DEDICATION AND ACKNOWLEDGMENTS

This book is dedicated to the first wave of Chinese and Japanese tofu makers who brought tofu to the West (1878-1975) and the first wave of Caucasian tofu makers who brought tofu to the West (1929-2013).

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Kay Derr, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Ellen Knollman, Patricia Krug, Sarah Lee, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation and maps: Akiko Aoyagi Shurtleff.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao, Lynn Hsu, Brooke Vittimberga.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland. And to Lorenz K. Schaller of Ojai, California.

■ For outstanding help on this tofu book we thank: H.T. Huang, Toshie Marra, Shoan Yamaguchi, Mr. & Mrs. Toshie Arai, Bill, George and Jack Mizono, Gary & Chandri Barat, Hervé Berbille, Billy Bramblett, John Breen, Jon Cloud, Bob Davis, Steve Demos, Bernd Drosihn, Paul Duchesne, Barbara Elliott, Louis Fellman, Rany Heang, Steve Fiering, Klaus Gaiser, Lorraine Guardino, Raj Gupta, Wolfgang Heck, Benjamin Hills, Norman Holland, Ted Hymowitz, Richard Jennings, Thomas Karas, Yasuo Kumoda, Vlatka Kuzmic, Tom Lacina, Ken Lee, Lee R. Lee, Richard Leviton, Luke Lukoskie, Philip Marshall, Art Mio, Mark Messina, Jim Miller, Larry Needleman, Ted Nordquist, Eileen Ota, John Paino, Danny Paolucci, Laurie Praskin, Mary Pung, Jeremiah Ridenour, Bruce Rose, Richard Rose, Andy Schecter, Matthew Schmit, Seemo (Hillel Shapiro), Ratan Sharma, John Sim, James Skiff, Patricia Smith, Bernard Storup, Jamie Stunkard, Wataru Takai, Harry Tanikawa, Tom Timmins, Minh Tsai, Svadesha Ruediger Urban, Casey Van Rysdam, Sjon Welters, Peter Wiegand, Stephen Yu.

■ Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony, this series of books on the Web would not have been possible.

This book, no doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

■ This bibliography and sourcebook was written with the hope that someone will write a detailed and well-documented history of this subject.

INTRODUCTION

Brief chronology of tofu and tofu products.

965 CE – Tofu is first mentioned in China in a document, the *Qing Yilu* (Wade-Giles: *Ch'ing I Lu)* [Anecdotes, Simple and Exotic], by Tao Ku. It states: "In the daily market were several catties of doufu. People of the region called doufu the 'vice mayor's mutton.'" It goes on to tell the story of a vice mayor named Jishu, who was so poor that he couldn't afford to buy mutton. Instead he bought a few pieces of tofu every day and ate them as a side dish with rice. Soon people in the area came to call tofu the "vice mayor's mutton." The story implies that tofu was widely consumed in China in those days and that it was less expensive than mutton.

1183 – Tofu is first mentioned in Japan in the diary of Hiroshige NAKAOMI, a Shinto priest of the Kasuga shrine at Nara; the tofu was used as an offering at the shrine's altar.

1457 – The word "tofu" is first written in Japan with the characters used today.

1603 – The word "tofu" is first mentioned in a European-language (Portuguese) document, *Vocabulario da lingoa de Iapam*... [Vocabulary of the language of Japan], the earliest dictionary of the Japanese language compiled by Europeans (Jesuits living in Nagasaki, Japan). Tofu is referred to as *Cabe*, *Tôfu*, or *Taufu*.

1613 – The word tofu is first referred to (though indirectly) for the second time by a Westerner, Captain John Saris, in the log of his trip to Japan. He wrote "Of Cheese [probably tofu] they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts." This is the earliest English-language document that mentions tofu in connection with Japan.

1665 – Tofu is first mentioned specifically by a Westerner, Domingo Fernández de Navarrete, in his book *A Collection of Voyages and Travels*. Navarrete, who served as a Dominican missionary in China, wrote: "Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese*, the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu*, that is, paste of kidney-beans. I did not see how they made it. They draw the milk out of the kidney-beans, and turning it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd, and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in China, and very hard to conceive there should be such abundance of kidney-beans. That *Chinese* who has *teu fu*, herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. *Teu fu* is one of the most remarkable things in *China*, there are many will leave pullets for it. If I am not deceiv'd, the *Chineses* of *Manila* [Philippines] make it, but no *European* eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of *Ajonjoli* ([sesame seed] a very small seed they have in *Spain* and *India*, which we have not) which the *Chineses* make in that city and is an extraordinary dainty."

1704 – Friar Domingo Navarrete's book is published in English. This is the earliest English-language document that mentions tofu in connection with China.

1770 Jan. 3 – James Flint in Capringe writes Benjamin Franklin in London (in response to an inquiry from Franklin) a detailed description of how the "Chinese convert Callivances into Towfu" (soybeans into tofu).

1770 Jan. 11 – The earliest document seen in which an American mentions tofu is a letter written by the famous Benjamin Franklin (who was in London) to John Bartram in Philadelphia, Pennsylvania. He sent Bartram some soybeans (which he called "Chinese caravances") and with them he sent "Father Navarrete's account of the universal use of a cheese made of them in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made, and I send you his answer. I have since learned that some runnings of salt (I suppose runnet) is put into water, when the meal is in it, to turn it to curds."

1821 – The second earliest reference seen to tofu in America, and the first to be published in the USA, appeared when A.F.M. Willich of Philadelphia mentioned it in *The Domestic Encyclopedia*. Speaking of soybeans (which he called "the seeds of the Chinese plant *Dolichos soja*"), he writes: These *seeds* are used in China and Japan as food; they are made into a kind of jelly or curd, which is esteemed very nutritious,

Copyright © 2013 by Soyinfo Center

and which is rendered palatable by seasonings of different kinds."

1870 Dec. – The term "Bean curd" is first used by Emil V. Bretschneider, writing in English in the *Chinese Recorder and Missionary Journal* (Foochow, p. 173). He says: "Bean-curd is one of the most important articles of food in China." Then he gives an accurate description of how it was made.

1880 – Tofu is first made in Europe by Paillieux, in France, for the Society for Acclimatization (but not on a commercial scale).

1878 – The earliest tofu company in the USA, Wo Sing & Co., is in business at 708½ Dupont St. in San Francisco, making both fermented and regular tofu.

1896 June – Tofu first appears in print in an American scientific journal (*American Journal of Pharmacy*), in an article by Henry Trimble, a pharmacist, titled "Recent Literature on the Soja Bean."

1905 – Five tofu shops are now owned and operated by Japanese in the United States: (1) Minato-ya, 24½ Quincy St., San Francisco, California. (2) Murata-ten (Renamed Murata Tofu-ya by 1906), P.O. Box 51, Isleton, California. (3) Nishi Tofu-ya, 87 Japanese Alley, Sacramento, California. (4) Okumura Kuraoka Tofu-ya [Tofu Shop] (Renamed Okumura Tofu-ya by 1906), 632 N. 6th St., San Jose, California. (5) Ichino Tofu-ya / Shintaro Kodama, 446 Jackson St., Los Angeles, California. Note that all are located in California. (Source: *Zaibei Nippon-jin Nenkan (The Japanese-American Yearbook.* 1905).

The first Japanese tofu shop in Washington State was in operation by 1906 (in Seattle); in Utah by 1907 (Ogden); in Nevada by 1908 (Reno); in New York by 1911 (Brooklyn, NYC), and in Idaho by 1913 (Sugar City). Thus, almost all of the earliest known tofu shops in the United States were started by people of Japanese ancestry - most of them in small communities in California, Oregon and Washington.

By 1910 at least 61 Japanese tofu shops had been established in the USA, by 1920 at least 166, by 1930 at least 293, by 1940 at least 392, and by 1950 at least 425.

1906 – Quong Hop & Co. starts making tofu in San Francisco, California. Until Sept. 2010, when it declared bankruptcy, Quong Hop was the oldest existing Chinese-American tofu manufacturer in the USA.

1910 – Europe's first commercial soyfoods manufacturer, named *Caséo-Sojaïne*, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. By May 1911 he was making and selling tofu, and by August 1911 he had added smoked tofu, pressed tofu sheets, fermented tofu cheese (in Gruyere, Roquefort, and Camembert flavors), and soymilk.

1911 – Ohta Tofu-ten (Ota Tofu Shop) is now making tofu at 266 Davis St., Portland, Oregon. As of 2013 Ota Family Tofu is still making tofu in Portland, Oregon, making it the oldest existing tofu maker in the United States.

1923 – The two 2nd oldest existing Japanese-American tofu companies (House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu) are founded in Hawaii. They both began as H. Iwanaga Daufu at 1031 Aala St. in Honolulu. In 1926 the company was renamed Shoshiro Kanehori Tofu, and in 1937 Haruko Uyeda Tofu, still at the same address. In about 1939 the company was purchased by Mr. and Mrs. Shokin Yamauchi, who later renamed it Aala Tofu Co. Their son, Shoan Yamauchi, made tofu at the family company until 1946, when he went to Los Angeles, purchased the Hinode Tofu Co., and began making tofu there in 1947. After becoming Matsuda-Hinode Tofu Co. in 1963, the company was renamed House Foods & Yamauchi Inc. in 1983.

1929 Nov. – T.A. Van Gundy, a Seventh-day Adventist and founder of La Sierra Industries in Arlington, California (near Riverside), becomes the first Westerner to make tofu commercially when he introduces La Sierra Soya Cheese. This tofu was canned and pimiento was added to prevent graying after canning.

1930 – Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, *yaki-dofu* (grilled tofu), and *ganmodoki* (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932 Dec. – Madison Foods, part of Madison College in Madison, Tennessee, is making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934 – By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, is making Loma Linda Vege-Cheese (canned tofu with pimiento).

1939 – Paris Tofu, founded by Joe Gon Fung, starts making tofu at 237 Powell St., Vancouver, BC, Canada. In 1957 the name was changed to Sunrise Market Ltd. and Leslie Joe became the owner.

1942 Sept. – Dr. Harry Miller, a Seventh-day Adventist

Copyright © 2013 by Soyinfo Center

doctor who had worked for many years in China as a medical missionary, begins making Miller's Soya Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept. – Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned.

1957 Aug. – Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in *Soybean Digest*) the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958 – The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958 – Tofu is first sold in a U.S. supermarket, Boys Markets, a supermarket chain which had about 12 stores at the time in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965 – The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of Romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966 – Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Shoan Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

1975 March – Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec. – *The Book of Tofu*, by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold more than 618,000 copies in English-language editions by April 2013, played a major role in introducing tofu to the Western World. Tofu came to the Westen world from 1975 on as part of a new wave of interest in vegetarianism.

1976 Jan. – Swan Gardens starts making tofu in St. Ingatius, Montana. Founded by Dick & Jocelyn McIntyre. In 1979 they moved the company to Miami, Florida.

1976 Aug. – Larry Needleman introduces The Learning Tree Tofu Kit (Bodega, California).

1976 Sept. – Farm Food Company starts making tofu as part of their Soy Deli at 820 B. St., San Rafael, California. Robert Dolgin and David Sandler are key figures.

1976 Nov. – Island Spring, Inc. begins making tofu on Vashon Island, Washington state. Founded by partners Lukoskie and Sylvia Nogaki.

1976 – Starting in the mid-1970s young American tofu makers start to use tofu in a fundamentally new way – as an ingredient (often in place of dairy products or meat) in a multitude of popular American foods, such as: Tofu Creme Pie (Sprucetree Baking Co., 1976). Tofu Pops (Vegetable Protein Co., May 1977). New Leaf Tofu Dressing (Quong Hop & Co., Sept. 1977). Fried Rice & Tofu Sandwich (Paul Duchesne, Nov. 1977). Tofu Chip Dip, Tofu Baked with Tamari, Marinated Tofu, Mary's Roasted Cashew Tofu Cheese Cake, Mary's Tofu Rice Salad, Mary's Eggless Egg Salad (Swan Foods Corp., 1977). The trend accelerated with time. Many of these foods were a boon to those who (for a variety of reasons) did not consume dairy products or meat.

1977 Jan. – Laughing Grasshopper Tofu Shop starts making tofu in Millers Falls, Massachusetts. Founded by Richard Leviton and Kathy Whelan. In Feb. Tom Timmins joined as a partner and by August of that year so did Michael Cohen. In Nov. 1977 Laughing Grasshopper moved to Greenfield, Massachusetts, was renamed New England Soy Dairy, and before long was the largest of the new wave of tofu makers in the United States.

Copyright © 2013 by Soyinfo Center

1977 Jan. – The Soy Plant (a worker-owned collective) starts making tofu in Ann Arbor, Michigan. Steve Fiering is a key figure.

1977 March to Oct. – Bean Machine, Inc. (BMI) is established by Larry Needleman with headquarters in northern California. Initially, BMI Orders most of its equipment from Takai Tofu & Soymilk Equipment Co. in Kanazawa, Japan. New tofu companies can order specialized tofu equipment they need from BMI.

1977 May – Flying Cloud Tofu (later renamed The Tofu Shop, then Northern Soy) starts making tofu in Rochester, New York. Greg Weaver, Greg Mello, and Andy Schecter are key figures.

1977 July – The Tofu Shop starts making tofu in Telluride, Colorado. In 1980 Matthew Schmit moved this tofu shop and soy deli to Arcata, California.

1977 Aug. – Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started. Most order their equipment through Bean Machines, Inc.

1977 Sept. – White Wave, founded by Steve Demos, starts making tofu at 1738 Pearl St., Boulder, Colorado.

1977 – Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton (see U.S. Patent No. 4,000,326 of 28 Dec. 1976). It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu." In 1981 the product was first imported into the United States,

1977 – Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu – Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the second to open a soy deli – which had a take-out menu.

1978 Feb. – Victor Food Products, Ltd. starts making tofu in Scarborough, Ontario, Canada. Founded by Stephen Yu, it soon becomes the biggest tofu maker in Canada.

1978 April – Nasoya Foods, founded by John Paino and Bob Bergwall, starts making Nasoya Organic Tofu (water pack) at Mechanic Street Exit, Leominster, Massachusetts.

1978 July 30 – Soycrafters Association of North America (SANA) is founded in Ann Arbor, Michigan. Approximately 70 people attend the foundation meeting, organized and hosted by The Soy Plant, incl. Jerry MacKinnon and Steve Fiering. Larry Needleman (of Bean Machines, California) is elected director and six other people are elected to the steering committee.

1978 Dec. – *The Book of Tofu*, by Shurtleff and Aoyagi, is published by Ballantine Books in a mass-market edition that retails for $2.95. As of April 2013 it is still in print.

1979 April – Tofu is first made in Australia by The Soy Bean Factory in Surry Hills, New South Wales**.** Other early tofu makers in Australia include the following. The notation 1981/01 means January 1981:

Homeland Foundation 1981/01, Sin Ma Trading Co. 1981/11, Protein City 1981/12, Vegetable Protein Co. 1981/12, Blissquick (Natural) Food Products 1981, Soyfoods Australia (renamed Nutrisoy, Pty Ltd, by 1987) 1982/02, Blue Lotus Foods 1982, Chung Hing Bean Curd Manufacturing, 1982/09, Earth Angel Soyfoods 1982/09, Hong Oriental Food 1982/09, Tofu Shop 1982/09, Chinese Farmhouse Tofu 1983/06, Jon Weekes Tofu 1983/06, Soycraft 1984/01.

1979 July – *Tofu & Soymilk Production*, by Shurtleff and Aoyagi, is published by Soyfoods Center in Lafayette, California. This craft and technical manual, with hundreds of line drawings by Aoyagi, is used to start hundreds of tofu manufacturing companies throughout the Western World and in some Third World countries.

1980 Aug. – Wildwood Natural Foods starts making nigari tofu in Fairfax, California. The company name originated in 1978 when Chris Smith started making Brown Rice & Tofu Sandwiches at The Sleeping Lady Café (worker owned and operated) in Fairfax – using tofu purchased from Quong Hop & Co. in San Francisco. The Brown Rice & Tofu Sandwich was first made in Nov. 1977 in Fairfax by Paul Duchesne, who called it Fried Rice & Tofu Sandwich, had no company name, and also bought his tofu from Quong Hop & Co. The four original partners in 1980 are Bill Bramblett, Frank Rosenmayr, Paul Orbuch and Paul Duchesne.

1980 Oct. – Tofu is first made in New Zealand by Harvest Wholefoods in Grey Lynn, Auckland, New Zealand. Other early tofu makers in New Zealand include the following. The notation 1980/11 means November 1980:

John Francis Tofu 1980/11, Sun Hing Foods Co. 1981, Jon Judson Tofu 1982/01, SoySource Tofu Shop 1982/10, Super Bean Foods (renamed The Soy Works in 1986) 1983/02, Bean Supreme Soyfoods 1984/04.

1981 Sept. – Legume, a marketing company in Verona, New

Copyright © 2013 by Soyinfo Center

Jersey, founded by Gary and Chandri Barat, starts selling Tofu Lasagna and Tofu Ravioli (both dairy free), America's first two frozen tofu entrees. By 1983 Legume is soaring, advertising their delectable products creatively and widely, and introducing tofu to millions of new people in a new format.

1982 April – There are 242 tofu manufacturers in the Western world, including 173 in the United States.

1982 June – SOY starts making and selling tofu at Cerny 945 km south of Paris), France, founded by Bernard Storup and Jean de Preneuf. They soon become the largest tofu manufacturer in France, later being renamed Nutrition et Santé (1 Aug. 1994), Nutrition & Soja, and Nutrition & Nature.

1983 Feb. - A tofu mini-boom is now underway in Europe, reminiscent of that which started in the USA in 1977-78. Early tofu makers in Europe, listed chronologically by country, include the following. The notation 1975/12 stands for December 1975:

France: Alimentation Japonais Osaka 1972, Le Bol en Bois 1975/12, La Rousselie 1978/02, Institut Tenryu 1981/01, SOY (Société Soy) 1982/06, Les Sept Marches 1982/09, Sojatour Tofu Shop 1982/09, Ets. Co-Lu 1983/06, Lagadec Tofu 1983/06, Soja d'Oc 1983/10, Nyingma Dzong 1983/11, Tofu Kuehn 1983?, Sojagral Ouest 1984/12.

Netherlands: Vanka-Kawat 1958, FA. L.I. Frank: Frank Soya 1959?, Heuschen B.V. 1964, Firma Post & Teekman 1965, Stichting Natuurvoeding Amsterdam (renamed Manna Natuurvoeding B.V. in 1982) 1977/09, Hwergelmir: Foundation for a Natural Life 1979/07, Firma Ergepe 1981/01, Stichting Oost West Centrum 1981/01, Michel Horemaus Tofu 1981/01, Witte Wonder Products 1981/04, De Morgenstond 1981/12, Soy-Lin or F.M. Lin 1982/09. Jakso: Center for Agriculture & Craftsmanship (later called Yakso) 1983/06, De Vuurdoop 1983/07.

England, UK: Dragon & Phoenix Co. 1966, Wong Chung 1975 or before, Lung Kee 1975 or before, Full of Beans Wholefoods 1978/08, Paul's Tofu & Tempeh 1981/01, Yu's Tofu Shop 1981/01, Cauldron Foods Ltd. 1981/09, The Regular Tofu Co. Ltd. 1981/12, Bean Machine (Wales) 1982, Hong Kong Supermarket 1982/09, Stewart Batchelder Tofu 1983/06.

Belgium: Etablissements Takanami (Takanami Tofu Shop) 1976, Jonathan P.V.B.A. 1977/01, De Brandnetel 1979/07, Unimave Tofu 1980, Aversano Tofu Shop 1981/01, Alternatur 1981/01, Seven Arrows Tofu 1982/04, 1983/10, Vajra 1983/11.

Switzerland: La Moisson 1978, Le Grain d'Or 1981/01, Genossenschaft Sojalade (later renamed Genossenschaftstofurei) 1981/09, Soyana 1982/02, Soy Joy 1982/04, Restaurant Sesam 1982/04, Opplinger Tofu 1982/09, Natural Products Promo Carouge 1982/09, Joya 1982/09, Centre Macrobiotique de Lausanne 1982, Osoja: La Maison du Tofu (later renamed Tofushop Centanin SA) 1983, Tofurei Pfannenstiel 1983/11, Thieu's Soja Spezialitaet 1983/11, Conserves Estavayer S.A. (Sold at Migros Supermarkets) 1984/06, Galactina Ltd. 1984/11, Berner Tofurei 1984?

Italy: Roland A. di Centa 1978, Gilberto Bianchini of Centro Macrobiotico ed Alimentazione Organica (Community Food). Renamed Centro Macrobiotico Tofu 1978/11, Ohnichi Intl. Foods Co. Portugal: Unimave Tofu 1980, Shogun Produtos Aliment. 1982/09, Jose Parracho Tofu 1982/09, Próvida Lda. 1984.

Spain: Zuaitzo 1984/03.

1983 – House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1985 June – The Library of Congress decides to change its subject heading from "Bean curd" back to "Tofu." This, perhaps more than any other single thing, makes the word tofu "official."

1985 Sept. – Morinaga Milk Industry Co., Japan's leading manufacturer of dairy products, announces the creation of a U.S. subsidiary, Morinaga Nutritional Foods. The new

Copyright © 2013 by Soyinfo Center

company, headquartered in Los Angeles, will market Mori-Nu brand tofu in the United States. With worldwide sales of $1,300 million, Morinaga today markets tofu in more than 30 countries.

1989 Dec. – Sixty-five books (each more than 48 pages long) on tofu have been published in the Western World since 1970. Each one has the word "tofu" or its equivalent in the title. Forty of these books were published in the United States, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil.

1990 Aug. 3 – Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy) acquires Nasoya Foods of Leominster, Massachusetts.

1993 June – Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California for an estimated $4 to $5 million.

1993 – House Foods Corp. of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is renamed House Foods America Corporation.

1995 June – Pulmuone U.S.A., Inc. (pronounced PUL-mu-wun), a subsidiary of Pulmuone Co., Ltd., the largest manufacturer of tofu and of natural foods in Korea, starts making tofu (Firm, Soft, and Extra Soft) in South Gate, California. They focus on marketing their tofu to Korean-Americans, use Korean characters on their labels, and soon capture much of this market. By 12 June 1997 Pulmuone is making 20,000 pounds of tofu per day.

1996 – The Little Tokyo Service Center hosts the First Annual LA Tofu Festival, attracting over 10,000 people.

1997 March 12 – House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company soon closes its tofu plant in central Los Angeles.

1998 – Nature Soy, Inc. (*Datian Doupin Chang*) starts making tofu and tofu products in Philadelphia. It grew out of an earlier company, Sunkee Tofu Co., started in 1990 in Philadelphia by Wen Yatsun (Gene He 2013).

2002 May – Pulmuone's tofu plant in Tappan, New York, starts operations – located in an existing older building.

2003 Aug. – Pulmuone's tofu plant in Fullerton, California, starts operations in an existing new building. Shortly thereafter their tofu plant in South Gate, California, is closed.

2004 April 19 – Wildwood Natural Foods, Inc. (formerly known as Wildwood Harvest Foods, Inc.) enters into a strategic alliance with Pulmuone U.S.A., Inc. Pulmuone purchases shares of Wildwood stock and ends up owning a controlling interest – more than 50% of the shares. In May 2004 Pulmuone takes the principals of Wildwood to Seoul, Korea, for 4-5 days to celebrate the Pulmuone's (the parent company's) 25th anniversary. On 16 Dec. 2004 Pulmuone USA acquires the remaining shares of Wildwood and the merged company resolves to use a fictitious name – PMO Wildwood – which was later adopted as the corporate name on 6 Oct. 2005, and then changed to Pulmuone Wildwood on 1 Dec. 2005.

2009 Aug. – Hodo Soy Beanery starts making soyfoods (mostly tofu and yuba) in Oakland, California. Founded as Basic Soy Beanery in May 2004 by Minh Tsai and close relatives, the company was renamed Hodo Soy Beanery in Sept. 2005.

ABOUT THIS BOOK

This is the most comprehensive book ever published about the history of tofu. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of this ancient and interesting food. It is also the single most current and useful source of information on this subject.

This is one of more than 100 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 109 different document types, both published and unpublished.
- 8,924 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 1,744 unpublished archival documents.
- 1,998 original Soyinfo Center interviews and overviews never before published, except perhaps in our books.
- 3,196 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

All of the graphics (labels, ads, leaflets, etc) displayed in this book are on file, organized by subject, chronologically, in the Soyinfo Center's Graphics Collection.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical
Agric. = Agricultural or Agriculture
Agric. Exp. Station = Agricultural Experiment Station
ARS = Agricultural Research Service
ASA = American Soybean Association
Assoc. = Association, Associate
Asst. = Assistant
Aug. = August
Ave. = Avenue
Blvd. = Boulevard
bu = bushel(s)
ca. = about (circa)
cc = cubic centimeter(s)
Chap. = Chapter
cm = centimeter(s)
Co. = company
Corp. = Corporation
Dec. = December
Dep. or Dept. = Department
Depts. = Departments
Div. = Division
Dr. = Drive
E. = East
ed. = edition or editor
e.g. = for example
Exp. = Experiment
Feb. = February
fl oz = fluid ounce(s)
ft = foot or feet
gm = gram(s)
ha = hectare(s)
i.e. = in other words
Inc. = Incorporated
incl. = including
Illust. = Illustrated or Illustration(s)
Inst. = Institute
J. = Journal
J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society
Jan. = January
kg = kilogram(s)
km = kilometer(s)
Lab. = Laboratory
Labs. = Laboratories
lb = pound(s)
Ltd. = Limited
mcg = microgram(s)
mg = milligram(s)
ml = milliliter(s)
mm = millimeter(s)
N. = North
No. = number or North
Nov. = November
Oct. = October
oz = ounce(s)
p. = page(s)
photo(s) = photograph(s)
P.O. Box = Post Office Box
Prof. = Professor
psi = pounds per square inch
R&D = Research and Development
Rd. = Road
Rev. = Revised
RPM = revolutions per minute
S. = South
SANA = Soyfoods Association of North America
Sept. = September
St. = Street
tonnes = metric tons
trans. = translator(s)
Univ. = University
USB = United Soybean Board
USDA = United States Department of Agriculture
Vol. = volume
V.P. = Vice President
vs. = versus
W. = West
°C = degrees Celsius (Centigrade)
°F = degrees Fahrenheit
> = greater than, more than
< = less than

HOW TO MAKE THE BEST USE OF THIS DIGITAL BOOK - SEARCH IT

Most Important Thing: The **KEY** to using this digital book, which is in PDF format, is to **SEARCH IT** using Adobe Acrobat Reader: For those few who do not have it, Google: **Acrobat Reader** - then select the **free** download for your type of computer. Then...

Type [Ctrl+F] to "Find." Near the top right of your screen a white box will appear.
Click the small down-pointing arrow just to the right of that box to get a menu.
Click "Open Full Acrobat Search."
At the left side of your screen a "Search" box will open.
When asked: "What word or phrase would you like to search for?" type that word or phrase in the box. For example: Wildwood or New Zealand. No need to use quotation marks. Then click "Search."
At "Results" click any line that interests you.

For those using a Mac without Acrobat Reader: Safari is often the default browser. Click "Edit" in the toolbar at top. In the dropdown click "Find," then click "Find..." again. A search bar will open across top of screen with a search box at right. In this box type a word or phrase you would like to search, such as Wildwood or New Zealand. Click "Done" then scroll through the various matches in the book.

Chronological Order: The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, start reading at the back, just before the indexes.

A Reference Book: Like an encyclopedia or any other reference book, this work is meant to be searched first - to find exactly the information you are looking for - and then to be read.

How to Use the Index: A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. "Bean curd. See Tofu."

Countries and States/Provinces: Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at "U.S. States" or "Canadian Provinces and Territories" respectively. All countries are indexed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

Most Important Documents: Look in the Index under "Important Documents -."

Organizations: Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, DuPont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

Soyfoods: Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

Industrial (Non-Food) Uses of Soybeans: Look under "Industrial Uses ..." for more than 17 subject headings.

Copyright © 2013 by Soyinfo Center

Pioneers - Individuals: Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, Artemy A. Horvath, Englebert Kaempfer, Mildred Lager, William J. Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/ Rights. These are indexed under the person's last name or movement name.

Nutrition: All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one of more than 70 subcategories.

Soybean Production: All subjects related to growing, marketing, and trading soybeans are indexed under Soybean Production, e.g., Soybean Production: Nitrogen Fixation, or Soybean Production: Plant Protection, or Soybean Production: Variety Development.

Other Special Index Headings: Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy-related).

Commercial Soy Products (CSP): See "About This Book."

SoyaScan Notes: This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

"**Note**:" When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

Asterisks at End of Individual References:

1. An asterisk (*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.

2. An asterisk after eng (eng*) means that Soyinfo Center has done a partial or complete translation into English of that document.

3. An asterisk in a listing of the number of references [23* ref] means that most of these references are **not** about soybeans or soyfoods.

Documents Owned by Soyinfo Center: Lack of an * (asterisk) at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

Document Types: The SoyaScan database contains 135+ different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

Customized Database Searches: This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

BIBLIO: The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

History of Soybeans and Soyfoods: Many of our digital books have a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available, free of charge, on our website, www.soyinfocenter.com and many finished chapters are available free of charge in PDF format on our website and on Google Books.

About the Soyinfo Center: An overview of our publications, computerized databases, services, and history is given on our website.

HISTORY OF TOFU AND TOFU PRODUCTS

1. Sealing of the Eastern Han Tomb No. 1, at Da-hu-ting, Mixian, Henan province, China (Early event). 50? AD. Undated.

• ***Summary:*** Recently, a most interesting kitchen scene was discovered on a mural incised on a stone slab in Han Tomb No. 1, at Da-hu-ting, Mixian, Henan province (W.-G. Ta-hu-t'ing, Mi-hsien, Honan province). This tomb is located about 425 miles due north of the famous Early / Western Han tombs at Mawangdui, near Changsha, Hunan Province. This tomb is from the Later / Eastern Han (25-220 AD).

Part of the scene may possibly depict the preparation of tofu, suggesting that it already existed as a food during the Eastern Han [also called Later Han dynasty, AD 25-220], and adding strength to the traditional view that it was invented several hundred years earlier by Liu An, the Prince of Huainan in the Former / Western Han dynasty (206 BC to 8 AD).

For a detailed discussion of this mural and an evaluation of the debate over whether or not it depicts tofu-making, see Chen, Wenhua (1990, 3 p.) and Huang (2000, p. 305-16, 331-33).

There are at least three problems with the mural: (1) There is no evidence that the scene is in any way related to soybeans. (2) If it is related to soybeans, there is no evidence of any cooking step. The panel which may depict the tofu-making process is divided into five segments, yet there is no segment that shows the cooking of the soymilk. Dr. H.T. Huang (2000, p. 311-12) tried to prepare tofu from uncooked soymilk and said the yield was miniscule, the smell very unpleasant, and the tiny amount of resulting product inedible. He wrote: "I did not taste it at all. It was not appetizing, so I threw it out." You cannot make tofu without first boiling the soymilk for at least 7 minutes. (3) Details of the mural are difficult to discern; one Chinese scholar argued in 1996 that the panel depicts stages in a wine fermentation.

In addition, historical evidence makes us question the existence of tofu at such an early date. There is not one other mention of tofu–or even a hint/clue of it–for the next 1,000 years. It seems inconceivable tofu would have existed in China during this 1,000-year period and never have been mentioned in the vast body of Chinese literature on food and agriculture. Tofu is not mentioned in the *Qimin Yaoshu* (544 AD) even though its author claimed: "From plowing and cultivation, to the making of fermented sauces and vinegar, there is no useful art in supporting daily life that I have not described in detail."

Tofu is first alluded to in China in 965 AD in a work titled *Qing Yilu* [Anecdotes, Simple and Exotic], by Tao Ku.

Tofu is next alluded to in a poem written by Zhu Xi in about 1180, and it first came to be widely used during the Southern Song dynasty (1127-1279)–more than 1,000 years after this tomb mural was created. In short, this tomb mural raises more questions about the origin and early history of tofu than it answers.

Note 1. Henan province is in north China. The Yellow River runs through its northern part. Just south of the river is the city of Luoyang. In early China it was successively the capital of the Eastern / Later Han, Chin, Northern Wei, and Sui dynasties. It was also the eastern capital under the Tang dynasty and the western capital under the Song dynasty. Also in Henan Province, about 120 miles east of Luoyang, is the city of K'ai-feng, one of the most historical cities of China, and capital of the empire during the Five-Dynasties period.

Note 2. Letter from then talk with H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1991. Jan. 25. The tomb in which the mural appears is located at the village of Ta-hu-ting, 6 km (3.7 miles) east of the county seat Mixian, which lies about 40 km southwest of Zhengzhou (W.-G. Chengchou), the capital of Henan (W.-G. Honan).

Note 3. Talk with H.T. Huang. 2003. July 5. An excellent 1993 Chinese-language book on the subject (*Han Dynasty Tombs at Ta-hu-thing Village in Mihsien County*) states that the exact date this tomb was sealed is unknown, however it is thought to have been sealed in the first century AD. It is believed that the owner of the tomb helped in the restoration of the Han dynasty–after the Former / Western Han–however tomb robbers long ago removed most of contents which would have enabled archaeologists to reconstruct its history.

2. [Watukura A inscription]. 902 AD. Java. Unpublished manuscript. [Jav]*

• ***Summary:*** A.M. Jones (1976 unpublished thesis), on p. 41 gives a list of inscriptions from the period 901-929 A.D. from Central and East Java. The Watukura A (Watu Kura) inscription is dated A.D. 902. The place it was found is unknown. It is a copperplate, now in a private collection in Copenhagen, Denmark. A transcription with translation can be found in v. Naerssen, *Oud Javaansche Orkonden in Daensche en Duitsche verzamelingen* [*Ancient Javanese Documents in Danish and German Collections*] (p. 82-105).

In Jones' section on foods, page 90 states: "There is no mention of the soya bean (Glycine max. Merr.) or of *tempe* but the bean must have been known and cultivated as we find mention of *tahu* [tofu] eaten at a feast in the Watukura A inscription. This name certainly points to Chinese influence* and the process of making *tahu,* beancurd cakes shaped into squares and made from soya beans and still widely eaten in Java today, may have been learned from the Chinese, either resident or visiting. In any case the *tahu* itself must have been made in Java; it could hardly have been imported as

© Copyright Soyinfo Center 2013

it does not carry" [i.e., is perishable]. * For footnotes, see Jones 1976.

Note: This is the earliest document seen (April 2013) concerning soybean products (tofu) in Indonesia; soybeans as such have not yet been reported. Address: Java.

3. Tao Ku. 965 AD. Qing yilu [Anecdotes, simple and exotic]. China. Passage on soy reprinted in C.N. Li 1958 #90, p. 75. [Chi]

• ***Summary:*** Wade-Giles reference: *Ch'ing I Lu*, by T'ao Ku. Northern Song dynasty. The section titled *Xiaozaiyang* states: "When Shi Ji was the magistrate of Qing Yang, he emphasized the virtue of frugality among the people, and discouraged the consumption of meat. Instead he promoted the sale of tofu (*doufu*), which gained the sobriquet, 'mock lamb chops' or 'the vice mayor's mutton.' (Translated by H.T. Huang, PhD, July 2002).

Note 1. This is the earliest document seen (April 2013), worldwide, that mentions tofu. Note 2. This is the earliest Chinese-language document seen (April 2013) that uses the term *doufu* to refer to tofu.

Note 3. This is the earliest document seen (July 2002) that advocates both vegetarianism and soyfoods, and that recommends the use of soyfoods (tofu) as a replacement for meat.

Dr. Huang adds: The title of this section can have a double meaning. *Xiao* means "little." *Zai* can mean either "ruler / minister / mayor" or "sacrificial / slaughtered." And *Yang* means "mutton" or "lamb." The intended meaning is clearly "mock (meatless) lamb chops" or "lamb chops for the people." The story implies that tofu was produced and marketed commercially by the latter part of the Tang dynasty, and that it was less expensive than mutton.

In March 1894, Schlegel and Cordier wrote an article in the European periodical *T'oung Pao* (published in France) titled "The Chinese bean-curd and soy and the soya-bread of Mr. Lecerf. I. Tofu" in which they discussed in detail the story from the *Qing yilu* but without actually citing that early Chinese book. Instead they cited the *Shuwu yiming shu* (ca. 1644, late Ming dynasty).

In 1968, in a Japanese-language article on the origin of tofu, the well-known Japanese food historian and sinologist Shinoda Osamu showed that this book (called *Seiiroku* in Japanese) was the world's earliest known *document* to mention tofu (Huang 2000, p. 300).

Then, in the 1980s, Chinese researchers found a tomb mural incised on a stone slab from the Eastern / Later Han dynasty (A.D. 25-220) that clearly shows tofu (or a prototype of tofu) being made (Chen, Wenhua 1990).

Huang (2000) gives a good explanation and translation of this passage and notes that during the Song dynasty, there was a dramatic increase in the number of times that the term "tofu" appeared in Chinese literature (p. 300-01). He adds (p. 126-27) that this food canon of late medieval China is "a compilation of anecdotes of little known facts and unusual events associated with a wide range of topics current in the Sui, Tang and Five Dynasties era. The entire book consists of 648 anecdotes, of which 238 deal with matters relating to food and drink." In addition (p. 354) this book states: Jiang (soybean paste) "is the host of the eight delicacies (*bazhen*), while vinegar (*chu*) is their manager." Thus it places "the value of *jiang* as a condiment higher than that of vinegar."

A second passage in this book, titled *Hutuofan* states that Guang Wu (a person or ruler) is at a place named Hutuo. Someone named Gong Sun recommended soybean congee (*douzhou*) to him. Until now, all through the northwestern prefectures and counties, people call soybean congee as *Hutoufan.* Note 4. *Fan* means "cooked grains." (Translated by H.T. Huang, PhD, July 2002).

Huang (2000, p. 193) also states that an early reference to red rice koji (*hong qu*) appears in this work in an entry titled "Fermented Mash: Bone of Wine." Huang translates this: "Among the recipes there is one for red pot-roast lamb. The method is to simmer the meat with red ferment,..."

Note: This is the earliest document seen (July 2012) that mentions red rice koji / fermented red rice, which it calls *hong qu.*

4. Lu Zanning (Su Shi). 980 AD. Wulei xianggan zhi [Treatise on the mutual responses of things according to their categories]. China. Passage on soy reprinted in C.N. Li 1958 #94, p. 76. [Chi]

• ***Summary:*** Wade-Giles reference: *Wu Lei Hsiang Kan Chih*, by Lu Tsang-Ning. The section titled "Miscellany" states: "Soybean oil can be mixed with tung oil for use in caulking boats / ships." (Translated by H.T. Huang, PhD, July 2002). Huang (2000, p. 301, 436-40, 627) states that this book is attributed wrongly to Su Dongpo (W.-G. Su Tung-P'o); the actual writer is the Buddhist monk Lu Zangning. The book also states that frying tofu in soybean oil produces a flavorful dish. Dr. Huang adds: Although the soybean is one of the principal sources of oil in the world today, it is difficult to obtain this oil from soybeans. Therefore this earliest reference to soybean oil does not appear until the Song dynasty–rather late in Chinese history. The *Qimin Yaoshu* [Important Arts for the People's Welfare (to gain their living in peace)], completed in +544, discusses commercial methods for pressing oils from colza / rape seeds (*manjing*), perilla seeds (*ren*), and almonds. It states that perilla oil was used in cooking and that, as a cooking oil, it was inferior to sesame oil but superior to hemp seed oil. However it does not mention the pressing of either sesame seeds or hemp seeds. Buddhist monks in China, like early European Christian monks, were generally very learned. Lu Zangning may also have written other books.

Note 1. This is the earliest document seen (Sept. 2006) that mentions soybean oil. A non-food use is described (caulking boats). Even though soybean cake / beancake is not

© Copyright Soyinfo Center 2013

mentioned, it must have existed in China by this time since it is always a by-product or co-product of the process for making soybean oil.

Note 2. This is the earliest document seen (July 2002) concerning the industrial utilization of soybeans or soybean oil, or the use of soybean oil as a drying oil.

Note 3. This is the earliest document seen (Nov. 2001) that uses the word "caulking" (or "caulk" or "caulked") in conjunction with soybeans.

Note 4. This is the earliest document seen (April 2013) worldwide that mentions frying tofu or fried tofu.

Note 5. Tung oil is a drying oil which, during the 20th century, became a rival of linseed oil in many applications in the Western world.

5. Su Sung [or Kou Tsung-shih]. 1061. Tu jing bencao [Illustrated pharmacopoeia, or Pharmaceutical natural history]. China. [Chi]*

• ***Summary:*** Wade Giles reference: *T'u Ching Pen-Tsao.* In "Translations Concerning the Pai Ta Tou (Soy bean) from the Chih Wu Ming Shih T'u K'ao," Hagerty (1917, p. 6-8) notes that the *T'u ching* (*T'u ching pên ts'ao*), states: "The Ta tou huang chüan (gives Chinese characters = Yellow soybean + roll or coil), or Bean sprouts, and Shêng ta tou, or Fresh [Raw] soy beans, are grown in the marshy land in the vicinity of Tai-shan mountain. At present they are grown everywhere. The Huang chüan, or Bean sprouts, are grown from the Shêng tou (Fresh bean) and also are called Nieh [character; fresh sprouts (see p. 35)]. When these sprouts are grown they should be dried in the sun and preserved in this manner. The name used by the Fang Shu, or Medical Prescription books, is Huang chüan p'i [characters]. At present the sprouts are generally given to women after childbirth to purify their milk and increase their strength.

"The Ta tou, or Soy bean, has two varieties, white and black. These black beans are used medicinally, but the white variety is not. The very small variety is called the Hsiung tou [characters] (Male bean), and is considered to have excellent medicinal virtues, and may be made a constant article of diet without any bad effects upon the system. It is also employed medicinally in many ways. The fluid made from this bean is very cooling to the human system, and is good for the cure of cinnibar [cinnabar, mercuric sulfide, HgS] poisoning and all forms of poisoning from eating herbs, etc. When made into Fu [character], or Bean curd, it has a cold effect upon the human system and excites the temper. If it is fried and eaten, it has a heating effect. If they are soaked in wine they make a good remedy for the cure of colds. When made into Shih [character], or Bean relish [fermented black soybeans], it is very cooling to the system. The Huang chüan, or Bean sprouts, and Chiang [character; Chinese miso], or Soy sauce, both have a uniform or even effect upon the system.

"If bean food is eaten by oxen, it has a warm effect upon their systems, but if eaten by horses, the effect upon them is cooling. Although one article of food, it produces different effects. Generally speaking, it is also suitable to use medicinally. As a cure for poison from eating Wu t'ou (Aconite), it is better than the 'Hsien fang,' or Fairies' prescription. If the Huang, or yellow variety [of soy bean], is ground into a powder and eaten, it will satisfy the hunger during the time of famine. If these bean foods are eaten too freely during a short period, the body will become heavy, but if eaten for a long period you will feel as usual.

"The ancient prescription books had a purple soup which was a good remedy for purifying the blood, curing colds, relieving general oppressiveness of the body, etc. This remedy will have good effect if taken two days after childbirth. Another prescription is made as follows: Take five 'Shêng,' or pints, of selected Wu tou [characters], or Black [soy] beans, wash clean and soak in one and one-half 'tou,' or peck measures, of wine. Fry the beans and wait until the smoke is gone and dip the whole in wine. When the wine has turned into a red-purplish color then remove the beans. The measure of the dose which may be taken can be regulated according to your needs. The ordinary dose is three 'chan,' or cups, during the day and night.

"N.B.–Balance (about six rows of characters) of Fu fang, or Medical Prescriptions, is omitted."

Joseph Needham. 1986. Science & Civilisation in China. Vol. 6, Part 1, p. 281. The "emperor Jen Tsung, ordained in +1057 another pandectal treatise, entrusting its preparation" to four highly qualified men, including "the outstanding scientific thinker and statesman Su Sung... A new procedure was now adopted, an imperial rescript being sent to all the prefectures and *hsien* cities of the empire instructing governors and magistrates to have drawings made of the most important drug plants of their regions. In due course, more than a thousand of these reached the capital." This measure was intended to improve the drawings of the previous century and restore the lost iconography of the Thang [T'ang] dynasty. "But the upshot was two treatises rather than one." The first compilation by Chang Yü-Hsi was published in +1060. "Su Sung in his turn brought out in +1061 the *Pên Ts'ao T'u Ching* (Illustrated Pharmacopoeia, or Pharmaceutical Natural History), not all pictures but containing much text different from Chang's, as we know from the later pandects, which always quote them separately. Both these works were greatly appreciated–and not in China only." Footnote e: The title of this work "was often afterwards quoted inverted as *Thu Ching Pên Ts'ao,* even by high authorities, but wrongly according to evidence from the Sung bibliographies."

Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1996. Sept. 29. "The earliest document with an illustration of the soybean is probably the illustrated *Hsin Hsiu Pên Ts'ao* (New, Improved Pharmacopoeia), +659. Illustrations to this work are now lost, but some are preserved in the *T'u Ching Pên Ts'ao* of

© Copyright Soyinfo Center 2013

+1061 and later in the *Ch'ung Hsiu Cheng-Ho Ching-Shih Cheng-Lei Pei-Yung Pên Ts'ao,* generally known as *Cheng Lei Pên Ts'ao* (CLPT), +1249 (final version), which remains available today. The entry on soybean (*Dadou*) in the CLPT includes a picture of the plant. A copy is attached."

Huang (2000, p. 296-97). This work "states that the 'white sprouts from the mung bean, *lüdou,* are considered a delicacy among vegetables'" (Footnote: C.N. Li 1958, p. 272), suggesting that they were superior to soybean sprouts.

6. Su Song; et al. 1061. Bencao tujing [Illustrated pharmacopoeia: Or, Illustrated treatise of pharmaceutical natural history]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-21, and #331, p. 234. [Chi]

• ***Summary:*** Wade-Giles reference: *Pên Ts'ao T'u Jing,* by Su Sung, et al. Song dynasty. Li (1958, p. 220-21) cites this as *Tujing Bencao* (+1061) however Needham (1986) has convinced us to cite it as shown above. This is a noteworthy work, however the original has been lost. The following passage has come down to us in the *Zhenglei Bencao* (Reorganized pharmacopoeia) (+1082), Chapter 25. Dried soybean sprouts (*dadou huangjuan;* "yellow curls") and mature raw soybeans (*sheng dadou*). They grow in the plains near Taishan (the famous mountain near the birthplace of Confucius). You find them everywhere. Dried soybean sprouts are derived from the fresh soy sprouts. After it has sprouted, you dry it and use it. Alchemical treatises call it "yellow curls" (*huangjuan*). There are two kinds of soybeans: Black and white. The black ones are used in medicine, the white ones are not. The very small ones are the male beans (*dou*)*;* they are particularly good for medical use.

The young plants (*doumiao*) grow to a height of 1-2 feet. The leaves are round with a pointed tip. The color is green. They are slightly hairy. The stem divides into branches. In the fall, they bear small, white or purple flowers in clusters. They form pods (*jia*) more than one inch (*cun*) long, which may contains 3-4 seeds / beans. Small pods may contain only 1-2 seeds / beans. The seeds fill the pods. When the leaves and the stems are full, then the beans are ready for harvest. There are early, medium, and late varieties. The shapes are large, small, round, or flat. The colors are yellow, white, red, black, spotted / speckled / striped (*ban*), and dark brown. Soybeans are used to make jiang, fermented black soybeans (*shi*), tofu (*fu*), or soy sprouts (*ya*). They can be pressed to give soy oil (*you*), or they can be parched / fried (*chao,* with or without oil, probably without in this case) to give soynuts (*guo,* literally "fruit"). They can also be used to make soy flour candy (*tangmo*). So the soybean has many uses. The pods are called *jia,* the leaves are called *huo,* the stems are called *qi,* and the seeds are called *dou.*

Note 1. This is the earliest document seen (June 2009) stating that *doumiao* grow to a height of several feet. Previously the term *doumiao* was used to refer to long soy sprouts which were typically much smaller and more tender.

Note 2. This is the earliest Chinese-language document seen (Dec. 2012) that mentions soynuts, which it calls *guo.*

Note 3. This is the earliest document seen (Sept. 2004) that mentions brown or dark brown soybeans.

Note 4. This is the earliest document seen (June 2009) which states that there are early, medium, and late varieties of soybeans.

Note 5. This is the earliest document seen (March 2005) that mentions soybean oil for what appears (from the context) to be food or therapeutic use. It is also the earliest Chinese-language document seen that mentions soy oil, which it calls *you* (a general term for all oil).

Red azuki beans (*chixiaodou*) are also mentioned in this book. (See Li 1958 #387).

And there is an entire section titled "Cowpeas" (*jiangdou, Vigna sinensis*) which says that it was widely cultivated in the northwestern provinces of China. (See Li 1958 #476).

And a section titled "Hyacinth beans" (*biandou*) with a long description. (See Li 1958 #537).

There is also a section titled "Broad beans" (*candou, Vicia faba*) with six lines of description, including the statements that it can be boiled, stir-fried, or made into flour (*fen*). When these beans are fed to cows or horses, the animals grow well. The seedlings fertilize the fields. The stems can be used for fuel, and the leaves used for feed. The pods are shaped like silkworms–which is why they are called "silkworm beans" (*candou*). (See Li 1958 #641). Note 6. This is the earliest document seen (Jan. 2005) that mentions broad beans (*candou; Vicia faba*) together with soybeans. (Translated by H.T. Huang, PhD, Jan. and May 2003). Note 7. The above text now exists only in the *Sannongji* (Records of the three departments of agriculture) (1760), by Zhang Zongfa.

Needham (1986, p. 581, 281n) cites this as shown above noting: "Now preserved only in numerous quotations in the later pandects of pharmaceutical natural history." On p. 588 Needham has a second explanatory reference for: *"T'u Ching* (*Pên Ts'ao*). Illustrated Treatise (of Pharmaceutical Natural History). See *Pên Ts'ao T'u Ching.* He explains that the term *T'u Ching* originally applied to one of the two illustrated parts (the other one was a *Yao T'u*) of the *Hsin Hsiu Pên Ts'ao* of +659. But by the middle of the +11th century these had become lost, so the *Pên Ts'ao T'u Ching,* by Su Sung was prepared as a replacement. The title *"T'u Ching Pên Ts'ao* was often later applied to Su Sung's work, but wrongly–according to evidence in the *Sung Shih* bibliographies. Needham (1986) states that this was the first document to mention flax in China (p. 174). Su Sung, also called Su Tzu-Jung, was a statesman and outstanding scientific thinker (p. 252, 281).

Note 8. This is the earliest document seen (Sept. 2004) that mentions soybeans whose color is spotted / speckled / mottled / striped (*ban*).

© Copyright Soyinfo Center 2013

Note 9. This is the earliest document seen (June 2003) that mentions flax.

7. Tang Shenwei. comp. 1082. Zhenglei bencao [Reorganized pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]
• ***Summary:*** Wade-Giles reference: *Chêng Lei Pên Ts'ao,* compiled by T'ang Shên-Wei. Song dynasty. Needham (1986, p. 561) says that the full title of this work (in W.-G.) is *Ching-Shih Chêng Lei Pei-Chi Pên Ts'ao.* This important work discusses the medicinal properties of foods. Chapter 25 states that the soybean (*dadou*) can be used to make sprouts. When these sprouts are dried, they are called "yellow curls" (*huangjuan*). You can also use the [undried] sprouts as food.

Chapter 25 also contains a long passage from the *Bencao Tujing* (Illustrated pharmacopoeia) (+1061) on dried soybean sprouts ("yellow curls"), fresh soybean sprouts, and mature dry soybeans (which see).

Chapter 25 states that fermented black soybean sauce (*shizhi;* W.-G. *shih chih*) from Shan or Shanzhou (same as today's Shaanxi province) can be kept for years without deterioration. Note 1. This passage suggests that this type of *shizhi* was a fermented product which would keep as long as today's soy sauce. If this is true, then *shizhi* would be a precursor of the soy sauce (*jiangyou*) that originated in China in the late Song dynasty (Huang 2000, p. 361).

The next passage appears in a much later book titled *Sannongji,* by Zhang Zongfa (W.-G. *San Nung Chi,* by Chang Tsung-Fa) (Records of the three departments of agriculture) (+1760). Young soybean plants (*doumiao*) grow to a height of 1-2 feet (*chi*). The leaves are round with a pointed tip; their color is green (*qing*) and they have hairs (*mao*) on the surface. One stem divides into branches. In the fall, white flowers appear; they are white or purple, and grouped together. The pods (*jia*) are more than an inch (*cun*) long, and they typically contain 3-4 seeds, or at least 1-2 seeds. The seeds fill the pods. The pods grow separately from the leaves. The varieties are early, middle, and late. The pods are either large or small, round or flat. The colors of the seeds are yellow, white, red (*chi*), black, spotted / speckled (*ban*), or dark brown. You can [use the seeds to] make jiang or fermented black soybeans (*shi*), tofu (*fu*) or sprouts (*ya*). You can press them to give yield oil (*you*). You can roast / fry (*chao*) them to give nuts (*guo;* soynuts). You can make candy from grain sweetener (*tangmo*). It has many uses. The pods are called *jia.* The leaves are called *huo.* The stems are called *qi.* The seeds are called *dou.* (Translated by H.T. Huang, PhD, Jan. 2003).

Note 3. This is the earliest document seen (Feb. 2003) that mentions red (*chi*) soybeans.

Also mentions malt sugar (*yitang*) and gluten (Chap. 25). (See Huang 2000, p. 296, 460 {malt sugar}, 498 {gluten}, 611). This work was enlarged in +1116 and retitled *Chêng-Ho Hsin-Hsiu Ching-Shih Chêng-Lei Pei Yung* (New revision of the classified and consolidated armamentarium pharmacopoeia of the Chêng-Ho reign period). It was then re-edited +1204 in Jurchen Chin, and definitively republished +1249 in Yuan; later reprinted many times. See also Hummel (1941).

8. Tang Shenwei. comp. 1082. Jingshi zhenglei beiji bencao [The classified and consolidated armamentarium of pharmaceutical natural history]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]
• ***Summary:*** Wade-Giles reference: *Ching-Shih Chêng Lei Pei-Chi Pên Ts'ao,* compiled by T'ang Shên-Wei. Song dynasty. See *Zhenglei Bencao* (1082).

9. Gou Zong-shi. 1115? Tujing yanyi bencao [Sung dynasty pharmacopoeia]. China. Undated. [Chi]*
• ***Summary:*** Wade-Giles reference: *T'u-ching Yen-i Pen-ts'ao,* by Kou Tsung-shih. Northern Song dynasty. Address: China.

10. Kou Zongshi. 1116. Bencao yanyi [Dilations upon pharmaceutical natural histories]. China. Passage on soy reprinted in C.N. Li 1958 #300, p. 221. [Chi]
• ***Summary:*** Wade-Giles reference: *Pên Ts'ao Yen I,* by K'ou Tsung-Shih. Song dynasty. An important work. In Chapter 20, the section titled "Whole dry soybeans" (uncooked, *sheng dadou*) after describing the different colors and kinds of soybeans (already found in many earlier documents) it states that soybeans can be ground and made into tofu (*fu*), and eaten.

Red azuki beans (*chixiaodou*) are also mentioned in this book. (See Li 1958 #388). (Translated by H.T. Huang, PhD, Jan. 2003).

Dr. H.T. Huang (personal communication, 5 June 1993) notes that this book states: "Keep chewing (massaging) wheat flour and it will yield *mianjin* (wheat gluten)."

Gai & Guo (2001, p. 44): This book was written by Ke Zhong-Xiang, who wrote: There are three kinds of immature raw soybeans: green, brown and black. The larger ones come mainly from Jiangsu, Zhejiang, Hunan, and Hubei; the smaller ones are from other places.

Needham (1986, p. 283-87): Emperor Hui Tsung, a remarkable man, came to the throne in +1101. His court was a "veritable entourage of virtuosi, appreciative of all the best that the art, the science and the technology of the time could perform." A major of event was the presentation to his throne of an "entirely original treatise on pharmaceutical natural history, by a hitherto unknown Medical Officer," K'ou Tsung-Shih. It was printed in 1119 by the writer's nephew, K'ou Yo. He wrote passages of "cardinal importance about the lodestone and the magnetic needle, recording induction and polarity, with a description of the floating compass," a statement on magnetic declination, and an attempt to explain it, all about 60 years before anything was known

© Copyright Soyinfo Center 2013

about magnetic polarity in Europe. He also discussed various fossils, and was perhaps an even better mineralologist and geologist than a botanist. In Chapter 17, he also discussed insect pests and their natural enemies (p. 525).

A modern edition was published in 1937 by Commercial Press.

11. Wang Yan. 1168. Suanxiji [Double rivulets collection]. China. [Chi]*

• ***Summary:*** Wade-Giles reference: *Suan Hsi Chi*, by Wang Yen. Southern Song dynasty. Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communication, 5 June 1993), notes that in this book the Sung dynasty poet Wang Yên (lived 1138-1218) wrote a poem in praise of *fu chin* (gluten) which says: "It has the color of fermented milk, and a flavor superior to chicken or pork."

12. Lu Yu. 1176? Doufu [Ode to tofu]. In: Nanjiangao (Southern Sword Drafts). China. Undated. Passage on soy reprinted in H.T. Huang 2000, p. 303. [Chi]

• ***Summary:*** Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communications, 8/91 and 1/92), notes: The term *liqi* (W.-G. *Li ch'i*) is used in a poem by the Sung poet Lu Yu who lived A.D. 1125-1210. After Su Tung-p'o, Lu Yu is probably the best known poet of the Sung dynasty. He was a prolific writer. This particular poem is found in a group of poems by titled "Southern Sword Drafts," by Lu Yu. The often-quoted lines of Lu Yu's poem on tofu are:

Shih p'êng tui nien chan. Hsi fu chu li ch'i. Dr. Huang (2000, p. 303) has translated these lines as: "Test the quern to turn it well. Wash the pot and cook the curd." Note that the word for "curd" is *liqi;* Lu Yu says that is what the people in Sichuan call tofu. A "quern" (pronounced "kwern)," is a traditional stone mill for grinding grains, seeds, or beans.

This poem also appears, for example, in: (1) Hung, Kuang-Chu. 1984. *Chung-kuo shih-p'in k'o-chi shih-kao, shang ts'ê* [Draft History of Food Science and Technology in China, Vol. 1]. Beijing, China: Commerce Publishers. p. 54. (2) Hung, Kuang-chu. 1987. *Chung-kuo Tou Fu* [Chinese tofu]. Beijing, China: Commerce Publishers. p. 13.

Note 1. This is the earliest Chinese-language document (Feb. 2004) seen that uses the word "liqi" to refer to tofu.

Note 2. This is the earliest document seen (April 2013) that mentions the curd (or curds) used to make tofu. Address: China.

13. Zhu Xi. 1180? Zhu Xi shi [Poems of Zhu Xi]. China. Passage on soy reprinted in C.N. Li 1958 #108, p. 82. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Chu Hsi Shih*, by Chu Hsi, a philosopher who lived 1130-1200 in the Southern Song dynasty. His poem titled "Tofu" (*doufu*) is very famous, being one of his thirteen poems extolling the virtues of a vegetarian diet. It has been transcribed (romanized) and translated by Huang (2000, p. 299) as follows: "Planting soybeans (*dou*), the seedlings (*doumiao*) are sparse. / My strength is spent, my heart is weary. / If only I had known Huai Nan's art, / I could just sit idly and reap my gains."

Notice that the word "tofu" does not appear in the poem; apparently long tradition held and everybody was expected to know that "Huai Nan's art" was the art of making tofu. Note also that *doumiao* refers to soybean seedlings growing in the field rather than those used as a food.

Dr. Huang continues in a footnote (p. 299): This poem is quoted in the *Wuli Xiaoshi* (Mini-encyclopedia of the principles of things), by Fang Yizhi (+1664), in Chapter 6 in the section on food and drink. "In his commentary, Zhu Xi said, 'according to tradition, *doufu* was invented by the Prince of Huai Nan.' Zhu Xi may have been somewhat naive in implying that in making *doufu* one could simply sit back and relax, but it is probably true that even in Song times food processing was more lucrative than farming as it certainly is today."

In the text following the poem (p. 299-300), Dr. Huang adds that the origin of tofu is still regarded as an important unsolved problem in the history of food science and nutrition in China. However, this was not always the case. The poem quoted above is the origin of and key piece of written evidence for the long-held tradition that tofu was invented by Liu An, Prince of Huai-Nan; he lived in the Former / Western Han dynasty from -179 to -122. When later Chinese works echoed this view, they would cite this poem as their source. Thus from the time of this poem until the early years of the Republic (which started in 1911), it was generally accepted that tofu was invented by Liu An during the Western Han. This view was not challenged until the early 1950s, when Chinese scholars argued that the story of the King of Huai Han was just an old wife's tale, and that Zhu Xi's poem was just a legend. They thought that tofu was probably invented around +1000.

Note: This is the earliest document seen (July 2003) which implies (but does not state clearly) that Liu An, Prince of Huai Nan, made or invented tofu. It is also the 2nd earliest document seen (Jan. 2009) concerning soyfoods and vegetarianism.

When asked for evidence supporting his statement that "tradition had long held that tofu was invented by Liu An, the Prince of Huai-Nan," Dr. Huang (July 2003) replied: "Zhi Xi referred to tofu only indirectly in his poem. He felt no need to refer to it directly or to explain what he meant since he believed that his readers would understand–based on the long tradition linking Liu An with tofu. Moreover, by this time, tofu was already sold in the markets of China and widely consumed. Likewise, there is no written evidence that rice was cooked by steaming during the Han dynasty; everybody knew it. Even the *Qimin Yaoshu* never explains

© Copyright Soyinfo Center 2013

how rice was cooked–because everybody knew since time immemorial. It's quite frustrating."

Wai (1964, p. 91) notes: "King of Wainan was quoted by many literary men as the inventor of tofu. For instance, in Poems Volume III of Chu Hsi (1130-1200), the greatest scholar of the Sung dynasty, it was written: 'Having raised beans for many years, but sprouts were rare; Exhausted in the garden, my heart is bitter; had I known Wainan's skill, anything is within reach of my own will.'" This poem seems to indicate that tofu was just beginning to become popular in China at about this time during the Southern Sung dynasty.

14. Nakaomi, Hiroshige. 1183. Nakaomi Hiroshige nikki [Diary of Hiroshige NAKAOMI]. Entry for January 2. Unpublished manuscript. Japanese summary by Kawakami 1978. [Jap]

• ***Summary:*** This diary was written during the Heian period by a Shinto priest (*kannushi*) of the Kasuga jinja (shrine) in Nara, Japan. The date of the entry, 2 Jan. 1183, is that measured by the old almanac. The diary entry stated that "one type of *shunkin* tofu" was included in the offerings at the shrine's altar.

Note: This is the earliest document seen (April 2013) that mentions tofu in Japan, or tofu in any country outside of China; the document was discovered by the great Japanese food historian Osamu SHINODA (1971).

Saito (1985) states: 1183–Tofu is first mentioned in a document from the Great Kasuga Shrine (*Kasuga Taisha*) in Nara. The characters used to write the word tofu then were different from the characters used today. It seems that this tofu was very hard.

There are four interesting points about this first mention: (1) The word "tofu" was written with characters different from those used today. The first character, pronounced *to* (rhymes with the "toe" on your foot), means "T'ang" as in "T'ang dynasty," and the second character, pronounced *fu*, meanings a "sign, mark, charm, or amulet"; (2) The tofu appears at a Shinto shrine rather than, as expected, at a Buddhist temple, and especially a temple with strong influence from China; (3) The tofu is used, not as a food, but as an offering at the altar. A similar mention appears in the annals of the same shrine on the same date one year later, but this time the reference is to "one type of *sokuan* tofu" (Note: The meanings of the terms *shunkin* and *sokuan* are not clear); (4) The date, January 2, is during the coldest time of the year, when the tofu would stay fresh longest. Address: Nara, Japan.

15. Lu You. 1190. Laoxue anbiji [Notes from the Hall of Learned Old Age]. China. Passage on soy reprinted in H.T. Huang 2000. [Chi]

• ***Summary:*** Wade-Giles reference: *Lao Hsüeh An Pi Chi*, by Lu Yu. Song dynasty. Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communication, 5 June 1993), notes that Chapter 7, p. 4a states: "*Tou-fu, mien-chin, niu-ju* (Tofu, wheat gluten and milk) were soaked in honey. Most of the guests could not enjoy it. But Su Tung-Po had a sweet tooth and he ate so much that he was full."

Dr. Huang adds: After Su Tung-p'o, Lu Yu is probably the best known poet of the Sung dynasty. He was a prolific writer.

16. Chen Dasou. 1200. Benxin zhaishu shipu [Vegetarian recipes from the Pure Heart Studio]. China. 13 p. Passage on soy reprinted in C.N. Li 1958 #114, p. 84. [Chi]

• ***Summary:*** Wade-Giles reference: *Pên Hsin Chai Shu Shih P'u*, by Ch'ên Ta-Sou. Song dynasty. C.N. Li (1958) cites the title as simply *Shu shipu*, thus omitting the first three characters. The section on eating soybean gruel (*chuoshu*) begins: "*Shu* (soybeans) are the same as *dou.* Today, tofu is cut into strips, cooked lightly, then mixed with the five flavors." Then the writer turns to the classic Chinese literature: "Does the *Book of Rites* (*Liji*, +100) not say: 'sucking soybeans and drinking water (*chuoshu yinshui*)'? Soybeans are pure and white; they have a clean taste." (Translated by H.T. Huang, PhD, Aug. 2002). Dr. Huang adds: The author of this important work wants to return to simple food. He emphasizes that soybeans are very good, clean food. He could be implying that the *Book of Rites* is really talking about tofu.

Huang (2000, p. 127-28, 301, 621) states that this booklet, written during the Southern Song dynasty, contains 13 pages, mainly of anecdotes. It seeks to reverse the exotic and bizarre gastronomic excesses of the Southern Song by promoting the simplicity and elegance of vegetarian fare. The work states that tofu may be cut into strips and flavored with condiments. Dr. Huang adds (personal communication, 5 June 1993) that this book also refers *mien chin* (wheat gluten); it states that wheat gluten is made from wheat flour.

Note 1. This is the 2nd earliest document seen (Sept. 2002) concerning soyfoods and vegetarianism.

Note 2. This is the earliest document seen that contains the word "recipes" (or "recipe") in the title.

17. Lin Hong. 1200? Shanjia qinggong or Shanjia gongqing [Basic needs for rustic living]. China. Passage on soy reprinted in C.N. Li 1958 #303, p. 221-22. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Shan Chia Ch'ing Kung*, by Lin Hung. Southern Song dynasty. Japanese reference: *Sanka Seikyo / Sankaseikyo*, by Rinko. An important work. The section titled "Swanlike yellow bean sprouts" states (see Huang 2000, p. 296): Several days before the 15th day of the 7th moon, people soak black soybeans (*heidou*) in water then allow them to sprout as follows: Spread grain chaff on a tray, top the layer with sand, plant the beans in the medium, then press surface with a wooden board. When beans are sprouted [remove board and] cover tray with an [inverted] pail. Remove pail each morning so that sprouts are

© Copyright Soyinfo Center 2013

exposed briefly to the sun. This will enable sprouts to grow evenly and be protected from sun and wind. On the 15th day, display tray in front of the ancestral tablet. After three days, remove tray and wash sprouts clean. Grill sprouts with oil, salt, vinegar and spices to give a savory dish. They are especially good when rolled in a sesame pancake. Because the sprouts are light yellow, and are shaped like the neck of a swan [goose], they are called "swanlike yellow bean sprouts" (*Ehuang dousheng*). Huang (2000, p. 296) notes that this is the "earliest documentation we have on the preparation and use of soybean sprouts as a food" is in this book. A footnote (Huang, p. 296) states: "The 15th day of the 7th month is the Summer Festival *Zhongyuan* when offerings are made to the ancestral spirits. A long soybean sprout with a yellow tip may resemble the neck of a swan with a yellow beak, hence the name Swan-like bean sprout. Except for the step of exposing the germinating beans to sunlight, this recipe is basically similar to those given in later works, in which the beans are always kept in the dark to prevent the generation of chlorophyll and the emergence of a bitter taste."

Note 1. This is the earliest document seen (Feb. 2007) that uses the term *heidou* to refer to black soybeans.

Huang (2000, p. 301) states that this work describes two dishes containing tofu: One, named Snow and Red Cloud Soup, is prepared by cooking tofu with hibiscus flowers; the other, Tofu à la *Su Dongpo* [named after the great Song dynasty poet (W.-G. Su Tung-P'o), who lived 1036-1101] is made from yew nuts, scallions, oil and soy sauce.

Huang (2000, p. 354) says that this work contains at least nine recipes in which *jiang* is used, including the celebrated Tofu à la *Su Dongpo* mentioned above.

Huang (2000, p. 358) notes that the earliest references to the term *jiangyou* [soy sauce; the same characters used to write the Japanese word *shoyu*] occur in two works of the late Song dynasty. This work (which may be the first of the two) gives four recipes in which *jiangyou* is used to flavor various vegetables and seafood. A footnote summarizes the recipes, with page numbers from the 1985 modern Chinese version: Soy sauce, ginger threads, and a little vinegar are used as a dressing for lightly cooked young chives (p. 34). A stir fry of spring bamboo shoots, bracken leaves and fish or shrimp is seasoned with soy sauce, sesame oil, salt and pepper (p. 47). Soy sauce is used with sesame oil, pepper and salt to flavour young bamboo shoots, mushrooms and Chinese wolfberry seeds (p. 66). Soy sauce and vinegar are used to season blanched shoots of the daylily [day lily; genus *Hemerocallis*].

Huang continues (p. 358): Neither work tells us how the *jiangyou* was prepared. This does not necessarily mean that soy sauce first originated during the Song. Rather, it means rather that by the time of the Song, *jiangyou* had become the accepted name for the liquid seasoning derived from *shi* or *jiang.* Most scholars agree that soy sauce is almost as old as soy *jiang*, but opinions differ as to what it was called before it became known as *jiangyou* during the Song. A footnote (p. 358) cites three Chinese-language works from the 1980s that discuss this issue.

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Jiang itself is used in 9 recipes, soy sauce called *jiangyou* in 3 recipes, and soy sauce called *jiangzhi* (W.-G. *chiang chih*) in 1 recipe.

Note 2. This is the earliest Chinese-language document seen (April 2012) that uses the word *jiangyou* (one of two documents) or the word *jiangzhi* to refer to soy sauce.

It is surprising that the sauce made from *jiang* should have been called *jiangyou* at all. Throughout the history of the Chinese language *you* has always meant the oily (or greasy), water insoluble substance derived from animal, vegetable, or mineral sources, for example, *zhuyou* (lard), *niuyou* (butter), *chaiyou* (rapeseed oil), *xiangyou* (sesame oil), *tongyou* (tung oil), *shiyou* (petroleum) etc. *Jiangyou* (or *shiyou*) is the one, notable exception. It is an aqueous solution (or suspension) of a variety of substances and by no stretch of the imagination can it be construed as a *yu* (oil). Nevertheless, the term *jiangyou* (soy sauce) gained acceptance in the Song dynasty and is now firmly ensconced in the language, perhaps as an indication of its very special role in the daily life of the Chinese. Thus, we have a surprising situation in which an English translation, 'soy sauce' (sauce prepared from the soybean) is a more rational name for the product than its Chinese original, *jiangyou* (oil derived from *jiang*) (p. 358).

Note 3. This is the earliest document seen (Aug. 2007) that mentions sesame oil, which it calls *xiangyou.*

Question: If soy sauce were made from whole soybeans (which contain about 16-20% oil), why wouldn't that oil rise to the top of the soy sauce, whence it would have to be skimmed off before the soy sauce could be used? Dr. Huang answers (Oct. 2002): There should have been a lot of oil on top of the soy sauce. However in the early Chinese literature, some of which goes into great detail about the process, there is no mention of any oil atop the soy sauce. In the old process, which used mixed cultures of microorganisms, I suspect much of the oil is simply hydrolyzed by lipase enzymes. The oil may have started to appear in modern times when they began to use pure cultures.

Yan-Kit So. 1992. *Classic Food of China* (p. 27-28). "The other book of interest [from the Song dynasty] is *Shanjia Gongqing* or *The Simple Offerings of a Mountain Hermit* by Lin Hong, a hermit who lived in Zhejiang province towards the end of the Song dynasty in the 13th century. Not a pure vegetarian, Lin nevertheless preferred vegetables to meat, and this is reflected in his book. Of the hundred or so dishes, most use only vegetables, fruit, flowers, fungi and bean curd. He was particularly fond of using regional vegetables such as watershield, Chinese clover, bamboo shoots, and chrysanthemums... An

© Copyright Soyinfo Center 2013

enthusiastic proponent of medicinal herbs, he also aimed, with his recipes, to provide cures for illnesses."

Lin is "acknowledged as the first person who used the modern term jiangyou for soy sauce." He "may have used the term 'simple offerings' in the title of his book, but many of his dishes [recipes] are anything but simple, both in their preparation and their conception. Lin was fond of using his ingredients to project artistic and sensual images, and he liked to write poems or borrow classical illusions to enhance their significance."

Fukushima (1989, p. 4): "The first appearance of the name of chiang-yu was in *Shan-chia Ch'ing-kung* (*Sanya-Seikyo* in Japanese) by Lin Hung (*Rin Ko* in Japanese) in the Sung dynasty (960-1127 AD)."

Bo (1982): It was recently discovered that the term "chiang-yu," written with the same characters as the Japanese term "shoyu," and both meaning soy sauce, was used for the first time in China (or the world) in this work, written during the Sung dynasty. Shoyu was used either in recipes that didn't contain meat, or in side dishes. It was an important seasoning to be sprinkled on foods.

18. Ge Changgeng. 1240? Qiongguan xianseng ji [Collection of the excellent stone master]. China. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Ch'iung Kuan Hsien Sêng Chi,* by Ko Ch'ang-Kêng. Song dynasty. Huang (2000, p. 500-01) states that gluten had become so well established among the foods of the Song dynasty, that it was praised in poems / verse. Ge Changgeng, a Taoist monk, wrote:

Tender tofu (*nendofu*) is said to be delectable.

But it is gluten (*fujin;* W.-G. *fu-chin*) that has the cleanest taste.

Footnote: This verse is quoted by Liu Tsün-Ling (1985). Dr. Huang adds: This poem is evidence of the high esteem that the Sung literati had for wheat gluten. The collection is also called the "Shining Stone Collection." Since this is a poem, he took some poetic license in his book in translating the name of this tofu as "Silken tofu" since *nendoufu* is not a type of tofu; he does not known whether it was simply tender tofu (*nen* is still widely used to describe tender foods, including meat or tofu) or whether it was actually made like silken tofu, without the separation of curds and whey.

Note. This may be the earliest Chinese-language document seen (April 2013) that mentions silken tofu, which it refers to as *nendofu.*

19. Wu Zimu. 1275. Mengliang lu [Dreams of the former capital]. China. Passage on soy reprinted in C.N. Li 1958 #121, p. 86. [Chi]

• ***Summary:*** Wade-Giles reference: *Mêng Liang Lu,* by Wu Tzu-Mu. Southern Song dynasty. This important work is a description of Huangzhou, the capital, towards the end of the Southern Song dynasty. The "Different bureaus" section states that they have fields of rice, wheat, and soybeans (*dou*) used [perhaps as forage] mainly to feed horses belonging to the various government agencies.

The "Street vendors on mats" section describes foods they are selling in Hangzhou–capital of the Southern Song dynasty, including bean-flavored water (*douershui*) and sweet soybean soup (*gandoutang*), honeyed jujubes, fruits, and cooked meats.

The "Market that sells things at dawn" section states that in the summer they sell various things including young soybean congee (*douzizhou*). Note 1. Young soybeans might refer to green vegetable soybeans.

The "Miscellaneous products" section states that children are selling different kinds of foods, including two unknown varieties of soybeans (*qidou* and *fadou,* "law + bean"), brownish-green soybeans (*geqingdou*), salted young soybeans (*yandouer,* maybe green vegetable soybeans), and sugared yellow young soybeans (*douer huangtang*), and cooked soybeans ground to make a cake (*doutuan*).

The section on "Noodle shops" says that these shops sell different kinds of soups and dishes, including pan-fried tofu (*doufu*), fried fish, cooked vegetables, fried eggplant. These are shops where the common people get an inexpensive

© Copyright Soyinfo Center 2013

meal.

The section on "Produce" mentions grains but concentrates on beans, starting with soybeans of different colors: black (*doudahei*), purple (*dazi*), white (*dabai*), yellow (*dahuang*), and green (*daqing*). Also mentions various non-soy beans including white (flat) beans, black (flat) beans, white azuki beans (*baixiao*), red azuki beans (*chixiao*), mung beans (*lüdou*), and many others. (Translated by H.T. Huang, PhD, Sept. 2002). Dr. Huang adds: The word "former" in the title indicates that author apparently moved away from Southern Song territory, perhaps northward into that controlled by the Yuan (Mongol) dynasty, which began in 1260. Note 2. This is the earliest document seen (Sept. 2004) that uses the term *doudahei* ("bean large black") to refer to black soybeans, or the term *dabai* ("large white") to refer to white soybeans.

Huang (2000): In Lin An (present-day Hangzhou, capital of the Southern Song dynasty), "tofu soup and grilled tofu [pinyin: *jian doufu;* W.-G.: *chien toufu*] were sold in a wine shop, and a food stall specializing in vegetarian stews also sold grilled tofu" (p. 301). Fermented black soybeans (*shi*) are mentioned (p. 341). A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." In this book, jiang (fermented soybean paste) is used in two recipes and fermented black soybean sauce (*shizhi*) is used in one recipe.

This book also "states that 'things that people cannot do without every day are firewood, rice, oil, salt, soybean paste (*jiang*), vinegar, and tea.' It is clear that by the time of the Song, edible oil had advanced to the position as one of the proverbial 'seven necessities' of life" (Huang p. 436). Vegetable "oil pressing establishments were seen in the southern capital of Hangzhou" (p. 441). Northerners loved to use hemp oil for frying food. Wheat gluten (*fu*) was widely served during the Southern Song; names of four dishes served in a pasta restaurant are given (p. 500).

Wilkinson (2000, p. 854) cites this as *Record of the splendors of the capital city,* by Wu Zimu (no date given). These are reminiscences of the Southern Song capital of Lin'an (Huangzhou) modeled after *Menghualu.*

Talk with H.T. Huang. 1995. Dec. 28. The *chiang* mentioned by this work would definitely have been soybean chiang; that is what the word meant, starting a century or two before the beginning of the Christian era.

Letter from H.T. Huang. 1994 April 12, followed by talk of 1995 Dec. 28. The "seven necessities" of life are first mentioned in this book, in chapter 16, p. 136 in the 1982 edition. They are: firewood, rice, oil, salt, *chiang,* vinegar, and tea." Yet according to another respected source, the original version of the book mentioned eight necessities, the eighth being wine, which was widely used both for drinking and as a condiment in cooking. Today, however, all the modern editions of this book include only seven necessities, omitting wine. Later the list was standardized seven (see Chai Hao 1771), and the term "seven necessities of life" became popular in China during the Yuan dynasty (1279-1368). In the Yuan dynasty there were several famous dramas; this period saw the start of Chinese dramatic literature. The words were put together in rhymes of seven characters, and at least one of these mentioned the "seven necessities." They couldn't accommodate eight necessities in the rhyme, so since the Yuan it has always been standardized at seven.

Letter from H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1993. June 5. This book (1982 edition, p. 136) lists *fu* (gluten) with lamb casserole, dragon (shrimp) *fu,* parched *fu* in five flavors, and grilled *fu.* At this time, *fu* (gluten), used as a synonym for *mien chin,* seems to be widespread in the Southern Sung, China.

Note 3. This work was re-issued in 1982 by Commerce Publishers, Beijing. It is part of a series titled "Culinary Classics of Ancient China."

Note 4. This is the earliest document seen (April 2013) that mentions grilled tofu. It is also the earliest Chinese-language document seen (April 2013) that mentions Chinese-style grilled tofu, which it calls *jian doufu.*

Yan-Kit So. 1992. *Classic Food of China* (p. 18). The book *Mengliang Lu* or *Dreaming of the Capital,* is by Wu Zimu, a Southern Song dynasty writer. It "contains reminiscences about the picturesque and urbane social and commercial life in Hangzhou in the 13th century..." An important source of information for that period, it mentions Mrs. Song's fish soup by name.

20. Saito, Akio. 1292. [Chronology of soybeans, 122 B.C. to A.D. 1292] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 12-14. [Jap; eng+]
• ***Summary:*** 122 B.C.–It is said that Lord Liu An of Huai-nan (*Wainan O Ryuan*) invented tofu. Therefore it is sometimes called "Wainan."

300 A.D.–By this time in Japan people are using fermented foods such as kuki, sake, vinegar, sushi, and hishio made from herbs (*kusa-bishio*) and grains (*koku-bishio*). Kuki is a bean-based product related to miso, natto, or tamari.

630 A.D.–Igunami no Otasuki is sent as a student from Japan to T'ang dynasty China (*Kentoshi*). It is thought that foods like tofu were brought back to Japan by such student monks when they returned [but there are no records of this].

701 A.D.–The Taiho Law Codes (*Taiho Ritsuryo*) are established, and they call for the establishment of the Hishio Tsukasa (Bureau for the Regulation of Production, Trade, and Taxation of Hishio and Misho), located in the Imperial Palace as an annex to the emperor's kitchen (*daizenshoku*). Soybeans were definitely used to make these fermented foods and seasonings such as hishio (like Chinese chiang), fermented black soybeans (*shi, kuki*), and misho (a forerunner of miso; the term "miso" had not yet been

© Copyright Soyinfo Center 2013

coined).

741 A.D.–Two new Buddhist temples are added to each feudal domain (*kuni*)*:* Kokubunji is for monks and Kokubunniji is for nuns. It is said that from this time, fermented black soybeans (*tera nattô,* or *shiokara nattô*) spread throughout Japan. They are made from soybean koji, which is soaked in salted water and dried.

794–The capital of Japan is relocated to Kyoto from Nara. The Heian period (794-857) begins.

794-1190–Salted pickles (*shio-zuke*), hishio pickles (*hishio-zuke*), miso pickles (*miso-zuke*), and sake lees pickles (*kasu-zuke*) are eaten. The pickles were made by various methods. But only during and after the Muromachi period (1338-1573) were the various pickles made often.

802–Sakanoue no Tamuramaro (758-811) recommends that farmers in Tanzawa grow soybeans as an emergency food.

840–Each feudal domain (*kuni*) is encouraged to plant millet, barnyard millet, barley, wheat, soybeans, azuki beans, and sesame seeds.

901–The Chinese character *so* in the present word *miso* appears for the first time in the *Sandai Jitsuroku.*

927–The *Engishiki* is completed by Fujiwara no Tokihira (871-811) and others. In this book it is written: "In the feudal domain of Omi 60 koku of soybeans [1 koku = 47.6 gallons or 180 liters], in the domain of Tanba 30 koku, in the domain of Harima 20 koku, in the domain of Misa 10 koku, and in the domain of Iyo 10 koku are recommended (*susumu*). It seems that the soybean was an important crop in those days. Soybeans, rice, wheat, sake, and salt are given as the raw materials for making misho (a product resembling miso). The places famous for making misho are Omi, Hida, Yamato, etc. There are 27 misho shops in the Nishi no Kyo area of Kyoto. It is stated in the *Engishiki* that in order to make 1.5 koku of hishio you need 3 koku of soybeans, 1.5 koku of salt, 0.15 koku each of rice, wheat, and sake, and 0.043 koku of non-glutinous rice (*uruchi-mai*). Hishio at that time would seem to resemble today's kidamari; it would seem to have been very salty.

1068?–Salty natto (*shiokara nattô;* probably fermented black soybeans) appears for the first time in the book *Shin Sarugakki,* by Fujiwara no Akihira (lived 989-1066). In this book the lifestyle, manners, and customs of the time are described.

1083–Stringy natto (*itohiki nattô*) is discovered accidentally in Oshu (northeast Japan) during the conquest of Oshu by Minamoto (Hachimantaro) Yoshiie (lived 1041-1108). It is said that the natto was made when cooked soybeans were placed in a sack strapped over the back of a horse. The warmth of the horse caused the fermentation. There are so many legends like this on in the northeast prefectures (*Tohoku Chiho*) of Japan that it seems possible that natto was originally made there.

1183–Tofu is first mentioned in a document from the Great Kasuga Shrine (*Kasuga Taisha*) in Nara. The characters used to write the word tofu then were different from the characters used today. It seems that this tofu was very hard.

Note: See Diary of Hiroshige NAKAOMI, entry of 1183.

1192–The Kamakura period and shogunate begins as Minamoto no Yoritomo (1147-1199) becomes the first head shogun.

1228–The Buddhist monk Kakushin returns to Japan from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso in Japan, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. Note 1. This tamari is considered the first soy sauce in Japan. Kinzanji miso is a type of *namémiso* (Finger Lickin' Miso) made from roasted soybeans and barley koji. To these are added eggplant, white melon (*shiro uri*), etc., and the mixture is fermented.

1288-1292–Tamari-style shoyu is sold from Yuasa in the Kishu area (in today's Wakayama prefecture).

Note 2. This document contains the earliest clear date seen for the cultivation of soybeans in Japan (A.D. 802, and 840), and for the appearance of the term "tamari" in Japan (1228).

Note 3. This is the earliest document seen (Sept. 2000) that mentions sesame seeds (802 A.D.). Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

21. Jujia biyong shilei quanji [Essential arts for family living (encyclopedia)]. 1301. China. Passage on soy reprinted in H.T. Huang 2000, p. 352. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Chü Chia Pi Yung Shih Lei Ch'üan Chi,* author probably unknown or maybe by Hsiung Tsung-Li (pinyin Xiong Zongli). Late Yuan (Mongol) dynasty.

Huang (2000, p. 352) states that this book "presents two methods for making jiang from soybeans, one for *shu huang jiang* (ripe yellow soy paste) and the other for *sheng huang jiang* (raw yellow soy paste). The names are actually misleading since the 'ripe' and the 'raw' refer to the manner in which the beans are treated before mixing with wheat flour for the first fermentation and do not refer to the quality of the final product. In the *shu* or 'ripe' case, the beans are roasted and ground into flour; in the *sheng* or 'raw' case the beans are soaked overnight and boiled until soft and tender. The product from the first fermentation is called *huangzi* ['yellow child,' soybean koji] and well as *jianghuang* ['jiang yellow']."

Huang (2000, p. 355-56) gives an interesting full-page table which compares the processes for making the following types of jiang: Soybean (*dou*), wheat (*mien*), sweet flour (*tianmien*), azuki bean (*xiaodou*), jack bean, barley (*damai*), and elmnut (*yuren*). Each of the processes except one is

© Copyright Soyinfo Center 2013

based on the *Jujia Biyong* (ca. 1350); the process for making sweet flour jiang is based on the *Bencao Gangmu* (The great pharmacopoeia) (+1596).

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on fermented black soybeans (*shi*). Jiang itself is used in 17 recipes, and soy sauce made from jiang (*jiangqing*) in 1 recipe.

Huang (2000, p. 297) notes that this is the earliest document seen to use the term *douya,* which, in English, is the modern term–"bean sprouts." Mung beans (*lüdou*) are the preferred beans for making such sprouts. A long quotation describes the process in detail and gives a recipe.

Huang (2000, p. 255) quotes a passage describing the process for making *jufu* (also known as *jubing*), from dairy milk curds. Its says to coagulate cow's milk by adding vinegar, just as when making tofu (*doufu*). When the dairy curds are fully formed, drain in a silk bag and press with a stone. Add salt and store in a jar.

Letter from Dr. H.T. Huang. 1996. Sept. 29. "I am glad you brought up the question of when vegetarian mock meat dishes were first prepared in China; it is one that requires further research. The earliest examples of mock meat dishes I have found so far were made with *mien-chin* (wheat gluten)." Gluten is used "in a recipe for mock lung sausage and one for mock eel." The book contains 4 vegetarian recipes using *mien chien* (wheat gluten), found on pages 132-34. These are vegetarian versions of grilled liver, barbecued liver, mock fermented beans (*doushi* = fermented black soybeans), and mock fish.

Note 1. This may be the earliest document seen (Dec. 2005) concerning roasted soy flour.

Note 2. This is the earliest document seen (Aug. 2002) concerning a meatless sausage.

Huang (2000, p. 194-95) notes that this book contains probably the earliest account of the process for making red ferment [*hong qu;* red rice koji] and a red wine.

Bray (1984, p. 623): Translates the title as "Collection of certain sorts of techniques necessary for households (encyclopedia)." Published in Yuan, +1301. Probably by Hsiung Tsung-Li. Ed. Ming, +1560, T'ien Ju-Ch'eng. Partly reprinted in Shinoda & Tanaka (1973), "A Collection of Chinese Dietary Classics." Also discusses hemp oil, which was widely used in traditional China, was considered to have an offensive smell, and was rated lowest of all the cooking oils, but it was a good lamp oil as it did not smoke or hurt the eyes" (p. 51).

Bo (1982): This book mentions wheat chiang. It also gives a detailed description of the method for making fermented black soybean sauce: Two months after September, heat clear sesame oil, stir in 3 *tou* [unit of measure] of good fermented black soybeans (*shi*), mix, steam, and cool. Sun dry then steam again. After repeating this process 3 times, mix in 1 *tou* of white salt and put everything in a large cauldron with 3-4 tou of hot water. Add 1 *ry* each of three spices, 5 *kin* each of white onion and (?). Simmer down to two-thirds the volume and store in a container. From this it is clear that fermented black soybean sauce was a kind of soy sauce with flavorings and spices.

22. Wang Zhen. 1313. Wangzhen nongshu [Wang Zhen's agricultural treatise]. China. Passage on soy reprinted in C.N. Li 1958 #131, p. 92-93, and #307, p. 222-23. Illust. Also published in 1956 by Zhonghua Press, Beijing. (Pinyin: Wang Zhen. Nongshu). [Chi]

• ***Summary:*** Wade-Giles reference: *Wang Chên Nung Shu,* by Wang Chên. The title of this illustrated Yuan (Mongol) dynasty book is also given as simply *Nongshu,* since Wang Zhen is the author. There are three numbered sections titled "Principles of agriculture and sericulture;" soy is mentioned in each.

No. 1. The subsection titled "Annual agricultural activities" states: In the second month, plant soybeans. In the eighth month, mow the soybean stems (*yi doujiao;* i.e., harvest the soybeans). In the ninth month, when you might get frost, it is time to harvest soybeans (*dadou*).

No. 2. The subsection titled "Methods of planting #6" lists all the common seeds that can be planted in a field; these include panicum millet, setaria millet, paddy rice, hemp, barley, wheat, soybeans (*dadou*), and azuki beans (*xiaodou*).

It then describes four different planting methods: (1) Broadcasting (*manzhong*), drill planting in rows (*louzhong*), *guazhong,* and planting in difficult places *ouzhong.* For broadcasting: Carry a container of 2,000 cc (2 *dou*) capacity containing the seed grain under your left arm. Using your right hand, take a handful of seed from the container as you walk and, every three steps, scatter it over the prepared field, trying to get even distribution, so that the young plants will be neither too crowded nor too sparse. This was the method used in northern China during the Qin, Han, and Jin dynasties (221 B.C. to A.D. 420). Another method more often used in northern China was drill planting in rows, which is described in the *Qimin Yaoshu* (+544). A special machine (perhaps pulled by oxen) was used to compact the earth, while drilling holes in it. A person walked behind and stamped the holes with his feet. Today (+1313) they use a seed-drill (see Bray 1984, p. 256-57) which automatically plants the seeds in rows. "One man is needed to lead the ox and one to hold the drill, shaking it as he walks so the seed falls by itself." The *ouzhong* method is used near the hilly areas, where there are steep rocky hillsides or city walls. You apply fertilizer and irrigate [by hand].

No. 3. The subsection titled "Organic fertilizers #8" quotes the *Qimin Yaoshu:* To enrich the field, mung beans (*lüdou*) are best. Next best are azuki beans (*xiaodou*) and sesame seeds (*huma*). It's best to plant in the 5th to 6th

© Copyright Soyinfo Center 2013

months. In the 7th to 8th months you kill them [probably by plowing under as green manure]. In the spring, if you plant cereals [after the legumes], you will get 10 piculs per mou. It's as good as using the droppings of silkworms, as well as other excreta [from both farm animals and humans]. Note: Shows Chinese awareness of growing legumes before cereal grains to increase the yield of the cereals. (Translated by H.T. Huang, PhD, Sept. 2002).

The section titled "Soybeans" (*dadou*, also called *bidou*) states: There are three kinds of soybeans (*dadou*)*:* white, black, and yellow. The *Guangya* (+230) says the soybean (*dadou*) is *shu.* The *Erya* (200 B.C.) says that "*rongshu* is the same as *renshu.*" Then comes a long quotation about when to plant soybeans. Black soybeans are good for relieving hunger and also as a reserve against famine years. In years of abundance you can use them as fodder / feed (*liaoshi*) for cattle and horses. Yellow soybeans (*huangdou*) can be used to make tofu (*doufu*), and to make jiang and related materials [perhaps such as fermented black soybeans and soy sauce]. White soybean congee (*baidouzhou*) can be used as a supplemental food. The three soybean varieties (*sandou*) have different colors and different uses, but they are all beneficial grains.

Huang (2000, p. 441-57) states that this is the earliest Chinese document seen which contains a description of an oil press (*youzha;* used to press oil from seeds–in this case sesame seeds). He translates the long passage describing the wedge press, notes that the illustration which accompanies it bears no relationship to the description, then examines why the oil press was developed so much later in China than it was in Mediterranean civilizations–where olive oil was being pressed by the 6th century BC. The most common wedge press was made from large tree trunks, slotted and hollowed out. The seeds were roasted in a large pan over a stove, crushed, then pressed, using wedges hit by a hammer or mallet. A photo (p. 449, from Hommell 1937, p. 91) shows a wedge press. Note: This is the earliest document seen (Nov. 2003) that mentions a wedge press–but not in connection with soybeans.

Bray (1984, p. 628) cites this as *Nung Shu* (Agricultural Treatise). Published in Yuan, +1313. By Wang Chên. Textual references are to the 27 chüan Palace ed. of 1783, prefaced 1774. However it is indexed under *Wang Chên Nung Shu* and refers to many ingenious early Chinese agricultural implements. Concerning woodblock printing (p. 49): The development of printing during the Song dynasty enabled the Chinese government to disseminate both old and newly commissioned agricultural works. Thus, the number of agricultural works published in China increased exponentially from the Song on. Woodblock printing also made possible the use of illustrations, yet relatively few Chinese agronomists used this new technology. The great pioneer in this field was Wang Chên, author of this book in 1313. Sadly, "most subsequent authors were content to simply crib their illustrations, if any," from this book. The book devotes a special section to the preparation and weaving of hemp (p. 535).

Concerning soybeans (Bray, p. 514): "Black soybeans are a food for times of dearth; they can supplement [cereals] in poor years, and in good years they can be used as fodder for cattle and horses." Of the various kinds of soybeans, "although some were thought to be fit only for fodder except in times of famine, others were considered to make wholesome porridges and gruels."

Concerning kaoliang, Bray says (p. 449) that the word *kao liang* (literally "tall millet") first appears in this document, but the plant was more commonly known in pre-modern times as *shu shu* ("Szechwan millet").

Bo (1982): This work states, "Soybeans are the grain that helps the world. Tofu and chiang ryo? are made from them. The latter product, used in the recipes in the book, must be soy sauce."

Bray (1981): A practical handbook on the essentials of agriculture and sericulture in south China. With the *Qimin Yaoshu* perhaps the most fundamental work. The text (except for capitalization and commas) is identical to that in Hagerty 1917.

Perkins (1969): Beancake is not mentioned in the 1313 edition of this book.

Needham (1965), in *Science and civilisation in China. Vol. 4, Physics. Part II: Mechanical engineering,* in the section on oil mills (p. 206-10), states that Wang Zhen first describes the horizontal wedge press used for pressing oil from Chinese oilseeds. However soybeans are not specifically mentioned.

Hagerty (1917, p. 17): Cited as "Nung Shu (Treatise on Husbandry), by Wang Cheng." "The Ta tou bean includes three varieties, Pai, or White, Hei, or Black, and Huang, or Yellow. The Pai tou, or White bean, is utilized for making congees or gruels, but all kinds may be mixed and used for food" (See: Bretschneider, E. 1882. *Botanicon Sinicon.* 1:81).

23. Hu Sihui. 1330. Yinshan zhengyao [Principles of correct diet]. China. Passage on soy reprinted in Buell and Anderson 1999, p. 515-17. [Chi]

• ***Summary:*** Wade-Giles reference: *Yin Shan Chêng Yao*, by Hu Ssu-Hui. Yuan. Reissued in +1456 by imperial order. Huang (2000) shows that this celebrated Yuan nutritional treatise is a rich source of information about Chinese food and drink. One of China's two best known and most important medieval and premodern works on diet therapy materia medica, it contains food prescriptions and was the official nutritional guide for the royal household. The author was the dietician at the Yuan (Mongol) court Fortunately modern editions are available. (p. 135, 137-38). Huang (2000) notes that this work mentions fermented black soybeans (*shi*) (p. 341), and says that in countering

© Copyright Soyinfo Center 2013

the toxicity of foods, soybean jiang (*doujiang*) is superior to fermented wheat jiang (*mian jiang*) (p. 357). It also discusses: Red fermented rice (p. 196; also called red ferment, *hongqu* in pinyin, or *hung ch'ü* in Wade-Giles; it is made with the Mold *Monascus purpureus* Went, and used as a natural red coloring agent). Distilled wine (p. 227). Five types of dairy products (p. 256). Malt sugar (*tang*) (p. 460). Pasta-making, including steamed buns (*mantou*) and wheat flour noodles (*mian, miantiao*) (p. 476, 484). Sea vegetables (*haicai*) are mentioned as a cure for goiter (p. 576). Three recipes for curing beri-beri (*jiaoqi*, W.-G. *chiao-chhi*) are given (p. 581).

Wilkinson (2000, p. 649) states that after the Han dynasty, recipe books were called *shijing* ("food treatises"), and after the Tang, *shipu* ("recipe manuals") or *shidan* in the later empire. Most have been lost. One that survives, a treatise on diet written for the khan by the Muslim court doctor, the Mongolian Hoshoi (Husihui), titled *Yingshan Zhengyao* (Essentials of eating and drinking)" has been translated into English.

English translation: Buell, Paul D.; Anderson, Eugene N., trans. 1999. *A soup for the Qan: Chinese dietary medicine of the Mongol era as seen in Hu Szu-hui's* Yin-shan Chêng-yao. London: Kegan Paul International. 715 p. 2nd edition published in 2010.

Section 3 (p. 515-17) states: "Soybeans are sweetish in flavor and neutral and lack poison. They decrease demon *qi*, control pain, and drive out water. They expel heat of the stomach, bring down blood stasis, and counteract the poisons of various drugs. They are made into tofu. Tofu is cooling and moves the *qi."*

Yan-Kit So. 1992. *Classic Food of China* (p. 28-29). One food book, written toward the end of the short Yuan dynasty (AD 1279-1368), "is remarkable for both its content and influence. *Yinshan Zhengyao* or *The Principles of Correct Diet* was written in Chinese by Hoshoi (or Hu Sihui in Chinese) who was the Imperial physician and dietitian from 1314 to 1321." Next to nothing is known of his life, not even his nationality; "some say that he was a Mongol, others that he was a Uighur, and still others that he was a Naiman. His book, which is based on ancient Chinese theories on medicine and herbs, is about food cure and nutrition, and refers to the Yin and Yang principles relating to the cooling and heating elements in the viscera. Besides admonitions and advice for those who wish to nourish their lives, such as pregnant women and nursing mothers, he prescribes remedies which use every known ingredient from land and water. As such, his book is indispensible to anyone who wishes to research the specialised field of Chinese food cures. The general reader will find the woodcut illustrations both fascinating and humorous (see illustrations, pp. 30-33)."

Needham (1984, p. 592) says this book is mainly about deficiency diseases, with the aphorism "many diseases can be cured by diet alone."

Lu, Gwei-Djen; Needham, Joseph. 1951. "A contribution to the history of Chinese dietetics." *Isis–History of Science Journal* 42:13-20. April. The *Yinshan Zhengyao* discusses early Chinese treatments for beri-beri.

24. Kagenki [Kagenki treasure at Horyuji temple in Nara]. 1338. Entry of July 26. First cited by Kawakami 1985. Unpublished manuscript. [Jap]
• ***Summary:*** This document, which was in *Gunsho Ruiju*, mentions "taufu-jiru," pronounced "toufu-jiru." Kawakami says this is the second oldest reference to tofu in Japan. Address: Nara, Japan.

25. Kagen ki [Record of the Kagen era (1305-1364)]. 1338. Japan. [Jap]*
• ***Summary:*** In this document, tofu is referred to in the form of *taufu-jiru.*

Note 1. According to Osamu Shinoda (1968), this is the earliest document seen that refers to tofu in Japan.

Note 2. Kagen is the name of a Japanese era when ran from 1303 to 1306. The Kagen-ki which started in 1305–during the Kagen era–covers the period 1305-1364. Address: Japan.

26. Chia Ming. 1350. Yinshi xuzhi [Essentials of food and drink]. China. A 1968 edition appears in *Yin-chuan p'u-lu*, compiled by Yang Chia-lo. [Chi]
• ***Summary:*** Wade-Giles reference: *Yin Shih Hsü Chih*, by Chia Ming. Late Yuan to early Ming dynasty.

Huang (2000) states that this book discusses food antagonisms and incompatibilities (p. 135). One of the two best known and most important works on diet therapy during the late medieval period, it is concerned mainly with prevention. The author reached the venerable age of 100 years in 1368, when the Ming dynasty was founded, and died six years later. Thus, he was a living testimony to his teachings. Huang summarizes some information on the structure and contents of the work first given in English by Mote (below), then notes that the work, with its emphasis on poisonous and incompatible foods, "tends to be somewhat alarmist in tone, and could give the impression that eating was a highly hazardous occupation" (p. 137-39). It mentions tofu (p. 324). In Chapter 2 it says succinctly: Wash wheat flour (*fu*) to get wheat gluten (*mianjin*). It is sweet and cooling, but when fried, it becomes a heating food. Since it is not easily digested, it should be avoided by children and those who are sick (p. 501).

F.W. Mote notes in K.C. Chang's *Food in Chinese Culture*. (1977, p. 227, 230) that this fascinating book (Essential knowledge for eating and drinking, published in 1368) stresses prevention rather than treatment of disease. The author was from a wealthy family in Hai-yen in northern Chekiang, and had held a minor government post at the end of the Yüan dynasty. He was in his hundredth year of age

© Copyright Soyinfo Center 2013

in 1368 when the Ming dynasty was founded, and the Ming founder (Chu Yüan-chang, ruled 1368-98) summoned him to the court to honor him for his longevity. In the polite conversation that ensued, the emperor of course asked him the secret of his long life, to which Chia replied: "The essential is to be most cautious about what one drinks and eats."

This book is divided into 8 chapters. Chapter 2 concerns the fifty kinds of grains, including legumes and some seeds used for food. In Chapter 2, the following appears: "Soybeans: their flavor is sweet; when raw, their character is warm, and when fried [or cooked] it becomes hot. They are slightly toxic. Eaten in excess they block the lungs, produce phlegm and arouse coughing, induce ulcerated sores, and cause a person to become yellow of face and heavy of body. They must not be eaten together with pork. Small greenish black beans, also red and white beans [probably azuki], are similar to soybeans in flavor and character. None should be eaten with fish or mutton." Address: China.

27. Gion shigyô nikki [Diary of an official at Gion-sha]. 1350. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to as *Mori.*

Note 1. According to Osamu Shinoda (1968), this is the 2nd earliest document seen that refers to tofu in Japan.

Note 2: Gion-sha is today's Yasaka Shrine in Kyoto. Address: Japan.

28. Zheng Yunduan. 1355? Zheng Yunduanshi [Poem by Zheng Yunduan]. China. Passage on soy reprinted in C.N. Li 1958 #133, p. 93. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Chêng Yün Tuan Shih,* by Chêng Yün-Tuan (who lived 1327-1356). This Yuan (Mongol) dynasty Chinese poetess wrote a poem (in non-rhyming free verse) titled "Tofu: Plant soybeans below the southern mountains. The frosty wind adds freshness to the pods. Turn the quern and let the jade milk flow. Boil and let the clear milk flow. The color is cleaner than the spongy soil. The fragrance surpasses the solidity of quartz. The flavor leaves a beauty that is more than sufficient. It is a delicacy that one should not pass on indiscriminately." (Translated by H.T. Huang, PhD, Oct. 2002).

Note: *Merriam-Webster's Collegiate Dictionary* (1998) defines quern (derived from the Old High German *quirn* = hand mill), a word first used before the 12th century, as "a primitive hand mill for grinding grain." Dr. Huang adds: In China, a quern is typically made out of stone and 12-18 inches in diameter. The grains or beans are fed in through a hole in the upper stone, which can be turned manually, by a more efficient push-pull device using human power, or by animal- or water-power. The lower stone is stationary.

See also Huang (2000, p. 303). Huang notes that this poem is also appears in: (1) Hung, Kuang-Chu. 1984. *Chung-kuo shih-p'in k'o-chi shih-kao, shang ts'ê* [Draft History of Food Science and Technology in China, Vol. 1]. Beijing, China: Commerce Publishers. p. 54. (2) Ang Tian-Sê. 1983. "Tou fu k'ao yuan" [On the origin of tofu]. *Papers on Chinese Studies* No. 2. p. 29-39.

Note 1. This is the earliest document seen (April 2003) worldwide that mentions soymilk ("let the clear milk flow").

Note 2. This is the earliest document seen (April 2003) that mentions a quern in connection with soybeans.

29. Huang Ming zuxunlu [Ancestral admonitions]. 1381. China. [Chi]*

• ***Summary:*** Wade-Giles reference: *Huang Ming tsu-hsün-lu.* Ming dynasty. F.W. Mote notes in K.C. Chang's *Food in Chinese Culture.* (1977, p. 212) that the growth of the palace eunuch staff is an important feature of early Ming government. The *Huang Ming tsu-hsün-lu* (Ancestral Admonitions), issued first in 1381 during the reign of the Ming founder, stipulated that separate bureaus within the palace eunuch staff be designated. The imperial wine bureau oversaw the production of wines, soybean meal, tofu, etc. Address: China.

30. Sejong sillok [Veritable Records of King Sejong]. 1434. Korea: See p. 66, 27b-28a. Record of 24 Dec. 1434. [Kor]*

• ***Summary:*** In Korea's dynastic records, an entry from 1434 states that an emperor from China's Ming dynasty (1368-1644) sent some serving women to the Choson court to prepare various foods; one of these was tofu. "The account states that all the dishes were harmonious and served beautifully and the means of preparing the tofu was even more exquisite"

Endnote 17 (p. 202): *Sejong Sillok* (*Veritable Records of King Sejong*), p. 66, 27b-28a (1434-12-24).

Of the many foods that the women brought to the Choson court from the Ming court, only tofu was singled out for praise in this particular entry (Pettid 2008, p. 41, 202).

31. Inryôken nichiroku [Journal of Inryôken]. 1437. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to in the form of *dengaku.*

Note: According to Osamu Shinoda (1968), this is the 3rd earliest document seen that refers to tofu in Japan. Address: Japan.

32. Ise no Jôshin. 1445? Sôgo daisô-shi [Sôgo daisô-shi]. Japan. Undated. [Jap]*

• ***Summary:*** K. Tsuchiya (Soymilk, 1982, p. 30) states that in this book, written in about 1417-1473, there is a section on cooking *unohana* (okara). Tsuchiya thinks this soup was similar to today's soymilk except that the okara had not been removed. The author was the ancestor of Ise no Teijô, who lived during the Tokugawa (Edo) period and wrote that the word *Tofu-kan* should actually be pronounced *Tofu-ko,*

© Copyright Soyinfo Center 2013

and that it means "soup" (*shiru*). When the last character is pronounced "kan" it means "yokan." Note: Could Mr. Tsuchiya be confusing Manpukuji's *tofukan* (hard tofu) with the word *tofukan* (written with different characters) that means soymilk?

Note 1. This is the earliest document seen, worldwide (March 2007), concerning okara or the pulp that remains after making soymilk or tofu.

Note 2. This is the earliest Japanese-language document seen (March 2007) that mentions okara, which it calls *unohana.* Note 3. This is the earliest document seen (March 2007) concerning the etymology of okara. Address: Japan.

33. Nijo, Yoshimoto. 1450. Shôjin gyorui monogatari Shôjin gyorui monogatari [A comic tale of the great war between vegetarian foods and animal foods]. Japan. 79 p. Japanese summary by Kawakami 1978. [Jap]

• ***Summary:*** Some say that the author was Yoshimoto NIJO (lived 1320-88), but Kawakami thinks that the work was more likely written a little later, in the mid-Muromachi period (the period ran from 1338 to 1573). The original handwritten copy has been lost but the published copy (79 pages) still exists.

This is a funny story about foods that are depicted as people. There are different fish people, Suri-dofu (grated tofu), Natto Taro (or Natto Taro Itogasane; the last name means "many threads"), etc. The story explains that vegetarian foods and fishes got together at the high ranking samurai's place. A red snapper that showed up late was placed at a lower ranking seat below the vegetarian foods. Natto Taro was placed next to the top samurai. The red snapper got upset and called on the fish, shellfish, poultry, and meats to attack the vegetarian (*shojin*) foods. Some animal names weren't even foods.

Letter from Naomichi Ishige, Japanese natto expert. 2007. Jan. 17. This monogatari contains the 2nd earliest known reliable reference to natto in Japan.

Note 1. This is the 2nd earliest document seen (Jan. 2012) and the 2nd earliest reliable Japanese-language document seen that mentions natto. This is also the 2nd earliest document seen (Dec. 2011) concerning the etymology of natto. For more details see: M. Hirano. 1990. *Nattô bunka-kô* [Thoughts on the culture and history of natto]. *Shoku no Kagaku* (*Food Science Journal*) No. 144. p. 16-22 (see p. 21).

Note: This is the earliest document seen (July 2002) concerning soyfoods and vegetarianism in Japan.

34. Jinson Daisôjô ki [Record of Jinson Daisôjô]. 1457. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to as *tôfu.*

Note: According to Osamu Shinoda (1968), this is the 4th earliest document seen that refers to tofu in Japan, and the earliest that refers to it by the name still used today, *tôfu.* Address: Japan.

35. Luo Qi. 1475? Wu yuan [The origin of things]. China. Passage on soy reprinted in C.N. Li 1958 #138, p. 95. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *Wu Yüan,* by Lo Ch'i. Ming dynasty (15th century). The section titled "Origin of foods, No. 10" states: "Liu An made tofu." (Translated by H.T. Huang, PhD, Oct. 2002). Note: This is the earliest document seen (June 2003) which mentions Liu An in connection with tofu or which states *clearly* that he made tofu. Liu An, Prince of Huai Nan, lived during the Former / Western Han dynasty from 179 to 122 BC.

36. Oyudono no Ue no nikki [Diary of Oyudono no Ue]. 1477. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to in the form of *oden.*

Note: According to Osamu Shinoda (1968), this is the 5th earliest document seen that refers to tofu in Japan, and the earliest that refers to it in connection with oden. Address: Japan.

37. Gohôkôin Konoe Masaie ki [Record of Gohôkôin Konoe Masaie]. 1479. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to as *shirakabe.*

Note: According to Osamu Shinoda (1968), this is the 6th earliest document seen that refers to tofu in Japan, and the earliest that refers to it as *shirakabe.* Address: Japan.

38. Ninagawa Chikamoto ki [Record of Ninagawa Chikamoto]. 1483. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to as *shirakabe.*

Note: According to Osamu Shinoda (1968), this is the 7th earliest document seen that refers to tofu in Japan, and the 2nd earliest that refers to it as *shirakabe.* Address: Japan.

39. Shoken nichiroku [Journal of Shoken]. 1486. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to as *dengaku.*

Note: According to Osamu Shinoda (1968), this is the 8th earliest document seen that refers to tofu in Japan, and the 2nd earliest that refers to it in the form of *dengaku.* Address: Japan.

40. Inryôken nichiroku [Journal of Inryôken]. 1487. Japan. [Jap]*

• ***Summary:*** In this document, tofu is referred to in the form of *mura dengaku.*

Note: According to Osamu Shinoda (1968), this is the 9th earliest document seen that refers to tofu in Japan, and the earliest that refers to it in the form of *mura dengaku.*

© Copyright Soyinfo Center 2013

Address: Japan.

41. Ch'oe Pu. 1488. P'yohae-rok [A record of drifting across the sea]. Korea. Unpublished manuscript. [soy ref. Kor]*
• ***Summary:*** This is the diary of a Korean official–Ch'oe Pu. In Feb. 1488, during the Ming dynasty, he and his crew were caught in a storm off the coast of Cheju, at the southernmost tip of Korea; they drifted for 16 days in an open boat, a terrible ordeal, to the southeast coast of China, landing near Ning-po. After being taken captive, he and his crew suffered many more ordeals, but were gradually sent to Peking, following the route of the Grand Canal. On the way, in Shao-hsing prefecture, the Regional Commander and the other two high officials served him tea and fruit, and wrote a list of twelve foods and drinks to be presented to him. The last item on the list was "One plate of bean-curd."

In Peking, his adventure attracted the attention of the highest authorities, who provided the means to return him to the border of his homeland at the Yalu River. In 1488 Ch'oe presented his travel diary to the Korean King, "who was pleased and ordered that it be put into the archives."

Note: In 1965 this work, translated into English by John Meskill, was published by Univ. of Arizona Press. Bean-curd is mentioned on p. 73. Address: Korea.

42. Rokuon nichiroku [Journal kept by supervisory priests (*soroku*) at a subtemple of the Zen Buddhist temple Shokokuji in Kyoto]. 1489. Japan. [Jap]*
• ***Summary:*** In this document, tofu is referred to as *tôfu.*

Note: According to Osamu Shinoda (1968), this is the 10th earliest document seen that refers to tofu in Japan, and the 2nd earliest that refers to it as *tôfu.* Address: Japan.

43. Shichijû-ichiban shokunin-zukushi uta awase [Seventy-one matching poems / songs concerning Japanese craftsmen. 3 vols.]. 1500. Japan. [Jap]*
• ***Summary:*** A woodblock print titled "Tofu seller" (*Tofu uri*) shows a Japanese woman seated in the seiza position (on her heels) on the ground behind a short table (about 4 inches high, 4½ feet long, and 14 inches wide). On the table is one large cake of tofu (about 10 inches square and 3 inches high) and four smaller pieces (each about 6 inches square and 1 inch high).

44. Su Ping. 1500. Doufu [Ode to tofu? (Document part)]. Quoted by Wai 1964, p. 91-92. [Chi; eng]
• ***Summary:*** In an English-language article about fermented tofu titled "Soybean cheese, Nganshou Wai (1964, p. 92) notes that Su Ping of the Ming Dynasty (1500) wrote:

"The best is King Wainan's skill, you see the beauty when you peel.

"Ground in mortar and milk flows.

"Boil in water and it turns to snow.

"Soak in the jar and white curds show.

"Cut apart with a knife yet the jade is sound.

"Who knows the delicacy of the curd? Only the Buddhist and Taoist."

Note 1. This is the earliest document seen (April 2002) clearly linking tofu and Buddhism.

Note 2. This is the earliest document seen (April 2013) that mentions soymilk curds–before they become tofu.

Note 3. Dr. H.T. Huang found in a bibliography the original Chinese name of Su Ping, who flourished in about 1435. He has no further information about this poem or its source.

45. Iseno, Teijo. 1525? Teikun ôrai [Teikun ôrai]. Japan. [Jap]*
• ***Summary:*** Ohta (1975, p. 226) states that this book was written during the Muromachi (Ashikaga) period [ca. 1336-1573] in Japan. It contains recipes for using fermented black soybeans (*shiokara nattô*).

K. Tsuchiya (Soymilk, 1982, p. 30) states that in this book, written during the Muromachi (Ashikaga) period in Japan, the word *tofu-kan* appears in the section titled *Shojin Ryori* (Buddhist Vegetarian Cookery). That word used to mean "tofu soup" but it actually refers to what Japanese today call soymilk (*tônyû*).

Toyo Shinpo. 1983. Jan. 1. "Tonyu no rekishi wa furui" [Soymilk has a long history]. Based on new book by Kanji Tsuchiya.

46. Tsuneatsu Hôin nikki [Diary of Tsuneatsu Hôin]. 1532. Japan. [Jap]*
• ***Summary:*** In this document, tofu is referred to as *taufu.*

Note: According to Osamu Shinoda (1968), this is the 11th earliest document seen that refers to tofu in Japan, and the 3rd earliest that refers to it as *tôfu.* Address: Japan.

47. Shishinki [Record of my heart; diary kept by a priest (1496-1564)]. 1534. Japan. [Jap]*
• ***Summary:*** In this document, tofu is referred to in the form of *tengaku.*

Note 1. According to Osamu Shinoda (1968), this is the 12th earliest document seen that refers to tofu in Japan, and the earliest that refers to it as *tengaku.*

Note 2. This record is related to Ishiyama Hongan-ji, the primary fortress of the Ikkô-ikki, mobs of warrior monks and peasants who opposed samurai rule. It was established in 1496, at the mouth of the Yodo River, on the coast of the Seto Inland Sea–near today's Osaka. In use from 1532 to 1580, it was finally demolished in 1580 by Oda Nobunaga. Address: Japan.

48. Nyôbô shitsukegaki [Women's book of manners]. 1540? Japan. [Jap]*
• ***Summary:*** According to the *Nihon Kokugo Daijiten* [Shogakukan Unabridged Dictionary of the Japanese

© Copyright Soyinfo Center 2013

Language, 2nd ed.] the earliest known appearance of the word *okabe*, meaning "tofu" was in the *Nyôbô Shitsukegaki*, a work produced toward the end of the Muromachi period. The entry explains that this is a *nyôbô kotoba* that means "woman's word."

Concerning the idea of *nyôbô kotoba*, the *Encyclopedia of Japan* (Kodansha, 1993; an English-language work) states: "A group of special feminine words originally created and used by court ladies (*nyôbô*) of the imperial household in the Muromachi period (1333-1568) to achieve a certain euphemistic elegance when discussing food and other mundane matters among themselves."

Again, according to the *Nihon Kokugo Daijiten* [Great Japanese Encyclopedia] the earliest known appearance of the word *mame no ko* (written in hiragana) was also in the *Nyôbô Shitsukegaki*.

Kawakami and Kimura (1985) state at "Kinako" (p. 36): The earliest known word for kinako was *mamenoko*, a word or term mentioned in the *Onna no Shitsukegaki* (Women's Book of Manners). They cannot find that book anywhere; it may be in the *Gunsho ruijû* [Great collection of old documents. 670 vols. Published in 1819]. In that latter book we read: *Mame no ko o ba kinako to mosu* (*Mame no ko* is also called kinako). Note: This may well be the earliest document seen (Nov. 2012) that mentions roasted soy flour, which it calls *mame no ko*. Address: Japan.

49. Iida Ichirobei of Shimôsa makes tamari shoyu and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu (Early event). 1558.
• ***Summary:*** In *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 221-22), in the section titled "The development of shoyu," we read: "The area of Shimousa, about 30 miles northwest of Tokyo and already famous as a center of miso production, was to become the birthplace of the product now known as shoyu. In 1561, in the town of Noda, Iida Ichiro Heibei made a new variety of tamari-shoyu from hishio and presented it to the samurai Takeda Shingen, already known for his interest in miso. The flavorful product soon became known by its elegant name: Kawanakajima Goyo Tamari-Shoyu. It was first produced commercially in Shimousa in 1574."

In "Chronology of Soybeans," by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14–in Japanese) we read:

1558–Iida Ichirobei of the feudal domain of Shimôsa (*Shimôsa no kuni;* today's Noda city in Chiba prefecture) makes tamari shoyu, called Kawanaka-jima Goyo Tamari, and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu. It is said that the taste of shoyu gave a great boost to the energy of Takeda's army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanaka-jima after tasting the delicious kori-dofu from Sahtobei?

50. Konko chômi-shû [Present and old cooking collections]. 1580. Publisher unknown. 276 p. Handwritten. Japanese summary by Kawakami 1978, p. 46. [Jap]
• ***Summary:*** The year 1580 was the year the book was copied. The actual year it was written is unknown. It is a sort of encyclopedia of cooking, and includes 17 varieties of sake, 3 varieties each of hishio and miso, plus a tofu section... and much more.

51. Gao Lian. 1591. Yinzhuan fushijian [Compendium of food and drink]. China. Passage on soy reprinted in H.T. Huang 2000, p. 297, 324, 340, 373. [Chi]
• ***Summary:*** Wade-Giles reference: *Yin Chuan Fu Shih Chien*, by Kao Lien (who lived 1574-1624). Ming dynasty. Huang (2000) discusses: Processes for making sprouts from yellow soybeans (*dahuangdou*) and broad beans (*handou*) (p. 297; Footnote: The identity of *handou* is uncertain; it could be either broad beans (*candou, Vicia faba*) or peas (*wandou, Pisum sativum*)). Mention of tofu (p. 324). Brief recipe for making fermented black soybeans (*shi*, p. 340).

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Seasonings based on jiang (fermented soybean paste) are used in 27 recipes: jiang itself in 20, soy sauce made from jiang (*jiangyou*) in 5 recipes, soy sauce named *jiangzhi* in one recipe, and soy sauce named *jiangshui* in one recipe. Seasonings based on fermented black soybeans (*shi*) are used in only 5 recipes: Fermented black soybeans (*shi*) in 4 recipes, and fermented black soybean sauce named *shizhi* in 1.

Huang adds (p. 373): Soy sauce (*jiangyou*) started to rival jiang in importance during the Ming [1368-1644], and by the early years of the Qing [1644-1912] had surpassed it in culinary usage. This book is the last Ming entry in the table. Huang also discusses: Use of red ferment (*hongqu*) to make red rice wine (p. 196).

Huang (personal communication, 5 June 1993), gives the date of this document as +1591, and notes that pages 148-49 mention *fu cha* (tossed gluten salad) and *chien fu* (pan-fried gluten slices). This information is repeated from an earlier book by Han I written ca. +1350.

Bo (1982): This Ming dynasty book contains may recipes that use soy sauce. Partly reprinted in Shinoda & Tanaka (1973), "A Collection of Chinese Dietary Classics."

52. Li Shizhen. comp. 1596. Bencao gangmu [The great pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #311, p. 224-26. [Chi]
• ***Summary:*** Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). Ming dynasty. This classic work was completed in 1578, but not published until 1596. It describes almost 2,000 animal, vegetable, and mineral drugs and gives over 8,000 prescriptions. A rich source

© Copyright Soyinfo Center 2013

of information, it is still very useful. All foods mentioned are considered as medicines, based on the ancient Chinese saying: "Food and medicine have the same origin." The title might also be translated as "Collected essentials of herbs and trees. Illustrated compendium of materia medica with commentaries."

Soybeans and soyfoods are discussed in two chapters of this book. Chapter 24 contains sections on soybeans, soybean sprouts, and yellow soybeans, in that order. Chapter 25 has sections on fermented black soybeans, yellow molded soybeans (Jap. soybean koji), tofu and yuba (*doufu pi*), jiang, and soy sauce. Concerning yuba: If a film should form on the surface of soymilk when it is heated in the process of making tofu, it should be lifted off and dried to give *doufu pi* (yuba), which is itself a delicious food ingredient (Huang 2000, p. 303, 323).

Note 1. This is the earliest Chinese-language document seen (Oct. 2012) that mentions yuba, which it calls *doufu pi.*

Note 2. This is the earliest document seen (Oct. 2012) that describes yuba as being removed at the start of the tofu-making process. If this description is correct it could help explain the deep and ancient connection between making bean curd (Chinese: *doufu;* Japanese: *tofu*) and making bean curd skin (Chinese: *doufu-pi;* Japanese: *yuba*).

The first part of each section is titled "Explanation of names"; when these simply repeat material we have translated from earlier Chinese documents, we will not re-translate it. Another part of each section explains each food / medicine in terms of its "nature" or "vital energy" (*qi*, hot, warm, neutral, cool, and cold) and "flavor " (*wei*, bitter, sour, sweet, pungent, salty).

The section titled "Soybeans" (*dadou*) begins by stating that soybeans are considered a "middle class drug / medicine" according to the *Shennong Bencao Jing* (*Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (+100). This section has four parts: (1) "Explanation of names." The soybean is *shu.* The pods are called *jia.* The leaves are called *huo.* The stems are called *qi.* (2) "Explanation of uses." After quoting information from earlier Chinese sources, he states: The different soybean varieties are black, white, yellow, spotted / speckled (*ban*), green, and striped. The black ones are also called *wudou.* They are used for both medicine and food, and for making fermented black soybeans (*shi*). The yellow ones are good for making tofu (*fu*), for pressing to obtain oil, or for making jiang. But the other soybean varieties can also be used to make tofu and can be cooked for food. They are usually planted before summer. The young plants (*miao*) grow to a height of 3-4 feet. The leaves are pointed. In the fall they have small white flowers which come in clumps about one inch across. The plants wither in the frost. According to the *Lüshi Chunqiu* (Master Lü's spring and autumn annals) (239 B.C.), when soybeans are in season, the stems are long and the branches are short. The pods come in groups of 27. The more branches there are, the more nodes. The large soybeans (*shu*) are round; the small soybeans (*shu*) are oval. The early varieties tend to grow like vines. The leaves float. The nodes are further apart. The pods are smaller and not solid. The later varieties have fewer nodes, less space between nodes, and they are less solid. According to the *Fan Shengzhi Shu* (The book of Fan Shengzhi {on agriculture}) (10 B.C.), if you plant soybeans in early summer, you should not plant them deep because the flowers do not like too much sun; they will rot and the roots will be scorched. One should adjust the depth of planting according to the variety. [After harvesting] store soybean seeds in a level, shady place in a bag. Take them out 15 days after winter begins; then you can use them for planting. Soybeans can be stored quite easily for one full year, so they can be kept in preparation for a famine year.

(3) Black soybeans–nature and flavor (*heidadou qiwei*)*:* They are sweet, neutral, and nontoxic. Prolonged ingestion will make you / your internal organs feel heavy. When raw, they are warm. When cooked, they become cold–according to *Zhibo* (a person) cited in the *Huangdi Neijing Suwen* (Yellow Emperor's classic of internal medicine: Questions and answers) (200 B.C.). Chang Qi (another person) says: When soybeans are raw they are neutral, but when they are roasted they become hot, and when they are boiled they become cool (*han*). When made into fermented black soybeans they become cold (*leng*). When used to make jiang or soy sprouts ("raw yellow curls") they are neutral. When cattle eat them, they are warm [i.e. they have a warming effect on the cattle]. When horses eat them, they are cold. So even though it is one substance, when it is eaten in different ways, it has different effects.

(4) "Inventions" (*faming*)*:* Explains the complex pharmacology and medicinal effects of soybeans on the five internal organs–such as the kidney, liver, etc.

The section titled "Soybean sprouts" (*dadou huangjuan* or "soybean yellow curls") has two parts: (1) "Explanation of names." These are sprouted [soy] beans (*dounie*). Allow the black soybean to sprout until it is 5 inches (*cun*) long. Then dry it; this is called *huangjuan* ("yellow curls"). It becomes very small when dried. (2) Nature and flavor (*qiwei*)*:* Sweet, neutral, nontoxic. Note 3. This is the earliest document seen (April 2003) that uses the term *dounie* to refer to "sprouted soybeans."

The section titled "Yellow soybeans" (*huang dadou*)–explanation of food uses–is divided into three parts: (1) "Explanation of names." Similar to the passage above stating that yellow soybeans are good for making tofu (*fu*), for pressing to obtain oil, for making jiang, etc. (2) Nature and flavor (*qiwei*)*:* Sweet, warm, nontoxic. (3) Soybean oil (*douyou quiwei*) nature and flavor: Pungent, sweet, and hot (*re*)*;* slightly toxic. Note 4. This is the earliest document seen (Feb. 2003) that uses the term *huang dadou* to refer to yellow soybeans.

Note 5. This is the earliest Chinese-language document

© Copyright Soyinfo Center 2013

seen (Sept. 2006) that uses the term *douyou* to refer to soybean oil.

Note 6. Is fermented tofu (*furu*) mentioned in this work? After looking carefully through the Chinese document, Dr. H.T. Huang says (2002) he cannot find any mention of it, after another long search. Moreover, he does not mention this book in the section of his Needham series book about fermented tofu (2000, p. 325-28). However Dr. Masaaki Yasuda, a professor in Okinawa, who has spent his professional career studying tofuyo, a type of fermented tofu, disagrees. When asked by Wm. Shurtleff about this specific point he replied (e-mail of 11 Nov. 2011): "You will find mention of fermented tofu in the Special Issue of *Honso Komoku* (*Bencao Gangmu*) by Li Shih-Chen in 1596. Maybe you only checked 'the main issues' of this book, but actually he also published other special issues that were not included in the main issues. You will find the fermented tofu using the key word *furu*, not fermented tofu nor *rufu. Furu* in this book clearly refers to the fermented tofu that you are searching for. Of course I read it myself in this book; I did not hear it from anyone else."

Red azuki beans (*chixiaodou*) are also mentioned in this book; a listing of alternative names, with commentaries, is given. (See Li 1958 #393).

White beans (*baidou*) are also mentioned as follows: White beans (*baidou*) are mentioned in the Song dynasty. They are also called *fandou.* The seedlings can be used as a vegetable. They are good eaten raw. In eastern Zhejiang the flavor is especially good. They can be used to make jiang and tofu (*fu*). In the north, the watery white beans (*shui baidou*) are similar but is not as good. White beans are also called *fandou.* They can be used to complement congee / gruel (*zhou*) and cooked rice served as a main dish (*fan*). According to the author (Li Shizhen) *fandou* is the same as white azuki beans. Some white beans have a yellow color. The beans are about the size of mung beans (*lüdou*). Plant them in the 4th or 5th month. The leaves of the seedlings are like those of red azuki beans (*chixiaodou*) and can be eaten. The pods are like those of azuki beans (*xiaodou*). One kind of pod comes with leaves like those of the soybean (*dadou*). They can be cooked like rice and used to make tofu (*fu*). They are of the same category. Nature and flavor (*qiwei*)*:* It is sweet, neutral, and nontoxic. (See Li 1958 #467). (Translated by H.T. Huang, PhD, May 2003). Dr. Huang adds: The white bean (*baidou*) could well be the white azuki bean.

53. Li Shizhen. comp. 1596. Bencao gangmu [The great pharmacopoeia]. China. Passages on soy reprinted in C.N. Li 1958 #140, p. 95-96, and #311, p. 224-26. [Chi]

• ***Summary:*** Continued: Wade-Giles reference: *Pên Ts'ao Kang Mu,* by Li Shih-Chên (lived 1518-1593). The following information on soybeans and soyfoods appears in Chapter 25 of the *Bencao Gangmu.*

The section titled "Fermented black soybeans" (*dadou shi*) is divided into four parts: (1) "Explanation of names." The word *shi* (different character but same pronunciation) also means something delectable and highly desirable. According to the *Shuowen Jiezi* (Analytical dictionary of characters) (+121), you get fermented black soybeans by adjusting salt and incubating soybeans (*shu*). (2) "Explanation of uses" gives a long, detailed description of how to make fermented black soybeans. See Huang 2000, p. 340-41. *Shi* can be made from various types of soybeans. When made from black soybeans, they make good medicine. There are two kinds of *shi* [both made by a mold fermentation]: unsalted / bland fermented black soybeans (*danshi*), and salted / savory fermented black soybeans (*yanshi*).

To make unsalted / bland fermented black soybeans (*danshi*)*:* In the 6th month, take 2-3 *dou* (20-30 liters) of black soybeans. Winnow until clean then soak overnight in water. Steam the beans thoroughly then spread on a mat. When almost cool, cover beans with artemisia leaves. Examine them every 3 days. When they are covered, but not luxuriantly, with a yellow coating [of mold], dry them in the sun, then winnow until clean. Add enough water to wet the soybeans, so that when scooped by hand, there will be wetness between the fingers. Place them in an earthenware jar (*weng*) and pack them down tightly. Cover with a 3-inch layer of mulberry leaves. Seal mouth of jar with mud, then let stand in the sun for 7 days. Remove beans from jar and dry them in the sun for an hour. Wet them again and put them back in the jar. Repeat this process [from wetting and sunning] 7 times. Finally, steam the beans, cool, dry, and store in the jar.

To make salted / savory fermented black soybeans (*yanshi*)*:* Take 1 *dou* (10 liters) of soybeans, soak in water for 3 days, steam thoroughly and spread on a mat (as before). When the beans are covered with a yellow coating [of mold], winnow, soak in water, drain off the water, and dry in the sun. For every 4 catties of beans (1 catty weighs about 1.33 pounds), mix in 1 catty of salt, plus half a catty of finely-cut strips of ginger. Place mixture in an earthenware jar. Season with pepper (*jiao*), orange peel, perilla, fennel, and almonds. Add water until it is one inch (*cun*) above surface of mixture. Top contents with leaves, then seal the mouth. Sun the jar for a month; then the savory fermented black soybeans will be ready.

Huang (2000, p. 341) notes that the process described above is identical in principal to that in the *Qimin Yaoshu* (Important arts for the people's welfare) (+544), reiterated about 350 years later in the *Sishi Zuanyao* (Important rules for the four seasons) (+900).

(3) Unsalted / bland fermented black soybeans nature and flavor (*danshi qiwei*)*:* Bitter (*ku*), cold (*han*) and nontoxic. (4) Puzhou fermented black soybeans (*Puzhou shi*) nature and flavor: Salty (*yan*), cold (*han*), nontoxic. Note

© Copyright Soyinfo Center 2013

1. Puzhou is a place in Shanxi province, China, noted for its distinctive fermented black soybeans. This is the earliest document seen (Feb. 2003) that mentions *Puzhou shi.*

The section titled "Yellow soybean koji" (*douhuang,* "bean yellow") describes the soybeans covered with yellow mold; they are the first step in making salty fermented black soybeans and are not a consumer food product. This section is divided into two parts: (1) "Explanation of names." Describes how to make *douhuang.* According to Li Shizhen (the author of this book): Take one *dou* (bushel) of black soybeans. Steam until cooked through. Spread on a mat and cover with rushes–as if you were making jiang. Allow the soybeans to mold until they have a yellow coating. Dry, then grind. (2) Nature and flavor (*qiwei*)*:* Sweet, warm, nontoxic.

Dr. Huang offers a comparison of danshi and douhuang (Feb. 2003 Feb): Unsalted / bland fermented black soybeans (*danshi*) is an end product, which is largely free of molds when it is sold; it was traditionally used in Chinese medicine. Dr. Huang has never seen or tasted *danshi,* never heard of it being used in food, and never seen it for sale in the USA. *Danshi* is made by a two-stage fermentation. In the first stage, after the soybeans are covered with a yellow coat of mold, they are winnowed, soaked in water, rinsed to remove most of the white mold and its yellow spores, then sun dried. In the second stage, the beans are packed tightly into a container and incubated for 10-15 days depending on the season. This stage enables the enzymes to act on the soybeans, digesting some–but not all–of the soy proteins. If the incubation is too long, some of the excessive peptides resulting from digestion of soy proteins may give the *danshi* a bitter taste. By comparison, yellow soybean koji (*douhuang*) is an intermediate stage of soybean processing not normally sold, but used to make jiang.

(C) The section titled "Tofu": The first clear recipe for making tofu in China appears in chapter 25 of this book (Huang 2000, p. 303). Li says that the process for making tofu (*doufu*) originated with the Prince of Huai-Nan, Liu An. Black [soy] beans, soybeans, white [soy] beans, mud beans, peas, mung beans, etc. can all be used. There are six steps: 1. Soak the soybeans [in water]. 2. Grind the beans [to give a slurry]. 3. Filter the milk [to remove the insoluble residue {okara}]. 4. Cook the milk [for an adequate time]. 5. Add nigari / bittern (*yen lu*), leaf of the mountain alum tree (*shan fan*), or vinegar to coagulate the milk. 6. Collect the curds.

Note 2. This is the earliest document seen (Jan. 2010) that describes the basic process for making tofu, either at home or on a commercial scale.

Li Shizhen continues: One can also obtain curds by mixing the hot milk in a container with gypsum powder. Various salty, bitter, sour, or pungent materials can also be used to coagulate the soymilk.

Note 3. This is the earliest document seen (Oct. 2002) that mentions nigari. Li (1958) adds: "Vital energy and flavor (*chiwei,* of tofu): Sweet, salty, cold / cooling, slightly toxic." Huang adds (p. 303) that although Li gives no details about the tofu-making process, we can surmise that the procedure used in his time is very similar to that used today in the Chinese countryside. Huang (p. 304-05) reprints line drawings (from Hung Kuang-Chu 1984, p. 58-60) of the traditional process for making tofu still used in China, and notes that the same curding agents or coagulants listed by Li Shizhen (bittern, mountain alum, vinegar, and gypsum) are still in use today.

54. Li Shizhen. comp. 1596. Bencao gangmu [The great pharmacopoeia]. China. See p. 360-71. 1965 ed., reprint of 1885 edition, Peking. Also reprinted in 1916 by Shanghai Hong Pao Chai Book Co., Shanghai. [Chi]

• ***Summary:*** Wade-Giles reference: *Pên Ts'ao Kang Mu,* by Li Shih-Chen (lived 1518-1593). The author: Bretschneider (1882, in *Botanicon Sinicum,* p. 54-55) notes: "Li was born at K'i Chou in Hu pei probably in the first quarter of the 16th century, and died toward the close of the same century. His literary name was *Tung pi.* He wrote under the pseudonym *Pin hu.* As was the case with the majority of early Chinese physicians of note, Li Shi chen was not a professional medical man, but a civil functionary and a magistrate of the district of P'eng k'i (T'ung ch'uan fu, Sz' ch'uan [Szechuan]). Besides this, his principal work, Li left several medical treatises. "Li began compilation of this work in 1552, and after 26 years' labour he completed it in 1578. He wrote out the manuscript three times before he was satisfied to give it out as complete. The author died before it was published, and his son, Li Kien yüan, presented the manuscript to the Emperor, in 1596, who ordered it to be printed."

The work: Called *Honso Komoku* in Japanese, this is the most famous of the many Chinese herbals, and the most important Chinese work on materia medica and natural history. Also called a botanical encyclopedia, it is the first treatise of its kind in which the material is treated critically. Bretschneider (1882, p. 55) adds: "Several editions have been successively issued. The earliest now extant is, it seems, that of Shun chi 15 (A.D. 1658). All editions which I have had an opportunity of examining are printed on indifferent paper and are full of misprints, which make the book very inconvenient for reference... The preface is followed by a general index of the 52 books (chapters) of the work, enumerating the 16 divisions and the 62 classes under which the whole matter is arranged... It begins with a critical review of the 42 capital works on Materia media published" previously.

Concerning the year of publication: Huang (2000, p. 621) says 1596. Yokotsuka (1986, p. 198) says 1590 and cites this as the earliest Chinese work to mention *chiang-yu* and *tao-yu* (the liquid separated from soybean chiang). Wai (1964) says 1596. Reischauer and Fairbank (1960, p. 308) say it was completed in 1578. Li (1958) says 1578. Merrill

© Copyright Soyinfo Center 2013

& Walker (1938) say 1590. Bretschneider (1881) says: Completed in 1578 but published in 1596 or 1597.

Talk with H.T. Huang. 1992. March 23. The most current, and one of the best, editions of this work was published in 1982 in Beijing by The People's Health Press (2,977 pages). It is edited and extensively annotated by Liu Heng-ju. He compared several of the most important extant versions, and where they differ (e.g. where a word is written differently in different versions), he explains these differences in footnotes, and explains why he chose the word or text that he did for his basic text. There is no English translation of the *Pen-ts'ao kang-mu*, one of the great scientific works in China (and worldwide) because: (1) It is a huge book which would take a lifetime to translate; (2) A vast amount of research would be required for an accurate translation; and (3) The cost of the translation and publication, and the relatively limited demand for the finished work would probably make the venture unprofitable for a commercial publisher. Perhaps the Chinese Academy of Traditional Medicine would be able to undertake such a translation, working jointly with English-speaking Western scholars.

In the section on soybeans, this work refers to a type of soy wine called *tou-lin chiu* ("bean soak wine") which is described as a sake-like fermented alcoholic beverage made from black soybeans. A recipe is given and it is stated that the *Ts'ung-shu chi-ch'eng ch'u-p'ien* (1473) said that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Note. This is the earliest document seen (Oct. 2012) that mentions a type of soy wine called *tou-lin chiu* ("bean soak wine") as described above.

Wang and Fang (1987) write: The method of preparing chiang-yu (soy sauce) was first described in this work. Cooked soybeans were mixed with wheat flour, pressed into cakes, and left in the room until the cakes were covered with yellow mold growth. The molded cakes, or *ch'ü*, were mixed with salt and water and aged in the sun. After pressing, the liquid was known as chiang-yu. Li also described how to make a similar sauce (*shi-tche*) by boiling fermented black soybeans.

Needham (Botany, 1986, p. 318g): "The soya-bean, *Glycine Soja, ta tou*, was considered an antidote for indigestion and poisoned conditions of the intestinal tract, but Li Shih-Chen found that this never had any effect unless *kan ts'ao* (*Glycyrrhiza glabra*) was given with it (chap. 24, p. 4a)."

Fukushima (1979, p. 5-6): "The chiang-yu described in *Pen-ts'ao Kang-mu* (*Honso-Komoku* in Japanese), published in 1590 by Li Shih-chen (*Ri Jichin* in Japanese) in the Ming (*Min* in Japanese) dynasty, was also made with koji [*ch'ü*] manufactured by using soybeans and cereals (Fig. 4). (In this process soybeans were cooked in water, mixed with wheat, and spontaneously molded to form koji. Salt water was mixed in with a paddle, then the mash was insulated and aged. Finally it was filtered to make chiang-yu). The ratio of soybeans to wheat in the koji making was 3:2. This ratio is very close to that used in making regular Japanese shoyu, which is made by using equal amounts of soybeans and wheat."

Wai (1964) notes that this book infers that soybean curd [tofu] was invented by Liu An.

Sato (1963, p. 20), in his book titled "Documents on Fermented Black Soybeans, Chiang, Miso, and Shoyu," cites this as the fourth earliest Chinese document seen on the subject. It was translated into Japanese by Suzuki Shintai.

Morohashi (1955) translated parts of the *Bencao* related to [soy] bean oil (*douyu*), bean sprouts (*douya, dounieh*), fermented black soybeans (*doushi*), tofu (*doufu*), [soy] bean flour (*doufen*), bean soak wine (*doulinjiu*), soybeans (*dadou*– production; there are black, white, yellow, dark brown, green, and speckled soybeans).

55. Ekirinbon setsuyôshû [Early Japanese dictionary]. 1597. Japan. [Jap]*

• ***Summary:*** This dictionary contains (as of April 2012) the earliest known published reference to shoyu (soy sauce) in Japan, written with the characters used today. Prior to this, other characters were used: Hishio / chiang, mame-bishio, etc. Written by a Japanese priest between 1469 and 1503, it was widely circulated in manuscript form and used by the common people. Modern rendering by Kawakami 1978, p. 220. It also mentions amazake and ko (the early term for amazake).

Note: This is the earliest Japanese-language document seen (June 2012) that mentions amazake, which it calls "amazake" and "ko." This is also the earliest document seen (March 2001) concerning the etymology of amazake.

Yokotsuka (1985, p. 205; 1986, p. 198) gives the title and date as "Ekirinbon-Setsuyoshu (1598)" and notes that the word shoyu [written with the same Chinese characters as chiang-yu / jiangyou, the Chinese word for soy sauce] first appeared in this book.

Akio Saito (1985) states that this book was published in 1521.

Fukushima (1989, p. 9): "The word 'shoyu' first appeared in *Ekirinbon-Setsuyoshu*, a Japanese dictionary published in 1597 during the Muromachi period."

Iino (2001, p. 23): "Next [after the *Tamonin-nikki* entries of 1568 and 1582] we find an entry for shoyu (using contemporary characters) in the *Ekirinbon-setsuyoshu* (1597). The oldest of these dictionary-like *setsuyoshu* is thought to be the *Bunmeibon-setsuyoshu.* Following its publication, similar volumes appeared successively, but none of these contains any reference to shoyu. The entry in the *Ekirinbon-setsuyoshu* appears to be the first reference to shoyu in a *setsuyoshu.* By this stage it seems clear that soy sauce was in common use, both in name and in practice."

56. Saito, Akio. 1599. [Chronology of soybeans in Japan, 1336 to 1599, the Ashikaga/Muromachi period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 14. [Jap; eng+]
• ***Summary:*** 1350–Dengaku (Oden) is mentioned in the records of the Gion shrine in Kyoto.

1444 June–The present characters for "tofu" appear in the *Kagakushu* encyclopedia.

1450–The suribachi (a serrated earthenware grinding bowl or mortar) becomes popular among the common people, therefore miso soup becomes popular.

1469–In the feudal domain of Sanuki (*Sanuki no kuni*) the Sakade Salt Farm (*Sakade Enden*) starts operation.

1500–In the published collection of Japanese poems and songs titled *Shichijû-ichiban shokunin-zukushi uta awase,* there is a drawing of a lady in a black kimono and white headband sitting cross legged on a low platform on a street and selling large and small pieces of cut tofu.

1521–The present characters for the word "shoyu appear for the first time in the book *Ekirinbon Setsuyoshu.*

1526–In a memorandum by Munenaga is written: "Late in the night, sitting by the sunken open-hearth fireplace together, and eating many Dengaku tofu" (*Yo mo fuke, irori-be ni hiza o narabe, Dengaku tofu o do kasanari.*) It seems that at the end of the Muromachi period, people spread miso on tofu, grilled it over a fire, then ate it.

1535–In Kishu (today's Wakayama prefecture), Akagiri Umataro? (Zenuemon/Yoshiuemon?) starts selling Yuasa Shoyu, which is derived from Kinzanji miso.

1558–Iida Ichirobei of the feudal domain of Shimôsa (*Shimôsa no kuni;* today's Noda city in Chiba prefecture) makes tamari shoyu, called Kawanaka-jima Goyo Tamari, and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu. It is said that the taste of shoyu gave a great boost to the energy of Takeda's army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanaka-jima after tasting the delicious kori-dofu from Sahtobei?

1559–The book *Tokitsugu Kyoki* by Yamashina Tokitsugu (lived 1507-1579) states that Tokitsugu sent a small keg of shoyu to Nagahaki kyoku. It seems that at the end of the Muromachi period, shoyu is becoming popular.

1560 May–Oda Nobunaga (who lived 1434-1582) wins the war over Imagawa Yoshimoto (1519-1560) in Okehazama. At about this time people start use the technique of frying to prepare the side dishes to their meals (*fukushoku-hin*) for the first time.

1573-91–Shoyu making starts on the island of Shodo-shima.

1574–Tanaka Chobei of the feudal domain of Shimousa (today's Chiba prefecture) Ichikawa starts making shoyu.

1587–Maruo Magouemon of Hanshu Tatsuno makes shoyu using Mikazuki soybeans.

1591–Akagiri Saburobei of Yuasa in Kishu-han (today's Wakayama prefecture) starts to use Shoyu Kaisen, a ship of at least 200 koku [9,520 gallons] capacity to transport his shoyu to other feudal domains (*kuni*) for sale.

1594–The term *koma-dofu* appears in the Rokuon Diary of Ginkakuji. "Rokuon" means "deer garden." *Koma-dofu* is a very firm tofu which originated in Korea.

Note. This is the earliest document seen (April 2013) that mentions firm tofu. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

57. Companhia de Iesus [Society of Jesus (Jesuit)]. 1603. Vocabulario da lingoa de Iapam, com a declaraçáo em Portugues, feito por alguns padres, eirmaós da Companhia de Iesu [Vocabulary of the language of Japan, with definitions in Portuguese, produced by some fathers and brothers of the Society of Jesus]. Nagasaki, Japan. 403 p. [Por; Jap]
• ***Summary:*** At the bottom of the title page is written: "Com licença do ordinario, & Superiores em Nangasaqui no Collegio de Iapam da Companhia de Iesus. Anno M.D. CIII." The "Licença" or license by Francisco Pasio is dated 2 Jan. 1603. A romanized version of each Japanese word is given, followed by a brief explanation in Portuguese. In Japanese, this book is known as *Nippo Jisho, Nagasaki-ban.* In 1960, Iwanami Shoten published a facsimile edition in Japan, titled *Nippo Jisho: Vocabulario da lingoa de Iapam,* compiled by Tadao Doi (822 p., 22 cm), then in 1980 they published a Japanese translation (xxxiv + 862 p., 27 cm). Kawakami (1978) has summarized some soy-related portions. Iwai (1953, p. 11) notes that this dictionary was compiled by Joao Rodrigues–but this is controversial.

Soy-related terms in this dictionary, and a translation of their definitions from Portuguese, through Japanese, into English, are as follows:

Abura ague. 1. Abura agueno mono. Abura-agé [deep-fried tofu] or abura-agé mono. Things which are deep-fried in oil. Note 1. This is the earliest document seen (April 2013) that mentions fried tofu.

Aburidôfu. Slice tofu, which is made from beans like raw cheese, broil in a fire.

Amazaqe [Amazake], a still-bubbling fermented liquid that has not yet completely become sake; or sweet sake. Note 2. This is the earliest Portuguese-language or Western-language document seen (June 2012) that mentions amazake, which it calls "Amazaque."

Azzuqi or azzuqui [azuki beans]. *"Hus feijoes pequenos como lentilhas"* means "Beans that resemble green peas (endo). Azzuqigai is rice porridge (o-kayu) that contains azuki beans. Azzukimochi is mochi that contains azuki beans. Note 3. This is the earliest European-language document or Portuguese-language document seen (Jan. 2005) that mentions azuki beans, which it calls *Azzuqi* or *Azzuqui.*

Cabe [Kabe]. Same as tofu. A type of food which is

© Copyright Soyinfo Center 2013

made from ground beans. This is a woman's word. Note 4. This is the earliest document seen (April 2013) that uses the word "cabe" (or "kabe") to refer to tofu.

Côji [Koji], a yeast [sic] used in Japan to make sake, or mixed with other things. Note 5. This is the earliest European-language document seen (June 2012) that mentions koji.

Daizzu [Daizu]. Mame. Graos, ou feijoes de Iapao [grain, seed, kernel, or Japanese beans].

Dengacu [Dengaku]. Dancing monks (Bôzos). Or tofu which is skewered, and on top of each slice is spread miso; then it is broiled. Note 6. This is the earliest document seen (April 2013) that mentions Dengaku, a type of delicious broiled / grilled tofu seasoned with miso.

Fanben [Hanben]. A type of food which is made by broiling tofu and simmering it with miso.

Icchô. A way of counting some types of food, such as tofu.

Miso. A kind of mixture which is made with *graos* [grains, seeds, kernels], rice, and salt to season Japanese soups.

Note 7. This is the earliest European-language (or Portuguese-language) document seen (March 2009) that mentions miso, which it calls *Miso.*

Misocoxi [*Misokoshi*], a bamboo strainer used for straining miso. Note 8. This is the earliest document seen (March 2011) that mentions a *misokoshi.*

Misoya, a shop that sells miso.

Misoyaqijiru [*Miso-yaki-jiru*], a type of soup (*Xiru*) made with tofu and finely sliced daikon radish. Note that the word tofu was written as "Tofus" in the dictionary but should be written "Tôfus."

Misôzzu, which should properly be called Zosui, is a healing food made from vegetables, rice, miso, etc. and served to those who are old, weak, or sick. Another meaning of this term is a type of porridge [*kayu*] containing a mixture of rice, vegetables, and other things.

Nattô, a type of food made by a brief boiling of grains / seeds [*graos* is the word used, but soybeans are actually employed], which are then put into an incubation chamber (muro).

Nattôjiru, a soup (*Xiru*) made from natto. Note 9. This is the earliest Portuguese-language document seen (Jan. 2012) that mentions *natto* or *Nattôjiru.* However recall that the "natto" used in Nattôjiru may well be fermented black soybeans.

Saqe (sake, saké).

Tamari, a very savory liquid taken from miso which can be used for seasoning foods [when cooking] or at table. Note 10. This is the earliest document seen (April 2012) that mentions tamari.

Tôfu*–Taufu. A type of food. It is made into the shape of a cheese by crushing soybeans. * Note: The sound of the Japanese character for bean (mame) is "tou." But at that time "taufu" was the typical pronunciation. In other documents it is the same, for example the *Iitsugu Kyoki* (Iitsugu Diary) written during the Tensho period (1573-1586), with entries in 1588, 1591, and 1600. Sometimes they used the characters for "T'ang" (as T'ang dynasty in China) and "cloth," although they were also pronounced as "taufu." In this 1603 Portuguese dictionary there appear a number of tofu terms written in the "open sound form" (kaionke): Cabe [Kabe = wall], Dengacu [Dengaku], Fanben, Icchô [One cho or cake of tofu], Vdondôfu, and Yudofu. One exception is the term Aburidôfu.

Tôfuya–Taufuya, a shop which makes and sells that cheese-like thing (tofu), which is made by grinding soybeans that have been soaked in water until they are soft.

Vdondôfu [Udon-dôfu]. Tofu which is made like udon (Japanese-style wheat noodles) and cooked.

Xôyu [Shoyu, or soy sauce], a liquid which corresponds to vinegar except that it is salty. It is used for seasoning foods. It is also called *sutate.* The character *su* means "bamboo mat" [as in "sudare"] and the character *taté* means "to stand up." Note 11. This is the earliest Portuguese-language document seen (April 2012) that mentions shoyu or soy sauce, which it calls Xôyu.

Yudôfu–Yudaufu: A food made from thinly sliced tofu, served next to a *kakejiru*-type sauce [which is then poured over the top].

The following terms are not mentioned: Agé (but abura-agé is), Daitokuji natto, Edamame (or Eda mame or Yeda mame), Fu (or gluten or wheat gluten), Hamanatto or Hamana-natto, Hiya-yakko, Kinako, Koya-dofu (or Kori-dofu), Okara, Soi*, Soj*, Shoyu, Tonyu, Unohana, Yaki-dofu, Yuba, Zoy*.

Note 12. This is the earliest dictionary of the Japanese language compiled by Europeans. It is also the earliest document seen (Feb. 2001) concerning soybeans or soybean products in connection with (but not yet in) Europe or Portugal, and the first such document to mention miso or natto.

Note 13. This is the earliest European-language (or Portuguese-language) document seen that mentions tofu, which it calls *Cabe, Tôfu,* or *Taufu.*

Michael Cooper (1974, p. 222-23), in his excellent biography of Rodrigues, states that in the preface to this celebrated work, the "compilers promised to produce shortly a supplement containing additional terms and words inadvertently admitted from the dictionary. The supplement appeared the following year, and the Bodleian Library, Oxford, possesses a copy of both the *Vocabulario* and its supplement bound together in one volume. The dictionary runs a formidable total of 330 folios, while the supplement extends to 71 more folios, each page carrying two columns of text. The value of this great dictionary, containing a total of 32,798 entries, is considerable." "Whether or not Joao Rodrigues had a hand in the compilation of the *Vocabulario*

© Copyright Soyinfo Center 2013

is still a debatable point... Thus until further evidence appears, the identity of the principal European collaborators must remain conjectural." Address: Nagasaki College of Japan.

58. Li Rihua. 1610. Penglong yehua [Night discourses by the Penglong mountain]. China. Passage on soy reprinted in C.N. Li 1958 #151, p. 98. Undated. [Chi]

• ***Summary:*** Wade-Giles reference: *P'êng Lung Yeh Hua,* by Li Jih-Hua (who lived 1565-1635). Ming dynasty. Penlong mountain is in Anhui province, in central eastern China. The text states (in very literary Chinese): The people of the Xi district are skilled in making tofu. They use a quern (hand-turned rotary mill stones) made of very fine purple stone. Each pair of stones is worth 2-3 pieces of gold. They are of the quality of inkstone. When the soybeans are ground, the cakes of tofu are completely smooth, without dregs. When you cook them, you do not have to season them with salt or fermented black soybeans (*shi*)*;* they have a natural, sweet flavor. On this mountain lived old Mr. Wang. He used a clay pot to cook his tofu; the flavor is superb. Legend has it that a scholar, Mr. Xu, was unsuccessful in his state examinations. So he threw down his pen and said, "How much time does one have in a lifetime? Why not return to my village, heat up my pot, and make tofu?" His product became well known as the Tofu of the Xu Pavilion. (Translated by H.T. Huang, PhD, Nov. 2002).

The second paragraph has been translated by H.T. Hang (2000, p. 325-26) who notes that this is the earliest document seen (Dec. 2002), worldwide, that mentions fermented tofu: "The people from the *i* District (in southern Anhui) love to ferment *hai fu* [*hai tou fu*] in the fall.* They wait until it changes colour and is covered with a hairy coat. The hair is carefully wiped off and the cake gently dried. It is then deep fried in hot oil, just like the making of *san* pastry. The oil is drained off and the cake cooked together with other food materials. It is said that the product has the flavor of *yu* fish. (Footnote: **Hai* is the ancient word for making a sauce by auto-digestion. The hairy growth refers to the fungal mycelium. The *i* District lies in southern Anhui).

Chu Yung-Shung (1981, p. 98A). "Fu ru is the fermented form of bean curd. The earliest record for this is in a book called *Night Dialogue under the Shade,* written by Li Ri-huo (1636-1661). He said that fu ru was prepared between summer and autumn in the Qi Men district and briefly described the procedure." Yet in the next sentence the author, Chu, contradicts what he has just said. "In a famous book on Chinese herbal medicine, *Compendium of Materia Medica* [*Bencao Gangmu*], the author, Li Shizhen (1518-1593) describes the preparation in detail."

Note 1. This is the earliest Chinese-language document seen (Oct. 2011) that mentions fermented tofu, which it calls *hai fu.*

Note 2. Concerning the date or year this document first appeared: C.N. Li (1958, p. 98 #151) gives the date as 1610. H.T. Huang suggests we use that date; it seems reasonable since Li lived 1565-1635.

Note 3. Dr. H.T. Huang (Dec. 2002) is unable to find any mention of fermented tofu in the *Bencao Gangmu;* he concludes that Chu may have been repeating misinformation started by Morohashi (1955).

59. Saris, John. 1613. [Log of trip to Japan] (Log–unpublished). Unpublished log. [Eng]

• ***Summary:*** On 29 Aug. 1613, while in Japan (near Shizuoka), Saris wrote: "Of Cheese [probably tofu] they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts."

Note 1. This log was first published in 1900 as follows: Satow, E.M. 1900. "The voyage of Captain John Saris to Japan, 1613." *Works Issued by the Hakluyt Society* (*London*). *Series 2.* 5:126. Saris probably wrote this in Japan in August 1613 as he was traveling by land from Hirado (an island off northwest Kyushu) to Shizuoka, where he would meet Japan's ruler, Ieyasu. His traveling companions included William Adams (the first Englishman to arrive in Japan–by boat in April 1600), 10 other Englishmen, and an escort of 7 Japanese guards to protect them (Samurai William, by Giles Milton, 2002, p. 167-71).

Note 2. This is the second earliest document seen (Feb. 2004) on soy by a European–but note that Saris does not mention soy, presumably because he did not realize that their "Cheese" was made from soybeans. It is the second earliest document seen (April 2013) by a European that mentions tofu (though it is not mentioned by name) or any other soyfood.

Note 3. This is the earliest English-language document seen (April 2013) that mentions tofu, or that uses the word "cheese" to refer to tofu, or that mentions tofu in connection with Japan.

Note 4. This is the earliest document seen (Feb. 2004) concerning soy or tofu in connection with (but not yet in) England.

60. Wang Xiangjin. ed. 1621. Qunfang pu [The assembly of perfumes, or Monographs on cultivated plants]. China. Passage on soy reprinted in C.N. Li 1958 #154, p. 99, and #315, p. 227-28. [Chi]

• ***Summary:*** Wade-Giles reference: *Ch'ün Fang P'u,* by Wang Hsiang-Chin. Li (1958) and Bray (1984) give the date as 1621; Needham (1986) and Huang (2000) give the date as 1630. Ming dynasty. "Heavenly perfumes:" During the 8th month rains, it rained soybean flowers (*douhua*).

In the part titled "Assembly of cereals," section No. 1 is about fertilizing the soil. Green beans are the best; azuki beans and sesame seeds are next best. It is advantageous to plant them before planting cereals. In the 7th or 8th month,

© Copyright Soyinfo Center 2013

plow them under. They are as effective as the droppings of silk worms or fresh manure, and are especially good for planting wheat. Note: This passage describing green manuring is found in the *Nongsang Cuoyao* (Selected essentials of agriculture, sericulture, clothing and food) (1314), and even earlier in the *Qimin Yaoshu* (Essential techniques for the subsistence of common people) (+544).

Section No. 3 titled "Black soybeans" (*heidou*) states: *Dou* is the general name for beans in the pod. The large ones are called *shu.* The little ones are called *ta.* The leaves are called *huo.*

Third lunar month: Plant black soybeans (*heidou*) and regular soybeans (*dadou*). Fifth lunar month: Plant the late varieties of regular soybeans, black soybeans, and yellow soybeans (*huangdou*). Ninth lunar month: Harvest the various mature soybeans.

Black soybeans (*heidou*)*:* They are widely grown and the young plants (*miao*) grow to a height of 3-4 feet. The pods are several inches long, and may contain 5 or 6 beans. Some pods contain only 1-2 beans. They mature by the time of the first frost. The smaller ones are used medicinally. The larger ones can be eaten; they are used for making fermented black soybeans (*doushi*) or feeding animals. The flavor is raw (*sheng*) and neutral. When fried, it is considered to be a "hot" (*re,* or "heating") food, but when boiled it is considered to be a "cold" (*han,* or "cooling") food. It can be used several ways. Children 10 years old or younger should not eat the fried beans together with pork; they might suffocate and die. Do not eat hemp seeds together with fried black soybeans. The leaves are called *huo* [and can be eaten]. Planting: A good time to plant soybeans is when the locust trees are free from insects. Plant sparsely in fertile soil and densely in poor soil.

Yellow soybeans: There are two varieties–large and small. You can harvest the seedlings (*miao*), the leaves, and the pods–just like the black soybeans mentioned above. The leaves are slightly lighter in color and the pods are a little fatter than those of black soybeans. The beans can be eaten as whole soybeans (*dou*), or they can be made into jiang (fermented soybean paste), fermented black soybeans (*doushi*), soy oil (*douyou*), or tofu (*doufu*). The residue (*zhi,* Jap: okara) from the tofu can be used to feed pigs. In times of famine, people also eat the okara. The presscake (*zhi,* "residue") that remains after pressing out the oil (*you*) can be used as a fertilizer. The stems can be burned for fuel. The leaves are called *huo,* and when these leaves are young, they can be eaten. (Translated by H.T. Huang, PhD, Nov. 2002).

Note 1. This is the earliest document seen (Sept. 2001) concerning the use of soybean presscake (or cake–the residue from pressing out soy oil) as a fertilizer.

Note 2. This is the earliest document seen (Oct. 2001) concerning the use of okara (residue from tofu) as a feed for pigs or other animals.

Talk with H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 2001. July 10. What is the difference between eating (*doumiao*) and (*huo*)*?* In antiquity in China, soybean leaves (*hou*) were sometimes used to make soup. These leaves were typically picked when the plant was still green but fairly large and mature; the plant was probably not uprooted, but continued to grow. On the other hand, the soybean seedlings (*doumiao*) were uprooted when they were still quite young, and the leaves were more tender. These tender leaves were prepared differently and eaten as a succulent vegetable. (*Doumiao*) is served today as a dish in Chinese restaurants, yet Dr. Huang has never seen it mentioned for use as a vegetable the early Chinese food literature–say before the year 1500. By contrast, Dr. Huang has never seen soybean leaves (*huo*) served as a dish in Chinese restaurants but they are mentioned in the earliest Chinese literature (*Book of Odes / Shih Ching,* 7th to 10th century B.C.).

H.T. Huang (2000, p. 456n) states that the sunflower (*xiangri kui*) originated in North America and was introduced to Europe in about 1510. In China, it first appeared in this 1621 book.

Wang Lianzheng (1987, p. 246) states that the sunflower is first mentioned in China in this book, where it is called *wenju* ("gentle chrysanthemum") and *ying yang hua* ("facing sunlight flower"). Today, sunflowers are an important oil crop in northern China.

61. Anrakuan, Sakuden. 1623. Seisuishô [Laughs to banish sleep]. Japan. [Jap]*

• ***Summary:*** Orie Endô (2006, p. 38) states: There are also examples of men using words such as *murasaki, himojii,* and *okabe* in a collection of popular common stories called *Seisuishô* (1623).

Note: The author's name is not a real Japanese name; it is made up and humorous.

62. Zhang Zilie. 1627. Zheng zitong [Orthography of characters]. China. Passage on soy reprinted in C.N. Li 1958 #162, p. 108-09, and #318, p. 228. [Chi]

• ***Summary:*** Wade-Giles reference: *Chêng Tzu T'ung,* by Chang Tzu-Lieh. Ming dynasty. An important work. Orthography is the art of writing words correctly, in the standard way. The entry for *dou* (with a grass radical on top) (beans) states: Popularly this character is written without the grass radical on top. According to the book *Wulilun* (280 AD), it can also mean *shu* (soybeans). But originally it was *dou* (written without a grass radical on top).

The entry for the archaic character for *dou* (with a sort of grass radical on top) gives a long explanation. Concerning yellow soybeans (*huangdou*), the *Bencao Gangmu* (The great pharmacopoeia, 1596) states that soybeans (*dadou*) come in various colors including black, white (*bai*), yellow, dark brown (*he*), green, and spotted / speckled (*ban*). Also mentions tofu (*fu*) and soybean sprouts (*dadou huangjuan*

© Copyright Soyinfo Center 2013

or "soybean yellow curls"). Also cites the *Mingyi Bielu* (Informal records of famous physicians) (0510).

The entry for (*shu*) (soybeans) first explains how it is pronounced; it rhymes with the word for uncle (*shu,* which is also written like the word *shu,* meaning soybeans, but without the grass radical). It is the same as the soybean (*dadou*). The early dictionary *Erya* (200 BC) states that *"rongshu* is the same as *renshu."* This means that the beans of the *rong* (W.-G. Jung) tribe are the same as soybeans. The ancient dictionary *Guangya* (230 AD), an enlargement of the *Erya,* says *dadou* is the same as *shu* (both meaning soybeans). *Xiaodou* is the same as *da* (both meaning azuki beans). The early dictionary *Erya Yi* (1174 AD) says the character *shu* is the general name for all the different *dou* (beans). In the *Shijing* (Book of Odes, 1000 BC), the group of odes / poems called *Xiaoya* states that "Soybeans (*shu*) grow in the middle of the plain." Another group of odes called *Daya* (from this same book) mentions *renshu.* A commentary on the *Book of Odes* by Kong Yingda (642 AD; he lived 574-648) says that *shu* is the same as *dadou* (both mean soybeans); soybean leaves are called *huo.* During the Ding Yuan year of the Spring and Autumn period, a a heavy frost killed the *shu* (soybeans). A tradition holds that *shu* (the soybean) is one of the herbs that is most difficult to kill. The *Hou Hanshu* (History of the Later / Eastern Han Dynasty) (450 AD), states that during a famine year, when people were very poor, half the time they had only *shu* (soybeans) to eat. When the army had no grains, they mixed *shu* (soybeans) with other grains to feed themselves. And the *Qian Hanshu* (History of the Former / Western Han dynasty) (76 AD) says that *shu* (soybeans) are used as food in times of famine.

