969 he returned to the Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, Georgia (northern Georgia). He passed away there in January 1973 at age 82 of Parkinsonism.

2929. Conrat, Maisie. 1972. Soybean cookery. *Organic Gardening and Farming* 19(7):89-93. July.
• ***Summary:*** Discusses the benefits of soybeans and their products: whole soybeans, soy flour, tofu, miso, and soy sauce.

"If you go into a natural food store today, you will find soybeans available in many forms. In some stores you'll find two or more varieties of whole beans as well as soy grits and soy meal, soy powder and soy flour. Most stores also carry roasted, salted soy nuts and a kind of soy cheese called tofu. They will have noodles, spaghetti, and macaroni made from soy; and they will also carry exotic soy products like miso. This may seem like a lot of things to get from one kind of bean, but in Japan, where soy is considered a protein staple, you will find more products yet...

"Both tamari soy sauce and miso are made from fermented soy beans. (Regular commercial soy sauce has been adulterated with various chemicals to simulate fermentation.) Miso is a thick paste made from black [not true] soybeans and rice, and has the same flavor as tamari

© Copyright Soyinfo Center 2013

soy sauce. You can use miso as you would beef extract in making soups, stews and sauces.

"Tofu is a kind of soy cheese. It is widely used throughout China and Japan, where it is available in many forms. Tofu is made from clabbered soy milk, just as cottage cheese is made from clabbered cow's milk. It is very mild and delicate, so you will probably want to serve it in a sauce or soup that has plenty of character."

Contains recipes for: Apple soy crisp (with soy meal). Soy pancakes (with soya flour). Soy cheeseburgers (with soybeans). Soy balls (with soy powder).

2930. Loring, Kay. 1972. Korean cafes keep growing. *Chicago Tribune*. Aug. 24. p. S_A6.
• ***Summary:*** This is a review of the restaurant Korea House in Chicago, where an estimated 10,000 people of Korean ancestry now reside. Four years ago there was only one Korean restaurant in the city; now there four. The main Korean seasonings are garlic, onion, red pepper, soy sauce, and sesame–plus kim chee (kimchi).

"No dairy products are used, because as in Japan and China, there is no room in this thickly populated country for dairy industries. Soy bean curds and soy milk are among substitutes." Vegetable oils, such as sesame oil and [soy] bean oil, are widely used in place of animal fats for cooking.

2931. Saio, Kyoko; Watanabe, Tokuji. 1972. Advanced food technology of soybean and other legumes in Japan. *Tropical Agriculture Research Series* No. 6. p. 209-16. Sept. Symposium on Food Legumes.
• ***Summary:*** The following amounts of whole soybeans (in 1,000 metric tons) are used in Japan to make these products: Tofu and fried tofu 295, miso 169, natto 47, Kori-tofu (dried or frozen tofu) 34, shoyu 15, kinako 12, others 70. Total 642.

The following amounts of defatted soybeans (in 1,000 metric tons) are used in Japan to make these products: Shoyu 154, tofu and fried tofu 77, miso 8, others 45. Total 284. Grand total: 926. Address: 1. Senior Research Officer; 2. Director. Both: National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo.

2932. *Los Angeles Times.* 1972. Are menus a puzzle? Master a few of those foreign food phrases. Oct. 6. p. F16.
• ***Summary:*** Foods listed under "Japan" include: "... Miso: Bean paste. Natto: Steamed and fermented bean... Shoyu: Soy sauce... Tofu: Bean curd."

2933. Rodale, Robert. 1972. Milking the soybean. *Washington Post, Times Herald.* Oct. 26. p. H10.
• ***Summary:*** "The versatile, high-nutrient soybean can be processed easily into a kind of milk with several nutritional advantages over cow's milk. That may come as a shock to dairymen, but it's true."

Soy milk, which comes from a plant, contains little saturated fat, and is an alternative for people who are allergic to dairy milk. Describes how to make soymilk at home. Although it is easy to make an inexpensive, it is not popular in the USA; most Americans don't like the slight "beany" flavor.

However a food made from soy milk, whose taste does please our palates, is slowly gaining popularity. "That food has the rather unattractive name 'bean curd.'" You may have seen it on the menu at a Chinese or Japanese restaurant. The Chinese themselves call it [in Cantonese] *dow foo yuen* and the Japanese call it *tofu,* a name that is gaining popularity in the United States. Surprisingly, bean curd made in Taiwan and shipped to the U.S. in cans is labeled *tofu.*

"The big value of bean curd is that it offers a high-protein, good-tasting alternative to meat. It's a true convenience food, with outstanding culinary and nutritional values." Describes the many ways it can be used. It is not an exotic oriental food, but one that "has the potential to become a basic food eaten and enjoyed regularly by millions of Americans."

A recipe for Bean curd and Chinese cabbage soup calls for 4 cups homemade chicken stock and "¼ pound bean curd."

2934. Haenszel, William; Kurihara, M.; Segi, M.; Lee, Richard K.C. 1972. Stomach cancer among Japanese in Hawaii. *J. of the National Cancer Institute* 49(4):969-88. Oct. [53* ref]
• ***Summary:*** Consumption of tofu was associated with a significant decrease in risk from stomach cancer. Address: Biometry Branch, National Cancer Inst., Bethedsa, Maryland 20014.

2935. Kushi, Michio. 1972. Macrobiotic seminars of Michio Kushi. Boston, Massachusetts. 152 p. Illust. No index. 28 cm. Transcribed by Joan Mansolilli.
• ***Summary:*** This is a transcript of talk given by Michio Kushi, macrobiotic teacher, in the fall of 1972, from Oct. 10 to Dec. 20. The main subjects are: Theory and practice of natural agriculture. Principles of the ancient world calendar. Disease–Origin, causes, and cures.

Soyfoods are mentioned briefly as the cure for various ailments, including diabetes mellitus (p. 92, 94; miso, tamari), venereal disease (p. 104; tekka, strong miso), stomach cancer (p. 128-29; miso soup, fried tofu, tekka, miso pickles), toxication from cigarette smoking (p. 131; miso soup), appendicitis with high fever (p. 132-33; tofu plaster on head). Address: Boston, Massachusetts.

2936. Rodale, Robert. 1972. Milk from soybeans is a treat to cows. *Hartford Courant* (*Connecticut*). Nov. 1. p. 31.
• ***Summary:*** Soy milk can easily be made at home from the versatile, high-nutrient soybean. Dairymen should take notice that a food made from soy milk has a good taste and

© Copyright Soyinfo Center 2013

is slowly gaining in popularity. "That food goes under the rather unattractive name bean curd." It is widely served in Chinese restaurants. "The Chinese themselves call bean curd *dow foo yuen*, and to the Japanese its tofu, a name that's gaining popularity."

Bean curd or tofu is not an exotic Oriental food; it has the potential to become a basic new food, enjoyed regularly by millions of people. Tofu has already become popular on the West Coast; *Sunset* magazine recently published an article about it. The soybean is a huge crop for American farmers, yet only about 2% of it is used for human food. The rest is fed to animals or used to make industrial products.

There is also an interesting parallel between tofu and yogurt. Both are made by culturing milk, have special health benefits, and started as foreign foods with seemingly little appeal to Americans. Yogurt is now a mainstream American food, and the same could happen to tofu. Address: [Rodale Press, Emmaus, Pennsylvania].

2937. Blinn, Johna. 1972. Celebrity cookbook: Keye Luke cooks variation on one theme. *Chicago Tribune.* Nov. 2. p. N_A8.

• ***Summary:*** Hollywood–Mr. Luke, a veteran actor with Zen Buddhist beliefs, is an amateur cook who has one or two Chinese dishes he likes to prepare–starting with flank steak: "I throw in a little ginger, garlic, assorted black bean paste, and soy sauce. I cook it over a hot fire in a wok."

His recipe for Asparagus and beef calls for "½ cake bean curd, diced. 2 to 3 tablespoons soy sauce."

2938. Ram, Mahabal; Kempanna, C.; Balasubramanian, A. 1972. Soybean can raise nutritional status of human diet. *Indian Farming* 22(8):19, 21-22. Nov. Series 2.

• ***Summary:*** Malnutrition is a major problem in India and there is a shortage of proteins. On the national level, several measures have been taken to augment the supply of protein-rich products like milk, egg, meat, fish, vegetables, pulses, etc. Yet is it alternative to explore alternative protein sources, such as the soybean, which has a high protein content (42%) and "occupies an exalted position amongst the protein-rich legumes."

Tables show: (1) Average nutritional composition of soybean. (2) Production of soy-protein in comparison with that of major pulses, cereals, milk, meat, etc. (3) Nutritive value of soybean and the other pulses. (4) Average weekly growth rate of rats on basal poor diet chapati containing soy-flour.

The final section briefly describes 13 methods of preparing different soybean recipes: (1) Soak soybeans in water then fry in deep fat. (2) Roast green soybeans in their pods. (3) Soak soybeans in water then bake. (4) Sprout soybeans. (5) Dahi bada. (6) Pakoda namkin [Pakora namkin; a pakora is a fritter–any kind of food coated in batter and deep fried]. (7) Pakoda sweet. (8) Gullab jamun. (9) Puri and chapati. (10) Vegetables. (11) Curd, made from soybean milk. (12) Add soymilk to tea in place of buffalo milk. (13) How to prepare soymilk at home. Also: Soybean oil can be used at home in place of mustard oil, coconut oil, groundnut oil, etc. Address: Indian Council of Agricultural Research, New Delhi.

2939. Rodale, Robert. 1972. "Chinese yogurt," a gift from the Orient. *Prevention* (*Emmaus, Pennsylvania*). Nov. p. 35-42.

• ***Summary:*** The author uses the term "Chinese yogurt" to refer to tofu, which he praises. "The Chinese practice is to precipitate the solids in soy milk by cooking it and then mixing in gypsum, which is calcium sulfate. The solids drop to the bottom of the container, and the liquid is filtered off the top. Then moisture is pressed from the solids. The resulting product is called bean cake, bean curd, dow foo yuen (Chinese) or tofu (Japanese). Bean curd is the most commonly used name for it in this country, but I prefer calling it tofu, a name which is gaining in popularity and sounds much more appealing. There is a close parallel between the process for making tofu and the technique for making yogurt. While soy milk is precipitated with magnesium sulfate, or sometimes calcium sulfate, yogurt is curdled by bacteria... I called tofu 'Chinese yogurt' in my title, because tofu is in fact remarkably similar to yogurt. They are both high protein foods, and each in its own way has other specific health values."

"To us, tofu offers the great possibility of providing an alternative to meat, an expensive food that is now a feature of almost every American meal. Both for cost and nutritional reasons, we are going to have to find other things than meat to eat–and tofu could well be what we are looking for."

"On the West Coast, tofu is rapidly growing in popularity. A few years ago you could get fresh tofu only in Oriental food stores. Now it is being sold in many California supermarkets and natural food stores. You can buy canned tofu almost anywhere in the country where gourmet foods are sold. The canned kind has almost the same flavor as fresh tofu, but is more expensive and lacks the soft, creamy texture of the fresh product."

Note: This is the earliest document seen (Sept. 2000) that compares tofu with yogurt, or that calls tofu a kind of yogurt, or that notes the similarities in the way these two foods are made.

2940. Miller, James S. 1972. Nuances of tofu. *East West Journal* 2(19):3. Dec. 15.

• ***Summary:*** This letter to the editor reads: "Dear Sir: It was just brought to my attention by members of the George Ohsawa Macrobiotic Foundation here in San Francisco that an article or articles on the use of "nigari" as opposed to synthetic chemicals in the making of 'tofu' appeared in some previous issue(s) of your publication. Such articles

© Copyright Soyinfo Center 2013

would be of great interest to us; by helping us to understand the advantages of using 'nigari' and the disadvantages of Calcium chloride or Calcium sulphate in making 'tofu'"

Reply. "Dear Mr. Miller, Both Calcium chloride and calcium sulphate are found naturally in sea water and in inland brine solution." Address: Quong Hop & Co., San Francisco.

2941. *SoyaScan Notes.* 1972. Chronology of soybeans, soyfoods and natural foods in the United States 1972 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1972 Jan. Janus begins operation as a macrobiotic natural foods distributor in Seattle, Washington. It is founded by George Gearhart and Blake Rankin.

1972 Feb. Tree of Life in St. Augustine, Florida, starts distributing natural foods. Founded by Irwin Carasso, this company would soon become the largest and most successful of its type.

1972 March. The Farm in Tennessee sets up a small plant and begins to make soymilk, which is rationed for use by babies and children.

1972 Sept. Frank Shorter wins the Olympic marathon, the first marathon victory by an American. A major boost to interest in running, exercise and fitness.

1972 Oct. William Shurtleff and Akiko Aoyagi start full time research on tofu in Japan, writing a book on the subject.

1972. *Soybeans: Chemistry and Technology,* by A.K. Smith and S.J. Circle, published.

1972. The Farm, a large spiritual and vegetarian community in Summertown, Tennessee, sets up a small "soy dairy" to make soymilk and tempeh for members, whose vegan diet contains no animal products, not even dairy products or eggs. This is the earliest known tempeh produced in a Caucasian-run tempeh shop in the U.S., although it is not sold commercially.

1972-74. World food crisis years. Photos of malnourished and starving children appear on the covers of leading magazines and in the TV news.

1972, July. Soviet wheat deal. The USSR suddenly purchases 18 million tons of wheat from the USA via Continental Grain, making it the largest food import deal in history. This starts an era of expanded U.S. agricultural trade with socialist countries. This massive Soviet purchase ends the long postwar period of food price stability.

1972. National Soybean Project established in Brazil.

1972. Soybean research starts at the International Institute of Tropical Agriculture (IITA), in Ibadan, Nigeria. The focus is on soybean production and varietal development. This gradually becomes the most important soybean research program in Africa, and plays a key role in helping national programs in Africa to get started.

2942. Leung, W-T.W.; Butrum, R.R.; Chang, F.H. 1972. Food composition table for use in East Asia. Atlanta, Georgia: Center for Disease Control, U.S. Dept. of Health, Education, and Welfare. xiii + 334 p. Dec. No index. 30 cm.

• ***Summary:*** Part I. Proximate composition, mineral and vitamin contents of East Asian foods, by Woot-Tsuen Wu Leung, Ph.D. (Nutrition Program, Center for Disease Control, Dep. of Health, Education and Welfare), and Ritva Rauanheimo Butrum, M.S., and Flora Huang Chang, B.S. (Federation of American Societies for Experimental Biology).

Part II. Amino acid, fatty acid, certain B-vitamin and trace mineral content of some Asian foods, by M. Narayana Rao, Ph.D., and W. Polacchi (Food Policy and Nutrition Division, Food and Agriculture Organization of the United Nations).

In Part I, Food Group 3 titled "Grain legumes and legume products" (p. 16-22) gives the composition of the following (100 grams edible portion and as purchased): Adzuki beans (*Phaseolus angularis;* incl. "Azuki-an," and boiled sweetened). Asparagus bean: See Cowpea, yardlong. Asparagus pea: See Goabean. Bambara groundnut or jugo bean (*Voandzeia subterranea*). Bengal gram: See Chickpea. Blackeyed pea: See Cowpea, catjang. Blackgram: See Mung bean. Broad bean or horse bean (*Vicia faba;* incl. "Fuki-mame" and "Otafuku mame"). Burma bean: See Lima bean. Butter bean: See Lima bean. Catjang pea: See Pigeonpea. Chickpea or Bengal gram (*Cicer arietinum*). Cowpea, all varieties (*Vigna* species). Cowpea, yardlong: See Cowpea, all varieties. Dhal: See Lentil. Dolichos, Australia pea (*Dolichos lignosus*). French bean: See Kidney bean. Goabean [goa bean], asparagus pea, or winged bean (*Psophocarpus tetragonolobus*). Golden gram: See Mung bean. Green gram: See Mung bean. Haricot bean: See Kidney bean. Hindu cowpea: See Cowpeas, all varieties. Horse grain or horse gram or Madras gram (*Dolichos uniflorus; D. biflorus*). Horsebean: See Broadbean. Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the word "horsebean" or the word "broadbean" to refer to *Vicia faba.*

Horsegram: See Horse grain. Hyacinth bean or Indian butterbean (*Lablab niger; Dolichos lablab*). Indian bean: See Mung bean. Indian butterbean: See Hyacinth bean. Jackbean, common (*Canavalia ensiformis*). Jugo bean: See Bambara groundnut. Kidney bean, French bean, navy bean, pinto bean, snap bean, or string bean (*Phaseolus vulgaris;* incl. "Usura-mame"). Lentil or dhal (*Lens culinaris; Lens esculenta; Ervum lens*). Lima bean, butter bean, or Burma bean (*Phaseolus lunatus; Phaseolus limensis*).

Note 2. This is the earliest English-language document seen (May 2003) that uses the scientific name *Lens culinaris* to refer to lentils.

Note 3. This is the earliest English-language document seen (Jan. 2009) that uses the name "Burma bean" to refer to the lima bean.

Madras gram: See Horse grain. Mung bean, Indian bean, red bean, green gram, golden gram, or blackgram / black gram (*Phaseolus aureus; Vigna radiata;* incl. vermicelli, dried starch, starch jelly, instant powdered green or red products with sugar and flour added). Mung bean, black gram or urd (*Phaseolus mungo; Vigna mungo*). Navy bean: See Kidney bean. Peanut or groundnut (*Arachis hypogaea;* incl. raw, roasted, with or without shell, salted, parched, seasoned, fried, peanut flour, peanut butter, peanut milk, peanut cake–defatted, peanut cake–defatted and fermented [onchom]). Peas, garden or field (*Pisum* species; incl. parched–salted, "Uguisu-mame"). Pigeonpea, or catjang pea (*Cajanus cajan; Cajanus indicus*). Pinto bean: See Kidney. Red bean: See Mung bean. Rice bean (*Phaseolus calcaratus; Vigna calcarata*). Soybean and soy products (Glycine max; G. hispida; G. soja; p. 19-21), incl: Whole mature seeds–dried (yellow, black), whole immature seeds dried, whole seeds–salted (black, green, green soaked, fried, fermented {natto}, pickled, roasted), flour made from roasted soybeans, defatted soybeans–whole seeds. Soybean products: Curd–unpressed, curd–tofu–raw (plain, kinugoshi, fukuroiri), curd–tofu–fried (moist type, dried type–regular size, dried type–small size, canned, abura age), curd–roasted [grilled], curd–tofu–fermented (home-prepared, jarred), curd–tofu (dried–spongy square, preserved, dried–rope-like, commercial {fermented with chili pepper}–jarred), curd cheese, curd sheet (milk clot sheet {yuba}) (moist type, dried type, pickled in soysauce), curd–pressed–raw (plain, fermented, spiced, strips–semi-dry), miso (Japan) (plain, sweet {5.3% salt added}, salty–light {10.4% salt added}, salty–dark {11.7% salt added}, mame-miso {9.7% salt added}, powdered {18.5% salt added}), paste [jiang] (plain, fermented, red pepper added, sweet, malt), soybean milk (unenriched–unsweetened, "Kaset" {Thailand; canned–concentrated, fluid}, Saridele {a mixture of soybeans, sesame seeds or peanuts, with vitamins and calcium added–Indonesia}), soybean sauce (dark–thick, light–thin, unspecified), tempeh (fermented soybean product, Indonesia), "Budo-mame" (cooked–Japan), Soybean residue [okara] (liquid, powder). Urd: See Mungo bean. Velvetbean (*Mucuna utilis; Stizolobium utilis;* incl. dried or mold-treated {tempeh}). Winged bean: See Goabean, Indes.

Food Group 4 titled "Nuts and seeds (p. 23-29) includes: Almonds, hemp seeds–whole, perilla–common (*Perilla frutescens*), safflower seeds, sesame seeds, sunflower seeds (*Helianthus annuus*), watermelon seeds.

Food Group 5, titled "Vegetables and vegetable products" (p. 30-75) includes: Amaranth, mungbean sprouts, seaweeds (many types), soybeans–immature seeds [green vegetable soybeans], soybean sprouts (raw, cooked).

Note 4. This is the earliest English-language document seen (April 2013) that mentions silken tofu, which it calls (in a table): "Curd, tofu, raw: 'Kinugoshi,' Japanese preparation."

Note 5. This is the earliest English-language document seen (Nov. 2012) that contains the term "flour of roasted soybeans."

Note 6. This is the earliest English-language document seen (Oct. 2006) that uses the term "Blackeyed pea" to refer to the cow pea. Address: Dep. Health Education and Welfare.

2943. **Product Name:** [Tofu].
Manufacturer's Name: Alimentation Japonais Osaka.
Manufacturer's Address: 13 Rue du Helder, Paris 9eme, France. Phone: 770-049-1.
Date of Introduction: 1972.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 401. Owner: Mr. Mikiyo Yamanaka.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Mr. Mikiyo Yamanaka. Note: This appears to be second earliest tofu manufacturer in France, after Li Yu-ying, and the first of the new generation.

Interview with Noboru Sakaguchi. 1990. June. He started this shop in 1971-72.

2944. **Product Name:** Kinugoshi Soft Tofu.
Manufacturer's Name: Azumaya Inc.
Manufacturer's Address: 95 Boutwell St., San Francisco, CA 94124. Phone: 415-467-1955.
Date of Introduction: 1972.
Ingredients: Water, soybeans, calcium sulfate.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. Loetterle. 1977. California Living. April 17. p. 40. Tseng et al. 1977. Home Economics Research Journal. Dec. p. 171-72. New Label. 1986. Soft (Kinugoshi) Tofu. Contains GDL (glucono delta-lactone).

Interview with George and Bill Mizono. 1989. Oct. 31. This product was first made at Boutwell St. in about 1972.

2945. **Product Name:** NamaAge: Fried Soy Bean Cake.
Manufacturer's Name: Azumaya Inc.
Manufacturer's Address: 95 Boutwell St., San Francisco, CA 94124. Phone: 415-467-1955.
Date of Introduction: 1972.
Ingredients: Soy beans, water, cottonseed oil or peanut oil, calcium sulfate.
Wt/Vol., Packaging, Price: 6 oz (170 gm) in poly pouch.
How Stored: Refrigerated.
New Product–Documentation: Label. 1978, dated. 7 by 4 inches. Plastic pouch. Dark green, light green, black, and white on clear. Azumaya logo. Little bean logo saying, "Hi, I'm Li'l Soy." Includes recipe: Nama-Age With Beef.

Label. 1986, dated. 7 by 3 inches. Blue, reddish brown,

supermarket in Lafayette, California. 1999. Jan. 17. This tall plastic quart of "SoyFresh Unsweetened Soy Beverage" was being sold in a large open-front refrigerated case with the Odwalla juices. Self-adhesive label. Blue, black, green, and yellow on white. Sticker: "Made with organic soybeans." Ingredients: Water, whole organic soybeans.

2948. **Product Name:** Soft Tofu: (Soy Bean Cake). Sui-dofu (written in Chinese).
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1972.
Ingredients: Soy beans, water, calcium sulphate.
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
New Product–Documentation: Label. 1979, undated. 5 by 4.25. Plastic film. Yellow and pink on clear film. "Since 1906. Keep refrigerated." Talk with Ben Lee. 1988. Sept. 30. Introduced in 1972.

2949. **Product Name:** Fresh Soy Bean Pudding. Dofu-hwa (written in Chinese).
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1972.
Ingredients: Soy beans, water, calcium sulphate.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.

New Product–Documentation: Label. 1979, undated. 5 by 4.25. Plastic film. Yellow and dark blue on clear film. "Since 1906. Keep refrigerated. Serving suggestions: For a delicious dessert serve chilled with fruit syrup, maple syrup, fruit cocktail, or honey." Talk with Ben Lee. 1988. Sept. 30. Introduced in 1972.

2950. **Product Name:** [Tofu].
Foreign Name: Tofu.
Manufacturer's Name: Sarvodaya Development Education Organisation Ltd.
Manufacturer's Address: 423 Golden Grove, E.C.D., Guyana.
Date of Introduction: 1972.
New Product–Documentation: Letter from Peter Kempadoo. 1981. April 12. Soyfoods Center Computerized Mailing List. 1981. Dec. 8. Owner: Peter Kempadoo.

Letter from Peter Kempadoo. 1992. Aug. 23. He has moved his Sarvodaya Development Education Organization from Guyana to Bulawayo, Zimbabwe, where he is now working with soyfoods.

2951. Yagi, K. 1972. [Packaged bean curd product]. *Japanese Patent* 13 690/72. [Jap]*
• ***Summary:*** Dried tofu is cooked, soaked in soy sauce, then put into a bag with a mixture of soy sauce, spices, binders, and preservatives. After the air is removed from the bag, it is sealed and steam heated. Address: Japan.

2952. Aihara, Cornellia. 1972. The Chico-San cookbook. Chico, California: Chico-san, Inc. 126 p. Illust. 22cm. by Nan Schleiger. Reissued in revised form as Macrobiotic Kitchen by Japan Publications in 1982.
• ***Summary:*** All recipes are numbered and pages are unnumbered. Soy-related recipes include: 6. Brown rice in soy sauce. 16. Black [soy] beans and brown rice. 23. Inari-sushi (with agé). 24. Ohagi of 3 colors (with roasted soybean flour and miso). 32. Ojiya (with miso or soysauce). 37. Roasted rice (with black soybeans). 38. Musubi (with miso). 55. Kinako mochi. 76. Soy bean stock. 87. Oden (with agé and soy sauce). 90. Kenchin soup (with agé). 95. Cream of onion soup (with miso). 96. Hacho miso soup. 97. Mugi miso soup. 98. Kome miso. 99. Oil miso. 100. Sesame miso. 101. Walnut miso. 102. Miso salad dressing. 103. Shiguri [sic, shigure] miso (with scallops). 104. Tokiwa miso (with shiitake mushrooms, citron, and walnuts). 105. Oyster miso. 106. Tai miso. 108. Nuka miso zuke (vegetables pickled in rice bran and miso). 121. Miso pickles. 137. Daikon with agé. 138. Daikon with miso. 143. Turnip with sesame-miso. 159. Burdock-miso soup. 162. Burdock with miso. 180. Onion-miso sauce. 182. Scallion-miso. 191. Carrots with miso. 192. Carrots with soy sauce. 200. Dengaku (with miso). 220. Roasted soybeans. 221. Soybean soup. 222. Soybeans with vegetables. 223. Soybeans with miso. 224. Soybean tempura. 225. Mashed soybeans with tarako (cod fish roe). 226. Soybean croquettes. 227. Soybean potage. 228. Soybean muffins. 229. Kidney beans with miso. 237. Shigiyaki (small eggplants with miso). 241. Eggplant miso pickle. 267. Rolled shiso leaves with miso. 291. Tofu kuzu

sauce. 292. Tofu chili-nabe. 293. Tofu with vegetables. 294. Tofu salad. 295. Okara rice. 296. Torimotsu okara (with chicken giblets). 297. Okara soup. 298. Okara croquettes. 299. Egg tofu. 308. Koi-koku (carp soup with miso). 311. Loach soup (with miso). 312. River fish with miso sauce. 320. Mackerel with miso. 335. Coltsfoot with miso. 341. Dandelion miso-ai [miso-ae]. 345. Horsetail with miso-ai. 359. Watercress miso-ai. 361. Nobiru goma miso (with wild onions). 369. Shiromiso shiru [sweet white miso soup]. 371. Nimame (black soybeans). 400. Shoyu bancha (twig tea). 408. Black bean tea. 409. Amasake (homemade from koji rice and sweet brown rice). 456. Amasake manju. 461. Soba with miso-ame. 515. Tekka (with Hacho and/or mugi miso). 516. Seitan (homemade). 517. Soy sauce (homemade). 518. Miso (homemade). 519. Tofu (homemade using nigari). 520. Nigari (homemade). 521. Amasake (homemade from koji rice and sweet brown rice flour).

Cornellia Aihara was born with a heart valve defect. She was told by doctors that she could never bear children and would probably not live past her nineteenth year. She proved them wrong on both counts. In 1955 she came to America from Japan at the invitation of Herman Aihara, a man she knew only through correspondence, and they were married. Within several years their two children were born.

Cornellia has applied herself to the teaching of macrobiotic cooking, childcare, home remedies, and philosophy since 1960. Address: Chico, California.

2953. Aihara, Cornellia. 1972. The *dô* of cooking (Ryorido). Vol. 2. Summer cooking. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 103 p. No index. 25 cm.

• ***Summary:*** All recipes in this macrobiotic cookbook are numbered. The section on "Tofu" contains recipes for: 35. Hiya yako [sic, yakko] (cold, uncooked tofu). 36. Kanten tofu (Tofu aspic). 37. Tofu kuzu aspic. 38. Harusame tofu kuzu sauce. 39. Unagi tofu [vegetarian].

The section on "Miso Soy Bean Paste" contains recipes for: 40. Soy bean miso [soybeans sauteed with miso]. 41. Vegetables with miso sauce. 42. Vegetable miso. 43. Green pepper with miso. 44. Deep fried miso balls.

Other soy recipes include: 60. Nori with soy sauce. 62. Kombu in soy sauce. 64. Hiziki tofu salad. 66. Fried koya tofu with carrot (with dried tofu). 71. Cold miso soup. 73. Split pea miso soup. 81. Tahini-tamari sauce. 89. Soy bean surprise [with miso-tahini sauce]. 92. Okara salad.

GOMF was founded in 1971. Address: 1471-10th Ave., San Francisco, California 94122.

2954. Aihara, Cornellia. 1972. The *dô* of cooking (*Ryorido*). Spring. Oroville, California: George Ohsawa Macrobiotic Foundation. 125 p. Illust. by Carl Campbell. Index. 21 cm.

• ***Summary:*** This macrobiotic book is divided into two parts: Eleven chapters followed by 14 sections of recipes. In part one, miso is mentioned on pages 15, 35, and 51 (Condiments and spices). Recipe section IV, titled "Wheat gluten" (p. 79-82) contains recipes for: Wheat gluten. Seitan. Fresh wheat fu. Boiled fu. Fried fu–gluten cutlet. Shish kebab (using 3 strips of cooked fu). French bread (made with gluten water, p. 115).

Recipe section V, titled "Tofu" (p. 83-90) contains recipes for: Tofu making (using 3 cups green soybeans and nigari coagulant; with 11 excellent illustrations). Nigari (from gray sea salt). Quantity tofu preparation (using 10 lb soybeans). Okara or unohana (using "3 cups soybean puree leftover from tofu making"). Tofu with kuzu sauce. Fried tofu. Shinano-agé (Fried tofu with buckwheat). Kaminari tofu (Thunder tofu). Nori-maki (Tofu rolled in nori; with illustration). Age-tofu (Stuffed tofu; with illustration).

Soy-related recipes include: Onion miso (p. 70). Rolled cabbage with tofu (p. 71). Bean sprout miso salad (p. 100; miso is called "mixed soybean puree {half mugi and half kome}." The sprouts are probably from mung beans). Ganmodoki (Mock goose; p. 109). Gyoza filled with seitan, dipped in a mixture of soy sauce and lemon juice (p. 111-12). Address: George Ohsawa Macrobiotic Foundation, Oroville, California.

2955. Aihara, Herman. 1972. Miso & tamari. *Macroguide* (*San Francisco: George Ohsawa Macrobiotic Foundation*). No. 12. iii + 34 p. [3 ref]

• ***Summary:*** Contents: Preface. Part I: Miso. Introduction, the origin of miso, kinds of miso, ingredients (soybeans, barley, rice, salt, water) how to make miso [at home] (barley miso, rice miso, soybean miso, analytical comparison of the three kinds of miso, other types of miso, miso pickles) value of miso (protein, fat, minerals, poison prevention, heart disease, miso for beauty, stamina, miso for radiation and other diseases, miso soup), miso in the treatment of tuberculosis and atomic radiation exposure.

Part II: Tamari or traditional soy sauce. Introduction, history, chemical change of tamari, how to make tamari soy sauce at home, how to use soy sauce.

Part III: The other soybean foods. Tofu (preparation of soybean milk at home, coagulation of soybean protein, the formation of tofu in a mold [for homemade tofu], tofu for external treatment–tofu plaster, age–deep fried tofu [how to make at home]), natto (introduction, how to make natto at home).

Part IV: Appendix. Available publications, G.O.M.F. message.

Illustrations by Carl Campbell show: (1) Two traditional kegs of miso and a glass jar of tamari (title page). (2) Making mugi (barley) miso in Japan (9 steps; p. 10).

Note 1. This is the earliest English-language document seen (March 2009) that describes how to make miso at home. Recipes for three types of miso are given: Barley miso, rice miso, and soybean miso. The method is translated from

© Copyright Soyinfo Center 2013

Miso University, by K. Misumi (in Japanese). Fortunately, the exact amount of each of 5 ingredients is given, and nine excellent illustrations show the main steps in the traditional process. Unfortunately, the instructions are somewhat vague.

Note 2. This is the earliest English-language document seen (Jan. 2012) that describes how to make natto at home. Address: San Francisco, California.

2956. Brissenden, Rosemary. 1972. South East Asian food: Indonesia, Malaysia and Thailand. Harmondsworth, Middlesex, England; Baltimore, Maryland: Penguin Books. 264 p. 18 cm. A Penguin handbook.
• ***Summary:*** After a three-month stay in Indonesia as a member of a student delegation from Melbourne University, Rosemary "realized that she could not live without Indonesian food. So she set about learning as much as she could from Asian students in Melbourne." In 1964 she was invited to write a weekly column in the Australian on South East Asian food. She is married and has three children.

"A note on this American edition. This book has been especially adapted for the American audience. British weights and measures have been converted into their American equivalents. Sources for obtaining unusual products mentioned in the recipes are given for most large American cities."

Note: This book is almost identical to the edition published in 1969 in the USA and England by Penguin Books. This American edition was published in 1972 by Penguin Books, Inc. Address: Australia.

2957. Brown, Edith; Brown, Sam. 1972. Cooking creatively with natural foods. New York, NY: Hawthorn Books. xvii + 302 p. Illust. Index. 24 cm.
• ***Summary:*** This vegetarian cookbook has been 35 years in the making. Edith was born in 1920, and Sam in 1917. "It really goes back to the birth of Brownies [Health Food Restaurant in New York City]. That was in 1936. In the beginning we were just a sliver in the wall, hardly a soybean's throw from Union Square in New York City. The address hasn't changed but *we* have." Brownies began as a tiny shop selling natural foods to people who lived or worked in the neighborhood. Today we are a restaurant-bakery -country store complex sprawled across Siamese-twin brownstone houses."

"The expansion of Brownies began modestly in 1938. Sam acquired a vegetable juice extractor and installed four stools in the shop. Vegetable-juice bars have long since become old hat, but the one on East 16th Street happened to be the first one in the country.

"The juice bar won a warm welcome. Customers 'dug' the oral vitamin shots being dispensed from the extractor. Soon people were coming from precincts far beyond the neighborhood to 'get juiced.' The word spread. There appeared a distinguished visitor in the person of the late Clementine Paddleford, the influential food editor of (alas, also the late) New York *Herald-Tribune.* Miss Paddleford came, sipped, and wrote rapturously about her discovery. That rave review really put Brownies on the map." (p. xi)

In the chapter titled "The natural foods cupboard: A glossary" we find good descriptions of various soyfoods: Soyameat (canned, Chicken or Beef Style), soybean granules, soybean powder [flour], soybeans (canned, like Boston baked beans), soybeans (dried), soy nuts [oil-roasted soybeans], Stripple Zips ("Bacony, crunchy, smoky bits of vegetable protein made from soy and yeast. A wonderful meatless flavoring."), tamari (soy) sauce, VegeBurger (canned, made from soy, wheat, and vegetables), VegeChee [tofu], Vegelona.

Soy-related recipes include: Pizza supreme (with Fearn Whole Wheat Soy-O Mix, p. 17). Soy-stuffed mushrooms (with canned green soybeans, p. 17-18). Dill soybeans (p. 74). Triple-treat bean salad (p. 80). Crunchy soybean salad (with canned green soybeans and Chicken-Style Soyameat, p. 81). Soy-nut meatballs (with canned soybeans in tomato sauce, canned VegeBurger, soybean granules, and Toasted Soy Nuts, p. 109-10). Soy, garbanzo & millet pie (p. 126).

One chapter is titled "The miraculous soya–and other members of the clan (bean)" (p. 129-45). The introduction notes: At Brownies we feature soybeans on the relish tray, on the salad menu, and as a meat substitute. We use soybean flour in almost everything that comes out of our ovens." Soy-related recipes include: Basic soybeans. Zippy soybean salad. Minty soybean salad. Soybean ratatouille. Scrumptious soy pudding. Soy walnut loaf. Protein casserole (with Beef-Style Soyameat). Lentil soy casserole. Tricolor bean salad (with toasted salted Soy Nuts). Exotic bean salad. Neapolitan bean salad. Peppy bean puree. Any-night beans.

Soy recipes with pasta (p. 175-78): Savory soy spaghetti. Soy spaghetti with saucy franks. Corny spy spaghetti. Spaghetti protein casserole (with soybean spaghetti, green soybeans, and Proteena). Soy elbows in parsley mushroom sauce. Oriental elbows. Soya blueberry muffins (p. 248). Crunchy soy-nut spinach cake (with soybean powder and unsalted soy nuts, p. 264).

Brownola plus (like Granola, p. 168). Address: New York, New York.

2958. Cadwallader, Sharon; Ohr, Judi. 1972. Whole earth cook book. Boston, Massachusetts: Houghton Mifflin Co. Published in association with San Francisco Book Company. xix + 120 p. Illust. by Anita Walker Scott. Index. 24 cm. Preface by Paul Lee. [3 ref]
• ***Summary:*** All 138 recipes in this natural foods (but not vegetarian) cookbook have been tested at the Whole Earth Restaurant. Soy-related recipes include: Cheese soybean soup (with cooked whole soybeans, p. 5). Soybean spread (p. 27-29). Soybeans as a good "alternative" source of protein (p. 32). Cold-pressed soy oil (p. 33). Soybeans and soybean

© Copyright Soyinfo Center 2013

products (incl. soy grits, tofu or soybean curd or soy cheese, soy and/or wheat macaroni noodles, p. 34). Basic soybean recipe (not pressure cooked, p. 36). Super soybean casserole (p. 37). Tofu-egg omelet (p. 37). Using gluten flour with soy flour in breads (since soy flour is heavy, p. 73). Quick breads and muffins (using soy flour, p. 82).

The chapter titled "Nonmeat protein dishes" notes (p. 34) that soybeans, which are native to the Orient, are relatively new to this country. "They are amazingly healthful, as high in protein as meat. They are considered a complete protein, or one that contains the eight amino acids. Since they taste different from other legumes,... they need careful, imaginative preparation." The light, soft consistence and bland taste of tofu "make it easy to use as an addition or substitute in your favorite recipes." Address: 1. Manager, Whole Earth Restaurant, Univ. of California campus, Santa Cruz, California; 2. Organic gardener and housewife, San Juan Bautista, California.

2959. Char, Alyce; Char, Theodore. 1972. The gourmet's encyclopedia of Chinese-Hawaiian cooking. New York, NY: Exposition Press. An Exposition-Banner Book. 306 p. Plus 32 unnumbered pages of [color] plates. See p. 277. Illust. (some color). 24 cm.

• ***Summary:*** This book is a fusion of Cantonese Chinese and Hawaiian cuisines. The names of Chinese foods is usually romanized in Cantonese. A surprisingly large number of the recipes are based on meat, poultry, fish or eggs.

In the chapter titled "The Chinese Kitchen" (p. 27-33) many soyfoods are described under "Spices, sauces and condiments." These entries tend to be less detailed than those in the Glossary.

The chapter on "Food sources and substitutions" includes: "Bean curd skin (*Fu Pee Guin*)*:* Use leaf fat.

The chapter titled "Chinese grocery store and supermarket items" includes these two entries: "Bean curd: Fresh; bottle or canned; in red sauce; dried in sheets or rolled." This reference is apparently to fresh tofu, bottled or canned tofu, red fermented tofu, dried yuba sheets, and dried yuba sticks. The 2nd: "Tofu: Wet and dried."

A sampling of soy-related recipes includes: Barbecued teriyaki beef (with homemade Teriyaki sauce, p. 73). Chicken with bean curd (with "4 cubes white bean curd, p. 99). Steamed spare ribs–Black beans (with "¼ cup black beans {*Dau See*}, p. 127). Bean curd spring roll with Szechuan cabbage (with 1 pkg. {½ lb.} bean curd sheets, p. 180). Note the ease with which the terms "Bean curd" and "bean curd sheets" are used interchangeably. Bean cake with bean sauce (with "2 blocks *tofu* or soybean cake, 4 inches square" and "¼ cup canned bean sauce {*Ngin see Jeong*}, p. 192).

On three unnumbered pages of black-and-white photos in the middle of the book (after p. 194) titled "Chinese ingredients" we see: (10) A box of "Dried bean curd, flat type" [folded sheets of yuba]. (6) "Bean cakes (cheese)" [a bottle of fermented tofu]. (8) "Red bean curd" [a can of fermented tofu]. (12) Brown bean sauce (*ngin see jeong*). (9) Thick red soy [sauce]. (15) Fried tofu. (20) Preserved black bean (*dau see*).

Celery cabbage with bean curd (with "2 tbsp. bean curd [fermented tofu], p. 198).

The Glossary (p. 277-91) contains many soy-related entries:

Aburage: "Japanese word for deep-fried tofu.

Beancurd flower, *dou fu fah* [curds made from soymilk]; very fine consistency, white in color, sold packaged in cellophane containers.

Beancurd sauce or cheese, *dau fu mui;* also called *fu yui;* squares of fermented beancurd [fermented tofu], salty and having a cheese-like consistency.

"Beancurd sticks or skins, *fu jook;* [dried yuba sticks] shiny cream-color brittle and wrinkled sticks or sheets; actually a by-product of beancurd made from second layer of puréed beancurd."

Black beans, preserved. *dau see;* preserved black soybeans; they impart their strong flavor to foods they are cooked with.

Brown bean sauce, *ngin see jeong;* sold in either paste form or as a thick sauce; made from fermented yellow soybeans, flour and salt. It can be purchased ready-made in bottles or cans, or made at home from salted, fermented black soybeans (see p. 29).

Cheese, Chinese: see beancurd sauce or red beancurd sauce.

"Hoisin sauce: thick brownish-red sauce, made from soybeans, chili, garlic, spices, flour and sugar.

"Miso paste: Japanese product made from seasoned, preserved, mashed soybeans; used in soups and stews.

Red beancurd sauce or cheese, *nahm yoi:* [red fermented tofu] red, pressed beancurd fermented in rice wine with salt and spices; used to season and flavor special dishes; sold in cans or jars.

"Soy sauce, *see yau:* also called *bahk yau:* thin sauce made from fermented soybeans, wheat, salt, water and yeast [sic]; first brew produces light colored thin sauce; allowed to set longer, becomes dark brown; light sauce, the first brew, premium and limited in quantity; used at table and in cooking.

"Soybean: both yellow or black used in stew dishes or stir fried.

Soybean cake, *dau fu:* [tofu] white custard cakes of pressed puréed soybeans; nutritious and used in lieu of milk in China for its protein value.

Note: This is the earliest English-language document seen (April 2013) that uses the term *dau fu* (or *dau-fu*) to refer to Chinese-style tofu.

Soybean cake, deep fried, *yau dau fu,* [deep-fried tofu] yellow-brown and triangular or cube shaped.

© Copyright Soyinfo Center 2013

Soybean paste, *jeong:* any sauce, such as *hoi sin sauce.*

Teriyaki: Japanese soy sauce marinade for beef, but also chicken, pork, or seafood.

Tofu, *dau fu:* Japanese word for products such as beancurd cake.

White beancurd cake or cheese [white fermented tofu]: see sauces or cheeses.

Also interesting in Glossary: Monosodium glutamate, *mee jing fun;* centuries old Chinese brand made from seaweed.

About the authors (inside rear dust jacket): Theodore Char, a native of Honolulu, graduated from the University of Illinois. In 1928 he became the first person of Chinese descent and the first Hawaiian to become a certified public accountant. He is a firm believer in physical culture and is an ardent hiker. Alyce Char is a graduate of the University of Hawaii. Throughout the Hawaiian "they are renowned for entertaining in their home and are frequently referred to as 'the host and hostess with the mostest.'" Among the books many color photos, are four excellent ones of this harmonious- and happy-looking couple. Address: Honolulu, Hawaii.

2960. Claiborne, Craig; Lee, Virginia. 1972. The Chinese cookbook. Philadelphia and New York, NY: J.B. Lippincott Co. xxi + 451 p. Color photos by Bill Adler. Drawings by Barbra and Roderick Wells. Illust. Index. 24 cm.

• ***Summary:*** Soy related recipes: Coriander and bean curd with sesame sauce (with dried brown bean curd [soy-sauce pressed tofu] and light soy sauce, p. 34). Cold chrysanthemum leaves with sesame oil (with dried brown bean curd and light soy sauce, p. 35). Chicken with black beans and shallots (with fermented, salted black beans, light soy sauce and dark soy sauce, p. 58-59). Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term "fermented, salted black beans" to refer to Chinese-style fermented black soybeans. The headnote to this recipe states: "Fermented, salted black beans have an almost winy flavor, and they give an intriguing flavor to almost any dish in which they are cooked." Yet nowhere in this book do the authors state that these black beans are actually black soybeans.

Soy sauce chicken (with light soy sauce and dark soy sauce, p. 59-60). Hoi sin sauce is mentioned (or a photo shown) as an ingredient on pages 65-66, 147, between pages 282 and 283, and on 4 other pages. Spicy pork and bean curd (with "6 pads fresh white bean curd," p. 136). Note 2. This is the earliest English-language document seen (April 2013) that uses the term "fresh white bean curd" to refer to fresh tofu, or that uses the word "pads" as the counter for pieces or cakes of tofu. The headnote states: "Bean curd has as many uses in China as cottage cheese does in the Western world. It is one of those neutral dishes [ingredients] like potatoes and snails which adapt well to assertive flavors."

Cantonese roast pork (with "2 tablespoons red bean curd sauce" [nam yue?] and "2 tablespoons bean sauce"). Chinese barbecued spareribs (with "2 tablespoons red bean curd sauce," "2 tablespoons ground bean sauce," and "3 tablespoons hoi sin sauce," p. 147-48). Ginger beef and bean curd with hot pepper (with "5 pads fresh white bean curd," p. 188). Steamed fish with bean sauce (with "¼ cup bean sauce," p. 208). Stir-fry shrimps with bean curd (with "5 pads fresh white bean curd," p. 231). Shrimps in black bean sauce with ginger and scallions (with "2 tablespoons fermented salted black beans and 2 tablespoons dry sherry or shao hsing wine." "Combine the black beans with 1 tablespoon of the wine and crush lightly with a spoon." Thus, "black bean sauce" can be easily and quickly made in the kitchen from fermented, salted black beans, p. 234-35).

Clams in black bean and oyster sauce (with fermented salted black beans that are quickly made into black bean sauce as above, p. 243-44). Frogs legs with black beans (with fermented salted black beans, p. 257). Mock Peking duck (with "6 sheets dried bean curd," p. 302-03. "Bean curd comes in large, semicircular thin sheets [yuba] as well as squares [probably yuba; see below]. Because the sheets are notably fragile, they are frequently broken." The headnote states: "This dish uses dried bean curd to produce an eminently edible creation that tastes remarkably like roast duck").

Bean curd and beef ball soup (with "1 pad fresh white bean curd," p. 318). Whiting and bean curd soup (p. 327-28; a whiting is a type of fish). Flowery bean curd soup (p. 328-29). Bean curd casserole soup (p. 330-31). Tsa chiang mien (Noodles with minced pork and bean sauce, incl. "½ cup bean sauce," p. 365-66).

One glossy color photo (between pages 282 and 283) and a numbered key shows many ingredients used in Chinese cooking, incl.: 5. Dark soy sauce. 6. Hoi sin sauce. 7. Bean sauce. 8. Light soy sauce (both in tall-neck bottles). 16. Fresh white bean curd. 28. Dried brown bean curd [soy sauce pressed tofu]. 31. Dried bean curd sheets [clearly yuba, since light yellowish brown, semi-transparent, subtly wrinkled surface, and very thin]. 32. Fermented salted black beans (small pile).

Chapter 11, titled "Chinese ingredients..." (p. 419-40) contains many interesting terms and definitions, with Chinese characters accompanying each. Soy related are: Dried bean curd sheets [yuba] ("These paper-thin, light brown half circles are very fragile and are often broken; they can be repaired by wetting and overlapping the broken edges. They are sold in packages of 10 and will keep for 3 to 4 months without refrigeration." Eventually they will turn rancid, since they have a high oil content"). Dried brown bean curd (3 Cc = Chinese characters given) [doufugan; soy sauce pressed tofu]. Dried red beans [azuki].

Fermented salted black beans (2 Cc) [douchi, dow see]: "An ingredient of Cantonese cooking but virtually unknown

© Copyright Soyinfo Center 2013

elsewhere in China, these black [soy] beans, sometimes simply called 'Salted Black Bean' are sold in 1-pound cans or in 8- and 16-ounce plastic bags. They will keep for months if stored in the refrigerator in a covered jar." Fresh white bean curd (2 Cc) (doufu). Ground bean sauce (3 Cc): Contains "the same ingredients as Bean Sauce, except the whole beans have been ground to a paste. It is sold in oblong 1-pound cans." Hoi Sin Sauce (3 Cc): "Made from pumpkin."

Red bean curd sauce (4 Cc): "A thick sauce made from soy beans, red rice, and salt water, this is available in 11-ounce oblong cans and also in 12-ounce round cans labeled 'bean curd.'"

Note 3. This is the earliest English-language document seen (March 2011) that uses the term "Red bean curd sauce" to refer to a commercial product made with red fermented tofu.

Sesame oil. Sesame paste. Sesame seeds. Shao Hsing Wine (made from rice). Soy sauce (2 Cc) [jiangyou]: Color ranges from light to very dark. The "difference lies more in the color than in the flavor." Sold in tall-neck bottles ranging for 12-21 ounces. "The soy sauce generally sold in American supermarkets is light soy sauce–it is most suitable used as a dip or in some stir-fry dishes but in general is too light to lend an appetizing color to a dish. Dark soy sauce, usually found only in Chinese markets, is sometimes labeled 'Black Soy.' Soy sauce will keep for months and sometimes years without refrigeration."

There follows a nationwide directory of sources for Chinese ingredients.

Also mentions: Eight precious jewel pudding (with "1 cup dried red [azuki] beans," p. 406-07). Red sand rice roll (with "1½ cups dried red [azuki] beans," p. 408-09).

"Craig Claiborne was food editor of *The New York Times* from 1957 to 1971. During this period he was credited by the Chinese-American Restaurant Association of Greater New York with significantly raising the level of public interest in Chinese food, and thus the standard of Chinese restaurant fare." A large, excellent color photo on the rear dust jacket shows Craig Claiborne and Virginia Lee preparing a meal together in a kitchen. Address: East Hampton, Suffolk Co., New York (on the eastern tip of Long Island).

[Washington, DC]: Food and Agriculture Organization of the United Nations; U.S. Dept. of Health, Education, and Welfare. vii + 296 p. Dec. 27 cm. [1500* ref]
• ***Summary:*** This book has two title pages and can be cited in two ways. See Leung (1972). Address: Dep. of Health Education and Welfare.

2962. Furia, Thomas E. ed. 1972. CRC handbook of food additives. 2nd ed. 2 vols. Cleveland, Ohio: CRC Press (a Division of The Chemical Rubber Co.). Vol. 1: xi + 998 p. Vol. 2. 412 p. Index. 27 cm. [624* ref]
• ***Summary:*** The many chapters are published by various authors. Contents of Vol. 1: Introduction. 1. Enzymes. 2. Vitamins and amino acids. 3. Antimicrobial food additives. 4. Antioxidants as food stabilizers. 5. Acidulants in food processing. 6. Sequestrants in food. 7. Gums. 8. Starch in the food industry. 9. Surface active agents. 10. Polyhydric alcohols. 11. Natural and synthetic flavorings. 12. Flavor potentiators. 13. Nonnutritive sweeteners. 14. Color additives in food. 15. Phosphates in food processing.

Contents of Vol. 2: Legal considerations on food additives. Antioxidants as stabilizers for fats, oils, and lipid-containing foods. Enzymes. Nonnutritive sweeteners: Saccharin and cyclamate. New sweeteners. Natural and artificial flavors. Synthetic food colors.

Vol. 1: Chapter 12, titled "Flavor potentiators" (p. 513-21), by Loren B. Sjöström (Vice-President, Arthur D. Little, Inc., Cambridge, Massachusetts) notes (p. 513): "In the context of flavor, the term 'potentiator' is only a few years old. The identification of flavor potentiators is a twentieth century accomplishment, an area of research still in its infancy." Yet seasonings (such as salt), as well as herbs and spices, have been used since ancient times.

The section on "Flavor enhancers" begins (p. 515): "The best known and most widely used flavor enhancer is monosodium glutamate (MSG). In 1866, a German chemist, Ritthausen, isolated glutamic acid. Later another chemist converted the acid to a sodium salt, monosodium glutamate. In doing their work, neither had any interest in flavor.

"More than 40 years later, in 1908, a Japanese chemist at the University of Tokyo, Dr. Kikunae Ikeda, discovered the flavor enhancing properties of MSG. Dr. Ikeda had set out to find out why and how a certain seaweed, *Laminaria japonica*, affected flavor. Japanese cooks had used this seaweed for centuries to improve the flavor of soups and certain other foods. Dr. Ikeda discovered that the ingredient in the seaweed that made the difference was MSG, and that it had an unusual ability to enhance or intensify the flavor of many high protein foods.

"After isolating MSG, Dr. Ikeda developed a process for extracting it from wheat flour and other flours. Working with the Japanese chemical company, Suzuki and Co., he supervised the construction of a plant and, as a partner with the company, began commercial production of MSG in 1909.

"There were several attempts to produce MSG in the United States in the years following, but it was not until the 1940's that large-scale MSG production began in this country. By 1968, U.S. production had grown to 46 million pounds per year and world consumption had increased to more than 150 million pounds per year."

The section titled "Types of potentiators" discusses 5'-nucleotides, maltol, dioctyl sodium sulfosuccinate, and

© Copyright Soyinfo Center 2013

several others. The 5'-nucleotides are synergistic with salt, and especially with MSG; they can have something like a multiplier effect in increasing the effectiveness of salt or MSG.

Note: Soy does not appear in the index of this book. Nor can we find it mentioned in Chapter 12. Yet there are scattered mentions throughout the book: Soy protein concentrate (p. 5). Soy sauce, tamari sauce, and miso–made for centuries in the Orient using fungal protease (p. 59). Studies on breads supplemented with soy, nonfat dry milk, and lysine (p. 114).

Experimental use of esters of *p*-hydrobenzoic acid in soy sauce and other foods (p. 128). Gas sterilants: Ethylene and propylene oxides. The ethylene oxide process was used during World War II to reduce the bacterial counts in soy flour and cereal products used in processed meat products for the Armed Forces (p. 156). An excellent acidulant for hams and soy bean curds [tofu] has been obtained by coating citric acid with suitable animal or plant oils (p. 242-43).

"Synthetic aroma for soy sauce," by K. Ebihara. 1954 Japanese patent No. 5250'54 (p. 258). Soy flour as a widely used binder for processed meat (p. 425). Soy flakes (31.5% parts by weight) and soy hulls (3.0%) as ingredients in "Soft moist pet food" (p. 445).

Cake doughnut mixes sometimes contain soy flour (p. 656). Completely synthetic coffee whiteners usually contain a combination of vegetable fats, sodium caseinate or soy protein, gums as viscosity stabilizers, phosphate or citrate salts as stabilizers for the proteins and as buffering agents, corn syrup solids or sugar as sweeteners and bodying agents, liquid-type emulsifiers, and colors to duplicate the color of cream (p. 671-72). Whipped toppings are used to replace high-fat cream products just as coffee whiteners are used to replace low-fat cream products. Both use protein, which may be soy protein (p. 672).

Imitation sour cream, sour cream dressings, and chip dips. Replacements for fermented cream products represent a growing market These non-dairy products contain vegetable oil / fat, protein (either soy protein or sodium caseinate [derived from milk], gum stabilizers, etc., p. 673). When partially hydrolyzed soy protein and sodium hexametaphosphate (SHMP) are added to dried egg white, an angel food cake mix can be prepared in which all of the ingredients can be included in a single mixing stage (p. 679). Gelsoy, a patented soy protein made from specially processed, defatted and dehulled soybean flakes, is reported to have improved water- and fat-binding capabilities when treated with SHMP (p. 746, 778).

Improving protein whipping properties: Sevall and Schaeffer prepared protein whipping compositions from soy protein by combining the protein with SHMP etc. (p. 747). Gunther made an entirely new whipping protein composition by combining an enzyme-modified soy protein similar to Gelsoy, with gelatin and a polyphosphate (p. 747). A long table on the regulatory status of direct food additives mentions "Isolated soy protein" (p. 874-75); its use as a binder is regulated by the Meat Inspection Division (MID) of the USDA.

The word "soybean" is mentioned on 22 pages; all of these concern soybean oil except when noted (p. 65 {soybean protein}, 67 {soybean meal, soybean flour / flours}, 99, 114 {soybean products}, 192, 193, 197, 198, 207, 221, 222, 263, 264, 280, 289, 290, 319 {the soybean plant resembles the guar plant}, 350 {soybean protein, soybean methylcellulose}, 424, 746 {soybean flakes}, 747 {soybean protein}, 749 {soybean milk}). Address: Technical Development Manager, Industrial Chemicals Div., Geigy Chemical Corp., Ardsley, New York; President, Intechmark Corp., Palo Alto, California.

2963. Goldsmith, Maureen. 1972. The organic yenta. New York, NY: Antheneum. xii + 179 p. 23 cm.
• ***Summary:*** Note: *Webster's Dictionary* defines yenta (derived from the Yiddish *yente* = vulgar woman, probably from the name *Yente,* and first used in 1939) as "one that meddles; also a blabbermouth or gossip." The author describes a yenta as "a woman who likes to stick her nose into everybody's business."

Being a single, 25-year-old hippie-type young woman of Jewish ancestry "whose zest for eating good food is surpassed only by her zest for serving good food," she formed the Organic Yenta Eating Club, which allowed her to cook for 20-30 friends at her house. Initially her meals were meat-based continental favorites. Eventually she started to cook natural food, vegetarian recipes to please a man she was dating. He favorite foods (shrimp, lobster, and crab meat) were considered traif (not to be eaten) by Jews. Then she recalled the important distinction in Jewish cookery between meat meals (fleischig) and nonmeat meals (milchig)–a distinction that many non-Jews (goyim) are not aware of. So she developed many Jewish vegetarian recipes.

Soy-related recipes include: Soy sprouts (p. 19-20). Almond fried rice (with fried tofu and soy sauce, p. 48-49). Lentils and nuts (with fried tofu, p. 57). Tofu (homemade from soy flour, p. 58). Organic yenta's "meat loaf" (with cooked soybeans, p. 58-59). Roasted soybeans (p. 60). Soy-cabbage salad (with cooked soybeans, p. 117-18). Address: San Francisco, California.

2964. Harris, Thelma Bruner. 1972. Good foods for good health: A cookbook featuring menu tips and easy-to-prepare recipes calling for the use of vegetables, fruits, grain foods, nuts, and dairy products. Nashville, Tennessee: Southern Publishing Assoc. 223 p. Illust. Index. 22 cm.
• ***Summary:*** A Seventh-day Adventist vegetarian cookbook. Soy-related recipes include: Soy-wheat bread (with soy flour, p. 27). Tofu patties (p. 75). Soybeans–Boston style (if possible use "the immature or quick-cooking variety,"

© Copyright Soyinfo Center 2013

p. 84). Soybean croquettes (with cooked soybeans, p. 84). Green soybean succotash (with green soybeans [not clear whether fresh or dry], p. 84-85). Soybean loaf no. 1 and 2 (with pureed soybeans, p. 85). Prosage croquettes (with Prosage sausage-like food made by Worthington Foods, p. 112; other entree recipes on pages 112-20 used brand-name soy and/or gluten products made by Seventh-day Adventist food companies, such as Veelets, Yum, Proteena, Soyameat frozen White Meat, Choplets, Soyameat Fried Chicken Style, Vegeburger, Wham, and Vegelona). Soy sugar cookies (with soy flour, p. 171).

2965. Hewitt, Jean. 1972. The New York Times natural foods cookbook. New York, NY: Avon. 434 p. Index. 18 cm. [147* ref]

• ***Summary:*** Contains a surprisingly large collection of soy-related recipes, and several innovative uses for tofu, considering this relatively early date. The following recipes list soy in the title. Note that all use whole dry soybeans (WDS) as the main soy ingredient unless otherwise stated in the title or in parentheses: Soy cheese appetizer (with tofu, p. 7). Soybean dip (p. 14). Vegetable-soy soup (p. 46). Soy chili (p. 73). Soy meat loaf (p. 80). Vegetarian sausages (p. 111). Soybean soufflé (p. 111). Soybean and nut loaf (p. 112). Soybean and vegetable casserole (p. 112). Pressure cooked soybeans (p. 113). Baked soybeans I and II (p. 113-14). Soy burgers (p. 115). Soy-rice burgers (p. 115). Soybean patties (p. 116). Broiled soy cakes (p. 116). Curried soybeans (p. 155). Soybean pistou (p. 156). Soybeans with tomato sauce (p. 156). Cooking dried soybeans (p. 157-58). Soybean cheese or curd (p. 158; how to make tofu at home using 1½ cups dried yellow soybeans and 1/3 cup lemon juice; this recipe will not work since the soybeans are never ground!). Marinated soybean salad (p. 181). Avocado-tofu dressing (p. 187). Basic tofu dressing (p. 190). Corn meal mush and soy grits (p. 211). Soya-carob bread (with soy flour, p. 257). Soy butterscotch pudding (with soy milk, p. 322). Soy nut coffeecake (with soy flour, full fat or low fat, p. 353). Soya cookies (with soy grits, p. 376). Soy mayonnaise (with soy flour, p. 394). Soybean spread (with WDS or soy flour, p. 394).

Although this book is not wholly vegetarian, it does contain a large selection of vegetarian entrees.

Note: This is the English-language document seen (Jan. 2007) that contains the term “Soy burger” (or “soy burger”).

2966. Hewitt, Jean. 1972. The New York Times heritage cook book. New York, NY: Putnam. xviii + 804 p. Illust. (full page color photos; line drawings by Ray Skibinski). Index. 25 cm.

• ***Summary:*** This monumental American cookbook contains more than 2,100 recipes organized by region, from the Northeast to the Northwest.

Soy related recipes: Teriyaki appetizer–Hawaii (with “½ cup soy sauce” and “2 pounds round steak, cut into strips,...” marinated and skewered, p. 660).

Tempura, with soy mustard sauce–Hawaii (with “1/3 cup soy sauce, preferably imported,” p. 663).

Miso-shiru (Bean paste soup)–Northern California (with “2½ tablespoons miso paste {fermented bean curd paste [sic]},” and “1 fresh tofu {fresh bean curd}, cubed,” p. 667).

Ruby’s teriyaki–Northern California (with the sauce composed of “2 cups imported soy sauce,” mirin, 1 cup sugar, grated fresh gingerroot, catchup, monosodium glutamate and crushed garlic, p. 695). Note: The sauce can be used with beef (“4 pounds boneless top sirloin”) or chicken (2½-3 lb).

Ruby’s sukiyaki–Northern California (with “2 cakes fresh tofu {fresh bean curd, see note”} and “½ cup imported soy sauce,” p. 696-97). “Note: Tofu is available in oriental food stores.”

Fried chicken in teriyaki sauce (with “2 cup imported soy sauce” and 1 cup sugar, p. 702-03).

A brief biography and portrait photo of Jean Hewitt appear on the inside rear dust jacket.

Note: Many recipes call for optional monosodium glutamate. Address: Food reporter and home economist, The New York Times.

2967. Horton, Lucy. 1972. Country commune cooking. New York, NY: Coward, McCann & Geoghegan. 232 + [8] p. Illust. by Judith St. Soleil. Index. 24 cm.

• ***Summary:*** A nostalgic memoir (for those who came of age at this time) of the world of young Americans in communes in the early 1970s, with many fine illustrations (see p. 27). The author, raised in New York City and educated at Bryn Mawr (Pennsylvania, with a major in classical archaeology), earned her traveling money by working as a live-in maid and cook for a rich “Park Avenue Lady” before embarking on the project that became this book. She hitchhiked to San Francisco, arriving in June 1971, then spent most of the next year visiting 43 communes in 12 states and Canada, and collecting recipes from each. There she found “a New Age of Food Consciousness.” The main topic of conversation and common interest at these intentional communities was not God or sex, but food. This book, with her 150+ favorite recipes, features natural and organic foods (with lapses). Most of the recipes from California and the West Coast are vegetarian, but in New Mexico and eastward (especially New England) she was “surprised to find that vegetarianism was more the exception than the rule” (p. 81). Thus, Chapter 3 is titled “Meat (and one fish).” There are recipes for chicken, fish, deer, goat, beef, etc.

The Introduction notes (p. 15): “The *sine qua non* of commune cooking is tamari soy sauce, an unspeakably delicious fermented Japanese product available in natural foods stores which bears no resemblance to commercial soy sauce” * (Footnote: *”Kikkoman soy sauce, available in

© Copyright Soyinfo Center 2013

supermarkets, tastes like tamari but contains a preservative").

"1. Soups: The commune soups I sampled were typically of mixed vegetables with a tomato or miso (p. 159) base" (p. 27).

Tamari chickbits (p. 94, with chicken). Note about soy grits (p. 114). Sprouts (p. 135-36, many kinds including alfalfa, mung beans, soybeans, from Terra Firma, Oregon). Miso Almond Sauce (p. 158-59). Tamari gravy (p. 159). Soy-related recipes include: From Chapter 2, "Vegetarian main dishes"–Donna's soyburgers (p. 60-61, with whole soybeans, from California). Soy cheeseburgers (p. 61-62, with whole soybeans, from Moon Garden, Oregon). Suzy's soybean casserole (p. 63-64, from Breadloaf, New Mexico). Baked soybeans (p. 64-65, from Woolman Hill School, Massachusetts). Larry's tofu (soy cheese) (p. 65-68, homemade tofu from whole soybeans, from Om Shanti, Mendocino County, California). Breakfast cereal with roasted, salted soybeans (p. 163). Soy spread (p. 227, with soy flour, from The Motherlode, Oregon). Soy nuts (p. 229-30, baked, soaked soybeans with oil and salt). A photo on the rear cover shows the author, age 27, with long blonde hair, granny glasses, and blue denim overalls. Says Raymond A. Sokolov: "Lucy Horton has done more than collect exotic recipes... she has assembled the crucial artifacts of a movement within The Movement."

Also discusses (see index): Adelle Davis, gluten (wheat), granola, ground nuts, macrobiotic diet, peanuts. Address: Derby, Vermont.