The entry for *dou* (without a grass radical on top) (beans) states: *Dou* is the same as *shu* (both mean soybeans). *Shu* is the same as *dadou* (both mean soybeans). *Xiaodou* is called *da* (both mean azuki beans). Lü Lan said: When the *dou* is in season, the stem is tall and the foot is short; there are 27 pods per plant, and more nodes on the stem. In the big *shu* (*dashu,* soybeans) the pods are round; in the small *shu* (*xiaoshu,* azuki beans) the pods are elongated. Those that mature first tend to be like vines, the leaves tend to be far apart, and the small pods tend to be solid. Those that mature late have short stems and fewer nodes, and the pods are less solid. The book of Fan Shengzhi (on agriculture, 10 BC) says: In the summertime when you plant *dou,* do not plant the seeds deeply. The flowers of the *dou* do not like the sun; if they get too much sun, the plants wither and dry up. Also, soybeans (*dadou*) are black, green, yellow, white, and spotted / speckled (*ban*) in color. There are 3-4 different types of azuki beans (*xiaodou*). The *Wangzhen nongshu* (Wang Zhen's Agricultural Treatise) (1313 AD) says: Today the dark-red bean (*chidou*), white bean (*baidou*), mung bean (*lüdou*), and *yingdou* are all small beans (*xiaodou*). White beans (*baidou*) are also called the rice beans (*fandou*). They can be cooked as congee (*zhou*). Another kind is called *chadou* ("tea bean"); its leaves are like those of the soybean (*dadou*). It can be cooked like grain (*fan*), which makes it like *fandou* (soybeans cooked like grain). The small black bean is called *ludou.* The northern people feed it to horses and it is also called *daodou* (jack bean, literally "sword bean"; [*Canavalia ensiformis*]). The *Youyang Zazu* (Miscellany of the Youyang Mountain) (860 AD) calls it *jiajiandou* because the pods are shaped like the back of a sword. Another bean is called *lidou* (morning bean), or *hudou* (tiger bean), or *lidou* (fox bean). Because when they pods are old, they become black and hairy. The seeds have black spots like a tiger, and striations like a fox. (Translated by H.T. Huang, PhD, Nov. 2002).

Needham (1986, p. 562) translates the title as "Complete character orthography (dictionary)."

63. Song Yingxing. 1637. Tiangong kaiwu [Exploitation of the works of nature]. China. Passage on soy reprinted in C.N. Li 1958 #160, p. 103-08. [Chi]

• ***Summary:*** Wade-Giles reference: *T'ien Kung K'ai Wu,* by Sung Ying-Hsing. Ming dynasty. For English-language translations of the entire book see: (1) E.-Z. Sun and S.-C. Sun (1966), and (2) Li Chiao-P'ing et al. (1980).

In the section titled "General names" the soybean (shu) is mentioned as one of the "five grains."

The long section titled "legumes" (*shu*) notes that one of the many types of Chinese legumes is the soybean (*dadou*) of which there are two colors: black (*heidou*) and yellow (*huangdou*). Different varieties, their time of planting and harvest, and uses are discussed. North of the Huai River, black soybeans are fed to horses and mules that are used on long journeys. All types of jiang, sauce, and curds [tofu] made from beans are made from the soybean.

The chapter on "Vegetable oils and fats" notes that the oil of yellow soybeans is one of the best for eating; from each *tan* of yellow soybeans, 9 catties of oil is obtained. In Jiangsu (W.-G. Kiangsu) soybean oil is used as food for humans, and the meal cakes are fed to pigs. For more details, see the two English-language translations cited above.

Huang (2000, p. 197-200, 444-45, 447, 450-52) cites and quotes from this book. See also Bray (1984, p. 513n, 518, 631, 707).

In Huang 2000 (p. 197-203) the section titled "Preparation of red ferment in the *T'ien Kung K'ai Wu,"* uses the term *dan qu* to refer to this cinnabar / red koji, which is prepared with regular (non-glutinous rice) and is twice as expensive as regular koji. A detailed translation is given with three illustrations and two photos. The photos show grains of red rice koji from Foochow. The illustrations show: (1) Two men, each carrying two baskets filled with regular rice to a stream using a shoulder pole. (2) Inoculated steamed rice piled on a mat and spread on round woven bamboo trays in wooden racks. (3) Mixing cinnabar / red koji into a pile of steamed rice on a mat to inoculate it.

© Copyright Soyinfo Center 2013

Note: These are the earliest illustrations seen that show clearly the koji-making process for regular or red koji. The new koji is used not so much for its ability to turn foods red, but for its ability to keep them from spoiling. The passage in this book on making cinnabar koji begins: The process for making cinnabar / red koji is a recent innovation. It works by extracting wondrous powers out of the rank and putrid, and by transforming and distilling the essences [of grains]. When spread thinly on fish or meat–the foods that spoil most easily–the red koji will enable them to retain their freshness even at the height of summer. No flies will come near them for up to 10 days, and their color and flavor will remain as fresh as before. It is indeed a marvelous medicament (Huang 2000, p. 197).

Letter from H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1994. May 10. This famous work on Chinese technology is one of the few post-Han Chinese documents that contains information about *Li*, the early Chinese forerunner of Japanese amazake. It states in Chapter 17: "In ancient times, *qu* (rice koji) was used for making wine (*jiu*) and *nie* (malt) for making sweet wine (*li*). In later times the manufacture of sweet wine was discontinued because its flavor was thought to be too weak, and the art of using malt [to make *li*] was consequently lost." (Dr. Huang's translation).

Note 1. This is the earliest document seen (Aug. 2002) that mentions soybean cake or meal.

Perkins (1969) says in a footnote on p. 71: "Beancake is not mentioned in the *Nung shu* (1313 ed.). The first reference of which I am aware is referred to in the Ch'en Tsu-kuei (1958, p. 99). It is also mentioned in Hsu Kuang-ch'i, 1628, and in the *T'ien-kung k'ai-wu*, both seventeenth-century publications."

E.-Z. Sun and S.-C. Sun, trans. and ed. (1966). *T'ien-Kung K'ai-Wu, Chinese Technology in the Seventeenth Century.* University Park & London: Pennsylvania State University Press. Chapter 12, titled "Vegetable oils and fats" states (p. 215-16): "For eating, the oils of sesame seeds, turnip seeds, yellow soy beans, and cabbage... seeds are the best." Next in quality come perilla and rape-seed oil. The yield of oil (in catties per *tan*) is given for many Chinese oilseeds. The two oilseeds with the lowest / worst yields of oil are: cotton seeds 7, and yellow soy beans 9. By contrast, sesame, castor, and camphor seeds yield 40 and rape seeds yield 30-40.

Platt (1956, p. 835) notes: The second volume of this 1637 work "is devoted to oils and fats. From this work it may be deduced (according to information supplied by Dr. G.D. Lu) that the soya bean was grown for its oil as early as the third century A.D. The yield of oil reported at this time was 9 catties per picul of oil seeds; since a picul is a hundred catties it means that, using a simple press, 9% of oil was extracted. [Note 2. 1 picul = 133.3 pounds weight. This is about as much as one man with a yoke can carry]. It may be of interest to those concerned with animal nutrition that the press cake at that time was fed to pigs, or used as fertilizer... The fighting horses and donkeys had to be fed with the black soya bean in order to increase their endurance and muscular power."

Note 3. This is the earliest document seen (Nov. 2005) that mentions cotton seed oil.

Note 4. This is the earliest document seen (March 2005) that mentions both rapeseed (or rapeseed oil, *chaiyou*) and soybean oil. See also Huang 2000 (p. 447-53, 456).

64. Song Yingxing. 1637. Tiangong kaiwu [Exploitation of the works of nature]. China. [Chi]

• ***Summary:*** Wade-Giles reference: *T'ien Kung K'ai Wu*, by Sung Ying-Hsing. Ming dynasty. The following translation is by M.J, Hagerty from the section on "The beans" in the Imperial Encyclopedia (*T'u shu shih ch'eng.* Published, 1728). See p. 10-17 in Hagerty. See also Bretschneider. *Botanicon Sinicum* 1:198. "(Second edition published in 1637). Under the heading of Shu, or Beans, says: 'In the Shu class of grains there are as many varieties as there are among the T'ao, or Rice, and Shu, or Millet. The Shu may be planted and harvested in all four seasons, and is a real substantial grain which may be utilized as a food and drink without satiation. There is one variety called the Ta tou, or Large bean [soybean], which grows in two colors–black and yellow. Those black and yellow beans must be planted about the time of the *ch'ing ming* season (April 5-19). The yellow been includes three kinds, as follows: *Wu yueh huang tou*, or Fifth month yellow bean, *Liu yueh pao*, or Sixth month bean, and *Tung huang tou* (3 Cc = 3 Chinese characters given), or Winter yellow bean. The *Wu yueh hung tou*, or Fifth month yellow bean, yields few grains in its pods, while the *Tung huang tou*, or Winter yellow bean, yields at least double those of the preceding. The *Hei*, or Black variety [of soybean], is harvested in the eighth month. It is customary when taking a long journey north of the Huai river, to feed the horse with black beans in order to make it strong. The abundance or scarcity of the Ta tou [soybean] crop depends, first, upon the fertility of the soil, second, upon diligent weeding and cultivation, and third, upon sufficient rain and dew for moisture. Shih, or Bean relish, Chiang, or Bean sauce, and Fu, or Bean curd, are all made of the Ta tou, or Large beans, as they contain the elements necessary (legumin?). Kiang-nan also has the Kao chiao huang tou, or High foot yellow bean. This is planted in the sixth month in a field from which an early crop of Tao, or Rice, has been harvested, and is harvested in the ninth or tenth month. The people of Chi-chun, a locality of Kiangsi province, practice a very good method in cultivating these beans. This consists of using the fields from which a harvest of rice has been gathered, and instead of plowing the land a hole is scraped out of each clump of the rice stalks with the finger, and in this hole is planted three or four seeds. When the dew falls

© Copyright Soyinfo Center 2013

upon the stumps of the rice plant, it will flow down to the seeds, nourishing them. Owing to the nature of the bean, it is very easy to grow, and when the stumps or roots of the rice plant are thoroughly saturated with moisture, they rot and act as fertilizer to the bean plant. If after the seeds send forth their shoots, there is no fall of rain to provide moisture, thereby producing a droughty condition, water should be drawn from a well and the field irrigated, using one *sheng* or pint to each plant. The field should now be cultivated in order to assure a very large harvest. When the Ta tou, or Large beans, have been planted and do not send forth shoots in the proper season, care must be taken in order to prevent injury by pigeons and swallows (eating the seed?). One variety which is called the Lu tou (2 Cc), or Green bean [mung bean], is a round, small variety shaped like a pearl. The Lu tou bean must be planted during the *Hsiao shu*, or slight heat season (July 7-22), if it is planted before that time, the sprouts will creep along the ground, extending a number of *chih*, or feet, and the pods will be very few. If planted after the *Hsiao shu* season at any time up to the *Ch'u shu*, or Limit of heat season (August 23- September 7), the plants will blossom in proper season and while pods will form, they will contain few seeds or grains. This plant includes two varieties, one of which is called *Chai lu chia tou*, or Pick green pods bean. These are picked as fast as they mature and may be gathered from day to day. Another is called *Pa lu tou*, or Pull green Beans. When these are old and sufficiently matured, the whole field is harvested once only. The *Lu tou*, or green beans [mung beans], are ground, washed to purify the grain and then dried in the sun, after which they are made into flour. This flour is used to make *tang pien*, a thin sheet-like cake, and *Ts'o su*, a somewhat similar preparation but made into strips which are narrow and thick. The people regard these articles of food as luxuries and they are considered valuable. Even the water which was used to wash the bean grains may be spread upon the fields, making the soil fertile. To preserve the seeds of the Lu tou, they are mixed with *ti hui* (2 Cc), or Earth lime (?)*Shih hui* (2 Cc) or stone lime (?),*Ma liao* (2 Cc), or Pologonum (the straw, chaff, etc. (?)), or *huang tu* (2 Cc) or yellow earth (clay ? loess ?). If this is done, there need be no fear of damage by worms around the fourth or fifth months. If a period of dryness should ensue, causing a drought, the plants will also be free from worms or bugs. When the Tao, or rice crop has been harvested, either in the summer or winter, the earth, in the fields which are to be planted with Lu tou beans, should be broken up fine, using a long club like an axehandle for this purpose. If there should be a heavy rain within one day after the Lu tou has been planted, which causes the earth to become hard and solid, thereby preventing the beans from growing, steps should be taken to prevent too much water coming onto the fields, and to provide an outlet for the surplus water. Cultivate the Lu tou and Ta tou beans [soybeans] with plow and spade, but this cultivation should be shallow, as the plant does not benefit by deep cultivation and the roots should be short and the stalks straight. If the soil is plowed deeply, the loose earth will cover the beans and half of them will not grow. Deep plowing or cultivation is not suitable for plants of the Shu class [legumes], but the farmers of ancient times were not aware of this.

"'One variety, called the Wan tou, has beans which are black and speckled in color and round in form like the Lu tou, but larger. This variety is planted in the tenth month, and in the fifth month of the following year, the crop is harvested. These beans may also be planted under deciduous trees, the foliage of which, is of slow growth (thereby allowing moisture to penetrate to the bean plants). One variety, which is called *Tsan tou*, or Silkworm bean, has a pod which is similar in form to a silkworm. The bean seeds are larger than those of the Ta tou, or Large bean. These are planted in the eighth month, and in the fourth month of the following year they are harvested. These beans are found in Chekiang province, and are usually planted around the *Sang*, or Mulberry tree. If the foliage of the mulberry tree is so dense that it covers the growing bean plants, thereby intercepting the dew, they will not grow. At the time when the *Tsan tou* and *Wan tou* have very bushy stalks and dense foliage, the pods of the other varieties have already formed and are filled with ripe mature beans. The region around the upper part of the Hsiang and Han rivers (in Hupeh) produce very many of these beans. They are also cheap and are regarded as satisfactory an article of food as *Shu*, or Glutinous millet, and *Chi*, or Non-glutinous millet.

"'One variety which is called *Hsiao tou*, or Small bean [azuki], or *Chih hsiao tou*, or scarlet bean, is utilized medicinally and has remarkable merit. The *Pai hsiao tou*, or Small white bean, also known as the *Fan tou* (2 Cc), is suitable to eat and is a very good nourishing grain. This bean should be planted after the *Hsia chih*, or summer solstice (June 21 to July 6) and is harvested in the ninth month. This variety is found growing abundantly in the region of Yang and Huai (usually means region of Kiangsu and Anhui province). One variety which is called *Lu tou* (2 Cc) was found growing wild in all the fields in ancient times and at present is extensively grown in the northern section of China. For the manufacture of bean curd, the bean rivals the *Lu tou* (2 Cc). This preparation was sold daily by peddlers in Peking, and was commonly called *Lu tou p'i* (3 Cc). Judging from this statement there must have been many of these beans produced. One variety, which is called the *Pai pien tou*, or White flat bean, is a creeping kind which grows around fences. It is also called *O mei tou*, or Beautiful eyebrow bean. Others of this class are the *Chiang tou* (2 Cc) (*Dolichos sinensis*), *Hu pan tou* (3 Cc), or Tiger's stripe bean, *Tao tou* (2 Cc), or String bean, and the Ta tou (2 Cc), or Large bean [soybean]. All are classified into either green-skinned or gray-colored classes. There are many varieties found growing profusely, only in certain localities, which

© Copyright Soyinfo Center 2013

are too numerous to describe here. All beans may be used as a vegetable or as a substitute for *ku*, or grain, and provide all the people with food. The naturalist must not neglect the study of these kinds of beans.

"'When the beans which are harvested are few, it is customary to use a flail to separate the grains from the chaff, and in this way save the strength of the farmer. The usual method is to spread them on the surface of the field (thrashing floor?), letting them dry in the sun, and having an ox draw a heavy stone over the surface of the bean stalks, the pressure causing the bean grains to fall out of the pods. It is also customary to beat the bean plants with a flail, the handle of which, is made of stout bamboo, having at the end a crank or swivel-like arrangement with a ring, to which is attached a wand more than three feet in length. The beans to be flailed are spread upon the ground and beaten with this implement. After the beans are separated by beating, they are shaken in the wind, which blows away the pods and leaves, after which they are sifted in order to remove everything but the good bean grains, and finally they are removed to the granary. The *Ch'ung mo* (2 Cc), or pestle and mortar (?), is not used in grinding *Ma*, or hemp seeds, and the *Wei nien* (2 Cc), or millstone (?), is not used for grinding the Shu, or bean.'"

65. Kebukisô [Hair blows like grass]. 1643. Japan. [Jap]*
• ***Summary:*** The second earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

66. Ryôri monogatari yorozu kikigaku [Many tales of cooking I have heard and recorded]. 1643. Japan. [Jap]*
• ***Summary:*** This famous printed book by an unknown author is the earliest Japanese book that specialized in cooking. Therefore it was widely quoted in many subsequent cookbooks. Recipes include miso soup and taremiso.

Some Japanese authors cite the Japanese title as simply *Ryôri monogatari* however the eminent scholar T. Yokotsuka (1985, p. 206) cites it as *Ryôri monogatari yorozu kikigaku.*

The names of the volumes include *Ryôri Taikan, Nihon Ryôri Taikan, Zokugun Shoruiju Inshokubu, Shokumotsu Koza.*

Note: This is the earliest document seen (April 2013) worldwide, and the earliest Japanese-language document seen (April 2013) that mentions dried-frozen tofu or frozen tofu, which it calls *kôri-dôfu.* Miyashita, who cited this early reference, gave the book's date as 1624.

Concerning shoyu: Iino (2001, p. 21) contains a "Table of ingredients used in *tou-miso* and shoyu during the Edo period." The entry for *Ryori Monogatari* (compiled in 1643) states that *Masaki shoyu* is made from the following ingredients: Soybean 19.6%. Wheat / barley 22.5%. Salt 15.7%. Water 39.2%.

In the section on "Foods, Sake," is a section on "Quick preparation of amazake. Wash 1 *sho* (1.8 liters) of cooked and dried glutinous rice (*domyoji*) in hot water and drain. Mix in 1 sho of koji and 1.5 sho of water; grind in a suribachi very well. Strain in a strainer (*suino*), then simmer in a pot, while stirring. It will become good amazake. Adding white sugar is good."

In the section titled "Man Kiki Gaki" is a description of "How to make Shirokawa Amazake. Crack by grinding 3 sho white rice, steam well and cool. Mix in 5 sho of koji, 5 sho of water, and knead well. Strain in a strainer (*suino*). Discard the pulp and keep the liquid to make amazake. Mix it occasionally. In summer it takes 3 days and in winter 5 days until it is ready."

67. Chen Maoren. comp. 1644. Shuwu yimingshu [Compilation of common things with unusual names]. China. Passage on soy reprinted in C.N. Li 1958 #158, p. 103. [Chi]
• ***Summary:*** Wade-Giles reference: *Shu Wu I Ming Shu*, by Ch'ên Mao-gun. The first passage states: "Soybean milk (*shuru*) is the same as tofu (*doufu*). If you cook the beans, you will get the milk."

The second and last passage states: "A Sanskrit (*fanwen*) quotation says that you use soybeans and azuki beans (*daxiaodou*) as a nut or fruit." (Translated by H.T. Huang, PhD, Nov. 2002). Dr. Huang adds: The first passage about soymilk and tofu is garbled and doesn't make much sense. The first passage is from the *Qing Yilu* [Anecdotes, simple and exotic] (+965), but this source is not cited in this work of 1644, and Li (1958) was also unaware of it, because he never cited or mentioned the *Qing Yilu.*

Schlegel (1894, p. 136) (1) "The *Tao-fu* or Bean-curd was also called 'Leguminous milk,' and was prepared by boiling curds or milk from beans." (2) Dr. Huang comments: Schlegel was the first to cite this early reference to tofu, but he did not realize that this passage actually comes from a much earlier source, the *Qing Yilu*, which appeared almost 680 years earlier, at the end of the Tang dynasty!

This work consists of 30 bound volumes of 30 chapters. The wood blocks were carved during the reign period of Chong Zhen, the last Ming emperor, who hung himself on Cold Mountain as the Qing Manchus were conquering his dynasty and preparing to establish the Qing dynasty (1644-1911).

Note 1. This is the earliest document seen (Nov. 2002) which states that the soybean was mentioned in an early Sanskrit source.

Note 2. This is the earliest Chinese-language document seen (Oct. 2003) that uses the term *shuru* to refer to soymilk.

68. Teitoku bunshû [Collected writings of Mr. Teitoku]. 1648-1651. Japan. [Jap]*

• ***Summary:*** In this Chinese book, Chapter / Section 21 is titled Huainan. It contains a large illustration showing Liuan of Huainan becoming an immortal sage (Jap: Sennin). Note: Liuan of Huainan was the legendary inventor of tofu.

Letter (e-mail) from Dr. H.T. Huang. 2007. March 10. Huainan is a region in southern Anhui province in central China. Liuan, who lived in the Western Han dynasty from 179 to 122 BCE, was a descendant of the first emperor of the Han dynasty. Therefore he is considered a prince. See also Huang 2000, p. 299.

70. Yorozu kikigaki hiden [Secrets of things heard and written]. 1650. Japan: Publisher unknown. 102 p. 2 volumes. Japanese summary by Kawakami 1978, p. 158. [Jap]
• ***Summary:*** Within the 54 sections, 34 sections concern food preparation, preservation, etc. Includes how to make shoyu, natto, dried-frozen tofu (kori-dofu), and miso. Between 1650-1673, nine printings were made. Each successive publication became more compact and more popular.

71. Tosa, Mitsunobu. 1657. Shichijû-ichiban shokunin-zukushi uta awase [Seventy-one matching poems / songs concerning Japanese craftsmen. 3 vols.]. Japan. [Jap]*

『七十一番職人尽歌合』より―豆腐売りとそうめん売り
（都立日比谷図書館加賀文庫蔵）

• ***Summary:*** A woodblock print titled “Sellers of tofu and somen noodles” (*Tofu to somen uri*) shows two Japanese women. At the lower right, one woman is seated in the seiza position (on her heels) on the floor or ground behind a short table (about 4 inches high, 4½ feet long, and 14 inches wide). She is wearing a dark kimono and a white head-tie. On the table is one large cake of tofu (about 10 inches square and 3 inches high) and four smaller pieces (each about 6 inches square and 1 inch high).

In the upper right, another women is standing near a rack, drying somen noodles.

Note: This book is located in the *Kaga Bunko* section of *Tokyo Toritsu Hibiya Toshokan* (library) at 1-4 Hibiya Koen, Chiyoda-ku, Tokyo 100.

72. Zhang Lüxiang. 1658. Zhangshi bu nongshu [Mr. Zhang's supplement to the agricultural treatise]. China. Passage on soy reprinted in C.N. Li 1958 #167, p. 112, and #322, p. 230. [Chi]

• ***Summary:*** Wade-Giles reference: *Chang Shih Bu Nung Shu*, by Chang Lü-Hsiang. Qing dynasty. The section titled "Land management" compares the cultivation of soybeans (*dou*) with the cultivation of silkworms (*can*) in terms of profit.

The section titled "Plum Soybeans" (*meidou;* the character for *dou* is written with a grass radical on top), which apparently refers to a particular soybean variety, states: The ordinary agricultural treatises do not mention plum soybeans, which are a unique product of a place named Tongyi (probably in Zhejiang). Chongyi, another place in the eastern district of Chongyi, also produces plum soybeans. Places adjacent to Chongyi (which do not produce plum soybeans) include: Jiaxing (a city in Zhejiang province about 53 miles southwest of Shanghai), Xiushui, Wujiang, Wucheng, and Haining; their soil is probably not suitable. The plants will grow there but they do not produce seeds. So only in the Tong [Tongyi] are is this kind of soybean produced. In the 6th and 7th month the mature soybeans (*chendou*) are used to make tofu (*fu*). If the yield of tofu is small, then add plum soybeans to increase the yield. When this soybean is mature and harvested, the merchants come to buy it. Both the officials and the merchants rely on it. Plum soybeans are planted after the 5th day of the 5th lunar month (*chingming*) and they mature before mid-summer, in only 100 days. So the growers get a profit very quickly. The five secrets / methods of getting as good yield are: (1) The seeds must be kept in a dry place; do not allow dampness or steam into the vessel / container (*qi*). (2) When you use clay [for sealing the mouth of the vessel], seal it tightly with a thick layer of clay mixed with straw. The straw enables the winter cold to permeate the clay and kill any insects in the clay. (3) Cultivate the soil early. (4) When you spread ashes on the field, use plenty. (5) When you cultivate, do so thoroughly. Everyone knows these five secrets. If you don't spread enough ashes, the roots will grow down only 5 inches. Cultivation turns the ashes under the ground, but they may not be evenly distributed. However, rain will make the ashes more available to the roots [by dissolving the minerals out of the ashes]. So the beans will grow more luxuriantly. If you allow the ashes to be buried too deeply, the roots will not be able to reach them. Or, if you add the ashes after the seedlings have started to grow, they will not be as easily available. If you follow these instructions, the soybean leaves and stems will grow well and you will get a seed yield of 3 *dou/mou* (about 60 liters per 1/6 acre, or 360 liters per acre, or 10.2 bushels per acre). Note: This is the earliest document seen (Feb. 2003) that mentions the use of ashes as a source of minerals (especially potassium) for fertilizing soybeans.

The section titled "Planting of hemp" mentions the planting of late rice and late (maturing) soybeans (*wandou*). Note: It is not clear whether the hemp is being grown for its seeds or fiber. (Translated by H.T. Huang, PhD, Dec. 2002).

73. Fang Yizhi. 1664. Wuli xiaoshi [Mini-encyclopedia of the principles of things]. China. Passage on soy reprinted in C.N. Li 1958 #170, p. 113-14. [Chi]

• ***Summary:*** Wade-Giles reference: *Wu Li Hsiao Shih*, by Fang I Chih. Ming and Qing dynasties. This is a very well-known work. The section titled "Different oils" states that to eat / cook vegetables, use tea-seed oil or soybean oil (*douyou*). When you press yellow soybeans (*huangdou*), you can get 18 catties of oil from one picul; if you use the wedge press, you can get 22 catties. Note: This is the earliest document seen (Nov. 2003) that mentions a wedge press in connection with soybeans. It it not clear what kind of press gives 18 catties of soybean oil.

The section titled "cattle" says that they fear both hot and cold weather, so its good to feed them hay mixed with beans (*dou*, probably soybeans).

The section titled "sheep" says to feed them hay mixed with beans (*dou*, probably soybeans); this will fatten them more easily. (Translated by H.T. Huang, PhD, Dec. 2002). Dr. Huang adds that the famous poem titled "Tofu" (*doufu*), by Zhu Xi (ca. 1180) appears in this work, which is widely cited as the source of the poem, since it is hard to find it in Ju Xi's collected works.

In chapter 6 of this book, the section on food and drink recommends the use of gypsum to curdle soymilk (Huang 2000, p. 205n).

74. Fernández Navarrete, Domingo. 1665. [Journal]. In: Awnsham Churchill and John Churchill, comps. 1704. A Collection of Voyages and Travels. London: Published by the author. 4 vols. See vol. 1, p. 251-52. Chap. 13. [Spa; Eng]

• ***Summary:*** This passage in Fernández Navarrete's journal, written in 1665 in Spanish, first published in Spanish in 1676, but not published in English until 1704 by Churchill &

© Copyright Soyinfo Center 2013

Churchill, appears in Chapter 13 of the Journal, titled "His Journey to Che Kiang" (p. 251-52). The following is from the 1704 translation; the unnamed translator may have been Captain John Stevens:

"16. Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese,* the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu* [tofu], that is, paste of kidney-beans [*Llamase Teu Fu, esto es, masa de frixoles* {*frijoles*}]. I did not see how they made it. They draw the milk out of the kidney-beans, and turning [curding] it, make great cakes of it like cheeses [*quesos*], as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd, and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in *China,* and very hard to conceive there should be such abundance of kidney-beans. That *Chinese* who has *teu fu,* herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. *Teu fu* is one of the most remarkable things in *China,* there are many will leave pullets for it. If I am not deceiv'd, the *Chineses* of *Manila* [Philippines] make it, but no *European* eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of *Ajonjoli* ([sesame seed] a very small seed they have in *Spain* and *India,* which we have not) which the *Chineses* make in that city and is an extraordinary dainty."

Note 1. Friar Domingo Fernández Navarrete was born in 1618 in Castrogeriz, Spain (he was Castilian), and he died in 1686 on the island of Santo Domingo, where he was Archbishop and Primate of the Spanish Indies. He wrote in Spanish, and served as a Dominican missionary in China (where he observed soyfoods) from 1658 to 1669.

Note 2. This is the earliest document seen in the Western world, or written by a European, that mentions soymilk, although it is described as a step in the process of making tofu rather than an a beverage. It is the third earliest that mentions soya or tofu.

Note 3. This is the earliest Spanish-language document (April 2013) seen that mentions tofu, which it calls *Teu Fu* or *masa de frixoles* {*frijoles*}. The author is not certain that Chinese in Manila made tofu. If they did, this would be the earliest document seen (April 2013) concerning soybean products (tofu) in the Philippines. This document would also contain the earliest date seen for soybean products in the Philippines (1665); soybeans as such had not yet been reported by that date. Yet if the Chinese were making tofu at this time in Manila, they must have had soybeans. Therefore, this would be the earliest document concerning soybeans in the Philippines. And these soybeans were probably being cultivated at this time in the Philippines.

Note 4. This is the earliest document seen concerning soybeans in connection with (but not yet in) Spain.

Note 5. This is the earliest document seen (Jan. 2002) concerning soybeans in Southeast Asia. This document contains the earliest date seen for soybeans in Southeast Asia (1665).

Note 6. This is the earliest document seen (April 2013) that mentions smoked tofu. It is interesting that a European mentions smoked tofu, which he apparently saw in China, before it is mentioned in any known Chinese document–in 1680.

Note 7. This is the earliest European-language document seen (Aug. 2007) that mentions sesame oil, which it calls "oil of Ajonjoli."

Note 8. This is the earliest European-language document seen (April 2013) that mentions dry / dried tofu ("They have it also dry'd") in China. This probably refers to *doufu-gan* (which literally means "tofu dry" but which we call "pressed tofu").

Note 9. Navarrete's 1665 journal is the earliest Spanish-language document seen (Jan. 2000) concerning soy. When it was published in 1676 in Spanish, it was the earliest Spanish-language publication seen concerning soy.

Note 10. For a biography of Domingo Fernández Navarrete (1610-1698), see J.S. Cummins (1962). In the National Union Catalog, his surname is given as "Fernández Navarrete" (i.e. his name is indexed under "F," not under "N"). In May 1677, long after leaving China, he was nominated Archbishop of Santo Domingo (an early name for the Dominican Republic); he arrived there on 20 Sept. 1677. He learned about food uses of soybeans in about 1665 while he served as a Dominican missionary in China (1658-1669). The island on which he was archbishop, called Hispaniola in English or Española in Spanish, was visited by Christopher Columbus in 1492 and settled in 1493; it became the center of Spain's rule in the West Indies and the base for Spain's expansion to the American mainland. Its capital constitutes the oldest continuous European settlement in the Americas. The natives were soon exterminated by the Spanish and replaced by negro slaves. During the 1600s, the western third of the island (known today as Haiti) was occupied by French buccaneers and ceded to France by Spain in 1697, after Navarrete wrote about soya; it came to be known by the French as the colony of Saint Domingue, while the eastern two-thirds of the island where Navarrete lived

© Copyright Soyinfo Center 2013

(Santo Domingo, known today as the Dominican Republic) remained under control by Spain. Hymowitz and Newell (1981) noted that this was the earliest accurate European description seen for the use of soybeans as a food. Thus the first two European references to soyfoods were both about tofu.

For a good biography of Fernández Navarrete, see Cummins 1962.

75. Shiomisaka, Baian (Umean). 1668. Ryôri anbai-shû [Collected cooking instructions]. Japan: Publisher unknown. 120 p. Japanese summary by Kawakami 1978, p. 159. [Jap]
• ***Summary:*** The 21 sections include sections on miso (there are many miso soups) and tofu. Perhaps miso soup became popular at about this time.

76. Ye Mengzhu. 1670? Yueshi bian [Viewing the world]. China. Passage on soy reprinted in C.N. Li 1958 #326, p. 232-33. Undated. [Chi]
• ***Summary:*** Wade-Giles reference: *Yüeh Shih Pien,* by Yeh Mêng-Chu (who lived 1624–ca. 1693). Describes conditions and institutions in the late Ming and early Qing dynasties (late 17th century). The "Economic affairs" section, part 2, states: Soybeans (*dou*, written with a grass radical on top) are used for making oil (*you*) or tofu (*fu*), for feeding horses, and for fertilizing the fields. Their price is about the same as rice. Different qualities of soybeans are produced in different places. Along the coastal regions, a variety named *tangdou* is the smallest and its price is also the lowest. Among those that are produced in the fields, the yellow soybean (*huangdou*) is the most common. The varieties with the largest seeds include the *shigu, qingbai* ("green white"), and *fengtan* ("flour round"), etc.; their prices are higher.

The price of yellow soybeans, in an average year, is slightly less than that of rice. One picul (*dan;* 1 dan = 71.6 kg or 156.76 lb) of soybeans is approximately equal in price to 0.8 to 0.9 piculs of rice. However in the 14th year of the reign of Chongzhen (near end of Ming dynasty), plenty of early soybeans but less rice was available. So 1 bushel of rice is equivalent to (could be traded for) 1 bushels of soybeans. In the 14th year of Shunzhi, the price of 1 bushel of early soybeans was 3½ ounces (oz; *liang*) of silver. But in the winter, the price of rice is only 1 ounces of silver per bushel. And the price of soybeans is 1.8 ounces of silver. Therefore, 2 bushels of rice are equivalent to 1 bushel of soybeans. Yet in the 7th year, 2nd lunar month, 1 bushel of white / polished rice was worth 1 ounce of silver, and 1 bushel of soybeans was worth 2 ounces of silver. In the 9th lunar month, one bushel of new rice was worth 2 ounces of silver, and 1 bushel of soybeans was worth only 1.5 ounces of silver. In the 8th year, 3rd lunar month, 1 bushel of white rice was worth 3.4 ounces of silver, and 1 bushel of soybeans was worth 1.5 ounces of silver. In the 4th lunar month, 1 bushel of white rice was worth 4 ounces of silver, and 1 bushel of soybeans was worth only 1.2 ounces of silver. In the 6th lunar month, 1 bushel of white rice was worth almost 5 ounces of silver, and 1 bushel of soybeans was worth only 1.6 ounces of silver. In the 7th lunar month, 1 bushel of soybeans was worth 3.2 ounces of silver–almost equal to the price of white rice. In the 14th year, 11th lunar month, a bushel of soybeans was worth only 0.8 ounces of silver, and rice was about the same price. In the 16th year, 3rd lunar month, 1 bushel of soybeans was worth 2 ounces of silver, about the same as white rice. In the 18th year, 1 bushel of new rice was worth 1.3 ounces of silver; 1 bushel of soybeans was worth only 0.8 ounces of silver. That winter, 1 bushel of white rice was worth 2 ounces of silver, but 1 bushel of soybeans was worth only 1.2 to 1.3 ounces of silver. In the reign of Kangxi, 2nd year, 10th lunar month, 1 bushel of rice was worth only 0.9 ounces of silver, and 1 bushel of soybeans only 0.5 ounces of silver. One bushel of the *tangdou* variety [smallest and least expensive] was worth only 0.4 ounces of silver, but later it was worth 0.6 to 0.8 ounces of silver. By the 18th year, 3rd lunar month, they actually reached 1.2 to 1.3 ounces of silver. In the 4th month, it rose to 1.4 to 1.5 ounces, then it dropped to 1.1 to 1.2 ounces. That fall, the price of new soybeans was 0.7 ounces per bushel. In the winter, 11th lunar month, it rose to 1.2 ounces. In the 19th year, spring, the price was 1.35 ounces per bushel, then it fell to 1.0 ounces. In the 21st year, spring, each bushel (*dan*) was worth only 0.7 ounces and in the summer, 5th lunar month, it dropped to 0.6. In the 23rd year, winter, the price of a bushel of soybeans came to about 1 ounce of silver. The next spring, it remained about the same. (Translated by H.T. Huang, PhD, Feb. 2003).

Note: This is the earliest document seen (Feb. 2003) that mentions or discusses the price of soybeans, the changes in this price during the one year or over many years (the price fluctuates markedly), or compares their price with that of other grains (rice). More broadly, it is the earliest document seen (Feb. 2003) that analyzes soybeans from a commercial viewpoint. One could make a lot of money by hoarding soybeans, or by knowing when to buy and to sell.

77. Fernández Navarrete, Domingo. 1676. Tratados historicos, politicos, ethicos, y religiosos de la monarchia de China... [An account of the empire of China, historical, political, moral, and religious]. Madrid, Spain: En la Imprenta Real, por Juan Garcia Infancon. A costa de Florian Anisson, Mercador de Libros. [18] + 518 + [25] p. See p. 347-48. 30 cm. [Spa]
• ***Summary:*** This is the earliest published Spanish-language edition of Fernández Navarrete's journal, written in 1665. It was printed/published in 1676 in Madrid by Juan Garcia Infanon. Book VI (*Tratado sexto*), titled "The author's travels" [1646-1674] (*De los viages, y navigaciones que el autor deste libra ha hecho*) begins on p. 289. We are interested in Chapter XIII, titled "My journey to Che Kiang and stay there till the persecution," which begins on p. 344.

© Copyright Soyinfo Center 2013

We will give below an exact transcription of part of this 17th century Spanish document, but we will adapt the original letter forms to their contemporary equivalents. Near the end of this chapter, Part 16 (p. 347) begins: *"Antes de passar al capitulo siguiente, escribo aqui con breuedad* [*brevedad*], *por averseme* [*averme*] *olvidado in en Tratado primero, el manjar usadisimo, comunisimo, y muy barato de que abunda toda la China, y que comen quantos ay en aquel Imperio, desde el Emperador, hasta el China mas ordinario, el Emperador, y señores, por regalo, la gente ordinaria por sustento, y necesidad. Llamase Teu Fu, esto es, masa de frixoles* [*frijoles*]. *El modo come se haze* [*hace*] *no le vi, sacan la leche de los frixoles, y quaxada* [*cuajada*] *hazen* [*hacen*] *uno como quesos tan grandes como un arnero, y de gruesso cinco y seis dedos. Toda la masa tan blanca como la mesma nieue* [*nieve*]. *Tiene la vista quanto se puede desear."*

The following translation is from A. Churchill and J. Churchill, comps. 1704. *A Collection of Voyages and Travels* (London): "Before I proceed to the next chapter, because I forgot it in the first Book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese,* the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu,* that is, paste of kidney-beans [*masa de frixoles*]. I did not see how they made it. They draw the milk out of the kidney-beans, and turning [curding] it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer."

Note 1. This is the earliest published Spanish-language document (April 2013) seen that mentions tofu, which it calls *Teu Fu;* the author refers to soybeans as simply *frijoles.*

Thanks to Javier Alvarez-Mon of Spain, a student and employee at the Graduate Theological Union Library in Berkeley, for help in transcribing and interpreting this passage in old Castilian (the language of Castile–an ancient kingdom in central and northern Spain–that became the modern official and literary language of Spain). Javier notes that today in Spain beans are no longer called *frijoles.* Rather, they are called *judías* (pronounced hu-DEE-as), a word apparently (for unknown reasons) related to the word "Jews."

Note 2 This is the earliest Spanish-language document seen (Oct. 2003) document seen that mentions soymilk, which it calls *la leche de los frixoles.*

For a good biography of Fernández Navarrete, see Cummins 1962. He was born in 1618 in Castrogeriz, Spain (he was Castilian), and he died in 1686 on the island of Santo Domingo, where he was Archbishop and Primate of the Spanish Indies.

78. Shixian hongmi [Guide to the mysteries of cuisine]. 1680. China. Passage on soy reprinted in H.T. Huang 2000, p. 325-27. [Chi]

• ***Summary:*** Wade-Giles reference: *Shih Hsien Hung Mi.* H.T. Huang (2000, p. 623) states that this book is attributed to Wang Shizhen (Wade-Giles: Wang Shih-Chên) but more probably was written by Zhu Yizun (W-G: Chu I-Tsun).

Huang states (p. 324) that frozen tofu (*dong doufu;* W.-G. *tung toufu*) is first mentioned in Chinese in this work. The section titled "Frozen tofu" states: In the depths of winter, place a cake of tofu (*doufu*) outdoors in a basin of water overnight. The water will freeze even though the tofu itself may not. However the beany flavor will be lost in the water, leaving the flavor of the tofu much improved. Another way is to freeze the tofu itself without the water. When thawed, it will look like a little beehive. Wash it well. Heat it in a soup base or fry it in oil. It will be an unusual dish regardless of how it is cooked. Huang adds that this same description of the process is repeated in the *Yang Xiaolu* (1698).

Note 1. This is the earliest Chinese-language document seen (April 2013) that mentions frozen tofu, which it calls *dong doufu.*

Note 2. Dr. Huang states (March 2004) that the term *dong doufu* almost always refers to tofu that has been frozen, then thawed and dried. However he has never seen an early description of how it was thawed and dried. In addition, he has never heard the term *bing doufu* ("ice tofu"), meaning "frozen tofu."

Huang (2000) states (p. 325) that pressed tofu (*doufugan,* "tofu + dry") is first mentioned indirectly in this work in connection with the preparation of smoked tofu (*xun doufu;* W.-G. *hsün toufu*), which is first mentioned in Chinese in this 1680 book. The section titled "Smoked tofu" states: Press tofu until it is as dry as possible. Soak it in brine, wash well, then dry it in the sun [to give *doufugan*]. Spread sesame oil over the surface, then smoke it. Another method is to soak tofu in brine, wash well, then dry it in the sun. Boil it in soup stock, then smoke it.

When William Shurtleff saw pressed tofu (*doufugan*) prepared in Taiwan and China during the 1970s, it was always pressed using either a hand-turned screw press or a lever-press with huge stones. He never saw it being dried in the sun. Perhaps the efficiency of the screw press in removing moisture from the tofu made the sun-drying unnecessary. Note that sun-drying takes extra time and exposes the warm tofu to unwanted microorganisms.

Huang (2000, p. 326) translates the earliest known account of making fermented tofu*: To make Fujian (W.-G. Fukien) style fermented tofu (*doufuru,* W.-G. *tou fu ju*), press tofu until it contains a little moisture as possible or wrap it in fine cotton paper and desiccate it in fresh ashes. Cut cake into thick square pieces and place them in rows on a bamboo steamer pad. After all steamer tiers are filled, cover steamer. [The best time to make it] is in the 2nd or 3rd month in spring or 9th or 10th month in autumn. Place steamer in an airy place. After 5 or 6 days, surfaces [of tofu] will be

© Copyright Soyinfo Center 2013

covered with a hairy growth, which may gradually turn black or greenish red. Wipe hair off tofu squares with a piece of paper. Save it, making sure not to damage the skin. For [the tofu from] each *dou* of beans, prepare 3 catties of soy sauce and 1 catty of fried salt. (If soy sauce is not available, use 5 catties of salt.) Grind 8 ounces of fresh red ferment spiced with clean peppercorn, fennel and licorice, then mix powder with salt and wine. Place tofu in a jar, add wine sauce mixture, then seal mouth of urn with clay. Allow urn to stand for 6 months; an excellent flavour will result."

(Footnote: *The original passage is interspersed with notes that describe a variation of the process as it was practiced in Zhejiang (W.-G. Chekiang). These notes make the text somewhat confusing to read, so they were left out in the translation. However, from these notes we can reconstruct the Zhejiang process as follows: After the steamer is filled with tofu squares, steamed them. Place the steamer, while still hot, on a bed of rice straw and cover completely with rice husks–in a place with little air movement. Remove tofu squares after 5-6 days. Press down and flatten the hairy growth. [This will help to keep the product fresh.] Then layer the squares in a jar. Sprinkle a pinch of salt on each piece of tofu until all surfaces are evenly salted. For each layer of tofu there should be a layer of salt. When salt is dissolved, each piece is heated in the sun by day and marinated in sauce mixture [as indicated in the Fujian process]. Continue sunning and marinating until all sauce is used up. Soak layered tofu in a jar with wine. Then seal mouth of urn with clay. Allow the urn to stand for 6 months and an excellent flavour will result).

Note 3. This is the earliest document seen (Feb. 2007) that mentions fermented tofu, which it calls *doufuru.*

Huang (2000, p. 326) continues by noting: Two other passages in the *Shixian Hongmi* are also of interest in this connection. One describes a method for making *zao rufu* (W.-G. *tsao ju fu*), i.e. fermented tofu (*furu*) aged with a fermented mash [rice wine dregs]: Transfer ripened *rufu* or samples that are too salty in layers to a new vessel. Line fermented mash or residue between layers and allow material to age. A product with a unique flavor is obtained. The other deals with the making of *doufu fu* (W.-G. *tou fu fu*), a deep fried 'stinky' dewatered tofu: Take good quality [pieces of] tofu and grill in oil. Then cover with a cloth screen to keep out flies and other insects. When a "stinky" odour is developed, fry the pieces again in hot "boiling" oil. The flavor is excellent.

Note 4. This "stinky" tofu is probably *chou doufu.* If it is, this is the earliest document seen (Oct. 2011) that mentions a type of *chou doufu* ("stinky tofu").

Huang (2000, p. 326-27) comments further: Two interesting points emerge from these passages. First, by the time that the *Shixian Hongmi* (+1680) was published, *furu* and *rufu* had apparently become synonyms for fermented tofu. The word *fu* could now mean a gel or custard made from any edible suspension or emulsion of food material, and *ru* any type of dairy or soy milk derived product. Second, although the word *zha* (W.-G. *cha*) was not used, there is no question that the frying in "boiling oil" shown in the second passage indicates that deep frying was a common method of cookery during the Ming dynasty.

Huang (2000, p. 341) states that this book contains an interesting recipe in which fermented black soybeans (*shi*) are stewed with pieces of pressed tofu (*doufugan*) and bamboo shoots.

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Seasonings based on jiang (fermented soybean paste) are used in 49 recipes: jiang itself in only 8, soy sauce made from jiang named *qingjiang* in 1 recipe, soy sauce named *jiangyou* in a whopping 37 recipes, soy sauce named *jiangzhi* in 2 recipes, and soy sauce named *jiangshui* in one recipe. Seasonings based on fermented black soybeans (*shi*) are used in only 6 recipes: Fermented black soybeans (*shi*) in 4 recipes, and fermented black soybean sauce named *shizhi* in 2.

Talk with H.T. Huang. 2001. Feb. 20. This 1680 book contains a recipe titled Soy Sauce Pressed Tofu (*Jiangyou Fugan*) which states: Cut pressed tofu (*doufugan*) into pieces. Mix 1 catty of soy sauce with 2 catties of water. Filter the liquid mixture then boil it. Filter it again to remove any remaining residue. Now add to the liquid: mushrooms and 4 different spices (*dingxiang, baiqi, dahuixiang,* and *guipi* {cassia bark, *Cinnamomum cassia*}), and tofu. Boil for several minutes. Remove from heat and allow to stand for half a day. The color still will not be very dark. Remove tofu from liquid and dry it. After 1 night, repeat the process of boiling and soaking several times. Note 5. This yields a highly seasoned tofu with a long shelf life at room temperature.

Note 6. This is the earliest document seen (Feb. 2004) that recommends adding mushrooms or spices / seasonings to soy sauce to enhance its flavor.

79. Chen Qiyuan. 1682. Maoshi jigubian [Examination of Mao's ancient *Book of Odes*]. China. Passage on soy reprinted in C.N. Li 1958 #177, p. 115-16. [Chi]

• ***Summary:*** Wade-Giles reference: *Mao Shih Chi Ku Pien,* by Ch'ên Ch'i Yüan. Qing dynasty. The section titled "Ode to the seventh month," which refers to Ode 154 in the *Shijing* (The Book of Odes); summarizes earlier knowledge of soybeans (*shu, dadou*), azuki beans (*xiaodou*), and other beans. Soybeans come in various colors, including black, white, yellow, dark brown (*he*), green (*qing*), and spotted / speckled (*ban*). They are used to make fermented black soybeans (*shi*), jiang, tofu (*fu*) and oil (*you*). Black soybeans are used as medicine. (Translated by H.T. Huang, PhD, Dec. 2002). Dr. Huang adds: The *Shijing* (Book of Odes) is a compilation which is considered to be the oldest of the

© Copyright Soyinfo Center 2013

five Confucian classics. In ancient times, there were several versions of this compilation. The version compiled by Mao Hêng in the early Han dynasty (2nd century BC) is the one that has been handed down to us and is considered the most trustworthy. When people cite or refer to the *Shijing,* they actually mean Mao's compilation.

80. Hishikawa, Moronobu. 1685. Wakoku shoshoku e-zukushi [Various Japanese occupations described in pictures]. Japan. [Jap]*
• ***Summary:*** One woodblock print shows a Japanese man carrying two water-filled wooden tubs of tofu suspended by 4 ropes at each end of a shoulder pole. He is selling tofu, probably in Kyoto. To his left is walking a kimono-clad woman, with a similar wooden tub (covered with a cloth but probably containing tofu) atop her head. She probably bought the tofu from him. Both people are bare footed. The caption says: "Please eat tofu. I came all the way from Nara."

81. Wakan shôjin ryôri-sho [Japanese-Chinese vegetarian cookbook]. 1688. Japan. [Jap]*
• ***Summary:*** The fourth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

82. Gôrui nichiyo ryôri-sho (or ryôri shinan-sho) [The recipe book with mixed variety for daily use]. 1689. Nishimura Hanbei (Edo), Nishimura Nishimura Ichiroemon and Nakagawa Moheibei (Kyoto). 5 volumes. Japanese summary by Kawakami 1978. [Jap]
• ***Summary:*** Other names for this book are *Gorui Nichiyo Ryôri Shinan-sho, Ryôri Shinan-sho,* and *Ryôri-sho.* The author is unknown. Fermented foods (*jozo shokuhin*) are included in volume 1, and tofu in volume 3. Unlike a typical recipe book, this one contains many descriptions of methods and processes for making foods. The book also contains detailed recipes for making and serving natto, plus a history of natto.

83. Gao Shiqi. 1690. Tianlu shiyu [Remnant knowledge from the gift of heaven]. China. Passage on soy reprinted in C.N. Li 1958 #179, p. 116. [Chi]
• ***Summary:*** Wade-Giles reference: *T'ien Lu Shih Yü,* by Kao Shih-Ch'i. Qing dynasty. The section titled "Liqi" states: The King of Huai Nan, Liu An, makes tofu (*doufu*). It is also called *liqi.* (Translated by H.T. Huang, PhD, Dec. 2002).

Note: The term *liqi* was first used to refer to "tofu" in about 1175 in a poem titled *Doufu* by Lu Yu. See Huang (2000, p. 303).

84. Jinrin kinmô zui Jinrin kinmô zui [Illustrated encyclopedia of life in the Edo period]. 1690. Kyoto, Japan. Reprinted in 1990 by Heibonsha (Tokyo); edited by Asakura, Haruhiko. [Jap]
• ***Summary:*** The following page numbers refer to the 1990 reprint edition published in Tokyo by Heibonsha. The compiler of this remarkable work is unknown. At the bottom of almost every page (up to p. 293) are one or two half-page illustrations. Pages 317-31 are footnotes, followed by a syllabary index (a e u e o, ka ki ku ke ko).

The original edition was divided into seven volumes, including: 2. Noh drama. 3. Producers (farmers, woodcutters, fishermen, etc.). 4. Merchants (sellers). 5. Craftspeople. 6. Various and other jobs. 7. Entertainers. At the end is a long section of footnotes and annotations.

Page 121. The illustration is titled *Kuzune-hori* (Digging kuzu root). Yoshino kuzu is the best known in Japan.

Page 142. Shoyu is a famous product of Sakai. Produced in Osaka and Sakai, it is shipped to various places (no illustration).

Page 144. The right illustration is titled *Koji-shi* (Koji maker). Miso makers, manju (steamed bun) makers, and many others use koji. The illustration shows a man carrying four koji trays (*koji-bune*) filled with koji; he is about to put them into the incubation room (*muro,* which has a rounded top) where the koji will ferment. The text mentions a "thin board" (*usuita*), which may be a second type of koji tray, shown on the ground at right, lacking either one or both ends. The volume of koji is measured by the standardized size of the koji tray.

Page 144. The left illustration is titled *Miso-ya* (Miso shop). It shows two men mixing or pounding something (either koji, cooked soybeans and water before fermentation, or miso after fermentation) in a wooden mortar (*usu, suribachi*) using long wooden spatulas or pestles. They use a wooden spatula (*sekkai*) as their store sign. Behind the men to the left is a vat of fermenting miso with stones on top for pressure. Two wooden scoops in a rectangular wooden "boat" are used for scooping and measuring koji, cooked soybeans, and/or salt. The text says: "Miso makes a good seasoning and helps keep people healthy. A day cannot go by without it."

Page 152. The illustration, titled *Kome-ya* (Rice shop), shows a man unloading a bale of rice (wrapped in rice straw) from the back of his horse. Nearby is a rice merchant, standing on a low platform near two other bales of rice. The text notes that the shop sells the "five grains" (*go-koku*), which include soybeans (*daizu*).

Page 160. The left illustration, titled *Yakidofu-shi* (Grilled tofu man), shows a man making grilled tofu over a rectangular brazier. In his right hand is a fan, with which he fans the coals beneath several cakes of tofu. In his left hand is a skewer with two prongs that pierce a cake of tofu. In front of his brazier is a wooden pail, which may be used to store cakes of tofu in water. At the front left is a sloping tray on which slices of tofu are drained. The maker of grilled tofu can found in market places, temple gatherings, festivals, and wherever people gather around. Note: This is the earliest Japanese-language document seen (April 2013) that

© Copyright Soyinfo Center 2013

mentions grilled tofu, which it calls *yaki-dôufu.*

Page 162. The illustration, titled *Ko-ya* (Flour shop), shows three people turning a large hand-turned stone mill in which various types of flour (including soy flour, *daizu no ko,* which is probably roasted soy flour {kinako}) are ground. Ropes from the ceiling hold up the t-shaped end of a push-pull device used to help turn the heavy upper stone.

Page 166. The right half of the illustration (not shown) is titled *Seller of Tataki natto in Kyoto.* To make this natto, dice stringy (*itohiki*) natto finely, then shape into a thin, flat square. Mix in finely chopped greens and tofu. It is an inexpensive, fast food. It is sold by walking street vendors from the end of September until February, especially at Tomikoji-dori, Shijo-agaru machi (probably in Kyoto).

The other illustration shows two men in front of a shop. Each is carrying a shoulder pole on one shoulder; from each end are suspended containers used to hold food. Each is also wearing straw sandals (*waraji*). The man on the right carries containers that are shaped like boxes with the long edges oriented vertically. A sliding panel may be used to open each box. Inside are either utensils and the ingredients for making tataki-natto, or bowls of tataki-natto ready to eat.

Note: This is the earliest document seen (Jan. 2012) that contains the word *itohiki* or the term "Tataki natto" in connection with natto,

Page 225. The left half of the illustration is titled *Horo miso,* which is a kind of miso. The character for *Ho* means "law" or "dharma." The man on the left has cylindrical wooden containers (*magemono,* shaped like traditional Japanese steamers) suspended from each end of his shoulder pole. Atop each is a bamboo mat (*sudaré*). The text states: This miso is made with black soybeans (*kuro mame*). The men who sell it all wear orange robes dyed with persimmons. They never put down the merchandise. Its container was covered and they carried it using a shoulder pole to keep it clean. When they had to put it down, they placed it with one side leaning against something. If anyone stepped over it, the seller demanded that that person buy it. To make *horo miso,* cook black soybeans, then drain off and squeeze out the liquid. The result is a very firm miso with a low water content. Originally it was used in temples, but later it came to be used by the common people.

Note: Naomichi Ishige, a scholar of and expert on Japanese food history, writes (personal communication, March 2008): "To make *horo miso,* mix miso, minced

© Copyright Soyinfo Center 2013

walnut, sesame, and Japanese *sansho* pepper, then saute the mixture with vegetable oil in a pan. People eat *horo miso* with rice, or have it as a relish when they drink sake.

"In the *Jinrin kinmo zui*, the reason tataki natto is thin and formed is because people thought that type of natto could be easily dissolved in miso soup. However, its rectangular shape does not relate to the way of cooking.

"I am not sure how the peddler in the picture put his goods in a box that he carried. I only imagine that he wrapped a rectangular tataki-natto in a bamboo sheath and stored it in the box.

"When peddlers began to sell granulated itohiki natto, they put the itohiki-natto into a bamboo basket. They ladled up the quantity needed by a rice scoop (*shamoji*) and sold it. Or, they wrapped the itohiki-natto in a straw parcel and sold the parcel." See also letter about natto history from Ishige sensei to Shurtleff, dated 16 March 2008.

Page 225. The right illustration is titled *Tofu-shi* (Tofu maker). The text states: Among the craftsmen, tofu makers rise the earliest each morning. Some sell deep fried tofu pouches (*aburaagé*). The book *Kuni Hana Manyoki* mentions the places named Maruyama and Reizan where the craftsmen lived. There may have been a lot of tofu makers who lived in this area. The illustration shows a tofu maker in his shop, sitting at the end of a firm pole used as a lever press to press the soymilk out of the okara in the pressing sack (which is placed on a rack) into the wooden vat below. It will then be curded to make tofu. Also visible in the tofu shop are a wooden tofu forming box with 3 holes in each side, and four hanging *noren* curtains.

Page 291. The illustration is titled *Yaku-harai* (Driving out bad luck). The text mentions *setsubun* (the annual festival on the evening of the last day of winter, just before the first day of spring, also celebrated by some as New Year's Eve–according to the old lunar calendar) and roasted soybeans (*iri-mamé / iri-mame*). On the evening of setsubun, Japanese wished to be cleansed of all bad spirits and bad luck. So they scattered roasted soybeans (with coins?) and cried out a slogan wishing for long life. This kept them very busy. Note: New Year's Eve and Day are not traditional Japanese concepts; they were imported from China and the West during the 20th century. Address: Japan.

85. Yaoya-shû [Collection of various things]. 1693. Japan: Publisher unknown. Volumes 1-3 have 54, 48, and 46 pages respectively. Japanese summary by Kawakami 1978, p. 152. [Jap]

• ***Summary:*** The three parts of the book discuss (1) processing foods, (2) cooking, and (3) mochi and confectionery (*kashi*). This is mostly a copy of *Gorui Nichiyo Ryôri Shinan-sho*, but the sequence of the material and the wording has been changed. Some new things have been added. Includes discussions of Nara Horin Miso, quick production of shoyu, and quick preparation of amazake, and Ukeire Tofu. It is not known what the latter is.

86. Hitomi, Hitsudai. 1695. [Honcho shokukan. See Pen chao shih chien]. [Chi]*

• ***Summary:*** Yokotsuka (1985, p. 206; 1986, p. 198) cites this as *"Honcho Shokukan* (1692)" but apparently does not cite it in his bibliography in either case.

The Japanese title can be translated as "Japan's food dictionary" or "Our country's food model." Written during the Edo period, the book is mostly about tea. The section about sushi states: Mix fish meat into cold rice, then mix in a little vinegar.

87. Hitomi, Hitsudai. 1695. Pen chao shih chien / Ben zhao shi jian [A mirror of food in this dynasty. 12 vols.]. Osaka?: Hiranoya Katsuzaemon. 22 cm. Widely referred to as *Honchô Shokkan* in Japanese. Modern rendering by Morohashi 1955, trans. p. 13. Complete modern translation into Japanese by Isao Shimada (1976; Tokyo: Heibonsha). [Chi]*

• ***Summary:*** This book, written by a Japanese man in Japan, yet entirely in Chinese, contains early references to yuba, frozen tofu, natto, shoyu, and miso. When Japanese read the Chinese characters for yuba, *doufu-lao*, they pronounce them *tôfu no uba*. *Lao* or *uba* means "old woman" or "wet nurse."

The book states that the word "natto" is derived from *nassho*, meaning "temple kitchen" or literally "place of offering, perhaps because the food was offered to Buddha before being offered to the monks." It also contains the earliest known written mention of natto's medicinal or

© Copyright Soyinfo Center 2013

healing effects, together with recipes for preparing natto miso soup (*natto-jiru*).

Note: Recall that this *natto-jiru* may well be made with fermented black soybeans rather than itohiki natto.

Saito (1985, p. 15-16) notes: "In 1695 Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Skokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He writes: 'Soybean: Makes one feel calm, relaxes the stomach, and is good for the intestines. Miso: One should not be without it. Natto: Makes one feel calm, conditions the stomach, enhances a good appetite, and detoxifies poisons. Tofu: Nowadays tofu in Edo is pretty good. Among the various types, Nishiki-dofu and Kezo-in-dofu are famous... But it cannot compete with the tofu made in Kyoto. Shoyu: Inactivates any poisoning from eating food, drinking alcohol, or taking medicine.' The above is taken from the translation into Japanese by Shimada Isao."

T. Yokotsuka (1985, p. 206; 1986, p. 198) cites this as *Honcho Shokukan* (1692) but apparently does not cite it in his bibliography in either case.

Needham (1986, p. 581) cites this as *Pên Ts'ao Shih Chien* (Materia Medica in Tasteful Verse, by Chu Lun). Ch'ing dynasty. 1739. Partly translated by Swingle. But Needham does not discuss its content.

Fukushima (1989, p. 9) states that the *Honcho-Shokkan* (Hitomi, 1695) describes miso and shoyu.

Concerning shoyu: Iino (2001, p. 21) contains a "Table of ingredients used in *tou-miso* and shoyu during the Edo period." The entry for *Honcho-shokukan* (compiled in 1695) states that *Shoyu* is made from the following ingredients: Soybean approximately 22%. Wheat / barley approx. 22%. Salt approx. 22%. Water approx. 34%.

Iino (2003, p. 8) states: "In the first half of the Edo Period (17th century), soy sauce was made in all regions of Japan and could be purchased anywhere. In addition, soy sauce was made by hand in the large majority of houses"– This is made clear by a reference in this 1695 book (*Honchô-Shokkan*), which also mentions the shoyu production process, noting that barley was used in place of wheat. On p. 9 Iino adds that detailed instructions for making *niban shoyu* (soy sauce from a second pressing of the moromi with salt water) are also described in this book. Iino then comments: "It is clear that with the beginning of soy sauce production, use was also made of the dregs [shoyu presscake] to make *niban shoyu."*

88. Gu Zhong. 1698. Yang xiaolu [Guide to nurturing life]. China. [Chi]

• ***Summary:*** Wade-Giles reference: *Yang Hsiao Lu*, by Ku Chung. H.T. Huang (2000, p. 627) gives the date of this document as +1698. In the section titled "Products associated with tou fu," Huang states: (1) (p. 324) A recipe for making frozen tofu, first mentioned in the *Shixian Hongmi* (Guide to the Mysteries of Cuisine) (+1680), is repeated in this book. (2) (p. 325) that both pressed tofu (*doufugan*) and smoked tofu (*xun doufu*) are mentioned in this book.

In the section titled "Fermented soybeans (*shi*)," Huang states that wheat flour is used as an ingredient in a recipe for making fermented black soybeans (*shi*).

In the section titled "Fermented soy sauce, *chiang yu,"* Huang states (p. 363): About 100 years after the *Bencao Gangmu* (The great pharmacopoeia) (+1596), the next description of the process for making soy sauce (*jiangyou*) appears in this book, in the form of three sketchy recipes, one of which states: Cook yellow soybeans (*huangdou*) or black soybeans (*heidou*) until soft. Mix the soybeans and their cooking water with white [wheat] flour and knead to form a dough. Shape into flat or convex cakes. Cover with artemisia leaves until a good growth of yellow mold appears; then grind these cakes. Incubate the meal in a jar with brine. Warm in the sun to give [a thin] soybean jiang (*doujiang*). Filter through a tightly-woven bamboo sieve placed over a wide-mouthed vat. The jiang (soy paste) stays in the sieve while the soy sauce (*jiangyou*) is collected below.

Note: This is the 2nd earliest document seen (April 2012) that describes the use of a significant amount of wheat (or wheat) flour in making Chinese soy sauce.

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Seasonings based on jiang (fermented soybean paste) are used in 25 recipes: jiang itself in 14, and soy sauce made from jiang named *jiangyou* in 11 recipes. Seasonings based on fermented black soybeans (*shi*) are used in only 1 recipe, which uses fermented black soybeans itself.

Huang adds (p. 373): During the Ming dynasty, soy sauce (*jiangyou*) started to rival *jiang* [which had a consistency like applesauce] in importance; by the early years of the Qing dynasty, soy sauce had surpassed jiang in culinary usage.

Huang notes (personal communication, 5 June 1993) that page 21 contains recipes for deep-fried gluten and smoked gluten.

Bo (1982): Describes the method for making chiang-yu (soy sauce).

89. Saito, Akio. 1699. [Chronology of soybeans in Japan, 1600 to 1699, the early Tokugawa/Edo period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 14-16. [Jap; eng+]

• ***Summary:*** 1600–Komakabe?, the name of a type of tofu, appears in the *Diary of Oyudono no Kami* (*Oyudono Kami no Nikki*). The very firm tofu called *kata-dofu* that is presently sold in Kochi prefecture (on the southern part of the island of Shikoku) originated from Komakabe.

1601–Daté Masamune (DAH-tay Mah-sah-MU-nay; lived 1567-1636) of Sendai establishes the Goenso-gura and starts making miso. This is the first time that an organized

© Copyright Soyinfo Center 2013

method has ever been used to make miso in Japan. The purpose of this is to make miso for the army and to store salt. According to some theories, the date was 1645 rather than 1601.

1603–In *Nippo Jisho,* a Japanese-Portuguese dictionary, tofu (called "taufu") is mentioned. It says that tofu is a food that is made from powdered / ground beans and that looks like freshly made cheese.

1605–Tokugawa Ieyasu commands the monks at Daifukuji temple to make Hamana Natto. Note 1. This is the earliest document seen (Nov. 2011) that mentions "Hamana Natto" (or "Hamanatto," regardless of capitalization). This document contains the earliest date seen for Hamanatto–1605! Note 2. This is the earliest document seen (Nov. 2011) stating that Hamanatto [fermented black soybeans] were made at Daifukuji temple in Hamamatsu.

1616–Tanaka Genba of Kamiusa no Kuni is advised to make tamari shoyu as a side business by Sanagi Kyurouemon of Settsu. The latter runs a sake factory and has a wholesale seafood products shop in Edo. This is the beginning of Choshi Shoyu and Higeta Shoyu.

1619–At about this time shoyu in quantity is brought from the Kyoto-Osaka area (*Kansai*) to Edo by Taru Kaisen and Hishigaki Kaisen. Note 1. A "Kaisen" is a ship that has a carrying capacity of at least 200 koku (= 9,520 gallons or 36,000 liters). That shoyu is regarded as the best quality and it soon takes over the entire Edo shoyu market.

1624-1644–Konpura Nakama (The union of merchants who go to Dejima / Deshima, an island in Nagasaki Bay) starts to export shoyu through the Dutch East India Company (*Higashi Indo Gaisha*) to Europe and Southeast Asia. It is said that in Europe this shoyu even reached the dining table of Louis XIV. Note 2. This document contains the earliest date seen for soybean products (shoyu) in Europe and Southeast Asia (probably Indonesia, 1644); soybeans as such had not yet been reported by that date. [Question: What is the source of these two dates?]

1626–Sendai Han (*daimyo* domain) starts to monopolize the selling of salt for the first time in the history of Japan. Because of this, all other Hans start to do likewise. Makabeya Ichibei of Kokubunji-cho in Sendai starts to sell Sendai Miso. He continues to sell his miso to the Han government for several generations.

1642–Because of famines in various provinces (*kuni*), the people were advised to eat coarse grains (*zakkoku*) and banned from eating rice. The sale of tofu, udon (wheat noodles), soba (buckwheat noodles), and *manju* (steamed glutinous rice cakes with a sweet azuki-jam filling) were also prohibited.

1645–The Ako Han starts a salt farm. Hatcho miso starts to be made in Mikawa, Okazaki. Hamaguchi Gihei of Hiromura in Kishu goes to Choshi and starts making shoyu. This is the beginning of Yamasa Shoyu.

1649 Feb.–The Tokugawa government (*bakufu*) passes a law to control the lives of farmers. Called Kanno Jorei (*Keian no Ofuregaki*), it states that farmers must plant soybeans and azuki beans between their rice fields and farms. Azé-mame (soybeans grown on the raised footpaths between rice fields) may have started from this forceful edict.

1652 May–Various farmers in Waksa, Kohama-han, Enshiki-gun? protest the heavy soybean tax increase. The farmland tax is often paid with soybeans. The leaders of the protest are killed.

1657 Jan. 18-19–A large fire (called *Sodefuri Kaji*) burned Edo (today's Tokyo). Laborers came from throughout Japan to reconstruct the city. To feed them, many sellers of pre-cooked, ready-to-eat food sprung up in Edo.

1666–Maruo Magouemon? Chotoku? of Hanshu Tatsuno makes Usukuchi Shoyu (light-colored soy sauce). After this, Tatsuno Shoyu's main product becomes Usukuchi Shoyu.

1681–The government bans the withholding or monopolizing of crops (such as rice, barley, or soybeans) following a year with a bad harvest.

1695–Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Skokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He praises the therapeutic virtues of soybeans, miso, natto, tofu, and shoyu. A translation into Japanese was later made by Shimada Isao.

1695–At about this time, tofu is sold by vendors sitting by the road. We do not know for sure when tofu was first sold by walking street vendors, but it is guessed that this may have taken place in about 1837-1853 when the book *Morisada Manko* was written by Kitagawa Morisada.

1696–There is famine throughout Japan. In eastern Japan, especially in Tsugaru Han, half of the population dies of starvation.

1696–One of the greatest scholars of agriculture during the Edo period, Miyazaki Yasusada (1623-1697), write *Nôgyo Zensho* (Encyclopedia of Agriculture). In it he described the many different colors, sizes, and shapes of soybeans cultivated at that time.

1697–Koikuchi shoyu, similar to the type made today, starts to be made from tamari shoyu in Choshi.

1698–After a big fire in Edo, sellers of Dengaku (skewered grilled tofu with a sweet miso topping) start to appear. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

90. **Product Name:** [Silken Tofu].
Foreign Name: Kinugoshi-dôfu.
Manufacturer's Name: Sasa-no-Yuki.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1703.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 307. Based on a 1973 interview with the owner. This is the world's oldest known existing tofu shop. All of the tofu they make and serve is silken tofu.

© Copyright Soyinfo Center 2013

Was the tofu they made and served when they opened in 1703 named "Sasa-no-yuki" or was it also referred to as kinugoshi? Whatever it was called, this is the earliest known silken tofu in Japan.

91. Fernández Navarrete, Domingo. 1704. An account of the empire of China, historical, political, moral, and religious. Vol. 1. In: Awnsham Churchill and John Churchill, comps. A Collection of Voyages and Travels. London: Published by the author. 4 vols. 424 p. See p. 251-52. Chap. 13. [Eng]
• ***Summary:*** The subtitle of the entire volume reads: "Some now printed from original manuscripts. Others translated out of foreign languages, and now first pub. in English. To which are added some few that have formerly appear'd in English, but do now for their excellence and scarcity deserve to be reprinted."

At the bottom of the title page of this chapter is written: "Written in Spanish by R.F.F. Dominick Fernandez Navarette [sic, Navarrete], Divinity Professor in the College and University of St. Thomas at Manila, Apostolick Missioner in China, Superior of those of his Mission, and Procurator General at the Court of Madrid for the Province of the Rosary in the Philippine Islands, of the Order of Preachers." Domingo Fernández Navarrete lived 1610-1698. Many curious observations are contained in this work, which is a translation of *Tratados historicos, politicos, ethicos, y religiosos de la monarchia de China* (1676). In this collection it appears as the first item in Volume I, which bears out the tendency for travel literature of this period to be of less significance for geography and history than for literature. The name of the translator is not mentioned, but Cummins (1962, p. cxvi) speculates that it may have been Captain John Stevens. The *Tratados* appears in all the Churchill editions.

The author's exact description of tofu in China, which first became available in English in 1704 in this book as compiled/edited by Churchill and Churchill is as follows:

"16. Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese*, the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu*, that is, paste of kidney-beans [*Llamase Teu Fu, esto es, masa de frixoles* {*frijoles*}]. I did not see how they made it. They draw the milk out of the kidney-beans, and turning it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd [dried and smoked], and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in *China*, and very hard to conceive there should be such abundance of kidney-beans. That *Chinese* who has *teu fu*, herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. *Teu fu* is one of the most remarkable things in *China*, there are many will leave pullets for it. If I am not deceiv'd, the *Chineses* of *Manila* [Philippines] make it, but no *European* eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of *Ajonjoli* ([sesame seed] a very small seed they have in *Spain* and *India*, which we have not) which the *Chineses* make in that city and is an extraordinary dainty."

Note 1. This is the earliest English-language document seen (Feb. 2006) that uses the term "kidney- beans" to refer to soybeans.

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "teu fu" (or "teu-fu") to refer to Chinese-style tofu, or that uses the word "cakes" or "cheeses" ("make great cakes of it like cheeses") in connection with tofu. This is also the earliest English-language document that mentions tofu in connection with China. Benjamin Franklin in London read the English translation and in 1770 wrote his friend John Bartram in Philadelphia, Pennsylvania, about tofu and Chinese Garavances / Caravances.

Note 3. This is the earliest English-language document seen (April 2013) that mentions smoked tofu or that uses the word "smoked" (actually smok'd) in connection with tofu.

Note 4. This is the earliest English-language document seen (May 2011) that mentions sesame seeds, which it calls *Ajonjoli*.

Note 5. This is the earliest English-language document seen (April 2013) that mentions dry / dried tofu ("They have it also dry'd") in China. This probably refers to *doufu-gan* (which literally means "tofu dry" but which we call "pressed tofu").

Note 6. This is the earliest book chapter seen (Oct. 2001) that mentions soy.

For a good biography of Fernández Navarrete, see Cummins 1962. Address: Divinity Professor in the College and University of St. Thomas at Manila, Philippines.

92. Tôryu setsuyô ryôri taizen [Our school's big book of cooking]. 1711-1715. Japan. [Jap]*
• ***Summary:*** The sixth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

93. Ryôri kômoku chômi-sho [The book of seasonings by

© Copyright Soyinfo Center 2013

cooking category]. 1716-1735. Japan. [Jap]*
• ***Summary:*** The seventh earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

94. Chen Menglei. ed. 1726. Tushu jicheng [Imperial encyclopedia]. China. 10 vols. Passage on soy reprinted in C.N. Li 1958 #327, p. 233. [Chi]
• ***Summary:*** Wade-Giles reference: *T'u Shu Chi Ch'eng,* edited by Ch'ên Mêng-Lei. Title also cited as: *Gujin tushu jizheng* (W.-G. *Ku Chin T'u Shu Chi Chêng*). Or as: *Qinding gujin tushu jizheng* (W.-G. *Ch'in Ting Ku Chin T'u Shu Chi Chêng*). Qing dynasty.

Soybeans are discussed in detail in the lengthy section titled "Beans." The section titled "Explanation of the name soybeans" (*dadou*) states: The word *dadou* is found in the *Shennong Bencao Jing* (*Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (+100). The simplified character *shu* [the ancient name for soybeans] is found in the *Bencao Gangmu* (The great pharmacopoeia), by Li Shizhen (+1596). The pods are called *jia.* The leaves are called *huo.* The stems are called *qi.* (Translated by H.T. Huang, PhD, March 2003). Dr. Huang adds: In this section on soybeans, there is much more information, but none of it is new; it is all from sources we have translated previously.

Huang (2000, p. 625-26) and Bray (1984, p. 631) give the date as 1726 and translate the title as "Imperial Encyclopedia. [or: Imperially Commissioned Compendium of Literature and Illustrations, Ancient and Modern]." Index by L. Giles (1911).

Wilkinson (2000, p. 605-07, 967) has an entire section on this book, including a table of contents, which is divided into 6 main categories, 32 sections, and 10,000 subsections. He cites it as *The Imperial Encyclopedia* or "Imperially approved synthesis of books and illustrations past and present," Chen Menglei et al., comps. 1726-1728. 10,000 *juan.* It is by far the largest [and last] of the general encyclopedias (*leishu*) to have been printed. "Modern editions are available, including on CD-ROM. The most detailed is that prepared for the 1985 Zhonghua and Ba-Shu edition.

Needham (1986) has an interesting chart (p. 184) that shows the ancestry and descent of this and other major Chinese encyclopedias and dictionaries. He tells the remarkable history of this encyclopedia and its compiler (p. 206-08).

Bray (1984, p. 76, 631): This popular encyclopedia contains sections devoted to crop plants. They "consist of quotations from the classics and from agricultural treatises, and are of little intrinsic interest here except for the illustrations, which sometimes differ slightly from those of the agricultural monographs."

Hummel (1944, p. 93-95): Ch'en Meng-lei, born in 1651, was a scholar, native of Huo-kuan (Foochow). Caught in a rebellion, he was exiled, then in 1698 pardoned and brought back to Peking, where he served as teacher and secretary for the Emperor's son, Yin-chih. There he began to compile a classified encyclopedia consisting of extracts copied from various works. In 1701 he persuaded Yin-chih to finance the project further. Then the emperor Sheng-tsu probably became interested in the project, for he gave it the title "Synthesis of Books and Illustrations of Ancient and Modern Times." The work seems to have become a state enterprise, for officials were appointed to help Ch'en in the compilation. It was completed in about 1722, before the death of emperor Sheng-tsu. The emperor's son, who succeeded to the throne after a bitter power struggle, disliked Ch'en and so had the work "revised" to obliterate all signs of Ch'en's connection to it. The "revision" was completed in 1726. The first edition, comprising 10,000 chüan, plus a table of contents in 40 chüan was printed in 1728. Sixty-four sets were printed. A second edition of 1,500 sets was printed in Shanghai in 1884-88, but was marred by errors. A third accurate edition / set was printed in 1895-98 in Shanghai. One set was presented to the Library of Congress in 1908. An English index to the encyclopedia, with a valuable introduction, was compiled by Lionel Giles and titled "An Alphabetical Index to the Chinese Encyclopedia Ch'in-ting Ku-chin t'u shu chi-ch'eng." It was published in London in 1911.

W.T. Swingle (1942, p. 13): The largest single Chinese account of many plants "is contained in the *Great Chinese Imperial Encyclopedia*, the largest encyclopedia ever printed in any country. It was compiled by order of the Manchu Emperor K'ang Hsi by Ch'êng Mêng-lei, but the work was not completed when K'ang Hsi died in 1723. His son and successor as emperor, Yung Chêng, promptly dismissed Ch'êng Mêng-lei and appointed Chiang T'ing-hsi, a scholar and statesman of some distinction, under whose care the manuscript was printed in 1726. This giant work fills 5,020 volumes, each containing two books or chapters."

W.J. Hagerty (1917) did an excellent translation (which see) of the section titled "Beans." Published by the USDA, Washington, DC. With plates. This section on beans (including soy beans) appears in the encyclopedia in Category IV–Science (*Po Wu Hui Pien*), Section 20–Vegetable Kingdom (*Ts'ao Mu Tien*), Subheading–Beans (*Tou Pu*), Book 35.

95. Rumphius, Georgius Everhardus. 1747. Herbarium Amboinense. Vol. 5 [The flora of Amboina. Vol. 5]. Amstelaedami (Amsterdam). See p. 388-89. Illustration, pl. 140. [Lat; Dut]
• ***Summary:*** Liber IX. cap. XXXI [Book 9, Chap. 31]. The left-hand column, titled "Cadelium. Cadelie." is written in Latin. The right-hand column titled "De Cadelie-Plant" is written in Dutch. This is a *Phaseolus niger,* in growth and shape similar to the *Katjang Kitsjil,* although a smaller bush, about a foot high, with most branches located up high, a little

© Copyright Soyinfo Center 2013

tipping down. The lower stem is round, the top rough. The leaves are ordered three-by-three, on long branches, thinner and smaller than the average *Katjang*, and almost similar to the *Lagondi*, but somewhat peaky, with yellow flowers like the little *Katjang*.

The fruit are short pods, more than a finger length long and half a finger wide, rough on the outside and flat, hanging together in groups. Inside are 2-3 little beans, looking like lentils, maybe a little longer but bigger, and very black. The multiple roots are long, thin and fibrous with some swellings or warts here and there.

Names: Latin: *Phaseolus niger, & Cadelium*. Malay, Javanese, and Balinese: *Kadelee*. Flemish (Belgice): *Zwarte Boontjes*. Chinese (*Sinice*)*: Authau* [*au-tau?*].

Occurrence: On Amboina [or Ambon, an island of the Moluccas in today's Indonesia] they are rare, but they are more abundant on Java, Bali, and other Malaysian islands.

Cultivation: If scarce, they were pushed into the soil, but the Javanese and Balinese, who have large fields of them, sow them since the birds do not eat the bitter seeds. The ripe bushes are pulled out completely, the leaves rubbed off (since not a lot of leaves are left on the ripe bushes), bound 8-10 together and hung up. When people want to eat them, they are put in warm water (bush and all), the pods open up and the beans are taken out. Or the dried beans are taken out of the pod and cooked into something special.

When they are sown on plowed land, the rows are covered using a broom of the stiff leaves of the *Goemoetoe* tree or *Sagueers/Sagueri* tree. To keep the birds from eating the ripe seeds, the young white leaves of the aforementioned tree are cut into thin strips, attached to long ropes and hung over the *Katjang* field. The wind moving the strips scare away the birds or a boy is assigned to do so.

Utilization: These little beans were cooked and eaten like other beans, although they are not widely consumed that way because they are harder and bitter. Most were sold to the Chinese, who use them to make flour, which is in turn made into low-quality noodles (Lara in Latin, Laxa in Dutch), called *Tautsjiam*. These are long, flat strips, resembling vermicelli, which they cut out of rolled-out dough, then dry in the sun and bind together into bundles. These noodles are cooked with meat or poultry, and thinly cut cabbage, which creates a special (although in our nation considered to look disgusting) and delicious tasting food, easy to digest, and allowed to be served to all sick people. But the real noodles of this type (Lara, Laxa) are made from rice- and wheat flour, which are thick round strips like vermicelli. The noodles from the little beans are very thin and small flat strips since the flour of the Kadelee makes a flexible but tough dough, which can be rolled out very thinly since of all beans the Kadelee have the toughest substance.

The beans are first roasted a little over a fire until the black skin opens or puffs up, then they are pounded steadily in a mortar (Dutch: Rystbloek) until the hulls come off; then one can run and grind the dehulled beans into a sticky substance. From this flour the Chinese also make another food called Tahu (tofu), because the dough, which is about as thick as one's thumb, and spread out on a table, they cut squares or marbles, which they then cook in bacon fat with spices and coriander, just like our cooks make certain balls from flour, sliced bacon, and spices.

A superb, large illustration (pl. 140) shows a soybean plant with leaves, pods, and roots (but no nodules). In the lower left-hand corner is a close-up illustration of one soybean pod attached to a stem, and two soybean seeds. Rumphius did not draw this himself. Since he was now blind, a scribe drew it following his description (see below).

In summary: Rumphius reported soybeans (Cadelium, Malay name = kadelee) in Amboina in 1747. He also reported many food uses (tofu, roasted soy flour made into noodles, green vegetable soybeans, black whole dry soybeans) and use as green manure. However he did not mention soy sauce (kecap / ketchup), which by 1747 had been exported to Europe as "ketchup" for about a century by the Dutch East India Co. and Dutch traders.

Brief biography of Rumphius: Georg Eberhard Rumpf (lived 1627-1702; Latinized name Georgius Everhardus Rumphius) was a German-born naturalist. In late 1652 he enlisted as a midshipman in the Dutch East India Co. In Dec. he left Texel island in Holland and in June 1653 he arrived at Batavia, the chief Dutch city on Java in the Dutch East Indies. On 8 Nov. 1653 he was sent by the company to Amboina (now Ambon Island in the Maluku Archipelago [Spice Islands, Moluccas], in eastern Indonesia). In Feb. 1662 he was given a salary and permission to work as a naturalist on Amboina. By 1663 he had been at work for some time on his first book, a flora (*Amboinsch Kruidboek, Herbarium Amboinensis*). Most of his writing on this book is thought to have been done between 1653 and 1670. In late 1690 the manuscript for the first six of twelve books were ready to be sent to Batavia. In mid-1692 the text was sent on to the Netherlands with the ship *Waterland*. But on Sept. 12 this ship was sunk by the French and all the text was lost. Fortunately a copy had been retained. But by the spring of 1670 Rumphius had gone blind through overuse of his eyes. So he was given scribes and artists by the company to be his hands and eyes. In 1673, aided by his wife, he commenced to translate the Latin text of his work into Dutch. On 17 Feb. 1674, his wife and youngest daughter were killed in a violent earthquake that devastated Amboina. In 1687 a huge fire destroyed his library, many of his manuscripts, and his illustrations to the book. Although 60 years old, blind, and feeble, Rumphius was undaunted. He started all over describing to scribes and artists the multitude of plants he had written of and illustrated. He, of course, never saw these new illustrations. On 8 Feb. 1696 the remaining manuscript chapters were sent on the ship *Sir Janslandt* to the Netherlands. When, in 1696, the *Herbarium Amboinensis*

© Copyright Soyinfo Center 2013

finally arrived in the Netherlands, the directors of the Dutch East India Co. "decided that it contained so much sensitive [valuable] information that it would be better not to publish" the work, which was later edited by J. Burmann. The magnificently illustrated work was finally published in six folio parts in Amsterdam between 1741 and 1750–more than 39 years after Rumphius's death (compiled from many sources). Vol. 5 of 6, which mentions the soybean was published in 1747, after Kaempfer, Hermann, and Linnaeus had published their description of the soybean.

Rumphius gave a good description of the soybean plant, called it *Cadelium*, mentioned that the native Amboinese name was *kadelee* (now spelled *kedele*), said that it grew most abundantly in Java, Bali, and other Malayan islands, and included a remarkably good illustration of the plant. Only the position of the pods is incorrect. (Piper & Morse 1923; Hymowitz 1981).

Note 1. This is the earliest document seen (May 2010) concerning soybeans in Indonesia, or the cultivation of soybeans in Indonesia. This is the earliest written botanical description of the soybean, though the fourth earliest one to be published. He wrote this 20 years before Englebert Kaempfer went to Japan.

Note 2. To determine the earliest date seen for soybeans in Indonesia, we must look at Rumphius's life. From the above we can say that he had probably seen soybeans in Amboina by 1670, and definitely by 1696. These are also probably the earliest dates seen for the cultivation of soybeans in Indonesia. The source of these soybeans is unknown.

Note 3. This is the earliest document seen (May 2010) concerning soybeans in Southeast Asia, or the cultivation of soybeans in Southeast Asia. This document contains the earliest date seen for soybeans in Southeast Asia, or the cultivation of soybeans in Southeast Asia (1747).

Note 4. This is the earliest Latin-language or Dutch-language or document seen (April 2013) that mentions tofu, which it calls *Tahu.*

Note 5. This is the earliest document seen (July 2003) stating that a type of vermicelli or noodles is made with soybeans.

Note 6. This book also contains early references to *Dolichos sinensis* (p. 375; the yard-long bean or asparagus bean) and to *Phaseolus niger* (p. 388). Address: Amboina, Dutch East Indies.

96. Hakubôshi. 1748-1750. Ryôri sankaikyô. 5 vols. [Cooking in mountain and sea countries]. Kyoto, Japan: Nakamura Jinbê [and others]. 19 cm. [Jap]*
• ***Summary:*** The eighth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work. On double leaves, Oriental style in case.

97. Li Hua-Nan; Li Diao-Yuan. 1750? Xingyuan lu [Memoir from the garden of awareness]. China. Undated. [Chi]
• ***Summary:*** Wade-Giles reference: *Hsing Yüan Lu,* by Li Hua-Nan, compiled by his son Li Tiao-Yüan. Qing dynasty.

H.T. Huang (2000, p. 324), in the section on frozen tofu, states that dried frozen tofu is first mentioned in this work, which suggests: Allow a whole batch of thinly sliced frozen tofu squares to thaw slowly, then store them in a cool place so they can be used in the summer.

Huang (2000, p. 327), in the section on "Making of fermented tofu" states: "Technically the most interesting accounts of the making of *furu* are found in the *Xingyuan lu* (1750). Five recipes are presented, representing two types of methodology. One uses ground wheat *ferment* as shown in the translation given below: 'First prepare yellow wheat *ferment* as previously described and comminute it to a fine powder. Take ten catties of fresh tofu and two catties of salt. Cut the tofu into thin rectangular pieces. Sprinkle a layer of salt over a layer of tofu. Allow the tofu to soak in the brine [that is generated]. After five or six days remove the tofu but keep the juice for later use. Arrange the tofu pieces neatly in a steamer and steam until they are well cooked. Hang the steamer with its contents in an empty room for half a month when the tofu becomes covered with luxuriant fungal growth. After scraping off the hairy surface the pieces are air dried. Now treat the tofu with dry yellow *ferment* as follows. Decant the salty juice from the soaking step and mix in dried *ferment* to form a paste. Spread a layer of tofu over a layer of *ferment* paste and cover with a layer of fragrant (i.e., sesame) oil. Add a few whole pieces of fagara. Place the stacks in a crock and seal the mouth securely with mud. Warm the crock in the sun during the day. After a month the product will be ready for the table."

Huang adds (p. 327): "The other methodology uses the mash left from the fermentation of wine from grains."

Huang (2000, p. 341-42) also notes that the process for making fermented black soybeans (*shi*) described in the *Bencao Gangmu* (The great pharmacopoeia) (1596) is repeated in four recipes in this book. Although the first stage, the production of soybean koji (molded soybeans) remains unchanged, "a variety of additional materials such as fagara, sugar, wine, melon juice, melon meat, melon seeds, liquorice [licorice], mint, magnolia bark, fritillary corm [fritilaria; bulbous herbs of the lily family] etc. have been included in one or more recipes for the second stage incubation." These herbs and spices gave each product its own unique fragrance and flavor. One of the four recipes calls for the use of wheat flour. Huang observes that when the amount of wheat flour is large, the process becomes very similar to that for making soybean jiang.

In addition (Huang 2000, p. 363-64) translates the detailed method for making soy sauce, which is presented as a method for making *qingjiang* ("clear jiang"): Clean and wash one *dou* of yellow soybeans. Boil beans until soft and the color has turned red. Blend beans and cooking water

© Copyright Soyinfo Center 2013

uniformly with 24 catties white wheat flour. Form into cakes, arrange on bamboo or willow [leaf] trays, then cover with rice straw. Place trays in a wind-free room, and incubate for 7 days or until a good growth of mycelium appears. Remove the straw. Place trays in the sun during the day; bring them indoors at night. Repeat the procedure for 14 days. If it rains during the day, trays should be placed in the sun for addition days until the total of 14 days is attained. This is how to make the yellow koji for jiang (*jianghuang*).

For each *dou* of yellow koji for jiang, measure 5 *dou* of well water into an earthenware crock. Measure exactly 15 catties of raw salt into a bamboo basket, and hang the basket in the well water [inside the crock] until all the salt dissolves in the water. Discard any residue in the basket. Mix the yellow koji into the water; let it warm in the sun for 3 days. On the morning of the 4th day, remove earthenware crock from sun and stir contents well with a wooden paddle. Two days later, remove from sun and stir again. Repeat this procedure 3-4 times. After about 20 days, the "clear jiang" (*qingjiang*, or soy sauce) should be ready for use.

To separate the soy sauce (*qingjiang*), use a finely woven cylindrical bamboo tube that is open at both ends. People in southern China call this a "circular sieve for jiang" (*jiangchou*). It is widely available in local markets of the capital [Beijing]. The same markets also sells various sizes of covers for the crocks. When the jiang / mash is ready [it has a consistency resembling that of applesauce], push the woven bamboo tube down into its center until the bottom of the tube rests securely on the bottom of the crock. Remove the jiang inside the tube so that the bottom of the crock is clearly visible. Place a brick atop the tube to prevent it from floating upwards. Liquid soy sauce will flow from the jiang mash into the tube. The next morning the tube should be filled with liquid. Use a bowl to transfer this clear soy sauce into a clean crock. Cover the crock with a piece of cloth to prevent flies from falling in. Warm the crock in the sun for half a month. To make more soy sauce, increase the amount of raw materials. After the sauce is ready, you can also use a sieve to collect the soybeans that float to the top of the mash. When half-dried, these beans make delicious fermented black soybeans or "fermented bean relish" (*doushi*).

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Seasonings based on jiang (fermented soybean paste) are used in 10 recipes: jiang itself in 4, soy sauce made from jiang named *qingjiang* in 5 recipes, and soy sauce made from jiang named *jiangyou* in 1 recipes. A seasoning named *douyou* is used in 8 recipes. Note: This is the earliest document seen (April 2012) in which a soy-based seasoning named *douyou* (W.-G. *tou yu*) is mentioned. Huang states (p. 371) that *douyou* is written with the Chinese characters for bean + oil.

Wilkinson (2000, p. 646) states that this book (late 18th century) is the first Chinese collection of recipes from a regional cuisine–that of Sichuan.

Fukushima (1989, p. 6): "The general manufacturing methods of soy sauce in the Ch'ing (Shin in Japanese) dynasty are recorded in *Ch'ing-yuan Lu* (sic, *Hsing-yuan Lu; Seienroku* in Japanese), written by Li Hua-nan (Ri Kanan in Japanese). Cooked soybeans and uncooked wheat were the raw materials used in koji making. The resultant koji was mixed with brine. After aging, the soy sauce was collected by pressing a deep bamboo colander into the aged mash and ladling out the liquid which had accumulated."

Bo (1982): Describes the method for making chiang-yu (soy sauce).

98. Oogimachi, Kinmichi [pseudonum: Hakugyoku Ou]. 1750? Hakugyoku Ou tôfu ki [Hakugyoku Ou's record of tofu]. Japan. Undated. [Jap]

• ***Summary:*** The caption of this striking illustration of two Japanese women in kimonos states (in Japanese): *Mizuchaya to Tofuchaya.* This can be translated as "Water Tea House and Tofu Tea House." The woman on the right is making dengaku using skewered pieces of tofu over a charcoal brazier.

水茶屋と豆腐茶屋

This illustration comes from a book that is hard to pin down; we are not even sure that such a book exists. The illustration appears in the book titled *Tôfu no Hon* [The book of tofu], by Koryû Abe and Shigemitsu Tsuji (1974, Tokyo, p. 7, in Japanese). On page 6 they cite the source (somewhat vaguely) as the source we cite above, and give the date as mid-Edo period. The Edo (or Tokugawa) period lasted from 1600 to 1867.

Abe and Tsuji state (p. 6) that the above ancient book mentions *Niken Jaya* ("two tea houses") and their tofu

© Copyright Soyinfo Center 2013

(Gion-dofu) and Dengaku. *Hakugyoku* means "white jewel" and *Ou* means "old man / man's."

They then make things more confusing by stating: According to *Sejidan*, written by Kikuoka Senryo of the mid-Edo period, Gion-dofu was made for the first time at these two tea houses (*Niken Jaya*), which were located to the east and west of the tall wooden gate in Kyoto's Gion section (*Gion Rômon*). That was the start of the Kyoto Water Tea House (*Kyo Mizu Chaya*). The two tea houses were named Fuji-ya (the eastern Niken Jaya) and Nakamura-ya (the western Niken Jaya). In those old days they sold tofu. Today only Nakamuraya exists, but its name is now Nakamura-ro.

A Japanese website named Union Catalog of Early Japanese Books (http://base1.nijl.ac.jp) lists some 20 documents by Hakugyoku Ou (the pronunciation of his name is shown in furigana = hiragana written next to the Chinese characters / kanji), but no dates are given. Unfortunately the book about tofu cited above is not mentioned among the 20.

According to *The Book of Tofu*, by Shurtleff and Aoyagi (1975, p. 307): The Nakamura-ro restaurant, which is said to be "the oldest of all existing Japanese restaurants, began about 400 years ago as a simple tea shop serving travelers, pilgrims, and townspeople who came to pay homage at the revered Yasaka Shrine in Kyoto's Gion Quarter. Over the centuries, the shop grew into a restaurant and became famous for its 'Gion-dofu.'... The present master and head chef, Mr. Shigemitsu Tsuji, is famous throughout Japan as a cook, lecturer, and author." An illustration by Aoyagi of the interior of Nakamura-ro appears from the time she and Shurtleff visited the restaurant in about 1973. Address: Japan.

99. Wu Jingzi. 1750? Rulin waishi [Unofficial history of the scholars]. China. Undated. [Chi]
• ***Summary:*** Wade-Giles reference: *Ju Lin Wai Shih*, by Wu Ching-Tzu. Qing dynasty. First printed in 1803. Huang (1993. June 5; personal communication), notes that this is a famous novel, which satirizes the defects of the Public Examinations System. In chapter 2, wheat gluten (*mianjian*) and pressed tofu (*doufugan*) are mentioned as gifts for a scholar.

Wilkinson (2000, p. 492, 623) states that the term *Waishi* (informal history) was generally used in the titles of fictional narratives; the most famous example is the 18th century satire *Rulin wiashi* (The Scholars). The author Wu Jingzi lived 1701-1754. An English translation titled *The Scholars*, by Yang Hsien-yi and Gladys Yang was published in 1957.

100. Kondate [Menus]. 1751-1781. Publisher unknown. 100 p. Japanese summary by Kawakami 1978, p. 47. [Jap]
• ***Summary:*** The menus, by an unknown author, are for tea ceremony cooking. Mentions *Higo-dofu*, which is tofu shaped like a piece of macaroni (hollow tube).

101. Sendai-johoku Haku-furosai. 1755. Chûnin hitsuyô [The cook's necessities]. Publisher unknown. 6 volumes (satsu). Japanese summary by Kawakami 1978. [Jap]
• ***Summary:*** The author's first name is unknown. His last name is apparently Haku-furosai, and he comes from Sendai-johoku. This is a Chinese herbal reference book for cooks. It lists tofu as a product made from soybeans, and lists many tofu recipes which are not found even in the famous Tofu Hyaku-chin.

102. Osbeck, Per. 1757. Dagbok ofwer en Östindisk resa åren 1750, 1751, 1752. Med anmärkingar uti naturkunnigheten, främmande folkslags språk, seder, hushållning, m. m. [Voyage to the East Indies in the years 1750, 1751, 1752...]. Stockholm: Tryckt hos L.L. Grefing. 4 + 376 + [16] p. Illust. 14 cm. German edition published in 1765, English in 1771. [Swe]*
• ***Summary:*** See the English translation of the book made in 1771. Page 358: *Dolichos sinensis*–by the Chinese called Ta-o–Diadelphia decandria.

Note: Osbeck lived 1723-1805. A photostat copy of the original is in the library of the Arnold Arboretum and in the rare book room of the University of Illinois (Champaign / Urbana).

103. d'Incarville, P. 1763. Maniére de faire les fleurs dans les feux d'artifice Chinois [How Chinese make the "flowers" in fireworks]. *Memoires de Mathematique et de Physique, Presentes a l'Academie Royale des Sciences...* 4:66-89. See p. 76. [Fre]
• ***Summary:*** When discussing salpêtre (saltpetre; potassium nitrate) the author mentions *teou-fou* (tofu). He says: "*... son usage pour faire cailler une espèce de fromage mou, fait de lait de haricots, qu'ils appellent teou-fou: il s'en vend beaucoup en Chine. L'eau mère de salpêtre est un poison dont se servent assez souvent ceux qui se veulent donner la mort: comme il en entre très-peu dans le teou-fou, on prétend qu'il n'y a rien à craindre; l'Empereur même en mange.*"

Translation: It is used to curd a type of soft cheese, made from the milk of [soy] beans, which they call tofu; a great deal of it [tofu] is sold in China. The water in which saltpetre is dissolved is a poison, which is often used on those whom one wants to kill: however, as only a very small amount is used to make tofu, it is said there is nothing to fear; even the Emperor eats it [tofu].

Note 1. This is the earliest French-language document seen (April 2013) that mentions tofu, which it calls *teou-fou*, and the earliest which uses the word *fromage* or the term *fromage mou* to describe to tofu.

Note 2. Potassium nitrate is not used as a tofu coagulant. The three main tofu coagulants are calcium sulfate, magnesium chloride, or seawater (of which magnesium chloride and magnesium sulfate are the two main constituents, besides water and sodium chloride–table salt). Address: Abbé, Jesuit Missionary.

104. Franklin, Benjamin. 1770. [Letter to John Bartram in Philadelphia, from London, dated January 11, 1770, describing enclosed Chinese Garavances / Caravances (soy beans) and how they are used to make tofu] (Letter to the editor)]. In: Willcox, William B. ed. 1973. The Papers of Benjamin Franklin. Vol. 17. January 1 through December 31, 1770. New Haven, Connecticut, and London: Yale University Press. See p. 22-23.

• ***Summary:*** "My ever dear Friend:" Franklin talks about the "true Rhubarb seed" that he is sending. "I send, also, some green dry Pease, highly esteemed here as the best for making pease soup; and also some Chinese Garavances (1), with Father Navaretta's (2) account of the universal use of a cheese made of them, in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made; and I send you his answer. I have since learnt, that some runnings of salt (I suppose runnet) (3) is put into water when the meal is in it, to turn it to curds.

"I think we have Garavances with us; but I know not whether they are the same with these, which actually came from China, and are what the *Tau-fu* [tofu] is made of. They are said to be of great increase...

"With love to good Mrs. Bartram, and your children. With sincere esteem, I am ever, my dear friend, Yours affectionately, B. Franklin."

Note 1. This is the earliest English-language document seen (March 2006) that uses the term "Chinese Garavances" (or any related spelling of the second word) or the word "Garavances" to refer to soybeans. This letter, an earlier letter the same month to Franklin from James Flint, and Franklin's other writings show clearly this was his intended meaning. It is not clear from the handwriting in this old, faded letter whether Franklin intended to spell the word "Garavances" or "Caravances," however both published versions of the letter (Darlington 1849 and Willcox 1973) use "Garavances."

Note 2. This is the second earliest English-language document seen (June 2008) that uses the word "Garavances" (or any related spelling, such as "Caravances, Calavanses, Callavanses, Callvanses," etc.) to refer to soybeans. It first appeared (as "Callivances" and "Callevances") in a letter from James Flint to Franklin dated 3 Jan. 1770.

Note 3. Father Navaretta is Domingo Fernández Navarrete (1610-1698), archbishop of St. Domingo, who went as a missionary to China. In 1665 he wrote a passage in his journal about how the Chinese make beans into a cheese which he called "Teu Fu" [tofu]. His observations were first published in 1676 in Spanish under the title *Tratados historicos, politicos, ethicos, y religiosos de la monarchia de China.* They were first published in English in 1704 in a book compiled by Awnsham Churchill and John Churchill, titled *A Collection of Voyages and Travels.* (London: Published by the author. 4 vols.). (2)

Note 4. Runnet is rennet, or natural nigari, derived from natural sea salt or sea water. Franklin says the soybeans are ground dry (without water, to make "meal") before being mixed with water then coagulated with "runnet" to make tofu.

Note 5. Mr. Bartram, a botanist in Philadelphia, probably planted the soybeans sent to him by Benjamin Franklin in his garden, which was located on the west bank of the Schuykill River below Philadelphia (Fox 1919; Hymowitz and Harlan 1983, p. 375-76).

Note 6. This is the earliest document seen (April 2013) concerning tofu mentioned by an American or in connection with (but not yet in) America. It is also the earliest English-language document seen (April 2013) that uses the word *Tau-fu* to refer to tofu, or the word "curds" in connection with tofu.

Note 7. This is the second earliest document seen (Jan. 2004) concerning soybeans in Pennsylvania–or in Philadelphia.

Note 8. This is the second earliest document seen (Sept. 2000) by or about Benjamin Franklin in connection with soybeans. Franklin was a commercial agent, representing four colonies (including Pennsylvania and Georgia) in London. He first learned about soybeans from James Flint, who probably first called them "Chinese caravances" or "Chinese garavances" (Prof. Theodore Hymowitz 13 Sept. 1998).

Note 9. Prof. Hymowitz (31 July 1989) states that "Caravance, garavance, and calavance are variations of the Spanish word *garbanzo,"* which means chick-pea or garbanzo bean. *Garbanzo* is a Castilian word, used also by the Basques under the form *garbantzua,* and by the French as *garvance.*

Note 10. Franklin says in this letter that he wrote Mr. Flint to ask about how the Chinese made tofu. A copy of Flint's reply from Capringe, dated 3 Jan. 1770, is reprinted in: Berkeley, Edmund; Berkeley, Dorothy Smith. 1992. *The Correspondence of John Bartram, 1734-1777.* Gainesville, Florida: University Press of Florida. xv + 809 p. See p. 727-28.

Note 11. What did John Bartram do with these soybeans that he received from Benjamin Franklin? According to Prof. Hymowitz (June 1999 personal communication), Bartram distributed them to eight farmers, whose names appear in the proceedings of the American Philosophical Society. Some of the eight were well-known people, including public (political or judicial) figures. Knowing their names, Ted spent a long time trying to find out what each of them did with their soybeans; he looked in their diaries, biographies, etc., but found nothing.

Note 12. This is the earliest document seen (Dec. 2005) concerning John Bartram of Philadelphia in connection with soybeans.

© Copyright Soyinfo Center 2013

Note 13. In *The Works of Benjamin Franklin...,* edited by Jared Sparks (1882, Vol. 7, p. 464) this letter is titled "Rhubarb seed.–Chinese cheese." The word "caravances" is italicized. The text of the letter concerning soybeans is identical.

Note. This is the earliest English-language document seen (April 2013) that uses the term "Chinese cheese" to refer to regular (nonfermented) tofu. Address: London, England.

105. Flint, James. 1770. [Letter to Benjamin Franklin in London, dated Jan. 3d 1770, describing how the Chinese convert Callivances / Callevances into Towfu (soy beans into tofu) (Letter to the editor)]. In: Edmund Berkeley and Dorothy Smith Berkeley. 1992. *The Correspondence of John Bartram, 1734-1777.* Gainesville, Florida: University Press of Florida. xv + 809 p. See p. 727-28.

• ***Summary:*** Benjamin Franklin first read about tofu in the writings of Domingo Fernandez Navarrete (lived 1698-1786), a Dominican missionary to China. Fernandez Navarrete first wrote about tofu–which he called *teu fu*–in his journal in 1665; this was first published in Spanish in 1676. It was translated into English by Awnsham and John Churchill, published in 1704, and subsequently republished; Franklin probably encountered it in the third edition: *A Collection of Voyages and Travels...* (6 vols., London, 1744-46; see Vol. 1, p. 1-113).

Franklin later wrote his friend John Bartram that the idea that a "cheese" could be made of beans "so excited my curiosity that I caused enquiry to be made of Mr. Flint, who lived for many years there [in China], in what manner the cheese was made."

This letter from Flint to Benjamin Franklin reads: "Dear Sir. 1st Process. The method the Chinese convert Callivances into Towfu. They first steep the Grain in warm water ten or twelve Hours to soften a little, that it may grind easily. It is a stone Mill with a hole in the top to receive a small Gram of warm water which passes between the two Stones the time of grinding to carry off the flower [flour?, slurry?] from between & keeps draining into a Tub which has a Sieve or Cloth at the top to stop the gross parts from mixing with the flower.

"2d Process. Then they stir up the flower & put the Water over the Fire just for it to simmer, keeping stirring till it thickens & then taken out & put into a frame that has a Cloth which will hold the Substance, & press the water from it, & when the Water is gone off the Frame with the Contents with a Weight on it must be put over the Steam of boiling Water for half an hour to harden or something longer. The pressing & boiling over the steam brings it into the Form you see it carried about at Canton. This is the process as I always understood.

"Now I shall give you my Opinion in what Manner I should proceed in the first Process. I would send my Callevances to the mill to be ground, then I would put the Flower into water & stir it well very thin. Then strain the gross parts from the Flour & then you proceed for the 2d. For I look upon the reason they steep the Grain & grind it with Water is that it is so hard they could not grind it with their little Stones. I hope you understand it, & wish the Complts [Compliments = best wishes] of the Season. I remain Dr Sr [Dear Sir], Your most obedt [obedient] Servant, J. Flint."

Note 1. This is the earliest English-language document seen (March 2006) that uses the word "Callivances" or "Callevances" (also spelled "Garavances, Caravances Calavanses, Callavanses, Callvanses") to refer to soybeans. But note that in 1764 C.G. Ekeberg, in a Swedish-language article on soy sauce, referred to the Caravance bean, apparently comparing it to the soybean, which he called Pactau ("white bean' = white soybean). Later this month, in a letter to John Bartram dated 11 Jan. 1770, Franklin used the word "Chinese Garavances" (or "Caravances").

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "Towfu" to refer to tofu.

Note 3. Why did Flint write this letter to Franklin? Both Flint and Franklin were in London at the time. Franklin, who first read about tofu in the writings of Fernandez Navarrete, must have asked Flint (either by letter or in person) if Flint knew how tofu was made in China. Flint read and spoke Chinese and had worked (as an interpreter) and traveled extensively in China. However, Flint apparently did not understand that the Chinese use a coagulant to make tofu.

Note 4. This is the earliest document seen (Sept. 2000) by or about Benjamin Franklin in connection with soybeans.

Note 5. This original letter is located in the Bartram Papers of the Historical Society of Pennsylvania (4:14). Address: Capringe.

• ***Summary:*** For details, see Osbeck 1771. Address: Captain of a ship in the Swedish East India Company's service.

107. Osbeck, Per. 1771. A voyage to China and the East Indies, by Peter Osbeck ... Together with a voyage to Suratte, by Olof Toreen ... and an account of the Chinese husbandry, by Captain Charles Gustavus Eckeberg. Translated from the German by John Reinhold Forster. Vol. 1. London: Benjamin White. See vol. 1, p. 73, 77, 218, 253, 304-05. Original edition published in 1757 in Swedish. [Eng]

• ***Summary:*** Note 1. All of the following passages were written in 1751.

In Canton, China: "Fish cut to pieces were carried about for sale on little tables, which hung on poles as described

© Copyright Soyinfo Center 2013

above: the same was done with bacon, and *Fdaufu* [tofu], a dish which is like our sweet cheese, but which was prepared of *Chinese* beans (*Dolichos Chinensis*)*"* (p. 218).

China: "Soya, or the *Tyong-yao* [*jiangyou*] of the *Chinese,* (*Dolichos Soja* Linn.) the *Japan Soya* is better and dearer than the *Chinese.* For its preparation see *Kœmph.* Amoen. p. 839. and likewise *Soja Dolichos, Flor. Zeylan.* 354. It was sold the katty for three kanderins" (p. 253).

Note 2. This is the earliest English-language document seen (Feb. 2007) that uses the word "Soya" in connection with the soybean or with soy sauce.

Note 3. This is the earliest English-language document seen (April 2012) that uses the word "Japan Soya" to refer to soy sauce, probably made in Japan. As of Feb. 2012, the term "Japan Soya" (referring to soy sauce) appears in this database three times from 1771 to 1907.

"Fdau-fu, or *Tou-fu* [tofu], which has been mentioned on page 218, was sold by pieces in several places. The *Chinese* shewed me a sort of small pease, which they call *U-ang-teo* [huangdou = "yellow bean"], and of which cheese [tofu] is said to be made, though the name gives reason to conjecture that it has been made from *Tao,* which are the *Chinese* beans, or *Callvanses."* (p. 305).

Note 4. This is the earliest English-language document seen (April 2013) that uses the word "Fdaufu" (or "fdou-fu"), or the term *Tou-fu* to refer to tofu.

Non-soy: "Spain, March the 6th, 1751. On my arrival at Cadiz [a seaport and province in southwest Spain], I saw the *Hedysarum coronarium,* or French honey suckle, in plenty. The Spaniards call it *Soya,* and the French *Saint Foin* (Note: What we call St. Foin in England is *Hedysarum Onobrychis;* the *Hedysarun Coronarium* is planted for ornament in our gardens); it was brought to town in great bundles as food for the cattle (p. 77).

Note 5. This plant called Soya in Spain is probably not the soybean.

"Callvanses (*Dolichos Sinensis*) (Footnote: *caule erecto ramosissimo, pendunculis erectis multifloris, leguminibus pendulis; Chinensibus Tao*). They are planted on dry hills, and treated like dwarf kidney beans. They do not grow high, and therefore do not much want to be supported; this however is done in some places, and especially where they stand in the open fields... These beans are of the smallest kind, and are quite white except the germen [hilum], which is black, but white in the middle. The *Europeans* buy them in great quantities, and make use of them in their return from China instead of pease. They have thin husks and are very palatable. A katty, which answers to a pound we use for grocery, was sold for two kandarin, or about three stivers" (p. 304). [Note 6. According to *Index Kewensis* and *Hortus III, Dolichos sinensis* (later named *Vigna sinensis* and now named *Vigna unguiculata subsp. sesquipedalis*) is the yard-long bean or asparagus bean, a subspecies of the cowpea.]

"Lack-Tao [Luk Taw or mung bean] (Footnote: *Phaseolus Max, Mungo Persarum*) is the *Chinese* name of another sort of beans, or pease, which are much less than our wild vetches. The plant itself grows like the former... With these pease they feed the parrots. Among the many seeds which I brought to *Sweden,* was a kind of small green pease, which was so nicely eat up by the worms at my arrival, that nothing but the husks were left, which served as a nidus [nest or breeding place] to the little beetles, with which they were almost filled" (p. 304-05).

The author: Peter Osbeck, a Swede, lived 1723-1805. He was a pupil of the great Linnaeus and he generally used botanical terms used by Linnaeus. In 1750 he set out on a journey to China as chaplain to a Swedish East Indiaman, *The Prince Charles*, which visited Java and southern China, and returned to Gothenburg, Sweden, on 26 June 1752. Osbeck was a zealous naturalist and brought home a rich collection of natural objects, chiefly Chinese specimens, for during his long stay at Whampoa and Canton he had ample opportunity to collect. All of his collections he placed in the hands of Linnaeus, who described the plants in his *Species Plantarum,* published a year after Osbeck's return. Osbeck's original account of his voyage appeared in 1757 in his native language, Swedish, titled *Dagbok öfver en ostindisk resa.*

The book: Linnaeus is indebted to this book for the greater part of the Chinese plants and animals he described. All of the 244 Chinese specimens collected by Osbeck belong to the neighborhood of Canton. Most of the plants Linnaeus knew from China were those collected by Osbeck, but Linnaeus seems to have been under the mistaken impression that Osbeck's plants came from India, a place that Osbeck never visited. Strangely, most of the systematic botanists who compiled general systematic works on botany after Linnaeus (Lamarck, Willdenow, Sprengel, de Candolle, Kunth, etc.) incorrectly referred to Linnaeus rather than to his source, Osbeck (Bretschneider 1880, p. 88-91).

Bretschneider (1880, p. 116) notes: "The third account of Swedish naturalists in China translated by John Reinhold Forster, is a treatise on *Chinese Husbandry* by Charles Gust. Eckeberg. Eckeberg was Captain of a Ship in the Swedish E.I. [East India] Company's service. We know from Sparrmann's brief account of his voyage to China that Eckeberg was captain of the Navarcha and that his ship arrived in Canton Aug. 24 in 1766. It was at this place that Eckeberg made his observations on Chinese husbandry, on which subject he subsequently published a very interesting account, of which I shall give an abstract. It seems that Eckeberg had previously visited Canton, about 1762."

Note 7. This is the earliest English-language document seen (Oct. 2010) that uses the word "husbandry" in connection with animals. Address: A Swede and pupil of Linnaeus, he traveled in China, arriving in 1751.

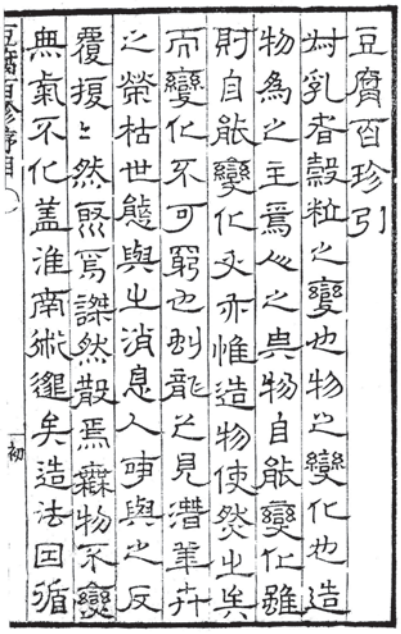
Japan. [Jap]*
• ***Summary:*** The ninth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

109. Delaporte, Joseph. 1772. Le voyageur françois, ou La connoissance de l'ancien et du nouveau monde. Quatrieme édition, revue, corrigée et augmentéeTome 5 [The French voyager: or, The knowledge of the old and new world. 4th ed. Revised, corrected and expanded. Vol. 5]. Paris: L. Cellot. 480 p. See p. 282. [10 ref. Fre]
• ***Summary:*** This book consists of a series of letters from the author, a French traveler, to a woman in France. Volume 5 contains letters written from China. In his letter from Peking, dated 1 March 1745, when discussing Chinese food, he mentions tofu (*teou-fou*), saying (p. 182-83): A Chinese person prefers vegetables to poultry / foul. We did not follow that example. Our resource was a larder of hams, chicken and ducks. A good foul does not cost more than a few cents. There is no more commonly known food, nor a better priced one, than a certain paste of beans, that is called *teou-fou.* Cakes are made from it, in the shape of a cheese, that are four to five inches in thickness. Eaten raw / plain, it has very little flavor; but cooked in water and seasoned with certain herbs with fish, and other ingredients, it is a very good food: fried in butter, it is excellent. It is also eaten dried and smoked; and this latter technique yields the best results. An incredible amount of it is consumed, from the Emperor to parcel carriers / porters, everybody is passionate about this food, and finds it so delicate that it is often preferred to poultry. Wherever you are, a pound of it, which is more than 20 ounces (*La livre, qui est de plus de vingt onces*) costs no more than very small change.

In French, the part about tofu reads: *"On ne connoît point ici d'aliment plus commun ni à meilleur marché, qu'une certaine pâte de feves, qu'on appelle teou-fou. On en fait des gâteaux, en forme de fromage, qui ont cinq à six pouces d'épaisseur. On y trouve peu de goût, lorsqu'on les mange crus;..."*



Note 1. This is the 2nd earliest French-language document seen (April 2013) that mentions tofu, which it calls *teou-fou.*
Note 2. Hervé Berbille first discovered on 26 July 2011 that this document mentions tofu. Address: Abbé.

110. Ka, Hitsujun. 1782. Tôfu hyakuchin [One hundred rare and favorite tofu recipes]. Edo: Yamazaki Kinbe; Osaka: Fujiwara Zenshichiro (Kochiya Moheibei). 9 + 31 leaves. Illust. 21 cm. Photoreproduction of original edition. Edited by Abe Koryu, with rendering into modern Japanese. Tokyo: Shinshu Shorin. 280 p. Publ. 1971. Japanese summary by Kawakami 1978. [Jap]
• ***Summary:*** Containing many beautiful illustrations (wood block prints), this is Japan's earliest and most famous book on tofu. Several pages look like this.

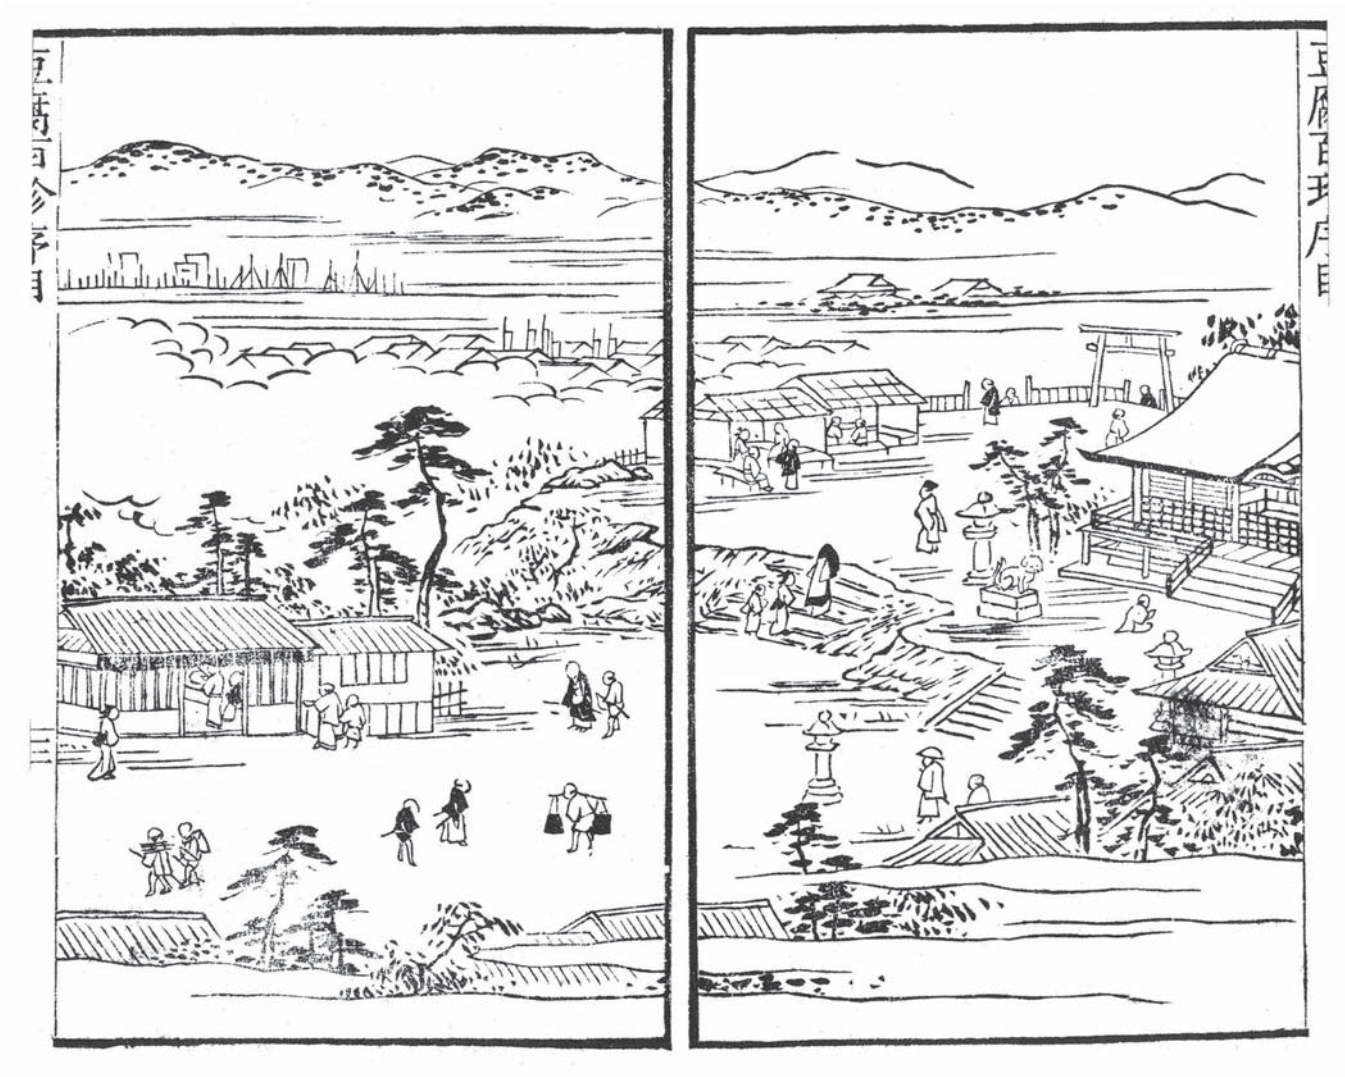
In Japanese, the first reads *Wainan seisho,* which might be translated: [Tofu is] The pure and excellent thing from Wainan [Huainan].

This is the earliest Japanese document seen (May 2002) with the word "tofu" in the title, or that contains illustrations of tofu; it mentions dried-frozen tofu as well. Because of its immediate success, a second volume (*Tofu Hyakuchin Zokuhen*) was published the next year. Devoted solely to tofu cuisine and combining the virtues of a travel and restaurant guide with those of a cookbook, the two books introduced the Japanese people to about 230 varieties of (or general recipes for) tofu cuisine served in the different provinces. It is still widely quoted. Abe (1971, 1974) has published a modern facsimile edition, nicely illustrated.

Illustrations (black-and-white wood-block prints on unnumbered pages) show:

(1) A village (2-page spread) seen from a distance with people appearing very small. (2) Five Japanese ladies in kimonos cutting tofu, grilling it to make *dengaku* over a low

© Copyright Soyinfo Center 2013



© Copyright Soyinfo Center 2013

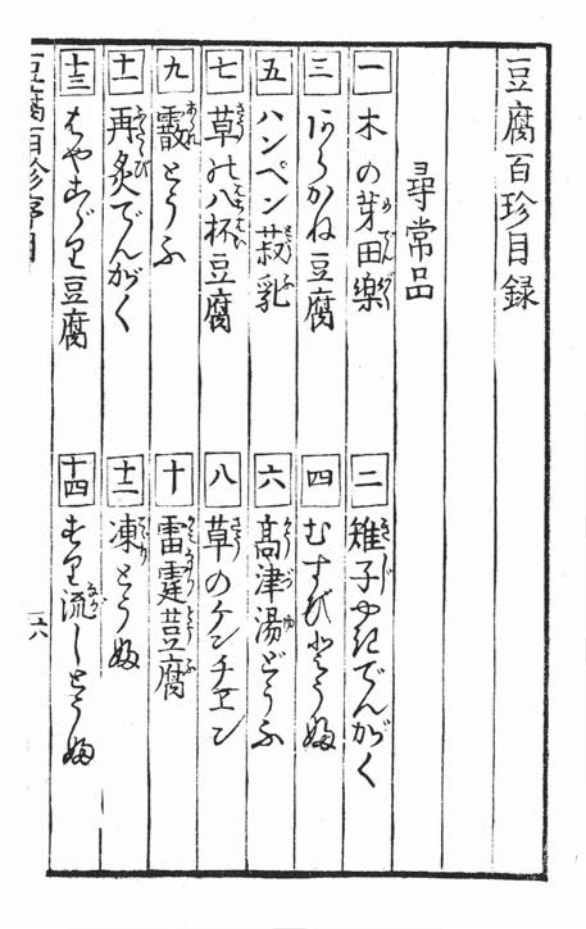
charcoal stove, and serving it on plates.

Note: This is the world's first book written entirely about tofu, or about soybeans or soyfoods.

111. Ka, Hitsujun. 1783. Tôfu hyakuchin zokuhen [One hundred rare and favorite tofu recipes: Sequel]. Osaka: Kochiya Moheibei. 280 p. (40 cho). Photoreproduction of original edition. Edited by Abe Koryu, with rendering into modern Japanese. Tokyo: Shinshu Shorin. 280 p. Publ. 1971. Japanese summary by Kawakami 1978. [Jap]



• ***Summary:*** The second volume of the popular *Tofu Hyakuchin*, which see.

Beautiful illustrations (black-and-white wood-block prints on unnumbered pages) show:(1) A lady in a kimono kneeling on her right knee in front of a low table on which are piled cakes of tofu. With a knife in her right hand, she is about to cut the tofu. (2) A restaurant in a temple with various people seated and walking. (3) A busy city street with people walking and eating in restaurants, whose fronts are open to the street, and whose names appear on a little cloth sign (*noren*) hanging from the eves. (4) "Dengaku Hoshi"–A Buddhist priest balancing on a single stilt called a "heron's leg." (5) A hand holding a Japanese-style vegetable knife cutting a large block of tofu rested in an L-shaped wooden support; this helps in cutting the tofu into thin slices / sheets. (6) A specially-shaped long wooden box (*tsukidashi*) having about the same cross section as that of a block of tofu, with a handle on one end, a screen over the opposite exit end, and a wooden pusher, which is used to push a block of tofu into the box and through the screen, thereby creating tofu noodles, similar to those called *tokoroten* made from a block of gelled *tengusa / gelidium* seaweed.

Masaaki Yasuda states in "Fermented tofu, tofuyo" (2011, p. 302): "The earliest known reference to fermented tofu in Japan comes from Osaka. In 1883, Ka Hitsu Jun published the famous book, *Tofu Hyaku Chin Zokuhen* (The Sequel to One Hundred Favorite Tofu Recipes). In this book, 'red tofu' and the other fermented tofu, 'tofu-ji,' were introduced. According to the book, how to make the red tofu was a family secret, and few details on its production were provided. The other description was clearly of Chinese style red furu, because the materials not only included red koji from China, shiro zake (white sake, Chinese distilled liquor named 'Bai-Jiu'), *sansho* (Japanese spice, this spice seems to be used instead of chili), but also refer to it as tofu-ji and use the same method of preparation."

112. Tôfu hyakuchin yôroku [One hundred and favorite tofu recipes, additional record]. 1784. Nishimura Ichirouemon and Nakagawa Toshiro (Heian, Horikawa), Fujio Zenshichi (Osaka, Koribashi). 50 p. Japanese summary by Kawakami 1978, p. 117. [Jap]

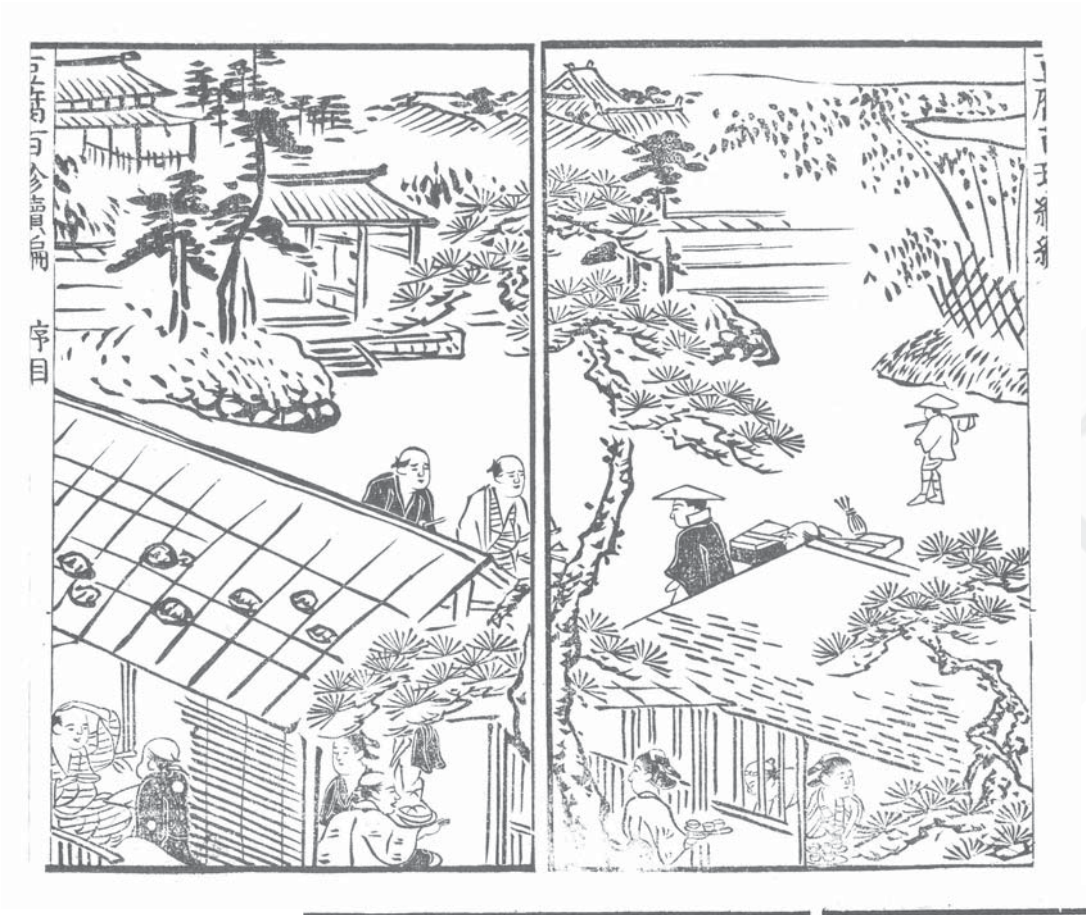
• ***Summary:*** There was a book called Toka-shu ("Collection of Bean Flowers") that appeared from an unknown author during the Edo period (1600-1868). A bookstore owner in Osaka bought that book and showed it to Ka Hitsujun, the author of the *Tofu Hyakuchin.* They decided to publish the book under the name *Tofu Hyakuchin Yoroku.* They bought the wood blocks in 1784 but did not actually publish the book until 1788. The contents of the book is like the *Tofu Hyakuchin* except that it has recipes of the Edo-period style.

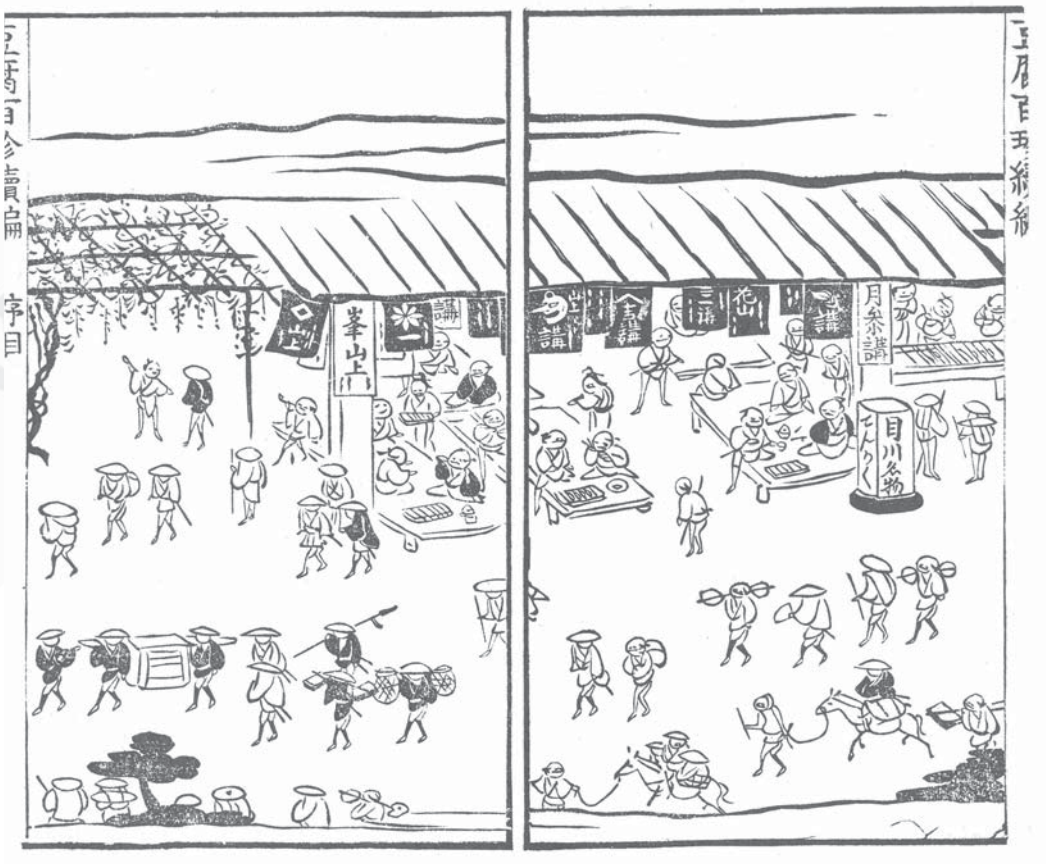
113. Loureiro, Joao de. 1790. Flora Cochinchinensis: sistens plantas in regno Cochinchina nascentes. Tomus II. [The flora of Cochin China, setting forth the plants in the kingdom of Cochin China. Vol. 2.]. Ulyssipone [Lisbon], Portugal. p. 433-884. See p. 441-42, 522-24. 27 cm. [Lat]

• ***Summary:*** In the section titled "Diadelphia. Decandria" (p. 441-42) we read: "Sp. 13. Dolichos Soja, Dau nanh. Hoam téu [huang-tou = yellow bean]. Writing in Latin, he gives a botanical description of the plant, describes its habitat as Cochin China and China, and cites as sources Thunberg, Kaempfer, and Rumphius. Then he adds: "Uses: These seeds, having been boiled or lightly toasted, are quite acceptable to both the stomach and the palate. From them is made the famous Japanese soy sauce called Soia, which the Chinese and Cochin Chinese frequently use for cooking food and stimulating the appetite. There is also produced a white food

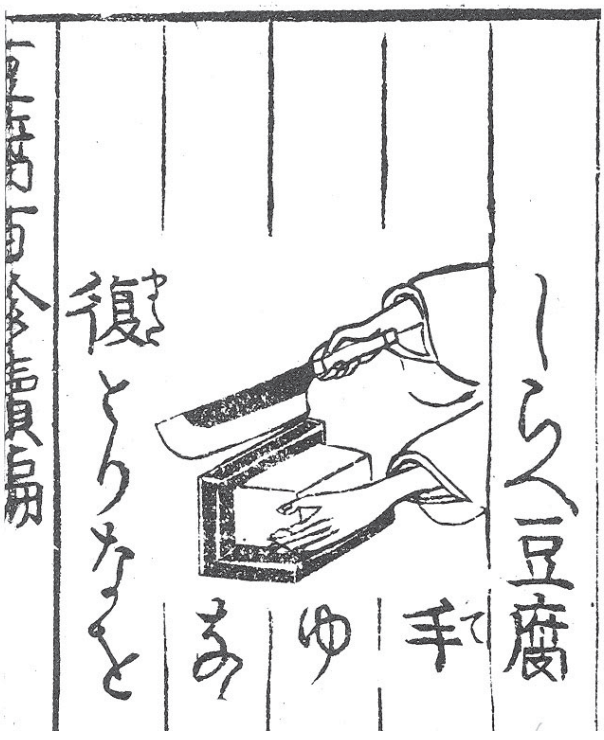
© Copyright Soyinfo Center 2013

© Copyright Soyinfo Center 2013





© Copyright Soyinfo Center 2013



© Copyright Soyinfo Center 2013

resembling coagulated milk (*lactis coagulati*) and called Teu hu or Tau hu [tofu] by the Chinese; it is the most widely used food among them. Although it is rather bland by itself, if the appropriate condiments are added, it becomes a food which is neither unpleasant nor unhealthy."

The author: Ioannis (Joao) de Loureiro was born in Portugal in 1715. Somewhere between 1735 and 1743 he arrived in Cochin China (today's Vietnam) as a Jesuit missionary. Living at Hué, the capital, near the sea coast, he tells us that he had no access to European medicines. So he was obliged to depend entirely on native medicinals, and by investigating them he was necessarily induced to study the local flora and to make botanical collections. Thus he developed a herbarium of nearly 1,000 species. In 1779 he went to Canton to do botanical research for 3 years, living within a factory. He left for Lisbon in 1782, and died in 1794 or 1796. He was one of the most prominent botanical collectors of the 1700s, giving rich descriptions of economical and medicinal uses.

The book: Volume 1 was first published in 1789; the set was reissued 3-4 years later edited by Willdenow, with added notes. It describes 1,257 plants (Bretschneider 1880, p. 129-46).

Note 1. This is the 2nd earliest document seen (May 2010) concerning soybeans in Vietnam, or the cultivation of soybeans in Vietnam. This document contains the 2nd earliest date seen for soybeans in Vietnam, or the cultivation of soybeans in Vietnam (1790). The source of these soybeans is unknown.

Note 2. This is the earliest Latin-language document seen (April 2013) that uses the word "Teu hu" or the word "Tau hu" to refer to tofu.

Also discusses: *Dolichos tetragonolobus* (p. 437. Winged bean? Habitat: Cochin China and China). The genus *Arachis* (p. 522-24), with two species: *Arachis asiatica* and *Arachis africana*. He notes (p. 524) that Linnaeus calls the latter *Arachis hypogoea* [peanut]. Address: Portugal.

114. Ryôrisho. Fu to tôfu [Cookbook on wheat gluten and tofu]. 1790. Japan. 38 p. Unpublished manuscript. Japanese summary by Kawakami 1978, p. 175. [Jap]

• ***Summary:*** This must be the last volume of a three volume work. This one is about Zen vegetarian cookery (*shojin ryori*). The other two were about fish and poultry. There are a lot of tofu recipes, including Suizenji Tofu, Enmeiji Tofu, Uneri Tofu, and Shiruko Tofu. A description of how to make sweet simmered miso (*neri-miso*) is also given.

115. Yuan Mei. 1790. Suiyuan shidan [Recipes from the Sui garden]. China. [Chi]

• ***Summary:*** Wade-Giles reference: *Sui Yüan Shih Tan*, by Yüan Mei. Qing dynasty.

H.T. Huang (2000, p. 323-24), in the section titled "Products associated with tou fu," states that this is the

earliest document seen that mentions fresh tofu curds. In a recipe for "Hibiscus Tofu" (*fuyong doufu*) the famous Qing dynasty gastronome says (p. 100): Place fresh tofu curds (*funao* = "tofu brain") in well water and heat to boiling three times to remove the beany flavor. Suspend the curds in chicken soup and heat again to boiling. Before serving, garnish with laver / nori (*Porphyra*, a sea vegetable) and pieces of shrimp. Later, fresh tofu curds were also called "tofu flowers" (*douhua* or *doufu hua*).

Concerning frozen tofu, Huang states (p. 324) that a recipe in this book states: Boil the thawed tofu in water to remove the remaining beany flavor, then simmer it in a soup base.

Huang also states (p. 325, 364) that both pressed tofu (*doufugan*) and smoked tofu (*xun doufu*) are mentioned in this book.

Concerning fermented tofu, Huang (2000, p. 327) notes: By the middle of the Qing dynasty local varieties of *furu* had begun to win national fame, such as the *furu* of Suzhou [in southern Jiangsu; W.-G. Su-chou or Soochow, formerly Wuhsien] and the white *furu* of Guangxi [or Guangxi Zhangzu, an autonomous region in southeast China; W.-G. Kuangsi]. The *Suiyuan Shidan* says:

'Rufu: The ones from the [shops] near the front of the Temple of General Wên in Suzhou are particularly good. The colour is black, and the flavour is clean. There are two types, a wet and a dry. The product with some shrimp paste in it is also attractive, but may have a slight fishy taste. The white

© Copyright Soyinfo Center 2013

furu from Guangxi (Kuangsi) is also outstanding, especially that made by the family of the official Wang Ku."

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." Seasonings based on jiang (fermented soybean paste) are used in 48 recipes: Jiang itself in 15, soy sauce made from jiang named *qingjiang* in a 24 recipes, soy sauce named *jiangyou* in 2 recipes, soy sauce named *jiangzhi* in 1 recipe, and soy sauce named *jiangshui* in 6 recipes. Fermented black soybeans (*shi*) are used in 2 recipes, and a new type of soy sauce named *qiuyou* (W.-G. *ch'iu yu*) is used in a whopping 62 recipes. Note: This is the earliest document seen (April 2012) in which a soy-based seasoning named *qiuyou* is mentioned. Huang states (p. 371) that *qiuyou* is written with the Chinese characters for autumn + oil, implying a sauce harvested in autumn.

Wilkinson (2000, p. 647-48). This was the most famous recipe book of its day, yet *wok* dishes accounted for only 16% of the recipes. Yuan Mei (lived 1716-1798) was one of China's four most famous "literati gourmands;" they exerted a considerable influence on the development of a higher cuisine, especially when they compiled their own cookbooks..."

Letter from Dr. H.T. Huang. 1996. Sept. 29. "Page 103 mentions mock roast goose made with yam wrapped in *doufu pi* (yuba)."

Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communication, 5 June 1993), gives the date of this document as +1790, and the English translation of the title as "Recipes from the Sui Garden." He notes that page 107 contains three recipes for gluten.

Endymion Wilkinson. 2000. *Chinese History: A Manual* (p. 649). This book *Suiyuan shidan* or *The Suiyuan recipes* was published in 1792, with a modern edition in 1984.

Newman (1989) states: "The idea of freezing bean curd is not new. Iced Bean Curd is one of Yuan Mei's recipes from the Xi Yuan Cookery Book written near the end of the 18th century. This book by a poet, government official and author, is a very comprehensive volume of over 300 recipes, only some are about tofu. One difference is that the Iced Bean Curd recipe is meant to be served hot, the doufu in it is first frozen then prepared for use."

Bo (1982): In this work Yüan Mei states that it is more graceful for a writer to use the term "ch'ing chiang" instead of "chiang-yu" when referring to soy sauce.

Hummel (1944, p. 955-56): Yüan Mei lived 1716-1798. A poet, literary critic, and essayist, he was a native of Ch'ien-t'ang (Hangchow). Resigning (1748) from his post as magistrate of Chiang-ning, he retired (1749) to his newly acquired "Garden of Contentment," Sui-yüan, near Nanking. From 1784-1795, spent in alternate travel and quiet seclusion, he came to be known as one of the most skillful poets of his time.

Reichl (1985): Yuan Mei has been called the "the 18th century philosopher of the table." His sayings are widely quoted. For example: "A great cook cannot with the utmost application produce more than four great dishes a day." Address: China.

116. Yuan Mei. 1792. Suiyuan shidan [The cookery lists of Suiyuan]. In: Sui-yüan Ch'uan-chi, 38 pen, Chu-i-t'ang Shu-chu edition. Shanghai, 1921. [Chi]*

• ***Summary:*** Yan-Kit So. 1992. *Classic Food of China* (p. 34-43). Contains a detailed biography of Yuan Mei, and the best discussion seen to date of his famous book *Suiyuan Shidan* or *The Cookery Lists of Suiyuan*, and its best known, most influential recipes. An illustration (p. 36) shows Yuan Mei. "Sui Yuan" means "Garden of Contentment." "Born in 1716 in Hangzhou, to a rather poor but genteel family, Yuan Mei began his formal education at the age of six, and he immediately got into the habit of making notes on everything he learned. This was to stand him in good stead for the rest of his life. From the age of eleven he began to climb the ladder of examinations and eventually reached the top in 1739, when he passed the Palace Examination in

© Copyright Soyinfo Center 2013

Peking, becoming a Hanlin scholar." That year he married a Miss Wang, to whom he had been since he was a child. In 1743 his official career began, as a Prefect in a district near Nanjing (Nanking) and later in Nanjing itself. But his official career lasted only 5 years. Giving up his official residence, he bought a large piece of land on which he built his dream house, Sui Yuan or Garden of Contentment which, when finished, consisted of 24 pavilions joined by lovely courtyards and gardens, with arching bridges and cascading waterways. Here he lived for the rest of his life, writing poems and studying cookery–his twin loves.

Being a Mandarin, he did not do any cooking himself. But he "kept a tight rein on the kitchen, telling his cooks what dishes he wanted to eat and how they should taste. His meticulousness was partially due to a sensitive stomach, the result of illness as a young man... He was constantly in search of delicious recipes, from aristocratic families with great cooks (where he was frequently invited) and even from monasteries, where he learned vegetarian dishes from superb cooks. One of his main sources of culinary information was his own great cook, Wang Xiaoyu (see p. 18) who was employed by him for more than 10 years until Wang died.

In this way, during some 45 years, Yuan Mei collected a repertoire of more than 300 recipes. "These, prefaced by his opinions and advice to cooks in two lists labeled 'the list of essential knowledge' and 'the list of taboos,' he compiled into a cookery book called *Suiyuan Shidan* or *The Cookery Lists of Suiyuan.* It was published in 1792, five years before his death."

"No one before had mustered so much passion in writing about the activity of cooking, eating and entertaining... His *Shidan* has remained the most influential Chinese cookbook and is regarded with great respect by both professional and home cooks..."

Good ingredients are essential: "For an excellent banquet, sixty percent of the credit goes to the chef and forty percent to the buyer of ingredients." One should never disdain inexpensive ingredients. Yuan finds bean curd [tofu], well known to be inexpensive, far more agreeable in taste than bird's nest.

Unlike the great Song poet and gourmet Su Dongpo, Yuan preferred not to indulge in alcohol, which he felt clouded his judgment and enjoyment of fine food. If you must drink, he advised, wait until the meal is over.

Yuan liked to credit the sources of his recipes–which was unusual at the time. The "sources of no less than one hundred recipes are named and traced to the houses or monasteries where he ate them or where he found them to be the most outstanding. Among the dozen or so recipes on bean curd, a food he was fond of and found agreeable to his delicate stomach, nine are credited..." He recommended "the white fermented bean curd 'cheese' [fermented tofu] in Guangxi. In Iced Bean Curd (see recipe p. 222), Yuan says to freeze cakes of tofu overnight on a tiled roof, then mentions the resulting "beehives" after the frozen tofu is thawed and becomes porous.

Of the 300+ recipes in Yuan Mei's famous book, more than 50 are stir-fried dishes. In Mandarin, the "wok" is pronounced *guo.*

Yan-Kit So. 1986. "A study of Yuan Mei's Iced Bean Curd." This is a study of a recipe for frozen tofu. This Qing dynasty book (whose title is also translated *Recipes from the Sui garden*) consists of more than 300 recipes, categorized either according to main ingredients (seafood, meat, tofu) or to specialties (dim sum, sweet cakes, etc.). It is the most comprehensive Chinese cookbook before cookery writing became popular in China in the 20th century. The author, Yuan Mei (lived 1716-1798), above all a poet and government official, was also a gourmet and bon-vivant who had 4-6 concubines. He may have been the ranking poet of his times, yet to many Chinese he is remembered for this cookbook, which has had a far-reaching influence down to the present day. Yuan was extremely fond of bean curd, for he lauded it as "far superior to bird's nest" if it was "well flavored" (Shih-tan, p. 4). His chapter on bean curd, consisting of 9 recipes, showed that he spared neither time, trouble, nor ingredients to flavor his bean curd. His most famous tofu recipe is titled Perfect Wang's Eight Treasure Bean Curd. Arthur Waley wrote a book titled Yuan Mei (1956, Allen & Unwin), which gives this book's publication date as 1796.

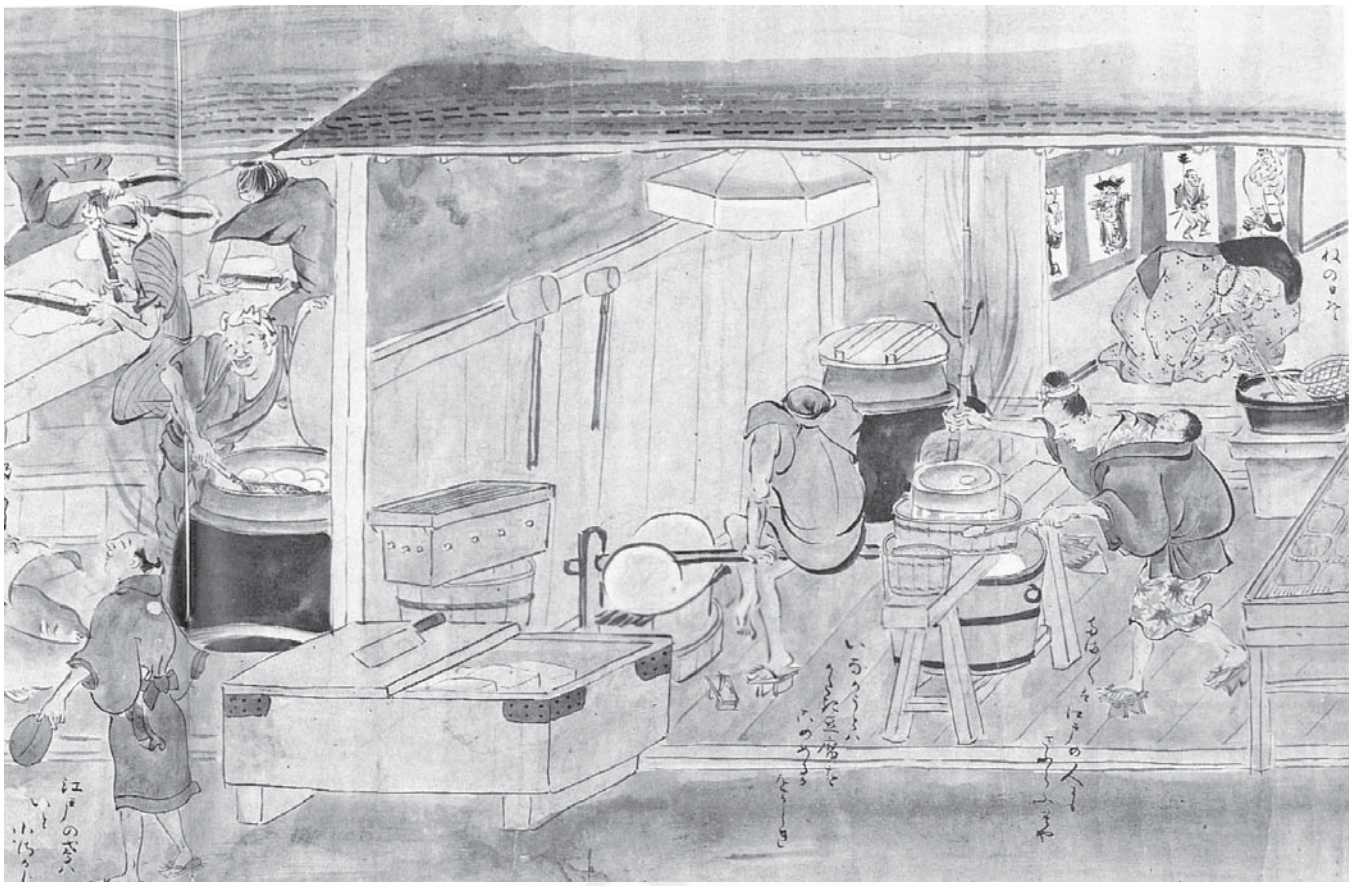
Sui Yüan is a sobriquet for Yüan Mei, after his garden of contentment. Hummel (1944:955-56): Yüan Mei lived 1716-1798. A poet, literary critic, and essayist, he was a native of Ch'ien-t'ang (Hangchow). Resigning (1748) from his post as magistrate of Chiang-ning, he retired (1749) to his newly acquired "Garden of Contentment," Sui-yüan, near Nanking. From 1784-1795, spent in alternate travel and quiet seclusion, he came to be known as one of the most skillful poets of his time. His discourse on cooking, written in a vein of charming banter, has been translated into several Western languages. "Tan" means list.

Bo (1982): In this work Yüan Mei states that it is more graceful for a writer to use the term "ch'ing chiang" instead of "chiang-yu" when referring to soy sauce.

117. Loureiro, Joao de. 1793. Flora Cochinchinensis: sistens Plantas in regno Cochinchina nascentes. Vol. 2. Dolichos soja [The flora of Cochin China. Vol. 2.]. Denuo in Germania edita cum notis Caroli Ludovici Willdenow; Bernolini [Berlin], impensis. See p. 537-38. Edited by Willdenow, with added notes. Also published by the Acad. Sci. of Lisbon. [Lat]

• ***Summary:*** The first edition of this important work was published in 1790. The content of this 1793 edition concerning *Dolichos soja,* published in Berlin and edited by Willdenow, is almost identical to that of the 1790 edition. The text has been re-set to fit on the smaller pages, and some

© Copyright Soyinfo Center 2013



abbreviations have been written out. In the chapter titled "Diadelphia. Decandria" we find: Arachis (p. 430-31; incl. Arachis Asiatica and Arachis Africana, also called Arachis Hypogoea). Phaseolus radiatus (p. 435). Dolichos Soja (p. 537-38).

By unusual coincidence, the earliest known recorded feeding of cow's milk to a human infant (by Underwood) also occurred in 1793. Address: Portugal.

118. Matsudaira, Fumai? 1800. Yotsu no toki no hana [Flowers of the four seasons]. Japan. Publisher unknown. 2 large volumes. Japanese summary by Kawakami 1978, p. 157. [Jap]

• ***Summary:*** These two volumes of writing on cookery contain information on tea ceremony cuisine (*kaiseki ryori*) menus, including grilled tofu (*yaki-dôfu*), Simmering Tofu (*Yu-dôfu*), Miso no Sashimi, Natto Miso Soup (*Natto-jiru*), and Yamabuki Shoyu. The author, Matsudaira, lived 1751-1818.

Note: This is the earliest document seen (Dec. 2011) that mentions *nattô-jiru* [Natto Miso Soup] in connection with sticky natto.

119. Ryôri shinan taizen [The big book of Shinan cookery]. 1801. Japan. [Jap]*

• ***Summary:*** The twelfth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

120. Shôjin gyorui sokuseki ryôri [Quick recipes for Zen vegetarian cookery and fish]. 1802. Kochiya Yoshisuke (Osaka) and Kichimonjiya Risuke. Japanese summary by Kawakami 1978. [Jap]

• ***Summary:*** This book, whose author is unknown, was issued by two publishers in 1802. Kichimonjiya published an edition titled only *Sokuseki Ryôri* (Instant Recipes). One was a folded book 30 by 40 cm, one was a woodblock print 15 by 8 cm. The front side is fish and poultry, the backside is Zen vegetarian cookery. In the latter section there is a recipe named Yuba Anpei that contains yuba and silken (*kinugoshi*) tofu.

illustrations and captions of the early modern period]. 1805. Japan. [Jap]

• ***Summary:*** A large, superb illustration (see previous page) shows tofu being made in a commercial tofu shop. The basic steps are unchanged to this day. A lady with a baby on her back, grinds the next batch of soaked soybeans in a hand-turned stone mill. She turns the mill with her right hand while ladling in soaked soybeans using a shallow spoon with her left. She is wearing raised wooden shoes (*geta*) to keep her feet dry and clean. The smooth white puree runs down into a wooden barrel beneath the mill. Puree from the last batch of soybeans she ground has been cooked with water (in front of her) in a large iron caldron covered with a wooden lid. That cooked puree was ladled out into a pressing sack.

A man, probably the tofu maker (with his back to us) is sitting on a lever press (a sturdy board attached to a fulcrum on the wall) pressing a white sack so that the soymilk runs down into a curding barrel and okara remains in the sack.

After a coagulant (nigari or calcium sulfate or both) is added to the hot soymilk in the curding barrel, the milk is transformed into white curds and yellow whey. The whey is ladled off (see two ladles hanging on wall) and the curds are scooped into the cloth-lined perforated wooden forming box that rests atop a wooden tub next to the wall just to the left of the ladles. The curds in the forming box are pressed to make tofu.

A previous batch of tofu is now under cold water in a wooden sink near the left front of the illustration. A knife, used to cut blocks of tofu into smaller cakes, rests on that part of the sink which is covered. A potential customer (far left), with a fan in his left hand, stands on the street.

At the far right of the illustration, thinly sliced pieces of tofu are draining on a mat on a long table, in preparation for deep frying. At the top right, an elderly person from the tofu maker's extended family (probably a parent of the tofu-maker or his wife), kneeling on the tatami mats in the home–one step up from the tofu shop, appears to be deep-frying–probably to make deep-fried tofu pouches (aburagé).

An adjacent room (to the left) is a fish shop where fish are being cut into smaller pieces and deep-fried (perhaps to make cakes or patties of *Satsuma agé*).

On the illustration of the tofu shop are three groups of old, hard-to-read Japanese characters, handwritten in script format. (1) At the top right is written *Ne no hi no.* "Ne no hi" is a word somewhat like "Tuesday," the name of one of the days of the week in old Japan under the lunar calendar system–even though there was no idea of a "week" in Japan at this time. "Ne ho hi" occurred roughly 3 times each lunar month of 28 days, typically at 12-day intervals.

(2) Below the feet of the women with the baby on her back is written: *Tamatama ni Edo no hito* [*?*] *mo saburafu ya,* which may mean "Sometimes people from Edo visit here."

(3) Below the man sitting on the pole that is pressing the sack of okara is written *Inaka* [*?*] *hito wa kataki tofu o konomeruga okashiki,* which may mean "It's funny that country folks prefer firm tofu."

124. Miller, Philip. 1807. The gardener's and botanist's dictionary: Containing the best and newest methods of cultivating and improving the kitchen, fruit, and flower garden and nursery; of performing the practical parts of agriculture; of managing vineyards, and of propagating all sorts of timber trees... The whole corrected and newly arranged..., by Thomas Martyn Vol. II. London: Printed for F.C. & J. Rivington. 2 vol. in 4. Unpaginated. 38 cm. 20 plates. [9 ref. Eng]

• ***Summary:*** The plants are arranged alphabetically in the book by genus, but not alphabetically within one genus by species. "33. Dolichos Soja: *Lin. spec.* 1023. *syst.* 659. *Reich.* 451. *fl. zeyl. n.* 534. *mat. med.* 171. *Kaempf. amoen.* t. 838. (Phaseolus). *Thunb. jap.* 282. *Lour. cochinch.* 441. *Rumph. amb.* 5. t. 140. (Cadelium). *Stems flexuose, racemes axillary, erect, legumes pendulous, hispid, containing about two seeds."*

Three pages later, under "33." is a description of the plant and its uses. "Stem round at bottom and smooth; above striated, very hirsute, a foot and more in height. Leaves petioled, hirsute: leaflets petioled, ovate, obtuse with a point, entire, the middle one on a longer petiole and larger, an inch in length: petiole striated, hirsute, a finger's length. Flowers in short, erect, hirsute racemes: subsessile, from three to five together. Corollas purple, scarcely larger than the calyx.*

"Native of the East Indies, Ceylon, Japan, &c.

"The seeds, which are usually called *Miso* [sic] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* [soy sauce] of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from these seeds, and is used in almost all their dishes, instead of common salt. The Chinese also have a favourite dish made of these seeds, called *Teu hu* or *Tau hu* [tofu], which looks like curd, and though insipid in itself, yet with proper seasoning as [is] agreeable and wholesome.**"

Footnotes: "*Thunb. and Linn. **Thunb. and Loureiro."

Note 1. This is the earliest English-language document seen (April 2012) that uses the word *"Soja"* or "The *Soja"* (regardless of capitalization or italics) to refer to shoyu or soy sauce.

Note 2. Miller associates the word "Kitjap" with Chinese rather than with Indonesian soy sauce, a point of key historical interest.

Glycine javanica: "*Java Glycine. Lin. spec.* 1024. *Reich.* 453. *Thunb. in Linn. trans.* 2. 340. *Leaves ternate; stalk villose; petioles rough-haired; bractes lanceolate minute.*

"Stem twining, as in *Phaseolus,* with yellow, reflex hairs scattered over it. Leaves of *Phaseolus.* Pedicels yellow, with close hairs. Stipules, to the petioles oval-oblong, to the

© Copyright Soyinfo Center 2013

peduncles lanceolate. Peduncles the length of the leaves, terminated by an ovate-oblong, close spike of nodding violet-coloured flowers, with very minute bractes between them.– Native of the East-Indies*; and near Nagasaki in Japan, where it is called *Fajo Mame*, and flowers in september and october [sic].**" Footnotes: "*Linn spec. **Thunberg."

On the title page, the subtitle reads: "To which are now first added a complete enumeration and description of all plants hitherto known, with their generic and specific characters, places of growth, times of flowering, and uses both medicinal and economical. The whole corrected and newly arranged, with the addition of all the modern improvements in landscape gardening, and in the culture of trees, plants, and fruits, particularly in the various kinds of hot houses and forcing frames: with plates explanatory both of them, and the principles of botany. By Thomas Martyn, B.D., F.R.S. Regius Professor of Botany in the University of Cambridge."

This elegant set of large books consists of 4 volumes, plus 2 volumes of plates. The soybean appears only in volume 2. Miller gives the most detailed botanical description of the soybean in English up to this time.

Note 3. Philip Miller was head of the famous Chelsea Physic [botanic] Garden in England. Among his many students was William Aiton, who introduced the soybean to England.

Note 4. This is the earliest English-language document seen (Oct. 2004) that uses the term "twining" to describe wild perennial ancestors of the soybean.

Note 5. This is the earliest English-language document seen (April 2013) that uses the word "Teu hu" (or "teu-hu"), or the word "Tau hu" (or "tau-hu") to refer to Chinese-style tofu.

Note 6. This is the earliest English-language document seen (April 2013) that uses the word "curd" in connection with tofu.

Note 7. This is the earliest English-language document seen (Jan. 2004) that uses the word "leaflets" (or "leaflet") in describing the soybean plant.

Note 8. This is the earliest English-language document seen (July 2001) that uses the word "petiole" (or "petioles" or "petioled") in connection with the soybean plant. *Webster's Dictionary* defines petiole (derived from New Latin for little foot), a word first used in 1753, as "a slender stem that supports the blade of a foliage leaf," i.e., the stem of a leaf.

Webster's Dictionary defines stipule (derived from New Latin *stipula*, which is derived from the Latin word meaning "stalk"), a word first used in about 1793, as "either of a pair of appendages borne at the base of the leaf in many plants." Address: F.R.S., Gardener to the Worshipful Company of Apothecaries at their Botanic Garden in Chelsea [England] and a Member of the Botanic Academy at Florence.

125. Pinkerton, John. 1811. A general collection of the best and most interesting voyages and travels in all parts of the world: Many of which are now first translated into English. Digested on a new plan. Vol. 7. London: Printed for Longman, Hurst, Rees, Orme, and Brown. 820 p. See p. 269.
• ***Summary:*** Each book of this 17-volume work is composed of unnumbered chapters, each describing a different voyage. One of these (p. 231-270) is "The embassy of Peter de Goyer and Jacob de Keyzer from the Dutch East India Company to the Emperor of China in 1655. By John Nieuhoff, Steward to the Ambassadors. Translated from the Dutch."

The Introduction begins: "Although China was discovered over land by Marco Polo the Venetian, towards the end of the thirteenth century, yet it was very little known to Europeans, till the Portugueze [Portuguese] arrived there by sea towards the end of the fifteenth, and the Romish [Catholic] missioners found admittance into the empire. In 1517, they established a trade at Quan-tong [Guangdong], commonly called Kanton [Canton]: afterwards they settled a factory also at Ning Po [Ningbo], called by them Liampo, on the eastern part of China, and drove a considerable trade along the coast, between those two famous ports, till their unsufferable [insufferable] pride and insolence brought on their destruction every where but at Ma-kau, or Makao [Macau], an island in the mouth of the river of Kanton [Pearl River], which they still hold, though under great restrictions."

On p. 269 we read that the daily allowance of food by the two ambassadors (de Goyer and Keyzer) included "six tael of mison" (possibly miso). Note: A tael is a unit of weight equal to 1/10 of a catty, or about 50 gm.

"Their secretaries daily allowance was, one katti [catty, a measure of weight] of fresh meat, five measures of tea, one katti of meal, one measure of taufoe [tofu],... four measures of oil, four tael of mison [miso?], one katti of herbs, and one cup of arrac" [arrack, a strong distilled alcoholic beverage mainly in South- and Southeast Asia].

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "taufoe" to refer to tofu.

Note 2. Kaempfer's History of Japan–first published in English in 1727–also appears in this book. The text is almost identical to the 1727 text. The section about soybeans and soyfoods is in Chapter 6, pages 697-98.

Note 3. Pinkerton lived 1758-1826. Address: Author.

126. Chen Jing. comp. 1814. Suanqi wuchanshu [Inventory of products from Suanqi]. China. Passage on soy reprinted in C.N. Li 1958 #335, p. 237. [Chi]
• ***Summary:*** Wade-Giles reference: *Suan Ch'i Wu Ch'an Shu*, compiled by Ch'ên Ching. Qing dynasty. The section titled "Yellow soybeans" (*huangdou*) states: The soybean has many uses. You can make tofu (*fu*), or press out the oil (*you*), or make fermented black soybeans (*shi*) or jiang–with the soybeans produced in our village or elsewhere. But we

© Copyright Soyinfo Center 2013

seldom consume soybeans directly. They come is various colors: black, white, yellow, dark brown, green, or spotted / speckled (*ban*). According to the pharmacopoeia (*bencao*) literature, when eaten raw it is neutral (Note: Dr. Huang has never heard of eating soybeans raw), when eaten parched or stir-fried (*chao*) it is heating, when eaten boiled it is cooling, when made into fermented black soybeans (*shi*) it is cold. When eaten by cattle it is warm. When eaten by horses it is cold. It is also said that if small children eat the parched beans with pork, they will suffocate. But after the age of ten years, they are out of danger; we do not know the reason. Dr Huang adds: "I wonder how that story got started." (Translated by H.T. Huang, PhD, March 2003).