2968. Hosking, Richard. 1972. A dictionary of Japanese food: Ingredients & culture. Boston: Tuttle Publishing. 239 p. Illust. by Richard C. Parker. Index. 19 cm. *
• ***Summary:*** An excellent, accurate book. The basic entry for each word is given under its Japanese name (thus *daizu* rather than soybeans). Each entry includes the Japanese term in kana (usually hiragana) and (usually) kanji (Chinese characters). One hundred small illustrations are very helpful. Address: Prof. of Sociology and English, Hiroshima Shudo Univ., Japan.

2969. Japanese National Tofu Assoc. 1972. Tôfu shûsetsu [Tofu: Collected theories. (Tools and techniques for making tofu in the traditional way)]. Tokyo. 40 p. [Jap]

2971. Liener, I.E. 1972. Nutritional value of food protein products. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 203-77. Chap. 7. [417 ref]
• ***Summary:*** Contents: 1. Introduction. 2. Protein and amino acid requirements of man: Protein requirements, amino acid requirements. 3. Evaluation of protein quality: Amino acid composition, biological techniques involving animals, protein efficiency ratio (PER), N-balance studies, plasma amino acids, experiments with human subjects, amino acid availability, in vitro techniques (physical tests, available lysine, tests for biologically active components [urease, trypsin inhibitor], enzymatic and microbiological techniques). 4. Nutritional significance of other soybean constituents: Available energy, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other minerals), unknown growth factor(s).

5. Factors affecting the nutritive properties of soybean protein: heat treatment, supplementation with amino acids, storage, germination, effect of antibiotics, dietary source of carbohydrate. 6. Soybean products used for human consumption: Soybeans as a vegetable, soybean flour (incl. Multi-Purpose Food (MPF), "toasted full-fat soy flour" {referred to in Japan as "kinako"}, soybean milk, soybean curd, other fractions, protein concentrates, protein isolates (use in infant foods, use in textured foods), fermented products (tempeh, natto, miso).

Note. This is the earliest English-language document seen (Nov. 2012) that uses the term "toasted full-fat soy flour" to refer to kinako.

7. Use of soybean products as protein supplement: As supplement to wheat protein (bread, other baked goods), as supplement to corn, as supplement to rice, use in vegetable protein mixtures, peanut and other oilseed proteins, blends containing corn, other cereals and legumes. Address: Univ. of Minnesota.

2973. Nakao, Sasuke. 1972. Ryôri no kigen [The origin of foods]. Tokyo: Nihon Hoso Shuppan Kyokai (Japan Broadcast Publishing Association). 225 p. Illust. (some color). Maps. Index. 22 cm. Series: NHK Books No. 173. [Jap]
• ***Summary:*** The important chapter titled "The big natto triangle and miso," by Sasuke Nakao (p. 118-27) discusses natto, its relatives and ancestors in East Asia, and the "natto triangle" theory (with a map). Nakao hypothesized that natto (*itohiki natto*, made with one or more strains of bacteria) originated in the monsoon area of Southeast Asia, where there are East Asian evergreen forests. He considered Yunnan province in China to be the hypothetical center of natto's origin.

© Copyright Soyinfo Center 2013

He states: We don't know much about natto in Japan. Konnyaku was clearly mentioned in the literature of the Heian period [794-1185]. But natto was first mentioned later, during the Muromachi period [1336-1573], therefore I guess it came from Java [sic] at about that time. Many new things from Europe (such as guns) also entered Japan during the Muromachi period.

What I call the "Miso Group" is salted mold-fermented soyfoods–such as miso, shoyu, tamari, and fermented black soybeans (*douchi*)–that originated in northern China outside the Big Natto Triangle, then spread to central China and to other countries such as Japan and Korea. I have shown the Miso Group on the map in an oval to the upper right. So the triangle and the oval shows the locations of these two groups of processed, fermented soyfoods.

In the Big Natto Triangle we find a number of foods that originated in northern China, including konnyaku and sushi. Sake is also fermented with a mold–the koji mold. Bean sprouts (a great Chinese invention, using beans that are hard to cook) also exist in the Miso Oval, but they spread into many areas within the Big Natto Triangle including Burma and Java.

Nyufu [dairy cheese or yogurt; literally "decayed / spoiled milk"] and tofu: Tofu was also a great invention of northern China–an easy way to eat soybeans. Seen from this point of view, European ways of cooking beans are very primitive.

Note: Traditional European beans generally contain too little protein and too much carbohydrates (especially starch) to enable them to be made into tofu.

Mr. Shinoda Osamu has developed the theory that tofu was invented in China but not in ancient times; probably in the middle of the Tang dynasty [618-906], and it became popular in the middle Song dynasty [960-1279], at which time it became an alternative to *nyufu* made from dairy milk. What I call *nyufu* here is different from *funyu* (fermented tofu), which is made by fermenting tofu, appeared after the invention of tofu, and is found today throughout East Asia. It is difficult to know exactly what *nyufu* was; in my opinion it was probably like *dahi* from India. In any case, it is certain that there was a product in called *nyufu* shortly before the Tang dynasty and during the early Tang.

During most of Chinese history, except when the nomadic milk-consuming Mongols ruled China during the Yuan dynasty (1279-1368), animal milks were not part of traditional Chinese culture.

Tofu was in Japan by 1183 AD (see *Diary of Hiroshige NAKAOMI*, entry for 1183). Maybe tofu was brought in by Buddhist monks and consumed in and around Nara. By the end of the Muromachi period [1336-1573] the center of tofu making and use had moved to Kyoto.

Another interesting thing is that in southern China and in Sichuan province, there is a tofu named *reiki* [*li qi*, pronounced "lichi;" "morning prayer]." The name originally referred to *nyufu* but later it came to refer to tofu. The origin of the word *reiki* was considered to be Sanskrit or some European language. It may have been connected with *nyufu* and/or dahi or India. Also, if we consider *reiki* to be the original name of tofu, then *nyufu* and tofu may have originated in Sichuan or southern China and migrated up to Northern China.

In summary: Nakano's theory is based on the observation that there are many varieties of non-salted fermented soyfoods and soy condiments inside the "natto triangle." Yunnan province in southwest China, Thailand, Myanmar (Burma), Bhutan, Nepal, Indonesia, and Japan all fall within this triangle.

Note 1. This is the earliest English-language document seen (Jan. 2012) that contains the term "natto triangle." Yet this term can be misleading, especially for non-Japanese. Natto is the only non-salted fermented soyfood or soy condiment indigenous to Japan. Natto is made by fermenting whole, cooked soybeans with bacteria (*Bacillus natto*, or *Bacillus subtilis*) in a warm place (ideally 104ºF or 40ºC) for about 24 hours. According to various Japanese legends, natto originated almost 1,000 years ago in northeast Japan when cooked soybeans were placed in a rice-straw sack strapped over the back of a horse. The natto bacteria are found abundantly on rice straw, and the warmth of the horse's body aided the fermentation. Under these conditions, the fermentation would take place naturally, without intentional inoculation.

The "natto triangle" refers to the geographical area within a large triangle in East-, South-, and Southeast Asia–the only place in the world where non-salted fermented soyfoods and soy condiments are indigenous. A number of these–such as tempeh in Indonesia and unsalted fermented black soybeans in China–are fermented primarily with molds (e.g., *Rhizopus, Aspergillus*) rather than bacteria. The triangle has its three corners in northeastern Japan (on the northeast, for natto), northeastern India and Nepal (on the west, for kinema), and in Java (Indonesia, on the south, for tempeh). It is incorrect to think of tempeh as a type of natto–by any definition! Applying this correction to the "natto triangle" causes it to fall apart! Extensive research after 1972 on the early history of tempeh and natto gave no support to the conjecture that natto came from Java.

However the incorrect theory actually turned out to have powerful predictive value, especially as close relatives of natto were discovered in northeast India by Tamang and co-workers starting in 1988, more than 15 years after the "natto triangle" hypothesis was proposed.

Sasake Nakao was born in 1916. The chapter titled *Mame no ryôri* [Bean cookery] is on pages 115-26.

• ***Summary:*** Contents: Brief history. Budget and personnel. Organization. General survey of the Institute. Major research area. Facilities and pilot plants. Reports and patents. Publications. Scholarship. Location.

In 1934, the Rice Utilization Research Laboratory was established by the national government. The first building of about 330 square meters was completed in 1935 at the present site. In 1944 the title of the Laboratory was changed to the Research Institute of the Bureau of Staple Food Administration, and investigations were directed toward the processing and utilization of unconventional food resources.

"Owing to the change in the food situation in Japan during World War II, the Institute carried out extensive research on the most efficient utilization of the nutrients in various foodstuffs, and on finding new food sources among various agricultural products, so as to meet the serious food shortage. This trend continued through the post-war period as the nation struggled with an even more acute food shortage problem. Fats and oils, fruits and vegetables, and fermented soybean products miso and soybean sauce were added as subjects of research.

"The Institute again changed its name to the Food Research Institute in 1947, and official analysis and standardization of food commodities were included in its activities... The Institute came to belong to the Food Agency in 1949 and later, in 1961, as a result of the reform in agricultural research administration, it was brought under the administration of the Agriculture, Forestry, and Fisheries Research Council together with other agricultural research establishments." The name was changed for a third time to the National Food Research Institute in 1970.

T. Watanabe is the Director of the organization. The fermentation research division is headed by H. Ebine, and consists of the following laboratories: Fermentation microbiology (M. Matsuno), fermentation chemistry (T. Ohta), industrial fermentation (H. Ito), mycotoxin (H. Ebine), resources utilization (N. Tsumura). The nutrition research division is headed by S. Kimura.

Note: This institute moved from Tokyo to Tsukuba in Feb. 1979. Address: Shokuhin Sogo Kenkyujo, Tokyo, Japan.

2975. Sankosha Kateibu. comp. 1972. Maruhi tôfu ryôri hyaku-sen [One hundred top secret tofu recipes]. Tokyo: K.K. Sankosha. 165 p. Illust. No index. 18 cm. [Jap]

2976. Smith, A.K.; Circle, S.J. 1972. Protein products as food ingredients. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 339-88. Chap. 10. [180 ref]
• ***Summary:*** Contents: 1. Flavor: Taste panel results, flavor components, plastein formation and flavor, plastein formation and nutrition, some food uses tolerant of soy flavor. 2. Bread and pastries: Soy flour history, effect of soy flour on baking characteristics, soy protein isolate in bread, soy flour and flavor, enzyme active soy flour, soy flour in Britain, detecting of soy flour in wheat flour. 3. Other baked goods: General, doughnuts, snack products. 4. Breakfast cereals. 5. Macaroni products. 6. Dairy-type products: Imitation milk, soy milk, filled milk, soybean cheese, imitation cream cheese, coffee whiteners, whip toppings, and frozen desserts, yogurt type products. 7. Comminuted meat products and meat analogs: Comminuted meat products, meat analogs, spun fiber type meat analog, extrusion-cooked type meat analog, heat-gelled type meat analog, meat fibers in heat-gelled protein matrix, assay of soy protein products in meat-type foods. 8. Gelling and aerating agents: Gelsoy as gelling agent, soy protein isolate as gelling agent, soy protein isolate as aerating agent, soy whey protein as aerating agent, enzyme modified isolates as aerating agent, foam-mat drying adjunct, foaming agent for soda water. 9. Miscellaneous food applications: Brew flakes, soups, gravies and sauces, confections, imitation nut meats, and [soy] nut butters, spray drying adjunct. 10. Nonfermented Oriental soybean foods: Introduction, Chinese soy milk, dried soybean whole and defatted milks, tofu (fresh tofu, bagged tofu, dried tofu, fried tofu), yuba, kinako ("The Japanese have a product which is similar to full-fat soy flour except that it is made from whole roasted soybean and this contains the seed coat"), soybean sprouts (compositional changes).

Concerning Brew Flakes (p. 373): "Soy flakes, grits, and peptones have been used since about 1937 or earlier (Burnett 1951) as adjuncts in brewing beer. Grits and ground meal from screw press processing were the first products used in brewing but later they were replaced by solvent-extracted flakes. The best results are obtained with flakes or flour having a high NSI (nitrogen solubility index) with a minimum of heat treatment in processing. Up to 0.75 lb. of flakes per barrel of beer has been recommended by Hayward

© Copyright Soyinfo Center 2013

(1941).

"The flakes may be used in the normal mashing operation to provide amino acids, peptides, minerals, and vitamins as nutrients for the yeast. It was reported by Wahl (1944) and Wahl and Wahl (1937) that addition of hydrolyzed soybean protein directly to the beer improves foam stability, flavor, and body of the beer." Address: NRRL, Peoria, Illinois.

• ***Summary:*** Contents: 1. Introduction. 2. U.S. history: Introduction of soybeans, processing for oil, soybean oil. 3. Soybean meal and protein: Animal feed industry, poultry industry, industrial uses. 4. Soybean production. 5. Oriental history: Ancient history, Oriental fermented foods (shoyu, miso, tempeh, ontjom, natto, hamanatto, tao tjo [Indonesian-style miso], kochu chang, ketjap), Oriental nonfermented foods (soybean milk, tofu), wedge press. 6. Soybeans and world food problems: Green Revolution, protein supplements (high protein food formulations, AID funded), amino acids, CSM, cottage industries (tofu, kinako).

Concerning industrial uses (p. 8-9): Soybeans rose in popularity as an agricultural crop in the USA at a time when other crops such as corn, wheat, cotton, and tobacco were being produced in surplus quantities. Soybeans took over much of the acreage vacated by these crops. "At that early period it was the hope of many leaders of agriculture, government, and industry that much of the oil and protein of the soybean could be diverted from the food and feed industries into industrial products such as paints, varnishes, soap stock, plastics, adhesives, plywood glue, paper coating and lamination, paper sizing, textile fibers, and other uses... In 1936 the US organized the Regional Soybean Industrial Products Laboratory for this purpose. These new industrial uses were expected to help relieve the problem of farm surpluses... In 1935 the Glidden Company built the first plant for the isolation of industrial grade soybean protein (transferred to Central Soya in 1958). The largest use of industrial grade protein is in the paper-making industry, for coating and sizing of paper board.

"After World War I, soybean meal, because of its low cost, replaced casein as an adhesive for Douglas fir plywood glue, where it still retains a substantial part of the market for the interior grade product."

"While soybean proteins have several important industrial applications, especially in the paper industry for coating and sizing paper, which are expected to continue for years to come, the original dream of an ever-expanding industrial market [for soy proteins] has faded. In the polymer market it appears that for most applications the proteins cannot be made competitive with the increasing number of low cost, high quality synthetic resins... It is generally recognized that the increasing demand for proteins for feed and food will greatly surpass the anticipated industrial uses."

• ***Summary:*** Written by the head cooks at four of Japan's best known Buddhist monasteries. A second edition was published in 1976.

On pages 78-79 is a description of Daitokuji-natto, a unique type of fermented black soybeans. They have what has been called "the flavor of tea." They are a type of "miso natto" made from soybeans, barley (*omugi*) and salt. The method of production, originally transmitted from China, was inherited from the famous Zen master Ikkyu [Ikkyû Sôjun, lived 1394-1481], who became head priest of Daitokuji temple in Kyoto in 1474. Future generations of monks and craftspeople at his personal sub-temple, Ikkyu, inherited the method from him and have passed it down to the present as a secret transmission.

At first the flavor of these savory chunks seems quite salty and a little sharp, but as you enjoy the flavor a little longer, overtones of subtle sweetness, tartness and spiciness emerge, creating a mysterious harmony.

Daitokuji fermented black soybeans are served in Japan in any of four ways: (1) Since long ago, tea masters and epicures have prized them for use in place of tea cakes (*chauke*) with thin whisked green tea or bancha tea. (2) In Ochazuke, they are sprinkled over hot rice in a small bowl, then doused with hot green tea. (3) Nowadays they are used as an hors d'oeuvre with sake or beer. (4) Occasionally they are pureed with dashi soup stock and used as an ingredient in refreshing summertime miso soups or simmered vegetable preparations (*nimono*).

The Ikkyu subtemple within Daitokuji is Japan's most traditional maker. The entire year's supply is made only during July and early August, in the heat of summer, when exposure to sunlight enables proper drying. After the earlier steps in the preparation, the beans are mashed, reshaped into small balls 3/4 inch in diameter, arranged in wooden trays each about 12 by 24 by 2 inches deep, and sun-dried. A photo shows the mashed, reshaped soybeans in wooden trays at Daitokuji, a major Rinzai temple in Kyoto, Japan. Address: 1. Ikkyu, Daitokuji; 2. Head priest, Tanzenji, Kamakura (Rinzai sect); 3. Eiheiji (Soto sect, Asst. head cook); 4. Sojiji (Asst. head cook).

2984. *Soybean Digest.* 1973. Zentoren [Japan Tofu Assoc.] opens new six-story center. Jan. p. 29.
• ***Summary:*** The Japan Tofu Association (*Zentoren*) "celebrated the opening of its new six- story center in Tokyo last Oct. 27. In attendance were Ministry of Agriculture and Forestry officials, staff of the agricultural attache's office, and industry leaders. Scott Sawyers, the American Soybean Assn.'s Far East director, represented ASA and presented the Tofu Assn. with a large wreath. The building had been in the planning stages since 1969 and the old building was torn down a year ago. Tofu is in wide use as a protein food in the Orient."

Photos show: (1) The six-story as seen from street level, outside. (2) A Japanese-style wreath (outside, at street level) presented by the ASA. Next to it is the wreath presented by Kakuei Tanaka, Prime Minister of Japan.

2985. *Mainichi Shinbun.* 1973. Zen no kokoro = ôtôfu [The heart of Zen = Tofu]. Feb. 20. [Jap]
• ***Summary:*** A large black-and-white photo shows William Shurtleff making tofu burgers at the tofu shop of Toshio Arai near Tokyo Japan. A processing / utilization chart drawn by Shurtleff shows how soybeans are transformed into thick soymilk (which is made into kinugoshi-dofu, or yuba), or thin soymilk (which is made into any of 7 types of tofu: oboro-dofu, aburage, o-tofu [*momengoshi*], atsuage, ganmodoki, yaki-dofu, or koya-dofu). Bill Shurtleff, age 31, comes from America, the world's main soybean producing country. He is living with the Aoyagi family at 278-28 Higashi Oizumi, Nerima-ku, Tokyo. His Book of Tofu is scheduled for publication in Sept. 1973. The article describes his appearance, then notes that he is a vegetarian doing Zen practice in Japan, which he feels is a very materialistic society. He is writing a book on tofu in large part to try to do something about the world food crisis. He is studying tofu at Sangen-ya under Mr. Toshio Arai. Mr. Arai notes that he has not yet finished his internship since he cannot yet make aburage by himself, but he should be "done" in about 3 months. Bill does translation work for his father's company and earns 30,500 yen/month which he lives off of. Akiko is his language teacher, so his Japanese has a feminine touch. There follows a brief description of Bill's favorite recipes: Ganmo burgers, Kori-dofu cutlets, Onion soup with tofu, and strawberry tofu whip.

Note: This is the earliest document seen (July 2012) concerning the work of William Shurtleff and Akiko Aoyagi with soyfoods, in Japan. Address: Tokyo, Japan.

• ***Summary:*** During the Vietnam war, POWs would re-tell movies to try to kill time. The food, which featured cabbage soup from Christmas on, is described. "Other side dishes might be [mung] bean sprouts or soy bean cake [tofu]."

© Copyright Soyinfo Center 2013

The latter wasn't bad, recalled Capt. John H. Nasmyth Jr., especially in the later years when "they started putting a sauce on it and it was pretty tasty." Note: This sauce was probably fish sauce (nuoc-mam), but it might have been soy sauce.

2990. Weaver, Peter. 1973. An overdose of vitamins? *Washington Post, Times Herald.* March 11. p. H4.
• ***Summary:*** This article consists of many questions and short answers–many unrelated to the title. "Q–I buy Tofu (soybean curd) at a health food store. The label states 'no preservatives,' but lists magnesium chloride [as an ingredient]. What's this?–M.K., Los Angeles, California."

"A–Magnesium chloride is not a preservative... theoretically its being used in your health food as a mineral additive. It doesn't have much nutritional value but its harmless."

This same question and answer also appeared in the *Los Angeles Times* on March 22, p. G15.

Note 1. Mr. Weaver apparently does not realize that magnesium chloride's main use is as a coagulant, to transform hot soymilk into curds and whey.

Note 2. Tofu is now being sold at health food stores in Los Angeles.

2992. Oberdorfer, Don. 1973. Meat prices–Japanese pay more, eat less. *Washington Post, Times Herald.* April 7. p. A1, A13.
• ***Summary:*** Tokyo, April 6–The price of meat has been rising in both Japan and the United States. After several hours of research in Tokyo butcher shops, the writer's wife, Laura, found a bargain, frozen sliced beef for only $1.60/lb. "She used almost two-thirds of a pound, combined with tofu (soybean curd), Chinese cabbage, spring onions [negi] and mushrooms in seasoned broth, to feed our family of four a Japanese dish known as *shabu-shabu."* A bowl of rice–the staff of life in Japan–rounded out the dinner.

• ***Summary:*** Mrs. K.P. requests a recipe for sukiyaki, which is given. It calls for "1 cape [sic, cake] tofu (soy bean curd)" and ½ cup soy sauce.

2994. Takai Seisakusho. 1973. Sarani susumu tôfu puranto no gôrika [Further progress in the efficiency of the tofu factory]. Aichi prefecture, Japan. 4 p. April 21. 30 cm. [Jap] Address: Aichi prefecture.

2995. Chow, Kin-wan. 1973. Dining out tricky in Hong Kong: Menu pitfalls. *Christian Science Monitor.* March 22. p. C7, 20.
• ***Summary:*** "I'd like to advise Americans to use soy sauce sparingly, if at all, when eating in a Chinese restaurant. Many seem to pour soy sauce on their dishes as if it were salt, which would really upset the chef if he saw it."

"For four people, you might like... bean curd with almond cream and mixed fruit." Or try "diced chicken with soya bean sauce."

2996. Brooks, Charles. 1973. Bay Area cooks use tofu as a substitute for meat. *Christian Science Monitor.* April 26. p. 12.
• ***Summary:*** San Francisco–One way consumers here are trying to beat rising meat prices is by using tofu (pronounced toe-foo), or Chinese soybean cake, which is now sold in many Bay Area supermarkets. Also called "bean curd" and "meat without bone," tofu originated some 2,200 years ago in northern China. It has long been a key protein source for Buddhist monks and other vegetarians. Now a new generation of young, hip-looking customers are discovering tofu, which retails for about 55 cents a pound in neighborhood supermarkets, and about 45 cents a pound in Chinatown. Since it has no fat and no bones, its the best buy around.

Many people are looking for tofu recipes. Some good ones can be found in *An Encyclopedia of Chinese Food and Cooking,* by W.W. and I.B. Chang, H.W. and A.H. Kutscher (Crown Publishers, New York). There are three basic types of tofu. A Chinese recipe for "Bean curd with tomato (*Dow fu fan keh*)*"* is given. It calls for "6 cakes bean curd, cubed."

2997. Ready, Anne. 1973. Visitor echoes price complaints: High cost of sukiyaki. *Los Angeles Times.* April 26. p. J2.
• ***Summary:*** Sashi Kukichi, an ice skating champion, is preparing an authentic sukiyaki for his fiancee. "Another ingredient, tofu, is a soy bean cake that, when cooked, resembles a firm egg custard." The recipe calls for "1 8-oz. cake tofu, cut in 1-inch cubes, optional."

The recipe for *Tentsuyu* sauce with tempura calls for "1/3 cup soy sauce" and a dash of MSG.

2998. Rice, William. 1973. The fair-skinned soybean. *Washington Post.* May 10. p. E1, E16.

© Copyright Soyinfo Center 2013

• ***Summary:*** The title of the continuation of the article on p. E16 is "The treasures beneath the surface of the fair skinned soybean." Mirror, mirror on the wall... The soybean is the fairest vegetable of all, for its dull yellow surface covers a treasure of protein and other nutrients. It is presented in many guises: "tofu (used in Oriental cooking as bean curd), green (fresh) soybeans (prepared as fresh limas, or eaten blanched or raw when very young), dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes), soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes), soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many Americans 'eating Chinese'), tamari (pure soy–preferred by vegetarians), miso (fermented soybean paste), soybean milk (liquid or powdered), soybean grits and flakes, lecithin (supplement to control cholesterol build-up) and some others. Soybeans have long been available in health food stores."

Rising beef costs have led to the use of "textured vegetable protein" as an "extender" in ground beef products. Contains 4 recipes using whole dry soybeans or soy flour.

2999. Dosti, Rose. 1973. USC students boast surplus: Cooperative beats the price squeeze. *Los Angeles Times.* May 17. p. K2.

• ***Summary:*** The women graduate students and undergraduates "who live and cook cooperatively at two Soroptimist residences at USC say they can" eat royally on little money. Each of 20 girls pays $25 a month into a common food fund and volunteers to cook the evening meal for 10 residents once every two weeks.

Their recipe for Sukiyaki includes "1 cake tofu (bean curd), cut into 1-inch cubes" and "1/3 cup soy sauce." A photo shows the girls, standing, gathered around a common dinner table, buffet style at USC, the University of Southern California, in Los Angeles.

Note: Soroptimist ("best for women"), founded in 1921, is an international volunteer organization for business and professional women who work to improve the lives of women and girls, in local communities and throughout the world. The organization seeks equality, peace, international goodwill, and to improve professional skills and to support human rights, specifically women's rights. Its headquarters is in Philadelphia, Pennsylvania. In 2009 it boasted about 95,000 members in more than 120 countries worldwide.

3000. Ewald, Ellen Buchman. 1973. Recipes for a small planet: The art and science of high protein vegetarian cookery. New York, NY: Ballantine Books. xi + 366 p. May. Foreword by Frances Moore Lappé (Hastings-on-Hudson, New York). Illust. by Diane Coleman. 18 cm.

• ***Summary:*** Lacto-ovo-vegetarian recipes based on *Diet for a Small Planet* by Frances Moore Lappe. The protein content is given for each recipe. Also contains information on complementary proteins. The author was born in 1946.

The chapter on protein complementarity discusses combinations of rice, wheat, peanuts or cornmeal with soy (in the form of whole beans, grits, flour, or tofu). A chart on protein / calorie comparisons gives the number of calories per gram of usable protein including the following: Defatted soybean flour 11, soybean sprouts 12, low fat soybean flour 12, tofu 15, full fat soybean flour 18, soybeans 20, gluten flour 23; Note that all these are relatively low in calories per gram of usable protein. By comparison: Hamburger 15, brown rice 69, cornmeal (whole, ground) 80.

Many recipes in this book contain small amounts of soy flour or grits, or soy sauce. Recipes containing significant amounts of soy include: All-protein crunchy granola (with soy grits, p. 48-49). New granola (with soy flour, p. 52-53). Orange pancakes with orange sauce (with soy flour, p. 58-59). Soy-sesame peanut spread (with roasted soy flour, p. 67). Peanut paté (with whole soybean and soy sauce, p. 70-71). Hot and sour soup (with tofu, p. 83-84). Soybean stew (p. 85). Peanut, tofu and sesame soup (p. 86-87). Exotic barley stew (with miso, p. 87-88). Cabbage soup for a meal (with soybeans, p. 91-92). Curried rice salad (with soybeans, p. 98-99). Gado gado (with tofu, p. 102-03). Soy-peanut marinade (p. 106). Dairy rich sauce (with tofu, p. 115). Chiles rellenos en casserole (with soybeans, p. 126-27). Herbed soybean bulgur casserole (p. 128-29). Garbanzo and cheese loaf (with miso, p. 133-34). Fesenjon–spiced ground beans (with soybeans, p. 135-36). Bean stroganov (p. 140-41). Crusted cauliflower (with soy flour, p. 143-44).

Breads and other baked goods (each with soy flour or grits, p. 195-274): Whole wheat soy bread. Wheat grits bread. Triple rich bread. Unusual pickle or olive juice bread. Cornmeal wheat bread. High rising bread. Spicy rye bread. Limpa bread. Oat rye soy bread. Caraway rye bread. Sourdough whole wheat bread. Egg and yogurt bread (SD = sourdough). Sun seedy oatmeal bread (SD). Four grain bread (SD). Nut and seed bread (SD). Mixed grain bread (SD). Crunchy nut muffins. Spiced pear muffins. Basic complementary muffins. Oatmeal muffins. Sour orange muffins. Pancake, waffle, or camping bread mix. Sourdough corn bread. Quick wheat soy bread. Quick molasses bread. Quick coconut bread. Cheese-filled coffee cakes. Walnut-and-raisin filled coffee cake. Orange coffee cake. Chocolate coconut cookies. Pumpkin cookies or bars. Fruit bar crunch. Honey almond bars. Banana spice bars. Gingerbread.

Cooking beans (p. 309-10, including soy and azuki/aduki). Putting more protein in your family's diet (Appendix F, p. 326-31).

Glossary (p. 339-44) discusses miso, soy flour, soy grits, tofu ("Tofu is soybean cheese, also known as bean curd... Some supermarkets carry tofu, and you can also get it in health food stores and oriental groceries and restaurants..."). Address: Berkeley, California.

© Copyright Soyinfo Center 2013

3001. *Toronto Star* (*Ontario, Canada*). 1973. The ugly soybean contains a wealth of protein, vitamins. June 6. p. 77.
• ***Summary:*** The article begins: "Mirror, mirror on the wall, what is the ugliest vegetable of all? The soybean. Some call it 'tasteless.' Others ask 'What do you do with it?' Cost-conscious cooks, nutritionists, and the food industry would be far more understanding."

Under the soybean's dull yellow surface is "a treasure of protein, more than any other vegetable, and substantial amounts of calcium, iron, other minerals and vitamins B and E. Also the soybean has more changes of clothes than any beauty queen." Consider the following guises:

"Eaten like peanuts: Tofu (used in Oriental cooking as bean curd); green (fresh) soybeans (prepared as fresh, or eaten blanched...); dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes); soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes).

"Other aspects of the bean are: Soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many North Americans 'eating Chinese'); Tamari (pure soy–preferred by vegetarians); miso (fermented soybean paste); soybean milk (liquid or powdered); soybean grits and flakes; lecithin (supplement to control cholesterol build-up)..."

"Soybeans have long been available in health food stores, and some of the larger supermarkets now carry them." The best variety for food use is said to be Bansei. Canned soybeans, which take less time to prepare, make a good beef extender.

Gives recipes for: Soybeans and mushrooms (with "2 cups cooked soybeans" and 1 tbsp. tamari or soy sauce). Baked soybeans (with "1 pound yellow soybeans picked over and washed." Let the beans soak in a large freezer container for 5 hours, then place them in the freezer for at least 24 hours to reduce the cooking time required. "Place frozen beans and liquid in a large kettle. Bring to a boil and simmer gently until tender, adding more hot water if necessary. This takes 2½ to 3½ hours"). Soybean-mint salad (with 2 cups cooked soybeans or 1 can {15½ ounces}), drained. Soy mayonnaise (with ½ cup soy flour).

3002. Dosti, Rose. 1973. Climax of a study project: 4th graders go Japanese for a meal. *Los Angeles Times.* June 14. p. K16.
• ***Summary:*** At Third Street School in Los Angeles, the 4th graders are finishing a social studies project on Japan; they are using chopsticks to lunch on a typical, authentic, home-cooked (by their parents) Japanese dinner. There was teriyaki on skewers (seasoned with soy sauce), sukiyaki, tempura, Inari Sushi ("made with aburage, a soybean curd skin, in which seasoned rice is stuffed"), and another kind of sushi made of vinegared rice and codfish wrapped in seaweed (nori). Recipes are given for Teriyaki and Inari Sushi. Two photos show the kids cooking.

3003. Oberdorfer, Don. 1973. Now even the soybean curd seems lost to Japanese. *Washington Post.* June 29. p. D11.
• ***Summary:*** Tokyo–Last night the USA announced an embargo on soybean exports–a big surprise and shock in Japan. Now even tofu, the ubiquitous and much-enjoyed soybean curd, will become more expensive. Soybeans are very important in Japan as a source of both food (beancurd, miso soup, soy sauce, etc.) and feed. 60% of the cooking oil in Japan is soybean oil. The USA supplies more than 90% of Japan's soybeans, and they are a major item of trade.

3004. Pond, Elizabeth. 1973. The day the soybeans stop–Japanese concern. *Christian Science Monitor.* June 29. p. 1-2.
• ***Summary:*** On June 27 the United States government started rationing soybean exports. This has become a new sore-spot in Japan-U.S. relations. On June 28, Japan's Foreign Minister, Masayoshi Ohira, expressed his government's concern to American Ambassador Mr. Robert Ingersoll. Mr. Ingersoll replied with a promise that the U.S. would try to meet Japan's demand for a stable supply of soybeans, cotton seeds, and cotton-seed products. He also mentioned that U.S. Secretary of Agriculture, Earl L. Butz, had stated at a press conference that "he would give special consideration to agricultural exports to Japan."

Japan could be hit hard by a shortage of soybeans. "No Japanese dinner is complete without miso soup (made of soybeans), and 92 percent of Japan's 3-million-ton annual imports of soybeans comes from the United States."

Now the Japanese are anxiously awaiting July 2, when the U.S. will issue its country-by-country export allocations [quotas]. "Japan fears that it might not even be allocated the full amount of soybean exports that have already been contracted." Once the U.S. export allocations are announced, the Japanese are hoping that the soybean export embargo will be lifted within a month–even though it is scheduled to last until the next soybean crop is harvested in September. Nevertheless, dealers will start contracting once the allocations are announced.

Japan is called a "surplus-trade" country by the U.S. meaning that the U.S. buys more from Japan than vice versa. So the U.S. has recently been browbeating Japan to buy more from the United States [conveniently forgetting that Japan has a much smaller population than the U.S.].

Last year Japan bought 3.12 million tons of soybeans worldwide," and it will buy an estimated 3.2 to 3.5 million this year if the supply is available.

"The price of tofu (bean curd) has already been shooting up in this inflationary year. Now Japan's many small and medium-size bean-curd and soy-sauce manufacturers and restaurant owners fear that the price will skyrocket 100

© Copyright Soyinfo Center 2013

percent"–hitting every family budget that includes these daily necessities.

Japan no longer grows many soybeans. Production on the small farms is inefficient, and many Japanese farmers are leaving their farms for the cities. "Even a high price support has failed to halt the decrease in Japanese soybean acreage."

3005. Pond, Elizabeth. 1973. The day the soybeans stop–Japanese concern. *Christian Science Monitor.* June 30. p. 1, 3.
• ***Summary:*** On June 27 the U.S. government began rationing soybean exports–a move that could hit Japan hard. Japan imports 3.12 million tons of soybeans a year and 92% comes from the USA. The Japanese are now anxiously awaiting July 2, when the U.S. will announce country-by-country export allocations. In Japan, the "price of tofu (bean curd) has already been shooting up..." The Japanese are hoping the "soybean-export embargo" will be lifted within a month after the allocations are announced.

What is the need for rationing? Last year America harvested a bumper crop of soybeans, and this years' is expected to be 15-20% larger. So the supply is adequate. The problem is that world demand has suddenly outstripped American supply, in part because of a scarcity of Peruvian anchovies, which are used as feed, and in part because of the rising cost of soybeans as feed to produce meat, poultry, and dairy products within the USA causes domestic inflation. So Americans have decided to fill their own soybean demand before exporting.

In Japan, soybean production is inefficient, and many Japanese farmers are leaving their farms. Even a high Japanese price support program has failed to stop the decrease in Japanese soybean acreage. Address: Staff correspondent, Christian Science Monitor.

3006. Sickler, Roberta. 1973. Ritual of the hearth: A cookbook of 20 menus and 117 unique vegetarian recipes in praise of life. New York, NY: Macmillan Publishing Co. x + 195 p. Illust. by the author. 26 cm.
• ***Summary:*** The recipes are grouped by season. Soy-related recipes include: Snow pea soup (with 3 bean-curd cakes [tofu] (each about 3 inches square by 3/4 inch thick), soy sauce, and hoisin sauce, p. 4). Green broth (with bean cake [tofu], p. 84). Tofu (homemade from soy flour and lemon juice, p. 86-87; "Tofu is a rich, delicate curd from soybean. It is especially good for summer, served cold with raw vegetables, or in hot soups or sauces. Tofu is made fresh daily in many Oriental neighborhoods, and sold in the form of small squares. It can be made at home quite successfully."). Tofu and summer vegetables (with "1 3/4 cups tofu curds, or 3 tofu cakes, cubed," p. 87). Soy bechamel sauce (with soy flour and Tamari soy sauce, p. 130-31; "We use dark Tamari soy sauce because it is aged slowly in wood and has a light, deep flavor."). Soy burgers (with whole soy beans, soy oil, soy sauce, miso paste, and soy flour, p. 183-84).

3007. Goodwin, June. ed. 1973. Inside the news briefly. *Christian Science Monitor.* July 3. p. 6.
• ***Summary:*** An excellent, large photo shows a Japanese woman (holding a young child) standing at the window of a traditional tofu shop while the tofu maker cuts her a cake of tofu from the large block of tofu floating in cold water in a large, rectangular, stainless-steel sink.

The caption reads: "Bean curd to the Japanese is like meat to Americans. To this Japanese mother, a meal just wouldn't be the same without the usual tofu (bean curd made from soybeans) which she is buying in a Tokyo shop. The latest U.S. ban on soybeans adds to her current woes of high food prices... Some Westerners may be switching from high-priced meat to lower-priced soybeans" (which contain 44% pure protein).

3008. Lundstedt, Erik; Lo, Frank Yau-Yee. Assignors to The Hong Kong Soya Bean Products Company, Ltd. (Kwun Tong, Kowloon, Hong Kong). 1973. Preparation of blue cheese from soybean milk. *U.S. Patent* 3,743,515. July 3. 2 p. Application filed 1 Dec. 1970. [9 ref]
• ***Summary:*** A blue cheese with the same flavor, taste, and blue veins as Roquefort cheese, is made from a soya bean curd which is prepared from soya bean milk fortified with butter fat and non-fat milk solids, by inoculation with *Penicillium roqueforti* and preferably also *Streptococcus diacetilactis.* Mold ripening only requires a two week period for full flavor development.

See also related patent titled "A heat stable curd from soya bean milk and process of manufacture thereof." Address: 1. South Chatham, Massachusetts; 2. HKSBP, Kwun Tong, Kowloon.

3009. *New York Times.* 1973. Japanese upset by U.S. soybean curbs. July 7. p. 27, 32.
• ***Summary:*** Many Japanese are angry at President Nixon for his ban on exports of soybeans last week. Japan obtains 92% of her soybeans (nearly 3 millions tons a year) from the USA. These soybeans are needed, however, to meet shortage of cattle feed in the USA. Last Monday in Washington, DC, officials replaced the embargo on soybeans with a system of export licenses. Meanwhile, the price of soybeans has skyrocketed.

Japanese use soybeans in many foods, including "miso soup, a soybean broth." Tofu (soybean curd) and fish are the two most important sources of protein for Japanese, according to Kuniyoshi Takagi, managing director of the Federation of Tofu Makers' Associations. Makers of soy sauce say the USA has supplied all of the 240,000 tons of soybeans the industry consumes each year, according to Kaoru Ito, managing director of the Japan Soy Sauce

© Copyright Soyinfo Center 2013

Brewers Association. There was even concern at the restaurant Sasa-no-Yuki (snow on bamboo sprouts), which serves only tofu in 12 varied dishes; a full tofu dinner of 8 tofu dishes costs not more than $3.00.

The Japanese government, deeply upset, placed soybeans at the top of a list of controlled commodities under a new regulation (that went into effect today) against hoarding and price manipulation. Japan's "stocks of soybeans stood at 400,000 tons at the end of May, and are expected to drop to 200,000 tons by Sept. 30, and be exhausted by Oct. 31 if there are no further imports," according to a spokesman for the Ministry of International Trade and Industry.

While the Ministry of Agriculture and Forestry urges the U.S. government to insure that Japan has a steady supply of soybeans, Japanese officials are also "looking for other sources and accelerating programs to increase local production."

A bar chart shows: (1) U.S. soybean exports to the world: In 1971–420 million bushels worth $1.3 billion. In 1972–441 million bushels worth $1.5 billion. In 1973 (first 5 months)–248 million bushels worth $1.3 billion. (\ 2) U.S. soybean exports to Japan: In 1971–98 million bushels worth $311.1 million. In 1972–109.4 million bushels worth $375.4 million. In 1973 (first 5 months)–62.5 million bushels worth $347.7 million.

3010. *New York Times.* 1973. Japanese upset by U.S. soybean curbs. July 7. p. 27.
• ***Summary:*** Hiroshi Higashimori, Secretary-General of the Japan Oilseed Processors Association, expressed the feelings of many Japanese in all walks of life, when he said, "We're really angry at Nixon-san."

The anger is a result of the U.S. president's ban last week of soybean exports. "In Washington [DC] last Monday, officials replaced the embargo on soybean with a system of export licenses. Exporters will be allowed to ship 50 per cent of their soybean orders on hand as of June 15 and 40 per cent of their order for soybean meal.

Not long ago, when President Nixon established détente with Peking, without first informing Tokyo, the Japanese called it the "Nixon Shokku." Now the soybean export embargo is being called the "Shoyu Shokku" [soy sauce shock].

Soybeans are used in Japan to make foods and ingredients that appear in almost every meal. They are a key source of protein in the Japanese diet. The typical breakfast, for example, includes miso soup. Fish and tofu [soybean curd] are two of the most important sources of protein in the Japanese diet, said Kuniyoshi Takagi, managing director of the Federation of Tofu Makers' Association. Yet he fears that both will become remote from the daily diet, "fish because of contamination and tofu because of the U.S. embargo."

Makers of soy sauce are also concerned says Kaoru Ito, managing director of the Japan Soy Sauce Brewers Association. The U.S. has supplied all of the 240,000 tons of soybeans that the soy sauce industry imports and processes each year in Japan.

There was even concern at Sasa-no-Yuki ("Snow on bamboo sprouts" [leaves]), a restaurant that features tofu as the centerpiece of 12 varied dishes; a full dinner of 8 tofu dishes costs a maximum of $3–which is remarkably low for Tokyo. The Japanese government, deeply upset at Washington, "has placed soybeans at the top of a list of controlled commodities under a new regulation against hoarding and price manipulation that went into effect today."

Meanwhile, Japanese officials are looking for other sources of soybeans.

A two-part bar graph shows U.S. soybean exports in millions of bushels. (1) Exports to the world grew from 420 in 1971 to 441 in 1972 to 248 for the first 5 months of 1973. (2) Exports to the Japan grew from 98 in 1971 to 109.4 in 1972 to 62.5 for the first 5 months of 1973. Source: Department of Commerce.

3011. Moorhead, John D. 1973. Little yellow bean pushing up prices: Whole world wants multipurpose soy meal. *Christian Science Monitor.* July 11. p. 1.
• ***Summary:*** Boston–"Soybeans: These unassuming yellow beans are the richest and cheapest source of protein known. And their meal makes the world's best animal feed." When president Nixon slapped an embargo and then strict controls on exports of soybeans, he was hoping to reduce soybean prices in the USA, and thereby eventually to reduce the price of meat.

Exports of soybean meal were 27% ahead of expected levels and a serious domestic shortage of soybeans was feared.

Nixon's soybean embargo has hurt the Japanese hardest–even though they were the best customer for U.S. soybeans. U.S. soybeans comprise 92% of all soybeans imported to Japan. Of those, 80% are "used for animal feed and the rest for such human staples as tofu (bean curd) and soy sauce."

A cartoon shows a personified soybean, wearing a big smile and a king's crown, holding in one hand a scepter with a dollar sign on it, sitting on a little mountain of dollar bills.

3012. Oberdorfer, Don. 1973. Japanese attack U.S. trade policy. *Washington Post, Times Herald.* July 17. p. A1.
• ***Summary:*** Tokyo, July 16–Secretary of State William P. Rogers and other senior U.S. officials were subjected to a barrage of criticism today for alleged American deficiencies as a trading partner." At this joint cabinet-level conference on economic affairs, Rogers said that the curbs were "unavoidable and temporary."

Until just a few months ago, Washington [DC] was doing the complaining concerning the very large bilateral trade imbalance in favor of Japan; Washington made strong demands that the Japanese buy more from the U.S.

© Copyright Soyinfo Center 2013

"At least four Japanese ministers, headed by Foreign Minister Masayoshi Ohira, expressed official dismay at the export restrictions during today's meeting here." Secretary of Agriculture Earl Butz was scheduled to be at the joint meeting, but he cancelled at the last minute, saying that he had urgent business to attend to in Washington. In his place he sent Undersecretary of Agriculture J. Phil Campbell.

"At a private hotel luncheon Sunday in the resort town of Hakone, Campbell and his wife heard little or nothing about Japan's special need for soybeans from the lips of their host, Agriculture Minister Yoshio Sakurauchi. However it did not escape their notice that the luncheon menu included boiled soybean snacks (edamame), Japanese soybean soup [miso soup], soybean curd squares (tofu), vegetables mixed with soybean curd [shira-ae], and cucumber with soy sauce."

3014. *New York Times.* 1973. How families abroad are coping at the market: Some Japanese changing diets. Aug. 28. p. 37.

• ***Summary:*** In Tokyo, there is a widespread awareness that fish is too contaminated with mercury to eat safely. The other traditional source of protein, soybean products, have jumped in price because of the U.S. soybean embargo. In the last two months, the price of "tofu (bean curd or bean pudding)" has gone up 13 cents to 19 cents; a bottle of soy sauce 51 cents to 64 cents; cooking oil 55 cents to 70 cents,..."

Despite the rise in prices, tofu and miso soup are still regular parts of the diet for most Japanese.

A bar graph shows the percentage of income spent for food in 1971 in various countries: U.S. 17.6%. Germany 21.9%. Britain 22.3%. France 26.5%. Japan 30.7%. India 60.0%. Africa (various) 70.0. Source: Bureau of Labor Statistics. Grocery Manufacturers of America.

• ***Summary:*** This book has a red, white, and black cover with a round yin-yang (*t'ai chi*) symbol on it. The Foreword begins: "This book, a compilation of several books and writings of George Ohsawa, attempts to give the whole scope of macrobiotic medicine to everyone." It includes the first English translation from French of Ohsawa's 1956 "Guide pratique de la medicine macrobiotique d'Extreme-Orient."

Contents: Forward [sic]. Preface. Introduction. Theory of macrobiotic medicine. Curing sickness. Cure the man. Letters from students of macrobiotic medicine. Appendix.

Information on soyfoods is found on the following pages: Tamari bancha (syoban, p. 85, 102). Miso (fermented soybean puree, p. 85). Tekka (miso, p. 87, 95). Tofu plaster (p. 88, 110-11, 125-30). Miso soup (p. 96). Koi-koku (Carp soup with miso, p. 99). Aburage (Age, p. 99). Deep-fried vegetable tofu (ganmo, with "1 tofu, ½ lotus root cut small, 2/3 inch jinenjo {nagaimo}, ½ inch carrot cut small, 2 inches burdock cut small, 1 quart oil, 1 cup whole wheat flour." Grid the tofu well in a suribachi, adding a pinch of salt, p. 99). Vegetable with ganmo (p. 100).

Note: This is the earliest English-language document seen (April 2013) that contains the word ganmo; it refers to deep-fried tofu burgers.

Dried radish with age ([aburage], see recipe 32, p. 100). Yin/yang soboro (with miso, p. 101). Scallion miso. Onion miso. Shigure miso (p. 103). Pheasant nituke [nitsuke] (with miso, p. 104).

The forward [sic] by Herman Aihara, editor, notes: "This book, a compilation of several books and writings of George Ohsawa, attempts to give the whole scope of macrobiotic medicine to everyone. The main part is treatment for sickness. However, treatment without understanding of principles and a good attitude is dangerous, therefore, the theory of macrobiotic and other articles were added. The book, like its predecessor, *The Unique Principle*, is unique not because of its name and contents, but rather in how it was translated, edited and published.

"The first part is a translation taken from Japanese books such as, *A New Dietetic Cure*, *How to Cure Sickness and a Sick Man*, and *Vegetarianism.* The second part is a translation from the French edition of *Practical Guide to Far-Eastern*

© Copyright Soyinfo Center 2013

Medicine which was done by Ann Harris. Noboru Muramoto was consulted to suit remedies to present-day American needs.

"Cornellia Aihara translated *Cooking for the Sick* which was written by Lima Ohsawa. *Massage and Palm Therapy* are based on notes taken by Cynthia McCluskey at Mirimichi Summer Camp, 1972. Photos of Cornellia demonstrating external treatments were taken by Fred Pulver. *The Manual of Macrobiotics* is a contribution of Nina Bond who took notes at George Ohsawa's lectures in New York at Summer Camp held about ten years ago.

"The third part is a translation from French and Japanese by Fred Pulver, Lou Oles and Herman Aihara.

"The last part is again taken from several articles appearing in past issues of *The Macrobiotic* magazine. The Appendix is taken from a translation of the French edition of Ohsawa's *Practical Guide to Far-Eastern Medicine*."

The preface, by George Ohsawa, states: "I am very happy to give you this short, simplified translation of my book, *Cure–Following the New Way of Eating.* It was originally written in Japanese, and is now in its 465th edition. I want to share with you the practical application of Macrobiotic healing that I have been teaching for almost 40 years–leaving aside the conceptual aspects covered in my other books and classes.

"Herein is the synthesis of my medical philosophy, which is nothing but the biological, physiological and dialectic interpretation of Far Eastern philosophy–the principles of the Order of the Universe and the Order of Man. For 30 years I have been writing on both the practical and theoretical sides of this question and have published more than 20 books and thousands of articles. But at this time I wish to limit myself to giving easily accessible information.

"My medical philosophy, the way of eating and the art of longevity and rejuvenation, is so simple and inexpensive that anyone can follow it any time, anywhere. If you decide to cure yourself before all else, you can forget about the bitter, painful and costly suffering that results from medical, physical, psychological and religious therapies.

"This system depends on you alone. No reliance on other people or on artificial means–everything depends on how you eat."

In the first chapter titled "How did I find macrobiotics? The principle of life," Ohsawa continues: "I was born at Sagano, Kyoto, Japan in 1893. My mother could not produce enough milk and I was a weak baby. I was told by mother that I almost died five times before I reached the first birthday. My family was poor. Father was a principal of an elementary school of a small village before I was born. Then my parents moved to Kyoto where he became a policeman. Mother worked at home to help finance–making strings for kimonos. Mother was an industrious woman. She studied Western science and culture through Yuzuru Niijima who was the founder of the Doshisha University. She died at the age of 30 from tuberculosis, leaving two sons. I was 10 and a younger brother was 6. Two sisters had died earlier due to the wrong diet which my mother introduced in our family through her study of Western science and culture.

"From that time we lived sad days as poor orphans. I was an apprentice in a Buddhist temple as a disciple. However, I soon started to vomit blood like my mother and sisters did. At 18, I had to give up my school, medicine, eggs and meat because I was too poor to continue such expensive living. I lived in the lowest living condition. In other words, I lived with brown rice, radish pickle and salt plum even though I was told that my sickness–tuberculosis–required eggs and meats by the doctors and my mother who gave us milk, eggs and bread every morning (which was violating natural order). We were punished for this violation. Such a diet destroyed our family's health. I, however, resented that I could not afford to continue such a diet because I didn't know the fact that such a diet was the cause of mother's and sisters' death and my sickness. If I could have afforded to continue that diet, I would have died at that time. I am so grateful that I was poor...

"Curing all my diseases and re-establishing my health at the age of 20, I realized that food is the source of life. After realization of this important fact, I decided to devote my life to preaching this doctrine...

"I traveled to France for the first time in 1914. Since then I have returned a dozen or more times."

3016. Hewitt, Jean. 1973. A Portuguese stew, an Oriental omelet. *New York Times.* Sept. 28. p. 26.
• ***Summary:*** The recipe for "Bean curd omelet" [*o-konomi-yaki*] includes "1 cake fresh bean curd (tofu) or one can, drained and cut into 3/4-inch cubes."

3017. *Washington Post.* 1973. Anne's reader exchange (Letter to the editor). Oct. 15. p. B7.
• ***Summary:*** A person with the initials E.K. writes to ask: "I would like some readers to tell me about Hog's Maw. How is it cooked? And how is soy bean curd made, how is it cooked, and where is it available?"

3018. Ilany (Feigenbaum), J. 1973. Soybean food for today and tomorrow. *Gordian* (*Hamburg*) 73(10):390-91. Oct.; 73(11):428-30. Nov.; 73(12):464-65. Dec. [21 ref. Eng; ger]
• ***Summary:*** "This is a short review of what is chiefly known at present of this wonderful bean, which only a few years ago, constituted a strange and exotic food." Contents: Introduction. Composition and nutritional value. Green soybeans. Sprouted soybeans. Soybean flours. Isolated proteins. Soy-food products of the Far East: Kinako, soymilk, yuba, "tofu or curd–soycheese," aburage, natto, Hamanatto, tempeh, miso, shoyu or soy sauce. Soybean oil. Lecithin.

© Copyright Soyinfo Center 2013

Concerning tofu: Tofu made in the regular way "is called 'Fresh Tofu.' It does not keep long, even under refrigeration, unless it is further processed. For this purpose it may be canned, frozen, fried, smoked, or fermented."

Note: This is the earliest English-language document seen (April 2013) that contains the term "soycheese"; it uses this term to refer to regular tofu.

3019. Taira, Harue. 1973. Heat destruction of amino acids in soybean products. *JARQ* (*Japan Agricultural Research Quarterly*) 7(4):267-73. Oct. [11 ref]

• ***Summary:*** Traditional, processed soybean foods that are widely used in homes in Japan include "Shoyu (fermented soy sauce), Miso (fermented soybean paste), Natto (fermented soybeans), Tofu (bean curd), Aburaage (fried bean curd), Kori-tofu (dried Tofu) and Kinako (roasted soybean flour)."

One of the steps in making each of these foods is heating, which denatures the protein (making it more digestible), eliminates the peculiar soybean flavor, and develops colored substances (which "can prevent oxidation of the unsaturated fatty acid contained abundantly in soybeans during the fermentation process of Miso as an example"). Heating also eliminates antinutritional factors.

"But overheating causes excessive denaturation of soybean protein and destruction of amino acids."

Tables show: (1) Amino acid composition of 7 soybean products, including Mamemiso [soybean miso, such as Hatcho miso] and yuba. (2) Change of amino acid after three steps in the process of making Mame-miso: Soaking the soybeans, heating the soybeans, the final product. (3) Change of amino acid after two steps in the process of making natto: Heating the soybeans, final product. After heating at a rather high temperature for a short time (120ºC for 30 minutes), there was no decrease in any amino acids except arginine, which decreased by 17.8%, and decreased by 29.1% in the final product. Some essential amino acids increased during the natto process. Methionine increased from 0.9 gm per 17 gm of nitrogen to 1.1 gm, an increase of 22.2%. Cystine remained unchanged at 1.0. (4) Change of amino acid after three steps in the process of making Tofu: Soaking the soybeans, heating the soybeans, the final product. No amino acids are reduced by heating, and some (such as methionine) increase. Of the 18 amino acids measured, 5 are unchanged, 10 increase, and 3 decrease slightly: Glutamic acid 19.6 > 19.3. Tryptophan 1.5 > 1.4. Serine 6.6 > 6.4.

One of the products which is heated by dry heat only (without soaking in water) is kinako. It is heated at 160ºC for 10 minutes, then ground. This heating reduced lysine from 5.1 to 4.8.

Figures (graphs) show: (1) The heat destruction of lysine in defatted soybean flour at 4 different temperatures (from 100ºC to 126ºC) for 4 different times (from 30 minutes to 4 hours). The higher the temperature and the longer the time, the greater the destruction of lysine.

(2) The heat destruction of cystine in defatted soybean flour. Same 4 temperatures and times; roughly same results.

(3) The influence of water on the heat destruction of lysine in defatted soybean flour. Same 4 temperatures and times. Adding water reduces the destruction of lysine.

(4) The influence of water on the heat destruction of cystine in defatted soybean flour. Same 4 temperatures and times. Adding water reduces the destruction of cystine.

(5) Heat destruction of total and available lysine in defatted soybean flour. Same 4 temperatures and times.

(6) Enzyme treatment and total liberated amino acids. Address: Food Analysis and Nutrition Div., National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

3020. Alfin-Slater, Roslyn B.; Jelliffe, Derrick B. 1973. Centuries-old cuisine of China is healthful, well balanced: SFH–Science, food, health. *Los Angeles Times.* Nov. 18. p. S70.

• ***Summary:*** "The Chinese diet, as might be expected, varies considerably from one region of the country to another. Yet it falls into two main groups, based on rice or wheat, the cultural superfoods."

"In traditional Chinese culture, no animal milk or its products, such as cheese, are eaten at all. It is perhaps for this reason that the soya beans has been" called "the cow of China."

"Soya curd (tofu)," precipitated by calcium, has an appearance and consistency very similar to those of cream cheese, and is also an important source of calcium in the Chinese diet, which is otherwise rather low in this mineral.

Interestingly, "appropriately flavored soya curd was consumed by Buddhists at feasts hundreds of years ago as a sort of artificial meat–long antedating the present-day textured vegetable protein (TVP) products, mainly derived from soya, which can be processed to give the appearance, texture and flavor of various meats."

3021. Ceylon Meals for Millions Foundation. ed. 1973. All about soya bean. Ceylon. 29 p. Nov. 11. 22 cm.

• ***Summary:*** In the middle of the cover a photo shows the upper part of a soybean plant with the pods and leaves. In the bottom one-third are illustrations of a bottle of [soya] milk, a can of condensed milk, a loaf of bread, a round cheese [tofu], and a tall glass with a straw and clear liquid in it.

Contents: Ad (full page) by Ceylon Oils & Fats Corporation. "We Purchase Soya Beans of Rs. 2000/- per ton delivered Seeduwa, subject to the following specifications:– Moisture 14% maximum. Damaged seed 1% maximum. Extraneous matter 3% maximum.

Preface, by Dr. C.C. de Silva, President, Ceylon Meals for Millions Foundation (dated 20 Nov. 1973). "The Ceylon Meals For Millions Foundation was organised in 1965. In

© Copyright Soyinfo Center 2013

its earlier form it stood as the Meals for Millions Council of Ceylon which was formed on the occasion of the meeting convened by the Junior Chamber of Commerce of Colombo on September 22, 1964 when the former Executive Director of the Meals for Millions Foundation, the late Miss Florence Rose, was on a brief visit to Sri Lanka to promote the use of locally available protein food sources for the betterment of the nutritional status of the population." The three objectives of the Foundation are given.

"Through every available means from the time of its inception in 1965 it has endeavoured to promote and popularise the cultivation of protein food crops, especially soya beans..." Florence Rose provided initial gift supplies "through the Indian Freedom from Hunger Campaign. An additional supply of 5000 lbs. of multi-purpose foods was purchased by the Foundation from India for this purpose. With part of this food available a pilot survey... was conducted with the assistance of M/s Lever Bros. (Ceylon) Ltd... The public showed a favourable response to the food. The successful breeding of several varieties of soya-beans for cultivation in Sri Lanka through the indefatigable efforts of the officers of the Agricultural Dept. at the Dry Farming Research Station at Maha Illuppallama represents a partial fulfillment of the aims of this Organisation.

"A special word of thanks goes to the Hony. [Honorary] Secretary of the Foundation, Mr. N.D. Wijayanayake for his efforts to get the publication through the Press."

Soya bean: The miracle crop of the 20th century, by Dr. G.W.E. Fernando, Assistant Director of Agriculture (Research), Maha-Illuppallama (p. 13-20, cited separately).

Soya bean recipes: A new trend in the preparation of "Thosai." Soya bean as a substitute for black gram in preparing delicious "Thosai" [Dosai].

Note. This is the earliest English-language document seen (Oct. 2012) that mentions the use of the soya bean in preparing "Thosai"–the Ceylonese counterpart of Indian "Dosai."

Soya–The miracle bean (Extracts taken from the issue on soya bean by the Nutrition Society of India 1971). Address: Sri Lanka.

3022. Saio, Kyoko; Watanabe, Tokuji; Kaji, Matsumi. 1973. Food use of soybean 7S and 11S proteins. Extraction and functional properties of their fractions. *J. of Food Science* 38(7):1139-44. Nov/Dec. [12 ref]
• ***Summary:*** The physical properties of a gel (such a tofu), prepared by coagulation with a calcium salt, made from 7S or 11S protein respectively, were remarkably different. The gel from 11S protein was harder and more elastic than that from 7S protein. Yuba made from the two protein fractions was also very different.

"The present paper consists of an investigation and proposal of a conventional method to fractionate 7S and 11 proteins, based on their different precipitation behaviors with calcium salt." Address: 1-2. National Food Research Inst., Ministry of Agriculture and Forestry, Shiohama, Koto-ku, Tokyo, Japan; 3. Meiji Seika Kaisha Ltd., Kawasaki, Kanagawa-ken, Japan.

• ***Summary:*** In this study, soybean curd [tofu] was fed to rats as part of a test diet. The level of dietary protein in this diet was 22.31% and the PER was 1.71. The average protein quality (PER soybean curd / PER casein x 100) in this study was 84.6. This test diet meets the amino acid requirements of the rat for all amino acids except methionine. Address: Depts. of Food Science & Animal Science, Univ. of Alberta, Edmonton, Alberta, Canada.

3024. **Product Name:** Soft Tofu (Pressed Silken Tofu with Calcium Sulfate), Yaki-dofu (Grilled Tofu), Tubu (Korean-Style Soymilk Curds), Atsuagé (Deep-fried Tofu Cutlets), Agé (Deep-fried Tofu Pouches).
Manufacturer's Name: Denver Tofu Co.
Manufacturer's Address: 6150 N. Federal Blvd., Westminster (N. Denver), CO 80221. Phone: 808-538-1305.
Date of Introduction: 1973-1975.
New Product–Documentation: Shurtleff and Aoyagi. 1979. Tofu & Soymilk Production. p. 194. "Tofu cutlet pouches. Firm tofu containing no expanding agent is cut into slices midway in size between the slices for tofu pouches and for tofu cutlets, then fried in a conveyorized deep-fryer in two temperatures of oil causing then to expand somewhat, but not as much as for tofu pouches. Thus they can be used either as soft cutlets or substantial pouches."

Talk with Haru Yamamoto. 1988. Aug. 25. Gives product names and approximate date of introduction.

3025. **Product Name:** Cathay Tofu: Fresh Soy Bean Cake (Chinese-Style Firm Tofu).
Manufacturer's Name: Cathay Co. [Azumaya].
Manufacturer's Address: 95 Boutwell St., San Francisco, CA 94124. Phone: 415-467-1955.
Date of Introduction: 1973.
Ingredients: Soy beans, water, natural calcium sulfate.
Wt/Vol., Packaging, Price: 14 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
New Product–Documentation: Label. 1982, dated. 5.25 by 4.25 inches. Red and black on clear film. "Chinese. 2 pieces fresh soy bean cake. No preservatives added. Hi! I'm Li'l Soy. Rinse with cold water before using. Keep refrigerated. Perishable." New Label. 1986. Firm (Chinese Style) Tofu.

Interview with George and Bill Mizono. 1989. Oct. 31. This product was introduced in about 1973, during

© Copyright Soyinfo Center 2013

the period of meat shortages, to try to capture the Chinese market. In March 1990 at Safeway Supermarket in Lafayette, California, a 14 oz water-pack retails for $0.89, the equivalent of $1.02/lb.

3026. **Product Name:** [House Hon Tofu Mix (Instant Soybean Curd Mix)].
Foreign Name: Hausu Hontôfu.
Manufacturer's Name: House Food Industrial Company Ltd. (Hausu Shokuhin Kogyo).
Manufacturer's Address: Plant: Sano city (100 km north of Tokyo), Japan. Head offices: Mikuriya-Sakaemachi 1-5-7, Higashi Osaka City, Osaka, Japan.
Date of Introduction: 1973.
Ingredients: Soy bean [powdered soymilk], glucono delta-lactone.
Wt/Vol., Packaging, Price: 2.3 oz In USA $0.99 in 1983.
How Stored: Shelf stable.
New Product–Documentation: Article in *Japan in Pictures.* 1974. 16(1):12-15. "Bean curd, a subsidiary food as nutritious as meat. Instant bean curd developed in Japan." Two photos are given of the equipment in the plant and 6 of the package and how this instant silken tofu is prepared at home. At the modern plant, a mixture of ground soybeans and water "is applied to a centrifugal separator, which separates it into soymilk and refuse. The soymilk, which has been concentrated by being heated, is sprayed into a tank heated to 100ºC, a process which dehydrates the milk to produce a bean curd base in powdered form [powdered soymilk]. A unit quantity of this powder is packed in an aluminum-foil bag containing nitrogen gas, which is put on the market accompanied by a small amount of coagulant.

"Process to prepare bean curd on the spot. Put a bag of 'Hontofu' in 600 cc of water, which is to be agitated [with a whisk]. Boil about 3 minutes. Mix the accompanying coagulant [glucono delta-lactone] immediately after the flame is put out. Transfer the substance into the container [a plastic box shaped like a cake of tofu]. Leave it for about 20 minutes and a block of bean curd is ready. Bean curd taken out of container [into a bowl of water]." Spot (½ page with photo of package) in *Food Product Development.* 1976. May. p. 88. Discusses: Ingredients and description. Product application. Product history. Product concept.

Label. 1985, undated. Photo on front panel of Chilled Tofu in clear glass bowl and Simmering Tofu in a *nabe* pot.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22.

3028. Quong Hop Company (The). 1973. Products fact sheet (Leaflet). South San Francisco, California. *
• ***Summary:*** "Tofu is the coagulated protein of the soybean, extracted from the whole bean by soaking, grinding, cooking, and filtering the beans with water to produce a milk which is then processed into a curd in much the same way cottage cheese is derived from cow's milk. Its appearance is that of a light cheese, its consistency that of a firm custard, and its taste very plain, making it very adaptable to any dish or seasoning you choose to use."

The Quong Hop Company claims that its tofu contains substantial amounts of vitamin A, B complex, E, and K, and that it is rich in lecithin, and free of cholesterol. Depending on the coagulation or curdling process, tofu can be a good source of calcium. Address: South San Francisco, California.

3029. Yamashita, Akira. 1973. Tôfu no naka no shishitsu ni tsuite [The lipids in tofu]. *Obihiro Otani Tandai Kiyo* [Jap]* Address: Obihiro, Hokkaido, Japan.

3030. Ahern, Emily M. 1973. The cult of the dead in a Chinese village. Stanford, California: Stanford University Press. xiv + 280 p. Illust. 23 cm. *
• ***Summary:*** The author's name is now Emily Martin. One of the foods presented at Chinese graves is "dried bean curd."

3031. Aihara, Cornellia. 1973. The *dô* of cooking (Ryorido). Vol. 4. Winter cooking. Macroguide No. 16. San Francisco, California: George Ohsawa Macrobiotic Foundation. 120 p. Illust. by Carl Campbell. 21 cm.
• ***Summary:*** All recipes in this macrobiotic cookbook are numbered.

Soy-related recipes include: 29. Nikomi Oden (with stuffed agé). 32. Boiled tofu (yutofu). 35. Furofuki daikon [with orange miso]. 36. Miso soup. 40. Kenchin soup [with tofu]. 47 Miso zoni, and white miso zoni. 87. Soy bean nishime. 89 & 90. Koji pickles. The section titled "Amasake" (p. 97-104) describes how to make it using sweet [glutinous] brown rice, then how to use it as a sweetener in various recipes: Amasake manju (steam cake). Amasake roll. Amasake karinto. Amasake cookies. Amasake cake. Amasake donuts (unyeasted or yeasted). Amasake crescents. Amasake wedding cake with frosting.