127. Morrison, Robert. 1815-1823. A dictionary of the Chinese language in three parts. 6 vols. Macao. Printed at the Honourable East India company's press by P.P. Thomas. 30 cm. [Eng; Chi]

• ***Summary:*** S.W. Williams, in "A Syllabic Dictionary of the Chinese Language," starts his preface by noting the great importance of this very early Chinese dictionary. "This work will ever remain a monument to his industry and scholarship; and its publication in six quarto volumes by the East India Company at an outlay of $60,000 was a just appreciation of its merits. Since then, many similar works have been published, dictionaries both of the general language and its chief dialects."

Part 1. Chinese and English arranged according to the radicals. Part 2. Chinese and English arranged alphabetically. In Part 2, Vol. 1 (published in 1819), page 739 (#9187) gives 3 characters for *she* [shih = fermented black soybeans], pronounced shuh. *Tow she* is a condiment made from pulse, used in cooking. *She yew* or *Tsëang yew* is soy [sauce].

Note: This is the earliest English-language document seen (Nov. 2011) that mentions fermented black soybeans, which it calls *she* or *Tow she.*

In Part 2, Vol. 1 (published in 1819), page 859 (#10358) gives the character for "leguminous plants, peas, or beans." The first example is Tow foo (2 Cc = 2 Chinese characters), "a white jelly-like substance made from pulse."

Note. This is the earliest English-language document seen (April 2013) that uses the term "Tow Foo" (regardless of capitalization or hyphenation) to refer to Chinese-style tofu.

Page 860 (#10365) gives 2 characters for *tow* [pronounced doe]. "A generic name for pulse, beans, and so on. Page 882 (#10622) gives 2 characters for *Tseang* [chiang; like soft Japanese miso]. "A kind of pickle; certain mode of preserving meat, rice, and pulse. *Tseang yew* is soy [sauce].

Part 3. English and Chinese (published in 1822). Page 398 gives "SOI, or Soy" followed by the two characters for "tseang yew" [soy sauce]. Note 1. Illustrations show each of these characters.

Vol. 3, Part 1 (published in 1823) gives Chinese and English arranged according to the radicals. On p. 397 is the 151st radical, *Tow.* Two early original forms of the radical are shown, each resembling a vessel with a lid. "Name of an ancient vessel to contain food, and used in the rites of sacrifice; a certain measure. Grain; leguminous plants, beans, or peas. Name of an office, of a place, and of a district. A surname." Characters containing this radical are shown on pages 397-98: *she*–"A sort of pulpy substance made of pulse [shih; fermented black soybeans]. *wan*–"A substance expressed from pulse; soy. Also read Yuh."

Note 2. The author, Rev. Robert Morrison (lived 1782-1834), a minister, was the first Protestant missionary in China. He was a Scotchman, though born at Morpeth in Northumberland, England. In 1807 he was sent by the London Mission to try to start a mission in China. But the British East India Company opposed missionary activity. So he traveled via the USA and reached Canton in 1808. Once there, the Company was glad to enlist his great linguistic talents, and he was appointed translator to their factory at Canton. Thus, it was at their expense (£15,000) that his great Chinese dictionary was published in 1822. He had previously published complete translations of the New and Old Testaments. A condensed (2 volumes in 1) edition was published in 1865 in London. He also established the Anglo-Chinese College at Malacca for English and Chinese literature, with a view to the propagation of Christianity. He died in 1834 at Canton, but he was buried at Macao in the Christian cemetery.

Note 3. This is the earliest English-language document seen (March 2001) that mentions fermented black soybeans, which it calls *tow she.*

Note 4. *Webster's New Geographical Dictionary* (1988) defines Macao (Portuguese Macau) as a Portuguese overseas territory consisting of the Macao peninsula (located at the mouth of the Pearl River just south of Canton and about 40 miles west of Hong Kong) and the two small islands of Taipa and Colôane. It was settled by the Portuguese in 1557; from 1717 until the 1800s, Macao and Canton were the only Chinese ports open to European trade. Its independence was declared by Portuguese in 1849 but not recognized by Chinese as Portuguese territory until 1887. It was for many years a haven for missionaries and traders. Portugal agreed in 1987 to return Macao to Chinese sovereignty in 1999. Address: D.D.

128. Santo Kyoden. 1815. Kottô-shû [Collected antiques. Historical essay on this transitory world]. 2 volumes. Japanese summary by Kawakami 1978, p. 243. [Jap]

• ***Summary:*** This work contains an early reference to yuba, and offers a different etymology of the term from that given in the *Kyonan Rubetsu-shi* of 1813. "*Doufu-p'i* has traditionally been called *yuba,* however this is a mispronunciation. Its real name is *uba.* Some people say that the reason this film is called *yuba* [written with the characters

© Copyright Soyinfo Center 2013

'hot water' plus 'old woman'] is due to its yellowish color and the wrinkled surface, which resembled the face of an old woman. However this is not true. According to the *Isei teikin ourai* [Encyclopedia in question and answer format, written in ca. 1730] yuba is called *tofu uwamono* [literally 'tofu upper substance'] and this is the correct name, since yuba is a film which forms on the surface while making tofu. It is also abbreviated as *tofu-no-ha* ('tofu film'). *Uba* is a mispronunciation of *uha,* in which the sound *ha* is mispronounced as *ba. Uba* and *yuba* each contains the sound *uba,* so that it is quite understandable that the dialectical term *yuba* was created."

129. Ryôri tsû [The connoisseur of cookery]. 1818-1829. Japan. [Jap]*
• ***Summary:*** The sixteenth earliest known reference to Koridofu (dried-frozen tofu) appeared in this work.

130. Golownin, Capt. Vasilii Mikhailovich [Golovnin, Mikhaiforich]. 1818. Narrative of my captivity in Japan, during the years 1811, 1812 & 1813; with observations on the country and the people. To which is added an account of voyages to the coast of Japan, and of negotiations with the Japanese, for the release of the author and his companions, by Captain Rikord. 2 vols. in 1. London: Printed for Henry Colburn. 348 p. See p. 58, 66. No index. 22 cm.
• ***Summary:*** In Vol. II: The author, a Russian, was confined to a prison. Page 58: "... our cages were cleaned out, and our coverlets and night-dresses aired in the sun during our absence. Food was brought to us every morning, noon, and evening. At each meal we received thick boiled rice instead of bread. It was dealt out to us in portions which were more than sufficient for Mr. Chlebnikoff and me;... In addition to the rice, we were served with soup made of sea-cabbage and other wild plants, such as sweet cabbage, wild garlic, and water angelica; to which, for the sake of rendering it savoury, pickled beans (Japanese *misso* [miso]) and some pieces of whale fat were added."

Page 66: "We were now supplied with better food: we were frequently treated with a kind of pudding, which the Japanese call tufa [tofu]; fine beans were boiled with our rice, forming a dish which is considered a great delicacy in Japan;..."

Page 198: "Our food in Matsmai [Matsumae] was incomparably better than it had been in Chakodade [Hakodate]... The fish were fried in oil of poppies, and were seasoned with grated radish [daikon] and soy [sauce]."

Note: This is the earliest document seen (Feb. 2001) concerning soya in connection with (but not yet in) Russia or Eastern Europe.

131. Shôjin ryôri tsû [The connoisseur of Zen vegetarian cookery]. 1818. Japan. [Jap]*
• ***Summary:*** The fifteenth earliest known reference to Koridofu (dried-frozen tofu) appeared in this work.

132. *Port Folio* (*The*) (*Philadelphia and London*). 1819. On China. 7(2):91-111. Feb. See p. 105-06.
• ***Summary:*** The article begins: "The following letter from a gentleman of this city [Philadelphia, Pennsylvania?], now abroad, is the result of careful observation, during a long residence among the people whom it professes to describe."

Page 105: "The Chinese make great use of beans, not only to feed their sheep and cattle, but also as food for themselves, in what they call, *thow foo* [doufu; tofu], and *foo chack,* [dried yuba sticks], a kind of flummery [soft jelly or porridge], exceedingly palatable and nourishing."

Note 1. This is the earliest English-language document seen (Oct. 2012), and the earliest European document seen (Oct. 2012), that mentions yuba.

Note 2. This is the earliest English-language document seen (Oct. 2012), and the earliest European document seen (Oct. 2012), that mentions dried yuba sticks or rolls, which it calls *foo chack* [Chinese; also spelled elsewhere *foo jook, fooh jook* or *fuchu,* "bamboo yuba"]. The yuba is rolled so it looks like a bamboo shoot at each end then folded to form a "V." It is often cooked in a sweet broth, and eaten as a sweet soup; the dried yuba becomes soft, delicate and subtly sweet thin sheets.

"Soy [sauce] is likewise made from beans, with the aid of molasses and salt. The beans are boiled until nearly all the water evaporates and they begin to burn; they are then placed in large jars exposed to the sun, water and molasses are poured upon them and stirred well every day until the liquid is completely impregnated with their flavour; it is then strained off, salted, boiled and skimmed, until perfectly clarified. It will keep any length of time. Many persons have thought that gravy was employed in this condiment, which is not the case, it being entirely a vegetable composition, and certainly very wholesome and agreeable. There are many qualities of it, and it requires much care and attention to make the best. Japanese soy is most esteemed, and is vastly superior to any made in China. Many shopkeepers have large platforms on the roofs of their houses, where a number of jars are placed, for the purpose of making this article of which there is an enormous consumption, since neither rich nor poor can breakfast, dine, or sup without it. It is sauce for every sort of food, gives zest to every dish, and is the *sine qua non* of a Chinese meal."

133. Rees, Abraham. ed. 1819. The cyclopedia; or, universal dictionary of arts, sciences, and literature: Dolichos soja. London: Longman, Hurst, Rees, Orme & Brown. See vol. XII. Dol. N.P. (Unpaginated). [2 ref. Eng]
• ***Summary:*** "Of the upright kinds [of Dolichos], *D. soja,* Linn. Sp. Pl. 1023. Jacq. Ic. Rar. t. 145, a native of Japan and the East Indies, is famous for its seeds, a great article of food in China and Japan. They are made into a kind of jelly or

curd [tofu], esteemed very nutritious, and rendered palatable by adventitious seasoning; or they are prepared with salt, so as to produce the liquid well known at our tables by the name of Soy [sauce]. The flowers of this species are small and unornamental."

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 1. This is the earliest English-language document seen (Feb. 2004) that mentions tofu in connection with Japan.

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "jelly" in connection with tofu.

Note 3. This is the earliest English-language document seen (Nov. 2002) that uses the term "upright" to describe the soybean plant.

Note 4. This is the earliest English-language document seen (Dec. 2003) with the word "nutritious" (or "nutrition," "nutritional," "nutritive," or "nutrients") in the title that also mentions soy.

Note 5. Sylvester Graham is said to have obtained much of his information about milling, bread baking, and early diets from this encyclopedia (McCance & Widdowson 1956, p. 49).

134. Willich, Anthony Florian Madinger. 1821. The domestic encyclopedia: Or a dictionary of facts and useful knowledge. Chiefly applicable to rural & domestic economy. 2nd American edition, with additions, by Thomas Cooper. Esq, M.D.: Sooju or soy. Philadelphia, Pennsylvania: Abraham Small. See vol. 3, p. 264-65.

• ***Summary:*** "SOOJU, or Soy [sauce], is a dark coloured sauce, which is prepared from the seeds of the Chinese plant *Dolichos soja*, which has an erect and hairy stem, erect bunches of flowers, and pendulous bristly pods, each containing about 2 seeds.

"There is a joke amongst seamen, that soy is made from beetles or cockroaches. This probably originates in the seeds of the plant from which the sauce is manufactured, having some fancied resemblance in shape and colour to a beetle. These *seeds* are used in China and Japan as food; they are made into a kind of jelly or curd [tofu], which is esteemed very nutritious, and which is rendered palatable by seasonings of different kinds [see A. Rees 1819]. The liquid which we know by the name of *soy* is thus prepared. After the seeds have been boiled, until they become soft, they are mixed with an equal weight of wheat or barley meal, coarsely ground. This mixture is fermented; and a certain portion of salt and water being added, the whole is allowed to stand for two or three months, care being taken to stir it every day: and by the end of that time it is ready for use.

"Soy is chiefly prepared in China and Japan; but that imported from Japan is considered preferable to any other. The quantity annually vended at the East India Company's sales is from 800 to 2000 gallons; at an average price of sixteen or eighteen shillings per gallon.

"The Soy-bean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated."

Note 1. This is the earliest document seen, published in America, that mentions tofu. Willich got his definition of tofu from *The cyclopedia; or, universal dictionary of arts, sciences, and literature* (see Dolichos soja) edited by Abraham Rees (1819).

Note 2. This is the earliest document seen (May 2012) that mentions the words "beetles" or "cockroaches" as an ingredient in the production of soy sauce. This idea is, of course, totally incorrect.

Note 3. This is the earliest document seen (Oct. 2010) that gives statistics for the amount of soy sauce sold per unit of time in England, or the sale price per unit volume.

Note 4. According to the *Oxford English Dictionary,* the "East India Company is a company formed for carrying on an East Indian trade, especially the English company incorporated in 1600 and described in its charter as 'The Company of Merchants of London trading to the East Indies', which from 1773 exercised political power in the East, and had the chief part in the administration of the affairs of Hindustan, till 1858, when the government was assumed by the Crown." Address: USA.

135. Sôsôshi–Shokoku Dôchû Kinwaraji [Sôsôshi]. 1822. Japan. [1 ref. Jap]*

• ***Summary:*** An article in *Toyo Shinpo* (Soyfoods News). 1991. March. 21. p. 4, shows this illustration (wood block print) by Mimaru KITAO of a lady in the early 1800s in Japan preparing tofu dengaku over a grill.

The 3 Chinese characters in the book's title are kusa or grass + twin + paper or newspaper. In the subtitle: Shokoku means various countries. Kinwaraji means gold sandal. The meaning of Dôchû is unknown.

136. Shôjin ryôri kondate shû [A collection of Zen vegetarian cookery menus]. 1829. Japan. [Jap]*

• ***Summary:*** The seventeenth earliest known reference to Kori-dofu (dried-frozen tofu) appeared in this work.

137. Dobell, Peter. 1830. Travels in Kamtchatka and Siberia; with a narrative of a residence in China. 2 vols. London: Henry Colburn and Richard Bentley. See vol. 2, p. 324-25. 20 cm.

• ***Summary:*** Note 1. The first several paragraphs of this are copied from *Portfolio* (1819, p. 105-06).

In Chapter XII of the section titled "A Residence in China," the author is describing Chinese food, especially in the Canton area: "An article of food, of which all classes appear extremely fond, is *thow-foo* [tofu] and *foo-chack*, a sort of flummery [soft jelly or porridge], made from beans,

© Copyright Soyinfo Center 2013

very palatable and nourishing.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term *thow-foo* to refer to tofu.

Note 3. The Cantonese term *foo jook* means dried yuba sticks. Perhaps the author was describing the product after the sticks had been broken into pieces and cooked until soft.

Soy, their famous sauce for all kinds of food, is also made from beans. The beans are boiled until all the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large, wide-mouthed jars, exposed to the sun and air; water and a certain portion of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, and boiled, and skimmed until clarified; and will, after this last process, become of a very deep brown colour, and keep any length of time. Many persons have thought that gravy was used in preparing this condiment; but this appears not to be the case, the composition being entirely a vegetable one, of an agreeable flavour, and said to be wholesome. There are two or three qualities of it; to make the best requires much care and attention. Japanese *soy* is much esteemed in China, on account of the superior manner in which it is made; perhaps they have a particular sort of bean for that purpose. Shopkeepers at Canton who sell soy, have large platforms on the roofs of their houses, where the jars for preparing soy are all arranged, and exposed to the sun; for the consumption of this article is enormous. Neither rich nor poor can dine, breakfast, or sup without soy; it is the sauce for all sorts of food, gives a zest to every dish, and may be said to be indispensable at a Chinese repast.

"In general, very little meat is eaten."

Note 4. The author spent 7-8 years in China between 1798 and 1820. He died in 1852. Address: Counsellor of the Court of His Imperial Majesty, the Emperor of Russia.

138. Siebold, Philipp Franz von. 1830. Synopsis plantarum oeconomicarum universi regni Japonici [Synopsis of the economic plants from the entire empire of Japan]. *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 12:1-74. See p. 54-57. Also first table at end. [Lat; Dut]

• ***Summary:*** The English translation of this periodical title is: "Transactions of the Batavian Society of Arts and Sciences." Batavia roughly corresponds to today's Jakarta on the island of Java, Indonesia. This work lists 447 economic plants, including the soybean. The section on Leguminaceæ [sic, Leguminosæ] (p. 54+), mentions plants of the genera *Dolichos* (incl. *D. hirsutus* or Kudsu / Kudzu), *Sooja, Phaseolus, Pisum, Vicia, Medicago, Arachis, Glycyrrhiza,* and *Mimorsa.* There are two species of soybeans: *Sooja Japonica,* the cultivated soybean, and *Sooja nomame,* the wild soybean. The genus and its species and varieties are described as follows (p. 56):

"CLXXVIII. Sooja, Moench. Sieb. (Sooja du Japon).

296 *S. Japonica,* Sieb. *Sooju* vernacular *Daisu,* Japan.

Varieties, grouped by color: a. White seeds. *Daisu,* Japan. b. White fuscis seeds. *Tobimame,* Japan. c. Fuscis seeds. *Sinsjumame,* Japan. d. Black round seeds. *Kuromame,* Japan. a. Black flattened seeds. *Kurotokorosun,* Japan. a. Greenish seeds. *Awomame,* Japan.

Uses: To make *Sooju, Miso, Toofu* (shoyu, miso, and tofu).

297 *S. nomame,* Sieb. *Nomame ac Jawaraketsmai,* Japan (v.v.). [vidi vivam = I have seen a living plant specimen.] *Plantae sponte crescentis folia adhuc tenera pro potu Thea colliguntur.*

At the end of this article are two large fold-out tables, each 30 by 18 inches, and each titled "Synoptic Table of Plant Uses." Each table contains six vertical double columns. References to soy appear only in table I. At the bottom right corner of the first is written in Latin: *"Dabam in Insula Dezima mensi Novembris 1827, Dr. von Siebold."* This translates as: "Given [as a letter for delivery] from the island of Dezima [Deshima], November 1827, Dr. von Siebold." The plants are divided into categories by type of use. For example: I. Simple foods: A. Cereal grains. B. Legumes. C. Fruits, etc. Under each category is a numbered list of the scientific names of the Japanese plants in that category, followed by its name written in both katakana and Chinese characters. Soy-based uses include: IA. Simple foods (*Alimenta simplicia*) (columns 1-4): Legumes (Legumina). 1. *Sooja Japonica,* Sieb. Daizu, "Yellow + Bean."

Note 1. This is the second earliest document seen (June 1999) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

II. Composite foods (*Alimenta composita*) (columns 4-5). B. For the sauce "Sooju." Shoyu. Sooja Japonica, Sieb.

C. For the paste (*pulto*) "Miso." Miso. Sooja Japonica, Sieb. plus rice and barley

D. For the cake (*placenta*) "Toofu." Tôfu. Sooja Japonica, Sieb. Note 2. This is the earliest Dutch-language or Latin-language document seen (April 2013) that uses the word "Toofu" or the word "Tôfu" to refer to tofu.

P. For the sprouts (*germinatione artifaali*) "Mogasi." Moyashi. Soja Japonica, Sieb.

Note 3. This is the earliest document seen by Siebold in which the soybean is mentioned. This document also contains the earliest date connected with Siebold and soybeans (Nov. 1827). His name on the title page is written "De. de Siebold."

Note 4. This is the earliest Latin-language document seen (Jan. 2013) that mentions soy sprouts, which it calls *germinatione artifaali,* "Mogasi." Moyashi. Soja Japonica.

Note 5. Siebold was born on 17 Feb. 1796 in Würzburg [Bavaria, Germany]. In 1821, as a young ship's doctor, he arrived in Japan, where he worked as a doctor at Deshima

© Copyright Soyinfo Center 2013

near Nagasaki for the Dutch colony.

Also discusses: Column 1 of table 1 also mentions: 13. *Coix lachryma,* P.S., suudama [Job's tears]. 2. *Phaseolus atsuki,* Japon, Azuki. "Red + Small + Bean." 12. *Arachis hypogaea,* L.E. Rakkasei [peanut]. "Fall + Flower + Bean." Column 2 mentions *Sesamum Orientale, P.S., goma* [*sesame seeds*]. Column 3 mentions the wild soybean (*Sooja nomame*), *Amaranthus oleraceus, A. Japonicus,* and *A. bicolor.* Column 4 also includes sea vegetables (*kaiso*).

Column 5 mentions *ame* [grain syrup], *fu* [wheat gluten cakes], *soba, somen* [wheat noddles], *mochi, konnyaku, kudzu,* and *tokoroten.* III. Medicinal foods (*Medicamina*) (columns 5-6).

139. Tôyô kondate ryôri haya-shikumi [Quick plan for impromptu menu cooking]. 1830. Japan. [50+ ref. Jap]*
• ***Summary:*** Contains an early reference to Kori-dofu (dried-frozen tofu).

140. Don, George. 1832. A general system of gardening and botany: Containing a complete enumeration and description of all plants hitherto known; ...Founded upon Miller's Gardener's Dictionary, and arranged according to the natural system. Vol. 2. London: C.J.G. and F. Rivington. 875 p. See p. 356-57 (Soja), 220-21 (Glycine). Index at front. 27 cm. [3 ref]
• ***Summary:*** This work was published in 4 volumes between 1831 and 1838. It was "caused to be prepared" by the proprietors of *Miller's Gardener's and Botanist's Dictionary.* The alphabetical arrangement of genera used by Miller was discarded. "It only remained, therefore, to choose between the Linnæan artificial method, and the Natural System of Jussieu; but the numerous advantages of the latter, particularly in an extensive work like the present, were too apparent to leave any doubt in the mind of the Editor as to which he ought to adopt... In the Linnæan artificial method, it often happens, that genera, intimately related, are separated far apart into different classes and orders, merely on account of the difference in the number of their stamens and pistils; a circumstance now found in many instances scarcely to be of sufficient importance, even to separate species, still less genera... The plan of the present work is founded on that of M. de Candolle, in his invaluable works entitled *Regni Vegetabilis Systems Naturale* and *Prodromus,* with such alterations as were rendered necessary by the rapid increase of science, and with numerous additions of new genera and species..." Like Miller, Don classifies soybeans in the genus *Soja.*

"CXC. SOJA (*sooja* is the name of a sauce prepared from the seeds by the Japanese). Moench. meth. 153. Savi, diss. 1824. p. 16. D.C. legum. mem. ix. prod. 2. p. 396.

Note 1. This is the earliest English-language document seen (April 2012) that uses the term "sooja" to refer to soy sauce.

"Lin. Syst. *Diadélphia, Decándria.* Calyx bibracteolate at the base, 5-cleft, the 3 lower segments straight and acute, but the 2 upper ones are joined together beyond the middle. Corolla with an ovate vexillum, which stands on a short stipe, and with an oblong straight keel." Note 2. *A Dictionary of Botany,* by Little and Jones (1980) defines vexillum (plural: vexilla) as "See Banner." Banner is defined as "The broad uppermost petal of a papilionaceous corolla as in the irregular flowers of certain members of the pea family, Fabaceae. Synonym: Standard or vexillum."

"Stamens diadelphous, the tenth one approximate, but certainly distinct. Stipe of ovary not surrounded by a sheath at the base. Style short. Legume oblong, 2-5 seeded, membranous; the seeds intercepted by cellular dissepiments. Seeds ovate, compressed.–A hispid erect herb, with pinnately-trifoliate leaves, and with the flowers either aggregate in the axils of the leaves on short pedicels, or disposed in short peduncalate racemes.

"1 S. híspida (Moench. l. c.) Annual. Hardy. Native of Japan, East Indies, and the Moluccas. Dólichos Soja, Li. spec. 1621. Jacq. icon. rar. t. 145. Soja Japónica, Savi, diss. 1. c. Kæmpf. amoen. 837 and 838, with a figure. Corolla violaceous, hardly longer than the calyx.

"The seeds, which are usually called *Miso* [sic, error based on Miller 1807] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from the seeds, and is used in almost all their dishes instead of common salt. The Chinese also have a favourite dish made of these seeds, called *ten-hu* [*sic, teu-hu,* i.e. tofu] or *tau-hu,* which looks like curd, and though insipid in itself, yet with proper seasoning is agreeable and wholesome.

"*Var. Beta, pállida* (D.C. prod 2. p. 396.) flowers yellow; seeds white. Roxb. [Roxburgh] hort. beng. p. 55.

"*Hispid* Soja. Fl. [Flowering] July, Aug. Clt. [Cultivated since] 1790. Pl. [Plant] 1½ foot.

"*Cult* [Culture and propagation]. The seeds of this plant only require to be sown in a warm sheltered situation in the month of May."

Under Phaseolus, Don lists a species named *Phaseolus max,* following Linnaeus and Rumphius, but he apparently did not confuse this with the soybean (listed on the same page under Soja hispida), since he noted that the species was not sufficiently known, the seeds were black, about the size of coriander-seeds, and that *Max* is the Spanish name of the plant.

On p. 220 we read: "XCV. Pueraria (in honour of M.N.N. Puerari, a professor at Copenhagen [Denmark]). D.C. ann. sc. nat. 1825. jan. p. 29. Leg. mem.vi. prod.2. p. 240. Lin. syst. Monadélphia, Decándria." Species: *P. tuberosa, P. Wallichii.*

George Don, son of George Don (1764-1814), was a British plant collector and nurseryman, born in Scotland, and

© Copyright Soyinfo Center 2013

lived 1798-1856. He collected plants on various expeditions for the Horticultural Society of London in Brazil, West Indies, and Sierra Leone. One of the most indefatigable and accurate botanists. Philip Miller lived 1691-1771. Note the similarity of the section on food uses of soybean seeds to that of Miller (1807). Address: England.

141. Encyclopædia Americana: A popular dictionary of arts, sciences, literature, history, politics and biography. A new edition. 14 vols.: Soy. 1832. Philadelphia, Pennsylvania: Lea & Blanchard. See vol. 11, p. 502-03.
• ***Summary:*** "Soy; a dark-colored sauce, prepared by the Chinese from the seeds of a sort of bean (*dolichos soja*). The plant has an upright and hairy stem, erect bunches of flowers, and pendulous, bristly pods, each containing about two seeds. The common story that soy is made from cockroaches or beetles, has probably originated from the form and color of these seeds. The process of preparing soy consists in boiling the seeds until they become soft, and mixing with them an equal weight of wheat or barley meal, coarsely ground. This mixture is fermented, and, a certain proportion of salt and water being added, the whole is allowed to stand for two or three months, care being taken to stir it daily: at the end of this time it is ready for use. The seeds are, besides, employed in China and Japan as food: they are made into a kind of jelly or curd, which is esteemed very nutritious, and is rendered palatable by seasoning of different kinds. In Japan, they are put into soups, and are the most common dish of the country, being frequently eaten three times a day. Soy [sauce] is chiefly imported from China and Japan, and that from the latter country is the most highly esteemed. The quantity annually sold in England, at the East India company's sales, is from 800 to 2000 gallons."

Note 1. Much of this information is taken from Willich (1821).

Note 2. The identical information appeared in the 1849 edition of this encyclopedia, in the same volume and pages.

142. Yang Shitai. 1833. Bencao shugou yuan [Essentials extracted from the *Explanations of Materia Medica*]. China. Passage on soy reprinted in C.N. Li 1958 #336, p. 237. [Chi]
• ***Summary:*** Wade-Giles reference: *Pên Ts'ao Shu Kou Yüan*, by Yang Shih-T'ai. Qing dynasty. It has three sections titled: (1) Soybeans (*dadou*). Yellow soybeans can be used for making tofu (*fu*), soybean oil (*you*), and jiang. The other kinds of soybeans can be used for making tofu (*fu*) and they can be parched / fried (*chao*) for eating. (2) Black soybeans (*heidadou*). (3) Soybean sprouts (*dadou huangjuan* or "soybean yellow curls"). The text of each is a reiteration of information about soybeans from earlier documents. (Translated by H.T. Huang, PhD, March 2003).

143. Burnett, Gilbert Thomas. 1835. Outlines of botany: Including a general history of the vegetable kingdom,... Vol. 1. London: John Churchill. viii + 1190 p. See p. 666.
• ***Summary:*** "(2145.) *Sooja* is the name of a Japanese sauce, prepared from the seeds of a species of Dolichos, now made into a distinct genus, and called *Soja hispida*. The *Soja* of Japan is preferred as a sauce to the *Kitjap* of China; both, however, are imported into England in large quantities, and are here known as *Soy* [sauce]. In bond it is worth about 6*s.* a gallon; but, after it has been adulterated, it is sold at 3*s.* and upwards a pint. The Japanese make a soup of the seeds, called *Miso*, which is one of their most favorite and common dishes, the natives eating of it three times a day. The Chinese also have a popular dish made of these seeds, called *Teu-hu* or *Tau-hu* [tofu], which looks like curd; and, though insipid in itself, yet with proper seasoning is rendered agreeable and wholesome."

Note: Burnett, like Miller (1807) and Don (1832) before him, associates the word "Kitjap" with Chinese rather than with Indonesian soy sauce, and reports that both are imported into England in large quantities. The Japanese product was clearly called and sold as "soy" in England. But what was the Chinese product called and sold as? Was it sold as "real" ketchup, catsup, catchup, etc.? Address: F.L.S., Prof. of Botany in King's College, London.

Edinburgh: Oliver & Boyd; London: Simpkin, Marshall, & Co. 461 p. Illust. Index.
• ***Summary:*** This comprehensive, almost encyclopedic, book was compiled by reading all accounts of travel in China. Every aspect of China and Chinese life is discussed in 9 chapters. Chapter 8 (p. 331-86) is a "Conspectus of the flora of China... and the important uses to which the important plants are applied by the Chinese.

Page 337-38: "The *lock-soy* of China is a kind of vermicelli made from rice."

Pages 321 and 357 lists many *Dolichos* species, including *D. Soja*.

Pages 357-58: "Many leguminous plants are cultivated by the Chinese both for ornament and use. Peas, beans, haricots, and other pulse, such as some species of dolichos...

"Sometimes whole fields of beans were observed by Staunton; and at others the small spots accidentally left vacant near the edges of banks, or along ridges of corn, the dolichos [soybean] was planted. The seeds of this plant are like those of the kidney-bean, and are usually dressed and eaten like French beans. The pods, however, are from one to two feet in length... From the seeds of the *soja* [soybean] the peculiar savoury sauce known under the name of soy is made, and the *teu-heu* or *tau-hu* [tofu] which is a very popular dish in China, is prepared from the seeds of this plant." Address: 1. F.R.S.E.; 2. Esq.; 3. Esq.; 4. Captain; 5.

145. Penny cyclopaedia of the Society for the Diffusion of Useful Knowledge: Soja hispida. 1841. London: Charles Knight & Co. See vol. 22, p. 193-94. [2 ref]

• ***Summary:*** "Soja Hispida (Moench), Soja Japonica (Savi), the Dolichos Soja (Linn), a leguminous plant, native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to 'form a favourite dish, called *ten-hu*, or *tau-hu* which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome' (Don's *Dictionary*). The Japanese call the seeds *Miso* [sic, error based on Miller 1807] and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed *Sooja* which has been corrupted into *Soy.*

"'The beans are boiled until all the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large wide-mouthed jars, exposed to the sun and air; water and a certain proportion of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, and boiled, and skimmed until clarified, and will after this process become of a very deep brown colour, and keep any length of time. It has been stated that the gravy or juice of meat was used in preparing this condiment, but it appears to be entirely made from vegetable materials. There are two or three qualities of soy. To make the best requires much care and attention. Japanese soy is much esteemed in China on account of the superior manner in which it is made. Shopkeepers at Canton who sell soy have large platforms on the roofs of their houses, where the jars for preparing soy are arranged and exposed to the sun; for the consumption of soy is enormous. Neither rich nor poor can breakfast, dine, or sup without it; it is the sauce for all kinds of food; gives a zest to every dish, and may be said to be indispensable at a Chinese repast.' (Dobell's *Kamschatka.*) Soy is only sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation."

Note: This is the earliest document seen (May 2004) that uses the word "stomachic" in connection with soy sauce. *Merriam-Webster's Collegiate Dictionary* (1998) defines stomachic (first used as a noun in 1735) as "a stimulant or tonic for the stomach." Address: London, England.

146. Ryôri dokukeiko [Practice in cooking by oneself]. 1843. Japan. [Jap]*

• ***Summary:*** Contains an early reference to Kori-dofu (dried-frozen tofu).

147. Grant, Alexander. 1844. A diary of Chinese husbandry, from observations made at Chusan in 1843-44, illustrated by drawings of the implements of agriculture. *Agricultural and Horticultural Society of India, Journal* (*Calcutta*) 3(Part I, No. 3):119-42. See p. 126-27.

• ***Summary:*** The entry for 31 Oct. 1843 states (p. 126-27): "There are also large fields of a small species of French bean [probably the soybean], much used in the preparation of bean curd [tofu]. In the interspaces of these, trefoil is being sown. The land in this double cropping system seems supported only by assiduous irrigation with water and liquid manure, and the small allotment of vegetable ashes and pulverized earth already referred to, in which the seeds are sown. The young plants are occasionally sprinkled over with the same preparation and its stimulating effects are soon observable in the *deep green colour* of the leaf."

The entry for 21st November 1843 (p. 127) states: "During last week much of the low paddy ground has been drained, ploughed, and collected by the heavy 3-pronged hoe into beds... Of each little farm, about one-fourth is thus laid out in a crop of mustard; another fourth with trefoil, and the remaining two-fourths in wheat, barley and beans, leaving only a very few fields uncultivated... Nearly the last sheaf of the second rice crop has been housed, and old and young are now busily employed in getting up the sweet potatoe crop, and cutting and tying up in bundles the species of bean already mentioned, and which after being dried in the sun is afterwards used to prepare bean curd, a very favorite article of diet among the natives. "The soy bean is also much cultivated here. On such patches as had been under cotton cultivation, the plants have been pulled up and the ground sown with trefoil. The cotton is of inferior quality here, and less attention appears to be bestowed upon it than in other details of the farm."

Note 1. Chusan (pinyin: Zhoushan, W.-G. Chou-shan) is an archipelago in the East China Sea off the northeast coast of Zhejiang province, in eastern China, at the entrance of Hangzhou bay, consisting of about 100 islands. The capital is Dinghai, on Zhoushan Island, the largest one, located about 50 miles east of Ningbo (W.-G. Ning-po). For several centuries, it was a base for trade with foreign governments, especially Japan and Great Britain.

Note 2. At the end of this article are 9 plates on unnumbered pages showing various agricultural implements.

Note 3. This is the earliest English-language document seen (April 2013) that uses the term " bean curd" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu. The second reference to "bean curd" in this document seems more accurate than the first. Address: Esq., Bengal Medical Service.

148. Ridgway, Archibald R. 1844. Letters from Hong Kong

and Macao (Concluded from page 313). *New Monthly Magazine and Humorist* 70(279):353-84. See p. 369.
• ***Summary:*** This is in "Letter X," written by Ridgway from his lodgings near Whampoa [the old English transliteration of Huangpu District, just north of Canton, in Guangzhou in southern China]. "In one of the rooms of my orange-grove friend's house, there were heaped up large piles of some coarse cakes, that puzzled me for some time. I asked what they were, but the only answer was 'Chow chow;' [food] upon which I tasted, but could not at all manage to relish them; and no wonder, for although chow chow, they are not chow chow for men, but for beasts. They are [soy] bean-cakes, used for fattening cattle, and the residue of a preparation that the Chinese make from a species of bean [soya bean] grown for the purpose. This preparation, which I have frequently seen hawked about the streets of Macao and Canton, is very like curdled milk, and is made as follows: the beans are, after being first boiled and skinned, ground in a hand-mill with a little water; the mass is then squeezed and strained through a fine sieve. The residue is made into the bean-cakes, while the curds [tofu] are a favourite dish at the tables of Chinamen of all ranks, who eat them, either with the simple addition of a little lime, which they think strengthens the stomach, or with condiments and sweets of all kinds. I tasted them once with lime, and found them very insipid.

"The village of Whampoa is a few hundred yards above Orange Grove, and is situated at a little distance above the river, and surrounded by a wall."

Note: This is the earliest English-language document seen (May 2010) that uses the term "bean cakes" (or "bean cakes" or "bean cake") to refer to ground, defatted soybeans. Address: Esq.

149. E. 1846. Soy (Letter to the editor). *Farmers' Cabinet and American Herd-Book* 10(12):379-80. July 15.
• ***Summary:*** Letter dated 26 June 1846. "Dr. Emerson of this city [Philadelphia] has received from a friend in China, some seeds of the *Dolichos soja*, a plant from which the Chinese and Japanese prepare their celebrated dark coloured sauce called soy [sauce], an article largely consumed by all ranks of people in those populous countries. The consumption is rather limited in the United States, but in England about 1000 gallons are imported annually, in addition to a large quantity counterfeited at home. It is excellent on fish and with soups. The flavour is peculiar, but when once acquired, the taste like that for olives and many other things, becomes very strong. By the Chinese and Japanese *soy* is not only esteemed for its agreeable but for its wholesome qualities. The notion of its being made for cock-roaches is of course a vulgar error."

After giving a brief description of the process for making "soy," the author notes: "The best *soy* comes from Japan. When genuine, it is of an agreeable flavor, neither too salt nor too sweet, of a thick consistence, and clear brown color. When shaken in a glass, it should leave a coat on the surface of a bright yellowish brown color." An alternative method of making soy [sauce] from the seeds of *Dolichos Soja* is then described. Both this and the previous method mention that soy is made by a fermentation process, but they do not mention koji or any other source of microorganisms.

"The seeds or soy-beans are also employed in China and Japan in various ways as food. They are made into a kind of jelly or curd [tofu], which is esteemed very nutricious [nutritious] and is rendered palatable by seasoning of different kinds. In Japan they are put into soups, and are the most common dish of the country, being frequently eaten three times a day."

An editor's footnote to this letter dated June 26 states: "Dr. E. has left with us a few of the *Soy* beans, which will be distributed among those who may incline to plant them. As the season is late, it is doubtful whether they would mature this summer; a few however might be tried, and others left to plant next spring."

Note 1. Hymowitz (1986, personal communication) thinks this may have been Ralph Waldo Emerson. This journal was published in Philadelphia, Pennsylvania. First cited by Hymowitz. 1987. Introduction of the Soybean to Illinois. Economic Botany 41(1):28-32.

Note 2. This is the earliest journal article seen worldwide that refers to tofu–which it calls "a kind of jelly or curd." Address: Philadelphia, Pennsylvania.

150. **Product Name:** [Inari-zushi (Vinegared Sushi Rice in Sweetened Tofu Pouches/Agé)].
Foreign Name: Inari-zushi.
Manufacturer's Name: Jukkenten Restaurant.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1848.
Ingredients: Deep-fried tofu pouches, water, sugar, shoyu, mirin, sushi rice, sweet vinegared gingerroot (gari).
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 194. "In Japan, the most popular way of serving agé [deep-fried tofu pouches] is in the form of *Inari-zushi.* Packed into lightweight wooden boxes and topped with thin slices of vinegared gingerroot, Inari-zushi are often found at picnics and outings of all kinds where they play much the same role as do sandwiches in the West. Served at most sushi shops, they are very inexpensive and are prepared in a different way by each chef.

"Inari-zushi is said to have originated in Tokyo about 1848, the creation of one Jiro Kichi, chef at the *Jukkenten* restaurant. Kichi peddled his new culinary treats at night through the streets of Tokyo carrying a four-sided paper lantern called an *andon.* On this he painted a red Shinto *torii* gateway, the hallmark of the Inari shrine where the Goddess of rice is said to abide. Since foxes are said to be very fond of agé, and since the fox is the patron animal of Inari shrines,

© Copyright Soyinfo Center 2013

this pictorial symbolism and its curious logic seemed natural and appropriate; Inari-zushi soon spread throughout Japan."

151. Williams, Samuel Wells. 1848. The Middle Kingdom: A survey of the geography, government, education, social life, arts, religion, &c., of the Chinese empire and its inhabitants. With a new map of the empire, and illustrations, principally engraved by J.W. Orr. London and New York: Wiley and Putnam. 2 volumes. See vol. I, p. 283, 290; vol. II, 402-03.
• ***Summary:*** In volume 1, in Chapter 6 titled "Natural History of China," the section on legumes (p. 283) states: "The widely diffused and extensive tribe of Leguminosæ holds an important place in Chinese botany, affording many esculent vegetables and valuable products. Peas and beans form important objects of culture, and the condiment called *soy* [sauce] (a word derived from the Japanese *soya*) is prepared chiefly from a species of Dolichos. One of the commonest modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum, or turmeric. The common Chinese eat few meals, without the addition of one form or other of the bean curd or bean jelly" [tofu].

Note 1. This is the earliest document seen (April 2013) that mentions turmeric in connection with tofu, or the uses the terms "bean jelly" or "bean jam" [probably incorrectly] to refer to tofu. However, Williams seems to be a bit confused here. He starts to describe how the condiment soy sauce is made in China, but he first states (incorrectly), that the dehulled beans are ground to flour which is then mixed with powdered gypsum or turmeric (also incorrect) before the soy sauce fermentation. The powdered gypsum and turmeric are part of the process for making bean curd–in which hot soymilk is curded with gypsum. Typically, to make bean curd in China, soaked (not dry) soybeans are ground to a slurry or paste (not a flour), mixed with water to make soymilk, which is cooked, then mixed with gypsum, which curds the hot soymilk. Firmly pressed tofu can be cooked with turmeric [and often soy sauce] to preserve it and give it a yellow color. Williams' incorrect idea that whole dry soybeans are first ground to a flour before being made into tofu is repeated by many subsequent European writers.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word "flour" in connection with the soy bean.

In a long discussion of the famous *Pun Tsau* [*Pên Ts'ao* or *Ben Cao*] herbal, by Li Shih-chen, the author notes (p. 280) that "The second division of grains contains four families:... 3. That of leguminous plants; and 4. The family of fermentable things, as bean curd, boiled rice, wine, yeast, congee, bread, &c., which, as they are used in medicine and produced from vegetables, seem most naturally to come in this place."

In volume 2, in Chapter 13 titled "Architecture, dress, and diet of the Chinese," the section on "Vegetables eaten by the Chinese" (p. 43) states: "The Chinese have a long list of culinary vegetables, and much of their agriculture consists in rearing them. Leguminous and cruciferous plants occupy the largest part of the kitchen garden; more than twenty sorts of peas and beans are cultivated, and the pods and seeds of two species of Dolichos are eaten, and the beans of another species made into soy by boiling and powdering the kernels, then fermenting them with yeast, and mixing other ingredients according to the taste of the maker or purchaser. Another still more common condiment made from beans, is called bean curd or bean jam, by boiling and grinding them, and mixing the flour with water, gypsum, and the juice of yellow seeds."

Concerning oils and fats (p. 46): "Oils and fats are in universal use for cooking; crude lard or pork fat, castor oil, and that expressed from two species of Camellia and the ground-nut, are all employed for domestic and culinary purposes."

Chapter 20 titled "Commerce of the Chinese," states (p. 402-03): "The silk trade is more likely to increase than any other branch of commerce, after tea, and the Chinese can furnish any amount of raw and manufactured silks according to the demand for them. The best *Soy* is made by boiling beans soft, adding an equal quantity of wheat or barley, and leaving the mass to ferment; a portion of salt, and three times as much water as beans, are afterwards put in, and the whole compound left for two or three months, when the liquid is pressed and strained. The flavor and ingredients of soy vary considerably, even among the people who make it, and much of that exported is supposed to be more or less adulterated." Note: The author apparently does not know what kind of beans are use to make *Soy.* In the 1882 edition of this book, he gives a more accurate description.

Note: This is the earliest document seen (Oct. 2002) concerning soy and adulteration. It speculates that much exported soy [sauce] is adulterated.

Also discusses: *Coix lachryma*, a kind of grass used for weaving floor matting (p. 276). "Hemp is cultivated for its fibres, and the seeds furnish an oil used for household purposes, and medicinal preparations; but the intoxicating substance called *bang*, made from it in India, is unknown in China" (p. 281). Samuel Wells Williams lived 1812-1884. Address: New York, Author of "Easy Lessons in Chinese," "English and Chinese Vocabulary," &c.

152. Wu, Ch'i-chün. 1848. Ta tou [The soy bean]. In: Wu Ch'i-chün, ed. 1848. *Chih Wu Ming Shih T'u K'ao* [Illustrated Treatise on the Names and Natures of Plants]. Published at T'ai-yuan-fu, Shansi, China. 28 cm. [Chi; eng]
• ***Summary:*** This treatise, containing 1,714 plates (including two illustrations of soybean plants), is the most important source of Chinese information on native plants.

The sections on the soy bean were translated into English and indexed by W.J. Hagerty in 1917. The translation

© Copyright Soyinfo Center 2013

includes photocopies of plates from the original work. Hagerty, who lived in Berkeley, California, was Chinese Translator for the Office of Crop Physiology and Breeding Investigations, USDA. He drew heavily on Bretschneider 1881, *Botanicon Sinicum.* Wu Ch'i-chün lived 1789-1847.

The translation is divided into two parts, each numbered separately, typewritten and double spaced. Part 1 (Book 1:8-9) is 3 pages translated. Part 2 (Book 1:24-33, titled *Pai ta tou* or "white soy bean") is 98 pages translated and includes a 16-page index to Part 2 only. Pages 1-38 of Part 2 contains numerous translations of the information about soybeans quoted from earlier Chinese texts. Pages 39-75 of Part 2 are extracts concerning beans (both soy beans and other beans) from Chinese gazetteers (*Chih Shêng Chu Shu*). The work concludes with a discussion of individual soyfoods, including many quotes from ancient Chinese documents: Shih or soybean relish [fermented black soybeans] (p. 76-80); Tou fu or bean curd (p. 80-81); Chiang or soy sauce (p. 81-82). The index is on pages 83-98.

In the introduction we read: "The Huang tou is at present commonly called *Mao tou* (characters: 'hair + bean'), or Hairy bean. When this is planted it grows very profusely. The beans are at first eaten as a vegetable, while later they are utilized like grain foods. The people cannot go a day without this food."

Both full-page illustrations (line drawings, apparently original) of soybean plants are bound before the title page. They show: (1) An upright soy bean plant, with two sets of flowers, two pods, and roots. Four types of seeds are shown near the bottom of the plate, but with no Chinese characters. At the left of the page, the following is written in four blocks of Chinese characters from top to bottom: *Chih Wu Ming Shih T'u K'ao* (the title of this book). Ta tou (soybean; literally "big bean"). Page number 8. *Ku lei chüan chih I* (Class–grains–Chapter 1).

(2) White soybean, slanting from lower left to upper right, including flowers two pods with outlines of the seeds, and roots. The seeds of five different types of soybean seeds are shown, each accompanied by its Chinese characters: Tea bean, yellow bean, black bean, white bean, and duck's egg green bean. At the left of the page four blocks of Chinese characters are written from top to bottom. The first and last blocks are the same. The second block is *pai ta tou* (white soybean). The third block is page number 10.

Note 1. The first illustration of the soybean plant (and an azuki bean plant) also appears in K.C. Chang, ed. 1977. *Food in Chinese Culture* (p. 178). Note 2. Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1999. July 9. He transcribes and translates the Chinese characters on the left of these two illustrations, then adds: "I presume the illustrations were original since they are different from the other illustrations I have seen in the pharmacopoeias."

Note 3. This is the earliest Chinese-language document seen (June 2009) stating that the term *mao tou* is used to refer to both green vegetable soybeans and to regular dry soybeans. Address: Michael J. Hagerty, Berkeley, California. June 1917.

153. Wu, Qijun. 1848. Zhiwu mingshi tukao [Illustrated investigation of the names and natures of plants]. Peking, China. 60 vol. in 6. Passage on soy reprinted in C.N. Li 1958 #341, p. 241-42. Illust. 29 cm. Reprinted in 1919 by Commercial Press, Shanghai (with Index). 23 cm. [Chi]
• ***Summary:*** Wade-Giles reference: *Chih Wu Ming Shih T'u K'ao,* by Wu Ch'i-Chün. Qing dynasty. A famous compilation or earlier material. The section titled "Soybeans" (*dadou*) reiterates earlier material. The section titled "White soybeans" (*baidadou*) states: Most people think that white soybeans are the same as yellow soybeans, but they are not. When you buy them in the market, you roast (*chao*) the green soybeans. The brown ones are often called "tea beans" (*chadou*)*;* their shape is long and round and they are usually roasted (*chao*) as an accompaniment for tea. They are usually planted in Sichuan province on spare land, but they are not planted as widely as yellow soybeans (*huangdou*). Yellow soybeans are commonly called *maodou* ("hairy beans") and they are the most widely planted of the different colors. In the beginning they were planted as a vegetable [i.e., green vegetable soybeans]. Then it came to be used as a grain. The people cannot do without it, even for a day. The flowers are small, and the beans are yellow, but sometimes they have a black hilum (*qi*). The shape is thin. They come in early and late varieties. If you see them all together, you can tell the difference. (Translated by H.T. Huang, PhD, March 2003).

Bray (1984, p. 647): "Illustrated investigation of the names and natures of plants." Peking, 1848. Reprinted in 1919 by Commercial Press, Shanghai (with index).

Wai (1964) translates the section on Liu An and tofu as follows: "Liu An, King of Wainan, first invented the preparation of tofu (soybean curd). Black beans, cowpeas, garden peas, or mung beans may be used as the raw materials. They are soaked in water, ground, filtered, and boiled. To the boiled filtrate is added bittern, leaves of mountain alum [or China box, *shanfan*, *Murraya exotica*, L.] or sour paste vinegar, and the precipitate is collected in the pan. Sometimes the precipitation is brought about by the addition of gypsum [the dihydrate form of calcium sulfate] and the precipitate is collected in an earthenware tub. Most salty, bitter, sour as well as hot materials can be used to precipitate tofu."

In 1917 M.J. Hagerty translated the section on beans (including soy beans) into English (18 pages). Note: Wu Qijun died in 1846.

154. Darlington, William. ed. 1849. Memorials of John Bartram and Humphrey Marshall. With notices of their botanical contemporaries. Philadelphia, Pennsylvania:

© Copyright Soyinfo Center 2013

Lindsay and Blakiston. xv + 585 p. See p. 404-05. 28 cm.
• ***Summary:*** This work, composed largely of letters by Peter Collinson (1693-1768) to John Bartram (1699-1777), includes a letter, sent on 11 Jan. 1770 from Benjamin Franklin in London to John Bartram in Philadelphia. It is transcribed as follows: "I send, also, some green dry Pease, highly esteemed here as the best for making pease soup; and also some Chinese Garavances, with Father Navaretta's [Navarrete's] account of the universal use of a cheese made of them, in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made; and I send you his answer. I have since learnt, that some runnings of salt (I suppose runnet) is put into water when the meal is in it, to turn it to curds.

"I think we have Garavances with us; but I know not whether they are the same with these, which actually came from China, and are what the *T'au-fu* [tofu] is made of. They are said to be of great increase...

Note: This is the earliest English-language document seen (April 2013) that uses the term *T'au-fu* to refer to tofu.

"With love to good Mrs. Bartram, and your children. With sincere esteem, I am ever, my dear friend, Yours affectionately, B. Franklin."

See also Smyth 1907 for a slightly different transcription, which omits part of his discussion of tofu and spells "Garavances" as "Chinese caravances." Address: Pennsylvania.

155. Wang Rizhen. 1850? Huya [Lakeside elegance]. China. Passages on soy reprinted in H.T. Huang 2000, p. 319-20, 324-25. Undated. [Chi]
• ***Summary:*** Wade-Giles reference: *Hu Ya*, by Wang Jih-Chên. H.T. Huang (2000, p. 319-20), in the section titled "Products associated with tou fu," notes that by the 19th century many products derived from soymilk had been developed. The most complete discussion of these appears in this book, published in about 1850: Tofu (*doufu*) is prepared by grinding soybeans finely [with water], cooking the milk in a caldron, then coagulating it with gypsum or nigari. Before coagulation, the soymilk is called *doufu jiang* ("tofu + thick liquid").

Note 1. This is the earliest Chinese-language document seen (Aug. 2003) that uses the term *doufu jiang* to refer to soymilk.

The curds are wrapped in a piece of cloth then placed in a wooden box, where excess water is drained off.

The soft product is called watery tofu [*shui-doufu, shuidofu*, which is made like soft Japanese tofu {*momen-goshi, with separation of curds and whey*} and *not* like Japanese kinugoshi, which is made without any separation of curds and whey].

The soft curds (before they are pressed into blocks of tofu) are called *doufu hua* ("tofu flowers") or *doufu nao* ("tofu brain").

Note 2. This is the earliest document seen (April 2013) that mentions soymilk curds, which it calls *doufu hua* or *doufu nao.*

Curds which have been placed in layers between sheets of cloth, then pressed, are known as *qian zhang* ("thousand leaves") or *baiye* ("hundred sheets / leaves").

Note 3. This is the earliest document seen (April 2013) that mentions pressed tofu sheets, or the names *qian zhang* or *baiye.*

When soymilk is heated, a film forms on the surface. When it is lifted off, it is called *doufu i* ("tofu robes") or *doufu pi* ("tofu skin") as noted in the *Bencao Gangmu* (The great pharmacopoeia) (+1596).

Note 4. This film is called yuba in English.

When small pieces of tofu are deep fried, giving a golden-brown outer surface surrounding a hollow interior, they are called deep-fried tofu (*you doufu,* literally "oil tofu").

Note 5. This is the earliest document seen (April 2013) that mentions deep-fried tofu or *you doufu.*

When firmly pressed tofu is cut into small pieces then simmered in soy sauce, the product is known as *doufugan.*

Note 6. Soyinfo Center believes that pressed tofu is now called *doufugan* and that pressed tofu simmered in soy sauce is now called *jiangyou doufugan.* When pressed tofu is marinated in soy sauce with "five spices" then baked, it is called five-spice pressed tofu (*wuxiang doufugan*).

The plain pressed tofu is known as *bai doufugan* ("white tofu dry").

When dried tofu is smoked by burning shavings it becomes smoked tofu (*xun doufu*).

When pressed tofu is soaked in brine and fermented, the product is called *chou doufugan* ("stinky pressed tofu" / "foul-smelling pressed tofu").

Note 7. This is the earliest document seen (Oct. 2011) that clearly mentions a type of *chou doufu* ("stinky tofu") or that mentions *chou doufugan* ("stinky pressed tofu").

Talk with H.T. Huang. 2001. Feb. 20. Tofu was seasoned and flavored long before the first description of the products in this book in about 1850. The use of five-spice was already in common use in China during the Ming dynasty (1368-1644), if not earlier. Five-spice tofu, made by simmering pressed tofu (*doufugan*) in a sauce seasoned with five spice, has the advantage of a longer shelf life than regular tofu.

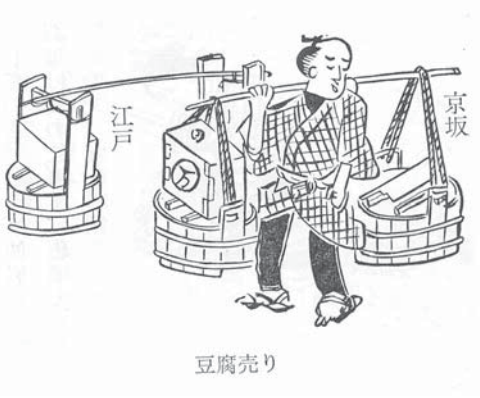
157. Kitagawa, Morisada. 1853. Morisada mankô [Mr. Morisada's book of comical illustrations without particular thoughts]. Japan. [Jap]*



• ***Summary:*** This book contains an early reference to Kori-dofu (dried-frozen tofu), and an illustration of a man selling natto (*nattô*). He is squatting with a bowl in one hand between two baskets of natto which are apparently connected by a shoulder pole. In his right hand is a cup with a handle on it, which he uses to scoop out the natto.

In *Tôfu no Hon* [The Book of Tofu], by Abe and Tsuji (1974, p. 8) is an illustration of a tofu street vendor taken from this book. It shows two types of shoulder poles and attached carrying containers. The upper left one is from the Edo / Tokyo area. The one actually on the man's right shoulder is from the Kyoto & Osaka area.

According to Saito (1985, p. 16) the book may also mention and have an illustration of a walking street vendor selling tofu. The author was born in 1810. The book may have a second title, *Ruijû kinsei fûzoku-shi.*

158. Hakura, Yokyu? 1854. Yôshû roku [A record of small provision]. Japan. Publisher unknown. 46 p. Written in Kanbun (Chinese). Japanese summary by Kawakami 1978, p. 156. [Jap]

• ***Summary:*** Mentions red miso (*aka-miso*), how to make a type of miso soup called *shi-yu* or *kuki-yu,* and tofu. Hatcho miso from Mikawa was recommended as red miso.

159. Montgaudry, Baron de. 1855. Compte rendu des expériences faites pour l'acclimatation des semences importées en France par M. de Montigny [Report of experiments made on the acclimatization of seeds imported into France by Mr. de Montigny]. *Bulletin de la Societe d'Acclimatation* 2(1):16-22. Jan. See p. 17, 20-22. [Fre]

• ***Summary:*** For years Mr. de Montigny has been sending seeds and plants from China to the Society for Acclimatization. When he last returned from China, in April 1854, Mr. de Montigny brought five varieties of seeds; a portion of this collection was entrusted to the Society for Acclimatization for experimentation.

Mr. Montgaudry was given responsibility by the Society for Acclimatization for distributing these five varieties of seeds to its members. These seeds were three varieties of rice, a variety of green bean (*Haricot*) unknown in France, alpist or canary-grass (*Alpiste*), giant maize / corn (*Maïs géant*), and two varieties of soybeans (*Pois oléagineux,* literally "oil peas") (p. 17).

The two varieties of soybeans are completely dissimilar. One has small green seeds; the other has rather large yellow seeds. These seeds are very precious and of the highest usefulness for France. Every year, France is obliged to buy from abroad more than 30 million francs worth of edible oil, but during the years when the two types of rapeseed (*les Colzas et les Navettes*) freeze or cannot produce because of drought, some 60 to 80 million francs must leave the country [to buy oil].

The two types of rapeseed only grow successfully on choice land, which must be both light and rich in humus. Generally, this quality of land comprises only a small proportion of the total is almost all localities [in France]. The soybean (*Le Pois*), however, is much less choosy about the soils where it grows well: it prospers on all terrains. In the valleys it grows wonderfully and on the mountains it gives good crops (p. 20).

The soybeans brought back by M. de Montigny are cultivated on a large scale in the fields of northern China. It is principally in the provinces of Honan, Shantung, and Shansi that one finds vast expanses covered with these soybeans. The climate of these provinces is quite similar to that of our own so-called 'cold provinces.' In China there is a large trade based on products obtained from these soybeans. The oil is used in many ways and is preferred to rapeseed oil and colza oil (refined rapeseed oil). Although it has an aftertaste of peas or beans, this is not as disagreeable as the bitterness from rapeseed or colza oils. With the addition of a little lard, it becomes similar in flavor to second-grade olive oil.

Note 1. He was referring to unrefined, probably filtered soy oil.

The residue left after expressing the oil is in the form of cakes, which the Chinese use to fatten their livestock and enrich their soil. These cakes are a powerful soil amendment in the countryside.

Note 2. *Webster's Dictionary* defines a soil amendment as "a substance that aids plant growth indirectly by improving the condition of the soil."

In China, soybeans are transformed into both a food for the poor and a seasoning highly regarded by the rich. For the poor, the flour of these soybeans [i.e. ground soybeans] is used to prepare a paté resembling that of *fromage blanc* (a fresh dairy cheese resembling cream cheese; quark), known in France as *fromage à la pie;* it [i.e., tofu] is sold in public places for a few cents (*centimes*) a portion and cut into cakes

© Copyright Soyinfo Center 2013

by means of a brass wire according to the customer's wishes. Ordinarily the Chinese fry their paté or cheese (*fromage*) [tofu] in the oil which also comes from soybeans; this fried food is highly esteemed.

For the rich, a seasoning (*assaisonnement*) is prepared which requires more care and culinary talent. The soybean paté (*La pâte de Pois*) [fermented tofu] is fermented after having been seasoned with pepper, salt, powdered bay/laurel leaves, powdered thyme, and other aromatics. During the fermentation, the producer bastes the paté with soybean oil (*l'huile de Pois*). After several days of fermentation, the preparation is ready. This paté or cheese [fermented tofu] becomes a very powerful digestive (aid to digestion) and an aperitif, which no one can resist because it is extremely tasty.

"At Kaifeng in Honan, at Tsinan in Shantung, and at T'aiyuan in Shanshi, the oil and cheese of soybeans are made in huge amounts, and are consumed locally. But the city of Ning-po, capital of Chekiang, is the center of production and of shipping of various products made from soybeans. The port of Ning-po is hard to reach in large vessels, but they can stop at the island of Choushan, where there is a very good port. Thousands of Chinese junks leave Ning-po and travel along the coast of China with no cargo but the products of soybeans, which they carry to all parts of the Celestial Empire, to Japan, and to all countries where they are known.

Soybeans have produced seeds in France since 1854. Their acclimatization is assured. Unfortunately we still have only a small quantity of seed, but M. de Montigny, who must return to China, will send the Society a large enough amount so that this precious seed will soon be distributed to all parts of France. This will be an eminent service rendered to the nation.

Mr. de Montigny had brought back a large quantity of soybeans, but it was not going to be up to him (as early as 1854) for this seed to be cultivated on a large scale on French soil. Most of the supply was lost in Paris, for reasons independent of all the zeal, all the planning by Mr. de Montigny, who was not in control of the steps undertaken by persons who appeared to offer to him all the warranties and from whom he could not anticipate the odd way (*façon singulière*) of using such precious seeds (p. 22).

Note 3. Monsignor Louis C.N.M. de Montigny, bearer of the seeds, was born at Hamburg of French parents in 1895. In 1843 he went to China and in 1847 he was appointed Consular Agent at the port of Shanghai, where he stayed, with promotions, until 1895. There he rendered great services to natural science and horticulture by introducing into France useful Chinese plants and animals, via the Society for Acclimatization (Bretschneider 1898, p. 536).

Note 4. The Baron of Montgaudry, author of this article, was the nephew of Comte Georges-Louis Leclerc de Buffon (1707-1788), a French naturalist who held the prestigious position of superintendent of the Royal Garden (*Jardin du Roi/Roy, Jardin des Plantes*) in Paris and was on the cabinet of the Natural History Museum. According to Paillieux (1880, p. 561) starting in 1739, French missionaries in China sent Buffon specimens and seeds of the most important plants in that country. Soybeans were probably received and planted by 1739 or 1740, and definitely by 1779. Buffon was a contemporary and ardent opponent of Linnaeus. He must have been disappointed when, in 1744, Louis XV issued the order that the Linnaean system was to be adopted in the future. Buffon was the author of the superbly illustrated *Histoire Naturelle* (1749-1804) in 44 volumes, some of them published posthumously.

Note 5. This is the earliest document seen (Feb. 2001) concerning soybeans in France, or the cultivation of soybeans in France.

Note 6. This is also the earliest document seen (June 2001) describing the work of the Society for Acclimatization in France with soybeans.

Note 7. This is the 3rd earliest French-language document seen (April 2013) that mentions tofu. It is also the earliest French-language document seen (April 2013) that compares to the particular French cheese named *fromage à la pie* (quark in German).

Note 8. This is the earliest French-language document seen (April 2012) uses the term *pois oléagineux* to refer to the soybean.

Note 9. This is the earliest Western-language, or French-language, document seen (Sept. 2006) that mentions soy oil, which it calls *l'huile de Pois* [*oléagineux*]. This is also the earliest document seen (April 2002) concerning the etymology of soy oil.

Note 10. This is the earliest Western-language document seen (Nov. 2012) that mentions fermented tofu, which it calls *La pâte de Pois*.

Note 11. This is also the earliest document seen in the Western World that mentions an industrial (non-food) use of soybeans (as a fertilizer for the soil).

Note 12. This is the earliest document seen (May 2005) that mentions flavor problems with soy–in this case, soybean oil.

Note 13. This is the earliest document seen (June 2007) that mentions the use of junks (or barges or boats) or water to transport soybeans or soy products within a country (China). Address: French Consul at Shanghai and Ning-po, China.

160. Julien, Stanislas. trans. 1855. Le pois oléagineux de Chine [The "oil peas" (soybeans) of China]. *Bulletin de la Societe d'Acclimatation* 2(4):225-26. April. [2 ref. Fre]
• ***Summary:*** This is a letter addressed to the president of the Zoological Society for Acclimatization, from the session of 30 March 1855. Monsieur and dear colleague. I have the honor of offering you, at the request of my friend Émile Tastet, some information that I have found in a Chinese book on the subject of oil peas (soybeans, *Pois oléagineux, Yeou-teou*).

© Copyright Soyinfo Center 2013

One reads in the *Imperial Encyclopedia of Agriculture* (*Cheou-chi-thong khao;* [*Ch'in Ting Shou Shi T'ung K'ao* by Chang Ting-yu and Chiang P'u]), volume 27, fol. 8, first page (recto): 'According to Li Shih-chen (Li-chi-tchin, author of the Great Materia Medica [Pen-ts'ao kang-mu]), the large peas (soybeans, Ta-teou) are found in the following colors: some are black (Hé-teou), white (Pe-teou), yellow (Hoang-teou), or gray (Ho-teou); and there are also some that are spotted with blue (Thsing pan-teou). The black ones are ordinarily called Ou-teou (here the word *ou* has the same meaning as *he,* black); they can be used in medicine, be eaten, and are used in the condiment called *chi* (fermented black soybeans, which are composed of these soybeans, of ginger, and of salt). The yellow can be used to make tofu (*Teou-fou,* a sort of fermented soybean pâté, on which the people nourish themselves habitually); oil is also drawn from them by putting them under a press; they are also used to make chiang (tsiang; Note: a sort of sauce like a soft miso that serves as a seasoning).

The other species of large peas (soybeans) are not good for making tofu (teou-fu, fermented pâté of peas); they are eaten after having been roasted. All the species of large peas (soybeans) described hereafter are planted before and after the summer solstice (June 21). The stem attains a height of 3-4 feet. The leaves are round and terminate in a point. In autumn, the plant bears small, white flowers, which are clustered together. Then they form pods (about as long as one's thumb), which become dry after the frost.

One reads in the *Treatise on Agriculture* by Fan-ching [Fan Sheng-chih, written ca. 10 B.C.]: 'At the summer solstice, the soybean (*teou*) is sown; it is not a big job. The flowers of the soybean do not like to see the sun; otherwise they turn yellow and the and the roots blacken.'

I regret, Monsieur, to be unable to find at the moment more details on the soybean; however, the above extract largely suffices to confirm the remarkable usefulness, unknown in Europe until just now, of the soybean which M. de Montigny has sent to you. I have already called attention to this fact in a large work that I finished a year ago, in which are described all of the Chinese industrial processes that relate to chemistry. But I do not know when I will be able to publish this work.

I am at the disposition of the Society for Acclimatization whenever you would like me to translate Chinese texts that would be of interest.

Note 1. This is the earliest French-language document seen (Nov. 2011) that mentions fermented black soybeans, which it calls *chi.*

Note 2. Bretschneider (1881) calls Julien a "great sinologue."

Note 3. This is the earliest French-language document seen (April 2012) that uses the term *pois oléagineux de Chine* to refer to the soybean, or with the term *pois oléagineux de Chine* in the title.

161. Williams, Samuel Wells. 1856. A tonic dictionary of the Chinese language in the Canton dialect. Canton, China: Printed at the office of the Chinese repository. xxxvi + 832 p. See p. 438, 511. 22 cm. [10 ref. Eng; chi]

• ***Summary:*** At the top of the title page, the title is written in Chinese (Cantonese) but printed in Roman letters: *Ying Wá Fan Wan Ts'üt Iu.* This book contains definitions and expansions of 7,850 characters; it focuses on those in general use. Soy-related characters include the following: Page 61–*Fu.* Corrupted, rotten; *tau fu* bean curd.

Page 438–*Shí.* Salted eatables, as beans, oysters, olives, which are afterwards dried and used as relishes; *tau shí* salted beans; *shí yau* soy [sauce]; *mín shí* salted flour and beans used in cooking; *lám shí* stoned and pickled olives; *tau shí kéung* salted beans and ginger–a relish" [like Hamanatto in Japan].

Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term *tau shí* or the term "salted beans" or the term "salted beans and ginger" to refer to fermented black soybeans.

Note 2. Concerning the term *mín shí* (min shi), Dr. H.T. Huang (expert on Chinese food history, June 2008 personal communication) says it is simply Cantonese for *mian shi* (pinyin; or in Wade Giles *mien shih,* characters #4503 + #5805). The characters are the same in Cantonese or in pinyin. The term is used only in Cantonese, where it often refers to "soy paste" or jiang / chiang (character #661). Dr. Huang has not seen the term used in classical texts or heard it in Mandarin or Fujian dialects.

Page 511–*Tau.* Pulse, peas, beans, legumes; *hung tau* red pulse [beans]; *ti tau* ground-nuts; *tau fu* bean curd; *tau fu fa* bean curd jelly [soymilk curds]; *tau fu kon* [pinyin: doufugan] bean curd cakes.

Page 533–*To.* A knife; a sword with one edge; *leung min to* a bean-curd knife.

Page 708–*Yun.* Liver, yellow; *tau fu yun* yellow bean curd cakes.

In the Preface, the author refers to ten earlier Chinese or Cantonese-English dictionaries and related works by Kanghi (*Kanghi Tsz T'ien,* which have been in use throughout the empire for nearly 150 years), Morrison (1827), Medhurst (1842-43), De Guines, Gonçalves, Callery, Klaproth, Bridgman (1841), Williams (1841), and Bonney (1854).

Note 3. This is the earliest English-language document seen (April 2013) that uses the term " bean curd" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu.

Note 4. This is the earliest English-language document seen (April 2013) that uses the term "tau fu kon" or "bean curd cakes" to refer to firm tofu.

Note 5. This is the earliest English-language document seen (March 2001) that mentions *shí, tau shí,* or fermented

© Copyright Soyinfo Center 2013

black soybeans, which it calls "salted beans." This is also the earliest document seen (March 2001) concerning the etymology of fermented black soybeans.

Note 6. This is the earliest document seen (Jan. 2012) that contains Cantonese romanization / transliteration. Address: Canton, China.

162. Towns (B.) and Co. 1858. The undersigned offer for sale, the following Chinese goods... (Ad). *Argus* (*The*) (*Melbourne, Victoria, Australia*). April 24. p. 2.

• ***Summary:*** "... now landing, ex Panama, from Hong Kong, -

"Kum chum, vermicelli, soo lew. Beanstick [probably dried yuba sticks], or maccaroni [macaroni], red dates, peas.

"Pearl barley, honied dates, green ginger. Chinese oil in jars; salted vegetables.

"Salted turnips (pieces), white beans curd [tofu].

"Pickle beans curd [probably pickled bean curd, which is fermented tofu?], green peas."

This ad also appears in the April 26 issue (p. 3).

Note 1. This is the earliest document seen (March 2010) stating that beanstick (probably dried yuba sticks), white beans curd (tofu), or pickled beans curd (probably fermented tofu) are now in Australia.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "pickle beans curd / pickled bean curd" to refer to fermented tofu.

Note 3. In 1851 gold was discovered in Victoria, in southeast Australia. A huge gold rush followed that lasted until the late 1860s. In 10 years from 1851 to 1861 Australia's population nearly tripled. As was the case with the California gold rush two years earlier (1849+) large numbers of Chinese joined the stampede. These three Chinese soyfood products were clearly imported for the Chinese.

Note 4. This is the earliest English-language document seen (Oct. 2012) that uses the word "Beanstick" (or "Beansticks") to refer to what is probably dried yuba sticks.

Note 5. This is the earliest document seen (Oct. 2012) that mentions yuba as an item of international trade– being imported or exported. Address: 26 William-Street [Melbourne].

163. Duméril, Auguste. 1859. Extraits des procés-verbaux des séances générales de la société. Séance du 4 Feb. 1859 [Excerpts of verbal proceedings from general meetings of the society. Meeting of 4 Feb. 1859]. *Bulletin de la Societe d'Acclimatation* 6:86-110. Feb. See p. 106. [Fre]

• ***Summary:*** Mr. Vilmorin presents a report on the results that he obtained concerning the cultivation of various Chinese plants brought back by Mgr. [Monseigneur] Perny [pronounced per-NEE]. He goes into some detail about his attempts to make the Chinese cheese named tofu (*du fromage chinois nommé teo-fou*) using soybeans (*les Pois oléagineux*).

Note 1. This Mr. Vilmorin is almost certainly Louis de Vilmorin (lived 1816-1860), head of Vilmorin-Andrieux & Co.

Note 2. This is the earliest French-language document seen (April 2013) that uses the term *fromage chinois* or the term *teo-fou* to refer to tofu.

Note 3. "Monseigneur" is an honorific in French. Address: France.

164. Lachaume, J. 1859. Avantages du Pois oléagineux de la Chine [Advantages of "Chinese oil peas" (soybeans)]. *Revue Horticole: Journal d'Horticulture Pratique* (*Paris*) 8(8):222-24. April 16. Series 4. [1 ref. Fre]

• ***Summary:*** "In the *Revue Horticole* (16 Nov. 1857, p. 568) we have given information about the soybean (*Pois oléagineux de la Chine; Soja hispida,* Moench) and about the type of cultivation that suits it.

"New experiments, conducted in 1858, have shown us that this legume can be very well acclimatized in France. Thus, on 18 April 1858, some seeds were sown in Vitry-sur-Seine, a locality whose soil is clay-calcium carbonate and naturally cold... Until Aug. 1, the time when the plants had attained 70 cm of height and were showing their first flowers, the care of the plants was limited to hoeing and weeding. The rest of the seeds were sown the same day in a nursery on a flat-band exposed to noonday sun. On April 26, the cotyledons came up; two weeks later, we replanted them in lines with the same spacing as before, without watering them and without the plants becoming fatigued.

"On June 16, at a temperature of 30ºC, we planted a third lot of these beans in a square."

"The first beans sown on April 18 and those that were replanted, bore the drought without any water other than that which fell from the sky; they came to maturity around Oct. 15.

"This success permits us to place in commerce, for 1859, the quantity of seeds that we have harvested, with the requirement to keep some for the horticultural societies that will ask for them.

"The beautiful tests that M. Vilmorin did in Feb. 1858 to determine the quantity of oil contained in his seeds, will encourage amateurs to introduce this new bean into their gardens and farms. According M. Vilmorin, a first test showed that the seeds contained 21.32% oil, and a second 21.16%.

"Besides the advantage of yielding oil, these beans can furnish an excellent cheese (*fromage;* [tofu]) that the Chinese make by boiling and then crushing the seeds in a mortar. A very white liquid [sic, curds] is produced that thickens if one applies pressure to it. One next places the paste in molds, adding salt in the French manner. The cheeses thus obtained provide an important source of nourishment for the working class.

© Copyright Soyinfo Center 2013

"There are numerous varieties of *Soja hispida;* we have cultivated some of them experimentally."

"To summarize, soybeans from China would be a good acquisition from many points of view: 1. As an oilseed; 2. As an edible plant, because the fresh seeds [edamamé] are easy to cook and furnish a pleasant (*agréable*) food, such as the samples from Sept. 1858 have proven; 3. As a forage plant which can yield a large harvest, when one possesses a sufficient quantity of seeds to operate on a large scale; 4. As a plant whose seeds can be used to make cheese [fermented tofu], a test that M. Vilmorin did not hesitate to make." Address: Arboriculteur at Vitry-sur-Seine.

165. Vilmorin, Louis. 1859. Compte rendu des essais de culture sur les plantes de la Chine, rapportées par monseigneur Perny [Report of culture trials on Chinese plants, brought back by Monseigneur Perny]. *Bulletin de la Societe d'Acclimatation* 6:520-28. Nov. [Fre]

• ***Summary:*** "Among the collections which have arrived from China during the past few years, one of the most important is that which the Society for Acclimatization has received from Father Perny (*l'abbé Perny*)." A brief description of each of the plants is given with the Chinese characters, their romanization, sometimes a number, and a description of the plant, sometimes with additional details in a footnote. The following are included:

"*Hé-teou** or black soybean. A small oil bean or soya with black seeds (*Petit Haricot à huile, ou Soya à grain noir*). It appears to be a delicate plant; we have received only three sickly (unhealthy) plants. Only one has produced any mature seeds. (Footnote: *It is from this bean that one makes the Chinese casein (*caseum*) called tofu (*Teou-fou*), which would be useful to introduce in France. In towns nationwide it would be a genuine resource for the poor)" (p. 523).

Note 1. This is the earliest French-language document seen (Oct. 2012) that contains the term *Haricot à huile* or the term *Petit Haricot à huile,* which it uses to refer to the soybean.

Note 2. This is the earliest French-language document seen (Oct. 2012) that contains the term *Soya à grain noir,* which it uses to refer to the black soybean.

"*Ta-lou-teou* [large/great + green + bean] or green soybean, no. 797... We have seen only the green plants, not the seeds. It is a small plant, almost dwarfish, but forming a thick bush and luxuriant vegetation. We awaited an interesting product from it, especially since the seed sown was of a pretty appearance, but the plant was so late that the first frosts destroyed it just as the first flowers appeared" (p. 523-24).

"*Ta-hoang-teou* [great + yellow + bean] or yellow soybean, no. 786. By looking at the seed, this would seem to be a pale green Haricot or Dolic bean. The plant which it produces, analogous in appearance to the oil bean or Soya (*Haricot à huile ou Soya*), appears to be very late and has not yet flowered" (p. 524).

"*Hoang-teou* or yellow soybean, no. 773. This is an oil bean or soya (*Haricot à huile* (*Soya*)) with large smooth seeds, which are more yellow than usual. The plant appears a little more dwarfish; it has flowered and set seeds, but they have not matured" (p. 526).

Note 1. Bretschneider (1882) in his *Botanicon Sinicum* (Part I, p. 130) is unusually critical of P. Perny for the many mistakes he makes in trying to identify Chinese plants. His work "puts sinologists to blush."

Note 2. The author (lived 1816-1860) is head of Vilmorin-Andrieux & Co., France's largest and oldest seed dealer. He died only 4 months after presenting this paper, on 21 March 1860, at the young age of 44. Vilmorin & Co. was selling soybeans by Nov. 1864.

Note 3. This is the fifth earliest document seen (June 1999) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

Note 4. Also discusses: The sunflower or "Grand *Helianthus* (*Kouey-hoa-tsé,"* no. 771, p. 524-25).

166. Sakato, Shi. 1859. Ryôri chôhô-ki [Records on convenience cooking]. Japan. 60 p. Unpublished manuscript. Japanese summary by Kawakami 1978, p. 177. [Jap]

• ***Summary:*** Contains many recipes for tofu and miso, plus amazake and shirozake (lit. "white sake"), hishio, natto, and Kinzanji miso.

167. Cobbold, Robert Henry. 1860. Pictures of the Chinese, drawn by themselves. London: John Murray. vi + 219 p. + 34 p. of plates. Illust. 19 cm.

• ***Summary:*** The chapter on "The cook-shop" states (p. 202-03): "As to cooking, while it is generally a strong point with the people, the perfection of the art is nowhere more observable than in the monasteries of the Buddhists. They have but the simplest elements of food to deal with. No meat, no fish, no poultry, are allowed at their tables. No eggs, no lard, no butter, no milk, must be introduced in their confectionery. Vegetables alone are permitted; and yet by means of these a dinner of surprising variety is served up to table; and if the guest judged only by appearances, he would suppose that the worthy abbot had forgotten the rigid rules of his monastic establishment, and was about to break his vow by partaking of most heretical viands."

"No one as he travels, even in rural districts, need fear starvation. It may be only the simple bean-soup or bean-cakes [probably tofu] which are offered..."

Note. This is the earliest English-language document seen (April 2013) that uses the term "bean-cakes" (or "bean cakes") to refer to tofu.

Pages 37-38: "In the many monasteries which I visited, I can call to mind but few which indicated, by the care bestowed on them and the strict observance of the rules, that

© Copyright Soyinfo Center 2013

there was reality in the members, or which contained men of superior intelligence. Priests of earnest mind will often heave a deep sigh over the degeneracy of the present age.

"In Buddhism there is no distinct order of 'begging friars,' but, as need arises, a few are chosen to travel through the country and collect subscriptions. In their journeys they are received and lodged by the brethren in other monasteries, who, by a law of the order, are bound to extend to them for a stated time such hospitality. They visit alike the houses of the rich and of the poor, and usually bring the artillery of their arguments to bear upon the weaker sex.

"A wallet at their back receives the contributions of the charitable–generally in the form of a little cooked rice, all animal food being prohibited according to the terms of their religious vow. They are the most strict vegetarians in the world, and have not the art of drawing the subtle distinctions between meats discovered by some religionists, or of discovering the essential difference between beef, mutton, and poultry, and salt, butter, eggs, and fish. A piece of common cake, if it contain a particle of either lard, butter, eggs, or milk, is most heretical food; a piece of cheese would be an unpermitted delicacy; a glass of any fermented liquor, a gross violation of propriety. Even the onion is disallowed as too stimulating; the milder and more innocent leek must flavour their porridge."

On page 203 is an illustration (line drawing) of a seller of soybean jiang (*doujiang*).

Note 2. Robert Henry Cobbold died in 1893. Address: Rev., M.A., Rector of Broseley, Salop, Late Archdeacon of Ningpo.

168. Lockhart, William. 1861. The medical missionary in China: A narrative of twenty years' experience. London: Hurst and Blackett, Publishers. xi + 404 p. See p. 63-69. No index. 23 cm.

• ***Summary:*** The author, a Christian medical missionary in Shanghai (he went there with Dr. Medhurst in 1843), describes the daily life of people in China. Chapter 4, which is mainly about food and money, has a long section about "pulse" or "beans," however the soy bean is never mentioned by name.

"Large quantities of *pulse*, a species of round white or yellowish bean, are grown in the north of China, at Shan-tung and Chih-le [Shantung and Chili], and in the south of Mantchouria [Manchuria], the yearly produce of this article is enormous. Its exportation forms a large branch of commerce; and the carrying of the beans, oil, and cakes gives employment to many thousand junks, which bring down their cargoes to Shanghai, Ningpo, and other ports.

"These beans are used chiefly for making oil: the other uses of them are subordinate to this."

He describes how the beans are ground in two different types of stone mills, the latter 30 feet in diameter and pulled by an ox. They are then steamed in baskets, pressed in a long, horizontal wedge press, filtered through straw then cloth, and stored in large baskets "lined with a very tough thin paper glued to the inside of the basket by varnish, and then varnished over. The oil never exudes if the paper has been properly attached to the baskets, each of which will hold 100 pounds of oil, and is the shape of a large flat jar, with a narrow mouth." Note 1. This is the earliest English-language document seen (Nov. 2003) that mentions a "wedge press" in connection with soybeans. It is also the earliest such document seen written by Westerner.

"The bean-cake, or residue after expression of the oil, is largely used as manure, and is found to fatten the land and improve the crops. It is never eaten by cattle.

"*Soy* [sauce] is made from the same bean, which after being slightly boiled in water is placed in the open air, in large jars with basket tops, for the purpose of fermentation. The beans turn brown and soft, and become a brown pultaceous mass. After the soy has drained away or been expressed, it is strained and packed in small jars for sale. No use is made of the residue.

Note 2. "Pultaceous" means "having a consistency like that of porridge."

Note 3. This is the earliest English-language document seen (March 2007) that mentions the "residue" left over after making soy sauce.

"*Tau fu*, or pulse-curd, is made by steeping the beans in cold water, when being soft they are ground between two flat stones. A spindle fixed in the centre of the lower passes through the upper stone, in which a hole is made about halfway between the centre and the rim. Through this hole the beans are passed as the upper stone revolves, by means of a handle fixed in the side of its rim. When ground they pass out at the rim as a creamy liquid, which is placed in a vat to settle. The supernatant fluid is afterwards drawn off, and the curd placed on a suspended square of cloth to get rid of more of the liquid. It is then transferred to square wooden frames lined with cloth, and next into a bean press loaded with a large stone. The remaining liquid drains out, leaving behind a thick cake of solid curd, which is cut up into small squares. [Note 4. The writer fails to mention that a coagulant is added to transform the milk into curd.] The curd is also sold after it leaves the filter and before it is pressed, and in both forms is fried with a little oil, and eaten as relish with rice. Sometimes cakes of curd are exposed to the air to ferment, when they become brown and dry, turning partly into soy, and form a tasty combination, much relished by the Chinese, of curd and soy.

"The beans are also given to animals, especially sheep and goats, as we give them brown peas."

"The bean-oil is used for lamps, and also for cooking purposes. It is a pale, thin, clear oil, rather strong in smell, but not disagreeable (p. 69).

"The oil mills are very large establishments, and always at work. In some of them from fifty to sixty buffaloes are

© Copyright Soyinfo Center 2013

kept to perform the work at the stone wheels."

Note 5. This is the earliest document seen (Sept. 2001) concerning the use of soy bean oil in lamps for illumination or lighting.

Note 6. This is the earliest English-language document seen (Sept. 2006) that uses the term "bean-oil" to refer to soybean oil.

Note 7. This is the earliest document seen (July 2002) concerning the feeding of soybeans or soy products to goats. Address: F.R.C.S., F.R.G.S., of the London Missionary Society [England].

169. Wang Shixiong. 1861. Suixiju yinshipu [Discourse on food and drink from the Random Rest Studio]. China. Passages on soy reprinted in H.T. Huang 2000, p. 319n, 324, 371-73. And in N. Wai, 1964, p. 92. [Chi]

• ***Summary:*** Wade-Giles reference: *Sui Hsi Chü Yin Shih P'u,* by Wang Shih-Hsiung. Qing dynasty.

The section on fermented tofu states: Firm tofu (*doufugan*) is difficult to digest. Children, the elderly, and sick people should not eat it. If you transform firm tofu into fermented tofu (*furu*) it will be good for sick people / patients; it gets better the longer it is aged. (Translated by H.T. Huang, PhD, April 2003).

H.T. Huang (2000, p. 319n, 653) states that the list of tofu products in this book (p. 63) is similar to that published about 11 years earlier (ca. 1850) in: *Hu Ya* (Lakeside elegance), by Wang Rizhen.

Huang (p. 324) states that this is the second earliest known Chinese document to mention pressed tofu sheets (*qianzhang* {W.-G. *ch'ien chang*} or *baiye* {W.-G. *pai yeh*}).

Huang (p. 371-73) states that, according to this book, the first batch of soy sauce, produced during the summer and harvested in the fall, was called *qiuyou* (W.-G. ch'iu yu) ("fall oil"). It is called for by this name in 62 recipes in the book. Huang adds that the term is almost never used today.

The book also describes an unusual use for wheat gluten: If one accidentally swallows a coin, roast some gluten without destroying its shape, grind well, mix with boiled water and drink. If the coin is caught in the throat, it will be coughed up. If it is in the stomach, it will be eliminated with the stool (Huang 2000, p. 501).

Huang (personal communication, 5 June 1993), notes that page 28 states: "*Mien-chin* is made by kneading wheat dough under water. It is cooling, disperses heat, mitigates thirst and dispels anxieties. But it is not easy to digest, and should be chewed well."

Wai (1964, p. 92) translates the section on fermented tofu: "Hardened tofu is difficult to digest, and is not good for children, old people, or patients. Sufu [fermented tofu], which is prepared from tofu and gets better the longer it is aged, is very good for patients." Wai concludes: "Therefore, we may presume that soybean cheese [fermented tofu] was sold long before the Ch'ing [Qing] dynasty." He then describes the ancient process. The cubes of tofu are inoculated with the fungus by arranging them on a large bamboo tray and covering them with rice straw (on which the fungus grows wild).

170. Williams, S. Wells. 1861. Notices of Chinese agriculture and its principal products. *Report of the Commissioner of Patents, Agriculture* p. 467-76. For the year 1860. See p. 474.

• ***Summary:*** "Agriculture has held a higher place in the estimation of the Chinese, in comparison with other pursuits, than among any nation of which we have definite knowledge... The fabled founder of agriculture, called Shin-nung [Shennong], *i.e.*, the Divine Husbandman, was likewise one of the five sovereigns, who are regarded as the founders of the black-haired race of China; he flourished during the fourth and fifth centuries after the deluge, and is now worshipped as one of the tutelary gods of the Empire. The ceremony of ploughing a field near Peking is performed every spring by the Emperor or his proxy" (p. 467).

Note 1. This is the 2nd earliest English-language document seen (June 2009) that mentions Shennong or the Divine Husbandman. Describing him as "The fabled founder of agriculture," indicates that he was a legendary / mythical rather than an historical figure.

"A great number of plants are grown in various parts of the country for the oil found in their seeds or nuts, which is consumed in cooking, burning, or in the arts, while the refuse cakes taken from the oil mills are returned to the ground as one of the best manures known. Oil is expressed for these purposes by simple pressure from the ground-nut (*Arachis*) throughout the Southern and Central Provinces, and the nut itself is baked for food." The Chinese also use rape oil, castor oil and the oil of the Sesamum, the Camellia sesanqua, and the oleifera (the latter two are called tea oil), and the croton *Jatropha curcas.*

"The list of leguminous and cruciferous plants cultivated in China is a long one... An emulgent [filtered or milked out] preparation of flour from the Dolichos bean, mixed with ground gypsum or tumeric [turmeric], and a touch of salt, called bean curd [tofu], accompanies every meal; the same materials, differently prepared, are sent abroad as Soy" (p. 474). Note 2. The author is referring here to the soy bean, tofu, and soy sauce. Address: Author of "The Middle Kingdom".

171. *Bulletin de la Societe d'Acclimatation.* 1862. Graines des principales plantes alimentaires de la province de Qwang-Tong, offered by Mgr. Guillemin [Seeds of the principal food plants of the province of Kwangtung (Guangdong), China, offered by Monseigneur Guillemin]. 9:323-24. April. [Fre]

• ***Summary:*** Monseigneur Guillemin was probably a high-ranking French dignitary in China. Kwangtung (Guangdong)

© Copyright Soyinfo Center 2013

is a province in southeast China, whose capital is Canton (Guangzhou or Kuang-chou). Among the 49 seeds presented (many of which were destroyed by insects), two samples are soybeans: "13. Yellow soybeans (*Hoang-teou*). Yellow beans from which the Chinese make the cheese called *teou-fou* (tofu). It is the soybean (pois oléagineux) par excellence.

"17. Ou-mi-teou. Soybeans (*Pois à soya*) which are used for the preparation of noodles (*pâtes*), vermicelli, known under the name *pe-teou-sze."* Address: France.

172. Williams, Samuel Wells. 1863. The Chinese commercial guide: Containing treaties, tariffs, regulations, tables, etc... With an appendix of sailing directions. 5th ed. Hongkong: A. Shortrede & Co. xvi + 387 + 266 p. Index. 21 cm. Facsimile edition reprinted in 1966 by Ch'eng-Wen Publishing Co., Taipei, Taiwan.

• ***Summary:*** In the section titled "Description of articles of export" [from China, alphabetical], Chinese characters accompany every entry. On p. 111 is an entry for "Beans and peas" (*tau*) incl. bean cake (*tau ping* or *tau shih* = "bean stones"). "The Chinese cultivate legumes to a greater extent, perhaps, than any other nation."

The manufacture of bean jam [jiang] and bean curd cakes [tofu] for food from the flour employs many people. The cakes used for manure are made by crushing the ripe peas [sic, beans] and boiling the grits soft; the mass is then pressed into cakes in iron hoops, and made solid by means of wedges driven down by heavy mallets. Peas and bean cakes are exported from Yingtsz' [Ying-k'ou, Yingkou?] and Tientzin to Amoy and Swatau [Swatow, Shantou, in Guangdong province]; they comprise one-fourth of all the produce shipped from Tientsin in 1861; and there is little else sent from Yingtsz'. In 1859, about a million piculs [1 picul = 133.33 lb] of the cake were reshipped to the south of China from Shanghai alone, chiefly for the consumption of sugar growers."

In the same section is an entry (p. 139) for: "Soy, *shi yú* [*shiyu* = fermented black soybean sauce], and *tsiáng yú* [*jiangyou* = soy sauce], is a condiment made from the Dolichos bean, which grows in China and Japan; our name is derived from the Japanese *siyau* [*shoyu*]. To make it, the beans are slowly boiled soft, then an equal quantity of wheat or barley flour is added; after this has thoroughly fermented and become mouldy, the beans are washed, and put into jars with their weight in salt, adding some aromatics, and three times as much boiling water as the beans were at first. The whole compound is now left for a month or more, exposed to the sun, and then pressed and strained. Good soy has an agreeable taste, and if shaken in a tumbler, lines the vessel with a lively yellowish-brown froth; its color in the dish is nearly black. There are many qualities of it, and when well made all improve by age. Japan soy is considered superior to Chinese, but both are of different qualities, and are probably made of various materials, some of which may be base enough. It is most commonly sent to England, India, and Europe, to form the basis of other sauces and condiments. It is worth from $4 to $8 per picul and goes chiefly from Canton."

On p. 129 is a section on "Oil" (*yú*), incl. [soy] bean oil (*tau yú*), wood oil (tung), cotton-seed oil, sesamum oil, olive oil, ground-nut oil, cabbage or rape oil, fish oil, etc.

In the same section (p. 149) is an entry for "Vermicelli (Chinese characters) *fun sz*, i.e. flour threads. This article, sometimes called *loksoy* [*lock soy*], manufactured from both rice and wheaten flour, is extensively used among the natives in soups. It is everyway inferior to the European."

Note 1. This is the earliest English-language document seen (Sept. 2006) that uses the term "bean oil" to refer to soybean oil, or that mentions *tau-yú* as the Chinese (Cantonese) name for soybean oil.

Note 2. This is the earliest English-language document seen (Sept. 2006) that uses the term "Dolichos bean" to refer to the soybean. It is also the earliest English-language document seen (Sept. 2006) that repeatedly uses the word "bean" (not preceded by the word "soy" or "soya") to refer to the soybean.

Note 3. This is the earliest English-language document seen (May 2005) that uses the "grits" to refer to coarsely ground soybean flour or pieces.

Note 4. This is the earliest English-language document seen (Sept. 2003) that contains the term "cotton-seed" or term "cotton-seed oil" (each spelled with a hyphen).

Note 5. This is the earliest English-language document seen (Oct. 2006) that that uses the term "crushing" (or "crush," "crushes," "crushed" or "crushings") in connection with soybeans to refer to the process of pressing the beans to yield oil and cake.

This section also discusses (alphabetically): Almonds (but not almond oil), ground-nuts (*hwa sang* characters, ground-nut cake characters hwa sang ping; the "oil is the chief article of export"), gypsum (*shih kau*, used especially in making bean-cakes and curd [tofu], sometimes called bean-macaroni), manure cakes or poudrette (*kang sha*, made from night soil mixed with earth for exportation. "The refuse of ground-nuts, sesamum, rape-seed, and other oleaceous seeds, is prepared for manure and for feeding swine and sheep, and sent from one part of the country to another"), salt, seaweed, sesamum seed, and silk.

A table titled "Rates of freight in steamers to Canton" states (p. 228): "Soy, per tub of 1 picul–$0.75."

In the section on "Foreign commerce with Japan" we read (p. 254): "Camphor, sulphur, porcelain, copper, nut-galls, vegetable wax, cassia, soy, and verdigris, have been furnished at rates and quantities sufficient to export to Europe."

Other sections discuss Chinese, Japanese, and British weights and measures, numerals, coins and currency.

Samuel Wells Williams lived 1812-1884. Address:

LL.D., Hongkong.

173. Payen, M. 1865. Séance du 30 Novembre 1864 [Meeting of 30 Nov. 1864]. *Bulletin des Seances de la Societe Imperiale et Centrale d'Agriculture de France* 20:65-70. 2nd series. [Fre]

• ***Summary:*** M. Chevreul, presiding. Instructions for a voyage to China: The perpetual secretary [Payen] announces that the young chemist, Mr. Champion, attached to his laboratory, is about to go to China, and the Society would like him to investigate several subjects.

Mr. Payen–thinks it would be useful to collect some information about the culture, products, retting, and usage of various textile plants. And the cheeses [tofu] (*les fromages*) made from the soybean (*Pois oléagineuse*) which contain 13% vegetable oil (*matière grasse*) according to analyses of samples reported by Mr. de Montigny, and sent by the imperial minister of arts and crafts.

Mr. Guérin-Méneville [Guerin-Meneville]–adds that samples of these soybeans soybean (*Pois oléagineuse*) (*Dolichos soja*) have been sent to the southernmost parts of France, where they succeeded perfectly.

Mr. Pépin–we have never seen it bloom in the climate of Paris. Those which we have been able to observe at Toulouse and at Bordeaux being already in bud but not yet bearing seeds; it did not seem, by the way, to be *Dolichos soja.*

M. Payen–Recall that the marshal Vaillant received, under the name of *Pois oléagineuse,* seeds which contained only 2% oil. It is therefore probable that this name of *Pois oléagineuse* can be used to designate various completely different kind of things.

The perpetual secretary–offers a note on the manufacture of this pea cheese [tofu] (*fromage de Pois*). These notes have been taken by Mr. Simon in a scientific voyage to Su-tchen [Sichuan?].

"The process for making tofu (called *teweu*)*."* Note: The source of this quotation / information about tofu appears to be: Champion, Paul. 1866. "Sur la fabrication du fromage de pois en Chine et au Japon [On the production of tofu in China and Japan]." *Bulletin de la Societe d'Acclimatation* 13:562-65. Oct. Meeting of June 1.

Take a variety of soybean (*Pois oléagineux*), which gives the best product and the most abundant quantity of cheese.

Soak the soybeans in lukewarm / tepid water for half a day until they swell. Better to prolong the action of the water until the soybeans are easily crushed between one's fingers; Then grind the beans with a mill while adding small cupfuls of the soaked soybeans and water in which they have been soaked. Collect the puree which runs onto a piece of linen placed on a wooden frame. Heat the liquid until it reaches about 65ºC; then add powdered gypsum (the size of a very small egg for every 2.5 to 3.0 kg of dry soybeans). Continue to heat while stirring. When the liquid starts to boil, remove it with a wooden ladle and put it into a mold, lined on the interior with a rather lose fitting cloth (Chinese molds are in the form of a square 40 cm on a side and 8-11 cm deep). When the mold is almost full, cover it with linen, then a wooden pressing lid atop which stones are placed as a pressing weight.

After being pressed for 1½ hours the cheese [tofu] is ready to eat.

Cheese prepared in this way will not last more than two days in the summer; to make it last longer, press it under greater pressure for a longer time and add spices and/or seasonings. This firmer tofu can be eaten fried in butter or oil.

Four cakes of Chinese tofu (1 cake weighs 640 gm) retail for 2-4 cash (*sapeques*) (100 sapeques = 50 centimes). There are 25 cakes. One can flavor fresh tofu with sweet or saltiness.

Mr. Chevreul–remarks on the importance of investigating the lipids present which are analogous to butyrine, for it has been known for a long time that the main odor of cheese resembles that of butyric acid.

Mr. Champion–has prepared cheese with ordinary peas. In China, cheese is made using peas and beans.

Mr. Brongniart–wishes that samples of all the varieties of legumes which can be used for making this cheese could be sent to France.

Mr. Payen–likewise asks Mr. Champion to collect information on the raising of silkworms and on the manner of preventing their illnesses.

Mr. Guérin-Méneville–adds that it is essential to complete existing information, adding precise details and circumstances, on the processes for making silk and the dividing of cocoons.

Mr. Payen–in closing asks for Mr. Champion to make more observations on the preparation of green tea and brown tea, and on the alimentary regimen [daily diet] of the Chinese people.

Mr. Pepin–wants more information about and samples of ginseng (*Panax quinquefolium*), which plays the role of a universal panacea in China. Address: France.

174. Champion, Paul. 1866. Sur la fabrication du fromage de pois en Chine et au Japon [On the production of tofu in China and Japan]. *Bulletin de la Societe d'Acclimatation* 13:562-65. Oct. Meeting of June 1. [Fre]

• ***Summary:*** "The Chinese and the Japanese eat considerable quantities of a white material rather analogous in its appearance to the French product named *fromage à la pie* (quark), and which they make with a particular type of soybean (*Pois oléagineux*) which is also used for food and from which one can extract a rather expensive and very good quality oil. The production of this cheese [tofu] is simple, but it requires care and rather extensive practice to produce a white product."

© Copyright Soyinfo Center 2013

The author then gives a detailed 3-page description of how tofu (*fromage de pois*, literally "pea cheese") is made–though he never mentions its name in either Chinese or Japanese.

Note. This is the earliest French-language document seen (April 2013) that uses the term *fromage de pois* to refer to tofu.

It is coagulated with magnesium chloride, and will keep for 1 day in summer and 1 week in winter. It is also often salted and it is mixed with various sauces which allow it to keep for several years. In the process of making tofu, the hot soymilk is poured into a second tub and allowed to cool before the coagulant is added. The foam is removed using a copper scoop. After several minutes, a skin / film (*une peau*) [yuba] forms on the surface of this liquid. It can be lifted off by passing a stick (*baguette*) underneath it and hung up to dry by inserting one end of the stick into one of many holes that have been deliberately created in the wall. This film, by the way, has a rather agreeable taste, and is eaten either fresh or dried; a second film is often formed and is lifted off in the same manner.

Note 1. This is the earliest French-language document seen (Oct. 2012) that mentions yuba, which it calls *une peau.*

After the tofu has been pressed, so that the volume has been reduced by half, it is removed from the forming box, or the tofu (cheese) is sometimes shipped out to a great distance. To transport them, it is sufficient to close the box with planks, nailed with the aid of bamboo pegs. Arriving at the destination, it is cut into small pieces by means of a large metal knife.

Tofu (pea cheese) is generally a grayish white and looks like a jelly. It does not keep for more than a day during the hot months, and to preserve it from rapid deterioration, it is generally mixed with salt or sauces of various types. It can then be kept for several years. A piece of tofu the size of a fist sells for 2 Cash (i.e., 1 centime).

He then (p. 564) describes shops in China selling hot soymilk for breakfast. "Generally, the shops where this cheese (*ce fromage* = tofu) is made are filled with Chinese, who bring cups to get some of the hot liquid (*le liquide chaud*), which is used to make the cheese and which has not yet been coagulated; they drink this beverage (*ce breuvage*), which has an insipid but not disagreeable taste, just like we enjoy coffee with tea. For many of the poor, the morning meal consists of a cup of this liquid, in which they dip various types of deep-fried crullers" (*des espèces de gâteaux frits à l'huile*).

"I will send with this note some samples of soybeans which, according to the analysis that I am in the process of making, contain more than 10% oil, and all the materials employed in this industry as well as some small preserved dried cheeses (*des petits fromages secs conservés*), of which I have spoken above. I have seen this production established on a large scale in many ports of China from the south to Peking, and also in various ports of Japan which I have visited. This cheese, when well prepared, has a very agreeable flavor. Deep-fried it makes a delicious dish. It is widely consumed among the Chinese and would be able to be employed, I believe, to advantage in Europe."

Note 2. This is the earliest document seen (Oct. 2011) worldwide–in any language or in any country–that discusses the use of soymilk as a beverage. We find this quite surprising! Why are there no earlier references to its use as a beverage in Chinese documents? This is also the earliest French-language document that mentions soymilk, which it calls *le liquide chaud* and *ce breuvage.*

Note 3. This is the earliest document seen (April 2013) that describes how to make tofu on a commercial scale. Address: France.

175. Soubeiran, J.L. 1867. Séance de 5 July 1867 [Meeting of 5 July 1867]. *Bulletin de la Societe d'Acclimatation* 14:448-64. Aug. See p. 453. [Fre]

• ***Summary:*** Page 453: Dr. Mourier sent from Yokohama (Japan) several boxes containing: (1) Upland rice, *Okano-komé,* which is cultivated like wheat... (3) Red-azuki (*Aka-adzeuki*). (4) Black azuki (*Kouro-Adzeuki*). (5) White beans (*Shiro mamé*) [probably white soybeans]. (6) Black soybeans (*Kouro-mamé*)*;* these four seeds [Nos. 3-6] are used to make miso and tofu,

Note: Azuki beans are never used to make miso or tofu, but white and black soybeans are–especially white soybeans. Address: Secretary of the meeting.

176. Hepburn, James C. 1867. A Japanese and English dictionary; with an English and Japanese index. Shanghai, China: American Presbyterian Mission Press. xii + 558 + 132 p. 2nd ed. 1872; Abridged ed. 1873, 1881; 3rd ed. 1886; 4th ed. 1888; 5th 1894; 7th ed. 1903. First edition was reprinted in 1966 and 1983. Index. 24 cm.

• ***Summary:*** This is Hepburn's earliest Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted below), the same word is written in katakana, then again in Chinese characters. Finally, one or more definitions are given.

Soy-related words and terms in the 1867 edition:
Amazake: Sweet sake, a kind of fermented rice.

Daidz [Daizu]: A kind of large white bean. Soja hispida.

Go: Beans mashed into paste. *Mame no go.*

Gokoku: The five cereals, wheat, rice, millet, beans, *kibi.*

Hiriodz [Hiriodzu, Hiryozu]: A kind of food [made of tofu fried in oil].

Note 1. This is the earliest English-language document seen (April 2013) that contains the term *Hiriodz* (the modern spelling is Hiryozu) which refers to Kyoto-style deep-fried

© Copyright Soyinfo Center 2013

tofu treasure balls.

Ireru–*Kono mame wa yoku iremash'ta:* these beans are well parched.

Iriru–Mame wo iriru: to parch peas [beans].

Kinako ["yellow flour"]: A kind of food made of beans.

Kiradz [Kirazu]: The refuse left in making *tôfu.*

Koji: Malt made by fermenting rice or barley, in the process of making sake, and soy [sauce].

Koji-buta: A shallow box for holding malt.

Mame: Bean, pea. *Mame no ko:* bean flour [probably kinako, roasted whole soy flour].

Miso: A kind of sauce made of [soy] beans.

Natto: A kind of food made of [soy] beans.

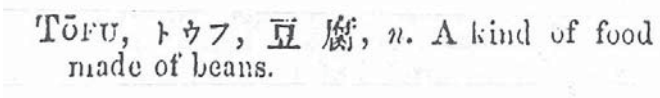
Nigari: The brine formed by the deliquescence of salt.

Sashi (verb): Shoyu wo sashi–To season with soy [sauce].

Sashimi: Raw fish cut in thin slices and eaten with soy.

Sh'taji [Sorted after "Shis," Shitaji]: Soy (used only by women). Syn. Note 2. This is the earliest English-language document seen (April 2012) that uses the word "sh'taji" or shitaji" to refer to soy sauce.

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. This is the earliest English-language document seen (April 2012) that uses the word "shoyu" (spelled correctly like this) to refer to soy sauce.



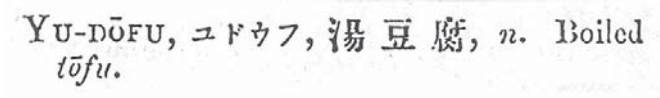
Tōfu, トウフ, 豆腐, *n.* A kind of food made of beans.

Tofu: A kind of food made of beans.

Umeboshi (*hakubai*). Dried plums. Ume-dzke [Ume-zuke]: Pickled plums. *Ume ga mada umimasen:* The plums are not yet ripe.

Yuba [hot water + leaf]: A kind of food made of beans.

Note 3. This is the earliest English-language document seen (Oct. 2012) that contains the word "yuba." The Chinese characters (meaning "hot water" + "leaf") are the same used today.



Yu-dōfu, ユドウフ, 湯豆腐, *n.* Boiled *tōfu.*

Yu-dofu: Boiled tofu.

The English-Japanese part of this dictionary starts after p. 558 and is titled "An index; or, Japanese equivalents for the most common English words." Separately numbered to p. 132, it includes: "Bean, Mame. Barm, Kôji, tane. Pea, saya yendo [saya-endo]. Soy [sauce], Shôyu."

Terms NOT mentioned include Aburaage, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 4. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans.

Note 5. This is the second earliest English-language document seen (June 1999) in which Chinese characters are used to write the name of the soybean or related products.

Note 6. This is the earliest English-language document seen that contains the word "tofu" (April 2013) or the word "natto" (Jan. 2012), or the word "koji" or the term "koji-buta" (July 2012).

Note 7. This is the earliest English-language document seen (Feb. 2004) that refers to amazake, which it calls "Amazake."

Note 8. This is the earliest English-language document seen (Oct. 2012) that uses the term "Shoyu" (or "shoyu") to refer to soy sauce.

Note 9. This is the earliest English-language document seen (Nov. 2012) that uses the word "Kinako" to refer to roasted soy flour.

Note 10. This is the earliest English-language document seen (Dec. 2008) that uses the word "Kiradzu" to refer to what is now called "okara," or "soy pulp." Address: Shanghai, China.

177. Knight, Charles. ed. 1867. The English cyclopædia–Natural History. Vol. IV: Soja. London: Bradbury, Evans, & Co. 1291 p. See p. 843.

• ***Summary:*** "Soja, a genus of Plants belonging to the natural order *Leguminosæ*.*Soja hispida* (Moench), *S. Japonica* (Savi), the *Dolichos Soja* (Linn.), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to 'form a favourite dish, called "ten-hu," or "tau-hu" [tofu], which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome' [Don 1832]. The Japanese call the seeds 'Miso' [sic] and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed 'Sooja,' which has been corrupted into 'Soy.' Soy is only sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used in moderation."

Note: The entry for "Soy" says to see "Soja."

Note: Much of the information in this entry for Soja comes from the *Penny Cyclopaedia of the Society for the Diffusion of Useful Knowledge* (London, 1841. See Soja hispida).

Also in this volume: Sesamum (p. 758). Voandzeia (p. 1224).

178. **Product Name:** [Matsuyama-Age Dried Deep-Fried Tofu].

Foreign Name: Matsuyama-agé, or Kansô Aburagé.

© Copyright Soyinfo Center 2013

Manufacturer's Name: Hodoya Shoten.
Manufacturer's Address: Doita-cho 499-1, Matsuyama-shi, Shikoku island, Japan.
Date of Introduction: 1868.
Ingredients: Water, soybeans, coagulant, oil for deep-frying.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 190. "Japan's most unique variety of agé is Crisp Agé (*Kanso Aburagé*), which comes in light crisp sheets that are mild in flavor, golden brown in color, and about 6 by 8 by ¼ inch in size. Rich in protein (24%) and natural oils (64%), it has a very low water content (4.5%), which allows it to be stored for more than 3 months at room temperature without spoilage... It has been prepared for several hundred years in the city of Matsuyama on the large island of Shikoku, as well as on Okinawa. Talk with a Japanese from Shikoku. 1981. This product has been made since the start of the Meiji period on Shikoku. Each piece is about 8 inches square. The first manufacturer was Hodoya-Shoten. The current president of Hodoya is Mr. Takaaki."

179. Pagés, Léon. 1868. Dictionnaire japonais-français [Japanese-French dictionary]. Paris: Firmin Didot frères, fils et cie. 933 p. See p. 597. [1 ref. Fre]
• ***Summary:*** This is a French translation of the Japanese-Portuguese dictionary published in 1603 in Nagasaki by the Society of Jesus [Jesuits].

Includes: Daizzou [daizu] (p. 252). (Mame), grains, ou haricots du Japon (*Soja hispida*, Moench.- Hoffm.).

Mame (p. 518). Haricots, ou pois chiches du Japon (*Soja hispida*, Moench.- Hoffm.).

Miso (p. 548): Certaine préparation de graines, de riz, et de sel, avec lequel on assaisonne le *Chirou* [*shiru*] du Japon.

Nattô (p. 597). Certain mets de grains légèrement cuits, et ensuite mis au four. Nattôjirou [nattôjiru]. *Chirou* [*shiru*] ou bouillon fair avec des grains [nattô].

Note: This is the earliest French-language document seen (Jan. 2012) that mentions natto.

Tôfou [tofu] (p. 803). Espèce d'aliment qui se fait avec des grains pulvérisés, en manière de fromage frais. Tôfouya [tofu-ya]. Maison où l'on fait ou vend des especès de fromages, faits de grains amollis dans l'eau et réduits en pâte. Address: Japan.

180. Saito, Akio. 1868. [Chronology of soybeans in Japan, 1700 to 1868, the last half of the Tokugawa / Edo period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 16. Feb. p. 10-11. [Jap]
• ***Summary:*** 1707 May–The Tokugawa shogunate government (*bakufu*) passes a law to lower the prices of goods. Shops selling high-priced tofu are punished. But tofu makers argue that although the price of soybeans has dropped, the prices of other ingredients such as nigari and oil have risen.

1709–Kaibara Ekken (1630-1714) writes *Yamato Honso,* in which he discusses the shapes and use of the 1,362 products from Japan, China, and other countries. He notes that among the five crops (*go-koku*), soybeans are the second most widely produced after rice.

1712–Kaempfer, the German physician and naturalist who stayed in Japan during 1691-1692, writes *Nihon-shi* in the Netherlands. In the book he discusses soybeans and includes a very accurate illustration of the soybean. This draws the attention of other European scholars.

1722–Kinzanji miso becomes popular in Edo (today's Tokyo).

1724 Feb.–The Tokugawa shogunate government commands that various goods, such as sake and shoyu [soy sauce], should be lower in price because the price of rice has decreased.

1726–The amount of shoyu imported to Edo from the Osaka-Kyoto area (*kudari shoyu*) is about 132,000 kegs (*taru*). Note: The average keg held 9 shô = 16.2 liters = 4.28 gallons (U.S.). Thus, 132,000 kegs = 564,960 gallons or 2,138,400 liters.

1730–The amount of shoyu imported to Edo from the Osaka-Kyoto area increases to 162,000 kegs.

1739–A French missionary living in China sends some soybean seeds to France for the first time. Attempts are made to grow them at the botanical garden, but the weather is not good and they fail. Later unsuccessful attempts were made to grow soybeans in Germany in 1786 and in England in 1790. There is another theory which says that the soybean went to Europe through Russia.

1748–The cookbook titled *Ryôri Kasen no Soshi* is published. It is the first cookbook which introduces the present form of tempura batter.

1753–The Swedish naturalist Linne (Linnaeus; 1707-1778) gives the soybean its first scientific name.

1770–Sugita Genpaku (lived 1733-1817) discusses the nutritional value of foods and uses the word *eiyo* (meaning "nutrition") for the first time in Japan.

1782–The book *Tofu Hyakuchin* (One hundred rare and favorite tofu recipes) is written by Ka Hitsujun (his pen name) of Osaka. He introduces about 100 tofu recipes. The next year he publishes a supplementary volume, *Zoku Tofu Hyakuchin.* He divides tofu recipes into five different categories according to their special characteristics, like common, regular, good, very good, and fantastic (*jinjohin, tsuhin, kahin, myohin, and zeppin*). In his jinjohin category, he includes 36 recipes such as *Kinome Dengaku, Kijiyaki, Dengaku,* etc.–showing that these were common recipes of the period. Over the next several years, many books with the word "Hitsujin" at the end of the title appear.

1783-1787–The terrible famine of the Tenmei period (*Tenmei no Dai Kikin*) occurs. It is worst in Oou province, where several hundred thousand people die of starvation. Many farm villages are abandoned.

© Copyright Soyinfo Center 2013

1788–At about this time the word *nukamiso* first appears.

1802–Takizawa Bakin (lived 1767-1848) writes *Kiryo Manroku,* a travel book, and in it he states: "Gion tofu is not as good as the Dengaku of Shinzaki, and Nanzenji tofu is not better than Awayuki in Edo. He criticizes tofu as a famous product from Kyoto (*Kyoto meibutsu tofu*) in his writing.

1804–Takahashi Fumiuemon (or Bunuemon) on the island of Shodoshima starts making shoyu; he starts selling it in 1805.

1810–Choshi Shoyu receives an order from the Tokugawa Bakufu (*Gozen Goyo-rei*).

1818–There are now 10 miso manufacturers in Edo (today's Tokyo). Yomo Hyobei's miso shop in Shin Izumi-cho (presently Ningyo-cho 3-chome, Nihonbashi, Chuo-ku, Tokyo) has a prosperous business. In some funny poems (*Senryu*) this shop is mentioned: "With sake and miso their name is ringing in the four directions" (*"Sake, miso de sono na mo shiho ni hibiku nari"*). And: "This shop is surrounded by nested boxes for food, and these boxes are used for red miso" (*"Jûbako ni torimakaretaru shiho-ga-mise"*). His red miso and his fine sake made with water from a waterfall (*takisui*) are very popular.

1822–Pounded natto (*tataki natto*), an instant food made of chopped natto, sells for about one-fifth the price of tofu on a weight basis. The restaurant Sasa no Yuki in the Negishi area of Edo, becomes well known for its tofu cuisine.

1832–Shoyu production in Noda reaches 23,000 koku (1 koku = 180 liters or 47.6 gallons), compared with only 17,000 koku in Choshi. Thus Noda passes Choshi in shoyu production.

1839–Shibata Kyuo (1783-1839), a follower of Shingaku, writes *Zokuzoku Kyuo Dowa* in which he pens words that later become famous: "In a place where the cuckoo can sing freely, you have to walk 3 *ri* (1 *ri* = 2.445 miles or 3.924 km) to buy your sake and 2 *ri* to buy your tofu" (*Hototogisu jiyu jizai ni naku sato wa, sakaya e san ri, tofu-ya e ni ri*). Shingaku, founded by Ishida Bangai, is a popular teaching of the time combining Shinto, Buddhism, and Confucianism (*Jugaku*). It emphasizes that "to understand heart/mind is the most important thing."

1845–Inari-zushi becomes very popular in Edo. It originated around Hiranaga-cho (presently Sadacho 1-chome, Chiyoda-ku, Tokyo). It is made with deep-fried tofu pouches (*abura-agé*) stuffed with rice or okara and sells for 7 *mon* each.

1851–There are now 140 miso manufacturers in Edo. Half of them are in the Hongo area of Tokyo.

1853–Kitagawa Morisada (born 1810) writes *Morisada Manko,* the story of his life during the Edo period. In it he says of tofu: "In the Kyoto-Osaka area it is soft, white, and delicious, but in Edo [today's Tokyo] it is hard, not white, and not tasty." Of miso he says: "In the Kyoto-Osaka area many people make their own miso each winter, but in Edo people buy red miso and Inaka miso (from the countryside), and nobody makes their own miso." Concerning the sale of natto (*natto-uri*) he says: "Cook soybeans, ferment them overnight, then sell them. In the old days, natto was sold only in the winter, but recently it has also come to be sold in the summer."

1857–Soybean varieties brought back from Japan by the Perry Expedition are distributed to the U.S. Commissioner of Patents.

1858–Eitaro, a Japanese confectionery shop in Nihonbashi, Edo, starts selling Amanatto [sugar-sweetened red beans] made from Kintoki Sasage for the first time. Sasage is a type of cowpea [*Vigna sinensis*].

1864–For the first time shoyu made in the area around Edo (*Kanto shoyu*) is permitted to use the term "highest quality shoyu" *saijo shoyu* to describe the product.

1865–Inflation in Edo. The prices of rice, sake, miso, oil, vegetables, fish, etc. skyrocket. The Tokugawa Shogunate (*Bakufu*) orders people to lower their prices and forbids holding back or buying up goods. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

• ***Summary:*** Contains a chapter about tofu titled "Fabrication du fromage de pois en Chine et Japon," by Champion and Lhôte (p. 185-89), which is cited separately. Address: Champion: Prof. of Chemistry at the Polytechnic Assoc. Former delegate of the Society for Acclimatization in China and Japan.

182. Champion, Paul; Lhôte, M. trans. 1869. Fabrication du fromage de pois en Chine et au Japon [Production of tofu in China and Japan]. In: P. Champion and S. Julien, eds. 1869. Industries Anciennes et Modernes de l'Empire Chinois... Paris: Eugene Lacroix. xiii + 254 p. See p. 185-89. [Fre]

• ***Summary:*** This chapter gives a detailed description of the production of tofu, but also mentions soymilk and yuba. "Tofu (*Le fromage de pois*, literally "pea cheese") which is regarded in China and Japan as a very important food, looks similar to *fromage à la pie* (a smooth cottage cheese or soft cream cheese; quark). It is made from a particular variety of soybeans (*pois oléagineux*, literally "oil peas"), which are also consumed directly and which can be used, in addition, to make an oil of very good quality and rather high price.

"The production of tofu is simple, but it demands much care. The soybeans are first soaked for about 24 hours, then

© Copyright Soyinfo Center 2013

they are drained in a wicker basket. Next they are ground in a mill, while mixing them with the soak water, which had been set aside. The mill used for this purpose is made of horizontal discs of hard stone. The upper stone is pierced with a conical hole. The apparatus is rotated by means of a connecting rod, connected by joints, that a worker rotates with one hand while the other hand is used to throw the soybeans into the hole of the upper stone with a spoon / scoop (*cuiller*). With each addition of the soybeans, a certain amount of water for grinding is added. The soybeans, ground by the action of the mill, are transformed into a liquid slurry (*bouillie liquide*), which collects between the millstones, falls into a circular channel, and accumulates in a tub. This slurry is poured onto a filter formed of a linen cloth attached to an overhead frame; when the filtration is very slow, the material is mixed. To facilitate this operation, the frame / chassis is suspended from the ceiling at the height of a man.

"The liquid filtrate (*Le liquide filtré*), mixed by hand, is collected in a wooden vat and poured into a cooking pot, where it is cooked slowly. This cooking pot is formed of a deep, wide pan of cast iron, surrounded by a type of wooden tub (frame?); the metallic surface presenting a limited area, permits the person cooking the liquid, without fear, to raise the temperature briskly; this can alter the material. This apparatus is almost always used by the Chinese for cooking organic materials. A second cooking pot is located next to the first one on the same stove, in the form of a parallelepiped (a six-sided polyhedron all of whose faces are parallelograms lying in pairs of parallel planes) and receives the direct action of the fire-box. The liquid which has flowed from the mill starts to be covered with foam at about 100ºC. It is kept boiling for about 10 minutes, then is decanted into the second cooking pot, where it is subjected to a lower cooking temperature, because of the disposition of the stove. The first cooking pot, once empty, is refilled immediately with a new quantity of liquid filtrate. The drained pulp [okara] on the filter cloth is washed with water, and the liquid which runs out is used to wet the beans which undergo grinding. This wash water carries with it a significant quantity of usable material.

"When the liquid (*la liquer*) has been heated for a few moments in the second pot, it is poured into a large tub and allowed to cool. One is careful to agitate it with the aid of one's hand, causing it to rotate. The foam which forms gathers in the middle of the surface and is removed with the aid of a copper scoop. After standing for several minutes, the liquid becomes covered with a thick film

pellicle (*pellicule épaisse*) [yuba], which is removed with a stick (*baguette*) without tearing it. The film is hung up to dry by affixing the stick in the wall. Sometimes a second film is formed; it is treated in the same manner. The material thus solidified at the surface of the liquid is employed in foods. It is eaten either fresh or dried and its flavor is not disagreeable.

Note: This is the earliest French-language document seen (Oct. 2012) that uses the term "pellicule épaisse" to refer to yuba.

"The liquid which remains in the vat is destined to produce the tofu (*fromage de pois*). One first adds to it a small quantity of water mixed with plaster (*plâtre*) [calcium sulfate], which has probably been baked in the cooking stove. Finally one adds a few drops of a concentrated solution from a salt marsh. (According to our analysis, this is nothing but magnesium chloride.) The liquids are mixed slowly to form a homogeneous mass, which soon coagulates and becomes a solid. The plaster is certainly added to coagulate the casein of the soybeans (*pois*). As for the magnesium chloride, it is rather difficult to define the role that it plays; it is used in only a few cities in China.

"Once formed, the tofu curds are poured, while still hot, into a square forming box, 40 cm on a side and 5 cm deep. These boxes, stacked up double, are placed side by side on a long stone table, having gutter drains along the two sides. The boxes on the table are closed at their lower part by a fine-weave linen, through which the water trapped in the cheese (*fromage*) can flow out. When the tofu (*fromage de pois*) is sufficiently drained, it is compressed in the box where it is trapped, by putting on the top a plank laden with weights. When the volume is reduced by half, the box is removed and the cheese it contains is sometimes shipped out to a great distance. To transport them, it is sufficient to close the box with planks, nailed with the aid of bamboo pegs. After arriving at the destination, it is cut into small pieces by means of a metal knife.

"Tofu is generally a grayish white and looks like a jelly. It does not keep more than a day during the hot months, and to preserve it from rapid deterioration, it is generally mixed with salt or sauces of various types [especially soy sauce]. It can then be kept for several years.

"A piece of tofu the size of a fist sells for 2 Cash, i.e., one centime. Sellers of tofu also offer for consumption the hot uncoagulated liquid (*le liquide chaud non coagulé*) [soymilk], of which we have spoken previously. Poor Chinese nourish themselves on this substance, which has a dull flavor but is not disagreeable. The shops where this cheese is sold present a curious aspect at certain times of the day. Chinese workers come in great numbers to buy a portion of liquid cheese (*de fromage liquide*), which they carry away in small cups; others consume the coagulated cheese on the spot.

"For many people of the poorer class, the morning meal consists solely of a cup of soymilk (*une tasse de fromage de pois liquide*) in which they soak some cakes [crullers] that have been deep-fried in oil."

Note: This is the earliest French-language document seen (Oct. 2003) that uses the term *fromage de pois liquide* to refer to soymilk.

"The production of tofu ("pea cheese") is executed on a

© Copyright Soyinfo Center 2013

grand scale in most of the ports of China through which we have traveled, from the south to Peking, and in the few towns in Japan that we have been able to visit.

"Tofu is rather agreeable in flavor. It could render a great service to the feeding and nourishment of Europeans if they are able to cultivate the seeds... Tofu, deep-fried like french-fried potatoes, makes a very delicious dish.

"The seeds used to make tofu usually contain 17% of a clear oil, whose flavor is not disagreeable."

"We will add to the above information some analytical results that our colleague, Mr. Lhôte, and we, have obtained on the soybeans (*pois oléagineux*, literally "oil peas") and tofu (*le fromage*)." A table (p. 189) gives: (1) The percentage composition of soybeans (now called *Pois de Chine*, or Chinese Peas) on an as-is basis and on a moisture-free basis: Water 15.07/ -, ash 4.63/5.45, lipids (*matières grasses*) 12.98/15.28, and nitrogen 5.79/6.81.

(2) The percentage composition of tofu (called *Fromage de pois*, or pea cheese) on an as-is basis and on a moisture-free basis: Water 90.37/ -, ash 0.76/7.89, lipids 2.36/24.50, and nitrogen 0.78/8.09.

(3) The percentage composition of yuba (called *Matière coagulée pendant la préparation du fromage*, or "The material coagulated during the preparation of tofu") on an as-is basis and on a moisture-free basis: Water 9.36/ -, ash 4.01/4.42, and nitrogen 9.70/10.71.

From 120 gm of soybeans on obtains 184 gm of tofu.

One full page (frontispiece, facing the title page) contains a specimen of the Chinese text translated by Mr. Stanislas Julien. The characters are written with handsome calligraphy. Address: China & France.

183. Martens, Georg Matithias von. 1869. Die Gartenbohnen. Ihre Verbreitung, Cultur und Benuetzung. Zweite vermehrte Ausgabe [Garden beans. Their distribution, culture, and utilization. 2nd expanded edition]. Ravensburg, Germany: Druck und Verlag von Eugen Ulmer. 106 p. See p. 103-05. With 12 color plates. 28 cm. [94* ref. Ger]

• ***Summary:*** The author discusses the soybean under the name *Soja hispida* Moench, gives a botanical description of the species, then and gives a classification of 13 varieties that he had secured from various sources, of which he apparently grew but one. He grew that one by his window in Stuttgart, having obtained it from the village of Daguiga, near the city of Aigun [or Ai-hun, in northeast Heilungkiang province] on the Amur River. He planted the seeds on May 23 and they were ripe by Sept. 24. He describes their area of distribution in East Asia, from the 50th north latitude in Siberia down to the Moluccas near the equator, but notes that their center of cultivation is Japan, where they are made into a type of butter named Miso, and a famous sauce named Soja that stimulates the appetite (*eine Art Butter, Miso genannt, und eine berühmte, den Appetit reizende Sauce, die Soja,...*). He considers these two delicacies fit for gourmets and epicures. The sauce was introduced to Europe by the English. In China, the beans are cooked to a white, thick paste (*Brei*), tofu (*Teu hu*), one of the most popular foods there.

In Europe, with suitable care, soybeans can be made to ripen / mature as far north as 53º north latitude, near Berlin. Thus, during the last continental blockade [first, of the British, by Napoleon, based on his 1806 Berlin Decree and 1807 Milan Decree; then in 1807 the British retaliated with their own sort of blockade], which is still an infamous memory, in the lands that at that time were part of the French empire, the soybean was prized and cultivated for a while as a coffee substitute (*als Kaffeesurrogat*). Later the milk vetch (*Kaffeewicke; Astragalus baeticus* L.), the chufa or earth almond (*Erdmandel; Cyperus esculentus* L.), and other coffee substitutes were used, but they have all been long since forgotten–except for chicory [*Cichorium intybus;* the thick roots of this perennial herb are dried, ground, and roasted, then used to flavor or adulterate coffee].

Martens divides the species into 3 subspecies based on the form of the seed, under which the varieties are named according the color and size of the seed. In this, he creates an entirely new system for classifying and naming soybeans.

I. *Soja elliptica* Martens. Seeds oval. 1. *S. elliptica nigra.* Seeds black and elongated; obtained through his son from Shanghai and Paris. 2. *S. elliptica castanea.* Seeds brown and elongated; obtained from Chefoo (China), Venice (Italy), and Berlin. 3. *S. elliptica virescens.* Seeds greenish yellow and elongated; obtained from Shanghai and Paris. 4. *S. elliptica lutescens.* Seeds yellow; brought by Mr. Schottmueller from Chefoo as "true Chinese oilbeans."

II. *Soja sphaerica.* Seeds globose/spherical. 5. *S. sphaerica nigra.* Seeds black, large; obtained from Yokohama and Nagasaki, Japan. 6. *S. sphaerica minor.* Seeds black, small; obtained from Japan and Sumatra. 7. *S. sphaerica virescens.* Seeds greenish; obtained through his son from Yokohama as "Ao mame" and from Shanghai. 8. *S. sphaerica lutescens.* (The *Soja pallida* of Roxburgh). Seeds pea-colored to pea-yellow, large; obtained from Dr. Schuebler in Oslo (Christiana), Norway, as "New Japan peas," under which name they have been recommended and popularized in the United States. 9. *S. sphaerica minima.* Seeds yellow, small; obtained through his son as "Shiro mame" from Yokohama.

III. *Soja compressa.* Seeds compressed. 10. *S. compressa nigra.* Seeds black and flat, the largest of all soybeans; obtained as "Kuro Mame" from Yokohama. 11. *S. compressa parvula.* Seeds black, small; obtained via Schotmueller from Chefoo. 12. *S. compressa virescens.* Seeds greenish; obtained from Chefoo and from Berlin as *Soja ochroleuca* Bouché. 13. *S. compressa zebrina.* Seeds brown banded with black like a zebra; obtained from the Berlin Botanic Garden.

Note 1. This is the earliest document seen (Nov. 2012) which states clearly that soybeans have been (or can be) used as a coffee substitute (*als Kaffeesurrogat*). It is also the

© Copyright Soyinfo Center 2013

earliest German-language document seen (Nov. 2012) that mentions soy coffee.

Note 2. This is the earliest document seen concerning soybeans in Norway. It is not clear whether or not the soybeans were being grown in Norway at this time.

Note 3. This is the earliest German-language document seen (April 2013) that mentions tofu, which it calls *Teu hu.*

Note 4. This is the earliest German-language document seen (April 2012) that uses the term *die Soja* to refer to soy sauce.

Note 4. This is the earliest document seen that (Aug. 1999) that divides the species into 3 subspecies based on the form of the seed, under which the varieties are named according the color and size of the seed. Martens is the first to use a number of such terms in connection with the soybean, such as "nigra" "castanea," "virescens," "lutescens," "elliptica," "Soja elliptica," "Soja pallida," etc.

Note 5. This is the earliest document seen (Feb. 2007) that uses the word "nigra" to refer to black soybeans.

Note 6. This is the earliest document seen (July 2001) in any language that contains the word "Chefoo," a port city in Shandong province, presently named Yantai (Wade-Giles: Yen-t'ai), and long associated with soybeans and soybean cake.

Note 7. Also discusses *Psophocarpus tetragonolobus* Dec. (p. 101). Address: Doctor der Naturwissenschaften, Germany.

184. *Deseret News* (*Utah*). 1870. Chinese chemistry. June 8. p. 9.

• ***Summary:*** From Shanghae News Letter: "Barley in the husk, sprouted hastily in warm water and then ground, is mixed with soft boiled *numi* [a species of glutinous rice] in the proportion of one of the former to four or five pounds of the latter, then subjected to pressure as in making bean curd [tofu]. The expressed juice, containing the starch of the rice and the saccharine of the barley germ, is then boiled over a brink fire until evaporated to a consistence slightly exceeding that of honey, if desired as a conserving syrup, or still further if intended for candies."

Note: This is the earliest document seen (June 207) concerning soy in connection with (but not yet in) Utah.

185. Bretschneider, Emil V. 1870. The study and value of Chinese botanical works. *Chinese Recorder and Missionary Journal* (*Foochow*) 3(7):172-78. Dec. Published as a 51 page book in Foochow in 1871. [15 ref]

• ***Summary:*** "Ssu-ma-ts'ien [Ssu-ma Ch'ien, lived c. 145–c. 185 B.C.], the Herodotus of China, in his historical work *Shi-ki* [*Shih-chi*, "Historical Memoirs"], written in the second century B.C., states that the Emperor Shen-nung [Shennong] 2700 B.C. sowed the five kinds of corn [grain]. Cf. *Shi-ki* Chap I. [Note: Chinese characters are given for most Chinese words.] In later times the Chinese commentators agreed that here the following corns were meant:" 1. *Shu* Panicum millet (*Panicum miliaceum* L.). 2. *Tsi* [*Chi*] Foxtail / Setaria millet (*Setaria italica* Beauv.). 3. *Shu* Soja-bean (*Glycine hispida*). 4. *Mai* Wheat. 5. *Tao* Rice.

In the section titled *Shu* (p. 175), the author discusses the soja bean at length, with many illustrations of Chinese characters: "*Shu.* This name occurs in the Shi-king and in the Ch'un-ts'iu (v.s.) and was related in ancient times probably to the *Soja-bean* (Soja Glycine) hispida. The Kuang-ya (4th century) says that the Shu and the *Ta-tou* (great bean) are the same. The Pen-ts'ao (XXIV I and 8) states that there are several kinds of Ta-tou, a black, a white, and a yellow (so named after the color of the seeds) and that from these beans *Tsiang* (Soja [chiang]), *Tou-fu* (Bean-curd) and *Tou-yu* (Bean-oil) are made. The drawing for *Ta-tou* in the Ch. W.I. [*Chi wu ming shi t'u k'ao,* a Chinese botany illustrated by woodcuts] represents the Soja hispida.*"

Footnote: *"At Peking two kinds of Ta-tou are cultivated, the *Huang-ta-tou* (great yellow bean) and the *Hei-ta-tou* (black great bean). The name great bean refers not to the seeds but to the whole plant, the Soja bean being an erect herb 3 to 4 feet high. The *Huang-ta-tou,* called also *Mao-tou* (hairy bean) is the true *Soja* bean, an erect hairy plant with trifoliate leaves, little axillare [sic] flowers, pendulous pods, and white yellowish seeds of the size of a great pea, but a little oblong. This is the 'Phaseolus japonicus erectus, siliquis Lupini, fructu pisi majoris candito' described in Kaempfer Amoen. exot., the Dolichos Soja of Thunberg."

"The *Hei-ta-tou,* which resembles much the Soja bean, is also covered with red hairs the seeds are the same size as the Huang-tou but black. I think it is a variety of the Soja bean. Both the yellow and the black bean are used for the same purpose at Peking for making Soja, and Bean-curd. *Bean curd* is one of the most important articles of food in China. It is prepared by macerating the above mentioned beans in water and milling them together with water. The liquid pap is filtered. To this fluid is added gypsum in order to coagulate the Casein and also Chlormagnesium [magnesium chloride {nigari} is a tofu coagulant]. The coagulated Casein or Bean-curd is a jelly-like appearance.

"It is known that Manchuria produces a large quantity of Beans (generally in the Reports on trade called Peas) from which by pressure *Bean-oil* or *Pea-oil* is made. Bean-oil is largely used in China for cooking and for lighting lamps. The *Bean-cakes* are exported to Swatow [pinyin: Shantou, in Guangdong Province, southern China] for purposes of manure in the Sugar plantations. New-chuang [Newchwang, later Ying-K'ou] (in Manchuria) exports chiefly Bean-oil and Bean-cakes. I have not seen the Bean used in New-chuang for this purpose, but from the description of others it must be the Soja bean. Mr. Payen (l.c. 341) has examined leguminous fruits from China, which he calls *pois oléagineux de la Chine* and states that they contain 13 per cent. oil, whilst our common leguminous seeds contain only 2 to 3 per cent. oil."

© Copyright Soyinfo Center 2013

End of footnote.

Note 1. This is the earliest English-language document seen (Aug. 2003) that mentions an existing industrial use for soybean oil (for lighting lamps).

Note 2. This is the earliest English-language document seen (Sept. 2006) that uses the the word "Soja-bean" (or "Soja-beans") to refer to the soybean.

Note 3. This is the earliest English-language document seen (Sept. 2006) that mentions *Tou-yu* as the Chinese name for soybean oil.

Note 4. This is the earliest English-language document seen (Aug. 2003) that uses the word "cakes" or the term "Bean-cakes" to refer to ground, defatted soybeans. It is also the earliest document seen (March 2001) concerning the etymology of soybean cake or meal.

Note 5. This is also one of the earliest documents seen (Aug. 2003) that clearly refers to the cultivation of soybeans in Manchuria.

Also discusses: *Coix lachryma* (Job's tears, p. 175), various millets, and buckwheat (p. 175); hemp (*Cannabis sativa*), *Kô* (kudzu, *Pachyrrhisus Thunbergianus*, p. 176), plums, and almonds (p. 176). Address: Esq., M.D., China.

186. Maclay, Robert Samuel; Baldwin, Caleb C. comp. 1870. An alphabetic dictionary of the Chinese language in the Foochow dialect. Foochow: Methodist Episcopal Mission Press. xxiv + 1107 p. See p. 773. 23 cm (8 vo.). [7 ref. Eng; Chi]

• ***Summary:*** Each Chinese character has a number, in parentheses directly above it. Below it is the Mandarin pronunciation. To the upper right of the first character for a certain sound in the Foochow dialect is written that sound. Tones are given for each character.

In the text below, we give the page number and the Mandarin pronunciation, followed by the Foochow pronunciation in parentheses.

Introduction (p. vii): "The work contains 928 different syllabic divisions or sections, as written in Roman letters and numbered in the text. This of course does not include all the distinctions arising from difference in tone."

Page 95 Chiang (Chiong): "A sauce, pickle, brine or condiment, made of salt and sugar [sic], used in cooking; relishes, seasonings, like oilmen's stores; salted preparations: com., *tién chiong* sweet condiments; *chiong heong* or *chiong hwong taing* a shop where condiments are sold; *chiong e* sauces, condiments; Coll. *tau chiong* a bean relish.

Page 234 Fu (Ho): Corrupted, rotten, spoiled. Coll. *tau ho* bean curd; *ho p'iéng* thin slices of curd; *ho kang* dried bean curd [pressed tofu].

Page 401 Chüan (Kwong): *kwong chiéng* rolls of glutinous rice (in thin crusts of bean-curd).

Page 435 K'o (K'o): To cook thoroughly. *k'o tau ho* to cook bean curd thoroughly.

Page 596 Ya (Nga): A germ, plumule, bud, or sprout. *tau nga* bean sprouts.

Page 763 Ssu [Shu] (Seuk): A general term for edible kinds of pulse.

Page 773 Shih (Sié): Salted eatables, as beans, etc., dried and used as relishes... *sié iu*, soy [sauce]; *iu sié* soy-beans or residual grains; *tau sie kiong* a sauce of salted beans and ginger; *sié iu ch'iong*, a soy [sauce] factory.

Page 783 Shao (Sieu): Coll. *sieu king chio* Sieuhing bean curd.

Page 847 Tou (Tau): Beans, peas, legumes. *tau sié* salt-bean relish; *tau ho* bean curd; *tau kang* (coll. *tau kwang*) cakes of bean curd; *tau nga* bean sprouts, made by covering so as to heat or ferment; *tau ho tea* "curd chopsticks"–the film [yuba] from the surface of the curd [hot soymilk] made into rolls [probably dried yuba rolls]; *tau ho peng* a bean-curd press; *peng tau leng* crushed beans; *tau chio* fermented bean-relish.

Note: This is the earliest document seen (Nov. 2011) that uses the term "fermented bean-relish" or the term "salt-bean relish" (with or without hyphens) to refer to fermented black soybeans (*douchi*).

Soy is also mentioned on pages 157 right side ("to diffuse the soy by tossing"), p. 227 right (flavored with soy), p. 257 right (Sort of pork balls seasoned with soy and unions), p. 365 right ("scalded with seasoning of soy, &c."), p. 557 left ("to fry with a seasoning of oil, soy, etc.").

Note: The word Foochow is also spelled Fuzhou (pinyin), and Fuhtchou. Robert S. Maclay lived 1824-1907. Address: Rev., D.D., of the Methodist Episcopal Mission; 2. Rev., A.M., of the American Board Mission [Foochow, China].

187. Williamson, Alexander. 1870. Journeys in north China, Manchuria, and eastern Mongolia: With some account of Corea. 2 vols. London: Smith, Elder and Co. Vol. 1, xx + 444 p.; Vol. 2, viii + 442 p. Illust. No index. 19 cm.

• ***Summary:*** This is a travelogue by a man whose purpose is "the distribution of the Scriptures and books and tracts in the Chinese language throughout the interior of North China. While his main interest is religious and moral (he is very critical of idolatry, ancestor worship, opium smoking, *fung shui* / geomancy, etc.), he also records many observations concerning the daily life of the people. Unfortunately the book has no index.

In volume I, Chapter 7, titled "Province of Shan-tung [Shandong], is a section on agriculture which states (p. 110): "Pulse is divided into three classes, each comprehending several varieties. The first is the common pulse, embracing the yellow and black varieties. The one is chiefly used for the manufacture of bean-cake and oil, and the other for feeding cattle. The second class comprises the small blue bean, the Kiang-teu, the small beans, including the variegated, purple, and black, and the Wang-teu, which has a bitter taste. This latter is sown in autumn like wheat, and comes originally

© Copyright Soyinfo Center 2013

from Manchuria. The third class, is the kitchen-bean, embracing the eyebrow bean, the monthly bean, the long-pod pea, and the fragrant bean. From pulse they also make a sauce of excellent quality called 'soy,' and also a bean-curd which is much used for food (Footnote: Regarding the manufacture of bean-cake, bean-oil soy, and bean-curd see *Medical Missionary in China*, p. 63-69. Dr. Lockhart)."

In describing his journey from Peking to Che-foo in November, he states (Vol, 1, p. 202-03): "Here we met many of their extraordinary wheelbarrows moving along on dry ground with a sail set; each barrow having a great wheel in the centre, finely balanced. Those we saw were laden heavily, and had a large sheet of cloth set on a frame-work in front; many of these sails were so rigged as to be capable of being raised or reefed at pleasure, the ropes or braces being attached to a hook close to the driver. We have never seen these wheelbarrows without pity; the strain to the men who manage them is enormous: indeed, we have never witnessed human beings under such heavy labour. We met many with fourteen bean-cakes on one barrow, equal to seven small donkey-loads."

Also mentions ground-nuts (p. 113) in Shan-tung. In Shan-si, in the war-torn town of Hoa-chow, he "could get nothing to eat but bean-cake curd [tofu]; and no dishes to eat even that in" (p. 370).

Volume II includes extensive travels in Manchuria. "Pulse [probably the soybean] is grown in all directions, and is one of the most important crops; there are several varieties, as in Shan-tung, and the purposes for which it is used are much the same" (p. 42). "Oil is extracted from several plants, chief among which is the *Sesamum*, which yields an oil used much in cooking. Next is hemp, the oil of which is used both for cooking and in lamps" (p. 43). Castor oil is also used; soy is not mentioned.

In central Manchuria: "Among the agricultural products, pulse stands first in importance as an article of food and of export;... it is sown in May and reaped in October" (p. 64). "We found the poppy under cultivation in all quarters... Natives told us that it was much more profitable than pulse or any kind of grain... Sad is the havoc this drug is making in China, and the worst is yet to come" (p. 65).

Appendix C (p. 437-38) concerns agricultural observations made by the author in 1868 in and around Che-foo. For example, on May 5, rice, pulse, and sesamum are sown. Sept. 7–Sesamum reaping. Oct. 8–"Barley sowing; pulse and yellow beans reaping; peanuts."

Appendix D (p. 439-42) contains two lists of plants collected by the author in 1869. The first is from Shan-tung. Among the Leguminosæ are "Glycine sp." and "Medicago sativa" [alfalfa]. The second is from North China and Manchuria. Under Leguminosæ the peanut is mentioned, but not the soybean.

Note 1. Rev. Alexander Williamson lived 1829-1890.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "bean-cake curd" to refer to tofu.

Note 3. This is the earliest English-language document seen (March 2007) that uses the term *Medicago sativa* to refer to the scientific name of alfalfa. Address: Rev., B.A., Agent of the National Bible Society of Scotland, Lochwinnoch, near Glasgow, Scotland.

188. Bretschneider, Emil V. 1871. On the study and value of Chinese botanical works, with notes on the history of plants and geographical botany from Chinese sources. Foochow, China: Rozario, Marcal & Co. 51 p. See p. 9. Illust. with 8 Chinese woodcuts. 22 cm. [61* ref. Eng]

• ***Summary:*** In the following, Chinese characters in the text precede most Chinese words, such as the names of plants, foods, authors, and many books. "Ssu-ma-ts'ien, the Herodotus of China, in his historical work *Shi-ki* (pinyin: *Shiji*, by Sima Qian), written in the second century B.C., states that the Emperor Shen-nung [Shennong] 2700 B.C. sowed the five kinds of corn [five grains, *wugu*] (p. 7).

The third of these is *shu*, the soja bean, which is discussed in both the text and in a long footnote (p. 9). "Shu. This name occurs in the *Shi-king* [*Shijing*, Book of Odes, ca. 1000 BC] and in the *Ch'un-ts'iu* [*Chunqiu*, Spring and Autumn Annals, 500 BC] (v.s. [see above]) and was related in ancient times probably to the Soja-bean (Soja / Glycine hispida). The Kuang-ya (4th century) says that the Shu and the *Ta-tou* (great bean) are the same. The *Pên-ts'ao* (XXIV, I and 8) states that there are several kinds of Ta-tou, a black, a white, and a yellow (so named after the colour of the seeds) and that from these beans *Tsiang* (Soja) [sic, jiang], *Tou-fu* (Bean-curd), and *Tou-yu* (Bean-oil) are made.*"

The footnote states: "* At Peking, two kinds of Ta-tou are cultivated, the *Huang-ta-tou* (great yellow bean) and the *Hei-ta-tou* (black great bean). The name great bean refers not to the seeds but to the whole plant, the Soja bean, being an erect herb 3 to 4 feet high. The *Huang-ta-tou*, called also *Mao-tou* (hairy bean) is the true *Soja* bean." "Both the yellow and the black bean are used for the same purpose at Peking for making Soja [soy sauce], and Bean-curd. Bean-curd is one of the most important articles of food in China. It is prepared by macerating the above mentioned beans in water and milling them together with water. The liquid pap is filtered. To this liquid is added gypsum in order to coagulate the Casein and also Chlormagnesium [magnesium chloride, i.e., nigari]. The coagulated Casein or Bean-curd is a jelly-like appearance.

"It is known that Manchuria produces a large quantity of the Beans (generally in the Reports on the trade called Peas) from which by pressure Bean-oil or Pea-oil is made. Bean oil is largely used in China for cooking and for lighting lamps. The Bean-cakes are exported to Swatow for purposes of manure in Sugar plantations. New-chuang [Newchwang; later Yingkou] (in Manchuria) exports chiefly Bean-oil and

© Copyright Soyinfo Center 2013

Bean-cakes."

The Preface begins: "In presenting these pages to the learned world, I consider it my duty to confess, that I am neither a Sinologue nor Botanist, my knowledge in Chinese as well as in Botany being very limited. But living in the Chinese Metropolis five years, I was encouraged by the favourable conditions in which I found myself, to make some inquiries into Chinese plants and to venture on the publication of these notes on Chinese Botany... Although I had the advantage of having access to the splendid library of the Russian Ecclesiastical Mission at Peking, where are to be found not only all Chinese works of importance, but also most European books relating to China,–the reader will observe the want of some special works on Botany."

Concerning the *Pên-ts'ao k'ang-mu* (p. 4-6), Bretschneider concludes: "On the whole it can be said... that the descriptions of plants therein are very unsatisfactory." "The *Pên-ts'ao* is often inconvenient for reference, the paper and the impression being bad and the misprints numerous."

As a general overview of the entire subject he concludes (p. 6-7): "It is true, the Chinese possess very little talent for observation and zeal for truth, the principal conditions for the naturalist. The Chinese style is inaccurate and often ambiguous. In addition to this the Chinese have an inclination to the marvelous and their opinions are often very puerile. None of the Chinese treatises can be compared with the admirable works of the ancient Romans and Greeks, *Plinius, Dioscorides* (both of the first century) &c. Nevertheless the Chinese works on natural science are very interesting, not only for the sinologues, but also for our European naturalists" interested in "geographical botany, and the history of cultivated plants."

The last section, titled "List of Chinese works quoted in the foregoing notes" (p. 48-51) gives 61 works, sorted chronologically, and grouped into dynasties. "The information regarding them has been derived from an examination of the *Ssu-k'u ts'üan-shu,* the great Catalog of the Imperial Library 1790. I hereby give only the title, the author's names and the time of publication." The earliest grouping, "Works written before the third century B.C." begins: *"Shen-nung pên-ts'ao-king.* Classical herbal, or Materia medica of the Emperor Shên-nung, 2700 B.C." Note: This is now generally cited as: *Shennong bencao jing* (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (100 AD).

Originally published as articles in the *Chinese Recorder and Missionary Journal* (Foochow) in 1870-71 (vol. 3). In a footnote describing this original publication, in Bretschneider's article in the *Journal of the North-China Branch of the Royal Asiatic Society,* 1882, he writes, "The editor of this periodical, at that time, seems to have had little experience in proof-reading; at any rate my paper (although presented in a very clear manuscript) came to light with such a profusion of misprints and other inaccuracies, that it would have been ridiculous to append to it a complete list of *errata.* I therefore would feel quite disposed to disavow this my first scientific essay; all the more since at the time I wrote it I had not yet sufficiently mastered the subject, and many of my former statements require modification."

Also discusses: Hemp (*Cannabis sativa, ma;* the male plant is called *si* while the seed-bearing female plant is called *tsü;* p. 5, 10). *Arachis hypogaea* (Ground-nut, *Lo-hua-sheng,* p. 5). Job's tears (*Coix Lachryma,* p. 9). Kudzu (p. 10). Address: M.D., Physician of the Russian Legation at Peking, China.

189. Smith, Frederick Porter. 1871. Contributions towards the materia medica & natural history of China. For the use of medical missionaries & native medical students. Shanghai, China: American Presbyterian Mission Press, and London: Truebner & Co. vii + 237 p. See p. 88, 202-03. 24 cm.
• ***Summary:*** This book, based in part on the famous *Pen-ts'ao kang-mu* by Li Shih-chen (1578-1597), contains a listing of medicinal plants arranged alphabetically by either their popular English name or scientific name. Chinese characters for the plant name, the romanized Chinese name, and key related terms are also given immediately after the main entry. There is no index. The soy bean is listed under "Dolichos soja (*Hwang-ta-tau;* characters = Yellow + large + bean), (*Mau-tau;* characters = hairy + bean).–The hairy, short pods of this Leguminous plant are eaten, when freed from the valves. They are mixed with vinegar and sesamum-

DOLICHOS SOJA.—黃大豆 (*Hwang-ta-tau*), 毛豆 (*Mau-tau*).—The hairy, short pods of this Leguminous plant are eaten, when freed from the valves. They are mixed with vinegar and sesamum-oil, and drank as a cooling draught in summer. The ripe, ovoid, yellow beans are used to make bean-curd 豆腐 (*Tau-fu*), a substance largely consumed by the Chinese when vegetables are not very plentiful. It is the cheese of the Chinaman. The beans are ground and pressed to produce the bean-oil, or pea-oil, as it is sometimes miscalled by foreigners. The beans are said to be laxative, peptic and nutrient. Bean-sprouts 豆芽 (*Tau-ya*), are the germinating beans of this plant, artificially raised in large quantities for food in winter.

© Copyright Soyinfo Center 2013

oil, and drank as a cooling draught in summer. The ripe, ovoid, yellow beans are used to make bean-curd (*Tau-fu*), a substance largely consumed by the Chinese when vegetables are not very plentiful. It is the cheese of the Chinaman. The beans are ground and pressed to produce the bean-oil, or pea-oil, as it is sometimes miscalled by foreigners. The beans are said to be laxative, peptic [promoting digestion] and nutrient. Bean sprouts (*Tau-ya*), are the germinating beans of this plant, artificially raised in large quantities for food in winter (p. 88) (see previous page).

Note 1. This is the second earliest English-language document seen (Jan. 2013) that refers to soy sprouts, which it calls "Bean sprouts (*Tau-ya*)... And this is the earliest English-language document seen (Jan. 2013) that uses the term "Bean sprout" or *Tau-ya* to refer to soy sprouts, then goes on to explain what these terms mean.

Note 2. This is the earliest document seen (Feb. 2000) that uses the word "laxative" in connection with soy beans.

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "cheese of the Chinaman" to refer to tofu.

Note 4. This is the earliest English-language document seen (Sept. 2006) that uses the term "pea-oil" ("as it is sometimes miscalled by foreigners") to refer to soybean oil

Also on p. 88, under *Dolichos trilobus* (*Koh*) is a description of kuzu. "The Pachyrizus trilobus is sometimes included under this name... A fibre resembling linen, called (Chinese characters) *Koh-pu* or *Kung koh,* of a yellow color, very fine and durable, and much prized in Hankow, is obtained from the climbing branches. The best of this cloth comes from Wu-chang hien (Hupeh), and from Kwang-sin fu in Kiangsi. The root is eaten, although to some extent deleterious, if not thoroughly cooked. A kind of arrow root (Chinese characters), called *Koh-fen,* is made from the root in Ngan-king fu (Nganhwui), Kwang-sin fu (Kiangsi) and at Teh-ngan fu (Hupeh). Emetic, diaphoretic and antiphlogistic properties reside in the root, which is given in fevers, exanthemata and rashes of all kinds, and in bloody fluxes [excessive abnormal discharge from the bowels]. Every part of the plant is officinal" [medicinal].

Soy sauce (p. 202) is listed under "Soy (*Tsiang-yú*)–The condiment known by this name, derived from a Chinese synonyme used by the Japanese, is a black, thin liquid, having an agreeable, saltish flavour, and frothing up of a yellow colour when very slightly shaken. It is the universal sauce of the Chinese and Japanese, and is largely exported to India and Europe as a convenient menstruum for other flavouring substances used as condiments. The yellow beans of the Dolichos soja are boiled very soft, and mixed with any cereal flour in varying proportions, and allowed to ferment and become mouldy. Salt and tea, or boiling water, are then added, and the mixture is then exposed to the sun and dew of the open air for three weeks or a month, care being taken to avoid rain. The liquid becomes much thicker, darker and more uniform in consistence, and after constant stirring is then strained and kept for use. Bran is sometimes used in making it. Large quantities are both sold from the shops and made at home by the Chinese. It is considered to provoke the appetite, and to correct any injurious quality of food. It is laxative, cooling, and an antidotal, according to Chinese estimation. It is sometimes daubed upon burns, scalds, eczematous and leprous sores."

Note: This is the earliest English-language document seen (April 2012) that uses the term "Tsiang-yú" to refer to the Chinese word for soy sauce.

Under "Maccaroni [Macaroni] (Mien-kin)," following the description of the basic kind made from wheat flour (which is "a part of the diet of priests and those fasting from animal food"), we read: "A kind of macaroni, very much like foreign macaroni, is made from bean-curd and called *Tau-kin* (bean + muscle, sinew, or tendon)."

Under "wheat," the author discusses the grain itself, "wheaten flour," and "wheaten starch," but he does not mention wheat gluten. Nor are azuki beans (*hsiao-tou*) listed. Bretschneider harshly criticizes this book: "Of little value, unreliable." But Rev. G.A. Stuart, M.D., in his Chinese Materia Medica (1911) states on the title page "Extensively revised from Dr. F. Porter Smith's Work." Smith lived 1833-1888. He wrote the preface in Nov. 1870 from Hankow, China. Address: Medical missionary (from England) in central China [Hankow].

190. *Phoenix* (*The*)*: a Monthly Magazine for India, Burma, Siam, China, Japan & Eastern Asia.* 1872. Japanese proverbs. 2(23):191. May. [Eng]

• ***Summary:*** "(52) *Tôfu ni kasugai:* Like using a clamp-shaped nail to fasten Tôfu (a soft kind of food) together."

Note 1. This is a remarkable periodical, with many interesting articles about East Asia in each issue.

Note 2. This article started on page 127 (No. 20, Feb), where it states: "We are indebted to Mr. W. G. Aston, Interpreter to H.M. [British] Legation in Yedo, for the text and translations which we give below, and also to two Japanese gentlemen for a careful revision of both."

191. Young, Alexander. 1872. Chinese food and cookery. *Appletons' Journal* (*New York City*) 8(181):291-93. Sept. 14.

• ***Summary:*** "The Chinese pork has a shining, flabby appearance which is not attractive to foreign eyes, and its rank, coarse taste does not invite renewed attention from the wary stranger. Cut into thin slices and fried in soy, which relieves the gross flavor of the meat, it is not absolutely repulsive" (p. 291 R.2).

"Among vegetables, of which there is great variety, peas and beans are in high favor. Some kinds of beans are made into soy [sauce], by boiling and powdering the kernels, and fermenting them with yeast; others are boiled and ground, and mixed with water, gypsum, and the juice of yellow

© Copyright Soyinfo Center 2013

seeds, forming bean-jam" (p. 292 R.6). Note: This "bean-jam" seems to be bean curd / tofu!

"The Chinaman, believing that cookery is the test of civilization, regards the carving processes of European and American society as conclusive proof of barbarism. An Englishman's mode of feeding, he says, allies him to the savages of Formosa; the chief labors of the slaughter-house being transferred to the dinner-table, and the principal work of the kitchen being performed by the stomach. 'In remote ages, before we became civilized,' said a polite Chinaman to a correspondent of the London *Times*, 'we used knives and forks as you do, and had no chopsticks. We still carry a knife in our chopstick-case, but it is a remnant of barbarism– we never use it. We sit down to table to eat, not to cut up carcasses'" (p. 292 C.5).

192. Doolittle, Justus. 1872. A vocabulary and hand-book of the Chinese language, romanized in the Mandarin dialect. 2 vols. in 3 parts. Foochow: Rozario, Marcal, and Company. London: Trubner & Co. New York: Anson D.F. Randolph & Co. Reissued in 1878. [Eng; Chi]

• ***Summary:*** In vol. 1, part 1, p. 272: "Ketchup, (a kind of sauce) shih yu." Note: The two Chinese characters (2 Cc) are printed to the left of their romanized form "shih yu." "Shih" means "fermented black soybeans." We would translate "shih yu" as "fermented black soybean sauce."

In vol. 2, parts 2 and 3. Page 36: Dip in the soy and eat it (Cc).

193. Hepburn, James C. 1872. Japanese-English and English-Japanese dictionary. 2nd ed. Shanghai: American Presbyterian Mission Press. xxxi + 632 + 201 p. 28 cm.

• ***Summary:*** This is Hepburn's 2nd Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted below), the same word is written in katakana, then again in Chinese characters. Then comes an abbreviation of the part of speech (n. = noun; v. = verb, etc.). Finally, one or more definitions are given.

This 2nd edition is 162 pages longer than the original 1867 edition; the Introduction is 19 pages longer, the Japanese-English section 74 pages longer, and the English-Japanese section 69 pages longer.

We will not repeat definitions that are identical to those in the 1867 edition. For new spellings, the 1867 spelling will be shown in parentheses. No new soy-related words were found in this 1872 edition. Soy-related words and terms in the 1872 edition: Adzuki (replaces Adzki) [azuki]. Amazake. Daidzu (replaces Daidz) [Daizu]. Hiriodzu (replaces Hiriodz) [Hiryozu]: A kind of food made of *tofu* fried in oil.

Note 1. This is the earliest English-language document seen (April 2013) that contains the term *Hiriodzu* (the modern spelling is Hiryozu) which refers to Kyoto-style deep-fried tofu treasure balls.

Kinako.

Kiradzu. Koji: Barm or yeast made by the fermentation of rice or barley, in the process of making sake and soy [sauce]. Koji-buta: A shallow box for holding barm. Miso. Miso wo suru: To rub *miso* in a mortar. Natto.

Nigari. Sashi (verb). Sashimi. Shitaji (replaces Sh'taji).

Note 2. This is the earliest English-language document seen (April 2012) that uses the word "shitaji" [spelled like this] to refer to shoyu or soy sauce.

Shoyu. Tofu: A kind of food made of beans, bean curd. Umeboshi (*hakubai*).

Yuba [hot water + leaf]. Yu-dofu.

The English-Japanese part of this dictionary starts after p. 558 and is titled "An index; or, Japanese equivalents for the most common English words." Separately numbered to p. 132, it includes: "Barm, Kôji; tane." "Soy, Shôyu."

Terms NOT mentioned include Abura-age, Aburaage, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently still did not realize that the various soyfoods he defined (with the possible exception of hiriodzu and soy sauce) were made from soybeans. Address: M.D., LL.D.

194. Katagiri, Torakichi; Sakakibara, Yoshino. 1872. Tôfu shûsetsu [Tofu: Collected theories]. Tokyo: Ministry of Education. 40 p. Illust. 19 cm. [Jap]

• ***Summary:*** The cooking teacher and author was Sakakibara Yoshino. The tofu production teacher was Katagiri Torakichi. Both of the first two men told it by word of mouth. It was written by the Japanese Ministry of Education (*Mombusho/ Monbusho*).

This charming booklet contains many illustrations (line drawings) of different types of tofu (*tsuto-dofu, tsumiire tofu, Matsukawa-dofu, yaki-dofu, agé-dofu, chikuwa-dofu, shôro-dofu* [pine-dew tofu]) and tofu making equipment (hand-turned stone mill on a stand, wooden tubs and vats, ladles, bamboo whisk, pressing sack design, a round wooden lever being used to press soymilk from the pressing sack into a wooden vat, bamboo colander, paddle for stirring in nigari, forming box cloths, forming box design, large knife for cutting tofu into cakes).

For an English-language translation of a document quite similar to this one, with different but related illustrations, see Richard B. Hubbard (1886).

Note 1. This is the earliest document seen (April 2001) that discusses or illustrates equipment for making tofu.

Note 2. This is the earliest booklet seen (Oct. 2001) that mentions soy.

195. Medhurst, Walter Henry. 1872. The foreigner in far Cathay. London: Edward Stanford. v + 190 p. No index. 19 cm. Series: Chinese Materials Center (CMC, San Francisco): Reprint No. 66 (1977).

• ***Summary:*** This is a 19th century guidebook to China. Chapter 11, titled "Eating and drinking in China" states (p. 97): "The truth is, that, unless a Chinaman is at all well to do, he rarely indulges in a meat meal at all, the usual food for the masses being, in the midland and southern provinces, plain boiled rice, with a relish for pickled fish or vegetables, salted eggs, a curd [tofu] made of lentils [sic, soybeans], &c. When meat can be afforded, pork is always the favourite dish..."

Delicacies, which are almost unknown to European palates, include sea-weed. Drunkenness is not a Chinese failing; they rarely get drunk or take to drink as a habit. "A public-house [tavern, bar] is an institution unknown." But public tea-houses abound in every street and public garden. Address: H.B.M. Consul [British], Shanghai, China.

196. Stoeckhardt, Adolph; Senff, Emanuel. 1872. Untersuchung von chinesischen Oelbohnen [Investigation on Chinese oilbeans (soybeans)]. *Chemische Ackersmann* (*Der*) 18:122-25. [Ger]

• ***Summary:*** "On a trip to England, Mr. Berndt, a manufacturer of velvet in Deuben [in Saxony], made the acquaintance of an English seaman, who told him many things about Manchuria, in China, where he had often been. He explained, among other things, that in northern China several varieties of beans are cultivated, and from them is obtained an oil (*ein fettes Oel*) which, like our cottonseed oil, is used as a food oil (*Speiseöl*), and also a type of cheese (*eine Art Käse*) [tofu], which is widely used as food. Finally, from this bean, one can make a type of soy sauce (*eine Art Soya*), which can also be used with foods. Later Mr. Berndt shared with me two small samples of these beans, which were sent to him by post from Hongkong through the arrangement of Mr. C. Eckardt; one was yellowish white and one black. The former, egg-shaped, had somewhat the size and color of small, pale peas; the latter was significantly smaller, shiny black, and of somewhat flattened, egg-shaped form. Both belong to the genus (*Gattung*) Phaseolus."

Note 1. This is the earliest German-language document (April 2013) seen that uses *Käse*, the German word for "cheese," to refer to tofu.

A table (p. 122) gives a laboratory analysis, conducted by Assistant Senff, of the two beans. It showed the following percentage composition (Yellowish white / black): Crude oil (ether extract, *Aetherauszug*) 20.53 / 16.88. Nitrogen-containing substances (*stickstoffhaltige Substanzen*) 38.54 / 38.04. Nitrogen-free extract (*stickstofffreie Extractstoffe*) 24.61 / 27.79. Cellulose (*Rohfaser* = crude fiber) 5.13 / 5.53. Minerals (ash) 4.50 / 4.62. Water 6.69 / 7.14. Note 2. This is the earliest document seen (April 2002) that mentions the term "nitrogen-free extract," which includes starch, sugar, gums, and the like. The nitrogen-free extract and fiber soon came to be classed together under the name of carbohydrates. This is also the earliest document seen (Dec. 2001) that clearly mentions fiber in soybeans, or the fiber content of soybeans.

"The composition of these beans is actually of surprisingly high grade, in part because of the high content of oil which takes the place of starch, and also because of the high nitrogen content. The chemical composition of lupine seeds (*Lupinensamen*) has already provoked lively astonishment, since in these, unlike the seeds of other known legumes, we find no starch, but rather a large amount of oil and protein (*eine reichlichere Menge von fettem Oel und Proteinstoffen*). So we are confronted with the Chinese oilbeans (*chinesischen Oelbohnen* = soybeans) in which the unique characteristic of the lupine seeds seem to be expressed in a higher potency, as shown in the following comparison." A table shows that most beans and peas contain 30-35% starch, 1.5-3% oil, and 24-26% protein. Lupine seeds contain no starch, 5-8% oil, and 30-35% protein. But the seeds of the Chinese oilbeans [soybeans] contain no starch, 16-20% oil, and 38-39% protein. The oilbeans are thus shown to be the most protein-rich livestock fodder; they also have a high respiration value (*Respirationswerth*). They seem even more important because these two main components are also suited for the human diet. The use of the oil as food oil (*die Verwendung des Oels als Speiseöl*) is confirmed, and the use of the proteins is not unlikely, since they consist largely of plant casein, through the application of salt and aromatic plants and subsequent fermentation, may well produce a tasty cheese, like that made from milk casein. Note 3. This is earliest document seen (May 2008) that clearly mentions starch in soybeans, and states that they contain none.