Also contains detailed, illustrated instructions for making and cooking with mochi (p. 23-30). A number of recipes contain fish and there is a picture of a cooked fish on the cover. Address: 1471–10th Ave., San Francisco, California 94122.

3032. Aihara, Cornellia. 1973. The *dô* of cooking (Ryorido). Vol. 3. Autumn cooking. San Francisco, California: George Ohsawa Macrobiotic Foundation. 100 p. Illust. by Carl Campbell. 21 cm. Revised ed. 1977.
• ***Summary:*** Interesting recipes include: Buckwheat noodle gratin (with tofu, p. 29). Udon with adzuki (p. 32). Endive rolled with agé (deep fried tofu, p. 33). Fu vegetable cream cooked (with wheat gluten cakes, p. 34). Carrots and onions miso (p. 37). Vegetable miso (p. 38). Sliced kombu nitsuke (with koya tofu [dried-frozen tofu], p. 38-39). Vegetable stew–Chinese style (with agé and frozen tofu, p. 41). Adzuki bean soup (p. 46). Creamed miso soup (p. 46). Kenchin soup (with vegetables and tofu, p. 47). Stuffed agé with sauce (p. 49). Thick tamari soy sauce (p. 50). Tahini-tamari sauce (p.

50). Mock meat sauce (with miso, p. 51). Chrysanthemum leaves with tofu (p. 63). Unagi-modoki (mock eel, with tofu, p. 64). Chick pea vegetable nitsuke (with koya tofu, p. 71). Wheat gluten and seitan (p. 71-74, incl. homemade wheat gluten, fresh wheat fu, boiled fu, fried fu–gluten cutlet, shish kebab with fu). Autumn dish (with adzuki beans and tamari, p. 72). Address: 1471–10th Ave., San Francisco, California 94122.

3033. Andersen, Lynn. 1973. Rainbow Farm cookbook. New York, NY: Harper & Row. 222 p. Illust. Index. 24 cm. Preface by Allen Gordon.
• ***Summary:*** This vegetarian cookbook, which has a macrobiotic flavor, is from Rainbow Farm, located on over 300 acres of mountain land in Phonecia, New York. Soy-related recipes include: Basic miso broth (p. 34). Miso vegetable soup #1. Miso soup #2 (p. 35). Soy butter dressing (made with 2 cups each oil and water, 3 tablespoons soy flour, and the juice of 2 lemons, p. 57). Miso vegetables (p. 67). Carrots and onions with tekka (miso, p. 67). Miso-onion spread (p. 76). Miso rice (p. 85). Tahini-miso spread (p. 108). Tahini-miso spread with vegetables (p. 108). Tahini-miso spread with seeds (p. 108). Tahini-tamari spread (p. 108). Miso balls (p. 111). Soy butter (or whipped soy cream, p. 111). Soy milk (with a blender, from soy beans, p. 118). Soy milk (without a blender, from soy flour, p. 118). Soy burgers (from okara, p. 119). Soy loaf (with cooked soy beans, p. 120). Tofu "(Chinese Soy Bean Cakes)" (curded with Epsom salt, p. 120). Miso sauce #1 and #2 (p. 126). Hiziki and tofu ([hijiki], p. 132). Egg noodles (with wheat and soy flours, p. 144). Soy milk with whole beans (p. 205). Soy milk with soy flour (p. 205).

A glossary of "New or Unfamiliar Foods" (p. 212-14) includes good descriptions of tamari, miso soy bean paste, kuzu, and tekka. Address: Phonecia, New York.

3034. Azumaya Inc. 1973. Tofu recipes–Series one. Yudofu, Pork Tofu, Sukiyaki, Sweet 'n Sour Tofu (Tear-off recipe pad). San Francisco, California 94124. 6 recipes. Each recipe: 7.5 x 7.2 cm.
• ***Summary:*** Color photo on each recipe. Caption on each reads: "Tofu–from the bean that thinks it's meat!" These are the earliest tofu recipe pads or cards seen in the Western World. Each recipe is "Copyright 1973."

3035. Azumaya Inc.; Matsuda & Hinode. 1973. Tofu recipes (color): Tofu & Mushrooms, Tofu Meat Loaf, Tofu Tuna Patties, Eastern Omelet (Tear-off recipe pad). San Francisco, California 94124; Los Angeles, CA 90013. 4 recipes. Each 18 x 7.5 cm.
• ***Summary:*** Color photo on each recipe (see next page). Caption on each reads: "Tofu–from the bean that thinks it's meat!" Each recipe is "Copyright 1973." Note the cooperation between two California tofu manufacturers that are potential competitors, Address: Los Angeles, California.

Prepared in San Francisco's famous **Bush Garden Restaurant**

Tofu and Mushrooms

Tofu – from the bean that thinks it's meat!

This delicately flavored dish is an excellent accompaniment to highly seasoned entrées such as barbecued spare-ribs or sweet 'n sour pork.

- 1 can (14 oz.) clear beef broth
- ½ cup dry red wine
- 3 Tbsp. Kikkoman soy sauce
- 2 Tbsp. sugar
- ½ lb. bite-sized fresh mushrooms
- 1 pkg. (14 or 16 oz.) tofu, cut in 1-inch cubes and drained
- 1½ Tbsp. cornstarch
- 3 green onions including tops, cut in 2-inch lengths

Tofu Meat Loaf

Tofu – from the bean that thinks it's meat!

Tofu is excellent as a meat stretcher. Its bland flavor never interferes with whatever seasonings it is combined with.

- 1 pkg. (14 or 16 oz.) tofu, drained
- 1½ lbs. ground beef
- 2 eggs, beaten
- ½ cup chopped onion
- ¼ cup chopped celery
- ¼ cup chopped green pepper
- 2 Tbsp. Worcestershire sauce
- 1 Tbsp. chopped parsley
- 1½ tsp. salt
- ¼ tsp. pepper
- 1 can (8 oz.) tomato sauce
- 1 Tbsp. Worcestershire sauce
- 1 Tbsp. brown sugar

recipe for Tofu-vegetable soup). Umeboshi (p. 175).

3037. Chen, Philip S.; Chung, Helen D. 1973. Soybeans for health and longer life. New Canaan, Connecticut: Keats Publishing, Inc. (A Pivot Health Book). xii + 178 p. Index. 18 cm.
• ***Summary:*** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products: Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Soy cheese (tofu). 14. Soy sauce. 15. Soybean sprouts.

Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References. Address: USA.

3038. Ch'en Ta-shou. 1973. Pen-hsin chai-shu shih p'u [Treatise on vegetarian foods]. China. 61 p. No. 1473 in the Series: Ts'ung-shu chi-ch'eng ch'u-p'ien. [Chi]
• ***Summary:*** Contains 20 recipes. Address: China.

3039. Cowan, J.C. 1973. Processing and products [soybeans]. In: B.E. Caldwell, ed. 1973. Soybeans: Improvement, Production, and Uses. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 619-64. Chap. 20. [52 ref]
• ***Summary:*** Contents. 1. Introduction. 2. Processing for oil and meal: Preparation of flakes, solvents, extraction, desolventizer-toaster, degumming. 3. Conversion to edible oil products: Refining, bleaching, deodorization, hydrogenation. 4. Edible fat products: Salad and cooking oils, status of flavor stability, shortenings and margarine oils, lecithin. 5. Essential fatty acids and atherosclerosis. 6. Industrial uses of oil. 7. Meal for livestock and poultry: Nutritional aspects, factors affecting use of meals. 8. Edible protein products: Soy flour, concentrates and isolates, textured protein products (textured soy flour or textured soy protein fibers made into "meat analogues" resembling chicken, bacon, etc.). 9. Fermented and specialty foods: Tofu, soybean milk (an intermediate step in the manufacture of tofu), miso, shoyu (tamari, light-colored shoyu), sufu, tempeh, hamanatto, and natto.

Soybeans flow through a crushing plant as follows: First, they are cracked to release or loosen the hull and to break the cotyledon into about 4 parts. Shakers and aspirators separate the hull from the cracked cotyledons and rollers flake them. "Purified petroleum hydrocarbons known as hexane extract the oil from the flakes and the solvent is recovered. Moistened flakes are heated to inactivate the antinutritional factors and are converted to feeds for livestock and poultry. A small proportion of the flakes goes to a wide variety of soybean protein products including flour, isolates, and concentrates."

Tables show: (1) Utilization of soybean in U.S. in million pounds, every 5 years from Oct. 1933 to 1970 (Kromer 1970). (2) Use of soybean meal in the USA for feeding livestock and poultry (million tons). In 1969, the estimated amounts used were as follows: Cattle 3.43. Hogs 1.69. Other livestock 1.73. Total livestock: 6.85. Broilers 3.07. Hens and pullets 1.28. Other poultry 1.10. Total poultry 5.45. Total livestock + poultry 12.30. Note that cattle are the single biggest users. (3) Bleaching soybean oil (process, % clay and type, change in Lovibond color rating). (4) Effect of bleaching, citric acid, and light exposure on soybean salad oil. (5) Specifications for soybean oil. (6) Effect of linolenate content on flavor of soybean oil at elevated temperatures. (7) Composition of certain edible oil products from soybean oil and related products (salad oil, hydrogenated-winterized soybean salad oil, hydrogenated soybean oil liquid shortening, plastic shortening types I and II). (8) Changes in iron and copper content of soybean oil in commercial refining. (9) Properties of all-purpose and high-stability shortenings from all-hydrogenated vegetable oils and blends of animal fat and/or vegetable oil (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (10) Typical analyses for mellorine and cookie and confectioner's fat. (11) Analytical data for typical margarine oils low and high in polyunsaturates (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (12) NSPA–tentative lecithin specifications (NSPA, 1969-1970). (13) Composition of soybean lecithins. (14). Approximate composition of soybeans and meal products (whole bean, cotyledon, hull, hypocotyl, meal {cake–extruded, flakes–solvent extracted, dehulled flakes–extracted, mill feed–separated hulls, mill run–separated hulls}). (15) Amino acid analysis of soybean meal (44% protein and 49% protein {dehulled}) and corn. (16) Amino acid analysis of blends of soy flour with cereals and milk (Inglett 1968; Corn soy milk {CSM}, Millet soy milk, Wheat soy milk, etc.). (17) Partial formulas for young swine and boiler rations in percent total rations. (18) Partial formulas for dairy feeds (14% protein). A supplement to forage or roughage. (19) Soybean grits and flour–screensize. (20) Composition of soy flour. (21) Composition of 4 types of soy protein concentrates. (22) Uses for high-protein soy products (protein 70 [concentrates] and protein 90 [isolates]).

© Copyright Soyinfo Center 2013

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "protein 90" to refer to a soy protein isolate. (23) Amino acid analysis of fractions derived from dehulled extracted flakes (Rackis et. 1961, 1970). (24) Effect of cooking in salt solutions on texture of structured granules. (25) Composition and use (1,000 metric tons in 1964 and 1967) of soybeans for traditional foods in Japan (Use of whole soybeans in 1967 in 1,000 metric tons: Miso 169. Shoyu 15. Natto 47. Tofu 329. Total 642. Use of defatted flakes or grits in 1967 in 1,000 metric tons: Miso 8. Shoyu 154. Natto 0. Tofu 77. Total 284).

Figures show: (1) Flowchart: Processing of soybeans to oil and meal using hexane extraction. (2) Illustration: A modern soybean processing facility (aerial view, Central Soya, Inc.). (3) Schematic diagram / flowchart: Manufacture of edible soybean oil products (salad oil, salad and cooking oil, shortenings, margarines, liquid shortening). (4) Illustration: A continuous deodorizer for soybean oil. (5) Graph: Effect of prolonged storage at 100ºF on flavor score of hydrogenated-winterized soybean oil or soybean salad oil (nitrogen packed, air packed). (6) Illustration: Continuous chilling and working equipment for margarine production (Votator Div., Chemetron Corp.). Printed by Cacho Hermanos, Inc., Corner Pines, and Union Streets, Mandaluyong, Metro Manila, Philippines. xiv + 170 p. Plus 8 leaves of unnumbered plates. Undated. Illust. (some color). 22 cm.

• ***Summary:*** The title page of this book states that the 19th printing was 1973 (Copyright by the author), but no initial date of publication is given. The rear cover states: Reprinted and exclusively distributed by: National Bookstore Inc. Other editions include 1953 (at Library of Congress), 1954, 1960, 1965, and 1968.

Contents: Acknowledgement. Introduction. Reminder, Fiesta fare. Everyday dishes. Sweets and desserts. Breakfast and merienda. Pickles and relishes. Refreshments. Glossary. Contains 19 black-and-white photos.

Soy-related recipes include: Baguio onion with tokua [firm tofu] (p. 28). Bañgus en tocho–1 (with tajure, p. 32). Bañgus en tocho–2 (with tajure, tausi, and tokua). Bañgus in soy sauce (with "2 tablespoons soy sauce," p. 33). Bawang guisado (with "3 pieces tokua, cubed and fried," p. 33). Beef steak (with "1 tablespoon soy sauce," p. 34). Misu-tomato sauce (with "3 tbsps. misu (soybean curd)" [sic, miso, not tofu], p. 74). Paksiw (Pork) (with "¼ cup soy sauce," p. 78). Paksiw na pata (with "Salt, toyo [soy sauce] and pepper to taste," p. 78). Pancit "luglug" (with "½ cup soy bean cake (Tokua) cut into small cubes," p. 80). Pork tapa (with "6 tbsps. toyo" [soy sauce], p. 88). Taguba (pork with "¼ cup soy sauce," p. 102).

The glossary defines the following soy-related terms: Misu–paste made of fermented rice and soy beans. Tajure–fermented soy beans, caked. Tausi–fermented soy beans. Tokua–soy bean curd. Toyo–soy sauce. Address: Philippines.

3041. DeFrancis, John; Lincoln, V.R. 1973. Things Japanese in Hawaii. Honolulu, Hawaii: University Press of Hawaii. xiv + 210 p. Illust. Index. 19 x 23 cm. [Eng]

• ***Summary:*** The goal of this book is to preserve Japanese culture in Hawaii. In 1868, the first Japanese came to Hawaii. Between 1886 and 1924 the trickle became a flood, which resulted in a total immigration of some 180,000 persons. More than half of this number eventually returned to Japan.

Setsubun is mentioned on pages 11, 25, 26. Setsubun generally takes place on about Feb. 3. The word "Setsubun" means literally "division of the seasons. This festival is kept alive in Hawaii largely due to the efforts of students from Japan at the East-West Center, which is funded by the U.S. federal government and is affiliated with the University of Hawaii. Its formal name is "Center for Cultural and Technical Interchange between East and West." Setsubun, a thousand-year-old festival, marks the time of year when the old year and its accumulation of evils are left behind, and a new year full of god fortune and hope begins. In bygone years, men dressed as devils were chased out of houses so that a happy new year could be ushered in.

Today the symbolic casting out of evil spirits is found in the bean-throwing ceremony. "This consists of throwing roasted [soy] beans (one for each year of one's age) while shouting 'Good luck in, devils out!'" This ceremony brings throngs of revelers to Buddhist temples and Shinto shrines throughout Japan. In private homes, the master of the house walks from room to room, scattering beans at the entrance of each, while shouting the magic incantation. "Then, each member of the household eats as many beans as there are years in his age, plus one for the new year, so as to ensure himself a good year to come."

In Hawaii, Setsubun used to be more widely observed than it is today–when it is celebrated in only a few places, including the Shingon Mission [Buddhist] and at some Shinto shrines. Also, a special program is organized by

© Copyright Soyinfo Center 2013

students at the East-West Center. Other Setsubun celebrations are also discussed. A photo shows one such celebration.

Soy is mentioned throughout the chapter on "Food and dining places." In Sukiyaki, bean-curd and soy sauce are basic ingredients (p. 165). Soy sauce is also used to season tempura, sushi, sashimi, tsukemono (also miso), and sashimi (p. 166-67). One these two pages are nice sections on tôfu [tofu], kamaboko, shoyu, miso, sweets (with azuki), mochi, and saké.

Glossary (p. 201-06): "Azuki: A red bean frequently made into a sweetened paste used as a filling in various confections, especially for ceremonial occasions. Symbol of joy and happiness."

"Chimaki: A cake of rice, soybeans, flour, sugar and salt."

"Hibachi: Japanese charcoal grill."

"Miso: Bean paste made of soybeans, wheat [sic, barley] or rice, and salt."

"Sekihan: Rice cooked with azuki beans."

"Setsubun: Late winter festival marking the beginning of spring."

"Shôyu: Soy sauce."

Sukiyaki. Teriyaki. "Tôfu: Beancurd made from soybeans."

"Umeboshi: Very sour pickled plum." Address: Oahu, Hawaii.

3042. Farmilant, Eunice. 1973. The natural foods sweet-tooth cookbook. New York, NY: Doubleday & Company, Inc. 182 p. Illust. (by Ed Nuckolls). Index. 22 cm. Pocketbook edition published in March 1978 by Jove Publications, New York. [10 ref]

• ***Summary:*** A tempting collection of more than 100 natural, healthful desserts made without sugar, honey, or artificial sweeteners. Recipes adapted from Far Eastern, Traditional European, and Classical American desserts. Soy-related information and recipes are (page numbers refer to the pocketbook edition): soy milk as an alternative for cow's milk (p. 12). Unrefined soy oil (p. 27). Koji and amasake (p. 29). Soy milk (p. 30). Soybean crêpes (with soybean flour, p. 65). Mock cream cheese cake (with tofu, p. 75-76). Tofu or soy cheese (homemade, 76-77). Amasake cookies (p. 83). Amasake (homemade from koji, p. 154-55). Soy cream sauce (with soybean flour, p. 161-62). Eggnog (with 3 eggs separated, 2 tablespoons barley malt extract or Amasake Syrup, 4 cups chilled Soy Milk, 1 teaspoon vanilla extract, and nutmeg, p. 172-73). Soy milk (homemade, p. 180). Food value charts (p. 185-87). Address: Food for Life store, Chicago.

3043. Ford, Marjorie Winn; Hillyard, Susan; Koock, Mary Faulk. 1973. The Deaf Smith country cookbook: Natural foods for family kitchens. New York, NY: Macmillan Publishing Co. (Collier Books). London: Collier Macmillan Publishers. xiv + 352 p. Preface by Frank Ford. Illust. Index. 24 cm. [7 ref]

• ***Summary:*** A pioneering natural foods cookbook, produced and copyrighted by Arrowhead Mills, Inc. of Hereford, Texas. Soy-related recipes include: Roasted soybeans (p. 42-43). Miso soup (with wakame, p. 53). Tamari bouillon (p. 57-58). Todo en la caldera (with soybeans and miso, p. 58). Miso sauce (p. 90-91). Thick tamari sauce (p. 91). Tofu (soybean cheese or bean curd, p. 98-99; an early recipe for homemade tofu made with vinegar or lemon juice as a coagulant. Lists 6 serving suggestions for tofu and 1 for the "soy mash" [okara]). Cooking flaked soybeans (p. 132-33). Soy sesame burgers (with 1/3 cup whole sesame seeds, p. 135-36). Rice pancake with tofu (p. 136). Soybean loaf (p. 138-39). Cooking with soybean flakes (p. 156). Blazing star timbales (with soybean flakes, p. 156-57). Tamale soy pie (with cooked soybeans or soybean flakes, p. 182-83). Soy milk (homemade, p. 292). In the last chapter titled "Natural Foods from Deaf Smith County," the following soy-related foods are discussed: Soybean flakes (p. 324, 327), black beans (a type of soybeans, p. 326), soybeans and foods made from them (p. 327). Soybean flour (p. 328). Tamari roasted nuts and soybeans (p. 331). Tamari soy sauce (p. 334). Miso soybean paste (p. 334). Wheat gluten is not mentioned in this book. Frank Ford's preface shows him to be a devout Christian, organic farmer (in Deaf Smith County, Texas), and advocate of natural foods.

In about Sept. 1991 this early natural foods cookbook was reprinted with a new cover and subtitle ("Natural Foods for Natural Kitchens"). Over 300,000 copies are now in print. Address: 1. Arrowhead Mills, Hereford, Deaf Smith County, Texas; 2. Soquel, California; 3. Foods editor, *The Texas Star*.

3044. Hardinge, Mervyn G.; Scharffenberg, J.A.; Sanchez, A.; Baldwin, M.; Sonnenberg, L.M.; Vyhmeister, I.B.; Crooks, H. 1973. Vegetarianism. Washington, DC: Review and Herald Publishing Assoc. 52 p. 29 cm. Life and Health Supplement. [81* ref]

• ***Summary:*** Contents: Vegetarianism–a new concept? Is man designed to eat meat? Why be a vegetarian? Is a nonflesh diet adequate? Plant foods and your diet. But what about protein? Still skiing at eighty-four! (ski champion Anders Haugen). Something new and different (meat-like products made from soybeans). Now, how?

3045. Hunter, Beatrice Trum. 1973. Fermented foods and beverages. New Canaan, Connecticut: Keats Publishing Co. 116 p. Index. 18 cm. [38 ref]

• ***Summary:*** In the chapter titled "Soybeans" (p. 31-49), the author discusses tofu (and how to make it at home with or without fermentation), meitauza (fermented okara), hakko tofu (a newly developed high protein food; fermented soybean curd), sufu (Vietnamese call it Chao), shoyu, miso,

© Copyright Soyinfo Center 2013

ketjap (thick Indonesian soy sauce [probably ketjap manis]), tempeh, Hamanatto, natto, Tao-cho from Malaysia, and Tao-si [fermented black soybeans] from the Philippines.

Note: The author has collected her information (both correct and incorrect) for a number of sources, which she does not cite directly, although she does have a bibliography.

3046. Ishinojima, Tadashi. 1973. Tôfu no ryôri: Shin tôfu hyakuchin [Tofu cookery: 100 new favorites]. *My Life Series* No. 15. 66 p. Illust. No index. 26 cm. (Tokyo: Gurafu-sha). [Jap]

• ***Summary:*** This beautiful book is filled with colorful photos of favorite and exotic Japanese tofu dishes, with recipes for each. These include: Dengaku. Shira-ae. Egg-tofu (Tamago-dofu). Tofu with hijiki. Chilled tofu (*hiya-yakko*). Contents: The taste of tofu. Two recipes for delicious tofu: Sukui-dofu, and Yu-dofu. Garnishes. Tofu Hyakuchin. Discussion about tofu. Homemade tofu. The nutritional value of tofu. Tofu cooking in the 4 seasons. Three soups. Traditional restaurant cooking: Sasa-no-yuki. Tofu cookery of Okinawa. Tofu cookery of China. An ad for *House Hon Tofu* (homemade silken tofu) appears at the back of the book. Address: Tokyo, Japan.

3047. Ito, Kazuo. 1973. Issei: A history of Japanese immigrants in North America. Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. Illust. Index of personal names only. 24 cm. Translation of *Hyakunen Sakura.* [100* ref. Eng]

• ***Summary:*** This massive book is basically a history of first-generation Japanese immigrants to Pacific Northwest (especially Washington, Oregon, and British Columbia), focusing on the great struggles and hardships they met, written from the viewpoint of individual Japanese who tell their stories (often in the first person), and compiled by a Japanese journalist. The book was first published in Japanese. Access to the wealth of information it contains is crippled by the lack of a subject index. So if one were looking for information about tofu, miso, or soyfoods, one would have to read the entire book. The index of personal names is well done.

At the very front of this book are very interesting maps of the old Japanese districts of the following cities: Seattle, Tacoma, and Spokane, Washington; Portland, Oregon; Vancouver, British Columbia, Canada. Unfortunately, none of the maps are dated. The name and location of each Japanese organization or business is shown clearly in English. In the part on "Japanese exclusion," the section titled "The smell of race" [very interesting] (p. 227-28) states: "Exclusionists especially point out that Japanese favorite foods and condiments, such as *miso*, soy sauce, radishes and pickles, are intolerable [in smell]... The neighboring whites complained loudly that they just could not stand the smell of cooking soy sauce... A Japanese smells like miso, and whites in general exude faint waves of the odor of butter and cheese. The smell of their underarm perspiration is really strong."

In the part on "Railroads," the section titled "Life of Yoshiichi Tanaka" notes that he worked with a gang of young Japanese bachelors who were all trying to save money. For breakfast they had miso soup, which was delicious, so everyone ate more, which caused food expenses to rise. "So we skimped on miso and merely added salt for flavor." For lunch they sometimes had "fish cooked in soy sauce, or a half cake of *tofu* (bean curd cheese), or radish, carrots and beef boiled hard with soy,..." "In the Japanese restaurant in Seattle we could fill up on miso soup, rice and pickles for only 10¢..."

Note. This is the earliest English-language document seen (April 2013) that uses the term "bean curd cheese" to refer to regular (non-fermented) tofu.

The part on "Alaska" (p. 355) is mostly about work in the canneries: "We shipped Japanese foods such as rice, soy sauce, miso, dried kelp [kombu] for soup base, dried sea slugs,... fu (a light cake made of wheat gluten), dried seaweed,..." Page 359 mentions soy sauce and miso soup with salmon.

The part on "Sawmills" states (p. 402): "The food was Japanese–first class rice imported from Japan,... and *koyadofu* (a dish made from bean curd). For breakfast they served miso soup with vermicelli in it. Lunch was rice, and fish and vegetables boiled hard with soy sauce." On Sundays they had red bean soup with mochi (rice cake).

Under "Supplementary food" (p. 408-09): The meals were mostly Japanese. Breakfast: miso soup... Dinner: Sukiyaki. "Some people bought things from Seattle stores like bottles of pickled bean curd (*funyu*), salted sea urchin, fermented soy beans [natto], salted plums, or seaweed preserved by boiling in soy sauce (*nori no tsukudani*),..."

In 1907 we spent $5 to $6 per month for food, and it was poor. For breakfast we ate miso soup and rice;... for lunch rice cooked together with *aburage* (fried bean curd)... I bought canned salmon and poured soy sauce and sugar on it for dinner. For Saturday dinner we had sukiyaki.

Page 410: Breakfast was tofu in miso soup with pickles and rice. Page 411: Deer meat sukiyaki.

In the part on "Agriculture," we read that Japanese immigrants to American sometimes enjoyed Japanese soyfoods. In about 1910, in Fife, a farming community near Seattle, in about 1910, Gunji Fujimoto "had miso soup and pickles for breakfast" (p. 440). In about 1916, in Hood River (northern Oregon), Henry Nakamura wrote that Japanese people could get foods from Japan, including "fried bean curd" (p. 499-500). There they also enjoyed miso soup for breakfast, cooked red beans [azuki] spread on bread for lunch, and rice, pickles, and dried radish strips cooked with

© Copyright Soyinfo Center 2013

soy sauce for dinner (p. 503). In the early 1920s in Oregon, breakfast typically consisted of rice, miso soup, and pickled cucumbers (Shoemon Nakamura, p. 512).

The part on "Mines" in 1917 (p. 557): "Dinner was Japanese style with stews, beef and tofu cooked together with soy, fish, miso soup, rice and so on."

Page 568: "The meals at Endo camp were notorious. Breakfast was miso soup and pickles with rice. When the population increased, the amount of soup was increased by adding water, not miso. The contents of the soup was always wakame (seaweed)" all year long "changelessly wakame. Mr. Endo laid in a huge stock of left-over seaweed and fried dried bean curd, and miso, soy sauce and pickles."

Part 20, "On the Streets," states that "The old Japanese towns in Seattle, Tacoma, Portland, and Vancouver (Canada) can hardly be traced today." The author has tried to reconstruct maps of these towns "in roughly the period of the 1920s, but not in any specific year" (p. 779-80). In Nov. 1908 Masanao Hanihara, Secretary of the Japanese Embassy, issued a report on his investigations of living conditions of Japanese in the western USA (p. 791). He found the Japanese still lived "at the level of immigrant laborers;" the conditions in their communities were "extremely low and chaotic." "The Japanese in these areas hardly mix with white residents, while sometimes they approach or mix with Chinese. There are many ill effects from clique-ishness." "The majority of Japanese workers lack knowledge of English, so whenever they make contracts they sign papers blindly" (p. 795-96). Hanihara estimated the Japanese population of various states as follows: Washington 9,000 to 10,000, Oregon 3,500 to 4,500, Wyoming 1,000 to 1,500, Idaho 1,000 to 1,500, Montana 1,000, and Alaska 1,000. The largest Japanese community in the region was in Seattle (about 4,000 Japanese). "Shinzaburo Ban of Portland is almost the top among successful Japanese on the Pacific Coast." His business, S. Ban Co., headquartered in Portland (where he arrived in 1891), acts mainly as a contract agency for Japanese laborers–a sort of employment agency, "and his store supplies sake, miso, soy sauce and other such Japanese foods and small items to the laborers" (p. 789-93; see portrait photo p. 792). A sidebar (p. 793, by Raisuke Tamura, Seattle) notes that "However long they lived in the United States, Japanese had to have Japanese food... Around 1906 I imported from Japan vegetables such as lotus root, Japanese radish [*daikon*], *gobo* (burdock), *zenmai* (fern), *abura-age* [deep-fried tofu pouches], *nigari* (bittern, a tofu coagulant), *tsukuneimo*, *yamaimo*, and so on, in hundred-pound baskets, and sold them to sawmills and railroad camps" (p. 793).

The 1 January 1916 edition the *Hokubei Nenkan* listed all businesses operating in various Japanese towns. These included two "tofu-makers" in Seattle, Washington (p. 800), at least one tofu maker in Tacoma, Washington (p. 804. Tacoma had a Japanese population of 931 in 1915–721 males and 210 females). Spokane didn't have a Japanese town as in Seattle and Tacoma, but in 1915 it did have a Japanese population of 536 (462 males and 74 females).

The map of old-town Portland, Oregon, probably from about 1935, shows 90 Japanese businesses located between 1st Ave. and 7th Ave. (running north-south) and between W. Burnside and N.W. Glisan (running east-west). Among these are two tofu manufacturing companies. "Ota Tofu Mfg." is located on 5th Ave. between Everett and Flanders. [Note: The actual address was 86½ 5th N]. "Fukei Tofu Mfg." is located is on N.W. Davis between 3rd Ave. and 4th Ave.

Contents: The book is divided into 21 parts, with each part containing several chapters (the number is shown in parentheses): 1. Sailing (6). 2. Secret passage and ship-jumping (5). 3. Japanese exclusion (15). 4. Japanese women (2). 5. Railroads (5). 6. Alaska (4). 7. Sawmills (2). 8. Agriculture (7). 9. Hotels (2). 10. Restaurants (2). 11. Mines (2). 12. Oysters (2). 13 Japanese language schools (2). 14. Studying English (3). 15. Pro-Japanese (8). 16. Furuya Company (4). 17. Lese majesty affairs (2). 18. Gambling (3). 19. Girls (2). 20. On the streets (9). 21. In Memorium [Memoriam–to the many who died]. (2). Appendixes: (1) Partial list of Japan-U.S. and Japan-Canada sister cities. (2) Japanese consulates. (3) Chronological table: Japan and America (side by side), 1868-Sept. 1972. Bibliography (p. 967-72, mostly Japanese-language books). Epilogues: To English and to Japanese editions. Index of personal names (p. 988-1016). Address: Tokyo and Seattle, Washington.

3048. It's your world vegetarian cookbook. 1973. Glendale, California: Seventh-day Adventist Church. 128 p. Foreword by U.D. Register, and Clive McCay. Illust. 23 cm.
• ***Summary:*** It's Your World" is a television series hosted by Art Linkletter (his photo faces table of contents) and sponsored by the Seventh-day Adventist Church in Glendale, California. Soy-related recipes include: Saucy soy sizzlers (no eggs, p. 10). Carrot nut loaf (with soy flour, p. 12). Millet gourmet balls (no eggs, with soy beans, p. 13). Danish Proteena balls (p. 17). Rediburgers (with Rediburger, p. 18). Festive loaf (with Vegeburger, p. 22). Mayflower loaf (no eggs, with soy beans, p. 22). Fresh tofu loaf (p. 25). Soy beans Hawaiian (with Loma Linda Boston Baked Beans, p. 37). Baked soybeans Americana (p. 39). Plantation soy special (with soy beans, p. 39). Browned tofu with mushrooms (p. 42). Viking Roast (with Holiday Roast [frozen, ready-to-bake soy loaf with a smoked turkey flavor], p. 56). Scrambled tofu (p. 56). Crispy tofu sticks (p. 57). Bit o'soy waffles (with soy flour, p. 65). Soy-oat waffles (with soy beans, p. 66). Soy cream topping (with Soyamel powder, p. 114). Soy nut milk (with soy milk powder, almonds, and cashews, p. 116). Soy half-and-half (with All Purpose Soyagen, p. 116).

Pages 118 and 119 list all commercial vegetable protein analogs made by Loma Linda Food Co (Arlington, California) and Worthington Foods, Inc. (Worthington,

© Copyright Soyinfo Center 2013

Ohio). Address: Glendale, California.

3049. Li, Shih-Chen. comp. 1973. Chinese medicinal herbs. Translated and researched by F. Porter Smith, M.D. and G.A. Stuart. San Francisco, California: Georgetown Press. 467 + [41] p. See p. 189-96, 411. Index. 24 cm. [1 ref. Eng]
• ***Summary:*** This paperback book, which has an orange and yellow cover, is a reprint, published without proper explanation or credit. It is a facsimile copy of Rev. G.A. Stuart's fine book, titled *Chinese Materia Medica* (1911), which is based on the famous *Pen-ts'ao kang-mu* and (as the title page of Stuart's work states) "Extensively revised from Dr. F. Porter Smith's Work" titled *Contributions towards the materia medica & natural history of China. For the use of medical missionaries & native medical students* (1871).