Note 4. This is the earliest German-language document seen (May 2008) which refers to soybeans as *chinesischen Oelbohnen* = "Chinese oilbeans."

"The high nitrogen content of the beans may also be confirmed through an analysis of their cake (presscake?). Upon inquiry to professor Völcker [Voelcker] in London I received the answer that he could not state for sure that the beans could be used to make a type of cheese, however he has investigated the oilcake ('Chinese Oilbean Cake') and found the following percentage composition compared to rapeseed cake: oil 5.32 / 8-9. Nitrogen-containing substances 45.93 / 27-28. Nitrogen-free extract 24.52 / 32-25. Cellulose

© Copyright Soyinfo Center 2013

5.71 / 15-16. Minerals (ash) 5.70 / 6-7. Water 12.82 / 12-15.

"Concerning the preparation of soy sauce (*Soya*), this indispensable table seasoning among the people of India and seafarers, a trusted friend who is very familiar with Oriental trade conditions, informs me that 'according to tradition, certain fungi, fruits, and parts of fish (especially also parts of the crablike sea-spider) are added to it, in a very complicated and long process that lasts several months.' From another source I learned the following: 'Soy sauce (Soya) is prepared from an oil-rich bean that grows in China. During the process it is mixed with other ingredients. Thereby a significant percentage of good-tasting oil is obtained and the residue is used as an excellent fodder for cows. Can any of my valued readers provide more specific information on the above?"

Note 5. This is the earliest document seen (May 2008) containing mention of soybean cake in the western world. It also the earliest document seen (May 2008) containing an analysis of the cake.

Note 6. This is the earliest document seen (July 2000) concerning soybeans in Hong Kong. This document contains the earliest date seen for soybeans in Hong Kong (1872). Soybeans were probably also being grown at that time in Hong Kong, but we cannot be certain of this.

Note 7. Mr. Carl Berndt of Saxony, is mentioned several times by Prof. Friedrich Haberlandt in his classic *Die Sojabohne* (1878). In part 1, page 4, Haberlandt states that Carl Berndt, a velvet manufacturer at Hainsberg-Deuben in Saxony, was one of the first people in Germany who attempted to cultivate soybeans. He had no success. "He wrote me about his efforts as follows: 'I had received 8 piculs of those beans [Note 8. A picul is a Chinese unit of weight = 133.33 pounds] (some green and some yellow), which I obtained through an official order of Governor (*des Minister-Präsidenten*) Dr. Weinlich of Shanghai via our local consul. I sent samples of those all over with the request that the recipient inform me of the results of his agronomic trials. Unfortunately I have waited in vain and I assume that the outcome was as unfavorable as it had been in my case and in my neighborhood. Although some gardeners and I managed to raise a few plants and harvest a few seeds, they rotted after being replanted and therefore could not germinate.'" Pages 10-11 of Haberlandt note that the first analysis of the composition of soybean seeds that became known in Germany was carried out by (Mr.) Senff using seeds obtained directly from Japan by Mr. Berndt. The results of this analysis were first published in 1872 in the journal *Chemischer Ackersmann* ("Chemical Farmer," p. 123). The tests showed soybeans to contain on average 38.29% protein and 18.71% oil. Page 14 of Haberlandt describes a letter that Carl Berndt wrote to Prof. Haberlandt. And in part 4, page 79 of Haberlandt states that Carl Berndt conducted soybean trials in 1877 in Deuben with 300 seeds; these trials succeeded beyond all expectations.

Note 9. This is the earliest document seen (Sept. 2002) that mentions the use of ether or any other solvent for extracting soybean oil. The extraction was on a laboratory scale. Ether is a light, volatile, flammable liquid (hydrocarbon), also used as an anesthetic.

Note 10. This is the earliest German-language document seen (Sept. 2006) that mentions soybean oil, which it calls *ein fettes Oel*.

Note 11. This is the earliest German-language document seen (Aug. 2003) that uses the term *Stickstoffhaltige Bestandtheile* to refer to nitrogen-containing constituents / protein in connection with soybeans. Address: Acad. Laborat Tharand.

197. *Far East* (*The*) (*Yokohama, Japan*). 1873. A curious phase of superstition has been exhibited since the formation of lotteries. 4(4):92. Oct.

• ***Summary:*** "The temple of Oiwa Inari is one very much venerated by the citizens of Tokei; and is one to which, actors, geishas, and the like go to pray for success in their profession. Since the lotteries have been in vogue, it has been given out that this is the temple at which to pray for good fortune in the drawings; the fox Oiwa having such things under his special care. The consequence is, it is always crowded with poor people who have invested (many of them their all) in these lotteries: who bring Sekihan (made of rice and red beans) and Aburage (beans fried in oil) of which the fox is said to be very fond; and who pray incessantly for the favour of Oiwa. The crowd is everyday very great from morning until night; but particularly on the days of drawing."

Note 1. This is the earliest English-language document seen (April 2013) that uses the word "Aburage" to refer to deep-fried tofu pouches.

Note 2. This article appears in the section titled "Monthly Notes from Local Papers," which starts on p. 88.

198. Balfour, Edward. 1873. The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 2nd ed.: Soy [sauce]. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 5, p. 517. 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [6 ref]

• ***Summary:*** The section titled "Soy" (p. 517), which is about soy sauce, states: "Tsiang-yu, Chinese. Soya [sic, shoyu / shôyu], Japanese. This well-known sauce is made from the Soja hispida which grows in China and Japan. In Java it is procured from the Phaseolus radiatus, the green gram, haree moong or putchay payroo of India. The beans are boiled soft with equal quantities of wheat or barley, and left for three months to ferment; salt and water are then added when the liquor is pressed and strained, 1,108 piculs of soy were shipped in Canton in 1844, for London, British India and Singapore; 100 jars, or about 50 gallons of soy were received at Liverpool in 1850. Its price is about 6*s.* per gallon in

© Copyright Soyinfo Center 2013

the London market, and the Japan soy is superior to the Chinese. Genuine soy is well flavoured, thick, brown, and clear; and when shaken in a glass, it should have a coat on the surface of a bright yellowish-brown colour. It is obtained from Canton; but the best is exported from Japan, by way of Batavia."

Note: This is the earliest English-language document seen (April 2012) that uses the term "Tsiang-yu" to refer to the Chinese word for soy sauce.

"Good soy is agreeable when a few years old, the Japan soy is superior to the Chinese. Large quantities are shipped for England and America. The Dolichos bean is much cultivated in Japan, where various culinary articles are prepared from it, but the principal products are a sort of butter termed mico, and a pickle called sooja. The flavour and ingredients of soy vary considerably, even among the people who make it, and much of that exported is supposed to be more or less adulterated."

Note: This is the earliest document seen (Oct. 2001) concerning adulteration of (or with) a soy product–in this case of soy sauce.

"Peas and beans form important objects of culture, and the condiment called soy (a word derived from the Japanese soya), is prepared chiefly from a species of Dolichos. One of the commonest modes of making this condiment is to skin the beans, and grind them to flour which is mixed with water and powdered gypsum, or turmeric. The common Chinese eat few meals without the addition of one form or other of the 'bean' curd, or 'bean' jelly. The soy was at one time largely used as a condiment in the several countries of Europe but has latterly been displaced with others."

The next entry is "Soy Bean, Anglo-Jap. *Soja hispida"* (which see).

Soy is not mentioned at Bean Curd, Beans, Legumes, or Leguminosae. Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

199. Balfour, Edward. 1873. The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 2nd ed.: Soja, Soja hispida. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 5, p. 458. 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [2 ref]
• ***Summary:*** "Soja, a genus of plants belonging to the natural order Leguminosae. Soja hispida (*Moench*), S. japonica (*Savi*), the Dolichos soja, (*Linn.*), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to form a favourite dish called 'ten-hu,' or 'tau-hu' [tofu], which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome. The Japanese call the seeds 'miso,' and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed 'sooja,' which has been corrupted into 'soy.' Soy is only sparingly used as a sauce in Great Britain. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation.–*Eng. Cyc.*"

"Soja hispida, Moench, W.&A., Grah. *S. japonica,* Savi. *Dolichos soja,* L., Roxburgh. *Garu kulay,* Bengali. Sahuca bean, English. Soy-bean, English. *Bhut,* Punjabi.

"This plant grows in the N.W. Himalaya, in Nepal, at Taong Dong, in China, Japan and the Moluccas. It is found in the Sutlej valley between Rampur and Sungnam at an elevation of 6,000 feet. It is cultivated in many parts in the north of India. This is the well-known Chinese bean, which constitutes such large article of trade between the northern and southern parts of China. Of all vegetable substances, it is richer in nitrogenous or flesh-forming matter than any yet discovered, The Sahuca bean, is the white Soja hispida. *India Museum.*"

Note: This is the earliest English-language document seen (Aug. 2003) that uses the word "nitrogenous" in connection with the soybean–to refer to its protein. Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

200. Douglas, Carstairs. 1873. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. London: Truebner & Co. xix + 613 p. 28 cm.
• ***Summary:*** The Preface notes that the written language of China is uniform throughout the whole of China, but it is pronounced differently when read aloud in the different parts of China. Various spoken languages of China have already been studied by Western residents in China: the Mandarin, the Hakka, the vernaculars of Canton and Amoy, etc. The Amoy vernacular is believed to be spoken by 8-10 million people. Chinese characters are not used in this dictionary.

Abbreviations (at start of parentheses): R. = Reading or literary style as to sound or meaning. C. = Chang-ebew dialect. Cn. = Chin-chew dialect.

Soy-related terms include: chiap (R. id.), (Cn. tsap; p. 46 L.2) "juice, sap, gravy, etc. kôe-chiap, brine of salt or pickled fish, &c." kê (Amoy = kôe; p. 201 L.7) "Pickled fish or shell fish." kê-chiap (implied; p. 46 L.2).

hû (p. 156 R.3) tâu-hû "bean-curd shaped into squares (from the pulpy 'tâu-hoe'), but not yet pressed. See tâu.

kôe-chiap (p. 242 L.4) "Brine of pickled fish or shell fish."

tâu (p. 480 L.3) "pease or beans, pulse." tau-khe "bean-cake from north China used as manure." tâu-iû "soy [sauce]." tâu-chiù "a thick sauce made from pulse." tâu-sî "salted beans" [fermented black soybeans]. tâu-hoe "soft bean curd not yet pressed or shaped." tâu-chiû or tâu-hû "bean-curd shaped but not yet pressed." tâu-hû-phê "bean curd made

© Copyright Soyinfo Center 2013

into thin sheets [yuba] for wrapping around eatables."

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term *tâu-hû-phê* to refer to yuba.

te tâu-hû "to shape the pieces of 'tâu-hoe' into pieces of 'tâ-hû.'" tâu-koa "bean-curd that has been pressed in a cloth." tâu-jú "bean-curd that has been pressed in a cloth then cut into smaller pieces and salted." tâu-kiâm or tâu-che or tâu-thâu "refuse from manufacture of bean curd" [okara].

Note 1. A new, revised edition of this work was published in 1899 in London by Presbyterian Church of England. A supplement by Douglas and Barclay was published in Shanghai in 1923. In some cases, the 1923 edition is bound at the back of the 1873 edition. The 1873 edition is dedicated to Rev. James Legge, D.D., a Christian missionary and Chinese scholar.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions okara, which it calls "refuse from manufacture of bean curd," along with its Chinese vernacular names.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term "cake" or "bean-cake" to refer to ground, defatted soybeans.

Note 4. This is the earliest English-language document seen (Feb. 2013) that uses the many terms such as *tâu-hoe, tâu-hû-phê, tâu-koa,* or *tâu-jú* to refer to the many uniquely Chinese varieties of tofu.

Note 5. This is the earliest English-language document seen (April 2012) that contains the terms "kôe-chiap" or (by implication) "kê-chiap" to refer to pickled fish or shell-fish. These terms are said by some to be the ancestors of the Malay word *ketjap / kecap* meaning soy sauce.

Note 6. Schlegel (1894, p. 143 footnote) gives the character for *Kê-tsiap* but the 1873 ed. of Douglas' dictionary gives no Chinese characters for any of the words defined. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

201. Hepburn, James C. 1873. Japanese-English and English-Japanese dictionary. Abridged by the author. New York: A.D.F. Randolph & Co.; London: Trübner & Co. vi + 330 + 206 p.

• ***Summary:*** "Preface: In order to render the Dictionary more portable and convenient in size, the Author has thought it best to abridge the larger work and bring it out in its present form. In so doing, he has omitted the Chinese and Japanese characters, the synonyms, and the examples showing the use of the words, excepting such as contained a peculiar idiom, and which could not be included in a definition. All the native Japanese words, with the exception of those which were rarely used or obsolete [such as Yu-dofu], have been retained; as, also, all the words derived from the Chinese which are in current use."

"The Second, or English and Japanese, Part, has not been abridged or altered from the original, except in the correction of such typographical errors as were met with."

Note 1. New words in this edition that are not in the 1867 edition are preceded by "**."

Soy-related terms: Adzuki: A small red bean. Amazake: Sweet sake, a kind of fermented rice. Daidzu: A large white bean. Soja hispida. Hiriodzu: A kind of food made of tofu fried in oil.

Kinako: A kind of food made of beans. Kiradzu: The refuse of beans left in making tofu. Koji: Barm or yeast. Koji-buta: A shallow box for holding barm. Miso: A kind of sauce made of beans.

** Moromi: The grounds left in making soy [sauce], used as an article of food.

Note: This is the earliest English-language document seen (April 2012) that contains the word "Moromi." However the definition is poor. The word *moromi,* which is often translated as "mash," is the stage in making soy sauce (it has a consistency resembling apple sauce) before the liquid shoyu (soy sauce) is pressed out, leaving behind the shoyu presscake or residue (which could be called "grounds").

Natto: A kind of food made of beans. Nigari: The brine formed by the deliquescence of salt. Sashimi: Raw fish cut in thin slices and eaten with soy. Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Tofu: A kind of food made of beans. Yuba: A kind of food made of beans.

Terms NOT mentioned include Aburage, Abura-age, Aburaage, Daitokuji natto, Edamame (or Eda mame or Yedamame), Hamanatto, Hiya-yakko, Koya-dofu, Kori-dofu, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans. Address: M.D., LL.D.

202. *Taranaki Herald* (*New Zealand*). 1874. The gathering of fungus... March 7. p. 2.

• ***Summary:*** "... has of late years become an important industry in this Province. The fact of fungus being of any value was made known here by Mr. Chew Chong offering to purchase any quantity that might be brought to him; and many inquiries were then instituted as to what use was made of it in China." During one year as much as 65,250 lbs. was exported. The Commissioner of Customs has written to the Colonial Secretary at Hongkong respecting its value and use. The Secretary replied:

"'Regarding the accompanying specimen of a kind of fungus on which you desire a report, I have the honor to inform you that this fungus is much prized by the Chinese community, as a medicine administered in the shape of a decoction to purify the blood. It is also used on fast days. A mixture of vermicelli, bean curd [tofu], and this fungus, is boiled and eaten instead of animal food."

Note: This article also appeared under the title

© Copyright Soyinfo Center 2013

"Exportation of fungus" in the *Southland Times* (March 11, p. 2), however the word "bean curd" was spelled "beancurds."

It also appeared under the title "Local and general news" in the *Wanganui Chronicle* (March 17, p. 2), however the word "bean curd" was spelled "beancurd."

Note: This latter is the earliest English-language document seen (April 2013) that uses the word "beancurd" or the word "beancurds" to refer to tofu.

203. Ritter, H. 1874. Tofu, Yuba, Ame [Tofu, yuba, ame]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (*Yokohama*) 1(5):3-5. July. [Ger]
• ***Summary:*** The discussion begins with tofu: Tofu (*Das Tofu*), one of the foods that is rather widely enjoyed by Japanese, is made from beans. It can be described most simply as 'bean cheese (*Bohnenkäse*);' the literal translation of the two characters, 'beans rotten,' seems to give us the first glance of its earlier meaning as a cheese–which is a product of fermentation. However, this only appears to be so, since tofu is definitely fresh and unfermented. Perhaps the earlier name signifies that the tofu essentially consists of legumin (*Legumin;* a legume protein), not considered as a portion but as a fermentation product of the beans.

The preparation is very simple. White soybeans (older beans are preferred to newer) are soaked for about 12 hours in cold water or 8 hours in hot water, then ground with water between the stones of a handmill to form a slurry (*Brei*). The slurry is filtered through a silk or very fine-meshed sieve. The larger particles remaining in the sieve are reground in the mill. The amount of water used during grinding is such that from one measure [volume] of beans about 10 measures of slurry are obtained. This slurry is then poured into a kettle, which contains an amount of boiling water equal to about one-third the volume of the slurry; it is simmered over a low / weak fire. It is best, when the kettle is only half full, because the foam will suddenly starts to rise; this rise can be moderated by the addition of some oil. As soon as the contents of the kettle comes to a boil, it is removed from the fire and the slurry is filtered through a cotton sack [over a vat], then pressed with a lever. The pressed residue in the sack (*Der Pressrueckstand* [okara]) is often cooked again with half the amount of water.

"The filtered liquid (*Die filtrirte Fluessigkeit* [soymilk]), which now consists of a solution of legumin, is carefully freed of its foam, and then the precipitation of legumin is brought about using nigari (*shio no nigari, Salzbitter*) as the coagulant. Nigari is the mother-liquor which drips out of [a sack of] sea salt in humid / wet weather, consists mainly of calcium- and magnesium salts. The nigari is added in three steps. First, about ½% of the liquid id added and only on the surface, while stirring slightly, since too much stirring would be disadvantageous. Then a somewhat larger amount is added, and without disturbing the first precipitation, stirred lightly. Finally, after most of it [the curd] has settled, a little more nigari is added, as much for the formation of the final curds and to obtain the right consistency. If you add too little nigari, you won't get any cakes (*Kuchen*) [of tofu], but too much nigari will give you a hard cake; soft tofu is preferred.

The author concludes by noting: "One cannot deny that most of the dishes made from tofu are rather nice, even for the European palate."

Note 1. This is the earliest German-language document seen which contains a description of tofu by a German living in Japan or East Asia.

Note 2. This is the earliest German-language document seen (April 2013) that uses the word *Bohnenkäse* ("bean cheese") to refer to tofu.

Note 3. This is the earliest document seen written by a Westerner (Nov. 2003) that uses the word *Nigari.*

Note 4. This is the earliest German-language document seen (Oct. 2003), that mentions soymilk, which it calls *Die filterte Fluessigkeit.*

Yuba (*das uba*) and *ame* (*das Ame*) are then described briefly. "Yuba is a peculiar preparation made from the legumin of the soybean [Note: *Webster's Third New International Dictionary* (1963) defines legumin (a term derived from the French *légumine*) as "a globulin [a type of protein] found as a characteristic constituent of the seeds of leguminous plants."] This thin yellow or brownish leathery tough film or skin is formed and consists of legumin which has become insoluble through cooking in contact with the air. It is prepared in the manner described above from the legumin solution in the soybean with addition of wood ashes [which raise the pH], cooked in an open kettle. As is the case with all alkaline protein solutions, there forms on the surface an insoluble film, which is then lifted off with a skewer and dried. Yuba is prepared as a food in various ways, but is used mostly as an addition to other foods."

Note 5. This is the earliest German-language document seen (Oct. 2012) that mentions yuba, which it calls *uba.*

Ame (grain syrup or *Midzuame*) is a widely used delicacy and sweet, loved by Japanese children. It consists of glucose (starch sugar) and dextrin that results from the malting of millet (*Hirse*) or rice. The *ame* made from millet is the sweetest, while that made from rice, especially from glutinous rice (*mochi kome*), has the advantage of being whiter." The process of making *ame* is then described in detail.

Dr. Rein adds to these proceedings that tofu is used in place of protein in lacquered or japanned work, in order to produce a more plastic product.

Note 6. This is the earliest document seen that mentions rice syrup (*ame* or *midzuame*) in Japan.

Note 7. The name of this journal varies. This issue was titled *Mittheilungen der Deutschen Gesellschaft für Natur und Voelkerkunde Ostasien's* and also known as the *Transactions of the German Asiatic Society of Japan.* The

place of publication is Yokohama. This article actually has no title. Address: PhD, Japan.

204. Mayers, William Frederick. 1874. The Chinese reader's manual: A handbook of biographical, historical, mythological, and general literary reference. Shanghai, China: American Presbyterian Mission Press. xxiv + 440 p. See p. 132, no. 412. 23 cm. [Eng]

• ***Summary:*** Part I, titled "Index of Proper Names," lists alphabetically the names of famous Chinese and tells about their lives and work. Chinese characters are used to write the name of each document or person mentioned.

Schlegel (1894, p. 136) states: "According to 'Collected Omissions of *Sieh-choh*' nothing had been ever heard of the confection of bean-curd before or after the period of the three dynasties of antiquity (B.C. 2205-250), and it was only mentioned for the first time in the work of *Liu-ngan*, king of Hwai-nan of the Han (second century before our era). Cf. Mayers, Chinese Readers Manual, No. 412, Cap. 24."

No. 412 in this book (p. 132) states: "Liu Ngan. Died B.C. 122. Commonly called Hwai Nan Tsze. A grandson and founder of the Han dynasty, and feudal prince of Kwang-ling, with the title Hwai Nan Wang. He was an ardent votary of the mystic researches of the Taoists, and assembled around him many hundreds of the pretended adepts in supernatural arts, who professed the ability to effect the transmutation of metals and to compound the elixir of mortality. The results of his study of the phenomena of nature, and the operations of the supreme creative energy, he embodied in a thesis to which he gave the title "History of Great Light" which forms one of the standard works of the Taoist canon, and is known familiarly as the treatise of Hwai Nan Tsze. It is related that having exhausted his wealth in the vain researches of alchemy, he was led into certain treasonable practices which entailed his ruin. Cf. F.S.T. [p. xix]. According to his contemporary Sze-ma Ts'ien, he was encouraged to aim at the succession to the throne by the failure of direct offspring to his kinsman Wu Ti, but the plot which he and other great vassals had concocted being discovered in time, he was proscribed, and perished by his own hand. Notwithstanding the assertions of history, the Taoist writers of a subsequent age maintained that he had reached the state of earthly immortality, and invested him with marvellous demiurgic powers. His writings owed their preservation to the care of Liu Hiang, q.v."

Under Liu Liang (p. 130-31) we read that he was born in 80 B.C. and was "One of the most celebrated among the philosophers and authors of the Han dynasty, with which he claimed kindred by descent from its founder... Notwithstanding his erudition in the orthodox literary canon, his mind displayed a strong leaning toward the more imaginative speculations of the Taoists, and his inclination toward a belief in the supernatural has caused his name to be associated with sundry marvellous stories. Thus it is recorded that the apparition of a venerable being, clothed in a yellow robe, surprised Liu Hiang while absorbed one night in his studies, and revealed to him the mysteries of creation and the evolution of the principles of nature, which are expounded in his treatise on the five primordial elements. The mystic being, before he vanished from sight, declared himself to be the Essence of the Great First Cause. Liu Hiang was author of the History of the Han dynasty, in which he became the founder of the modern style of historical composition."

No mention is made of tofu in this section.

The author, William F. Mayers, lived 1831-1878. Subsequent editions were published in 1910 and 1924. Address: Secretary to her Britannic Majesty's Legation at Peking, China.

205. Williams, Samuel Wells. 1874. A syllabic dictionary of the Chinese language; arranged according to the Wu-Fang Yuen Yin, with the pronunciation of the characters as heard in Peking, Canton, Amoy, and Shanghai. Shanghai, China: American Presbyterian Mission Press. lxxxiv + 1252 p. 28 x 22 cm. [8 ref. Eng; chi]

• ***Summary:*** In this dictionary, the Chinese characters are arranged alphabetically. Each main character, written large, has the pronunciation written below it, and the meaning written in English to the right. Below these are numerous compound words in which the character appears, followed by a definition of each. No pronunciation is given for compounds or combinations of several characters, such as teu-fu [doufu], which makes the dictionary hard to use. The main radical relating to soya is no. 151, Teu, 7 strokes, referring to pulses and sacrificial vessels (p. 874).

Page 145, under fu (rotten, corrupt, spoiled), lists the characters (teu-fu) for "bean curd; low policeman and underlings are named teu-fu-kwan because they live on and are no better than this curd; and also the teachers in low government schools."

Page 764, under shi, lists the characters for "salted beans" [fermented black soybeans], "salted beans and flour," "soy [soy sauce; shi yu in Chinese or shoyu in Japanese], an English word probably derived from this name."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the word "shi" to refer to fermented black soybeans.

Pages 874-75, under teu, list the characters for "legumes of every kind, pea, beans," "bean-curd jelly" [tofu].

Note. This is the earliest English-language document seen (April 2013) that uses the term "bean-curd jelly" to refer to tofu.

Page 968, under tsiang [ch'iang], lists the characters for "a relish made of salt mixed with bean or other kinds of flour, and water, and allowed to remain until cured; it is used as a condiment; relishes, sauces, condiments; salted preparations," "a dry relish," "a shop for sale of oilman's stores, and condiments," "bean sauce, this is the basis of

© Copyright Soyinfo Center 2013

most of the Chinese relishes," "vegetables seasoned in soy."

On page 839, under ta (big), there is no listing for ta-teu, the soybean. On page 252, under hwang (yellow), there is no listing for hwang-teu, the yellow soybean. On page 580, under mao (hair), there is no listing for mao-teu (fresh green soybeans). Thus it seems that the compiler of this dictionary was unaware of the soybean.

Page 1111, under yiu, lists the character for oil in various combinations. When preceded by the character for "fragrant" it refers to "sesamum, gingilie, or benne oil," made from the seeds of *Sesamum orientale.* Soybean oil is not specifically mentioned.

Note: This is the earliest English-language document seen (Feb. 2005) that uses the word "benne" to refer to sesame seeds. Address: United States Legation, Peking.

206. Griffis, William Elliot. 1876. The Mikado's empire. New York, NY: Harper & Brothers, Publishers. 625 p. Illust. Index. Map. 23 cm. [25+* ref]

• ***Summary:*** Book 1. History of Japan from 660 B.C. to 1872 A.D. Book 2. Personal experiences, observations, and studies in Japan, 1870-1874.

This is a remarkable book, beautifully written by an American teacher and traveler in Japan who loves the culture and the people, who lived and traveled widely among them in both the countryside and cities during his four years in Japan (29 Dec. 1870 to 25 July 1874), and who speaks Japanese. He has a deep knowledge of many aspects of Japanese history, including the history of Japanese religions (incl. Buddhism). He was invited to Japan to organize a scientific school on the American principle in Fukui, Ichizen, and to give instruction in the physical sciences. This is the 1st of 18 books he wrote about Japan. He returned to Japan in 1926 the receive the Order of the Rising Sun.

Among the Aino [Ainu] in Hokkaido [Yezo] (p. 31): They sit, like the Japanese, on their heels. Their food is mainly fish and sea-weed, with rice, [soy] beans, sweet-potatoes, millet, and barley, which, in Southern Yezo, they cultivate in small plots."

Describing the Japanese origin myth, with the Sun Goddess (Amaterasu), Izanami, Izanagi, etc. (p. 48-49): "The God of Clay and the Goddess of Fresh Water married. Their offspring was Naka musubi. From his head grew the mulberry and silk-worm, and from his navel sprang the five cereals, rice, wheat, [soy] beans, millet, and sorghum." "Reporting the matter in heaven, Amaterasu was angry at Sosanoö, and degraded her (the Moon-goddess) from joint rule, and condemned her to appear only at night, while she, the Sun-goddess, slept. Amaterasu then sent a messenger the second time to see whether the Food-goddess was really dead. This was found to be the case. Out of the dead body were growing, millet on the forehead; silk-worms and a mulberry-tree on the eyebrows; grass on the eyes; on the belly, rice, barley, and large and small beans." Note 1. Large beans are soybeans; small beans are azuki.

Page 208: The native sauce, *shô-yu*, made of fermented wheat and beans, with salt and vinegar, which the cunning purveyors of Europe use as the basis of their high-priced piquant sauces [such as Worcestershire sauce], was made and used as early as the twelfth century. The name of this saline oil (*shô*, salt; *yu*, oil) appears as 'soy' in our dictionaries, it being one of the three words (soy [sauce], bonze, moxa) which we have borrowed from the Japanese." Note 2. The author's derivation is incorrect; *shô* does not mean "salt," but rather *hishio* or *jiang*, which is the mash, having the consistency of applesauce, before the liquid is pressed out.

Page 357: In the cooper shops is a "dazzling array of wood-work, so neat, fresh, clean, and fragrant... There are two coopers pounding lustily away at a great rain-tank, or saké-vat, or soy- tub" [vat]. An illustration shows two coopers at work hooping a vat.

At the pagan temple (p. 381): "Several old women have stands, at which they sell holy [soy] beans, pious pease, and sanctified rice. These are kept ready in tiny earthen saucers. The orthodox buy these, and fling them to the cloud of pigeons that are waiting on the temple eaves, and fly, whirring down, to feed. Ten thousand sunbeams flash from their opaline necks..."

Page 420: "The village houses were built of a frame of wood, with wattles of bamboo smeared with mud, and having a thatched roof. Within, the floor was raised a foot or so above the ground, and covered with mats. When the rooms had partitions, they were made of a frame of wood covered with paper, and made to slide in grooves. In the middle of the floor was the fire-place. From the ceiling hung pot-hooks, pots, and kettles–one for tea, one for rice, another for radishes, beans, or bean-cheese [tofu]. In these villages good-nature and poverty seemed to be the chief characteristics of the people."

Page 426-27: "The seller of fish, vegetables, oil, and bean-cheese, each uttering his own trade trade-cry, ambled on."

Page 455: "Men or women itinerants carry a small charcoal brazier under a copper griddle, with batter, spoons, cups, and shoyu sauce, to hire out for the price of a cash each to the little urchins, who spend an afternoon of bliss making their own griddle-cakes and eating them."

Note 3. This is the earliest English-language document seen (April 2012) that uses the term "shoyu sauce" (regardless of capitalization or hyphenation) to refer to soy sauce.

Page 496: "... a shop to which the *élite* of the epicures of Yedo [today's Tokyo] resorted daily for the delicacy of eels fried in soy [sauce]. The appetizing odor was wafted" into the neighborhood.

Page 516: "May 1st [1871]–During the past month I have made many excursions on horseback through the country round. staying overnight at the village inns. Sasaki

© Copyright Soyinfo Center 2013

and Iwabuchi have been my companions. I have seen the paper manufactories, oil-presses, the sake breweries, soy-vats,..."

Page 542: Jan. 22d, 1872. For dinner: "Rice, bean-cheese, daikon, mushroom, fish, are served."

Azuki beans (red beans, small beans) are also mentioned on pages 454 and 469. The population in 1872 was 33.3 million. On pages 587-88 is a sort of bibliography.

William Elliot Griffis lived 1843-1928.

Note 4. This is the earliest English-language document seen (April 2013) that uses the term " bean-cheese" (hyphenated, by itself, with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu. Address: A.M., Late of the Imperial Univ. of Tokyo; presently in New York.

207. Imperial Japanese Commission to the International Exhibition at Philadelphia (1876). 1876. Official catalogue of the Japanese section: And descriptive notes on the industry and agriculture of Japan. Philadelphia, Pennsylvania: Published by the Japanese Commission. 130 p. 24 cm.

• ***Summary:*** The Preface (p. 3) begins: "Never until the year 1873, had Japan participated to any great extent in the various European International Exhibitions. Up to that time she had been merely represented by some of the provincial governments, acting independently of the central Government. However, the Government determined to be worthily represented at the Vienna International Exhibition of 1873,..." But Japan was well prepared for the Philadelphia Centennial Exhibition.

Under classes of "Agricultural products" (p. 32, 34): Class 621–Peas, beans, etc. (incl. Soya, adzuki). Class 650–Sea weeds (incl. Vegetable isinglass [agar, kanten]). Class 657–Flour and starch (incl. Kudzu {*Pueraria thunbergiana*}). Class 659–Wines and other kinds of drinks (incl. Sake, Soy {a kind of sauce}).

Page 71 discusses relief painting in lacquer: "The lacquer can even be carved, and, finally, the artisan can incrustate mother-of-pearl shell, ivory, thin metal, or anything he likes into the lacquer. By mixing a sort of paste made of [soy] bean powder, or the white of eggs, with the lacquer, he can thicken it to such an extent as to give it a kind of plasticity, admitting the possibility of making impressions which remain visible after hardening."

In the long chapter titled "Descriptive notes on the industry and agriculture of Japan (p. 37-117) is section on "Agricultural products. Classes 620-21–Cereals, vegetables, etc." (p. 104-06). Beans, generally referring to soy beans, are mentioned many times. "Manures of a mineral nature consist of marls, shells and ashes; those of vegetable origin of inferior kinds of beans and peas or their residues, of [soy bean] oil-cakes, the residues of sake-brewing,..."

"The excellent kinds of beans and peas, which are made into a kind of cheese [tofu] and a peculiar mixed dish called 'misso' [miso] afford the necessary nitrogenous substances, and to a certain extent form the substitute for meat; the Soyu [shoyu; soy sauce] also belongs to this kind of food, and is frequently mixed with other dishes. With regard to animal food, it is limited almost exclusively to fish, poultry and eggs. But a change has already been effected to a certain extent in the larger towns, where butcheries have been established. An experiment of sheep farming was commenced one or two years ago" (p. 106).

Note: This is the earliest English-language document seen (April 2012) that uses the word "Soyu" (regardless of capitalization) to refer to shoyu or soy sauce.

Under "Class 657, 658–Flour, starch, etc. we read (p. 110-11): "It has been mentioned above that the various kinds of beans constitute a very important element of the national diet. Some of the preparations made of beans and peas are worthy of a short notice. In preparing the 'Tofu,' white beans are soaked in water, ground between two stones, strained through a sieve and afterwards boiled. The contents of the kettle are then filtered through cotton cloth and the residue pressed out. The liquid [soymilk], which may be considered as an alkaline solution of legumine, is precipitated by successive additions of the bitter lye [nigari] which runs off from sea-salt by deliquation, and which is mostly composed of magnesium salts. The precipitate is legumine with a small percentage of legumine-composits [-composites] and a large proportion of water. The 'yuba' is also made by boiling the above-mentioned legumine solution in an open kettle, with a slight addition of ash-lye. The insoluble skins which form upon the surface of the boiling liquid, are taken off and dried. Another kind of preserved food is the 'misso' [miso]. White beans are first boiled, pounded in a mortar to form a paste, then mixed with fermenting rice and salt, whereupon the whole mixture is placed in tubs and left in some cool place; at the end of a month it is ready for use. In mentioning the various preparations made of beans, the 'Soy' or, as the Japanese call it, 'Soyu' [shoyu] should not be omitted; but as it belongs rather to the produce of fermentation, the process will be described under the head of Class 660 [Alcohol and malt liquors].

One page 112 we read: "The soy, or 'soyu,' is made of a small bean, the 'Dolichos soja,' or 'Soya hispida,' to which are mixed wheat, salt and water. The beans are first boiled, and the wheat bruised and steamed; both are then mixed with a small addition of fermenting wheat, placed in flat wooden boxes and kept for several days at a fixed temperature in a special room. At the end of three days, the mass [koji] is all covered with fungi and partly with roots of germination. After having been mixed with a salt-lye, which has been prepared hot and allowed afterwards to cool down, and to depose certain impurities, the mashings are now removed to enormous coops [vats] in which they are kept for several years. Experience has shown that the best soy is produced by mixing equal quantities of mashings of three years and

© Copyright Soyinfo Center 2013

five years' standing. This mixture is transferred into bags of thick cotton-cloth, placed in large boxes, and then submitted to pressure–at first only to a slight pressure, which yields the best soy, and afterwards, however, to a gradually increasing pressure, the separation of the last portions being assisted by an addition of salt water.

"The soy forms a very important condiment for all kinds of dishes, and is consumed in large quantities. In 1874 the production amounted to 1,506,402 hectolitres."

An interesting term in the Index (p. 129) is "Bean-cheese," which refers to tofu (p. 110).

Also: Use of hemp (*asa*) for manufacture of cloth (p. 77, 113). The tea ceremony (p. 108). Sea weeds, incl. cultivated nori and Asakusa nori in Tokio bay, kanten or vegetable isinglass, and fu (that resembles carragheen [carrageenan] moss and is used in the sizing of the warp of silk goods) (p. 109). Kudzu (p. 110). Sake (p. 111). Address: Japan.

• ***Summary:*** (Continued from p. 414). Part "VII. Temple of Inari at Fushimi, near Kiyoto [Kyoto] (p. 479)."

Page 480: "Idolatry is practised here, but the fearful superstition connected with the worship of Inari is carried on beyond the principal shrine in a somewhat more retired spot backed by a hill in the distance. Some 350 wooden *torii*, placed close together, and forming two pathways side by side, show that we are approaching a spot where many press to worship–for these *torii* are offerings made by devotees. The shrine to which they lead is small, the entire building being only a few feet square. Its doors are closed, and there is only a small aperture, a few inches square, left open to admit the numerous offerings. On the shrine small toy-like *torii*, about a foot in height, may be counted by the dozen. What exalted deity is here worshipped? It is the fox! On one occasion I happened to be at the spot, just as an old man came to take away the offerings made the preceding day. When he opened the door I examined the interior of the shrine. The only furniture it contained was a box, placed under the small aperture in the door, to receive offerings, and a tray, placed against the back of the shrine, on which some of the offerings of the previous day had been arranged. The old man was provided with a basket, into which he put the offerings on the tray. He then took fresh offerings from the box by the door, and laid them in order in the place. They consisted of fried bean curd, *mochi*–a kind of unleavened cake made from rice flour-peas, beans, dried fish, &c, and cash. These had all been offered to the fox-gods; and on one side of the shrine I observed a small hole, through which these deified animals are supposed to enter, to feast on the supply provided for them."

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried bean curd."

"Worshippers come to this shrine, ring the bell, clap their hands, present an offering, bow, and mutter a prayer; then they pass into the spacious grounds at the back to visit the holes of foxes. As they go over the well-beaten path, they stop at place after place to pour a few drops of wine, or to make some other small offering at the foxes' holes. Several years ago this form of superstition was discouraged by the Government, but it still survives, and no doubt will survive, until the people are taught to worship the great Creator, and to serve Him alone. The superstition is widespread. Education may do much to show its absurdity; however, nothing will effectually eradicate it but the Gospel of Christ." Address: Rev.

• ***Summary:*** Near the end of Section 5, "The oil seeds and

© Copyright Soyinfo Center 2013

vegetable oils of commerce," is a section titled "Chinese oils" (p. 424-25) which include "ground-nut oil (*Arachis*)*;* til seed (*Sesame orientale*)*;* tea-seed oil from *Thea viridis;* oil pea (*Dolichos viridis*)*;* and the oil bean (*Soja hispida*). The latter product forms a considerable article of commerce in China. This pulse oil possesses a great analogy to the ordinary edible oils of commerce; its odour and flavour are agreeable, and it is useful for burning." It becomes pasty when exposed to low temperature, and "resinifies rapidly when exposed to the atmosphere. Being a drying oil, it might... replace linseed in some of its uses." The seeds yield "about 18 per cent. of fatty matter, and the Chinese regularly obtain 17 per cent. of oil from it."

There are several varieties of this bean: white, yellow, and green. "The yellow are made into a fermented mass, or cheese, called tan-fir [sic, tofu], by macerating them in water and pressing them into a cake, adding lime and salt to precipitate the caseine, which is obtained in the form of a jelly."

This bean is cultivated mainly in the north of China, especially in the province of Shantung. More than 3,000 junks are employed to transport it to southern ports. In 1869 the port of Che-foo [Chefoo or Yantai] exported "242,224 piculs of bean-cake and 5,570 piculs of bean-oil, and about 10,000 piculs of the cake were imported into Foo-Choo-foo [Foochow or Fuzhou], valued at £42,000." The cake is used as a food for both humans and stock, and as manure.

Also discusses: Kudzu (p. 352). Linseed oil (p. 399-400). The ground-nut (*Arachis hypogæa*) and its oil and cake (p. 400-05). Sesame seed (frequently called Til or Gingely) and its oil (p. 412-15). California wines (p. 431-32). Manila hemp (plantain fibre; p. 469).

Note 1. This is the earliest English-language document seen (Nov. 2001) that classifies soybean oil as a "drying oil."

Note 2. The index of this book is filled with errors.

Note 2. This is the earliest English-language document seen (July 2005) that contains the term "oil seeds" (or "oil seed" or "oil-seeds") in connection with soy beans.

Note 3. This is the earliest English-language document seen (Sept. 2006) that contains the term "vegetable oil" in connection with soy beans.

P.L. Simmonds lived 1814-1897. Address: F.R.C.I., editor and author, Cheapside, London [England].

212. *North Otago Times* (*New Zealand*). 1878. New Zealand State Forests. March 22. p. 2 (Supplement).

• ***Summary:*** From the *Gardeners' Chronicle* (29 Dec. 1877)– the following "Report of the Conservation of State Forests, Wellington, 1877."

"... but the most curious article of exportation as a Fungus, *Hirneola polytricha*, of which we are told that in 1871 this plant was first collected for exportation to China, where it is used as an article of food, being boiled and mixed with bean curd [tofu] and vermicelli; it is also administered as a medicine to purify the blood. Its price in Hong Kong is 10½*d* per pound retail."

213. *Chicago Daily Tribune.* 1878. Familiar talk. Chinese dishes. April 13. p. 9.

• ***Summary:*** "Some of the queer dishes with which the Chinese supply their tables were described in these columns last week, but there are others mentioned by Dr. Gray in his very valuable work on China, which are quite as strange and as worthy of notice. A beverage termed snake-wine is sold by Chinese druggists, and held in esteem as a remedy for various bodily ills..."

"Several curious preparations are manufactured from beans, which are a favorite vegetable with the Celestials. One of these dishes is called bean-curds. It is made by reducing the beans to flour, which is sifted through fine cloth, and then boiled for an hour over a slow fire."

There follows a long quotation about bean-curds [tofu] and bean sprouts [probably mung, but could be soy] from pages 136-37 of Vol. II of the following book: Gray, John Henry. 1878. *China: History of the laws, manners, and customs of the people.* Edited by William Gow Gregor. 2 vols. London: Macmillan and Co.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term " bean-curds" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu.

214. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (*Yokohama*). 1878. Sitzung in Tenkoin, Yedo, am 22ten Juli 1878 [Meeting in Tenkoin, Tokyo, on 22 July 1878]. 2(16):271. July. [Ger]

• ***Summary:*** "Concerning Dr. Langgaard's communication on tofu, Mr. Kempermann remarks that in his opinion tofu is mainly a food of the wealthy; for the poor seem to place great significance on sugars [carbohydrates], and in times of great shortages of rice, sugar consumption will be considerable.

"Dr. Langgaard remarks that shoyu plays a very insignificant role as a source of nutrients. Shoyu contains a great deal of salt and serves mainly as a seasoning. It is important to mention, concerning shoyu, that, especially when it is used in fresh condition, at one and the same meal, only small quantities can be enjoyed.

"After this, Mr. Netto pointed out that tofu consumption depends on the price of fish. In Kosaka* the poorest people eat tofu when they must forego the enjoyment of fish."

* Note: The meaning of the term "Kosaka" is unclear. The only known place by that name is a relatively unknown small town in Akita prefecture, in northeastern Japan. Address: Japan.

215. *Tokyo Iji Shinshi* (*Tokyo Medical Journal*). 1878. Miso,

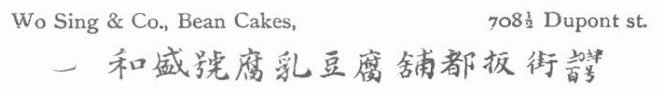
Date of Introduction: 1878.



Wo Sing & Co., Bean Cakes, 708½ Dupont st.
一 和盛號腐乳豆腐舖都板街訂

New Product–Documentation: Wells Fargo & Co. 1878. Directory of Chinese Business Houses. p. 43. The first line is in English: "Wo Sing & Co., Bean Cakes, 708½ Dupont st." & Co."

The 2nd line, written in Chinese characters, states: Wo Sing Company Fermented Tofu [and] Tofu Shop 708½ Dupont st.

Wells Fargo & Co. 1882. Directory of Chinese Business Houses. p. 69. "Wo Sing, Bean Cake." Same address.

Note: This is the earliest known commercial tofu product made in the western world. And, this is the earliest known soy product made in California. This is the earliest document seen (Oct. 2011) concerning a manufacturer of fermented tofu or tofu in the western world, the USA, or California. It is also the earliest document seen concerning the use of soybeans in California.

Note: Wo Sing & Co. probably imported from China the soybeans it made into tofu.

217. Commission Imperiale à l'Exposition Universelle de Paris, 1878. 1878. Le Japon à l'Exposition Universelle de 1878 [Japan at the Universal Exposition of 1878]. Paris: Publiè sous la Direction de la Commission Impériale de Japon. 2 volumes in one. 26 cm. Preface by M. Matsugata. Facsimile edition (preservation photocopy) reprinted in 1998 by BookLab, Inc. [Fre]

• ***Summary:*** Part I (159 p.) is about the geography and history of Japan. Part II (192 p.) is about art, education and teaching, industry, production, agriculture, and horticulture in Japan. The Preface is by M. Matsugata, Head of the Imperial Department of Agriculture and President of the Japanese Commission to the Universal Exposition of 1878.

In Part II, the section on "Fermented beverages–Condiments" contains a long section on "Shoyu" (p. 124-25). It gives a brief description and discusses the ingredients (equal parts dehulled wheat, soybeans, and salt; the best salt comes from Ako in the province of Harima), purifying the salt by dissolving then heating it in water, and stirring the mash (2 or 3 times a day from June to September), aging for 15, 20, or sometimes 30 months to obtain shoyu. The mash in then pressed in cotton sacks, and the resulting liquid is boiled, cooled, allowed to settle, then stored in small wooden tubs. The residue from the first pressing can be used to make a second-grade shoyu, which can be mixed in varying proportions into different grades of shoyu.

Note 1. This is the earliest French-language document seen (April 2012) that uses the term *shoyu* to refer to soy sauce.

In the section on "Agriculture," the subsection on "Cereal grains" (p. 133) discusses both soybeans and azuki beans (*Phaseolus radiatus*). "The soybean (*Le Mame*) or *Soja Hispida* is comprised of several varieties: The green soybean (*l'Awo mame*), the white soybean (*le Shiro mame*), the black soybean (*le Kuro-mame*), the yellow soybean (*le Ki mame*), *Konrinza mame, Ichia mame,* and the saddled soybean (*Kurakake mame*). Some of these different varieties are early maturing and some are late.

The soybean finds numerous uses, for it can be eaten cooked, ground into flour [kinako / roasted soy flour], or used for the manufacture of shoyu, miso, or tofu. The bean, its seed coat, pod, leaves, and stem serve as feed for horses. Lately it has been used on a trial basis to feed sheep, and the results proved that it was the best feed that one could give to them.

Tofu is made with two kinds of boiled soybeans: White and yellow. After being pressed and hardened, it will last for a long time. Yuba is a somewhat similar product, made with the same ingredients. Note 2. This is the earliest French-language document seen (March 2004) that contains the word *Tofu.*

The black soybean speckled with white (*Gan Kui mame* [*Gankui*]) is one of the best varieties to eat.

The azuki (*L'Azuki ou Phaseolus radiatus*) includes the early and late types, and comes in several varieties such as the *Hine no Azuki*, the Dainagon Azuki (*le Dai Nagon Azuki*), the White Azuki (*Shiro Azuki*), etc. Sweet azuki bean paste (*L'An*), is widely used in confectionery, is made by mixing the Azuki and sugar. One cake made from it is called *Yokan.* Azuki flour (*farine de l'Azuki*) is used to remove greasy stains from fabric / cloth. The *Yaye Nari*, a green bean (*haricot*), is used in the same ways as the azuki bean (p. 135). Note 3. This is the earliest French-language document seen (Jan. 2005) that uses the word "Azuki."

Also discusses: Sea vegetables (many individual types with both Japanese and scientific names, p. 127-29). Kudzu (*Pueraria thumbergiana* [sic, thunbergiana], starch from the roots and fodder from the leaves, p. 139; fibers used to make cloth, p. 153). Hemp seeds (p. 139). Sesame seeds and sesame oil (*Goma,* p. 145). Peanuts and peanut oil (*Tojin mame,* p. 145). Hemp as a fiber plant (p. 151). Address: Paris, France.

Inorganic and mineralogic part]. Yokohama, Japan: C. Lévy, imprimateur-Éditeur. xi + 294 p. See p. 150-51. [1 ref. Fre]
• ***Summary:*** This book intends to be a modern-day *Bencao Gangmu* (in Japanese *Honso Komoku*)–a famous Chinese text. Pages 150-51 discuss *nigari* (*yen-tan-sui*, *shiwo-no-nigari*). It is widely used in China for the manufacture of tofu (*fromage végétal*, *to-fu*), by precipitating the legumine or leguminous casein (*légumine ou caseine légumineuse*).

Note: This is the earliest French-language document seen (April 2013) that uses the term *fromage végétal* to refer to tofu.

219. Gray, John Henry. 1878. China: History of the laws, manners, and customs of the people. Edited by William Gow Gregor. 2 vols. London: Macmillan and Co. See vol. II, p. 135-37. Illust. 22 cm.
• ***Summary:*** In Vol. II, chapter XXIII, titled "Agriculture–Arable Farms" (p. 106+), begins with a brief history of China agriculture and the cultivation of the major cereals. On pages 135-37 is a discussion, with three large illustrations, of [soya] beans cultivated in China, and their products–oil, bean cakes, flour, bean curds [tofu], salted and fermented bean [fermented black soybeans], and [soy] sprouts. The author is clearly describing soya beans yet he apparently does not know their name, for he never uses the word "soya." "The [soya] bean farms in the northern provinces are very extensive; and, as the soil as a rule is a rich strong loam, the crops are very luxuriant The varieties of this plant which the Chinese cultivate are the tick and horse beans; they prefer to sow them in February and March." He then describes how the fields are plowed and the seeds are planted. The "[soya] beans are drilled or set in rows, either by an instrument or by hand, with spaces about two English feet apart. These spaces are regularly hoed, and the weeds in the rows are carefully removed by hand. Hoeing is so essential a part of the cultivation of beans that the success of the crop depends in a great measure upon the manner in which it is performed." The plants harvested with a sickle, then taken to the homestead of each farmer and the beans threshed with flails. "These extensive crops of beans and peas are grown for the sake of abundant supplies of oil. For this purpose the beans are placed in a circular trough, and crushed by a massive stone wheel drawn by oxen. The fragments are placed in large presses until all the oil has been expressed into vats. The bean cake from which the oil has been pressed is given, in part, to cattle, and, in part, sent to Swatow, Canton, and the ports of Formosa, where it is regarded as the best possible manure for sugar-producing lands.

"In Kwang-tung there are also extensive bean and pea farms. The crops, however, which are produced on these farms are not crushed for oil, but used as food by the people. When threshed, they are sold in large quantities, and bought extensively by persons who gain a livelihood by selling bean curds. For this preparation the beans are reduced to flour by the ordinary Eastern handmill. The flour is then passed first through a strainer of coarse calico [cotton cloth], and afterwards through one of a finer quality. It is then boiled for an hour over a slow fire, till it attains the proper consistency, and can be sold as food. The Cantonese are very fond of bean curds, which are prepared during the night to be ready for the morning meal. No sooner has the sun arisen than men may be seen in almost every street of the large cities and towns of Kwang-tung, selling the much relished preparation. It resembles *blanc mange* [*blancmange*] so much that for many months after my arrival at Canton, I quite thought that it was something of that kind."

Note 1. This is the earliest English-language document seen (April. 2013) that uses the term " bean curd" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu. It is also the earliest document seen (May 2000) that compares tofu to blanc mange / blancmange.

Note 2. This is the earliest English-language document seen (Oct. 2001) which gives a detailed description of how flour is made from [soya] beans in China.

The Chinese also salt beans. For this purpose they place four catties of beans in a jar, together with one catty of salt, a half catty of ginger, and a few taels of almonds and other spices. The jar is then hermetically sealed, and placed in the pantry. At the expiration of a month it is opened, and the ingredients [fermented black soybeans] are always agreeable to the Chinese palate. The most singular use, however, to which beans are put is yet to be recorded. Great quantities of them are purchased by a class called N'ga-Tsoi, who subject them to the following treatment in the large establishments in which they carry on their occupation. The beans are deposited in coarse earthen-ware jars, which are filled with very clear spring water. In a few hours the water is drawn off by the removal of plugs; and this process is repeated six times in the twenty-four hours. At the end of seven days the beans are inspected, and each is found to have produced a tender shoot. The beans with the shoots [bean sprouts] are then sold in the vegetable markets as great delicacies. There is an establishment of this kind at the gate of the old Sam-kai Miu, a suburb in the western suburb of Canton. There are two wells in this establishment, containing water which in point of purity cannot be surpassed."

The section on boats on the Canton river in China states (p. 278): "; the Tow-Foo-Teng, or bean curd boats;..."

Note. This is the 2nd earliest English-language document seen (April 2013) that uses the term "Tow-Foo" (regardless of capitalization or hyphenation) to refer to Chinese-style tofu.

Full-page original illustrations (line drawings) show: (1) "Crushing [soya] beans" (facing p. 135). An ox turning a large horizontal millstone while a farmer, seated nearby, holds a whipping stick. His home is in the background and several containers and simple implements related to the oil

© Copyright Soyinfo Center 2013

and cake are in the foreground.

Note 2. This is the earliest English-language document seen (June 2001) that uses the word "crushing" (or any cognate thereof) in connection with soybeans.

(2) "Crushing [soya] bean cakes" (facing p. 136). One man uses a wooden mallet to pound wedges between bean cakes in a hollow log to press out the oil. A second man to the right drives an ox which is turning the top stone of a pair of horizontal millstones. These millstones are different than those shown in the first illustration; their diameter is smaller and the top stone has two holes in it–similar to the mill traditionally used to make tofu.

(3) "[Soya] Bean cakes" (facing p. 137). A wealthy merchant is standing by an attractive brick building. To the right is a body of water. One man is stacking round bean cakes (about 12 inches in diameter) to the right of the large front door. A second man is carrying ten bean cakes using a shoulder pole. A small boy and a dog are bringing up the rear.

Both volumes contain 140 illustrations. Pea-nuts are discussed on pages 137-38.

Note 3. This is the earliest document seen (July 2000) concerning soybean products (bean cake) in Formosa (Taiwan). This document contains the earliest date seen for soybean products in Taiwan (1878); soybeans as such had not yet been reported by that date. Address: M.A., LL.D., Archdeacon of Hong Kong.

220. Haberlandt, Friedrich. 1878. Erste Abtheilung [Part 1, pages 10-15 (Document part)]. In: F. Haberlandt. 1878. Die Sojabohne [The Soybean]. Vienna: Carl Gerold's Sohn. ii + 119 p. [4 ref. Ger]

• ***Summary:*** "The value of soybeans results from their high content of the most important nutrients. The first analysis that made the composition of these seeds known in Germany was carried out by [Mr.] Senff using seeds obtained directly from Japan by Mr. [Carl] Berndt. The results of this analysis* (Footnote: *See the journal *Chemischer Ackersmann* ("Chemical Farmer") 1872, p. 123) showed that 100 parts of air-dried soybeans have the following composition:" A table (p. 11) based on two samples and their average shows: Water 6.91%, protein 38.29%, oil (*Fett*) 18.71%, nitrogen-free extract 26.20%, crude fiber 5.33%, and ash (minerals) 4.56%.

A second table (p. 11) which compares the nutritional composition of soybeans, common beans (*Fisole*), peas, lentils, fava beans (*Pferdebohne* = *Vicia faba* = "horse beans") and yellow lupins, shows that soybeans have a much higher content of protein (38.29%, followed yellow lupins at 35.32%), oil (18.71% followed by yellow lupins at 4.97%), and ash (minerals, 4.56%, followed by yellow lupins at 3.78%).

"There are few statements in the pertinent literature concerning soybean utilization. But there is no doubt that, in their native countries, they have heretofore been used exclusively as foods. In *Synopsis der Pflanzenkunde* ("Synopsis of Experience with Plant Culture;" 1877, Hannover, Vol 2, p. 413), Dr. Johannes Leunis says that soybeans taste good and are also used to make a thick brown sauce, which is added to almost all foods in India, China, and Japan, and is also an article of commerce in Europe, used to improve sauces and gravies. However the sauce now available in Germany is said to be made of other ingredients rather than soybeans, namely mushrooms. From England, where this soy sauce is imported from India by the firm Grosse [sic, Crosse] & Blackwell in London, its use is spreading to the continent and is available in Vienna. Kaempfer, who describes the soybean plant so excellently in the classic work on his travels, also gives detailed information about its use as foods in Japan, which has since appeared in numerous other writings, such as Oken's *Allgemeine Naturgeschichte aller Stande* ("General Natural History of All Places") [1841] vol. III, part 3, page 1661."

Haberlandt then quotes in their entirety Kaempfer's descriptions of miso and soy sauce (about 200 words each). He also indicates a vague knowledge of tofu.

"It is reported that in China a type of food is made from the oilcakes or perhaps from soybeans directly, that superficially resembles a soft cheese or Quark (a European white unfermented cheese; *nach dem weichen Käse oder dem Quark ähnliche Speise machen*) presumably the original mush is subjected to a fermentation process and then mixed with pepper and other spices. A large part of China's population is said to use this staple food."

Note 1. This is also the earliest German-language document seen (April 2013) that uses the word "Quark" in connection with tofu.

He goes on to describe the chemical composition and uses of the oil presscake in China.

Page 14: "Since the oil content (*Oelgehalt*) of the soybean is lower than that of other oilseeds, it must be assumed in advance that its application for the production of oil (*Oelgewinnung*) must be disregarded. This also became evident through a test which Mr. Carl Berndt conducted on the rest of the soybeans that hadn't been used for agronomic trials. He was kind enough to give me the following report: 'Although I should have expected that one could not determine the full quantity of oil from a relatively small quantity of seeds, I was still astonished that there was not more than 6%. The analysis had resulted in 16 to 18%, and therefore the mechanical quantity was estimated at 10-12%.

"'Actually it was quite difficult to locate an oil miller who would clean his mill sufficiently that one received pure oil. Moreover, these people didn't proceed with the interest and care that are necessary, since I found lots of oil in the presscakes, indicating that they had not been pressed sufficiently. In terms of quality, I am more satisfied than I had expected to be. I had someone prepared baked goods

© Copyright Soyinfo Center 2013

where oil was used in the recipe and I could not detect the slightest after-taste. As a cross-check, I had another part of the baked goods prepared with Provenzer oil, but I could not tell the difference between the two.

"'To what extent the [soybean] oil could be used for industrial [non-food] purposes, especially as a mordant (*Beize*) for the dyeing of Turkish-red, which uses very old, spent oil (that is soluble in carbonic potassium) can only be established when a sufficient quantity of oil becomes available.'"

Note 2. This is the earliest document seen (Oct. 2001) concerning special industrial uses of soybean oil as a non-drying oil, as a mordant for dyeing. Address: Hochschule fuer Bodencultur, Vienna, Austria.

221. Haberlandt, Friedrich. 1878. Zweite Abtheilung. Anbauversuche im Jahre 1875 und 1876 [Part 2: Culture trials in the years 1875 and 1876 (Document part)]. In: F. Haberlandt. 1878. Die Sojabohne [The Soybean]. Vienna: Carl Gerold's Sohn. ii + 119 p. See p. 16-35. [30 ref. Ger]
• ***Summary:*** Contents of Part II: Source of the supply of the various soybean varieties used in the original trials. Trials at the Royal College of Agriculture (*Hochschule für Bodencultur*) in Vienna in 1875. Results from 1876 from Hungarian Altenburg and Gross-Becskerek in Hungary, in St. Peter bei Graz in Steiermark [Styria], in Napagedl in Mähren [Moravia; in the Czech Republic as of Jan. 1993], in Sichrow, Swijan, and Darenic [Czechoslovakia], Tetschen-Liebwerd in Böhmen [Bohemia; in the Czech Republic as of Jan. 1993], in Bukovina [Bukowina or Bucovina, a former Austrian crownland, as of 2005 divided among the Ukraine and Romania; by Dr. Nik. Dimittrievicz], in Proskau [now Proszkow, in southwest Poland] in Preussisch-Schlesien [Prussian Silesia], and in the experimental garden at the Royal School of Agriculture. Comparison of the resulting seeds with the original seeds. Chemical analysis of the seeds and straw. Evidence of the "degree days" or "heat units" (Wärmesummen; "warm temperature summation" or "warm sum," similar to U.S. maturity groups) which the soybeans needed for their development in Vienna, St. Peter, Tetschen-Liebwerd, and Proskau.

In 1875 Prof. Haberlandt conducted the first agronomic trials with the 19 soybeans he obtained at the Vienna World Exposition (*Wiener Weltausstellung*) of 1873. On 2 May 1875 he planted three varieties of seeds at the Royal School of Agriculture in Vienna. The brownish-red variety (plot #1) from China blossomed on June 28, the light-yellow variety (plot #2) from China blossomed on July 1, and the light-yellow variety (plot #3) from Mongolia blossomed on June 29. The seeds of all three varieties ripened on Sept. 11. On plot #1 grew 27 plants, that yielded 249.2 gm of seeds (equivalent to 2,769 kg/hectare). On plot #2 grew 25 plants, that yielded 336.5 gm of seeds (equivalent to 3,739 kg/hectare). On plot #3 grew 15 plants, that yielded 196.9 gm of seeds (equivalent to 2,177 kg/hectare).

Prof. Haberlandt then sent samples of seeds to seven cooperators in central Europe, who planted and tested the seeds in the spring of 1876, with good or fairly good results in each case. These men reported the details of their agronomic trials to Haberlandt, who quoted from their reports. For details see: F. Haberlandt. 1877. "Der Anbau der rauhhaarigen Sojabohne." *Landwirthschaftlichen Versuchs-Stationen* 20:247-72.

In addition, on April 25 and May 5 Prof. Haberlandt planted 7 varieties (some original seeds, some reproductions; 4 black, 2 yellow, and 1 brownish-red [*braunrothe*]) in the experimental garden at the Royal School of Agriculture. A table (p. 26) gives his detailed results. Comparison of the resulting seeds with the original seeds showed that individual seeds in each new generation generally weighed more than those in the previous generation. Page 29 shows a chemical analysis of the seeds and straw. Haberlandt then calculated (p. 33) the "degree days" or "heat units" (*Wärmesummen;* "warm temperature summation" or "warm sum," similar to U.S. maturity groups) which his different soybean varieties needed for their development. For the seeds to begin to ripen they seem to need a total of 1824 to 5924 heat units (ºC), and to be ready for harvest 2230 to 3174 heat units. The minimum need at Proskau was 2246.9. The soybean can be grown as a green fodder plant at locations with less heat units. A table on p. 34 shows the mean temperature for each month, the northern latitude, and the elevation (meters above sea level) at Vienna, Graz, Tetschen-Liebwerd, and Proskau. Graz had the lowest latitude (47º4') and Tetschen-Liebwerd the highest (50º44'). Vienna and Graz had the warmest temperatures in May, June, and July. Address: Hochschule fuer Bodencultur, Vienna, Austria.

222. Isono, Tokusaburo. 1878. On shoyu [Its preparation and analysis, with a description of salt manufacture in Japan]. Inaugural dissertation at Tokyo Imperial University, Japan. 25 p. [Eng]*
• ***Summary:*** Page 4: "Common salt is indispensable as an article of food in Japan as well as... This nigari is used in precipitating to-fu as I stated before on page 3..." Address: Tokyo.

223. Langgaard, A. 1878. Bemerkungen ueber den Naehrwerth des Tofu nach Analysen von J. Schimoyama [Observations on the nutritional value of tofu from analyses by J. Schimoyama]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (*Yokohama*) 2(16):268-69. See also p. 271. [Ger]
• ***Summary:*** This article begins: "A large number of foreigners living in Japan are of the opinion that the physical condition of the Japanese people has completely deteriorated (*körperlich vollkomen heruntergekommenes ist*). This opinion is heard not only from lay people but, also (quite

© Copyright Soyinfo Center 2013

often) from physicians, with the additional opinion that with such a nitrogen-poor [low-protein] diet as the Japanese eat, you can hardly expect anything different."

Dr. Langgaard praises tofu as a food which is enjoyed almost daily by all classes of Japanese society, even the poor. In German it is called by the suitable term "bean cheese" (*Bohnenkäse*). One table (based on research by J. Schimoyama [Shimoyama]) gives the nutritional composition of tofu: Dry matter 11.79%. Water 88.21%. Fat: 26.11% of dry matter or 3.08% of fresh tofu. Protein: 69.54% of dry matter or 8.19% of fresh tofu. Salts [ash]: 4.35% of dry matter or 0.52% of fresh tofu.

Note 1. This is the 2nd earliest German-language document (April 2013) seen that uses the term *Bohnenkäse* to refer to tofu.

A second table, combining the research of Liebig with data from the previous table, compares the following foods on an equal nitrogen basis: Mother's milk, tofu, beef, wheat flour, potatoes, and rice. It shows that tofu is very rich in protein, and the lowest of all foods compared in non-nitrogenous [non-protein] substances. A third table shows that the Japanese diet based on rice and tofu is an economical way to obtain the nutrients one needs, and is comparable to the European diet of potatoes and meat. Address: M.D., Japan.

224. *Proceedings of the American Pharmaceutical Association.* 1878. Report on the progress of pharmacy. 25:25-334. See p. 236-37. Held in Sept. 1877 in Toronto, Ontario, Canada.

• ***Summary:*** In the section titled "Materia medica: Vegetable drugs" (p. 116-237), a subsection titled "Useful Plants of the Chinese Province of Shantung" (p. 234+) begins: "From a recent report on the geography and natural history of the province of Shantung, published in Hong Kong, the 'Journal of the Society of Arts' extracts some interesting details, which are copied in "Ph. J. Trans.," July 8th, 1876, p. 26. The following useful plants are mentioned:

Page 236: *"Soja Hispida.*–The bean cheese or bean curd, so common in many parts of China, is made from white or yellow beans steeped in cold water till they are soft, when they are deprived of their skin by pressing them between the fingers, after which, they are reduced to pulp, by pounding them in a mortar or pressing them under a millstone; the pulp is passed through a sieve, and then some *lu-shui*–[nigari] the residuum of sea-salt or nitre, or a gypsum solution is added, which coagulates the albumen; the water is taken off by pressure in linen cloth loaded with stones; this liquid is carefully thrown away, being said to be poisonous. The cake so obtained is salted, and sold fresh in the streets, or dried to the consistence of hard cheese. Flour for food is also made from these beans, as well as sauce or soy.

Note. This is the earliest English-language document seen (April 2013) that uses the term " bean cheese" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu.

"This sauce, now extensively used in Great Britain and America, is prepared by steeping the beans in water for one hour; they are then half dried in the sun and mixed with wheat flour and allowed to ferment, being placed for that purpose in a hot damp place. The mould which develops itself in abundance on the beans is scraped off, the beans are then dried and put in salted water, which has been properly boiled and cooled (to expel air). The brown and black color of the sauce so obtained is supposed to be produced by a microscopic fungus resembling the ergot of rye, whose properties the soy is said to possess.

"These kind of beans are very extensively used in the manufacture of the now famous bean cake, which appears to be exported in enormous quantities. The beans being thoroughly crushed under heavy stone wheels turned by mules, are heated under water and the cakes compressed between iron hoops. The pressure is slowly and gradually increased by driving wedges with an enormous stone suspended as a pendulum and acting as a ram. The oil which runs from them into a kind of well, is black and very dense; it has a disagreeable smell, and is used for illuminating purposes, and for calking boats, and being mixed with lime it makes a kind of putty. A foreign firm at Nenchavang [sic, Newchwang], sometime ago, tried to extract oil from the beans by the more powerful and expeditious means of a hydraulic press, but the resistance to a sudden pressure was so great that hardly any oil could be obtained."

The next section (p. 236-37) is titled *"Sesamum orientale, Arachis hypogœa, Cannabis sativa, Ricinus communis"* [sesame, peanuts, hemp, castor]; these are among the oil-producing plants of Shantung province.

225. Wells Fargo and Co. 1878. Directory of Chinese business houses: San Francisco, Sacramento, Marysville, Portland, Stockton, San Jose, Virginia City (Nevada). San Francisco, California: Britton & Ray. 86 p. [Eng; Chi]

• ***Summary:*** On page 43 is a listing written in English and Chinese, for "Wo Sing & Co., Bean Cakes, 708½ Dupont st., San Francisco." The Chinese characters indicate that the company made both fermented tofu and regular (non-fermented) tofu.

The following table of contents gives a rough idea of the relative size of Chinese populations in various western American cities in 1878, assuming that the population is approximately proportional to the number of pages of business listings. San Francisco, p. 1-48. Sacramento, p. 49-60. Marysville, p. 61. Portland (Oregon), p. 64-68. Stockton, p. 69-74. San Jose, p. 75-83. Virginia City (Nevada), p. 84-86.

Note: This is the earliest directory seen (i.e., publication with the word "Directory" in the title; April 2001) that lists a

© Copyright Soyinfo Center 2013

soy-related company. Address: San Francisco.

226. Wernich, Albrecht Ludwig Agathon. 1878. Geografisch-medicinische Studien nach den Erlebnissen einer Reise um die Erde [Geographical-medicinal studies based on the experiences of a trip around the world]. Berlin: Verlag von August Hirschwald. x + 423 p. See p. 85. No index. 23 cm. [3 soy ref. Ger]

• ***Summary:*** Chapter 5, titled "Japan–Food value and foods" contains a long discussion of the soybean (*Dolichos Soja*) and soyfoods (p. 84-87) including tofu (*Bohnenkäse oder Bohnengefaultes*) and shoyu (*Soja oder Schoju*), with two long quotations. Soybeans are rich in protein and almost free of starch. They can be roasted to taste like nuts and used in baked goods.

Note. This is the earliest German-language document seen (April 2013) that uses the term *Bohnengefaultes* to refer to tofu.

Endnote No. 35 (p. 411) states that miso soup (*Misoschiru*) or shoyu soup (*Schio-ü-schiru*) are part of the typical Japanese breakfast. Miso is made from beans, barley, and salt; shoyu is made from beans, wheat, and salt. The soup typically contains small amounts of vegetables (such as varieties of potatoes), beans, cabbage and mushrooms, turnips or carrots, onions, etc. weighing a total of about 170 gm. The main dish at breakfast is rice (weighing about 470 gm). Also included are fish or an egg, salt-pickled vegetables, and 100 gm of tea.

Also discusses *Pueraria Thunbergiana* (kuzu, p. 87). Total references: 162. Albrecht Wernich lived 1843-1896. Address: Docent for Special Pathology and Therapy at Berlin University.

227. *Kogyo Tokei-hyo* (*Census of Manufacturers*). 1878--. Serial/periodical. Tokyo: Japanese Ministry of International Trade and Industry (MITI), Research and Statistics Dept. (Tsusho Sangyo Daijin Kanbo Chôsa Tokei-bu). Annual. [Jap]

• ***Summary:*** Contains statistics concerning Japan's industries and commodities. For example, in the report for the year 1987 (published in June 1989) under miso we find "124111 Miso (Including powdered or spray-dried miso). Total production in Japan: 641,337 tonnes. Value in million yen: 138,960. ??" Similar figures are given for each of Japan's 47 prefectures, listed from north to south, starting with Hokkaido and ending with Okinawa. The four largest producing prefectures are Nagano 186,316 tonnes (29% of the total), Aichi 63,294 tonnes, and Shin (?) 34,282, and Aomori 32,145 tonnes.

Note: The powerful and influential publisher, MITI, is called Tsûsan-sho in Japanese. Address: Tokyo, Japan.

228. *Hartford Daily Courant* (*Connecticut*). 1879. A Hartford lady at a Chinese dinner. June 4. p. 2.

• ***Summary:*** A lady, formerly living in Hartford but now the wife of an American official in China, writes to her friends at home and describes a ceremonious dinner she attended recently. The feast was given by the "deputy" (whom she describes as a "lovely old man), and "was attended by only seven persons, two American ladies, and two Chinese men besides the host."

She describes each briefly each course of the twenty-course meal, which was preceded by eight dishes of appetizers. "Thirteenth–Stewed pigeons and bean curd." "Twentieth–Rice with chicken soup, salted cabbage, salt bean curd [probably fermented], chestnuts grown in water and I don't know what.

"After that, tea and it was over. This was followed by a two days' headache."

229. *New York Times.* 1879. A Chinese banquet: How the Viceroy of Canton regaled Gen. Grant. July 4. p. 2.

• ***Summary:*** After leaving the White House, President Ulysses S. Grant and his wife, Julia, decided to travel around the world. From the *Hong Kong Daily Press:* That evening, the Viceroy's yamen (residence) was lit with thousands of lamps. The Chinese dinner menu, with many courses listed in detail, with both Chinese and English names, includes: Fu P'i Kap Tan (pigeon eggs inclosed in bean curd [sic, yuba]). Ui Wan Tau Kan (bean soup [sic, soup with pressed tofu]). Hang Yan Tau Fu (almond curd).

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Fu P'i" to refer to yuba.

230. Warington, Robert. 1879. Agricultural chemistry in Japan. *Chemical News and Journal of Industrial Science* 40(1039):195-96. Oct. 24.

• ***Summary:*** "In the International Exhibition, now being held at Sydney [Australia], a collection of soils, manures, and agricultural products is shown by the Imperial College of Agriculture in Tokio, Japan. Accompanying the collection is a descriptive catalogue, compiled by Mr. Kinch, the Professor of Chemistry at the College, in which a short account is given of the various products exhibited, with chemical analyses of the majority of them. The catalogue contains in all about 80 analyses of Japanese products. The whole of this important work has been accomplished in the laboratory of the College, under the superintendence of Mr. Kinch, and is certainly highly creditable to the Institution."

The section titled "Soy Bean (*Glycine* [*Soja*] *hispida*)" (p. 195) mentions miso, tofu, and shoyu.

Starch and sugar: Starch is prepared in Japan from the root of a leguminous plant, *Pueraria Thunbergiana* (p. 196).

"Alcoholic liquors.–Rice-beer (*Sake*) is the most important beverage of the country. It is manufactured only during the winter months. The ferment is first prepared by spreading steamed rice mixed with wood-ashes in shallow trays, which are then seeded with the yellow spores of the

© Copyright Soyinfo Center 2013

fungus developed in a previous operation, and kept for some days in a warm chamber. When the fungus has developed, the mass is used to inoculate a fresh quantity of steamed rice. The mash is prepared by adding to steamed rice and water a certain proportion of the above ferment, and the whole is repeatedly agitated for two days. In this stage of the operation the starch of the rice is converted into sugar. The mash is then transferred to a large vessel, and the temperature raised to that of the human body. In this stage an active alcoholic fermentation takes place. The liquor thus formed is not, however, the final product. To it are added fresh quantities of steamed rice, water, and ferment, and after three days mashing this addition is again, and yet again repeated. When the last rice has been added the whole is allowed to ferment for thirteen days. The sake is now strained, and the residue pressed. After standing fifteen days to clear, the pure sake is heated to 120º F. to destroy any remaining yeast, and is then fit for use.

"Finished sake contains, according to six analyses given by Mr. Kinch, 11.33 to 15.0 per cent of alcohol by weight, and 2.33 to 3.05 per cent of solid matter; the total free acid, reckoned as acetic, was 0-20 to 0-27 per cent. Various sweet, imperfectly fermented, liquors are also manufactured. The solid residue left after pressing out the sake is distilled, and yields spirit of various strengths. The strongest spirit exhibited was 10.7 over Proof." Address: M.R.C.S. Eng.

231. *Bulletin de la Societe d'Acclimatation.* 1879. IV. Bibliographie. II. Journaux et revues. 1879. 3e fascicule.–*Le Soja hispida* [IV. Bibliography. II. Journals and Revues. 1879. 3rd volume of *Le Soja hispida*] (Continued). 26:666-71. Nov. [Fre]

• ***Summary:*** Continued (p. 670.3): "One can read in the *Imperial Encyclopedia of Agriculture* (*Cheou-chi-thong-Khao*) [from China], book / volume XXVII, folio 8, recto: 'Yellow soybeans can be used to make tofu (*teou-fou*, a sort of fermented soybean paté consumed regularly by the lower classes). Oil is removed from the beans using a press; they are also used to make jiang (*tsiang*, a sort of sauce used as a seasoning). The *Treatise on Agriculture*, by Fan-Ching states: At the summer solstice, one plants soybeans (*dou*); they don't require heavy labor. The flowers of the soybean don't like to see the sun, otherwise the plants will become yellow and the roots will blacken' (Mr. Stanislas Julien, member of the Institute, this *Bulletin*, 1855, p. 225).

"Soybean oil (*L'huile de Pois oléagineux*) is very similar to our edible oils; its odor and taste are agreeable. It is equally suited to combustion [burning in oil lamps]. Exposed to freezing cold, it thickens; atmospheric oxygen makes it rapidly turn to resin. It belongs, therefore, to the class of drying oils and can, according to this report, replace linseed oil in some of its applications. Soybeans contain 18% oil and, because of the quantity and quality of the oil they contain, should provide a new food and a useful product to the industrial arts (Letter from M.E. Frémy, this *Bulletin*, 1855, p. 382).

"At 3 degrees below zero, the plants are not stressed; at 4 degrees the leaves freeze and the pods are slightly injured. If one considers that Haricot beans freeze at zero degrees, one can consider that soybeans are suited to be cultivated in our climate." There follows a detailed botanical description of the plant. "Each plant bears 80 to 100 pods. The seed yield is excellent: each plant produces on average 183 seeds which, freshly shelled, make a tenth of liter and weigh 58 gm. A liter of soybeans contains 4,000 seeds and weighs 750 gm.

"Independently of these oleaginous qualities, soybeans make a delicious vegetable. Cooking them is very easy: just toss the fresh green seeds into boiling water. The seed coat detaches itself from each seed and floats to the surface, where they are removed. After 30 minutes, the cooking is done and furnishes a delicate dish, recalling the taste of green peas, but less sweet (Note from Mr. Lachaume, this *Bulletin*, 1858, p. 131).

"Look again at a communication from Mr. Paul Champion on the production of tofu (*fromage de Pois*), in China and Japan (this *Bulletin*, 1866, p. 562), etc.

"Let us say again that in the meeting of the Central Society of Horticulture, on Nov. 13 of this year, Mr. Duchartre read a note on the relative richness of peas, haricot beans, dry beans (*Fèves*), lentils and soya (*Soja*) in nitrogenous materials (protein) and oil. He concluded that soya is the richest of all. Up until recently, dry beans (*Fèves*) have been considered the richest, containing 30.80% protein and 70% oil; however soya contains 35% protein and 73% oil" [sic, this percentage is much too high]. Address: France.

232. Kinch, Edward. 1879. Japan: A classified and descriptive catalogue of a collection of agricultural products exhibited in the Sydney international exhibition by the Imperial College of Agriculture, Tokio, Japan. Tokyo: Agricultural Bureau (Naimushô), Home Dept. 65 p. 20 cm. [Eng]

• ***Summary:*** Each item that was displayed is numbered. All chemical / nutritional analyses give percentage composition unless otherwise stated. The chapter on "Manures "begins (p. 4): "The principal manures used in this country are human excrements both solid and liquid, which are collected with the greatest care and applies to the land whilst in a more or less advanced state of decomposition. The excreta are often made into a compost with dried grass.

The section titled "vegetable manures" (p. 7-13) gives analyses of rape cake (*abura kasu*), malt dust (*ame kasu*), sesamum cake (*goma kasu*), rice beer residues (*sake kasu*), soy [sauce] residues (*shoyu kasu;* water 16.37%, ash 4.96%, organic matter 78.67%), rice cleanings (*nuka*), and barley bran (*fusuma*).

Note 1. This is the earliest English-language document

© Copyright Soyinfo Center 2013

seen (May 2012) that contains the term *shoyu kasu* (in italics, without diacritics) which it defines as "Soy residues," and the earliest that gives its composition.

The chapter on "Foods" begins (p. 16): "By far the most important national food is rice, *Kome;* more than one half of the cultivated land of the Empire is devoted to paddy fields, *Ta,* and besides the rice grown on this irrigated land a considerable quantity is grown on the dry fields, *Katake." Mochi-gome* or glutinous rice, is specially used for making the new years' cakes, *Mochi.*

The many kinds of leguminous plants include: Peas, field and haricot beans, vetches, lupins; soy beans *Glycine* (*soja*) *hispida, O-mame or Daidzu;* fol. lanceolata (*Midzu-kugiri*)*; Phaseolus radiatus, Adzuki* or *Shodzu; P. radiatus v. pendula, Tsura-adzuki; P. radiatus subtriloba, Bundo;* Horse gram, *Dolichos uniflorus, Sasagi;* Gram, *Dolichos umbellatus, Hata-sasagi;* Overlook pea, *Canavalia incurva, Nata-mame;* Ground nut, *Arachis hypogœa, Rakkasho* or *Tojin-mame.*

"Also should be mentioned the sesamum, *Goma,* the oil of which is extensively used in cooking; *Perilla ocymoides, Ye-goma;* and rape, *Brassica sinensis, Abura-na,* which is cultivated for its seed, the oil being used for burning." Also list (with scientific and Japanese names, p. 17-18) the principal root crops, fruits, sea weed and lichens, fungi, and starch.

Next: Chemical analyses of rice, wheat, rye, "red bean–*Adzuki–Phaseolus radiatus* (large variety and small variety)."

Note 2. This is the earliest English-language document seen (March 2006) that uses the word *Shodzu* (or *shôdzu* or *shôzu* or *shodzu* or *shozu*) or the word "red" or the term "red bean" to refer to the azuki bean, or that gives its scientific name as *Phaseolus radiatus,* or that reports the existence of large and small varieties, or that uses the word *Bundo* to refer to a variety of azuki bean.

Then (p. 22-26): "44. Beans. *O-mame, Daidzu. Glycine* (*soja*) *hispida.* White round soy bean. Miso mame. Percentage composition (table): Water 11.32, albuminoids 37.75, fat 20.89, fibre 1.50, ash 3.86, starch and soluble cellulose 24.58. Total 100.00.

"This bean is met with in several varieties of different colour and size, but they differ little in composition. It is vegetable which approaches nearest in chemical composition to animal food (meat), containing as it does one fifth of its weight of fat and often two-fifths of nitrogenous matter. It is an extremely valuable adjunct to the food of a people who subsist so largely on a purely vegetable diet, of which the bulk is rice so rich in heat producers–starch, and poor in flesh formers–albuminoids.

"*Shoyu, Miso,* and *Tofu,* are made from these beans, and enter largely into the food of the nation.

"45. Miso. *Shiro-miso* or white miso. From Osaka. Percentage composition: Water 50.73, fibre 12.93, ash 6.58 (containing 5.4 per cent of common salt), sugar 17.54, albuminoids 5.64, soluble carbohydrates 6.58. Total 100.00. Soluble in water 35.88 per cent.

"46. Miso. *Aka-miso* or red miso. From Osaka. Percentage composition: Water 50.40, fibre 8.25, ash 12.50 (containing 12 per cent of common salt), sugar 0.61, albuminoids 10.08, soluble carbohydrates 18.16. Total 100.00. Soluble in water 34.71 per cent."

Note 3. This is the earliest English-language document seen (March 2009) that uses the term "Shiro-miso" refer to white miso (and vice versa) or "aka-miso" to refer to red miso (and vice versa).

"In the preparation of *Miso* the beans are boiled, pounded in a mortar into a paste and mixed with fermenting rice, *Koji* (see *sake*) in various proportions, and with more or less salt, and the mixture is placed in tubs and left in a cool place for about a month. It will be seen that one variety, white miso, contains much sugar, derived from the *koji,* and little salt; whilst the other variety contains very little sugar and much more salt.

"47. Tofu. Percentage composition: Water 89.29, ash 0.48, fibre 1.01, nitrogenous substances 4.87, non-nitrogenous substances 4.35 (containing 3.32% fat). Total 100.00.

"This food is made by boiling the white soy beans, *Shiro-mame,* in water after they have been soaked, ground and strained through a sieve. The solution is filtered through cotton cloth and the residue pressed; the liquid, containing legumin in solution, is precipitated by the addition of the brine which runs off from sea salt during its deliquescence in the air. The precipitate constitutes *Tofu."*

Note 4. This is the earliest English-language document seen (Oct. 2008) that uses the word "legumin" to refer to the water soluble protein in soybeans than can be precipitated by a coagulant to make tofu.

"48. Kori tofu. Percentage composition: Water 18.75, ash 1.60, nitrogenous substances 48.80, non-nitrogenous substances, chiefly fat 30.85. Total 100.00.

"Prepared from the above [tofu] by exposing it to the air during frost, until it freezes, and afterwards thawing in the sun, by which the greater quantity of the water is removed.

Note 5. This is the earliest English-language document seen (April 2013) that mentions dried frozen tofu, which it calls Kori tofu.

"49. Soy [sauce]. Shoyu. Specific gravity 1.1996. Grams per litre: Total solid residue 359.888, ash 195.168 (principally common salt), sugar 31.034, albuminoids 41.000, free acid expressed as acetic acid 6.200.

Note 6. This is the earliest document seen (Jan. 2008) that uses the term "specific gravity" in connection with soyfoods–in this case soy sauce.

"Manufacture of *Shoyu. Shoyu* is made from the soy bean, *Glycine* (*soja*) *hispida q.v.* together with wheat, salt and water. Equal parts of beans and wheat are used.

© Copyright Soyinfo Center 2013

A small part of the wheat is mixed with *Koji* (see *sake*) and allowed to ferment. The remainder is roasted and the beans are also roasted. The roasted beans and wheat are then mixed together with the fermenting wheat, placed in shallow wooden boxes, and kept for some days, at a fixed temperature, in a warm chamber with thick walls, until the whole mass is covered with fungus. It is very important that the temperature of this chamber should be kept at the proper point. By these processes, part of the starch of the wheat is converted into dextrin and sugar, and lactic acid and acetic acid are formed. It is then mixed with salt lye, the proportion used being about 4 *go* of salt to 12 *koku* of water to extract 1 *koku* of the fermented product. The mashings are removed to large vats and there kept for at least 20 months and generally for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for 5 years with that kept for 3 years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed in the same manner as in *sake* pressing. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *Moromi* or mixed soy, in order to give it a sweet taste. Occasionally a sweet sake, obtained by taking 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours, is added instead of honey. The residue obtained on pressing *moromi* is again mixed with salt and water, in the proportion of 8 *to* of salt to 1 *koku* of water and again pressed, this yields and inferior *shoyu.* Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food, and the last residue as manure. One *koku* of the mixture, *moromi,* produces 4 *kuwamme* of residue at the first filtration and about 3.5 *kuwamme* of residue at the second and third. The *shoyu,* after pressing, is allowed to settle for two days in large tanks, and then drawn off and again filtered. *Shoyu* is a very important condiment, it is mixed with a great many kinds of food and is produced and consumed in very large quantities.

"1000 *Go* = 100 *Sho* = 10 *To* = 1 *Koku* = 4.929 Bushels. 1 *Kin* = 1.325 lbs. 1 *Kuwamme* = 8.28 lbs.

Note 7. This description of how shoyu is made contains several major errors.

Finally, there are chapters on alcoholic liquors (with emphasis on sake or "rice beer, sometimes called rice wine"), sweet liqueurs (*mirin, homeishiu, shiro-zake*), food adjuncts (incl. salt, vinegar, spices, herbs, and perhaps shoyu), edible sea weeds (20 varieties, with both Japanese and scientific names, and an analysis of each), tea, tobacco, fodder, animal foods, dye stuffs, oils and waxes, and starch (incl. *kudzu, Pueraria thunbergiana*).

Note 8. This is the earliest document seen (July 2008) concerning soybean products (tofu, dried-frozen tofu, and shoyu) in connection with (but not yet in) Australia.

Note 9. This is the earliest document seen (July 2008) by Edward Kinch (1848-1920) that mentions soy. Kinch was born on 18 Aug. 1848 at Henley-on-Thames, Oxfordshire, England, the 3rd child of Charles Kinch and Emma Plumbe Kinch. He was baptised there on 12 Dec. 1845 in St. Mary's church. Kinch was a chemist, specializing in agricultural chemistry. In 1869 he became assistant professor at the Royal Agricultural College (RAC) in Cirencester (in southwestern England). From 1876 to 1881 he was a professor of agricultural chemistry at the Imperial College of Agriculture in Tokyo, Japan. Then from 1881 to 1915 he was professor of chemistry at the RAC in Cirencester. He married Edith Shirley Huntington in 1889 in Pembroke district, Pembroke, Wales. They had two children, William (born ca. 1886) and Dora Ann (born ca. 1893). He died on 6 Aug. 1920 in Haselmere, Surrey, England.

Note 10. This catalog was displayed at the Sydney International Exhibition, held in Australia in 1879. The Sydney International Exhibition was Australia's first international exhibition, a showcase of invention and industry from around the world. An imposing Garden Palace was constructed in the Botanic Gardens as a home for the exhibition. Address: F.I.C., F.C.S., &c., Prof. of Chemistry. Imperial College of Agriculture, Komaba, Tokio, Japan.

233. Pickering, Charles. 1879. Chronological history of plants: Man's record of his own existence illustrated through their names, uses, and companionship. Boston, Massachusetts: Little, Brown, and Co. 1222 p. See p. 763. [10 ref]

• ***Summary:*** In the section titled "Chronological arrangement of accompanying animals and plants," at the year 1296 A.D. we read: *"Soja hispida* of Japan. Enumerated by the Chinese official 141 as unknown in Cambodia:–'miso' beans are mentioned in 1444 in the annals of the Japanese emperors (transl. Tits. [Titsingh / Titsing] and Klaproth); were observed by Kaempfer v. 837, and Thunberg, under frequent cultivation near Nagasaki and elsewhere; are known to be made into the condiment called 'soia' (Pers.) in English *soy;* also into a white porridge [tofu] in general use among the Chinese and called by them 'teu hu' or 'tauhu' (Loureiro). Westward, S. hispida was observed by Mason in Burmah; by Roxburgh, and Graham, in the gardens of Hindustan. Transported to Europe, it is described by Jacquin rar pl. 145" [*Icones plantarum rariorum*].

Note 1. This may be the earliest document seen (May 2010) concerning soybeans in Burma (later renamed Myanmar), or the cultivation of soybeans in Burma. This document may contain the earliest date seen for soybeans in Burma, or the cultivation of soybeans in Burma (1879). The source of these soybeans is unknown. However, as of Feb. 2012 we have been unable to find verification for Pickering's statement about Mason in the writings of Francis Mason. Finding the earlier citation by Mason may allow us to push back this date.

© Copyright Soyinfo Center 2013

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "tauhu" to refer to Chinese-style tofu. Address: M.D., Boston, Massachusetts.

234. *Hawke's Bay Herald* (*New Zealand*). 1880. The use of the "Jew's ear" fungus in China. Jan. 9. p. 3.
• ***Summary:*** "According to a paper recently read before the Philosophical Society of Wellington, New Zealand, it appears that a large trade is carried on between that colony and China in the fungus known as 'Jew's ear.' This trade is practically restricted to a single species, *Hirneola polytricha*, Mont., which is very abundant on decaying timber in all the forest districts. Small quantities only of this fungus were exported before the year 1872; in that year, however, the amount declared at the various ports in the colony was 57 tons 14 cwt. [hundredweight], of the estimated value of 9,635 dollars; in 1877 it had increased to 220 tons 5 cwt., valued at 16,590 dollars,..."

"China is the sole market for this fungus. The use to which the Chinese apply it is as a medicine for purifying the blood, administered in the form of a decoction. It is also used on fast days, with a mixture of vermicelli and bean curd [tofu], instead of animal food. It seems to be likewise largely used in soups as ordinary food, and is sold at retail at about twenty-five cents per pound."

235. H.K. 1880. Bean-cake manure in China. *Gardeners' Chronicle* (*London*) 13:209. Feb. 14.
• ***Summary:*** "H.K. writes, 'I distinctly remember boarding junks laden with cakes of artificial manure upon the coast of China, but had supposed that it was of another description to the Bean-cake, the refuse [okara] of the Beancurd [tofu], which is so commonly sold in China. If so, the manufacture of a palatable food, which leaves so valuable a refuse, is one which might be adopted with advantage in this country.' Can Mr. Fortune enlighten us?"

Note: This is the second earliest English-language document seen (Oct. 2001) that mentions okara, which it calls "the Bean-cake, the refuse of the Beancurd [tofu]." Address: England.

236. Grisard, Jules. 1880. Extraits des procés-verbaux des séances de la société. Cinquième section. Séance du 6 Avril 1880 [Excerpts of verbal proceedings from meetings of the society. Fifth section. Meeting of 6 April 1880]. *Bulletin de la Societe d'Acclimatation* 27:320. April. [Fre]
• ***Summary:*** The president, Mr. Eug. Vavin, insists on the great interest presented by the soybean (*Soja hispida*) cultivated as a common legume, but he does not believe that the manufacture of cheese [tofu] from the soybean would be of any great interest, especially among members of the Society. Mr. Vavin is convinced that this legume will be widely disseminated and grown within several years, not only because of its fine taste, which will invite research on its uses as a food, but even more because it has the precious advantage of not having been attacked by the broad bean beetle (*bruche* [*Bruchus rufimanus*]).

"Mr. Paillieux observes that this plant can be used in animal feeds; he rejects its use for making [soy] sauce, but believes that it can be used to advantage in the preparation of cheeses, for it contains a large proportion of casein, 35 per cent." Address: Secretary, France.

237. *Bulletin de la Societe d'Acclimatation.* 1880. Extraits des procés-verbaux des séances de la société. Séance générale du 14 Mai 1880 [Excerpts of verbal proceedings from meetings of the society. General meeting of 14 May 1880]. 27:231-49. May. See p. 248. [1 ref. Fre]
• ***Summary:*** Mr. Auguste Paillieux shows the members of the Society a small scale model of a Chinese stone mill used to make tofu, then describes the process for making tofu, which he calls *Teou-fou.*

Mr. Jules Grisard recalls that in the first volumes of this Bulletin, and especially during the years 1855 and 1856, a great deal of information was published about the soybean (*le Soja*), a plant which at that time was generally called *Pois oléagineux.* Address: France.

238. Greev, Edward. 1880. What the Japanese eat. *Frank Leslie's Popular Monthly* (*The American Magazine*) 10(2):164-74. Aug.
• ***Summary:*** A very interesting article with many large illustrations. On page 171 we read: "We quitted the dealer in vermicelli, etc., and entered a shop devoted to the manufacture of *tofu* (bean-curd, or cheese), a national dish. It is semi-gelatinous, white, delicious and wholesome. Yuba is another sort of paste food, made from white beans. Misso [miso] is a white bean paste, mixed with fermented rice and salt. It requires a Japanese-trained stomach to digest this.

Note: This is the earliest English-language document seen (March 2009) that uses the term "bean paste" (not preceded by the word "soy" or "soya") to refer to miso.

"Soyu [shoyu] (soy), a sauce made with boiled beans and wheat, was also sold at this establishment. The mess is fermented until it is a mass of fungi, then cooled and salted with hot lye. It is next transferred to enormous vats, in which it is kept for several years, then pressed in bags made of thick cotton cloth. The brown juice that runs from the horrible mass is soyu, and is not only palatable, but wholesome. The Japanese flavor dishes with it, and use it as we do vinegar, for pickling. It tastes like mushroom catsup.

"I had seen the process of soy-making, therefore declined to visit one of those establishments; whereupon my guide took me to a candy factory. As a nation, the Japanese are not large consumers of sugar."

Mentions many other Japanese foods and beverages including saké (rice-wine or rice-beer); he describes how it is made. Illustrations: (1) Seven Japanese men and women

seated on tatami mats around a low table having a meal; in the background is a large painted wall. (2) A Japanese butcher's shop, as seen from outside. (3) A salt vender and house servant, carry goods at both ends of a shoulder pole. (4) The *Pelor japonicum*–a curious Japanese fish. (5) A dealer in dried fish with a man carrying goods on a shoulder pole. (6) Japanese entertaining European guests, seated in chairs at a raised table. (7) A rice warehouse near Tokyo. (8) A saké shop at New Year's with a large crowd of men. (9) A Japanese tea house.

239. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages [The soybean, its chemical composition, varieties, culture, and uses]. *Bulletin de la Societe d'Acclimatation* 27:414-71. Sept.; 27:538-96. Oct. 28 cm. [73 ref. Fre]

• ***Summary:*** One of the most important and original of the early publications on soya in Europe. Its in-text bibliography on soya was the largest of any published up to that time.

Contents: Part I: Introduction and extracts on soybeans and soyfoods from 30 articles published previously in the *Bulletin of the Society for Acclimatization* from 1855 to 1880 (pages 414-430. Note 1. Each of these articles has a separate record in this database).

1. Soybean botany (p. 430-31). 2. The soybean in Japan (p. 431-42): Engelbert Kaempfer and his writings on miso and shoyu, information on soya from a document titled *Japan at the World Exposition of 1878* (*Le Japon á l'Exposition universelle de 1878,* written in French by a Japanese, p. 29-33), recipe for making shoyu in France, tofu. 3. Soya in Cochinchine (French Indochina, p. 442-46): Black soybeans. 4. Soya in China (p. 446-51): Soy oil (*Huile de Soya*), fermented tofu (*le fromage de soya, teou-fou*), soy sauce (*tsiang-yeou;* In London, England, it is sold under the name of "India Soy" at Cross & Blackwell, Soho-Square {p. 451}).

Note 2. This is the earliest French-language document seen (April 2013) that uses the term *fromage de soya* (p. 449) to refer to tofu. 5. Soya in Austria-Hungary (p. 452-71): Starting with soybeans at the World Exposition of Vienna in 1873, includes a long, in-depth discussion (with many excerpts) of Prof. F. Haberlandt's book *Le Soja,* published in Vienna in 1878.

Tables in Part I show: (1) The chemical composition (in both their normal and dry states) of Chinese soybeans (*pois de Chine*), tofu (*fromage de pois*), and tofu curds (p. 427). (2) The yield of tofu. 120 gm of soybeans yields 184 gm of tofu (p. 427). (3) The weight and nitrogen content of the different components when tofu is made from soybeans (p. 428). (4) The Japanese names of 23 soybean (*mame*) varieties and a very brief description of their characteristics (p. 435-36; e.g., 1. *Go-guwatsu no mame* {5th month bean}. 2. *Use mame* [*sic, Wase mame*] {early}. 3. *Nakate mame* {half season}. 3a. *Okute mame* {late}. 4. *Maru mame* {round}. 5. *Shiro teppo mame* {white, like a pistol bullet} 6. *Kuro mame* {black}. 7. *Kuro teppo mame* {black, like a pistol bullet} 8. *Koishi mame* {small stone}. 9. *Awo mame* {*Ao,* green}. 10. *Kage mame* {shade, shadow}. 11-15. *Aka mame* {red; 1 of same species, two of different species}. 16-18. *Tsya mame* {*Cha,* tea colored}. 19. *Kuro Kura Kake mame* {black saddled}. 20. *Aka Kura Kake mame* {red saddled}. 21-23. *Fu iri mame* {striped, variegated, mottled; see Uzura mame = speckled like quail eggs}). This nomenclature was taken from a Japanese work titled: "Explanation, with figures, of trees and plants recently determined / identified."

(5) The romanized Chinese names of six types of soybeans and a French translation of each (e.g., *Houang-teou = Soya jaune*) (p. 447). (6) Two analyses of soybean seeds, reprinted from *Chemischer Ackersmann,* 1872 (p. 458). (7) The chemical composition of three soybean varieties, including Yellow of Mongolia, Yellow of China, and Reddish-Brown of China; the composition of the original seeds and the first generation seed is given for each type (p. 460-61). (8) The chemical composition of reddish-brown, yellow, and black varieties of soybeans (p. 469-70; data from M. Schroeder, Mach, and Caplan, published by F. Haberlandt). (9) Weight of 1,000 seeds for four generations grown out in Vienna. Original seeds: 81.5 to 105 gm. First generation: 110.5 to 154.5 gm. Second generation: 141.8 to 163.6 gm. Third generation: 116.0 to 151.0 gm.

Contents (continued), Part II. 6. The Soybean, by Count Heinrich Attems (p. 538-60): Soybean cultivation, time of planting, spacing of seeds, quantity of seeds, harvest, uses, and food preparations made from whole soybeans. Practical soybean culture trials on a grand scale, in the domain of the archduke Albert, an extract from a booklet by Edmond de Blaskovics titled "The Soybean, Its Culture, Use, and Value as Forage" (Vienna, 1880). Excerpts of six articles on soya from the *Wiener Landwirthschaftliche Zeitung* (*Viennese Agricultural Journal*) (Jan. 1879 to June 1880) (p. 548-54). Excerpts of ten articles on soya from the *Oesterreichisches Landwirtschaftliches Wochenblatt* (*Austrian Agricultural Weekly*) (March 1879 to Feb. 1880) (p. 554-59).

7. The soybean in France (p. 561-76): History (starting with Buffon, who became director of the *Jardin des Plantes* [Royal Garden, also called Jardin du Roi] in 1739), varieties grown, cultivation, utilization (mainly as forage plant for livestock and as an oilseed for oil and meal), accessory uses (miso, Japanese-style soy sauce {*shoyu*}, Chinese-style soy sauce {*tsiang-yeou*}, Japanese-style tofu {*tô-fu*}, Chinese-style tofu {*téou-fou*}, fermented black soybeans {*téou-che*}, and soy coffee {*café de Soja*}, white fermented tofu {*fromage blanc*}, red fermented tofu {*fromage rouge*}, green vegetable soybeans {*des graines fraîches, écossées encores vertes, comme le Haricot flageolet*}, whole dry soybeans {*les graines sèches comme le Haricot blanc ordinare*}).

8. Conclusion and tables showing French analyses of soybeans (p. 576-78). Appendixes (p. 579-96): Summaries of

© Copyright Soyinfo Center 2013

letters to the Society describing 27 cultural experiments with soybeans conducted during late 1880 at various locations in France, Switzerland and Algeria. (Note 3. Though the publication date of this appendix is given as Oct. 1880, some of the letters are dated as late as 21 Nov. 1880). Reprint of a 2-page letter from Eugene Simon, former French consul in China, on soybean farming in China (p. 591-93). Reprint of a description by Eugene Simon, based on the description of a Chinese, of how tofu is made in China (p. 593-94). A French translation of a 1781 article by Isaac Titsingh on preparation of soy sauce in Indonesia (p. 594-95). And some information about soybeans from the ancient Chinese herbal *Pên Ts'ao Kang Mu* (p. 595). Reprints of 2 letters from Eugene Simon in China, on soya and tofu in China. French translation of a 1781 article by Isaac Titsingh on preparation of soy sauce.

Note 4. We find it surprising that this superb work contains no illustrations of a soybean plant, or of any part of the plant, or of any foods made from soybeans; the only illustration (p. 569) is a cross section of an empty pit into which one could put a mixed silage that contained 20% soybean plants. The distance a-b is 3 meters; f-g is 2 meters; e-f is 0.5 meters; a-e is 1 meter; i-h is 0.4 meters.

Note 5. This is the earliest French-language document seen (Dec. 1999) that uses the term *Huile de Soya* to refer to soybean oil.

Note 6. This is the earliest document seen (March 2001) that has a bibliography of more than 50 references concerning soybeans.

Note 7. This is the earliest European-language document seen (Sept. 2004) that mentions the Japanese soybean types *Nakata-mame* or *Okute mame.*

Note 8. This is the earliest French-language document seen (April 2012) that uses the term *tsiang-yeou* to refer to Chinese-style soy sauce. Address: France.

240. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages [The soybean, its chemical composition, varieties, culture, and uses (Continued–Document part I)]. *Bulletin de la Societe d'Acclimatation* 27:414-49. Sept. 28 cm. [73 ref. Fre]
• ***Summary:*** Introduction (p. 414): At the moment, when according to all appearances, a precious plant is going to take the place in our culture to which it has the right, we consider it our duty to bring back to light the previous efforts of the Society for Acclimatization, to introduce and propagate this plant in France. We will publish, therefore, word for word excerpts of everything soya in the records, reports with articles, letters and notes published in the bulletins of our society during the past 25 years. Our study, it seems to us, cannot be proceeded by an introduction more interesting than this.

From 1855 until the present (1880), the Society has not ceased to receive and distribute soybean seeds, and to make known its cultivation and utilization. It has rewarded successful trials by recognition and publication, and described the production processes of the industries that use soybeans.

We might have tried to refer the reader to past bulletins of the Society, but not everyone has access to these old documents, and besides looking up these articles on soy takes time and care. These motives led to our decision.

The question of soy has been dormant for a long time. But it awakens today with cultural experiments, which have been carried out for seven years in Etampes, using seeds given by the Society, with tests of tofu making which have been conducted in Marseilles; it was finally highlighted with the introduction of the plant in Austria-Hungary, in Bavaria, in Italy, etc. The question is ripe for a solution.

We do not know, whatever our own hopes may be, what the future holds for soy, but if its cultivation may render one day great service to the country, all the honor would belong to the Society, which, during a quarter century, has not ceased to facilitate and to encourage it.

Written on the 25th anniversary of Society's work with soy. We will divide this work into 6 chapters, starting with excerpts from past bulletins of the Society.

Chapter 1. Linnaeus gave our plant (*Le Soya*) the name *Dolichos Soja* (*Species plantarum,* 1621). Jacquin mentioned it later in his *Icones plantarum rariorum,* p. 143. Moench gave it the name Soja hispida. Moench gave it the name Soja hispidia (*Method plant. hort. bot. et agri Marburgensis,* 1794, p. 153).

Messrs. Bentham and Hooker have not admitted this genre; for them the plant is nothing but a veritable Glycine. This is also the opinion of almost all modern botanists. Miquel affirms that there are two species of *Soja* in Japan, *Prolusio florae Japonicae.* These are: (1) *Glycine hispida* (*Soja hispida,* Moench). (2) Glycine Soja, Sieb. et Zucc.

Note 1. In 1880 Paillieux called it Soja Hispidia.

Chapter 2. The soybean (*Le Soya*) in Japan. Begins with the full story of Englebert Kaempfer [see our chapter on Kaempfer], including translations into French of his writings on miso and shoyu.

There follows a list of Japanese soybean varieties of which they possess the names, 19 names, 22 species (see previous record, table, p. 435), with nomenclature taken from a Japanese work entitled Explications, with figures, of trees and plants newly determined, with the last 3 names taken from a work entitled Japan at the World's Fair of 1878, written in French by a Japanese. (Note that only in 1880 did Paillieux change the name of soybean to Le Soya). Then come descriptions of the characteristics of some of the various beans. "In short we can say that the various types of Mame can be used to make miso, shoyu, or to-fu." The Japanese do not make soybean oil (*huile de Soja*). They use sesame oil for cooking and rapeseed oil to burn in lamps... Soybean straw is given to animals. In Satsuma, in the far south of Japan, horses are given soybeans (*graines de*

© Copyright Soyinfo Center 2013

Daizu) at the end of their rations and it is claimed that this is good nourishment and not as expensive as naked barley. (Confusion about Mame and Daizu). Here is what is said about soybeans in the work entitled *Japan at the World's Fair of 1978:* The Mame serves numerous usages; it can be cooked, ground to a meal or flour, and used to make shoyu, miso, and tofu. The soybean, its pods, its leaves, and its stalks serve to nourish horses and sheep; tests show that this is the best nourishment available... Shoyu, after being filtered, is boiled, then cooled. The lees / dregs are then removed and it is stored in small kegs. The reside of first grade shoyu is used as follows. One takes 5 *to* of this residue and one ads one *to* of water. It is mixed, pressed, and boiled, Then one ads 2 *to* of salt, lets it rest and decants it. This second product is then added in larger or smaller quantities to various qualities of shoyu (p. 440). There follows a detailed practical recipe for making shoyu in France by an unnamed correspondent. He recommends substituting peas for soybeans in France. He uses the word *Daizu* for soybean (1½ page description). Here is the recipe for the sauce I have learned in Japan. He made it in France, using 2 parts by volume of naked barley and 3 parts of soybeans (*Daizu*).

Page 441: In Japan, there is no village, no matter how small, that does not have a shoyu maker. It is also made in private homes. The correspondent says: During my stay in Japan, the price of shoyu varied, according to the quality, from 8 to 12 sen, 40 to 60 centimes per *masu,* that is to say per 1.8 liters. To-fu (*Fromage de Daizu*). Note that they now call soybean Daizu. This is a detailed description of how tofu is made in Japan.

Page 442: Key points. Cold extraction of the slurry. The residue is used as fodder for livestock–from beef to rabbits. Soymilk (which he calls "the albuminous liquid" {*Le liquide albumineux*}) is put on the fire. Coagulate it with nigari (*eau de mere*) which contains magnesium chloride. Put the tofu in a basin of running water. To-fu is usually eaten fresh (he says *To-fu* for Japanese tofu and *Teou-fou* for Chinese). It is very frequently cooked with shoyu and dried fish, sometimes fried, more often grilled. Sometimes during the winter it is frozen, then dried to give it a spongelike consistency. In this state it lasts a long time and is cooked / prepared in various ways. In its fresh state, this vegetal cheese (*fromage végétal*) has a very delicate consistency, but it has a certain taste of raw beans that is not pleasant / agreeable.

Note 2. This is the earliest French-language document seen (April 2013) that mentions dried frozen tofu.

Chapter 3. Le Soya in Cochin China (p. 442). France has long been involved in Indochina as a Colonial power. There follows a report from the Committee on Agriculture and Industry in Cochin China. Siebold et Zuccarini. There is a long excerpt (Corroy 1878) from an article about "The feeding of horses and mules imported into Cochin China" from *Bulletin du Comite Agricole et Industriel de la Cochinchine* 1:449-58. For the year 1877. Series 2. See p. 456-58. It is about using black soybeans (*Glycine Soja*)as feed.

Glycine soja is cultivated in India up to the Himalayas and down to Ceylon, in Philippines, Java, etc. The seeds, boiled or lightly roasted are agreeable to the taste and to the stomach. Soy sauce is used to stimulate the appetite. The people also make a white pâté resembling coagulated milk, called Teu hu or Tau hu by the Chinese, which is for them a food more widely used than any other and which, though bland by itself, when served with seasonings and condiments, is a pleasant and healthy dish.

Chapter 4. Le Soya in China (p. 446). The generic name of the soybean is Yeou-Teou. Yellow soybeans are huang-tou. He-tou is black soybeans. Certain varieties are selected for each of the various food uses; not just any varieties are used. Soybeans are used to make fermented spirits and artificial wines called Teou-che.

Soy oil (p. 448). This oil is very widely used. It is of the first grade among the 15 or 20 oils possessed by the Chinese. Europeans find that it has a disagreeable aftertaste of raw beans. Except for this, it is of excellent quality. It was written in the introduction that M. Fremy analyzed the seeds / grains of Soya and that they contained 18% oil. Three samples analyzed by the German chemist Senff contained an average of 18.71% lipids. The analysis of Mr. Pellet of 3 samples of yellow Soya from China, Hungary, and Etampes, that we furnished him, gave about the same result.

Tofu (*Le fromage de Soya,* p. 449): Only the Tartars, scattered throughout the Empire, have continued to use milk. The Chinese do not use it. For them the soya takes its place. From the soybean they extract and filter a milk, a true milk (*lait*) usable like the milk of the cow, goat, or ewe (female sheep).

We are reporting in the chapter entitled Soya in France what type of tests we have done personally and those which have been done by the Society of Horticulture of Marseille. We have but to mention here the immense consumption of soymilk (*lait de Soya*) in China, as such or in form of cheese [tofu]. The Introduction contains reports on tofu by Baron Montgaudry and M. Champion, so there is no need for us to say any more about tofu here. Continued. Address: France.

241. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages [The soybean, its chemical composition, varieties, culture, and uses (Continued–Document part III)]. *Bulletin de la Societe d'Acclimatation* 27:571-76. Sept. 28 cm. [73 ref. Fre]
• ***Summary:*** Accessory uses (*Usages accesoires*) (p. 571): The soybean will be used to make miso, shoyu, Chinese-style soy sauce (*le tsiang-yeou*), Japanese-style tofu (*le tô-fu*), Chinese-style tofu (*le téou-fou*), fermented black soybeans (*le téou-che*), and soy coffee (le café de Soja).

We have already said that the soy sauce of the Japanese is excellent; Chinese soy sauce is greatly inferior to it.

© Copyright Soyinfo Center 2013

We have made tofu ourselves. Fermented black soybeans (*téou-che*) have been made in Marseilles. We have made soy coffee and presented it to the National Horticultural Society.

For 25 years our missionaries and consuls in China have invited us to make tofu (soy cheese, *fromage du Soja*) in France; we have followed their advice. This fresh cheese in China is a popular food, and the consumption surpasses all that one can imagine. We have made known and want to make known fresh soy cheese, known in the environments of Paris as *fromage a la pie* (quark) and the cheese which is not as fresh as "cheese lightly salted."

Here is how we have proceeded. He then describes how he made tofu... coagulated with vinegar, then boiled 8-10 min after adding vinegar. He made the tofu this way 8 or 9 times. We always got the curds without difficulty, sometimes the same day, sometimes the next. The yield was 1.5, the same as indicated by Champion and L'Hote. The milk may be consumed, as it is in China, before coagulation. The cheese is obtained easily, the danger is in the flavor of raw beans (peas) that we have not been able to remove. We have tried in vain to season it with sweet blue clover (*mélitot bleu*) and with caraway; the bad flavor persists.

We have masked this flavor almost entirely by boiling it for 3 hours, but the result is not satisfactory enough to compensate for the time and fuel. The flavor that we don't like in the milk and cheese is not as repugnant to children as to adults. They kids love the curds, and ask for seconds. If agriculture gets hold of the soybean, if the seeds are everywhere in the hands of cultivators, if its price is low, it will perhaps become the habit to make it into milk and cheese, but it will take some time (Footnote 1: We have presented soy cheese to the National Horticultural Society on 24 June 1880).

We will now discuss the attempts at making soyfoods that have taken place in Marsseille, and which have as their object neither the white cheese or the lightly salted cheese, but fermented black soybeans. We thank Dr. Adrien Sicard, first vice-president of this society, for describing the process which they used to make and perfect the same type of cheese.

Dehull the soybeans. Cook them for 2 hours with 200 gm of rennet per 100 gm of soybeans. They will be ready to eat in 12 hours.

White cheese (p. 573): Add 4 gm salt in a glass pint to 100 grams cheese; cover with Chinese brandy. Note: Without inoculating the tofu with a mold, this process will not work.

Red Cheese (p. 573): Start as above but before placing in the pots, roll the cheese in a powder composed of 4 gm of red sandalwood to which is added a little cinnamon and mace [to get the red color, red koji is traditionally used]. Put spirits on top. Be carefully to seal hermetically air-tight.

Adrien Sicard, first vice president of the Horticultural Society of Marseille, adds the following: At the end of 3½ months the cheese has been found good, but not advanced enough. One month later the white cheese, made with seeds harvested in France, and which I have taken the care to redo, that is to say, to repeat in putting the rind within it by kneading as is done with various cheeses, had bluish marbling and a little of the taste of Roquefort. Beyond this time, it has decompose / fallen apart and had come to the point where I sent it to you.

We saw in Chapter 3 that soy has been cultivated in Tyrol under the name of "coffee bean" (*fève de café*), and that one finds it not only in this country, where it is used to make a coffee substitute, but also in Istria (a peninsula in northwest Yugoslavia) where it is used in the same way. It is supposed that it is used in the same in the south of Italy and in Dalmatia (a region in western Yugoslavia on the Adriatic Sea).

Gustave Huezé, in his book *Les Plantes Alimentaires* (Edible Plants, 2 vols, 1873) gives the soybean the name of the coffee bean (*Dolic à cafe*) and says it is cultivated in all parts of Ariège and of Haute Garonne; we have not been able to verify this. We have roasted soybeans and found that they smell just like roasted coffee. It is inferior to coffee, but for all the world it is a coffee. We presented to the national Horticultural Society a jar of roasted soybeans (26 August 1880) and each one was able to verify the fact that we put forth.

Preparation of soybeans for the table (p. 574): One can praise green vegetable soybeans, still green and shelled, like the Haricot flageolet (tiny French baby lima beans). We don't have personal knowledge of them being eaten in this state, but one of our friends has tested that the cooking has not been any easier than that of the dry soybeans. Moreover, no cook will consent to shell them; that would be too long a job.

We have prepared the dry beans like ordinary white Haricots [dry, as used in cassoulet]. With lots of cooking and care they don't remain hard, but they are still more firm than the Haricot. The flavor is sweet and very pleasant. It doesn't have the same drawbacks as the Haricot. They are excellent in salads, pureed in soups, etc. In mixture with the starchy beans, they complement them by adding nitrogen and fat.

The soybean should be soaked for 24 hours in distilled water or rain water. In the evening, to each liter of distilled water add 3 gm (0.3%) maximum of crystals of soda (baking soda). The water will turn white if it has excess calcium in it, and one must rid oneself of the precipitate by letting it settle the next day.

According to M. Blavet the method of cooking [whole dry soybeans] is as follows: Toss the beans into boiling water and leave them for 2-3 minutes, lift them out, then cook them in new water.

Note: The author fails to understand that whole dry soybeans, when cooked without pressure, require 24 hours over a low flame. Use of baking soda or pressure reduces the cooking time, but they must still be cooked much longer than

© Copyright Soyinfo Center 2013

other beans because of their high protein content.

We are inclined to believe that defatted soy meal can be ground to a flour for use in human nutrition. It will consist of 40-45% nitrogenous materials and will not pick up any bad flavors during the production. It will serve to make soups very rich in nutrients and is easier to cook than the whole beans.

Conclusion (p. 576-78; see separate record). Address: France.

242. Kinch, Edward. 1880. Contributions to the agricultural chemistry of Japan. *Transactions of the Asiatic Society of Japan* 8(Part 3):369-415. Oct. See p. 392-93, 398-401, 413-15. Reprinted in March 1907 as a monograph. [29 ref]

• ***Summary:*** "Of vegetable manure the principal are seaweed, the residues from different manufactures, e.g. rape cake, sesamum cake, cotton cake and other oil residues, as from camellia seeds, the residues from the manufacture of *shôyu, ame* [*rice syrup*], *sake, shôchu,* indigo etc." (p. 392). [Note that soybean cake is not mentioned].

"The oil cakes, *ame kasu* (malt dust, the residue from the manufacture of ame from rice, millet and malt of wheat or barley) and *shôyu kasu* [The residue from the manufacture of shoyu] are the most valuable. These manures should not be applied in quantity at the seed time in an unmixed state, owing to their fermenting and also attracting and harbouring insects, which attack the seeds and young plants." Rape cake (*Abura kasu*) and Sesamum cake (*Goma kasu*) are also mentioned.

There are original analyses (p. 393) of 6 samples of "Soy [sauce] residues, *Shôyu kasu* Residue from the manufacture of *Shôyu* from beans and wheat." These vary over an extremely wide range. Nitrogen content ranges from 1.27% to 5.20%, and ash is 0.57% to 11.53%.

"Soy bean, sometimes called Japan pea, *Glycine hispida* (Moench) also known as *Soja hispida:* of this many varieties of different colour and size, etc. are met with, but as far as is known, they differ but little in composition. They are known collectively as *Daidzu* or *O-mame;* a common white round variety is known as *Miso-mame* and *Shiro-mame;* other names of varieties are *Awo-mame, Kuro-mame, Ki-mame, Ichiya-mame, Kurakake-mame* and *Korinza* (p. 398).

Note 1. This is the earliest English-language document seen (March 2008) which states clearly that the present scientific name of the Japan pea is *Glycine hispida* (Moench)–that is, the soybean. Actually, however, the correct scientific name since 1873 had been *Glycine hispida* (Maxim.)

"This bean approaches more nearly in its proximate chemical composition to animal food than any other vegetable known. It contains about one-fifth of its weight of fat and nearly two-fifths of nitrogenous matter. It is extensively cultivated in the north of China and also grows in the Himalayas. In China it is compressed for the sake of its oil, and the residual cake is used for food and also extensively as a manure. In Japan it is used in the preparation of *Shôyu, Tôfu, Miso* and also of *Yuba,* and in these various forms enters to a considerable extent into the food of the nation, to which it is a most valuable contribution, supplying as it does the alimentary principles–albuminoids and fat–in which the staple food, rice, is deficient: it also contains a much larger percentage of the necessary mineral matters than does rice. Of late years this bean has been grown experimentally in different parts of Germany, with success. The haulm and leaves which furnish a valuable fodder, and a variety is cultivated specially for that purpose and known as *Kari-mame.*

"The composition of a sample of the white round variety known as *Miso-mame* was found to be: Water 11.32%, ash 3.86%, fat 20.89%, albuminoids 37.75%, fibre 2.00%, starch etc. 24.08%. Total: 100%" (p. 398). Note 2. This and each of the following nutritional analyses appear to be original, not cited from earlier sources.

A table then contains an analysis of each of the following 4 products: Shiro-miso from Osaka, aka-miso from Osaka, to-fu [tofu], and kori to-fu [tofu]. The composition of aka-miso was found to be: Water 50.40%, ash 12.50% (incl. 11.00% common salt), sugar 0.61%, nitrogenous matter 10.08%, fibre 8.25%, soluble carbohydrates 18.16%. Total: 100%.

The composition of to-fu was found to be: Water 89.29%, ash 0.48%, fat 3.32%, nitrogenous matter 4.87%, fibre -, soluble carbohydrates 2.04%. Total: 100%.

The composition of kori to-fu was found to be: Water 18.75%, ash 1.60%, fat 28.80%, nitrogenous matter 48.80%, fibre -, soluble carbohydrates 2.05%. Total: 100%.

There follows a discussion (p. 398-400) of foods that can be made the soy bean (*miso, kôji, tôfu, kôri-dôfu,* and *shôyu* or soy), and a description of how each is made. "*Miso* is made by mixing the boiled beans with *Kôji* (rice ferment used in *sake* brewing) in various proportions, and with more or less salt, and keeping the mixture in tubs in a cool place for about a month. It will be noticed [from the table above] that one variety contains much sugar, derived from the *Kôji,* and little salt, and the other much salt and little sugar.

"*Tôfu* is made by pounding the soy beans after soaking in water, then straining through a sieve and boiling in water. The solution is filtered through cotton cloth and the residue pressed; the strained liquor, containing vegetable casein or legumin, is precipitated by brine. *Nigari,* formed by the deliquescence of common salt. The precipitate pressed and cut into cakes is *tôfu."*

Note 3. This is one of the earliest English-language documents seen (Jan. 2004) that uses the word "tofu." This is *the* earliest document seen (Jan. 2004) that uses the word "cakes" in connection with tofu.

Note 4. This is the earliest English-language document seen (Oct. 2008) that mentions "vegetable casein" in

© Copyright Soyinfo Center 2013

connection with soybeans or tofu, or that equates "vegetable casein" with "legumin" (the word Kinch used in 1979), the water soluble protein in soybeans that can be precipitated to make tofu.

"*Kôri-dôfu* is prepared from the above by freezing it and afterwards exposing to the sun, when, in the process of thawing, the greater quantity of the water is removed, leaving a horny spongy residue.

Note 5. This is the 2nd earliest English-language document seen (April 2013) that mentions dried-frozen tofu, which it calls "kori to-fu" or *kôri-dôfu*. This is also the earliest document seen (April 2013) that uses the word "spongy" to describe the texture of dried-frozen tofu.

"An example of *shôyu* or soy was found to have a specific gravity of 1.199 and to contain per litre: Total solid residue 359.88 grms., ash 195.16 grms., sugar 31.03 grms., nitrogenous matters 41.00 grms., free acid, expressed as acetic acid 6.20 grms. The ash is chiefly common salt, but contains a quantity of phosphates derived from the mineral matter of the beans and kept in solution by the acetic acid formed."

"The [shoyu] mashings are removed to large vats and there kept for many months, usually twenty, and frequently for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for five years with that kept for three years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *moromi* or crude soy, in order to give it a sweet taste. Occasionally a sweet sake, *ama-sake*, prepared by taking, 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours is added instead of honey. The residue obtained on pressing *moromi* is usually again mixed with salt and water, and pressed; this yields an inferior *shoyu*. Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food and the last residue as manure.

"The *Shoyu* after straining is allow[ed] to settle for two days in large tanks, then drawn off and filtered; before sale it is heated to incipient ebullition, otherwise it quickly goes bad.

"The quantity of nitrogenous matter in solution in *shoyu* appears to increase with the length of time elapsing before filtering the *moromi."*

Note 6. *Webster's Dictionary* defines ebullition as "the act, process, or state of boiling or bubbling up."

Also contains detailed information on and chemical composition of adzuki beans or *shôdzu* (*Phaseolus radiatus*), daikon, sea-weeds (incl. three types of Asakusa nori (*Porphyra vulgaris*), kobu (*Laminaria saccharina*) [konbu, which Thunberg and Kaempfer also discussed], wakame, arame or kokusai, awo-nori or ohashi-nori, hijiki, Irish moss or carrageen, tokoroten-gusa or agar agar, kanten or tokoroten, and funori), and sake.

At the end of the article is the summary of a discussion. Professor Atkinson made some remarks about shôyu. He said that Mr. Isono, a graduate of the University of Tôkiyô, had made analyses of *shôyu moromi* at various periods (after 3, 10, and 20 months), which are printed in full, together with an analysis of Kikkoman shoyu. "It was interesting to observe the disappearance of the glucose, and the gradual increase of the soluble nitrogen from the first sample to the last. The greatest change took place between the third and the tenth months. but, after the removal of the greater part of the glucose and dextrin, converted into alcohol and lost by evaporation, very little alteration occurred, except in the color of the liquid, which became darker."

Note 7. This is one of the earliest English-language documents seen (May 1999) that contains an accurate description of miso; it also contains very early information on the composition of different types of miso.

Note 8. This is the earliest English-language document seen (Dec. 2000) that uses the term "chemical composition" in connection with the soy bean.

Note 9. This is the earliest English-language document seen (Nov. 2003) that uses the term "sesamum cake" to refer to sesame cake.

Note 10. This is the 2nd earliest English-language document seen (April 2012) that uses the term "shôyu" to refer to soy sauce.

Note 11. This is the earliest English-language document seen (July 2001) that contains the word "fibre" in connection with soy beans. The fibre content of one variety of soy bean and one miso variety are given.

Note 12. This is the earliest English-language document seen (July 2003) that uses the Japanese word "Goma" to refer to "sesame."

Note 13. This is the earliest English-language document seen (Nov. 2005) that contains the term "cotton cake."

Note 14. This is the earliest English-language document seen (April 2012) that contains the word "Kikkoman."

Note 15. This is the earliest English-language document seen (May 2012) that contains the term *shôyu kasu* (in italics, with diacritics) which it defines as "Residue from the manufacture of *Shôyu* from beans and wheat." Address: Prof. of Chemistry, Imperial College of Agriculture, Komaba, Tôkiyô.

243. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages: Le soja en France [The soybean, its chemical composition, varieties, culture, and uses: Soya in France (Document part)]. *Bulletin de la Societe d'Acclimatation* 27:561-76. Oct. [Fre]
• ***Summary:*** Page 561: "Historical–Buffon [Comte Georges-Louis Leclerc de Buffon, lived 1707-1778] became director of the *Jardin des Plantes* [Royal Garden, also called *Jardin*

du Roi] in 1739. Shortly thereafter French [Catholic] missionaries in China sent him specimens and seeds of most of the important plants of that country. Soybeans or their seeds were almost certainly among their shipments, and without being able to prove it, we have no doubt on this subject. Be that as it may, we have recovered from the Museum [of Natural History] a sachet which, in 1779, contained soybean seeds. It bears the following dates of harvest: 1834, 1836 to 1841, 1843, 1844, 1846, 1847, 1849, and 1850 to 1855 inclusive. Then 1857 to 1859, 1862, 1865 to 1867, 1870, 1871, 1873, 1874, 1877.

"In fact, soybeans have been cultivated at the Museum very probably since 1740, certainly in 1779, and more recently from 1834 to 1880 without interruption. The plant has always germinated and borne fruit as desired, cultivated like haricot beans (French green beans), without any particular problems. It has proved its hardiness and the small influence which changes in atmospheric conditions have on it.

"Since 1855, the abundant distribution of soybean seeds ceaselessly by the Society for Acclimatization, has allowed soybean agronomic trials to be conducted throughout France. But it is difficult, if not impossible, to obtain information about trials made before 1855.

Mr. Blavet, president of the Horticultural Society of Etampes, has uncovered an interesting document in a brochure titled *Seance publique de la Societe d'Agriculture de l'arrondissement d'Etampes* (Public session of the Agricultural Society of Etampes), for the year 1832, page 84. One chapter bears the title "Report by Mr. C. Brun of Beaumes, member of the Agricultural Society of Etampes, chevalier of Saint-Louis, doctor on the faculty of sciences of France, of some agronomic trials conducted by him in 1821, on various species of cereal grains, on his property of Champ-Rond, near Etampes [Seine-et-Oise], France." A final note says: The heat of the summer of 1821 was so favorable to exotic plants that I saw the following plants bear fruit abundantly in my outdoor garden at Champ-Rond, near Etampes: the Dolichos of China (*le Dolichos de la Chine;* perhaps wistaria), the soybean (*Dolichos Soja*), and Dolichos Lablab (also called hyacinth bean). The Niouelle (?) of Senegal showed here for the first time its long pods (*épis*), etc." Note: This is the earliest document seen (April 2000) that describes the 1821 soybean experiment by Mr. C. Brun of Beaumes.

"The duty of the Museum, as a public-interest organization is to distribute seeds, either as a pure gift or as part of an exchange, to persons who request them. Undoubtedly, therefore, trials have been made at various early dates, but we have no record of them.

"Starting in 1855 a large number of participants received seeds from the *Société d'Acclimatation* and experimented with them. Most of these people did not report the results of their trials, as they were obliged to. Others, however, did, including Messrs. Vilmorin, Delisse, Lachaume, etc. But their cultivation did not lead to any progress, so the soybean was not established a permanent crop in France.

"In 1868 Mr. Chauvin, vice-president of the Society of Horticulture at Côte-d'Or [a department in eastern France], cultivated several soybean varieties there, and the culture has continued there to this day.

"In 1874 the Society of horticulture of Etampes received soybean seeds from the Society for Acclimatization, and began experiments that continued until 1880. One can find them mentioned in the Introduction to the Etampes livestock reports. Their cultivation is direct with great seal by Mr. Blavet, president of the horticultural society of that area.

During the same period, one Dr. H... brought the best soybean varieties from Japan and cultivated them. He failed in this trial because his soybeans were late-maturing types. He then restricted himself to cultivating yellow soybeans from China. He encountered no more difficulties and he made *Sho* [perhaps shoyu, or Japanese-style soy sauce] by himself for use in his home.

"In 1878 we received seeds of two soybean varieties. One, from Japan, had white flowers and very pale yellow seeds with a greenish hue. The other, from China, was yellow and belonged to the *Houang-téou* ["yellow soybean"] series; they were among the seeds received from Mr. Montigny and other donors, and have been cultivated at the Museum, at Etampes, at Marseilles, and a little bit all over. (Footnote: These varieties look a little different on the outside, but their chemical composition, usage, and cultivation are the same).

"The seeds from Japan give us nice green foliage, but the plants do not mature their seeds. The Chinese variety succeeds in France as it does anywhere else."

In 1879 a yellow variety received directly from China matured well and was harvested at Marseilles. In 1880 Vilmorin-Andrieux & Company introduced into France one of the varieties tested by Haberlandt in Austria, which variety has proven well adapted to French conditions.

On pages 564-65 the author attempts a sober appraisal as to why a plant with such obvious merits, that has been known in France for over 140 years, is still virtually unknown. Established institutions such as the Museum of Natural History and the government had taken exasperatingly little interest in aiding the private efforts of the Society to introduce new plants. Chemical analyses, demonstrating the nutritional superiority of the soybean, had been lacking until about 1855, when Mr. Frémy [Fremy] confirmed that the soybean contained oil. Messrs. Champion and Lhôte have given an incomplete analysis [published in 1869]. But the classical books on agricultural chemistry, the works of our professors, which make known the chemical composition of the seeds of our typical legumes, omit information on the soybean. There was a general resistance, especially on the part of the establishment, to growing new crops and using new foods. And finally the basic approach of the Society in

© Copyright Soyinfo Center 2013

introducing soya first and foremost as a human food was questioned.

"Our point of departure has not been successful. Soya has been presented simply as a new legume. But it is more difficult to cook than other legumes, The flavor is good, but not superior. Fresh, it takes lots of time to shell. Dry, it requires pre-soaking for 24 hours in water that is not hard. If one is ignorant of its nutritive properties, there would be little incentive to grow it, and one would keep growing the traditional legumes instead.

"The people of Austria-Hungary have been wiser. Having already acquired incontestable proof of the value of soya for livestock fodder, they have no other objectives. They seem at the very least to have considered as secondary the utilization of soya for human nutrition. Therefore as soon as they had enough seed, they cultivated large areas, while we were still cultivating the furrows between the rows in the kitchen garden for use as food.

"The seeds will soon be found in all the good markets of southern Germany. The small farmer will then find them (soybeans) all around him at low prices. In eating them, he will find himself strengthened. Then he, in turn, will plant them himself."

Varieties (p. 565-66): In 1878, Japan, China, and the Dutch East Indies have presented all their varieties of soybeans at our Universal Exposition in Vienna. We think that there are more than 30 varieties of soybeans. Let the Society for Acclimatization and Messrs. Vilmorin, Andrieux, etc. get us seeds and we will plant them all. Then we will find among them, perhaps, some early varieties, to add to those we know.

Cultivation (p. 566-56).

Utilization (p. 567-71): We believe it has already been demonstrated that the cultivation of soybeans is easy, that its fecundity is great, and that its chemical composition is superior. Then why have they not been cultivated for the past 10 years?

We tried to introduce soya as a food plant for the garden rather than as a fodder and oilseed. We started where we should have finished. If we persist in this direction we shall fail. Soya will fall back into oblivion, while in southern Germany, the Danube provinces, central Russia, and Italy, it will soon be widely grown and serve as a source of riches.

Accessory uses (p. 571): The soybean is used to make miso (*le miso*), shoyu (*le shoyu*), Chinese-style soy sauce (*le tsiang-yeou* [*jiangyou*]), the tofu (*le tô-fu*) of the Japanese, the tofu (*le teou-fou*) of the Chinese, fermented black soybeans (*le teou-che* [*douchi*]), and soy coffee (*le café de Soja*). We have always said that the shoyu of the Japanese is excellent, whereas the soy sauce of the Chinese is inferior (p. 571).

In the middle of page 571 and near the bottom of page 572 the term *fromage de soja* is used to refer to tofu.

Note 2. This is the earliest French-language document seen (April 2013) that uses the term *fromage de soja* to refer to tofu.

Note 3. This document contains the earliest date seen for soybeans in France, or the cultivation of soybeans in France (very probably in 1740, certainly in 1779). The source of these soybeans was French missionaries in China. Continued. Address: France.

244. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages: M.P. Olivier Lecq nous adress une lettre... [The soybean, its chemical composition, varieties, culture, and uses: Letter from Mr. P. Olivier Lecq (Document part)]. *Bulletin de la Societe d'Acclimatation* 27:567-71. Oct. [1 ref. Fre]

• ***Summary:*** The writer believes that the main use for soybeans in France will be as fodder and as a source of oil, with the straw being fed to livestock. When soy is widely cultivated, it will be widely researched.

Its accessory uses will come later, in due time. We will make the Shoyu of Japan, which is excellent and which supplements the juice from meats. We shall make tofu (*téou-fou*), a cheese whose flavor does not appeal to Europeans but that children will eat in its fresh state and will go on eating as they grow into adults.

Mr. Olivier Lecq (p. 568), the writer, is an agronomic engineer from Templeuve, in the department of Nord, located in the far north of France, about 209 km (130 miles) north-northeast of Paris on the border with Belgium. Templeuve is a tiny town about 15 km (9 miles) west of Lille (the capital of Nord) and about midway between Tournai and Roubaix. Mr. Paillieux notes that this letter which he received is of great importance.

Mr. Lecq writes: "As I have already had the honor to tell you, I have pursued the cultivation of the soybean (*du Soja*) only from the viewpoint of feed for animals. Cultivating this plant for the first year, I was unable to conduct trials, and I believe I must rely on the trials made at Séclowitz [Seelowitz], in Moravia. Here is what Mr. Jules Robert told me about the soybean."

"'In 1879 the soybean (*le Soja*) gave me, at maturity, 1,873 kg of beans per hectare and 400 kg of straw. Another part, cut before maturity, gave me 10,500 kg of half-dry hay, ready to be ensiled. (This harvest was relatively poor.) This hay, of which I send you a sample, was mixed with maize and millet... The soya constitutes one-fifth of this mixture, in order to enrich the mass with nitrogenous materials. It is important that the pods be well developed. All the plants must have lost at least 50% of their weight while being dried for hay. When the mass has been well compacted by humans, and if possible by horses, and has been completely covered with 40 cm of soil, it will begin to generate its own heat, turn brown, and again sink down to about half its volume– at which point it will have the appearance and odor of the sample you have.

© Copyright Soyinfo Center 2013

"It is important that the piling up be done layer by layer, if these plants, which have such a large mass, are to obtain the desired high temperature.

"If the silo is dug down into the earth to a depth of 1 meter, it is a good idea to have the pile rise 1.5 meters above ground level, so that the total mass, after settling, barely rises above ground level, as if to form a rounded roof.

The best dirt in which to dig a sunken silo is clay with a plastic quality. It would be appropriate to pat the sides with the back of a spade that has been wetted if the weather is dry in order to polish the surface, and to prevent the action of air and the passage of water.

An illustration (p. 569) shows the shape and dimensions of the excavated silo, and the soil covering the silage. The circular pit is 3 meters in diameter at the top and 2 meters in diameter at the bottom, 1 meter below ground level.

A table (p. 569) gives the composition of the forage: Water 8.6%, fatty materials 2.33%, cellulose 43.94%, proteinaceous substances 8.75%, ash 8.80%, and other 27.56% ("extractive substances" or *substances extractives*, probably starch).

This analysis was made at the agricultural laboratory of the prince of Schwarzenberg, at Lobositz (Bohemia).

I am unable to give you the loss in weight which results following the end of the fermentation. I will determine that at the time of my ensilage (*mes ensilages*) of 1880. Thirty oxen which were being fattened were nourished from this mixture whose composition was shown above. A second table (p. 570) shows the average weight of each ox: On Feb. 1, 633 kg each. On March 1, 654 kg. And on April 1 690 kg. A third table (p. 570) shows the ration of six ingredients given to each animal during February, March, and April. In February it was: Natural hay 3 kg. Brown hay (*foin brun* = silage) 5 kg. Corn flour (*farine de maïs*) 1 kg. Peelings of beetroots (*cossettes de betteraves* = mangel-wurzel). Chopped straw 6 kg. And salt 80 gm.

Olivier Lecq continues: In a letter of Sept. 10, Mr. Robert told me: 'I am recognizing more and more the great nutritive value of the forage conserved in silos in which the soybean constitutes about 20%. I increasingly appreciate the importance of this plant from the viewpoint of feeding animals, as we wait for it to be used in human nutrition.'

More nourishing than hay, less exposed to the falling rain and the attacks of insects, the soybean (*le Soja*) in its green state but with pods formed, gave me a harvest of 30,000 kg. I mixed it with green alfalfa (*luzerne*), grass, and maize. I wouldn't dare to give the soybean by itself; I would be afraid of over-exciting the animals with a feed that would be too concentrated.'

One hectare would, therefore, suffice to feed 100 steers for 30 days. 10 kg of this concentrated forage have produced the same effect as 5 kg of maize flour. These 10 kg cost 25 centimes, whereas the 5 kg of maize flour cost at least 1 franc [100 centimes, or 4 times as much].

This, sir, is the information I can give you on soybeans cultivated for the purpose of feeding animals.

I cannot yet give you information on my own crop. I don't yet have much of it, about 3 ares [1 are = 100 square meters], since it did not come up as well as desired. I have some very strong plants and others that are weaker because I had to fill in the gaps by replanting during the drought.

I believe one can compare the soybean with the grape vine for the heat that is necessary for its maturation. I believe that soya requires even less heat–if I can judge by what happened in my case.

One cannot be sure of being able to harvest the beans each year in the department of Nord, but 90% of the time one should be able to.

This crop should, therefore, be encouraged, because even in when it doesn't mature, the soybean will still provide an abundance of very nutritious and beneficial forage, and it will leave the soil in excellent condition for the following crop. Address: France.

245. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages: Appendice [The soybean, its chemical composition, varieties, culture, and uses: Appendix (Document part)]. *Bulletin de la Societe d'Acclimatation* 27:579-96. Oct. [Fre]

• ***Summary:*** The first appendix contains summaries of letters to the Society describing 27 agronomic trials with soybeans (*Culture expérimentale de Soja or Soya*) conducted during 1880 (using soybean seeds distributed by the Society) at various locations in France, Switzerland, and Algeria. (Note: Though the publication date of this appendix is given as Oct. 1880, some of the letters are dated as late as 21 Nov. 1880). These letters were received from the following people:

1. Charles Coffin, jardinier en chef au château de Brunehaut, near Etampes (Seine-et-Oise)–18 Sept. 1880. 2-3. Oliver Lecq, at Templeuve (Nord)–20 Oct. 1880 and 30 Oct. 1880. 4. M. Boursier, at Chevrières (Oise)–3 Nov. 1880. 5. M.C.T. at Arras (Pas-de-Calais) 12 Nov. 1880. 6. M.D. at Genlis (Côte-d'Or)–12 Nov. 1880. 7. M.J.S. at Sautin, near Péronne (Somme)–14 Nov. 1880. 8. M.G. at Juvigné (Mayenne)–14 Nov. 1880. 9. M.D. at Saint Lager (Rhône)–14 Nov. 1880. 10. M.L. at Fresnoy, near Hesdin (Pas-de-Calais)–15 Nov. 1880. 11. M.D. at Presles-et-Thierny, near Laon (Aisne)–15 Nov. 1880. 12. M.H. at Montpellier (Hérault)–15 Nov. 1880. 13. M.B. at Andenas, commune d'Alluy, near Chatillon-en-Bazois (Nièvre)–16 Nov. 1880. 14. M.P. at Muides, near Mer (Loir-et-Cher [a department in north-central France])–16 Nov. 1880. 15. M.R. at château de Minillet, near Bornel (Oise)–16 Nov. 1880. 16. M.C. at Montgarny (Meuse)–16 Nov. 1880. 17. M.B. at la Chaise, near Barbezieux (Charente)–17 Nov. 1880. 18. M. de S. at Saint-Sulpice-sur-Lèze, near Noé (Haute-Garonne)–16 Nov. 1880. 19. M.B. at Saint-Riquier, near Abbeville (Somme)–18 Nov. 1880. 20. M.D. at Courtivron

(Côte-d'Or)–18 Nov. 1880. 21. M.P. at Merville (Haute-Garonne)–19 Nov. 1880. 22. M. de docteur Hénon at Cornières, near Annemasse (Haute-Savoie)–18 Nov. 1880. 23. M.A. Sicard, vice-président de la Société d'horticulture de Marseille (Bouches-du-Rhône)–19 Nov. 1880. 24. M. le docteur Bertherand at Alger [Algiers, Algeria]–19 Nov. 1880. 25. M.L. at Monségur (Gironde)–21 Nov. 1880. 26. M. le docteur Coutaret at Roanne (Loire)–20 Nov. 1880. 27. M.G. at Donneloye (Switzerland {in Canton Vaud, Bezirk Yverdun, southwest Switzerland})–18 Nov. 1880.

Note 1. The report from Dr. Bertherand from Algiers, dated 19 Nov. 1880, reads: "The breeding nursery (*jardin d'essais*) cultivated soybeans (Soya; *Glycine hispida*) many years ago. Soya does rather well here, but its seeds are hard and remain tough. It is possible that it will not be able to compete in the diet with the common haricot for a long time." Note: This is the earliest document seen (Aug. 2009) concerning soybeans in Algeria, or the cultivation of soybeans in Algeria. This document contains the earliest date seen for soybeans in Algeria, or the cultivation of soybeans in Algeria (many years before 19 Nov. 1880; perhaps before 1860 when M. de Montigny is said to have introduced the soybean to Algeria (see Eprémesnil 1860)).

The appendix section ends with: (1) Reprint of a 2-page letter from Eugene Simon, former French consul in China, on soybean farming in China (p. 591-93); (2) Reprint of a description by Eugene Simon, based on the description of a Chinese, of how tofu is made in China (p. 593-94); (3) A French translation of a 1781 article by Isaac Titsingh [Titsing] on the preparation of soy sauce in Indonesia (p. 594-95); and (4) Some information about soybeans from the ancient Chinese herbal *Pên Ts'ao Kang Mu* (p. 595). Address: France.

246. Mene, Édouard. 1880. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d'Acclimatation* 27:644-66. Nov. [3 soy ref. Fre]
• ***Summary:*** This is part of a longer article, published in several issues, which is an excellent review of earlier publications and work. This part begins with a section on legumes. Among the legumes discussed are *Vicia Faba* (*sora mame, otafuku mame, okakura mame*), *Dolichos unguiculatus* (*sasaghe* [*sasage*, present name: *Vigna unguiculata* (*L.*) *Walp. subsp. unguiculata*], incl. *Jin-roku Sasaghe, Yuhuté Sasaghe, Heritori-yu- roku-Sasaghe*), *Canavalia* (*nata-mame = C. incurva* [*sword bean*], *shiro-nata mame = C. lineata*), *Haricot* (*Phaseolus vulgaris*, incl. *Ingen mame* and azuki {*Phaseolus radiatus* var. *subtrilobata*}), sesame, etc. The author saw samples on display at the Japanese Ministry of Agriculture and at the Exposition at Champ-de-Mars in France.

"Soy sauce (*Le Shoyu*) (p. 648-49): This condiment, so appreciated by the Japanese, had samples displayed is the class of fermented beverages. It is often made with wheat flour and beans (*haricots*), but more often with boiled soybeans (*pois*).

"Chinese *Soye* or *Soya* (*Le Soye ou Soya chinois*) is the same condiment, but more especially made with red beans (*haricots rouges*). Note: Clearly the author did not realize that soy sauce is made from soybeans (not from haricot beans or peas, nor from azuki beans).

Note: This is the earliest French-language document seen (April 2012) that uses the words *Le Soye* or *Soya Chinois* to refer to soy sauce.

"In Canton, it is made in the following way: the red beans are cooked in water for one hour; thrown in a sieve and drained; next the beans are sprinkled with wheat flour and carefully spread out on a wood plank that is put in a warm and humid place that favors the development of considerable mold; after four or five days the mold is taken off and the beans, after having been dried in the sun for 24 or 48 hours, are washed in cold water; salt and water are added, and the mixture is exposed to the sun for two weeks. It is then boiled for half an hour, adding for flavor a bit of star anise, regular anise, and orange peel; the mixture is then filtered through a basket and finally bottled as *Soya."*

There follows a short section titled "Peas" (*Pois, Pisum sativum*), including *Endo mame.* Next comes a detailed but somewhat confused discussion of soybeans (*Pois oléagineux, Soja hispida*) and a listing (often repetitive) of many different types and colors, as follows (p. 649-50): "There was also a variety of soybeans (*Pois oléagineux, Soja hispida*), an early soybean (*mamé*), one with large hanging pods covered with red hairs, and one with large, yellowish-white seeds.

"The principal varieties of *Soja* and *Soja hispida* indicated in the watercolors of the Tokyo Bureau of agriculture were: 1. *Soja* with white flowers, a yellowish-white bean of medium size with white pods. 2. Early green *Soja,* a large yellowish-white bean with large pods covered with red hairs. 3. *Soja blanc,* with large yellowish-white seeds. 4. *Grand Soja blanc,* a large, yellowish-white bean with rather long greenish pods. 5. Green *Soja,* a yellowish-white bean of medium size with little green pods and the stem scattered with brown hairs. 6. *Kinoshita-mame,* a small yellow bean with little hairy pods. 7. Red *Soja,* a red bean of medium size with green, velvety leaves and red flowers. 8. Black *Soja,* a black medium-sized bean. 9. *Kouro-hiro mame,* a large black oval bean [*kouro = kuro* = black]. There are also varieties called: 10. *Awo-mame,* a large, greenish-white bean [*awo = ao* = green]. 11. *Shiro-mame, Kuro-mame, Kuro-kake mame, Kinname* (*Glycine soja*), *Kouringa, and Ichia-mame.*

"In the collection of beans at the Exposition of Champ de Mars the following soybeans were found: 12. *Daizu* (*Soja hispida*), a round yellowish bean of medium size. 13. *Shiro-daizu,* a large yellowish bean [*shiro* = white]. 14. *Oshiro-daizu,* a very large yellowish bean, twice the size of *Shiro-daizu.* 15. *Akayendo,* a medium-sized yellowish bean. 16.

© Copyright Soyinfo Center 2013

Awo-mame, a large, greenish-white bean (variety of *Glycine*). 17. *Aokuro-daizu,* a large greenish bean speckled with black. 18. *Thya-iro-mame,* a large, reddish-brown bean (variety of *Glycine*) [*Thya-iro = cha-iro* = brown]. 19. *Shiro-mame,* a white bean speckled with grey (variety of *Glycine*). 20. *Aka-daizu,* a large red bean [*aka* = red]... 21. *Kouro-daizu,* a large black bean."

Near the end of this subsection we read (p. 651): "In China, an oil is extracted (*on extrait*) from soybeans (*pois oléagineux*, literally 'oil peas'); it is used for both cooking and illumination. The green or black peas are often used to color rice wine. Mixed with beans (*haricots*) and wheat, they form the base for the manufacture of soy sauce and of tofu (this latter condiment is composed of two species of boiled beans). With soybean seeds (*Avec les graines de Soja*) the Japanese also prepare a sort of pap (*bouillie*) which for them takes the place of butter and which they call *Miso.* The leaves and branches of the soybean serve to nourish goats and sheep." Address: France.

247. *Brisbane Courier* (*Queensland, Australia*). 1880. Imports (A special charge is made on consignees' announcements inserted in this column). Dec. 29. p. 2.
• ***Summary:*** "Claverhouse, s. [steamer], from Foochow via Hongkong and Cooktown: 1469 packages... 50 packages black tea, 5 boxes bean curd,... 100 cases China oil." Note: What is "China oil"?

248. Bishop, Isabella Lucy (Bird). 1880. Unbeaten tracks in Japan: An account of travels on horseback in the interior, including visits to the aborigines of Yezo [Hokkaido] and the shrines of Nikkô and Isé, by Isabella L. Bird. 2 vols. New York, NY: G.P. Putnam's Sons. See vol. I, p. 232, 237-38.
• ***Summary:*** The section titled "Notes on food and cookery" (p. 232-40) states: "Some fish are fried in the oil of the *Sesamum Orientale,* which produces an odour which makes one fly from its proximity. Eels and other dainties are served with soy (*shô-yu*), the great Japanese sauce, of a dark brown colour, made from fermented wheat and beans with salt and vinegar [sic], and with a dash of *saké* added to give it a higher flavour" (p. 232).

Buddhist teachings on the sacredness of life have, in some parts of Japan, been effaced by contact with foreigners. There some people eat wild birds and fowl. "Seaweed is a common article of diet and is dried and carried everywhere into the interior. I have scarcely seen a coolie make a meal of which it was not a part, either boiled, fried, pickled, raw, or in soup" (p. 234). *Brinjal* or egg-plant are among the many vegetables pickled. Confections consist of sugar-coated [azuki] beans, and *yokan*–made from seaweed. Mochi is a small round cake of unbaked rice dough.

"The common people are also fond of 'a pot-boil of birds' in which a little soy and *mirinshu* are added to the water" (p. 237).

"The chief kinds of soup used by the middle classes are bean soup [miso soup], egg soup, and clear soup. The latter is of two kinds, one water and salt, the other water and soy" [sauce]. Among the lower classes there are many kinds, most of which taste like dirty water with a pinch of salt, and contain cubes of bean curd, strips of dried fish, cuttlefish, etc... Carp is used with bean soup only..." (p. 237-38).

Note: This is the earliest English-language document seen (July 2011) that uses the term "bean soup" to refer to miso soup.

In formal entertainments, the highest of the three classes is *san no zen* in which three small tables of eatables are provided to each guest. The first table includes rice, and "bean soup with carp." Each table contains from 8 to 12 bowls or dishes (p. 238).

Note 2. The author, Mr. J.F. Bishop, lived 1831-1904. Note 3. Yezo (also spelled Yezzo, Yeso) refers to Hokkaido, Japan's northernmost main island. Address: Author [England].

249. Gill, William John. 1880. The river of golden sand: The narrative of a journey through China and Eastern Tibet to Burmah. 2 vols. London: John Murray. With an introductory essay (p. 15-95, about the geography of the area) by Col. Henry Yule, C.B., R.E. [25+* ref]
• ***Summary:*** All the references to soy are in China. Volume 1. Page 68. "October 2–Whilst waiting for the mules to get under way we watched the process of making bean-curd cakes."

Note. This is the earliest English-language document seen (April 2013) that uses the term "bean-curd cakes" to refer to tofu.

"The use that the Chinese make of beans is very remarkable; they cook them in all sorts of ways, eat them pickled, put them into potato patties, and convert immense quantities into bean-curd cakes [tofu].

"The ordinary black and white beans are ground between two circular blocks of granite about two feet in diameter; there is a small hole in the upper stone, through which the beans are swept, water being poured on at the same time.

"As the upper stone is turned a thick white cream runs out from between the stones, and is caught in a receptacle. This thick cream is then boiled with water, a very little rock-salt being added. After a time quantities of froth rise to the surface; this is skimmed off and thrown away, the remainder being tied up in a cotton cloth and squeezed tightly, after which it is put into a flat pan to set. It is finally cut up into squares, and is ready for use.

"The Chinese are particularly fond of this preparation, and in the smallest village even, if nothing else is to be procured, one or two people will be certain to be found selling bean-curd cakes."

where men and boys were busy in the black mud arranging the fish traps that seemed to give them plenty of occupation, for the time that they could spare from threshing corn, making bean-curd cakes, or grinding flour."

Page 185. Feb. 10. The New Year Festival. In the evening we come to our moorings and "the men have their supper. Then the loud cry of the hawkers, who go about amongst the craft selling bean-curd cakes, or little drops of spirit, makes itself heard above the shouts of the sailors;..."

Page 280-81. April 27. "I halted for breakfast at a little wayside tea-shop... Here the customers sit down, drink tea, and call for the dishes they desire; generally a little rice and chopped vegetables; or if particularly rich they may indulge in bean-curd cakes, or some of the innumerable sweetmeats always for sale, such as toffee flavoured with ginger, and hardbake made with walnut instead of almonds."

Page 420: We "arrived at the outskirts of Ch'êng-Tu." "Here were the usual eating and drinking shops, and the number of cakes and pies made of wheaten flour, bean-flour, and flour from all kinds of grain, seemed greater than ever."

Volume 2. Page 18. Near the end of the Han dynasty (3rd century AD), "a certain Liu-Pi, though a member of the imperial family, was in very straitened circumstances, and was at one time driven to making a livelihood by selling straw sandals. He fell in with two men also of poor position, one Chang-Fi, a pork butcher, the other Kuan-Yu, a seller of bean-curd cakes [tofu]. These two counselled Liu-Pi to seize the throne; and they then formed themselves into a confederacy, calling themselves the Three Brothers.

"They had little to start with, but by great bravery and force of character they eventually succeeded in establishing Liu-Pi as emperor." Note: This story, if true, seems to indicate that tofu existed in China in the 3rd century AD.

Page 91. "The Chinaman, on the other hand, loves variety. In every tea-house by the wayside, owing its existence to no more opulent class than the coolies on the road, there are always several little dishes of some sort. Beans simple, beans pickled, bean-curds, chopped vegetables in little pies,..."

Page 279. "... up to the very gates of Chien-Ch'uan-Chou, the first walled city we had seen for months. The walls of the city and the gates were in good repair, and if they suffered much, have been entirely restored since the Mahometan rebellion, but the streets through which we passed were poor and wretched, with miserable houses. Here the old familiar Chinese sights again appeared–fruit-stalls, eating-stalls, with the favourite bean-curd cake;..."

Page 332. This porridge is simply made by pouring boiling water over buckwheat flour, and mixing it up well with an enormous quantity of coarse brown sugar into a paste. The Chinese make a similar porridge of bean-flour; indeed it is hard to say what they do not make of beans; and how they would get on without this useful vegetable it is impossible to say.

Page 365. "... the face of my Ma-Fu, as he made short work of [i.e., ate quickly] innumerable dishes of pork, onions, chilies, bean-curds, and good bowls of rice, was a sight well worth paying for." Address: Capt., Royal Engineers [England].

250. Special catalogue of the Ningpo collection of exhibits for the international fishery exhibition, Berlin, 1880. Preceded by a description of the fisheries of Ningpo and the Chusan Archipelago. 1880. Shanghai, China: Statistical Dept. 132 p.

• ***Summary:*** In the section titled "International Fishery Exhibition, Berlin, 1880," is a subsection (p. 3) on the "Food" of Ningpo: "The great staple of the food of the fishing population consists of rice, generally the glutinous kind called *Ngo mi,* and fish... The condiments are the black sauce called 'soy,' or a red one made from shrimps pounded in salt water. Salt is largely used, as well as a kind of cheese made from beancurd, and called *toufu."*

Note: This section is translated into German (p. 94) under *Nahrungsmittel;* the words *Soya* and *Tou fu* are used.

Another subsection (p. 15-16) on "River fishing" with cormorants in Ningpo (on the Ningpo river), China. Under "Feeding" we read: "The young birds are at first fed with a mixture, in equal parts, of beancurd and raw eel's flesh cut fine... At the end of a month the down begins to be covered by the larger feathers, and the quantity of fish-flesh fed to them is increased, while that of beancurd is reduced. A second month elapses, and the young birds, having grown to double their original size, are fit for the market; a male fetches $1 or $2, and a female half as much."

"After fishing two or three hours the birds are allowed to come on board and rest. At the end of the day the hempen ring is loosened or removed altogether, and they are either allowed to fish for themselves, or are fed by the hand of their master. Seizing the birds one after another by the upper mandible, the fisherman thrusts into their throats a handful of small fish and a ball of beancurd, as large as his fist, the ingurgitation of which he helps with the other hand by stroking the neck of the bird, who seems to enjoy it, as he promptly returns for a second supply. The entire scene is most ludicrous."

251. Nanrido Eiraku. 1880? Nenjuban saisen: Shirôto ryôri. Sassoku hôchô [Year-round recipes: Speedy cooking for amateurs]. Publisher unknown. Undated. Japanese summary by Kawakami 1978. [Jap]

• ***Summary:*** Written in the Kyoto-Osaka area of western Japan some time during the 1800s, this book quoted the *Tofu Hyakuchin.* It lists daily home recipes, including tofu recipes and some using shoyu. Kirazu, the early term for okara, is mentioned. The recipes are listed according to the season in which they are best prepared.

252. Organov, N. 1881. Soia ili maslichnyi gorokh (Soja hispida *) [Soybean or oil-bearing plant (Soja hispida *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg* (*Transactions of the Imperial Free Economic Society*) 1(2):184-198. Feb. [3 ref. Rus]
• ***Summary:*** The asterisk in the title refers to a footnote (p. 184) which states: Some call this plant "Chinese beans"; in Austria they call them "Haberlandt's beans." Haberlandt is responsible for the successful cultivation of such useful soybeans in Germany. Thanks to Haberlandt, soybeans also became known in Russia. In 1877, Haberlandt sent about 50 soybeans to I.G. Podoba; from these soybeans we have already (1881) obtained 15 pounds of soybeans. This article is based on a brochure by Haberlandt [his superb book, *Die Sojabohne*, 1878], plus the scarce information from the Russian agricultural literature.

The origin of the soybean is in Asia (India, China, Japan, Mongolia). Large quantities of numerous varieties are cultivated there. Soybeans are also grown in the Caucasus, Tunisia, and Algeria, as well as in southern and central Europe. Many attempts have been made to cultivate soybeans in Europe, but more were unsuccessful. Attempts were made in: Hohenheim [Germany]–unsuccessful. Bamberg [southern Germany], by Dr. A. Rauch, who obtained the seeds from their native country–unsuccessful. Germany, by Carl Berndt, using seeds from Shanghai–unsuccessful. France, where soybeans are more commonly known as *pois oleagineux.* 1872–During the Franco-Prussian War [1870-1872, France lost], Sergeant Otto Wehrman found soybeans in the botanical garden of Montigny near Metz and brought them to Germany, where in 1875 attempts to cultivate them were again made.

In 1877 Prof. Haberlandt (Austria) cultivated soybeans received from Capodistria in Istrien [Istria or Istrian Peninsula; as of 2003 divided between Croatia and, at its base, Slovenia]. In Istria, soybeans were used to make coffee. They were also cultivated in Dalmatia [as of 2003 largely in Croatia] and southern Italy.

Such methods of cultivation resembled experimental gardening of horticultural and hothouse plants rather than scientific research on the acclimatization and growing capabilities of soybean plants.

The soybean plant has been well known and well documented by botanists and travelers since the last [18th] century. Kaempfer called the soybean *Daidzu* or *Mame.* Linnaeus called it *Glycine soja.* Jacquin–*Dolichos soja.* Dr. von Siebold and Zuccarini *Soja Japonica,* Sav. and *Soja hispida,* Mönch. Each name represents a different variety of soybeans [sic].

A footnote (p. 181) states: The famous essay by Kaempfer, titled *Amoenitatum exoticarum politico-physico-medicarum,* describes his travels in Persia and Central Asia in 1712. The essay includes descriptions and uses of soybeans in Japan, China, India, and other places.

Knowledge of and interest in soybeans in Europe expanded during and after the 1873 Vienna World Exhibition. Twenty varieties of soybeans were obtained by Haberlandt, who planted them in 1875 in the Vienna Botanical Garden.

A description of Haberlandt's studies (p. 186) includes favorable growing conditions, a description of planting, and identification of different soybean varieties. In 1876, there were only 7 interested people or organizations who wanted to continue Haberlandt's research on soybean cultivation. However by 1877 Haberlandt's successful results interested more people (up to 160). These people received samples of soybeans from Haberlandt and reported their results back to him. Footnote (p. 187): The results of Haberlandt's experiments and those of the colleagues to whom he sent samples were published in the 1878 brochure [sic, book] *Die Sojabohne: Ergebnisse der...*

Describes the physical appearance of soybeans.

Page 188 proposes uses for the soybean in Europe, as food for people, feed for livestock, soybean oil, coffee, and soy sauce. Quotations from Oken (p. 189-90) discuss various uses of soybeans, including a description Miso (a substitute for butter) and Shoyu (a sauce added to fried meat), and how each is made. In China, soybeans are used to prepare a soft cheese or cottage cheese (tofu). A footnote (p. 188) is a reference to a book: Oken. 1841. *Allgemeine Naturgeschichte für aller Staende.* Vol. 3, p. 1661. Page 190 continues with comments on the great nutritional value of soybeans when used as food. A quotation from Dr. F. Leithner [of Krems, lower Austria, on the Danube River, 38 miles west-northwest of Vienna] describes his positive experiences in preparing soybeans as dinner for his guests. Prof. W. Hecke recommended that soybeans be combined with potatoes to make a kind of porridge. A quotation from Dr. Eduard Mach [of St. Michele, South Tirol] describes the taste of soybeans. Other food uses of soybeans proposed by Haberlandt: a substitute for peas in pea sausages, chocolate substitute.

Three tables (p. 191) show the nutritional value / chemical composition of soybeans. (1) The first analysis of the composition of soybeans (soybean seeds) in Germany was conducted by Senff, who obtained the seeds from Japan [from Mr. Berndt]. Their average chemical composition is given. (2) Mr. A. Tomaszek / Tomasek [in Napagedl in Mähren / Moravia, a region in today's Czech Republic] gives the following composition percentages for two types of soybeans from China, grown by him in 1876: yellow (column 1) and dark red (col. 2). (3) Further analysis by Tomaszek / Tomasek shows extremely high concentrations of fat and nitrogen [protein] for the two types of soybeans shown in table (2).

Three more tables (p. 192) give a more detailed analysis, by the Technical Laboratory in Vienna, of three soybean varieties: yellow (from Mongolia), yellow (from China), and

© Copyright Soyinfo Center 2013

dark red (from China). There are three columns: Original soybean sample, soybeans grown the first year, and soybeans grown the second year. For each variety, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash.

A table (top of p. 193) shows the chemical composition of seven types of legumes: Peas, lentils, wild beans, yellow lupins, haricot beans, broad beans [Vicia faba], Chinese beans (soya), and soya beans. For each legume, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash. The data for the first five legumes come from Emil T. Wolff. The data for the broad beans and Chinese beans (soya) come from J. Kuehn / Kühn. The data for the soya beans come from Zulkowski.

A quotation from Carl Berdt includes details on soybean composition, and discussion of the uses of soybean oil (including in bread). A table (p. 193-94), based on the research of Prof. Völker [Voelcker, of London] gives the percentage composition of dried soybean oil-cake (Chinese oilbean cake). A table (2 columns) by Caplan (p. 194) gives the chemical composition of soybean pods, and of the leaves and stems. Another table (p. 194-95) gives an analysis by Zulkowski of the composition soybean straw and chaff dried at two temperatures: air-dried, and dried at 100ºC. A table (p. 196) shows the mineral composition of soybeans.

Pages 197-98 summarize: (1) Cultural trials and harvest information by Attems with Mongolian yellow and Chinese brownish-red soybeans. He was satisfied with the results and sees a future for soybeans. (2) Harvest results of Tomaszek. (3) Harvest results of Prof. Kulisz. Continued.

Note 1. This is the second earliest Russian-language document seen (Nov. 2002) concerning the soybean.

Note 2. This is the earliest Russian-language document seen (Sept. 2006) that mentions soy oil.

253. *Clutha Leader* (*Otago, New Zealand*). 1881. Chinese superstitions. April 1. p. 2.

• ***Summary:*** "I propose in the present paper to follow an imaginary Chinaman from the cradle to the grave, and note a few of the superstitions by which he is bound."

On the first day after the birth of a child, the first idolatrous ceremony takes place. A feast is made to the 'Zong-kong zong-bo,' which seems to refer to a god and a goddess "who reside in the bed and look after the children, teaching them to talk and laugh in their sleep. Two large and ten small bowls of rice and some bean curd [tofu] are offered, candles lit, incense and gold paper burned. The idea connected with this feast is that a multitude of spirits have congregated, waiting for a chance of inhabiting a human frame, and as only one can enter the child, this feast is to conciliate the unsuccessful candidates, and induce them to disperse quickly in quest of another abode."

254. Podoba, Ivan Grigor'evich. 1881. Maslichnyi gorokh ili soya (Soya hispida): Svoistva, kul'tura i sposob upotrebleniya [Oil-bearing pea plant or soybean (Soya hispida): Composition, cultivation, and uses]. Odessa, Ukraine, Russia: Printing House of L. Nitche. 14 p. 20 cm. [4 ref. Rus]

• ***Summary:*** Discusses: The soybean plant is attracting interest in agriculture, as being a prominent plant in the future, competing with the domestic potatoes and maize (*kukuruza*). Introduction of soybeans to Europe from Asia (Austria, Germany, France). The yellow soybean found best suited for acclimatization. Botanical indications of a useful / healthy soybean plant. Cultivation of soybeans. Uses of soybeans: Dairy cattle–Podoba says it is already known that soybeans can be used to feed dairy cattle and recommends it to be used likewise in the Southern agriculture. Table comparing soybeans to other plants in its chemical composition. Preparation of soybeans for food: soybean flour, "bean" cheese [tofu], uses in the army, "bean" sausages, substitutes for coffee and chocolate. Cultivation of soybean in the Tavricheskaia region (Crimean region of today's Ukraine).

Note 1. This is the third earliest Russian-language document seen (Nov. 2002) concerning the soybean. Note 2. This is the earliest document seen (July 2002) concerning the feeding of soybeans or soy products to dairy cattle. Address: Odessa, Ukraine, Russia.

255. Renouard, Alfred. 1881. Sur l'introduction du soja hispida en Europe [On the introduction of the soybean to Europe]. *Association Francaise pour l'Avancement des Sciences, Comptes Rendu* 10:945-51. April. Session of 17 April 1881, Algiers. [3 ref. Fre]

• ***Summary:*** Contents: Introduction. History. Cultivation and harvest. Soya as a forage plant. The edible soybean [food uses]. "The *soya*, or rather the *soja hispida* is a plant that is cultivated at many locations in Europe, but whose name is not well known here, and which has only been cultivated for several years. Japan has long known the specialties of its cultivation. There it is well known under the name of *o'mamé* and from it is extracted, from the roasted seeds, the sauce called "japonaise," which is found in the commerce of Europe, where it enjoys a good reputation.

History: At the Exposition of Vienna, in 1873, the Japanese government exhibited, for the first time, the soya as a forage and food plant. Some Austrian scholars, including Prof. Haberlandt of the Institute of Agronomy at Vienna, then studied the composition of this oilseed and perceived that it would make an excellent forage. In 1877 trials started in Austria. In 1871 the Society for Acclimatization in Paris sent several samples of soya seeds to M. Blavet, president of the Horticultural Society of Étampes. He grew the crop and sent samples to other departments and abroad. Later the

© Copyright Soyinfo Center 2013

seed house of Vilmorin coined the name "Soya of Etampes" (*soya d'Étampes*). But it does not seem that these laudable efforts have been crowned with success. Mr. Paillieux of the National Society for Agriculture, Mr. Saint-André, director of the Agronomic Station at Montpellier, Mr. Vavin of the Society for Acclimatization, have all worked with soya and are still working for the propagation of this useful plant.

"In the region of Nord, it is to a Frenchman, who actually lives in Moravia, that we owe the actual propagation of soybean culture: Mr. Julius Robert, who cultivates nearly 3,000 hectares at Seelowitz. Last year he made a gift of several hundred liters of soybeans to the Society of Farmers of Nord. At the instigation of Mr. Corenwinder, several farmers tried them. The results obtained by the first experimenters were, in general, satisfying, but we should not yet make a final judgment as to the plant's definite acclimatization. Nearly 30 farmers from around the town of Lille are proposing to plant soybeans again. Free samples, provided to our society by Mr. Olivier Lecq (of Templeuve), an agent for Mr. Robert and those who conducted the first trials, have been rapidly distributed. Today we can consider the soybean as definitely well tested in our department.

"Cultivation and harvest of soybeans: Mr. Yossida [Yoshida], a Japanese man from Tokyo, was sent to the town of Lille by his government to work seriously on cultivation and preparation of flax / linseed. He told us that there were at least 100 varieties of soybean in Japan. A Japanese book titled *Explanation, with Illustrations, of Trees and Plants Newly Determined*, mentioned 25 very distinct varieties of soybeans. The Chinese herbal only cited five varieties, which seems to prove that the soybean is native to Japan.

"In France, we barely know 2 or 3 varieties: the yellow and the brown soybean for temperate climate, and the black for the warm climate. It is the yellow variety that was tried in the department of Nord, and also, by the way, the one that has been cultivated at the Museum since 1790; there we can observe that it comes up well but it does not produce seeds every year" (p. 946).

"In the department of Nord the soybean, can be harvested toward the end of September or during October. However, in warmer countries or regions, the harvest can begin in August or September."

"The harvest ought to be done like that of the like the dwarf bean (*haricot nain*), in the department of Nord, in ripping out the stalks entirely, then suspending them from poles in an open field, the bundles of soybeans tied just above the top of the roots [hung upside down]. The plant thus dries rapidly, if the weather does not pose an obstacle to it. When the soybeans are well dried out, they can easily be stored: they are not attacked by weevils (*bruches*) that cause, as everyone knows, so much damage to beans, peas, lentils, etc."

In 1879 in Austria trials were conducted by Mr. de Blackowicz [Edmund v. Blaskovics] under orders from the Hungarian Ministry of Agriculture. In 1879 he obtained an average yield of 1,699 liters/hectare (range: 237 to 3,262).

Mature and well dried, the soybean constitutes an excellent feed for animals in France. On this subject, comparative experiments on the nutritional value of air-dried soybean pods and dead leaves were conducted in 1879 by Messrs. Weiske, Delmel, and Schulze at the Proskau agronomic station.

In total, 1,000 gm of pods were fed to each of two sheep, from Jan. 8-15 then from Jan. 16-23. One table shows percentage of each nutrient in the pods digested by each sheep (p. 948). A second table shows the percentage of each nutrient in the dead leaves digested by each sheep (p. 949).

"Finally, the soybean has been fed to animals after having been ensiled in a mixture with various forages. The fermentation which these forage crops undergo changes the composition of each. For example, in mixing soya with maize (which contains only 4-5% protein), the protein content of the mixed silage is increased. The following analysis, made in 1879 at Lobozitz (Bohemia) in the agricultural laboratory of the prince of Schwartzenberg, is of a forage composed 80% maize on the stalk and 20% soya on the branches. A table (p. 949) shows: Moisture 8.62%, fatty materials 2.33%, cellulose 43.94%, nitrogen-free extracts 27.56%, proteins 8.75%, and ash 8.80%.

On the farm of Mr. Julius Robert, the cattle being fattened were fed as follows (per head per day). A table (p. 949) shows–in February: Hay 3 kg. Soya and maize ensilage 5 kg. Corn flour 1 kg. Beet peels 40 kg. Chopped straw 6 kg. Salt 80 gm. The amount of soy and maize silage fed in March and April were increased to 8 kg. The next table (p. 950) shows that the cattle gained (on average) 633 kg in Feb., 654 kg in March, and 690 kg in April. The increases in weight gain in March and April must be due entirely to the marked increase in the amounts of soy and maize silage fed during those two months.

The article concludes: "To make from the soybean what the Japanese and Chinese make from it is the least important part of the question; because we think that Europe will leave them with their soy butter (*mizou* [miso]), their sauce (*soyo* [shoyu]) and their cheese [tofu]. It is not surprising that people tried to make cheese; the legumine [a kind of protein] which the soybean contains in large proportion, is, as we know, analogous to casein and undergoes the same chemical reactions. By the way, all these products, except the sauce, are detestable to the European palate.

"Next year I shall give an account of the results obtained during three years of trials in the department of Nord" [in far northern France on the border with Belgium].

Contains eight tables from earlier publications by other authors.

Note: This is the earliest French-language document seen (April 2012) that uses the word *soyo* to refer to soy sauce. Address: The Younger (*fils*), Civil engineer,

manufacturer at Lille, secretary general of the Industrial Society of Nord [a department in northern France] (Ingénieur civil, Manufacturier à Lille, Secretaire général de la Société industrielle du Nord).

256. Bellain, P. 1881. Rapport: Sur les brochures des mois d'avril et mai [Report: On publications of the months of April and May]. *Société Nantaise d'Horticulture: Annales et Résume des Travaux* p. 185-90. See p. 185-86. [Fre]
• ***Summary:*** Gentlemen, it is possible that at of one of our meetings, we adopted, perhaps, a position too harsh / severe towards the soybean (*le Soja hispida*), a plant that several of us had tested on a rather large scale. Many Societies, in reports that I shall not produce here, praise the soybean (*du Soja*), extol its culture and predict a fine future for it, when its qualities, whether for animal fodder or as a human food, will be duly noted. Thus we would do well, Gentlemen, to start our trials, to taste soya more thoroughly and then, maybe, will we recognize that it can become, as a vegetable, a favorable substitute to the green pea or the green bean, or a plentiful fodder, without even mentioning the very fine properties assigned to it in Japan or in China for making cheese [tofu].

Should I mention to you the black soybean (*Haé-Téou*), a new vegetable, obtained from seeds shipped from China where it is cultivated on a large scale. A long and very interesting notice that I read in the February issue of the *Bulletin of the Society for Acclimatization,* prompted me to address myself to the propagator of this new legume (*léguminuse*) to obtain a few seeds. Mr. Faibre, banker at Beaune (Côte-d'Or), most graciously, shipped me some black soybean (*Haé-Téou*) seeds; I am going to try them and for further input, I refer you to the article in the Bulletin I just mentioned. Mr. Faivre added to this shipment some other seeds about which I shall also report to you at a later time.

Note: "Nantaise" means "of the city of Nantes." Nantes is a city in Western France, located on the Loire river 50 km (30 miles) from the Atlantic coast. Nantes is the capital city of the *Pays de la Loire region* and the *Loire-Atlantique département.*

257. *Oesterreichische Monatsschrift fuer den Orient* (*Vienna*). 1881. Zur Verwendung der Soja-Bohne als Nahrungsmittel [The utilization of the soybean as food]. 7(7):119-20. July 15. [2 ref. Ger]
• ***Summary:*** This article is about tofu (*Bohnenkäse*), based on sources published earlier.

258. Roman, E. 1881. Correspondance: Sur le Soja [Correspondence: On the soybean]. *Nature* (*La*) (*Paris*) 10(425):115. July 25. Letter. [Fre]
• ***Summary:*** "The soybean (Le Soja or Soya), of which you have spoken in previous issues of *La Nature*, is a very interesting plant and destined to play a major role in our agriculture, but it is not new, and its introduction [to Europe?] should not be attributed to Italy [but rather to France]. The [Natural History] Museum was already in possession of its seeds in 1779, but at that time it was nothing but a curiosity. It has been cultivated there up to 1880 inclusive.

"It is now grown not only in Italy but also in Austria-Hungary, where its cultivation seems to have undergone a major development, and in France at various points, especially at Etampes and at Montpellier. Likewise, I had some planted at Orange [capital of Vaucluse in southeast France] this year.

"This plant is probably destined to play as important a role in the future as the potato. Its qualities, which have already been confirmed in France by many experimenters, leave no room for doubt. *La Revue Horticole* has already published several articles on soya; and Mr. Paillieux has written a brochure on this subject (published by la *Maison rustique*).

"Although it seems incredible, soya a hardy plant in France, especially from the latitude of Paris southward, grows in any soil, even the driest, and can provide us with the following: 1. An excellent forage, that is good for fattening cattle. 2. Seeds similar in shape to small haricot beans, but containing 37% protein, 20% fat, and only 3% starch.

"None of our French legumes has an equal chemical composition. The nutritional composition of soya is much better than that of haricots and lentils. It comes close, in that respect, to that of cheeses and could possibly replace the famous dry pepper sausage (*saucisson aux pois*).

"Cooked with rain water and certain precaution, those beans can make a nice dish similar to haricots.

"From it, the Chinese make milk (*du lait*), various cheeses (*divers fromages*), oil, a condiment (*Indian Soy* [sauce]), etc., etc.

"In France, people have envisioned roasting the seeds to make imitation coffee.

"I immediately tried it to check the idea and, although I am very choosy when it comes to coffee, I recognized that the flavor and properties of this decoction of soya were quite similar to those of an average quality coffee. It goes without saying that a cup of soy coffee, well prepared, is immensely preferable to what we are served under the name of mocha in 75% of publish establishments.

"Mixed with milk, the decoction of soya is, in my opinion, better than the coffee with the best aroma. For some time now, we have been drinking this soy coffee with milk every morning. The awareness of these properties of soya would be very useful to the poorer classes, for it actually costs 1.20 French francs per kg at Vilmorin, and this price will certainly drop by more than half when soya comes to be extensively cultivated.

"You can see from the above that soya is one of the most

© Copyright Soyinfo Center 2013

valuable plants and that its cultivation merits encouragement in France. It is doubtful that, to start with, we will develop all of the applications mentioned above. But we could–and this is the advice given by those who introduced it–cultivate it first for use as forage. Animals are not sensitive to routine; they accept with pleasure anything savory that one offers them, and have already adopted the soybean. Once the plant is extensively cultivated and well known, we will gradually come to take advantage of all of its qualities."

Note: This is the earliest French-language document seen (Oct. 2003) that uses the word *lait* to refer to soymilk. Address: Ingenieur en chef à Périgueux.

259. *Gardeners' Chronicle* (*London*). 1881. Soy beans in China. 16(411):632. Nov. 12. New series.
• ***Summary:*** "The Soy Bean (Soja hispida), as is well known, is very largely used in China as an article of food. A kind of curd is prepared from them, but they are mainly used to manufacture an edible oil, and the refuse pulp after the expression of the oil is manufactured into cakes the size and shape of large cheeses weighing about 60 lb., which are used either as fodder for animals, or more frequently as manure, especially for Sugar-cane plantations in the southern parts. The beans are known under three distinct varieties, black, yellow, and green: the yellow are said to be the best, as producing most oil. It is stated in a recent report from Newchwang [a treaty port, today's Yingkou, in Manchuria] that the natives of that place boast that the oil made on the spot is much better than that made from the same beans after their arrival in the South.

"The harvest takes place in August and September, and the beans from the neighbouring localities are shipped from Newchwang before the river closes, and during the winter, when the roads are hard and the rivers can be crossed on the ice, thousands of carts arrive from the more distant districts with produce that is shipped away the following spring or summer. In fact, the shipment of produce goes on all the year round as long as the port is open. Bean-oil and bean-cake can be kept any length of time without spoiling; the beans themselves are more perishable, but will keep for a year or more if preserved from damp."

Note 1. This is the earliest document seen (April 2007) stating that soybean cakes (or meal) are used as a fodder or feed for animals.

Note 2. This is the earliest document seen (June 2007) describing the transportation of soybeans over roads using carts or trucks; this takes place in Manchuria. Address: England.

260. Penhallow, D.P. 1881. Meiso [Miso]. *Kansas City Review of Science and Industry* 5(7):437-41. Nov.
• ***Summary:*** "It is well known that the Japanese are a rice-eating people, with whom this article, meiso, is perhaps, the most important of all their foods, but it is not so generally known that the flesh of animals could hardly be considered a regular article of food until within the past few years, and even now, with the great mass of the people, meat is seldom used. Thus for centuries, these people have lived almost wholly without that which western people consider so important a source of nitrogen. It seems, however, that the demands of nature were recognized and met by obtaining from the vegetable kingdom what they failed to secure from the animal, and thus it is we find them consuming enormous quantities of beans prepared in a great variety of ways. Some of the important preparations from beans are cheese, or tofu–a white, curdy mass strongly resembling cottage cheese, unflavored with salt, and held in high estimation. It is prepared in a variety of ways, but almost invariably forms a part of every meal as a constituent of soup. Cake–a stiff, jelly-like confection made by straining boiled [azuki] beans and incorporating with a large proportion of sugar. Pickles–beans in the pod and frequently on the stem [edamame], pickled in a strong brine; they are eaten without further preparation. Sugared beans–roasted beans enveloped in a heavy coating of sugar, and sold as a confection. Shoyu, or Soy–a liquid of dark color and salty flavor, made by fermenting a mixture of salt, beans, and roasted wheat or barley. It is largely eaten with fish and rice. There are other modes of preparation which we will pass over with the exception of meiso, which forms the subject of this article.

"The pasty mass manufactured and sold under this name constitutes one of the most important of the preparations from beans, and enters largely into the diet of all classes as a basis for soup, or, in various forms, as a sauce for fish and meat. In composition it consists of:

"Salt–4.5 *to* = 2.30 bushels.

"White [soy] beans–1 *koku* = 5.13 bushels.

"Rice–4 *to* = 2.05 bushels.

"Salt.–The salt employed is of a very crude sort. It is obtained from sea water by evaporation under the influence of solar heat, and as no attempts are made to secure any special degree of purity, it is consequently contaminated with other salt's and its specific value thereby lessened. Sticks, straw–especially from the coarse bags in which it is transported–and dirt are also always to be found, and as no efforts to cleanse or purify, beyond removal of the larger fragments of straw, etc., are made at the factory, the product into which such salt enters has a rather uninviting appearance. It is always used dry.

"Beans.–The ordinary white [soy] beans appear to be used in preference to any others. They are prepared by boiling for about six hours, when the fire is drawn and they are allowed to cool in the boiler. The next morning they are removed from the boiler and placed in mash boxes which measure 10 x 3 x 1 feet, where they are thoroughly reduced and mixed with the rice and salt by means of a round pole used as a pestle.

"Rice.–White rice, or that which has been well cleaned,

© Copyright Soyinfo Center 2013

is soaked in cold water for two days. It is then well drained and transferred to a boiler containing fresh water, when it is steamed for three hours. While yet hot, it is taken to a warm room and allowed to remain under the influence of a warm, moist air for four days, when the whole is found to be covered with an abundant growth of fungus.

"The room in which this operation is performed usually measures about 10 x 20 feet, is constructed of mud walls–eight or ten inches in thickness, and is made as close as possible with the exception of one small window to admit light for the workmen, and a door through which to enter. The only moisture in the room is that which comes from the moist rice, but a constant temperature of 80ºF. is maintained by means of a large charcoal fire at each end of the room. It is regarded that a warm, moist air, undisturbed by draughts, is quite essential to the success of the operation, though darkness is not deemed requisite, the absence of windows being more a matter of economy than anything else. The production of the fungus is usually regarded as the critical part of the whole manufacture, and failure sometimes occurs. No reason could be obtained from the Japanese why the subsequent fermentation is dependent upon the presence of the fungus; that its production is an essential part of the process was all the information that could be obtained.

"At the end of four days, the rice is taken out into a large airy room and spread upon straw mats, 3 x 6 feet, and allowed to cool for one and a half hours. It is then transferred to small trays which measure 18 x 8 x 8½ inches, for convenience in handling, when it is allowed to cool as rapidly as it can. Whether the rice now dries or remains moist appears to be a matter of indifference. As soon as thoroughly cooled, it is incorporated with the salt and beans. It is generally customary, however, to prepare the rice in large quantities once in four days, and thus have a stock always on hand. In that case, as soon as cooled, it is mixed with the salt and placed in large storage vats, where it is tamped solid by the feet, and will then keep without trouble for two months.

"When all the ingredients have been thus prepared, they are placed, cold, in the mixing boxes already described, and thoroughly incorporated into a stiff, pasty mass by means of a long mixing rod. This mixture is then placed in large vats having a capacity of about seventeen koku or eighty-seven bushels. Here it is packed solid by the feet and allowed to undergo a very slow fermentation. Every effort is made to keep the temperature of the mass down as low as possible, and if, during the summer, the heal of fermentation gets too great, the whole mass spoils. It is then mixed with roasted wheat and by further fermentation converted into shoyu or soy. Sometimes the mixture fails to ferment properly, when it is taken out and mixed with a fresh portion of beans. The fermentation is allowed to continue six months in summer und eight months in winter, at the end of which time the meiso is ready for the market.

The result of these various operations is a stiff, pasty mixture of repulsive appearance and disagreeably sour odor, and though it would hardly find favor with Americans or Europeans, possibly excepting epicures, it seems to be in great demand with the Japanese.

"The factory where these facts were obtained employs six men, and the annual produce amounts to from 900 to 1,000 *koku*, equal to 4,617 to 5,130 bushels. The cost of the various ingredients and the finished product is as follows: *"

"Beans, 1 *koku*–5.13 bu–6 yen.

"Rice, 1 *koku*–10 yen.

"Salt, 1 *koku*–5.40 yen.

"Total cost of meiso per koku–7.13 yen.

"Market price per koku–13.20 yen.

Footnote (*): "Prices for 1880; probably somewhat higher at present. Yen, gold, is equal to the U.S. dollar." Continued. Address: Prof., late of the Imperial Agricultural College of Japan [Tokyo].

261. Bankoku gokuhiden [For all nations, top secret]. 1881. Japan. 126 p., handwritten. Publisher unknown. Japanese summary by Kawakami 1978, p. 129. [Jap]

• ***Summary:*** Contains 90 interesting recipes, including goma-dofu (sesame tofu), tofu umeboshi, aniri tofu, and tofu kamaboko.

262. Paillieux, Auguste. 1881. Le soya, sa composition chimique, sa culture et ses usages [The soybean, its chemical composition, culture, and uses]. Paris: Librairie Agricole de la Maison Rustique (26 Rue Jacob). 126 p. 28 cm. [42 ref. Fre]

• ***Summary:*** This is largely a reprint in book form of Paillieux's excellent article by the same title published in the September and October 1880 issues of the *Bulletin de la Societe d'Acclimatation.* The arrangement of text on the pages is somewhat different from (and clearer than) the earlier publication, and it contains small amounts of new information–as on p. 87-88.

Note 1. This is the earliest book seen (July 2012) about the soybean published in French and the second earliest book seen (July 2012) about the soybean published in the western world; the first was by Haberlandt in 1878. This book contains only one unimportant illustration, the same one found in the preceding articles.

2. In France (Dec. 2011) there is "une Rue Paillieux" at Crosne. Since it is on the same page on the Web as Nicolas Auguste Paillieux–http://jacques. colliard.pagesperso -orange.fr/ JournalFamille/ Salats_MJEa.h tml–it is probably the same Auguste Paillieux. Address: Membre de la Societe d'Acclimatation, France.

263. Phares, David Lewis. 1881. Farmer's book of grasses and other forage plants, for the southern United States. Starkville, Mississippi: Published by the author. J.C. Hill,

printer. 148 p. See p. 19. 22 cm.
• ***Summary:*** "Glycine hispida Japan pea: This bean (it is not a pea) came under my observation some twenty-five years ago [i.e. in about 1856], as the Japan Pea. It was then cultivated to a limited extent for a few years; but ceased to attract attention till the close of our civil war; when it was again widely sold as the Southern Relief Pea. The catalogues name it Soja hispida. Though not a climber, it may be the Dolichos Soja, or Soy bean of China and Japan.

"In this country, this bean is probably not esteemed so highly as it should be either for the table or for forage. Few people bring it to the table more than once; for when prepared as other beans it is inedible and disgusting. But when the ripe seeds are soaked from twelve to twenty-four hours they may be cooked so as to afford a most delicious and nutritious dish. The soaking changes the shape of the bean from globose to oblong."

"This is probably the Sooja or Miso of Japan so much used in soups in that country. The soy or sauce made from these seeds is used three times a day, as salt with us, in nearly all dishes. The favorite Chinese curd-like dish, *Teu hu,* also is made of these beans."

Phares lived 1817-1892. He resided in Mississippi in 1881, and says that he observed soybeans being cultivated in about 1856, but it is not clear that they were being cultivated in Mississippi, either in about 1856 or at the time this letter was written. Later documents (Riley 1909) prove that soybeans were grown in Mississippi as early as 1857.

Note 1. This is the earliest American document seen that uses the term "Glycine hispida" to refer to the soybean.

Note 2. This is the earliest document seen (April 2008) that mentions the soybean in connection with the U.S. Civil War. Address: A.M., M.D., Prof. of Biology, A&M College of Mississippi, Sanitary Commissioner for the State at large of Mississippi.

264. *Otago Witness* (*New Zealand*). 1882. Gleanings. Jan. 21. p. 7.
• ***Summary:*** "M. Roman, a French engineer, states that the cultivation of the interesting plant, the soja or soya, has been largely developed in Hungary and in various parts of France. He thinks that it may in the future become as important an article of food as the potato. It grows in any soil, even the driest; and the plant is an excellent fodder for cattle. The seeds are very nutritious and have the form of small kidney beans. An agreeable soup [miso soup] may be made of them. The Chinese use them for various kinds of cheese [tofu, fermented tofu], to make a condiment with oil [soy sauce? The second character in basic Chinese word for "soy sauce," *jiang-you,* means "oil"], &c. In France the seeds are roasted like coffee, and M. Roman says the decoction of the soja bean is very similar to that of average coffee."

Note 1. This article also appeared (again in the "Gleanings" section) in the May 6 (p. 7) issue of this newspaper.

Note 2. This is the earliest document seen (March 2010) concerning soybeans (the soja or soya) in connection with (but not yet in) New Zealand.

267. Kraevskii, -. ed. 1882. Peterburskago sobranii sel'skikh khoziaev: 16-go fevralia 1882 goda [St. Petersburg meeting of agriculturists: 16 Feb. 1882]. *Golos* (*"Voice"*) (*St. Petersburg, Russia; Newspaper*) No. 72. March 18. p. 5. [Rus]
• ***Summary:*** This full-page article begins: Head of the meeting: "Our colleague, K.A. Skachkov, who is well acquainted with China and its agriculture, will present his report about the soybean and its use in Chinese agriculture."

K.A. Skachkov: He notes the previous mention of soybeans by A.V. Sovetov. Soybeans are considered "new" only in Europe; they have existed for centuries in China and Japan, where they are well documented in monographs on soybeans. He discusses soybeans in northern China (methods of cultivation, climate, yield) and uses of soybeans in China and Japan such as soy sauce (*tsiap yu*), jiang (after processing soybeans to make jiang, which is fermented, the jiang is used to pickle the roots of vegetables which, being well salted, are eaten between meals and called *jiang-tsai*), soybean prices in Russia, and various types of tofu (*age-dofu, yaki-dofu,* etc.). He notes that in China soybeans are not sold in raw form (?), but can be obtained from factories.

After the talk, the head of the meeting asks if there are any questions or comments; various Russian participants (not only Skachkov) answer the questions. First, K.A. Skachkov comments on the preparation of tofu; the "60-day" soybean is best planted during the latter half of June in Russia.

E.I. Ragozin, asks: "What are the practical uses of the soybean for us [in Russia]? How can it be used in our agriculture? Can it be used only as feed for livestock or can it play a more important role? It is very interesting to discuss the theoretical possibilities of soybeans, but in my opinion it would be better to put them to use." A.V. Sovetov replies that, as he has discussed in a previous report, the soybean can be used as both livestock feed and human food. "It is of high nutritional value and contains twice as much nitrogen as meat, but only 18% fat. The answer to the

© Copyright Soyinfo Center 2013

question of how soybeans can be assimilated into Russian agriculture (and how successfully it can be bred here) lies in numerous experiments and trials of actually growing this plant here. Podoba has already proven that it can be grown in the far southern region of Russia (Tavricheskaia), as has Chernoglazov in the Poltavskaia region and Levanda in the Kiev region. However, I do not known how far north soybeans can be grown, although I have heard of trials in the Voronezhkaia region."

A.S. Ermolov: "My cultivation of soybeans in the Voronezhkaia region was not successful. I know that they are not acclimatized to withstand frost." Again A.V. Sovetov replies that soybeans can handle a light spring frost, but an early fall frost kills soybean plants just as it does pea plants. As Podoba reports, it can survive temperatures 2-3ºC below zero. Discusses successful times and temperatures for soybean cultivation.

A.S. Ermolov: "Nevertheless, the soybean plant is fairly easily acclimatized. I talked about this matter with Friedrich Haberlandt, who agrees with me. It is just a matter of obtaining the right varieties."

Head of the meeting: "I would like to add that with time and patience, plants can be gradually acclimatized to almost any environment." A.V. Sovetov, in agreement, adds: Cucumbers and pumpkins, which are warm-weather plants, have been acclimatized to the colder climates of northern Russia. Likewise with beans. E.I. Ragozin adds that he cultivates beans here in the St. Petersburg region.

A.S. Ermolov concludes that soybeans can be cultivated perfectly well in at least *southern* Russia. However, he still questions how soybeans can be used in Russia. None of the other agriculturists at this meeting have told the society how they use the soybeans they grow, so Ermolov suggests listening to the ideas Sovetov has and will present.

A.V. Sovetov: Soybeans can be used to make: Soybean broth, a substitute for beans or peas, soybean potato cakes, a mixture with rice or corn. Soybeans have a very high nutritional value. They can also be used as a feed for livestock, or as food for the army or navy.

Head of the meeting: Difficulties in cultivating this plant should not prevent us from trying.

E.I. Ragozin: Would it be possible for me to obtain and attempt to cultivate the 60-day bean plant? A.V. Sovetov: Of course, but this 60-day bean plant is not a soybean plant, so the previous statements may not apply to it. Head of meeting: Closing remarks.

268. Mene, Édouard. 1882. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d'Acclimatation* 29:466-90. Sept. See p. 477-90. [40 soy ref. Fre]

• ***Summary:*** This excellent review of earlier publications and work, which is largely about the soybean, contains 40 references to earlier publications, many of them from the *Journal of the Society for Acclimatization* and from early European botanists. Much of the information is taken from earlier issues of this periodical and from the book *Le Japon a l'Exposition universelle de 1878.*

Contents: The soybean (*Soja hispida, O mame: Daizu*, p. 477). The wild soybean (Glycine hispida, Soja hispida, p. 477; it is found in the wild in the coastal regions of the island of Kyûshû. Called *Tsuru-mame* and *Nô-mame* by Franchet and Savatier. Soybeans in the catalog of the Japanese Universal Exposition of 1878: No. 24–The black soybean (*Kuro-mame*), No. 25–The white soybean (*Shiro-mame*), No. 26–The green soybean (*Ao-mame*), No. 37–The black soybean speckled with white (*Gankui-mame*). Where the soybean is cultivated: Not only on the island of Japan, but also in India, on the island of Ceylon, on the Malacca peninsula (i.e., Malay Peninsula), on the Philippine islands, in Borneo, Java, in the Kingdom of Siam, in Cochin China, at Tong-King [Tonkin, formerly in North Vietnam] and throughput China, but mainly in Mongolia and in the provinces of Honan, Shengking [Liaoning], Shantung, and Shansi.

Note 1. This is the earliest document seen (May 2010) concerning soybeans in Malaysia, or the cultivation of soybeans in Malaysia. This document contains the earliest date seen for soybeans in Malaysia, or the cultivation of soybeans in Malaysia (1882). The source of these soybeans is unknown.

Note 2. This is the earliest document seen (May 2010) concerning soybeans in the Philippines, or the cultivation of soybeans in the Philippines. This document contains the earliest date seen for soybeans in the Philippines, or the cultivation of soybeans in the Philippines (1882). The source of these soybeans is unknown.

Note 3. This is the earliest document seen (May 2010) concerning soybeans in Siam (renamed Thailand in 1938), or the cultivation of soybeans in Siam. This document contains the earliest date seen for soybeans in Siam, or the cultivation of soybeans in Siam (1882). The source of these soybeans is unknown.

Note 4. This is the 2nd earliest document seen (May 2010) concerning soybeans in Siam Vietnam, or the cultivation of soybeans in Vietnam. This document contains the 2nd earliest date seen for soybeans in Vietnam, or the cultivation of soybeans in Vietnam (1882). The source of these soybeans is unknown.

The Chinese exposition (class 73) contains samples of all the varieties of soya cultivated in the provinces of the empire: No. 2991 and 3000–Green, white, black, yellow, striped / streaked / variegated (*panachés*), and red soybeans. Source: Chinese customs at Newchwang. No. 3014-3016–Yellow, black, and green soybeans. Source: Customs at Tientsin [Tianjin]. No. 3058 to 3061–Yellow, green and black soybeans., from the customs at Chefoo [Yantai]. No. 3091. Yellow soybeans, from the customs at Chinkiang

© Copyright Soyinfo Center 2013

[Zhenjiang]. No. 3103 to 3109–White, red, black, and yellow soybeans from the customs at Shanghai. No. 2135 to 3128–White, black, red, and green soybeans from the customs at Wenchow [Wenzhou]. No. 3152 to 3156–White, green, and black soybeans from the customs at Takow [Kao-Hsiung].

At the Japanese exposition (class 74, condiments and stimulants) are samples of miso and shoyu from Tokyo and the province of Hizen, especially the town of Nagasaki.

The Chinese exposition also contains in class 74 (condiments and stimulants) samples of soy sauce [*soye, soya*] called *Tsiang-yeou* from the Chinese customs at Chefoo, Ning-po, Wenchow, and Canton. The Chinese often add aroma in the form of star anise, green anise, and orange rind. Chinese soy sauce is made with yellow soybeans called *Houang-téou.*

Descriptions of how to make shoyu, miso, tofu, and soybean oil based on earlier European publications (p. 479-83).

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), both of whom are involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal; Pterocarpus santalinus*), mace, and cinnamon (p. 482).

In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of *Tcheou-chan* [*Zhoushan?*] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo (p. 483).

There follows a long section on the introduction and acclimatization of the soybean in Europe (p. 484-89) based on earlier European documents.

The next section, about kudzu (*Pueraria Thunbergiana,* p. 489-90) cites 9 early references, including *Le Japon a l'Exposition universelle de 1878,* vol. II, p. 153). Address: France.

269. Giliaranskii, V.P. 1882. Monografiya Kitaiskago maslichnago gorokha "Soja hispida" [Monograph on Chinese oil-bearing pea plant *Soja hispida*]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg* (*Transactions of the Imperial Free Economic Society*) 3(3):269-71. Nov.; 3(4):435-50. Dec. [10 ref. Rus]
• ***Summary:*** Part I (Nov.): Soybeans were introduced to Russia to increase the country's food production. Discusses the nutritional value of soybeans. Haberlandt introduced the cultivation of soybeans to Europe, and his trials proved that soybeans could be successfully grown in various European countries. However Podoba was the first who practically / experimentally proved the success of soybean in Europe. Podoba also installed a laboratory partner named Fein in southern Russia. The first popularizer was A.V. Sovetov, who initiated further projects and data collection.

Giliaranskii began his work in 1881 when he received 5 soybean seeds from his director, Nikolai Pavlovich Ill'inu, who also allowed Giliaranskii to use his equipment and laboratory. In 1880 the Asian Department of Foreign Ministry (of Russia) obtained soybean samples by demand. In the same year, crop information about soybeans was received from the Consulate.

In the text, Giliaranskii then cites five documents that were helpful to him in compiling this article: (1) Organov, N. 1881. *Soia ili maslichnyi gorokh* (*Soja hispida* *) [Soybean or oil-bearing plant (Soja hispida *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg* (Scholarly Works of the Imperial Free Economical Society 1(2):184-198. Feb.; 1(3):304-325. March). (2) The publications of Dr. Bretschneider, who was on a mission to Peking. (3) La Planta Soja hispida, by Geerts, a report from a mission to Japan. Chapters 3 and 4 from Part 1; Chapters 4 and 5 from Part 2 (translation from French), including much information about soy sauce and miso. (4) The famous book: Haberlandt, Friedrich. 1878. *Die Sojabohne: Ergebnisse der Studien und Versuche ueber die Anbauwuerdigkeit dieser neu einzufuehrenden Culturpflanze* [The soybean: Results of studies and trials on the potential for growing this newly introduced crop plant]. Vienna, Austria-Hungary: Carl Gerold's Sohn. ii + 119 p. (5) *Oesterreichische Monatsschrift für den Orient* (Vienna). 1881. *Die japanische Sojabohne als Nahrungsmittel* [The Japanese soybean as a source of food]. 7(12):204-05. Dec. 15.

Part II (Dec.): Chapter 1. Oil of soybean seeds (*Maslo semian soi*). Bretschneider discusses the taste and use of soybeans in Russia. Karl Brendt is mentioned again. Giliaranskii states: "My yield included 40 *zolotnik* (1 *zolotnik* = 4.26 gm) of oil, produced from the variety of seeds received from Mr. Podoba. The oil was extracted using sulfuric ether. I had about 4 lb of soybeans, which I ground in a coffee mill. Then I immersed the flour in ether in a test tube for 4-5 days. Almost all of the oil was extracted. I also extracted the oil using carbon bisulphide, but the yield was 1.5% less than with sulfuric ether.

"I also tried to extract the oil using petroleum ether, but again the yield was unsatisfactory. In addition, the petroleum ether dissociates from the soybean oil, thus changing the latter's smell and taste. The product known as *rigolen,* which has a boiling point of 35ºC, would be the best solvent of all, it is impossible to obtain in St. Petersburg.

"The oil I extracted using sulfuric ether had a clear, heavy yellow color, similar to olive oil in color and viscosity... however as time passes, under certain conditions, it becomes black in color." Through his experiments, Giliaranskii proved that soybean oil contains nitrogen. Sato and his experiments are mentioned (p. 436-37).

© Copyright Soyinfo Center 2013

A table (p. 437-38) gives the percentage composition of soybean cake (water, protein, fat, nitrogen-free extract, cellulose, ash), with two columns based on the research of Völcker (1872) and J. Küehn (see Pott 1889, p. 490). Soybean oil cakes, known in English as "bean-cakes," are an important export from the port of Newchwang to southern China, especially to Syamou (?). Discusses the price of soybeans.

Chapter 2. Uses of soy sauce (in China, as well as Europe). Methods of preparing soy sauce are described in numerous Chinese and Japanese publications, but also in European publications such as: (1) *Etude pratique du commerce d'exportation de la Chine*, by N. Rondot (1848, Renard, p. 188). (2) *Chinese Commercial Guide*, by W. Williams (1863, Hong Kong, p. 139). (3) Newspaper article by K.A. Skachkov in *Golos* [Voice] (No. 72, 1882). The main ingredients used in making soy sauce are yellow soybeans (*Soja hispida*, Shiro-daizu or Teppo-mamé or Shoyu-mamé), wheat koji, salt, and water. A detailed description of the process is given. Amazake is sometimes added to soy sauce to give variation in the flavor. Kinch's analysis of Geerts' data (p. 443) gives the relative density of soy sauce as 1.199. The density of soy sauce solids is 359.88 gm/liter. A table (p. 443) gives the density (in gm/liter) of soy sauce constituents as follows: Ash 195.16. Sugars 31.03. Albumen 41.00. Acids 6.20.

Chapter 3. Sauce *miso* or *dai-dzu-ko*. Describes seven different types of Japanese miso and how each is made: 1. Original miso or *shiro miso*–white with little salt. 2. *Chu-miso*–very salty. 3. *Aka-miso*–red, prepared with koji. 4. *Nagoya-miso*. 5. *Kinzanji-miso*–made with soybeans, eggplant and gingerroot. 6. *Mugi-miso*–made with barley and soybeans. 7. *Kogane-miso*–a type of *aka-miso*. A table (p. 445) compares the nutritional composition of *shiro-miso* and *aka-miso*.

Chapter 4. Tofu. Chinese name: doufu. English name: bean-curd. Japanese name: tofu. Yellow soybean varieties (*Gogwatsu-mamé*, *Wase-mamé*, and *Natsu-mamé*) are widely used in Japan to make tofu. A table (p. 447-48) gives the percentage composition of tofu, with two columns based on the research of Kinch (1880) and Geerts (1876). Tofu is seen as an excellent alternative for dairy cheeses.

Chapter 5. Preparation and composition of dried-frozen tofu (kori-tofu) and other types of tofu (dried cheeses). A table gives the nutritional composition of kori-tofu (based on Kinch 1880). Also discusses *agé-tofu*, *abura-tofu*, and yuba. Describes the method for preparing yuba, which is eaten in soups in Japan. Several tables were summarized by Nikitin in Russian (1900) and German (1901).

Note: This is the earliest Russian-language document seen (Oct. 2012) that mentions yuba. Address: USSR.

270. Kinch, Edward. 1882. Die Sojabohne [The soybean]. *Biedermann's Central-Blatt fuer Agrikulturchemie* 11:753-55. Nov. [Ger]

• ***Summary:*** According to Watt (1890, p. 511): "In 1882, Professor Kinch urged the advisability of renewed efforts [to grow soya] in the Himalayan tracts, and, as a consequence, the government of India directed the attention of local officials to the subject. Seed obtained from the Government Gardens, Saharanpur, were distributed to Madras, the Panjab, Bengal, Bombay, Hyderabad, and Burma, for experimental cultivation. It appears to have been grown from seed obtained from China with a fair amount of success at the Saidapet Experimental Farm in 1882."

"The chemical composition of the bean, according to Professor Kinch, places it above all other pulses as an albuminous food, while that of the straw also surpasses in nitrogen value that of wheat, lentils, and even hay."

Table 1 gives original analyses of the nutritional composition of various soybeans, including: from Japan, pale/colorless from China, yellow from Germany, from India, brown, round black, and oblong black soybeans.

"The average composition of the straw, the pods, and of a type of soybean straw from Japan, which are used as very tasty feeds for horses, cows, and sheep" are given in table 2.

Table 3 gives the nutritional analyses of various soybean products: White miso, red miso, Tofu or *Bohnenkäse*, frozen tofu (*gefrorener Bohnenkäse*), and soybean cake (*Sojabohnenkuchen*) which remains after pressing out the oil (*Abpressen des Oels*).

Table 4 shows the percentage composition of nine different mineral salts in the ash of soybean seeds and straw.

Note 1. This may be the 2nd earliest document seen (May. 2010) concerning soybeans in Burma. It seems likely that soybeans were cultivated in Burma at that time, but that is not certain. This document may contain the 2nd earliest date seen for soybeans in Burma (1882).

Note 2. This may be the second earliest document seen (Oct. 2010) concerning soybeans in Pakistan, however that is not certain. The nation of Pakistan was created out of British India in 1947. In 1882 Panjab (Punjab) was a province in British India. It was divided in Aug. 1947 into East Punjab, India (with about 1/3 the area and ½ the population of the original province), and West Punjab, Pakistan. West Punjab was renamed simply Punjab and is now one of Pakistan's four provinces; its capital is Lahore.

Note 3. This is the earliest German-language document seen (April 2013) that mentions dried-frozen tofu, which it calls "gefrorener Bohnenkäse." Address: Professor, Cirencester, England.

271. *Indian Agriculturist* (*The*) (*Calcutta*). 1882. The Japan Pea in India. Dec. 1. p. 454-55. [2 ref]

• ***Summary:*** "If all accounts of this vegetable be true, it is a most important addition to the stock of Indian food, and fodder plants." An American paper writes of it: -

"'The Japan Pea is the most productive as well as good

© Copyright Soyinfo Center 2013

food for all kinds of stock; horses, cattle, sheep, and hogs will eat the peas, stems, and leaves, if harvested before fully matured, and cured like all other hay, with as much relish as they do corn. Then, there is no pea for the table–it is soaked in water the night before cooking–that has a more exquisite flavour. They grow on a stout bushy stalk from two to three feet high, somewhat resembling the cotton plant. The main stalk, as well as the branches of the limbs, are literally loaded with small pea-pods, filled with little yellow peas, similar in colour, size, and flavour, to the English garden pea. The way to get the greatest yield is to plant in hills two and-a-half feet each way, allowing but one stalk to the hill to remain after the first working. That will give you 6,960 stalks to the acre, and on ordinary land, cultivated the same as corn, will average at the lowest estimate a pint of shelled peas to the stalk, or a fraction over 108 3/4 bushels per acre. With high cultivation and good soil, it would be an easy matter to double that yield: besides, there is no other crop that will yield more hay to the acre. It is a sure cropper, neither wet not dry weather materially interferes with the quantity or quality of the yield.'

"In a paper on the Soy bean, as the Japan pea is sometimes called, Mr. Kinch, Professor of Chemistry at the Royal Agricultural College, Cirencester, says, that it is worth more than a passing notice, as it is the vegetable which approximates most nearly, in its chemical composition, to animal food:

"'The Soy bean is extensively cultivated in the north of China, whence it is exported to the southern provinces; it is here pressed for the sake of its oil, and the residual cake largely used as food for man and beast, and also as manure. In Japan it is known by names signifying the bean, and from it are made not only *soy* [sauce] but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water, and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, nitrogenous matter, fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso.* The soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, Reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then, numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw, on different kinds of animals, have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others, at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy... The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, especially the first three named.'"

"'Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the labouring classes is so wastefully cooked. One use it has already found, not altogether to be recommended, *viz.*, after roasting, as an adulterant of, and substitute for, coffee.'" Address: India.

272. *Waikato Times* (*Waikato, New Zealand*). 1882. Gleanings: The soy bean. Dec. 7. p. 3.
• ***Summary:*** "A recent number of the *Agricultural Students Gazette* (Royal Agricultural College, Cirencester [England]) contains an article by Prof. E. Kinch on the Soy bean (*Soja hispida*). This bean, of which there are a dozen or more varieties known in the East, is very largely used as an article of food in Japan and China, where it is manufactured not only into soy [sauce], now exported in considerable quantities to Europe, but also into bean cheese [tofu] and other forms of food..."

"Prof. Kinch is trying to grow one of the varieties in the Botanic Garden at Cirencester, and though our climate is probably too uncertain, and the temperature often too low for most of the varieties to attain perfection, if any of them could be acclimatized, a valuable leguminous crop would be added to our present list."

273. **Product Name:** [Fermented Tofu, and Tofu].
Foreign Name: Doufu-ru, Doufu.
Manufacturer's Name: Sam Sing.
Manufacturer's Address: 615 Dupont St. basement, San Francisco, California.
Date of Introduction: 1882.
New Product–Documentation: Wells Fargo & Co. 1882. Directory of Chinese Business Houses. p. 45. The first line is in English: "Sam Sing, Bean Cake. 615 Dupont st. basement."

The 2nd line, written in Chinese characters, states: Sam Sing Fermented Tofu [and] Tofu Shop 615 Dupont st.

Note 1. Wo Sing and Sam Sing, the two companies in San Francisco that made tofu or fermented tofu, were both located on the same street (Dupont St.).

Note 2. This is the 2nd earliest known commercial soyfoods manufacturer in California (after Wo Sing, 1878).

274. Blyth, Alexander Wynter. 1882. Foods: Their composition and analysis. A manual for the use of analytical chemists and others. With an introductory essay on the history of adulteration. London: Charles Griffin and Company. xxviii + 586 + 36 p. See p. 191. Illust. 19 cm. [2 soy ref]

• ***Summary:*** The focus of this book is adulteration of foods, its detection and history. Page 191 states: "Chinese Peas. A Pea or bean, much used in China in the form of cheese, is *Soia hispida."* The composition of 3 varieties of soybeans according to G.H. Pellet [1880] is given.

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term "Chinese peas" to refer to soybeans.

A translation of information on tofu from Stanislaus Julien and Paul Champion [1869] *Industries anciennes et modernes de l'empire chinois...* states: "The pea-cheese is considered, in China and Japan, a very important food. The peas (*Soia hispida*) are soaked in water for about 24 hours, then strained; they are next ground to a thin paste with some of the water which has been put on one side. The grinding is effected by a mill. The matters are filtered, and the filtrate is concentrated by heat; and after skimming once or twice is cooled, the caseine [casein] coagulated by plaster, and a salt, which appears to be chloride of magnesium, added. The cheese is grayish-white, and has the following general composition:"–Water 90.37%, fatty matters 2.36%, nitrogen 0.78%, and ash 0.76%.

Also discusses: History of adulteration, especially in England (p. 1-63), gluten (p. 150-51), coffee and its adulteration (p. 349-53; soy is not mentioned), almonds and almond oil (p. 503-07), specific gravity of various oils including sweet almond oil, arachis oil, and sesame oil (but not soybean oil).

In England, recent acts prohibiting adulteration of foods, beverages and drugs were passed in 1860, 1872, 1875, and 1879. Address: M.R.C.S., F.C.S., &c., Public Analyst for the County of Devon, and Medical Officer of Health and Public Analyst for St. Marylebone, England.

275. Bretschneider, Emil V. 1882. Botanicon sinicum. Notes on Chinese botany from native and Western sources. I. *J. of the Royal Asiatic Society, North China Branch. Series 2.* 16:18-230. For the year 1881. [1882* ref. Eng]

• ***Summary:*** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Preliminary Notices (p. 18-22). 1. Contribution towards a history of the development of botanical knowledge among eastern Asiatic nations: Chinese literature on materia medica and botany (p. 22-75, incl. the Materia Medica of Shen Nung, p. 26-32), Chinese works on agriculture (p. 75-86). Chinese geographical works containing botanical information (p. 86-92). Early acquaintance of the Chinese with Indian and Western Asiatic plants (p. 92-95). History of materia medica and botany in Japan (p. 96-101). On the botanical knowledge of Coreans [Koreans], Manchoos [Manchus], Mongols, and Tibetans (p. 101-05).

2. On the scientific determination of the plants mentioned in Chinese books (p. 105+, incl. Cleyer, Siebold, and Kaempfer, p. 124-27). 3. Alphabetical list of Chinese works (p. 131-216). Index of Chinese authors (p. 217-22). Celebrated mountains of China (p. 223-28).

Concerning Shen nung, "Chinese works on agriculture" (p. 75) states: "The primeval Emperor *Shen nung*, whom the Chinese believe to have composed the first treatise on Materia medica, is also credited with having laid the foundation of Chinese Husbandry. His name implies this tradition, for Shen nung means: the Divine Husbandman. It is related in the early records that the people of his age were rude and wholly unacquainted with the advantages of agriculture. They subsisted on fruit, vegetables, and the flesh of birds and beasts. Shen nung examined first the quality of the soil, fashioned timber into ploughs and taught the people how to till the ground and raise grain. On a previous page I referred to the mountain in Shan si, where tradition makes him first teach his people the fundamental processes of agriculture. Sz' ma Ts'ien [Ssu-ma Ch'ien] (B.C. 163-85) records in the *Shi ki* [*Shih chi; Historical records*] (book 1) that Shen nung sowed the five kinds [of cereals]."

In the section on the work of early Europeans who studied the flora of East Asia, the following researchers are discussed in detail: Cleyer (p. 124), Kaempfer (p. 125-26), Thunberg (p. 126), Siebold (p. 126-27), Miquel and Zuccarini (p. 127), Hoffman and Schultes (p. 127-28), Dan. Hanbury (p. 128), O. Debeaux (p. 128), Dr. Fr. Porter Smith (p. 128-29), and P. Perny (p. 130; very critical). Address: China.

276. Bretschneider, Emil V. 1882. Botanicon sinicum. Notes on Chinese botany from native and Western sources [Part I]. London: Trübner & Co. 228 p. No index. 28 cm. [1882* ref. Eng]

• ***Summary:*** The contents of this book was first published in 1882 as an article in the *Journal of the Royal Asiatic Society, North China Branch.* (Vol. XVI, 1881; Article III). Series 2. The contents and pagination of this book is the same as the original article (which see). Address: M.D., Physician of the Russian Legation at Peking, China.

277. Figuier, Louis; Gautier, Emile. 1882. Le soya [The soybean]. *L'Année Scientifique et Industrielle:...* (*Paris*). p. 391-93. [Fre]

• ***Summary:*** For a long time, French agriculturists have worked to introduce this new leguminous plant which has distinct advantages over its close relatives, the haricot bean and the pea.

© Copyright Soyinfo Center 2013

The soya, or soja, is of Chinese or Japanese origin. For more than a century, the Museum of Natural History in Paris has possessed specimens. The Society for Acclimatization has spread / disseminated the seeds throughout France, but distrust and apathy have always led to the abandonment of the cultivation of this plant, which nevertheless grows very well in our climate.

More intelligently, Austria tried importing this plant in 1873, and it had soon spread throughout Austrian territory. In Italy and Bavaria it was also grown here and there.

A brief botanical description of the plant is given.

In China and Japan the soybean is used in various forms as a food. An oil is extracted from it which, in part, serves domestic needs. But the two principal forms in which it is used are *shoyu,* a type of sauce or condiment, and *to-fu* [tofu] or *téou-fou* of the Chinese, which has the appearance and certain qualities of *fromage à la pie* (the French term for a fresh dairy cheese resembling cream cheese; quark).

Many people believe that the Chinese eat a diet composed only of rice; however it is clear that they also have their "cheese." An interesting brochure by Mr. Valllieux contains all of the information necessary to make tofu (*fromage de soja*). Doctor Picard has perfected this process and has succeeded in making with tofu (*fromage de soja*) a product that resembles Roquefort cheese [probably fermented tofu].

The dry seeds of the soybean (*de soja*) can be eaten as is, as you would with haricot beans; they provide an excellent purée, and–we must emphasize–they offer none of the drawbacks of haricot beans.

They can also be roasted, in lieu of coffee beans. The aroma and the decoction properties of roasted soybeans would be quite analogous to those of coffee of medium quality, thus far superior as a consequence to all that is served under the name of coffee in many public establishments.

The pods, stems and leaves are fed to cattle and horses. Mixed with green lucerne [alfalfa] growing in the fields, soya produces very rapid fattening / growth; this is easily explained when one examines the chemical composition of the plant.

Cultivation of soybeans is possible throughout the southern part of France; but in the north and in countries which are somewhat cold, they require a great deal of care and attention.

In summary, because of its completely unique nutritive qualities, the soybean is a plant whose cultivation should be expanded as much as possible.

278. Wells Fargo and Co. 1882. Directory of Chinese business houses: San Francisco, Oakland, Sacramento, San Jose, Stockton, Marysville, Los Angeles, Portland, Virginia City (Nevada), Victoria (B.C.), Denver (Col.). San Francisco, California: Britton & Ray. 146 p. [Eng; Chi]

• ***Summary:*** On page 45 is a listing written in English and Chinese, for "Sam Sing, Bean Cake, 615 Dupont st. basement, San Francisco." On page 69 is a listing for Wo Sing, Bean Cake, 708½ Dupont st., San Francisco. The Chinese characters indicate that both companies made both fermented tofu and regular (non-fermented) tofu.

The following table of contents gives a rough idea of the relative size of Chinese populations in various western American cities in 1882, assuming that the population is approximately proportional to the number of pages of business listings. San Francisco, p. 1-76. Oakland, p. 77-84. Sacramento, p. 85-96. San Jose, p. 99-106. Stockton, p. 107-13. Marysville, p. 114-18. Los Angeles, 119-23. Portland (Oregon), p. 124-31. Virginia City (Nevada), p. 132. Victoria (B.C., Canada), p. 133-38. Denver (Colorado), p. 139-46. Address: San Francisco.

279. Williams, Samuel Wells. 1882. The Middle Kingdom: A survey of the geography, government, literature, social life, arts, and history of the Chinese empire and its inhabitants. Revised ed. 2 vols. New York, NY: C. Scribner's Sons. 2 vols. Illust. 24 cm.

• ***Summary:*** In volume 1, in Chapter 6 titled "Natural History of China," the section on legumes (p. 365) states: "The leguminosæ hold an important place in Chinese botany, affording many esculent vegetables and valuable products. Peas and beans are probably eaten more in China than any other country, and soy is prepared chiefly from the Soja or Dolichos. One of the modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum, or turmeric. It is eaten as a jelly or curd, or in cakes, and a meal is seldom spread without it in some form."

In Chap. 13 titled "Architecture, dress, and diet of the Chinese," the section on "Vegetables eaten by the Chinese" (p. 773) states: "The Chinese have a long list of culinary vegetables, and much of their agriculture consists in rearing them. Leguminous and cruciferous plants occupy the largest part of the kitchen garden; more than twenty sorts of peas and beans are cultivated, some for camels and horses, but mostly for men. Soy is made by boiling the beans and mixing water, salt, and wheat, and producing fermentation by yeast; its quality is inferior to the foreign. Another more common condiment, called bean curd or bean jam, is prepared by boiling and grinding black beans and mixing the flour with water, gypsum, and turmeric."

In volume 2, Chapter 20 titled "Commerce of the Chinese," states (p. 396): "*Soy* is a name derived from the Japanese *sho-ya;* it is made by boiling the beans of the *Dolichos soja,* adding an equal quantity of wheat or barley, and leaving the mass to ferment; a layer of salt and three times as much water as beans are afterward put in, and the whole compound stirred daily for two months, when the liquid is pressed and strained. Another method of making the

© Copyright Soyinfo Center 2013

condiment has already been mentioned in Volume I., p. 365."

Samuel Wells Williams lived 1812-1884. Address: Prof. of the Chinese Language and Literature at Yale College, Author of Tonic and Syllabic Dictionaries of the Chinese Dictionary.

280. Geerts, A.J.C. 1883. Observations on Kinch's list of plants used for food. *Transactions of the Asiatic Society of Japan* 11(Part 1):31-35. April. [3 ref. Eng]

• ***Summary:*** Note 1. Geerts is referring to the article by Kinch titled "List of plants used for food or from which foods are obtained in Japan," on pages 1-30 of this issue of this periodical.

"Prof. Kinch seems not to have been acquainted with the list of 447 economical plants, published in 1826 by Ph. Fr. von Siebold in the *Transactions of the Batavian Society of Arts and Sciences* [*Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen*], Vol. XII, under the title of *'Synopsis plantarum oeconomicarum universi regni Japonici,'* for Mr. Kinch mentions only the more imperfect list given by Thunberg in his *Flora Japonica.* Further, several articles written on the subject of economic Japanese plants, published by von Siebold in the Journal of the Royal Dutch Society for the Advancement of Horticulture, during the years 1844-45-46, etc., might be perused with advantage by those who wish to study the practical side of Japanese economic plants.

"In Karl von Scherzer's work, *Fachmaenuische Berichte ueber die oesterreichisch-ungarische Expedition nach Siam, China und Japan,* Stuttgart, 1872, there is an extensive article by Dr. S. Syrski, on Japanese horticulture and economic cultivated plants, pp. 175-220. Several interesting observations on the mode of culture, time of sowing, planting, and harvesting, will be found there."

"As a preliminary catalogue Mr. Kinch's list may be useful for those persons who do not possess the botanical literature on the Japanese flora, but as a practical indication for horticulturists the list is deficient. Note 2. Chinese characters (or katakana) are given for each for the following Japanese terms.

"For instance the plant *Dai-dzu* or *O-mame,* the Soja hispida, Moench, has in Japan five distinct cultivated varieties and eleven or perhaps more sub-varieties, viz:

"I. White or slightly yellow beans, Haku-dai-dzu. 1. Very early variety with very small bean. Harvest in July. *Goguwatsu-mame* 2. Early variety with small white bean, *Wase-mame* or *Natsu-mame.* These [first] two varieties are also called *Bai-to* or *Tofu-mame* and serve especially for preparing *To-fu* [tofu]. 3. Middle early variety with somewhat larger round beans, *Nakate-mame.* Much used for preparing miso. 4. Late variety with round and hard beans, *Okute-mame.* 5. Late variety, with smaller, perfectly round and hard beans, *Maru-mame.* Can be kept a very long time and is much used as food for horses. 6. Late variety, with large, perfectly round, and very hard beans, *Teppo-mame* or *Aki-mame.* Is much valued for the preparation of *Shoyu* [soy sauce].

II. "Black beans, *Koku-dai-dzu* or *Kuro-mame.* 1. Middle late variety, with round, small, hard, black beans, *Kuro-mame.* 2. Middle late variety, with round, large black beans, *Kuro-teppo-mame.* 3. Late variety, with flat, elliptic, black beans, *Go-ishi-mame* or *Kuro-torokusun* or *Hachi-bu-name* or *Tamba-kuro-mame.* These kinds [in category II.] are eaten in a boiled mixed with sugar as *entremets.*

"III. Brown beans, *Katsu-dai-dzu.* 1. Round reddish brown beans, *Aka-mame.* According to the size the Japanese distinguish even six subvarieties of this brownish Soya-bean. The reddish kinds are far less cultivated than the white and black varieties. 2. Light brownish-red and round beans, *Cha-mame.* According to the more or less intense colour the Japanese distinguish three sub-varieties of *Cha-mame.* They are rarely cultivated. [Both these types] are eaten with sugar in a boiled state" (p. 34).

Note 3. This is the earliest English-language document seen (Oct. 2004) that mentions red or reddish soybeans (actually brownish-red).

Note 4. This is the earliest English-language document seen (Feb. 2007) that contains the word "Soya-bean" or ("Soya-beans").

"IV. Greenish or blue-greenish beans, *Sei-dai-dzu* or *Aö-mame.* 1. Round, middle-sized greenish beans, *Aö-mame.* The Japanese distinguish two sub-varieties, viz., α. *Sei-hi-to* with the epidermis only of a green colour, but white inside [and] Beta. *Nikuri-Sei,* which are outside and inside of a greenish colour. 2. Light green round beans, *Kagemame.* [All] are only cultivated in the provinces of Ise, Iyo, Harima, Idzumo [Izumo], Omi. Eaten with sugar in a boiled state. Note 5. This is the earliest English-language document seen (Oct. 2004) that uses the term "light green" to describe the color of a soybean.

"V. Spotted beans, *Han-dai-dzu* or *Fu-iri-mame.* 1. Greenish, flat, oblong beans with a black spot at the navel. *Kuro-kurakake-mame.* Relatively rare and only cultivated in Nagato [an old province on the southwest tip of Honshu, Japan; as of 2003 part of Yamaguchi prefecture], Idzumo [Izumo] and the environs of Kiyoto [Kyoto]. 2. Yellowish-green, flat, and slightly oblong beans, with a dark brown spot at the navel. *Aka-kura-kake-mame.* Rare. 3. Yellowish-green beans with many dark spots. *Furi-mame* or *Udzura-mame.* Rare. Cultivated in Harima province."

Note 6. This is the earliest English-language document seen (Oct. 2004) that uses the term "Yellowish-green" to describe the color of a soybean.

Note 7. This is the earliest English-language document seen (Sept. 2004) that uses the word "spots" (or "spotted" or "spotting") or the term "reddish brown" to describe the color of soybean seeds.

Note 8. This is the earliest English-language document

© Copyright Soyinfo Center 2013

seen (June 2009) that discusses the color of many soybean varieties.

Note 9. This is an excellent, original article, which gives the names of many Japanese soybean varieties for the first time in English or any other European language. That information is largely derived from Iinuma (1861 and/or 1874).

281. *Brisbane Courier* (*Queensland, Australia*). 1883. Imports (A special charge is made on consignees' announcements inserted in this column). June 9. p. 4.
• ***Summary:*** "Venice, s. [steamer], from Hongkong: 46 cases merchandise,... 47 boxes soy [sauce],... 1 bag seaweed,... 18 packages preserved ginger, 5 boxes bean curd, 15 boxes sauce, 8 baskets ginger,... 10 boxes bean cake,... 5 boxes bean stick" [dried yuba sticks].

Note 1. Bean cake, which is apparently a food, is probably fermented tofu, but could possibly be dried frozen tofu. If it is fermented tofu, this is the earliest English-language document seen (Oct. 2011) that mentions fermented tofu, which it calls "bean cake."

Note 2. These goods are clearly for Chinese customers in Australia.

Note 3. This is the earliest document seen (Jan. 2010) that clearly mentions yuba being imported or exported.

282. Giliaranskii, V.P. 1883. Monografia kitaiskogo maslichnogo goroxa (Soja hispida) [Monograph of Chinese oil-bearing pea plant (Soja hispida)]. St. Petersburg, Russia: Printing House of "Obschestvennaya Pol'za" Union. 48 p. 20 cm. [1 ref. Rus]
• ***Summary:*** Contents: Foreword. Part I: Natural history of *Soja hispida.* 1. Soybean history (including I.G. Podoba's experiments). 2. Plant description. 3. Soybean varieties. 4. Summary table of soy varieties cultivated in Japan. 5. Cultivation of soybeans. 6. Physical and physiological properties of soybean seeds. 7. Chemical composition of soybean seeds.

Part II: Soybean processing and utilization. 1. Soybean oil. 2. *Shoyu* [soy sauce]. 3. *Mi-so* [miso] sauce. 4. Vegetable cheese *to-fu* [tofu]. 5. Dried vegetable cheese *Kori-tofu* [dried-frozen tofu] and other varieties of *tofu.* Address: First Class Technologist/Production Engineer, St. Petersburg, Russia.

283. Koenig, Franz Joseph. ed. 1883. Chemie der menschlichen Nahrungs- und Genussmittel. Vol. 2. Zweite sehr vermehrte und verbesserte Auflage [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. 2nd ed.]. Berlin: Verlag von Julius Springer. xviii + 816 p. See p. 371-72, 387. Illust. Index. 25 cm. [5 ref. Ger]
• ***Summary:*** In the section on "Legumes" is a subsection titled "Soybeans" (*Sojabohne*) (p. 371-72) which begins with short summaries of Haberlandt (1878) and Wein (1881). The first table, based on calculations by Wein, shows that, on a per hectare basis, soybeans yield about 1/3 more protein and about ten times as much vegetable oil as common beans or peas. The second table gives the average chemical composition of 43 soybean varieties analyzed by König, and first published in detail in Vol. 1, p. 103-04. The range: Protein 26.5 to 40.0%. Oil 14 to 19%. The third table gives the average analysis of the ash found by Edward Kinch in 1882. The soybean is unique among legumes in its combination of a high oil content with an even higher protein content. Moreover, its straw makes a nutritious fodder for cattle. "The soybean is therefore highly recommended for cultivation in Germany, and efforts should be made to find ways of producing good-tasting foods from it."

In China and Japan, soybeans have long been used to make human foods such as miso (*Misobrei*), shoyu (*Soohu*), and tofu (*Tofu*). The fourth table gives the nutritional composition of five soy products as determined by Edward Kinch: White miso, red miso, fresh tofu, frozen tofu, and soybean cake. While some of these products may not be suited to German tastes, E. Wein has used soybeans to prepare a tasty German dishes, including a soup like that made from beans and peas, a salad like that made from garden beans, or by cooking soybeans with potatoes or rice, a purée, which resembles Italian "Polenta" and has been called "Sojenta" by Haberlandt (1878). The taste of dishes made from soybeans reminds one of somewhat of almonds or chestnuts, but even more of garden beans. A soybean flour (*Mehl*), similar to the flour made from beans and peas, has already been made for kitchen use from soybeans (see p. 387).

The section titled "Legume flours" (*Leguminosenmehle*) (p. 387) contains a table that gives the nutritional composition of such commercial flours: Bean flour (*Bohnenmehl*), pea flour (*Erbsenmehl*), lentil flour (*Linsenmehl*), and soybean flour (*Sojabohnenmehl*). The latter contains: Water 10.23%, protein 25.69%, oil / fat 18.83%, carbohydrate 38.12%, cellulose (*Holzfaser*) 2.75%, ash 4.36%. On a moisture-free basis: Nitrogen 4.58%, carbohydrate 42.45%.

Also discusses: Lecithin in egg yolks (not in soy, p. 223, 233). Composition of vegetable oils, incl. olive, linseed, poppyseed, hempseed, rapeseed, white sesame, black sesame, cottonseed, peanut, palm kernel, coconut (p. 325). Lupins (yellow or blue, p. 373-75). Almonds (p. 495, 497). Agar-Agar (p. 496-97). Peanuts (p. 495, 497). Coffee substitutes (not incl. soy, p. 607). Address: Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Vorsteher der Agric.-Chem. Versuchsstation Muenster in Westphalia).

• ***Summary:*** Chapter 14, "Field pea crops, including the Japan pea" states (p. 184): "The Japan pea assumes the form of a bush from two to three feet in height. In the plains it should be sown after the rains cease. Drills should be made three feet apart, and a single seed should be sown at every three feet; the spot where the seed is sown being manured as for beans. The botanical name of the Japan pea is *Soya Hispida.* It is half pea and half bean in appearance, with singular leaves, and pods somewhat like the pods of the *Cajanus sativa* or *Urhur Dall* [*Dahl*] of the next chapter."

In the Appendix (p. 267+) is a section titled "Japan pea" which states (p. 280-81): "A small supply of this pea-bean was received by the writer in the spring of 1882. It was freely distributed in Dehra, but failed entirely as a hot-weather crop. A few seeds sown at Mussoorie grew to the height of two feet, and bore pods very much resembling those of the *Urhur Dall* (*Cajanus sativa*). At the writer's request a supply of the seed was sent to Simla, and the result is given beneath.

"'The Government of India has decided on the cultivation of the Japan pea being extended in this country, and with this view it has suggested that further experiments should be made in suitable places. This bean or pea has its natural habitat in China and Japan, it also grows in Mongolia, and in India in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries, under the name of the Soy bean. It is a vegetable, which approaches most nearly in its proximate chemical composition to animal food. The Soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw on different kinds of animals have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy.

"'In Japan it is known by names signifying THE bean, and from it are made not only soy [sauce] but a paste, known as *miso,* which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially the Japanese, who use so little animal food. They tend to supply the deficiencies of the staple food, rice, in nitrogenous matter [protein], fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso.'–Vide 'Simla Argus,' 18th November, 1882.*"

Note: Simla was a hill station in British India. The *Argus* was a periodical published at Simla, a hill station in British India in the 1880s. The Simla Argus Press published a few books at the same place and time. Address: Lieutenant, Her Majesty's Bengal Army, Dehra Doon; Honorary Member Agri-Horticultural Society of India.

285. Scheube, Botho. 1883. Die Nahrung der Japaner [The food of the Japanese]. *Archiv fuer Hygiene* p. 352-83. [3 soy ref. Ger]

• ***Summary:*** In the Japanese diet, rice plays the most important role. From a special type of glutinous rice, the Japanese prepare their beloved rice cakes, called mochi, which are found in every house during the New Years festival. The Japanese bake no bread, yet *Fu* (made from wheat gluten) could be considered a kind of bread. The process for making it is described.

Legumes, beans and peas, also are important in the Japanese diet. Countless types are cultivated, but the most important is the remarkable soybean (*Sojabohne–Glycine hispida*), on account of its richness in nitrogen [protein] and fat, and its relatively low starch content. The most important foods made from soybeans are tofu, miso, and shoyu; a detailed description is given of the process by which each is made. Two analyses of shoyu, by Ogata and by Kinch, give its composition. Beans and peas are also eaten as vegetables by the Japanese, and bean meal [probably kinako] is used in the preparation of many kinds of cakes.

On pages 361-67 are many tables containing descriptions of the diets consumed by various individual Japanese persons, usually for three days or three meals. For each is given: The age and approximate weight of the person, the foods consumed, and the weight (in grams) of each food consumed each day. Tofu (*Bohnenkäse*), miso soup (*Miso-Suppe*), and wheat gluten cakes (*fu*) appear with rice (and/or sushi or mochi) and tea in most diets. The word *Bohnensauce* (p. 362) appears to refer to shoyu (soy sauce).

Botho Scheube lived 1853-1923. Address: Docent, Univ. of Leipzig, Germany.

Les plantes potagères: Description et culture des principaux légumes des climats tempérés [Garden vegetables: Descriptions and culture of the principal vegetables from temperate climates]. Paris: Vilmorin-Andrieux & Co. xvi + 652 p. See p. 549-50. Illust. Index. 25 cm. [Fre]

• ***Summary:*** The section titled "Soja–*Soja hispida* Moench" (p. 549-50) describes the soybean. It is a member of the legume family (*Légumineuses*). Synonym: *Pois oléagineux de la Chine.* A description is given of this Chinese annual, of its cultivation and usage.

Two specific types of soybeans are then described and

© Copyright Soyinfo Center 2013

an illustration (line drawing) shows the live plant of each type with many pods growing thickly on the stem, plus a separate enlargement of a cluster of pods: (1) Ordinary soja with yellow seeds (*Soja ordinaire a graine jaune*). A cluster of about 7 pods appears to the upper left of the plant. This illustration first appeared in 1880.

(2) The soybean of Etampes (*Soja d'Étampes*). A cluster of about 3 pods appears to the lower right of the plant. A note states that the plant is reduced to one-eighth its normal size, and the pods to one-third.

See also the 1885 English edition.

Note: Both of these illustrations are copied from earlier publications, as follows: (1) Vilmorin-Andrieux et Cie. 1880. *Prix Courant Général de Graines, 1880-1881.* See p. 30. (2) J.R.F. 1882. *Garden* (*The*). July 29. p. 93. Address: Paris, France.

287. *Brisbane Courier* (*Queensland, Australia*). 1884. Imports (A special charge is made on consignees' announcements inserted in this column). April 8. p. 4.
• ***Summary:*** "Suez, A.C.J. and S.S.S. Company's s. [steamer], from Hongkong direct: 2,432 bags rice, 50 cases oil, 50 cases Chinese oil, 10 cases China oil,... 10 boxes bean curd,... 8 boxes salt beans [probably salted black soy beans; fermented black soybeans],... 54 boxes sauce,... 5 boxes bean sauce [perhaps soy bean sauce],..."

Note: The ambiguous term "bean sauce" is used in 4 issues of this Australian newspaper from 8 April 1884 to 8 March 1897.

288. *Times* (*London*). 1884. Japan at the health exhibition. Aug. 28. p. 2, cols. 4-5.
• ***Summary:*** "The last foreign court completed at the International Health Exhibition [in London] is that of Japan." In a few days, a Japanese restaurant will be opened. "Two Japanese cooks have accompanied the Commissioners, and here the visitor will be able to make the acquaintance of some of the dishes which find a place on the *menus* of the Parisians of the East. Sweet-tasting bamboo sprouts, sweetmeats and confectionary of fanciful appearance; *saké*, 'the wine of the country,' a fermented drink made of rice and containing 11 to 12 per cent. of alcohol, the nutritious *miso* made from soy beans and fermenting rice [koji], frozen töfu [sic, dried frozen tofu] or bean curds, tangle [kombu], salted mushrooms, dried shrimps, cured bonito, laver [nori], various edible sea-weeds, orange vinegar, and several soys [soy sauces], are among the good things which those who are adventurous in dietary may enjoy."

Note: This is the earliest English-language document seen (April 2013) that uses the word "frozen" in connection with tofu; there is no such word as *töfu.*

289. International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p.
• ***Summary:*** Also cited as: (1) "Catalogue of the exhibits of Japanese Food Products at the International Health and Education Exhibition, held in London, 1884." (2) "Japan. International Health Exhibition A. Descriptive catalogue..." (3) "London, International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII."

A map of the "International Health Exhibition, London, 1884" (p. 537-38), which was held at the Royal Albert Hall in South Kensington, on Exhibition Road near the High St. Kensington Station; gives an overview of the hall and surrounding roads and railway stations. The title of the section related to food is "Japan. A descriptive catalogue of the exhibits sent by the sanitary bureau of the Japanese Home Department," prepared under the direction of K. Nagai, Commissioner, and J. Murai, Assistant Commissioner. There follows a 2-page Introduction by Kiuichiro Nagai, dated Sept. 1884. Then a table of contents of five groups; Group I is food. Then a table of Japanese weights and measures. Pages 545-71 begin: the "Descriptive catalogue." Group I–Food. Detailed information and / or chemical analyses are given of the following: are given: (7) Soy bean (*Glycine hispida*) *O-mame.* (7A) Phaseolus radiatus. Adzuki. (192) Dried fruit of *Lagenaria vulgaris–Kan-pio* [*kanpyo*], cook with soy sauce. Mushroom (*Agaricus campestris*). *Shii-take* [*Shiitake*], cook with soy sauce. Kanten, vegetable isinglass, cook with soy sauce. Frozen konniaku [konnyaku]. Minoboshi daikon, cook with soy sauce. Fu, nama-fu, yaki-fu (roasted) (Wheat gluten). Kuzu starch. Buckwheat soba, cook with soy sauce. (203) Hijiki sea weed (*Cystoseira* species), cook with soy sauce. (204) Ogo sea weed (*Gigartina* sp.), cook with soy sauce. (205) Wakame sea weed (*Alaria pinnatifida*), cook with soy sauce. (206) Agar-agar (*Gelidium corneum.* Tengusa). Use to make tokoroten or kanten. (207) Tangle (*Laminaria japonica*). Kombu [konbu]. (208) Laver, dried (*Porphyra tenera*). *Asakusa-nori.* (209) Awonori [Aonori], dried (*Enteromorpha compressa*).

(210) Frozen bean-curd. *Kôri-tôfu.* "Preparation.–It is made by steeping soy beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. This refuse is called 'Kiradzu' [kirazu] or 'Unohana.' The liquid [soymilk] remaining after taking away such refuse is put into a kettle and again boiled. Upon the surface of the water [sic, soymilk] there forms a thin substance [film] like wet paper; this is skimmed off and dried. It is called 'Yuba' (lit., bean-curd skin), the taste of which is very agreeable. When it [the soymilk] begins to bubble up brine is sprinkled over it in order to stop the bubbles, and it is put into a special wooden box, then thrown into a cotton cloth bag and coagulated into long square shapes, which is bean-curd."

Three tables follow: (1) "Analysis of bean curd" [tofu]. (2) "Analysis of dried bean-curd" [dried frozen tofu]. (3) "Analysis of refuse of bean-curd" [okara].

© Copyright Soyinfo Center 2013

Note 1. In the description of making tofu (above), yuba is removed during the tofu-making process.

(211) Yuba (Skin of bean curd; "Yuba is made during the process of making bean curd, and is a thin, yellow, transparent substance)."

Note 2. This is the earliest English-language document seen (Oct. 2012) that uses the term "bean-curd skin or the term "Skin of bean curd" to refer to yuba.

(213) Somen (Vermicelli), cook with *shioyu* (soy sauce).

Note 3. This is the earliest English-language document seen (April 2012) that uses the term *shioyu* to refer to shoyu / soy sauce.

(228) Umeboshi (Salted and dried plums). (229) Miso (a fermented substance made from soy beans and yeast [koji]). *Miso-ai, Sansho-miso, shoga-miso, wasabi-miso, togarishi-miso, goma-miso* [*sesame miso*], *keshi-miso, katsuwo-miso* [*katsuo-miso*]. (229a) Konomono [*Kô-no-mono*] (Vegetables pickled in fermenting mixture of bran and salt (incl. Nukamiso-dzuke ([Nukamiso-zuke] pickled in salt and bran), Takuwan-dzuke (Takuan-zuke; daikon radishes pickled in salt and bran), Shiwodzuke ([Shiozuke] salt-pickled), Shio-oshi (salted and pressed), Kasudzuke ([Kasuzuke] pickled in sake residue), Misodzuke (Misozuke; pickled in miso), &c.)). Takuwandzuke [Takuanzuke; Takuan pickles]. (229b) Kasu-zuke (mentions miso soup). (230-35) Shoyu (Soy) and how it is made [p. 21 of section]. Chemical analysis of Kikkoman shoyu. Eight chief brands of shoyu. (236) Mirin (a kind of sweet liquor), with koji. Sembei [senbei], with miso. (242) Yokan, three varieties. (246) Midzu-ame [mizuame]. Frozen mochi.

Class III–Prepared animal substances. Dried cod fish, cooked with soy [sauce]. Beef tsukudani, cooked with soy [sauce].

Class IV. Beverages. Sake (wine), made with koji (yeast). "Koji (yeast) is used for brewing Sake in Japan, almost like malt used for brewing beer in western countries,..."

Class VI. Cookery practically demonstrated. Nippon Ryoriya (Japanese restaurant), incl. misoshiru (miso soup), and konomono. Address: England.

290. International Health Exhibition, London. 1884. (210) Frozen bean-curd. Kôri-tôfu (Document part). In: International Health Exhibition, London. 1884. *The Health Exhibition Literature.* Vol. XVII. London: William Clowes and Sons, Ltd. 749 p. See p. 560-61.

• ***Summary:*** "It is made by freezing common bean-curd. Bean-curd is made of *Daidzu Glycine* (*soja*) *hispida* and contains a largo quantity of vegetable albumen. This is one of the most frequent kinds of food of the middle and lower classes of the people of Japan; it contains an abundance of nourishment, and Hygeists [Hygienists] recommend its use. However, bean-curd is indigestible as in passing through the process of freezing, it undergoes a change. Ordinary bean-curd is not a safe eatable to remove to a distance, as it spoils very readily: therefore, frozen bean-curd only is exhibited here with explanation of the ingredients of the common curd.

"Preparation.–It is made by steeping soy beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. This refuse is called 'Kiradzu' or 'Unohana.' The liquid remaining after taking away such refuse is put into a kettle and again boiled. Upon the surface of the water there forms a thin substance [yuba] like wet paper; this is skimmed off and dried. It is called 'Yuba' (lit., bean-curd skin), the taste of which is very agreeable. When it begins to bubble up brine is sprinkled over it in order to stop the bubbles, and is put into a special wooden box, then thrown into a cotton cloth bag and coagulated into long square shapes, which is the bean-curd.

"Analysis of bean curd: Nitrogen 0.76%. Fat 2.36%. Water 90.37%. Ashes [ash] 0.76%.

"Analysis of dried bean-curd [moisture free]: Nitrogen 8.09%. Fat 24.59%. Ashes [ash] 7.79%.

"Analysis of refuse of bean curd [kirazu or unohana]: Albumen 3.664%. Fat 0.837%. Glucose 0.266%. Starch 2.630%. Cellulose 2.896%. Other non-nitrogenous substances 6.156%. Water 85.660%."

Note 1. This is the earliest English-language document seen (July 2012) that seems to use the word "nitrogen" and the word "albumen" interchangeably.

"Use.–Bean curd is prepared for eating by boiling it or holding it over a fire; it is usually eaten with soy [sauce] and various condiments. It easily digests and is suitable food for adults, for infants, or for invalids, but it cannot be preserved for more than a day or two, owing to its perishable nature, whereas frozen bean curd does not easily spoil and can be preserved for a length of time, but it is indigestible and furnishes less nourishment than the unfrozen."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "Frozen bean-curd" or the term *Kôri-tôfu* or the term "dried bean-curd" or the term "frozen bean curd" to refer to dried-frozen tofu. Address: England.

291. International Health Exhibition, London. 1884. (211) Yuba (Skin of bean curd) (Document part). In: International Health Exhibition, London. 1884. *The Health Exhibition Literature.* Vol. XVII. London: William Clowes and Sons, Ltd. 749 p. See p. 561-62.

• ***Summary:*** Preparation.–Yuba is made during the process of making bean curd [tofu], and is a thin, yellow, transparent substance.

"Use.–It is used as a food adjunct with boiled rice, by most persons, by boiling or warming over a fire and salting it.

"Analysis: Albumen 51.597%. Yellow oil 15.620%. Cellulose 0.401%. Nitrogenous substances 6.651%. Ashes [ash] 2.821%. Water 22.850%. Total 100.000%

© Copyright Soyinfo Center 2013

"Analysis of dry substance [moisture free]: Carbon 2.821%. Nitrogen 22.850%. Hydrogen 42.024%. Oxygen 8.257%. Ashes 5.868%. Water 18.180%. Total 100.000%" Address: England.

292. *Gardeners' Chronicle* (*London*). 1884. Japanese food vegetable products. 22:781-82. Dec. 20. New Series.
• ***Summary:*** "The Japanese Commission at the late International Health Exhibition have produced an excellent catalog of their exhibits, which contains a great deal of valuable information on the production and uses of the specimens in question. In the first group, devoted to food products, a series of analyses is given of the principal grains and pulses, fungi, cucurbitaceous fruits, &c."

"*Kori-tôfu: Frozen Bean Curds.*–It is made by freezing common Bean curd, which is made of Daidzu (Glycine [Soja] hispida), and contains a large quantity of vegetable albumen. This is one of the most frequent kinds of fruit of the middle and lower classes of the people of Japan; it contains an abundance of nourishment, and hygeists [hygienists?] recommend its use. Bean curd is indigestible, but in passing through the process of freezing it undergoes a change. Owing to the Bean curd spoiling very readily, it is not suitable for carrying long distances. It is made by steeping Soy Beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. The liquid remaining after taking away such refuse, is put into a kettle and again boiled. Upon the surface of the water a thin substance, like wet paper, forms, this is skimmed off and dried and known as 'Yuba,' the taste of which is very agreeable. When it begins to bubble up brine is sprinkled over it in order to stop the bubbles and it is put into a special wooden box and afterwards thrown into a cotton-cloth bag and coagulated into long square shapes, which is the Bean curd.

"Bean curd is prepared for eating by boiling it, or holding it over a fire. It is usually eaten with soy [sauce] and various condiments; it is easily digestible and is suitable food for adults, infants, or invalids, but it cannot be preserved for more than a day or two owing to its perishable nature, whereas frozen Bean curd can be preserved for a length of time, but it is indigestible and furnishes less nourishment than the kind first named. The "yuba" or skin of the Bean curd is used as a food adjunct, with boiled Rice, by most persons, by boiling or warming over a fire and salting it."

Other Japanese foods described in detail in this early article are Ginkgo biloba (Ginnan, the fruit of the maidenhair tree), Lagenaria vulgaris (Kau-pio, a dried fruit), Agaricus campestris (Shii-take [Shiitake] mushrooms), Gelidium corneum (Agar-agar or Kanten), Frozen Kouniaku [Konnyaku], Katakuri Starch, Kuzu Starch (from the root of Pueraria Thunbergiana), Warabi Starch, Hijiki (Cyrtoseira sp.), Ogo (Gigartina sp.), Wakame (Alaria pinnatifida), Tangre [Tangle] or Kombu (Laminaria japonica. "It is used as a food by boiling with soy, sugar, mirin, &c., or served in soup"), Laver, dried–Asakusa-nori (Porphyra vulgaris) [Note that items from Hijiki to Laver are sea vegetables], Umeboshi: Salted and dried plums.

Continued in the issue of 10 Jan. 1885.

Note 1. This is the earliest English-language document seen (April 2013) that uses the terms "frozen," or "Kori-tôfu," or "Bean Curds," or "Frozen Bean Curds" to refer to frozen tofu.

Note 2. This is the earliest document seen (Jan. 2010) concerning the use of soya in infant foods or infant feeding.

Note 3. This is the earliest English-language document seen (Dec. 2006) that uses the word "Umeboshi" or the term "Salted and dried plums" to refer to umeboshi salt plums.

Note 4. As of 1975, the scientific name of the shiitake mushroom was *Lentinus edodes.* It had been cultivated and used as human food for centuries in China and Japan. It is not used much in most developing countries, nor in the West where the common champignon *Agaricus bisporus* (*A. brunnescens*) is the mushroom of commerce. One important advantage of shiitake is that it can be cultivated on wood.

Note 5. This is the earliest English-language document seen (Oct. 2008) that uses the term "vegetable albumen" to refer to soy protein.

293. Cohn, Ferdinand. 1884. Ueber Schimmelpilze als Gaehrungserreger [On molds as instigators of fermentation]. *Jahres-Bericht der Schlesischen Gesellschaft fuer Vaterlaendische Cultur* (*Breslau/Wroclaw*) 61:226-30. For the year 1883. [Ger]
• ***Summary:*** In this lecture, presented on 31 May 1883, Prof. Cohn named the species *Aspergillus oryzae.* It had previously been named *Eurotium oryzae* Ahlburg (now a synonym).

Note: Thom and Raper (1945, p. 261) note that "The name *E. oryzae* with an incomplete description for the saké organism was published by Korschelt, in *Dingler's Polytechnisches Journal* 230:330. 1878, as taken from a letter from 'Herr Ahlburg.'"

On page 227 Cohn notes: "In the winter of 1883 I obtained some grains of tane kosi [sic, *tané koji, tane koji*] (the so-called mother-yeast of the Japanese rice wine, saké) from Shinkizi [Shinkiji] Nagai, a native of Tokyo who was staying in Breslau as a student of agriculture. I prevailed upon this intelligent and industrious young man, under my supervision, to make sake using the tané koji and methods he had learned in Japan. After a number of unsuccessful trials, we met with excellent success. The Japanese methods are, although used for hundreds of years, so rational, that they can hardly be improved based on a scientific understanding of the process. Tane Kosi are grains of rice which are overgrown with the mycelium and spore bodies (*Fruchttraegern*) of *Aspergillus oryzae,* the splendid rice mold with its greenish-yellow conidia."

© Copyright Soyinfo Center 2013

"Another fermentation product made by *Aspergillus oryzae* is the well-known soy sauce (*Sojasauce*). This was also prepared at our institute by Mr. Shinkizi Nagai using the Japanese method. This soy sauce was prepared from soybeans (*Sojabohne, Dolichos Soja*) that have recently been cultivated here. Soybeans are different from our typical beans in that they have a very low content of starch and are very rich in fat and 'Cheese-stuff' (literally *Kaesestoff*, Legumin, vegetable casein) [i.e., protein]. Because of this fact, the soybean is used to make cheese [tofu] in Japan."

A detailed description of the process for making soy sauce is then given.

Note 1. This is the earliest German-language document seen (April 2012) that uses the term *Sojasauce* to refer to soy sauce.

Note 2. Breslau is the German name for Wroclaw, a city in southwest Poland. Address: Prof., Dr.

294. Gordon, Charles Alexander. comp. 1884. An epitome of the reports of the medical officers to the Chinese Imperial Maritime Customs Service, from 1871 to 1882; with chapters on the history of medicine in China, materia medica, epidemics, famine, ethnology, and chronology in relation to medicine and public health. London: Baillière, Tindall, and Cox. xvi + 435 p.

• ***Summary:*** This book is about public health, epidemics, and medicine in China. Contents: Part I: Local conditions in relation to public health. The names of 19 Chinese treaty ports are given: Peking, Tiensin, Newchwang, Chefoo, Chinkiang, etc.

Part II: Historical notices of medicine in China, and of certain epidemics, etc. Diseases (the names of 83 are given), various.

Part III: Therapeutics and drugs (the names of 24 are given).

Part IV: Some diseases of animals. Appendix (44 items, including: 35. Note on the great famine of 1877-78. 36. Note on the ethnology of China. 37. Note on Chinese chronology in relation to medicine and public health. 38. Table of Chinese weights. 39. Table of Chinese measures. 40. Table of Chinese money. 41. Table of Hong Kong money. 42. Table of Siamese money [Siam, today's Thailand]. 43. Note on Siamese weights. 44. Note on Siamese measures).

Soy is mentioned on pages 232, 244, 253. The section on "Iodine" states (p. 232). Two examples of prescriptions of sea-weed are given in the Reports before us. The second dates from the 14th century. "Hai-tsao [type of seaweed], 1 tael; hwang-lien (justicia), 2 taels. Grind to powder and eat it regularly, avoiding fatty things, and things difficult of digestion. As a diuretic the following is the prescription: Kwen-pu [type of seaweed], 1 catty. To be digested in a kettle of rice-water, and then cut into slices; again digested to a pulp, to which salt, vinegar, soy, orange-peel, etc., are added."

The contents of the *Bencao Gangmu* [The great pharmacopoeia], by Li Shizhen (1596) consists of 52 chapters, and is divided into several sections. Under Vegetable [plants], the five divisions are herbs, grains, culinary herbs, fruits, and trees. Under "Grains," the 4th and last subdivision is "Alimentary preparations of a vegetable nature, and used in medicine (as boiled rice, yeast, soy, vinegar, wine, etc.)."

The section titled "Materia medica" is divided into three parts: The vegetable, animal, and mineral kingdoms. Under *Dolichos lablab* we read (p. 253): "Seeds: taken in great quantity, being considered protective against fever. (Sp. ?)– The beans fermented and salted [fermented black soybeans], from Hupeh, are used as a sudorific [they induce sweating]. The small black kind are purgative. Soy is prepared from beans of Dolichos or Soya,..."

In the section on "Peking" we learn (p. 2) that crops raised in North China "include wheat, barley, maize, three kinds of millet, buckwheat, yams, sweet potatoes, beans, various kinds of cabbages, cucumbers, carrots, turnips, radishes, egg plants, onions, celery, parsley, pepper, and spinach. Tobacco and cotton are cultivated." Besides these there are "ground-nuts (*Arachis*)... and salted beans [fermented black soybeans] are eaten extensively by natives.

The section titled "Lu-shui" [nigari, p. 233] begins: "In the Report on Chefoo for the year 1873, the medical officer alludes to a substance used by the Chinese for preparing bean-curd [tofu], and styled 'Native hydrochloric acid.' It is also known by the Chinese under the name of *lu-shui."*

Sir Charles Alexander Gordon lived 1821-1899. Address: Surgeon-General, M.D., C.B., Honorary Physician to Her Majesty the Queen [Victoria], author of many books.

295. Podoba, Ivan Grigor'evich. 1884. Soya i lallemantsiya: Novye ves'ma poleznye rasteniya, ikh svoistva i kul'tura [Soya and *Lallemantia iberica* (dragon's head): New useful plants, their composition and cultivation]. St. Petersburg, Russia: Printing House of I.P. Voschinskii. 24 p. 20 cm. [8 ref. Rus]

• ***Summary:*** Discusses: The soybean plant is attracting interest in agriculture, as being a prominent plant in the future, competing with the domestic potatoes and corn. Introduction of soybeans to Europe from Asia (Austria, Germany, France). The yellow soybean found best suited for acclimatization. Botanical indications of a useful / healthy soybean plant. Professor Garts divided soybeans into two varieties according to their shape and color: Soja platycarpa and Soja tumida. Cultivation of soybeans. Uses of soybeans: Dairy cattle–Podoba says it is already known that soybeans can be used to feed dairy cattle and recommends it to be used likewise in the Southern agriculture to enhance the quality and quantity of the milk. Table comparing the chemical composition of soybeans to that of other plants. Preparation of soybeans for food: soybean flour, "bean" cheese [tofu],

© Copyright Soyinfo Center 2013

uses in the army, "bean" sausages, substitutes for coffee and chocolate. Cultivation of soybean in Tavricheskoi region (Crimean region of today's Ukraine [2002]).

A full-page table (p. 14) gives the chemical/nutritional composition of soybean seeds, straw, and pods, and compares that of yellow soybeans with the composition of a similar part of other legumes. Values are given for the following: Water, protein, fat, nitrogen-free extract, fiber, and ash (minerals). Under seeds, for example, six types of yellow soybeans are used individually for comparison: (1) Pallida. (2) Those grown in Vienna, Austria, in year 1. (3) Those grown by Podoba in Ukraine in year 3. (4) Castanea [brown]. (5) Atrosperma. (6) Melanosperma. These are compared with nine other legumes. Average figures are given, but no individual investigations.

Introduction of soybeans into various regions of Russia (p. 15): 1. Khersonskaia and Tavricheskaia (Taurida) regions. In 1877, fifty seeds were acquired from Haberlandt. Podoba released his soybean experiments in his yearly report, and later published them in the sixth volume of *Zemledel'cheskaya Gazeta.* Note: Khersonskaia (Kherson) is a region in southern Ukraine extending north of Crimea from the Sea of Azov to the Black Sea.

2. Grodnenskaia region. Experiments not known and not published. 3. Poltavskaia (Poltava) region [part of Ukraine as of 2005]. Positive results of acclimatization by L.A. Chernoglazov. 4. Penza region. A frost in May did not damage soybeans, however many other crops died. 5. Bessarab region [part of Moldova as of 2005]. K. Morkarov successfully produced 5 lb of soybeans. 6. Samara region. Unsuccessful results due to late harvest which was damaged by frost and hail.

A half-page table (p. 16) gives information about people, from different regions in today's (2002) Ukraine, who presented each year from 1879 to 1883 at the Annual Exhibition of the Independent Economic Society (*Vol'no Economicheskim Obschestvom*) held on Oct. 31 each year. In 1879 I.G. Podoba presented from Tavricheskaia. In 1881 Grigorii Ivanov Yaschenko and L.A. Chernoglazov presented from Poltavskaia, and N. Zhelekhovskii presented from Kievskaia. In 1882 Gr. Iv. Yaschenko presented from Poltavskaia and L.V. Illyashevich from Khar'kovskaia. In 1883 Gr. Iv. Yaschenko and L.A. Chernoglazov presented from Poltavskaia.

A half-page table (p. 17) gives the prices (in rubles) for which soybeans were sold in 1883. 2.50 per pood (36 lb) by Gr. Iv. Yaschenko in the Khar'kovskaia region (today's Ukraine). 2.50 per pood by the agricultural store of K.V. Laskari in Kishinev (Chisinau), Bessarabia (today's Moldova). 3.00 per pood by L.V. Illyashevich in the Khar'kovskaia region (today's Ukraine). 8.00 per pood by seed-seller Grachev in St. Petersburg (today's Russia). 0.60 per lb by seed-seller Gol'dring in Warsaw (today's Poland).

History of *Lallemantia iberica* (dragon's head). It is a plant native to Georgia, introduced to Europe from Persia in 1873 at the World Exposition in Vienna. Description and cultivation. History of the spread of Lallemantia throughout Russia.

Note 1. This is the earliest document seen (July 2002) concerning the feeding of soybeans to dairy cattle.

Note 2. *Lallemantia iberica* (dragon's head) is an annual plant with a short vegetative cycle adapted to dry climates, cultivated for its seeds, from which a drying oil is extracted. The oilcake is used as a feed for horses, ruminants, and rabbits. A cow can be fed up to 2 kg/day. Address: Candidate/Applicant of Natural Sciences, St. Petersburg, Russia.

296. *Times of India* (*The*) (*Bombay*). 1885. The maxims of a Chinese gourmand. Jan. 30. p. 6.
• ***Summary:*** That gourmand was Yuan Tsu-tsai, who lived in the last century. He lived to age 80 and "left behind him a cookery book, in which he discussed the subject of food and drink from a scientific and artistic point of view. Parts of this volume were recently translated by the North China Asiatic Society in Shanghai, and are thus rendered accessible to English readers. His maxims are more polished and more ambitious than those of the immortal Mrs. Glasse, but they are equally sensible and practical."

"His first maxim is, 'Don't eat with your ears'–in other words, do not have whatever you have heard is a dainty. 'Remember,' he says, 'that well-cooked bean-curd is much nicer than badly-cooked birds'-nest;..."

• ***Summary:*** Begins with a brief biography of the author by a friend named Sugiura. The author was an organic chemist employed at the Japanese patent office, and this article is an analysis of the chemical composition of tofu, published in part for reasons of public health and hygiene. Address: Japan.

301. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: Beans. London: Bernard Quaritch. See vol. 1, p. 303-04. 26 cm. [1 ref]
• ***Summary:*** Page 303: "Bean-curd, Tau-fu of the Chinese, is largely used as a condiment in China. It is an emulsive preparation of a species of Dolichos, D. soja. The bean is boiled and skinned, and ground with water to a pulp, which is strained, and water added. In this state it resembles bonny clabber or curdled milk, and is called tau-fu-hwa, or bean curd jam; the water is sometimes all strained off, and it is then sold in slices, or small seeds called hwang-tze are added. The Rev. Mr. Gray [1878] says the bean flour is sifted through coarse calico, and then through a finer sort, and is then boiled for an hour over a slow fire, until it thickens to a consistence suitable as food; it very much resembles blanc-mange [blancmange].

Page 304: "Bean-sprout, the Tan-ya [sic, Tau-ya] of the Chinese, are the germinating sprouts of the Dolichos soja bean, artificially raised by the Chinese in large quantities for wood [sic, food] in winter.–*Smith, Chin. Mat. Med.; Gray,* ii. 136."

Note 1. This is the earliest English-language document seen (Oct. 2001) that uses the term "bean flour" to refer to soybean flour.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "Bean-sprout" or "Tan-ya" to refer to soy sprouts, then goes on to explain what these terms mean. Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

302. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: Leguminosae. London: Bernard Quaritch. See vol. 2, p. 697-98. 26 cm.
• ***Summary:*** "Leguminosae is a name of the Fabaceae or bean tribe, *q.v.* Leguminous and cruciferous plants occupy the largest part of the Chinese kitchen garden; many sorts of peas and beans are cultivated, and the pods and seeds of two species of dolichos are eaten, and the beans of another species made into soy by boiling and powdering the kernels and then fermenting them with yeast, and mixing other ingredients, according to the taste of the maker or purchaser. Peas and beans form important objects of culture, and the condiment called soy (a word derived from the Japanese Soya) is prepared chiefly from a species of dolichos. One of the commonest modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum or turmeric. The common Chinese eat few meals without the addition of one form or other of the bean-curd or bean-jelly. The soy was at one time largely used as a condiment in the several countries of Europe, but has been displaced for others. See Fabaceae. ['The bean tribe, leguminous plants.' Soy is not mentioned.]" Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

303. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: Soy [sauce]. Bentham. London: Bernard Quaritch. See vol. 3, p. 715. 26 cm.
• ***Summary:*** This entry is shorter than and different, in parts, from its counterpart in the 1873 edition. New text: "Chinese use Soja hispida pulse when ripe for the manufacture of an oil, and give the remnant of the grain, together with stalks and leaves of the plant, as a food for cattle. Its cultivation has become general in Syria [sic, Styria], Dalmatia [in Croatia], and Hungary. In the two former countries, the grain, after being allowed to ripen, is threshed out and roasted, and then employed for making coffee. In China, the grains are soaked till they swell and become soft, and then cooked like the small sort of beans. In other places, the seeds are set in a very damp, watery soil, and kept in darkness until they sprout up into a long white stalk, 4 or 5 inches high, which is then cut and served up after the manner of a salad. A sort of cheese, consumed in quantities by the poorer people both in China and Japan, is made from Soja hispida.

Note: This appears to be the earliest document seen (June 2007) concerning soybeans in Syria, or the cultivation of soybeans in Syria. However, Balfour got his information

© Copyright Soyinfo Center 2013

about Syria, Dalmatia, and Hungary from Friedrich Haberlandt's classic book *The Soybean* (*Die Sojabohne*), the only early work in which Dalmatia and Hungary are both discussed. The third place, however, is Styria (Steiermark in German), not Syria! The next earliest reliable document concerning cultivation of soybeans in Syria was published in 1975, and describes soybean trials in Syria in April 1974. Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

304. Mene, Édouard. 1885. Des productions végétales du Japon [The vegetable products of Japan]. Paris: Au Siège de la Société Nationale d'Acclimatation. 592 p. Index. 24 cm. [34 soy ref. Fre]

• ***Summary:*** The title page states in small letters: *Extrait du Bulletin de la Société Nationale d'Acclimatation*, indicating that much of the material in this book is based on articles previously published in this French-language Bulletin. However many other early books on Japanese agriculture have also been consulted and are carefully cited.

In the Introduction, the author explains that he was appointed by the Society for Acclimatization to prepare this report on the vegetable products of Japan which had been exhibited at the Universal Exposition of Paris in 1878–in two parts. Those displayed by the Japanese firm Trocadero, and those displayed in the galleries of the palace at Champ-de-Mars. The author and many others were deeply impressed by this exhibition.

Grains (class 69, p. 31): Wheat or rice are mixed with beans or peas and fermented to make shoyu and miso. Shoyu is one of the most widely used condiments in Japanese cuisine. The method of production is described briefly. Among the condiments displayed in class 74 were a number of flasks of shoyu from Tokyo.

Legumes (p. 40-47): Discusses soybeans, tofu, azuki beans (*Phaseolus radiatus* var. *subtrilobata*, p. 42-44; incl. yayenari, red, white, black, and yellowish azuki, Dainagon azuki, azuki flour, an, yokan), shoyu, soybeans (*Pois oléagineux, Soja hispida*, p. 45-46; incl. Kuro-mame {Black soybeans}, various colors and shapes of dry soybeans {green, yellowish, large yellowish, greenish black, brownish red, white, large red}).

There is also a special, long section on soybeans (*Soja hispida. O mame: Daizu;* p. 270-83) and soyfoods. In the Japanese exposition, the display of useful products (*tableau des productions utiles*) designates: No. 24. *Kuro-mame.* Black-seeded soybeans, the size of an average sized haricot bean. No. 25. *Shiro-mame.* White-seeded soybeans, spotted / flecked / speckled / mottled (*tachetées*) with gray. No. 26. *Ao-mame.* Greenish-seeded soybeans. No. 34. *Gankui-mame.* Black-seeded soybeans, flecked with white.

The soybean (*Le Soja*) is cultivated in Japan, India, Ceylon, the Malacca peninsula [today's Malaysia], the Philippine islands, Borneo, Java, the kingdom of Siam, Cochin China, Tongkin (*Tong-King*), and throughout China, primarily in Mongolia and in the provinces of Henan / Honan, Liaoning (*Shenking*), Shandong / Shantung, and Shanxi / Shansi (*Chan-si*).

The Chinese exposition (class 73) contained samples of all the varieties of soya cultivated in all the provinces of the empire. Nos. 2991 to 3000. Green, white, black, yellow, striped or variegated, and reddish soybeans, provided by the Chinese customs office at Newchwang. Nos. 3014-16. Yellow, black, and green soybeans from the customs office at Tientsin. Nos. 3058-61. Yellow, green, and black soybeans from customs at Yantai / Chefoo. No. 3091. Yellow soybean from customs at Chinkiang. Nos. 3013-19. White, red, black, and yellow soybeans from customs at Shanghai. Nos. 3125-28. White, black, red, and green soybeans from customs at Wenzhou / Wenchow. Nos. 3152-56. White, green, and black soybeans from customs at Kao-hsiung (*Takow*).

The soybean is one of the plants most widely used in Japan and China for both food and industrial purposes. As indicated previously, shoyu, miso, and tofu are indispensable to the Japanese diet. Samples of these products were displayed in the Japanese exhibit in class 74 (condiments and stimulants); they came from Tokyo and from the province of Hizen, mainly from the town of Nagasaki. In the Chinese exhibit, also in class 74, were samples of (*soye*) or (*soya*) which are similar to Japanese shoyu but are called *Chiang-yu* (*Tsiang-yeou*) in China. They were provided by the customs offices at Yantai / Chefoo, Ning-po, Wenzhou / Wenchow, and Canton. For aroma, the Chinese often add star anise, green anise, and orange peel. Chinese soy sauce is made from yellow soybeans (*Houang-téou*).

Note: This is the earliest French-language document seen (April 2012) that uses the term *Chiang-yu* to refer to soy sauce.

Note: This is the earliest document seen (Jan. 2006) describing a soy sauce made with star anise, green anise, orange peel or other spices or herbs outside of Indonesia.

A detailed description of the method for making Japanese shoyu is given, excerpted from the book *Le Japon à l'Exposition universelle de 1878* [Japan at the Universal Exposition of 1878] (1878, vol. II, p. 124). Additional excerpts concerning shoyu, miso, and tofu are taken from: Simon 1862, Kaempfer 1712, *Bulletin of the Society for Acclimatization* 1880 (p. 248), and Champion 1866.

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), who are both involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese [probably tofu] and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal; Pterocarpus santalinus*), mace, and cinnamon (p. 276).

One of the most important soy products is the oil,

© Copyright Soyinfo Center 2013

which is obtained from the seeds–especially the large yellow soybeans that the Chinese call *Houang-téou.* The Japanese do not make soy oil (*huile de Soja*) but in China manufacture of this product gives rise to considerable commerce. Fremy (1855) found that soybean seeds contain 18% oil. The oil is a drying oil, yellow in color and with a special odor and a taste of dried legumes, similar to that of peas. It is used in cooking and illumination. In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of *Tcheou-chan* [*Zhoushan?*] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo. There follows a detailed description (p. 276-77) of how soy oil is obtained from soybeans.

Another common use is as fermented black soybeans (*Chi*) which (according to Stanislas Julien) contain soybeans mixed with ginger and salt. Kiu-tsee is a fermented soy product made in Canton; it contains red rice, soybeans, and the leaves of *Glycosmis citrifolia.* The Chinese also make a pasta and a sort of vermicelli from soybean seeds named *Hou-mi-téou.*

The stems and leaves make excellent forage. Black soybean seeds are often mixed with chopped soybean hay and fed to horses and mules in northern China and Manchuria.

In Japanese and Chinese medicine, black soybean seeds, ground and made into a decoction, are used to combat asthma attacks.

There follows a long history (p. 277-83) of the introduction of the soybean to Europe (starting at the Jardin des Plantes in Paris, in 1740 or 1779) and its acclimatization, based largely on articles from the *Bulletin of the Society for Acclimatization.* It includes a summary of the work of Prof. Haberlandt in central Europe.

Also discusses: Japanese plum trees (*Prunus mume*) and umeboshi salt plums (p. 52-54, 466-67). Sesame seeds and sesame oil (p. 54-55). Amaranths (p. 63-64). Job's tears (*Coix lacryma;* p. 214-15). Kudzu, kuzu powder, and kuzu cloth (*Pueraria Thunbergiana;* p. 283-85). Peanuts and peanut oil (*Arachis hypogœa, Tojin-mame;* p. 286-87). Sesame seeds and sesame oil (*Sesamum indicum, Goma;* p. 518-20). Hemp and hemp oil (*Cannabis sativa, Asa;* p. 558-59). Address: Médecin de la Maison de Santé de Saint-John de Dieu [Paris, France].

305. Welch, Adonijah Strong. 1885. Report on the organization and management of seven agricultural schools in Germany, Belgium, and England. Washington, DC: Government Printing Office. 107 p. See p. 73-77. Made to Hon. George B. Loring, U.S. Commissioner of Agriculture.
• ***Summary:*** The last section is titled "The Royal Agricultural College at Cirencester, England," where the author visited on 8 Feb. 1884. The subsection titled "Work of the laboratory" (p. 73) describes seven types of current original research. including: "7. On the soy bean (Soja hispida), its chemical composition and value as a food.

"The following is a detailed account of Prof. Edward Kinch's description and analyses of the soy bean of China. I append his entire report of the results of this interesting investigation, because it not only shows the character of the work done in his laboratory, but indicates that this bean may be profitably grown in some parts of the Western States. Indeed, the same bean was grown on the experimental grounds of the Iowa Agricultural College last year, and showed a very large yield."

Prof. Kinch's report, titled "The Soy bean," states: "This bean, sometimes known as the Japan pea and China bean, is the seed of the *Soja hispida,* Miquel (*Glycine hispida,* Moench; *Dolichos Soja,* Linné; *Glycine Soja,* Jaquin), a plant of the natural order Leguminosae,..." suborder Papilionaceae, and tribe Phaseolæ. Its natural habitat appears to be China and Japan; it also grows in Mongolia and in India, in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries. This bean is worth more than a passing notice, as it is the vegetable which approaches most nearly in its proximate chemical composition to animal food. This will be seen later on. There are a great number of varieties of the soy bean known, which differ to some extent in the shape, size, and especially in the color of the seed, and in a few minor particulars, but which seem to vary comparatively little in chemical composition. Dr. C.O. Harz has classified the principal varieties as follows:

"Group I.–*S. hispida platycarpa. 1. olivaeea. 2. punctata. 3. melanosperma* (*a. vulgans. b. nigra. c. renisperma. d. rubro-cincta*). *4. platysperma. 5. parvula.*

"Group II.–*S. hispida tumida. 6. pallida* (*Roxburgh*). *7. castanea. 8. atrosperma.*

"These names sufficiently indicate the nature of the variety as far as the seed is concerned. The soy bean is extensively cultivated in the north of China, whence it is exported, to the southern provinces; it is here pressed for the sake of its oil and the residual cake largely used as a food for man and beast, and also as a manure.

"In Japan it is known by names signifying the bean, and from it are made not only soy [sauce] but a paste known as *miso,* which is in constant request at nearly every meal, *tofu,* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. An analysis of it is given below.

"These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, in nitrogenous matter, fat, and also in mineral constituents.

© Copyright Soyinfo Center 2013

"The Buddhist priests, who are strictly forbidden to use animal food, consume considerable quantities of these beans, principally in the form of *miso.* The soy bean first attracted attention in Europe in 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the Catalogue of the Exhibits of the Indian Museum. Since then numerous experiments have been made on the European Continent on its growth, and also feeding experiments with the bean and its straw on different kinds of domestic animals have been prosecuted. Such experiments have been carried on by Wolling and Wein, at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieski, and others, at various stations in Germany, Austria, and Hungary, and experiments have also been made in France and in Italy.

"The proximate chemical composition of some of the different varieties, grown in different places, is now given and compared with some other foods of vegetable and animal origin."

Table 1, titled "Percentage composition of the soy bean," gives the percentage of six constituents (water, nitrogenous matter [protein], fat, carbohydrates, fiber, and ash) in seven different types of soy beans: Pale yellow (from Japan, China, Germany &c., India), brown, round black, and long black.

"It has been shown by Levallois (*Comptes-Rendus*) that the soybean contains a special variety of sugar, many of its properties resembling mellitose; this constitutes about 10 per cent, of the soluble carbohydrates. Of the nitrogenous matters nearly all is in the form of albumenoids; a small quantity, about 1 per cent., appears as a peptone-like body, and about one-tenth to two-tenths per cent. is non-albuminoid."

Table 2, titled "Percentage composition," compares the percentage content of the six constituents listed above for six foodstuffs: Peas, [common] beans, lupins, lentils. lean beef, and fat mutton.

"These analyses show the greater richness of the soy beans in nitrogenous matter and in fat than the common bean and pea, and that, when the water is equalized, it more nearly approaches meat in proximate composition. The only leguminous seed of common occurrence, which contains more oil than this bean, is the earth-nut or ground-nut, *Arachis hypogæa,* which is now so largely cultivated abroad for its oil and its cake. In order to compare the soy bean straw with hay and with other straws of like nature, the following average analyses are given:

Table 3 (untitled) compares the percentage content of the six constituents listed above for six feeds: Meadow hay, bean straw, pea straw, lentil straw, soy bean straw, soy bean hulls.

"A special variety of *Soja hispida* is cultivated in some parts of Japan as a fodder crop and cut just as the pods are fully formed. The hay made from this is much relished by horses, cattle, and sheep. A sample of a crop grown on the Imperial College of Agriculture Farm, Komaba, Tokiyo, gave on analysis: Water 15.0%, nitrogenous matter 19.8%, fiber 35.9%, ash 6.8%, carbohydrates and fat 22.5%. Total 100.0%.

"It will be seen that this hay exceeds even lentil straw in the amount of nitrogenous matter it contains." Continued. Address: LL.D., Ames, Iowa.

306. Welch, Adonijah Strong. 1885. Report on the organization and management of seven agricultural schools in Germany, Belgium, and England (Continued–Document part II). Washington, DC: Government Printing Office. 107 p. See p. 73-77. Made to Hon. George B. Loring, U.S. Commissioner of Agriculture.

• ***Summary:*** Continued from page 76: "The following are means of various analyses made in Japan of food products obtained from the soy bean, and which are largely consumed there:"

Table 4, titled "Percentage composition," shows the percentage content of the six constituents listed above in four Japanese food products: White miso, red miso, bean cheese [tofu], and frozen bean cheese [dried frozen tofu].

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "frozen bean cheese" to refer to dried-frozen tofu.

"The ash of miso consists mainly of common salt, which is added in the process of manufacture.

"The ash of the soy bean was found, as a mean of several samples, to have the following percentage composition. The composition of that of the straw is also given: Table 5 (untitled) lists the percentage composition of each of the following constituents in soy bean ash and soy bean straw ash: Potash, soda, lime, magnesia, ferric oxide, chlorine, phosphoric pentoxide, sulphur trioxide, and silica.

"The crop takes from the soil a large amount of valuable mineral constituents, phosphoric acid and potash, as well as a large amount of nitrogen.

"The results of the German and Austrian experiments show that where temperature is not too low, the result of the harvest as compared with that of ordinary beans or peas is exceedingly satisfactory.

"The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, i. e., *pallida, castanea, atrosperma,* and *melanosperma,* especially the first three named. They require a vegetation time of about one hundred and fifty days, during which the average temperature must be about 58º F. (14.3 C.), and number of heat units (the average temperature multiplied by the number of days) [*Wärmesummen*] about 2,100 C. They may be sown the beginning of May and harvested the end of September or even the beginning of October.

"The seeds should not be sown deeply, not more than 1 to 1½ inches deep, and about eighteen plants to the square yard may be left after weeding and thinning out. The plants

© Copyright Soyinfo Center 2013

grow to a small bush about 2½ feet high, and produce pods with two to five seeds. The most suitable soil is a peaty soil, or one containing a good deal of organic matter, and the next most favorable is a calcareous soil. Nitrate of soda has been found to be a good manure for the crop in Germany and also potash salts, especially potassium sulphate. Ammonium sulphate did not give as good a return as the same amount of nitrogen in the form of nitrate; on soils poor in organic matter it would probably be better to supply the nitrogen in some organic combination, such as rape-cake, shoddy, and the like. Phosphoric acid, especially as a dicalcic phosphate was a help on some soils.

"Field experiments made by myself on this crop in Japan showed that wood ashes had a good effect, and that anything like an excess of nitrogen was very harmful to the yield of grain. In that country the plants are often sown on the dividing ridges between the plots of paddy and without any manure. The yield of seed and straw in the German experiments compares very favorably with that of peas and beans grown under the same conditions; from 2,000 to 3,000 pounds of seed and from 5,000 to 10,000 pounds of straw per acre have been obtained.

"Feeding experiments with the produce have been made with pigs, sheep, oxen, and milch cows, and with very good results. The bean is a most excellent addition to other foods, especially such as are deficient in nitrogenous matter and fat. The digestion co-effients of the nitrogenous matters of the fat and of the non-nitrogenous matter of the soy bean, and also in the cake left after its pressure for oil, closely approximate to 90 in each case. As a mean of two direct experiments with soy bean straw, the digestion coefficients were found to be as follows: Nitrogenous matter 60.8, fat 6.2, fiber 33.6, and non-nitrogenous extractive matters 69.0. The hulls are rather less digestible.

"The albuminoid ratio in the bean is about 1 to 2.3, in the straw 1 to 8.1, in the hulls about 1 to 20, and in the cake 1 to 1.3. An analysis of the cake shows: Water 13.4%, nitrogenous matter 40.3%, fiber 5.5%, carbohydrates 28.1%, fat 7.5%, ash 5.2%. Total: 100.0%.

"In good condition it would be a valuable addition to our feeding cakes, but it is too highly valued in the East to enable it to be imported to any extent at a profit.

"The soy bean plant has considerable power of resisting unfavorable climatic influences, as cold, drought, and wet; and appears to be particularly free from insect attacks, and, indeed, from all parasites; this last, if it continues, is by no means a slight advantage. The soy beans are eagerly bought by the natives of Southern Italy, an almost vegetarian race; that they are easily digested I can speak from experience, having frequently used them on my table, cooked after the manner of haricots. Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *Soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the laboring classes is so wastefully cooked. One use it has already found, not altogether to be commended, viz., after roasting, as an adulterant of and substitute for coffee.

"We have procured seeds of several varieties direct from Japan, and of one variety from Germany, and these are now being cultivated in the botanic garden. They were sown rather late, and the month of June has not been favorable to their growth, but some of the varieties promise fairly." Address: LL.D., Ames, Iowa.

307. Scott, J. George (Shway Yoe). 1886. The Chinese brave. *Asiatic Quarterly Review* (*London*) 1(1):222-245. See p. 227. Jan.

• ***Summary:*** The Chinese are fighting the French. From Aug. to Nov. of 1884 "there was a seemingly endless stream of Chinese marching on the north-east frontier of Tongking" (p. 222).

Page 227: "The men lived in tents, or more often in rough and ready thatched huts built of branches of trees,... From ten to thirty men lived in each hut, and each section had its cooking pots, meals, and other arrangements in common, the fireplace being the primitive three bricks... The braves lived far from badly, according to their modest ideas of good living... Vegetable gardens sprang up in the neighbourhood. Numbers of peddlers with refreshment stalls followed the troops and ministered to the wants of the epicure by the supply of the bean-curd [tofu], the salt fish, and brews of different kinds of vegetables, from nettles to bamboo shoots, in which the peasant delights. The officers had their ragouts of chickens and ducks; their jars of soy [sauce], and peanut, and other oils; their bottles of wine, mostly in old champagne quarts, with Chinese labels of a magniloquence calculated to convert a teetotaller. On the whole, the Chinese armies were far from badly off."

308. Hubbard, Richard B. 1886. Japanese bean curd. *Monthly Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) 19(68):646-51. Sept. [1 ref. Eng]

• ***Summary:*** "I transmit herewith a translation of an article on the manufacture of tôfu, or Japanese bean curd, published by the Educational Museum of Tokio. The use of this bean (the *Soja hispida* or *Glycine hispida*) in the manufacture of so nutritious an article of diet, the nearest approach as it is stated, in its chemical constituents to animal food among known vegetable foods, seems to me to be one to which our attention should be called, with a view to introduce it to our tables. Richard B. Hubbard, United States Legation, Tokio, June 24, 1886."

Contents: Early history. Method of preparation (with

5 excellent illustrations {line drawings}, described below). Preparing tofu for the table. Uses of tôfu. The soy bean (excerpts from Prof. Kinch's article upon the Agricultural Chemistry of Japan, *Transactions of the Asiatic Society of Japan.* 1880. Vol. 8, p. 398).

The translation was made by Dr. W.N. Whitney, interpreter of the legation. "Early history: Tôfu or bean curd was first used in China, according to the statement of Chinese authorities, in the reign of Wai-rau-wo of the Han dynasty (B.C. 206 to A.D. 25). In Japan, the record of its uses only dates back to the third decade of the fourteenth century, mention being made of it in the works called Tei-kiu-wo-rai and Isei-tei-kui-wo-rai, edited by Kitabatake Geni, and previous to which time we do not find any reference whatever to tôfu of the bean from which it is made, the *Soja hispida."*

"Method of preparation: The yellowish-white beans are soaked in water for twenty-four hours, or a night and a day, when they are poured into a stone mill (Illustration, Fig. 1) and ground. As the quality of the product of manufacture is largely dependent upon the purity of the water used, it is necessary that the purest water obtainable should be employed. The beans, having been first pounded, are mixed with an equal quantity of water in the oblong tub, Fig. 1 (a), and gradually poured into the orifice in the upper stone of the mill with a copper dipper. This mill resting within a bottomless tub (b) some eight or ten inches in height, upon the narrow wooden stand, is rotated by means of a bamboo rod or handle (d), which has one end inserted into a socket in the upper millstone. The thin pulp [slurry] of ground beans and water as it flows between the stones of the mill is directed into a tub beneath (e), and kept from running along the horizontal bars of the table by the perpendicular sides of the bottomless tub which surrounds the mill.

"The pulp which is collected in the under tub (e) is put into an iron pot and heated over a wood fire until it begins to boil, which stage is indicated by the appearance of bubbles or foam upon the surface. One or two gills of cold water [a gill is ½ cup or ¼ pint] are then poured around the edge of the pot inside, and as soon as the foam has subsided the pot is covered and a second boiling takes place; cold water is then again poured in and the contents allowed to stand. In stirring and mixing the pulp in the pot, a kind of wisp [whisk], made of split bamboo and coated with thickened oil dregs, is employed. The pulp is then dipped out of the pot with a ladle of bamboo, into a grass-cloth bag (Fig. 2, a), to prevent it running over the sides of which, a kind of flat trough (b) is used. Several dipperfuls of water are then poured into the bag, the mouth of which is tied up and the whole laid upon a mat of sticks (c), and over a linen cloth stretched over the top of a shallow tube [sic, tub], as shown in Fig. 2.

"Pressure is then brought to bear upon the bag by means of the round wooden stick used as a simple lever, as shown in Fig. 3. The liquor [soymilk] which oozes out, filters through the cloth laid over the top of the shallow tub, into the vessel beneath. Should the quantity of pulp ground up be large, several bags will be necessary, or one bag may be refilled several times.

"The contents of the tub, being the liquor expressed from the grass-cloth bag containing pulp, is then stirred up with about a gill of brine* poured in with a little bamboo ladle, and the cloth cover replaced." (Footnote: *"The brine used is obtained by deliquescence, and precipitates the vegetable caseine [casein] or legumen contained in the liquor [soymilk] expressed from the pulp.–Translator"). The cloth is again removed after the lapse of a few minutes allowed for the brine to thoroughly mix, and two gills more of brine are poured in, and, a few minutes later, still another portion of two or three gills, a little at a time.

"Whenever coagulation takes place in the filtered liquor in the tub, a shallow bamboo basket (Fig. 4), containing a stone to keep it down, is twice let down into the liquor, and the water [whey] which runs into the basket is removed. When coagulation is complete, the bamboo basket is inverted and the tub tilted to one side, to allow the water to drain off through the meshes of the basket.

"The next step is to transfer the coagulum from the tub to a rectangular-formed box (Fig. 5), which is accomplished in the following manner: A wooden frame, which just covers the edges of the forming box, is placed in position upon the open top of this box, which, it should be stated is 1.8 feet long, 0.62 feet wide, and 1 foot deep inside..." After the tôfu is pressed, the "box with its contents are then placed in a large trough of cold water." After cooling, the tofu, which has assumed "the consistency of a cooked omelet, is cut up with a broad-bladed brass knife into quite thick slabs of about 4 by 6 by 1½ inches in size. The quantity of water and brine used in the preparation of tôfu should be in the proportion of 15 sho (1 sho = 107.92 cubic inches) of water and ½ sho of brine to 4.5 sho of the bean.

"Preparing tôfu for the table: Tôfu may be prepared in many ways for the table, such as by frying or toasting, or making into soup. It may also be scrambled or made into croquettes. When fried, toasted, or scrambled, it has very much the taste of sweet-bread, and when saturated with Japanese soy is not unlike that dish in appearance and consistency. When used in soup it is cut up in little squares. There are several books in Japanese treating of this subject, such as the 'Tôfu-zoku hyaku-chin,' or the 'Hundred curiosities in Tôfu.'

"Uses of Tôfu: Tôfu, and the residue [okara] in its manufacture, are used for various other purposes, such as in the imitation of *tsuye-shu*, a kind of vermilion. For this purpose tôfu from which the water has been expressed is mixed with a kind of red lacquer, with a spatula, and thoroughly kneaded. This resulting paste is laid upon the articles to be manufactured, and after drying it may be carved or engraved upon.

© Copyright Soyinfo Center 2013

"The warm water in which the beans are first boiled is used to extract grease from clothing, and to cleanse the mats used upon the floors of Japanese houses, and also for washing the ceilings, for which purposes it has no equal. The pulp [okara] remaining in the grass-cloth after the vegetable caseine has been expressed, is used by the Japanese women as a substitute for soap in washing the hair. It is also used when mixed with finely-chopped straw as a food for horses and cattle, and sometimes as manure."

Note 1. This is the earliest English-language document seen (Oct. 2001) that uses the word "residue" or the word "pulp" to refer to okara. Note 2: This is the earliest English-language document seen (Sept. 2004) that uses the term "yellowish-white" to describe the color of soybean seeds.

Note 3. This is the earliest document seen (June 2001) that uses the word "soap" in connection with soybeans; okara is used in Japan as a soap. Address: Minister, United States Legation at Tokio, Japan.

309. Tamari, Kizo. 1886. Vegetables in Japan. *Transactions of the American Horticultural Society* 4:77-80. For the year 1886.

• ***Summary:*** "Peas and beans are so numerous in varieties that they can not be easily described. Besides common cultivated peas and beans, we have asparagus beans with long and tender pods, ensiform beans [shaped like a sword blade], many kinds of kidney beans and soy beans (*soya hispida*), etc. Some [such as soy beans] are used green, in pod, and the seeds are mostly used for making different kinds of cakes [confections] or as parched beans" [soynuts / irimame].

Note 1. This is the earliest English-language document seen (Dec. 2012) that uses the term "parched beans" to refer to soynuts.

The most important crop among our pulse is the soy bean. The annual product is about the same as that of wheat, viz.: eleven and one-half [11.5] million bushels. This large amount is consumed in three different forms in our culinary uses, viz.: miso, shioyu [shoyu] and tofu. The first and second are made of the beans, wheat or barley, common salt and water; the first in the form of paste, and the second a liquid, commonly called Japanese sauce. The third is a white mass, made by coagulating extract juice of the bean with a solution of epsom [sic, Epsom] salts. This is called Chinese cheese by the English."

Note 2. This is the 2nd earliest English-language document seen (April 2013) that uses the term "Chinese cheese" to refer to regular (nonfermented) tofu.

"Tofu is very extensively and commonly used, especially among those living apart from the seacoast, and where they can not get fresh fish, this is cooked and used as a substitute for fish. This bean is exceedingly rich in nitrogenous substances. It contains about thirty-seven per cent. of albuminoids, or over three times as much as wheat, barley, or oats, and one and a half times as much as peas or beans. So far, our people are the most extensive consumers of pulse of any people in the world. It seems to me that it is caused by the demand for nitrogenous food, which was almost excluded from animal food besides fishes on our table."

Note 3. The latter refers to the fact that Buddhism in Japan prohibits the consumption of four-legged creatures.

Note 4. This volume is a report of the seventh annual meeting, held at Cleveland, Ohio, September 7th to 10th, 1886. Address: Japan.

Index. 27 cm. 35 plates, with Fig. 26 being of the soybean. South Kensington Museum science handbooks. With 23-page supplement, 1901. Reprinted in New Delhi, India in 1983 by Ajay Book Service. [17 ref]

• ***Summary:*** "The soy-bean. *Glycine Soja*, Sieb. and Zucc. *Synonyms*–Soja hispida (Moench.); Dolichos Soja (Linn.); Soja angustifolia (Miq.). *Hind.* [Hindi]–Bhat, Bhatwan. *Punjab* [Panjabi]–Bhút. *Beng.* [Bengali]–Gari-kulay. *Naga*–Tsu-dza.

"This important bean is the seed of Glycine Soja, a small, sub-erect, trifoliate, hairy annual, with pods generally 3 to 4-seeded. It belongs to the natural order Leguminosae,

© Copyright Soyinfo Center 2013

sub-order Papilionaceae, tribe Phaseoleae, and sub-tribe Glycineae; 5 genera are included in this sub-tribe. Glycine contains about 12 species, chiefly Australian, but 3 are Indian, namely *G. javanica, G. pentaphylla,* and our present species.

"The soy-bean forms a considerable article of food in China and Japan. Since 1873 it has been successfully grown, as an experiment, in some of the warmer parts of Europe. It is widely spread in the outer Himalaya, and tropical regions from Kumaun to Sikkim, and the Khasir [Khasia / Khasi Hills], and the Naga Hills to Upper Burma. It is often cultivated, rather largely in Busti and Gorakhpur [in today's Uttar Pradesh], Patna, and Purniah [Purnea] Districts [both in today's northeast India].

"This crop is generally grown by itself; the seeds are sown from June to September; the harvesting takes place between November and January. It is consequently a kharif crop. The seeds should be placed at a depth not exceeding 1 to 1½ inch; 18 plants may be left, after weeding and thinning, to the square yard. A peaty soil, or one rich in organic matter, suits the plants best; a calcareous soil is also favourable to its growth. Sulphate of potash is a good manure, nitrogen may be supplied either as nitrate of soda or, in the case of soils poor in organic matter, in the form of rape or mustard cake, but it is rarely needed, while large applications of nitrogenous manure exert a distinctly injurious effect upon the yield of beans. So far as we know, this very important, vigorous, and productive pulse is not attacked by any insect or parasitic fungus."

A full-page illustration (p. 141) shows the upper part of a soy-bean plant, with flowers and a lengthwise cross section of one of the pods.

"Very few vegetable products are so rich as this bean at once in albuminoids and in fat and oil, the former constituent amounting to 35 per cent., and the latter to 19. The cultivation of the pale large-seeded varieties should be extended."

A table titled "Composition of soy-beans" (p. 143) shows that the seeds contain 35.3% protein, 18.9% fat, 4.6% ash, 11.0% moisture. "The nutrient-ratio is here about 1:2, while the nutrient-value is 105. Potash forms nearly one-half, and phosphorus-pentoxide one-third of the ash of the soy-bean. Ripe soy-beans require long soaking, preferably in warm water, in order to render them soft.

"In China and Japan three preparations are extensively made from the soy-bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The soy-bean may also be grown as a fodder plant. If cut just when the pods are fully formed it makes an excellent hay, superior to that of the lentil."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "bean cheeses" or (by implication) "soy cheeses" to refer to tofu.

Webster's New Geographical Dictionary (1988) defines Bengal (earlier Bengal Presidency) as a former province in northeast British India, and now a region encompassing West Bengal, India, and Bangladesh. The capital was Calcutta, located on the Hooghly River about 90 miles from its mouth. Calcutta is now the capital of West Bengal, India. Dhaka (Dacca) is the capital of Bangladesh. Bangladesh was formerly East Bengal (part of India, 1700s-1947), then East Pakistan, 1947-1971. It became Bangladesh in 1971.

This one of the earliest document seen (March 2001) that clearly refers to soybeans growing in Burma, but it is not clear whether these are cultivated or wild soybeans.

Page 127 discusses "The Pea-Nut. *Arachis hypogaea,* L." Six local vernacular names are given. "This plant is probably of American origin, although it has long been cultivated in India, on the West Coast of Africa, and in many other tropical countries. There is a similar plant, *Voandzeia subterranea* [Bambara groundnut], allied to Vigna, which grows under the same conditions." The composition of pea-nuts (in 100 parts and in 1 pound) is given. "Half the weight of pea-nuts is oil... Pea-nuts, after the greater part of the oil has been extracted by pressure, yield a cake well adapted for feeding cattle." An excellent full-page illustration (line drawing, p. 126) shows the pea-nut plant with seeds growing under ground and details of flowers and seeds.

Note 2. This is the earliest document seen (March 2001) that mentions *Voandzeia subterranea. Webster's Third New International Dictionary* has an entry for "voandzeia: [NL, from Malagasy *voandzou*]. A genus of tropical creeping herbs (family Leguminosae) with trifoliate leaves and small axillary flowers." We later learn that one species, *Voandzeia subterranea* (L.) Thouras, is called the Bambara groundnut. The Bambara are a Negroid people of Upper Niger.

Note 3. This is the earliest English-language document seen (Oct. 1999) that contains the term "nitrate of soda" (as a fertilizer) in connection with soy-beans. It was later renamed "sodium nitrate."

Note 4. This is the earliest document seen (Oct. 2002) that uses the word "kharif" to refer to the rainy season in South Asia.

Note 5. A long, positive review of this book appeared in the *Times of India* (25 Dec. 1886, p. 4), which mentioned that even though Church had never been to India, he derived his knowledge from reliable sources. The word "soy-beans" appeared twice in the review. Address: Prof. of Chemistry, Royal Academy of Arts, London.

313. Gordon Cumming, C.F. (Constance Frederica). 1886. Wanderings in China. 2 vols. New edition. Edinburgh and London: William Blackwood and Sons. Illust. Index. 21 cm.
• ***Summary:*** The author is a Protestant Christian; she praises

© Copyright Soyinfo Center 2013

Christian mission work in China and sees all Chinese (except Christian converts) as heathens and idolaters. She traveled in Hong-Kong and China in late 1878 and 1879. Each entry is dated, like a journal.

Volume I: In describing a Chinese feast on the island of Nantai, she notes that beef is prohibited by Confucianism on utilitarian grounds; however sea-weed and "almonds with bean curd" are among the many delicacies served. All manner of delicate little dishes "were scattered about the table for the guests to play with between courses, and each was provided with a tiny silver plate for mustard, soy [sauce], or any other condiment" (p. 220-23). A footnote on delicacies of old states that in the late 1500s at Launceston, England, porpoise was served with furmenty [frumenty; a dish of wheat boiled in milk and usually sweetened and spiced], almond-milk, sugar, and saffron (p. 222).

She describes a vegetarian meal at Kushan Monastery, noting that butter is considered as unfit for food, and milk is fit only when curdled and sweetened (p. 260).

Volume II: In a delicious vegetarian dinner at the Tien-Dong Buddhist Monastery, "pea-nuts" were served on the first tray. "Of course the whole was entirely vegetable [vegetarian], though some portions of corn-husk and other things tasted so very much like meat and preserved fish that we found it difficult to persuade ourselves that such was not the case" (p. 39). From vendors with portable street ovens in Peking: "Bean pudding in a crust of mashed potatoes, fried in oil, seemed to be in great demand..." (p. 281).

"But the favorite food here [Peking] is a cake made of bean curd. Common small beans are ground between two granite millstones like a hand quern. As the upper stone is turned, water is poured on, and a creamy white fluid oozes out, which flows into a tub, and is boiled with salt. The froth is skimmed off, and the curd is tied up in a cloth, put under pressure, and so formed into square cakes [tofu], which really taste rather like our own curds. They are generally, however, fried in oil, or else eaten with soy, which is a sauce obtained from the same bean when fermented." (p. 282).

"Every now and again among the curious vehicles dragged noisily along the street, came a gigantic wheelbarrow, laden with wicker oil jars. It seems that the manufacture of oil from the yellow and white pulse bean is one of the great industries of Northern China, and thousands of junks are annually employed in transporting the oil and bean-cake to the Southern Provinces. The beans are first crushed in oilmills, whose revolving stone wheels are turned by bullocks. Some mills are so large as to employ about sixty bullocks. The beans are then steamed, and when very hot are (by a somewhat elaborate process) subjected to great pressure whereby the oil is expressed. It is filtered through a cloth, and is then generally poured into large jar-shaped baskets, each made to contain a hundred pounds of oil. They are lined with tough paper, which is glued to the wicker-work by a strong varnish, and is quite oil-proof. The narrow mouth of the jar is then covered with the same varnish paper, and no further packing is required even for a sea voyage. The oil, which is clear and pale, is used both for lamps and for cooking purposes.

"The bean-cake which remains after the oil has been expressed, is used as manure for the land, but is never given to cattle, who, however, are largely fed on the bean itself. As the aforesaid very popular pulse curd and soy sauce are both prepared from the same bean, it must be allowed that it holds an important place among the vegetable products of the land" (p. 283).

Miss Constance Frederica Gordon Cumming, a woman, lived 1837-1924. A portrait photo of the author appears as the frontispiece of each volume. Address: Author and world traveler.

314. Hepburn, James Curtis. 1886. A Japanese-English and English-Japanese dictionary. 3rd ed. Tokyo: Z.P. Maruya & Co., Limited. Yokohama, Shanghai, Hongkong & Singapore: Kelly & Walsh, Limited. London: Trübner & Co. 962 p. 22 cm.

• ***Summary:*** "During the fourteen years which have elapsed since the publication of the last edition of this Dictionary [in 1867], the Author has kept it constantly before him, correcting errors, improving and enlarging the definitions, and adding new words and illustrations, according as his time and other important engagements allowed him. But owing to the amazing changes and rapid advancement of the Japanese in every department, he has found it difficult to keep pace with the corresponding advance of the language in the increase of its vocabulary. He has endeavored, however, to collect these words, examine, classify and define them. Many, no doubt, have escaped his notice. Still there is an addition of more than ten thousand words to the Japanese and English part."

New soy-related definitions in this edition, not found in or changed from the 1867 edition: Aburage: Anything fried in oil or grease, especially fried *tofu.* [fried tofu].

Amazake: Sweet *sake,* a kind of drink made of fermented rice.

Azuki: A small red bean, Phaseolus radiatus. Daizu: A kind of large white bean, Soja hispida.

Hiriôzu: A kind of food make of *tôfu* fried in oil.

Note 1. This is the earliest purely English-language document seen (April 2013) that contains the word *Hiriôzu.* It refers to Kyoto-style deep-fried tofu treasure balls.

Kinako: A flour made of beans.

Kirazu: The refuse of beans left in making *tôfu* [okara].

Note 2. This is the earliest purely English-language document seen (Aug. 2011) that uses the word "Kirazu" to refer to what is now called "okara" or "soy pulp."

Koji: Barm or yeast made by the fermentation of rice or barley in the process of making *sake* or *soy* [sauce].

Miso: A kind of sauce made of beans, wheat and salt.

© Copyright Soyinfo Center 2013

Miso wo suru: To rub miso in a mortar.

Sake: A fermented liquor brewed from rice. Sake wo kamosu: To brew sake. Sake ni yô: To be drunk. Sake no uye ga warui hito: One who behaves disorderly because of drink. Sake ni oboreru: To be addicted to drink [alcohol].

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Syn. [Synonym]: Shitaji.

Tamari: Soy, shôyu. Note 3. This is the earliest English-language document seen (April 2012) that uses the word "Tamari" to refer to a type of Japanese soy sauce,

Tofu: A kind of food made of beans, bean curd.

Unohana: The Deutzia scabra; also refuse of beans from making tofu. Yuba: A kind of food made of beans, the skin of bean curd.

Terms listed unchanged from the 1867 edition include Natto, and Yu-dofu.

No listing is given for: Daitokuji natto, Edamame [Yedamame], Hamanatto, or Okara.

The "English and Japanese dictionary," which starts on page 771-73, contains the most important English words with numerous examples. Included are: Bean: Mame. Spec. Azuki, sora-mame, daizu, endo, ingen, sasage. Bean pod: Mame no saya. Bean curd: Tôfu.

Soy: Shôyu.

Note 4. This is the earliest English-language document seen (Oct. 2001) that uses the word *Unohana* to refer to okara. Address: M.D., LL.D., Yokohama, Japan.

315. Lanessan, J.-L. de. 1886. Les plantes utiles des colonies françaises [Useful plants of the French colonies]. Paris: Impremerie Nationale. 990 p. See p. 710. [Fre]

• ***Summary:*** Dau-nanh is the name of the soybean in Cochin China. Gives a botanical description of "*Dolichos Soia* or *Soja* L.–Annual, erect, fuzzy stalk, simple with ascending branches; ternate, oval velvety leaves; purplish flowers in simple bunches, axillary; calyx with five sharp divisions, the upper ones shorter;... oblong wings; slightly carinate; ten stamens, nine shorter; hispid hanging pod; whitish oval beans.

"In Japan they prepare with these beans and some meat broth a sauce of great renown, *Sooju* or *Soja,* that the Chinese and Vietnamese also use to stimulate their appetite. They also make a white purée resembling coagulated milk, called *Teu-bu* [tofu] in China, where it is highly appreciated. Although it is rather insipid, it is neither disagreeable nor indigestible."

Note: Meat broth is not used in preparing shoyu, which acquires a hearty, meaty flavor through the fermentation process. Address: Professeur Agrege d'Histoire Naturelle a la Faculte de Medecine de Paris, France.

316. Rein, Johann Justus. 1886. Japan: Nach Reisen und Studien, im Auftrage der Koeniglich Preussischen Regierung dargestellt [Japan: Travels and researches undertaken at the cost of the Prussian government. Vol. II.]. Leipzig, Germany: Verlag von Wilhelm Engelmann. 679 p. See p. 5, 65-70, 123-27, 185, 649. Illust. Indexes (1 German and Latin, 1 Japanese). 2nd ed. 1905. [9 ref. Ger]

• ***Summary:*** A superb book, showing the high German art of studying other cultures. The many illustrations are either beautiful wood engravings (*Holzschnitte*), real photographs, or actual samples of paper or textiles (glued in). In the chapter on "Food plants" (*Nährpflanzen*), the following is a partial contents of the section on "Pulse or leguminous plants" (*Hülsenfrüchte oder Leguminosen,* p. 65-71): Introduction to crops cultivated in Japan. 1. The ground-nut and ground-nut oil. 2. The soybean: "Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained.

"In Japan the varieties of soy-bean are distinguished–according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making Shôyu (soy), Tôfu (bean-cheese), and Miso (a sort of sauce), and those eaten in any plain shape."

Soy-bean varieties in Japan include: 1. "White (pea-yellow) soy-beans, Japanese Shiro-mame or Haku-daidzu. To this division belongs an early-ripening sort with very small seeds, called Goguwatsu-mame [Go-gatsu], or 'five-months-kind,' because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the Wase-mame or Natsu-mame, that is, early and summer-bean. These two are also called Tôfu-mame, because they are used chiefly in making Tôfu. Another sort serves to produce Miso. It is called Nakate-mame, 'middle-late bean,' its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, Okute-mame (late-bean), Maru-mame (bullet-bean), and Teppô-mame (gun-bean), or Aki-mame (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making Shôyu, while Maru-mame is valuable as horse-feed.

2. Black soy-beans, Japanese Kuro-mame or Koku-daidzu. These are eaten boiled with sugar, as an entrée, or as a relish to rice. There is a middle-late sub-species, with

© Copyright Soyinfo Center 2013

round, elliptical seeds, Kuro-mame, in short, and another like it with big, bullet-shaped beans is called Kuro-teppô-mame. And again there is a late-ripening sort with flat, elliptical seeds under several names.

3. Brown soy-beans, Japanese Katsu-daizu (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as Aka-mame, red soy-beans, round, reddish-brown in colour, in different varieties, and Cha-mame, tea beans, three light-brown sorts of small extent and significance.

4. Greenish or bluish green soy-beans, Japanese Ao-mame or Sei-daizu, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of Aö-mame [sic, Ao-mame]:–(a) Sei-hito,–epidermis green, inside a whitish yellow. (b) Nikuri-sei,–greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) Kage-mame, with pale green, round beans. 5. Speckled soy-beans, Japanese Fuiri-mame or Han-daidzu. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:–(a) Kuro-kura-kake-mame, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) Aka-kura-kake-mame, with a brown spot on the saddle (eye), otherwise yellowish-green, flat and drawn out long. (c) Fuiri-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima.

"Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields."

Returning to the work of Haberlandt: "At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with the soy-bean and of its chemical analysis. His conclusions are as follows:

"(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

"(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

"(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

"(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

"(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

"After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of the Austro-Hungarian monarchy, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

3. Azuki beans (many varieties are named and described).

Two tables (p. 73-74) show the following: (1) Analysis of 10 different numbered samples of soybeans, empty pods, and straw and leaves. Eight are from Haberlandt's book *Die Sojabohne* [The Soybean] (1878), two are from Caplan, and one each from Mach, Senff, Levallois, and Kinch. (2) Comparative composition of 9 different legumes, including soybeans, azuki beans, common peas, broad beans / faba beans, lentils, yellow lupins, and peanuts. The soybean has by far the most crude protein, is second in fat (after peanuts), and is average in (minerals).

Foods made from soybeans (p. 123-27): Shoyu (*Shôyû, die japanische Bohnensauce, auch Soja*). Miso (made with rice koji [*Kôji oder fermentierender Reis*]). Tofu (*Tôfu, Bohnenkäse*, made with *Shio-no-nigari* (*Salzbitter*)) incl. dried-frozen tofu (*Kori-tôfu, gefrorener oder Eis-Tôfu*).

"Kori-tôfu, frozen or ice-Tôfu, is the spongy, horn-like substance that remains when common Tôfu is allowed to freeze and then thawed and dried in the sun, thus getting rid of most of its water. By Yuba [Yuba] is meant a third preparation, consisting of brownish, tough skins (*Häuten*), made by boiling the dissolved legumine of the Tôfu-process, with the addition of some wood-ashes, and then taking away in succession the skins that rise" (p. 126-27; see Rein 1889).

Note 1. This is the earliest German-language document seen (Oct. 2012) that contains the word Yuba.

The section on "Oil plants and their products" (p. 176-89) gives details on 13 plants and the oil obtained from them, including: 1. Rapeseed oil. 2. Mustard oil. 3. Camellia oil. 4. Cottonseed oil. 5. Peanut oil. 6. Sesame oil. 7. Perilla oil (*Perilla ocymoides*). 11. Hempseed oil. Soybean oil is not one of these. However a table (p. 185) gives the average composition of various Japanese oilseeds (Source: E. Wolff et al.; Ollech 1884): Rapeseed, peanuts, cottonseed, sesame (brown and white), hemp seeds, shelled beech-nuts, and soybeans.

Note 2. Volume 1 was published in 1881. The title of volume 2 is Land-und Forstwirtschaft, Industrie und Handel. Johann Justus Rein lived 1835-1918.

Note 3. This is the earliest German-language document seen (April 2013) that uses the term "kori-tôfu," or "gefrorener Tôfu," or "Eis Tôfu" to refer to dried-frozen

tofu.

Note 4. Also discusses: Ame, midzu-ame, and barley malt syrup (p. 121-22). Fu, or baked wheat gluten cakes. Hemp, hempseed, and hempseed oil (p. 88, 177, 184-85). Kudzu (p. 75, 199, 217). Peanuts and peanut oil (p. 176-81, 185). Sea-weeds–especially marine algae (p. 93-96). Sesame seeds and oil (p. 88, 176-78, 181-82, 185). Address: Prof. of Geography, Univ. of Bonn, Germany.

317. *Otago Witness* (*New Zealand*). 1887. Miscellaneous. Feb. 11. p. 8.
• ***Summary:*** From The Standard: "The cultivation of the Soy bean (Soja hispida), extensively used in Japan, is being recommended in the United States, where it has been tried on a small scale. It is a round, yellowish-white bean, which is constituents is said to come nearer to animal food than any other vegetable. According to an article published at the Educational Museum of Tokio, this bean was first raised in China about 200 years B.C. [sic, 11th century BC] and its use in Japan dates back to the fourteenth century [sic, at least the 8th century]. In the latter country it is chiefly used as 'tofu' or bean curd, which is cooked in various ways. Analysis shows that the bean contains 37 per cent. of albuminoids, and nearly 21 per cent of fat. In Germany the Japanese bean has been cultivated with success."

318. *Vegetarian Messenger* (*Manchester, England*). 1887. Notes and queries: Vegetable cheese [tofu]. May. p. 154-55.
• ***Summary:*** "There is some possibility, we are authorised to state, that cheese, as made in China from beans, will at last shortly be profitably be manufactured and sold in this country. Those interested in its production, or desirous in any way to forward its sale, which will, on account of its low price, at no distant date unfavourably interfere with ordinary cheese made from curds of milk, should communicate with M. Nunn, Fox Hill, Upper Norwood."

Note: This is the earliest English-language document seen (April 2013) that uses the term "vegetable cheese" to refer to tofu.

319. Williams, W. Mattieu. 1887. Tofu and vegetable cheese. *Gentleman's Magazine* (*London*) 257(1878):616. June.
• ***Summary:*** The article begins: "Vegetarians should look to this. Tofu is a curd manufactured from beans in Japan. According to the 'Journal of the Society of Arts.' December 24, 1886, it 'approaches more nearly in its chemical composition to animal food than any other vegetable known.'"

The author describes briefly how tofu is made in Japan. "The fibrous residue left in the bag [okara], after the filtering out of the vegetable casein [protein], may be mixed with chaff as a food for cattle."

He adds that he has made tofu from common split peas in a similar manner and precipitated the vegetable casein with acetic acid. "All kinds of peas and beans will yield soluble casein when thus treated, and most valuable food may thus be obtained free from the woody fibre, which is difficult to digest.

"My experiments were avowedly but preliminary and suggestive; they, however, point to the possibility of a very important industry in the manufacture of a new and most desirable food, viz. vegetable cheese. If I am not altogether mistaken, it may be produced on a large scale at about threepence per pound, and be equal, if not superior, to the best cheese made in the dairy. As I have shown in the work above quoted, a sheep weighing 60 pounds contains less nutritive matter than 20 pounds of ordinary cheese. This also applies to the vegetable cheese."

320. Kellner, O.J.; Mori, Y[ôtarô]. 1887. Beitraege zur Kenntnis der Ernaehrung der Japaner [Contributions to an understanding of the nutrition of Japanese]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens in Tokio* (*Yokohama*) 4(37):305-21. Aug. [37 ref. Ger]
• ***Summary:*** *Vegetarian Messenger* (May 1888, p. 127-28) states that the staple diet of the Japanese "is almost wholly Vegetarian... As to beef, however (there is no mutton in Japan), there can be no question that its consumption is very small. In 1882, only 36,288 beasts were slaughtered, or about one kilogramme of meat per head of population, and it must be borne in mind that a large consumption takes place at the open ports amongst Europeans, and in the proximity of vessels... It would appear that the flesh of mammals is almost entirely excluded from that diet." Address: Tokyo.

321. Osawa, Kenji; Ueda, Keiji. 1887. Shokumotsu shôka no ryôhi (zokkô) [The quality of digestion of foods (continuation)]. *Chugai Iji Shinpo* (*Medical News, Foreign and Domestic, Tokyo*) No. 177. p. 16-21. Aug. [Jap]*
• ***Summary:*** A digestion experiment with tofu continued for two days, October 28-29, 1885. The subject, K.U., weighed 51.45 kg at the beginning and 49.36 kg at the end of the experiment. The diet consisted of tofu with some shoyu and starch. The following percentages of the basic nutrients were digested: Protein 96.1%. Fat 97.4%. Carbohydrates (incl. fiber) 88.4%. Ash 72.4%. Address: Physiological Institute, University of Tokyo.

322. Kellner, O.J. 1887. Zusammensetzung Japanischer landwirthschaftlicher und technischer Producte und Materialien [Composition of Japanese agricultural and technical products and materials]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens in Tokio* (*Yokohama*) 4(35):205-22. Sept. See p. 205, 208-09. [Ger]
• ***Summary:*** The introduction (p. 1) contains a list of publications on agricultural chemistry and chemical

© Copyright Soyinfo Center 2013

nutritional physiology published by this laboratory under Dr. Kellner's direction. These include investigations of seeds, hay, straw, manures, and technical products (alcoholic drinks and shoyu).

A large table (p. 8, probably based on Kellner's research) gives the German name, botanical name, Japanese name, and nutritional composition of 12 leguminous seeds and oilseeds (on a dry-weight basis, plus their ash), including soybeans (*Sojabohne, Soja hispida, daizu*), shelled peanuts (*Erdnuss, Arachis hypogaea, Nankin mame*), and sesame seeds (*Sesam, Sesamum orientale, goma*).

A discussion of the soybean (p. 209) notes that it is widely cultivated in Japan and also used to make a variety of other products that resemble those made from milk. Soybeans are not often consumed directly, but are used in the preparation of tofu (*Bohnenkäse*), miso, and shoyu sauce. A small table gives the nutritional composition of three additional soybean varieties that are used for shoyu production. They all contain less protein and more fat than the soybean from the previous large table.

Another large table (p. 215) gives the German name, botanical name, Japanese name, and nutritional composition of 12 plants purchased at a market in Tokyo, including: kuzu (-, *Pueraria Thunbergiana, kudzu*), peanuts (*Erdnuss, Arachis hypogaea, Tojin-mame*), and soybeans (*Sojabohne, Soja hispida, kari mame*). The soybeans contain 13.67% water. Their dry matter contains 18.11% raw protein, 3.07% ether extract [crude oil], 39.16% crude fiber, etc.

Other large tables gives the composition of kudzu (p. 217), kombu (*Laminaria japonica,* p. 219), okara (*Tofukuchen, Tofurückstände,* p. 221), and various alcoholic beverages (p. 221, including sake {made from koji}, mirin, shirosake (white sake), white Kofu wine, and Sakurada beer brewed in Tokyo). A small table (p. 221) gives a nutritional analysis of three samples of shoyu, including the specific gravity (density relative to water), dry matter, organic matter, ash, and acid (as acetic acid). Address: PhD, Tokyo.

323. *Vegetarian Messenger* (*Manchester, England*). 1887. Japanese bean curd. Sept. p. 303-07. [1 ref]
• ***Summary:*** This excellent, detailed article on tofu, by Mr. Hubbard of the United States Legation at Tokio, is reprinted from: R.B. Hubbard. 1886. "Japanese bean curd." *U.S. Bureau of Manufactures, Department of Commerce and Labor, Monthly Consular and Trade Reports* 19(63):646-51.

324. *Vegetarian Messenger* (*Manchester, England*). 1887. Correspondence: Notes and queries. Oct. p. 341-43.
• ***Summary:*** "Soy beans.–Where can these be procured, and how are they to be cooked?–X.Z."

"Vegetable boots and shoes.- Are these now made and sold? If so, where?–T.B." No reply is given to either question.

"Vegetable cheese.- *Querist* asks when we are to have the vegetable cheese [tofu] promised in a former number of the *Vegetarian Messenger* [May 1887, p. 154-55]. (We fear that the death of an active friend, Mr. Nunn, who was making experiments in this direction, and who made the promise alluded to, will postpone the appearance of vegetable cheese indefinitely. Experiments should, however, be made by those who have any practical acquaintance with the chemistry of foodstuffs. Mr. Mattieu Williams, writing in the *Gentleman's Magazine* for June, on the subject of the manufacture of Japanese bean cheese," discusses his experiments with peas and beans. These investigations "'point to the possibility of a very important industry in the manufacture of a new and most desirable food, viz., vegetable cheese. If I am not altogether mistaken, it may be produced on a large scale at about 3 pence per pound, and be equal, if not superior, to the best cheese made in the dairy.'").

• ***Summary:*** Soy-related definitions include: Dengaku: A kind of food made of baked *tôfu.*

Go: [Soy] Beans mashed into paste for making *tôfu;* also used by dyers to limit colors. Mame no go: [Soy] bean paste.

Go-koku [Gokoku]: The five cereals–wheat, rice, millet,

© Copyright Soyinfo Center 2013

beans, and sorghum.

Hitashi-mono [Hitashimono]: Beans or vegetables boiled or steeped in *shôyu* [shoyu].

Irimame: Parched peas [sic, parched soybeans = soynuts].

Kirazu: The refuse of beans left in making *tôfu.*

Mamemaki: The ceremony of scattering parched beans [parched soybeans] about to drive out evil spirits on the last evening of the old [lunar] year.

Toshi-koshi [Toshikoshi]: The crossing from the old to the new year; the ceremonies observed on the last day of the year,... when parched beans [parched soybeans] are scattered after sundown to drive off noxious influences and evil spirits. The parched beans used this evening, if kept and eaten when the first thunder of the new year is heard, are supposed to protect against lightning.

Note 1. This is the 2nd earliest English-language document seen (Dec. 2012) that uses the term "parched soy beans" to refer to soynuts / irimame.

Tsui-na (*oni yarai*)*:* The ceremony of driving evil spirits out of the house by scattering parched [soy] beans about on the last evening of the old year.

Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term *Tsui-na* in connection with Setsubun and the ceremony scattering of roasted soybeans in Japan.

Yô-kan [yokan]: A kind of confectionery made of sugar and [azuki] beans.

Yuba: A kind of food made of beans.

James Curtis Hepburn lived 1815-1911. Address: M.D., LL.D., Tokyo, Japan.

328. Li Wenpei. 1887. Shiwu bencao [Materia diatetica]. China. Passage on soy reprinted in C.N. Li 1958 #343, p. 242-43. [Chi]

• ***Summary:*** Wade-Giles reference: *Shih Wu Pên Ts'ao,* by Li Wên-P'ei. Qing dynasty. The section titled "Black soybeans" (*heidadou*) states that it is also called *wudou* ("crow-black beans"). Appendix green soybeans (*qingdou*). Sweet, neutral, and nontoxic. Clears the eyes and stabilizes / settles the heart (*xin*). Warms the spleen (*pi*). Consumed over a long time, it improves the complexion and makes it light / white rather than old. When cooked by boiling, its nature is cold. Prolonged eating makes the body heavy. It is an antidote to various poisons. The small, flattened kind is called "horse fodder bean" (*maliaodou*). It cures ruptured hernia. Prolonged ingestion encourages a black head of hair. The type with a green seed coat is even more effective than the black or the yellow soybean; the green seed coat type is best parched for food, or used to make tofu (*fu*).

The section titled "Yellow soybeans" (*huangdadou*) states: It is sweet, warming, and nontoxic. It helps to alleviate intestinal gas, and improves the functioning of the large intestine. It can be roasted for food, used to make tofu (*fu*), or pressed for oil (*you*). (Translated by H.T. Huang, PhD, March 2003).

• ***Summary:*** Because of the difficulty many people have in tolerating gluten bread, we are anxious to find another food free from sugar and amylaceous materials for diabetics. I thought it would be interesting to do some trials on the use of the seeds of a bean used often in China, Japan, and Malaysia.

I had the occasion to study this bean under the direction of my master, Mr. Muntz, when I was at his laboratory at the Agronomic Institute (*l'Institut agronomique*). I wish to speak of soybeans (*Soya*).

In 1855, Mr. de Montigny, struck by the considerable nutritional value of soybeans, imported some to France, and submitted them to the Society of Acclimatization (*la Société d'acclimatation*), hoping that our farmers would make the best of this legume that is the foundation of the food of the poor classes of China and Japan. In these countries, the soybean equals the potato in our countryside, in consumption. We shall see, in a bit, that the bean of this legume (sub-order *papillonacée* [sic, papilionaceæ]) is richer by far in nutritious elements than the tuber of Parmentier [the potato].

Since this attempt [by Mr. Montigny in 1855], many agronomical trials have been conducted, at different places in our territory [France and its colonies], and they have proven that the acclimatization of this plant, in France, is possible. They have also permitted us to hope that the climate of our regions is analogous to that of the Chinese and Japanese provinces where the soybean (*le Soya*) is cultivated on a large scale. Unfortunately, these trials had the goal of feeding animals rather than the introduction of this bean into the human diet.

However, eight years ago, Count Attems, who was busy with the cultivation of soybeans in Austria, wrote: "We fool ourselves when we think that soybeans are only an advantageous pasturage, or when we believe that they constitute a delicate dish only for the table of the rich. Soybeans have also been discovered for the large class of less idle consumers, for the country folk and the workers; and although it is a plant of ancient Asia, future generations will make a great case for them and without a doubt will

© Copyright Soyinfo Center 2013

call them "Haberlandt's bean" (*Haricot de Haberlandt*) in recognition."

Professor Haberlandt, who tested the cultivation of soybeans following the Exposition of 1873, published his results in 1878 and became the popularizer of their cultivation and use in Austria. Here is this author's [Haberlandt's] opinion on the nutritive value of this bean:

"I think that soybeans are a food too concentrated to be prepared alone and that, consequently, it is better to mix them with other foods, especially those containing starch... They can furnish armies with provisions of little volume, and enter with good right, as the best equivalent, in pea sausages."

In France, although many notes relative to the cultivation and use of soybeans have been addressed to the Society of Acclimatization, I believe that the first, if not the only monograph that was made of it, is that of Mr. Paillieux. This work was published in 1881; I have borrowed from him numerous times. As for me, it was in 1883 at the Agronomical Institute that I came to know soybeans, following the analyses and experience of Mr. Muntz, and of my dear friend, the late Levallois, from whom the Academy of Sciences received last April 3rd a posthumous communication on the composition of the beans that he harvested at the agronomic station in Nice, of which he was the director.

The name *Dolichos soya* was given by Linnaeus to this Chinese bean that Moench later named *Soya hispida.*

In Japan, they call it *Daïzu Mame,* that is, food seed *par excellence.* In China, it is known under the name *Yéou-téou;* its cultivation there is less important than in Japan, although it enters largely into the food of the working class and is used, as in Japan, for the commercial / industrial preparation of a variety foods.

The soybean is also cultivated and consumed in India, the Himalayas, Ceylon, Tonkin, Cochin China, and the Dutch possessions in Malaysia. In these different lands, it is eaten in its natural state (*en nature*), and used to make many food products, on the one hand the daily food of the poor, on the other condiments sought after by the rich.

Because of the high content of fatty materials in soybeans (17-18%), its flour emulsifies with water, giving with oil a certain quantity of *légumine* [a protein found in soybeans]. The mixture, passed through a cloth, yields, as a filtered liquid, a true milk (*vrai lait*), used like that of cows, goats, or sheep. This is the milk (*le lait*) of the Chinese.

This milk is used to prepare a cheese (named *Téou-fou* in China, *Tou-fou* in Japan), that resembles a white cheese known, in France, under the name of *fromage à la pie* (quark). The lightly heated milk is coagulated when it is warm with the help of a few spoonfuls of liquid nigari / pure sea water (*d'eaux mères de sel marin*). The curds (*caillé*) thus obtained are allowed to drain, then submitted to the action of flowing water. Note 1. The drained curds are first pressed to make tofu, then cut into cakes, which a placed into a container of cold, circulating water.

According to Mr. Champion, in China a piece of tofu (*fromage de pois*) as big as a fist sells for a cent (*un centime*). For many people of the working class, it constitutes the morning meal, either in a liquid state [as soymilk], or coagulated and fresh [as curds], or in a dried state [probably as pressed or firm tofu, or possibly as yuba] and fried in oil extracted from soybeans.

According to the analyses of Mr. Fremy, the soybean contains 18% of this oil, which is in the first rank among the 15-20 types of oils that the Chinese possess. It is of excellent quality and for Europeans, has the sole drawback of retaining the aftertaste of the raw bean.

In Canton [China], soybeans figure in the composition of a solid ferment, *Kiu-tsée,* that the Chinese use to make an artificial wine and their brandy (*eau-de-vie*).

Note 2. This is the earliest document seen (Oct. 2012) that contains the term *Kiu-tsée* (written with an acute accent), which it uses to refer to a solid Cantonese wine ferment.

Continued.

331. Petit, Léon. 1888. L'huile de soya. Son emploi en médecine comme purgatif à petite dose [Soy oil. Its use in medicine in small doses as a purgative]. *Bulletin de la Societe de Medecine Pratique de Paris.* p. 449-52. Meeting of April 26. Presided over by M. Laburthe. [Fre]

• ***Summary:*** Kaempfer first introduced soybean seeds into Europe from Japan, where they are used to make *miso* and *shoyu* (a black and limpid liquid). These two are indispensable condiments in the Japanese diet. They also make a vegetable cheese, tofu, which is usually eaten fresh, and of which the people are very fond.

In Cochin China, soya occupies a major place in the culinary art. The Chinese do not consume milk; instead, they crush the soybean and obtain from it a liquid, rich in casein and oils, which they use like we use the milk from cows' goats, or sheep. From it, they also make white cheeses, red cheeses [fermented tofu], and a sauce, *Tsiang-Yéou* (*jiangyou* or soy sauce), which are greatly appreciated. For my part, I have had the occasion to taste this condiment several times and I admit that I do not share, in this regard, the enthusiasm of the Chinese. Much more, *soya* enters in the preparation of a ferment used for making spirits and wines.

Nothing could be easier than obtaining soybeans; in France, they germinate as easily as haricots. They contain 30-35% protein and make excellent forage.

The soybean has been tested as a forage plant, either alone or mixed with hay, oats, barley, sugar beets, etc. Mr. Paillieux, a distinguished agriculturalist, even conducted various trials in using the soybean for human food.

He cooked the seeds, like one cooks haricot beans, after they had been soaked in distilled water. He also roasted soybean seeds to make a sort of coffee. He successfully

© Copyright Soyinfo Center 2013

reproduced the various Japanese and Chinese food preparations. He even tried to make a flour by grinding the beans, but this flour degenerated [rancidified] because of the large quantity of oil and fat that it contains.

It is possible that if this oil were extracted, the soybean oilcake (*le tourteau de Soya*) could be ground / reduced into flour which would contain more than 40% nitrogenous materials [protein] and would have no bad [after]taste. But unfortunately, this flour would have a rather high net cost, because of the manipulations that its production would necessitate, unless a use for soybean oil, which is the object of an enormous traffic in China, is found. This very limpid oil, which has a beautiful yellow color like olive oil, leaves a little acrid taste in the mouth which is not disagreeable. It possesses very obvious drastic qualities. I had a liter at my disposition, and I observed that with a minimum dose of 10 gm, you obtain a very energetic purging [like diarrhea], without any type of abdominal pain / colic (*colique*). I hope, before long, to receive a certain quantity of soybean oil that I shall place at the disposition of those of our colleagues who would like to test it as a purgative.

Note: The writer is the only person ever to ascribe a "purging" or "purgative" property to soy oil.

There follows a question and answer session. Mr. Terrier asks: Can Mr. Lecerf provide us with some information about the use of this oil in China and Japan? Mr. Petit responds: I believe that the Chinese and Japanese use this oil only for therapeutic purposes. Soy sauce (*La liqueur de Soya*) is widely employed in England as a condiment. Mr. Lecerf adds: I know nothing about how the Chinese and Japanese use soy oil as a medical substance; but, as I said, this oil is of the highest rank among the oils consumed throughout China. I would say to Mr. Petit that the *India Soy,* which the English consume, is a product which contains only a small proportion of soybeans; it is made with considerable quantities of barley and rice [sic], and it comes from China. However *Shoyu,* which I present to you, is originally from Edo [Tokyo, Japan]. Like that from Batavia [Jakarta] (Ket-Jap [ketjap, kecap]), it is made with from equal parts wheat and soybeans (*Soya*).

Mr. Gillet de Grandmont asks: Very precise and extensive information on the cultivation of soybeans can be found in the *Annals* [*Bulletin*] *of the Society for Acclimatization.* This bean, which I have tried to use for food, does not soften easily upon cooking; it always retains a very disagreeable, acrid taste. I could hardly stand it, except consumed in the form of a salad after cooking.

Mr. Lecerf replies: In the fresh state [as green vegetable soybeans], soybeans are not hard and their taste is even agreeable. In the dry state, it is easy to render them less tough, by adding a small quantity of sodium bicarbonate [baking soda] to their cooking water, and by taking care to soak them in water 24 hours in advance. Address: M.D., 2 Rue Casmir-Delavigne, Paris.

332. Carrière, E.-A.; André, Ed. 1888. Chronique horticole [Horticultural chronicle]. *Revue Horticole: Journal d'Horticulture Pratique* (*Paris*) 60:217-21. May 16. See p. 220. [Fre]

• ***Summary:*** The section titled "Soy 'cheese'" (*Le "Fromage" de Soja*) states (p. 220): The starch [sic, protein] of the soybean is sometimes used for the preparation of a cheese.

Those who try to prevent the consumption of this product from expanding say that it has a rather strong taste of raw haricot beans.