The preface to this 1973 reprint is by Beatrice Bliss, in whose name the book is copyrighted. On the rear cover, Bliss notes: "For over 4500 years Chinese scholars have been compiling medical treatises. The greatest and most complete of all was published in 1578, after 26 years of labor, by Li Shih-chên. American physicians in China, long impressed with the efficacy of organic medicine, translated, researched, and updated his herbal Pên Ts'ao, now published for the first time in the United States." The preface continues: "Unlike the Western world, China has been flooded since time immemorial with medical treatises. While the first English-language pharmacopoeia was published in London in 1618, the earliest Chinese treatise still in existence is attributed to the Yellow Emperor who, according to legendary history ascended the throne of China in the year 2698 B.C... The complete Pên Ts'ao comprises 1,892 species of drugs, animal, vegetable and mineral, and includes 8,160 prescriptions."

The plants discussed are listed alphabetically by scientific name. The sections on soybeans, which have many uses as medicinal herbs, are identical to those found in Stuart (1911).

Also discussed are: Kudzu vine, *ko*, or pueraria (*Pachyrhizus thunbergianus;* p. 299). Azuki bean or Ch'ih-hsiao-tou (*Phaseolus radiatus;* p. 316. "It is considered to be good food for donkeys, but is too heavy and heating for mankind. Medicinally, it drives away dropsy and scatters carcinomatous and purulent swellings.").

Wheat Gluten (Mien-chin; p. 445-46). "This is prepared by washing out the starch, and when a small quantity is wanted for catching birds, it is only necessary to masticate the wheat until nothing else is left. It is used as a nutritious article of diet, and is also considered to be antifebrile."

3050. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering (Continued–Document part II). Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.
• ***Summary:*** Continued: "Flavor was no problem as the public enjoyed the bean-like cereal flavor of soy. We calculated that, if we could produce a product of high keeping quality and automate the production, we could produce and sell soy milk for $0.20 a quart in comparison to cow's milk at $1.00 per quart. To do this we used wide mouth bottles with a metal crown cap. By sterilizing these bottles in a pressure retort, we had a milk that kept indefinitely without refrigeration. This allowed us to divide the city into four quarters, and by delivering a week's supply at a time we were able to provide house delivery with one fourth the equipment and personnel of our competitors. We had many customers living in other cities that bought a month's supply at a time and carried the empty bottles back to us.

"During our first month of operation, the cost was $1.10 per bottle. The second month was $0.40 per bottle, the third month $0.19 per bottle and the fourth month $0.12 per bottle, which allowed a reasonable profit. We were unable to proceed further as the Japanese blew up the plant on August 7, 1937.

"Realizing the nutritive value of soy and its possibilities, and no longer being able to continue in the Far East, we established the 'International Nutrition Laboratory' in Mt. Vernon, Ohio.

"At first our endeavor was to perfect manufacturing equipment so we could return to the Orient and develop foods for low-income population. As a result, we worked with soy flour manufacturers and oil meal developers. Although many experiments were conducted in testing baking and roasting the bean, we learned very early that moist heat was best for developing high assimilability of this rich protein source.

"I believe I built some 21 different types of moist heat processors from pressure steam cookers to blowing line steam jets through liquid falls of the extracted protein. One day my father remarked, 'Son, you have more equipment out on the scrap pile than you have in the plant.'

"As World War II progressed, we found ourselves producing high protein products for feeding of people that had been undernourished due to the enemies' confiscation of food materials. However, as the war drew to a close, we saw a need for a change of income source. So, with the assistance of Dr. Baxter of Ohio State University, Soylac was brought on the market. Although we had to overcome diarrhea and other feeding problems, it was found that, with proper moist heat treatment and a proper balance of various carbohydrates and vegetable oil, we produced an infant milk that was readily accepted by the pediatricians.

"As we had a greater amount of soy protein fiber [okara] than extracted protein, we at first dried this and sold it for livestock feed.

"It was felt that meat analogs could not be produced from this protein casein residue. Again special equipment had to be made to handle and process this product so that

© Copyright Soyinfo Center 2013

palatability and high food value would result. With specially designed heat processes and modified meat manufacturing equipment, bolognas and beef-like cutlets were produced at first with the addition of wheat protein, later with soy spun protein fibers. As discussed in the latter part of this dissertation, we were also able to produce very satisfactory meatlike products entirely from the residue.

"In the late summer of 1960, I received a call from my father inviting me to a luncheon conference. Here I met Ronald Hill of UNICEF.

"After being introduced I was informed that UNICEF intended to install an infant formula plant in Indonesia under the direction of Dr. S.S. De of F.A.O.

"We were invited to be designers of the plant and I was to supervise the installation and training of the personnel to operate the installation.

"I was most fortunate to be assisted in the project by Dr. E.L. Rowe, a graduate Ph.D. from the University of Southern California. With his help at the Institute of Nutrition of Indonesia, and the assistance of the College of Medicine of the University of Indonesia we were able to determine the causes of diarrhea in infant feeding and correct it in our formula and processing methods.

"As in every country the natives of that locale must have a product that suits their individual organic reaction to nutrition in-take.

"It has not been possible to produce a product acceptable in all countries and cultures. Thus it has been necessary to adapt both production methods and formula to each area individually. In Indonesia we had a very delicate pH balance to maintain, and moisture quantities had to be regulated so the infant obtained a nutritious substance that its body could absorb without ill effects.

"Shortly after my return to the United States and during a periodic visit of my father, Dr. Perry Webber called upon us to assist Madison Foods to develop their soy products for greater market acceptance. They had some very commendable meat analogs using the combination of both soy and wheat derivatives. However, they wished to explore in the infant formula field which was creating a sizable market. Infasoy was originated at this time and a process was developed to increase the normal extracted quantity of protein from the traditional extraction method. This was done by the use of mechanical equipment and formulations. It was here, with a great quantity of wheat fiber in use, that we derived a method of using the soy residues [okara] to manufacture meat loaves, sausages, wieners, and bolognas entirely of soy except for seasoning materials and added fats. This greatly increased the nutritional value as well as the income derived from the sale of these products.

"As we were perfecting and developing equipment and products at Madison, a call came from Brazil for assistance in developing a soy and cow milk formula.

"As the Brazilian government felt that some animal product should be incorporated in this kind of formulation, processing experiments were carried out. As a result much was discovered in flavor control. It had long been determined that you could not mask the flavor of the soybeans. It was entirely a matter of using some of the flavors in the bean and eliminating the objectionable ones.

"While still at Madison I had a call to install a traditional soy milk plant in the Far East. Our technologies had progressed to the point that we had difficulty at first to retain sufficient soy flavor to satisfy the palate of the local clients. However, this was accomplished to the satisfaction of the customers.

"The last three years have been used in developing sophisticated analogous types of meat and milk. This has been accomplished in the laboratory and we feel will soon be available for countries now pressed with shortage of milk. Should milk fall short in dairy farming countries, we know we can supplement this shortage with a vegetable source as acceptable as the product in shortage.

"In summary let me review:

"1. We are facing shortages in milk, which is produced with a ratio of 8 lbs. of feed to produce one gallon. We can produce a gallon of vegetable milk with a total of l lb. of fat, carbohydrate, and beans.

"2. A breakthrough in flavor control has been achieved, which eliminates the former taste objections.

"3. Breakthroughs have also been made in using the soy milk by-products for low cost meat analogues which are highly acceptable and nutritious.

"We have approached the time that the soybean protein will not only relieve food shortages but will also satisfy the most sophisticated taste." Address: Cedar Falls, Iowa.

3051. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering. Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.

• ***Summary:*** "It was a late summer morning 1922 in the State of Maryland that my father announced at the breakfast table that I would accompany him on a short trip to Frederick, Maryland to look at a stone burr mill he wished to purchase for some soy milk experiments he wanted to conduct.

"Protein had always been a high priority topic in our house as Dr. John Harvey Kellogg had made a deep impression on my father (Dr. Harry W. Miller, Sr.) during his student medical days at Battle Creek, Michigan.

"On the way to Frederick my father explained to me that the mill he wished to purchase was to be used to prepare soybeans so that a white milky fluid of suspensible protein could be extracted from the beans. Little did I realize that I was to be introduced to a research field that would dominate my work and studies the rest of my life.

"Having purchased the mill the next step was to find a proper location to conduct the experiment. One of

© Copyright Soyinfo Center 2013

Maryland's larger dairy farms was chosen for this, and after transporting the mill to the farm, it was bolted to heavy timbers and one of the dairy's tractors was used to turn the pulley on the mill.

"To a boy of ten it was more interesting than spectacular to see a white milky liquid run down out of the mill instead of seeing the milk being drawn from the udder of a cow. However, this experiment made a lasting impression on a ten year old who was always experimenting and constructing contraptions of his own.

"No, the liquid from that mill did not replace the milk produced on the farm. However, at the present rate of population increase, and ever-increasing shortages of grazing area to produce milk, we may in the future be looking to the use of this mill and its complementary equipment to supplement the animal products in lands of large dairy production.

"Shortly after my introduction to the first experiments on that dairy farm, I traveled to the land of the soybeans. This country was to become my home and source of information as my parents had accepted a call to mission service in China.

"Having been raised a strict vegetarian, the foods made from vegetables and grain sources were always a challenge to my curiosity.

"Roaming the streets of Shanghai every portable food caterer, street sidewalk restaurant, as well as the more sophisticated Buddhist (vegetarian) restaurant held a new horizon of future products made from the soybean.

"It was indelibly inscribed on my young mind that each procedure in each shop had a very definite and end-resulting purpose behind it.

"The first visit I made to a shop which produced these foods, the owner would address me. 'What is your honorable name,' and my answer would be, 'my humble name is "Show Me,'" translated small rice.

"My childish curiosity either amused the shop keepers or my youth intrigued them. Regardless, I was soon known as 'small rice.' in all these shops and home processing establishments and was allowed to roam at will and have my questions answered frankly–so much so, that I was able to get answers and ingredient names that my elders were unable to secure.

"Basically, the first step in extracting protein was to hydrate the bean. I found that each shop had some variation in soaking the bean. Hot water was used in one place and cold in another. Some added chemicals to the soaking water and others varied by prewashing the bean before soaking while others washed the beans after soaking.

"Although I knew that all their variations were vital to the end product, it was to be several years before I would be using these various steps to achieve end results.

"During my earliest experience with processing, I learned that enzyme action is definitely affected by these variations in procedure.

"The Orientals extract soy protein to produce soy curd, in its various forms, and soy skin or film membrane. Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soy skin" or the term "film membrane" to refer to yuba.

"Soy curd is produced by coagulating the extracted, liquid-suspended protein. After being pressed from the granular residue of the bean, a liquid white protein suspension is left. Each shop had a different heat to bring the liquid to before adding the coagulatory chemical.

"Each producer had a different product for the customer. One would have a large cake of rather coarse curd. This they cut into blocks according to the purchaser's need. The buyer taking it would flavor and prepare it as he desired.

"Another shop would produce a firmer curd which was pressed into small cakes; some were flavored with sesame oil; some peanut oil in which they were deep fried; and others were boiled in soy sauce and sold in this form to the customers.

"They also had what I called the yogurt shop. This was a very exacting procedure of heat control and quantity of coagulant to produce a yogurt-like curd which was chilled in bowls and served with rice malt poured on top to flavor it.

"There was one shop that pressed a fine curd till it was rather dry. These cakes were cut into square pieces about 3/4 of an inch square, were stacked on bamboo mat trays and placed in a culture-inoculated, heat-controlled room for three days. After this period the mold-covered squares were put loosely in glass jars in a hot pickling juice with ginger, ground red peppers, rice wine, brown sugar, and salt, and were sealed so the sauce would preserve the curd and flavor it [to make fermented tofu]. This product is sent all over the world to delight the palates of the Orientals.

"Perhaps the most interesting to me was the film protein [yuba] produced by heating the liquid extract to a definite regulated temperature and allowing a film to form on the top of it. This is picked up with a long chopstick and hung on a wire line to dry.

"Here again, liquid flavored films were produced by temperature changes. One way of changing the thickness of the film was to allow the liquid to evaporate so that the last films to be produced from a pot of liquid would be thicker than the first. Also, the fuel used would change the flavor of the film as the smoke from coal, charcoal rice straw and wet saw dust, or bamboo splints each had a definite taste.

"Not being satisfied with seeing these products made, I was determined to see how they were used; so 'Small Rice' would go to the kitchen of the Buddhist Restaurant long before dawn to watch the cooks soak these film in various sauces, some to be rolled tightly into bologna-like rolls and broiled for hours in a soy sauce, ginger, and anise flavored juice. This roll, when sliced, had a beef-jerky like flavor. Another was to lay the films one after another on top of each

© Copyright Soyinfo Center 2013

other to be sprinkled (each one) with rice wine, sesame oil and monosodium glutamate. These films were folded into a half moon shape, placed in bamboo trays and steamed for several hours. They were then placed on a screen to dry the surface moisture, then fried in deep sesame oil or peanut oil whichever flavor was desired.

"When these foods with various seasonings were served you would have anything from fish to turkey or duck.

"It was the eating of these Buddhist meats that gave me the courage in later life to learn to eat animal tissue, as I had been raised a strict vegetarian.

"Had I not learned to eat and taste these various animal products, I am afraid I would be like the official in India: when describing to him how we could make meat analogs from soy milk residue he asked, 'Well, what does chicken taste like?'

"This early experience in China was a challenge to make extensive study into each country's dietary and food flavor habits before designing a product for them.

"In the early 1930's with the encouragement of W.J. Morse and La Clara Reed of the U.S. Department of Agriculture, my father and I, using equipment supplied jointly by the Department and ourselves, produced a spray-dried soy milk formula which was granted a patent by the U.S. Patent Office, and which the American Medical Association accorded its own highly valued seal of acceptance for an infant formula.

"The first commercial plant was installed in Shanghai, China, during 1936 and 1937. Although we were using soy milk for feeding babies and institutional employees, due to the high price of pasteurized cow's milk there was a challenge to install a soy dairy to produce a vegetable milk at a low price." Continued. Address: Cedar Falls, Iowa.

3057. Tsuji, Tome. 1973. Tôfu ryôri [Tofu cookery]. Tokyo: 209 p. Illust. [Jap]*

3058. Willcox, William B. ed. 1973. The papers of Benjamin Franklin. Vol. 17. January 1 through December 31, 1770. New Haven, Connecticut, and London: Yale University Press. See p. 22-23. [4 ref]
• ***Summary:*** According to Roy Goodman (Curator of Printed Materials, American Philosophical Society, Philadelphia, Pennsylvania) this is the most authoritative compilation of Benjamin Franklin's letters.

On pages 22-23 is Franklin's letter to John Bartram from London, England, dated Jan. 11, 1770. It is reprinted from William Darlington, ed., *Memorials of John Bartram and Humphry Marshall* (Philadelphia, 1849), pp. 404-05. For details see Franklin 1770.

There are five footnotes to this letter. No. 2 states correctly that "runnet" refers to "rennet, used in the generic sense of a curdling agent."

In footnote No. 3 the editor identifies Father Navaretta as "Domingo Fernandez Navarrete (1618-86), a Jesuit [sic, Dominican] missionary to China who published his work in Spanish in 1676. It was translated into English by Awnsham and John Churchill, published in 1704, and subsequently republished; BF probably encountered it in the third edition: *A Collection of Voyages and Travels...* (6 vols., London, 1744-46), Vol. 1, p. 1-113.

Also in footnote No. 3, however, the editor is very confused about what Franklin means by "Chinese Garavances" (soybeans) and *Tau-fu* (tofu). The editor says that "BF's [Benjamin Franklin's] description of garavances and their use is, to put it mildly, misleading. He was not referring to cheese but to a vegetable paste; and the paste was not made of garavances, or chick peas, but of beans... Tau-fu or teu-fu was there described (p. 252 [in the third edition of English translation of Navarrete's book]) as a paste of kidney beans, as it was in the original Spanish; where BF got hold of garavances we have no idea."

If the editor, Willcox, had understood soybeans and their uses he might have said: "In 1770, 'Chinese Garavances' was a fairly well known name for soybeans. The cheese made from them was tofu. We still do not know where Franklin got his soybeans."

3059. **Product Name:** Tofu.
Manufacturer's Name: Yah Kee.
Manufacturer's Address: 83 Tyler St., Boston, Massachusetts. Phone: 617-426-7588.
Date of Introduction: 1973. January.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 313. Cheng Yao-Wang [Cheng Yah Wong]. 83 Tyler St. Boston. Tel: 426-7588.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 395. Owner: Mr. Wong.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Listed as Cheng Yah Wong. Same address and phone.

© Copyright Soyinfo Center 2013

Owner is Mr. Wong. Note: This company is not listed in the 1960 Boston City Directory, the most recent one at Sutro Library.

Dun & Bradstreet database search. 1984. May 23. Yah Kee, in Boston, Massachusetts has $100,000 annual sales and 3 employees.

Talk with John Weissman of the Vegetable Protein Co. 1992. March 31. At some time after 1977 he bought tofu from Yah Kee, a Chinese tofu maker in Boston's Chinatown.

Boston Globe. 1997. Jan. 27. "Way Ping Wong, 85: Pioneer in Boston tofu industry." "In 1973 he moved his family to the United States and settled in Boston, where he founded the Wah Kee [sic, Yah Kee] Company, Inc., a tofu manufacturing company that now handles over 50 percent of the New England, said Cheong Chen, a family friend.

Talk with Betty Wong, daughter-in-law of Way Ping Wong. 1997. Feb. 13. She and her husband, Cheng Yah Wong, live in Newton Massachusetts. The article in the *Boston Globe* spelled the name of this company incorrectly. The correct name is Yah Kee. Her husband [James] co-founded Yah Kee in late 1973 with her father-in-law at 83 Tyler St. Betty is sure of the 1973 date because her husband came to the USA in 1973 and she arrived the next year in 1974; when she arrived he was already making tofu. After about 2 years the company moved across the street into larger quarters at 104 Tyler St. In 1976 they registered their tofu company officially. Two years ago the factory moved to Waltham, Massachusetts, where it is today at 108 Clematis Ave., Building 7, Waltham, MA 02154. Phone: 617-642-8999. But they still keep an office in Boston at 194 Tyler Street. The company now makes many different types of soyfood products, firm tofu, soya drink, silken tofu, dry bean curd (doufu-gan), tofu pudding (doufu-hwa), fried tofu, tofu puffs. At the very beginning (in 1973) they made only Chinese-style form tofu and soymilk. Yah Kee sells all of its tofu in bulk in water; none is sold in individual packages. This allows them to sell the tofu at much lower prices. It sells this tofu to restaurants and some supermarkets.

Form filled out by James Wong. 1998. July 10. Yah Kee, Inc., 108 Clematis Ave. #7, Waltham, MA 02154. Phone: 781-642-8999. Started making and selling tofu in 1976. But Betty says that was when the company was registered; the real tofu production began in late 1973.

3060. **Product Name:** [Tofu (Firm, or Soft)].
Manufacturer's Name: Agro-Nippo Produtos Alimenticios Ltda.
Manufacturer's Address: Vila Clarice, Av. 15 de Novembro, 210-350 Pirituba, Sao Paulo, Brazil. Phone: 261-2348.
Date of Introduction: 1973?
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. A large, modern Japanese-run tofu factory.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 400. Agro Nippo Produtos Alementicos Ltds., Av. 15 de Novembro, Vila Clarice, 210-350 Pirituba, Sao Paulo, Brazil. Tel: 261-348 (A large factory). Owner: Unknown.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number.

Letter from Jane Cadwell Pautz. 1982. May 29. The company is now located at Av. José Alves de Mira 185, Pirituba, Sao Paulo, Brazil. They make both firm and soft tofu.

Talk with company by phone. 1989. May 18. The owner is Mikio Uchinaka. The company started about 16 years ago (i.e. in about 1973). The location has not changed but Av. 15 de Novembro has been renamed to Av. José Alves de Mira.

Letter (e-mail) from Jaime Nakamura of Brazil. 2012. Oct. 16. A record from the National Institute of Intellectual Property (http://www.inpi.gov.br/) in Brazil shows that Agro-Nippo Produtos Alimenticios Ltda. first registered the word "Tofu" as a mark (marca) on 12 July 1978. They re-registered it approximately one every 10 years thereafter.

3061. Hartz (Jacob) Seed Company, Inc. 1973? Hartz seed. Stuttgart, Arkansas. 8 p. Undated. 28 cm.
• ***Summary:*** Contents: Introduction. Arkansas' Grand Prairie: a major seed producing area for soybeans, rice and oats. Facilities. Research. Real estate and farm management. Export.

Jacob Hartz Sr. (1888-1963), pioneer in the development of soybean production in the South, founded Jacob Hartz Seed Company in 1926 [sic, 1942] and later that year built the first small seed cleaner in the State.

"More farmland in Arkansas is planted in soybeans than any other crop... Jacob Hartz Seed Company contracts upwards of one and one-half million bushels of Arkansas Certified "Blue Tag" Soybeans each year. This seed is produced by 150 Certified Seed Growers. The company's export operations have been directed into many areas of the Pacific, especially for natto, tofu, and miso in Japan.

Photos show: A portrait of Jacob Hartz, Sr. (p. 1) An early binder, pulled by a tractor, cutting oats. Modern combines harvesting soybeans. An aerial view of the plants elevators and offices in Stuttgart. Company President Jake Hartz, Jr. with Dr. Curtis Williams in one of the company's three greenhouses. Address: P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 501-673-8565.

3062. **Product Name:** Tofu.
Manufacturer's Name: Hashizume Bean Cake Corporation.
Manufacturer's Address: 30-16, 38th Ave., Long Island City, Queens, NY 11101. Phone: 212-937-9150.

• ***Summary:*** Contents: Abstract. Introduction. Japan's soybean supply and demand. The present soybean protein food market in Japan. Administrative aspects with respect to soybean protein foods. Research and development projects concerning soybean protein foods and their achievements. References. Address: National Food Research Inst., Ministry of Agriculture & Forestry, Tokyo, Japan.

3064. Lundstedt, Erik; Lo, Frank Y. Assignors to Hong Kong Soya Bean Products Co., Ltd. (Kwun Tong, Kowloon, Hong Kong). 1974. Heat stable curd from soya bean milk and process of manufacture thereof. *Canadian Patent* 941,228. Feb. 5.
• ***Summary:*** Prepare soymilk with 6% solids. Add 1-10% by weight of edible fat. Heat to 93.5ºC with steam for 10 minutes. Homogenize at 2,500 lb. pressure. Cool to 24ºC. Add calcium chloride coagulant under strong agitation to form curds at below 49ºC. Heat to 71ºC. Cool to separate whey for superior smooth, silky curds. Hot pack by heating to at least 66ºC. Homogenize. Pump and pack hot. This is a curd, not cheese; there is no fermentation. Address: 1. South Chatham, Massachusetts; 2. Kwun Tong, Kowloon, Hong Kong.

3065. *Los Angeles Times.* 1974. Seldom-used soybean high in protein, unsaturated fats. Feb. 7. p. F2.
• ***Summary:*** Genevieve P. Ho, PhD, of the Agricultural Extension Service, USDA, University of California, explains that soybeans and soybean products have been staples in China for 4,000 years [sic, 3,000 years]. Among these products are "soybean curd, soybean milk, soybean sprouts and soy sauce..."

"In 1972, soybeans retailed for 14 cents a pound. Today they sell for 54 cents a pound in health food stores and 31 cents a pound in Oriental markets." Describes how to cook whole dry soybeans at home. Gives recipes for: Soybean casserole. Soybean cookies (with "1 cup cooked soybeans"). Bean curd soup (with "1 cup bean curd (tofu), broken in small pieces"). Bean curd and shrimp (with "1½ cups bean curd (tofu)" and "1 tbsp. soy sauce").

3066. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report* (*Brookline, Massachusetts*) No. 2. Feb. 12. p. 1-4. Edited by Ane & Mark Riegel.
• ***Summary:*** On Feb. 12 Mr. Kushi, a macrobiotic teacher, lectured on: Soybeans. Making tofu: Lemon juice and vinegar vs. nigari. Making natto.

For making tofu, Kushi recommends using nigari rather than lemon juice or vinegar, since the yang nigari balances the yin soybean.

The soybean, "according to our Unifying Principle of macrobiotics, belongs to the yin category. And if you are taking plenty of soybeans, then you become a fool... if you cook kombu together with soybeans, the taste is very good, and nutritionally it is a better balance."

Soybean milk is easy to make. It can often be a substitute for cow's or goat's milk. Soybean milk is yin. If you give this to a baby for a long period, the baby becomes very yin. It is better to give soybean milk for a short period. Address: Brookline, Massachusetts.

3067. Dresden, Donald. 1974. Japan Inn: A good show, visually and gastronomically. *Washington Post.* Feb. 17. p. PO34.
• ***Summary:*** Dining: The Japan Inn, now in its 3rd year of operation, located at 1715 Wisconsin Ave., NW (Georgetown), continues to rank as one of the finest Japanese restaurants in Washington, DC. To make the broth for Miso soup, begin with a Japanese seaweed called "sea tangle" [kombu], then remove it after it has imported its flavor. Add dried bonito flakes to produce a delicate, fish-tasting broth. "Bean cake [tofu], mushrooms, and chopped green onions finish the dish."

Shabu-shabu comes with two dipping sauces. One of these is made by mixing soy [sauce], vinegar, two kinds of

© Copyright Soyinfo Center 2013

sake, seaweed and dried bonito flakes. The other contains sesame seeds, oil, and paste. Shabu-shabu "also contains hot pepper, aged soy bean cake, soy sauce and two kinds of sake, one of them [mirin] sweet."

Note: The meaning of "aged soy bean cake" is unclear. It could be fermented tofu, although that is rarely used as an ingredient in Japanese cookery.

3068. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report* (*Brookline, Massachusetts*) No. 3. Feb. 26 and 27. p. 5-30. Edited by Ane & Mark Riegel.

• ***Summary:*** On Feb. 26 Mr. Kushi, a macrobiotic teacher, lectured on: Tekka–"Tekka is used not only as a condiment, but also for medicinal use. Tekka is made from three different roots–carrots, burdock, and lotus roots." The "volume of miso is flexible... Homemade tekka is traditionally made in a cast iron frying pan." The Japanese word "tekka" derives from *tetsu* (which means iron) and *ka* (fire). "For medicinal use, yang miso is better."

Miso and miso manufacturing, including how to make malt (rice koji) (8 pages). Note: This section indicates that Mr. Kushi has some basic knowledge of the subject but there are many errors. 1. Koji is not malt (which refers to soaked, germinated cereal grains), but molded cereal grains or soybeans. 2. Koji kin is not malt bacteria, but koji molds. 3. One does not add enzymes to miso and enzymes do not grow. Even modern miso factories do not add enzymes when making miso. 4. The entire mixture is not stirred after 20-25 days to add oxygen. Kushi says you must keep miso for a least 6 months, but to cure sickness it must be kept for 2-5 years. Miso soup can compensate for the bad qualities of meat and eggs–so everyone should eat miso soup daily. Soup stocks and miso soup.

On Feb. 27 he discussed: General outline for making shoyu–soy sauce (4 p.), including discussions with Kikkoman on making natural shoyu starting with whole soybeans. In the early years after 1973, Kikkoman wanted to make natural shoyu and sent Kushi several samples, but he turned them all down, in large part because Kikkoman wanted to use defatted soybean meal instead of whole soybeans. Erewhon is buying shoyu from 3 companies in Japan. But Kushi says the quality is declining compared to five years ago [i.e., 1969], when it had powerful healing effects when taken with bancha or kuzu. He adds: "Around Boston or on our Ashburnham land, I really hope we can begin to make miso or soy sauce." Kushi says that now, after pasteurization, coloring and flavoring is added [not true, except in HVP soy sauce]. "Traditionally [in Japan] for this they used natural herbs. For a sweeter taste and darker color they traditionally used kanzô [kanrô?] or 'sweet grass = sweet herb.'"

"Formerly, until modern technological methods started to be applied, almost each village made their own shoyu like this, either as a joint community project, or someone with money made it and sold it to several villages."

Using bean and grain sprouts–moyashi (including soy sprouts). Other soybean products: Fried tofu (two methods for agé). Ganmodoki. Kori-tofu or koya-tofu (freeze-dried tofu). Soybean milk ("Soy milk is very yin." Note: Most Japanese and Japanese scientists consider soymilk to be an "alkaline" {*arukari-sei*} beverage, which therefore promotes good health). Yuba. In the discussion (p. 28), yogurt made by leaving soymilk unrefrigerated and "Chinese fermented tofu... fu nyu" are mentioned. The U.N. [United Nations] recommendations on food, using vegetable proteins.

Note: This is the earliest English-language document seen (April 2013) that uses the term "freeze-dried tofu" to refer to dried-frozen tofu. Freeze drying, which is an expensive, modern, high-tech process that uses a vacuum chamber to dry a frozen food, is not a good term to use for this traditional Japanese food which is air-dried naturally. Address: Brookline, Massachusetts.

3069. *Better Nutrition.* 1974. Food for thought. Feb. [1 ref]

• ***Summary:*** "The Overseas Development Council is calling for a Sino-American Soybean Research Institute for developing soybeans which will produce more beans per acre...

"Unfortunately, our country uses most of its domestic supply of soybeans as food for poultry and cattle. In the Far East soybeans are used directly as food for people, which is, of course, much more sensible. Soybean protein is as nearly complete a protein as exists in vegetarian food. Combined with cereals or nuts at the same meal, soybean food offers complete protein very inexpensively at the rate of 11 grams for every serving of the cooked dried beans.

"Other soybean products available in our country are loaded with high quality protein: soy flour, with up to 47 per cent protein, soybean curd (a kind of cheese) with almost 8 per cent protein, *miso* and *natto* with 11 and 17 per cent protein respectively.

"Soybean milk products are equally nourishing where protein is concerned."

3070. Central Food Technological Research Inst. (CFTRI). 1974. International Symposium on Protein Foods and Concentrates, Proceedings. Mysore, India: CFTRI. vii + 450 p. Held 27 June–4 July 1967 at CFTRI, Mysore.

• ***Summary:*** This symposium was sponsored by the Council of Scientific and Industrial Research, India, and the Office of International Research, National Institutes of Health, U.S.A., and co-sponsored by the Food and Agriculture Organisation of the United Nations, with the active participation of the World Health Organization and the Association of Food Technologists, India.

Page 293 discusses kinugoshi tofu. Address: Mysore, India.

3071. Erhard, Darla. 1974. The new vegetarians. II. The Zen macrobiotic movement and other cults based on vegetarianism. *Nutrition Today* 9(1):20-27. Jan/Feb.
• ***Summary:*** This article is mainly a very critical assessment of the macrobiotic diet and movement introduced as a cure by George Ohsawa. It also discusses Sufi groups, the new Vrindaban International Society for Krishna Consciousness (founded in 1966 by his Divine Grace A.C. Bhaktivedanta Swami Prabhupada), and various vegan groups.

A pie chart on page 21 shows the various major food movements in the U.S. counterculture "and how they all lead to unscientific vegetarian forms of food faddism." Within the natural food movement are organic communes, Krishnas, vegans, Sufis, followers of the Ehret's mucusless diet healing system, and practitioners of Yoga. Within the health food movement are four major teachers: Paul C. Bragg, Herbert Shelton, Carleton Fredericks, and Adelle Davis. Within the "Cosmic Nutrition Movement" are Zen macrobiotics (yin/yang polarity), and the Messiah's Crusade (positive/negative polarity).

"Veganism is the philosophy and practice of compassionate living. Founded in England in 1944, the Vegan Society originally stressed the ethics of eating. The American Vegan Society, based in New Jersey, was founded in 1960 and is composed of individuals who are more health oriented. This Vegan philosophy was essentially based on Dr. Albert Schweitzer's concept of reverence for life, and Mahatma Gandhi's concept of Ahimsa, a Sanskrit term meaning non-killing and non-injury" [dynamic harmlessness] (p. 27). "Vegans who practice more restrictive diet interpretations may use Dr. Shelton's Food Combining System." Vegans and their children often use soya milk.

The reason is that the general natural foods movement is an example of unscientific food faddism is that the "Diet emphasizes natural and/or organic vegetables, fruits, legumes, grains, and usually dairy products, and restricts meat."

A sidebar briefly defines "Vegetarian terms" including amasake, miso, mochi, nirvana, tamari, tofu, and umeboshi.

Note: This is the earliest document seen (May 2002) concerning Sufism (or Islam) and Vegetarianism. Address: RD, MPH, Research Nutritionist, Clinical Study Center, San Francisco General Hospital, California.

3072. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part I (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.
• ***Summary:*** 1974 Feb. 28. Meet Bill Shurtleff and Mr. Masa Miyashita of Kikkoman export dept. (good man, speaks fluent English) at the Imperial Hotel (*Teikoku Hoteru*, built in the 1920s by Frank Lloyd Wright) in Tokyo. Talk for 4 hours. Westbrae hires Shurtleff as an interpreter and guide.

March 1. Dinner at Sasa-no-Yuki, beautiful old restaurant that specializes in tofu cuisine.

March 4, Monday. Visit Kikkoman in Noda with Shurtleff and Miyashita. Tour Plant #7, then Plant #4 (the Goyo-Gura), which produces the emperor's shoyu in the traditional, natural way. "Saw 5 batches of moromi mash from 1 month old to 12 months old, and tasted each one. Delicious. Great color change between the 1 month and the 12 month moromi. We saw all the traditional tools. The moromi vats were made of cedar and last approximately 200 years." See a movie on how shoyu is made. Lunch at a sushi shop. Visit two miso retail shops with Shurtleff near his home. One had 42-45 types of miso (mostly rice miso, with 1 each Hatcho, barley, and cooked miso), the other 32-35 types. Tasted many and learned the differences. I buy Saikyo sweet white miso and Hatcho miso.

March 5, Tues. Attend a cooking class at Lima Ohsawa's house, then have dinner with Lima and the class members. Sick for the next 2 days.

March 9, Sat. Call then meet Mr. Kazama of Mitoku. He represents Erewhon. We may import through Kikkoman's Pacific Trading. Plan trip to Sendai Miso-Shoyu. Sendai is interested in using organic soybeans to make shoyu but would like a contract stating that all of it will be purchased when done. Dinner at the natural foods restaurant, Hakumon run by a Frenchman named Pierre.

March 11, Mon. Meet Shurtleff early at Tokyo station. Take bullet train (Shinkansen) to visit two Hatcho miso plants (Hayakawa Kyuemon Shoten, and Ota Shoten in Okazaki city, Aichi prefecture). Both plants claim to be over 600 years old. They use modern steamers and koji rooms. They pile 4-6 tons of rocks atop each large vat of miso, age it for 2 summers. It becomes very mellow when fully aged. They also use about half of their Hatcho miso to make Akadashi miso. It also contains caramel coloring, barley syrup, MSG, shoyu, a white miso, and preservatives. They sell a lot of Akadashi but only a little Hatcho miso. Lunch at an udon noodle shop that hand makes and cuts the noodles. Lots of slurping. Then visit a plant that makes real tamari and shoyu. All the tamari is mixed with junk. Train to Kyoto; stay at Friends World College. Note: This is the earliest English-language document seen (March 2012) that contains the term "real tamari."

March 12, Tues. Visit a tofu maker, a yuba maker (*Yuba Han*), then the company that makes Saikyo sweet white miso. The owner lies to us initially about his miso aging and caramel coloring (which tastes and looks like tar). Then he reverses himself without batting an eye. Lunch at a 300 year old Zen vegetarian restaurant (*Okutan* near *Nanzenji* temple); so beautiful that I start crying. Fantastic place. Light snow falling by the pond. Enjoy Simmering Tofu (*Yu-dofu*) in a broth. Then we go to a 400-year old tofu restaurant (*Nakamura-ro*) at a shrine (*Gion*) for dessert of *amazake* and *Dengaku* (skewered and braised with sweet miso). On to a

© Copyright Soyinfo Center 2013

second miso factory. It is a bore and the owner does not seem sincere but he has a great reputation among macrobiotics. He makes both natural and sweet white miso. Shurtleff visited him last year. For white miso the soybeans are boiled; for red miso they are steamed. Some white miso contains sodium thiosulphate bleach. Visit another yuba shop. They use granite grinding stones to make soymilk, cast iron pot to cook it in and copper skimming tables. A very beautiful place. Meet Ty Smith at a soba shop. He is a chain smoker, just quit working for Muso, and promoting a cooperative effort between Janus, Chico-San, Erewhon, and The Well to import foods from Japan. Evening at Jittoku coffee house, owned by an American, in a large old Japanese treasury (kura). Back to Tokyo by train. Talk until 1:00 A.M.

March 14, Thurs. Meet Kazama and Shurtleff, and take express train to Sendai Miso-Shoyu. We are treated royally by Mr. Muro. Long introduction and discussion. Visit their 2 plants, one modern, one traditional, natural. They make only rice miso. Their production of natural miso is more than all that imported to America by Erewhon and Janus. They age their natural shoyu 18-24 months at the request of Michio Kushi and Erewhon. They have 9 aging vats for the first year, then it is switched to other tanks. They invite us to have a shoyu taste test among 3 products: Kikkoman regular shoyu, Sendai regular, Sendai natural. Both Bill and I choose Kikkoman as best; good aroma, color, and taste. They congratulate us on our good taste. Sendai regular had very strong salty taste. We both liked the Sendai natural least; good color, no aroma, very mild taste. Sendai people say only one year is needed to ferment shoyu naturally. We might sell them organic soybeans (we had purchased 12 truckloads from a farmer) and get shoyu back in 1 year. We meet the president (Sasaki?), born 1928. Elegant geisha-hosted tempura and sushi dinner with president, 2 vice presidents, production manager, and a consulting professor (Shibasaki sensei). After dinner to a traditional bar for *doburoku* (thick, unrefined sake with a low alcohol content [or was it nigori-zake?]), then a sushi house. Shurtleff leaves for Tokyo on night train.

March 16, Sat. Visit Shurtleff and Aoyagi's home for lunch. We have dried-frozen tofu main dish, salad with creamy tofu dressing, strawberries with tofu whipped cream. Delicious. Then we learn how to make tofu at home. It's easy. I'll make it at home in California, then at our Westbrae Natural Foods retail store on Gilman Street (Note: This led to a long series of tofu classes by Gerner, Liz Horowitz, and later Shurtleff & Aoyagi; The retail store changed its name in late 1976 to Gilman Street Gourmet).

Note 1. This is the earliest document seen (April 2006) concerning Westbrae Natural Foods.

Note 2. This is the earliest English-language document seen (Jan. 2012) that contains the term "creamy tofu dressing" (or "dressings") a term coined by Shurtleff and Aoyagi in *The Book of Tofu* (p. 108).

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "dried-frozen tofu." Continued. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

3073. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part II (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm. • ***Summary:*** Continued: March 19, Tues. Take bullet train to Kyoto to meet Steve Earle of Muso Shokuhin. We 3 go to Okayama to see Fuchu Miso, that makes mugi miso (the barley miso sold in our store) and sweet white miso. The president's wife is the epitome of Japanese woman. For lunch we have tofu burgers with Italian sauce and mushrooms in a bento made by Akiko. Delicious. Take a boat to Shodo-shima where Marushima Shoyu Co. is located. Island is also famous for toasted sesame oil. Arrive at a ryokan at 6:30 P.M. VIP treatment. Bath before dinner and served in private room by geisha. Too much fish! Note: This is the earliest English-language document seen (April 2013) that contains the term "tofu burgers."

March 20, Wed. Miso soup for breakfast. Visit Marushima Shoyu where Muso gets its "natural" shoyu for export to America. They have the newest wheat roasters (they roast it with sand), biggest presses. We see cement aging tanks in a temperature-controlled room, then onto a large red building with 150 aging tanks. But we see no whole soybeans, only soybean meal (*dasshi daizu*). "I feel the owner is a liar and this is a bogus operation. The scene gets heavy and ugly. Bill is great and presses on with questions." The owner claims that 40% of their shoyu is natural, aged for 3 years and made with whole soybeans; 60% made with soybean meal, temperature controlled for 7 months. Thus there should be about 120 vats of natural versus 60 regular. But where is the natural? Their faces turn red. We have caught them red handed. The owner take us to one musty, dirty old building with 25 vats, only 8 of which contain shoyu, some only half full. Lots of cockroaches. Looks like no one ever goes here. Still no sign of a single whole soybean. Uneasy departure. Steve Earle is embarrassed. We take a train to Tokyo. We present Earle/Muso with a list of inconsistencies and ask for a written reply.

March 21, Thurs. Visit Mr. Kazama's miso factory (*Ikeda Kojiro Miso Shoten* in Kawaguchi-shi near Tokyo), that makes barley miso, the only brown rice miso in Japan, and shoyu. Call Ty Smith of Muso. He says Muso was very happy with our findings concerning the problems at Marushima, and that they have contacted a new source in Kyushu. Marushima said their president died a year or so ago and his son took over. They have lost the old feeling and tradition.

March 22, Fri. 6:00 A.M. Meet with Bill Shurtleff at

© Copyright Soyinfo Center 2013

his tofu master's tofu shop (*San-Gen-Ya*, run by Mr. Toshio Arai). We watch how he makes tofu. Beautiful place (12 feet square) attached to their home. Beautiful people; they don't speak English. Both make tofu starting early in the morning. He delivers in the afternoon and she sells out of the shop. He gave me hot rich soymilk (from *kinugoshi*) with wild mountain honey. Both incredible. So sweet and delicious. They also serve us freshly made agé, kinugoshi, and natto. Lunch at Shurtleff and Aoyagi's home: Noodles and tofu, Chinese fried tofu, tofu pudding, agé, kinugoshi, and mikan orange. We go over my notes from the miso factory. We copy all of his notes. Then I leave, very sad, but the friendship will remain. Akiko is a remarkable lady. Meet Mr. Kazama and go to Pacific Trading. Lousy meeting with Mr. Masaaki Miki (sales manager), and Masa Miyashita (export dept). Go to airport.

Results of the trip: (1) Westbrae started (about 9 months later) to import many varieties of miso, plus shoyu, and other products from Mr. Kazama in Japan. Bob Gerner was the founder, president, and chairman of the board of Westbrae; (2) Bob Gerner and Liz Horowitz taught "Tofu and Miso Cookery Classes" in Berkeley during 1976; (3) Westbrae published and distributed widely two brochures, *What is Miso?* (May 1976) and *What is Tofu?* (July 1976) written by Shurtleff and Aoyagi; (4) In 1976 Westbrae Natural Foods Inc. decided to sell its retail store at 1336 Gilman St. in order to focus on being a distributor and importer. The store had been losing money. Bob Gerner bought it in June 1976 for the low price offered by the highest bidder. He remodeled the store, renamed it Gilman Street Gourmet, and re-opened it in Sept. 1976. In the spring of 1977 Gerner added a deli to the store; there he made and sold Tofu Burgers, Tofu Treasure Balls, and Tofu Steaks Sauteed in Ginger Sauce. The same week that the deli opened, Gerner sold 3,000 to 4,000 of his new Tofu Burgers out of the Westbrae booth at the New Earth Exposition in San Francisco. Bob's nephew and sister (Margaret) made the tofu burgers. The burgers sold equally well at the same Expo in 1978 and 1979; (5) Shurtleff and Aoyagi wrote *The Book of Miso* and their New-age Foods Study Center moved toward becoming Soyfoods Center.

Note: In late November 1974 Mr. Kazama came to a meeting at Pajaro Dunes by Santa Cruz, sponsored by The Well. The idea was to set up a natural foods trade association. Erewhon wanted to control all imports of Japanese natural foods from Japan. Janus and The Well both had to import through Erewhon. They said Westbrae must buy through them via The Well (Roger Hillyard/Pure & Simple), and pay a 5% commission. Kazama had to defer to them. Gerner refused and they backed off. Ty Smith, now head of Erewhon, was upset that Westbrae was not paying a commission. Gerner told him "Tough." So Westbrae ended up importing from Kazama. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

3074. Huang, Su-Huei. ed. 1974. Chinese snacks: Wei-Chuan cooking book. Taipei, Taiwan: Dept. of Home Economics, Wei-Chuan Foods Corp. 184 p. Illust. No index. 25 cm. [Eng]

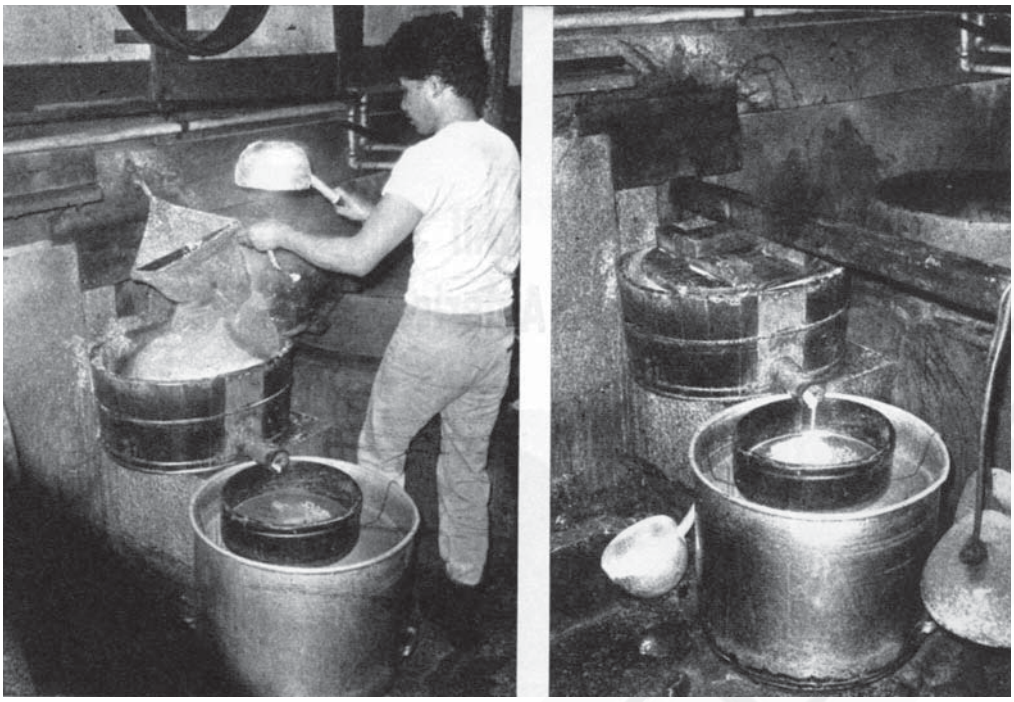
• ***Summary:*** Almost every page contains a large color photo of a finished dish. Recipes include: Seaweed-bean curd broth (p. 7). Bean curd-rice noodle soup (p. 8-9). Egg flower soup with tofu (p. 10). Steamed spareribs with black beans over rice (with "fermented black beans," p. 14). Bean curd and vegetable soup (p. 14). Bean curd and oyster broth (p. 24). Chicken in black bean sauce over rice (p. 25). Red-cooked beef noodles (with black bean paste {pronounced "he do ban jiang"} and hot bean paste {"la do ban jiang"}, p. 47). Saucy noodles–"Ja jiang mien" (with pressed bean curd and sweet bean paste {"tien mien jiang"}, p. 59). Sweet almond-beancurd soup (p. 143). Sweet soybean milk ("Do jiang," p. 156). Salty [soy] bean milk (p. 156). Crispy Chinese crullers ("You tiau," p. 157; serve with sweet or salty soybean milk).

Also: Cantonese moon cakes (with red bean paste [azuki] filling, p. 133, with color photo). Crunchy sesame cakes (with red bean paste filling, p. 135). Tasty fried bean cakes (with red bean paste filling, p. 137). Sesame-bean paste puffs (with red bean paste filling, p. 141). Sweet almond-beancurd soup ("beancurd" made with agar and evaporated milk–no soy, p. 143). Address: 19 West Nanking Road, Taipei, Taiwan. Phone: 551-13564.

3075. *Japan in Pictures.* 1974. Bill Shurtleff, a perfect mania for bean curd. American who has come to Japan to study Zen. 16(1):16-17. [1 ref. Eng]

• ***Summary:*** Shurtleff is a 31-year-old American who has come to Japan to study Zen meditation and tofu. Five large,

© Copyright Soyinfo Center 2013



black-and-white photos of Shurtleff show him: (1) Deep-frying *"ganmodoki"* [tofu burgers] at San-Gen Ya, the shop of tofu master Toshio Arai in Nerima-ku, Japan, where Shurtleff is an apprentice, learning how to make tofu in the traditional Japanese way. (2) Ladling cooked soybean puree (*gô*) out of the cauldron into the pressing sack. (3) Standing next to Mr. Arai. Much of the equipment in the shop can be seen as Mr. Arai talks about making tofu. (4) With Mr. and Mrs. Arai, sitting on the step that leads from their tofu shop into their home. (5) One sitting in full lotus position practicing meditation in the home of Mr. and Mrs. Kinjiro Aoyagi in Nerima-ku. His head is shaved and a small altar is in the background. Another article on previous pages of this issue discusses a new method for making instant tofu. Address: Japan.

3076. *Japan in Pictures.* 1974. Bean curd, a subsidiary food as delicious as meat. Instant bean curd developed in Japan. 16(1):12-15. [1 ref. Eng]

• ***Summary:*** The first 2 pages of this article contain 6 color photos showing tofu in Japanese-style (Yu-dofu, Dengaku, Sukiyaki, and Clear Soup), and Chinese-style (Sheng Pan Tofu, Guo Tie Tofu) recipes. "A block of bean curd weighing 340 grams, measuring 7 x 10.5 x 3.5 centimeters and being sold for US$0.20, contains as much as 21 grams of protein. To take this much protein, one must drink 3 bottles (or 600 cc) of cow's milk at the cost of US$0.35.

The conventional (traditional) process for preparing bean curd is described. "In Japan as many as 38,000 bean curd makers are operating on a small scale. Under these circumstances the bean curd industry has been far from modernized."

The next two pages, titled "Modernization of bean curd making," compare the traditional process for making tofu (6 black-and-white photos show the Yuba Han yuba shop in Kyoto) with a modern process developed by House Food Industrial Company, and used to make "House Hontofu" at their new modern factory in the city of Sano, 100 km north of Tokyo. Two photos are given of the equipment in the plant and 6 of the package and how this instant bean curd [silken tofu] is prepared at home. At the modern plant, a mixture of ground soybeans and water "is applied to a centrifugal separator, which separates it into soymilk and refuse. The soymilk, which has been concentrated by being heated, is sprayed into a tank heated to 100ºC, a process which dehydrates the milk to produce a bean curd base in powdered form [powdered soymilk]. A unit quantity of this powder is packed in an aluminum-foil bag containing nitrogen gas, which is put on the market accompanied by a small amount of coagulant.

"Process to prepare bean curd on the spot. Put a bag of 'Hontofu' in 600 cc of water, which is to be agitated [with a whisk]. Boil about 3 minutes. Mix the accompanying coagulant [glucono delta-lactone] immediately after the flame is put out. Transfer the substance into the container [a plastic box shaped like a cake of tofu]. Leave it for about 20 minutes and a block of bean curd is ready. Bean curd taken out of container [into a bowl of water]." Address: Japan.

3077. Mustakas, G.C. 1974. A new soy lipid-protein concentrate for beverages. *Cereal Science Today* 19(2):62-64, 69-73. Feb. [29 ref]

• ***Summary:*** Describes a new way to make liquid or spray-dried soymilk from finely pulverized tofu. A lipid-protein

© Copyright Soyinfo Center 2013

concentrate (LPC) curd was isolated from full-fat soy flour by isoelectric acid wash at pH 3.5. 94% of the protein in the original soybeans was recovered in the LPC. "Wet-milling in a colloid mill and homogenizing reduced the LPC to a fine particle size and gave a product with excellent suspension properties in water. The resuspended concentrate yielded a drink that was very bland, had smooth mouth-feel, was low in viscosity, and had other desirable beverage characteristics... The liquid product can be spray-dried to a reconstitutable powder, if desired, for convenience and for reduced shipping costs." The whey by-product has a high biological oxygen demand (BOD), which represents a serious disposal problem. Address: NRRL, Peoria, Illinois 61604.

3078. Watanabe, Tokuji. 1974. *Tofu* and its derived products. In: International Symposium on Protein Foods and Concentrates, Proceedings. Mysore, India: Central Food Technological Research Inst. (CFTRI). See p. 286-301. Held 27 June–4 July 1967 at CFTRI, Mysore. *
Address: Japan.

3079. Barr, Pat. 1974. Something for library or kitchen: *The Mandarin Way*, by Cecilia Sun Yun Chiang as told to Allan Carr. *Washington Post.* March 6. p. B4.
• ***Summary:*** A good review of a fine book by a great woman. Cecilia is now the "presiding genius" at The Mandarin restaurant in San Francisco, California. The reviewer recommends this book "most warmly to all who are willing to go in search of items such as bean-curd sheets and sea cucumbers..."

Note: This is the earliest document seen (Oct. 2012) in all major U.S. newspapers digitized by ProQuest that uses the term "bean-curd sheets," which refers to yuba. The new term appears in 37 documents between 1974 and the present, including 5 in the 1970s, at least 24 in the 1980s.

3080. Rosenberg, Monda. 1974. One-pot meals liberate the cook. *Toronto Star* (*Ontario, Canada*). March 13. p. G1. Family section.
• ***Summary:*** Grandmother knew that a big pot of slowly simmering stew was the easiest way to always have dinner ready. Today, the pot has been replaced by woks and crock pots. Stir-frying food in a wok is neither new nor mysterious.

Joni Boyer, a young Toronto mother, likes to stir-fry most of her meals; its quick and easy. "In Joni's rounds of Chinese grocery stores, she has discovered an extremely cheap source of protein–soybean curd. Made from boiled soybean milk, it is strained, curdled, spooned into muslin and then weighted to squeeze out moisture. Since these delicate pieces break apart easily, Joni just heats them through. In the Orient it is known as the 'meat without bones.'"

Five photos show women preparing one-pot meals. Address: Staff food writer.

3081. Fleming, Cecil. 1974. How to save on milk: Get it in a box. Powdered product a good calcium source. *Los Angeles Times.* March 14. p. G1.
• ***Summary:*** "Sacramento (AP)–California's 4,000 dairymen may have to slaughter 25% of their milk cows unless they are granted a price increase of 16 cents per gallon, an industry spokesman warned Wednesday.–LA Times, Feb. 28."

Dr. Genevieve Ho, nutritionist at the UC Agricultural Extension Service, suggests that consumers consider other less expensive forms dairy sources of calcium, such as instant nonfat dry milk, which can be reconstituted quickly and easily.

A table shows other sources of calcium, with the number of milligrams of calcium per unit. These include "Soybean curd (tofu)," which contains 64 mg of calcium per ¼ cup [= 256 mg per cup].

3082. Spiral Foods Inc. 1974. Wholesale price list. Chico, California. 4 p. March 15. 28 cm.
• ***Summary:*** This two-sheet catalog and price list, consisting of two pages stapled in the upper left corner, is printed front and back with reddish-orange ink on tan paper. The first item is five cookbooks. Soy-related products: Condiments: Lima tamari soy sauce (aged naturally over 2 yrs.). Miso–soybean puree (entirely natural–Mugi Miso, or Kome Miso). Lima kome miso. Nigari (natural coagulant to make tofu). Barley koji. Tekka. Sesame salt (toasted whole brown sesame seeds and sea salt). Salt plums (pickled in sea salt). Kuzu (wild arrowroot starch). Utensils: Soy pitcher [soy sauce dispenser]. Address: 1144 West 1st Street, Chico, California 95926. Phone: 343-2111.

3083. Dosti, Rose. 1974. Making nutrition culturally acceptable: Project for Chinese elderly. *Los Angeles Times.* March 28. p. H1.
• ***Summary:*** Every afternoon the banquet room at the Hong Kong restaurant is filled with elderly Chinese from the Los Angeles area. Dr. Genevieve Ho, a nutritionist at the University of California Agricultural Extension Service designs the menus and recipes, but also gives talks on nutrition in Chinese–while stressing the importance of calcium, vitamin A, and protein in the diet.

Sardines (bones and all) over a bed of bean curd supply plenty of calcium. A recipe is given for Sardines with bean curd.

Ground seasoned fish, seasoned with green onion and ginger, "is formed into walnut size balls and sauteed in oil to serve with braised bean curd," for a dish that is rich in both calcium and protein.

Dr. Ho also talks about avoiding salty foods such as bean paste, fermented black beans, pickles, and salt fish.

A photo shows a group of happy Chinese seniors seated at a round table. Dr. Ho (standing) also looks very happy.

3084. Chiang, Cecilia Sun Yun; Carr, Allan. 1974. The Mandarin way. Boston, Massachusetts: Little, Brown and Co. xiv + 274 p. Index. 23 cm.
• ***Summary:*** This charming, interesting book ("as told to Allan Carr" by Cecilia) is combination biography and Chinese cookbook organized by months (moons)–so that it flows with the seasons and seasonal foods. For each of the twelve moons of the old lunar calendar, there is one chapter (e.g., First Moon) of Cecilia's memories of growing up in China, as one of 13 children in a family of great wealth, followed by an "Interlude" chapter on a particular theme (e.g., "Of shopping and its pleasures") with her favorite recipes for that time of year.

Soyfoods (including "soy" or "soy sauce," "fresh bean curd," and "preserved bean curd") are mentioned throughout the book–for example: Freshwater "dancing shrimp" were "eaten raw after being dipped in a tangy sauce of preserved bean curd [fermented tofu], pepper, soy sauce, coriander and wine" (p. 8). The pork shoulder was "'red-cooked' in soy [sauce] and wine..."

Note: This is the earliest English-language document seen (Oct. 2010) that uses the term "preserved bean curd" to refer to a type of fermented tofu.

Some measure of success in reproducing authentic meals outside of China "can be achieved if the basic supplies are obtained either by purchasing them in Chinese shops or ordering them by mail (several sources, with addresses, are given..." These include: "fresh ginger root, dried bean curd, dried bean curd [pressed tofu; doufu-gan], sheets [yuba], sesame seed paste, sesame seed oil,... soy sauce,... red bean paste [azuki, also called "1 can sweet red-bean paste" (p. 164)], hot bean sauce" (p. 21)).

Fish with hot spicy bean curd sauce (*Tou-pan la-yü*, with "1 tablespoon Szechwan hot bean curd paste," p. 50). Five-spiced spareribs, Peking style (with "2 tablespoons pale soy sauce," p. 71). Peking duck (with "hoisin (duck) sauce," p. 96). Red-cooked chicken with chestnuts (with "4 tablespoons dark soy sauce, Japanese Kikkoman or imported," p. 116). Chopped spinach with shredded bean curd (*Po-ts'ai pan tou-fu kan*, with "dry pressed bean curd," p. 138). Szechwan four season beans (with "1 heaping tablespoon hot soy bean paste," p. 162).

In San Francisco's Chinatown, where the shops are predominantly Cantonese, the "dry goods store provides me with pressed bean curd and bean curd sheets [yuba, doufu pi],..."

Talk with Cecilia Chiang. 2008. Nov. 15. She says that "bean curd sheets" refers to doufu pi or yuba; pressed bean curd to doufu-gan. "Hot bean sauce" is *la douban jiang*, which is *douban jiang* with hot chili peppers; both are made with soybeans. Red bean paste is the same as "sweet red bean paste," made with azuki beans (*xiao hong dou*), and the same as Japanese *an*. Address: 1. Founder and owner, The Mandarin restaurant, Ghirardelli Square, San Francisco, California.

3085. William Shurtleff during his apprenticeship at Sangen-ya tofu shop, Nerima-ku, Tokyo, Japan (Photograph). 1974.
• ***Summary:*** In front of Shurtleff are Mr. and Mrs. Arai's two daughters. Standing in the background is Mrs. Arai, who worked each morning with her husband making tofu. She did all of the deep-frying. Behind her is her home; the tofu shop is under the same roof as the family home.

3086. Brand, David. 1974. Agricultural researchers try to boost yields of soybean genetically, but task isn't easy: In search of superbean. *Wall Street Journal*. April 17. p. 38.
• ***Summary:*** Urbana, Illinois–The soybean plant that Richard Cooper holds has taken him five long years of research to produce. "The plant is a dwarf soybean, and from it may spring the first generation of super-productive soybeans." At the USDA's regional soybean laboratory, where Mr. Cooper is chief researcher, he has discovered that dwarf soybeans are more productive than normal soybeans growing four feet high. It is very important but very difficult to get significant yield increases from the soybean plant.

"For millions of Asians the bean–as a protein curd called tofu–has long been an integral part of a largely vegetable diet."

"The failure to increase soybean yields is beginning to result in 'a deteriorating world supply and a great deal of worry about future protein supplies,' says Lester Brown of the Overseas Development Council, a Washington [DC]-based think tank. 'I doubt whether there is a greater global research priority than this.'" Address: Staff reporter for the Journal.

3087. Hashizumi, Kazumane; Iwane, Takeo; Watanabe, Tokuji. 1974. 3089. Loring, Kay. 1974. Restaurants: Elegance prevails at new Dragon Inn North. *Chicago Tribune.* May 16. p. N1.
• ***Summary:*** This is a restaurant review. The Dragon Inn serves a hot and sour soup "filled with soybean curds and lean shredded pork."

The dessert (which must be ordered in advance) "was a 'jewel' rice pudding... It's beautiful to see, a molded sticky rice mound with black bean paste and fruits..."

3090. Bennett, Jean. 1974. East meets West at Harris table. *Los Angeles Times.* May 23. p. H4.
• ***Summary:*** Yuet Fong Chan was born in Hong Kong; her family came from the Canton district of Chiu-Yeung. She has been married to David Harris, a native of Mississippi, since 1965. She likes to cook. One of here favorite Chinese recipes is "Soy bean cake [tofu] with pork." Other recipes are given.

3091. Kay, Theodore. 1974. Soybeans in the Nigerian diet. *Samaru Agricultural Newsletter* 16(1):18-22. May. [Eng]
• ***Summary:*** Contents: Introduction. Nutritional value of the soya bean. Daily amino acid requirements for men, women, and children. Suggested methods of incorporating soya bean into the Nigerian diet: Soya bean paste (soaked, uncooked soya beans, with the hulls on, ground to a white paste) and whole beans (not dehulled). Utilization of the paste: Directly for kosei (akara ball) and panke (puff-puff), for preparation of soya bean milk, which can be used to make protein-enriched pap, fu-fu, bean curd (to-fu), awara or wara. Use of the residue from preparation of soy bean milk [okara]: In Alele (moin-moin), or biscuits. Utilization of whole soya beans: baked, sweet baked powder, stew. Discussion: Why do we need soya bean in Nigeria? Five reasons are given. Acknowledgments to many co-workers.

The soya bean has been cultivated in the Far East since about 2800 B.C. It has [been] the main source of protein for all of East Asia, particularly for the vegetarian Buddhist. It has been used as bean curd (To-fu) and soya sauce in most parts of the Far East from Indonesia up to the Northern end of Japan, as soya bean milk in China, as soya paste (mi-so) in Japan, and as a fermented product (Tempe) in Indonesia.

The crop is well established in Benue Plateau State south of Makurdi, in the North-Western State around Abuja and in the southern part of North-Central State. However, it has been very difficult to cook the beans in a traditional West African way so it has never become popular in this country. Most of the soya bean produced in Nigeria has been exported as a cash crop, except a little for animal consumption. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

3092. *Times of India* (*The*) (*Bombay*). 1974. Soyamilk becoming a big draw. June 19. p. 6.
• ***Summary:*** Pantnagar–The soya-milk and beverage that has been produced at Pantnagar Agricultural University's pilot plant since last year has already become a big attraction, not only on campus but also in nearby towns, such as the hill station of Nainital, 75 km. away.

Nutritious, tasty and moderately priced, soyamilk that is mass produced is expected to help bridge the huge gap between the supply of and demand for regular milk in India.

The cost of making soyamilk is expected to be one-third to one-fourth the price of regular milk.

This soyamilk was developed at Pantnagar by three Indian and American scientists after three years of research under a PL-480 grant; Prof. B.P.N. Singh, Dr. Surjan Singh, and Prof. A.I. Nelson. The patent for the process and the equipment, filed in both India and the USA, is held jointly by Pantnagar University and Illinois University.

The development of the process for making soyamilk is just the beginning, said Dr. Surjan Singh. His team is in an advanced stage of research and development for making a variety of other soyamilk products "such as ice cream, curds [tofu], sweets and baby food."

• ***Summary:*** Contents: Nutritive value. Using soybeans: Fresh soybeans, dry soybeans, soybean sprouts, soy flour, soy grits, soy milk, soybean mash (or pulp), soybean curd [tofu, sold in squares called "cakes"], soybean oil. Recipes: Main dishes, vegetables, salads, breads, soups, desserts, sauces, snacks. Index to recipes. Address: Consumer and Food Economics Inst., Agricultural Research Service.

3095. *Foreign Agriculture.* 1974. Koreans expand soybean output by planting rice paddy dikes. July 8. p. 8-9.
• ***Summary:*** Korea, which doubled its imports of U.S. soybeans last year, is again promoting a program to boost domestic oilseed production by planting soybeans on rice paddy dikes. This practice, which was mandatory under the Japanese occupation, had been abandoned until revived last year. In 1973, "dike-bean" acreage was estimated at 86,485 acres. The Ministry of Agriculture and Forestry (MAF) estimates that the maximum area for dike-beans now ranges from 93,900 to 135,900 acres. A significant portion of the crop harvested daily in the summer to be consumed as a cooked, green vegetable, much as Americans eat lima beans. Nearly all of Korea's soybean production is consumed as food. Industry sources estimate that 70% is used in homes for making soy sauce and paste, 20% for bean curd, and 10% for bean sprouts. Address: Office of U.S. Agricultural Attaché, Seoul.

© Copyright Soyinfo Center 2013

3096. Siegel, Max H. 1974. For hospital's Chinese patients, journey to health starts with ethnic foods. *New York Times.* July 9. p. 12.
• ***Summary:*** The Beekman-Downtown Hospital has brought in leading Chinese chefs to teach its kitchen staff how to prepare "home cooked" meals for Chinese, who comprise about ¼ of the hospitals patients. A menu, for supper, Saturday–Group II, includes "Bean cake's soup." A recipe is given for "Chai ch'ang dow fu (Bean curd family style)," which calls for "3 pieces tender bean curds weighing about 6 ounces each."

3097. **Product Name:** Tofu Cream Pie [Strawberry, or Blueberry].
Manufacturer's Name: No Company Name. The owner later ran Cable Springs Bakery.
Manufacturer's Address: Kelly Rd., Cambridge, Massachusetts.
Date of Introduction: 1974. July.
How Stored: Refrigerated.
New Product–Documentation: Talk with Barry and Cathy Creighton. 1992. May 16. Barry and Cathy first made this product on Kelly Rd. (it was only 1 block long) in Cambridge, out of their home. Their company had no name until they moved to Cambridge St. and started Cable Springs Bakery. The product concept was developed in Los Angeles, where he was "cooking and baking for Erewhon," but he made no commercial tofu products there. Then he moved to Boston, lived on University Ave., and baked out of there for 1-2 months, then he needed a bigger place that was his own, so he moved to Kelly Rd. There he expanded his product line and first started using tofu. This product was introduced in the summer of 1974, packaged and sold at natural food retail stores (such as Erewhon) as a small, single-serving pie. Their daughter, Eliza, drew the label at home; it had a little tree on it, but no company name. He stopped making them at the end of that summer. The Kelly Rd. house burned down so they moved into the bakery; their son David was actually born in the bakery.