The Society for Acclimatization, according to a proposal from Mr. Paillieux, is going to establish a prize of 500 francs to be awarded to the person who finds a practical process for removing this disagreeable taste from soy cheese, fresh or fermented / ripened. Address: France.

333. Suchi, Tokutaro. 1888. Shibô no eiyôtaki kôyô [Digestion experiments with rice and tofu]. *Tokyo Igakkai Zasshi* (*J. of the Tokyo Medical Society*) 2(9):457-62. May; 2(10):511-20. June? [Jap]

• ***Summary:*** K. Oshima (1905, p. 153) reports that T. Suchi, age 21 and in good health, conducted these experiments upon himself. "The amount of fresh rice and fresh tofu eaten per day was exactly the same in both experiments. In cooking the tofu 40 cubic centimeters of shoyu and 10 gm of sugar were used each day. In experiment No. 17 the tofu used was fried in rapeseed oil by the investigator himself, the amount of oil thus used being carefully weighed." Urine and feces were collected and analyzed.

Digestion experiment No. 16 continued for 7 days, Nov. 18-24, 1887. Suchi weighed 41.30 kg at the beginning and 41.51 kg at the end. The diet consisted of rice and tofu. Suchi digested 95.2% of the protein (*tanpakushitsu*) in the diet, 96.5% of the fat, 98.3% of the carbohydrates, and 77.2% of the ash.

Digestion experiment No. 17 continued for 6 days, Nov. 29 to Dec. 4, 1887. Suchi weighed 41.42 kg at the beginning and 41.47 kg at the end. The diet consisted of rice, tofu, and vegetable oil. Suchi digested 94.2% of the protein in the diet, 93.9% of the fat, 99.5% of the carbohydrates, and 78.9% of the ash.

Note: This is the earliest Japanese-language document seen (Aug. 2003) that uses the term *tanpakushitsu* to refer to protein in connection with soybeans. Address: Physiological Institute, Tokyo University.

334. *Chicago Tribune.* 1888. An eel dinner in a Tokio cafe. An appetising meal that is manipulated with chop sticks. June 9. p. 16.

• ***Summary:*** From Rumah in St. Louis Globe Democrat: "A specialty of Tokio houses of refreshment is eel houses." "We celebrated a recent anniversary day by an eel dinner at a

© Copyright Soyinfo Center 2013

famous eel house."

"The feast began with a soup or stew of eels, the bottom of the bowl being filled with a delicate white curd [tofu], and the flavor of the dish being as mild and evasive as flaxseed tea... The plain broiled eels are called white eels, and after them came black eels, or eels dipped in soy [sauce] before and during the broiling. They acquire a rich brown tint and a most piquant flavor by this treatment, and the soy, or bean sauce, with which the Japanese always improve their fish and birds, might be used in the same way in other countries. Japanese soy is the foundation of Worcestershire sauce, and is much better before it is charged with all the spices and cayenne that convert it into the English condiment."

335. Kellner, O.J. 1888. Researches on the composition and digestibility of Japanese feeding stuffs. *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(2):1-45. July. See p. 25-29, 39-45. [3 ref. Eng]

• ***Summary:*** Section "V. Hay of soy beans (karimame)" (p. 25-29) describes experiments feeding soy bean hay to sheep (rams). "This hay is considered the best coarse fodder in this country. It is usually cured, when the pods have developed their normal size but the leaves are still green. A specimen of such hay was examined in 1883 by Mr. *M. Ota."*

In part "II. Soy bean (daizu)" (p. 39-45), Kellner notes: "Although the soy beans are somewhat expensive owing to their principal utilization as human food (tofu, miso and shoyu), it may happen that small proportions of them are resorted to in the feeding of the live-stock, for the purpose of supplementing the protein of a ration otherwise too poor in that nutrient." Soy beans, apparently raw, were fed to sheep. Feces ejected, water drunk, and live weights were measured. The article concluded: "The specimen of soy beans examined by us contains the following proportions of digestible nutrients, percent of the dry matter: Crude protein 34.30, fat 18.25, fiber 9.09; nitrogen-free extract 19.65; the last 2 total 28.74.

"Of all raw vegetable products, earth nuts perhaps excepted, the soy beans are the richest in the most valuable nutrients, protein and fat, and contain them in a highly digestible form."

Note 1. This is the earliest English-language document seen (April 2008) that uses the term "human food" in connection with soy beans.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "crude protein" (or "crude-protein" or "crude proteins") (one of two documents). Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

336. Egasse, M. 1888. Le soja et ses applications économiques et thérapeutiques: Matière médicale et therapeutique [Soja and its economic and therapeutic applications: Medical and therapeutic subject-matter]. *Bulletin General de Therapeutique Medicale, Chirurgicale, Obstetricale et Pharmaceutique* 115:433-48. Nov. 30. [28 ref. Fre]

• ***Summary:*** This is a review of the literature, especially the use of soy in diabetic diets. The author was one of the first Westerners to suggest the therapeutic use of soybeans in diabetic diets. Illustrations show: (1) A soy bean plant (from Vilmorin 1883, p. 434). (2) Two views of a soy bean and a cross section of soy bean seed (both from Blondel, p. 435).

Discusses (with 11 tables) the work with soybeans of Haberlandt in Austria-Hungary, Steuff [Steuf] in Germany, Schroeder (a chemist) in Napagedl [in Mähren / Moravia, a region in today's central Czech Republic], Capan [sic, Caplan] in Vienna, Pellet in France, P. Muntz, A. Levallois, Stingl and Morawski, E. Kaempfer, Eug. Simon, Champion, L'hôte and Champion, Mr. Lecerf, Mr. Dujardin-Beaumetz and Mr. Bourdin at Reims (soy bread), and Mr. Lailleux in Algeria.

Blondel (1888) reports the absence of starch in all parts of the soybean seed (p. 435).

"Soybeans are used above all to prepare foods: in Japan, miso and shoyu (*le sooju*), in China an imitation of milk (*une imitation du lait* [soymilk]) and a cheese (*un fromage* [tofu]) greatly appreciated by the common people" (p. 441).

"Throughout China, soybeans (*les graines du soja*) are also used to prepare a milklike / lacteal emulsion (*une émulsion leiteuse*) which replaces milk and which is obtained by crushing the seeds, soaking them in water, and simply passing the liquid through a fine sieve. The [soy] milk, this liquor (*liqueur*), only looks like [dairy] milk, but since [dairy] milk is extremely rare, this liquor supplements the milk [i.e., soymilk supplements dairy milk] from the alimentary point of view" (p. 443). Note: This is the earliest French-language document seen (Oct. 2003) that uses the term *une imitation du lait* or *une émulsion leiteuse* to refer to soymilk.

"The applications of soybean seeds for the feeding of diabetics is not numerous. Yet we know, via an oral communication from Mr. Lailleux, former intern at the hospital in Algiers, that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers, have seen, under the influence of a dietary regimen based on soybean pap, that not only did the content of sugar in their urine diminish by a considerable proportion, but also the condition of their sores was improved, a condition which like all of its type had resisted other treatments employed. If this fact can be verified again, either with soy pap or soy bread, the therapy would have found in soybeans an aid of great utility in the ordinary treatment of diabetes mellitus, which is so difficult for most patients to stand, especially because they must abstain from starches for which they generally show such a strong appetite" (p. 447). Address: France.

Au pays de Chine: le pays de Chine, ses habitants, moeurs, usages, institutions, l'oeuvre du catholicisme, persécuteurs et martyrs [In the country of China: The country of China, its inhabitants, manners and customs, institutions, the work of Catholicism, persecuters and martyrs]. Paris: Librairie Bloud et Barral. 300 p. See p. 117-19. [1 soy ref. Fre]

• ***Summary:*** A frequent companion to rice, which one finds on every table, is tofu (*le teou-fou*), a name which literally means "rotten beans," or, to say better, decomposed. However this name gives no idea of what tofu really is.

It is a cheese (*un fromage*) made with the milk of a small bean. There follows a detailed description of how soymilk is made and then curded to make tofu. In some parts of China, calcium sulfate is used to produce the curds. Europeans would enjoy these curds. For the poor, tofu is a precious resource. We would do well to cultivate the little bean from which it is made.

A footnote explains that the scientific name of this bean is *Soja hispida.*

338. Blyth, Alexander Wynter. 1888. Foods, their composition and analysis: A manual for the use of analytical chemists and others. 3rd ed. London: Charles Griffin & Co. xxxi + 640 p. See p. 375. Illust. 19 cm. The 1st ed. was 1882. [2 soy ref]

• ***Summary:*** In Part III, "Carbohydrates," is a section titled "Chinese peas" which is entirely about soya beans. It begins: "A pea or bean much used in China in the form of cheese is the *Soia hispida."* A large table shows the composition of three samples of this bean according to G.H. Pellet [1880].

The author continues, apparently using Champion and Julien [1869] as his source: "The pea-cheese [tofu] is considered, in China and Japan, a very important food. The peas (*Soia hispida*) are soaked in water for about 24 hours, then strained; they are next ground to a thin paste with some of the water which has been put on one side. The grinding is effected by a mill. The matters are filtered, and the filtrate is concentrated by heat; and after skimming once or twice is cooled, the casein coagulated by plaster, and a salt, which appears to be chloride of magnesium, added. The cheese is grayish-white, and has the following general composition:-" Water 90.37%. Fatty matters 2.36%. Nitrogen 0.78%. Ash 0.76%.

In the section titled "Adulterations of coffee and their detection" is a table (p. 382) based on Moeller [1886] which shows the length and breadth of the palisade layers in 11 leguminosae, including "Soya" and Lupine. The text adds (p. 383): "In soya, lupus seed, and canavalia, the pillar cells are as high as broad, and very much like cotton reels."

Also discusses: Linseed (p. 151). Gluten (p. 156). Oleo-margarine and butterine (p. 302-04). The sweet and bitter almond, and oil of almonds (p. 549-53, with 14 references). Adulterants of olive oil (incl. arachis [peanut] oil and sesame oil, p. 557-58). The British Margarine Act of 1887 ("An Act for the Better Prevention of the Fraudulent Sale of Margarine," p. 619-21; refers to the Sale of Food and Drugs Acts of 1875). Address: Court House, St. Marylebone. M.R.C.S., E.C.S., Public Analyst for the County of Devon [southwest England], and Medical Officer of Health and Public Analyst for St. Marylebone.

339. Holbrook, Martin L. 1888. Eating for strength: or, Food and diet in their relation to health and work, together with several hundred recipes for wholesome foods and drinks. New York: M.L. Holbrook & Co. 236 p. No index. 20 cm.

• ***Summary:*** The author, a health reformer, advocates a vegetarian diet. Chapter 9, titled "Alimentary products of the vegetable kingdom," has a section on "Peas, beans and lentils" which states (p. 117): "The special characteristic of the bean, as compared with cereals, is a less amount of starch and a larger amount of nitrogenous matter. This renders it an excellent substitute for flesh meat. All experience goes to show that it is a more satisfying vegetable product for hard-working men than almost any other. In Catholic countries, especially France, where flesh food is less used, and where during Lent and on Fridays it is proscribed, leguminous products are more extensively used than elsewhere. They are much used by the vegetarians of India and China..."

"In Japan the bean is made into a curd [tofu], a most nutritious article of diet, and the nearest approach in its chemical constituents to animal food of any of the vegetable foods. A very full account of the mode of preparing and using it was published by the United States Government in the consular reports for 1886. This curd is used in soup, croquetts [croquettes] and a hundred other ways, and is said to be well liked. It might to our advantage be introduced into our country, and so might the soy bean generally used in Japan and China, which is richer in fat than our own beans are." A table (p. 118, based on Kinch 1880) gives the composition of the soy bean.

Note 1. This is the earliest English-language document seen (Nov. 2003) that contains the term "substitute for flesh" or "substitute for flesh meat" to refer to a meat alternative.

Note 2. This is also earliest document seen (March 2001) concerning the etymology of meat alternatives.

The chapter on "Food in various diseases" recommends remedies for constipation (brown bread, fruit, and fresh vegetables), chronic rheumatism (a vegetarian diet), diabetes (gluten bread, "made now by many health food companies"), food for orphan asylums, prisons, etc. ("a rightly constituted vegetable diet," 'non-flesh' diet, or 'Vegetarian' dietary).

Note 3. This is the earliest English-language document seen (Sept. 2006) that contains the term "health food" (or "health-food" or "health foods"). Address: M.D., Prof. of Hygiene in the New York Medical College and Hospital for Women, Editor of the *Herald of Health,* etc.

• ***Summary:*** Contents: 1. Historical and botanical description. Soya (*Le Soya*) in Japan: Miso (according to Kaempfer), shoyu (*Le Sooju, Shoyn*), soybean varieties (23, soy oil, tofu), Japan at the exposition of 1878, practical recipe in France by the correspondent of the Horticultural Society of Paris (*Sociète d'Horticlture de Paris*), soy cheese or tofu (*fromage de daizu* (*To-ju*)), soya in China, soy oil, fermented tofu (*Le fromage de Soya, Teou-Fou*) (white fermented tofu, red fermented tofu), soya in Cochinchina (black soybean), soya in France (history), preparation of soya for the table. Letter from Maurice Dupuy (chemist at Vienna, June 1888, to M. Lecerf; nutritional value of Soya hispida, nutritional composition of 2 samples). Conclusions. Bibliography. Address: M.D. Faculté de Médecine, Paris; Former student at the Industrial and Agronomic Institute of Nord [Ancien élève de l'institut industriel et agronomique du Nord].

341. Osawa, Kenji. 1889. Shôka shiken tsuika [Additional investigations on digestion]. *Chugai Iji Shinpo* (*Medical News, Foreign and Domestic, Tokyo*) No. 211. p. 6-8. Jan. [Jap; eng+]
• ***Summary:*** Experiment no. 18 was a digestion experiment with rice and tofu, plus small amounts of starch (kuzu powder), shoyu, and sugar. It was conducted for 3 days, June 20-22, 1887. A table shows the amount and nutritional composition of each food used. The following percentages of the basic nutrients were digested: Protein 95.2%. Fat 94.8%. Carbohydrates 98.8%. Ash 83.4%. The author concluded that mixed foods (except for fat) are more easily digested than single foods. Address: Physiological Institute, Tokyo University.

342. Kellner, O.J. 1889. Tofu cakes. *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(4):24-25. March. [Eng]
• ***Summary:*** This article is about okara and its uses. "Tofu, e.g. bean curd essentially consists of legumin, and is prepared from soy beans, which are steeped in water, finely ground on stone mills and extracted with much water. The solution of legumin thus obtained is heated to boiling, filtered after cooling, and precipitated with the brine that drains off from the crystals of common salt during the preparation of the latter from sea water. The precipitate, after being pressed in wooden frames represents the tofu, a common human food in China and Japan. The portion left undissolved of the beans, called *tofu kasu* [okara] is chiefly used as food for domestic animals, but sometimes also consumed by the poorer classes or used as manure.

An analysis of such cakes, by Mr. J. Sawano, gave the following results (fresh substance): Water 85.74%, crude protein 3.82%, fat 1.44%, crude fibre 3.15%, nitrogen free extract 5.38%, ash 0.47%, total nitrogen 0.611%, albuminoid nitrogen 0.024%. The following are "per mille" [i.e., mg/100 gm]: Potash 1.71, soda 0.07, lime 0.97, magnesia 0.40, ferric oxide 0.10, phosphoric acid 1.20, sulphuric acid 0.12, silica and sand 0.12, chlorine 0.01.

"As the dry matter of the cakes is still rich in protein (26.7%) and fat (10.3%), they deserve, of course, to be more recommended as a food for cattle and hogs, than as a manure for direct application."

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term *tofu kasu* or *kasu* to refer to okara. It is also the earliest document seen (Oct. 2001) stating that okara is fed to "hogs" or "domestic animals." Address: Tokyo, Japan.

343. *Medical Record* (*New York*). 1889. Soya bread in diabetes. 35(14):386. April 6. Whole No. 961. [1 ref]
• ***Summary:*** "Dr. Lecerf has used bread made from Soya flour in a number of cases of diabetes and regards it as a valuable addition to the dietary in this disease, and as far superior to gluten bread (*Journal de Medicine de Paris*, December 9, 1888). *Soya hispida* is a leguminous plant growing in Japan and the far East, the grain of which is used by the natives in the preparation of sauces [including soy sauce] and to make a sort of vegetable cheese [tofu]. It contains a large proportion of fat, which takes the place in great measure of the starch in other grains. The bread made from it resembles rye-bread, has an agreeable taste, and is quite digestible. It has a tendency to cause diarrhoea [diarrhea] at first, but patients soon become accustomed to its use and can then take it without any inconvenience."

344. Wileman, A.E. 1889. Salt manufacture in Japan. *Transactions of the Asiatic Society of Japan* 17(1):1-66. April. See p. 27. Read 14 Nov. 1888. [Eng]
• ***Summary:*** In Japan, salt is made from sea water "in the numerous salt gardens, or salterns, scattered along the coast." After the water has been evaporated from salt, it still contains "bitterns" or "mothers," which possess a very bitter or acrid taste due to the magnesium salts (mainly magnesium sulphate) present in solution.

The pans used for making salt by evaporation last only 35-40 days because of a build-up of "pan scale" on the inside surface.

Page 27: "Several expedients are resorted to for diminishing the pan scale as much as possible and frequently with success.

"One consists in adding to the brine contained in the boiling pan the lees [sic, whey] obtained from the manufacture of Tôfu [Tofu] or Bean Curd. This bean curd is made by treating a large white bean called the 'Daizu,' or scientifically, Soja Hispida, with water and then boiling

© Copyright Soyinfo Center 2013

it. The liquor exuding from these beans when squeezed in a cloth, is what is used for putting into the brine. For a boiling of two *koku* (= 40 gallons) of brine, two *shô* (= 3 quarts) is the regulation quantity."

345. Lecerf, Ch. 1889. Le soya, sa valeur alimentaire et son emploi thérapeutique [The soybean. Its food value and therapeutic applications]. In: Compte Rendus, Congrès International de Thérapeutique et de Matière Médicale. 1889. Paris. 347 p. See p. 296-302. Meeting of Aug. 3. Therapeutic section. [4 ref. Fre]

• ***Summary:*** The soybean (*Le Soya or Soja*) is a legume of the group *Phaséolées*, widely cultivated in China, Japan, and the Far East, where it serves as a foundation of the food of the indigenous people.

The Dutch traveler Kaempfer, in 1712, first reported on this plant, which he designated under the Japanese name Daïdsu. After that it was named: *Dolichos soja* by Linnaeus, *Soja hispida* by Moench, and *Glycine hispida* by Siebold. A detailed botanical description is given. It is an annual herbaceous plant, having slender stems about 80-90 cm in height. Its leaves are trifoliate with a special pattern of veins (*imparipennées- trifoliolées*), its leaflets / folioles are hairy and oval but pointed on the ends. Its flowers are small, papilionaceous corolla, varying in color from white to purple; they are disposed in axillary groups, etc.

The type that I have just described is the one that acclimatizes itself most easily to the European regions where the cultivation of corn / maize is possible. In Japan and China, there are numerous varieties of soya, having brown, black, or greenish seeds. In these countries, each of these varieties has a special use: One kind is used to make tofu (*le Téou-fou*), a kind of cheese of which the Chinese people are very fond. Another is used in the preparation of Shoyu, a kind of sauce which is (so to speak) indispensable to the Japanese. Yet another kind is employed by the Chinese to make Cantonese wine starter (*Kiu-tsée;* [from China]) a solid ferment, which is used in making wines and artificial brandies.

All that is known about the various uses of Soya, about the trials that have been made concerning the acclimatization of this plant in Europe, as well as the chemical composition of the plant and its seeds, can be found in an excellent monograph by Mr. A. Paillieux [1881].

In April 1888, in a communication to the Society for Practical Medicine (*Société de médecine pratique*), I called to the attention of the medical corps the services that this legume could render to diabetics and to invalids, and presented samples of bread made with soya flour.

I am happy to note that my idea did not remain without a response / an echo. Our learned president, Prof. Dujardin-Beaumetz, was kind enough to present to the Academy of Medicine (on 29 May 1888) the soya bread (*pains de Soya*), which I made with no flour other than non-soy flour; he was kind enough to conduct trials with this bread in his department at the Cochin hospital [a famous hospital in Paris].

Later, Mr. Blondel published (*Journal de pharmacie et de chimie*, 5th series, vol. 18, p. 537) a very interesting study on the structure of soybean seeds., and demonstrated the almost complete absence of starch in their tissues. Then Mr. Egasse, in an excellent article in *Bulletin général thérapeutique* (30 Nov. 1888) summarized the various works concerning Soya and its economic and therapeutic applications.

Not much attention was given to Soya [in Europe] until after the Exposition of Vienna in 1873, to which the Japanese brought numerous samples. Professor Haberlandt and Count Cettems were the principal popularizers, and even though they recommended its cultivation mainly from the viewpoint of feeding and fattening livestock, they opened the door to the idea that the seed could be of service if it were introduced as a human food.

In France, the Society for Acclimatization encouraged cultivation trials with Soya, which it sought to popularize; but in spite of the numerous trials that were made and of which the majority gave excellent results, its cultivation continued only in and around Étampes (Seine-et-Oise).

The analyses [of the chemical composition] of soybean seeds that have been made in Austria, Germany, and France are numerous. The writer then gives the composition (in two large tables on p. 299) of three samples of soybeans (from China, Hungary, and Etampes) and their ash as conducted by Mr. Pellet and published in the *Comptes Rendus des Seances de l'Academie des Sciences* (Paris) (1880, vol. 40, p. 1177).

The analyses of Mr. A. Muntz was based on French samples, whose content of starch and sugar was rather high. They contained 6.4% (p. 299).

The sweet material (*matière sucrée*) of the soybean was studied by Mr. Levallois, who also made comparative analyses of the proportion of phosphoric acid and nitrogen contained in wheat and in soybeans. His latter results are given in the form of a short table.

If we compare the chemical composition of Soya, according to the analyses of Mr. A. Muntz, and that of beef that has been defatted (as in a laboratory) according to the analyses of M. Lehmann, we see that the Soya contains more of the useful nutrients / principles than the meat. A table (p. 300) compares the amylaceous and sweet materials, proteins, fats, phosphoric acid, and water for the two foodstuffs.

Soya is therefore a precious plant, which, in a small volume, offers a large nutritive value. Its low starch content makes it very useful in diabetic diets.

The oil contained in the soybean seed, even though it is said that the Chinese use it as an edible oil, is a laxative and has a taste that is not very agreeable; this taste would make it hard to use, even as a substitute for castor oil. It is the oil, above all, which makes it difficult to make bread from Soya

© Copyright Soyinfo Center 2013

flour, and which gives this flour a disagreeable taste, which even cooking does not diminish noticeably. This oil is not, strictly speaking, a drying oil as is often said; it is a mixture of resin, fixed oil, and essential oil (*de résin, d'huile fixe et de huile essentielle*).

With the flour, from which most of the oil has been removed, I have succeeded in making a bread that is not disagreeable. It stays fresh for 4 to 5 days, and has the great advantage for sick people over gluten bread of having a good crumb (the soft, white part of a loaf, other than the crust), not to mention the insignificant amount of starch that it contains.

This bread, cut into slices and dried in a drying stove, furnishes biscuits; finally the flour, mixed with egg yolks, enables us to makes wafers / thin waffles than can be sweetened with saccharine.

Soya bread, in appearance, has a great similarity to rye bread; its color darkens gradually as it ages. And it is easily digested, provided, as Mr. Dujardin-Beaumetz advises, one does not consume more than 250 gm per day.

In using this bread, a certain accommodation must be made; during the first few days it has a mild laxative effect, but this diminishes as one gets used to it.

Many sick people, having previously used gluten bread, have switched to Soya bread basted on its good taste. Then they discovered the additional advantages of a bread that absorbs and retains moisture well, and that stays fresh and soft for rather a long time. Note: At mealtimes, many French people used to dunk their bread (which is served next to the meal) into a hot, tasty liquid (soup, milk, coffee, gravy, etc.) and use it like a utensil to move or push other foods around, and clean the plate at the end of the meal.

The trials conducted to date do not yet allow us to say for sure, in diabetes mellitus, what the action of Soya is on the production of sugar. But we can affirm, already, that the quantities of glucose (*glycose*) do not increase when Soya bread is substituted for gluten bread. A fact that appears to remain constant with diabetics who use Soya, is a decrease in the volume of urine excreted in 24 hours.

If, by virtue of their low starch content, Soya preparations are useful to diabetics, the relatively large proportions of proteins and of phosphates which they contain make them a substantial food which can render a service to debilitated persons.

Discussion: Mr. Constantin Paul says–Concerning Soya biscuits, sweetened with saccharine, recently recognized as good for the feeding of diabetics, I would like to call the attention of the Congress to the services which can be rendered, in the diets of the sick, by the use of saccharine in general, so convenient to use to console the diabetics that that they do not have completely suppress all sweets...

Mr. Stokvis adds that saccharine has been recently used in Holland and he would like to make the same observation as Mr. Paul. As long as saccharine is used in a sufficiently alkaline milieu, no stomach problems are observed. Address: Pharmacist, Paris.

346. Dujardin-Beaumetz, Georges Octave. 1889. L'hygiène alimentaire: Aliments, alimentation, régime alimentaire dans les maladies. Deuxième édition revue, corrigée et augmentée [Food hygiene: Foods, feeding, special diets for illnesses. 2nd ed., revised, corrected, and expanded]. Paris: Octave Doin. viii + 239 p. Series: Conférences de Thérapeutique de l'Hopital Cochin, 1885-1886. Illust. [1 soy ref. Fre]

• ***Summary:*** Dr. Dujardin-Beaumetz, a world-famous physician, lived 1833-1895. He wrote the preface to the first edition on 15 Oct. 1886, and to the second edition in July 1888. This book contains papers presented by the author at 15 conferences. Soya is discussed extensively at the 5th (p. 71-90) and 11th (p. 175-80). Page 72 notes: The principal vegetable proteins (*albuminoïdes végétaux*) have been well studied by Ritthausen (see his book *Die Eiweisskoerper,* 1872, Bonn). They consist of vegetable albumin, vegetable casein, legumin, vegetable gelatin, gluten, and conglutin [*Ils se composent d'albumine végétale, de caséine végétale, de légumine, de gélatine végétale, de glutine et de conglutine.*] As for gluten, its composition is more complex, and Ritthausen affirms that it contains at least four albuminous substances, gluten-casein which is insoluble in alcohol, and three substances which are soluble in alcohol; gluten-fibrine, gliadin [a term first used in about 1828], and mucedin (*mucédine;* a nitrogenous substance, one of the constituents of gluten. Word first used in English in 1879). Note: This is the earliest French-language document seen (Nov. 2003) that contains the word *caséine* or that uses the terms *caséine végétale* or *albumine vegetale* to refer to "vegetable protein."

Page 88 notes: Dr. Bovet has shown that legumin, which is rich in protein and low in starch, can serve as a base for cakes and pâtés to be used in diabetic diets. But certainly the most interesting fact is that which was communicated by Lecerf to the Society for Practical Medicine (Société de médecine pratique; June 1888) concerning soy flour (*farine de soya*).

"Soya (*Le soya*) is a legume very similar to our haricot, which originated in China and Japan, and which is cultivated presently in Austria. From soya one can extract a fatty substance, which the Chinese use as milk and from which they even make a cheese [tofu]. As for the flour, it contains a considerable quantity of protein, more than even beef (36.63% vs. 22.74%), as one can see from the following table... But what is most interesting is its low content of starches and sugars. Lecerf proposed that this flour be used to make a bread for diabetics. Such a bread would contain 45% water, 20.1% protein, 9.35% oil, 2.794% starches and sugars, and 0.863% phosphoric acid. Thus, this bread, which has an agreeable flavor, can be substituted for gluten bread, which contains at least 16-17% starches and sugars.

The chapter on diabetic diets contains a long discussion of bread (p. 181): Bread is an indispensable food. The

© Copyright Soyinfo Center 2013

introduction of gluten bread in the feeding of diabetics, which we owe to Bouchardat, is one of the most important points in the dietary treatment of this disease. But there are various types of gluten bread, each with a different content of starches and sugars; dry gluten bread, sold in slices, contains the least. This brand, made by Cormier, is widely praised by Bouchardat. Page 185 shows a table stating that fresh gluten bread contains 27.07% sugars and Lancry gluten bread contains 31.15%. Boussingault wrote an article titled *"Analyse comparative du biscuit de gluten et de quelques aliments"* [Comparative analysis of gluten biscuits and of some other foods]. (1876, *Annales de Chimie 5:114-26*).

Concerning soya bread (*pain de soja;* p. 187-88): Soya bread constitutes a major step forward in the feeding of diabetics. As noted above, Lecerf has given its composition; it contains less than 3% starches and sugars compared with at least 16% in gluten breads. It is also rich in protein. Therefore there is real interest in replacing gluten bread and potato bread by soya bread in diabetic diets. Address: Membre de l'Académie de médecine et du Conseil d'hygiène et de salubrité de la Seine médecin de l'hôpital Cochin.

• ***Summary:*** The Japanese practice a near-vegetarian diet and consume very little meat. In 1882 only 36,288 cattle were slaughtered and the 37 million inhabitants consumed less than 1 kg per capita each year. The authors found that rice constitutes about 50% of the total vegetable food of the Japanese, followed by barley and wheat (27%), other small grains such as millet and buckwheat (13.9%), with green vegetables, roots, tubers, etc. making up the remainder. Soybeans, which are rich in protein and fat, are not widely consumed as such directly, but are made into other unique foods such as tofu and miso, and a tasty sauce, shoyu. Miso is made in almost every household in Japan. The process for making miso, tofu (*Bohnenkäse*), and shoyu is described (p. 103-04).

A table (p. 121) gives the chemical composition of various Japanese foods (on a moisture-free basis), including soybeans cooked with shoyu, and tofu (*Bohnenkäse*).

Address: Tokyo, Japan.

• ***Summary:*** Summaries of early studies on chemical composition of soybean seed and of miso. The long and interesting section titled "Commercial sauces and food seasonings" (p. 241) is discussed in a separate record.

A table (p. 389) gives numerical data on the oil from various oilseeds, including the soybean: Melting point, saponification number, neutral fat (*neutralfett*), free fatty acids, total fatty acids, molecular weight of the fatty acids, lecithin, stearic acid from lecithin, phosphorus, unsaponifiable components.

Pages 486-90 give a good review of the literature on soybeans, discussing the various types, composition, shoyu or soy sauce, koji, Japanese miso, and tofu. A table (p. 489) gives the composition of 5 soy products analyzed by Edward Kinch: White miso, red miso, fresh tofu, frozen tofu, and soybean cake. König notes that some of these foods are not suited for the German palate, however E. Wein makes several good-tasting dishes from soybeans, used in a soup like beans or peas, in a salad like green beans, or cooked with potatoes or rice and pureed to resemble the Italian 'Polenta'–called 'Sojenta' by Haberlandt. The taste of these soybean preparations reminds one somewhat of almonds or chestnuts. See also soy flour under "Meal" (*Mehl*) (p. 625).

Pages 595-600 give detailed nutritional analyses of soybeans based on studies by various authors: Black oblong soybeans (based on E. Wein 1881, and Edw. Kinch 1882). Yellow soybeans (Anderson, Senff, Fr. Schwackhoefer and Joh. Stua, Zulkowski, E. Mach and K. Portele [of Versuchs-Station St. Michele, original communication; harvested in Tirol, Austria, in 1877], R. Ulbricht and von Koritsánsky [Koritsansky, of Acad. Laborat. of Hungarian Altenburg, original communication; harvested in Hungarian Altenburg in 1878], E. Wildt [of Vers.-Stat. Posen, original communication; harvested in Posen], Schroeder-Napagedl, Blaskovics, Wein, Weiske, Kinch). Brown soybeans (Schwackhoefer, Zulkowski, E. Mach and K. Portele, Ulbricht, E. Wein, Schroeder, Weiske, Kinch). Black round soybeans (Senff, Mach, Wein, Kinch). Other soybeans (Caplan, Mach, Wagner, H. Pellet, Carriere, Kinch, Meissl, Kellner, Jenkins). Soybeans grown with fertilizer / manure (*Gedüngte Sojabohnen*, E. Wein).

Page 625 contains one analysis of whole soybean flour (Sojabohnenmeal) conducted in 1882 by C.H. Knorr in Heilbronn; the analyst was *v. d. Becke und Cosack*. This flour

© Copyright Soyinfo Center 2013

contained 10.23% water, 25.69% nitrogenous substances, and 18.83% fat, etc.

Pages 631-32 give detailed nutritional analyses of soybean products based on studies by various authors: Leguminose-Maggi (18 brands made by Jul. Maggi & Co. in Kempthal, Switzerland; sampled from 1885-1888; studies by E. Schumacher-Kopp, M. Wesener [personal communication]). Soybean preparation named "miso" (Made by Jul. Maggi & Co. in Kempthal; sampled in 1888; Study by W. Kisch [personal communication]). Miso (red or white, 1882; by Edw. Kirch [sic, Kinch]). Tofu (fresh or frozen; E. Kirch [sic, Kinch]). Address: Prof. and Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Professor und Vorsteher der Agric.-Chem. Versuchsstation Muenster i. W., Germany).

351. Rein, Johann J. 1889. The industries of Japan. Together with an account of its agriculture, forestry, arts, and commerce. London: Hodder and Stoughton. xii + 570 p. See p. 6, 55-59, 62-63, 105-08, 157. Illust. Indexes (English and Latin; Japanese). 26 cm. [3 ref. Eng]

• ***Summary:*** This book is a translation of volume II of his superb book *Japan nach Reisen und Studien,* published in 1886. The result of many years of study, including a stay in Japan, it is based on travels and researches undertaken at the cost of the Prussian government. Rein spent the first five months of 1874 in Japan, residing in the German Legation in Tokio and studying lacquer. After submitting a detailed report on the subject, he traveled throughout Japan.

On page 6, the author discusses the *Gokoku* (five chief cereals) and the introduction of agriculture to Japan. "As Tokugawa Ieyasu, the founder of the last Shôgun [shogun] dynasty, emphasizes in the twelfth of his 'Eighteen Laws,' the introduction of agriculture into Japan is ascribed to the sun-goddess *Tenshô Daijin* (Amaterasu). She was, to the old Japanese, Janus and Ceres in one. Her temple, at Yamada, in Ise, was the great national sanctuary, which had to be cared for according to law, and built anew every twenty-one years out of consecrated Hinoki-wood (*Chamæcyparis obtusa* S. and Z.) 'in order that the land might have peace and thrive.' By Gokoku (five chief cereals) were meant rice, barley and wheat, Italian millet, other kinds of millet, and beans–in fact, the principal *Kokurui,* that is, cereals and pulse. The term Go-koku, however, did not meant the same thing in all ages. Thus we find in Kaempfer, *Amoenitatum exoticarum* (1712, p. 834), Kome (*Oryza*), O-mugi (*Hordeum*), Ko-mugi (*Triticum*), Daidsu (*Dolichos soja,* L.), and Adzuki (*Phaseolus radiatus,* L.) mentioned as Gokoku. Later the idea was extended farther, and included all important food-plants belonging to the group of cereals and pulse."

"The Emperor Shinnung [Shen Nung] had introduced and spread the practice of agriculture in China, about the year 2700 B.C. For this he was deified after death, and a temple was dedicated to him in Peking. In the park-like surroundings of this temple, the emperor of China since then, at the time of the spring equinox, annually ploughs a piece of land and sows it with go-koku." Note 1. This is the second earliest document seen (Dec. 2000) that gives an early date (2700 B.C.) for Shen Nung. It is the earliest document seen (Dec. 2000) that weakly links Shen Nung with soybeans, which were probably one of the Gokoku.

Soy-bean is described in the chapter on "Food Plants," under "Pulse or Leguminous Plants." "Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained. Note 2. This is the earliest English-language document seen (June 2008) that uses the word "garbanzos" (or "garbanzo") to refer chick peas.

"In Japan the varieties of soy-bean are distinguished–according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making Shôyu (soy), Tôfu (bean-cheese), and Miso (a sort of sauce), and those eaten in any plain shape." Soy-bean varieties in Japan include: 1. "White (pea-yellow) soy-beans, Japanese Shiro-mame or Haku-daidzu. To this division belongs an early-ripening sort with very small seeds, called Goguwatsu-mame [Go-gatsu], or 'five-months-kind,' because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the Wase-mame or Natsu-mame, that is, early and summer-bean. These two are also called Tôfu-mame, because they are used chiefly in making Tôfu. Another sort serves to produce Miso. It is called Nakate-mame, 'middle-late bean,' its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, Okute-mame (late-bean), Maru-mame (bullet-bean), and Teppô-mame (gun-bean), or Aki-mame (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making Shôyu, while Maru-mame is valuable as horse-feed.

2. Black soy-beans, Japanese Kuro-mame or Koku-daidzu. These are eaten boiled with sugar, as an entrée, or as a relish to rice. A species like it with big, bullet-shaped beans is called Kuro-teppô-mame. 3. Brown soy-beans,

© Copyright Soyinfo Center 2013

Japanese Katsu-daizu (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as Aka-mame, red soy-beans, round, of red-brown colour, in different varieties, and Cha-mame, tea beans, three light-brown sorts of small extent and significance. 4. Greenish or bluish green soy-beans, Japanese Ao-mame or Sei-daizu, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of Aö-mame:–(a) Sei-hito,–epidermis green, inside a whitish yellow. (b) Nikuri-sei,–greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) Kage-mame, with pale green, round beans. 5. Speckled soy-beans, Japanese Fuiri-mame or Han-daidzu. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:–(a) Kuro-kura-kake-mame, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) Aka-kura-kake-mame, with a brown spot on the saddle (eye), otherwise yellowish-green, flat and drawn out long. (c) Fuiri-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima. Note 3. This is the earliest English-language document seen (Sept. 2004) that uses the word "speckled" (or "speckling" or "specks"), or the word "flecks," or the term "light-brown" to describe the color of soybean seeds.

"Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields."

Note 4. This is the earliest English-language document seen (June 2009) which states that there are early-, medium-, and late-ripening varieties of soybeans.

"At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with the soy-bean and of its chemical analysis. His conclusions are as follows:

"(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

"(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

"(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

"(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

"(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

"After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of Austro-Hungary, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

"As I know from a reliable source, people soon became convinced that it was possible to cultivate with certainty the early-ripening yellow sorts. The crops from these, however, are unsatisfactory. It is so difficult to boil them soft that they have no sale and cannot be turned to due account."

The seeds of certain wild kinds of beans also serve for food, incl. Tsuru-mame or No-mame (*Glycine soja*, S. and Z.) and No-adzuki (*Atylosia subrhombea*, Miq.). (p. 62).

Tables (both based on other sources) show: (1) Analyses of soy-beans (*Glycine hispida*, Moench) (p. 62). Gives the nutritional composition of 8 varieties, plus the empty pods, and the straw and leaves. (2) Comparative "analyses of various pulse" (p. 63), including *Glycine hispida* (*Daidzu*–soy-beans), *Phaseolus radiatus* (*adzuki*), *Pisum sativum* (*Yendo*–peas), *Vicia faba* (*Sora-mame*), lentil, yellow lupine, and ground-nut.

Pages 105-08 contain accurate, detailed discussions of shoyu, miso (which "does not spoil, and is said to be at its best when three years old"), and tofu.

A table titled "Average composition of various Japanese oil-seeds according to E. Wolff and others" (p. 157) includes the composition of ground-nut [peanut], sesame (brown, or white), hemp-seed, and soy-beans.

Also discusses: Adzuki (*Phaseolus radiatus*, p. 60, 108). Algae, marine, used as food [sea vegetables] (p. 77, 80-82). Ame, midzu-ame, and barley malt (p. 103-04). Arachis hypogæa (p. 56, 153-54). Fu (wheat gluten, p. 108). Hemp (*Cannabis sativa*, p. 75, 157, 165-66). Kudzu (p. 65, 160, 184). Sesame seeds (Benni-seed, gingeli, p. 154-55). Address: Prof. of Geography, Univ. of Bonn [Germany].

352. Rein, J.J. 1889. Tofu, kori-tôfu, and yuba (Document part). In: J.J. Rein. 1889. The Industries of Japan. Together with an Account of its Agriculture, Forestry, Arts, and Commerce. London: Hodder and Stoughton. xii + 570 p. See p. 107-08. [3 ref. Eng]

• ***Summary:*** "8. Tôfu, called in English bean curd, in German and French, less appropriately, *Bohnenkaese* and *fromage de pois*, is a valuable article of food made in Japan and China from yellow Soja-beans. It consists of fresh coagulated legumine [legumin], so that the English term suits it better than the German. Its preparation is simple.

"The yellow Soja-beans are put to soak, in cold water for from twelve to twenty-four hours, or a shorter time in

© Copyright Soyinfo Center 2013

warm, and then ground between the stones of a hand-mill, water being added to assist maceration. It becomes thus a thin mass, in which the quantity of water exceeds that of the beans about ten times. This is next filtered or pressed through a fine sieve, and the remnant put through the mill a second time. Ten volumes of this filtered stuff are now diluted with three volumes of hot water, and heated to boiling-point. This is done in a kettle, which is only about half filled. When cool again, the mass is filtered through a woollen sack, and the process ends with pressing it under the lever.

"As in our soups from leguminous plants, the legumine is now found dissolved in the filtrate. To coagulate and separate it, there is added Shio-no-nigari (salt-bitter), i.e. brine from sea-salt, consisting principally of chloride of magnesium. Care is taken to have the precipitation take place slowly and quietly. (In China, according to St. Julien, burnt gypsum is also added.) When the liquor has cleared it is dipped out carefully, while the stuff precipitated is placed in four-cornered wooden forms with punctured, movable walls, which are lined with cloth. This is folded together over the Tôfu, a board is laid on top, and the Tôfu pressed out with a moderate weight of stones. Finally, the soft greyish mass is cut into tablets with broad latten [resembling brass] knives, and put away under water. In summer this suffices only for a short time. To be kept longer, it is put up in Shôyu, or pickled, etc.

"Kori-tôfu, frozen or ice-Tôfu, is the spongy, horn-like substance that remains when common Tôfu is allowed to freeze and then thawed and dried in the sun, thus getting rid of most of its water. By Yuba is meant a third preparation, consisting of brownish, tough skins, made by boiling the dissolved legumine of the Tôfu-process, with the addition of some wood-ashes, and then taking away in succession the scums that rise."

Note 1: This is the earliest English-language document seen (April 2013) that uses the term "frozen Tôfu" or "ice-Tôfu" to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (Oct. 2012) that uses the word "scums" to refer to yuba. Address: Prof. of Geography, Univ. of Bonn.

353. Simmonds, Peter Lund. 1889. Tropical agriculture: A treatise on the culture, preparation, commerce, and consumption of the principal products of the vegetable kingdom. New [i.e. 3d] ed. London and New York: E&F.N. Spon. xvi + 539 p. See p. 426. Index. 22 cm.
• ***Summary:*** Near the end of Section 5, "The oil seeds and vegetable oils of commerce," is a section titled "Chinese oils" (p. 426) the content of which is identical to that of the 1877 edition–except that the last paragraph, about oil-seeds in India, is missing.

Also discusses: Linseed oil (p. 399-400). The ground-nut and its oil and cake (p. 400-05, 415-17, 421, 425-426). Sesame seed and its oil (p. 413-17, 426-426).

P.L. Simmonds lived 1814-1897. Address: F.L.S., F.R.C.I. 85 Finborough Road, South Kensington [England].

354. Whitney, William Dwight. ed. 1889. The century dictionary: An encyclopedic lexicon of the English language. 6 vols. New York, NY: The Century Co. See vol. I, p. 488.
• ***Summary:*** This dictionary contains three entries related to the soy-bean in Volume 1. At the entry for "bean" we read: "Sahuca or soy beans, the seeds of *Glycine Soja*, largely cultivated in India and China, from which the sauce known as *soy* is made.

"bean-cake, n. A large cheese-shaped compressed cake of beans after the oil has been expressed, used largely in northern China as food for cattle, and in the sugar-plantations of southern China as manure."

"bean-curd, n. A thick white jelly resembling blanc-mange [blancmange], made of beans, much eaten by the natives of northern China, Corea [Korea], and Japan."

Note 1. This is the earliest document seen concerning soybean products (bean-curd) in Korea; soybeans as such have not yet been reported.

Note 2. This edition of *The Century Dictionary,* published from 1889-1891, is the earliest edition listed in the *National Union Catalog.* Address: Prof. of Comparative Philology & Sanskrit in Yale Univ.

355. Yeo, I. Burney. 1889. Food in health and disease. London, Paris, New York and Melbourne: Cassell & Company, Ltd. x + 583 p. See p. 432-33, 440. Illust. Index. 19 cm. Series: Clinical Manuals for Practitioners and Students of Medicine. Reissued in 1890 in Philadelphia by Lea Brothers & Co.
• ***Summary:*** In Part II, "Food in disease," Chapter 3 is titled "Food in diabetes." "Soya" is mentioned on pages 432-33. "Dujardin-Beaumetz also objects both to gluten bread and to almond cakes; the former he maintains is often found to contain a considerable percentage of starch."

"Quite recently Dujardin-Beaumetz has advocated (Footnote: 'L'Hygiène Alimentaire.' Second edition) the use of 'soya' bread for diabetics, of which he gives the following as the composition:–Soya Bread: Water 45.000. Proteids 20.168. Fats. 9.350. Starch and sugar 2.795. Phosphoric acid 0.863.

Note 3. This is the earliest English-language document seen (Dec. 2011) that contains the term "proteids" (or "proteid") in connection with soybeans.

"This bread, he states, keeps well, and has an agreeable taste, and contains much less sugar-forming material than gluten bread, the best kind of which, he asserts, contains at least 16 per cent. of starch and saccharine substances.

"Lecerf (Footnote: *Journal de Médicine Pratique,* 10 June 1888, p. 923) was one of the first to call attention to the value of the meal of the *Soya hispida* in dietetics. It has a leguminous fruit like the haricot, and is a native of China

© Copyright Soyinfo Center 2013

and Japan, but is now cultivated in Austria. The Chinese extract from soya a fatty substance which they use as milk [soymilk], and even make cheese [tofu] with it. The meal is very rich in nitrogenous substances, more so than animal flesh, and the amount of starchy and saccharine substance is very small."

The section on "Diabetic dietaries" contains "5.–Dujardin-Beaumetz's" (p. 440) which begins: "He adopts with little modification the dietary of Bouchardat. He strongly recommends... *the use of soya bread."*

The author (who lived 1835-1914) mentions gluten on pages 7, 10, 74, 76, 78-83, 184, 186, 193, 194, 428-33, 437, 439-40, 541, and 556.

He seems favor a non-vegetarian diet Chapter 4 (p. 73+), which is titled "Vegetable foods," begins: "We derive from the vegetable kingdom a great variety of foods, many of them of a highly nutritious character, and therefore of great importance to the human race... but as a rule, in vegetable foods the non-nitrogenous constituents are greatly in excess of the nitrogenous ones, and occur chiefly as carbo-hydrates; and, save in the case of certain fruits and seeds, they contain but little fat."

"There is legumin or vegetable casein, abundant in the seeds of the leguminosae, and resembling in all essential particulars the casein of milk" (p. 74). Chapter 12 (p. 341-54), which is titled "The relative advantages of animal and vegetable foods–Vegetarianism (Beneke's diet for carcinoma)," contains a fair and balanced review of the literature on vegetarian and non-vegetarian diets. He states (p. 344-45): "There are few persons in the present day who advocate the practice of limiting the human dietary to substances of exclusively *vegetable* origin. The majority of the so-called 'vegetarians' of modern times adopt no such exclusive diet, but take, together with the more highly nutritive forms of vegetable food, such typical animal foods as eggs, milk, cream, butter, and cheese. They object only to animal flesh. But those who take for their food the egg and the milk prepared by animals from the vegetable substances they feed on, and reject only animal flesh, have no claim to call themselves 'vegetarians.' They feed, as has just been said, on the most typical and concentrated of animal foods. They have a *sentimental* objection to killing animals for food, and they found upon it a scheme of diet which we believe to be utterly impracticable on an extensive scale, and irreconcilable with the existing state of civilised man, not so much on strictly physiological grounds as on general economical considerations. There can be no objection to individuals adopting any kind of diet which they may find answer their needs and minister to their comfort; it is only when they attempt to enforce what they practise on others that they must expect to encounter a rational opposition."

"But there exists also abundance of evidence that a purely vegetable diet is not the most appropriate for the production of either physical or intellectual effort.

"Jules Béclard has recorded in his well-known text-book on Physiology that 'the workmen employed at the forges of Tarn were for a long period fed with vegetable substances. It was then found that all the workmen lost, on an average, fifteen days' work a year on account of exhaustion or illness. In 1883, Mons. Talabot, deputy of La Haute Vienne, took charge of the forges. Meat was then made an important part of the diet. The health of the men afterwards improved so greatly that they did not lose more, on an average, than three days' labour a year. Animal food produced a gain on each man of twelve days' work a year.'

"It has also been stated that the Italian labourers from Lombardy, with their largely vegetable dietary, performed much less work when engaged in piercing the St. Gothard Tunnel than their Swiss co-labourers with a more richly animalised scale of diet."

The author also mentions the words "vegetarian," "vegetarianism," or "vegetable diet / dietary, / foods / kingdom / origin / substances" on pages vii, x, 32, and 406-408. Address: M.D., F.R.C.P., Prof. of Clinical Therapeutics, King's College, London, and Physician to King's College Hospital [London, England].

356. *Lancet.* 1890. Analytical Records: Bread and biscuits made from the soya bean (G. Van Abbott and Son, 6, Duke Street Mansions, Grosvenor Square, W. [London]). 136(3494):342-43. Aug. 16.

• ***Summary:*** "The use of 'soya' bread has recently been advocated for diabetics by no less eminent an authority than Dujardin-Beaumetz. Lecerf, according to Professor Yeo was one of the first to call attention to the value of the meal of *Soya hispida* in dietetics. It has a leguminous fruit like the haricot, and is a native of China and Japan, but is now cultivated in Austria. The Chinese extract from soya a fatty substance which they use as milk [soymilk], and even make cheese [tofu] with it. The meal is very rich in nitrogenous substance, more so than animal flesh, and the amount of starchy and saccharine substance is very small. Our examination of the bread before us confirms this. We find it to contain as much as 25.02 per cent. nitrogenous matter, and as little as 2.72 per cent. starch, and 4 per cent. of mineral matter. In texture it is just like ordinary wholemeal bread, and it possesses quite an agreeable taste. Messrs. Abbott have evidently made a very valuable addition to their list of foods which are intended for the use of the diabetic. The biscuits are not less satisfactory." Address: England.

357. Schlegel, G. 1890. Re: Dr. Vorderman's comments on tofu (Letter to the editor). *T'oung Pao* (*General Newspaper*) 1:273. Oct. [Eng]

• ***Summary:*** Dr. Vorderman writes from Samarang [Semarang], Central Java: "The better I get acquainted with the Chinese, the more I am astonished at the relative height they have reached in (medical) practice." He discovered that

© Copyright Soyinfo Center 2013

their well-known *beh ko* (Cc = Chinese characters given) is exactly the same preparation as our malt-extract, and is often prescribed for poor patients in the same way.

"Without knowing any thing of the theory, they prepare leguminous curds: *Tau-hoo* (Cc for doufu/tofu) and *Tau-koa* (Cc for *dougan* or pressed tofu) from Kedelei-beans (Phaseolus mas [sic, max]) by precipitating the legumine with calcined gypsum, which gypsum is imported in a crude state from China to Batavia [Jakarta, West Java, Indonesia], and is there called *Batu tau* (Malay *batu* = 'stone' and Chinese *tau* = 'bean')."

Note: This is the earliest English-language document seen (April 2013) that uses the word "Tau-hoo" or "Tau-koa" (or "tau hoo" or "tau kua") to refer to Chinese-style tofu. Address: Semarang, Central Java.

358. Chamberlain, Basil Hall. 1890. Things Japanese: Being notes on various subjects connected with Japan. London, K. Paul, Trench, Trübner & Co.; Tokyo, the Hakubunsha, Ginza; etc. ii + 408 p. Index. 21 cm. 2nd ed. 1891. Slightly revised edition published 1905. Reprinted in 1970 by Charles E. Tuttle Co., Inc. (Rutland, Vermont, and Tokyo). [50+* ref]

• ***Summary:*** The author, who arrived in Japan in 1873 and was first introduced to the mysteries of the Japanese language by a dear old samurai, has lived through the transition stage of modern Japan.

This book is arranged alphabetically by subject. An extensively revised 2nd edition was published in 1891. Food (p. 122-25): "The following is a specimen of the bill of fare at a Japanese banquet. The reader must understand that everything is served in small portions, as each guest has a little table to himself, in front of which he squats on the floor:–Preliminary course, served with sake:–*suimono,* that is, a kind of bean-curd [tofu] soup;... *sashimi,* minced raw fish; *hachi-zakana,* a fine, large fish, either boiled with salt or boiled with soy [sauce]; *uma-ni,* bits of fish or sometimes fowl, boiled with lotus-roots or potatoes in soy and in a sort of liqueur called *mirin;*...

"First course (*Zembu*):–*Shiru,* soup which may be made of bean-curd [tofu], of fish, of sea-weed or of some other material;... *aemono,* a sort of salad made with bean sauce [miso] or pounded sesamum seeds;..."

"It is the custom, too, to set food before a guest, at whatever time of day he calls. On such occasions soba is in request–a sort of buckwheat vermicelli, served with soy [sauce] and the sweet liqueur called *mirin;* or else *shiruko,* that is, rice-cakes [mochi] with a sauce made of red beans [azuki] and sugar."

On Buddhism and vegetarianism in Japan (at Food, p. 122-23): Beans are a constant part of the daily diet. Buddhism has left its impress here, as on everything in Japan. To Buddhism was due the abandonment of a meat diet, now over a thousand years ago. The permission to eat fish, though that too entailed the taking of life, which is contrary to strict Buddhist tenets, seems to have been a concession to human frailty. Pious frauds, moreover, came to the rescue. One may even now see the term 'mountain whale' (*yama-kujira*) written up over certain eating-houses, which means that venison is there for sale. The logical process is this:–A whale is a fish. Fish may be eaten. Therefore, if you call venison 'mountain whale,' you may eat venison. Of course no actual prohibition against eating flesh, such as existed under the old *régime,* exists now. But the custom of abstaining from it remains pretty general; and though beef and pork were introduced at the time of the late revolution,... recent statistics show that meat-eating is again on the wane."

There are also interesting sections on Kaempfer, Engelbert (p. 187-88), Perry (Commodore) (267-69), and Siebold, Philipp Franz, Freiherr (p. 320-22).

For an excellent, later book with the same title, written by a Japanese in English, see Mock Joya (1960). Address: Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo [Japan].

359. Gorkom, K.W. van. 1890. Supplement op De Oost-Indische Cultures, in betrekking tot handel en nijverheid [Supplement to East-Indian crops: In relation to commerce and industry]. Amsterdam, Netherlands: J.H. de Bussy. vii + 303 p. See p. 283-87. Supplement to the 1884 publication of the same title. 25 cm. [2 ref. Dut]

• ***Summary:*** The section titled "Kadelé" (Soybeans) discusses the cultivation of soybeans (also called *katjang djepoen* [Japan beans], Soya, *Glycine hispida,* or *kadelé boontjes*) on Java and the experimental culture in Europe. Interest is shown in the cultivation of soybeans as a food for diabetics.

Soya is cultivated in Java both for its seed and for its green leaves which are used as animal feed. The small soy beans are roasted by the indigenous people or, in the form of cakes / patties (*tetempé* [tempeh]), eaten like bean-cheese (*boonen-kaas* [tofu]). ("*De kadele boontjes worden door de inlanders geroosterd of, in den vorm van koeken* (*tetempé*), *als boonen-kaas gegeten*").

Note. This is the earliest Dutch-language document seen (April 2013) that uses the term *boonen-kaas* to refer to tofu.

The author considers that Indonesian soy sauce (*kétjap*) is inferior to Japanese soy sauce. Nutritionally, soya is rich in proteins (*proteïnestoffen*) (± 38%) and fat (± 21%), and low in starch and sugar.

In Germany and Austria, many years have been spent in developing and cultivating varieties of soybeans adapted to the European climate. Dr. Haberlandt, professor at the University of Vienna, distinguished himself for this work, even to the extent that a variety was named after him. In the experimental gardens at the National Agricultural in Wageningen [Netherlands], a field of soya is cultivated, but the results are not yet satisfactory. Yields are low, especially during the dry and warm summers, when the

© Copyright Soyinfo Center 2013

plant flowers abundantly, but the seeds don't have time to develop properly. The author hopes that through continued experiments, a suitable variety will be developed.

The soya bean has received attention from the medical profession because of its composition. Dr. Le Cerf of Paris was one of the first to try using soya with diabetic patients. He introduced soya bread instead of an almond bread and was successful with it. Dr. Stokvis, a professor in Amsterdam, recommended soy bread (see *Nederlandsch Tijdschrift voor Geneeskunde* No. 10), and the chemical analyses published by Mr. L.C.W. Cox in the same journal (issue No. 19) supported the recommendation. Patients were content with the bread, although they did not find it very appetizing. The author states that if rye or wheat flour could be used together with soy flour, they would yield a very digestible and nutritious food. For this reason also he recommended experiments aimed at acclimatizing soya to Europe.

Dr. Sollewijn Gelpke has published a work titled "The Yield and Cultivation of Dryland Crops," in which he writes that the cultivation of soya is quite easy and in Java takes place on sawahs (wet rice fields) and clay, in contrast to peanuts (*katjang-tanah*), which is grown on tegals and sand. [Note: A tegal is a dry (not irrigated) field, near the rice fields, but used for vegetables and other secondary crops.] Soya beans are sun-dried, soaked in water for 24 hours, then sown on land that has first been flooded with water. Otherwise they are sown by poking holes in the ground and dropping in the seeds. Gelpke says that soya is so appealing to the indigenous people that, if the soil is hard, he just opens the surface with a crowbar and sows his seeds. This way of cultivation is seen especially on the heavy clay soils of Java.

In the Netherlands it is not well known that soya is cultivated in Java, because it could be imported for less money than is currently the case. The author has samples of the beans and has noticed that the seeds from European experiments are smaller in size than those grown in Java.

Various laboratory analyses are given. It is noted that soya flour coming from Hungary is used for the production of soy bread, baked by Mr. Koehler of Amsterdam. Mr. Cox studied this bread. The author believes that the sugar content of this bread is high enough to make it unsuitable for diabetic patients, and notes the presence of starch and dextrin. Morawski and Harz have confirmed that ripe soya beans don't contain starch, whereas unripe beans do.

Note 1. Kempski (1923) says: "see van Gorkom's Oost-Indische Cultures, neu herausgeg. von Prinsen-Geerligs, Verlag de Bussy, Amsterdam, 1913, Vol. III, p. 283/86."

Note 2. This is the earliest Dutch-language document seen (Aug. 2003) that uses the word *proteïnestoffen* (or *proteïnestoff*) to refer to proteins in connection with soybeans. Address: Dr., Former Head Inspector of Crops, Dutch East Indies (Oud-Hoofd-Inspecteur der Cultures in Nederlandsch Oost-Indië).

360. Henderson (Peter) & Co. 1890. Henderson's American farmers manual. New York, NY. 26 p. 28 cm.

• ***Summary:*** In the section titled "Miscellaneous Plants for Forage, Soiling, &c.," the soybean appears on page 24, along with 24 other such plants. The entry reads: "Soja or Japan Bean. (*Glycine hispida.*)–A variety altogether distinct from any other Bean. The haulm is strong and vigorous, and covered with soft fur. The pods contain four to five small Beans of a yellowish brown color. This Bean is very suitable for growing in the *South*, and is used largely for plowing under. In Japan the beans are used principally for making 'Tofu' or bean curd. Per lb., 20 cts. [$0.20]; per bushel of 60 lbs., $6.00."

Note 1. This is the earliest listing seen for the soybean in any seed catalog published by Peter Henderson & Co. where a description of the plant is given. Sherry J. Vance, research aide at the L.H. Bailey Hortorium (462 Mann Library, Cornell University, Ithaca, New York 14853-4301) wrote to William Shurtleff of Soyfoods Center on 22 April 1997: "Per your request, I have checked our catalogs for Peter Henderson from 1881 to 1890 looking for entries on soybeans. Despite a thorough search, I was unable to locate soybeans offered in any of the Henderson catalogs from 1881-1889."

Note 2. Peter Henderson lived 1822-1890. On the cover of this catalog are four illustrations of farming scenes. Across the top is written: "If you have no use for this Catalogue, kindly give it to some of your farmer friends." Address: 35 & 37 Cortland St., New York.

361. Hosie, Alexander. 1890. Three years in Western China; A narrative of three journeys in Ssu-ch'uan, Kuei-chow, and Yun-nan [1882-84]. London: George Philip & Son. New York: Dodd, Mead. xxxiv + 302 p. Illust. Index. 23 cm. 2nd edition published in 1895.

• ***Summary:*** In pinyin, these three provinces are now written: Sichuan (northernmost of the three), Yunnan (southern), and Guizhou (southeastern). The author, an excellent observer and writer, was stationed in Western China by the British government from 1882 to 1884. Throughout this travelogue, on 18 separate pages, he reports that [soy] beans were being grown, usually with other local crops such as barley, buckwheat, ground-nuts, hemp, maize, millet, oats, opium poppies, rape, and wheat.

On the way to Ch'ung-King [Chongqing] in Sichuan province: "My men, who for the last few days had been unable to procure rice, and had subsisted for the most part on bean-curd, rejoiced to find themselves in a valley of their own province where paddy, maize, tobacco, hemp, and beans were well advanced..." (p. 68).

Near Ch'ung-King: "The hill-sides were also covered with [soy] beans, which seemed to thrive well on a scanty soil." The greenery, houses, and restaurants "invite the

© Copyright Soyinfo Center 2013

traveller to tarry for a moment and enjoy their cool shade. As pack animals are usually turned loose to forage for themselves, the peasantry, whose lands adjoin the high-road, have hit upon a novel plan to prevent their depredations. Wheat and beans were thickly sprinkled with feathers, which, as might naturally be supposed, are not a pleasant sauce" (p. 72).

In the city of Hou Chou in Sichuan province: "A special industry of the city is the manufacture of a soy [sauce], which is famous, not only in Ssu-ch'uan, but in other provinces. Chinese soy, as is well known, is imported to England in large quantities, and is, I believe, used in the manufacture of sauces. In China itself there is amongst foreigners a decided prejudice against soy, and a fresh arrival is often solemnly assured that it is made of boiled down cockroaches; yet, to the best of my information, it contains nothing more deleterious than the juice of a bean" (p. 164).

The city of Nei-chiang [Neijiang] in Sichuan province exports "bean-sauce" [probably soy sauce], opium, grass-cloth, and several other things. Sugar cane and ground-nuts cover the hill slopes (p. 169). A fold-out map at the back shows the author's route.

Also discusses: Ground-nuts [peanuts] (p. 83, 169) and the sweet cooking oil extracted from them (p. 83). Women who wore coarse hempen clothes (p. 152). Address: H.B.M. Consular Service, Wenchow, China.

362. Purdy, Charles W. 1890. Diabetes: its causes, symptoms, and treatment. Philadelphia and London: F.A. Davis. viii + 184 p. See p. 87. Index. Physicians' and students' ready reference series, No. 8. [2 soy ref]

• ***Summary:*** In Section VI, "Treatment of diabetes mellitus," the soya bean is mentioned (p. 87): *Soja*, or Japanese bean, owing to its high nutritive properties and its low percentage of starch, is likely to enter largely into the diabetic diet of the future. It has recently been much cultivated in some parts of Europe, especially in Hungary. Its composition is as follows: Nitrogen, 36.6 per cent.; fatty matter, 17 per cent.; starchy matter, 6.4 per cent.

"A sauce is made from *soja* which bears the name of *miso* and *soju* [shoyu]. A kind of cheese [tofu] is made from it, and very much prized in Japan as a table-luxury. (Footnote: See Egasse 1888, p. 433-38).

"In Europe the soja has already been utilized for food of men and animals, and recently the attempt has been made to make bread of it. This is very difficult because of the large proportion of oil which it contains. This oil is very purgative [sic], and hence it becomes necessary to rid the meal of it in order to render it fit for domestic usages. Lecerf in Paris and Bourdin in Rheims have succeeded in rendering the bread made from this meal very well supported by the stomach.

"This bean, which, as the analysis shows, is more nutritive than meat, serves for nourishment to a great country like Japan, under the forms of sauce, of cheese, of farina, and even of *real* artificial milk" (Footnote: Therapeutic Gazette, March 15, 1890, p. 150).

Gluten is also mentioned several times (p. 84-85): "First in importance ranks the question of bread in the construction of any diabetic diet-list. The withdrawal of this article from the list is usually the most serious deprivation the patient has to encounter. In consequence of this fact, an almost endless number of breads have been placed upon the market, which are *claimed* to be free, or nearly free, from starch, and are hence named diabetic breads. Now, I do not hesitate to say that most breads which have been put upon the market with such claims are 'a snare and a delusion,' and have unquestionably shortened the lives of hundreds of diabetic patients. Most samples of so-called 'diabetic flour,' from which the starch is claimed to have been eliminated, 'or nearly so,' contain from 30 to 70 per cent. of that article... But Dr. Chas. Harrington, of Boston, has rendered us under perpetual obligations to him for fearlessly exposing the most of these deceptions, by publishing a careful analysis of most of them in detail. It may first be noted that his analysis of home-made bread gives the proportion of contained starch as 44.99 per cent. The Graham wafer, made of Graham flour, contains 58.45 per cent. of starch. The gluten flour, of Farwell & Rhines, of Watertown, N.Y., contains 67.17 per cent. of starch... The gluten flour of the New York Health Food Company contains 66.18 per cent. of starch. Bread made of this flour would contain 35 per cent. of starch... The Boston Health Food Company's diabetic flour, No. 1, sold as absolutely non-starchy, contains 62.94 per cent. of starch. Bread made of this flour would contain 30 per cent. of starch." Address: M.D., Queen's Univ. [Kingston, Ontario, Canada].

363. Watt, George. 1890. A dictionary of the economic products of India. Vol. 3. London: W.H. Allen & Co.; Calcutta, India: Office of the Superintendent of Government Printing. 534 p. See p. 509-11. Index (in Vol. 7). 25 cm. [14 ref]

• ***Summary:*** Contents related to the soy bean: *Glycine* (p. 509-10). *Glycine hispida*, Maxim. (p. 510-11): Synonyms, vernacular, references, habitat, oil, medicine, food and fodder, chemistry, the bean, oil.

Under Glycine: "Reference having been made to the authorities of the Calcutta Herbarium on the subject of G. soja, Sieb. et Zucc., being, as shown in the Flora of British India, a native of this country, Dr. Prain kindly went into the subject very carefully. He writes: 'We have not, from any part of India, any specimens of G. soja proper. The Khasi Hills plant is more erect, more hispid, and has larger legumes than the Himalayan, and indeed resembles G. hispida, Maxim., quite as much as it does the Indian cultivated "G. soja," which, indeed, it connects with G. hispida. It is, in fact, the plant most like the wild G. soja, S. et Z., which no one ever professes to have found wild in India, while it is

© Copyright Soyinfo Center 2013

also the one most like G. hispida, Maxim. (which has never been found wild anywhere). It is the plant collected by Dr. Watt and myself in the Naga Hills.'

"The writer noted on his Naga Hill specimens that they were found in a semiwild state, and that the plant was known to the Angami Nagas as *Tsu Dza*, a name not unlike soja. Throughout India, the soy bean is cultivated, black and white seeded forms being met with, which vary to some extent, but all preserve the specific characters of G. hispida. Plants raised at Saharanpur from Japanese seed have larger and broader leaves than the usual Indian forms. The fact that this cultivated plant possesses, even among the aboriginal tribes, names which are original, i.e., in no way modern derivatives, points to an ancient cultivation, if, indeed, it may not be accepted as an indication of its indigenous nature. (Editor.)"

"Vern[acular]–Bhat, bhatwan, ram kurthi (Hind. [=Hindi or Hindoostanee]); Bhut (Punj. [= Panjabi]); Gari-kulay (Beng. [=Bengali]); Hendedisom horec (black-seeded), Pond disom, horec (white-seeded variety) (Santal); Tzu-dza (Naga); Bhatnas, bhatwas (Nepal); Seta, kala botmas (Parbat.); Musa, gya (Newar); Khajuwa (Eastern Terai); Bhut (Kumaun).

References: The author cites 17 early references concerning soya and, using information from these.

This brief bibliography on soya is one of the best and worst seen. Its is good in that it cites a host of previously uncited publications. It is bad in that the references are so abbreviated as to often be incomprehensible; and some of them are incomplete or incorrect.

Habitat: "Extensively cultivated throughout India and in Eastern Bengal, Khasia hills, Manipur, the Naga hills, and Burma, often found as a weed on fields or near cultivation."

Medicine: "A decoction of the root is said to possess astringent properties." Food and fodder: "The Soy-bean forms an important article of food in China and Japan. Since 1873, it has been successfully grown in the warmer parts of Europe. It is also widely spread, in a cultivated state, over a great part of the Himálaya [Himalaya] and the plains and lower hills of India. On the plains the crop is generally grown by itself, as a *kharif* crop; the seeds are sown from June to September, and the harvesting takes place from November to January.

"The bean is eaten in India in the localities where cultivated. The Rev. A. Campbell states that in Chutia Nagpur it is generally used roasted and ground as *satu*, or simply roasted in the form of *atá*. In other parts of the country it is also eaten in the form of *dal*. In China and Japan three preparations are made from the soy-bean, namely soy-sauce, soy-cheese, and a kind of paste. The last two of which are manufactured by crushing and pressing the seeds."

Note 1. An extensive "List of works consulted" (bibliography) appears in Vol. I (1889, p. xiii-xxii), followed by a list of contributors (p. xxiii-xxvi) and list of abbreviations (p. xxvii-xxxiii).

Note 2. This is one of earliest documents seen (March 2005) that clearly refers to the cultivation of soybeans in Burma.

Note 3. This is the earliest English-language document seen (Nov. 2012) that uses the word *satu* to refer to roasted whole soy flour, or that mentions roasted whole soy flour is made and used in India.

Sir George Watt lived 1851-1930. This 7-volume work, published from 1889 to 1896, is arranged alphabetically by product. An extensive bibliography is in vol. 1, and the index comprises vol. 7. Address: M.B., C.M., C.I.E., Reporter on Economic Products with the Government of India.

364. Turner, Fred. 1891. New commercial crops for N.S. Wales: The cultivation of the soy bean (*Soja hispida*, Moench.). *Agricultural Gazette of New South Wales* 2(11):648-50. Nov.

• ***Summary:*** "The soy bean is indigenous in India, Japan and China. There are numerous varieties of the plant cultivated in those countries, including both tall and dwarf-growing kinds, but it is the large-seeded varieties of the latter which I would particularly recommend for cultivation in this Colony, because they are not only more easily managed, but, generally speaking, are more productive to any given area than the tall growing kinds. The dwarf soy is an annual hairy growing plant, growing about 2 feet high, with trifoliate leaves, and small flowers borne is short axillary racemes. These are succeeded by oblong three or four seeded hairy pods. As will be seen from the engraving of the plant, it is a good deal like the ordinary dwarf kidney bean in its habit of growth, but differs materially in the superior quality of the pulse which it yields. The very productive and pulse yielding plant has been cultivated in Asiatic countries probably from time immemorial, but only within the past twenty years or so has it attracted the attention of European cultivators. In the southern parts of Europe, the cultivation of the dwarf kinds have proved a great success, and in France they are said to be an important crop.

"Some of our leading seedsmen have now become aware of the value of the soy bean, and seeds are now obtainable in Sydney. The plant has already been grown in a small way in a few places in this Colony, and has proved itself well adapted to our climate, so that there is no risk in attempting its cultivation here, in suitable places, on a large scale."

Note 1. This is the 2nd earliest document seen (March 2010) that clearly refers to the cultivation of soybeans in Australia or Oceania. This document contains the 2nd earliest clear date seen for cultivation of soybeans in Australia or Oceania (Nov. 1891). The source of these soybeans is unknown.

"Moreover it is not only a vigorous growing and a heavy yielding pulse plant, but it appears to keep remarkably free from both insects and fungoid pests." Note 2. This is the earliest English-language document seen (Aug. 2007) that

© Copyright Soyinfo Center 2013

uses the word "fungoid" to refer to fungal.

"Having eaten the seeds of the soy bean, I can say that they are an excellent addition to the pulse yielding plants we have already under cultivation. As regards their chemical composition I cannot do better than quote the analyses of Professor Church and Dr. Forbes Watson. 'Although there are a number of varieties of the soy bean, the chief differences between them lying in the size, shape, and colour of the seeds, yet these varieties are not distinguished by definite differences in chemical composition. That composition entitles the soy bean to the highest place, even amongst the pulses, as a food capable of supplementing the deficiencies of rice, and of other eminently starchy grains. Very few vegetable products are so rich as the bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35 per cent, and the latter to 19 per cent. The cultivation of the pale large seeded varieties should be extended."

Facing this first page is a full page illustration of a soy bean plant, titled *Soja hispida*, Moench. "Soy Bean." with an enlarged pod (A) and seed (B). It has been copied from an 1882 issue of *The Garden* (July 29, p. 93) then modified slightly.

Two tables are titled "Composition of soy bean." The first, by Professor Church, shows the composition in 100 parts [percentage] and in 1 lb. The second by Dr. Forbes Watson, shows the composition with husk and husked.

"'The nutrient ratio here is about 1.2 while the nutrient value is 105. Potash forms early one-half and phosphorus pentoxide one-third of the ash of the soy bean. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers [albuminoids = proteins], and 7 per cent of oil.'"

"The soy bean can be grown nearly all over that portion of the Colony where late spring or early autumn frosts do not occur, and with irrigation it might prove a valuable plant to grow in the interior. A good guide to go by is to cultivate the plant in those parts where the kidney bean will flourish, and this is over an immense area of New South Wales. The soybean is rather an exhausting crop, therefore it should be an alternating one. It would do very well to follow after a root crop. To obtain the best results it should be grown on a moderately light, well drained, and well worked soil that is rich in organic matter. The plant will grow well enough on other kinds of soil provided that they are drained, and well worked, and, if not naturally fertile, some suitable manures are applied. If well rotted farm-yard manure is not available, then sulphate of potash, or nitrate of soda, might be used with advantage. If farm yard manure is applied to the land, it should be ploughed in some time previous to sowing the crop, or it might have a tendency to cause a too rank growth of the plants, at the expense of the yield of beans. Commercial manures may be used on the land when it is prepared to receive the crop.

"Sowing the seed. From the Hunter to the Tweed Rivers, it would be possible to obtain two crops in the year by sowing in October, then again in December if there is a sufficient amount of moisture in the soil. South of the Hunter River, however, it will be hardly likely that more than one crop can be harvested during the year. The seed for this should not be sown before the middle of October, or the beginning of November, according to situation. It would perhaps be as well to state that the young plants are very susceptible to frost, 2º Fahr. being quite enough to blacken them." Gives more details on sowing, then a paragraph on harvesting.

The last section is titled "Uses: The beans can be picked from the plants whilst green, and cooked and eaten without previous preparation. Ripe soy beans should, however, be steeped in warm water for some time before they are cooked, otherwise they will remain almost as hard as they were before cooking. In China and Japan the soy bean cheese [tofu] and a kind of paste [miso] are important articles of food. In those countries also soy sauce is made from the beans, which is not unknown to European palates. The sauce is said to be made in the following way. Boil the beans with equal quantities of wheat or barley, and leave it for three months to ferment, after which salt and water are added, and the liquid strained. Soy sauce is extensively used in Asia, and to some extent in Europe for flavouring certain dishes, especially beef, and it is supposed to favour digestion."

Note: This is the earliest English-language document seen (April 2013) that uses the term "soy bean cheese" to refer to tofu.

365. Chamberlain, Basil Hall. 1891. Things Japanese: Being notes on various subjects connected with Japan... 2nd ed. revised and enlarged. London: Sampson Low, Marston and Company, Ltd.; Hongkong, Shanghai, Yokohama, and Singapore, Ltd.: Kelly & Walsh, Ltd. [8] + 503 p. Index. 1st ed 1890 (408 p.). Slightly revised edition published 1905. Reprinted in 1970 by Charles E. Tuttle Co., Inc. (Rutland, Vermont, and Tokyo). [14 ref]

• ***Summary:*** This book is arranged alphabetically by subject. Festivals (p. 154): "*Setsubun* is the name of a movable feast occurring sometimes late in January, sometimes early in February, on the eve of the first day of spring, old calendar. Beans [roasted soybeans] are scattered about the house on the evening of this day in order to scare away demons, and of these beans each person present eats one more than the number of the years of his age."

Food (p. 168): Same as in the 1890 ed.

Sun, moon and stars (p. 394): There are three great nights of the lunar year for moon viewing. "The 15th night of the 8th moon, which is no other than our harvest moon at the full, is celebrated by an offering of beans and dumplings and of bouquets of eulalia-grass [*susuki*] and lespedeza blossom.

© Copyright Soyinfo Center 2013

This moon is termed the 'bean moon.'"

Note: In *Chado: The Way of Tea,* a translation of the Japanese classic *Sado-sai-jiki,* and various other Japanese books we learn that the full moon on the 15th night of the 8th lunar month is the brightest and most widely viewed one of the year and is called *meigetsu* (literally "bright moon"). Aesthetic appreciation of the full autumn moon originated in China as early as the Han dynasty (202 BC to AD 220). Moon-viewing became popular in China during the Tang dynasty (618-907) and this tradition was transmitted to the Japanese court in Kyoto in about the 8th century; the aristocracy called this festival *Otsukimi* ("moon viewing") and celebrated it, outdoors, by composing poems, listening to music, etc. Today that date falls in mid-September. In both Japan and the West, this is the "harvest moon" and its celebration a pre-harvest festival.

However it is the *next* full moon, about a month later, on the 13th day of the 9th lunar moon that is called the "bean moon" (*mame-meigetsu*). It is indeed, as Chamberlain says, celebrated by an offering of beans (*edamamé,* or green vegetable soybeans) and dumplings (glutinous rice steamed with chestnuts). In some parts of Japan the edamamé are mashed, sweetened with sugar, then used to coat rice-flour dumplings. This *mame-meigetsu* is still celebrated at the Kitano Tenmangu Shrine in northwest Kyoto.

Tea (p. 403): Other tea-like infusions: "*Mugi-yu,* an infusion of parched barley; *Mame-cha,* a similar preparation of beans. *Fuku-ja,* or 'luck tea,' is made of salted plums, sea-weed, and xanthoxylon seeds, and is partaken of in every Japanese household on the last night of the year."

Concerning red beans [aduki]: Birthdays (p. 56): "Birthdays are not much observed in Japan, except that rice mixed with red beans [azuki] is eaten on the auspicious day."

Festivals (p. 154-55): Dec. 13.–This day is called *Koto-hajime,* that is, "the beginning of things," because such preparations for New Year as house-cleaning, decorating, and the pounding of rice for cakes (*mochi*), are then taken in hand. People eat *o-koto- jiru* on this day,–a kind of stew whose ingredients are generally red beans [azuki], potatoes, mushrooms, sliced fish, and a root called konnyaku."

Jan. 15-16.–The end of the New Year holidays. The 16th is the *Hokônin no Yado-iri,* or Prentices Holiday Home. Rice-gruel mixed with red beans [azuki] is eaten."

N.B. *Azuki-meshi,* that is, rice mixed with red beans, is eaten on the 1st, 15th, and 28th of each month, these being the so-called *san-jitsu,* or "three days." On the 30th, people eat buckwheat vermicelli (*misoka-soba*).

Overview of Japanese commerce: "The chief progress made during the past thirty years has been in industrial developments" (p. 433). A large table show imports to Japan in 1890 (p. 434): The top five imports (with the value in million yen) are: Textiles and textile fabrics 20.49. Rice 12.30. Sugar 8.48. Raw cotton and wool 5.74. Kerosene oil 4.95. "Oil cake" [mostly soybean cake] is another major import, but grouped with oils, oil wax, and paints in oil 0.41.

Exports from Japan (p. 434-35): The top five are: Raw silk, waste silk, and cocoons 16.75. Tea 6.28. Copper 5.36. Silk piece goods and silk manufactured goods 3.64. Coal 3.10. Also seaweed 0.68.

The top five ports for exports and imports are (p. 435): Yokohama 73.0. Kobe 49.0. Nagasaki 7.7. Osaka 3.80. Shimonoseki 1.77.

Japan's leading trading partners (imports + exports) are: Great Britain 32.5. USA 26.7. Hongkong 14.8. China 14.0. France 12.2. Address: Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo.

366. Dujardin-Beaumetz, Georges Octave. 1891. Ueber die Behandlung des Diabetes mellitus [On the treatment of diabetes mellitus]. In: Verhandlungen des X. Internationalen Medizinischen Congresses. See vol. 2, part 5, p. 78-101. Held 4-9 Aug. 1890 at Berlin, Germany. [Fre]

• ***Summary:*** This section of the International Medical Congress consists of three papers on the treatment of diabetes. The first, by Mr. Pavy of London, is in English. The second, by Mr. Dujardin-Beaumetz of Paris (p. 84-91), is in French. Since Mr. Dujardin-Beaumetz was unable to attend, his paper was read by Mr. Ewald of Berlin. The third paper, by Mr. Seegen of Vienna, Austria-Hungary, is in German. Thereafter is a long discussion with many participants.

Only the paper by Mr. Dujardin-Beaumetz includes a discussion of soybeans. Gluten bread, introduced by Bouchardat, was a step forward, but it contained too much starch. Almond bread, as suggested by Seegen, was tried in France with fairly good results. But the best results came from soy bread (*le pain de soja*).

The soybean (*Glycine hispida*), which provides a much-appreciated food in Japan and a cheese (*un fromage*) [tofu] now widely researched, is presently cultivated on a large scale in Europe. It contains almost no starch, and the histological samples taken by Blondel proved that soybean seeds contain almost no starch. However, it contains a purgative oil, soya oil (*l'huile de soja*), which creates difficulties when making soy bread.

Nevertheless, a soy bread is now made commercially in France, either with or without gluten. It is accepted by numerous diabetics and it is far superior to the best gluten bread. Unfortunately the unusual and rather strong soy taste will always limit the use of this bread.

The first participant in the discussion is Mr. Miura (Tokyo, Japan), who comments (in German, p. 100-01) on the treatment of diabetes in East Asia and notes that soybeans are widely used. Address: Paris, France.

Forschungen. Vol. 10. No. 4. [2 ref. Ger]
• ***Summary:*** Wheat flour is an important component in the production of shoyu (p. 328).

"Production of soybeans by year was as follows. (Note 1. 1 cho = 2.45 acres and 1 koku = 180 liters or 47.6 gallons): 1878 was 414,961 cho and 1,642,183 koku. 1881 was 427,557 cho and 2,175,337 koku. 1884 was 440,647 cho and 2,323,435 koku. 1887 was 466,315 cho and 3,253,790 koku (p. 330). The large increase in numbers is due mainly to a 76% increase in yields during this 9 year period. This must be difficult since most soybeans are grown around the edges of fields, on paddy bunds and in very small plots.

"Soybeans are grown throughout Japan, but they are concentrated in Tokyo plain and the prefectures bordering on its north. In 1887 the following 12 prefectures accounted for 56% of Japan's total production: Kanagawa, Saitama, Chiba, Ibaraki, Tochigi, Gunma, Nagano, Niigata, Yamagata, Fukushima, Miyagi, and Iwate.

Note 2. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Japan.

"This exceptionally nutritious bean appears in all possible forms in Japanese cooking, as a vegetable, boiled in sugar, as tofu ("als Tofu (Bohnenkäse)" = bean cheese), and as the main component of fermented miso soup (*Miso-Suppe*) and of soy sauce (*Soja-Sauce*).

"During the period 1870-74, the price of soybeans averaged 3.015 yen/koku. In 1875 it was 4.46 yen and in 1886 3.98 yen, with a high of 7.11 yen/koku in 1882."

"Since 1885, with the introduction of use taxes, new production statistics have begun to be kept on the shoyu industry. In 1887/881 some 1,180,188 koku of shoyu was taxed from 11,687 businesses, averaging 101 koku per factory. By comparison, the amount of shoyu taxed in 1888-89 was 1,304,551 koku from 10,634 businesses, averaging koku per factory. As with sake breweries, the number of plants has diminished from 13,682 in fiscal year 1885/86 to 10,634 in the fiscal year 1888/89. Although shoyu factories are found throughout Japan, there are certain regions of concentration. Chief among these is Chiba prefecture, which in 1887/88 had 689 factories and a production of 121,816 koku, averaging 177 koku/factory. The capital of the industry is the city of Choshi. Other major shoyu producing prefectures are Ehime (555 plants, 73,525 koku), Hyogo (544 plants, 73,168 koku), Okayama (580 plants, 64,389 koku), Fukuoka (381 plants, 58,022 koku), Ibaraki, Aichi, Kanagawa, and Saitama.

On p. 611-12 is a detailed discussion of Japan's shoyu tax. Shoyu production was already being taxed in 1875. Then law 10, enacted on 8 May 1885, which went into effect of 1 July 1885, reinstated the tax. This tax is similar to the sake tax. A yearly license costing 5 yen is required and a tax of 1 yen/koku of shoyu produced is levied. Government tax revenues from shoyu grew from 640,379 yen during the partial year 1885/86 to 1,215,254 in 1889/90.

Rathgen lived 1856-1921. Address: Leipzig, Germany.

368. Riley, C.V. ed. 1891. Reports of the United States commissioners to the Universal Exposition of 1889 at Paris. Vol. 5, Agriculture. Washington, DC: Published under direction of the Secretary of State by authority of Congress. 935 p. See p. 127. Index.
• ***Summary:*** In the section on "African and Asiatic countries" is a subsection titled "Japan" (p. 127) which (according to the table of contents) is about "The Soja (*Glycine hispida*) and the azouki [azuki] (*Phaseolus radiatus*), two important Japanese vegetables."

The actual entry states: "The exhibit in class 71 was particularly interesting; beside the Government exhibit there were fifteen private ones and eleven of these exhibits contained soja or *daizon* [*sic, daizu*]. The soja (*Glycine hispida*) is a leguminous plant closely resembling the pea, and is one of the principal vegetables in use among the Japanese, who employ it in various ways; *kôritôfou*, or cheese of the soja [dried frozen tofu], is a sort of alimentary paste, prepared by coagulation and freezing. The soja is also grown to a small extent in France, and was exhibited in a collective exhibit from the département de l'Aube. Its grain contains very little amylaceous matter (starch) and sugar, and is therefore particularly adapted for food for diabetic patients, while it also contains much nitrogenous matter and phosphoric acid, which renders it very nutritive.

Note. This is the earliest English-language document seen (April 2013) that uses the term *kôritôfu* to refer to dried-frozen tofu.

"Another vegetable much used in Japan is the *azouki* (*Phaseolus radiatus*), a sort of bean [azuki]. Dried prunes, *anzous* (*Prunus armeniaca*) [apricots], were also shown and were of good quality. There was a fine exhibit of dried ginger. Raisins, nuts, peanuts, preserved bamboo sprouts, etc., were also shown, and the whole display was a good one."

Note: This is the earliest document seen (Aug. 2011) about the United States Department of Agriculture (USDA) in connection with the soybean. Address: Ph.D., Representative of the U.S. Dep. of Agriculture.

© Copyright Soyinfo Center 2013

plants in France. One cannot doubt the worthiness such an interest when a plant, such as the soybean, has found, in its country of origin, such numerous applications.

This plant is used in China and Japan for human food and for animal feed, for making bread, cheese [tofu], for extracting an oil [soy oil], etc. Why would we not do the research necessary to raise such a precious plant in France? Many trials have already been conducted and have succeeded rather well; we will return to that later, but first we must see how the soybean behaves in Japan and China.

The soybean (*Glycine Soya*) belongs to the legume family. A botanical description is given.

In Japan, the soybean is one of the most widely used plants. It is known under the name of either *mame* or *daizu*, and it is widely used to make a sort of paste, named *miso* (*le Miso*). The process for making miso is described. [Note: However koji is not mentioned so it will not work]. It ferments for 1-2 months, and then is ready for food use. It is part of the breakfast of many Japanese.

The second product made from soybeans is a condiment, a liquid named *Shoyu.* It is a sort of dark brown syrup which serves as a sauce to season dishes, especially fish. The manufacture of shoyu is a very important industry in Japan. In the city of Nagasaki alone there are as many as ten factories, and each makes more than 1.2 million kilograms per year of shoyu. A description of how shoyu is made is given using equal quantities of boiled soybeans and roasted wheat, plus salt. 1.8 liters sells for 40-50 centimes.

The third product made from soybeans is a cheese called tofu (*le To-fu* or *fromage de Daizu*). The process for making tofu is described. It can be eaten fresh, but unfortunately it retains the taste of raw beans, which is not very agreeable.

In China the soybean is known as *Yeou-teou,* but ice it is not ordinarily cultivated on a large scale, as it is in Japan. According to Eugene Simon: Each person makes his or her own cheese [tofu]. Very also, often, each one makes his oil, if not at home, then at least at one of his parents' homes or in the neighborhood; it is distributed by the head of the family.

There is a variety of black soybean which constitutes the principle food of animals; horses and mules eat the seed in nature. People use mainly the white soybean (*la Soya blanche*)*:* from it they extract an oil [soy oil], which is the object of an enormous trade and which occupies the top rank among the oils used in China. As in Japan, the Chinese also make tofu. According to Paillieux and Bois, in the entire Chinese empire, only the Tartars use daily milk; the [Han] Chinese do not consume it at all. They use soymilk instead. The soybean is solid milk. Not all legumes contain legumine, as the soybean does. Describes how to make soymilk from soybeans.

Trials for the acclimatization of soybeans in Europe are rather numerous. In 1875, the first ones were conducted by F. Haberlandt and Blaskovics in Austria-Hungary. In France, Buffon received soybean seeds and cultivated them at the Museum [of Natural History]. One of the problems with the soybean is that its seed mature very late. However some varieties mature their seeds earlier than others.

An illustration [non-original] shows a soybean plant. At the bottom of the column on page 1, we read: See No. 425, of 25 July 1881, p. 115 [an article by E. Roman]. Address: Ingenieur en chef à Périgueux.

371. *Times* (*London*). 1892. Chinese roads. Sept. 20. p. 7, col. 5.

• ***Summary:*** "An account by Mr. Clennel, an officer of the British consular service in China, of a journey which he made recently from Amoy [Xiamen, a seaport in Fujian province] to Foochow [Fuzhou, the capital of Fujian province] overland has been published as a Blue-book."

The large number of travelers "needs sustenance and rest and supports a truly wonderful number of cookshops and small wayside inns... Here hot water, tea, rice, dried fish, tobacco, fruit, sweet potatoes, pea-nuts, bean-curd cakes, slices of sugarcane, and sweetmeats in great variety may be had on payment of a fraction of a penny for each."

372. Georgeson, C.C. 1892. The economic plants of Japan–XVI. Leguminous plants. *American Garden* (*New York*) 13(12):727-29. Dec.

• ***Summary:*** This article begins: The soy bean (*Glycine hispida,* Moench); Jap. *O-mame, Diadzu* [*sic, Daidzu*]. A bush-bean extensively cultivated in all parts of Japan. The plant varies from 1½ to 3 feet in height, according to the variety and soil, and the varieties, which are numerous, differ much in size, color, time of ripening and the general appearance of their beans... The beans are more or less lenticulate, some almost globular.

"This vegetable is always grown in rows about two feet apart, and usually as a second crop, the early beans being planted between the rows of wheat and barley, and the late ones immediately after these crops are harvested. After the beans are well up, they are cultivated with the hoe once or twice, and if the soil is poor, enriched with liquid manure, but otherwise they receive no special care. The beans are, for the most part, not used until ripe, when they are prepared for food in a multitude of ways. Occasionally the green pods, containing nearly full-grown beans, are boiled, and the beans shelled and eaten from the pod. The early varieties mature in from 80 to 100 days, and the late ones from 100 to 120 days.

"Varieties of this bean are numerous. Probably more than a hundred can be found in the country. Beans of all varieties of this species are in shape intermediate between peas and our common beans. Many of them are nearly round, many are somewhat flattened on two sides, or lentil-shaped, and some are oblong, but never to the same degree that our common beans are elongated. As to size, they vary from that of duck-shot to a little above very large peas. The size of the hilum and its markings are in many cases characteristic."

© Copyright Soyinfo Center 2013

Note: This is the earliest English-language document seen (April 2007) that uses the word "hilum" in connection with soy bean seeds. The hilum is the place on the seed where it is attached to the pod. The hilum of most soybean varieties is dark in color.

"The beans are easily classed, according to color, as white, yellow, black, brown, green and spotted varieties. About 38 sorts that came under special observation I noted down as being worthy of more general culture. Some of these were sent from the Japan Imperial College of Agriculture to the French Exposition in 1889. Four of the varieties have been grown successfully at the Kansas Agricultural College for several years, and may be trusted to mature seed in this latitude. Two other kinds tested here proved failures because they ripened too late. The successful kinds yielded under field culture last year from 16 to 18 bushels of beans an acre. They promise to become quite valuable in this country, not only for the table but for stock-feed. Soy beans are more nutritious than any other known species of bean. They yield as much nourishment as good beef–pound for pound. Most of the housekeepers who have tried those grown here pronounce them fully equal to the navy bean for table use, and some think them superior. They contain more albumen and less starch than the navy beans, and so do not cook quite so mealy as the latter, but they are fully equal to them in flavor. Their rough and rather tough pods render them unsuited for use in the green state, hence they will not come in competition with wax beans; but they can compete with the navy beans, and they have doubtless a great future as stock feed. Not only is the bean itself nutritious, but the entire plant is rich in nitrogen. The Japanese as yet consume but little meat; with them the soy bean takes the place of meat, especially with the middle classes. One of their favorite uses of this bean is in the form of bean-cheese, or tofu.

"For making bean-cheese the *Shiro-mame*, or white soy bean, is commonly used. The beans are soaked in cold water for 24 hours, then while still wet they are ground between two small millstones turned by hand, the product being not flour but a thin paste, which is collected in a tub below. To this more water is added, and it is then boiled in a large kettle for an hour. On being removed from the fire it is strained through a bag to remove the hulls, the filtrate running into a tub or vessel of suitable size. Water is stirred into it, and a small quantity of 'bitter brine' (refuse from the salt-works, consisting chiefly of chloride of magnesium) is added, about a quart of 'bitter brine' to every two gallons of dry beans. This causes the legumin to be precipitated; when it has settled to the bottom of the tub, a little pressure is applied by means of a lid, which fits inside the vessel and is weighted somewhat. When cool, the water is decanted off, and the *tofu* or curd is cut in slices, and is now ready for the market. In this condition it is a spongy yellowish white substance, resembling cheese-curd. It is peddled from house to house, and is universally esteemed; but it is always roasted, fried, baked or cooked in some way before it is served. It has been my privilege to eat it on many occasions, and I can testify that it is both palatable and satisfying. The only scruple one need have about eating it is concerning the purity of the water used in its preparation. According to Professor Kinch, *tofu* has this composition: water, 89.29; ash, 0.48; fiber, 1.01; nitrogenous substances, 4.87; non-nitrogenous substances, 4.35. Americans eat many things less nourishing than this bean-cheese." Address: Prof., Kansas Agricultural College.

• ***Summary:*** This massive volume, weighing almost 12 lb, contains more than 1,450 pages and 13,848 Chinese characters. Contents: Dedication (to the Honourable C.P. Chater). By the same author (17 books). Preface: Number of characters, the characters numbering, duplicate characters, phonetic arrangement, orthography, the tones, the dialects (Beneath the number attached to each character will be found its rhyme (R) as given in the *P'ei-wên-yün-fu.* The romanization of each character is given in Cantonese, Hakka, Foochow, Wênchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch'uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter), the definitions, the entries, etymology, grammar, difficulty of Chinese, personal. Philological essay (incl. tones, ranging from 4 to 9, in ten dialects). Table of sounds.

Examples of soy-related characters:

Chiang (p. 122, No. 1220). "A soy made by mixing salt with bean-flour. Sauce. Pickled food." Fourteen compounds using this character are given, including: Bean sauce, soy. Pickled bean curd [fermented tofu]. Bean sauce. Soy [sauce] is of two kinds, the clear and the thick. Dry relishes. Soy colour–a dark reddish drab. He won't use money for vinegar to buy soy.

Ch'ih (p. 205, No. 1996). "Salted fruits, etc., dried and used as relishes." Four compounds incl.: Salted beans. Soy, sauce.

Ch'ou (p. 259, No. 2521). "Sweet-smelling; strong-smelling. Stinking. *Ch'ou fu.* "stinking bean-curd; noxious."

Note 1. This is the earliest English-language document seen (Oct. 2011) that mentions *Ch'ou fu* which it translates as "stinking bean-curd." This is also the earliest document seen (Oct. 2011) that uses the term "stinking bean-curd."

Fu (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials–a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained

© Copyright Soyinfo Center 2013

as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (*rufu* = milk + fu) [Note: Probably fermented tofu, *not* soymilk].

Huang (p. 522, No. 5124). Yellow. Compounds: Yellow beans [soja].

Mao (p. 778, No. 7,679). "Hair, down, feathers." But the word "Hairy beans" = edamame does not appear here.

Shih (p. 988, No. 9999). See No. 1996.

Ta (p. 1,036-37, No. 10,470). "Great." But the word "Great bean" = soybean does not appear here.

Tou (p. 1,127, No. 11,417). "Beans; pulse." See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,316-17, No. 13,409). "Oil, fat, grease." 45 compounds incl. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But "bean-oil" = soybean oil does not appear here.

Note 2. This is the earliest English-language document seen (Aug. 2007) that contains the term "sesamum-seed oil." Note 3. Herbert Giles lived 1845-1935.

Note 4. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin).

Note 5. This is the earliest English-language document seen (Oct. 2001) that uses the term "bean-flour" to refer to soy bean flour.

Note 6. This is the earliest English-language document seen (Oct. 2011) that uses the term "pickled bean curd" to refer to fermented tofu.

Note 7. This is the earliest English-language document seen (Oct. 2002) that uses the term "Wood oil" to refer to what would later be called "China wood oil" or "tung oil," a pale yellow drying oil obtained from the seeds of tung trees (any of several trees of the genus *Aleurites*), and used mainly in quick-drying varnishes and paints, and for waterproofing. Address: H.B.M. [Her Britannic Majesty's] Consul at Ningpo [Zhejiang province, China].

374. Kellogg, Ella Ervilla Eaton. 1892. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery, and a large number of original, palatable, and wholesome recipes. Battle Creek, Michigan: Health Publishing Co. 573 p. Illust. Index. 23 cm. • ***Summary:*** The wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the dietary system employed at the Battle Creek Sanitarium. The Preface, written by the publishers, begins: "The interest in scientific cookery, particularly in cookery as related to health, has manifestly increased in this country within the last decade..." Many successful schools for instruction in cookery have been established. Unfortunately the focus has been on "the preparation of toothsome and tempting viands, but little attention has been paid to the science of dietetics, or what might be termed the hygiene of cookery.

"A little less than ten years ago the Sanitarium at Battle Creek, Michigan, established an experimental kitchen and a school of cookery under the supervision of Mrs. Dr. Kellogg... the demand for instruction has become so great that classes are in session during almost the entire year. During this time Mrs. Kellogg has had oversight of the cuisine of both the Sanitarium and the Sanitarium Hospital, preparing bills of fare for the general and diet tables,... [for] 500 to 700 inmates.

"These large opportunities for observation, research, and experience, have gradually developed a system of cookery... [that] may justly be styled, *A New System of Cookery.* Although based on modern chemistry, the methods are simple, and the results are tasty, wholesome and attractive. Many people say its has never occurred to them "to do it this way before." Great success has also "attended the cooking school in connection with the Bay View Assembly (the Michigan Chautauqua),..."

In the Introduction, the author emphasizes that diet and cooking should be studied as a science whose aim is to promote good health. This book focuses on those scientific principles. The most important foods, the legumes and grains, and their products, are given extra space and special attention.

Chapter 1, titled "Foods," discusses the properties of food, the food elements (starch, sugar, fats, albumen, mineral substances {phosphates, carbonates}, and indigestible substances), uses of the food elements, proper combination of foods (6 of carbonaceous to one of nitrogenous), condiments (which have no real food value, are all strong irritants, and only disguise the natural flavor of food. The use of condiments invites habitual use of intoxicating drinks), etc. Each chapter is followed by a page titled "Table topics" containing quotations, often from well-known or respected people. For example: "A man's food... suggests his moral nature. Many a Christian is trying to do by prayer that which cannot be done except through corrected diet.–Talmage." The first two food chapters are about cereal grains (p. 78-107, and about breads and bread-making). In the next chapter, titled "Fruits," is a long section on "nuts, or shell fruits" with recipes. Note 1. Neither peanut butter nor "nut butters" are mentioned in this book.

The long chapter on "Legumes" (p. 217-27) focuses on dry peas, beans, and lentils. Although neither soybeans nor soyfoods are mentioned, we read (p. 217-18): "The nitrogenous matter of legumes is termed *legumin*, or vegetable casein, and its resemblance to the animal casein of milk is very marked. The Chinese make use of this fact, and manufacture cheese [clearly tofu] from peas and beans."

Note 2. This is the earliest document seen (June 2007) concerning soyfoods in connection with Dr. John Harvey

© Copyright Soyinfo Center 2013

Kellogg–actually his wife, Ella.

The chapters on animal products are toward the back of the book, after the chapter on desserts. The first of these, titled "Milk, cream, and butter" (p. 364-79) says that milk is best used in its fresh, natural state, and includes discussions of "adulteration of milk, quality of milk influenced by the food of the animal, diseased milk, kinds of milk to be avoided, and distribution of germs by milk." The section on "artificial butter" discusses various "fraudulent preparations" such as oleomargarine. The use of cheese is strongly discouraged, since it "is very difficult of digestion" and "is very liable to contain a poison called tyrotoxin, capable of producing most violent and indeed fatal results..." Recipes for non-fermented cheese are given. The next chapter is titled "Eggs" (p. 380-88).

Surprisingly, this is not a vegetarian cookbook, although the author and her husband were long-time ardent vegetarians. Next comes a long chapter on meats, with recipes (p. 389-417). Possible reasons for including such a chapter are: (1) As a place to criticize the use of the "flesh and various organs" of animals, poultry and game as food. (2) As a place to praise the vegetable [vegetarian] diet. (3) To help prevent other leaders of the domestic science / scientific cookery movement (most of whom were not vegetarians) from categorically dismissing the book. On the first 3 pages of this chapter we read: "At the present time there is not much question in the minds of many intelligent, thinking people as to the propriety of using foods of this class, and especially of their frequent use. Besides being in no way superior to vegetable substances, they contain elements of an excrementitious character, which cannot be utilized, and which serve only to clog and impede the vital processes, rendering the blood gross, filling the body with second-hand waste material which was working its way out of the vital domain of the animal when slaughtered. To this waste matter... are added those productions of the putrefactive process which so quickly begin in flesh foods exposed to air and warmth.

"That flesh foods are stimulating has been shown by many observations and experiments.

"Flesh foods are also specially liable to be diseased and to communicate to the consumer the same disease... It has been abundantly proved that such diseases as the parasitic, tuberculous, erysipelatous, and foot and mouth diseases are most certainly communicable to man by infected flesh. All stall and sty fed animals are more or less diseased. Shut up in the dark, cut off from exercise, the whole fattening process is one of progressive disease... Add to this the exhaustion and abuse of animals before slaughtering; the suffering incident to long journeys in close cars, often without sufficient food and water; and long drives over dusty roads under a burning sun to the slaughter house, and it will be apparent to all thoughtful persons that such influences are extremely liable to produce conditions of the system that render the flesh unfit for food." Note 3. The main concern here is human health, not animal suffering.

"Meat is by no means necessary for the proper maintenance of life or vigorous health, as is proved by the fact that at least 'four tenths of the human race,' according to Virey, 'subsist exclusively upon a vegetable diet, and as many as seven tenths are practically vegetarians.' Some of the finest specimens of physical development and mental vigor are to be found among those who use very little or no animal food." "The use of large quantities of animal food, however free from disease germs, has a tendency to develop the animal propensities to a greater or less degree, especially in the young, whose characters are unformed. Among animals, we find the carnivorous the most vicious and destructive, while those which subsist upon vegetable foods are by nature gentle and tractable." Nevertheless, many meat-centered recipes are given. The page of "Table topics" at the end of the chapter contains only quotations critical of eating meat.

The chapter on "Food for the sick" contains recipes (p. 426-28) for: Beef tea. Chicken broth. Mutton broth. Chicken panada, etc. The section titled "Grains for the sick" (p. 429) states: "The various cooked preparations of grains–granola, wheatena, avenola, wheat gluten, and gluten meal–Manufactured by the Sanitarium Food Co., Battle Creek, Michigan, form excellent articles of diet for many invalids, when served with hot milk or cream..." Then comes a section on "Meats for the sick" with 7 recipes (p. 430-31).

A closing chapter titled "A year's breakfasts and dinners" (p. 481-538) gives 365 days of sample healthy menus, with this introduction: "We have given meats no place upon these bills of fare, as we wished particularly to illustrate how good, substantial menus of appetizing variety could be provided without their use;..."

Caramel coffee, one of "various grain coffees" is mentioned on at least 7 pages in this book. For example, the chapter on "Beverages" (p. 357+) discusses caffein, the adulteration of tea and coffee, and the idea that these beverages contain "poisons." A section in this chapter on "Substitutes for tea and coffee" gives recipes for making five different types of "Caramel Coffee." The first one states (p. 360): "Take three quarts best bran, one quart corn meal, three tablespoonfuls of molasses; mix and brown in the oven like ordinary coffee. For every cup of coffee required, use one heaping tablespoonful of the caramel. Pour boiling water over it, and steep, not boil, for fifteen or twenty minutes."

This book also discusses: Artificial human milk (3 recipes, one based on pearl barley). Graham bread, Graham flours, and other whole-wheat flours. Wheat gluten (with many recipes).

A 3rd ed. was published in 1898, a 4th edition in 1904, and a final edition in 1910.

Concerning the Bay View Assembly School of Cookery, this was connected with the Michigan Chautauqua, which

© Copyright Soyinfo Center 2013

was a Methodist camp meeting resort begun in 1875. A chautauqua was an institution of the time that provided popular education combined with entertainment in the form of lectures, concerts, plays, etc., often presented outdoors or in a tent. Ella Kellogg was very involved with the Women's Christian Temperance Union (WCTU), which built a hall on the grounds of the Bay View Assembly in 1890. Address: A.M., Superintendent of the Sanitarium School of Cookery and the Bay View Assembly School of Cookery, and Chairman of the World's Fair Committee on Food Supplies for Michigan [Battle Creek, Michigan].

• ***Summary:*** Contents of section on soy: Introduction: Work of the Society for Acclimatization with soy, structure of this book, excerpts on soy from past issues of the *Bulletin the Society for Acclimatization.* Botany of the soybean. 1. Soy in Japan: Kaempfer's writings, including miso and shoyu, Japan at the World's Fair of 1878, miso, shoyu, tofu. 2. Soy in Cochin China: Black soybeans, various foods. 3. Soy in China: Soy oil, tofu and fermented tofu, soy sauce, other uses. 4. Soy in Austria-Hungary. 5. Soy in France: Historical, varieties, cultivation, utilization.

The author's full name is Nicolas-Auguste Paillieux (lived 1812-1898; he died on 8 Feb. 1898 at age 85). An illustration (non-original line drawing; p. 503) shows a mature soybean plant bearing many pods, plus a close-up of three pods to the lower right of the plant (from an original in J.R.F. 1882). Note: Desire Bois lived 1856-1946.

Also discusses (listed alphabetically): arachide (peanuts, p. 26-28), haricot mungo (azuki, p. 201-09), kudzu or ko (p. 271-84), quinoa (p. 460-66), souchet comestible (chufa, p. 498-502, with illustration). Address: 1. Member of the Societe Nationale d'Acclimatation 2. Asst. de la Chaire de Culture, Museum d'Histoire naturelle de Paris.

376. Shimizu, Sazao. 1892. Tôfu putomain chûdoku [Ptomaine poisoning from tofu]. *Yakugaku Zasshi* (*J. of the Pharmaceutical Society of Japan*) No. 129. p. 1130-33. [Jap]
• ***Summary:*** This is the earliest document seen (Feb. 2012) expressing concern with the microbiological safety of tofu.

Note: *Webster's Dictionary* defines ptomaine (derived from the Greek ptoma = corpse, and first used in 1880) as: "any of various organic bases which are formed by the action of putrefactive bacteria on nitrogenous matter and some of which are poisonous." Webster's defines ptomaine poisoning (first used in 1893) as: "food poisoning caused by bacteria or bacterial products." Address: Gifu-ken, Japan.

377. *Avenir de Diego-Suarez* (*Madagascar*). 1893. [Foods made from the soybean]. March 2. [11 ref. Fre]*
• ***Summary:*** Note 1. As of Oct. 2012 we have been unable, after great effort, to obtain a copy of this article; we do not even know the title. However a detailed summary (which we have; which see) appears in *Le Temps* (Paris) of 8 April 1893.

Note 2. Diégo-Suarez (renamed Antsiranana or Antsirane in 1975) is a harbor and town at the northern tip of Madagascar. In 1893 Madagascar was part of the French colonial empire. The place was named for Diego Soares, a Portuguese navigator (brother of the better-known Bartholomew Dias) who visited the bay in 1543.

The estimated population in 1990 was 54,400. A French naval base (maintained since 1901) was handed over to Madagascar in 1975.

378. *Temps* (*Le*) (*Paris*). 1893. On lisait dans *l'Avenir de Diego Suarez* du 2 mars cet avis: [One reads in *l'Avenir de Diego Suarez* of March 2 this notice:]. April 8. p. 2, cols. 2-3. No. 11641. [1 ref. Fre]
• ***Summary:*** The governor hurriedly lets the residents know that he has just received from Mr. de Mahy a box of soya bean seeds (*une boîte de graines du haricot* soya), with which is made a cheese [tofu] that keeps for a very long time. It improves with age and that is a precious resource for settlers who live far from the urban centers.

This notice appears to have surprised a few of our colleagues. It did not contain, however, the revelation of an unknown food.

Cheese made from soya is called tofu (*to-fu*). Here is the recipe for tofu, which seems to us of interest to reproduce given the efforts being made to acclimatize this legume in Europe. You begin by softening the seeds of this bean in water, then you crush them in a mortar so as to make a milky paste. When this paste is pressed in a piece of linen it separates into two parts: one [okara] stays inside the linen and is used for animal feed. The other, a liquid which passes through the linen, is rich in emulsified fatty matter and in albuminoidal matter (albuminoids). This liquid is heated; coagulation is facilitated by adding nigari (eau mere / mother water, which flows out of sea salt piles). This curd separates and gives the cheese. It is eaten either raw, or cooked with fish, or most often pulverized. During the winter [after being frozen], it is dried. In this state, it keeps for a very long time.

Soya cheese (*Le fromage de soya*) is a very important food in China. Only the Tartars / Mongols have continued to use [cow's] milk. The Chinese do not consume any such milk. In its place they use soya. Its seed is a sort of solid milk. No other legume contains as much legumin (a substance chemically analogous to casein) as the soybean. None other is as rich in fatty acids. All you need to do is to crush the soya seed, dilute it with water, and filter through a sieve to obtain a product with milklike properties that can

© Copyright Soyinfo Center 2013

be used just as you would milk. Soya cheese looks just like quark cheese (*fromage à la pie*).

The soybean (*La soya*) which is cultivated in Japan, in China, in the Indies [Dutch East Indies, today's Indonesia], in Cochin-China [today's South Vietnam], in Tonkin [today's North Vietnam], etc. is used for more than just making tofu. It is used in these countries in a great variety of ways to make human foods and seasonings. Transformed by cooking in water into a gruel / pap (*bouillie*) which is mixed with salt and polished rice, one obtains miso, which is served at lunch [as the seasoning in miso soup] by many Japanese.

Mixed with barley and submitted to fermentation, after adding additional water and being pressed, one obtains a syrupy liquid, called shoyu, a unique sauce used to season almost all Japanese foods (*mets*), and which is employed in such large quantities that the factories of the city of Nagasaki make more than 1,200,000 kilograms of it each year. Finally, an oil is extracted from the soybean which is the object of an important trade and which serves for both human consumption and in industry.

379. *Natuur* (*De*). 1893. Soja [Soya]. 42(20):233-34. May 13. [1 ref. Dut]

• ***Summary:*** This Dutch-language periodical appears inside a German-language periodical titled *Die Natur* (Halle). The author of this article (whose initials "CKN" appear at the end) discusses: The soybean plant, named *Glycine Soya* or *Dolichos Soja* or (in Dutch) *de Sojaboon,* which is widely used for food in Japan (where it is called *Mame* or *Daizu*) and China. Food products made from the soybean in Japan: Miso, shoyu (soy sauce), To-fu [tofu] or *Kaas van Daizu;* a brief description is given of how each is made. Soybeans in China, where it is called "Yeou-teou," and where they make a cheese (*Soja kaas*), oil (*eigen olie*), and milk (*melk*) which resembles cow's milk.

Note. This is the earliest Dutch-language document seen (April 2013) that uses the term *To-fu* or the term *Kaas van Daizu* or the term *Soja kaas* to refer to tofu.

Black soybeans (*zwarte Soja*) are widely used. Proteins in the soybean, including legumine. In Europe, by 1881, the soybean was known in Italy, Austria, Hungary, and France (especially at Etampes and Montpelier); from the seeds, people learned to obtain oil, milk, cheese, an excellent cattle feed, and a vegetable for humans–similar to the French bean but much better (*en een groente voor den mensch, gelijkende op onze spersiebonen, maar veel beter*). Soybeans are used by doctors to treat people suffering from diabetes.

In France, the seeds are roasted like coffee beans; the result is a good-tasting coffee substitute (*dure koffie,... een even goed smakend surrogaat verkrijen*).

A large illustration (engraving) shows a soybean plant bearing many pods. In the lower left corner is one large pod. In the lower right is written "Al Clement," which appears to be the artist's name.

Note 1. This is the earliest Dutch-language document seen (Nov. 2012) that mentions soy coffee.

Note 2. This is the earliest Dutch-language document seen (June 2009) that mentions green vegetable soybeans, which it calls *"een groente voor den mensch,..."*

Note 3. This is the earliest Dutch-language document seen (Oct. 2003) that mentions soymilk, which it calls *melk.*

Note 4. This is the earliest Dutch-language document seen (Oct. 2003) that mentions oil from the soybean, which it calls *olie.*

380. *Chemist and Druggist* (*London*). 1893. The manufacture of soy in China. 43:38-39. July 8.

• ***Summary:*** "The manufacture of soy [sauce] and beancurd [tofu] is one of the most flourishing industries in the prefecture of Wênchow, China. The method is not supposed to be a secret, but the native manufacturers do not encourage inspection by foreigners. The beans used in the industry are principally white beans from Chinkiang. Besides these little else is required than a large amount of salt and flour, and an unlimited supply of fresh water.

"There are five large manufacturers in Wênchow, who work under licenses issued by the provincial Government and (as salt is a Government monopoly) are subject to periodical inspection of their premises by excisemen. The largest manufacturer at Wênchow takes out a license for 8 salt 'passes,' each 'pass' representing 368 bags of 85 1/3 lbs., or 2,243 cwt. [1 cwt (British) = hundredweight = 112 pounds] of salt every year. For each 'pass' obtained the manufacturer is permitted to set up 36 vats, to each of which, again, are annexed two feeding-vats. The vats are arranged at the bottom of a reservoir; the salt is stored in a similar reservoir at the back of the premises, where it is allowed to stand and drain for one year, Chinese salt being mostly unclarified sea-salt. Each vat is provided with an impervious cover.

"The beans, having been carefully washed, are placed in a cauldron holding 133 1/3 lbs. They are boiled for six hours, and then simmered and cooled through another eighteen hours. The broth is drawn off for use later on in the process, while the mash is mixed with flour (apparently wheat flour) at the rate of 213 lbs. of flour for each cauldron of mash. The resultant mixture is placed in large shallow baskets of bamboo, fitting each upon a wooden frame. These frames are piled one on the top of the other to a great height, and are left in the sun for five to eight days. When the mash emits a yellow exudation and turns yellow it is ready for further manipulation. It is now placed in the vats, and over it is poured a mixture of 2 parts of salt to 5 parts of water.

"To this clarified brine is added the bean-broth, and with this mixture the mash (now dry) is beaten up, and left to ferment. As it dries in the sun the process is repeated, and so on throughout the hot season (say, July to September), care being taken to cover the vats during rain. After three months

© Copyright Soyinfo Center 2013

or so a yellow oil appears, each vat producing about 667 lbs. of the oil. To this oil are added 2,400 lbs. of brine (but no bean-broth) thickened by 10 per cent. of salt, and the result is the soy [sauce] of commerce. Of this there are six grades, the prices of which per catty (1 1/3 lb.) are respectively 96 cash, 80 cash, 56 cash, 40 cash, 24 cash, and 20 cash–1,040 cash to the dollar (2*s.* 10*d.*). The soy [sauce] of one year can be used in that year, but it is considered always better to give it a second summer's fermentation."

Note 1. This is the earliest English-language document seen (May 2003) that contains statistics on the production or consumption of soyfoods (in this case soy sauce) in China.

Note 2. The ratio of wheat to soybeans in making this soy sauce is apparently 213 to 133.3, or 1.6 to 1. It is not clear whether the 133.3 pounds refers to dry or to washed soybeans, however the weight should not be much different.

381. *Los Angeles Times.* 1893. The ru-ying: Fish eagle, or fishing cormorant of the Chinese. Sept. 3. p. 18.
• ***Summary:*** "The little birds are fed on bean curd [tofu] and chopped eels. At the age of 4 weeks the males are worth from $1 to $2."

• ***Summary:*** The Dutch microbiologist discusses bean sprouts (p. 350-54; *taôge*), light-colored, brown and black soybeans (p. 354-56; *kadelé poetih, merah, item* [*Bat. maleisch*], *Licht gekleurde, bruine en zwarte soja-boontjes*), tofu (p. 356-57; *tao-hoe*), firm or pressed tofu (p. 357-59 (*tao-koa*)), ragi (p. 359-60; a traditional inoculum, though he does not mention tempeh), tapej (p. 360; [tapeh], Tsao in Chinese), arak (p. 369-78).

Plates at the end show microorganisms for ragi, tapej, sugarcane brem, and rice wine.

Note: This is the earliest Dutch-language document seen (April 2013) that uses the term *tao-hoe* or the term *tao-koa* to refer to tofu. Address: Inspect. burg. geneesk. diest voor Java en Madoera (Civil Medical Service in Java and Madura).

383. *St. Louis Post-Dispatch* (*Missouri*). 1893. Use of the soya bean. Nov. 12. p. 20.
• ***Summary:*** "The use of the Soya bean in the dietary of diabetics has recently attracted much attention. Heretofore the bean has been used only for culinary purposes, the Japanese using a liquid called sooju [shoyu] or soja [soy sauce], a condiment which they prepare by fermenting the seeds of the Soya bean. The Japanese name of the plant is Daidsu [Daizu]. Linnaeus, the great botanist, called it *Dolichos Soja.*"

The Japanese call the beans Mame, and make 'miso' or sooju from them. The preparations are used principally in cooking meat. In China an emulsion [soymilk] is made from the oil of the beans [sic, from the whole beans]. It forms a white liquid and is drunk in the districts in which milk is too dear for the poor to buy it. The Chinese also make a kind of cheese [tofu] from the beans. Soy sauce is exported to and used in many European countries. The Dutch call it 'Zoya.' In the East Indies it is known as 'Ket Jay' [sic, 'Ket Jap'] (probably the source of 'catchup' or 'ketchup'). This liquid is obtained by fermentation of cakes of roasted barley and boiled soya bean. After [the first] fermentation salt is added. The whole is kept for two or three years and then the sauce is squeezed out of the mass.

"Bread and biscuit, made from the flour of the beans, have been highly recommended for diabetics on account of the low proportion of starch and the high proportion of fat and proteid. They are said to be pleasant to the taste. Dr. W. Hale White, writing from Guy's Hospital, London, where he has used the bread and biscuit for some time, says: 'They are to patients suffering from diabetes not only a good substitute for gluten bread, but they form a pleasant change from it, and many patients much prefer the taste of them to gluten bread.'"

384. Bretschneider, Emil V. 1893. Botanicon sinicum. Notes on Chinese botany from native and Western sources. II. *J. of the Royal Asiatic Society, North China Branch. Series 2.* 25:i-ii, 1-468. For the year 1890-91. See pages 35-36, 137-39, 162-65. [200+* ref. Eng]
• ***Summary:*** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Corrigenda and addenda to Part I. Introduction (p. 1). Notes on Chinese, Japanese and European works consulted (p. 4). Plants mentioned in the *Rh ya* (p. 20). Plants mentioned in the *Shi king*, the *Shu king*, the *Li ki*, the *Chou li* and other Chinese classical works (p. 137). General remarks by Dr. E. Faber (p. 402). Classification of Chinese names of plants (p. 411). Index of Chinese names (p. 435). Index of European names (p. 461).

Pages 35-36 state: "29.–*Jung shu* is the same as *Jen shu.*

Kuo P'o:–This is the plant called *Hu tou* (foreign bean).

"Hing Ping:–Fan Kuang as well as She Jen and Li Sün all explain the above names of the *Rh ya* by *hu tou.* But they were mistaken. As *jung* is likewise a term for foreigners [western barbarians] they concluded that *jung shu* and *hu tou* are the same. Cheng Hüan and Sun Yen identified the *jung shu* correctly with the *ta tou* or great bean. [Comp. infra, 355, *Shi king.*]

"The *ta tou* is the *Soja hispida*, Moench, or soy bean. The *hu tou*, or foreign bean, is the *Faba sativa* [sic, *Vicia faba*], or common bean [sic, broad bean], one of the cultivated plants introduced from Western Asia into China, in the second century B.C., by the famous general Chang K'ien [Chang Ch'ien, traveled 139-115 B.C.].

Chapter 2, "Plants Mentioned in the Shi King, the Shu

© Copyright Soyinfo Center 2013

King, the Li Ki, the Chou Li and Other Chinese Classical Works," begins with a discussion of cereals or grains (*ku*). "The term *wu ku* [*wugu*] (Cc = Chinese characters given) or five kinds of grain seems to be the oldest classification of grain. It is attributed to the Emperor Shen Nung. The ancient commentators enumerated these five kinds as follows (Cc): 1. *tao,* Rice. 2. *mai,* comprising Wheat and Barley. 3. *tsi, Panicum miliaceum,* the common Millet. 4. *shu, Panicum miliaceum,* the glutinous variety [of Millet]. 5. *shu,* the Soy bean, *Soja hispida.* Note 1. This is the earliest English-language document seen (Aug. 2002) which mentions the *wu ku* ("five grains") and states that the soy bean (*shu*) is one of them. Since the classification of the *wu ku* are attributed to Shen-Nung, it is the earliest English-language document that links him with the soy bean.

"Some commentators have *liang, Setaria italica,* instead of *tsi,* others substitute *ma,* hemp, *Cannabis sativa,* for *tao,* rice." Mencius and the *Li ki* both use the term *wu ku.*

"The ancient Chinese term 'the five kinds of grain' is also usual in Japan. We read in [Kaempfer's] *Amoen. exot.,* 834, under *come* [rice]..." The soy bean is included. The *Chou li* mentions the six kinds of grain, or *liu ku,* which did not include the soy bean, and the nine kinds of grain, or *kiu ku,* which listed the soy bean, *ta tou,* as number six and the adzuki bean as number 7.

Pages 164-65 state: "355.–In the *Shi king* we have the term *jen shu,* which Legge translates as 'large beans,' 468:–Hou Tsi planted large beans [dadou = soy beans] which grew luxuriantly. Note: This is the earliest English-language document seen (June 2003) that mentions Hou Tsi in connection with soy beans.

"In the *Rh ya* [29] *jen shu* is given as a synonym of *jung shu.* Sun Yen identifies it with the *ta tou* or great bean, which latter name seems to appear first in Fang Cheng-chi's book on husbandry [1st century B.C.] This is the soy bean, *Soja hispida,* Moench [See *Pên ts'ao kang mu,* XXIV, 1.] A good drawing of the plant is found in *Chi wu ming shi l'u k'ao,* I, 8. This bean has always been considered by the Chinese as the most important of the cultivated leguminous plants. It is grown in numerous varieties all over the Empire, especially in the north, and is much esteemed for the oil yielded by its seeds. The name great bean refers to the plant, not to the seeds, which are small, of the size of a pea.

"The soy bean is also largely cultivated in Japan. It is described and figured under the Chinese characters meaning "great bean" in *Amoen. exot.,* 838, and *So moku,* XIII, 18-21.

"The soy bean is much employed in China and Japan for preparing the so-called 'bean-curd' and the sauce called 'soy.' The first is prepared by macerating the beans in water and milling them together with the water. The liquid pap is filtered. To this fluid is added gypsum, in order to coagulate the casein, and also chloride of magnesium. The coagulated casein or bean-curd is of a jelly-like appearance. Soy is made by boiling the beans, adding water, salt and wheat, and producing fermentation by yeast.

"Bean-curd and soy were most probably known to the Chinese in the classical period, although no distinct mention is made of these condiments in the classical writings. The ancient term *tsiang,* which Legge translates by 'sauce,' includes, we may suppose, soy. [See *Li ki,* I, 459-461 'Diet of the Ancient Chinese.'] Confucius *Analects,* 96. Biot translates the *tsiang* mentioned in the *Chou li* by 'mets delicats.' I,70:–Pour les mets delicats on emploie cent vingt objects differents. Compare *Pên ts'ao kang mu,* XXV, 26, on the preparation of the *tsiang.* At Peking the common name for soy is *tsiang yu* (*tsiang* oil). [S.W.] Williams [*Dictionary* (1874), 764] states that the English word soy is probably derived from *shi yu,* in Japanese *si yu.* [I should think rather from the characters pronounced *sho yu* in Japanese. See Hepburn's *Dictionary* (*1867*).] The character *shi* written with another radical replacing the "bean" radical to the left of the main character, in the *Shuo wen* is explained there by 5 characters, made of salt and beans [I cannot understand what the third character here is intended to mean]. See also *Pên ts'ao kang mu,* XXV, 2, under *ta tou shi.*

"As to the bean-curd, *tou fu,* it appears from the quotations in *Pên ts'ao kang mu,* XXV, 7, that this term and the mode of making bean-curd are first mentioned in the *Huai nan tsz'* [2nd century B.C.], but it was no doubt much earlier known in China." Address: China.

385. Fesca, Max. 1893. Beitraege zur Kenntniss der japanischen Landwirtschaft. II. Specieller theil [Contributions to an understanding of Japanese agriculture. II. Special part]. Berlin: Paul Parey. ix + 929 p. See 187-203, 872-73. Also published as vol. 2 of 2 volumes bound in one (Paul Parey, 1893). [7 ref. Ger]

• ***Summary:*** The chapter on the legumes (*Die Huelsenfruechte,* p. 187-203) is partly a review of the literature, with emphasis on soybeans (*Daizu, Omame, Sojabohne*). He begins by noting that for a nation like Japanese, where the people live predominantly on plant foods (*Pflanzenkost* = vegan diet), legumes are of major importance for the nutrition of the people, in that they offer a substitute for meat. They also supply important nitrogen to the soil. A table (p. 188) shows soybean production and yield in Japan from 1879 to 1887. The area increased from 441,699 *cho* to 466,315. Note: 1 *cho* = 2.45 acres Production increased from 2,280,135 *koku* to 3,253,790. Note: 1 *koku* = 180 liters or 47.6 gallons. Yield increased from 5.1 *cho/koku* to 7.69. Soybeans like the climate of northeastern *Yezzo* [Hokkaido]. A table (p. 190) gives the date of planting, date of harvest, and days to maturity at Hakodate, Sapporo, and Nemuro (all on Hokkaido). Also discusses: Soy sauce (*Shoyusauce;* p. 190), dates for other locations, and fertilizer (*Düngung*) needs (p. 191-92, incl. phosphoric acid, potash, wood ashes, straw, and superphosphate). A table (p. 193) shows soybean area (in *cho*), production. and yield in 1887

© Copyright Soyinfo Center 2013

in 6 parts of Japan (Yezzo, northern Japan, central Japan [which had by far the greatest planted area and production], western Japan, Shikoku, Kyushu).

Also discusses: The extraordinarily high nutritional value of the soybean (p. 196), yellow lupins (p. 196), defatted soybean cake (*Daizukasu,* p. 196), shoyu or soy sauce, *Shoyubohne,* and koji (p. 197-99), tofu, *Bohnenkäse,* and *Tofumame* (p. 199), Kori-Tofu and E. Kinch (p. 199).

His analysis of shoyu presscake (*Shoyukasu*) and okara (*Tofukasu*) showed that they contained respectively: Water 53.6 and 85.7%. Ash: 6.7 and 0.5%. Crude protein: 12.6 and 3.8%. Crude fat: 13.7 and 1.4%. Nitrogen-free extract: 6.7% and 5.4%. Crude fiber (*Rohfaser*)*:* 6.7 and 3.2%. *Tofukasu* is a rather good livestock feed, and it is also eaten by poor people. The shoyu presscake, although richer in nutrients than okara, is used, at most, only in small amounts in feeds and then it must be cooked. Living yeast cells in the koji can easily cause stomach diseases and problems, and the presscake also has a high salt content. Note: This is the earliest German-language document seen that mentions okara (Oct. 2001), which it calls *Tofukasu.*

Miso (4 types; p. 200-02): (1) White miso (*Shiro-Miso:* Low salt content and short shelf life; keeps for 10 days); made with rice koji. Fermented for 3-4 days. (2) Edo Miso (*Yedo-Miso*)*:* Higher salt content, shelf 5-4 months up to 1 year. Made with rice koji. Fermented for 10 days in summer, 30 days in winter. (3) Farmhouse miso (*Inaka-Miso*)*:* Very high salt content. Shelf life: About a year; made with barley koji. Fermented for about 11-12 months. (4) Sendai miso, also known as Red miso (*Sendai-miso: auch Aka-Miso genannt*)*:* Red color and high salt content. Shelf life: several years. Made mostly with barley koji. Fermented for 1½ to 2 years.

Azuki (*Phaseolus radiatus,* with planted area, production and yield for 1883 and 1884, p. 203).

A table (p. 873) shows a valuation of Japan's agricultural production for about 17 major crops (Source: *Japan's Volkswirtschaft und Staatshaushalt*). For each crop, the annual production (in koku), the worth per unit, and the value of the total crop in yen are given. The most valuable crops are: Rice: 40 million koku, 200 million yen. Dehulled barley (*beschalte Gerste*)*:* 7 million koku, 14 million yen. Naked barley (*nakte Gerste*)*:* 5 million koku, 12.5 million yen. Soybeans (*Sojabohnen*)*:* 3 million koku, 12 million yen. Wheat (*Weizen*)*:* 3 million koku, 12 million yen. Address: Prof., Dr., Germany.

386. Henderson (Peter) & Co. 1893. American farmers manual. New York, NY. 26 p. 28 cm.
• ***Summary:*** In the section titled "Miscellaneous agricultural seeds" (p. 24) is an entry for: "Soja or Japan Bean. (*Glycine hispida.*)*"* It is identical to the entry in the 1890 edition of this *Henderson's American farmers manual.*

This catalog is owned by Special Collections, USDA National Agricultural Library, Beltsville, Maryland. Address: 35 & 37 Cortlandt St., New York.

387. Henry, Augustine. 1893. Notes on economic botany of China. Shanghai, China: Printed at the Presbyterian Mission Press; Kilkenny, Ireland: Boethius. 68 p. See p. 13-14. 18 cm. Facsimile edition printed in 1986 by Boethius Press, Kilkenny, Ireland. [Eng]
• ***Summary:*** The book begins: "Missionaries and others living in the interior, are often in a position to make enquiries concerning the natural production of China, the results of which would be of great service to science. I intend to publish a few notes, pointing out the direction in which such work might be done as regards articles derived from the vegetable kingdom."

The author focuses on the vegetable products of Shêng-king [Liaoning, a province in northeast China whose capital is Mukden]. The soja bean is a staple of Newchwang trade.

"7. The Soja bean, *Glycine hispida,* Max. is noted for its numerous varieties and manifold uses. *Ta-tou* is the book-name of the *species;* but in the colloquial the varieties have each a distinct name, and these have not been very well made out for China. In Japan there are five great varieties, the white or yellowish, green, black, brown, and spotted, divided into sixteen sub-varieties, according to difference in form (which varies from spherical to flattened elliptical) size and colour. These sub-varieties differ in their use, time of arriving at maturity, etc. In China the chief kinds are *Huang-tou* [Yellow soybean] and *Hei-tou* [black soybean]: and perhaps the following sorts mentioned in the Paris Ex. C. [Exhibition Catalogue?] as occurring at Newchwang, are simply varieties of the Soja bean, viz., *Pai-tou* [*white soybean*], *Ch'ing-tou* [green soybean] and *Ma-tou* ["sesame bean"]. Information is wanted about these varieties. The Soja bean is the most important of the legumes cultivated in China; from its seeds *bean-oil* is produced; the refuse in the manufacture of which, *bean-cake,* is largely used in the South for manuring the sugar plantations. From certain varieties *bean-curd, soy* and *bean-sprouts* are prepared...

"For Sheng-king we wish descriptions and uses of the different varieties of the Soja bean, distinguished according to the local names."

Also discusses other species of beans and peas cultivated in China (p. 12-13; each is accompanied by two Chinese characters): 1. *Pien-tou,* the *lablab* bean, of which there are two varieties, one with purple, the other with white flowers. Botanists call this species *Dolichos lablab,* L.

2. *Kang-tou, Vigna sinensis Hassk,* the "chow-lee" of India [cowpea].

3. *Tao-tou* ([jack bean], literally "sword bean"), *Canavalia ensiformis,* D.C., the "over-look" pea of the West Indian negroes.

4. *Tsan-tou* ("silkworm bean"), *Vicia Faba,* L, the common bean, the broad bean.

© Copyright Soyinfo Center 2013

5. *Wan-tou, Pisum sativum,* L., the common garden pea.

6. *Phaseolus mungo,* L. This haricot includes in China two if not more very distinct varieties. (a). *Lu-tou* ("green bean"), the Chinese vermicelli pea [mung bean]; the small seeds of this are ground into flour and are used for making the kind of vermicelli known as *Fên-t'iao.* (b). *Ch'ih-hsiao-tou* ("red small bean"), small red haricots [azuki].

8. Besides the foregoing there are several other species of beans cultivated to a small extent, among which may be mentioned the *Man-tou* of Hupeh, *Phaseolus chrysanthus,* Sav. and lentils, *Ervum Lens,* L. which is called at Ichang *Chin-mai-wan.*

Note 1. This is the earliest English-language document seen (April 2003) that uses the term "lablab bean."

Also: kudzu (*ko,* p. 57-59), which is said to grow all over China, especially in the vicinity of Kiukiang.

Note 2. The edition published in Ireland in 1893, having the same title, has E. Charles Nelson as the 2nd author. It has vx [15] pages of front matter plus 6 unnumbered pages. And it is 21 cm tall, rather than 18. According to OCLC / Worldcat (Oct. 2010) the edition published in Ireland is owned by 44 libraries worldwide, compared with only 2 for the Shanghai edition. Address: I.M. Customs, Shanghai, China.

388. Japan, Dep. of Agriculture and Commerce, Agricultural Bureau. 1893. A descriptive catalogue of the agricultural products exhibited in the World's Columbian Exposition. Tokyo: Printed at the Seishibunsha. 115 p.

• ***Summary:*** The World's Columbian Exposition was a World's Fair held in Chicago, Illinois, to celebrate the 400th anniversary of Christopher Columbus's arrival in the New World in 1492.

Discusses 38 commercial products, with most divided into basic information and products made from the crop. Includes: Rice ("The manures applied to rice fields" include "green manures, farm yard manures, composts, ordures, fish manures, Sake kasu, Shoyu kasu, rape seed cake, and soy bean [cake] {p. 11}), barley ("It is much used as the material for making miso. Miso is prepared by pounding together boiled soy bean, salt, and the Koji {yeast}* prepared from common barley or naked barley; and is one of the most common articles of food in Japan." (Footnote: *"Eurotium oryzae). It [barley] is also used for making *ame* {p. 23}).

Wheat ("Wheat is used principally for preparing soy [sauce], vermicelli, onmen [sic, somen?], undon [sic, udon], and several kinds of confectionary" {p. 27}. It is also used for making *fu* or wheat gluten; "Roast 'fu' is used as food by boiling it with soup, soy, mirin, etc." {p. 29}), naked barley (*Hordeum nudum; hadakamugi*), Job's tears (*Coix lacryma; hatomugi*), soy bean (*Soja hispida; daidzu*), adzuki (*Phaseolus Radiatus,* [*azuki*]), sasage (*Dolichos Umbellatus*), haricot bean (*Phaseolus vulgaris*), peas, buckwheat ("Sobakiri" and "Kôri-soba" are both seasoned with soy sauce {p. 46}), rape seed (*Brassica chinensis, natane*) and rape seed oil (*natane abura*), sesame seeds (yellow {*kigoma*}, white {*shirogoma*}, and black {*kurogoma*} are displayed) and sesame oil (made from only yellow and white sesame), yegoma (*Perilla occimoides*), hemp, shiitake, chilli (*Capsicum Longum; tôgarashi;* "The fresh unripe fruit and leaves of certain varieties are eaten by cooking them with soy, sugar, "Katsuwobushi" [katsuobushi],* etc." {p. 103}). Also discusses: Dried daikon (p. 109-11), konjak flour (*Conophallus konjak; konniak-ko, konnyaku;* "For cooking, it is cut into small pieces and boiled with soy, soup, mirin, sugar etc." {p. 112}), kampio (*Lagenaria vulgaris; kampio* [*kampyo, kanpyo*]*;* "It is used as an article of food by boiling with water, soy, sugar, mirin etc." {p. 113}), wine.

Concerning the soy bean: In 1887, the total area of arable land devoted to soy bean cultivation is 4,633,152 *tan* (1 *tan* = 0.245 acre; thus 1,142,472.2 acres or 462.352.16 hectares). The total production of soy bean in the Empire was estimated to be 3,253,790 *koku* (1 *koku* = 180 liters, and 1 bushel = 35.2390 liters; thus 585,682,200 liters = 16,620,284 bushels).

Note 1. From the above figures, a yield of 14.53 bushels per acre can be calculated.

From 1887 to 1891 the price of soybeans per *koku* ranged from 4.180 yen in 1888 to 5.319 yen in 1890. Four specimens of soybeans were exhibited: Green soy bean (*awo-daidzu*). Black soy bean (*kuro-daidzu*). Common soy bean.

"Daidzu or soy bean is extensively used in Japan to prepare various kinds of foods indispensable for the daily meal, such as 'soy' or 'shôyu,' 'tamari' (a kind of soy), tofu, and miso. It is also largely used as a food for horses and manure [bean cake].

Note 2. This is the 2nd earliest English-language document seen (April 2012) that mentions tamari, which it calls "tamari" (not "tamari shoyu").

A analysis of the percentage composition of 3 kinds of soy beans analyzed by the Sanitary Experiment Station at Tokio is given; Green soy beans have the highest crude protein content (42.85% with 12,28% water). White soy beans (*shiro-daidzu*) have the highest ash content (5.00% with 13.46% water). Black soy beans have the highest fat content (18.26%, and the 2nd highest crude protein content 40.25%, with 11.09% water). Soy bean (*Itachi-daidzu*) from Saitama prefecture.

Although daizu is abundantly produced in Japan, since its daily consumption by all classes of people is great, it is now imported from China and Korea in large quantity. However imported soy bean is never used to make first class shoyu or soy, since the imported beans are inferior to those produced in Japan.

A table shows the quantity (in *kin*) and value (in *yen*) of soy bean exported from Japan from 1887 to 1891; 2.1 million *kin* were exported in 1889.

© Copyright Soyinfo Center 2013

Four specimens of soy sauce are on display. Two brands (the trade marks are shown) are made by Mr. Mogi Shichiroyemon, and two are made by Mr. Mogi Saheiji. All are made at Noda-machi, Chiba prefecture, Japan. Brands (a) and (c) are of the first quality; brands (b) and (d) are of the second quality.

A table shows the amount of shoyu made in Japan each year from 1887 to 1891; the amount ranges from 1,304,551 *koku* in 1888 to 1,157,982 *koku* in 1890. Since 1 *koku* = 180 liters, the amount made in 1888 is 234,819,180 liters. The total number of shoyu manufacturers in 1889 was 10,682. A table shows the price (in yen) of various brands and quantities of shoyu from 1887 to 1892. A brief description of the process for making shoyu is given. The word "barm" is used instead of koji. Either barley or wheat can be used with daizu to make the barm. The "mixture is kept for about 25 months, stirring it occasionally with a paddle, say twice a day during winter and three times in summer, and when it is fermented to the required degree, soy is extracted by means of a soy press. The clear liquid thus obtained is pasteurized by heating to about 130º F. and when entirely cooled, it is transferred into casks."

As shoyu is manufactured from daizu, wheat, etc., "it naturally contains a large quantity of albuminous matter. Shoyu is used in Japan as table salt is in Europe and America; consequently it is indispensable for daily use for cooking fish, meat, vegetables. etc. It has a remarkable merit when applying it in the place of sauces (like 'worcestershire') for beefsteak, fry, stew, etc. It answers better than salt when used with cold meat.

"Japanese soy or 'Shoyu' has long been exported to various parts of Europe where those who once taste it never fail in extolling its flavour. It is said that in Holland, Japanese soy has been used by many people from long years ago and highly esteemed by them." A table shows the chemical composition of shoyu.

"Since the fine flavour of Japanese soy has recently become known to people abroad, several trial consignments were made both to Europe and America, and the result, though it has obtained a high reputation among them, still it has not yet become a leading article of export." A table shows the annual amount and value of shoyu exported from Japan from 1887 to 1891. It ranges from 1,302.71 *koku* worth 11,091 in 1887 to 3,749.01 *koku* worth 41,028 yen in 1891. Thus the exports are growing rapidly.

Three specimens of tamari are one display, one dilute and one concentrated. The first two are made and sold by Mr. Ishima Mosaku. The 3rd (regular tamari) is made and sold by Mr. Morimoto Chôhachi. All are made at Yokkaichi in Miye [Mie] prefecture. Tamari is made chiefly in the prefectures of Miye, Aichi and Gifu [in central Japan]. Tamari is very similar to shoyu except that no wheat is used in manufacturing tamari.

Tofu (bean curd): "Tofu is one of the most favourite foods of Japanese and sold in all places both in towns and villages. The specimen here exhibited is called Yakidofu and is prepared by roasting partially dried 'Tofu' over a charcoal fire." "As 'Tofu,' sometimes called bean curd, being a coagulated vegetable albumen of soy beans, it contains a large proportion of nutritious matter, most important to human life, especially, to those who subsist mainly upon vegetables." The price of this Yakidofu is 18 yen per 10 dozen.

Note 3. This is the earliest English-language document seen (April 2013) that mentions grilled tofu, which it calls *Yakidofu.*

A specimen of Kôri-tôfu or frozen bean curd is displayed; it is made in Minami Adzumi-gun, Nagano prefecture. "As it can be preserved for many years it is a suitable for provision for vessels undertaking long voyages."

Concerning adzuki: There are both red adzuki and white adzuki. Early varieties are sown in the spring; late varieties {called aki-adzuki in the autumn}. "It is mostly used for preparing "An"–a pulpy mixture of boiled Adzuki flour and sugar, and in that state is largely used for making various kinds of confectionary." It is also used to make "Sarashi-an or refined flour of 'adzuki," and "shiruko–a juice prepared by boiling the flour with a suitable quantity of water and adding sugar..." Note 4. Shiruko could be described as adzuki bean soup with mochi (rice cake).

Concerning rape seed: "Rape was formerly cultivated to a great extent but since the introduction of Kerosene Oil, the acreage of its cultivation has been much diminished, yet it is grown in nearly all parts of Japan and forms one of the important farm crops."

389. Kellogg, Ella Ervilla Eaton. 1893. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery, and a large number of original, palatable, and wholesome recipes. Chicago, Illinois: Modern Medicine Publishing Co. 581 p. Illust. Index. 23 cm. • ***Summary:*** This 1893 edition is very similar to the 1892 edition. All the pages up to about p. 440 are identical, but somewhere after that 8 pages have been added. Pages 551-58 are blank except for "New recipes" and the page number printed at the top of each page. There are also 14 blank pages after the last numbered page.

Note: An ad in the Sanitarium health foods booklet (1893, inside rear cover) states: "The new hygienic cook book. Thoroughly scientific; entirely practical. Over 800 carefully tested recipes. Bright and entertaining in style, concise, the result of Ten Years of patient research and experimentation in the Experimental Kitchen connected with the Sanitarium at Battle Creek, Michigan. Ought to be in every family." Address: A.M., Superintendent of the Sanitarium School of Cookery and the Bay View Assembly School of Cookery, Battle Creek, Michigan, and of the Bay

390. Koenig, Franz Joseph. ed. 1893. Chemie der menschlichen Nahrungs- und Genussmittel. Zweiter Theil. Ihre Herstellung, Zusammensetzung und Beschafftenheit, ihre Verfaelschungen und deren Nachweis. Dritte Auflage [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. Their production, composition and properties, their falsification and proof of that. 3rd ed.]. Berlin: Verlag von Julius Springer. xvi + 1385 p. See p. 194-95, 389, 486-90, 529-30, 1044-53, 1071. Illust. Index. 24 cm. [12 ref. Ger]

• ***Summary:*** Summaries of early studies on the chemical composition of soybeans and various soyfoods, including some original studies. Discusses (p. 194-95) commercial sauces, including Japanese shoyu (*"Japanisch Soya oder Shoya oder Soy"*). See separate entry.

Discusses (p. 1044-51) adulteration of coffee and coffee substitutes. Under "Coffee made from legumes" (p. 1051) we read: "The soybean (compare p. 486) is also used for the preparation of a coffee substitute." A table (p. 1053, based on Kornauth) compares the composition of 12 roasted seeds and fruits used to make coffee substitutes, including chicory, barley, figs, soybeans, white lupins, and chufa.

An illustration (p. 1071) shows different cellular layers of the soy bean sprout leaves (*Keimblätte*)–after an illustration by J. Moeller.

Also discusses: Peanuts (*Erdnusse, Arachis,* p. 322, 373, 385, 389, 494, 621, 686, 1051). Sesame seeds (p. 322, 385, 372, 389, 408, 494). Almonds (p. 322). Hemp (p. 322, 385, 493). Lupins (p. 372, 385, 389, 490-91, 1050, 1053, 1068-69). Chufa (*Erdmandel, Cyperus esculentus,* p. 1051, 1053). Address: PhD, Prof. (who teaches but does not have a faculty seat or voting rights) at the Royal Academy and Head of the Agricultural-Chemical Experiment Station at Muenster, in Westphalia, Germany (ordentlicher Honorarprofessor der Koeniglichen Akademie und Vorsteher der agric.-chemischen Versuchsstation Muenster i. W.).

391. Sagot, Paul Antoine; Raoul, Edouard François Armand. 1893. Manuel pratique des cultures tropicales et des plantations des pays chauds [Practical manual for tropical crops]. Paris: Augustin Challamel. xxxii + 734 p. See p. 151-55. [Fre]

• ***Summary:*** In the chapter titled *Légumes et Culture Potagère,* there is a section on soybeans and soyfoods written by Edouard Raoul titled "Soja hispida Moench, Pois Soja, Pois oléagineux de Chine. Daïzou des Japonais." It discusses the widespread culture of soybeans in southern Asia, China, and Japan. "The seed is very rich in oil and in casein soluble in water. Its consistency, especially before maturation, is very tender and fine. Unfortunately it does not have much taste of its own. The pod is very small and contains only 2-3 seeds. It is not easily opened. I prefer soybean seeds having a color that is clear fawn-colored or tawny (*fauve*) or greenish, to those which are black."

"The plant must be sown from very fresh seeds. The germination (in Europe) is often very unequal, and many of the seeds don't develop... Some seeds sent by me to French Guiana (*la Guyane*) have been cultivated by Mr. Bar au Maroni, and have borne fruit, but I don't have precise details on their vegetation or ease of utilization."

Brief descriptions are then given of miso, shoyu, tofou (tofu), *kouri-tofou* [dried-frozen tofu], "which is nothing but tofu dried using heat" [sic], and *uba* (yuba, "a product very rich in nitrogenous materials {proteins} and fats"), followed by a list of the names of the best-known Japanese soybean varieties, and a discussion of the difference between *Glycine hispida* Moench (*Kuro mame* [black soybeans], *no mame, kuzu, yama-daizou* [wild soybeans]), and *Glycine soja* Siebold et Zuccar. (*kiu mame* and *tsourou-mame*). Typical analyses of the stems and leaves, seeds, and entire plants are given based on research conducted by M. Joulie. A comparison of the nutritional value of soya and wheat is given based on the research of Wechler in Austria and Messrs. Fremy, Muentz, and Pellet in France. Dr. Menudier uses soy flour in diabetic diets.

Also discusses: Winged beans (p. 149-50; *Psophocarpus tetragonolobus* Dec., *Dolichos tetragonolobus* L., *Pois carré*). Peanuts (p. 150-51; *Arachide, Arachis hypogœa*). Bambarra groundnuts (p. 151; *Voandzou, Voandzeia subterranea* Dup. Th.).

Note 1. This is the earliest document seen (May 2009) concerning soybeans in French Guiana, or the cultivation of soybeans in French Guiana. This document contains the earliest date seen for soybeans in French Guiana, or the cultivation of soybeans in French Guiana (1893). The source of these soybeans was Prof. E. Raoul, who was apparently in France.

Note 2. This is the earliest French-language document seen (April 2013) that uses the term *kouri-tofou* to refer to dried-frozen tofu.

Note 3. Sagot lived 1821-1888.

Note 4: This is the earliest document seen (Nov. 2003) concerning general information on soybean production in the tropics.

Note 5. Notice that "kuzu" is given as a name for the wild soybean in Japan. Address: 1. Docteur en Médecine, Ancien Chirurgien de la Marine, Ancien Professeur d'Histoire Naturelle a l'École Normale Speciale de Cluny; 2. Pharmacien en Chef du Corps de Santé des Colonies. Professeur du Cours de Productions et Cultures Tropicales a l'École Coloniale.

392. Schlegel, Gustave; Cordier, Henri. 1894. The Chinese bean-curd and soy and the soya-bread of Mr. Lecerf. I. Tofu. *T'oung Pao* (*General Newspaper*) 5:135-46. March. [11 ref.

Eng]

• ***Summary:*** "Of late these Chinese preparations have again attracted the notice of Europeans. The *Temps* in France published last November [sic, April 8, 1893] a note upon the subject after an article in the *Avenir de Diego-Suarez* of 2 March 1893, and Dr. Vorderman, of the civil medical service in Java and Madura... We will add to these notices what is written about the subject by the Chinese themselves.

"I. Tao-fu or Bean Curd. According to 'Collected Omissions of *Sieh-choh'* nothing had been ever heard of the confection of bean-curd before or after the period of the three dynasties of antiquity (B.C. 2205-250), and it was only mentioned for the first time in the work of *Liu-ngan* [*Liu An*] king of Hoai-nan [Huai Nan] of the Han (second century before our era) Cf. Mayers, Chinese Readers Manual, No. 412, Cap. 24."

"The *Tao-fu* or Bean-curd was also called 'Leguminous milk', and was prepared by boiling curds or milk from beans.

"It is further related that when *Shi-tsih* [pinyin: Shi Ji] was governor of *Ts'ing-yang* [pinyin: Qing Yang] (Latitude 30º45', Longitude 115º26') he, in order to purify himself and to rouse the population, did not permit himself the use of meat, but bought every day in the market several pieces of bean curd, so that the townpeople called these curds 'The little slaughtered sheep.'

"The bean of which this curd is prepared is known in science by the name of *Soja hispida,* and has been imported in the form of a meat-sauce from Japan to Europe under its japanese name of *Sho-yu,* the corrupted japanese pronunciation of the chinese *tsiang yu* or 'relish-oil' which this sauce bears in some parts of China, and which has been further corrupted by the Dutch into *Soja,* by which name (also written *soya* and *soy*) it became known all over Europe. We will return to this by and by.

"According to Dr. Vorderman (loc. cit. p. 354) the soy-beans are distinguished in light-colored (cream-color, straw-yellow, light ochre-yellow and amber-yellow), brown and black. The first two sorts are roundish, the last either roundish or oblong, as they come from the one or the other variety of the plant. Accordingly, the plant with roundish seeds is called *Soja hispida, tumida* and that with oblong seeds *Soja hispida, platycarpa,* amounting, with the differences in color, to four varieties: 1. Soja hispida, tumida Beta pallida; 2. Soja hispida, tumida Beta atrospuma [atrosperma]; 3. Soja hispida, tumida Beta castanea; 4. Soja hispida, platycarpa Beta melanosperma.

"No. 2 and 4 are black and serve especially for the fabrication of Soy or Ketchup, whilst No. 1 (pale-yellow) and No. 3 (brown) are used for other culinary purposes.

"Since the Vienna [Austria] exhibition of 1873, when several samples of Chinese, Japanese and Indian soybeans were exhibited, their great nutritive proprieties and richness of azote [nitrogen] and fat have been shown by chemical analysis, and the culture of this plant has been largely introduced into Europe, especially in Hungary."

Note 1. This is the earliest English-language document seen (July 2003) that contains the word "soybeans"–spelled as one word.

König in his work *Die menschlichen Nahrungs und Genussmittel,* 2nd Ed., Vol. II, p. 372, gives an analysis of the composition of 4 types of soybeans. "Dr. Vorderman says that he has not been able to detect amylum [starch] in the Soybeans of Java, China and Annam in applying the reaction of jodium [iodine] upon the section of the bean. The texture of the cotyledons consists principally of oblong, radiating parenchyme-cells, about five times longer than broad.

Note 2. This is the earliest English-language document seen (Oct. 2004) that uses the word "cotyledons" in connection with soybeans.

"II. *Tao-kan* or Preserved Bean Curd. The Chinese make of the Soy-beans two preparations, one called in Java *Tao-hu* and the other *Tao-toa.* They both consist of leguminous cheese, obtained from the light-brown beans, principally those obtained from Annam. But at present many Chinese in Batavia prefer the so much cheaper *kadele putih* grown in the *Preanger* and the *Ommelanden* (circumjacent territory of Batavia).

"These lightcolored beans are macerated during five hours in rainwater, when they swell up to about twice or thrice their original size. After having been cleansed from accidental dirt or admixtures, they are ground in a stone handmill, very much resembling that in which Europeans ground colors. One Chinese turns the mill, whilst the other throws the macerated beans, still in their husk, with a little water into the mill, so that the stuff runs as a white, thin mass, by a small gutter, into a tub prepared for its reception. This mass is then heated upon the fire in a large iron open cauldron, until it reaches the boiling-point. The froth is skimmed, and the fluid strained, after boiling, through a cotton cloth, in which a white, doughy residu [sic, residue = okara] remains, having a peculiar oily smell, and which serves as food for ducks and fowl.

"The filtrated fluid, which has a milkwhite color, is mixed, whilst it is being cooled, with a certain proportion of common Madura-salt or with a little calcined gypsum.

Note 3. This is the earliest English-language document seen (Oct. 2003) that refers to soymilk, which it calls the "milk from beans" and "The filtrated fluid, which has a milkwhite color..."

"This gypsum is imported from China in the form of large lumps of radiated gypsum. As it is specially used for preparing the leguminous cheese of the soybeans, it is called by traders in Batavia by the Malay-Chinese hybrid word *Batu-tao* i.e. 'bean-stone.'\ "The salt (or, as in China, the chloride of magnesium) and gypsum change the juice, by precipitation of the legumine [legumin], into a white, gelatineous [gelatinous] mass, which, when sufficiently cooled, obtains a certain consistency, allowing it to be cut

© Copyright Soyinfo Center 2013

into flat square pieces. This can, however, not be done for after two hours after the precipitation. These squares are then laid upon plantain-leaves protected by a white cotton cloth against dust, and hawked about in the streets.

"They have an unpleasant raw bean-flavor, but when mixed with other victuals, this taste is lost. It is used as well in the preparation of Chinese victuals, as in that of the so-called Indian rice-dish.

"In order to preserve the *tao-fu* for continuous use, it is made to *tao-koa* (or dried beans) by the following method.

"The *tao-fu*, cut into flat squares, is plunged into a decoctum of *Curcuma longa*, which colours it intense yellow. These yellow cakes are then wrapped up in white square pieces of cotton, laid between boards and exposed to a certain pressure. Generally they are at the same time stamped with Chinese characters.

"By this pressure a good deal of water is lost, but the cakes can be preserved much longer.

"Dr. Vorderman says that both *tao-fu* and *tao-koa* can be successfully used in the nourishment of feeble children, who refuse to take eggs. *Tao-koa* is also imported from China, but these cakes are much larger than those prepared in Java, and are always stamped with Chinese characters."

Note 4. This is the earliest document seen (Aug. 2002) that mentions Liu An of Huai Nan in connection with tofu.

Note 5. This is the earliest English-language document seen (April 2013) that uses the word "Tao-fu" (or "Tao fu"), or the word "Tao-hu" (or "Tao hu"), or the word "Tao-kan" (or Tao kan") to refer to Chinese-style tofu.

Note 6. This is the earliest English-language document seen (Sept. 2004) that uses the term "pale-yellow" or the term "straw-yellow" to describe the color of soybean seeds.

Note 7. An article in this same issue, titled "The Chinese in Boston" [Massachusetts], notes that presently "1,000 Chinese live in Boston, of which 700 work in the 180 laundries, and about 300 are merchants and traffickers, all dwelling on Harrison Ave. Here one also finds 63 gambling dens (or houses of ill repute) and several others where opium is smoked–visited in part by the most vile class of Americans."

Note 8. We wonder if there wasn't at least one tofu shop in Boston at this time. Address: 1. Professeur de Chinois à l'Universite de Leide [Leiden]; 2. Professeur à l'Ecole spéciale des Langues orientales vivantes et à l'Ecole libre des Sciences politiques à Paris.

393. *Weekly Argus* (*Crawfordsville, Indiana*). 1894. Too sacred to touch. Stricken down, he lay where he fell until death came to his relief. May 19. p. 7.

• ***Summary:*** "The ex-lord abbot, of the Otani sect, who died lately at his residence in Kyoto, was the head of all the Buddhist priests in Japan." He had been in poor health since the previous year. While making his way along a hallway, attended by a male servant, he fell. The alarm was sounded, and instantly about twenty women charged will all sorts of duties and ceremonial offices in the house of the prelate ran to the spot. But so inflexible is the etiquette of the abbot's household "that in the absence of his wife not one of the attendants might touch the body of the incarnate Buddha, even in the moment of his death agony." He died about an hour later. Describes the many ceremonies conducted.

The funeral ceremony was on a grand scale. However: "The viands served were of the plainest kind–a little miso soup, with square cut pieces of bean curd, and some rice."

394. Cavendish, Alfred Edward John; Goold-Adams, Henry Edward. 1894. Korea and the sacred white mountain: Being a brief account of a journey in Korea in 1891. London: George Philip & Son. 224 p. Illust. (40 original, many color). Maps. Index.

• ***Summary:*** This book is an amplification of the author's diary kept during a stay of a few weeks in Korea. Soy is mentioned as follows: Page 12: "Chefoo is the watering-place for Korea, Pekin, Tientsin, and Shanghai, but the foreign portion of it is very small, with three indifferent boarding-houses, but good pears and good bathing, if you do not mind a naked fisherman or two about. The chief exports appear to be straw plait for hats and bean-cake for manure."

Page 33-34: Korean ponies, which carry foreign travelers and their belongings, are very small. The forage ration consists of about 2 lbs. of beans and millet boiled in water, and the whole poured hot into a trough; the average feed is two gallons of this mixture, given three times a day, and supplemented by 2 lbs. of chopped straw (rice or millet)." "Other means of transport are found in donkeys, cattle, and coolies."

Page 48: Beans are becoming largely grown in Korea, for the demand for them in Japan is increasing, as they are used in the manufacture of Bean-curd, Miso, and Soy [sauce], while the Japanese are growing instead mulberries for sericulture. Wheat, barley, and rice, the latter of two kinds, one of which grows in dry soil, are also increasing, the export of these in 1890 being–barley, 5,260,533 lbs., value $50,341; beans, 87,950,800 lbs., value $1,004,762; wheat, 5,869,466 lbs., value $60,381; rice, 116,622,000 lbs., value $2,057,868."

Page 54. "Besides flax, maize, and cotton, there were fields of the small millet (*Setaria italica*), substitute for porridge, and of the tall millet, Susu or Kaoliang (*Holcus Sorghum*), with stems 8 to 12 feet high and as thick as a man's thumb, turning to golden yellow or bright mahogany colour; from the latter kind the Koreans make the coarse cloth of which their rough garments are composed, when they do not use Manchester shirtings; also fields of beans, food for cattle and men, and the foundation of Japanese soy [sauce] and our Worcestershire sauce."

Pages 146-47: "He produced some samshu, a muddy fluid which smelt and tasted like Kaffir beer, with strong

© Copyright Soyinfo Center 2013

spirit in it; this peculiar taste is due to the bean-water [water in which soy beans have been boiled] which they mix with the spirit distilled from rice or millet. We were given a bottle of this liquor by the head-man, and the cook bought another of Chinese make, which was quite clear and less diluted with bean-water."

Pages 195-96: "Whilst waiting in the inn to-day, I had plenty of opportunities of observing the nauseous smell of the food greedily devoured by the Koreans. Five or six little dishes, containing various preparations of meat or fish, chillies, [soy] beans, cabbage, rice, &c., were ranged on a little table a foot high, and gave forth a most evil odour. A Korean likes his viands very highly seasoned, and in eating takes a little of every dish into his mouth, that he may enjoy the pleasant mingling of the different flavours." Note: At least one of these dishes probably contained Korean-style soy sauce or miso–but we cannot be sure.

Bean or beans (usually noted in passing as a crop with other crops) are mentioned on pages 66, 67, 68, 134, 138, 150, 191, 194, 199. Address: 1. Captain, F.R.G.S., 1st Argyll and Southern Highlanders, now in Edinburgh; 2. Captain, R.A.

395. Kellner, O.J. 1895. Ueber die Bereitung von Sake, Shoyu, und Miso [On the preparation of sake, shoyu, and miso]. *Chemiker-Zeitung* 19(6):97-98; 19(7):120-21. Jan. 19. [6 ref. Ger]

• ***Summary:*** The first installment of this article gives details on the production of sake in Japan. The process can be divided into 4 steps: The production of a diastatic ferment (koji), the culturing of the yeast (*Hefezüchtung*), the main fermentation, and separation of the fermented liquid (sake). A detailed description is given of the preparation of both koji starter (the ash of camellia wood is used) and koji. The koji, make in koji cellars, contains a very powerful, inverting ferment (*ein sehr kräftiges, invertirendes Ferment*), whose effect goes further than the diastase of malt. The finished sake, which contains 11-14% alcohol, is consumed hot. Sake makers in Japan, like beer makers in earlier times in Germany, are very conservative and will hardly allow the introduction of a thermometer into their operations.

Shoyu or "Bohnen-Sauce" is called Soja or Shoja in Germany. About one-fourth of the wheat is finely pulverized. It is fermented in vats for various times ranging from 8 months to 5 years. Then the liquid is pressed out in cotton sacks. Finally the press-cake is mixed with salt water, and re-pressed to yield a lower quality product. The finished product consists of a mixture of soy sauces of different ages to improve the flavor and aroma. The best soy sauce is made from equal parts of 3-year and 5-year soy sauce. The press-cake is used for fertilizer.

A nutritional analysis of shoyu is given. Its relative density ranges from 1.182 to 1.193. In 1888-89 in Japan 10,634 shoyu plants produced 1.3 million koku [1 koku = 180 liters or 47.6 gallons, so 1.3 million koku = 234 million liters or 61.88 million gallons]. Per capita consumption was about 5.5 liters per year.

Concerning miso, the author discusses rice miso first, then barley miso, implying that the former is more widely used. He notes that miso can be made in only 4 days by incubating it hot. He then gives nutritional analyses of 5 types of miso that he made in 1889. "According to my estimation, at least 30 million kg, over half of the yearly soybean harvest, is used in miso production... Those soybeans that are not used for shoyu and miso production, serve largely for the production of tofu (*Bohnenkäse*)." The tofu is coagulated with a solution obtained from sea salt that is rich in magnesium chloride [i.e. nigari]. Address: Privy Councillor (Hofrath), Japan.

396. Martin, Ernest. 1895. Le Tao-fu (soya), son origine, ses propriétés, son acclimatation [Tofu (soya): Its origin, properties, and acclimatization]. *Revue Scientifique* (*Revue Rose*) 3(5):144-46. Feb. 2. Series 4. [Fre]

• ***Summary:*** A French-language review of the literature on tofu, including a brief discussion of soy sauce and soybeans. The Soya hispida (Family: Papilionacées; Glycine Phaseolus) is an oilseed (*graine oléagineuse*) that originated in China. According to the research of Prof. Schlegel at the University of Leiden, it was first mentioned in the work of Liu-An, king of Huai-nan, of the Han dynasty, in the 2nd century before the Christian era. From this period, the seed was boiled and a milk-like liquid [soymilk] was extracted which had the reputation of possessing beneficial properties.

When the soybean (*le soya*) was imported to Europe, it was in the form of a sauce made in Japan and sold by the Dutch who were the first [sic] European navigators to arrive in Japan. Note: Portuguese navigators arrived in and traded with Japan before the Dutch.

Its name was *sho-yu*, which is nothing but the corruption of the Chinese characters *tsiang-yu*, which signifies savory oil [sic]. From sho-yu, the Dutch made the word "soya" or "soy" the name by which the bean is known in Europe.

Discusses: The shape and color of soybeans. The Exposition of Vienna [Austria] in 1873. König's discovery that soybeans contain 31-33% protein. The research of Vorderman and Pellet. Tao-Kan, Tao-Hu (tofu in Java), and Tao-Koa. Tofu exported from Annam. How Chinese in Batavia make soymilk and tofu (curded with gypsum); use of the residue [okara] for feeding to penned poultry, such as chickens and ducks. Further processing of tofu to extend its shelf life. Preparation of soy sauce. Many uses of tofu in Chinese therapy. Shi-tsih as the founder of the vegetarian diet. Writings of Montigny, the French consul general. Soy bread in diabetic diets. Mr. Desvilles. Soybean trials and acclimatization in France. Composition of soybeans grown in France.

"From the viewpoint of practical utility, we conclude

© Copyright Soyinfo Center 2013

that the acclimatization of species of the vegetable and animal kingdoms, which was formerly the goal of multiple costly tests, has now lost much of its importance. The ease of communications and the rapidity with which exotic shipments can be made often provide the same results.

"However we must continue to be attentive to failures of acclimatization, for they have much to teach us. One of the most interesting problems of science is that of mutations. The work of the mutationists (*tératologistes*), and especially of Dareste, on the production of artificial anomalies, has led to new proof that the variability of animal organization is much greater than one would be tempted to believe–and this variability extends also to plants... Such research can help elucidate the problem of the origin of races, which has heretofore remained in the deepest obscurity despite the work of savants such as Is. Geoffroy Saint-Hillaire, Darwin, and Quatrefages.

"Thus there is nothing surprising in the transformations manifested in living things which, transplanted from afar, find themselves placed in telluric [terrestrial] and climatological conditions completely different from those of their original habitat. Examples of this transformation multiple with each new day;" they include the opium poppy, rhubarb, some legumes, numerous varieties of bamboo. "What is the reason for these laws of transformation and degeneration that extend over each of the large kingdoms of nature? The problem is posed but has not been seriously addressed.