3098. **Product Name:** Mocha Walnut Torte (With Tofu).
Manufacturer's Name: No Company Name. The owner later ran Cable Springs Bakery.
Manufacturer's Address: Kelly Rd., Cambridge, Massachusetts.
Date of Introduction: 1974. July.
How Stored: Refrigerated.
New Product–Documentation: Talk with Barry Creighton, founder of Cable Springs Bakery. 1992. May 16. The tofu product he liked best was Mocha Walnut Torte, which he first made as a wedding cake, then sold at the Seventh Inn, a sort of gourmet macrobiotic restaurant in Boston. It was too creamy to package, so it was never sold at retail stores. He baked it in 18-inch-square shallow trays, and the restaurants sliced it into pieces as desired.

3099. *Sunset* (*Menlo Park, California*). 1974. Tofu in 1974: In this inflationary year tofu makes great budget sense. But this protein custard is a mystery to too many cooks. 153:104-06. July.
• ***Summary:*** This pioneering and very important, positive article was generated (at least in part) by an Azumaya P.R. campaign at a time when meat prices were skyrocketing.

"As food prices rise, Westerners are learning about soybean curd, an inexpensive protein food sold most often under its Japanese name, *tofu.* Oriental cooks have long known the value of this nearly tasteless substance with the texture of custard. (The Chinese call it *dow foo.*) And now various styles are becoming more widely available.

"Some people may hesitate to try tofu for fear their families won't accept it. They should realize that tofu is bland and readily assumes the flavors of whatever ingredients you use with it. The recipes here all have Oriental flavors, including such favorites as sweet and sour, teriyaki, and sushi; all are simple and quick to prepare. But the versatility of tofu makes it an appropriate ingredient for other dishes ranging from appetizers and soups to main dishes and desserts.

"The companies that make the various styles of tofu are frequently small family-run operations; products and their names vary slightly from company to company..."

"For all types of tofu, soybeans are ground, mixed with water, and cooked until a milky liquid [soymilk] is extracted and drained off. A coagulant is added to set the liquid, making a curd. How the curd is handled determines the product."

A table (with 4 columns) describes six types of tofu: (1) Fresh soybean pudding (called Dow foo fah in Chinese and having no Japanese name) is sold in portions of about 1 lb water packed in plastic tubs. (2) Soft tofu (called Suey dow foo in Chinese and Kinugoshi in Japanese) is sold in 3/4 to 1-lb blocks water-packed in plastic tubs. (3) Medium-firm tofu (Japanese style, called Dow foo in Chinese and Tofu in Japanese) is sold in 1 to 1¼-pound blocks water-packed in plastic tubs or cartons. (4) Hard tofu (Chinese style, called Dow foo yuen in Chinese and having no Japanese name) is sold as two or more slices (about 6 oz each) water-packed in bags or plastic tubs. (5) Raw-fried tofu (called *Hung siu dow foo* in Chinese and *Nama-age* in Japanese) is sold in slices or sticks of various sizes dry-packed in bags or plastic tubs. (6) Deep-fried tofu puffs (called *Dow foo bok* in Chinese and *Age* {ah-gay} or *abura-age* in Japanese) are sold in small dense cubes usually dry-packed about 15 in a 5-oz package (Chinese product) or in large puffy pieces usually dry-packed about 3 in a 1½-oz package (Japanese product).

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried tofu puffs" or the term "Deep-fried tofu puffs" or the term "Raw-fried

© Copyright Soyinfo Center 2013

tofu."

Photos show (1) Tofu slices taken from the rinsing tank and being packed into plastic tubs at Azumaya, (2) A large photo shows 8 types of Japanese- and Chinese-style tofu on a table near a wok and skimmer: Medium firm tofu, Fresh soybean pudding, Soft tofu (Japanese style), Soft tofu (Chinese-style), Hard tofu, raw fried tofu, Deep-fried tofu puffs (Chinese-style), and Deep-fried tofu puffs (Japanese-style). (3) Teriyaki-glazed raw-fried tofu cubes.

Recipes are given for Tofu and water cress soup, Tofu orange almond pudding, Stir-fried chicken and tofu, Tofu teriyaki appetizers, Fried tofu salad with peanuts, Fried tofu with pork sauce, Rice-filled agé appetizers (Sushi), and Sweet and sour tofu.

3100. Bennett, Jean. 1974. Filipino food: A blending of flavors. The dentist cooks. *Los Angeles Times.* Aug. 1. p. K22.

• ***Summary:*** About Ida Del Mundo, a fine chef, and her cooking. Philippine cuisine has a long and complex tradition. "Much of it is Spanish in origin. Some of it is of Chinese origin such as the use of wheat, rice, noodles, soy bean curd, [mung] bean sprouts, egg rolls, and the very extensive use of steamed foods." A recipe for Sweet and sour sauce dip calls for soy sauce. A photo shows Ida cooking Filipino foods.

3101. Saio, Kyoko; Sato, Iwao; Watanabe, Tokuji. 1974. Food use of soybean 7S and 11S proteins: High temperature expansion characteristics of gels. *J. of Food Science* 39(4):777-82. July/Aug. [12 ref]

• ***Summary:*** The authors studied aburage [deep-fried tofu pouches], which is one of Japan's most popular foods derived from Tofu, soybean curd. Thin sliced Tofu, after being dehydrated by pressing, is deep-fried twice, first in oil at low temperature (110-120ºC) and then at high temperature (180ºC). During the low-temperature deep-frying, the Tofu gel swells to more than 3 times its original area and its texture becomes very porous.

The effect of different coagulant types and concentrations, pH levels, and ratio of 7S to 11S proteins was studied. Aburage expands more when made with a calcium-type than with an acid-type coagulant. Calcium chloride works very well, an expansion increases with its increasing concentration and the increased use of NaCl in the buffer. 11S proteins expand better. Address: 1&3. National Food Research Inst., MAF, 12-4-1 Shiohama, Koto-ku, Tokyo; 2. Kyowa Hakko Kogyo Co., Tokyo.

3102. Dosti, Rose. 1974. Inside those tiny tiers in a Japanese picnic: Colorful array finger food. *Los Angeles Times.* Sept. 5. p. L1.

• ***Summary:*** When preparing for a picnic, the Japanese put their food in a three-tiered box named a *jyubako* [jûbako], which is often wrapped in a *furoshiki* (large handkerchief). One of the dishes served at Japanese picnics is Inari-sushi [Inari-zushi], "a tofu-filled football-shaped hors d'oeuvre,..."

The recipe for "Inari-sushi" begins: "Cut fried tofu in halves (to form half-moon with pocket). Pour boiling water over tofu and let stand for 15 seconds to remove oils from tofu. Drain. Then cook in dashi..."

3103. **Product Name:** Fudge Torte (With Tofu and Carob).
Manufacturer's Name: Cable Springs Bakery.
Manufacturer's Address: Cambridge St., Cambridge, Massachusetts.
Date of Introduction: 1974. September.
Ingredients: Incl. tofu pureed with raisins and vanilla, carob sweetened with barley malt, crusts.
How Stored: Refrigerated.
New Product–Documentation: Talk with Kathy Bellicchi. 1992. May 10. Barry Creighton developed this delicious dessert product, which was the "grandmother of all desserts in the Boston macrobiotic community." It was very popular. She thinks he was selling it commercially for 1-2 years before August 1974 when he officially started Cable Springs Bakery in Cambridge. He was married in Jan. 1974. Kathy thinks he initially he made it out of Anne Ohaion's kitchen at 29 University Road. It was composed of a layer of crust on the bottom, topped with a layer of tofu pureed with raisins and vanilla, topped with a layer of thick carob-and-water sweetened with barley malt. This layering was repeated 2 more times, so that there were 3 layers of each type. The top layer was the carob. After being baked in trays, the torte was cut into rectangles about 2 by 4 inches on a side. Kathy bought this bakery from Barry Creighton, and made these tortes once a week. This was the only commercial tofu- or soy product she made.

Other early commercial soy products in Boston: Matthew and Helen Sandler (who now live in Aspen, Colorado) ran a bakery and probably used soymilk in some baked goods. A guy named Andy [Strauss] made cookies with soy. Tom Iglehart, who now lives in Jamaica Plain, had a bakery (Kathy used to share bakery space with him). He used to make sandwiches with various tofu spreads and tofu salads.

Talk with Barry Creighton. 1992. May 16. He first made this product in September 1974 at Cable Springs Bakery on Cambridge St. in Cambridge, Massachusetts. This was the only tofu product he made while at Cambridge Street. The only products he made at Ann Ohaion's kitchen were the Apple Crumb, Sea Vegetable Pie, and Currant Pudding Pie–none of which contained tofu. He does not feel this was his best tofu product. "It was a little 'out there' macrobiotically." The tofu product he liked best was Mocha Walnut Torte (which see).

3104. P.T.I. 1974. Pant varsity plans milk for millions project. *Times of India* (*The*) (*Bombay*). Oct. 4. p. 8.

© Copyright Soyinfo Center 2013

• ***Summary:*** Pantnagar (Uttar Pradesh)–"The G.B. Pant university of agriculture and technology here proposes to start a 'milk for millions' project in collaboration with the World Bank, the Life Insurance Corporation, Central and state governments and the proposed cattle development corporation."

The project includes the introduction of "soymilk" (soyabean milk) as a supplement to regular milk for the first time. A new plant with an installed capacity of 10,000 liters per day of soymilk would cost only 1 million rupees. Except for the homogenizer, all of the equipment is available in India. The cost of production is expected to be 50-60 paise per litre.

The protein and fat content of the soymilk are equal to those of cow's milk. The milk can be transformed into curds [tofu], which will stay fresh for a week when stored at 5ºC.

3105. Dinshah, Freya. 1974. The vegan kitchen. 9th ed. Malaga, New Jersey: The American Vegan Society. 48 p. Illust. Index. 29 cm. Spiral bound.

• ***Summary:*** A lifetime vegetarian, the author has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. In this 9th edition, soy-related recipes include: Soya sprouts (p. 14). Soya patties (with soya flour, baked in an oiled dish, p. 23). Soya rounds (with whole soybeans, baked on a lightly oiled baking sheet, p. 24). Soya beans (dry roasted [soynuts], p. 25). How to shell green soya beans (p. 25). Soya loaf (with cooked soya beans, baked, p. 28). Soya butter (made with soya powder/flour, p. 29; this is not really soynut butter). Sesame/soya milk (with soya powder/flour and dates, p. 30-31; a photo shows a bag of Fearn Natural Soya Powder). Quick soya/tahini milk (with soya powder/flour, p. 32). Soya cheese Americana (tofu made with soya powder/flour and coagulated with lemon juice, p. 32). British Plantmilk cheese (tofu made with Plamil and lemon juice). Australian soya cheese (with soya powder, p. 33). Vegan soya/potato mayonnaise (with soya milk, p. 33). Basic jelled ice cream (with soya milk and agar-agar, p. 38).

The cover of this cookbook states: "Comprehensive total-vegetarian natural food system. Nutritionally balanced. Scientifically sound. Healthful and humane. Ethically unassailable. Ecologically superior. Recipes, menus, ideas, illustrations." Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey.

3106. Farm, The. 1974. Yay soybeans! How you can eat better for less and help feed the world. Summertown, Tennessee: The Book Publishing Co. 14 p. Illust. 22 cm.

• ***Summary:*** This highly creative little booklet, printed with blue ink on white paper (a similar 1978 edition used brown ink on white paper), contains many original / pioneering soyfoods recipes (marked with an asterisk

(*)). Contents: Living on soybeans. Some of our favorite ways to eat soybeans. Basic cooked soybeans: Soybeans and tortillas, Soybean stroganoff, Soyburgers, Soy fritters, Cheezy soybeans (Good Tasting Nutritional Yeast gives the cheezy flavor), Soy nuts (dry roasted), Soy coffee. Soy milk: Homemade using soy flour or using soybeans, Soy ice cream–"Ice Bean,"* (made with soy milk in vanilla or cocoa flavors), Soy yogurt* (p. 5, made with soymilk and starter from Chr. Hansen's Lab. in Milwaukee, Wisconsin). Soy flour: Basic salad and sandwich spread, Seasoned sandwich spread. Soy cheese* (made from fermented / soured soymilk), Soy cheesecake* (made with "soy cheese"), Cookie crust for cheesecake, Soy mayonnaise* (made with soymilk). Soy pulp [okara]: Introduction, Soy pulp burgers*, Scalloped potatoes and pulp, Soysage*, Protein spice cake (with soy pulp), Soy pulp cookies, and Soyola* (soy pulp granola). Eggless cookery: Introduction, Pancakes (with soymilk), Chocolate cake (with sour fresh soymilk), Soy soufflé (with soy flour). Good Tasting Nutritional Yeast: Introduction, Melty nutritional yeast "cheese," Nutritional yeast "cheese" crackers, Golden gravy. Nutrition of soybeans: Nutritional composition of 1 cup whole cooked soybeans, 1 cup sweetened soymilk, 1 cup mother's milk, 1 cup cow's milk. "We supplement our soymilk with vitamin A

SOY CHEESE

Make a thick soymilk, using less water. Place in a wide-mouthed glass container and let it sour for a few days. A thick curd will form with a clear, yellow whey underneath. (If it gets a slimy consistency, do not use it.) Transfer the curd carefully into a cloth placed in a colander without breaking up the curd. Let drain for several hours. Do not squeeze. Tie up the cloth and boil in salted water for 45 minutes to an hour. Place again in a colander and let drain, untouched, for 2 hours. This makes one consistency of soy cheese, and another can be made by then pressing between two boards. Bricks, a pot full of water, or a heavy dictionary all make good weights. The pressed cheese can be sliced and served cold or fried with onions.

SOY CHEESECAKE

3 cups soy cheese (either basic spread* or cheese from recipe above)
½ cup sugar
½ t. salt
¼ cup oil
2 T. cornstarch dissolved in ½ cup water

*If you use basic spread, rinse with cold water to remove vinegar taste.

Mix all ingredients. Put in prebaked pie shell (see recipe below). Cheesecake batter should cover edges of pie crust to prevent burning of crust. Bake 30 minutes at 350°. Chill before serving if possible. Serves 8. (Makes one 8 x 8 inch pan. Double this recipe for a 9 x 12 inch pan.)

Variation: use half margarine (melted) and half oil. Substitute ¼ cup white flour and ¼ cup water for cornstarch and water, and add lemon juice and vanilla. This variation should sit until completely cool. Top with fruit, jam, fruit glaze, a layer of slightly sweetened soy yogurt, or a thin layer of lemon pudding, or a crumb topping.

COOKIE CRUST FOR CHEESECAKE

2 cups white flour
½ cup sugar
1/8 cup oil
¼ scant cup soft margarine
1/8 cup water
¼ t. salt
dash of cinnamon

Mix flour, sugar, salt and cinnamon. Then work in oil and margarine with fingers. Work in water. Pat on bottom and halfway up sides of pan and bake quickly in a hot oven till light brown. Be careful: it burns easily.

SOY MAYONNAISE

1 cup soymilk
2 1/3 cup oil
1 T. sugar
2 T. vinegar
1½ t. salt

Put cool or cold soymilk in a blender. Pour in oil slowly while blending at high speed. Blend until the mixture gets very thick (about 1 minute). Blend in the rest of the ingredients with a rubber spatula. Makes about one quart.

(150 mcg./cup), vitamin D (2.5 mcg./cup), and vitamin B12 (6 mcg./cup).” Composition of soymilk and soypulp (wet and dry, including PER). Some facts about people and food. Plenty.

Page 1 begins, “On The Farm we live on soybeans. They supply us with the protein part of our diet, taking the place of meat, fish, eggs, milk, and dairy products. We are complete vegetarians and don’t eat any of those foods. We are growing 150 acres of soybeans this year to feed our community of 800 folks... We’ve been living, working, and growing on this diet for four years now, as a community, and many of us have been vegetarians longer than that. So far we’ve delivered 230 babies here on the Farm...” The last page notes that The Farm has “formed a new non-profit corporation called Plenty, with the following purposes, as stated in its charter: To help share out the world’s food, resources, materials, and knowledge equitably for the benefit of all...”

The section titled “Soy Pulp” (p. 7) states: “If you make soymilk, you’ll have soy pulp left in the cloth when your milk is done. Our soy dairy produces lots of pulp every day, and although the pulp contains less protein than the milk, the protein it has is high quality, so we’ve been putting our creative kitchen instincts to work developing new ways to use this nutritious foodage. We’ve found that soy pulp can be substituted for rice in many recipes. It also can be used in baked goods likes cakes and cookies, where it gives a coconutty flavor when combined with sugar and vanilla extract...” Three recipes are given.

Note 1. This is the earliest document seen (Oct. 2003) that uses the term “soy dairy” to refer to a facility which makes soymilk and products from soymilk.

The last page is about “Plenty.” “Living in Tennessee and eating our soybeans hasn’t seemed like quite enough to be doing about world hunger and other areas of human need around the planet. So we have formed a new non-profit corporation called Plenty, with the following purposes, as stated in its charter:

“’To help share out the world’s food, resources, materials, and knowledge equitably for the benefit of all.

“’To help and aid any people anywhere in the world who due to any natural or man-caused disaster such as drought, famine, flood, earthquake, tidal wave, weather imbalance, disease epidemic, storm, fire, insect devastation, crop failure, population imbalance, war, political oppression, religious oppression, racial discrimination, or greed, are in need of food, clothing, shelter, medical aid and supplies, resources, materials; agricultural, engineering, or scientific assistance or education; or anything else, to enable them to lead healthy, comfortable, responsible, and productive lives in the pursuit of happiness...

“’To accept donations, gifts, devises, bequests, and loans of food resources, materials, equipment, funds, stocks, bonds, and property of all kinds from any and all sources to help achieve the purposes of the corporation;

“’To establish and coordinate a group of volunteer workers who will help achieve the purposes of the corporation; such volunteers will not be salaried, but will receive only necessary subsistence...

“’To enter into any partnership or union of interest with others... or produce food, resources, materials, funds, or knowledge that will help achieve the purposes of the corporation;

“’To establish and operate orphanages and foster homes to care for and provide homes for orphans from all countries of the world...

“’To help and aid in finding homes with adopting parents for orphans from all countries of the world, and to help these orphans settle in these homes with adopting parents...’

“We really do have Plenty. Let’s spread it around!

“For further information, write: Plenty, Route 1, Box 289, Summertown, Tennessee 38483.”

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy pulp” or the word “soypulp” to refer to okara.

© Copyright Soyinfo Center 2013

Note 3. This is the earliest document (Oct. 2001) seen that contains a recipe for a soy cheesecake (one of two documents).

Note 4. This is the earliest document seen (June 2001) that uses the word "soysage" to refer to a sausage-like food product made largely from okara (soy pulp).

Note 5. This is the earliest document seen (Jan. 2010) concerning Plenty (Summertown, Tennessee).

Note 6. This is the earliest document seen (Feb. 2002) that mentions tofu (called "soy cheese") in connection with The Farm.

Note 7. This is the third earliest publication seen (Jan. 2003) in the SoyaScan database under the subject heading "Soyfoods Movement." Address: Tennessee.

3107. Glesgow, Iorez. 1974. Try tofu–The bean curd: This inexpensive, high protein food is even better and tastier–when the flavor is "Occidentalized." *Organic Gardening and Farming.* Oct. p. 92-95.

• ***Summary:*** Contains a recipe, with 10 photos, for making tofu at home. The soymilk is curded with magnesium sulfate (epsom salts). The curds are pressed in a colander lined with cheese cloth. Cut the tofu into cubes about 1½ inches on a side and store in a refrigerator in a container with sufficient *salted* water to cover the cubes. The salt from the water permeates the tofu cubes giving them an "Occidentalized" flavor.

3108. Katzen, Mollie. 1974. The Moosewood cookbook: Recipes from Moosewood Restaurant, in the Dewitt Mall, Ithaca, New York. Ithaca, New York: Published by the author. 79 p. No index. Oct. 28 cm. *

• ***Summary:*** This is the self-published, hand-lettered, original edition of what became one of the best and most popular American vegetarian cookbooks of the 1970s and 1980s. The book went through three printings and sold about 5,000 copies over a period of about 2 years before Ten Speed Press approached Mollie to buy the rights to a revised and expanded edition–though still hand lettered. Mollie's first printing of the book was sold for $4 only at one bookstore–McBooks. The second run was sold at about 3 local bookstores. The warehouse was in Mollie's home and car. She distributed it to the bookstores. The Ten Speed Press edition was published in Oct. 1977. It contains almost everything that was in the original edition but about 3 times as many recipes.

Soy-related recipes include: Perfect protein salad (with cooked soybeans, p. 32). Move over Joyce Chen Casserole (with tofu, p. 37). Zuccanoes (with cooked soybeans, p. 48). Soy gevult (p. 54). Gado-gado (with tofu, p. 55).

Note: Mollie writes in 1990: "I first learned about tofu in 1970 from a Chinese restaurant in San Francisco. They called it 'bean cake' soup. I was intrigued–and not disappointed."

Talk with Mollie Katzen. 1991. Oct. 31. Mollie got her first job as a cook in 1969 at a tiny macrobiotic restaurant named The Ithaca Seed Company in Ithaca, New York. "In those days to be a vegetarian was either to be macrobiotic or just to eat a lot of dairy products and cheese. There was very little available middle ground." Then she moved to San Francisco and from 1970-72 worked as a cook at the Shandygass, a popular, high-class, international gourmet vegetarian restaurant. The Moosewood restaurant was started in 1973 by 7 people, each of whom was an owner; 5 women and 2 men. Mollie was the only person among these who had restaurant cooking experience. The book originated because Mollie wanted to standardize the cooking and recipes in the restaurant. It was meant mainly for use by the cooks in the restaurant, and prior to its appearance there had been few written recipes. Every recipe that was in this book was served at Moosewood at that time. Quite a few contained dairy products–to try to attract mainstream customers to the 65-seat restaurant, and to please them. Then customers began to ask for the recipes. Originally the restaurant was lacto-ovo-vegetarian except for one meat entree a night, but that was soon dropped because no one wanted to cook it and none of the customers wanted to eat it. The Moosewood restaurant still exists (though they now serve fish) and is bigger than ever. They now publish their own cookbooks and have rights to the name "Moosewood."

Of her three cookbooks, Mollie personally likes her most recent one, *Still Life with Menu*, the best. It is healthier and lower in fat. A new, extensively revised, 15th anniversary of the Ten Speed Press edition of Moosewood will be published in 1992. Address: Moosewood Restaurant, Dewitt Building, Ithaca, New York.

3109. Spira, Ruth Rodale. 1974. Naturally Chinese. Emmaus, Pennsylvania: Rodale Press, Inc. iii + 346 p. Illust. Index. 25 cm. [8 ref]

• ***Summary:*** Soy-related recipes include: Deep-fried bean curd with sesame sauce (p. 91, with "4 cakes bean curd," each of which is cut into 9 pieces, dried on paper toweling, then deep fried at 375ºF). Chicken and bean curd stick soup (p. 109, with "¼ pound bean curd stick" [dried yuba sticks]). Bean curd and greens soup (p. 115, with "1½ pieces fresh bean curd" [tofu]). Stir-fried eggs with soybean sprouts (p. 226). Stir-fried eggs with bean curd (p. 227, with "2 fresh bean curd cakes or 1/3 pound homemade bean curd"). Bean curd sautéed with eggs (p. 258, with "4 cakes fresh bean curd"). Stir-fried bean curd with black mushrooms (p. 259). Stir-fried bean curd with squash (p. 260). Homemade bean curd with soybeans (p. 261-62, curded with vinegar or gypsum / calcium sulfate. The residue [okara], which is called "Soybean pulp, may be added to ground beef up to a 1 to 2 ratio." Step 8. "Remove curd from bag and mix with salt" is a new invention in making tofu–which ends up with a texture like cottage cheese and seasoned with salt). Homemade bean curd with soybean powder (p.

© Copyright Soyinfo Center 2013

262-63, curded with vinegar or gypsum). Celery cabbage creamed in soy milk (p. 269, with "4 heaping teaspoons soybean powder." "2. Place soybean powder and water in a pint jar. Tighten lid and shake well. Add cornstarch and honey to soybean 'milk'"). Soybean sprouts with celery (p. 273). Spinach in soy sauce (p. 276). Vegetarian dish of the Buddhists (p. 277-78, with "2 ounces dried bean curd" [probably dried yuba sticks] and "3 cakes fresh bean curd").

"A guide to Chinese cooking ingredients" (p. 289-324) and "Glossary" (p. 325-26) describe: Bean curd (dow foo–tofu, incl. pressed curd {firmer}, canned bean curd {somewhat less creamy than the fresh}). Bean curd, dried (foo jook [dried yuba sticks]; tiem jook is sweeter than foo jook). Bean curd cheese (fooh yu [fermented tofu]). Bean paste, yellow (wong dow sa). Bean sauce, brown (min see jeung). Beans, black soy (kei tou). Beans, black fermented (dow see; these black soybeans are fermented, dried and salted). Hoisin sauce (hoy sin jeung. "A soybean-based sauce..."). Soybean sprouts (Da dow ngah).

Photos show: (1) Three squares ("pillows") of pressed bean curd. (2) A box of "Dried bean curd" [foo jook] (p. 296). (3) Black soybeans (enlarged) (p. 299). (4) A bag full of "Salted black bean (spiced)" (fermented black beans). Made by Koon Chun Sauce Factory, Hong Kong. (p. 300). Note: As of Nov. 2011 the company (in the New Territories, Hong Kong, with a website) is named "Koon Chun Hing Kee Soy & Sauce Factory Ltd."

3110. Claiborne, Craig. 1974. Traditional dining in Japan: In the evening and in the morning, too. *New York Times.* Nov. 3. p. 80.
• ***Summary:*** He enjoyed shioyaki, a wedge of fresh salmon, briefly salted and then broiled. It was accompanied "by a piping hot bowl of miso or bean or bean curd soup containing small squares of bean curd and midget-size brown wild mushroom caps,..."

In giving a history of oden restaurants in Japan, the writer explains that they were established as places where men could express their frustrations, hurt feelings or pent-up anger. Oden portions are typically large in size. Choices include "deep-fried bean curd patties (ganmodoki) made with chopped vegetables."

3111. Oberdorfer, Don. 1974. The Japanese have a word for it: Sushi. *Washington Post.* Nov. 7. p. E12.
• ***Summary:*** Describes a visit to a neighborhood tofu shop in Tokyo–one of 8,200 in Tokyo and 72,000 throughout Japan. On Nov. 11 they give special discounts in observance of "Sushi Day," a festival the shopkeepers established a few years ago. Sushi originated in China about 1,700 years ago, but the Japanese have developed the modern version.

A photo shows the "chief clerk of the sushi parlor making 'inari sushi,' beancurd coverings fill with vinegared rice,..."

3112. Aihara, Herman. 1974. Soybean diet: Diet for the better protein. Oroville, California: George Ohsawa Macrobiotic Foundation. xi + 164 p. Nov. Illust. Index. 21 cm.
• ***Summary:*** This book is an expanded version of "Miso and Tamari" (1972). Contents: Preface. Introduction. 1. Theory: Steak vs. gasoline, is animal protein indispensable, protein requirements, essential amino acids–law of all or nothing, minimum daily requirement of essential amino acids.

2. Miso: Introduction, the origin of miso, kinds of miso, ingredients, how to make miso, value of miso, miso in the treatment of tuberculosis, how to make miso at home using mugi koji, recipes using miso for warmer seasons, recipes using miso for colder times.

3. Tamari or traditional soy sauce: History, chemical change of tamari, how to make tamari soy sauce at home, how to use soy sauce, soy sauce cooking for warmer times, soy sauce cooking for colder times.

4. The other soybean and high protein foods: How to make tofu at home, how to make tofu plaster, how to make agé–deep fried tofu at home, how to make seitan at home. 4A. Tofu, seitan, and gluten cooking for warmer times: How to make tofu, nigari, and bulk tofu at home, how to make wheat gluten, seitan and fresh wheat *fu* at home. 4B. Tofu, seitan and gluten cooking for colder times. Appendix: Cutting styles, useful information. Bibliography.

Large photos near front of book show: (1) Herman Aihara. (2) Cornellia Aihara looking very happy at her stove. Address: Oroville, California.

3113. Hughes Markets. 1974. Happy New Year '75 (Ad). *Los Angeles Times.* Dec. 26. p. K20.
• ***Summary:*** The section titled "Foods of the Orient" includes: Kikkoman soy sauce, one gallon can $3.29. "JFC Kinako 7 oz. pkg. Soy bean flour–35¢. Misuzu Koya Dofu 3.5 oz. box. Dried Soybean Cake [Dried frozen tofu]–69¢... Age [Deep fried tofu pouches, sold in the fresh produce dept.] 59¢ package."

Also includes Tempura batter mix, New crop botan rice, Motohiko Sapporo maki–Rolled Tangle [konbu]. Azuma yokan–Bean jelly [azuki]. JFC or Hime Shitake–Shiitake dried mushrooms. Hime kampyo [kanpyo]–Dried gourd strips. Take waribashi–Bamboo chopsticks. Kamaboko. Blue chip stamps.

3114. *SoyaScan Notes.* 1974. Chronology of soybeans, soyfoods and natural foods in the United States 1974 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1974 March. The first issue of *Vegetarian Times* published by Paul Obis in Chicago.

1974 April. Bob Gerner (of Westbrae) and William Shurtleff (guide) travel throughout Japan searching for

© Copyright Soyinfo Center 2013

quality sources of traditional miso and soy sauce. Right after the trip, Westbrae starts importing these products.

1974 Aug. 9. President Nixon, elected in 1968 and 1972, resigns after the Watergate scandal. Gerald Ford succeeds him as president. Butz continues as Secretary of Agriculture.

1974. Brazil passes West Germany to become the world's second largest soybean crusher, after the U.S.

1974 late. Miles Laboratories / Worthington introduces the Morningstar Farms line of meat analogs based on spun soy protein fiber. Sold nationally at U.S. supermarkets.

1974 late. The Farm in Summertown, Tennessee, publishes *Yay Soybeans!*, a 14-page booklet containing many innovative soyfoods recipes, such as "soy ice cream–ice bean," soy yogurt," "soy cheese," "soy cheesecake," "soy mayonnaise," and "soysage" (a meatless okara & soymilk sausage). Most of the dairylike products were made with fresh or cultured soymilk. The Farm now grows 150 acres of soybeans to feed its community of 800 people. It has just established Plenty, a non-profit corporation "To help share out the world's food, resources, materials, and knowledge equitably for the benefit of all."

1974. The Farm in Summertown, Tennessee, publishes *Hey Beatnik*, which contains the earliest know use of the term "Soy Dairy." The Farm's soy dairy now makes 60 gallons of soymilk a day at a total cost of $0.30 per gallon.

1974. *Tofu Recipes*, the first book on tofu in English, written and self-published by Grace Kikuchi in Ann Arbor, Michigan. Spiral bound and 47 pages long, it gives a recipe for homemade tofu and uses tofu largely with fish and meat.

1974 Nov. World Food Conference in Rome. Delegates from 130 UN member countries adopt an international strategy to overcome world hunger and malnutrition.

1974-1975? Eden Foods starts to import natural foods, including miso and shoyu, from Japan.

3115. **Product Name:** [Vita Tofu].
Foreign Name: Vita Tofu.
Manufacturer's Name: Nepal Soya Industries (Soya Food Industry; Kathmandu Tofu Shop).
Manufacturer's Address: 9/374 Bhedashing, Jamguthi, Kathmandu, Nepal.
Date of Introduction: 1974. December.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. June 20.

Letter from Miss Ruth Angove, Nutrition Advisor, United Mission to Nepal, G.P.O. Box 126, Kathmandu, Nepal. 1983. Aug. 16. Concerning the small tofu shop you asked about in your letter of 20 Nov. 1982, two men work there, Achyut Anand Baidja [Achutananda Vaidya; apparently the owner from the Newar ethnic group], and Bhenda Singh. The address is Jyanguthi 9/374, Kathmandu. "He is employed at the Government Food Research Lab., and has been in Japan in 1974, where he learned the tofu process and bought a small presser. He makes tofu in a dark room off a filthy courtyard. It is not fly screened. Soaked beans were draining on a piece of old fly screening and two small boys sitting on the floor were cutting up buffalo meat for sun drying. He told me that it is difficult to do the process in Nepal. He delivers to the vegetable market in the morning. The stall holder keeps the tofu in water in an old and dirty plastic bowl. The water gets dirtier all day at in present temperature (30ºC) spoilage is rapid. He has applied for a loan for a cabinet freezer. In my opinion, conditions in downtown Kathmandu are totally unsuitable for food industry! I enclose a copy of his leaflet. He has a copy of the large *Book of Tofu."*

The leaflet (4.5 by 7.75 inches, black on pink, written in Nepali) says: "High protein food. Vita Tofu. To prepare: 1. Cube the tofu, fry it in oil, add to any curry, vegetable, or meat dish; mix and serve. 2. Crumble the tofu by hand, fry in oil, and mix with tomato, onions, and spices as desired. 3. Fry sliced tofu. Sprinkle with salt and serve.

"Tofu can be used to increase the protein for small children, pregnant women, and old people. We can prepare tofu for parties and functions given 24 hours notice. We are keen to serve you.

"Soya Food Industry, Kathmandu."