"As for the soybean (*graine de soya*), we have shown that it undergoes this transformation in a very sensitive manner: in it, the protein molecule progressively gives way to the starch (*amylacée*) molecule. At the heart of the plant organism, a special synthesis is accomplished: its chemical composition is modified in proportions such that it becomes inappropriate for the goal targeted by its cultivation in Europe."

397. Inouye, M. 1895. The preparation and chemical composition of tofu. *Bulletin of the College of Agriculture, Tokyo Imperial University* 2(4):209-15. Aug. [6 ref. Eng]
• ***Summary:*** One of the best early articles on tofu in Japan. Inouye tried to make a product resembling Swiss cheese with tofu, with moderate success.

"The efforts to prepare an easily digestible food from soya beans led to the preparation of *miso* and *natto*, two kinds of vegetable cheese, which were investigated some time ago in the laboratory of this college. (Footnote: On the preparation of *miso*, by O. Kellner, this Bulletin, Vol. 1, No. 6. On *natto*, by Yabe; Bulletin Vol. 2, No. 2).

"But the most interesting preparation is *tofu*, which consists principally of the protein-matter of the soya bean and which, according to the investigation of Prof. Osawa in Tôkyô, is as easily digestible as beef. This preparation is freshly made every day and sold in the form of tablets [cakes] about 10 c.m. broad, 2 c.m. thick, and 25 c.m. long [4 by 10 by 0.8 inches thick], is of snow-white appearance and of the consistency and taste of freshly precipitated casein of milk, but as there is no trace of bacterial action connected with its preparation, the name vegetable cheese is certainly not justified." A table (p. 211) shows the composition of tofu a determined by *Kellner.*

"*Tofu* is also sold in another form called *kori-dofu* [dried-frozen tofu]. It is prepared by exposing the fresh *tofu* tablets to the action of frost, under which they shrink considerably, lose water, and become more compact. While fresh *tofu* contains, on an average, 89.02% of water, *kori-dofu* contains only 15.32% in the air dry condition. The analysis of *kori-dofu* gave me the following results: Water 15.32%. Albuminoids 41.42%. Fat and lecithin 23.65%. Non-nitrogenous extract 15.05%. Cellulose 1.48%. Ash 3.08%."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *kori-dofu* to refer to dried-frozen tofu.

The author then describes the tofu manufacturing process, noting that it "is manufactured only on a small scale, by people who sell it in their own shops." "The beans are first soaked for about twelve hours in water and then crushed between two mill-stones until a uniform pulpy mass is obtained. This is then boiled with about three times its quantity of water for about one hour, whereupon it is filtered through cloth. This liquid is white and opaque, exactly like cow's milk; while the smell and taste remind one of fresh malt." "I also analyzed the fresh milky liquid with the following results" for "Soya bean milk" and cow's milk, respectively (p. 212): Water 92.53% / 86.06%. Albuminoids 3.02% / 4.00%. Fat 2.13% / 3.05% Fibre 0.03% /–. Ash 0.41% / 0.70%. Non-nitrogenous extract, including carbohydrates 1.88% /–. Milk sugar–/ 5.00%.

"The fat contained in this liquid as well as in the *tofu*-tablets was found to consist partly of lecithin. *Tofu* dried at 100º yielded 26.65% fat and 4.83 gr. of this fat yielded, after igniting with carbonate of soda and nitrate of potash in the usual way, 0.280 grm. of magnesium pyrophosphate, which, when multiplied by the lecithin-factor, 7.2703, corresponds to 2.035 grm. lecithin, amounting to 11.2% of dried *tofu*, leaving for the genuine fat 15.4% (Footnote: A portion of this lecithin was probably present in the soya bean as lecithalbumin; comp. Leo Liebermann, J.B. f. Thierchemie, 1893, p. 32, and E. Schulze, *Chemiker Zeitung*, 1894, No. 43); more of the latter, therefore, is left in the refuse than of the former."

Note 2. This is the earliest English-language document seen (March 2001) that contains the word "lecithin" or "lecithalbumin" in connection with soy–in this case tofu.

"In the manufacture of *tofu*-tablets from the freshly prepared milky liquid, about 2% of concentrated brine [natural nigari] as it is obtained as mother liquor from the

© Copyright Soyinfo Center 2013

preparation of sea salt, is added with constant stirring, whereupon a flocculent precipitate is soon formed which is separated by means of a cloth filter, slowly pressed, and then cut into tabular shape. I have tried to arrive at a satisfactory explanation of the nature of *tofu*, and have found that the salt-brine does not act by its chloride of sodium, but by the calcium and magnesium salts which are in it; for we can at once obtain precipitate from the milky liquid if we add a little calcium nitrate or magnesium sulphate, while we can not obtain any separation or precipitation by adding even considerable quantities of sodium chloride or sodium sulphate."

"I have analysed a sample of the salt brine used for *tofu* making and found it to contain, besides chloride of sodium, 27.9% of chloride of magnesium and 7.0% of chloride of calcium."

Footnote 4 (p. 213): "In order to see whether a product similar to Swiss Cheese could be obtained from the crude soya casein or *tofu*, I infected 50 grm. of fresh *tofu* with a small dose of pulverised Swiss cheese, and added ten per cent of common salt to the mixture, pressed it in cloth, and allowed it to stand in a moist beaker glass for several months. The product resembled, only to a limited extent, the cheese from milk, but further experiments with the addition of small quantities of milk sugar are intended."

Note 3. This is the earliest English-language document seen (Oct. 2003) that contains the term "soya bean milk."

Note 4. This is the earliest English-language document seen (Oct. 2003) that contains the word "milky" in connection with soymilk, or that uses the term "milky liquid" to refer to soymilk. It is the second earliest English-language document seen (Oct. 2003) that mentions soymilk, and the earliest that mentions it in connection with Japan. However there is no suggestion that Japanese consume soymilk as a beverage.

Note 5. This is the earliest English-language document seen (March 2009) that uses the term "vegetable cheese" to refer to miso. Address: Nôgaku-shi [Prof. of Agriculture], Japan.

398. Prinsen Geerligs, H.C. 1895. Eenige Chineesche voedingsmiddelen uit Sojaboonen bereid [Some Chinese foods made from soybeans]. *Pharmaceutisch Weekblad voor Nederland* 32(33):1-2. Dec. 14. Summarized in Teysmannia (1897) 7:413-15. [5 ref. Dut; eng]

• ***Summary:*** Contents: Introduction. Tofu or bean cheese (*Tao-hoe of boonenkaas*). Chinese soja or Fao-ijoe (boonenolie; soybean oil). Japanese soya (soy sauce; In Japanese: Shoijoe; in Chinese: Sex-sze-ijve). Taucho or bean paste (*Fao toio of boonenbrei*).

In the section on tofu, soymilk is mentioned twice.

Note 1. This is the earliest Dutch-language document seen (April 2013) that uses the term *boonenkaas* (unhyphenated) to refer to tofu.

Note 2. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *melkachtige, vettige vloeistof* ("milky, fatty liquid") or *gefiltreerde melkachtige vleistof* ("filtered milky liquid") to refer to soymilk.

Note 3. This is the earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls "Fao toio." This would later be spelled tao-tjo, taotjo, tauco, or taucho.

At the end of the section on tofu, the author continues: Another widely used bean preparation is soy sauce (de Soja), of which two kinds exist: the Japanese and the Chinese Soja. The first-mentioned has already been repeatedly described, for example by König (1889, p. 241), further by J.J. Hoffman in his "Contributions to the Knowledge of the Language, Geography, and Ethnology of the Netherlands Indies" (*Bijdragen tot de Taal-, Land- en Volkenkunde van Nederl. Indië;* Vol. V, p. 192), and recently by G. Schlegel in T'oeng pao [T'oung Pao 1894] (Part 5, No. 2) and O. Kellner in *Chemiker Zeitung* (1895, p. 120). While I could not find anything in the literature about the preparation of Chinese soy sauce (*Soja*), I have copied the following from the manufacturers themselves.

Chinese Soja or Fao-ijoe (bean oil). For this, only black varieties of the *Soja hipida* [*sic, hispida*] *humida Beta atrosperma* or *Soja hipida platycarpa Beta melanosperma* have been used. Their seeds are cooked and the water poured off, after which the beans are left in the sun for half a day to dry. Now they are cooled on big trays of woven bamboo out of the sun, then covered with leaves of a *Hibiscus* variety. On the beans there will always appear a type of mold, the *Aspergillus Oryzae* to be precise, which, at least on Java, appears every time again on moist soybeans exposed to the open air, but strangely enough does not appear on other foods. The beans are allowed to stand until the mold sporulates, which can be seen by the green color of the mold threads (hyphae), then they are dried again for some days and then put in a strong salt solution that has been cooled. This mixture is put in the sun for 8 days and afterwards it is boiled. The salt solution is then poured off from the beans and saved. The beans are boiled again and the water is added to the first salt solution. This process is repeated as many times as it takes to extract the residue completely.

"The decoction is strained through a fine sieve, boiled again, and the sugar from the areng palm, star anise (not the leaves), and some other herbs (which are available from Chinese druggists as "soya herbs") are added. Finally, this dark brown, pleasantly aromatic liquid is boiled down until salt crystals start to appear on the surface, indicating that the liquid is completely saturated with salt. After cooling, the soy sauce (*soja*) is ready to use. It yields a spice which is used together with all different kinds of foods as a pleasant condiment, and in the Chinese, Javanese, and even the European kitchen on Java it is an irreplaceable ingredient.

"Soy sauce is sold in several quality grades, of which the

© Copyright Soyinfo Center 2013

best is a thick sauce with a special aroma. The lesser kinds are thinner and are made by diluting the thick soy sauce with salt water, while in the very low-grade kinds, instead of the pleasantly sweet-tasting palm sugar, the bitter, sour-smelling unassimilated molasses from sugar factories is used.

Note 4. This is the earliest document seen (May 2010) that describes the preparation of a sweet Indonesian-style soy sauce quite similar to *ketjap manis* (which seems to have been first created about 1960), yet the writer does not mention its name.

"The Chinese soy sauce appears as a black colored, thick, clear liquid in which sometimes a viscous sediment can be found. When diluted with water it turns turbid or cloudy, but after adding salt this cloudiness disappears. Here is an analysis of one of the most common varieties: Specific gravity 1.254, saccharose and glucose 15.60%, nitrogen containing substances (*stikstofhoudende stof*) soluble in alcohol 4.87%, nitrogen containing substances not soluble in alcohol 2.62%, nitrogen-free substances soluble in alcohol 0.25%, nitrogen-free substances (*stikstofrije stof*) not soluble in alcohol 0.75%, salt 17.11%, other ash components 1.65%, water 57.12%. Total 100%.

"The substances insoluble in nitrogen consist (except for peptone) mainly of legumin, which is soluble in strong salt solutions (compare Beilstein, *Handbuch Organische Chemie*, III, p. 1275) and will precipitate when diluted. This protein product (*eiwitstof*) has, by repeated precipitation with alcohol and renewed dilution in water and salt, been cleaned and could be recognized as a legumin. The elementary analyses gave these figures: Carbon 51.6, hydrogen 7.1, nitrogen 15.9.

"Furthermore, the dilution in water was precipitated by ammonium sulfate, magnesium sulfate and sodium sulfate and not by a large quantity of sodium chloride.

"The nitrogen containing substances soluble in alcohol were leucine, tyrosine and aspartic acid, all breakdown products of legumin, plus a little ammonia. Nitrogen-free extraction substances are almost not present and consist of a little pectin and the black coloring agent from the skin of the soybeans, which gives the black color to the soya.

"Just like Kellner (*Chemiker Zeitung* 1895, p. 121) remarks, the composition of the soya is very similar to the one of meat extract, by which the big importance of this condiment in countries, where mainly vegetable type food is consumed, can be readily explained. Very peculiar moreover is the way in which during the preparation of the soya the heavily digestible protein substances, which are locked into the thick skinned cells of the soya, have been converted into an easily digestible, very delicious food.

"One lets the boiled beans mold by means of the *Aspergillus oryzae*, which above all has the quality of changing amylodextrine and starchy substances into sugars followed by carbonic acid and water breakdown. We can say that a microscopic investigation of a molded soybean shows that the mold threads (hyphae) penetrate the cell walls of the complete soybean and partly dissolve them so the contents will be more readily available. When the mold has used up all that food, as shown by its fructification, the beans are put into a strong solution of salt water so that the legumin will dissolve, producing a thick fluid liquid. At the same time, the broken down substances of the legumin will dissolve pepton [peptone], leucine, tyrosine and ammonia, next to the aromatic substance that will start to form in this stage. The continued manipulations, addition of sugar, herbs, etc., are of course of minor importance, but principally the clever way in which the mold is being used to dissolve the cell walls is highly interesting. This, like so many Chinese preparations, is completely empiric and no Chinese would have the slightest notion of what all this molding is about."

This article describes the first attempt to identify the tempeh mold. In the section on Indonesian miso (taucho), the author notes: "In a similar way, in Java, other molds are used to make leguminous seeds into more digestible foods. Thus the presscake, which remains after making peanut oil and would be indigestible without further preparation, is subjected to the action of molds. In central and eastern Java *Chlamydomucor Oryzae* [now known as *Amylomyces rouxii*] is used, whereas in western Java an orange mold of the family Oospore (Neurospora) is used. In the former case, the food is called 'bongkrek,' and in the latter 'ontjom.' If soybeans are molded with *Chlamydomucor* the spice is called 'tempets' [sic, tempeh]. In the preparation, the seeds are boiled, spread, mixed with a little molded cake from a former batch, and left alone for a while until the mass is bound into a solid white cake.

"All the aforementioned molds have the ability to break starch and pectin substances down into sugars, by which means the cell walls are opened and the seeds made more easy to digest.

"In the case of the starch-containing peanut presscakes, the breakdown of starch into sugars, followed by the use of the resulting sugars, proceeds so rapidly that the cakes become warm and within 1 day about 5% of their weight will disappear.

Kagok Tegal 28.9.95.

Note 5. This is the earliest document seen written only in Dutch that mentions Indonesian miso, which it calls *Fao toio* or *boonenbrei*, and *tao tsioe.*

Note 6. This is the earliest document seen stating that Hibiscus leaves are used in Indonesia to make soyfoods–in this case soy sauce.

Note 7. This is the earliest document seen (April 2012) that mentions "bongkrek"–but the explanation is incorrect.

Note 7. This is the earliest document seen (Sept. 2011) that mentions "ontjom." Address: Java, Indonesia.

193-94.

• ***Summary:*** In the section on "Food Consumption" a subsection titled "Japanese Dietaries" (p. 193-94) states: "The legumes are little eaten in their natural state but form the basis of a number of prepared foods and relishes, such as miso, tofu, and shoyu, all of which are made from the soja bean. The miso is prepared from cooked beans, which are rubbed to a thick paste and fermented with the ferment used in the preparation of the rice wine. Tofu, or bean cheese, is essentially the legumin of the soja bean, which is first extracted with water and then precipitated by the addition of the mother liquor (magnesium chlorid), obtained from the evaporation of sea water in the manufacture of salt. The cheese is eaten fresh. The shoyu sauce is prepared from a mixture of cooked and pulverized soja beans, roasted and pulverized wheat, wheat flour, salt, and water. The mixture is fermented with the above-mentioned rice ferment for 1½ to 5 years in casks. This sauce is used very largely by all classes." Address: Prof. of Chemistry in Weslyan Univ. Director of the Storrs (Connecticut) Agric. Exp. Station, and Special Agent of the U.S. Dep. of Agriculture.

Botanical investigations into the materia medica of the ancient Chinese. *J. of the Royal Asiatic Society, North China Branch. Series 2.* 29:1-623. See p. 9-13, 385-86, 389. [200+* ref. Eng]

• ***Summary:*** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Introduction (p. 1-9). Abbreviated references to Chinese, Japanese and European books (p. 9-12). Medicinal plants of the *Shen Nung Pan Ts'ao King* [pinyin: *Shennong Bencao Jing*] and the *Pie Lu* [pinyin: *Mingyi Bielu*] (p. 13-). Pages 385-86: Section "229.–ta tou, Soy-bean, *Soja hispida,* Moench. P., XXIV, 1. T., XXXV.

"Comp. *Rh ya,* 29, *Classics,* 355.

Pen King:–Ta tou. The seed of the (3 Cc = Chinese characters given) *hei dadou* [black soy bean] is used in medicine. Taste sweet. Nature uniform. Non-poisonous. When eaten it causes the body to become heavy.

Pie lu:–The ta tou is produced in T'ai shan [in Shan tung, App. 322] in marshes. It is gathered in the 9th month.

Su Sung [11th cent.]:–The ta tou is now generally cultivated in two varieties–the white and the black. The latter is used in medicine.

Li Shi-Chen:–There are many sorts of the ta tou–the black, white, yellow, gray, green and spotted [according to the colour of the seeds]. The black sort is used in medicine, is also a valuable food, and is employed in making Cc shi (Soy [nuggets]. V. infra, 234, and Bot. sin., II, 355). From the yellow sort oil is expressed and Cc tsiang [jiang] (sauces) and Cc fu (beancurd [tofu]. See l.c.) are prepared. These beans are also eaten roasted. Besides the seeds of the ta tou, and the oil expressed from them, other parts of the plant are likewise officinal, viz. the Cc ta tou p'i (the valves of the legume), the leaves, the carbonized straw and the flowers.

"See P. Smith, 88, *Dolichos soja.* -

"230.- Cc [yellow soybean sprouts] *ta tou huang kuan.* P., XXIV, 7.

This drug is noticed in the *Pen king.* As T'ao Hung-King and Li Shi-Chen explain, this consists of the germs of the black Soy bean, produced by steeping the beans in water and causing them to germinate. These germs are used as food.

"This is still an article of food at Peking, but produced from the yellow Soy bean and called Cc *huang tou ya.*

Note. This is the earliest English-language document seen (Jan. 2013) that gives a name to soy sprouts; it calls them *ta tou huang kuan* (old name) and *huang tou ya* (present name).

Pages 389-90: "234.–Cc [fermented black soybeans] *ta tou shi.* P., XXV, 2. Comp. *Bot, sin.,* II, 355:–Soy. It is noticed in the *Pie lu.* Li Shi-Chen says it is prepared from the black soy bean.

"In the *Cust. Med.* the Cc *tou shi* is mentioned as an article of import, p. 110 (183) Wu hu,–p. 164 (368) Shang hai,–p. 216 (89) Wen chou. It is said to come from Han kow and Ning po, and is identified there with salted black beans.–See also *Hank. Med.,* 45 [by R. Braun, 1888].

Appendixes. Chinese geographical names (p. 547). Alphabetical index of Chinese names of plants (p. 606). Alphabetical index of genus names of plants (p. 616). Address: Late physician to the Russian Legation at Peking.

401. Kingsford, Anna Bonus. 1895. The perfect way in diet: A treatise advocating a return to the natural and ancient food of our race. 6th ed. London: Kegan Paul, Trench, Truebner & Co. Ltd. xiii + 121 p. 16 cm. [92* footnotes]

• ***Summary:*** *The Encyclopedia Britannica* (1929, at Vegetarianism) considers this book one of the two classics on the subject. It is a revised and enlarged translation of the author's July 1880 thesis, from the University of Paris, under the title *De l'Alimentation Végétale chez l'Homme.* The original thesis was published in Paris in French, then translated into German. The first English edition was published in 1881. The author, a physician (M.D.) deals much more with the physical and social aspects of a vegetarian diet, than with its moral and philosophical aspects. This is not because she regards the latter of lesser importance, "but because their abstruse and recondite nature renders them unsuitable to a work intended for general reading."

This long essay, which is not divided into chapters, discusses both vegetarianism and animal welfare. It begins with a Proem (prose poem, from *The Light of Asia,* about the life of the Buddha by Edwin Arnold), then discusses anatomy and physiology, cookery, physical force, national habits,

© Copyright Soyinfo Center 2013

chemistry, stimulating effects of flesh food, alcoholism, slaughter houses, social considerations, sufferings of cattle, dangers of flesh-eating, treatment of disease, economical considerations, over-breeding, the leather question, cruelty in the fur trade, the manure question, sport, recapitulation, conclusion.

On page 26 the author praises the Japanese diet: "The Japanese not only abstain from animal food, but even from milk and its productions. One of the laws which they most religiously observe is, not to kill, nor to eat anything that is killed... The Japanese are represented as robust, well made, and active, remarkably healthy, long-lived and intelligent...

"'Fish and rice are the staple articles of Japanese diet... Beans are an important article, and from these is manufactured *tofee* [sic, tofu]–literally bean-cheese, an article largely used by the poorer classes'" (*New York World* 1887).

"China.–'The perfection of the art of cooking is nowhere more observable than in the monasteries of the Buddhists. They have but the simplest elements of food to deal with. No meat, no fish, no poultry are allowed at their tables. No eggs, no lard, no butter, no milk must be introduced into their confectionery. Vegetables alone are permitted, and yet by means of these a dinner of surprising variety is served, and if the guest judged only be appearances he would suppose that the worthy abbot had forgotten the rigid rules of his monastic establishment, and was about to break his vow by partaking of most heretical viands'" (*Pictures of the Chinese*, by Rev. R.H. Cobbold, M.A.).

On pages 93-94 the author shows that a meatless diet will support a much larger population from a given area of land than a meat-centered diet for which the land is used for pasture and grazing. Address: Doctor of Medicine of the Faculty of Paris, 11 Chapel Street, Park Lane [London?].

402. Thompson, William Gilman. 1895. Practical dietetics: With special reference to diet in disease. New York, NY: D. Appleton & Co.; London: Henry Kimpton. xxii + 802 p. See p. 135, 656. Illust. Index. 24 cm.

• ***Summary:*** The chapter titled "Vegetable Foods" states (p. 135): "Soya bread is made from an oily pea which grows in China and Japan, and is used sometimes by diabetics, for it contains over one third part gluten and but 1.17 per cent of glucose."

In the chapter on "Diseases especially influenced by diet" (p. 599+), in the section on "Diabetes mellitus" is a subsection titled "Dietetic treatment." Under "Substitutes for bread" we read (p. 654) that there are five breads made from flour especially prepared for diabetics: Gluten bread, bran bread, almond bread, inulin bread, and soya bread. The passage on "Soya bread" (p. 656-57) states: "A meal [flour] is made from the fruit of the *Soya hispida*, a bean which is grown in China and Japan and also raised in Austria. It is very rich in proteid. It has a peculiar taste and holds a purgative oil.

Note: This is the earliest English-language document seen (May 2005) that uses the word "meal" to refer to soy flour.

"The published percentage compositions of the more important ingredients of soya bread is as follows: Water, proteids, fats, starch and sugar, phosphoric acid.

"Soya bread is nutritious on account of the large percentage of fat which it contains, but according to an analysis made by an expert chemist it contains more carbohydrates than it is advertised to hold. This, in fact, is true of all the breads and biscuits made of substitutes for flour. Prof. Leeds says that some breads which are falsely called gluten breads contain from 50 to 75 per cent of carbohydrates, and hence they are unreliable and deceptive."

Also discusses: Vegetarianism (p. 28-30). Wheat bran and gluten (p. 120-21). Gluten bread (p. 128-29). Prepared farinaceous foods, incl. Liebig's Foods, Nestlé's Food, Gerber's Food (p. 130-33). Diastase and malt extracts (p. 142-43. "Diastase is a vegetable ferment [enzyme]..."). The chief vegetable proteids and a "purely vegetable diet" (p. 143-45). Erbstwurst or pea sausage (p. 146-47; "It was invented in 1870 by a cook named Grünberg, and the German Government bought the secret of its preparation. It is a cooked food composed of pea meal mixed with fat pork and salt, so treated as to prevent the decay of legumin." Highly nutritious, it is rich in nitrogenous [protein] and starchy material, and the fat provides energy, but it often produces flatulence and diarrhea. Erbstwurst may be quickly made into soups. It was used by the German army in the Franco-Prussian War, and was known as the "iron ration.") Peanuts and peanut flour (p. 172). Oleomargarine and Butterine (p. 176-77). Peanut oil (p. 179. "Peanut oil is used to some extent in this country, like cotton-seed oil, mainly to adulterate or imitate olive oil, which is much more expensive"). Adulteration of coffee (with chicory, beans, or peanuts) and coffee substitutes (from wheat, rye, or oatmeal to which butter is added) (p. 200-01). Food preservation and ferments (p. 253). Vegetarian diets (p. 296-97). Digestion of proteids in the stomach (incl. gluten and vegetable casein, p. 325). Artificial digestion, using scientifically prepared digestive ferments or enzymes (p. 329-35): "To physiologists we are indebted for the discovery and development of the scientific preparation of digestive ferments of enzymes and the predigestion of food outside the body. The composition of the various digestive ferments and their action in general have been understood for a long time, but it is only within the last two or three decades that the use of these organic bodies has been made practicable on a large scale for rendering food more digestible or assimilable by invalids."

"The different ferments which can be used for increasing the activity of digestion within the body or for partially digested foods outside of the body are principally diastase, pepsin, and extracts of pancreatic juice, which are usually

© Copyright Soyinfo Center 2013

called pancreatin, and which are compounds of several substances. Besides these there are several vegetable ferments, such as papain from the American papaw, and ferments are present in the juice of the pineapple, and the century plant or agave.

"Predigestion of starches: There are a variety of ferments which have the power of converting starch into dextrin and sugar. They are ptyalin in the saliva, amylopsin [an amylase] in the pancreatic juice, diastase, a ferment in the intestinal juice, and the substances inulin and lichenin... Mucin and certain gums are also amylolytic. Of these different ferments, the one which is found to be of most practical service for predigestion is diastase. The action of the diastase of malt resembles that of the ptyalin of saliva and the amylopsin of pancreatic juice, which alter starches into dextrin and maltose." "Ground malt itself possesses even stronger digestive action upon starches than malt extracts." "For manufacturing malted foods the wheat or barley flour should be baked in order to rupture the starch granules and make them more soluble."

"Predigestion of proteids: The digestion of proteids may be accomplished either within the body by prescribing pepsin and hydrochloric acid, or without the body by use of the same agents, or, as is more often done at present, by pancreatinisation. Pepsin was among the first digestive ferments to be isolated and employed for artificial fermentation. This ferment differs from diastase in the fact that it is capable of continuing its digestive functional activity within the body, and it is therefore frequently prescribed in cases of deficient gastric secretion, to be taken with the meals, or immediately after, as a powder or in solution. The action of pepsin is confined to the conversion of albuminous food, and it requires an acid reaction." A table (p. 332) shows the relative digestive power of 6 commercial products as reported by Prof. Chittenden on 16 Feb. 1889; Parke, Davis & Co.'s Pepsinum Purum in Lamellis was found to be best. "Pancreatin is the name of a complex fermentative body derived from extracting the pancreatic gland." It is "a powerful digestive agent and, on the whole, more serviceable for the predigestion of food than any of the other ferments. It contains both trypsin and amylopsin. This extract also emulsifies fats... and since its action is so powerful and varied, the majority of the predigested food preparations–the so-called 'peptonised foods'–are made with pancreatin instead of pepsin." Predigested infant foods and milk are popular but expensive and sometimes have a bitter or disagreeable flavor. Papoid [from papaya] is an excellent vegetable ferment favored by Prof. Chittenden (of Yale Univ., Connecticut), who states that it "has the power of digesting to a greater or less extent all forms of proteid or albuminous matter, both coagulated or uncoagulated. Furthermore, papoid is peculiar in that its digestive power is exercised in a neutral, acid, or alkaline medium."

Food absorption takes place from the stomach to a limited degree, from the small intestine to a great degree, and from the large intestine to a lesser degree.

The first U.S. edition was published in 1897 (copyrighted 1895). A second edition was published in 1902. A fourth edition was published in 1909 (xxvi + 928 p.). William Gilman Thompson lived 1856-1927. Address: M.D., Prof. of Materia Medica, Therapeutics, and Clinical Medicine in the Univ. of the City of New York.

403. **Product Name:** Tofu.
Manufacturer's Name: Hirata Co?
Manufacturer's Address: Sacramento, California.
Date of Introduction: 1895?
New Product–Documentation: This is the earliest known soyfood product made by a Japanese in the Continental USA. However the initial company name, address, and starting date are not clear.

Washizu, Shakuka. 1930. *Zaibei Nihonjin shi kan* (*A History of Japanese in America*). Pages 36-37. "Pioneers of tofu and konnyaku production in America." A person named Chieto HIRATA, who lived in Sacramento, California, imported konnyaku from Japan. He came to the USA in about 1891. He is one of the old timers who transmigrated Hawaii. A native of Hiroshima prefecture in Japan, he was very clever and business-minded. In 1893 his wife began a company making konnyaku in Sacramento, California. Shortly after that she started making tofu.

"Footnotes: (1). Mr. Hirata is presently engaged in business in Korea. (2) Since the Chinese were the most skilled in making tofu, only recently [in the last 20 years] have Japanese started specializing in its production. There are many who claim to be the first; I am afraid of making any errors."

404. Ralph, Julian. 1896. The story of Miss Pi. *Harper's New Monthly Magazine* 92(548):189-200. Jan. See p. 190.
• ***Summary:*** This is a Chinese fairytale. Miss Azalea Pi is a fairy. In Hang-chow: "They stared at the live fish in the tanks and tubs of the fish-dealers, at the huge immaculate white mounds of bean curd, and the gorgeous displays of green, pink, and yellow vegetables. Everything was new to them."

405. *Times* (*London*). 1896. Agriculture: Crops and live stock. Jan. 13. p. 8, col. 3. [1 ref]
• ***Summary:*** "A vegetable preparation possessing many of the dietetic properties of meat is produced in Japan under the name of 'tofu.' It consists principally of the protein matter of the soya bean, and is said to be as easily digestible as beef. It is freshly made every day, and is sold in thin tablets of snow-white colour, and of the consistency and taste of freshly-precipitated casein of milk. The name 'vegetable cheese,' proposed to be applied to it, is not justifiable, as there is no trace of bacterial action associated with its preparation. Another form, known as 'kori-dofu,' is prepared by exposing

© Copyright Soyinfo Center 2013

the fresh tofu tablets to the action of frost, with the result that they shrink considerably, lose water, and become more compact. Fresh tofu contains, on the average, 89 per cent of water, whilst kori-dofu contains only 15.3 per cent, in air-dry condition. Tofu is manufactured by the people who sell it in their shops. The beans are first soaked for 12 hours in water, and then crushed between two millstones to a uniform pulpy mass. This is boiled for an hour with three times its quantity of water, and is then filtered through cloth. The liquid passes through white and opaque, exactly like cow's milk, whilst the smell and taste is suggestive of fresh malt. Upon standing, very fine particles separate on the surface, and these under the microscope are easily recognizable as small globules of fat. After two or three days there is a strong development of lactic acid, under the influence of which the casein separates exactly as in the souring of milk. Mr. Inouye, of the College of Agriculture at the Imperial University, Tokio, states that in preparing tofu tablets from the fresh milky liquid about 2 per cent of concentrated brine is added with constant stirring; a flocculent precipitate soon forms and is separated by means of a cloth filter, slowly pressed, and cut into tabular shape. In this way about one-fourth of the total quantity of the proteid in soya beans is obtained in the tofu. The brine employed is made from sea water, and it is to the potassium and magnesium salts contained in this that the precipitation of the tofu appears to be due. Wherever rice forms the principal food of man, as in China and Japan, the addition of some other food rich in nitrogenous matters, or proteids, is necessary to make up for the deficiency of proteids in rice. The people of the sea coast supply this want by the use of marine animals, whilst inland the seeds of various leguminous plants, and notably the soya bean, are employed, as beef and other meats have only recently come into use. Tofu, therefore, may be regarded as a kind of vegetable beef prepared artificially from a plant product, and, when consumed in conjunction with rice, filling the *róle* of a nitrogenous or proteid food in the presence of a larger quantity of a carbonaceous one."

Note: This is the earliest article seen (Dec. 2005) in the *Times* (London) that contains the term "soya bean."

406. Prinsen Geerligs, H.C. 1896. Einige chinesische Sojabohnenpraeparate [Some Chinese soybean preparations]. *Chemiker-Zeitung* 20(9):67-69. Jan. 29. (Exp. Station Record 8:72). [3 ref. Ger]

• ***Summary:*** This is a German translation of the author's 1895 Dutch article, but with two mistakes concerning tempeh corrected. He changed the name of the mold from *Chlamydomucor Oryzae* to *Rhizopus Oryzae* and he changed the name of the product from "tempets" to "tempeh." He added in conclusion that "it was finely sliced and enjoyed, mold and all." But he continued, apparently mistakenly, to refer to tempeh as a Chinese soyfood.

He also improved his description of Chinese-style soybean paste, which he now calls *Tao-tjiung* (*Bohnenbrei*) [*doujiang*], and says has much similarity with the miso of the Japanese (p. 68 R.7).

Note 1. These two articles by Prinsen Geerligs ushered in the era of scientific research on tempeh by European microbiologists and food scientists.

Note 2. This is the earliest document seen (Sept. 2011) that contains the word "tempeh"–spelled with an "h" on the end.

Note 3. It is also the earliest German-language document seen (Sept. 2011) that mentions tempeh, which it calls "tempeh."

Note 4. This is the earliest German-language document seen (Oct. 2003) that uses the term *milchweisse Flüssigkeit* ("milk-white liquid") to refer to soymilk. Address: Java, Indonesia.

407. *Vegetarian Messenger* (*Manchester, England*). 1896. Tofu, a Japanese vegetable cheese. Feb. p. 33-35.

• ***Summary:*** A summary of a long paragraph on tofu from an article titled "Agriculture: Crops and live stock," in the *Times* (London) (13 Jan. 1896, p. 8).

408. Ralph, Julian. 1896. The "boss" of Ling-Foo. *Harper's New Monthly Magazine* 92(550):620-31. March. See p. 624.

• ***Summary:*** "She trotted seventeen hours a day on those doubled-up ends of hers [feet that had been bound]–like the pig-deer in the rice-fields–cooking the rice, preparing the bean curd in all its forms, serving the food, the tobacco, the lighted paper spills for the men who smoked the water-pipes."

409. Kellogg, John Harvey. 1896. Bean cheese: Editorial. *Modern Medicine and Bacteriological Review* (*Battle Creek, Michigan*) 5(5):112. May.

• ***Summary:*** "A variety of cheese known as *tofu* is much used by the Japanese. It is made from the soja bean, which, after soaking for twelve hours in water, is ground to a uniform pulpy mass, then boiled for an hour in three times its quantity of water, and afterward filtered through a cloth. The milky liquid thus obtained is allowed to stand two or three days, when lactic acid develops, by which the vegetable casein is separated as in sour milk. Ten per cent. of concentrated brine is added by constant stirring, which causes a flocculent precipitate. This is separated by a cloth filter, and is formed into tablets by a slow pressure.

"*Tofu* is eaten in the form of soup and in many other ways. The solid nutriment which it contains amounts to only about ten per cent. Sometimes the greater part of the water is separated by freezing, and the block of frozen *tofu* afterward allowed to thaw in the sun. When prepared in this way, the proportion of solid nutriment, chiefly fat and vegetable casein, is nearly eighty per cent."

Note 1. This is the earliest document seen (June 2007) in

© Copyright Soyinfo Center 2013

which Dr. John Harvey Kellogg clearly mentions a soyfood product–tofu.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "frozen tofu" to refer to dried-frozen tofu. Address: M.D., Battle Creek Sanitarium, Michigan.

410. Trimble, Henry. 1896. Recent literature on the soja bean. *American J. of Pharmacy* 68:309-13. June. [12 ref]
• ***Summary:*** One of the best early reviews of the literature, especially the Japanese and European literature, published in the United States. This paper introduced several new soyfoods (such as *natto* and *kori-dofu*) to the United States Contents: Introduction. Nutritional composition of the soja bean based on analyses of 5 samples from China, Hungary, France, and Japan. Diastatic enzyme / ferment "present in the soja beans to a greater extent than in many other leguminous seeds (see Güssmann 1890). Composition of etiolated soja shoots [sprouts]. The oil [of the soja bean]. Starch content. Sugar content. Use of soybeans as food in Japan. Miso. Natto. Tofu. Kori-dofu. Introduction of the soja bean to the United States in about 1888. Ability to obtain nitrogen from the air.

Note. This is the earliest English-language document seen (Jan. 2013) that uses the term "etiolated soja shoots" to refer to soy sprouts.

"The immediate excuse for the appearance of this paper is the fact that a number of contributions have recently appeared on the soja bean, notably from the College of Agriculture, Imperial University of Japan."

"The oil may be extracted by pressure or by means of solvents [in the laboratory]; it is said to possess some laxative properties, is of a yellowish brown color, and has a slightly aromatic odor; it is intermediate between the drying and non-drying oils." The following constants, based on Stingl and Morawski (*Chemiker Zeitung,* 1886, p. 140) are given: "Specific gravity at 15ºC: 0.924. Point of solidification: 8-15ºC. Fusing point of the fatty acids: 27-29ºC. Point of solidification of fatty acids: 23-25ºC. Temperature rise: 59ºC. Iodine number: 121.3. Iodine number of the fatty acids: 122. Saponification number: 192.5. Note: Trimble actually got these constants from *J. of the Society of Chemical Industry,* 31 May 1893, p. 453-54, which summarised an Italian-language article by De Negris and Fabris (1891), whose values confirmed those obtained by Stingl and Morawski.

Trimble (p. 311-12) gives a good, detailed description of natto based entirely on Yabe (1894). Parts of his summary perceptive: "Yabe found in this substance four kinds of microbes present, and he believes the chemical decomposition of the proteids to be due to one or more of these microbes... A chemical investigation by the author just mentioned [Yabe] revealed tyrosine, peptone, guanine, leucin and xanthine. The total proteids amounted to considerably more in the *natto,* when allowance is made for moisture, than existed in the original bean, and the artificial product is also considered to be much more digestible."

Concerning tofu and soymilk: "A still more interesting preparation of the soja bean than either of the preceding [miso and natto] is *tofu.* This has been described and investigated by M. Inouye (*Bulletin Imp. College of Agriculture,* Vol. 2, No. 4 [1895]). The beans are first soaked for about twelve hours in water, and then crushed between two millstones until a uniform pulpy mass is obtained. This is then boiled with about three times its weight of water, and filtered through cloth. The liquid filtrate is white and opaque, very closely resembling cow's milk, while the odor and taste remind one of fresh malt. On standing, the liquid becomes sour from the formation of lactic acid, and a coagulation of the casein takes place. The freshly boiled and filtered liquid is coagulated either by the addition of a portion of the sour liquid which has been set aside from a previous lot, or it is treated with about 2 per cent of a concentrated brine, such as is obtained as mother liquor from the preparation of sea salt."

"Somewhere about the year 1888 the soja bean was introduced into the United States. It has been tried in a number of State Experiment Stations, and is gradually working into favor in the Southern States. In Kansas the plant has been found to withstand considerable drought... The plant is valuable for forage or soiling. The beans have been produced in South Carolina to the amount of 10 to 15 bushels per acre. On account of their richness in oil they have been used as a substitute for cotton-seed meal in feeding cattle, with very satisfactory results.

"The plant is believed to have, in common with most leguminosæ, the power of obtaining some of its nitrogen from the air, and hence, of acting as a soil renovator."

Note 1. This is the earliest document seen (March 2002), published in the USA, that contains the word *tofu,* or *kori-dofu* [dried-frozen tofu], or that discusses soymilk.

Note 2. This is the earliest English-language document seen (March 2003), published in the USA, that uses the word "crushed" or one of its cognates (crushing, crushers, etc.) in connection with soybeans.

Note 3. This is the earliest U.S. document seen (Sept. 2002) that mentions the use of a solvent for extracting the oil from soybeans.

Note 4. This is the earliest English-language document seen (March 2008) that contains the term "iodine number" (regardless of hyphenation or capitalization).

Note 5. This is the earliest English-language document seen (March 2008) that contains the word "drying" in connection with soy oil and its iodine number, or that states that soy oil is intermediate between the drying and non-drying oils. Address: USA.

411. Guo Yunsheng. 1896. Jiuhuang jianyishu [Treatise on simple methods of alleviating famine]. China. Passage on

© Copyright Soyinfo Center 2013

soy reprinted in C.N. Li 1958 #344, p. 243-47. [Chi]
• ***Summary:*** Wade-Giles reference: *Chiu Huan Chien I Shu*, by Kuo Yün-Shêng. Qing dynasty. The major division titled "Monthly ordinances for famine relief" contains the following sections: In the third month, you can plant large-seeded black soybeans (*heidou*). In the third month, plant small-seeded yellow soybeans (*huangdou*)*:* they can be used cooked as a main dish / grain (*fan*) or as a side dish / vegetable (*cai*), or they can be used for making jiang, fermented black soybeans (*shi*), soy oil, or tofu (*fu*). In the third month, plant large-seeded yellow soybeans (*huangdou*)*:* they can be used in all the same ways as small-seeded yellow soybeans, described above.

In the fourth month, plant large-seeded black soybeans, small-seeded yellow soybeans, and large-seeded yellow soybeans: In the early fall, they young pods can be eaten [as green vegetable soybeans].

In the fifth month, plant the large-seeded black soybean, the small-seeded yellow soybeans, and the large-seeded yellow soybeans: everybody knows what to do with them.

The major division titled "Saving the soil when it is depleted" contains the following sections: Plant large-seeded black soybeans, small-seeded yellow soybeans, or large-seeded yellow soybeans: Do not till the soil [which could cause erosion]. Note: Planting these legumes will help enrich the soil with nitrogen.

Plant large-seeded black soybeans, small-seeded yellow soybeans, or large-seeded yellow soybeans on land which has been infested by insects: Soybean seedlings contain no sugar, so the insects do not like to eat them.

New beans [those on land that has not been previously planted to beans] should be planted in a shady place: These new beans came from a place named Fanxian in Sichuan province. Note: This is apparently a famous soybean variety from a place where soybeans are apparently grown a lot.

Large-seeded black soybeans, small-seeded yellow soybeans, and large-seeded yellow soybeans should be planted in a shady place.

Barley can use black or yellow soybeans as green manure. Wheat can use black or yellow soybeans as green manure.

Barley can use dried black or yellow soybean leaves as manure. Wheat can use dried black or yellow soybean leaves as manure. Note: In times of famine, recycle all possible crop wastes.

In sandy places, use the dry empty pods of black soybeans or yellow soybeans as manure.

In hard soil, use dried leaves of black or yellow soybeans as manure.

Black soybeans and yellow soybeans should not follow (fears) the red flowered plant [safflower?] in rotations– according to certain old farmers. Note: Safflower has orange-red flowers, which were long used in China as a source of red dye. Southern melons (*nangua*) should not follow black or yellow soybeans in rotations. Bamboo shoot melons (*sungua*) should not follow black or yellow soybeans in rotations. False southern melons (*jianangua*) should not follow black or yellow soybeans in rotations. *Nuogua* melons should not follow black or yellow soybeans in rotations: in the midst of their growth, the melons will wilt. Black soybeans should not follow yellow soybeans in rotations, and vice versa.

The major division titled "Planting for famine relief" [plants which yield a crop quickly] contains two sections: Quick-maturing / early soybeans (*dadou*) or plum soybeans (*meidou*) can planted any time (and staggered) from the 2nd month to the 5th month: Soybeans planted in the 2nd month will ready to harvest in the 5th month. Small-seeded yellow soybeans whose seedlings are to be used as a vegetable (*huangdou miaocai*) can be planted for 3 months / three times [meaning unclear]: The grain changes into a vegetable; they are grown everywhere. (Translated by H.T. Huang, PhD, March 2003).

• ***Summary:*** Very similar to the 1895 edition, with the same number of pages. Soya is mentioned on pages 135, 654, 656-57, 785, and 799. Address: M.D., Prof. of Materia Medica, Therapeutics, and Clinical Medicine in the Univ. of the City of New York.

413. *Bruce Herald* (*Otago, New Zealand*). 1897. Miscellaneous. Jan. 12. p. 6.
• ***Summary:*** "Vegetable meat of Japan, called "torfu" [sic, tofu], is said to consist chiefly of protein of the soya bean, and to be as nutritious and digestible as meat. It is sold in tablets, is white as snow, and tastes like fresh malt."

414. Tokio Nurseries Co. 1897. General catalogue of plants, bulbs, seeds, &c. &c. Tokio, Japan. v + 53 p. 25 cm. [Eng]
• ***Summary:*** In the section titled "Vegetable seeds" (p. 45-50) is a subsection on "Pulse" (p. 47-48). The first entry is: "Soya Hispida, glycine hispida, soy bean, wide cultivation of this bean in the East, is used in the preparation of Japanese Soy [sauce], of Vegetable Bean Cheese [tofu], as well as Green fodder and manure. Thus the bean forms one of the staple products of Japan.

"'Early Variety,' sow April, crop in June. $1.20 per 10 lbs. $12.00 per 100 lbs.

"'Late Variety,' sow May, crop in August, eaten only when fully boiled down. $2.00 per 10 lbs. $18.00 per 100 lbs."

Other species of pulse listed are: *Phaseolus Mungo var. subtrilobata* ([azuki], 4 varieties; "'Common,' a very

© Copyright Soyinfo Center 2013

hardy productive one, sending out bushy crowns. The beans are crushed and made into sweets. $1.00 per 10 lbs." Also: White, Black-Eyes, New Prolific), *Phaseolus Mungo var. radiatus* ([mung beans]; "green podded, which when smashed is made into sweets, June-Sept., $1.50 per 10 lbs."), broad beans, peas ("Ordinary pisum sativum, also used in the preparation of viscous soy" [sauce]), red pea, *Dolichos Lablab, Mucuna Capitata,* French beans, Speckled Partridge ("correct botanical name is not yet identified"), *Canavalia ensiformis.*

"Cable address: Nurseries Co., Tokio. Headquarters for lily bulbs, Cycas revoluta, Japanese plants and seeds." On the cover are two photos: (1) A horse pulling a two-wheeled cart loaded with boxes. (2) People packing things into trays and baskets outdoors.

Note 1. This is the earliest Japanese seed catalog seen (Dec. 2004) that mentions soybeans.

Note 2. This is the earliest Japanese seed catalog seen (Dec. 2004) that contains one or more photographs.

Note 3. This is the earliest English-language document seen (April 2012) that mentions a non-soy sauce made from peas that resembles soy sauce. Address: Komagome, Denchu, Tokio, Japan.

415. Langworthy, C.F. 1897. Soy beans as food for man. *Farmers' Bulletin* (*USDA*) No. 58. p. 20-23. July 7. Revised (very slightly) in 1899. [1 ref]

• ***Summary:*** Describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (white, red, or Swiss), tofu, frozen tofu, yuba, shoyu. Many of his descriptions of soyfoods are based on Trimble (1896).

"Tofu, or bean cheese, is prepared as follows: The beans are soaked in water for about twelve hours, and crushed between millstones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for about an hour, and filtered through cloth. The filtrate is white and opaque, having somewhat the appearance of milk. It has, however, the taste and smell of malt. This milky liquid, to some extent, resembles cow's milk in composition, as is shown by the following table:" The table, titled "Comparison of the composition of soy-bean milk and cows' milk," shows that the two liquids (soy / cow) have the following composition: Water 92.53% / 86.08%, albuminoids 3.02% / 4.00%, fat 2.13% / 3.05%, etc.

"The protein in soy-bean milk is precipitated by adding the mother liquor obtained in the manufacture of salt from sea water, which contains considerable magnesium chloride. The precipitate is filtered off and formed into cakes with the hands. It is eaten in the fresh state or frozen. In the latter case it loses part of its water."

"Though these soy-bean products are prepared chiefly in Japan and other eastern countries, their manufacture has been attempted to some extent in Switzerland and elsewhere..."

"Bean sausages in considerable variety are prepared in Germany, and formed part of the ration of the German soldier in the Franco-Prussian war. So far as can be learned, these are always made from ordinary varieties of beans and not from soy beans...

"Under the name of coffee beans, soy beans are eaten to some extent in Switzerland as a vegetable, and dried and roasted are also used as a coffee substitute. Their use for this latter purpose is not unknown in America. The attempt has recently been made by certain dealers to place the soy bean on the market as a new substitute for coffee and to sell it under other names at an exorbitant price.

"Bulletin No. 98 of the North Carolina Experiment Station recommends soy beans as a palatable vegetable when prepared as follows: Soak the beans until the skins come off and stir in water until the skins rise to the surface and then remove them. Boil the beans with bacon until soft, season with pepper, salt, and butter, and serve hot. If the beans are green the preliminary soaking may be omitted. No other references to the use of soy beans for human food in the United States have been found."

Note 1. This is the earliest English-language document seen (Oct. 2003) that contains the term "soy-bean milk." It is also the earliest U.S. government document or USDA document seen (May 2006) that uses the term "soy-bean milk" (or any other term containing the word "milk") to refer to soymilk.

Note 2. This is the earliest document seen (Jan. 2005) concerning the work of the USDA with nutrition (or home economics) and soybeans. Address: Office of Experiment Stations, USDA, Washington, DC.

416. *New Zealand Tablet* (*National*). 1897. Science notes: The flavours of butter and cheese. Oct. 22. p. 27.

• ***Summary:*** "We learn some curious facts about butter and cheese from that section of Professor Marshall's learned Presidential Address on Botany, at the meeting of the British Association, which was devoted to the bacteriology of the dairy. To different forms of bacteria, he tells us, are due the distinctive flavours of varieties of butter and cheese..."

"The lecturer suggested that interesting results might be obtained from the investigation of the vegetable cheese [tofu] made in China and Japan from the curd of the soy bean, which is allowed to become mouldy in the process" [fermented tofu].

417. *Sydney Mail* (*Australia*). 1897. Horticultural notes. Nov. 20. p. 1057.

• ***Summary:*** "The several thousand of Chinese residents in San Francisco are remarkable for their aversions to 'white devils' bread,' and for using in its stead a number of articles, either imported at considerable expense direct from China or grown by them in the rich alluvial valleys of California. One may frequently see offered for sale in the provision-dealers' stores in China-town, San Francisco, large baskets of

© Copyright Soyinfo Center 2013

yellowish-white lily-bulbs..."

"Among other things frequently met with in the provision stores of China-town are:–... Chinese cabbage, Brassica chinensis; sprouted seeds of the Soy bean, Glycine Soja; black, white, and green seeds of Glycine Soja, and a small, square, white cheese made from the same, wrapped in a yellow cloth, and bearing a brown Chinese monogram;..."

Note 1. This is an early report of soybeans, soy sprouts, and probably pressed tofu in California. It is the only document ever seen (Jan. 2010) describing pressed tofu being sold, wrapped in cloth, bearing a Chinese monogram [character] on the cloth. The source of this information is unclear.

Note 2. This is the earliest English-language document seen (Jan. 2013) that uses the term "sprouted seeds of the Soy bean" to refer to soy sprouts.

418. Trimble, Henry. 1897. The soy bean. *American J. of Pharmacy* 69:584-93. Nov. [11 ref]

• ***Summary:*** Much of this material is derived from Williams and Langworthy (1897). Illustrations (p. 585, from Williams, p. 5) show: (a) flowering branch of a soy bean plant (reduced 2/3), (b) one of the flowers (enlarged), (c) pods of a soy bean plant (reduced 2/3).

One table (p. 588) shows the chemical composition of various kinds of forage made from the soy bean (fresh or air-dry substance, or water-free substance): Fodder (early bloom to early seed), soy-bean hay, straw, straw (hulls and vines after threshing), soy-bean seed, soy-bean meal (18.9% / 21.0% fat), soy-bean ensilage, corn and soy-bean ensilage, millet and soy bean ensilage.

Another table (p. 591) shows the composition of the following "Soy-bean food products": Fresh tofu, frozen tofu, natto, yuba, white miso, red miso, Swiss miso, and two types of shoyu. For each is given the percentage of water, protein, fat, nitrogen-free extract, fiber, and ash [minerals].

Note: This is the earliest English-language document seen (Sept. 2011) that contains the term "soy-bean food" or "soy-bean food products." It is also the earliest document seen (Sept. 2011) concerning the etymology of the word "soyfoods." Address: USA.

419. Angell, Stephen H. 1897. Soya as food and fodder. *Consular Reports* [*USA*] 55(207):551-52. Dec. [2 ref. Eng]

• ***Summary:*** A remarkable article about all aspects of soybeans and soyfoods. It begins: "The following is a translation from an article by M. Henri Fortune, the well-known French agriculturist. 'There exists a plant extensively cultivated throughout China, Japan, Cochin China, and Tonquin, of which the culture on clay and flinty clay lands would be an excellent experiment for agriculturists and persons interested in the progress of agriculture. This plant acclimatizes perfectly in Belgium.

"'It is employed in the above countries as a food and for divers other purposes. Transformed by cooking into a pulp, which is mixed with salt and rice, we obtain the 'miso,' which constitutes the regulation breakfast of the Japanese. I have eaten this preparation in Yedo [Edo, Tokyo] in 1892, and I found it excellent in taste and very nourishing.

"'Mixed with barley, fermented with water and pressed, this product yields a sirup known as the "soya," which is, so to speak, the unique sauce for all and every Japanese dish, and is employed in such large quantities that the works in the town of Nagasaki have a yearly production of 2,000 tons. The soya also yields a very superior quality of oil, which advantageously replaces olive oil.'"

"'The bread made from the flour of the soya is as good as cake without sugar, and is very appetizing, and is not to be compared with gluten bread, which constipates.'" Fortune believes that 'soya bread is twice as nourishing as wheaten bread, five times as poor in starch, and ten times as rich in fatty materials, and, once its qualities are fully known, the soya may be pronounced the bread of the future.' He recommends the use of soya in bread and biscuits for diabetic diets.

"'In China, the soya replaces milk, which the Chinese do not drink at all. To make this milk, the grain must be crushed, put in a sieve, water slowly poured over it, and a product obtained having all the qualities of milk.

"'The cheese made from soya is delicious. The grain is softened in water and pounded in a mortar. The pulp compressed in a cloth gives two parts; that which is hard is used to feed poultry, etc., and the other, which passes through the cloth, is albumen, and is put on the fire, the curds separated with the aid of rennet, and, when coagulated, a little salt is added.'"

Of green vegetable soybeans he writes: "'We have a project in hand to call together the principal Paris restaurant keepers this winter, to allow them to partake of this new vegetable, which will advertise it throughout the world under the patronage of such substantial connoisseurs.

"'In a few years hence, one will buy soya at the grocers, as to-day one buys beans. It is an excellent substitute for hay, and keeps horses in good condition, and cows, when fed on it, will yield at least 20 per cent more milk daily than when fed on ordinary hay.

"'The soya produces per hectare (2.471 acres) from 2,500 to 3,000 kilograms (5,512 to 6,614 pounds) of seed, especially if phosphate fertilizers are sufficiently employed.'"

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Belgium, or the cultivation of soybeans in Belgium. This document contains the earliest date seen for soybeans in Belgium, or the cultivation of soybeans in Belgium (Dec. 1897). The source of these soybeans is unknown. Address: Commercial Agent, Roubaix, France July 13, 1897.

420. Hosie, Alexander. 1897. Three years in Western China; A narrative of three journeys in Ssu-ch'uan, Kuei-chow, and Yun-nan [1882-84]. 2nd ed. London: George Philip & Son. New York: Dodd, Mead. xxvii + 302 p. See p. 68, 164. Illust. Map. Index. 22 cm. First edition published in 1890.
• ***Summary:*** The contents and pagination of this book are largely the same as those of the first edition (1890). Bean curd [tofu] is discussed on p. 68, and soy sauce on p. 164. Also contains a fold-out map showing the author's route. Address: M.A., F.R.G.S., H.B.M. Consular Service, Newchwang, China.

421. Krafft, Guido. 1897. Die Pflanzenbaulehre. Sechste, neuarbeitete Auflage [Instruction in plant cultivation. 6th ed.]. Berlin: Verlagsbuchhandlung Paul Parey. viii + 279 p. Illust. (incl. many color). Index. 23 cm. Series: Lehrbuch der Landwirtschaft auf wissenschaftlicher und praktischer Grundlage. 2nd Bd. [2 ref. Ger]
• ***Summary:*** In Chapter 2, "Legumes (Cultivation of protein-rich seeds)," section 7 (p. 80-81) is about the soybean (*Die Sojabohne*) also called the hirsute Soya (*rauhhaarige Soja*) or the "Haberlandts bean" (*Haberlandt's-Bohne*) (*Soja hispida* Mönch). Discusses: Botanical description, color of seeds, two important German-language publications about soybeans (Wein 1881 and Haberlandt 1878), widely cultivated in China and Japan, bears seeds in Europe only in areas which in 20-25 weeks accumulate 2500 to 3000ºC heat units (*Wärmeansprüchen*), description and chemical composition of yellow soybean seeds, used as food to make [soy] sauce and cheese [tofu] in China and Japan, a source of oil in Europe, and a feed for cattle, imported also as soya cake and meal (*Sojakuchen, Sojaschrot, Sojamehl*), best soil for cultivation, planting time, care, flowering, typical yields of seeds (62-72-75 kg/ha) and straw. A non-original illustration (line drawing) shows a soybean plant with many pods growing thickly on the stem, plus an enlarged view of a cluster of about 7 pods to the upper left of the plant. The soybean is also mentioned on p. 64. Also discusses Lupines (p. 80-85).

Chapter 3, Oilseeds (*Ölfrüchte;* the cultivation of oil-containing seeds, p. 81+) mentions: Peanuts, almonds, white sesame, brown sesame. It discusses: rapeseed (p. 82-83). Address: PhD, Professor der Land- und Forstwirtschaft an der k.k. technischen Hochschule in Wien (o. ö. Professor der Land- und Fortswirtschaft and der k.k. technischen Hochschule in Wien).

422. Lafar, Franz. 1897. Technische Mykologie. Ein Handbuch der Gaerungsphysiologie... Erster Band: Schizomyceten-Gaerungen [Technical mycology. A handbook of fermentation physiology... Vol. 1: Schizomycetic fermentations]. Jena: Verlag von Gustav Fischer. xiii + 362 p. See p. 290, 305-15. Illust. No index. 25 cm. Foreword by Prof. Dr. Emil Chr. Hansen (Carlsberg-Laboratorium, Kopenhagen [Copenhagen]). [7 ref. Ger]
• ***Summary:*** The introduction gives a detailed early history of the discovery of fermentation, microorganisms and *Mikrozymen / Mikrozyma* (microzymes) (including the work of Needham, Spallanzani, Franz Schulze, Theodor Swann, Schröder and Dusch, Louis Pasteur, and Béchamp), its relation to spoilage, the development of fermentation theory, and the nature of the fermentation organisms.

In Chapter 31, "Cheese fermentations and related decompositions," section #179 is titled "Natto and miso." These fermented foods are both made from the soybean (*Soja-Bohne*). For natto: The fermentation results in a partial transformation of the proteins into amides, peptones, guanin, xanthin, and tyrosin. The resulting mass is called natto in Japan, and is sold commercially. Note: Even though the word "enzymes" is not used, the author describes their action. This is the earliest document seen (July 2003) describing the action of enzymes produced during a soybean fermentation. At the end of the same section, koji, shoyu, tofu, nukamiso, taohu, and tao-yu (Chinese-style tofu and soy sauce) are mentioned–with 7 partial references.

Chapter 33, titled "The binding of free nitrogen by bacteria" (p. 303-17) discusses this relatively new idea in depth, including the discovery of root nodules on legumes, the origin and function of the nodules, and the nodule bacteria; Soybeans are mentioned on p. 303. Chapter 36, titled "Nitrogen-fixing bacteria" (p. 335-43) gives more details.

Note 1. Although there are many in-text citations, the bibliography for this volume appeared in Vol II, published in 1901-1907. An English-language translation of this volume was published in 1910.

Note: This is the earliest document seen (Sept. 2002) concerning the early history of microbiology and the discovery of enzymes. Address: Unestablished university lecturer (*Privatdozent*) for Fermentation-Physiology, Technical High School. Assistant at the Physiological Laboratory of the Royal Experiment Station for the Fermentation Industry at Hohenheim near Stuttgart [Germany].

• ***Summary:*** Chapter 3, titled "Fodder and forage plants (Exclusive of grasses)" begins: "The bulk of the information given in the following pages is taken from Bulletin No. 2, issued by the United States Department of Agriculture, division of agrostology. Numerous other plants are mentioned in the bulletin, but only those have been selected

© Copyright Soyinfo Center 2013

which it is considered might be successfully introduced into this colony."

In this chapter (which is mostly about legumes, with the plants listed alphabetically by scientific name) is a subsection (p. 447-48) on the soja bean. It starts with a large illustration (line drawing), "Fig. II.- Soja bean (*Glycin* [*sic, Glycine*] *hispida*) which shows the upper part of a soybean plant with leaves, pods, and a flower.

It continues: "*Glycine hispida* (Soja bean; soy bean; coffee bean. Fig. II)–An erect annual legume, with hairy stems and leaves, which has been cultivated in China and Japan from remote antiquity. It was long grown in botanic gardens, but when the facts concerning its use as a human food by oriental nations came to light about twenty years ago, it was largely introduced into this country [USA] and Europe, where thorough trials of its forage and food value have been made. There are a large number of named varieties, which vary in the color of their seeds and the length of time which the plants require to come to maturity. The seed is planted at the rate of half a bushel to the acre, in drills 2½ to 3 feet apart, and cultivated about the same as Indian corn. In Virginia, soja beans are planted between the hills of corn, so that two crops are produced on the same field at the same time. The yields of seed are often enormous. Soja beans are fed to stock green, as silage, or as hay. The haulms are rather woody, and do not make the best quality of hay, but as either ensilage or green forage they are unsurpassed. The hay contains from 14 to 15 per cent. crude protein and 3 to 6 per cent. of fat. The beans contain from 32 to 42 per cent. protein, and from 12 to 21 per cent. of fat in fresh material. When fed to milch cows, a ration of soja beans increases the yield of milk, improves the quantity of the butter, and causes the animal to gain rapidly in weight. It is an excellent addition to a ration for fattening cattle. In China and Japan, where the soja bean is an article of diet, substances similar to butter, oil, and cheese [tofu], as well as a variety of dishes, are prepared from it. The yield of green forage amounts to from 6 to 8 tons per acre, and of the beans from 40 to 100 bushels. The feeding value of the bean has been found to be greater than that of any other known forage plant except the peanut."

Also mentioned in this chapter are the peanut (p. 433), astragalus (p. 434), *Brassica napus* (winter rape, rape, dwarf Essex rape, p. 436-37), chick pea (p. 439), *Cyperus esculentus* (chufas, hognut, ground almond, p. 440), lentil (p. 440), etc. Address: Perth, Australia.

424. Naudin, Charles Victor. 1897. Nouvelles recherches sur les nodosités ou tubercules des légumineuses (et sur leurs rapports avec ces plantes) [New investigations on legume nodules or tubercles (and on their connection with these plants)]. Paris: Librairie Agricole de la Maison Rustique. 75 p. [Fre]

• ***Summary:*** In Part I (p. 1-20), soybeans are mentioned on pages 5 and 16, and peanuts on p. 6. In Part II, section 4 is *Arachis hypogaea* (p. 24-27), and section 26 is *Soja hispida* (p. 56-58). The conclusion is p. 69-75.

Part I is an introduction and a commentary on how our knowledge about edible legumes has increased over the ages as a result of contact with people in various cultures. "In Europe and in our colonies, the haricot beans of America, the Dolichos and Soja of the Far East, the peanut from Brazil, the cashew from India, and many other economic legumes have shown no difficulty finding their home with us or elsewhere when the nature of the soil and climate were favorable." The author then discusses natural vs. sterilized soil and the different results from nitrogen, nodules, and nodulation.

Concerning the soybean (p. 56-58): *Soja hispida*– Edible legume from China, introduced a few years ago into Europe and cultivated in several countries. It is also found in America where it appears that it is esteemed as an edible plant. We know that its beans are so rich in albuminoid materials [protein] that the Chinese make a sort of cheese [tofu] from it, and in France its use is recommended for diabetics.

In 1895, I cultivated it at Rastine [perhaps the name of his home or estate; it may be in southern France near Toulouse] where it did well, despite the drought, and proved to be very productive. I found no root tubercles on any of these plants. At Villa Thuret in the last days of May, I planted 7 soybeans in a very large pot of earth sterilized by boiling, and 7 other seeds in a similar pot filled with control soil from the garden. All these seeds came up at the same time, but the plants from the sterilized pot quickly took a lead upon those from the control soil. They were greener, more vigorous, and rose to 0.5 or 0.6 meters while those of the other pot hardly passed 0.4 meters in height.

On September 6, the 14 plants were pulled out of the earth, and the large clod that enclosed their roots was dissolved in water. In the sterilized pot three plants presented neither tubercles nor bulges of any sort. On the fourth plant we distinguish on the gnarl a pustule of doubtful nature. On the three others we find 7 or 8 tubercles spread out on the roots or agglomerated and forming tuberosities the size of a small pea. The 7 plants from the control soil all bore tubercles but not very many and hardly the size of a cabbage seed. This comparative experiment shows first that the earth rid of microbes that it could contain by boiling is more favorable to soybeans than soil with bacteria in it, and that the seeds of this legume can contain bacteria that, depending on the circumstances, will develop or will remain inert, which is the case with all other legumes.

Note 1. Naudin lived 1815-1899. Itie (1910, p. 48) notes: "Naudin finally confirmed that, rich in tubercles in its country of origin, the soybean does not take these with it when planted in a distant location."

Note 2. A footnote states that this is a revised edition of

des tubercules et des tuberculoïdes des légumineuses in: (1) *Memoires de l'Academie des Sciences de Toulouse*, 1893; and (2) *Comptes Rendus des Seances de l'Academie des Sciences*, June 1896, p. 407.

425. *Tropical Agriculturist* (*Ceylon*). 1898. The soy beans. 17(7):460. Jan. 1. [1 ref]
• ***Summary:*** "The Madras Government sends us a paper showing how Surgeon-Lieutenant -Colonel W.G. King, Sanitary Commissioner for Madras, addressing the District Medical and Sanitary Officer, Vizagapatam, the Deputy Collector of Bellary and the Tahsildar of [nearby] Saidapet [Tamil Nadu], on 8th September 1897, says:

"I have the honour to forward herewith __ oz of soy beans, with the request that you will kindly cause them to be sown in any suitable place where they can be carefully watched as to progress of growth, and that you will oblige me by stating the nature and amount of crop obtained and whether you think the beans can be grown successfully in your district from the experience so obtained. I need not remind you that the 'Soy bean' is probably the most nutritious form of readily assimilable pulse at present known, and that, should it prove possible to introduce it widely in this Presidency, it would prove of great advantage in jail administration and also to the poorer classes generally... In asking you to kindly undertake the experiment, I may state that it was only after long and persistent search in India and Burma that I have ultimately obtained specimen."

"Very few vegetable products are so rich as this bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35%, and the latter to 19... In China and Japan three preparations are extensively made from the soy bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The Soy bean may also be grown as a fodder plant. If cut just when the pods are fully formed, it makes an excellent hay, superior to that of the lentil."

• ***Summary:*** From *Health News:* The Soja, or Soya bean, is the Japanese bean (*Glycine soja*), cultivated in certain countries of Europe, and more particularly in Hungary, since 1875. This bean, which contains extremely little starch, and has been employed in the dietetic treatment of diabetes by

© Copyright Soyinfo Center 2013

Lecerf, contains a very large amount of albuminoid matter (flesh formers); and, on referring to the different analyses published by Steuff [Steuf], Capan, Pellet, and Muntz, we find the following percentage of alimentary principles contained in the bean:–Albuminoid matter, 36.67 per cent.; fatty matter, 17.60 per cent. If this analysis is compared with that of meat, the Japanese bean has a decided advantage over beef.

"From an alimentary point of view, the soya bean serves several uses. A sauce is made from it, which bears the name of *stiso* [*miso?*] and *soju* [shoyu], but the most curious and interesting point in the application of soja to dietetics, is a kind of cheese made from it–it is the *pea or bean cheese* [tofu], very much prized in Japan.

"In Europe, the soya bean has been utilized as the food of men and animals, and in the last few years the attempt has been made to make bread of it, which is a matter of considerable difficulty, by reason of the large proportion of oil which this bean contains. This oil, as Leon Petit has shown, is very purgative, and might replace castor oil in medical practice. Hence it becomes a necessary to rid the meal of this oil, in order to render it fit for domestic use. Lecerf, in Paris, and Bourdin, in Rheims, have succeeded in rendering the bread made from this meal very well borne by the stomach.

"Here, then we have a bean which is more nutritive than meat, and which serves for nourishment to a great country like Japan, under the different forms of sauce, of cheese, of farina, and even of an artificial milk. The advantage which the Vegetarian dietary may derive from such a food is evident." Address: Physician to the Cochin Hospital, Paris.

429. Fesca, M. 1898. Die Sojabohne [The soybean]. *Tropenpflanzer* (*Der*) (*Berlin*) 2(8):233-46. Aug. [7 ref. Ger]
• ***Summary:*** The author writes about the importance of soybeans for the German colonies. This is primarily a review of earlier writers, such as O. Kellner and E. Kinch. "The soybean is one of the most important cultivated plants in East Asia. In Japan and most parts of China, it is by far the most important legume. It is also cultivated in India..." In Japan, 385,000,000 kg of soybeans are produced on 430,000 to 450,000 ha of land. This is 8½ to 9% of Japan's total agricultural land and 19% of the land not planted to rice. Large amounts of soybeans are also planted around the edges of fields and on the tops of dams. The yield of soybeans in Japan for 1892-94 was 880–900 kg/ha. The soybean is one of the main crops in Shantung province, China, according to travelers Williamson and von Richthofen; it is used extensively for oil. An excellent 5-part illustration (p. 235) shows the cultivated- and the wild soybean plant, with close-ups of the pods, seeds, and flowers.

The author then discusses *Shoyu.* Through a long, slow fermentation process some of the starch is transformed into dextrin and sugar, then lactic and acetic acids are formed. Aromatic compounds are also formed but little is known about their amount or composition. The fermentation breaks down proteins. He then gives Kellner's analysis of the composition of shoyu. According to E. Kinch, one liter of shoyu contains 31.03 gm of sugar and 41 gm of nitrogenous substances.

The author praises tofu as a fine protein source and cites E. Kinch's 1879 analysis of the composition of tofu and dried-frozen tofu [*Kori-Tofu*].

He gives analyses of the composition of shoyu presscake (*Shoyuruechstande*) and okara (*Tofurueckstande*). Of the shoyu presscake he says: "Unfortunately the high content of salt (NaCl; 3-5%) makes it unusable for man or beast. It can, however, be used as a fertilizer." Address: Prof., Dr.

• ***Summary:*** "Fine as these cereal crops are, beans are a still more important crop. They are grown in enormous quantities for their oil, which is used extensively by the Chinese for illuminating and cooking purposes. After the oil is extracted, the beans are pressed into huge cakes, which are shipped from Newchwang [Yingkou; one of the treaty ports] to the southern ports of China, and there used as a fertilizer for sugar cane.

"Beans are also ground into a pulp and converted into a white jelly-like substance, which is called bean curd [tofu] and highly relished by the Chinese." Address: Formerly Deputy Consul-General of the United States at Shanghai [China].

431. Brinkley, Frank; Nanjô, F.; Iwasaki, Y.; Mitsukuri, K.; Matsumura, J. 1898. An unabridged Japanese-English dictionary: With copious illustrations. Tokyo: Sanseido. xxvi + 1687 p. Illust. 19 cm. [Jap; Eng]
• ***Summary:*** "... with coöperation of Prof. K. Mitsukuri in zoological terms, Prof. J. Matsumura in botanical terms."

For each entry, the romanized word comes first, followed by the word written in hiragana and then in kanji (Chinese characters). Note: The authors often use the word "bean" when they should use the word "soybean." Soy related:

"Aburage: Bean-curd fried in oil.

"Amazake: Sweet *sake;* a kind of drink made of fermented rice. Syn. [Synonym]: Hitoyozake, Kozake.

"Ame: A honey-like jelly made of flour of various grains; starch-sugar.

"Ammochi: Mochi stuffed or covered with boiled and crushed pea-beans [sic, azuki beans] mixed with sugar.

"Azuki [bot.] Mungo.

"Azuki meshi: Rice and red pea beans mixed and boiled for food.

Azuki mochi: Same as Am-mochi.

© Copyright Soyinfo Center 2013

"Dengaku: (2) (Coll.) *Tôfu* baked and covered with sweetened miso. *Dengaku wo yaku:* to bake or prepare *dengaku.*

"Dengaku-dôfu: See above.

"Daizu (Bot.) Soja bean.

"Edamame: (1) (lit.) Branch bean. (2) (coll.) [Soy] Beans boiled in pods on the stalks.

"Gobuzuke: Dried radish chopped into pieces of about 5 *bu* (of half an inch) in length and cooked with soy [sauce] and sugar.

"Gusokuni: Lobster chopped into transverse pieces and cooked with sugar and soy.

"Hachihaidôfu: *Tôfu* chopped into small pieces and boiled in a soup composed of four cups full of water, two of soy, and two of sake.

"Hitasu–Shôyu ni hitasu: To steep in soy.

"Hiyayakko: *tôfu* served cold.

"Ikanago-shôyu: Soy prepared in Sanuki [on Shikoku island], from a kind of fish called *Ikanago.*

Irimame: Parched peas or [soy] beans. *Irimame ni hana ga saku* (coll. Prov.) (lit.) blossoms on parched peas; something regarded as impossible.

"Iritori: Fowls boiled with a mixture of sugar, soy and *mirin* until the sauce is fully absorbed.

"Iritsuke: Any fish roasted or boiled in a pan until the sauce or soy is fully absorbed.

"Kabayaki: (1) A way of roasting fish. (2) Eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted. (3) Unagi no kabayaki: Roasted eels.

"Kenchin: (Modern Chin.) (1) Black beans malted and fried, and eaten with soy or table salt. (2) A soup containing various vegetables and *tôfu* mixed together and fried.

"Kigaracha-meshi: Rice boiled with water and a small quantity of *sake* or soy (so called from its yellowish color).

"Kijiyaki: The flesh of bonito or tunny-fish covered with soy and sugar, and baked.

"Kinako: [Soy] Bean flour (of yellowish or greenish color).

"Kinome-dengaku: *Tôfu* or the fruit of the egg plant covered with a pasty mixture of *miso,* sugar, and the buds or leaves of the *sanshô,* and baked.

"Kiuri-momi: Cucumber chopped fine and seasoned with salt, vinegar and soy.

"Kôji: Yeast, barm [sic]. *Kôji wo nekasu:* To make yeast [sic, kôji].

"Kokushô: A soup prepared with *miso* and the flesh of *koi* [carp] (*cyprinus haematoperus*).

"Kombumaki: Roasted or cooked fish wrapped in a piece of *kombu,* tied and boiled with sugar and soy.

"Kuromame: (Bot.) Black soy bean.

"Kyarabuki: The stems of the *fuki* boiled with soy.

"Mamemaki: A ceremony of scattering parched peas [sic, soybeans] about in an occupied house to drive out evils spirits, celbrated on the last night of December, or the early part of January (o.s.) [old style] crying aloud the while *fuku wa uchi* (fortune inside), *oni wa soto* (devils outside). Syn. Oniyarai, Setsubun.

"Mame-no-ko: [Soy] Bean flour used for covering or sprinkling over *mochi, dango.* Syn. Kinako.

"Miso: A kind of sauce made of wheat, [soy] bean, and salt. *Miso wo tsukeru:* (a) (lit.) to spoil (as one's coat) with miso. (b) (fig. coll.) to disgrace one's self; *Tonda miso wo tsuketa:* (coll.) have met with a shocking failure.

"Misokoshi: A miso strainer.

"Misomame: (Bot.) Soja bean, Glycine.

"Misoshiru: A kind of soup made with miso.

"Moromi: The grounds or lees left in making soy or *sake* and used as food.

"Moromi-sake: A kind of sake with rice grounds not separated from the liquid. Syn. Doburoku, Nigorizake.

"Murasaki: Another name for the sardine, or for soy.

Namaage or Nama-age: Not listed.

"Nattô: A kind of food made of boiled [soy] beans (usually sold in small packages made of rice straw).

"Nigari: The brine left by the deliquescence of salt.

"Nigashio: Same as Nigari.

"Oborodôfu: (1) A *tôfu* boiled down until it is almost dry and relished with soy and sugar. (2) A kind of *tôfu* [sic, unpressed tofu curds].

"Omame: (Bot.) Soy bean.

"Satsuma-iri: Food prepared by cooking a mixture of parched rice and finely chopped sweet potato, and relishing it with soy and sugar.

"Shitaji: Soy. See *Shôyu.*

"Shôyu: A kind of sauce made by pressing a fermented mixture of calcined barley meal, boiled [soy] beans, yeast, water, and salt; soy. Syn. Shitaji, tamari.

"Shôyu no moromi: Soy before it is pressed.

"Suiri: Cooked with vinegar. *Iwashi no suiri:* A sardine cooked with a mixture of vinegar and soy. Syn. Suni.

"Sukimi: Flesh of fish sliced thin, and eaten relished with soy and *wasabi* or horse-radish.

"Sukiyaki: Roasting sliced meat or flesh with soy, in a shallow pan. Note: This is the earliest document seen (April 2012) that contains the word "sukiyaki."

"Sumiso: A kind of sauce made by rubbing together *miso* and vinegar in a mortar [suribachi].

"Suribachi: An earthenware vessel used in rubbing *miso;* a mortar.

"Sushi: (1) Fish seasoned with vinegar. (2) A general name for food made of boiled rice and fish, eggs, vegetable, etc. seasoned with vinegar and soy. As an affix the form is changed to *zushi. Inari-zushi:* food made of fried *tôfu* stuffed with a kind of *chirashi-zushi.*

"Tamari: Soy before it is pressed [sic].

"Tekkamiso: A kind of food made by roasting *miso* mixed with parched beans, chopped burdock, and a little oil.

Temae: (1) One's own side. *O temae miso wa shio ga*

© Copyright Soyinfo Center 2013

karai: (coll.) Self approbation is disgusting.

"Teriyaki: Flesh of fish baked with a kind of sauce composed of soy, *mirin*, and sugar.

"Tôfu: A kind of food made from bean curd hardened by mixing with a small quantity of the brine left after the deliquescence of salt [nigari]. In composition the form changes into dôfu. *Tôfu ni kasugae:* (Prov.) (lit.) an iron clamp to connect pieces of tofu; no effect. Yaki-dôfu: Baked [grilled] *tôfu.*

"Tsukuru: To pickle in sake, brine vinegar, etc. *Shôyu wo tsukete yaku:* To bake [grill] seasoned with soy. Syn. Hitasu, uruosu.

"Uchimame: The soy bean flattened with hammer and boiled in soup.

"Udondôfu: Tôfu cut into udon like pieces, and eaten boiled in a soup made of cups of soy, two of *sake* in four cups of water.

"Yuba: The skin of bean curd used as food. Syn. Uba.

"Yudôfu: Boiled *tôfu."* Address: 1. Captain, R.A., Editor of the *Japan Mail;* 2. M.A., Bungakuhakushi; 3. Nôgakushi.

• ***Summary:*** Page 241: Court words, used by the Imperial Family, include: For miso they say *"o mushi* (lit. honourably steamed). English: bean sauce." For tôfu they say *"o kabe.* English: Bean-curd." O-kabe belongs also to the language of women.

Note. This is the earliest English-language document seen (Oct. 2012) stating that *o-mushi* is the Japanese court word or women's word for "miso."

Page 451: A poem of 31 syllables (5, 7, 5, 7, 7) says: Hototogisu / Jiyû jizai ni / Kiku sato wa,–/ Saka-ya ni san ri, / Tôfu-ya ni ni-ri!" Translation: "The village where one may listen undisturbedly to the cockoo's song is–three leagues from the grog shop, and two from the bean-curd shop!"

Anglo-Japanese vocabulary: soy [sauce], *shôyu, shitaji.*

Japanese-English vocabulary: "kabe, (with honorific prefix *o*), the Court word for tôfu, bean-curd."

Page 517: "miso, a kind of bean sauce."

Page 520: "mushi, (with honorific prefix *o*), the Court [women's] word for miso, bean sauce."

Page 538: "shôyu, soy (our word comes from the Japanese)."

Page 546: "tôfu, bean-curd: tôfu-ya, a shop for or seller of bean-curd." Address: Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo.

433. *Proceedings of the American Pharmaceutical Association.* 1898. Report on the progress of pharmacy. 46:582-1120. See p. 857-60.

• ***Summary:*** In the section titled "Materia medica," under "Vegetable drugs," we read: *"Soy Bean-Food Value, etc.*– Referring to his paper on the soja bean (see Proceedings 1896, 634), in which he gave a summary of the literature on this valuable food product, Prof. Henry Trimble reproduces in the abstract a recent paper entitled "The Soy Bean as a Forage Crop," by Thomas A. Williams, with an appendix on "Soy Beans as Food for Man," by C.F. Langworthy, published in *Farmer's Bulletin,* No. 58, issued by the U.S. Department of Agriculture. While not adding anything new to the knowledge of the digestive ferment, which was prominently discussed in the summary above referred to, there is much valuable information that is of interest to the pharmacist.

Discusses *Glycine hispida,* soy bean, Prof. Haberlandt, yuba, shoyu, tofu, frozen tofu, natto, and miso.

See: Trimble, Henry. 1897. "The soy bean." *American J. of Pharmacy* 69:584-93. Nov.

434. Simmonds, Peter Lund. 1898. The dictionary of trade products, manufacturing and technical terms, moneys, weights, and measures of all countries. New ed., revised & enlarged. London and New York: George Routledge and Sons, Ltd. viii + 510 p. 20 cm.

• ***Summary:*** This book consists of a reprint of the body of his 1867 book *Commercial Dictionary of Trade Products,* plus a different preface and a shorter supplement (p. 423-510). New soy-related entries in the Supplement include: "Pea oil, a fixed oil obtained in China by pressing the seeds of *Dolichos soja.* "Soy bean (*Glycine soja.* This pulse, a native of the far East, is now grown in Thibet, Assam, and other parts India)." "Tofu, the oil-cake of beans and peas in Japan and China, used for soups and sauces.

New non-soy entries in the Supplement include: Alfalfa, earth-pea (*Voandseia* [*sic, Voandzeia*] *subterranea*), ginguba (a name in Angola for the ground-nut), yaourt [yogurt] (a name among the Turks for fermented milk).

Note 1. This book has no date on the title or copyright pages. The most recent date seen in the Supplement is 1891 (p. 500–Telescope). Note 2: Peter L. Simmonds lived 1814-1897. Address: F.L.S., F.R.C.I., Vice-President of the City of London College, 16 Whittingstall Road, Fulham [England].

435. Trabut, Louis. 1898. Le soja [The soybean]. *Algerie, Service Botanique, Informations Agricoles. Bulletin* No. 16. 7 p. [7 ref. Fre]

• ***Summary:*** The author, who demonstrates a good knowledge of American and European publications on the soybean, has cultivated soybean varieties at Alger (Algiers) and Rouïba since 1896. The soybean resists dryness well. "Soya (*le Soja*) has remained a curiosity and is not well known among agriculturists. This is explained by the large diversity of soybean races having very different needs, and also by their very varied aptitudes and uses. This is not

© Copyright Soyinfo Center 2013

astonishing, for soya is cultivated in the country of its origin in both temperate and tropical zones, and is used for the feeding of animals, which eat it in the form of grain, hay, and green forage. It plays a major role in the human diet, providing abundant nutrition in the form of sauce, vegetable milk (*lait végétal*) or cheese [tofu], oil, flour, and bread. Soya completes rice, which is lacking in nitrogen. It is very widely used, furnishing, at a low price, a food which replaces meat or fish." Note 1. This is the earliest French-language document seen (Oct. 2003) that uses the term *lait végétal* to refer to soymilk.

"We have made the mistake of presenting soya as a rival to the haricot bean: the comparison turned out to be advantageous for the latter legume (haricot) and soya was rejected.

"In Algeria we think that, for the moment, soya must be looked at primarily as a forage plant. Very remarkable for its richness in nitrogenous materials and fat, it can be very useful in the feeding of animals, for fattening and for the production of dairy milk. Its role in the human diet is less evident, however the indigenous people might find a precious resource in this legume. The soya would perfectly complement 'bechna' [probably a local grain] and barley, which are used to make a flat cake which, is too low in nitrogenous materials."

"At this station the maximum yield has been obtained from a large yellow soybean obtained directly from China. On an area of 10 ares (1,000 square meters or 0.1 hectare) the yield has been 30 tonnes/ha of green forage giving about 70 quintals (7,000 kg) of dry forage." Note 2. This is the earliest document seen (Jan. 2001) that uses the word "quintals" (or quintal") in connection with soybeans. Note: 1 quintal = 100 kg.

"The yield of the seed had been high enough that cultivation of soybeans can be considered profitable. The early varieties have given the following yields in kg/hectare at the Rouïba Station in 1896/1897: Chocolate dwarf 1370 (not watered)/1735 (watered). Compact green 2980/1735. Yellow early 2500/1785. The spring of 1896 was very rainy, while the spring of 1897 was very dry and it was necessary to water the crop.

On page 7 is a brief description of miso, shoyu, and tofu (made by coagulation of soymilk).

Concerning nodulation: Until this year, the numerous varieties of soya which I have cultivated at the station did not show any trace of nodulation on the roots; it is therefore evident that in our soils the special microbe which determines these nodules or tumors is not present. In Jan. 1897 I contacted Prof. Kirchner (at the School of Agriculture at Hohenheim), who is especially interested in the rhizobium of soya, and I asked him to send me several nodules in order to allow me to introduce to the soya crops here the microbe which assimilates atmospheric nitrogen.

All the pots that were inoculated produced soybeans whose roots were covered with nodules the size of peas. It was not formerly possible to appreciate the influence of the nodules on the development of the plant. Field trials concerning this point will be made during 1898.

An illustration (non-original, p. 2) shows a soybean plant (from an original in Carrière 1880). Address: Algeria.

436. Tran, Nguyen Hanh. 1898. Fromage de pâte de haricots [Fermented tofu]. In: Essais Agricoles et Industriels Faits en Cochinchine Depuis la Fondation de Cette Colonie Jusqu'en 1897. 2 vols. Saigon, Vietnam: Imprimerie Commerciale Rey. See Vol. 2, p. 190-92. [Fre]

• ***Summary:*** At top of title page of this volume 2: "Publications de la Société des Études Indo-Chinois de Saigon–No. 1." In middle of title page of volume 2: "Extraits des Bulletins du Comité Agricole et Industriel (1865-1883) et de la Société des Études Indo-Chinois (1883-1896)."

With the haricot bean [soybean] (*dau-nanh* in Annamite) the indigenous people prepare a series of foods which are consumed abundantly in this country [Vietnam] and in China. It could be that with carefully-made preparations, Europeans could make use of it [the bean].

The soybean contains an abundance of a milk-like substance with which the followings cheese can be prepared.

1. Tofu (*Dau hu*)–A type of cheese that is eaten the day it is made. It has a consistency somewhat similar to that of Swiss cheese. It is widely used as an ingredient in other dishes, seasoned with either sugar or salt, or in cooked foods, because heat does not damage it.

2. Pressed tofu (*Dau-hu-cu.ng;* [*cu.ng* means "hard"])–Used in the same way as No. 1, it is always cut into pieces and cooked with other ingredients. Having a firmer consistency than No. 1, it can be kept for a day or so.

3. Yuba (*Dau-hu-ky;* [literally "bean curd skin"])–This cheese comes in dry sheets. It is cooked in other culinary preparations. It serves as a mild seasoning and as a wrapper like some Italian pastas.

Note 1. This is the earliest French-language document seen (Aug. 2010) that uses the word *Dau-hu-ky* (regardless of hyphenation or capitalization) to refer to yuba.

4. Fermented tofu (*Dau-hu-nhan;* [*nhan* means "bitter"])–This fermented and salted cheese will keep for a month or even a year. It is eaten with bread, with cooked rice, or even with meats.

5. Chao–Another fermented and salted tofu, but sold in an alcoholic brine, and diluted to make a soft paste. Used in much the same way as butter. It sometimes accompanies starchy foods (grains, bread, etc.) and sometimes it is added to meats or fish.

6. *Dau-hu-oa*–A creamy cheese which is eaten with sugar or water sweetened with sugar. Note 2. These are soymilk curds (*doufu-hua* in pinyin). Also called *Tao pho* (in Hanoi). *Dao-hu hoa* (in Hue). Tau-hu (Saigon).

The next section describes how to make each of the six

© Copyright Soyinfo Center 2013

different types of tofu and yuba.

1. Tofu–As with other cheese, each of these must be prepared with care. Start by crushing soybeans into pieces–3 or 4 pieces per bean at most, then soak in water for 18-20 hours. Stir from time to time so that the hulls rise to the surface, then decant then off. Grind the rest finely to obtain a fluid puree. Bring to a boil. After 15 minutes, add sea salt to coagulate the liquid. The sea salt can be replaced by gypsum, but the result will not be the same.

2. Pressed tofu–Prepare like No. 1 but cook longer and press in a form with a very heavy weight for several hours until it is about 1 cm thick and of firm consistency so that it will last for several days.

3. Yuba–Lift off the thin films that form on the surface of hot soymilk with a fork. Let them dry in the sun. The films, which are either white or yellow, will last for a year, if care is taken to dry each film slowly and for a long time; otherwise they will turn red.

4. Salted, fermented tofu (Da-hu nhan)–Cut tofu in pieces a little larger than one's thumb and spread them on a plate covered by a banana leaf. According to the season, leave them here for 2-3 days or more, until each piece is entirely covered with mold. Wipe off the mold and layer them in a deep crock. Between each later add powdered salt. Hermetically seal the mouth of the crock / vase and expose it either to the rays of the sun or to a source of heat; continue this for 10-15 days, until the cheese is ready. It is an excellent condiment.

5.–Chao. The complex fermentation is described in detail.

6. Soymilk curds before they are pressed. Very light and delicate, with subtle sweetness.

437. Blasdale, Walter C. 1899. A description of some Chinese vegetable food materials and their nutritive and economic value. *USDA Office of Experiment Stations, Bulletin* No. 68. 112 p. See p. 32-36. [19 ref]

• ***Summary:*** "According to Prinsen-Geerligs [*Chemiker-Zeitung,* 20 (1896) 67-69], 'tao hu,' or bean cheese, is prepared from the seeds of the white variety of soy bean. These are allowed to soak for three hours in water, are then reduced to a thick paste, and the mass cooked. The cooked mass is strained through a coarse cloth. The filtrate consists of a milky-white liquid containing protein and fat. As soon as this becomes cool some material is added (for instance, crude salt containing magnesium chlorid [chloride]), which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes. The cakes may be dipped for a few moments into a saline solution of curcuma. Variations in the process give rise to a number of varieties of bean cheese. This is essentially the method used by the Chinese of San Francisco in the preparation of the bean cheese used by them. It is sold either in the form of a freshly precipitated curd or in the form of small square cakes obtained by compressing the former material. It is usually cooked in peanut oil before being eaten and, in the author's opinion, is a palatable food. A partial analysis of one of the cakes gave 81.35 per cent, fat 5.19 per cent, and ash 0.80 per cent.

"The filtrate from the cooked soy beans resembles milk, and, on heating, a skin [yuba], not unlike that formed on milk, rises to the surface of it."

A large number of varieties of the soy bean are in cultivation in China and Japan, but only two were found in the Chinese markets in San Francisco, a yellow and a black variety. Aside from a difference in color, the two forms apparently do not differ materially from each other. The yellow variety is known as 'wong tau,'and is designated by the characters 'yellow' + 'bean,' while the black is known as 'hak tau,' and is designated by the characters 'black' + 'bean.'

"Both varieties obtained from the Chinese market in San Francisco grew readily in Berkeley, attaining a height of about 3 feet, and in spite of a very dry season produced an abundant crop of seeds... The composition of the seeds of the two varieties is shown in Table 10 (p. 33), the average composition of American-grown soy beans being quoted also for purposes of comparison." On a dry-weight basis, the original black soy beans contained, on average, 0.35% more protein (39.62% vs. 39.27%) and 0.72% less fat (18.77% vs. 19.49%) than the yellow soy beans. The soy beans grown in Berkeley (average of 8 analyses) contained 38.1% protein and 19.00% fat.

Photos show: (1) The upper portion of a plant of the black soy bean (p. 33).

(2) "Mature plant of yellow soy bean" (showing only the pods and stems, no leaves, p. 35). Address: Instructor in Chemistry, Univ. of California.

438. *Foreign Seeds and Plants Imported by the Section of Seed and Plant Introduction, USDA, Inventory.* 1899. [Soy bean introductions]. No. 2. S.P.I. Numbers 1001-1900. 94 p. Transmittal date: 5 July 1899.

• ***Summary:*** 1492-1493. "Glycine hispida. Soy bean. From France. Received through Mr. W.T. Swingle, December 1898.

"1492. (2 packages.) 'An erect annual legume, with hairy stems and leaves, which has been cultivated in China and Japan from remote antiquity. It was long grown in botanic gardens, but when the facts concerning its use as a human food by oriental nations came to light about twenty years ago, it was largely introduced into this country and Europe, where thorough trials of its forage and food value have been made. There are a large number of named varieties, which vary in the color of their seeds and the length of time which the plants require to come to maturity. The seed is planted at the rate of half a bushel to the acre, in drills 2½ to 3 feet apart, and cultivated about the same as

© Copyright Soyinfo Center 2013

Indian corn. In Virginia soy beans are planted between the hills of corn, so that two crops are produced on the same field at the same time. The yields of seed are often enormous. Soy beans are fed to stock green as silage, or as hay. The stems are rather woody and do not make the best quality of hay, but as either ensilage or green forage they are unsurpassed. The hay contains from 14 to 15 per cent crude protein and 3 to 6 per cent of fat. The beans contain from 32 to 42 per cent protein, and from 12 to 21 per cent of fat in fresh material. When fed to milch cows, a ration of soy beans increases the yield of milk, improves the quantity of the butter, and causes the animal to grow rapidly in weight. It is an excellent addition to a ration for feeding cattle. In China and Japan, where the soy bean is an article of diet, substances similar to butter, oil, and cheese, as well as a variety of dishes, are prepared from it. The yield of green forage amounts to from 6 to 8 tons per acre, and the beans from 40 to 100 bushels. The feeding value of the bean has been found to be greater than that of any other known forage plant except the peanut.' (Jared G. Smith.)

"1493. (1 Package.) 'Soja hispida à grain noir' (black-seeded *Soja hispida*)." Address: Washington, DC.

439. **Product Name:** Doufu, Doufu Curds, and Fried Doufu.
Manufacturer's Name: Chinese Tofu Shops.
Manufacturer's Address: San Francisco, California.
Date of Introduction: 1899.
New Product–Documentation: Blasdale. 1899. USDA Office of Experiment Stations, Bulletin No. 68. p. 35. The method for making tofu "is essentially the method used by the Chinese of San Francisco in the preparation of the bean cheese used by them. It is sold either in the form of a freshly precipitated curd or in the form of small square cakes obtained by compressing the former material. It is usually cooked in peanut oil before being eaten and, in the author's opinion, is a palatable food. A partial analysis of one of the cakes gave 81.35 per cent, fat 5.19 per cent, and ash 0.80 per cent."

Page 10: Provisions: "Curry-powder will often help to make insipid Japanese dishes palatable, and *shôyu* (soy [sauce]) adds a zest to soups." "The following Japanese articles of food are considered palatable by most foreigners: *Kaseteira* [*Kasutera*], sponge cake. *Miso-shiru,* bean-soup [miso soup],... *Sakana no tempura,* fish fritter. *Unagi-mesihi,* layers of rice with eels done in soy. *Yokan,* sweet bean-paste" [azuki].

Gods and Goddesses (p. 56): Toyo-Uke-Bime, also called Uke-Mochi-no-Kami, is "the Shinto Goddess of Food or of the Earth. The *Nihongi,* one of the two principal sources of Japanese mythology and early history..." The Moon God killed the Goddess of Earth. From the body of the murdered Earth sprang cattle and horses, millet, silkworms, rice, barley, and [soy] beans, which the Sun-Goddess decreed should thenceforth be the food of the human race. In the *Kojiki* version of the myth, it is Susa-no-o who slays the Goddess of Food, and there are other differences of detail."

Eastern Japan (p. 225): "Tenjin-yama or Minato (Inn, Suiryo-kwan). This prettily situated place contains a few sake breweries and soy manufactories, the produce of which is shipped in junks to Tokyo;..."

Mountains of central Japan (p. 281): "Narada (accommodation at a Buddhist temple)" consists of but a few households; the people are isolated and poor. "Rice, *sake,* and soy [sauce] are with them luxuries to be indulged in on rare occasions, their ordinary food consisting only of millet and potatoes."

Central Japan (p. 334): "Yuasa (Inn, Edo-ya) is a dull town, noted for its manufacture of soy."

Central Japan (p. 336): "There is a current belief to the effect that Koya-san is so precipitous that such luxuries as bean-curd (*tôfu*) cannot he carried up to it, but that the priests place coppers on the temple balustrade, with which the crows fly off to Kumano and bring back bean-curd in return."

Central Japan (p. 389-90): Kasuga no Miya (a Shinto temple). The oratory "is now used by the townspeople on the evening of the Setsubun (3rd February) for the performance of the ceremony of scattering [roasted soy] beans to expel evil spirits."

Central Japan (p. 403): Matsudô. "Travellers will remark the great industry and economy practised in the agriculture of this district, even the ridges between the rice-fields being

© Copyright Soyinfo Center 2013

sown with beans or barley." Note 1. Soy beans were often planted on such ridges, then harvested as green vegetable soybeans.

Note 2. The last 53 pages of this book are advertisements. Address: 1. F.R.G.S., Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo; 2. Corresponding member of the Royal Scottish Geographical Society, and late of the Imperial Japanese Dep. of Communications.

442. Douglas, Carstairs. 1899. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. New edition. London: Presbyterian Church of England. xix + 612 p. 27 cm. [2 ref]

• ***Summary:*** The Preface begins: "The vernacular or spoken language of Amoy, which this dictionary attempts to make more accessible than formerly, has been also termed by some 'The Amoy Dialect' or 'The Amoy Colloquial;' and it particularly coincides with the so-called 'Hok-kien Dialect,' illustrated by the Rev. Medhurst in his quarto Dictionary under that title."

On page 58, under the character for *chiang–chiu* a sort of sauce or condiment. *tau chiu* sauce made from beans and flour. *chiu-chheng* the thinner part of *tau chiu. koan-kiu-chiu* this sauce seasoned with cayenne pepper. *chiu-liau* various sorts of vegetables preserved in *tau chiu. chiu-koe* pumpkins so preserved. *chiu-kiu* ginger so preserved. *chiu-mia-chia* wheaten dough balls in this sauce.

On page 156, under the character for *hu–tau-hu* [tofu] bean curd shaped into squares (from the pulpy "tau-hoe"), but not yet pressed. See *tau.*

On page 176, under the character for *iu* meaning oil or fat. On the last line of the right column–*tau-iu* soy [sauce]. *e-tau-iu* dark-colored soy. *seng-iu* the common oil from ground-nuts. *moa-iu* oil from hemp-seed.

On page 423, under the character for *shi–si* salted vegetables and fruits. *tau-si* pickled and salted beans [soybeans]. *tau-si-pe* black beans [soybeans] boiled, dried, and kept till mouldy, to be made into soy [sauce]. *tau-si-phoh* beans from which soy has been made, broken down small. *mi-si* (Cantonese) = *tau-chiu* (Amoy), sort of salted sauce.

On page 480, under the character for *tou–tau* peas or beans; pulse. *tau-khe* bean cake from North China, used as manure. *tau-iu* soy (see iu). *tau-chiu* a thick salt sauce made from pulse. *tau-si* salted beans [fermented black soybeans]. *tau-hoe* soft bean curd not yet pressed or shaped. *tau-chiu* same. *tau-hu* [tofu] bean curd shaped but not yet pressed. *tau-hu-phe* same, but made into thin sheets for wrapping around eatables. *teh tau-hu* to shape the *tau-hoe* into pieces of *tau-hu. tau-koa* bean-curd that has been pressed in a cloth. *tau-ju* same cut into smaller squares and salted. *tau-kiam* (Cantonese) same. *tau-che* refuse from manufacture of bean-curd [okara]. *tau-thau* same. *the-tau* = lok-kha-seng, the Arachis, ground-nut, or pea-nut, from which oil is made. *tho-tau* same.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *tau-hoe,* or the term *tau-ju,* or the term *tau-hu-phe,* or the term *tau-koa* to refer to tofu.

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the term "pickled and salted beans" to refer to fermented black soybeans.

Note 3. The first edition of this book was published in 1873. In 1970 the Ku-T'ing Book Store in Taipei published a photoreprint of the 1899 London edition; it was bound with a Supplement photoreprinted from the 1923 Shanghai ed. (612 p., 27 cm). Carstairs Douglas lived 1830-1877. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

443. Heuzé, Gustave. 1899. Les plantes alimentaires des pays chauds et des colonies. 2 ed. [Edible plants of the tropics and colonies. 2nd ed.]. Paris: Librairie Agricole de la Maison Rustique. xii + 381 p. See p. 174-78. 19 cm. Series: Cours d'Agriculture Pratique. [Fre]

• ***Summary:*** The soybean is referred to in French as "Dolic du Japon ou soja." An illustration (non-original, p. 175; by Thiebault, from Carrière 1880) shows the soybean plant (titled *Dolic du Japon ou soja*) and a cluster of pods. Its scientific names are Soja japonica, Sav. or Soja hispida, Moench. Synonyms are Dolic soja, and Dolic à café. A botanical description is given. "Varieties which are most widely cultivated are the yellow soybean (le soja jaune; Soja ochroleuca) and the black soybean (le soja noir; Soja hispida). A sub-race named *soja d'Étampes* is the most widely appreciated in France. It is very productive but it needs 4-5 months to ripen its seeds. The soybean is an annual; it was introduced to France from China by de Montigny under the name *pois olèagineux.* It is successfully cultivated in China, Japan, the Indies, the Moluccas, etc. It is rather easily sold in the green state at various markets. Its principal merit is its ability to resist drought. It needs as much heat as haricots...

"The Japanese transform the seeds of this legume into a puree (tofu; *ten-hu*) or a paste (*miso*) with which they make a sauce (soja), which they use to prepare various seasonings named *shoyu* or *sooju* and *tofu* or *daïzu.*

"Soybean seeds germinate very irregularly and very late in Europe, especially in their second year of existence. An analysis of the soybean seed on a moisture-free basis, conducted by Mr. Joulie, is given.

"The soybean is richer than wheat in fatty and proteinaceous materials. When one prepares dry soybeans, it is useful to soak them in water for 8-10 hours before cooking, for they are naturally very hard. They are also eaten in the shelled green state.

"The varieties with branches [les variétés à rames]

• ***Summary:*** 1871 July–A brewing tax (*jozo-zei*) and patent tax are levied on clear sake (*seishu*), unclear sake (*dakushu*), and shoyu. But in 1875 the two taxes on shoyu are discontinued because shoyu is considered one of the necessities of life.

1873–At about this time a sincere farmer, Itoi Mosuke, of Akita prefecture finds a special type of soybean and names it Itoi-mame. Later the name changes to Ani and they are cultivated all over Akita prefecture.

1873 May–The Japanese government exhibits soybeans at the exposition in Vienna, Austria. And the USA becomes interested in soybeans. Also at this expo, Kikkoman uses glass bottles for their shoyu for the first time.

1875–At about this time, shoyu becomes so popular overseas that a German-made fake shoyu appears.

1877–There are now 40-50 miso shops in Tokyo, centered in Hongo (which comprises the areas of Yotsuya, Fukagawa, Shiba, Shinagawa, Ooi, Oshima, etc.).

1877 Feb.–Dried-frozen tofu (*kôri-dôfu*) is purchased as an army supply for the Seinan no Eki war.

1877 Aug.–The first domestic exposition is held in Japan, at Ueno Park, Tokyo. Kikkoman shoyu wins an award.

1878–The quick method of miso fermentation (*miso no sokujo-ho*) is mentioned in a government report.

1878–The first official government statistics on soybean cultivation in Japan start to be compiled. This year the area is 411,200 hectares and production is 211,700 tonnes [yield = 514 kg/ha].

1879–The price of high-quality miso in Tokyo is 4 *sen* per kg. In 1980 the price is 303 yen/kg–or about 7,575 times higher. Note: From now on prices from the Meiji era come from a book titled *History of Lifestyle of the Meiji, Taisho, and Showa periods as seen from prices of the day* (*Nedan no Meiji Taishi Showa Fuzoku Shi*). It is published by the Weekly Asahi (*Shukan Asahi*).

1882–Around this time many small shoyu manufacturers appear and quite a few bad quality shoyu products are on the market. Shoyu loses considerable consumer confidence.

1885–The price of 1 keg (*taru*, 16.2 liters or 9 *sho*) of shoyu at this time is as follows: Highest grade (*jo no jo*) (Kikkoman) 1 yen, 40 sen; Middle upper grade (*jo no chu*) (3 makers including Yamasa) 1 yen 38 sen; Lower upper grade (*jo no ge*) (Kamibishi) 1 yen 25 sen; Upper middle grade (*chu no jo*) (Fujita) 1 yen 25 sen; Lower middle grade (*chu no ge*) (Chigusa) 1 yen 17 sen; Lower grade (*ge*) (Kinka) 80 sen. Yamaguchi Yoshibei of Yamasa Shoyu starts to sell Worcestershire Sauce, called "Mikado Sauce."

1885 May–The government reinstates the tax on shoyu to raise money for the army.

© Copyright Soyinfo Center 2013

1887–Soybean production in Japan tops 400,000 tonnes (419,700 tons) for the first time.

1890–The Tokyo-Area Shoyu Brewers' and Wholesalers' Union (*Ichifu Rokken Shoyu Jozo-ka Tokyo Tonya Kumiai Rengokai*) forms a cartel for the first time because of a 50% increase in the price of their raw materials.

1891–Mogi Kenzaburo of Kikkoman (1st generation) starts to use a special press (*gendo maki assaku-ki*) invented by Yamazaki Izuko to press the shoyu out of the moromi mash more efficiently and quickly.

1893–In recent years the import of soybeans to Japan has increased rapidly, and this year it reaches 96,000 tonnes. These soybeans are grown mainly in Manchuria. The average price of 2 liters of high-quality shoyu in Tokyo is 10 sen. (In 1982 it is 584 yen, or 5,840 times more than in 1893).

1894–Around this time miso soup is recognized for its value as a protein food. Dr. Sito Nesaku, an agricultural specialist, says that miso is a farm household's milk.

1894–Yabe Kikuji (1868-1936) calls natto "Japanese cheese" and presents the first academic paper on natto bacteria in Japan.

1895–Around this time the number of walking vendors of tofu, natto, and boiled whole soybeans (*ni-mame*) increased, as did the production of dried-frozen tofu (*kori-dofu*). The number of small shoyu makers decreased dramatically as Kikkoman, Yamasa, and Higeta increasingly used advanced industrialized methods. Recipes and methods for making miso pickles (*miso-zuke*) using carrots, daikon, udo, and ginger are given in women's magazines such as *Jokan, Katei Zasshi* and *Jogaku Kogi.*

1896–Around this time the importation of salt starts, as shoyu makers in Noda and Chiba buy 15,000 tons of salt from England.

1897–Soybean imports this year increase to about 140,000 tonnes, which is one-fourth of Japanese consumption. Domestic soybean production is 400,000 tonnes.

1899–Mogi Keizaburo of Kikkoman of Kikkoman (1st generation) starts using a boiler for the first time in the shoyu industry. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

447. Gomilevskii, V.I. 1900. O kitaiskom bobe (Soja hispida) i ego znachenii dlya rysskogo khozyaistva [The Chinese soybean (Soja hispida) and its meaning in Russian economy]. St. Petersburg, Russia: Printing House of "Obschestvennaya Pol'za" Union. 32 p. 22 cm. [17 ref. Rus]

• ***Summary:*** Contents: I. Research of Gil'desgeim proved that soybeans could replace meat in daily diet. More than 20 varieties of soybeans from Japan and China were introduced to Central Europe and Russia in 1873 at the World Exposition in Vienna. Soybeans were first recognized in Russia by agricultural writers Yaroshevskii and Semnalovskii in an article in their journal (name of which is not stated) and later in another article in the *Zemledel'cheskaya Gazeta.* During about the same time articles were written by I.G. Podoba and Mel'nikov. In the 1884 exhibition in Odessa, various Russian regions presented soybeans in various stages of development and soybeans which can be used as coffee substitutes. Soybeans were also cultivated in Kiev, now part of Ukraine.

II. Description of soybeans. Different varieties of soybeans in Europe (*Soja hispida* praecox is recommended for cultivation in Russia). III. Composition of soybeans. Use of soybeans as meat substitutes for poor people and the army. Soybeans as substitutes for coffee. Soybeans used in tofu, miso and spicy sauces for meat. Recipes: food uses of soybeans: soybean flour for bread, soybeans for soybean oil. IV. Composition of soybeans. Use of soybeans as feed for cattle, dairy cows, pigs and horses.

V. Characteristics of the soybean: How it stands hot and cold weather, uniqueness, not a demanding plant (needs little fertilizer), prefers southern climates/latitudes. VI. Cultivation of soybeans: Type of soil, preferred temperatures and time of year for planting, spacing between seeds and rows. VII. Soybean maintenance. VIII. Harvesting of soybeans. IX. Harvesting/gathering of soybeans. X. Conclusion: Soybeans have a bright future in Russia, they may help fight hunger in the poor regions, as well as provide an excellent source of nutrition and energy for the army and the marines. Address: St. Petersburg, Russia.

448. *New York Times.* 1900. A missionary exhibit: Oriental curios to be seen soon at Museum of Natural History. March 4. p. X8.

• ***Summary:*** It is chiefly an exhibit of curios from Asia, collected by various missionaries. The Japanese department is one of the most complete. "There are specimens of Japanese food supplies, beans of different kinds, rice, dried edible mushrooms grown in an oak grove [probably shiitake],... long, transparent strips of a tempting looking stuff which is labeled 'seaweed'; a bottle of [soy] sauce made of fermented wheat and beans; a cake made of wheat flour and looking much like ordinary bread but with odd black lines running through it [*fu*, or dried wheat gluten cake with nori]; a stick for stirring bean curd [tofu];..."

Note: An almost identical article appeared in this newspaper on June 12, p. 2. It describes the exhibit that this article is announcing.

Untersuchung der Nahrungs- und Genussmittel 4:39-40 (1901). [46 footnotes. Rus]

• ***Summary:*** An excellent summary of the Russian and foreign literature on soybeans. Nikitin published two of his own original analyses of the chemical composition of soybeans, plus six analyses done by Giljaranski and one by Lipskii. These were black, yellow, and greenish soybeans from Russia, China, and Japan. He published numerous investigations on the nutritional value of soybeans. Lipskii found, in his investigations on the digestibility of soybeans, that in a diet consisting exclusively of mashed soybeans, 19.5% of the nitrogen and 19.2% of the fat remained undigested. The nitrogen loss is also somewhat larger than a diet of mashed peas, which Rubner found to be 17.5% undigested.

I.G. Podoba, a researcher, made Zwieback from soybeans. It consisted of 11.4% water, 24.57% nitrogenous substances, 9.16% fat, 47.09% nitrogen-free extract, 5.10% crude fiber and 4.62% minerals. Podoba gave this Zwieback for 4 consecutive days to five children at 9:00 A.M. They felt full until 2:00 P.M., whereas they usually felt hungry by 12:00 noon.

Tables show the nutritional composition of the following based on various investigations: 1. Soja hispida platycarpa var. melanosperma Harz (black, long; 3 investigations {1879} by E. Wein and Kinch, plus average). 2a. Soja hispida tumida var. pallida Harz (yellow; 25 investigations {1861-1881} by Anderson, Senff, Schwackhöfer & Stua., Zulkowski, Mach, Ulbricht, Wildt, Schröder, Blaskowics, E. Wein, Weiske, Kinch, plus average, p. 456). 2b. Soja hispida tumida var. castanea Harz (brown; 13 investigations {1876-1882} by people mentioned above, plus average, p. 457). 2c. Soja hispida tumida var. atrosperma Harz (black, round; 5 investigations {1872-1882} by Senff, Mach, Wein, Kinch, plus average, p. 457). 3. Analysis of soybeans whose botanical origin is unknown (17 investigations {1877-1886} and average, p. 457-58; Planted soybeans and harvested soybeans by Caplan. Tirol "coffee bean" by Mach. Unknown by Wagner. From China, Hungary {Pressburg}, and Étampes by H. Pellet. Unknown by Carriére. From Japan and India by Kinch. From Japan by Meissl. Three from Japan by Kellner. Two from Japan (Dai-dzu) by unknown. From America by Jenkins). 4. Analyses of soybeans derived from other sources and grouped together (13 analyses, p. 458). Address: USSR.

450. *Washington Post.* 1900. Dinner a la Japanese: A repast that is certainly picturesque and may be digestible. May 20. p. 22.

• ***Summary:*** From the Boston Evening Transcript: "In each course there are half a dozen dishes and the host tells what they are. First suimono, a bean soup [sic, clear soup, often with tofu];... sashimi, raw fish cut into thin slices and covered with ice. This is dipped into rich sauce called soy, and is really very good."

451. Langworthy, C.F. 1900. Vegetable cheese. *Sanitary Home* (*Fargo, North Dakota*) 2(3):55-57. May.

• ***Summary:*** "It is commonly believed that the Japanese, Chinese, and other oriental peoples live almost exclusively on rice, eating little or no meat... In the course of centuries the Japanese and Chinese have evolved the art of preparing substances resembling dairy products from vegetable sources. It is well known that beans, peas, and other legumes contain large amounts of protein... The soy bean, which is perhaps the principal legume grown in Japan and China, is less suited for food in its natural state."

"Though the soy bean is not relished when cooked in the ordinary way, the Chinese and Japanese prepare very satisfactory foods from it in ways which are unknown to western cooks. Bean cheese or bean curd, called by the Japanese tofu and by the Chinese tao hu, is one of the most important of these products and is prepared as follows: The soy beans are soaked in water for about 12 hours and crushed between mill stones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for an hour or more and filtered through cloth. The filtrate is white in appearance and has somewhat the appearance of milk. It has the taste and smell of malt. Analysis shows that it resembles cow's milk in composition. When heated a film forms on the surface which in appearance suggests cream. This is dried and eaten under the name of yuba. As soon as the soy bean milk becomes cool, some material is added; for instance, crude sea salt, containing magnesium chlorid [chloride], which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes or cheeses. These are sometimes dipped in saline solutions of curcuma to color them. The bean cheese cakes are sometimes eaten fresh or may be cooked in different ways. Often when practicable they are frozen. This removes a considerable part of the water present. As shown by analysis, the fresh bean cheese contains about 5 per cent of protein and 3 of fat. Ordinary cheese made of milk contains about 28 per cent protein and 36 per cent fat.

"Miso resembles tofu to some extent. It is prepared from cooked soy beans, which are rubbed to a thick paste and fermented with rice wine ferment. Shoyu is a thick sauce prepared from a mixture of cooked pulverized soy beans, roasted and pulverized wheat, wheat flour, salt, and water. The mass is fermented with rice wine ferment in casks for from one to five years being frequently stirred. The resulting product is a moderately thick, brown liquid, in odor and taste, not unlike a good quality of meat extract, though perhaps a trifle more pungent. Throughout the East it is eaten in large quantities with rice and other foods and is an important source of protein. Under the name of soy sauce, it has been known to Europeans in India for many years, and is not unknown in the United States. Most of the

© Copyright Soyinfo Center 2013

soy bean products are fermented; that is, they are prepared with the aid of micro-organisms. The micro-organisms break down the cell walls and similar materials and thus the cell contents are rendered more accessible to the digestive juices at the same time peculiar and pleasant flavors are developed. The manufacture of these products is of very ancient origin and affords an interesting, practical illustration of the use of bacteria for economic purposes.

"The Chinese residents of San Francisco and other cities consume large quantities of these soy bean products and it is stated on good authority that soy bean cheese is manufactured in this country, though doubtless it is seldom, if ever, eaten by any except the Chinese."

Note 1. This periodical was later named *North Dakota Farmer.*

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "bean cheese cakes" to refer to tofu.

Note 3. This is the earliest document seen (June 2011) concerning soybeans in connection with (but not yet in) North Dakota.

Note 4. This is the earliest English-language document seen (Oct. 2003) that contains the term "soy bean milk."

Note 5. Dr. E.F. Ladd was a nationally-known pioneer in food safety and sanitation in the United States. He published this periodical, *Sanitary Home,* in Fargo and distributed it free of charge like an extension publication before the extension service was created; North Dakota State Univ. paid the printing and mailing expenses. Interested in home safety, he rewrote technical publications in a language homemakers could understand. He did much work with North Dakota food purity and chemical purity laws. Address: PhD, Office of Experiment Stations, Dep. of Agriculture, Washington [DC, USA].

452. Abel, Mary Hinman. 1900. Beans, peas, and other legumes as food. *Farmers' Bulletin* (*USDA*) No. 121. 32 p. See p. 9-11. Illust. Revised Nov. 1904. Corrected March 1906. [1 ref]

• ***Summary:*** A section titled "Soy Bean (*Glycine hispida*)" (p. 9-11) briefly describes the soybean plant and the rich nutritional composition of its seeds. The first paragraph is quoted from USDA Farmers' Bulletin 58.

Starting with paragraph 2: "This leguminous plant, probably native in China, is the most important legume of China and Japan... In the Orient this bean and the various food products made from it are so largely consumed that it is perhaps the most important food plant next to rice. The soy bean is eaten to a small extent boiled like other beans, but in China and Japan it is elaborated into a variety of products, all of which have a high percentage of protein, and when eaten in connection with the staple food, rice, which is so deficient in that constituent [protein], helps to make a well-balanced dietary. Some one of these products is eaten at perhaps every meal and by rich and poor alike, especially in the interior of these countries, where sea food is not obtainable.

"One of the most important of these preparations is shoyu, and it is the only one that has been introduced to any extent into other countries, where it is known as soy sauce...

"There are also several varieties of bean cheese or similar products made from this legume which are very important foods. These are natto, miso, and tofu. Natto is made from soy beans that have been boiled for several hours until very soft, small portions of the still hot mass being then wrapped securely in bundles of straw and placed in a heated, tightly closed cellar for twenty-four hours. Bacteria, probably from the air or the straw, work in the mass, producing an agreeable change in its taste.

"For tofu, the soy bean, after soaking and crushing, is boiled in considerable water and filtered through cloth. To the resulting milky fluid 2 per cent of concentrated sea brine is added, which, probably by virtue of the calcium and magnesium salts present, precipitates the plant casein, which is then pressed into little snow-white tablets. It is made fresh every day. Tofu is sometimes cooked in peanut oil before it is eaten. In natto and miso the action of minute organisms plays an important part. In tofu there is no such action. The composition of a number of these products is as follows:"

A table (p. 11) shows the nutritional composition of food products made from soy beans, including fresh tofu, natto, white miso, red miso, Swiss miso, and shoyu (2 samples).

An illustration (non-original line drawing, p. 10) shows a soy bean plant with a cluster of 7 pods to its upper left (slightly changed from an original in Carrière 1880, p. 154).

This bulletin also discusses (with an illustration of each): The bean–Broad or Windsor bean (*Vicia faba*). Kidney bean (*Phaseolus vulgaris*). Lima bean (*Phaseolus lunatus*). Scarlet runner (*Phaseolus multiflorus*). Frijole (*Phaseolus spp.*). Cowpea (*Vigna catjang*). Lablab bean (*Dolichos lablab*) and other common varieties. Locust bean (*Ceratonia siliqua*).

The pea–Field pea (*Pisum arvense*). Garden pea (*Pisum sativum*). Chick-pea or gram (*Cicer arietinum*).

The lentil (*Lens esculenta*). The peanut (*Arachis hypogæa*).

Note 1. This is the earliest English-language document seen (Aug. 2011) that uses the term "milky fluid" to refer to soymilk.

Note 2. Mary Hinman Able was not an employee of the USDA or of the federal government. She was a pioneer in the fields of nutrition, nutrition education, home economics, and popularizing science for the general public. Between 1904 and 1913 she wrote several farmers bulletins for the USDA. From 1909 to 1915 she was editor of the *Journal of Home Economics.*

Transmittal date: 18 Aug. 1900.
• ***Summary:*** 2869/2873. "Glycine hispida. Soy bean. From China. A collection of seeds presented by Prof. G.D. Brill, of the Hupeh Agricultural School, Wuchang. Received March 1899. They comprise the following:

"2869. 'This is called the yellow bean and is very much grown here, generally on a trellis. The pods are long and contain many beans each. It is soaked in water for a day or two, then ground and the skins and coarser parts separated by filtering through a coarse cloth. This filtrate is boiled with powdered gypsum, which causes it to curdle, after which it is pressed in molds. The seeds are also soaked in water until the sprouts are 2 or 3 inches long. These are then fried and eaten. The bean is also a source of oil.'

"2873. 'I think this is the same as the Soy bean already grown so much in the United States. Here it is often planted among the growing rice of the second crop, and matures the seed after this is cut. It is planted as a catch crop. It is eaten while green, cooked with rice, and when dry it is ground with poor rice, made into dough with water, rolled out thin, cooked and cut into narrow strips, and eaten at the Chinese New Year–why more at that time than any other I do not know.'"

Note: This is the earliest document seen (April 2005) that uses the term "catch crop" to refer to soy beans. A catch crop is one that is grown as a substitute for a staple crop that has failed, or one that is grown as an intermediate between two crops in an ordinary rotation, or between the rows of another crop. Address: Washington, DC.

454. Aymar, R.W. 1900. Looting Peking's priceless treasures: When allies entered the Imperial City. *Atlanta Constitution* (*Georgia*). Oct. 9. p. 5.
• ***Summary:*** "'Look at this,' begged a soldier, holding up to me a lantern of bronze. It was of superb design, with tracings on it as fine as the filaments of a spider's web. The treasure was at least 400 years old. The most marvelous thing about it was the translucent globe–made of what do you think? Of bean curd, a wonderful fabrication, flimsy as gelatin and warranted not to break or crack."

Note 1. It is unclear how one could make a translucent globe out of bean curd [tofu]. H.T. Huang says: I really have no idea how it was done. My best guess is that it was made by using bean curd skin (yuba).

455. *Chicago Daily Tribune.* 1900. Simple diet of the Japs. Nov. 25. p. 36.
• ***Summary:*** The "Japanese have an advantage because of their simpler and cheaper diet. The Japanese eat thrice a day, but their food is so simple that foreigners find it difficult to satisfy themselves with it until they try it for two or three weeks, by the end of which time they generally concede its merits over the heavier foods of America and England.

"A Japanese breakfast consists of a tiny cup of tea, followed by a soup which may be made of bean curd, fish, or seaweed, a small piece of boiled fish, a small omelette, and a small cup of hot rice."

"The monotony is so great to a European that there is never any temptation to overeat, and the Japs are not gluttons. Yet this is the diet of the Japanese" against whom the Americans "will soon be pitted for commercial supremacy."

456. Boorsma, P.A. 1900. Scheikundig onderzoek van in Ned.-Indie inheemsche voedingsmiddelen. De sojaboon [Chemical analysis of some indigenous foodstuffs in the Netherlands Indies. The soybean]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 40:247-59. [18 ref. Dut]
• ***Summary:*** Contents: Literature review. Introduction (Boorsma is living in Java). Chemical composition of indigenous soybeans: Table giving figures (based on Boorsma's original research) for large black, large yellow, small yellow, unripe or immature black soybeans, soy protein (*eiwit in de soja*) or legumine, the oil (*De vette olie*), analysis of the ash, starch, the black soybean (*zwarte kedeleh*), use of soybeans in Java and Japan. Japanese soy preparations (*Japansche soja preparaten*)*:* Shoyu (soja) made with koji, tofu, yuba, miso and natto. Indigenous (Chinese) preparations: Tempeh (*tempe kedeleh*), Indonesian soy sauce (*Ketjap–Bataviasche soja*), tofu and pressed tofu (*Tao-hoe en Tao-koan*), Indonesian miso and fermented black soybeans (*Tao-tjo en Tao-dji*).

Note 1. This is the earliest document seen (Jan. 2012) in any language that mentions "Tao-dji."

Note 2. This is the earliest Dutch-language document seen (Jan. 2012) that mentions fermented black soybeans, which it calls *Tao-dji.*

Note 3. This is the 2nd earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls "Tao-tjo." This is the earliest Dutch-language document seen (Feb. 2009) that uses the word "Tao-tjo" to refer to Indonesian-style miso.

The section titled "Japanese soy preparations" (p. 251-53) includes descriptions of koji, tofu, dried frozen tofu (*kori-tofu*), yuba, miso and natto, as follows: Tofu is the Japanese name for a yellow-white to gray mass, which is prepared by macerating the finely ground up soybeans with water; an initial [natural] fermentation, which occurs alongside, creates enough acid to precipitate part of the protein. Then a short heating, causes as much fat as possible to bind to the protein, so that the liquid after filtration has a milky appearance. Through the addition of the highly alkaline magnesium concentrate, a by-product of making sea salt, the protein is precipitated, separated out by hand and shaped into cakes–which contain lots of water, protein and fat. As a side dish or in the preparation of soup, tofu is used a lot. To remove most of the water, it is common to freeze and dry the cakes in the sun afterward. Then they are called kori-

© Copyright Soyinfo Center 2013

tofu.

Note. This is the earliest Dutch-language document seen (April 2013) that mentions dried frozen tofu, which it calls kori-dofu.

Yuba is an even fattier product obtained by the evaporation of the cream layer, that aggregates on the surface of the just mentioned bean milk.

In Japan, most soybeans are processed into cheese types, called miso and natto [which the author confuses in the following].

The cooked beans, that have been formed into a firm dough are fermented again with koji, kitchen salt and water. The temperature and the amount of kitchen salt, that one uses, affect the nature of the product [miso] and the speed of fermentation. Finally the mass is cooked for a long time in the brine, separated and shaped into cakes. The resulting vegetable cheese [natto] is then wrapped in bundles, of about 500 grams, of straw, and left to its own for a few days in a heated space; where, according to Loew [sic, Yabe 1895, p. 438-39] the microbes attached to the straw cause an additional post-fermentation.

The reason for the somewhat extensive attention [in this writing] to the latter, is that the native soybean (katjang kedeleh) preparations of the Dutch East Indies are, more or less, patterned after the Japanese.

This excellent article contains a 4½-page description (the best seen to date, p. 253-58) of the traditional process for making soybean tempeh (*Tempe kedeleh*). The soybeans are parboiled, soaked in water for 2-3 days, drained, steamed in a steamer (*koekesan*), spread in a layer several centimeters thick on woven bamboo trays in shelves, and covered completely with banana leaves. They are then inoculated with the *bijang*, which is the "mold containing residues of a previous preparation." This is mixed in here and there, then the trays are covered lightly with banana leaves so as to let in some air. "Rampant growth of the mold soon begins. In the evening the mass is molded a little and after two 24-hour periods one will obtain a coherent cake, which is cut into pieces and taken as is to the market."

The cotyledons are stuck together by a dense mycelium, which has grown into a somewhat white covering. According to Prinsen Geerligs (cited above), the name of the mold is *Chlamydomucor Oryzae.*

During the two days of rampant mold growth, a radical conversion takes place in the components of the seeds; a lot of water, carbonic acid, and heat start to develop... A thermometer inserted into the fermenting mass shows a temperature 10-12ºC above that of the environment.

As the preparation is finished, the banana leaves are taken away; the temperature drops slowly to normal, the rampant mold growth stops, and the mass dries out slightly. In this condition, the tempeh can be kept for several days without spoiling.

When the rampant mold growth is allowed to continue for a third day, simply by leaving the banana leaves in place, the conversion will soon become much stronger as noted by the formation of ammonia. Also poisonous products start to form; a monkey, given a little bit [of overripe tempeh] among his other foods that day was vomiting violently one hour later. Thus we should admit that the stories about poisonings caused by various sorts of tempeh [such bongkrek, made from coconut presscake] probably have some foundation. But there is little fear of this from soybean tempeh.

After microscopic examination, Boorsma concluded that Prinsen Geerligs and others were wrong in stating that (1) the mold hyphae penetrate and dissolve the hard soybean cell walls, and (2) cellulose is decreased during tempeh (*tempe*) fermentation. He studied the chemical and compositional changes at four stages during a 3-day tempeh fermentation; a table shows his findings. He observed that fats and soluble carbohydrates decreased substantially, while nitrogen decreased only slightly. He also discussed the hydrolysis of soybean lipids, and why tempeh is easier to digest than whole soybeans.

Note 4. This is the earliest Dutch-language document seen (Sept. 2011) that uses the term *tempe kedele* or the word *tempe* to refer to tempeh.

Note 5. This is the earliest document seen (Jan. 2012) that describes how to make tempeh on a commercial scale.

On page 258 Boorsma briefly discusses Ketjap (which he called *Bataviasche soja*, or Jakarta soy sauce) and Tao-hoe and Tao-koan (tofu and firm tofu), based on information from Prinsen-Geerlings (for both) and Vorderman (for firm tofu). For each he gives a nutritional composition. On page 259 Boorsma briefly discusses *Tao tjo* and *Tao-dji* (Indonesian-style miso and fermented black soybeans). Note 6. This is the earliest Dutch-language document seen (Dec. 1999) that uses the term *Tao tjo* to refer to Indonesian-style miso or tauco / taucho.

Note 7. This is the earliest document seen (April 2001) that contains the term *Tao-koan.*

Note 8. This is the earliest Dutch-language document seen (Jan. 2012) that contains the word *natto.*

Note 9. This is the earliest Dutch-language document seen (Oct. 2012) that mentions yuba, which it calls *Yuba* and describes as *een nog vetrijker product dat verkregen wordt bij uitdampen van de roomloog, die zich bij de zooeven genoende boonenmelk aan de oppervlatke verzamelt."*

Note 10. Boorsma was a Dutch naturalist who lived in Indonesia in the early 1900s. Address: Netherlands.

457. Hutchison, Robert. 1900. Food and the principles of dietetics [1st ed]. New York, NY: William Wood & Company. xviii + 548 p. Plus 3 leaves of colored plates. Illust. Index. 23 cm. [100+* ref]

• ***Summary:*** Chapter 13, "The pulses–Roots and tubers," contains a table (p. 225) titled "Composition of pulses," which gives the nutritional composition (based on many

© Copyright Soyinfo Center 2013

analyses) of 13 pulses, including soy beans, soy bean flour, peanuts, lentils, horse beans (dry), broad or Windsor beans, French beans (*haricots verts*), haricots (*haricots blancs*), etc. For each is given the percentage of water, proteid, carbohydrates, fat, cellulose, and mineral matter. Soy bean flour is the highest in proteid (39.5%), followed by soy beans (32.9%). Peanuts are the highest is fat (44.3%), followed by soy beans (18.1%), and soy bean flour (13.7%).

There is a basic description of each of the major pulses. We read (p. 226-27): "The Soy Bean (*Glycine hispida*) is the richest of all the pulses in proteid, and also has a large amount of fat, but very little starch. For this reason it is of use as a bread substitute in diabetes, a flour being prepared from it and made into loaves or biscuits. In China and Japan it is extensively eaten in the form of soy cheese [tofu], and as various sauces and pastes [miso], all of which are rich in proteid and so are fitted to supplement the deficiencies of rice. It is also grown in Southern Europe.

"The Peanut (*Arachis hypogæa*), although botanically one of the pulses, really resembles more closely the true nuts. Like these, it is rich in proteids and fat, and may be used as a diabetic food. It enters into the composition of a patent food know as 'Nutrose,' and after expression of the oil it forms cakes for cattle."

The section on diabetes has a subsection on "Diabetic breads" (p. 475-76) stating that gluten, the chief proteid of wheat, was one of the first substances to be used in making them. More recently, oily nuts and "the soja bean" have also been used. Many of these breads, and especially the gluten breads, "are by no means free from starch."

A table (p. 196) compares the "composition of wholemeal and white bread." Wholemeal bread contains 5 times as much "cellulose" [dietary fiber] as white bread, yet white bread contains slightly more proteid. A second table (based on analyses by Atwater) compares the composition of "white bread, brown bread, and Graham bread." There is a vigorous debate as to which of these is better nutritionally. Also discusses: Wholemeal bread, and Graham bread. Robert Hutchison was born in 1871. Address: M.D. Edinburgh, F.R.C.P., Asst. Physician to the London Hospital and to the Hospital for Sick Children, Great Ormond St. [London].

458. Satow, Ernest M. ed. 1900. The voyage of Captain John Saris to Japan, 1613. London: Printed for the Hakluyt Society. viii + lxxxvii + 242 + 20 p. See p. 126. Series: Works Issued by the Hakluyt Society (London). 2nd Series. No. 5. [20 ref]

• ***Summary:*** On 29 Aug. 1613, while in Japan (near Shizuoka), Saris wrote: "Of Cheese* they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud, nor tame beasts."

(Footnote [by Satow]: *"This must be a mistake of Saris. Perhaps he mistook bean-curd (*tôfu*) for cheese, which is not known to have at any time formed part of the diet of the Japanese").

Note 1. The body of this work is a log kept by Captain Saris during his voyage to Japan and nearby areas. Each entry is dated. His spelling conventions have been preserved.

Note 2. Richard Hakluyt (pronounced HAK-luyt; lived ca. 1552-1616) was an English geographer and historian of Welsh extraction. He decided at an early age to devote his life to "globes, maps, and spheres." A good researcher, he burrowed into all the records he could find of the early Spanish and French voyages, and laid before Queen Elizabeth a one-man encyclopedia of the wonders of America. It was, he assured everyone, a land "of huge and unknown greatness," though he himself had never been west of Bristol, England. In short, he helped to paint a picture of America as a land veined with gold and blazing with precious stones–the English version of the Spanish El Dorado.

An illustration (frontispiece) facing the title page shows the Shogun Ieyasu, seated in flowing robes. Address: Sir, K.C.M.G. [Knight Commander of (the Order of) St. Michael and St. George, Her Majesty's Envoy Extraordinary and Minister Plenipotentiary to Japan [England].

459. VanBuskirk, J.D. 1900. Some common Korean foods. *Transactions of the Korea Branch of the Royal Asiatic Society* 14:1-8.

• ***Summary:*** Table 1, "Korean food products," based on statistics published in the 1917 report by the Bureau of Agriculture of the Government General, shows Korean production in millions of bushels: Rice 61. Barley 25. Millet 19. Wheat 8. Beans and peas 18. Since exports and imports of foodstuffs are relatively small compared to the amount produced, and the number of animals fed is not large, "these figures should give us a good idea of the amount of food eaten."

Rice is sometimes cooked with peas or beans (incl. soy beans) mixed in (called *pat-pap* or *kong-pap*). But the cooking takes longer and the beans are often not well cooked, and thus less digestible (p. 3).

The section titled "Bean and pea foods" (p. 4-5) gives the name of each food in Korean characters and discusses: (1) Bean curd (*tu-bu*), equivalent to Japanese tofu, is curded with the "concentrated mother liquid from sea water" [Jap. nigari]. The bean residue [okara] (*pi-ch'i*) left over from making tofu is also sometimes eaten. Bean curd "is not generally eaten without further preparation; it is commonly added to soups and stews and often made into omelets with eggs; another palatable food is made by cooking the bean curd for a short time in bean sauce (*chang*) and serving this with sesame oil, pepper and onions; it is called *to-bu cho-rim.* Bean curd may be eaten without further cooking served in sauce."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *tu-bu* to refer to Korean

© Copyright Soyinfo Center 2013

tofu.

Pea curd (*mook*) is similar to beancurd in composition but made from peas using a very different process.

"Bean Sauce (*kan-chang*) is somewhat like the Japanese 'sho-yu' but is more salt and not sweetened. Soy beans are thoroughly boiled, mashed, made into cakes and partially dried. These cakes (*me-ju*) are stored for months and allowed to mold and slowly ferment: when ripe they are broken up and soaked in salt water for a long time, then strained, the solid part being dried and used as a condiment (*toin-chang*). The liquid is boiled and the coagulated protein scum frequently removed; when sufficiently concentrated the liquid sauce is cooled and stored. This is the indispensable condiment for Koreans.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term *kan-chang* to refer to Korean soy sauce.

"Another bean sauce (*ko-cho-chang*) is made by taking about equal parts of the fermented bean cakes, rice, and salt, with a large amount of red pepper, the mixture being soaked in a small amount of water till ripe. This too is very important as a condiment."

Note 3. This is the earliest document seen (March 2009) that clearly mentions a Korean-style miso, which it calls "ko-cho-chang,"–today commonly called "red pepper sauce."

"'Kong-cha-ban' is made by boiling beans in the bean sauce; they do not swell but are hard, brittle, and very salty. Sugar and sesame oil may be added when serving them.

"Sprouted beans (*kong-na-mul*) are very common. The beans are soaked in water and allowed to sprout. When the sprouts are quite long both beans and sprouts are boiled and served–sauce is generally added."

Kim-chi, a fermented food made from cabbage or sliced turnips, is sometimes served with added bean sauce.

Among animal foods: "'Mut-chim' is dried fish soaked in water, then shredded; it is then soaked in bean sauce. Sesame oil and pepper are added; it is then allowed to stand for a shot time." Address: M.D.

460. Zavitz, C.A. 1900. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 21:6-37. For the year 1899. See p. 9, 16, 31-32.

• ***Summary:*** A table (p. 7) shows the number of distinct experiments in agriculture, number of experimenters, and number of satisfactory reports each year for 1886, 1888, and 1891-99. For 1886 these numbers were 1, 12, and 8. For 1888 they were 1, 90, and 40. For 1891 they were 12, 203, and 126. For 1895 they were 15, 1699, and 513. For 1899 they were 23, 3485, and 739. Thus, during these 14 years the Union made remarkable progress.

A table titled "List of experiments for 1899" (p. 9), under "Grain crops" includes "Testing three varieties of Japanese beans–3 plots."

In a long "List of experimenters" we read (p. 16) that the Japanese beans were grown by: (1) F.B. Doud, Branchton, Brant Co. (2) Simon Miller, Unionville, York Co. (3) Jno. D. Neilson, Thedford, Lambton Co. (4) O.A.C., Guelph, Wellington Co.

In the section titled "Conclusions" (p. 31-32), table 15 shows the results (based on 4 tests) of testing three leading varieties of Japan [soy] beans: Medium Green (estimated value 72), yielded 2.6 tons/acre of straw and 22.4 bu/acre of grain. American Coffee Berry (estimated value 100), 1.4 tons/acre of straw and 21.3 bu/acre of grain. Extra Early Dwarf (estimated value 86), 1.1 tons/acre of straw and 12.7 bu/acre of grain.

The text immediately below the table explains: "The Soy beans [sic] (Glycine hispida) is a leguminous plant native of Japan and China, and ranks very high from a chemical point of view. The plant is an annual, erect in growth and branches profusely. There are a large number of varieties, nearly all of which are too late for the conditions of Ontario. The different varieties are distinguished largely by the time required for the plants to mature and by the color of the seed; the yellow, the green, and the black, being the most common. The Soy beans are used for green fodder, silage, hay, pasture, and as a soil renovator, and the grain is used as a feed for live stock. These beans have been used as a food for man from the earliest times in Japan and China, and more recently in the European countries. They are not used as a food by themselves, but are made into different complex forms, of which five are quite common among Japanese, namely: natto, tofu, miso, yuba, shoyu.

"Conclusions.

"1. The Soy beans gave very good results in the Union experiments in 1899.

"2. The medium green Soy beans which gave the largest yield of grain per acre of the three varieties tested over Ontario in 1899, is the latest of the three varieties.

"3. The American Coffee Berry was the most popular variety with the experimenters when yield, time of maturity, etc., were all taken into consideration."

Note 1. This is the earliest report seen (Aug. 2002) in this periodical concerning soy beans. C.A. Zavitz is also secretary of the Ontario Agricultural and Experimental Union, and a member of its Committee on Agriculture (appointed at the last annual meeting).

Note 2. This is the earliest document seen (Jan. 2012) that mentions natto in Canada. Address: B.S.A., Director of Co-operative Experiments in Agriculture, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

463. D.A.R. 1901. Katjang-Kedelihpraeparaten [Soyfoods]. *Orgaan van de Vereeniging van oud Leerlingen der Rijks Landbouwshool* (*see Landbouwkundig Tijdschrift*) 13(161):242-45. Dec. [Dut]
• ***Summary:*** The author wrote an article in the April issue of this magazine about soybean cultivation. Now he will discuss how soybeans are used to make foods. As mentioned in the previous article, soya beans as such are not good to eat, even boiled or roasted; they need to be processed so as to digest the indigestible protein; then this protein can be absorbed by the digestive enzymes of the stomach and intestines.

As Japan is *the* soya country, we will start with the product that is most popular there, soy sauce, which has also earned its place in Europe. It is made from equal parts of roasted soybeans and wheat, 1-3 parts water, and much salt. The koji is fermented for a long time. Prof. Dr. M. Fesco [sic, Fesca], who provided much of this information, said it takes about 20 weeks to 5 years. The longest and slowest fermentation gives the best quality product. In Japan, every housewife makes her own soya sauce and there is competition for the best homemade soy sauce. Late-ripening protein-rich soybeans, called shoyu-mame, are used. In Java, the residue from soy sauce is used a lot, along with peanut presscake, for fertilizing sugar-cane fields.

In the Netherlands Indies, ketjap [Indonesian-style soy sauce] is made solely by the Chinese. Also called Tao-yoe, it is prepared by covering cooked soybeans with hibiscus (*waroe*) leaves. The age and variety of the leaves is very important. The mold that grows produces substances [enzymes] that digest legumin [soy protein]. More of the process is described.

Note 1. This is the earliest document seen (Feb. 2009) that contains the term Tao-yoe. H.T. Huang (e-mail of 25 Feb. 2009) states: "Tao-Yoe sounds like Cantonese for *Douyou* (pinyin) or *tou yu* (W.-G.) which in Mandarin mean soy sauce, and which first appeared in about 1750 in the *Xingyuan Lu* (*Hsing Yüan Lu*). See Huang 2000, p. 371-73.

Star anise (*Hades manies*) is also added to Indonesian soy sauce. Some Chinese have gained a reputation for their knowledge of the different additives (*boemboengs* [*boemboes*]). 61. kg of soybeans (1 gantang or 10 katties) can yield 3 bottles of number 1 ketjap (which retails for 50 Dutch cents per bottle), plus 3 bottles of 2nd extraction ketjap (each 40 cents), plus 3 bottles of ketjap no. 3 (which is little better than salt water with a light brown tint; each 20 cents).

The Japanese also use soybeans to make tofu (*tofoe*). Precipitated with magnesium chloride, it is a greyish-white dough, or sometimes yellow product. Although containing 90% water, it is a concentrated food. A table (based on analyses by E. Kirch [sic, Kinch] of Tokyo) shows the composition of tofu and kori-tofu; the latter is made by freezing tofu then thawing it. Tofu is a good product for vegetarians, but beware than it can act as a laxative because of the magnesium chloride.

Note 2. This is the earliest Dutch-language document seen (Sept. 2011) with the term *Katjang-Kedelihpraeparaten* in the title; it means "Soyfoods."

Note 3. This is the 2nd earliest Dutch-language document seen (April 2013) that mentions dried-frozen tofu, which it calls kori-tofu.

• ***Summary:*** The soybean is discussed in the chapter titled "Cultivation of crops other than paddy rice: Cultivation of secondary crops (*Palawidja*)." Soya bean is one of the secondary foods served with rice, but it is mostly used to make soy sauce and tempeh (*tempe*). One variety of soybean, which originally came from Japan, is widely grown as a second crop on the wet rice fields (*sawahs*), and it is easy to cultivate at altitudes of 1,200 to 1,500 feet above sea level. It is called *katjang kedele* in Central and East Java, but *katjang djepoen* in Sunda or West Java (*de Soendalanden;* [the area around Bandung only]). A description of the plant and the method of cultivation in Java is then given. It is planted much more on wet rice fields than on dry (non-irrigated) fields (*tegalans*) near the rice fields used for vegetables and secondary crops. Usually the soybean seeds are planted right after the paddy stumps have been cut away, but sometimes they are planted just before or during the paddy harvest, and pressed into the earth under the feet of the paddy cutters. They are rarely weeded, excepted when the crop is suffocated by tall weeds. At harvest, the plants are pulled completely out of the ground and bound into bunches. At night they are stored under a specially-constructed roofed shelter in the field, and during the day they are sun-dried on bamboo structures or on the ground. This takes at most 3-4 days, if the plants are really ripe and the weather is good, after which the bunches are put on bamboo mats in heaps and threshed. To protect the seeds from damage, one preferably

© Copyright Soyinfo Center 2013

uses piece of banana tree branches which still have fibrous veins. The fibrous plant stems and branches are removed together with the soybean pods and burned on the sawah fields. Poor people first sort out the pieces good enough for fuel and take these home. Immature green leaves are fed to animals. Sometimes soybeans are planted on the dikes of the paddy fields at the same time as or a few days later than the paddy rice. The fresh seeds from this harvest are then planted in the sawah fields after the paddy is harvested. Soybeans planted in this way are called *katjang apitan.*

There are two varieties of soya: one has an ivory yellow seed coat and the other is black. The latter is used almost exclusively to make soy sauce; the former to make pastry and condiments for rice or as a vegetable (*sayur; sajoer*). Soya is cooked with salt in the green pod and eaten as a snack.

The indigenous people do not occupy themselves with the production of soya (soy sauce) or *ketjap* or other products made from soybeans such as *taoetjo* [*tao tjo, tauco, taucho* = Indonesian style miso], *taoehoe* [*tao hoe, tahu* = tofu], *taoekwa* [*tao koan, taokoan or takoa* = fermented tofu], and *taoetji* [*tao dji, tausi* = fermented black soybeans]. The work is too involved and takes too long before the product is ready to be sold. Most people are too inexperienced and there is not enough of a market for the product.

The only food that most people make out of soybeans is tempeh (*témpé*), which plays the same role in Central and East Java as does ontjom in Sunda or West Java, and is prepared similarly. The tempeh-making process is described. It takes place indoors, out of the light. It is sometimes cut into smaller pieces. It is usually eaten pan-fried after being soaked in a solution of tamarind and salt. It is also cooked with vegetables.

Most soybean seeds are sold to the Chinese, who export them or process them to make soy sauce and other products. To make soy sauce, the seeds are roasted to aid in removing the hulls. Some people pound the seeds instead. They are cleaned, boiled in water, drained, spread on flat bamboo trays (*tampah* or *njiroe*) and dried daily for a week in the wind. They are washed again then soaked for 30-40 days in salt water which has been boiled then cooled. This mash is mixed thoroughly and strained through a cloth. To the black liquid is added a boiled and cooled mixture of cane sugar and water, then the mixture is boiled until its volume is reduced by 20%. If the solid residue removed by filtering still tastes salty, it is put into water, kneaded and strained again. A sugar solution is added and all is boiled down as before to make second-grade ketjap.

To make *taoetjo* (*tauco, taucho* or Indonesian-style miso), the soybeans are soaked in fresh water, the hulls are removed, the seeds boiled and spread on bamboo trays to cool. Rice or glutinous rice flour is roasted until golden brown, then mixed with the seeds and set aside for 2-3 days to ferment between hibiscus (*waroe*) leaves on flat trays. When the mass has molded, it is sun dried for a few days until very hard. Note: This is the soybean koji used making taucho.

Remove the leaves and put this mass of soybean koji into salt water. On the third or fourth day, add some yeast (*gist*) and some cane sugar syrup. Continue the soaking and fermentation in salt water for 2-3 weeks. Place it [in crocks] daily outside in the dew, taking care that no rain gets on it.

To stimulate the fermentation, take steamed rice or glutinous rice that is only half cooked. Add *ragi* starter and allow it to ferment for 2-3 days until a sweet, alcoholic flavor develops. This kind of fermented rice is called *peujeum* in West Java, or *tapé* in Central or East Java. Now add this fermented rice to the soybeans in salt water to enhance both the fermentation and the product.

After 3-4 weeks the soybeans should be very soft like porridge; then the taucho is ready to be used. It is eaten raw with cooked or raw vegetables, or mixed with meat or rice dishes; other condiments are also made from it.

Another product that the Chinese make out of soybeans is tofu (*tahoe* or *tauwhoe*). Soaked soybeans are ground and the puree is mixed with fresh water. Then a milky liquid (*melkachtige vloeistof*) is filtered off and coagulated. The Chinese use a coagulant called *tjiogo* (gypsum or calcium sulfate), which is specially imported from China and is not always available, even to the Chinese apothecary. It is first burned, then cooled before being added to the milky liquid. The white mass which is precipitated is called tofu. A similar product can be made from mung beans. Address: Batavia (Jakarta), Java.

465. Chamberlain, Basil Hall; Mason, W.B. 1901. Handbook for travellers in Japan: Including the whole empire from Yezo to Formosa. 6th ed., revised. London: John Murray; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 577 + 94 p. “With 28 maps and plans and numerous illustrations.” Index.

• ***Summary:*** This 6th edition is quite similar to the 1899 5th edition, but with some important changes, and 41 pages of additional advertisements at the rear. In the concise English-Japanese dictionary (p. 21-22): Beans–mame. Soy–shôyu, shitaji.

Eastern Japan: Chôshi (Inn, Daishin): “Chôshi is noted for its soy, the manufacture of which may be seen at Tanaka Gemba’s establishment, the oldest and largest, which supplies the Imperial Household.”

In the ads at the back is a full page advertisement (p. 49) for “Higeta Soy, manufactured by G. Tanaka, Chôshi, Shimôsa, Japan.” An illustration shows the Higeta trade mark. “Higeta Soy dates from 1615 A. D. (Second year of Genwa).

“Higeta Soy is honoured with the distinguished patronage of the Imperial Household.

“Higeta Soy was awarded the superior medal at the

© Copyright Soyinfo Center 2013

World's Fair at Chicago [Illinois], and gold and other superior medals by the Home Exhibitions.

"Higeta Soy has an excellent flavour and is very nutritious, being made of the best kind of bean, wheat, rice, and table salt." A table gives a nutritional analysis.

"Higeta Soy, not being acrid, is suited for ladies and children.

"Higeta Soy can be preserved even in hot countries, if kept in a dark place. This fact has been proved by many years' experience." Detailed directions for use are given.

Note: This is the earliest document seen (Feb. 2012) that mentions "Higeta" in connection with soy sauce. Address: 1. Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo; 2. Corresponding member of the Royal Scottish Geographical Society, and late of the Imperial Japanese Dep. of Communications.

466. Hosie, Alexander. 1901. Manchuria: Its people, resources, and recent history. London: Methuen & Co. xii + 293 p. See p. 180-84, 218-24, 240-45, 252-53. Illust. Index. 23 cm.

• ***Summary:*** The Preface states that Hosie was in charge of the British consulate at Newchwang in Manchuria from Nov. 1894 to July 1897 and from April 1899 to April 1900. In 1900 he made the first careful estimate of soybean production in Manchuria, calculating the amount at 600,000 tons. He noted that during that period most of Manchuria's soybean exports went to southern China, through the ports of Swatow, Amoy, and Canton, where mills were erected for extracting the oil; the cake was used for fertilizing sugar plantations there and in Java. Nearly all of the soybean oil exported from Manchuria was consumed in China.

Chapter 2, titled "Recent events in Manchuria" (p. 39-72) begins with the Sino-Japanese war of 1894-95 (it began on 3 Aug. 1894 and concerned a dispute over the kingdom of Corea [Korea]), the Japanese invasion of Corea and Manchuria, Japanese victory and the treaty of Shimonoseki (17 April 1895), the complexities of railway construction and financing in Manchuria (from the start of construction of the Manchurian Railway on 28 Aug. 1897), and the expected effects of the new railroads on Manchurian trade. Manchurian trade currently labors under serious disadvantages due largely to climatic conditions, absence of good roads, and the slow and clumsy methods of transport. "I have said that it is practically impossible to sow, reap, and export [soy] beans, the most valuable trade product of the country, in the same year, and that they have to be carried by cart and stored at depots on the waterways to await shipment when the ice breaks up in the following spring. In this way capital is locked up for months and heavy storage charges are incurred" (p. 67). The Russian Central Manchurian Railway should greatly alleviate these problems. Bubonic plague struck Manchuria in 1899 (p. 69).

Note 1 This is the earliest document seen (Jan. 2008) concerning the transportation of soybeans by railway.

Chapter 7, titled "Agriculture and agricultural products" (p. 172-98) contains extensive information on "Beans" (which are actually soybeans). Beans are often used on large farms in the second year of a 4-year crop rotation consisting of millet, beans, rice (or barley or wheat), and millet. Other important cereal crops are Job's tears (*Coix lachryma*, used medicinally and in making sweetmeats) and tall millet (*Kao-liang*).

"A large variety of beans is grown in Manchuria, and, together with their resultants, bean-cake and bean-oil, they constitute by far the most valuable item in the export trade of the three provinces." In April they are sown by hand in drills, and the crop ripens in September. "The Chinese distinguish the beans of commerce by their colours, and they are known as Yellow (Huang Tou), Green (Ch'ing Tou), Black (Hei, or Wu Tou), White (Pai Tou), Red (Hung Tou) and Small Green (Lü Tou). The yellow, green and black are varieties of the soy bean (*Glycine hispida, Moench.*, or *Dolichos soja*, L.)..." The white and red beans are "the ray-fruited dwarf bean (*Phaseolus radiatus*, L.)" [azuki bean]. The Lü Tou (small green bean, *Phaseolus mungo*, L.) [mung bean], "the smallest but one of the most important of the beans of commerce cultivated in Manchuria," is used to make vermicelli and bean sprouts.

Concerning soy beans: The "yield per acre, which requires from 16 to 18 lb. of seed, is estimated at from 27 to 39 bushels, with a weight of about 40 lb. per bushel." [Note: A U.S. bushel of soy beans weighs 60 lb.]. "Each variety of soy bean has a number of sub-species. The yellow has three, known respectively as (a) Pai-mei (white eyebrow), from the white scar on the saddle or point of attachment to the pod; (b) Chin-huang, or Chin-yüan (golden yellow or golden round), from the golden colour and more rounded shape of the bean; and (c) Hei-chi (black belly), from the dark brown scar on the saddle. All the three sub-species are highly prized for the quantity of oil or fat which they contain, but sub-species (a) and (b) are noted for the quality of the bean-curd (Tou-fu) or legumine obtained from them, as well as for the sprouts which are procured by soaking the beans in water, and which are greatly relished as a vegetable.

"There are two sub-species of the green bean (Ching-Tou)." One has a green epidermis (skin) but is yellow inside, while the other is green on the both the surface and inside.

The black bean (Wu Tou) has three sub-species:–(a) To-wu-tou (large black bean), where the epidermis is black and the inside green. It yields oil or fat, and it is likewise boiled with millet or rice and used for food.

"(b) Hsiao-wu-tou (small black bean), where the bean is somewhat smaller than the sub-species (a), with a black epidermis and yellow inside. It is largely used for horse feed and also yields oil, the refuse being employed for feeding pigs. It is likewise pickled for food.

"(c) Pien-wu-tou (flat black bean), where the epidermis

© Copyright Soyinfo Center 2013

is black and the inside yellow. It is flattened and elliptical in shape, and is mostly used for pickling and for horse feed." (p. 181-82).

A detailed description is then given of Tou-fu, or bean curd, and how it is made (p. 183-84).

"Besides these beans of commerce there are several varieties of garden beans cultivated for food, such as...; the Mao Tou, or hairy bean [probably green vegetable soybeans], with short hairy pods, each containing one to three beans (epidermis white and inside green);... With the exception of the Mao Tou these are usually cooked and eaten with the pods" (p. 186).

"The plants grown in Manchuria whose seeds yield oil are six in number. They are (1) *Dolichos soja,* L., or soy bean," (2) Castor oil plant. (3) *Sesamum orientale,* or sesame. (4) *Perilla ocymoides,* L., or perilla. (5) The cotton plant. (6) *Cannabis sativa,* L., or the true hemp plant. "The names and uses of these [six] oils are the following: (1) *Tou yu* [soy bean oil]–cooking, mixing paints and lighting" [illumination]. All these six "oil-yielding seeds" (with the exception of *sesamum seeds,* which are roasted) are crushed, steamed and subjected to great pressure. A table (p. 188) shows the percentage and value of the oil and cake extracted from these six seeds.

A black-and-white photo shows a Chinese bean mill at Newchwang with a huge granite stone wheel (facing p. 220).

Also discusses: Job's tears or pearl barley (p. 180-81). *Phaseolus radiatus* (the ray-fruited dwarf bean [azuki] which is red or white, p. 182-83). Hemp, a valuable textile plant (p. 186-88, 251). Sesamum seed (p. 188). Ground-nuts [peanuts] (p. 188, 251). The ground nut (*Arachis hypogœa,* L.) is cultivated in Manchuria for food, however not to any great extent. The oil is not extracted from the nuts, as it is in the south of China. Seaweed (p. 258).

A second edition of this work was published in 1904 (London: Methuen & Co., 293 p.; New York: C. Scribner's Sons; see p. 181-87). In the 1910 ed. (published in Boston by J.B. Millet Co.; 320 p.), see p. 75-79. Address: M.A., F.R.G.S., Once Acting British Consul, Tamsui; Now at Aberdeen (Scotland or Hong Kong).

467. Hosie, Alexander. 1901. Manchuria: Its people, resources, and recent history. Tou-fu or bean curd (Document part). London: Methuen & Co. xii + 293 p. See p. 183-84.
• ***Summary:*** "The Tou-fu, or bean curd,... is a product of universal consumption in China. The beans–yellow or green–are steeped overnight in cold or, if time is an object, in warm water. In the morning they are taken out much swollen and ground in a stone mill, water being poured in at the hole in the top of the mill-stone every few seconds to hasten the process. The whole is then collected and passed through a sieve or piece of cloth, which retains the epidermis of the beans. The filtrate is thereafter poured into a pot and brought to the boil. It is then poured into an earthenware *kang,* or jar, and half a bowl of brine (*Lu shui*) [nigari], from sea-salt, well diluted, is added to and stirred in it to cause coagulation of the legumine. This occurs in about an hour, when it is transferred to a wooden frame some three inches deep, with wooden sides and bottom, whereon a cloth has been previously spread. The water escapes through the cloth and by a drainage opening at the end of the frame, the cloth is folded over the legumine, and a lid of bamboos or reeds is placed on the top and weighted with stones to press out the moisture and shape the curd to the size of the frame. This is soon completed; the stones and lid are removed; and the cloth folded back exposes a whitish grey mass of the consistency of cream cheese. It is now ready to be cut up by knife, and is sold at from 8 to 9 copper cash (960 to 1,000 copper cash = 1 Mexican dollar = about 2s.) a catty of 1 1/3 lb. Three shêng (1 shêng = 3 catties = 4 lb.) of beans will yield 50 catties, or 66 2/3 lb. of bean-curd. Besides the actual curd various analogous substances are produced, such, for example, as Tou-fu-kan-tzu (dry bean-curd cakes), where the curd is cut up and undergoes additional pressure; Tou-fu-nao (bean-curd brain), a substance of less consistency than the curd itself, obtained by putting powdered gypsum instead of brine in the filtrate after it has been brought to the boil; Tou-fu-p'i (bean-curd skin [yuba]), the scum of the boiling filtrate, which is taken off and hung up to dry; Ch'ien-chang-tou-fu (bean-curd wafers or sheets), made by placing thin layers of the legumine in cloth and subjecting them to considerable pressure, and Tung-tou-fu (frozen bean-curd), where the bean-curd is cut up, frozen and then exposed to the rays of the sun, whereby the greater part of the moisture is removed during the process of thawing."

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term *Tou-fu-p'i* to refer to yuba.

Note 2. This is the 2nd earliest English-language document seen (Oct. 2012) that uses the term "bean-curd skin" (regardless of hyphenation or spacing) to refer to yuba.

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "dry bean-curd" or the term "dry bean-curd cakes" (regardless of hyphenation or spacing) to refer to pressed tofu (*doufu-gan*). Address: M.A., F.R.G.S., Once Acting British Consul, Tamsui; Now at Aberdeen (Scotland or Hong Kong).

468. Hosie, Alexander. 1901. Manchuria: Its people, resources, and recent history. Chapter IX–Special industries of Manchuria (Document part). London: Methuen & Co. xii + 293 p. See p. 218-24.
• ***Summary:*** One of the most important commercial industries of Manchuria is that which makes bean-cake and bean-oil, using a crush-stone mill and wedge press. The author explains "the method adopted in Manchuria for extracting the oil. A large stone wheel of dressed granite about ten feet in diameter and two and a half feet thick at

© Copyright Soyinfo Center 2013

the axis, gradually contracting to a foot at the rim, which is smooth, revolves in a circular well from thirty to thirty-six inches broad, paved with stone and bounded on each side by a low wall of concrete or wood two to three feet high. The massive wooden axle on which the wheel revolves has its opposite end firmly fixed in a huge beam which rises vertically from the centre of the hollow circle formed by the inner wall of the well and which revolves with the wheel. Behind the wheel and supported by a plank fixed near the opposite end of the axle is a wooden framework which just sweeps the floor of the well."

"The beans to be crushed are heaped in the well against the inner wall. Two mules, blindfolded, are harnessed to the wheel, one in front, the other behind, and walk in a track outside the outer wall... In this way the beans are crushed into thin wafers; but this style of wheel is now somewhat antiquated, and has been to a great extent superseded by an improved method of feeding and crushing, which I shall now describe. A massive stone roller, measuring forty-two inches long with a diameter of fifty-three inches, has the centre of its rim cut to a depth of a quarter to half an inch and polished." "Two mules, whose track lies outside the low encircling wall, are harnessed to the projecting ends of the planks." A full-page photo (facing p. 220) shows a "Chinese bean mill in Newchwang."

When the first process, the crushing of the beans, is finished, the bean wafers are removed from the gutter in baskets and steamed. Details of the steaming apparatus are given. A circular wooden grating, lined with hempen cloth, is placed over a a large, shallow, circular iron pot more than half full of boiling water. Bean wafers are placed on the cloth and steamed for 15 minutes. They are then placed in numerous iron hoops, each 23 inches in diameter, lined with grass. These are stacked five high and pressed. The press "consists of four massive wooden pillars, some ten feet high, embedded in the ground, and arranged in two pairs at a short distance from each other, each pair bound together at the top and forming an angle." Longer logs are placed crosswise so they pass "through the two angles made by the two pairs of pillars until the space between the cakes and the cross log uniting the pillars is filled. Wooden wedges, bound at the thick end with iron, are now driven in between the upper logs at each side by the workman, who wields with great effect a heavy, short-handled iron hammer suspended at each side from a cross beam erected above the press. After a few minutes the oil may be seen pouring from the cakes, descending to the wooden base, and thence finding its way to the underground tank. From time to time the wedges are knocked out, another log inserted, and the wedges again driven home. This process goes on for two hours, when the extraction is complete. The cakes are then dragged from the press and the iron hoops and grass casings removed. Each cake is now a solid mass, twenty-three inched in diameter and four inches thick, with a slight protuberance all around the centre of the edge, caused by the great pressure on the weak part of the cake between the two iron hoops." The trimmed cakes weigh 53 catties each. About 9% of the original weight of the soybeans is expressed as oil. The trimmed cakes "are stored in godowns ready for shipment to Swatow and Amoy, where they are macerated and applied to the sugar cane fields as manure." The average prices (in Newchwang taels) of [soy] beans, bean-cake, and bean-oil during the decade (decennary) ending in 1891, and in the year 1897, are given. "In the decennary ending 1891 the average values were: Beans, Newchwang taels 2.91 per picul of 300 catties (400 lb); Bean-cake, N. taels 3.69 per ten pieces, and Bean-oil, N. taels 3.43 per picul of 100 catties."

"This oil is used for both cooking and lighting [in lamps], and is exported by steamer and junk to all parts of China. Up the Yang-tsze, however, and in the southern provinces, it has rivals in the so-called tea-oil and ground nut-oil manufactured from the seeds of *Camellia sasanqua, Thunb.,* and *Arachis hypogæa, L.,* respectively. In 1896 a bean-oil factory with foreign machinery manufactured in Hong-Kong was erected in the port of Newchwang. The beans are crushed between pairs of iron cylinders driven by steam, and the crushed bean wafers, treated as above described, are placed in iron screw presses turned by capstan bars by hand. With this exception the process of manufacture is the same as in the native mills. In the foreign mill the oil is pumped from the underground reservoirs into iron tanks, where it is stored before being run into the wicker waterproof baskets for shipment. Oil extracted in the mills in the far interior of Manchuria is packed in large waterproof boxes to enable it to bear the rough transit by cart to the port, and on arrival at Newchwang the boxes are opened and the oil transferred to baskets for export." 469. Jaffa, M.E. 1901. Nutrition investigations among fruitarians and Chinese at the California agricultural experiment station, 1899-1901. *USDA Office of Experiment Stations, Bulletin* No. 107. p. 1-43. [15+* ref]

• ***Summary:*** Contents: I. Nutritive value of fruits. Introduction. Analysis of food materials: Description of samples. The dietary studies: Individual studies of 6 fruitarians, discussion of fruitarian dietaries. Digestion experiment with a girl: Metabolic nitrogen, balance of income and outgo of nitrogen.

II. Dietary studies of Chinese. Introduction. Composition of food materials. Dietary studies and a discussion of the results of each: A dentist's family, a Chinese laundry association, employees on a Chinese truck farm. Summary. Conclusions.

In part I, the author studied a family of 6 healthy fruitarians living in California almost exclusively on fruits and nuts. He found that they were apparently in good health,

© Copyright Soyinfo Center 2013

although underweight. The children were somewhat smaller in stature than average American children of their age and sex. However the youngest child in this family, "and the only one who had lived as a fruitarian [on nuts and fruits] almost from infancy, was certainly undeveloped. Her bones were very small, although she showed no tendency toward rachitis. She looked fully 2 years younger than she was" (p. 20).

In part II, "Dietary Studies of Chinese," the introduction begins: "We often hear those who recommend a vegetarian diet say, 'See how much hard work the Chinamen can do, and they live almost entirely upon rice,' and many believe that the Chinese to a great extent are vegetarians." The author notes that in Japan "bean cheese [tofu], and other foods comparatively rich in protein which are made from soy beans are eaten in large quantities by all classes." Of the 3 groups of Chinese studied, each one ate "bean cheese" [tofu] and 2 of the 3 ate "dried bean cheese" [probably dried-frozen tofu] during the study. The food was inexpensive, costing an average of $0.19 per man per day. Rice was consumed in large amounts, but was far from being the only food eaten. In fact "the diet was about as varied as that in the ordinary American households."

"The Chinese studied, who are believed to be fairly representative of Chinese residents in California in similar employment, did not, as is often supposed, live almost entirely upon a vegetable diet. Indeed, they approached no nearer to such a diet than does the average American, who has no thought of doing without animal food.

"Rice on an average constituted between one-half and one-third of the total food consumed and held much the same relation to the total food of the Chinese as do bread and other cereals, starches, etc., to the total food of the ordinary American family." Address: Asst. Prof. of Agriculture, Univ. of California.

470. *Washington Post.* 1902. A great national crisis. Aug. 12. p. 6.
• ***Summary:*** The Chinese prince, Tsai Chen, is traveling in the United States. His dinner menu for last Sunday night [apparently in New York City] included, among its 12 dishes, "11. Stewed bean curd."

471. Meyer, Frank Nicholas. 1902. Letters of Frank N. Meyer. 4 vols. Compiled by Bureau of Plant Industry, USDA. 2444 [i.e. 2577] leaves. Unpublished typescript.
• ***Summary:*** Only two copies of these rare, magnificent unpublished documents exist. One is Rolls 28-30, Vols. 105-109, Project Studies, Division of Plant Exploration and Introduction, Record Group 54: Records of the Bureau of Plant Industry, The National Archives. The second is at the University of California at Davis. Most are carbon copies of typewritten letters. Includes some illustrations (pencil sketches) by Meyer.

The first letter in this collection, dated 7th Oct. 1902, is from Meyer in Santa Ana, California, to Mr. Adrian J. Pieters (a fellow Dutchman) at USDA in Washington, DC. Meyer arrived in California on 18 Sept. 1902 and started immediately to work for USDA at the plant introduction garden in Santa Ana; he stayed 7 months. In April 1904 Meyer is in Guadalajara, Mexico. In March 1905, Meyer receives an offer from David Fairchild and Pieters to work for USDA as an agricultural explorer in northern China. In August 1905, he is in Nagasaki, Japan. In Sept., he is in Shanghai, China. In Oct. 1905, he writes a long letter to Fairchild. Meyer made four very fruitful expeditions to Asia, eastern Europe, and the Middle East. His first expedition was to China, Manchuria, and Siberia, 1905-08. His second was to Europe, Russia, Caucasus, Transcaucasia, Turkestan, and Siberia, 1909-12. His third was Russia, Siberia, Manchuria, China, and Japan, 1912-15. And his fourth and final expedition was to Japan and China, 1916-18.

On 23 Dec. 1917, war engulfed Frank Meyer at Ichang (I-ch'ang or Yichang) on the Yangtze River. He was trapped there until 2 May 1918 when he managed to break through lines of soldiers. The last letter in this collection, dated 18 May 1918, is from Meyer to Fairchild written from Hankow, China. He died about 1-2 June 1918, having drowned in the Yangtze River below Anking, and above Wuhu, China.

Meyer did not report any soybeans in Russia or Turkestan.

Note 1. This is the earliest document seen (July 1998) concerning Frank N. Meyer.

Note 2. Ichang, which opened as a treaty port in 1876, was a city of 40,000 people by 1920. It is situated at the head of steam navigation on the Yangtze, at the throat of the main outlet from Szechuan, and at the point where the mountains of Szechuan and western Hupeh meet the central plain of Hupeh.

Note 3. Soyfoods Center owns all pages that mention soy, plus: (1) The full U.C. Davis cataloging record for the archival collection, which is in Special Collections SB108 A7M49 1902 v1-4. (2) A letter from Melissa Tyler of U.C. Davis, dated 22 Sept. 2003, discussing the collection and its lack of front matter. (3) Appendix A: Bureau of Plant Industry, by Knowles Ryerson about a dispute he had with Secretary of Agriculture Henry Wallace involving Nicholas Roerich, Dr. H.G. MacMillan, and James F. Stephens over a plant exploration expedition to Manchuria and the Gobi Desert. In 1934 Ryerson was appointed Chief of the USDA's Bureau of Plant Industry; this dispute led to his removal that same year; he was replaced by Frederick D. Richey. Address: USDA Bureau of Plant Industry.

472. *Washington Post.* 1902. Like oriental cuisine: Many Americans eat at Chinese restaurants. Nov. 30. p. 28.
• ***Summary:*** The ordinary bill of fare at Chinese restaurants in this city is bird's nest soup, or birds' nests a la Chinois;

chop suey, chow fou, yet quo mien, chow mein, fou young dong and kee heong chan."

"Yet quo mien is perhaps the most popular item on the menu." "Chop suey stands next in order of popularity." The ingredients, which are listed, are hashed fine and fried in peanut oil. For cooking, the Chinese, being good Buddhists, never use lard or any other animal fat, employing in their place all manner of vegetable oils. With each dish of chop suey the waiter brings a small dish, such as is used for butter in American restaurants, filled with a peculiar brown sauce. This [soy sauce] is made in China of fermented beans, rice, and cabbage [sic], and is a great appetizer.

"Many years ago a shrewd Englishman who had been in the East India service took this sauce, and by adding certain other ingredients, evolved the famous Worcestershire sauce, which to-day is found on the tables of every hotel in the civilized world.

"It is surprising what the Chinese are able to make of beans. In the Heavenly Kingdom 'bean curd' is as staple an article of diet among the masses as bacon in this country. It is made by grinding beans moistened with water between two heavy stones, the product resembling cream. It is then taken, strained, flavored, and subjected to several processes known only to the makers, and finally pressed into long cakes like castile soap, in which shape it is cut up in slices and sold."

"There the ordinary bill of fare is bird's nest soup, or bird's nest a la Chinois; chop suey, chow fou, yet quo mein, chow mein, fou young dong and kee heong chan."

475. Law, James Thomas. comp. 1902. Law's grocer's manual: A practical guide for tea and provision dealers, Italian warehousemen, chandlers, drysalters, bakers, confectioners, fruiterers, and general store-keepers. 2nd ed. London: Gilbert & Rivington, Ltd. 1185 p. See p. 872-73 (soy), 957 (torfu [sic, tofu] or bean curd). Illust.
• ***Summary:*** "Soy.–This thick, brown liquid sauce, or ketchup, is not made from black beetles, as some humorous connoisseurs persist in suggesting, but from Soja beans, a kind of black beans, variously known as *Glycine*, or *Dolichos soja*, *Soja hispida*, etc., or Soy-beans, or peas...

"Soy is generally made by boiling the beans till soft, and then mixing them with an equal weight of crushed wheat or barley and salt. After covering and leaving this mixture about 24 hours to ferment, other ingredients are added, and the whole is then stirred daily for about two months. Finally, it is squeezed, and the liquid is filtered, and preserved in wooden vessels, in which it gradually brightens and clears by long keeping. It should be thick, but of a clear brown colour, not too salt or sweet, and of agreeable flavour. When shaken in a glass bottle, it should leave a coat on the surface of a bright yellowish-brown colour.

"The manufacture of China soy and 'bean-curd,' or 'cheese' (see *Torfu* [*tofu*]), is said to be one of the most flourishing in the prefecture of Wenchow, where there are five large factories making them from the Chin-Kiang *white* beans, sea-salt, flour, and water.

"The ordinary batch there is 123 1/3 lbs. of beans, which are first washed and boiled for six hours in a large cauldron, after which the fire is withdrawn, and the beans are allowed to simmer and cool for about 18 hours, after which they are ground to a thin paste with the water in a mill. The 'broth' is then drawn off and kept for use later on in the process. To the mash is added 213 1/3 lbs. of flour. After being well mixed it is filled into large shallow baskets of bamboo, each of which is then fitted on a wooden frame. These frames are piled one on top of another to a great height, and are exposed in the sun for five or six days, or in cold weather for seven or eight days, until the mash gives out the proper effluvium and turns yellow. The mass is next emptied into a large vat, and on it is poured a quantity of clarified brine, which has already been mixed with the bean 'broth' above mentioned. It is all then beaten up together and left to ferment. After three months or so, a yellow oil appears, and to this oil more brine is added (to each 667 lbs. of oil, 2,400 lbs. of brine), and about 10 per cent. of salt to thicken it. The result is 'China Soy,' of which there are about six different qualities, the best being about five times the value of the lowest.

"English soy.–An inferior article sometimes made in this country by simply saturating molasses, or treacle, with common salt. The better sort is made as follows:–Take 1 gallon of malt syrup, 5 lbs treacle, 4¼ lbs. of salt, 1 qt. [quart] mushroom juice; mix with a gentle heat, and stir until thoroughly blended, and in a fortnight [14 days] the clear portion may be drawn off as a very fair imitation soy.

"Soy forms the chief base of nearly all the bottled sauces and relishes in the market.

"Apply to C. Windschuegl & Co., 1 Leadenhall Street, E.C.

Note: The entry for tofu is listed separately in this bibliography (Law 1902) as a "document part."

London: Gilbert & Rivington, Ltd. 1185 p. See p. 957. Illust.

• ***Summary:*** "Torfu [sic, tofu] or Bean Curd.–(See also *Soy.*) A Japanese food product which is said to approach more nearly to animal food than any other vegetable. It is made by powdering the yellowish-white beans grown chiefly in the North of China and the Himalayas. The powder, or meal, is impregnated with brine, and undergoes elaborate treatment until coagulated. and preserved in a mass. It contains about 1-5 [one-fifth] its weight of fat and 2-5 [two-fifths] of nitrogenous matter, and when wanted for use is cut up into slabs which may be fried or toasted, and saturated with soy [sauce], so as to taste like a sweet bread, or it may be divided into small squares for soups, sauces, etc."

The first edition was published in 1896. A third edition was published in 1931 in London by W. Clowes & Sons (xiii + 774 p.; edited and revised by C.L.T. Beeching). A fourth edition was published in 1950 in London by William Clowes & Son (xv + 814 p.; edited and revised by W.G. Copsey).

477. Rorer, Sarah Tyson. 1902. Mrs. Rorer's new cook book: A manual of housekeeping. Philadelphia, Pennsylvania: Arnold and Company. 730 p. Illust. Index. 21 cm.

• ***Summary:*** The soy bean is mentioned in two special sections: Botanical classification of our common vegetables (p. 281): "Leguminosae: Pulse family. Soy bean, peanut, kidney bean, string bean, lima bean, black bean, pea, chick pea, lentil, St. John's bread."

Soy bean (*Glycine hispida*, Maxim.) (p. 334-35): "Soy beans are grown principally in China where they form an important article of food; in fact, they are the richest of all in food constituents. It is also grown to a considerable extent in India [sic], where it is mixed with rice. This bean ranks high in fat and albuminoids and is their only muscle-making food. It has more than meat value. By the Chinese it is made into cheese [tofu], pastes [jiang], and sauces [Soy]. Soy sauce is used by them on all meat and fish dishes. For the English and Americans it forms the foundation for such sauces as club-house and Worcestershire."

Note 1. This is the earliest document seen (Feb. 2012) stating clearly that soy sauce is used as an ingredient in making Worcestershire sauce.

"Soy is an agreeable seasoning to creamed meat dishes and a very pleasant addition to French salad dressing. It can be purchased in jugs at any Chinese shop, or at the American wholesale druggists by measure." A table (based on Church) gives the composition of the soy bean: Albuminoids, etc. 35.3%. Fat 18.9. Starch and dextrin 12.5. Sugar 12.0. Cellulose 4.2. Water 12.5. Mineral matter 4.6.

"Soy" [sauce] is used as an ingredient in 12 recipes: Japanese fish sauce (p. 228). Japanese eggs (p. 253). Sautéd [sic Sautéed] celery ("When ready to serve sprinkle over two tablespoonfuls of soy or mushroom catsup, and send at once to the table," p. 389-90). Ginger chutney (p. 435). Japanese dressing (p. 442). Celery salad ("This is greatly improved by adding a few drops of Worcestershire sauce, soy or mushroom catsup," p. 451). Bobotee salad (p. 457). Philadelphia cream salad (p. 459-60). Shad roe salad ("one tablespoonful of Worcestershire sauce or soy," p. 469). Salad seasoning ("Agreeable seasonings to be kept on hand for salad making: Garlic, mushroom catsup, tomato catsup, Worcestershire sauce, soy, tobasco oil [sic, Tabasco], tarragon vinegar, mint sauce, capers and celery seed," p. 472). "A group of Hawaiian recipes"–To cook beef ("bake until brown. Then pour over it a half pint of sweet cream, to which you have added a tablespoonful of soy. Cook slowly for one hour, basting frequently with the cream," p. 691-92). Cream lettuce sauce to serve with fish ("a half saltspoonful of pepper and a teaspoonful of soy," p. 695).

Worcestershire sauce is used as an ingredient in at least 25 recipes. The first four are: Ox tail soup (p. 62). Cream of cheese soup (p. 74). Mock turtle soup (p. 80). Baked carp (p. 104).

Peanut butter is used as an ingredient in 5 recipes: Cream of peanut soup (p. 75). Lentil pie (p. 337-38). Peanut wafers (p. 535). Nut and fruit crackers (with almond butter or peanut butter, p. 537-38). Marguerites (p. 556).

The earliest recipe seen for homemade peanut butter states (p. 535): "Peanut Butter: Roast the nuts, shell and blow off the brown skins. When making it in large quantities, it will pay to have a bellows for this purpose, or put the peanuts on a coarse towel, cover them with another towel, rub them gently, then blow off the skins. If you use salt dust them lightly with it and grind at once. Pack the butter into glass jars or tumblers, cover them and keep in a cool place. This may be used plain or diluted with water."

Two recipes use almond butter as an ingredient: Almond wafers (p. 525). Nut and fruit crackers (p. 537-38). A recipe for homemade almond butter is given (p. 525).

The word "vegetarian" is mentioned in connection with 7 sections of recipes: Meats (p. 135-36). Vegetables (p. 277-78). Salsify (p. 317-18). Tomatoes and okra with curry (p. 417-18). Nuts (p. 522-23). Nut croquettes (p. 538). Sample menus–Vegetarian (p. 666). The author speaks very favorably of a balanced vegetarian diet. Scientists in general agree, she says, that animal proteids are easier to digest than vegetable proteids. "I must contend, however, that a well selected vegetable diet will give health, bodily vigor

© Copyright Soyinfo Center 2013

and mental strength to those who live rationally." In other countries and cultures, vegetarians are quite equal in strength to those of the same economic class who live largely on meat or on a mixed diet of proper proportions–and are most likely freer from disease. The out-door laborer would probably do better on a vegetarian diet whereas the sluggish digestive apparatus of an indoor is probably better suited to beef (p. 135-36).

"The American people, as a class, in their rushing and bustling life, prefer to take their nitrogen from animal products, which are more easily digested and assimilated than vegetables." "The Japanese, who do in their country the work performed by horses here, are practically vegetarians." The "vegetarian requires but two meals per day," yet they are more nourishing than three meals of meat. They take less time to eat, cost less, and offer more variety. "The amount of cellulose or waste in vegetable foods keeps up the peristaltic motion of the intestines and lower bowels; hence, vegetable eaters are rarely troubled with constipation and torpid livers." America has "grown into a meat-eating nation" in large part because the scullery maids who preside over the kitchen are largely uneducated, do not understand nutrition, and have never learned the subtleties of preparing vegetables (p. 277-78).

"To the vegetarian, they [nuts] are indispensable; they furnish his meat, milk and butter. They are palatable, nutritious, and, if well prepared, easy of digestion. Being of vegetable origin, they are free from the danger of disease germs. Their food value is generally overlooked by Americans as they are generally served as dessert"–on top of a heavy meal. "From the general awakening in regard to healthful diet, societies have sprung up all over the world, recommending the use of vegetable foods, especially fruits and nuts. We have well established, both in New York and London, large vegetarian societies, many with separate branches of 'fruit and nut eaters.' Personally I have tried the experiment, and find it most satisfactory" (p. 522).

The Preface notes that this "new book on Domestic Science... represents on paper The School at its highest period of development..." "A great change in the methods of living has taken place in America during the last few years." Not long ago, schools of cookery taught "fancy cookery"–"to succeed with these elaborate, dyspeptic-producing concoctions as the highest ambition. All this has now changed: the teacher or cook book (an ever present teacher) that does not teach health, body building, and economy in time and money, is short lived. There are still a few women who do elaborate cooking to please the palate and appetite,... They are still at the palate stage of existence. Strive to reach a higher plane of thought–eat to live. Why should any woman be asked to stand for hours over a hot fire mixing compounds to make people ill? Is this cookery? Is the headache that follows a food debauchery more pleasant or pardonable or less injurious than that which follows drink? Results of intemperance are identical. Simple living and high thinking have the approval of learned men and women,..."

Sarah Tyson Heston Rorer (1849-1937) "is one of the great ladies of American culinary history. She was a nationally recognized cookery expert, founded and ran a cooking school in Philadelphia for 18 years, authored over 75 books and pamphlets, edited her own magazine *Table Talk*,... and was domestic editor of the *Ladies Home Journal* for 14 years." With over 1,500 recipes, tips and advice, and more than 125 recipes, this "is one of America's great cookbooks. The *Ladies Home Journal* reprinted it in 1970. It offers an excellent view of American cookery at the turn of the 19th to 20th centuries" (MSU introduction).

Note 2. This is the earliest document seen (Jan. 2001) which states that "body building" is widely considered part of a healthy way of life. Address: Philadelphia.

478. Thompson, William Gilman. 1902. Practical dietetics: With special reference to diet in disease. Second edition, enlarged and thoroughly revised. New York and London: D. Appleton and Company. xxiii + 828 p. See p. 152, 164, 676. Index. 23 cm.

• ***Summary:*** In the chapter titled "Vegetable Foods" we read (p. 152): "Soya bread is made from an oily pea which grows in China and Japan, and is used by diabetics, for it contains over one third part of gluten and but 1.17 per cent of glucose."

Page 164 states: "The *soy bean* is the chief legume of China and Japan, where it furnishes the necessary protein to add to a rice diet. From its vegetable casein several varieties of bean cheese [tofu] are made."

Also discusses: Nestle's Food (p. 150-51). Granose (p. 151). Gluten and the amount of gluten in wheat and various wheat products, pasta, and rye bread (p. 136, 145, 151-53, 161, 676). Sago (p. 158). Diastase and malt extracts (p. 159-60). *Erbstwurst,* or pea sausage (p. 163-64). Peanuts (p. 165, 191, 198; peanut oil is used mainly to adulterate or imitate olive oil, which is more expensive). Almonds (p. 190-91, 198, 674). Oleomargarine and Butterine (p. 196).

The first U.S. edition was published in 1897 (copyrighted 1895). A third edition was published in 1905 in New York and London, and a fourth edition in 1909 (xxvi + 928 p.). The author lived 1856-1927. Address: M.D., Prof. of Medicine in the Cornell Univ. Medical College.

479. Vorderman, Adolf G. 1902. Analecta op bromatologisch gebied. IV. [Writings on mold-fermented foods. IV.]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 42:395-431. See p. 411-31. [10 ref. Dut]

• ***Summary:*** Describes the "ontjom" and "tèmpé" [he spells the word tempeh with these two accents throughout] processes, including *ontjom beureum* [a Sundanese food made from *boengkil katjang* (bean waste or okara) and *Monilia sitophila* mold], onggok, and tempe-kedele. He

© Copyright Soyinfo Center 2013

describes two ways of making tempeh that he saw. The first is the well-known one in which soybeans are fermented between banana leaves. In the second way the soybeans are wrapped in a banana leaf to form a package about 20 cm (8 inches) long and 7 cm (2.8 inches) wide, then wrapped in a djati (jati) leaf. These packages are stacked in a bamboo basket covered with sacks for 24 hours, then taken out and spread on the floor to cool for another 24 hours.

He also describes: Tempe bongkrek katjang; same as ontjom beureum [okara onchom] except that a *Rhizopus* mold is used. Ontjom bodas; same as tempe bongkrek katjang except that another *Rhizopus* mold, not similar to Oryzae, is used. Tempe bongkrek kelapa (from South Banjoemas [Banyumas]); Quite similar to ontjom beureum, it is made from pressed coconut and inoculated in the old leaves from tempe kedele. It is eaten mostly by poorer people because of its lower price. Tempe morrie made with Soempiaoeh type soybeans (from Banjoemas) and coconut residue pressed 3 times. The soybeans are treated like soy tempe up to the laroe [laru] process. Then they are mixed with coconut presscake, which has been washed, steamed, and inoculated with ground bibit leaves on which there is *Rhizopus oryzae.* Finally it is packed in the skin of the banana stem to make long slender rods, and fermented. Tempe enthoe, from South Bagelen, is made from coconut (no soy) wrapped in a banana stem. Tempe tjenggereng is made with coconut presscake (called gatok in Banjoemas) and ragi, no soy; "This tempeh has, like the tempeh bongkrek kelapa, led to several cases of fatal food poisoning. Dagé [Dage, Dageh] is made with bacteria rather than molds on a substrate of oilseed cakes, primarily pressed coconut, sesame seeds, or peanuts." The last page contains detailed illustrations (drawings) of *Rhizopus* species from *Ontjom bodas* and *Rhizopus oryzae* from *tempe kedele*, each magnified 60 times.

Note 1. This is the earliest Dutch-language document seen (Oct. 2001) that mentions okara, which it calls *boengkil katjang.*

Note 2. This is the earliest document seen (Sept. 2011) that mentions and correctly describes tempeh bongkrek, which, for the sake of clarity, he describes as *tempeh bongkrek kelapa.*

480. Blyth, Alexander Wynter; Blyth, Meredith Wynter. 1903. Foods: Their composition and analysis. A manual for the use of analytical chemists and others. 5th ed. With an introductory essay on the history of adulteration. London: Charles Griffin and Company, Ltd.; New York, NY: D. Van Nostrand Co. xxv + 616 p. See p. 184, 356. Index. 23 cm. The 1st ed. was 1882. [1 ref]

• ***Summary:*** This book begins with a very interesting 46-page essay of the history of food adulteration in England, France, and Germany, including a history of English legislation (from 1860) to deal with this problem, a history of the present scientific processes for the detection of adulteration, and the present law in England concerning adulteration of food. History has witnessed the adulteration of many common foods, including bread, honey, milk, cream, butter, cheese, tea, coffee, cocoa, alcoholic beverages, spices, oils, etc. Coffee, for example (p. 17), began to be adulterated almost immediately after its introduction–especially with chicory. In 1718 the first legislation against this practice was enacted, followed by a broader act in 1803.

In the section on "Peas" is a subsection titled "Chinese peas" (p. 184) which defines them as "A pea or bean much used in China in the form of cheese, is the *Soya hispida."* A table gives the composition of three samples of Chinese peas" according to G.H. Pellet. A footnote on this page states: "The pea-cheese [tofu] is considered, in China and Japan, a very important food." A brief description of the process for making this greyish-white cheese, coagulated by plaster and magnesium chloride, is given, followed by a table showing its general composition–according to Julien and Champion (*Industries de l'Empire Chinois*).

Note: This is the earliest English-language document seen (April 2013) that uses the term "pea-cheese" to refer to tofu.

The section titled "Margarine" (p. 272-73) discusses how it is manufactured and its constituents–followed by a long section (p. 274-305) on the "Analysis and adulteration of butter."

The section on "Coffee" (p. 346-63) gives analyses of the true coffee bean, roasted and unroasted. Chicory is still the main adulterant. The subsection titled "Microscopical detection of adulterations in coffee" contains a table (p. 356; based on J. Moeller [1886], *Mikroskopie der Nahrungs- und Genussmittel*) that shows the length and breadth of the palisade layers of eleven legumes used to adulterate coffee–including "Soya" and "Lupine."

Also discusses: Adulteration of almond oil (p. 505-07), and of olive oil (p. 509-13–with sesame oil, arachis oil, etc.). The Margarine Act of 1887 (p. 589-90). Act regulating the sale of horseflesh / horsemeat for human food, 1889 (p. 591). Address: 1. M.R.C.S., F.I.C., F.C.S., Medical Officer of Health and Public Analyst for the Borough of Marleybone; Public Analyst for the County of Devon; Barrister-at-Law (London, England).

481. Deux missionnaires [Two missionaries], 1903. Au Laos [To Laos]. Tours, France: Maison Alfred Mame et Fils. [Fre]

• ***Summary:*** This is the first of three volumes in a series, all by the two missionaries. They are: (1) Au Laos (To Laos). (2) Du Thibet en Chine (From Tibet in China). (3) De Chine au Thibet (From China in Tibet). Information about tofu (*teou-fou*) is found in the first volume (see p. 122-23, 138).

Page 122: Along the roads used, even if there are no vegetables, one can always find pea cheese or teou-fou [tofu]. At first glance, from far away, one would take this

© Copyright Soyinfo Center 2013

block, white as snow and square, for a piece of (cow's) milk cheese. This teou-fou, that is to be found everywhere in China, is the national cheese. It is made by soaking in water for several hours special peas or beans that must be made of stone; it is useless to try to boil them for a whole day: they would still be inedible.

Page 123: These peas, soaked but still very hard are ground with a stone mill by hand, at cockcrow or even before: every morning, it is the first job of the hostel boy. The mill is placed over a wood frame that itself rests on a cooking pot into which the crushed peas drop as a white boiled mass. The cooking pot, full of a kind of thick white milk, is then heated over a hot fire; the soap milk it holds is chemically treated; a bit of white powder derived from a rock called *ngay-yen* [calcium sulfate] in Chinese, the scientific name of which I do not know, is thrown into it. The pea milk then coagulates as a cheese does; it can be eaten and some gourmets prefer to eat it this way, but most ordinarily, it is placed in a square form where, while dripping, it acquires consistency. As the need arises, it is cut into slices, it is sauteed into a pan with, or often without grease, for the poor. As this cheese is totally insipid, taste is added with a copious amount of peppers. It is also dried and fermented according to certain rules. Submerged in Chinese wine with peppers, it turns into a rotten mass unpleasant to the smell but delicate to the taste [fermented tofu] to the point of delighting...

Page 138: They are walking and nothing is happening. Suddenly there appears to be a table along the road set for a meal. Line 12: They are offered tofu (*teou-fou*) and some other fermented vegetables, bread and tea. It is obvious: everything is ready for a fortifying meal. First through a happy happenstance, (fortune is decidedly smiling upon us), an old man, very pleasant, an ambulant merchant, offers us a piece of concentrated tofu (*teou-fou*), expertly aromatised but mostly strongly seasoned that makes not just our mouth but also our eyes water. While we were savoring this distinguished cheese, our butler made haste and here we are being served... (with several non tofu courses).

Note: This is the earliest known commercial soy product made in New York state.

485. *New-York Tribune.* 1904. Chinese food products: Beans a leading article of diet in China. April 10. p. A9.
• ***Summary:*** From What to Eat: "Dr. Yamei Kin, a Chinese woman doctor now studying in America, gives some interesting facts about Chinese food products. One surprising thing Dr Yamei Kin tells is that Chinese soy is made from a sort of red bean ground up and fermented. While fermenting it smells like sauerkraut, only worse. The fermented product is shipped in cases to England, where it is mixed with vinegar and other products and sold as Worcestershire sauce.

Note: This is the earliest document seen (April 2012) that mentions Dr. Yamei Kin in connection with soy.

"The Chinese laborer lives on beans as much as does the Boston typewriter girl. The bean in China is more like our small round cow-pea. This is ground fine, mixed with water and a little salt. Then the water is pressed out and the bean cake [tofu] is sold to the poor. This bean cake may be cooked and mixed with other things, fish, chickens, etc. It is highly nutritious and explains why the Chinese laborer can endure so much on so little food. Vegetables are eaten in quantities... Fish is popular but very little meat is eaten. An animal is never killed to be eaten until it is too old to work; hence the Chinese do not like beef, considering it too tough. Pork is popular and every family keeps one or two pigs.

"The Chinese are great cooks, and love to give elaborate dinners. This is the chief means of entertaining in China. However, the dinner consists of sixty courses, and it takes several hours."

Also appeared in the *Detroit Free Press.* 1904. May 1 (p. 2).

486. Humphreys, Mary Gay. 1904. The aesthetic housekeepers of Japan. *Ogden Standard Examiner* (*Utah*). April 29. p. 23.
• ***Summary:*** The author, an American, writing from her experience of living in Tokio, notes that Japanese housekeepers bring a strong sense of beauty or aesthetics to every part of their daily life. Concerning foods: "One of these is bean curd, 'tofu,' a white substance that is sliced and fried like mush, with soy [sauce] for a flavor. This curd is so nutritious and so cheap that an American who lives in Japan suggested its being introduced into this country as a food. Soy is a liquid made from the black bean and is said to be the foundation of Worcestershire sauce. It enters into almost all cooking, and most agreeably."

A Tokio restaurant meal: "It was charming, a meal to be remembered, and meat thus cooked in soy [sauce] something 'Japanesy' that we might well import."

Nuta salad: "This is made of clams, rape tops and onion with a sauce of bean paste, rice, mustard and soy [sauce], rubbed into a brown liquid." One large illustration shows a Japanese woman with elaborate dress and hairdo; three others show her working at home.

487. *Boston Daily Globe.* 1904. Typical dishes. Japanese service is dainty in the extreme. May 22. p. 35.
• ***Summary:*** "Meat plays a small part in the Japanese menu,... Fish and rice are the staples... The following is a typical menu for a dinner of ceremony:" Soy-related dishes include: "Suimono–A kind of bean-curd [tofu] soup." "Hachi-zakana–A fine, large fish, either boiled with salt or boiled [broiled?] with shoyu." "Umani–Bits of fish or sometime fowl, boiled with lotus root or potatoes in shoyu and with 'mirin,' a sort of sweet liqueur." "Tsubo–Seaweed..." "Ayemono [Aemono]–A sort of salad made with bean sauce [miso?] or pounded sesamum [sesame] seeds." Raw fish–The favorite for festive occasions is the *tai* [sea bream], "on account of its name, which is the last syllable of the word *me-de-tai*, meaning 'congratulatory.'... Before eating, the slices are dipped lightly in soy [sauce], seasoned with grated horseradish or ginger."

488. Brunson, John A. 1904. A glimpse of Japanese life. *Good Health* (*Battle Creek, Michigan*) 39(5):237-42. May.
• ***Summary:*** A good photo (p. 239) shows a Japanese vegetable vendor carrying his goods in baskets on a shoulder pole. Page 240 notes: "*Tofu,* or 'bean curd,' as the foreigners call it, is a favorite dish. The beans are first ground fine in hand mills. These mills consist of two stone discs about eighteen inches in diameter, and perhaps six or eight in thickness, one being placed above the other. To the upper stone is attached a handle by which it is turned, and the motor power is supplied by two women. It is a familiar sight in Japan to see 'two women grinding at the mill.' The husks and coarser parts of the bean flour are then carefully removed, and the fine white residuum is mixed with water and pressed into squares which somewhat resemble cottage cheese in appearance. The *tofu* is then boiled, and is both palatable and nutritious, but rather concentrated."

In Japan, fish are served raw, while yet fresh, "with *shoyu,* a kind of Japanese Worcester sauce."

Note 1. This is the earliest article seen (Aug. 1996) with detailed information on soyfoods in Dr. John Harvey Kellogg's periodical *Good Health.*

Note 2. This is also the earliest document seen (Aug. 1996) that compares tofu with cottage cheese.

489. *Atlanta Constitution* (*Georgia*). 1904. Chinese vegetables. June 6. p. 10.
• ***Summary:*** From The Boston Home Journal: "The vegetables used by the Chinese are entirely different from what we are accustomed to, and make a wonderful collection. An investigation and analysis of the vegetables and food offered for sale in the Chinese markets of San Francisco has recently been made by Professor Walter Blasdale, of the chemistry department of the University of California, from which we gather the following facts:..."

There follows a summary of: Blasdale, Walter C. 1899. "A description of some Chinese vegetable food materials and their nutritive and economic value." *USDA Office of Experiment Stations, Bulletin* No. 68. 112 p. See p. 32-36.

"Beans are a staple article of food with them. There are many varieties and they are baked, boiled, made into soup, and even made into a bean cheese [tofu]. The most important is the 'soy bean.'

"Many of these vegetables are imported from China, but most of them are now raised along the banks of the Sacramento [River in California] and are brought every morning fresh to the Chinese market."

490. Hitier, H. 1904. Société Nationale d'Agriculture de France: Communications diverses [National Society of Agriculture of France: Various communications]. *Journal d'Agriculture Pratique* 68:2. p. 55. July 14. [Fre]
• ***Summary:*** During the session of 6 July 1904 Mr. Bouvier presented a sample, to pique our curiosity, of tofu (*fromage de Soja*) that Mr. Paul Serre had sent to the Society from Java. This cheese is obtained after grinding the soybeans in water, in a double boiler or steam-jacketed kettle (*bain-marie*). The albumin is precipitated, just like casein, with the aid of a special ferment (*d'une ferment spécial*) and with it one makes a special sort of cheese, of which the indigenous people are very fond. It would be interesting to study the one or several particular "ferments" used for this cheese.

Note 1. The reporter seems confused between fermented and non-fermented tofu. Note 2. Ferments were later called "enzymes." Address: France.

491. *Times* (*London*). 1904. Summer conditions and food supplies in Manchuria. Aug. 9. p. 2, cols. 5-6.
• ***Summary:*** From a correspondent. There are two harvest seasons in Manchuria. The first is that of wheat and barley; the second is that of yellow millet and red millet, followed by [soya] beans, "which are the product *par excellence* of Manchuria," and finally *kao-liang*, or tall millet.

"The vast quantities of [soya] bean cake, stored in the country from last year's stock, which were not exported as usual to Japan, were enough to support at least 50,000 Russian horses. The beans and cake were stored in towns within easy access of the Russian centres. and have long since been secured."

"As regards food for her [Russia's] army, the natives can furnish a relatively small proportion of coarse flour made from wheat... The small millets can be used as porridge. Natives travel long distances on this alone. For the cold season the bean curd is splendid food for men who live in the open air. The supply of this is practically unlimited.

Note 1. This was written in the midst of the Russo-Japanese war (Feb. 1904–Sept. 1905); Japan beat mighty Russia.

Note: This is the earliest document seen (March 2008) that mentions Russo-Japanese War in connection with soya beans.

492. *Evening Post* (*Wellington, New Zealand*). 1904. Seasons in Manchuria: Conditions and food supplies. Interesting particulars. Sept. 21. p. 5.
• ***Summary:*** "A correspondent of the London Times gives the following particulars of the conditions in Manchuria: -

"'It should be well understood that there are two harvest seasons in Manchuria. The first is that of wheat and barley, which in the central and southern provinces ripen at the end of June or early in July, immediately before the usual summer rains, whereas in the northern provinces it follows the rainy season, being cut towards the end of August.

"The second or greater harvest commences, in the extreme south, early in September, and later as one advances northwards, around Kharbin [Harbin], for instance, about the first week in October. The small yellow-grained millet or *ku-tze* is the first, followed quickly by small red millet or *mi-tze;*... Beans, which are the product par excellence of Manchuria, next claim the reaper's attention, and last, but not least, the kao-liang [kaoliang], or tall millet.'"

"'The vast quantities of [soya] bean cake stored in the country from last year's stock, which were not exported as usual to Japan, were enough to support at least 60,000 Russian horses. The [soya] beans and cake were stored in towns within easy access of the Russian centres, and have long since been secured.'"

"'For the cold season the bean curd [tofu] is splendid food for men who have to live in the open air. The supply of this is practically unlimited."

493. Hutchinson, Jonathan. 1904. Chinese in the Rand and the risk of leprosy (Letter to the editor). *Times* (*London*). Sept. 24. p. 3, cols. 1-2.
• ***Summary:*** The writer fears that Chinese coolies now working the mines of South Africa will bring leprosy with them. "Wherever Chinese labour goes there also goes leprosy... Leprosy and the Chinaman's dietary are inseparable." The writer believes that eating improperly cured salt-fish make Chinese susceptible to leprosy. To try to prove his point, his gives a "Schedule of breakfasts and suppers to be supplied to Chinese coolies awaiting

embarcation [embarkation] for South Africa in the depôts of Kowloon." Salt fish are supplied every day except Thursday, when "bean curd" takes their place. Address: London.

494. Hosie, Alexander. 1904. Report by Consul-general Hosie on the province of Ssuch'uan. Presented to both houses of parliament by command of His Majesty. Oct. 1904. London: Printed for H.M. Stationery office, by Harrison and Sons. 101 p. See p. 10-11. 34 cm. China No. 5.
• ***Summary:*** Sir Alexander Hosie (lived 1853-1925) traveled to Ssuch'uan in June and July, 1884.

In Part A, titled "Agricultural and horticultural products," section II on "Pulse" (p. 10-11) states: "1. Soy Bean (*Glycine hispida*, Max.).–The soy bean does not play the same part in Ssuch'uan [Szechwan] as it does in Northern China, and especially Manchuria, where it is cultivated almost entirely for its oil and for the refuse cakes, which find a ready market not only in China and adjacent countries, but are winning their way as fertilisers into remoter regions. The great oil-yielding plant of Ssuch'uan is rape, and although oil is extracted from the soy bean, it is as an article of food, whether cooked whole or in the form of resultant products, that the latter is appreciated in Western China. Three well-marked varieties, each with two or more sub-species, are cultivated." A bushel of each weighs 40 pounds.

(I.) Yellow Soy Bean (all are ovoid in shape; oil is extracted from the first two): (a) "Pai Huang Tou" or White Yellow Bean. This is the lightest in color of the three sub-species of the yellow bean. A bushel of 40 lbs. costs T. [Taels] 0.8.8, or about 2*s.* 1*d.* There are about 150 beans per ounce. "As a rule they are cooked whole and served as a vegetable condiment." (b) "Ta Huang Tou" or Large Yellow Bean. Has a light tinge of green. Eaten in the same way as the white-yellow bean. (c) "Hsiao Huang Tou" or Small Yellow Bean. This bean is much smaller and less expensive than the other two sub-species. "For this reason it is in demand for the manufacture of beancurd in its various forms. It is also used as a vegetable. "Oil is extracted from (a) and (b), and to a much less extent from (c); but this subject will be dealt with under the head of oil-yielding plants.

(II.) "Ch'ing Tou"–Green Soy Bean. "There are two sub-species of this bean, (a) where epidermis and inside are both green, and (b) where epidermis is green and inside yellow. The former is more commonly cultivated in Ssuch'uan, and both are eaten and cooked as a vegetable. They are also salted and put away in jars for winter use. The bean is of the same size, shape, and weight as the white-yellow bean. The above yellow and green varieties of the soy bean occupy the ground from April to August, whereas the next variety (black) takes a month longer to mature.

Note 1. This is the earliest English-language document seen (May 2009) that contains the word "Green Soy Bean." It refers to mature dry soybeans with a green seed coat–not to green vegetable soybeans.

(III.) "Hei Tou"–Black Soy Bean. "There are two sub-species of this bean: (a.) The first is much larger, rounder, and heavier than the yellow and green variety. Only 88 are required to make up an ounce and the cost is T. 0.6.5 per bushel of 40 lbs. Like the green bean, it is used cooked in its fresh state as well as pickled. (b) The second is a small flattish bean, about 450 going to the ounce. It is used in medicine and for food, principally the former. The cost is T. [Taels] 0.8.0 for 40 lbs. Both these sub-species are black outside and yellow inside, the epidermis of the former being readily detachable when crushed."

In section VI, "Products of cereals, pulse, and starch-yielding plants," the first entry (p. 19) is for "1. Beancurd and Jellies.–In my book on Manchuria I have fully described the manufacture of beancurd from the yellow soy bean, and it is therefore unnecessary to go into details in this place; but in Ch'êngtu it is preserved and exported in jars like wine. The beancurd is cut into small pieces, drained of its water, and packed in jars with layers of salt. There they remain for forty days, when they are taken out, drained of the brine, packed in other jars with ground up bread, red rice (dyed), star-aniseed, and red wine. The jars are then closely stoppered and the preserved beancurd is ready for export. It is also preserved without the wine, which is replaced by the cold water which had previously drained from it, but with a seasoning of ground-up chillies, star-aniseed, &c." Related products are "pea jelly," "sweet potato jelly," "rice jelly," and "buckwheat jelly." Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "preserved beancurd" to refer to fermented tofu.

Note 3. This is the earliest English-language document seen (Oct. 2011) that uses the word "wine" (including rice wine or "sake" / "saké") in connection with fermented tofu, and explains how that wine is used in the two-step fermentation process.

We also read (p. 19): "3. Soy or bean sauce. Two kinds of soy are manufactured in Ssuch'uan–white or red–or, as the latter is frequently called, black:–(a) Red soy.–In describing the manufacture of soy, I propose to give the exact quantities employed, so that a better idea of the amount of soy yielded by them may be obtained.

"Twenty-eight catties of yellow soy beans are steeped overnight in cold water. In the morning they are removed in their swollen state and steamed for five hours. They are then taken from the steamer, spread out on mats, and allowed to cool, after which they are thoroughly mixed with 20 catties of wheat flour and placed in a basket made of split bamboo. [Note: The ratio by volume of soy beans to wheat flour is 1.4 to 1]. In six or seven days, as soon as yellow mould begins to appear, they are placed in an earthenware jar with 30 catties of cold water (well-water preferred) and 30 catties of granular salt and the whole is thoroughly mixed and the jar covered. In three or four days the jar, which has been placed in the sun, is uncovered and the contents stirred by hand, and

© Copyright Soyinfo Center 2013

the same takes place daily for three months. At the end of this time the liquid has all evaporated. During the following months the cover is removed during the day and replaced at night. The contents are now a black pickle, and may be eaten as such; but to obtain the soy they are divided up into equal parts and placed in two earthenware jars, to each of which is added 40 catties of boiling well-water. The contents of each jar are now thoroughly mixed and stirred up and a fine bamboo sieve in the shape of a basket is placed in the jar. The liquid escapes into the basket while the dregs are kept back by the sieve. In two or three days the liquid has all drained into the basket, when it is baled out and boiled with two catties of white sugar or glucose manufactured from glutinous rice, already described, with the addition of two or three ounces of mixed whole chillies and star-aniseed. Each jar will yield 35 catties of red soy, valued at 96 cash a catty, so that the 28 catties of yellow beans, with the other ingredients, yield 70 catties of soy. A whole year is required from the steeping of the beans to the production of this soy.

"(b) White soy.–In the case of white soy the beans are first roasted in sand which has been previously heated in an iron pan with a mixture of rape oil. This roasting is complete when the beans open or split, and the sand is removed by sieve. They are then placed in an earthenware jar and steeped in cold water for twelve hours. They are afterwards steamed as in the manufacture of red soy, and mixed with flour and salt; but, instead of 30, some 60 catties of water are added to prevent the blackening of the beans and the discoloration of the soy. The daily uncovering, stirring, and recovering take place as in red soy, but at the end of 120 days the solid matter is removed and the liquid alone is exposed in the jar to the sun. This soy is ready for use at the end of the 120 days, but improves by keeping and exposure to the sun. No sugar or glucose is used, and the seasoning is placed in the jar with the 60 catties of water. Nor is there any boiling before use. The cost of white soy, which is more yellow than white, is from 80 to 96 cash a catty, according to quality."

In the section on oil-yielding plants, p. 34 states: "(e.) *'Glycine hispida, Max.'*–In Ssuch'uan the soy bean of Northern China and Manchuria is replaced by rape seed, and it is cultivated more as a vegetable than for its oil. The production of the latter is insignificant from a commercial point of view."

In 1922 a derivative work titled "Szechwan, its Products, Industries, and Resources," was published in Shanghai by Kelly & Walsh, Ltd. (185 p.).

495. Abel, Mary Hinman. 1904. Beans, peas, and other legumes as food. *Farmers' Bulletin* (*USDA*) No. 121. 39 p. See p. 11-13, 18-20. Revised. Illust. [1 ref]*

• ***Summary:*** A revised edition, 3 pages longer than the 1900 original. The information about soy is unchanged, however it is on different pages (see above). The section titled "Nutritive value of the legumes" (p. 18-20) includes a table titled "Composition of fresh and dried legumes compared with that of other foods." Under "Dried legumes," the composition of "Soy beans" (dry, containing 10.8% water) is given.

496. *Agricultural Bulletin of the Straits and Federated Malay States.* 1904. Soy and bean cheese. 3(12):494-96. Dec.

• ***Summary:*** "Among the number of small manufactures by natives in Singapore, many of which are quite unknown to the ordinary residents, the manufacture of the Chinese sauce known as Soy, is one of some interest and importance, and having had occasion lately to visit three of these factories, I put together such notes on the manufacture as I was able to make. Soy is made from the seeds of the bean *Glycine hispida*, which is cultivated in China and also in India, and the beans are imported from China to Singapore for making Soy and Bean-cheese.

"The present price of the beans is high, six dollars a picul, probably owing to the Russo-Japanese war.

"The Soy beans are first boiled, which causes them to swell up considerably, and then put into stone jars about three feet tall and two feet across, with a quantity of brine made of coarse salt, which I was told was made of equal parts of salt and water. The brine is first made in jars, and occasionally skimmed as the extraneous matter floats to the top. The jars when full of beans and brine are covered on wet or dull days with a conical tin cover which is taken off in sunshine. At one factory I was told that wheat flour was put into the jars with the beans, and a note in 'Spon's Encyclopedia' states that an equal quantity of roughly ground barley or wheat is boiled with the beans, but this does not appear to be done here.

"The beans are left to soak for from sixteen days, when there is a big demand for the product, to a year, and the longer it is kept the better the Soy is considered. Six to eight months, however, seems the usual length of time.

"The beans are then strained out, squeezed in a cloth, and the deep brown liquor filtered through a cloth laid in a rattan basket, and then boiled. It is afterwards poured into stone jars such as the Chinese use for their pickled cabbages, and sold to various places in the East.

"I could not find that any ferment was added to produce fermentation of the beans, and the Chinese said there was none. There is, however, a general idea of there being some secrets, known only to the head man and religiously preserved by him, as to the manufacture. This is, however, commonly stated by any Chinese manufacturer, however simple and well known his manufacture may be.

"There are two kinds of beans of the *Glycine*, black and white, which are used separately.

"Soy is extensively used as a condiment both by Chinese and Europeans in the East, and forms the basis of most of the sauces used throughout the world.

"Bean cheese: Bean cheese or bean-cake [tofu], is also

© Copyright Soyinfo Center 2013

made from the Soy beans, but the white ones only are used. The beans are first cracked in a stone quern or mill, worked by hand, the beans being poured through a hole in the upper millstone. They are then immersed in water for a day, which causes them to swell. Then they are transferred to another quern and ground to the consistency of a cream. This is boiled and when cool poured into a cloth and squeezed and pounded on a small table with a square hole in the centre till much of the water is squeezed out, when the cheese is made into square flat cakes four or five inches across and about ½ or 3/4 inch thick, then wrapped in cloth and put each in a little rattan tray or dish, they are put over a low fire, till they are firm enough. Some are coloured yellow by a decoction of the seeds of a capsular plant brought from China, the seeds being steeped in water and the liquid brushed over the top of the cheese. A little alum and a quantity of powdered gypsum is sometimes at least added to the bean cake during its manufacture. The former probably to make it whiter, the latter probably to increase the weight. The Chinese seem to be very fond of adding gypsum to such manufactured articles. It has been mentioned in an earlier *Bulletin* that it is mixed with Jelutong rubber.

"Bean cheese is a very popular article of food with all kinds of natives, and costs about one cent a cake, and about 6 or 8 cents a pound.–Ed."

Note: This article also appeared in *The Gardens' Bulletin, Singapore* (1904, p. 496).

497. **Product Name:** Doufu, and Fuyu (Fermented Tofu).
Manufacturer's Name: Sing-how Lee & Co.?
Manufacturer's Address: Jackson St., San Francisco, California.
Date of Introduction: 1904.
New Product–Documentation: Shurtleff & Aoyagi. 1980. History of Tofu. p. 63. based on interview with Stanley Lee: In about 1904 Mr. Sing-how Lee started a tofu shop in San Francisco with several partners. No one remembers the name any longer. Because of conflicts with the partners, he left and started Quong Hop in 1906 in Chinatown. The company may also have made fermented tofu. And some fermented tofu was probably being imported to America from Hong Kong and China.

Note: Unfortunately, after decades of searching, Soyinfo Center has been unable to find any documents to confirm this story.

498. Burg, Cornelis Leendert van der. 1904. De voeding in Nederlandsch-Indië [The foods of the Netherlands Indies]. Amsterdam, Netherlands: J.H. de Bussy. viii + 526 p. See p. 210-20, 222-23, 255-56. Index. 24 cm. [49 ref. Dut]
• ***Summary:*** Burg describes the preparation of tempe as follows: "Yellow soy-beans are boiled, soaked in cold water for 48-72 hours, squeezed out between cloths, and then steamed in a conical basket, made of flattened bamboo or of cane (Malay: kukusan) till they are done. Afterwards they are spread out on wire frames, which are entirely covered with banana leaves, and mouldy remains of a previous preparation are added, then all is covered again with banana leaves. The whole mass is stirred a few times, and after 2 days a cake has been formed, from which pieces are cut, which are fried in cocoanut oil and eaten afterwards. During the preparation, the cotyledons have been bound together by a tight mycelium, much water and carbonic acid being secreted in the meantime and the temperature of the mass rising 10 to 12ºC above that of the surroundings. The cellular walls are not dissolved by the hyphae, but the soluble carbohydrates and the fat diminish, the nitrogen content remains about the same, but in tempé only 70% is to be found of the protein, as originally present in the beans."

He also describes, on Prinsen Geerligs' authority, the preparation of *tao-tjo* (Indonesian-style miso). Peanuts are discussed on p. 220; *tempé boengkil, tempé bongkrek, ontjom beurreum, ontjom bodas* on p. 222.

499. Geil, William Edgar. 1904. A Yankee on the Yangtze: being a narrative of a journey from Shanghai through the Central Kingdom to Burma. New York, N.Y.: A.C. Armstrong and Son. xv + 312 p. Plus 100 unnumbered pages of plates. Illust. No index. 21 cm.
• ***Summary:*** The author is in a boat on the Yangtze, just up-river from Shanghai, in China. The section titled "Early rice" (referring to breakfast) states (p. 15): "These dishes bore frightful dragon and other terrifying decorations, and contained first, superannuated and odoriferous shrimps; second, sickly bean curd floating gently on a summer sea of native vinegar and mustard seed oil; the third dish boasted pickled turnip tops and other refuse; and the fourth, bean curd cheese which reminded me of wild-cat's liver soaked in sulphurated hydrogen."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "bean curd cheese" (regardless of hyphenation) to refer to Chinese-style fermented tofu.

The section titled "Mr. Ma's inn" states (p. 114): "We stopped at the 'Perpetual Provider' Inn and had Early Rice at seven-forty, at which meal I ate two large bowls of rice and bean-curd." Address: Doylestown, Pennsylvania.

500. Hosie, Alexander. 1904. Manchuria: Its people, resources, and recent history. London: Methuen & Co.; New York: C. Scribner's Sons. xii + 293 p. Plus 16 unnumbered leaves of plates. See p. 180-87, 218-24, 240-45, 252-53. Illust. Map. Index. 23 cm.
• ***Summary:*** For details, see the original 1901 edition; the two editions are very similar and contain the same number of pages.

This book contains information about Manchuria's railways including the Central Manchurian Railway, Imperial

© Copyright Soyinfo Center 2013

Chinese Railway, Siberian Railway, South-Baikal Railway, Trans-Baikal Railway, Trans-Manchurian Railway, and Ussuri Railway. However neither the South Manchuria Railway nor the South Manchuria Railway Company are mentioned. Address: Once Acting British Consul, Tamsui; Now at Aberdeen (Scot or HK).

501. Kellogg, Ella Ervilla Eaton. 1904. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery; a thousand choice, palatable, and wholesome recipes. Revised and enlarged edition. Battle Creek, Michigan: Modern Medicine Publishing Co. 508 p. [39] leaves of plates. Illust. Index. 24 cm.

• ***Summary:*** In this new edition, the wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the dietary system employed at the Battle Creek Sanitarium. Although this is a vegetarian cookbook (which includes the use of eggs and milk), that fact is not discussed anywhere in the book.

The "Preface to the fourth edition" (p. 4) begins "Cookery is a progressive science. Within the past few years several new and very valuable food products have been developed in the food laboratories of the Battle Creek Sanitarium and put upon the market, making necessary the evolution of many new recipes for their preparation for the table."

The long chapter on "Meats" (p. 389-417) in the 1892 ed. has been replaced by an even longer chapter on "Nuts and nut foods" (p. 389-425). After that we find all new chapters: "Food for the sick" (p. 426-52), "The daily menu (p. 453-63), and "Appendix" (p. 464+) with many pages of nutritional analyses, copied from the "Battle Creek Sanitarium Diet List," showing the "Food value of the large variety of foodstuffs when prepared for the table."

In the new "Introduction," the section on dairy products has been rewritten to deemphasize their use.

The long chapter on "Legumes" again notes that the Chinese "manufacture cheese [clearly tofu] from peas and beans" (p. 217-18).

The chapter on "Milk, cream, and butter" states (p. 369): "Various nuts, as almonds, filberts, and cocoanuts furnish products which make excellent substitutes for milk, and which can be utilized in cooking in early all recipes where milk is needed. These milk substitutes approach very closely the same composition as cow's milk, thus affording equal nourishment, while they have the advantage of being perfectly clean and free from germs. Recipes for their preparation are given elsewhere."

The chapter on "Nuts and nut foods" begins with a description of the major nuts. The long section on "The peanut or groundnut" notes: "In this country they are more commonly roasted, but in this form are almost indigestible, for the peanut is really not a nut at all, but a legume, and requires thorough cooking... to render it digestible. Peanuts are, however, a very wholesome and nutritious food when properly cooked" (p. 393). Recipes include: To blanch almonds. To blanch peanuts. Cocoanut cream. Nut pulp (from well blanched and baked peanuts). Peanut butter (Blanch, then cook in a double boiler for 8-10 hours before grinding). The section titled "Nut preparations" states: "Within the last few years, various processes have been discovered whereby nuts of different kinds are converted into most valuable and palatable foods. Chief among these nut products may be named protose, or vegetable meat, almond and peanut butters, nuttolene, nuttose, nut meals, and nut soup stock" (p. 398). Then come subsections on: "Protose and nuttolene recipes" (p. 399-411, incl. 2 recipes for Vegetarian roast, Vegetarian chili sauce, Protose steak, Nut steak in gravy, Mock hamburger steak, Nuttolene cutlets, Nut fillets, Protose patties, and Rice and lentil croquettes). "Nut products with vegetables" (p. 411-16). Nut cream and butter (p. 416+, incl. Nut butter, Nut milk). Sandwiches (p. 214+, incl. with almond nutter or nut butter).

The Appendix showing nutritional value of foods (p. 464-84) includes all the new nut products. At the very end is a half-page table titled: "The following table shows clearly the inferior value of flesh foods." The nutritional composition of 23 such foods (red meat, poultry, fish, and shellfish) is given. The book contains 31 excellent illustrations and 39 unnumbered pages of glossy black and white photos, each page printed on only one side.

Note 1. This is the earliest document seen (Jan. 2007) that mentions a kind of meatless burger or patty, which it calls "Mock hamburger steak" and "Protose patties."

Also discusses: "The superiority of bread made from the entire wheat or unbolted meal" also called "whole-wheat bread" (p. 112, 143). Many gluten recipes throughout. Diabetic biscuit (p. 452, made of Graham or entire-wheat flour). The following words do *not* appear in the Index: Animal, beef, bulk, fiber, fish, flesh, roughage.

Note 2. The 1904 date appears only on page 4 in the section titled "Preface to the fourth edition." No mention of a 4th ed. appears on the title page. The copyright page gives only the 1892 date. Address: Battle Creek, Michigan.

See p. 243, 788-91, 839-41, 1090-94. [12 ref. Ger]
• ***Summary:*** Summaries of early studies on the chemical composition of soybeans and various soyfoods, including some original studies. The section on meals (p. 839-40) gives the composition of various legume meals (*Hülsenfruchtmehle, Leguminosesmehle*), including [whole] soybean flour (*Sojabohnenmehl*) and defatted soybean meal (*Desgl., entfettet,* which may have been defatted in the laboratory). “The various preparations made from leguminous meals by Jul. Maggi & Co. in Kempthal (Kemptal) (Switzerland) (see Vol. 1, p. 467) are made by mixing leguminous meals with gluten-rich varieties of cereal grains, and sold under names such as Leguminose-Maggi A (2% fat), B, C, AA (6.54% fat), AAA (14.60% fat), etc. The composition of these products on an as-is and on a dry-weight basis is given on page 841. These can be categorized into those which are low in fat and those which are rich in fat. The fat from the latter is derived from the process of making soybean meal.”

In the section on coffee substitutes, the subsection on “coffee from legumes” (p. 1093-94) mentions briefly that a coffee substitute can be made from soybeans (see also p. 788). The composition of this soybean coffee (“Sojabohnen-Kaffee”) is given. Address: Geh. Reg.-Rath, o. Professor an der Kgl. Universitaet und Vorsteher der Agric.-Chem. Versuchsstation Muenster in Westphalia, Germany.

507. *Treasury Decisions under Tariff and Navigation Laws, Etc.* 1904. Bean cake, bean stick, and potato cake (24513–G.A. 5361). 6:542-44. For the year 1903.
• ***Summary:*** Bean cake is koya tofu [dried-frozen tofu]. Bean stick is dried yuba sticks. Potato cake is konnyaku.

“The merchandise in question in these cases was imported from Japan and China into the port of Honolulu, Hawaiian Islands, and consists of so-called bean cake, bean stick, and potato cake. The goods were classified and assessed for duty under the provision for “all vegetables prepared or preserved,” in paragraph 241 of the tariff act of 1897 at 40 per cent ad valorem, and are claimed to be dutiable at 20 per cent ad valorem, as nonenumerated manufactured articles, under section 6 of the act.

“The bean cakes are small, approximately rectangular shapes of porous consistency and yellow color, which break into crumbs under pressure. The bean sticks [dried yuba sticks] are lengths of hard, brittle, yellow substance, having a glazed appearance and resembling a piece of molasses candy.

“Kikujiro Shimada, owner of the Tofu Manufactory in Yokohama, who has been engaged in this business over thirty-five years, thus describes the manner in which bean cake is made: To manufacture bean cake, koya tofu, first keep soja beans in water at least twenty-four hours (beans are now mostly imported from China), and when the beans become very soft, grind them under the millstone; mix the ground beans with water and boil the mixture in kettles about half an hour. When cooled, by pouring it into a cloth sack and squeezing it, we get a milk-like juice, which is too rich for tofu manufacturing. What remains in the sack is mixed with water and boiled again and the squeezing repeated. The thin milk-like juice we get is mixed with the rich one obtained by the first squeezing, and while the mixture is yet warm it is poured into the mold and a little quantity of nigari (the brine left by the diliquescence [deliquescence] of a salt) is added to cause the bean juice to coagulate. The mold has several holes lined with fine cloth to allow the water to drop away. In the course of an hour or so we get tofu, white jelly-like food. Slice the tofu carefully and freeze it in cold nights and then dry it in the sun. Repeat this for days and nights until the frozen tofu is perfectly dry, when it is marketable.

Note: This is the earliest English-language document seen (April 2013) that uses the term “koya tofu” to refer to

© Copyright Soyinfo Center 2013

dried-frozen tofu.

"The process of making bean stick is described in a letter dated February 20, 1903, from the commercial museum, department of agriculture and commerce, Tokio, received by the collector from the same source as the manufacturers' affidavits above quoted. It is as follows:

"Yuba (bean stick). Keep the soja beans in water until they are very soft; then rub them fine in "suribachi" (mortar like earthen pot) and then boil these. Thick creamlike matter will collect on the surface. This when dried by fire is yuba" (p. 544).

8900. "From Anjo, Japan. Received through Messrs. Lathrop and Fairchild (No. 963, June 29, 1902), July 24, 1902. 'Twenty-six numbered seeds of a giant soy bean presented to the Department by Mr. K. Obata, director of the Tokai branch agricultural experiment station at Anjo, Japan, on condition that should any of the seeds prove to have inherited the characteristics of its female parent he is to have returned to him a fair quantity of the beans which it produces. All the beans have been numbered, and it is desired especially that a record of each be kept for information. This "most exceptional sport" ["an individual exhibiting a sudden deviation from type beyond the normal limits of individual variation usually as a result of mutation, esp. of somatic tissue"] from which these beans are taken measured 12½ feet in length and had a stem 1 inch in diameter at the base. It yielded about one-fifth of a gallon of beans, while ordinary plants, I am assured by Mr. Obata, give from 50 to 60 seeds only. Its root system is well developed, but whether unusual it is impossible to say, as it was dug before Mr. Obata saw it. The history of this "most remarkable sport" is as follows: Mr. J. Miyazaki, a descendant of a Samurai and now a second-hand clothier in the village of Okasaki [Okazaki?], found in his small back yard a soy bean which neither he nor his wife had planted purposely, but over which they quarreled, the wife wishing to pull it up because it grew to such unusual proportions and spread over the whole yard. Mr. Miyazaki, however, found in this abnormal plant something to interest him, and when the local district fair was held in Mukada in October he dug up the plant and exhibited it there, but he unfortunately and thoughtlessly ate up most of the beans. Mr. Obata, of the experiment station at Anjo, saw the plant at the fair, visited Mr. Miyazaki's place, and rescued the remaining handful of seed. He got samples of the soil where the plant grew and has sown about 20 seeds in this soil at the experiment station. I have seen and photographed this remarkable sport and think it worth of the most careful attention.' (*Fairchild.*)"

9344. "From Chiu-hua, China. Secured by Dr. S.P. Barchet, of the United States consulate, Shanghai, China, at the request of Dr. S.A. Knapp. Received January 22, 1903. *Chiu-hua.* 'In case of future reference to the bean, if you call this the *Chiu-hua* bean I shall know what is meant, in the absence of a botanical name, as I have not seen this bean anywhere else. It is sown broadcast in paddy fields before the rice is harvested. The moist ground favors the sprouting, and the standing grain shields the sprouting plant from the sun. By the time the rice is harvested the beans have taken firm roots and require no further care. Horses and cattle are very fond of them green or in the ripe state. The bean also makes a good food for man. This bean I think well worth a trial in the Southern States.' (*Barchet.*)"

9407-9418. "A collection of soy beans grown by Mr. W.R. Beattie on the experimental grounds on the Potomac Flats, from introduced seed.

"9407. Grown in 1902 from S.P.I. No. 4912.
"9408. Grown in 1902 from S.P.I. No. 4913.
"9409. Grown in 1902 from S.P.I. No. 4914.
"9410. Grown in 1901 and 1902 from S.P.I. No. 6312.
"9411. Grown in 1901 and 1902 from S.P.I. No. 6333.
"9412. Grown in 1901 and 1902 from S.P.I. No. 6334.
"9413. Grown in 1901 and 1902 from S.P.I. No. 6336.
"9414. Grown in 1901 and 1902 from S.P.I. No. 6386.
"9415. Grown in 1901 and 1902 from S.P.I. No. 6396.
"9416. Grown in 1901 and 1902 from S.P.I. No. 6397.
"9417. Grown in 1901 and 1902 from S.P.I. No. 6414.
"9418. Grown in 1901 and 1902 from S.P.I. No. 6416."

Note 3. This is the earliest document seen (June 2007) that clearly refers to the cultivation of soybeans in Washington, DC (on the Potomac Flats). This document contains the earliest clear date seen for the cultivation of soybeans in Washington, DC (1900).

Note 4. This is the earliest document seen (March 2003) that mentions the Potomac Flats, an experimental garden owned and used by the USDA in Washington, DC, before it purchased the Arlington Farm in 1900. Even before that, starting in 1865, there was an experimental garden around the original USDA building on The Mall. The Potomac Flats were acquired by the USDA in 1899. They were located in Washington, DC, on the banks of the Potomac River, probably in what is now Potomac Park.

Note 5. This is the earliest document seen (July 1998) concerning David Fairchild and soybeans. Address: Washington, DC.

510. Kadono, C. 1905. The diet of the Japanese. *Times* (*London*). Feb. 11. p. 6, cols. 3-4.

• ***Summary:*** This article is actually mostly about soya beans and their products. "It is well known that the Japanese diet consists chiefly of rice, vegetables, and fish, with very small and occasional additions of butchers' meat. The relative quantities of these, and vegetables and products thereof used, would be interesting and in some respects instructive.

"The following bill of fare, which attempts to give the three meals of a day for a family of moderate circumstances, will show how they live. It may also be said that all Japanese live rather simply whether high or low in their station of life, and the menu can be taken as typical of all classes.

"Breakfast (about 7 to 7:30 a.m.).–Miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto, &c.).

"Lunch (12 noon).–Fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea.

"Supper (6 to 6:30 p.m.).–Soya soup (with vegetables, fishes, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butchers' meat or fowl and vegetables stewed), rice, tea...

"From the foregoing it can be seen how cereals and vegetables predominate in Japanese diet. Rice and miso and

© Copyright Soyinfo Center 2013

soya, as will be seen from the menu, form the predominant feature of the food, and it may not be an exaggeration to say that the Japanese physique is mainly built up on the products of soya beans, such as miso, soya sauce, tofu, &c."

There follows a detailed table titled "Analysis of Soya Beans and Their Products. (Extract from a table by Mr. C. Omura.)" Nutritional analyses are given for the following, written exactly as they appear: Soya beans (5 varieties), miso (white, red Osaka, red Tokio, red Sendai), soya sauce (regular or Noda), tofu, dried frozen tofu, fried tofu, mash residue from tofu (Okara), yuba (Dried skim off tofu-mash), natto (Steamed beans with surface fermentation).

Note 1. This is the earliest English-language document seen (April 2013) that contains the term "fried tofu."

"Soya beans are grown all over Japan and in Manchuria, and so far as I know cannot be had here [in England]. They are eaten boiled, either young or ripe." They are manufactured into those articles shown above, of which miso, soya, and tofu are the most important..." The author then gives a 5-10 line description for each of how miso, soya sauce, and tofu are made. Tofu is coagulated with a "strong brine. "The remnant (okara), being a white pulverized mass, called fancifully 'snow balls' by Japanese, is eaten boiled and seasoned with soya sauce.

"I have given Japanese meals to some English friends and most have pronounced the food excellent, and some have even braved the sliced raw fish with soya sauce."

Note 2. Concerning the idea that okara is sometimes fancifully called "snow balls," the term *kirazu* is written with three characters: yuki = snow, hana = flower(s), and sai = vegetable(s). Or the author may be referring to a local term from some part of Japan.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *okara* or the term "mash residue from tofu" to refer to okara.

Note 4. This is the earliest English-language document seen (April 2013) that contains the term "dried frozen tofu" (or "dried-frozen tofu"). Address: England.

511. *Manchester Guardian.* 1905. What the Japanese eat. Feb. 13. p. 12.
• ***Summary:*** This is a summary of: Kadono, C. 1905. "The diet of the Japanese." *Times* (London). Feb. 11. p. 6, cols. 3-4. Mentions soya beans, miso soup, tofu, natto, soya sauce, etc.

512. *Chambers's Journal* (*London*). 1905. Japanese diet. Vol. 8. March 25. p. 270. Sixth series. [1 ref]
• ***Summary:*** "The nations of the world have now had the opportunity of learning many a valuable lesson from the general management of the Japanese army... It is interesting to note that the hard work done by the Japanese Tommy is performed on a dietary table which would hardly satisfy the soldiers of any other country. A large quantity of the Japanese soldiers' rations is made up of compressed fish-meal... Another form of food which seems peculiar to the Japanese army is obtained from kelp and other seaweeds, many of which afford very nourishing sustenance...

"At home this is the bill of fare of a Japanese family in moderate circumstances, according to C. Kadono in the *Times.* Breakfast (about 7 to 7.30 A.M.)–miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto). Lunch (12 noon)–fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea. Supper (6 to 6.30 P.M.)–soya soup (with vegetables, fish, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butcher meat or fowl and vegetables stewed), rice, tea. The Japanese physique is thus largely built up on the product of soya beans, which are grown all over Japan and in Manchuria, and from which miso, soya, and tofu are made. Soya beans, which, we believe, are not to be had in this country, are much richer in albumen than either beef or mutton. The Japanese diet, therefore, mainly consists or rice, vegetables, and fish, with very small and occasional additions of butcher meat."

• ***Summary:*** This article is a summary of: Kadono, C. 1905. "The diet of the Japanese." *Times* (London). Feb. 11. p. 6.

514. *Eureka Reporter* (*Utah*). 1905. Soy bean cheese [tofu]. June 2. p. 2.
• ***Summary:*** "The municipal laboratory of Paris has been examining the experiments made by Dr Vogel who has manufactured a very succulent cheese from the small Chinese beans known as soy beans. The doctor finds that the pulp of these beans contains many of the caseine qualities and that the resulting composition is both nourishing and pleasant to the taste."

Note: This same article also appeared in the *Emery County Progress* (Utah) (3 June 1905, p. 2).

515. Li, Yu-ying. 1905. Le lait végétal fabriqué en Chine [The vegetable milk made in China]. In: 2nd Congrès International de Laiterie: Compte-Rendu des Séances (2nd International Dairy Congress: Proceedings): Paris: Comité Français–Fédération International de Laiterie. 548 p. See p. 387-89. Held 16-19 Oct. 1905 at Paris, France. [Fre]
• ***Summary:*** The president of this international milk congress introduces Li Yu-ying as attaché at the Chinese Legation, and official delegate to the congress. Li begins by expressing his happiness at being able to speak to the congress and getting to know the many scholars and very competent people from many countries.

"In China, not much animal milk is consumed. It is replaced by another product: *vegetable milk* (*le lait végétal*).

© Copyright Soyinfo Center 2013

This latter product could not be used here and, therefore, is of little interest to you. I will speak to you about it only as a curiosity, first to explain the special method employed in my country for the production of vegetable milk and vegetable cheese, and finally to increase interest in these products because of their hygiene and economy.

"Everyone knows that animal milk is an excellent substance with numerous advantages. One may ask, therefore, why so little of it is consumed by the people of China. The reason is because it is relatively expensive and because cows cannot be raised in all parts of China. Dairying is practiced only in the north and the west of China. In the other provinces dairying is difficult because of the climate and the nature of the soil; so vegetable milk is consumed there.

"The latter is made with the seeds of *Soja hispida* or 'oil peas of China.' This is an annual legume which has been imported to England, Spain, Belgium, and France. Presently it is widely cultivated in America as forage.

"Mr. Lechartier, director of the agronomic station at Rennes, has experimented with this plant in France; he obtained yields of up to 25,000 to 30,000 kg of green forage per hectare. This plant is therefore already known here."

"As forage, the soja hispida is as rich in protein as clover (*trèfle*), horse beans or dried kidney beans (*les féveroles*), etc.; but it is richer in fats than the other legumes. The seeds are richer in nitrogenous materials [protein] than other plants of the same family. Analyses show that they contain 30% protein, oil, and little starch.

"The seeds of this plant can also be used to make a cheese (tofou [tofu]) which is a major source nourishment for the peoples of China and Japan. It is consumed, in effect, every day and at every meal, as a main dish.

"The production of these two products [milk and cheese] is very simple. First the seeds are cooked, then they are pressed strongly to obtain a sort of puree, which is coagulated by a mineral salt that plays the role of rennet. The fresh cheese, which is made daily, must be sold and consumed the same day. It can be used in recipes like vegetables or meats. However it can also be preserved, either hot, or by putting it in a salt solution: in this way one obtains various cheeses which are used as desserts, as following:

"(1). Salted and smoked cheese (*Le fromage salé et fumé*), which in both flavor and form bears some resemblance to gruyere cheese. It can be stored for a rather long time; (2) Salted cheese (*Le fromage salé*), white in color, whose taste somewhat resembles that of goat cheese; (3) Fermented cheese (*Le fromage fermenté*). Its color is white, yellow, or gray, and it flavor is very strong, like that of Roquefort.

"The processes which give rise to Chinese milk and cheese also give residues [okara] which are not lost. They are employed either as fertilizer, or as feed for farm animals. Thus nothing is wasted from soybeans. Moreover, the factories where this plant is processed are very numerous, and the products made by them are the most moderately priced. A square or cake of vegetable cheese (*carré de fromage végétal*) (11 by 10 by 2½ cm), consumed daily by one person, costs about one centime, or about one-fiftieth the price of an animal cheese of average price.

"It is of interest, finally, to compare the products of the animal dairy with those of the vegetable dairy, not only in terms of their similarity in appearance, but also in terms of their chemical composition. It is well known that animal milk contains a large proportion of casein; the same is true of vegetable milk, which contains legumine that has the same chemical formula as casein.

"Furthermore, during processing, the peas (*le pois*, i.e. soybeans) undergo a complete chemical and mechanical transformation which concentrates the nutritive parts and eliminates the others; it is this which explains the richness of the vegetable milk and cheese in nutritive principles.

"After all these considerations, you can realize the interest present in this industry in China.

"It can also be interesting in places where raising livestock is impossible. It is evident that this would be more difficult than in the countries which produce animal milk in large quantities. I am well aware that animal milk has a real superiority over vegetable milk, but doesn't it also have its disadvantages: Fraud, on the one hand, and its contagious diseases on the other? Moreover, milk merchants have various categories of milk at different prices; it is clear that the most expensive is the best, and vice versa. But the consumer knows full well that some milk is not of good quality, yet he is obliged to take it in order to earn money. Thus it is the fate of the poor to be condemned to drink milk of inferior quality, and often fraudulent. However, vegetable milk does not support fraud and cannot transmit contagious diseases. It is the same for everyone; the poor consume the same product as the rich.

"Let the culture of soybeans expand therefore in Europe. One might try to make vegetable milk which will be destined, not for those who have the means to buy good milk, but rather for those who can only afford low-price milk; thus, fraud becomes useless, and this will a benefit for public hygiene and for the purse of poor people."

Note 1. This is the earliest document seen (May 2011) concerning Li Yu-ying. It is also the earliest publication seen by him on the subject of soya.

Note 2. These proceedings contain a list of attendees and of excursions. Address: Attaché at the Chinese Legation, and official delegate.

516. Macmillan, H.F. 1905. The "Soya (or Soy) Bean." (Glycine hispida). A new vegetable, fodder, and green-manure product for Ceylon. *Tropical Agriculturist* (*Ceylon*) 25(5):682-83. Nov. 15.

• ***Summary:*** "It is strange that a product so important,

© Copyright Soyinfo Center 2013

so simple of cultivation and so quick in yielding returns as this has not hitherto attracted attention in Ceylon. Notwithstanding the fact that it has been introduced several years ago by the Royal Botanic Gardens, and successfully grown at Peradeniya year in and year out, both for the instruction of visitors to the Gardens and for distributing seeds; I question whether there are at present half-a-dozen gardens or estates in Ceylon which count this amongst their crops."

"The Soya Bean thrives at Peradeniya, and appears to be well-suited to the climate and soil; whilst it also flourishes in the Mediterranean region and Southern Europe. It would therefore seem reasonable to expect it to thrive at a comparatively wide range of elevations in Ceylon, provided the conditions of soil and rainfall were at all favourable. In China and Japan the Soya Bean forms a standard article of food with all classes of the community, being prepared for use chiefly in the form of a sauce, paste or cheese, the latter two preparations being made by crushing and pressing the seeds. In India the seeds are said to be cooked and used in various ways, often 'roasted and ground as *satu*, or simply eaten in the form of *dal*.' Soy sauce is said to form the basis of many popular sauces made in Europe." A few years ago soy sauce in London was worth 2 shillings and 6 pence per gallon. "Personally I think Soya Bean as a vegetable is very agreeable and forms a good substitute for the Lentils and Broadbeans of Europe if cooked and served similarly. Its chemical composition, according to Professor Church, places it above all other pulses as an albuminous food."

The soya bean is also considered valuable as a fodder plant and for green manuring. A brief description of its cultivation is also given. "Regarding cultivation, probably few crops are less exacting in their requirements than this. Its most striking characteristic, judging by results recorded at Peradeniya, is the remarkably short space of time in which the plants grow and produce a crop. Here the seeds germinate in 3 to 5 days, the plants flower when a month old; a fortnight later the pods are fit for picking [for use as a green vegetable], and the harvesting is complete in about two months from the time of sowing. Thus, granted the seasons were favourable, it should be possible to obtain four crops a year. In making these statements, which may seem unduly optimistic, it is not by any means intended to convey the impression that practically no expenditure of labour is involved in the production of this crop. On the contrary it is pretty certain that to make it a profitable product for whatever purpose, even under the most favourable conditions for its growth, a reasonable amount of cultivation will be required. It has yet to be proved how far it would repay cultivation in Ceylon for fodder and green-manuring, but that it should prove a welcome adjunct to the food products of the natives, if not as a general vegetable, there seems no question."

A footnote states: "* Since writing this Mr. Kelway Bamber has presented a small quantity of Soya Bean seed to the Botanic Gardens, remarking that he intended to recommend it as a green-manure crop." Address: Curator of the Royal Botanic Gardens at Peradeniya.

517. De Becker, J.E. (Joseph Ernest). 1905. The nightless city: or, the "History of Yoshiwara Yûwaku." 5th ed. revised. Shanghai, Yokohama, Bremen: Max Nössler & Co.; London: Probsthain & Co. xvi + 386 p. + 46 unnumbered leaves of plates. See p. 158-61, 221. Illust. 2 maps. 19 cm. Reprinted in 1971 by Tuttle & Prentice-Hall.

• ***Summary:*** A book about prostitution in Tokyo. Note 1. The approximate date of this 5th edition, Dec. 1905, is given on p. xvi, at the end of the "Preface to the fifth edition." The first edition was published in 1899.

"It was not until after the City of Yedo had become the seat of the Tokugawa government that regular houses of ill-fame were established, and up to the period of Keicho (1596-1614) there were no fixed places set apart for brothels and assignation houses" (p. 1).

The section titled "Dai-ya no koto (Cook-houses of the Yoshiwara)" (p. 158-61) notes that "these cook houses supply every conceivable kind of food be it *sushi* (a fish and rice roll), *kwashi* [*o-kashi*] (cakes)..."

"By the way, there is, in the *Shôbai Orai* (Chinese characters) by Ikku, an item which shows a bill of fare in a *dai-ya* a hundred years ago. It is as follows;–The bill of the *Ki-no-ji-ya* consisted of:... *Teri-gomamé*–Dried young sardines roasted and boiled in sugar and soy... *Aburage*–Bean-curd fried in oil [fried tofu]... *Yaki-dôfu*–Roasted bean-curd... *Umani*–Any food cooked in a mixture of soy, *mirin*, sugar, and the shavings of dried bonito... *Ankake*–A kind of soup containing *tôfu* or arrowroot, etc., all of which foods are suitable to those persons who stop in brothels for several consecutive days.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "Yaki-dôfu" or the term "Roasted bean-curd" to refer to grilled tofu.

"Famous things of the Yoshiwara... *Sanya-tôfu*–Bean curd of Sanya... *Kobu-maki*–Rolled seaweed... *Ni-mamé*–Boiled [soy] beans... *Dengaku–Tôfu* baked and covered with sweetened miso... These things were very popular (even outside the Yoshiwara)" from 1772 to 1829.

Page 221: "The *yûjo* (prostitutes) did not all appear in the cages until the 20th of the 1st month, so the night aspect of the Yoshiwara did not resume its normal appearance until this date. The *saruhiki* (One who goes about getting money by leading a monkey who performs tricks) and *dai-kagura* (A kind of dance performed in the streets by boys wearing wooden lion-head masks) began to pour into the Yoshiwara from the 1st day of the 2nd month: on the night of the first 'horse day' the front of every brothel in the first and second wards of Yeido-chô and of Kyô-machi was illuminated by a large lantern on which was written the names of the *yûjo*

© Copyright Soyinfo Center 2013

in the house. Votive offerings of red rice [probably *sekihan*, azuki beans cooked with rice], fried bean-curd, and fruit were made to the family shrines of the god Inari."

J.E. de Becker lived 1863-1929. Address: Kamakura, Twenty years a resident of Japan, an English student of sociology.

518. **Product Name:** Tofu.
Manufacturer's Name: Minato-ya.
Manufacturer's Address: 24½ Quincy St., San Francisco, California.
Date of Introduction: 1905.
New Product–Documentation: *Zaibei Nippon-jin Nenkan* (*The Japanese-American Yearbook*). 1905. No. 1. Published by Mr. Kyutaro Abiko, of Nichibei [Shinbun], Japanese-American News. Page 10. Under the category heading "Tofu Shops (Tofu-ya)" is listed Minato-ya, 24½ Quincy St., San Francisco. No owner is listed. Also in 1906, p. 14.

Note 1. This is the earliest known Japanese tofu maker in the continental United States (one of three).

Note 2. (1) Quincy St. is a small alley between Kearny St. and Grant Ave. near California. It still exists (1989). (2) Mr. Oka, head of the History Room, Japan Cultural and Community Center, says this was probably a restaurant that made tofu on the side. (3). This was before the earthquake and before Quong Hop & Co.

519. **Product Name:** Tofu.
Manufacturer's Name: Murata-ten. Renamed Murata Tofu-ya by 1906. P.O. Box 51, Isleton, California.
Manufacturer's Address: P.O. Box 51, Isleton, California.
Date of Introduction: 1905.
New Product–Documentation: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 22. A 1/6 page ad (square, on unnumbered page before p. 22) in this 1905 yearbook states that Murata-ten makes tofu (*Tôfu seizô*). Owner: Ichimatsu Murata. They also make food to order. Also in 1906, p. 32. However the address has changed to P.O. Box 41. Also in 1907, p. 63.

520. **Product Name:** Tofu.
Manufacturer's Name: Nishi Tofu-ya.
Manufacturer's Address: 87 Japanese Alley, Sacramento, California.
Date of Introduction: 1905.
New Product–Documentation: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 10. Also in 1907, Directory p. 55. Also in 1908, Directory p. 67 (Japanese numbers). Also in the 1909 Yearbook, Directory entry p. 39 (same address, except it was called "87 Jap Alley").

Note: This is the earliest known Japanese tofu maker in the continental United States (one of three).

521. **Product Name:** Tofu.
Manufacturer's Name: Okumura Kuraoka Tofu-ya [Tofu Shop]. Renamed Okumura Tofu-ya by 1906.
Manufacturer's Address: 632 N. 6th St., San Jose, California.
Date of Introduction: 1905.
New Product–Documentation: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 24. Ad (1/32 page). On an unnumbered page in the block of ads after Directory p. 28. This tofu company is owned and run by Ichitaro (spell?) Okumura, and Kinsaku Kuraoka. Also in 1906, p. 38. But the name is now "Okumura Tofu-ya." Note: Nomitsu Tofu-ya was at this address in 1912.

522. **Product Name:** Tofu.
Manufacturer's Name: Shintaro Kodama.
Manufacturer's Address: 446 Jackson St., Los Angeles, California.
Date of Introduction: 1905.
New Product–Documentation: *Zaibei Nippon-jin Nenkan* (*The Japanese-American Yearbook*). 1905. No. 1. Published by Mr. Kyutaro Abiko, of Nichibei [Shinbun], Japanese-American News. Page 34. Under the category heading "Fish Retailers and Tofu Shops (Sakana-ya, Tofu-ya)" are listed two companies. The first is Santa Monica Sakana-ya, clearly a fish retailer. The second is Shintarô Kodama, but no specific mention is made of tofu in his company name. These companies were probably grouped together because they sold fresh, perishable foods.

Note: This is the earliest known Japanese tofu maker in the continental United States (one of three).

523. **Product Name:** Soybean sprouts.
Manufacturer's Name: Wing Chung Long, later named Wing Chong Lung.
Manufacturer's Address: 307 Marchessault St., then 752 N. Alameda St., Los Angeles, California.
Date of Introduction: 1905.
New Product–Documentation: Los Angeles City Directory. 1905. First listing for Wing Chung Long, general merchandise, 307 Marchessault.

1910 listing same but grocery instead of general merchandise.

1915 listing same but 307 E. Marchessault. 1916 First listing for Wing Chong Lung Co., general merchandise, 307 Marchessault. 1917 listing is Wing Chong Lung Co., merchandise, 752 N. Alameda. 1918 listing same but "Chinese merchandise."

1930 listing. Wing Chong Lung, grocery. 752 N. Alameda. Note: None of the above state that they made soy sprouts or tofu.

Company invoice dated 1 Sept. 1936. Tofu was selling for 5 cents a piece, and bean sprouts were 3 cents a pound.

© Copyright Soyinfo Center 2013

Interview with Bill Lee of Wy Ky. "Wing Chong Lung was the first Chinese company to try to break into the Los Angeles tofu market, controlled by Matsuda-Hinode. They tried in 1952 but Hinode kept them out. They now make bean sprouts."

Talk with Grant Tom of Wing Chong Lung. 1988. Oct. 4. He was born in 1934. The company was founded in 1871, importing foods from China and selling them in California. He thinks they were making Chinese-style firm tofu, soft tofu (*sui-daufu*), soymilk curds (*daufu-fa*, eaten with syrup), and soy sprouts at about the turn of the century, probably before 1900. At the time they were located on Alameda St., and the owner was Tom Chong Man. In 1934 the company moved to the present address, 922 South San Pedro St. He thinks they stopped making tofu shortly after World War II because of too much competition from Matsuda and Hinode. They stopped making soy sprouts about 3 years ago.

Note: This is the earliest commercial soy product or document seen (Dec. 2003) in connection with Los Angeles, California.

524. Bardet, M. 1905. Sur un pain sans matières amylacées à base de soja hispida [A bread without starch based on soja hispida (soybeans)]. *Bulletin General de Therapeutique Medicale, Chirurgicale, Obstetricale et Pharmaceutique* 149:181-84. [Fre]

• ***Summary:*** This is a presentation by Mr. Bardet to the Therapeutic Society (*Société de Thérapeutique*) in France about a new bread for diabetics. Soya, which is widely used in Japan, has met with little success in France. However it is of interest because it contains almost no sugars or starches–less than 5-6%–yet an average of 35% vegetable casein. The Japanese consume enormous quantities of vegetable cheese (*fromage végétal*) [tofu], which is obtained from soya.

"The bread which I have the honor to present has been prepared under the name of Krube bread (*pain Krube*). This is the first soy bread I have found which is truly acceptable. When fresh, it resembles a brioche, being somewhat soft and oily; when stale, it becomes firm but still retains the taste of a brioche. It is obtained by grinding the seeds in a special way to defat them (*dégraisser*) and make them better suited to bread." The man who developed the bread is a diabetic.

A table shows the composition of the soy flour: Nitrogenous materials (proteins) 28.69%. Oils and fats 38.00%. Minerals 4.24%. Inert substances 15.21%. Sugars and starches 5.80%. Moisture 8.06%. Total 100%. The bread contains 508 calories per 100 gm. Thus soy bread supplies 3.5 times the protein and twice the calories as regular bread.

Question from Mr. Berlioz: "What is the digestibility of this bread compared with wheat bread?" Answer: They are different foods and cannot be compared.

Question from Mr. Saint-Yves Mesnard: "These seeds [soybeans] were introduced to France by Montigny in 1855; people have tried unsuccessfully to acclimatize them in various places in France, so at present all our soya is imported from Japan. Thus soya is destined to remain a deluxe and rare food. This is very unfortunate, for it is a legume with nutritive properties which could be used advantageously by both diabetics and healthy individuals. It seems to me that this bread has been prepared extremely well and would almost give the illusion of a brioche, if its odor was not so strong. It represents major progress over the former breads which were more like rubber than bread." Answer: "Yes, soya is presently a deluxe product. I believe that the price of 100 kg of flour is about 150 francs, and that is enormous."

Comment by Mr. Laumonnier: "Soya has been successfully cultivated in and around Marennes (Charente-Inférieure) [Note: A department in western France on the Bay of Biscay by the Gironde River, now called Charente-Maritime]. The climate of this region is both temperate and humid–important factors for the culture of this plant. The Japanese army has tried to use soya in its food rations, but found them difficult to preserve."

526. Bui, Quang Chieu. 1905. Des cultures vivrières au Tonkin [On the food crops of Tonkin, Indochina]. *Bulletin Economique de l'Indo-Chine* 48:1152-90. New Series 2. Many illust. and photos. [4 ref. Fre]

• ***Summary:*** This article begins with a foreword by H. Brenier, Director of Agriculture, Forestry and Commerce for Indochina. He notes the importance of soybeans, soy products (including soy sauce and tofu) and adzuki beans (*Phaseolus radiatus*), among the people of Asia. In Annamite (south Vietnamese), tofu is called *dau phu* and the soybean is called *dau nanh* or *dau tuong.*

Adzuki beans are discussed (p. 1153-55, 1157) and a nutritional analysis of the azuki bean, which has been cultivated in France, is given. The section on the soybean (p. 1153, 1157-68) discusses: The local names and varieties of the soybean, botanical characteristics, cultivation, utilization (to make soy sauce, *tuong*, tofu, etc.), commerce and trade (in the province of Hungyen, the stalks of the soybean plant are used to make a sort of incense). An illustration (line drawing, p. 1159) shows a Soja plant with pods.

A detailed description is given of the manufacture of *tuong* (a sort of soft miso) in Tonkin. First *moc*, or molded glutinous rice is prepared. After glutinous rice is cooked, it is covered with banana leaves and allowed to mold for 2-3 days. Then the soybeans are prepared. They are grilled,

© Copyright Soyinfo Center 2013

ground to a powder, boiled with water, and put into a jar for 7 days until sweet. Six parts of rice koji are then mixed with 5 parts soy. The mixture will be ready to eat after it has fermented for 15-30 days. If it is too thick, add salt. Good tuong is soft and mildly sweet. It is sweeter and smoother than nuoc mam. Annamites say that only the prosperous households succeed in making tuong. If the tuong starts well, then becomes sour, that is a bad omen.

Tuong can also be made from corn (*maïs*), which is grilled, ground, sifted, covered with taro leaves, and allowed to mold. Put it in salt water, then after 5-6 days add roasted soy flour as above. Stir it before sunrise and let it stand open in the sun for 15 days, putting on the cover as soon as the sun disappears. If this is done, it will last a long time.

Note 1. This is the earliest document seen (Jan. 2009) that mentions *tuong.* The importance of this fermented seasoning, a close relative of Chinese *jiang,* is indicated by the local name for the soybean (*dau tuong*), or "the bean used to make tuong."

Production of tofu (*dau-phu*)*:* Lots of dau-phu is made in Tonkin, especially in Hanoi, where it constitutes the basis of the poor people's food. It is never made in large factories, only small shops. Soak the soybeans, wash them and remove their hulls, cook to soften them, then grind them with a hand-turned mill over a wooden bucket. The soymilk is extracted with cold water then boiled for 30 minutes. There remains in the sack a white residue (*un résidu blanc*) [okara] which is fed to the pigs. The next day, add some fermented whey from a previous batch to coagulate the soymilk. Then press the curds. The finished tofu cakes are each 15 by 8 by 1 cm thick. Tofu is widely used in soups. A table (p. 1165) shows the costs of equipment to start a tofu shop, and a profitability analysis. Early analyses of the composition of the soybean, conducted by Fremy, Muentz and Pellet (in France) and Wechler (in Austria), are reproduced. Photos show key steps in the process: (1) A person is washing soybeans in a bamboo colander while standing in a stream near Hanoi. (2) The soybeans are ground in a small, traditional, hand-turned stone mill by a person sitting on the same wooden bench as the mill, in a bamboo hut, surrounded by various wooden tubs and colanders. (3) Using a sack to filter the ground puree from the stone mill. (4) Cooking the filtered liquid over a small wood fire in an earthenware pot. (5) Pressing the curds (outdoors) after precipitation of the protein. (6) More forceful pressing. (7) A merchant walking the streets selling tofu on two trays, each suspended by 3 ropes from the ends of a shoulder pole.

Note 2. This is the earliest French-language document seen that mentions okara (Oct. 2001), which it calls *un résidu blanc.*

Note 3. This is the earliest document seen stating that okara is fed to "pigs." Address: Indo China.

527. Clubb, Henry Stephen. 1905. Unpolished rice, the staple food of the Orient: A lecture to the Vegetarian Society of America; to which is added over one hundred receipts [recipes] for cooking unpolished rice, rice flour, rice polish; and testimonials of eminent food reformers. Philadelphia, Pennsylvania: The Vegetarian Society of America. 32 p. 18 x 14 cm. Pages unnumbered.

• ***Summary:*** Rev. Henry Clubb (born 1827) was an early advocate of the use of brown rice in America. He notes that this is the food on which the Japanese Army won its great victories (in the recent Russo-Japanese War), performed its rapid marches, remained comparatively free from camp diseases, and recovered rapidly from battle wounds.

On page 5 he notes: "In China, Japan and Java soy sauce, soy bean cheese [tofu], or a similar product is eaten with rice in considerable amounts, and furnishes a large part of the protein necessary for the daily diet of the laborious people."

On the inside rear cover of the booklet is a list of publications and products sold by the Vegetarian Society, which is located at 1023 Foulkrod St., Philadelphia.

Note 1. This is the earliest document seen (April 2011) concerning unpolished rice (brown rice).

Note 2. This is the earliest English-language document seen (April 2011) that contains the term "unpolished rice." Address: Rev., Philadelphia.

528. Fernie, William Thomas. 1905. Meals medicinal: With "herbal simples," (of edible parts). Curative foods from the cook; in place of drugs from the chemist. Bristol, England: John Wright & Co.; London: Simkin, Marshall, Hamilton, Kent & Co., Ltd. xxii + 781 p. See p. 84. Illust. Index. 22 cm.

• ***Summary:*** In this collection of unusual facts about the healing power of foods, the various foods are listed alphabetically. The section titled "Bean" states (p. 84): "The Soy Bean (*Glycina soja*) [sic, *Glycine soja*] is of three varieties, black, green, and white. These Beans are boiled, then mixed with barley, or wheat, until, through fermentation, they become covered with fungi; then brine is added, and further fermentation goes on for a couple of years. The sauce thus concocted is afterward boiled afresh, and put, when cool, into bottles, or casks. From a nutritive point of view it is superior to any other sauce in our markets." Soy is made throughout Japan, and most Japanese partake of it with every meal. "In China, Soy Cheese [tofu] is extensively eaten, whilst various sauces, and pastes [jiang] are prepared from the Beans... An old fable said that Soy was made from certain beetles, and Londoners have improved this to 'black beetles.'" Note: This is also the earliest English-language document seen (April 2013) that clearly uses the term "Soy Cheese" (or "soy cheese") to refer to tofu.

The author then quotes a four-line poem by Edward Lear from his *Book of Nonsense* (1862) which begins: "There was an old person of Troy / Whose drink was warm brandy and

© Copyright Soyinfo Center 2013

soy,..."

Also discusses: Seaweeds (p. 495-96, 627-33; Incl. Irish moss or carrageen, dulse, laver, sloke, samphire, sea holly, bladderwrack, and *Laminaria digitata* or sea-tang, sea spinach, agar-agar or Japanese isinglass). The Pea-nut (Arachis hypogæa, p. 504-05; Incl. pea-nut candy and nut cream). Vegetarianism (p. 711-17). The book contains no recipes. Address: M.D [England].

529. Fujimura, Tôtarô. 1905. Tôfu keiran ryôri-hô: katei jitsuyô [Tofu and hen's egg cookery: For practical household use]. Tokyo: Daigaku-kan. 184 p. 22 cm. [Jap]

530. **Product Name:** Tofu.
Manufacturer's Name: Ichino Tofu-ya.
Manufacturer's Address: 446 Jackson St., Los Angeles, California.
Date of Introduction: 1905. January.
New Product–Documentation: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 48. Also in 1907, p. 39. The phone is now Red 2022. Also in 1908, p. 44 (Japanese numbers).

531. Kikuchi, Senkichi. 1905. Tôfu oryôri [Tofu cookery]. Tokyo: Hôeikan. 200 p. 18 cm. [Jap]*
Address: Japan.

532. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1905. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 1]. 234 Turk St., San Francisco, California. 345 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]
• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. There is no English-language title page. The company that publishes this yearbook also publishes (at the same address) a daily newspaper titled *The Japanese American.*

The book is composed of: 16 unnumbered pages of ads and basic information; page 14 is "About this publication, and pages 15-16 are the table of contents, 12 unnumbered leaves of black and white photos (including two maps, in Japanese, of northern and southern California, on glossy paper), 192 pages which are the body of the book, a directory interspersed with 80 pages of ads in groups of either 16 or 32 pages.

The table of contents reads: 1. Census of Japan and USA (both population and agriculture). 2. U.S. law. 3. U.S. agriculture as it relates to Japanese. 4. Commerce. 5. Education and religion. 6. Cities in which a significant number of Japanese live. 7. Statistics. 8. Japanese farmers in U.S. agriculture. Appendix: Directory and index to the directory.

Sources are cited: U.S. Agricultural Census for 1900. Trade information from Japan's Dept. of the Treasury (*Ökurasho*) and the U.S. Dept. of Commerce. Then there is a 2nd table of contents for the directory, listing different city place names, by state. This directory was compiled by this newspaper using every means at their disposal.

Imports of Japanese shoyu (soy sauce) to the USA were 429,135 *sho* worth $86,681. Note: 1 *sho* = 10 *go* = 1.8000 liters. So this amount is 772,443 liters or 203,925 gallons (p. 136). A significant amount of Japanese miso was also imported but this yearbook was unable to get the exact statistics (p. 136).

The top half of p. 137 is about shoyu; the bottom half is about sake. Concerning shoyu: Shoyu is one of the daily necessities for Japanese. It is the 3rd largest item imported [probably after white rice and sake]. In Meiji 36 (1903) the amount imported was 4,291 *koku*, 3 *to* and 5 *sho* worth $86,681 (see above). It is the No. 1 "direct import" because it is relatively easy to import due to its packaging, documentation, basic liquid nature, and way of invoicing (it does not require double invoicing). It is easy to sell; not much capital is needed to stock it and it is a very popular item. Like bread or flour in U.S. groceries, it has a small profit margin and the stock turns over rapidly. Many varieties of shoyu are imported from many parts of Japan: Choshi in Chiba prefecture, Hamaguchi Yoshibe, Sa-jirushi, Mogi Saheji's Yama Kikkoman in Noda (Chiba prefecture), Ka-jirushi, Yamagata-hi, Sendai jirushi, and Bunmei jirushi. The best selling brands are those which are of medium price. Recently, in San Jose, Mr. Yamamori, started a shoyu making plant and is working hard to make it successful. We look forward to receiving his product.

In San Jose, California, there are two shoyu makers (p. 156, bottom right).

The Directory shows Japanese companies making soyfoods only in California.

Note: This is the earliest document seen (July 2011) that is a directory of Japanese living in the United States. Address: San Francisco, California.

533. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man. *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 20-33, 40-43, 46-47, 145-53, 168-73. [26 ref. Eng]
• ***Summary:*** One section titled "The Soy bean and its preparations" (p. 23-33) gives detailed discussions of tofu (including yuba, frozen tofu, kara [okara], and fried tofu), miso (incl. white miso, red or Sendai miso), shoyu, and natto. The nutritional composition of each is given, and many early studies by Western and Japanese scientists are cited.

© Copyright Soyinfo Center 2013

"Next to rice in importance in the Japanese diet are legumes, which are universally used... Of the different legumes used as food in Japan, the soy bean (*Glycine hispida*) is by far the most important. According to agricultural statistics for the years 1879 to 1887, nearly 10 per cent of the cultivated land in Japan was devoted to the growth of this legume, an area somewhat larger than that devoted to wheat growing. In the northern Island [Hokkaido] in 1887 nearly 17 per cent of the total cultivated area was devoted to the soy bean. The average yearly production of soy beans amounts to about 360,000,000 kilograms... A part of the product is of course used for seed, and a not inconsiderable part is used as fertilizer.*" (Footnote: * "In northern China soy beans are used to some extent in the production of oil, which is used for cooking and illumination [in oil lamps]. The residue from this process [the presscake] is imported largely into Japan, where it is used as a fertilizer"). Other legumes widely used in Japan include the mungo bean (*Phaseolus mungo radiatus*) and the adzuki bean (*Phaseolus mungo subtrilobata*) (p. 23-24).

"Many varieties of soy beans are known, being designated according to the color, size or shape of the seed, and the time required for maturity. For example, there are black, green, yellow, and white varieties, and these are again designated as early, medium, or late, according to the season of maturity, and small, medium, and large, according to the size of the seed. The black soy beans are used chiefly for cooking, with sugar and shoyu; the green variety is also used in this way, either in the fresh state or after being dried" (p. 24). There follows a long section on tofu (detailed in a separate record).

The "larger part of the leguminous food in the Japanese diet consists of the preparations of soy beans, such as miso, shoyu and tofu,..." (p. 46).

In Japan, legumes about 8% of the protein and 11% of the fat in the diet (p. 137). Many digestion experiments are described (p. 144-87), including those with tofu, shoyu, "tofu cake or kara, the soy-bean residue remaining from the preparation of tofu (see p. 26)," and yuba conducted in Japan by Osawa and Ueda (1887), T. Suchi (1887), Kano and Iishima (1899). Table 91 (p. 191) is a "Summary of results of digestion experiments with legumes and legume preparations." The percentages given are "coefficients of digestibility." Experiments No. 6 and 7–soybeans (average): Protein 65.5%, fat (uncertain), carbohydrates (incl. crude fiber) 85.7%. Experiments No. 8 and 92–tofu (average): Protein 92.7%, fat 96.4%, carbohydrates (incl. crude fiber) 93.3%. Experiment No. 94–"yuba (soy legumin coagulated):" Protein 92.6%, fat 95.7%, carbohydrates (incl. crude fiber) 86.6%, crude fiber 35.5%. Experiment No. 93–"tofu cake (soy-bean residue [okara]):" Protein 78.7%, fat 84.3%, carbohydrates (incl. crude fiber) 82.8%, crude fiber 89.6%.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kara* to refer to okara.

Other Japanese foods discussed include adzuki or adzuke beans (*Phaseolus mungo subtrilobata*) (p. 24, 170), dried algae (sea vegetables, p. 34), and kuzu (p. 170). Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

534. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man: Tofu (Document part). *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 26-28. [1 ref. Eng]

• ***Summary:*** "Tofu: This term is commonly translated as bean cheese–though sometimes bean curd–in English and *Bohnen-käse* in German. Tofu is not strictly equivalent to cheese, however, as neither bacteria nor ferments are involved in the process of manufacture. It consists chiefly of the albuminoid materials of the soy bean combined with magnesium and calcium salts, as pointed out by Inoue." To make tofu, soaked soybeans are ground between millstones. "The mass is then mixed with about three times its bulk of water and boiled for about an hour, after which it is filtered through a cloth. By this process about 30 per cent of the total protein of the beans is dissolved and contained in the filtrate, ready to be precipitated as tofu. The filtrate is white and opaque, somewhat resembling milk. To this is added, with constant stirring, about 2 per cent of the concentrated mother liquid [nigari] obtained in the manufacture of salt from sea water, whereupon the albuminoid material is precipitated in combination with calcium and magnesium salts." After pressing, the tofu is finally cut into cakes about 10 cm broad, 2 cm thick, and 25 cm long [about 3.9 by 0.79 by 9.8 inches], though the size varies in different localities.

"The residue from the boiled and filtered beans is known as kara [okara], or tofu cake, and contains a large quantity of protein and carbohydrates. It is a good food material, being used considerably by poor people as an ingredient of miso soup.

"If the milky filtrate mentioned above is boiled, a sort of film forms on the surface. This film, which consists mainly of coagulated albuminoids and fat, is sometimes prepared in large quantity, and when dried is used as an article of food, being known as yuba.

"Tofu is generally prepared every day and is eaten in the fresh condition simply with a little shoyu, though it is also frequently cooked in shoyu or in miso soup. Fried tofu, called abura-age, is also a very popular article of food. Rape-seed oil is generally used in frying, though sesame oil is sometimes used. Note 1. This is the earliest English-language document seen (April 2013) with the word "Tofu" in the title in a document published in the United States,

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "abura-age" to refer to deep-fried tofu pouches.

© Copyright Soyinfo Center 2013

"Tofu may also be prepared for preservation and transportation. For this purpose it is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and then dried in an oven. As thus prepared it can be preserved for several years. When the tofu is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the tofu porous and it may be easily dried. If it is not frozen, it is difficult to dry it and the resulting material is dense and horn like."

Table 2 (p. 28) gives the average composition of the above-mentioned tofu preparations: "Fresh tofu, frozen tofu, fried tofu, tofu cake [okara], yuba."

The digestibility of the nutrients in tofu has been found to be high, as will be seen from the results of digestion experiments summarized later (p. 191). As much as 95 per cent of the protein is digested and about the same proportion of fat. The carbohydrates were found to be somewhat less digestible when the tofu was eaten alone, but when it was eaten with rice about 99 per cent of the total carbohydrates of the diet was digested.

"Both the composition and the digestibility of tofu, therefore, prove it to be a very nutritious food material. This is extremely significant, because tofu in its various forms is used very extensively by all classes of Japanese. In the interior of the country, where fish can not be easily obtained, it is a most important source of protein. For Buddhist priests, as well as the strict adherents to Buddhism (who eat no animal food), it forms a very popular and almost indispensable dietary article. Though no authentic record has been found regarding the manufacture of tofu in Japan, it is believed on good authority that the method was first introduced from China by Buddhists for their own use." Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

535. Thompson, William Gilman. 1905. Practical dietetics, with special reference to diet in disease. Third edition, enlarged and thoroughly revised. New York & London: D. Appleton & Co. xxiii + 846 p. See p. 155, 167. 10 plates. Index. 25 cm.

• ***Summary:*** Chapter 4, titled "Vegetable Foods," contains a section on "Prepared farinaceous foods, which contains a subsection (p. 155) that reads: "Soya bread is made from an oily pea which grows in China and Japan, and is used sometimes by diabetics, for it contains over one third part gluten and but 1.17 per cent of glucose."

Another section in the same chapter, titled "Legumes, peas, beans, and lentils" states (p. 167): "The soya bean is the chief legume of China and Japan, where it furnishes the necessary protein to add to a rice diet. From its vegetable casein several varieties of bean cheese [tofu] are made."

The section on "Vegetarianism" (p. 35-37) concludes that this "eventually results in a loss of strength and general resisting power against disease..."

Also discusses: Diastase and malt extracts (p. 163-63). Erbstwurst or pea sausage (p. 166-67). Gerber's Food and Nestle's Food (p. 152-53; both foods are dextrinized, then evaporated with milk or cream. Nestlé's food is made in Vevay [Vevey], Switzerland, "from sterilised fresh cow's milk to which wheaten bread crust is added after dextrinisation by additional heat. Cane sugar is mixed in, and the mass is dried, pulverised, and hermetically sealed in tins. For use it requires dilution with water."). Gluten (p. 139, 148, 164, 689). Oleomargarine and Butterine (p. 199). Peanuts and peanut oil (p. 168, 201, 222; "Peanuts contain considerable oil, which is extracted and sold largely as spurious olive oil.").

The first U.S. edition was published in 1897 (copyrighted 1895). A second edition was published in 1902. A fourth edition was published in 1909 (xxvi + 928 p.). The author lived 1856-1927. Address: Prof. of Medicine in the Cornell Univ. Medical College, New York, NY.

• ***Summary:*** The entry for Soja (p. 1811) has the following contents: About the plant: Chemical analysis (by M. Léon Padé), culinary uses. Soy sauce: Formula No. 5,145, basic description. Tofu (*Fromage de Soja*)*:* Formula No. 5,148, basic description, remarks.

Masculine noun. Pronounced "so-ya" (*Soja hispida platycarpa*). A plant of the legume family, also called *pois oléagineux de la Chine* ("oil pea of China").

Pierre Poivre, who visited the Indies in 1750, tells us in his work *Voyage d'un Philosophe* of a species of phaseolus called *pois du Cap*–which is probably not related to the soybean. Nevertheless, an illustration (not original) shows a soybean plant.

A table gives a chemical analysis of soybean seeds by M. Léon Padé.

Culinary uses: Mentions soy flour, dried frozen tofu (kôri tô-fu), tofu, soy sauce.

Recipe for making soy sauce (Sauce soya, Formula 5,147–apparently located elsewhere in the book) using fresh soybeans. Recipe for making tofu (Fromage de Soja, Formula 5,148) also from fresh soybeans.

Joseph Favre lived 1849-1903. Address: 11 rue Guénégaud (near le Pont-Neuf), Paris.

• ***Summary:*** A corrected edition, one page shorter than the 1904 revised edition. On the cover, below the title is written "(Corrected March 25, 1906)," yet at the bottom of the same page the publication date is given as 1904.

The section about soy (p. 11-13) is titled "Soy bean (*Glycine hispida*) and its preparations," but the information in that section appears to be the same as in the original 1900 edition, as is the illustration of the soy bean plant (p. 12) and the table on page 19.

538. Bloch, A. [Armand-Aron]. 1906. Quelques mots sur la fabrication et la composition du Teou-Fou (Fromage de haricots chinois fourni par le *Soja hispida*) [Some remarks on the production and composition of tofu (Cheese from Chinese beans furnished by the *Soja hispida*)]. *Bulletin des Sciences Pharmacologiques* (*Paris*) 13:138-43. March. (Exp. Station Record 18:857). [Fre]

• ***Summary:*** The author, a pharmacist to France's colonial troops, describes tofu as *fromage de Haricots* (bean cheese) or *fromage de Haricots chinois* (cheese of Chinese beans) and gives a detailed description of how it is made. "It is said to be a food at the frontier of Tonkin [in today's Vietnam]; the church fathers of Szechuan speak of tofu in their dictionary, it is used in all of Pet-chi-li [Petchili or Chili, today's Hebei province] (I have helped several times in making it in the city of Tien-Tsin {Tientsin, Tianjin})."

Note. This is the earliest French-language document seen (April 2013) that uses the term *fromage de Haricots* or the term *fromage de Haricots chinois* to refer to tofu.

Note 2. Chihli was a former province in northeast China; its capital was Peking. In 1928 it was divided largely into Hebei (formerly called Hopei or Hopeh), Jehol, and Chahar. The largest part was Hebei. There was also a Gulf of Petchili / Chihli, which is today's Bo Hai, the huge gulf east of Tianjin.

Tofu shops start work at 1:00 in the morning and finish by 9-11:00 A.M. Soaked soybeans look a little like the French Flageolet. The mill used for grinding soybeans to make tofu is turned by an animal, usually a donkey. The puree is cooked for 10-30 minutes. From 1 kg of *Soja hispida* (soybeans) one can get 3.3 to 4 kg of tofu. Tofu is also made into sheets.

The author then gives a nutritional analysis of tofu (water 83.5%, protein 11.25%, oil 4.33%, ash 0.57%) and okara (*tourteau, teou-fou-tcha, le résidu*–water 88.75%, protein 10.85%, oil 0.4%, ash 0.36%). Finally he analyzes two coagulant solutions: Nigari (*solution coagulante, yen lou;* it is rich in magnesium chloride) and magnesium sulfate.

In conclusion Dr. Bloch recommends introducing tofu among France's Indochinese troops since it is rich in protein, contains no starch, is inexpensive, and can be used in a wide variety of forms and recipes, and is easily preserved in thin dried sheets.

This entire article was reprinted in *Annales d'Hygiene et de Medicine Coloniales* 9:298-304 (1906). German summary in *Chemisches Central-Blatt* 1906(1):1502-03. Address: Pharmaceutical doctor to the colonial troops (Docteur en pharmacie, Pharmacien-major de 2e classe des troupes coloniales).

539. List or manifest of alien passengers applying for admission to the United States: Heiji Ota. 1906.

• ***Summary:*** Line: Ocean Steam Navigation Line / Co. Sheet 10. No. 287. Name of passenger: Heiji Ota. Age: 32. Sex: Male. Married or single: Single. Occupation: Farmer. Able to–Read: Yes. Write: Yes. Nationality–Country: Japan. Race or people: Japanese. Last residence: Okayama. Destination: Portland, Oregon. 12 (?). By whom on passenger list: Self. Whether in possession of (?) money: Yes, $50. Whether going to a residence and relative: 54 N. 4th Dr., Portland, Oregon. Hashiya (?) 21. Port of Landing: Victoria [B.C.]. Date of Arrival: April 19, 1906. Date of embarcation: April 25, 1906. Head tax paid to: G.N. Ry.

Note 1. Heiji seems to be the only Ota on this ship. The Ota Tofu Co. of Portland, Oregon, had almost surely not yet been established.

Note 2. "Required by the regulations of the Secretary of the Treasury of the United States, under Act of Congress approved March 3, 1903, and Department Circular No. 97, dated Nov. 1, 1901."

540. Katayama, T. 1906. On the preparation of a vegetable cheese from the protein of the soy bean. *Bulletin of the College of Agriculture, Tokyo Imperial University* 7(1):117-19. April. German summary in Chemisches Central-Blatt 1906(2):540. [4 ref. Eng]

• ***Summary:*** Describes experiments to make a cheese similar to Swiss cheese. The soybean contains (according to Osborne and Campbell 1898) as its "chief proteid constituent glycinin, a globulin similar in properties to legumin, but of somewhat different composition, containing nearly twice as much sulphur..." and having the following composition: Carbon, 52.12; hydrogen, 6.93; nitrogen, 17.53; sulphur, 0.79; and oxygen, 22.63 per cent.

This protein can be extracted from [soaked, ground] soybeans by boiling. "The liquid thus obtained resembles cow's milk in appearance," and when treated with calcium and magnesium salts, yields a precipitate which is sold in Japan under the name of Tôfu. The author has attempted the preparation of a cheese from tofu. 450 gm of pressed tofu were mixed with 60 gm of common salt, 50 gm of finely-ground Swiss cheese, and the mixture was wrapped in a linen cloth saturated with brine, and left for five months in a room with an average temperature of 15º C. At the end of this time the mass was of a grey color, and quite compact; it was free from the numerous pores produced by evolution of gas in Swiss cheese. The cheese had an agreeable taste different from that of Swiss cheese, and when extracted with water,

© Copyright Soyinfo Center 2013

yielded a solution in which the presence of albumoses and peptones was detected. Further experiments with mixtures containing larger quantities of milk-sugar, but no casein, gave similar results. Address: Japan.

541. Katayama, T. 1906. A condensed vegetable milk. *Bulletin of the College of Agriculture, Tokyo Imperial University* 7(1):113-15. April. German summary in Chemisches Central-Blatt 1906(2):540. [1 ref. Eng]
• ***Summary:*** A liquid closely resembling cow's milk is obtained by soaking soy-beans in water, crushing them, and boiling with water. "The composition of this milk prepared in Japan for the purpose of obtaining Tôfu by the precipitation with calcium or magnesium salts, is in average as follows:" A table titled "Soy-bean milk" shows: Water 92.53%. Protein 3.02%. Fat 2.13%. Fibre 0.03%. Non-nitrogenous extract, including carbohydrates (galactan), 1.88%. Ash 0.41%.

"There can be no doubt that this vegetable milk is of a certain value as an easily digestible food, although in regard to the nourishment of children it cannot replace cow's milk or mother's milk, even if the necessary amount of milk sugar be added.

"The idea suggested itself to prepare from that vegetable milk, the soy milk, by addition of sugar and evaporation a durable preparation resembling condensed cow's milk."

"In 4 litres of soy-milk were dissolved 4 g. dipotassium phosphate [to prevent separation of protein] and 600 g. cane sugar and the solution concentrated *in vacuo* to a very thick liquid. This no doubt can replace the much more expensive condensed cow's milk for certain purposes of the cuisine as e.g. for sweetening coffee and tea, and for the preparation of chocolate.

"It has an agreeable taste like cow's milk, but a very feeble odor recalling crude beans and a slightly yellowish color. If this preparation should be manufactured on a large scale, it must be, of course, always sold under its proper name, and adulteration of condensed cow's milk with condensed soy milk, must be strictly prohibited." Chemical investigations "must determine whether such an adulteration can be easily discovered. My experiments in this direction answer this question in the affirmative."

Such adulteration could be detected by addition of sodium carbonate, when a yellow coloration would indicate the presence of the soy milk. Also, if a portion of the suspected milk were mixed with twice its bulk of water, treated with a few drops of dilute sulphuric acid, and one-tenth of the whole distilled off, the distillate would possess the characteristic odor of the raw beans, if soy-milk were present. Adulteration might also be detected by separating the casein from the suspected sample with rennet, and adding calcium nitrate to the filtrate; the formation of a precipitate would indicate the presence of the globulin of soy-milk, the so-called glycinin.

Note 1. This is the earliest English-language document seen (Oct. 2003) that contains the term "soy milk" or the term "soy-milk."

Note 2. This is the earliest English-language document seen (April 2010) that uses the term "vegetable milk" to refer clearly to soy milk.

Note 3. This is the earliest English-language document seen (Dec. 2010) that uses the term "condensed vegetable milk" to refer to condensed soymilk. It is also the earliest document seen (Dec. 2010) that mentions or discusses condensed or concentrated soymilk. Address: Japan.

542. Bloch, A. 1906. Fromage de haricot chinois [Chinese bean cheese (Abstract)]. *Revue du Service de l'Intendance Militaire* (*France*) 19:647-51. July. [1 ref. Fre]
• ***Summary:*** A French-language summary of the following French-language article: Bloch, A. 1906. "Quelques mots sur la fabrication et la composition du Teou-Fou (Fromage de haricots chinois fourni par le *Soja hispida*)" [Some remarks on the production and composition of tofu (Cheese from Chinese soy beans)]. *Bulletin des Sciences Pharmacologiques* (Paris) 13:138-43. March.

It begins: "Among the innumerable products used to feed the population of China, one can mention, in the top rank, tofu (*le Téou-fou*), a bean cheese made from the Soja hispida. Tofu is a food that is very rich in protein, and one that would be of interest to introduce among our Indo-Chinese troops. Its cost price is modest, its food forms are numerous, and it can be easily stored in thin sheets." Address: Docteur en pharmacie, Pharmacien Major, Professeur à l'Ecole d'application du Service de Santé des troupes coloniales à Marseille [Marseilles, France].

543. Peltrisot, C.N. 1906. Les cultures alimentaires en Indo-Chine [The food crops of Indochina]. *Bulletin des Sciences Pharmacologiques* (*France*) 13:427-435. Aug. See p. 429-30, 434. [1 ref. Fre]
• ***Summary:*** "Next we will discuss the seeds of the soybean (*Soja hispida ou Glycine hispida*). This interesting product is used in many ways: the most interesting is, undoubtedly, the preparation of soy cheese (*fromage de soja* [tofu]), which is real vegetable casein (*veritable caséine végétale*).

Next is the complicated and difficult preparation of the fermented sauce, known under the name of *tuong* [a sort of soft miso]. Then, the therapeutic use of soy bread (*pain du soja*), commended for diabetes, because of its low content of sugars and starches, and its richness in albuminoids (*albuminoïdes*). Finally, the industrial and food uses of the oil obtained by expression / pressing (*expression*).

A table of synonyms (p. 433-35) gives the family name, the scientific name, and vernacular / local name in Indochina of 66 plant species, including: "Légumineuses–*Soja hispida* Sieb et Zucc–Dâu nành."

Also discusses: *Cajanus indicus. Dolichos sinensis et tonkinensis.* Cowpeas (*Vigna sinensis*). Mung beans

Nov. 1. [Ger]

• ***Summary:*** A German-language summary of the following French-language article: Bloch, A. 1906. "Quelques mots sur la fabrication et la composition du Teou-Fou (Fromage de haricots chinois fourni par le *Soja hispida*) [Some remarks on the production and composition of tofu (Cheese from Chinese beans furnished by the *Soja hispida*)]*." Bulletin des Sciences Pharmacologiques* (*Paris*) 13:138-43. March.

545. Bois, Désiré. 1906. Les plantes potagères indigènes de l'Indo-Chine [The indigenous kitchen-garden plants of Indo-China]. *Journal d'Agriculture Tropicale* 6(66):355-58. Dec. 31. [Fre]

• ***Summary:*** Mr. Bois, of the Museum, recently returned from a trip to Indo-China. One of these plants is the soybean (p. 357-58). This member of the legume family plays a major role in the diet of the Annamites. It is the soybean (*le soja, Glycine hispida*) which the indigenous people call *dau tuong.* This plant, which stands about 50-10 cm high, is highly valued for all of its parts. Its leaves remind us of those of the haricot bean. Its flowers are very small and violet. They give birth to a flattened pod, that is hairy and 2-4 round seeds, white, yellow or black in color, according to the variety.

Before its complete maturity, the seed of the soybean can be consumed [as a green vegetable] like the seed of flageolets (*haricot flageolet*)*;* but it is rather difficult to extract from the pod.

It is a food very rich in the element nitrogen, if it is compared which the seed of wheat, for example. A table shows that the soybean contains 36.67% nitrogen, vs. 11.9% for wheat, the soybean contains 17.00% oil, vs. 15.5% for wheat, and only 6.4% starches and sugars, vs. 61.5% for wheat.

It is from the soybean that the Chinese prepare the sauce well known under the name of shoyu, as well as a vegetable cheese (*fromage végétal*) [tofu].

In Indo-China, the Annamites use soybeans to make a sauce known as *tuong*, which is widely used.

Tuong replaces *Nuoc Man* [*Nuoc Mam*] (a fish sauce) for seasoning foods; its savoriness is sweet, a little sugary, and it is often preferred to nuoc man.

Tuong is prepared as follows: grill the soybeans, then pulverize or grind them, and let them boil in water until the mass acquires a certain consistency.

Then put the product in a jar. At the end of 7 days add glutinous rice which has been cooked and fermented [to make koji]; add some salt. The mixture will be ready in 15 to 30 days.

The soybean also serves to prepare a fresh vegetable cheese, which constitutes the basis of the diet of the poor of Hanoi, and of which a large amount is consumed in Tonkin.

This cheese is called *dau phu* by the Annamites.

To prepare it, soak soybean seeds in water for 2 hours. Then crush [or grind] them well, then add the mass to water so that it is well diluted. When water becomes milky, it is filtered through a coarsely woven sack to separate the liquid from the solids.

Put the milky water in a boiler; when it comes to a boil, add a little cold water. Then pour in some sea water, stirring slowly, until it produces a precipitation comparable to that which is observed in milk under the action of rennet.

The precipitant is vegetable casein. When pressed, it becomes small square curds. When completely pressed one obtains small parallelepipeds of dau phu or tofu. This cheese must be consumed immediately. It can be conserved in fresh water for 24 hours. With the addition of salt, it is usable 2-3 days after it is prepared. The soybean, thanks to its richness in nitrogen, plays a very important role in the food economy of the Annamites, the Chinese and the Japanese. Because they contain a large percentage of oil, they are sometimes called "oil peas" (*pois oléagineux*).

In Manchuria, the home par excellence of the soybean, the oil that is extracted from the seed of this precious legume is used for illumination [in lamps] and as a food. The cake is an excellent fertilizer. Address: Agricultural engineer (*Ingénieur agronome*).

546. **Product Name:** Tofu.
Manufacturer's Name: Hayashi Tofu-ya.
Manufacturer's Address: San Francisco, California.
Date of Introduction: 1906.
New Product–Documentation: Talk with Mr. Seizo Oka, Head, History Room, Japanese Cultural and Community Center, San Francisco. 1989. Dec. 5. He has talked with Mrs. Sumiko Kawashima (maiden name Oye/Ohye) who now lives in Hinode Tower. Her father, Mr. Masuzo Oye was an early tofu maker in San Francisco. Before him, one of the earliest in San Francisco was said to be Jitsutaro Hayashi. Mrs. Kawashima thinks that Mr. Hayashi started making tofu in San Francisco in about 1906.

Talk with Dr. Paul Hayashi. 1989. Dec. 5. Paul lives in Orinda, California (phone: 254-5074). Paul's paternal grandfather was Jitsutaro Hayashi. He emigrated from

© Copyright Soyinfo Center 2013

Japan to Hawaii, where he worked as a cook on Grove Farm Plantation for the Wilcox family, who had bought the plantation from General Grove. His first two sons had been born at the plantation. Tokutaro "Terry" Hayashi, Paul's father, was born in 1893 in Hawaii (He later graduated from the University of California Dental School in 1917; he died several years ago). Then Jitsutaro moved into Honolulu, where he started a small grocery store. After a short time, the family moved to San Francisco, where Jitsutaro again opened a grocery store. Paul thinks the family stayed in San Francisco until the earthquake, then they moved to near Treat Blvd. near Walnut Creek. They worked for a farmer for a short time. Then they moved to Sacramento, where Jitsutaro again opened a grocery store. Paul recalls hearing that his grandfather made tofu in San Francisco and peddled it along with other groceries out of a horse-drawn cart; Paul's father, as a young boy, went along to protect Jitsutaro from unfriendly Caucasians. Paul imagines that his grandfather would probably also have made tofu in Sacramento.

547. **Product Name:** Doufu (Tofu), and Soy Sprouts.
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: Wentworth Place (between Jackson and Washington Streets), San Francisco, California.
Date of Introduction: 1906.
How Stored: Refrigerated.
New Product–Documentation: San Francisco City Directories. 1906-1966. In the years prior to about 1927 these directories did not list the names of Chinese residents or companies. In 1927 they listed three companies whose names started with "Quong" but not Quong Hop & Co. which was first listed in 1930 as a grocery company at 135 Waverly Place. This listing continued until 1938, when the term "groceries" was replaced by "food manufacturers" at 133 Waverly Place. In 1948-49 the company was listed as an "importer" at the same address.

In 1951 for the first time the company listing was associated with tofu; the occupation was described as simply "bean cakes," still at 133 Waverly Place. The term "bean cakes" may well have referred to fermented tofu, or to both fresh and fermented tofu. This was changed in 1955 to "bean cake manufacturers." In 1960 Hom O Hing and Yee Let Wong were apparently the owners. In 1966 the address changed to 1779 Folsom St. The occupation was still "bean cake manufacturers."

Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 314. 161 Beacon St., South San Francisco, California 94080. James Miller & Stanley Lee.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 393. Quong Hop, 161 Beacon St., South San Francisco, 94080. Phone: 415-873-4444. Owner: Stanley Lee, Jim Miller: nigari tofu. In S.F. since 1906.

Soya Bluebook. 1980. p. 55. 161 Beacon St.

Shurtleff & Aoyagi. 1980. History of Tofu. p. 63. Based on interview with Stanley Lee: "In about 1904 Mr. Sing Hau Lee started a tofu shop in San Francisco with several partners. Because of conflicts with the partners, he left and started Quong Hop & Co. [the name means 'Great Unity'] in 1906 in Chinatown, on an alley called Wentworth Place, between Jackson and Washington Streets. In the basement of the store the company made tofu (firm and wine-fermented) and sprouts (soy and mung). The shop was very similar to a typical small tofu shop in China; the foods were sold at the store-front upstairs. After the 1906 earthquake, the company moved across the bay to Oakland for 6 months, then moved back to San Francisco to a new location at 135 Waverly Place in Chinatown. Quong Hop did a good business until the beginning of World War II when their supply of soybeans, all of which were imported from China, was cut off. So they restricted their tofu production to only fermented tofu. In the mid-1960s the company moved to 1779 Folsom St. at 14th. As the natural foods movement began, they decided in 1971 to start again to make regular tofu (plus several new varieties) and soymilk. In 1972 they moved to a large new factory at 161 Beacon St. in South San Francisco and developed many innovative products using tofu and soymilk."

Note: This is the earliest record seen (April 2001) concerning Quong Hop & Co. and tofu. But note that the early documentation is missing! The first solid listing is in 1951!

548. **Product Name:** Fuyu Bean Cake (Fermented Tofu).
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: Wentworth Place (between Jackson and Washington Streets), San Francisco, California.
Date of Introduction: 1906.
New Product–Documentation: San Francisco City Directories. 1906-1966. See record for Quong Hop, Tofu.

Hokubei Mainichi Year Book. 1951, p. 17. Ad (½ page, horizontal). The top ¼ of this ad is in English: "Quong Hop & Co., 133 Waverly Place, San Francisco 8, California. Phone: YUkon 2-1739." A large photo shows a pint jar of Quong Hop fermented tofu. The front label reads: "Since 1906. Quong Hop & Co. Bean Cake..." Directory entry, p. 38. Category: "Funyu wholesalers."

Francis Kalnay. 1959. House Beautiful. May. p. 174-75. "Soybean has all the answers." A photo shows the jar and label. The English portion of the front panel reads (from top to bottom): "Since 1906. Quong Hop & Co. Bean cake."

very selective raw materials. It is the best side dish with your evening drinks. After 3 months you can enjoy it [Does this mean you must wait for 3 months before eating it?]. Please buy it at your local grocery store. (Directory entry, p. 37 under "Food Products").

Shurtleff & Aoyagi. 1980. History of Tofu. p. 63. based on interview with Stanley Lee: "Quong Hop & Co. started in 1906 in San Francisco to make tofu (firm and wine-fermented) for the local Chinese population. The label bore the Cantonese characters pronounced 'fuyu,' as well as the English term 'Bean Cake,' a termed coined by the company to help health inspectors understand what type of product they were inspecting. During the Prohibition era (1919-1933) and thereafter, the term aided government inspectors from the Treasury Department's Bureau of Alcohol, Tobacco, and Firearms to understand what they were taxing. Hop did a good business until the beginning of World War II when their supply of soybeans, all of which were imported from China, was cut off. So they restricted their tofu production to only fermented tofu. In the mid-1960s the company moved to 1779 Folsom St. at 14th. As the natural foods movement began, they decided in 1971 to start again to make regular tofu."

Letter from Gordon Chang, Prof. of Chinese Studies, Stanford Univ. 1999. July 19. He likes fermented tofu and would like to learn to make it himself. He called Quong Hop and they no longer make it. They stopped three years ago, much to the dismay of his friends and relatives.

549. Bloch, A. [Armand-Aron]. 1906. Quelques mots sur la fabrication et la composition du Teou-Fou (Fromage de haricots chinois) [Some remarks on the production and composition of tofu (A cheese made from Chinese beans)]. *Annales d'Hygiene et de Medecine Coloniales* 9:298-304. [Fre]

• ***Summary:*** This is a reprint, with several small changes, of an article published in March 1906 under the same title in *Bulletin des Sciences Pharmacologiques* (Paris) 13:138-43. Address: Pharmacien-Major de 2e Classe des Troupes Coloniales, Docteur en Pharmacie.

550. Hearn, Lafcadio; Bisland, Elizabeth. 1906. The life and letters of Lafcadio Hearn [1890-1904]. 2 vols. Boston and New York: Houghton, Mifflin Co. 560 p. See Vol. 2, p. 28-30. Illust. Index. 23 cm.

• ***Summary:*** In a letter to Basil Hall Chamberlain, from Matsue, dated May 1891, Hearn writes: "Dear Professor Chamberlain,–I have just returned from a pilgrimage to the famous Kwannon temple of Kiyomizu–about 18 miles from Matsue–where it is said that the sacred fire has never been extinguished for a thousand years, to find your postal card."

"The scenery at Kiyomizu is superb. But there is no clear water except the view of Nanji-umi from the pagoda and the hills. The mamori, I regret to say, are uninteresting. There is, however, a curious Inari shrine. Beside it is a sort of huge trough filled with little foxes of all shapes, designs, and material. If you want anything, you pray, and put a fox in your pocket, and take it home. As soon as the prayer is granted you must take the fox back again and put it just where it was before. I should like to have taken one home; but my servants hate foxes and Inari and tofu and azuki-meshi and abura-gi [aburage] and everything related to foxes. So I left it alone."

"Through the goodwill of Basil Hall Chamberlain, Hearn gained a teaching position in the summer of 1890 at the Shimane Prefectural Common Middle School and Normal School in Matsue, a town in western Japan on the coast of the Sea of Japan. Most Japanese identify Hearn with Matsue, as it was here that his image of Japan was molded." In "1896, with some assistance from Chamberlain, he began teaching English literature at Tokyo (Imperial) University, a post he held until 1903" (Source: Wikipedia, at Lafcadio Hearn, Oct. 2008). Address: Matsue, Japan.

• ***Summary:*** Prof. O. Loew includes a discussion of tofu, soymilk, yuba, and shoyu (*shôyû-sauce*). On the coasts of Japan there were fresh seafish, and in the inland regions some salted fish were used. People have learned how to prepare wheat gluten (*Jap: fu; German: Weizenkleber*) in various dried forms, which are very porous and easily

© Copyright Soyinfo Center 2013

digested. The protein of the soybean, under the name of tofu (*Tôfu*), comes in the form of soft white cakes and is prepared daily. It is sold from door to door by salespeople.

The cooking of the softened soybeans, before the precipitation of the tofu, has a very milklike consistency. Without doubt, it is similar in nutritional value to milk but it can be recommended only for adults, and not for sensitive infants. "When this soybean milk (*Soyabohnenmilch*) mixed with some gelatine [sic] is simmered down, and while in a concentrated condition the mixture is poured into flat, level containers, there results from the drying of the gelatinous mass thin skins, which are sold under the name of yuba."

Note 1. This is the earliest German-language document seen (Oct. 2003) that uses the term *Soyabohnenmilch* ("soybean milk") to refer to soymilk.

Note 2. The date on the title page is given as 1907-09. The place of publication has now changed to Tokyo. Address: Prof. of Agricultural Chemistry, Imperial University, Tokyo, Japan.

Manufacturer's Address: 226 Jackson St., San Jose, California.
Date of Introduction: 1906. January.
New Product–Documentation: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 38. Note: Mitsunaga Tofu-ya was at this address in 1909.

556. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1906. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 2]. 234 Turk St., San Francisco, California. 345 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]
• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 4 unnumbered leaves of black and white photos (mostly of San Francisco) on glossy paper, 20 unnumbered pages of ads and basic information, of which the 4th to last page is why and how they wrote this book (they got a lot of help from people in various areas to gather data, although no names or places are given), and of which the last two pages are the table of contents, 224 numbered pages which are the body of the book, 44 unnumbered pages of ads, 59 pages of directory interspersed with 50 pages of ads in groups of either 16 or 32 pages.

There is a tofu shop in San Francisco (p. 183, bottom right) and a shoyu (soy sauce) maker in San Jose (p. 189, top right); last year Yamamori Shoyu Jozo-sho made 1,000 koku of shoyu. Note: 1 *koku* = 10 *sho* = 180 liters. Therefore the company made 180,000 liters of shoyu. Since 1 liter = 0.264 gallons, this is 47,520 gallons of shoyu.

There is 1 tofu shop in Florin (p. 203, top right) and two tofu shops in Isleton (p. 204, top right).

The Directory shows Japanese companies making soyfoods in California and Washington state. It is preceded by an index of the Directory. Address: San Francisco, California.

557. Okumura, Hanjirô. 1906. Tôfu hyakuchin: eisei ryôri [One hundred and rare and favorite tofu recipes: hygienic cookery]. Tokyo: Hagiwarashin Yôkan. 44 p. 18 cm. [Jap]
• ***Summary:*** This book appears to be a simplified, condensed and (somehow) sanitized version of the 1782 classic *Tôfu Hyakuchin*, by Ka Hitsujin.

558. Senft, Emanuel. 1906. Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Beruecksichtigung der japanischen Militaerkonserven [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 5(12):481-91. [5 ref. Ger]
• ***Summary:*** Working for the German Food Administration, the author examined a number of preserved foods that had played an important role in helping Japan to win the Russo-Japanese war. He drew heavily on Loew (1895). "Widely distributed in Japan is a unique baked good, which is produced primarily from wheat gluten with only a little of wheat flour; it is called *Fu* (wheat gluten bread).

"A very important role is played by the soybean and the many diverse products made from it: Yuba, the vegetable cheeses tofu, natto, and miso, plus shoyu or soy-sauce (*Shoju oder Soy-Sauce*). Like the soybean, tofu and natto are rich in protein. They supply the protein lacking in rice."

Also discusses fresh konnyaku, dried-frozen konnyaku, dried persimmons, sea vegetables (12 types in great detail, with an illustration of the cells of a kombu plant), and warabi (dried ferns). Address: Official of military medicines, Committee of military hygiene.

559. Soya Gakugawa (Chusuke). comp. 1906. Tôfu sanbyakuchin [Three hundred rare and favorite tofu recipes].

Kyobashi: Shiki Shimaya Shobo. Japanese summary by Kawakami 1978. [Jap]
• ***Summary:*** This work is composed of three earlier books published as one: Tofu Hyakuchin (1782), Tofu Hyakuchin Zokuhen (1783), and Tofu Hyakuchin Yoroku (1788).

560. Tôfu ryôri: Hôichi Shinbun kenshô tôsen [Tofu cookery: Hoichi Newspaper prize winners]. 1906. Tokyo: Hôichi Shinbunsha. 79 p. 21 cm. [Jap]*

561. *Bulletin of the Imperial Institute* (*London*). 1907. Utilisation of the soy bean. 5(1):86-87. [2 ref]
• ***Summary:*** "The plant yielding the "soy bean" (*Glycine soja*) has of late received much attention at the hands of agriculturists in tropical countries on account of its value as a green manure. The bean itself has long been employed in the East as a vegetable and food-stuff, and has been imported in large quantities into European countries, principally for use as a feeding-stuff for animals. It is also an important ingredient in Indian soy, which forms the basis of chutney. More recently the introduction of the extraction of cheaper methods for the extraction of fixed oils by the use of solvents has made it possible to utilise such materials as the soy bean, which contains only 10 per cent. of fixed oil, as a source of oil, and considerable quantities are now used in the United Kingdom in this way." Note: This is the earliest English-language document seen (March 2003) that uses the term "solvents" (or "solvent") in connection with the crushing of soybeans to give oil and meal.

Also discusses briefly the preparation of soymilk and tofu in Japan.

562. Marre, Francis. 1907. Le lait végétal en Chine [Vegetable milk in China]. *Nature* (*La*) (*Paris*) 35(1776 Supplement):13. June 8. [Fre]
• ***Summary:*** The use of milk as food in China is very limited. The immense empire, which is governed by the Son of Heaven, is not suited for raising livestock, except in its northern and western regions, which occupy only a small part of its total area. Moreover, the climate and nature of the soil do not permit the culture of forage crops. These purely geographical reasons are enough to explain why vegetable milk is consumed abundantly in the majority of Chinese provinces.

This milk, whose name seems strange and a bit paradoxical, is made from the seeds of *Soja hispida*, also called the oil pea of China (*haricot oléagineux de Chine*), an annual plant of the legume family. To obtain it, the seeds are first [ground with water], boiled and then pressed, making a sort of puree which, when dissolved in water, makes a very nourishing vegetable milk. When treated with a mineral salt, which acts much like rennet in milk, it coagulates and may be made into a kind of cheese (*to-fou*) [tofu] which plays an important part in nourishing the Chinese and Japanese people. It is one of their basic daily foods and can be made into a great variety of culinary preparations. It is generally consumed fresh, the day it is made. But it may be cooked, and preserved by salting or smoking. In commerce, three principal varieties of vegetable cheese (*fromage végétal*) [tofu] are found. One, which is fermented [fermented tofu], is white, yellow or gray, and has a piquant flavor like that of Roquefort. The second is white and salty, resembling goat cheese / goat's milk cheese. The third is smoked and quite like Gruyere (*gruyère*).

In the process of making vegetable milk and tofu, they recover with care the various by-products [okara, whey] and use them with ingenuity to nourish their animals and as fertilizer for their fields; in this way nothing is lost. Even the stems of the plant and the pods that envelop the seeds are used as forage. Thanks to the fact that every part of the plant can be used, and thanks also to the low cost of manpower in China, soy cheese (*fromage de soja*) can be sold for such a low price that enough to serve a man for a day (110 square cm of surface by 2.5 cm thick) costs less than a centime [one-fifth of a U.S. cent], or 50 to 60 times less than an equal quantity of animal cheese.

As for the food value of soymilk, it is approximately equal to that of cow's milk; it contains significant quantities of legumine, whose chemical composition is very close to that of casein.

Mr. Li Yu-Ying, an attaché at the Chinese legation in Paris, made soymilk (*lait de soja*) the subject of an important presentation at the last dairy congress, and forecast the introduction of soya (*soja*) into French culture.

Note 1. This is the earliest French-language document seen (April 2013) that uses the term *to-fou* to refer to tofu.

\ Note 2. This is the earliest French-language document seen (Oct. 2003) that uses the term *lait de soja* to refer to soymilk. As of Oct. 2003 *lait de soja* is the modern French word for soymilk.

563. *New York Times.* 1907. Here is a Japanese bill of fare: Prof. Chittenden shows value of simple diet used in Japan. Aug. 11. p. SM5.
• ***Summary:*** A typical bill of fare of a Japanese family in moderate circumstances includes: "Breakfast (from 7 to 7:30 A.M.)–Miso soup with vegetables. Boiled rice, pickles, and tea. Sometimes raw egg or boiled sweet soya beans or natto.

"Lunch (12 noon)–Fish boiled in soya. Vegetables stewed in soya. Boiled rice, pickles, tea.

"Supper (from 6 to 6:30)–Soya soup. Vegetables. Raw fish sliced, eaten with soya sauce..."

"The miso, soya sauce, and topi [sic, tofu] are all products of the soya bean, on which, with rice, the Japanese physique may be said to be built up." "Rice is the main foodstuff, with the soya bean a close second."

Prof. Chittenden of Yale University notes that Japan's "exploits in war have recently attracted the attention of

© Copyright Soyinfo Center 2013

the civilized world." Yet the great majority of Japanese have "remained untouched by the prodigality of Western civilization." Their "habits and customs still bear the imprint of simplicity and frugality."

Since Japan defeated Russia in war, many observers have noted that "the people of no other nation... have greater powers of physical endurance, or greater bodily strength and agility..."

564. Bloch, A. [Armand-Aron]. 1907. Le soja. Sa culture, sa composition, son emploi en médecine et dans l'alimentation [The soybean. Its culture, its composition, its use in medicine and in food]. *Bulletin des Sciences Pharmacologiques* (*Paris*) 14:536-51. Sept.; 14:593-606. Oct. [46 ref. Fre]
• ***Summary:*** A review of the literature drawing heavily on Egasse (1888), Trimble (1896 and 1897), and Williams & Langworthy (1897, revised 1899), and including many others. Contents: Introduction (mainly a long history of the soybean worldwide, with emphasis on Europe). Chemical composition of the soybean. Chemical composition of the soybean plant.

Part II: Preparation of shoyu. Preparation of miso. Natto. Preparation of tao-yu ([Chinese-style soy sauce] a condiment made with black soybeans, hibiscus leaves, and *Aspergillus Wentii* mold) and tuong. Tofu and yuba. Other soyfoods, incl. soy coffee.

"We are presently looking everywhere for ways of giving economic value to our colonies. It seemed interesting to me to draw attention to the soybean, the Chinese bean (*le Soja*, *Haricot chinois*) which contributes a large part of the food of the people in China, Japan, and the Far East. Already in use in Indochina, tested in Europe with success then abandoned for no apparent reason, the soybean could acclimatize itself in other colonies of ours, particularly in Madagascar, and perhaps in certain of our African possessions, and therefore could contribute to increasing their riches and the well being of their indigenous peoples."

Soy oil "can be extracted partially by pressure or completely by ether or petroleum ether. It is yellowish red with a not particularly disagreeable odor."

Mr. Lailleux, a former intern at the hospital in Algiers, has reported that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers [Algeria], have been helped by a dietary regimen based on soybean pap.

Note: This is the earliest document seen (Aug. 2009) concerning soybeans in connection with (but not yet in) Madagascar. Address: Pharmacist major 2nd class of the colonial troops. Doctor of pharmacy.

565. Ruata, Guido; Testoni, Giuseppe. 1907. La soia nell'alimentazione italiana [Soy in the Italian diet]. *Ministero d'Agricoltura, Industria e Commercio. Bollettino Ufficiale* 6(6):698-718. Dec. 18. (Chem. Abst. 2:864). [35 ref. Ita]
• ***Summary:*** Contents: Introduction. Description of the soybean. Cultivation and its history in Europe. Harvest and yield. Nutritional value of the soybean: Tables show analyses according to König (10 tables), to Balland (1 table analyzing 3 varieties, from Cambodia {Exposition of 1900}, from Cochin China, and from Tonkin), to Gautier (1 table), to Maurel (1 table), and to Lechartier and Joulie (from Grandeau 1903, analyzing 3 varieties, from Etampes, black soybean, and yellow soybean–all grown in France; each either as is or dry). Tables of nutritional analyses by Ruata & Testoni (includes the weight of 1,000 seeds for each variety): I. Black soybean, from Vilmorin-Andrieux of Paris, France; from Dammann & Co. [seedsmen] of Naples (Italy); and from the Inst. of Hygiene of Bologna, Italy. II. Giant Yellow, from Etampes (Pinolini), from Naples (Dammann), from Bohemia (*Boemia*–Ingegnoli); III. Small yellow soybean (from Dammann in Naples). IV. Green soybean (from Dammann). V. Brown soybean (from Dammann). The authors believe the Giant Yellow soybean is best adapted to Italian conditions. The analysis of the variety from Naples is as follows: Weight of 1,000 seeds: 205 gm. Water 9.80%. Albuminoids 37.13% (*albuminoidi*, protein) Carbohydrates 24.40%. Fat 18.36%. Lecithin 1.62%. Crude fiber 4.47%. Ash: 4.30%.

Preparation of soybeans (detailed descriptions and nutritional analyses): The whole seeds, miso (*Il miso*), tofu (*To-Fu* or *to-fu*), shoyu (fermented; made with koji), soy flour and bread (*farina e pane di soia*, incl. experiments by Brugia, and Rimini), soy polenta. Conclusions.

Three non-original illustrations (line drawings; between p. 700 and 701) show three different full-size views of the Soja plant, including: (1) Plant with roots. (2) Stem, leaves and pods. (3) Stem and pods (Original from Pinolini 1905).

Several bar charts (following p. 712) give nutritional composition comparisons of 12 staple foods, mainly legumes, cereal grains, dairy products, and meat: Fig. 2–Albuminoids (protein content); soya is the highest with 37.13%. Fig. 3–Carbohydrate content. Fig. 4–Fat content; soya is highest with 18.36%. Fig. 5–Salt (*Sali*).

Other tables show: (1–p. 701): For four soybean varieties, weight of 100 liters in kg and number of seeds per kg. Soia d'Etampes yellow 72 / 7,400. Black soybean from Podolia 74.5 / 7,400. Yellow soybean 72.5 / 8,550. Black soybean 73 / 12,200. Note that the black soybean has by far the smallest seeds.

Selected translations of the text: The first part of the article discusses dietary problems in Italy, especially pellagra, a skin disease caused by deficiencies in protein and niacin. One of the causes seems to be the consumption of corn, especially spoiled corn (*maiz guasto*) (p. 699-700). The authors are interested in studying the soybean as a potential new food for Italy, based on the examples from other countries where it has been consumed for a long time and where corn is unknown or almost unknown. They want to take the initiative in getting the best possible advantage

© Copyright Soyinfo Center 2013

from the introduction of soybeans as an Italian food (p. 700). In Italy the varieties which grow well are the early black, the yellow, the brown, the green, and the giant yellow; the latter is similar to the variety Soya Etampes, which has been acclimatized in France (p. 701). History in Italy: According to Pinolini, the soybean made its appearance around 1840, and has been cultivated with success around Verona, along the Lombard coast of Lake Maggiore, and near Mantua and Lucca (Mantova and Lucchese). As far as we know, it either was cultivated or is still cultivated in Liguria, Friuli, the Marches, and Emilia. Around Naples, it is especially cultivated in San Giovanni a Teduccio, under the care of Dammann & Co., a seed company (p. 702).

In the year 1906 in a field annexed to the Institute of Hygiene, we conducted experimental cultivation of soybeans, sowing the black variety from Podolia, sent to us by the Vilmorin-Andrieux, a seed company in Paris. A similar experiment was carried out on a larger expanse of land, at the same time as ours and with the same seeds, by Dr. Ignazio Buldrini at his farm near Bologna. The land at the Institute of Hygiene, being rather rich in humus, was fertilized with phosphate fertilizer at the rate of 500 kg/ha and potassium sulfate at the rate of 100 kg/ha. Dr. Buldrini's land, well supplied with potassium and phosphoric anhydride,... was fertilized with plenty of manure. The seed was planted on both fields in early May. The vegetation developed regularly and in August we obtained a harvest that yielded 1,500 kg/ha of seeds reaching perfect maturation (p. 703).

Brugia (1902) has conducted numerous experiments in baking with soy flour, and here is what he writes about it: "It is necessary to find an inexpensive food with great nutritional value for the poor farmers and rural people. It would be ideal to be able to make bread from soybean flour, thus creating a food that would be physiologically balanced and complete." He first tried mixing soy flour with wheat flour in the proportions 50/50 and 30/60, but the results were unfavorable. Then they tried using brewer's yeast in the process and had very good results, except that the price was a little high. It was then necessary to substitute a mixture of bicarbonate of soda and cream of tartar (½ gm per 3 g of flour) for the brewer's yeast. This worked very well. He then gives a table showing the nutritional analysis of the best bread (p. 716). In the conclusions of his work, Brugia says: "Soy flour cannot be used by itself in baking. But mixed with wheat it gives an optimum bread, soft textured, complete and balanced nutritionally, economical, and convenient. A second table shows an analysis of soy bread published by Rimini (1902) (p. 716).

Soy polenta, a mixture of soy and corn, was named Soyenta by Haberlandt who first prepared it. It could be of nutritional benefit to the people in those parts of Italy who get almost all of their nutrients from polenta. We have conducted numerous tests to find a type of Soyenta (to adopt Haberlandt's name) which, because of taste and ease of preparation, could enter into the diet of our rural population without difficulty. Here are the results of our experiments with various types of Soyenta: (1) With whole yellow soy flour: The resulting product does not have a soft consistency; it is coarse and crumbles rather easily, but the taste is nice. (2) With sifted soy flour: This product is not as good as the previous one, because it is too sticky. The taste reminds us of infant cereal made of wheat flour. (3) Soy flour mixed with wheat flour in varying proportions: Not advisable because it presents in various degrees the difficulties of the former. (4) (p. 717). Soy flour mixed with corn flour: Best results were obtained with a mixture of 1 part soy flour to 4 parts corn meal (coarsely ground, Veronese style). The consistency of this product is not unlike that of regular polenta, and the flavor is also very close. Hot or cold it slices very well, and overall it can be used just like regular polenta, but it has more nutritional value (p. 717).

Note 1. This is the earliest Italian-language document seen (April 2013) that mentions tofu, which it calls *To-fu.*

Note 2. This is the earliest Italian-language document seen (April 2012) that mentions soy sauce, which it calls *Il shoyu* ("shoyu").

Note 3. This is the earliest Italian-language document seen (March 2009) that uses the word "miso" (*Il miso*) to refer to miso.

Note 3. This is the earliest Italian-language document seen (Aug. 2003) that uses the term *albuminoidi* to refer to protein in connection with soybeans. Address: 1. Direttore dell'Istituto d'Igiene della Regia Universita di Bologna (Director of the Inst. of Hygiene at the Univ. of Bologna); 2. Insegnante nella Regia Scuola Media Commerciale, Direttore del Laboratorio chimico Compartimentale delle Gabelle di Bologna, Italy.

566. *USDA Bureau of Plant Industry, Inventory.* 1907. Seeds and plants imported during the period from December, 1905, to July, 1906. Nos. 16797 to 19057. No. 12. 125 p. Dec. 20. Also titled USDA Bureau of Plant Industry, Bulletin No. 106.
• ***Summary:*** Soy bean introductions: Glycine hispida.

17251-17280. "From Arlington Farm, Virginia. A collection of soy beans grown on the Arlington Farm in 1905 from seed received through the Division of Agrostology.

"Black varieties:

"17251. Medium early, black. Grown from Agrost. Nos. 1978, 1979, and 2033, combined.

"17252. Flat, medium large, late, black; third crop from Agrost. [Agrostology] No. 1293.

"17253. Medium black; second crop from Agrost. No. 1536.

"17254. Medium black, small seeded; first crop from Agrost. No. 1980.

"17280. Large, late, yellow; first crop from Agrost. Nos. 1976 and 1977.

17520. "From Richmond, Va. [Virginia]. Received through T.W. Wood & Sons, February 16, 1906. *Hollybrook Early.* 'A particularly valuable strain of soy beans, which matures its crop three weeks earlier than the *Mammoth Yellow* soy, and is consequently better adapted for planting in sections north of Virginia, or for planting late in order to make a crop of shelled beans. The yield from the *Hollybrook Early* soy is very nearly equal to that of the *Mammoth Yellow,* and they are sure to make a crop of beans. The *Mammoth Yellow* soy requires the full growing season to mature its crop, and frequently an early frost will cut short the yield of the crop of beans. There is no such danger with *Hollybrook Early* soys, and they will prove to be a distinct and valuable acquisition.' (*Wood & Sons.*)

17852/17857/17861/17862. "From Peking, China. Received through Mr. F.N. Meyer, February 23, 1906. A collection of seeds, as follows: [These are the first soy beans introduced by agricultural explorer Frank Meyer, listed in this journal.]

"17852. From Peking. '(No. 17a.) These beans are roasted and sold in Peking as delicatessen.' (*Meyer.*)

"17857. From Shan-hai-kwan. '(No. 42a.) Used for food in Shan-hai-kwan.' (*Meyer.*)

"17861. From Sachon. '(No. 28a.) A small, black soy bean grown for fodder; late variety. An excellent food for stock; must be boiled before being fed.' (*Meyer.*)

"17862. From Tientsin. '(No. 152a.) A fine variety of soy bean used to make bean cheese from.' (*Meyer.*)

18227. "From Khabarovsk, East Siberia. Received through Director Gagin of the Khabarovsk Experiment Field, March 26, 1906. *Tchernie bobi.* 'A black variety of *Soja hispida,* which is cultivated in several places in Manchuria and Amur land.' (*Gagin.*) 18258/18259. "From Peking, China. Received at the Plant Introduction Gardens, Chico, California, through Mr. F.N. Meyer, February 26 and 27, 1906. Seeds and cuttings of Chinese plants, the seeds indicated by the letter 'a' following the number as follows:

"18258. From Pee-san. '(No. 5a.) This soy bean is extensively cultivated in the mountains north of Peking and is highly esteemed for human food; requires but little irrigation, and is well worth trying in the arid West.' (*Meyer.*)

"17259. From Tschang-ping-tsu. '(No. 6a.) This bean is grown in the northern country as a nitrogen-supplying crop with sorghum, corn, or millet; does not scatter much when ripe, but seems to be late in ripening.' (*Meyer.*)

18459/18460. "From West Branch, Michigan. Received through Mr. Edward E. Evans, May 2, 1906.

"18459. *Green.*

"18460. *Early black."*

18619. "From China. Received through Mr. F.N. Meyer, at the Plant Introduction Garden, Chico, California, May 18,

© Copyright Soyinfo Center 2013

1906. Seeds and cuttings of Chinese plants, the seeds being indicated by the letter 'a' following the numbers, as follows:

"18619. From Shanghai. '(No. 188a.) A very large variety of yellow soy bean.' (*Meyer.*)"

18707. "From China. Renumbered for convenience in recording distribution, June 21, 1906. A dull reddish brown colored variety of soy beans, the actual source of which is in doubt." Note: This is the earliest American document seen (Sept. 1996) that uses the word "soy" (as in the phrase "the *Hollybrook Early* soy is very nearly equal to that of the *Mammoth Yellow*") to refer to the soy bean rather than to soy sauce. Address: Washington, DC.

567. Kato, Yogoro. 1907. Tôfu no gyôko ni tsuite [On the coagulation of tofu]. *Tokyo Kagaku Kaishi* (*J. of the Tokyo Chemical Society*) 28:1249-61. Dec. [Jap]

568. Charabot, Eugene; Collot, Georges; Chevron, Maurice; Villar, Pierre. 1907-1908. Exposition coloniale nationale de 1907, au Jardin colonial [National colonial exposition of 1907, and the colonial garden. 2 vols. in 1]. Paris: Augustin Challamel. 270 p. See p. 171. [5 ref. Fre]

• ***Summary:*** Soja: The soybean (*Le soja; Soja hispida* Sieb. et Zucc, *Dolichos soja* L.) is a legume of China, Japan and also Indo-China. It seed is especially used for making a vegetal cheese, the soy cheese (*du fromage végétal, le fromage de soja*) [tofu]. Manchuria is the homeland par excellence of the soybean, but here it plays the role of an alimentary oilseed and for illumination, rather than as a simple food plant, as it does in Indo-China and the rest of China. Huge quantities of soybeans are exported from Manchuria–196,680 metric tons in 1903. Nevertheless Indo-China exports, on average, 2,000 to 3,000 metric tons a year of soybeans to East Asia. Address: Member, Société d'histoire naturelle des Ardennes, France.

569. **Product Name:** Tofu.
Manufacturer's Name: Fukushima Tofu-ya.
Manufacturer's Address: 228 N. East St., Visalia, California.
Date of Introduction: 1907.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 52.

570. **Product Name:** Tofu.
Manufacturer's Name: Murakami Tofu-ten.
Manufacturer's Address: 140 Main St., Watsonville, California.
Date of Introduction: 1907.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 28. Also in 1908, p. 29 (Japanese numbers). But the address is now 138 Main St.

Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 102. But the entry now reads: Murakami Tofu-ya, 138 Main St. Also in 1911 directory, p. 100. Also in 1912, p. 126. Also in 1913, p. 150. Also in 1914, p. 156.

571. **Product Name:** Tofu.
Manufacturer's Name: Shinoda Tofu-ya.
Manufacturer's Address: 1218 Third St., Sacramento, California.
Date of Introduction: 1907.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 55. Also in 1908, Directory p. 67 (Japanese numbers).

Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 39. But the address is now 1222 Third St.

572. **Product Name:** Tofu.
Manufacturer's Name: Tofu oyobi Mochi-ya.
Manufacturer's Address: 265 24th St., Ogden, Utah.
Date of Introduction: 1907.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 72. Note 1. *Oyobi* means "and." *Mochi* means "pounded glutinous rice cake." *Ya* means "shop." So, this shop makes tofu and mochi.

Note 2. This is the earliest document seen (Aug. 2011) concerning soybeans in Utah. This document contains the earliest date seen for soybeans in Utah (1907). The source of these soybeans is unknown. A tofu shop must have soybeans in order to make tofu. Other early tofu shops in Utah were in Ogden (1909, 1911, 1912) and in Salt Lake City (1912, 1914).

573. **Product Name:** Tofu.
Manufacturer's Name: Ueno Tofu-ya.
Manufacturer's Address: 632 N. 6th St., San Jose, California.
Date of Introduction: 1907.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 23. Also in 1908, Directory p. 60 (Japanese numbers). Note: Okumura Tofu-ya was at this address in 1906.

574. **Product Name:** Tofu.
Manufacturer's Name: Akiguchi Tofu-ya.
Manufacturer's Address: Tesla Coal Mine, 12 miles SE of Livermore, California.
Date of Introduction: 1907. January.
New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [*Japanese-American*

© Copyright Soyinfo Center 2013

Yearbook]. Directory entry p. 22. Note: Coal was discovered here in 1855. Today its hard to believe that this pastoral scene once supported over 200 buildings and 1,500 inhabitants. In 1890 John Treadwell, a millionaire gold miner, opened the Tesla coal mines. After five years of development work and building a railroad to Stockton, Treadwell organized the San Francisco and San Joaquin Coal Company. Two years later, the first trainload of Tesla coal rolled into Stockton. The mine produced over 80,000 tons of coal per year over the next ten years, during which time Tesla became the leading coal producer in California. In 1897, John Treadwell named the town for Nikola Tesla, a famous electrical inventor, who was first to harness the use of alternating currents. Treadwell planned to use Tesla's invention to send electricity to Bay Area cities from a coal-burning power plant at Tesla. However, this plan never materialized for fear of competing with California's new hydroelectric power plants. Instead, Treadwell built the first successful plant to make briquettes (from coal) in the United States; the plant operated from 1901 to 1905, when a fire destroyed the plant and eventually forced coal mining to shut down at Tesla in 1911. Tesla then became a ghost town.

575. Balland, A. 1907. Les aliments; Analyse, expertise, valeur alimentaire. Vol. II. Légumes, fruits, viandes, laitages, conserves, boissons & fourrages [Foods: Analysis, expertise, food value. Vol. II. Legumes, fruits, meats, dairy products, conserves, beverages & fodder plants]. Paris: Librairie J.-B. Baillière et Fils. 508 p. See p. 180-81, Soja. [1 ref. Fre]
• ***Summary:*** The author notes the antiquity of the soybean in Cochin China (citing A. Candolle 1885) and their use in making tofu (citing A. Bloch 1906). He then gives nutritional analyses of three soybeans, one each from Cambodia, Cochin China, and Tonkin, obtained at an exposition in the year 1900. Their protein content (*matières azotées*) is 35.14%, 34.85%, and 38.41%, and their fat content (*matières grasses*) is 14.80%, 12.95%, and 13.35% respectively.

Note: This is the earliest document seen (May 2010) concerning soybeans in Cambodia (renamed Kampuchea in 1979). This document contains the earliest date seen for soybeans in Cambodia (1900). The soybean was probably being cultivated in Cambodia at that time. The source of these soybeans is unknown. Address: Ancien Pharmacien Principal au Laboratoire des Expertises du Comite de l'Intendance, France.

576. Chalmers, John. 1907. English and Cantonese dictionary. 7th ed. Revised and enlarged by T.K. Dealy. Hongkong: Kelly & Walsh, Ltd. xi + vii + 822 p. 23 cm. [Eng; Chi]
• ***Summary:*** On page 20 are the Cantonese characters and term for bean-curd (tau-foo). On page 437 are the Cantonese characters and terms for soy [sauce], shi-yau, and for soy bean (*Soja hispida*) (taai tau, paak tau) or *Dolichos soja* (wong taai tau, or mo tau [literally "hair beans" = green vegetable soybeans]).

A 5th edition was published in 1878 in Hongkong, and a 7th edition in 1907 in Hongkong.

Note: This is the earliest English-language document seen (April 2013) that uses the term "tau-foo" (or "tau foo") to refer to Chinese-style tofu. Address: Chalmers: LL.D; Dealy: Queen's College, Hongkong.

577. Gagnepain, Francois. ed. 1907. Flore générale de l'Indochine. Vol. 2 [A general flora of Indochina. Vol. 2]. Paris: Masson et Cie. 1213 p. See p. 398-99. Published under the direction of H. Lecompte. [soy ref. Fre]
• ***Summary:*** In the section on the genus Glycine, there is a subsection on *Glycine soja* Sieb et Zucc. Cultivated in Tonkin, Laos, Cochinchine. Vernacular names: *Dàu nanh, Mak toua kon* or *ta tone.* Uses: The seeds can be consumed like those of the haricot, or used to make a cheese [tofu] or a condiment, and they also yield oil. The black variety is used to feed livestock. The stem and leaves can be used as forage. The author lived 1866-1922.

Note: This is the earliest document seen (Feb. 2012) concerning soybeans in Laos, or the cultivation of soybeans in Laos. This document contains the earliest date seen for soybeans in Laos, or the cultivation of soybeans in Laos (1907). The source of these soybeans is unknown.

578. Hurrier, Paul. 1907. Matière médicale et pharmacopée Sino-Annamites [Chinese and Annamite (Vietnamese) materia medica and pharmacopoeia]. Paris: Vigot Frères. viii + 292 p. Illust. Index. 25 cm. Preface by Prof. Em. Perrot. [25 ref. Fre]
• ***Summary:*** The book begins with a chapter titled "History of medicine in China," which includes many abbreviated bibliographic references in the text. Pages 21-22 discuss acupuncture and a large fold-out illustration (facing p. 20) shows several views of the meridians on the human body. Part two of the book, titled "Special Chinese and Annamite drugs with therapeutic uses," contains four chapters: 1. Mineral kingdom. 2. Animal kingdom. 3. Vegetable kingdom. 4. Five indexes: Latin names, Chinese names, Annamite names, Japanese names, and Cambodian names.

In chapter 3, "Vegetable kingdom," in the section on Legumes (p. 144) is a subsection titled *Dolichos soja* L. (p. 147). It begins with the three Chinese characters for "Yellow soy bean" = *Teou-Ko* (Mérat); *Mau-tau* (Porter Smith); *Houang-teou* (in Chinese), *Dan-dèn* (in Annamite). The laxative seeds of this variety are used to make a special condiment, soy sauce (*le soy; Tsiang-yu*) composed of soybean flour, tea, and salt. From the cooked seeds, the Annamites make a vegetable cheese (*fromage végétal; Teou-fou*), which resembles goat cheese, and of which they consume very large amounts. Mr. Bloch, in a recent study on tofu (*"Quelques mots sur la fabrication*

© Copyright Soyinfo Center 2013

et la composition du Teou-Fou," published in *Bulletin des Sciences Pharmacologiques* (Paris), March 1906, p. 138-43), described the process of making tofu, which is coagulated with magnesium chloride. The entire plant is used to make a decoction for treating smallpox and rheumatism.

Glycine javanica (*no-mame* in Japanese is also mentioned on p. 148).

Also discusses: Various sea vegetables (*kombu, kanten, funori, amanori;* p. 71-72). *Cannabis sativa* (hemp; p. 102). *Phaseolus radiatus* = small red bean (azuki in Japanese; p. 150). *Sesamum orientale* (sesame seeds; kuro-goma [black sesame] and shiro-goma [white sesame] in Japanese; p. 178). Address: Pharmacien de 1re class, Docteur de l'Université de Paris, France.

579. Jumelle, Henri L. 1907. Les resources agricoles et forestiéres des colonies Françaises [The agricultural and forestry resources of the French colonies]. Marseille, France: Barlatier, Imprimeur-Éditeur. viii + 442 p. See p. 333. No index. 28 cm. [2 ref. Fre]

• ***Summary:*** In the chapter on Indo-China (p. 267-363) is a section on coconuts (p. 322+) followed by a section on "Other oil-bearing plants" (*Les autres plantes oléagineuses*), which contains paragraphs (p. 326-27) on the sesame seed (*Le sésame,* cultivated in Cambodia) and the peanut (*L'arachide,* long cultivated in Cochin China and central and south Annam). Some confusion exists concerning the oil of *Aleurites cordata* (Chinese wood oil, *l'huile d'abrasin*) (p. 331-32): "Why is this oil, so well known and widely used in Indo-China, not exported, as is its analogous oil from China? It is not ignored by European and American manufacturers; and in the United States, as in Europe, it is in demand * by the factories that make linoleum or that prepare varnish from copal." (Footnote: *"It seems that the oil imported into Europe and the United States is often adulterated with oil from the seeds of *Soja hispida* [soybeans], which is likewise a very drying oil").

The next section, titled "The indigenous food" (*L'alimentation indigène*) (p. 332-35) includes a discussion of various legumes consumed in Indo-China. "Among the leguminous seeds used as food, there is a large consumption of kidney-beans (*de haricots*), of dolichos beans (*de doliques*), and, even more, of soybeans (*de sojas*)." "The large consumption of the soybean (*du soja*) is due to the fact that its beans, not only are eaten after a long cooking, but, again, serve as the base for various preparations, as in Japan and China (Footnote: It is with these soybeans, mixed with wheat and *koji,* and coarse salt, that the Japanese make their *shoyou* [*shoyu,* soy sauce] and their *miso,* and the Chinese their sauces or analogous dishes, *teou-ju* and *teou-tiung.* In Java, the indigenous people make similar preparations. The fermentations are, in all these cases, caused by various molds.) It is thus that the Annamites [of central Vietnam] make a cheese called *dau-phu,* which is the *teou-fou* of the Chinese, the *tofu* of Japan. They likewise make a sauce named *tuong,* which is almost the same as the *teou-tiung* [*doujiang*] of the Chinese, and two cheeses [tofu], one solid, the other of a softer consistency, called *dau-hu* and *dau-hu-ao* in Cochin China." Address: Prof., Faculte des Sciences de Marseille [Marseilles], France.

580. Katayama, T. 1907. On the preparation of a vegetable cheese from the protein of the soy-bean. *Zentralblatt fuer Bakteriologie. Series 2.* 19(19/20):601. [1 ref. Ger]

• ***Summary:*** German summary of an article from *Bulletin of the College of Agriculture, Tokyo* 7(1):117. The vegetable cheese is tofu. Address: Japan.

581. Macgowan, John. 1907. Sidelights on Chinese life. London: Kegan Paul. Trench, Trübner & Co., Limited. viii + 367 p. Illust. (12 in color by Montague Smyth and 34 others). 26 cm.

• ***Summary:*** Chapter 1, "The Chinaman," begins (p. 1): "The Chinaman's mind is a profound and inexplicable puzzle that many have vainly endeavoured to solve. He is a mystery not simply to the foreigner, who has been trained to more open methods of thought, but also to his own countrymen, who are frequently heard to express their astonishment at some exhibition of character, that has never occurred to them during the whole of their oblique life."

Page 9: "A coolie, for example, in [sic, is] engaged by you to do general household work. He comes to you from an inland country where poverty is the prevailing characteristic of the whole population. Sweet potatoes are the staple food three times a day, year in, year out, helped down perhaps by salted turnip, bean curds [tofu] and pickled beans [fermented black soybeans]–for it is only on special occasions that they have the rare happiness of indulging in the luxury of rice."

Page 163: "At the same time he placed before him a tiny little platter in which were some nicely browned strips of fried bean curds [deep-fried tofu] to act as appetizer to the rice, and to arouse his flagging appetite."

Note: This is the earliest English-language document seen (April 2013) that contains the term "fried bean curds."

Page 170: "In addition to this precious crop [rice] that needs so much attention, the cultivator has others that claim his thoughts and time. These are the beans that are used in the manufacture of soy [sauce] and in the making of bean curds [tofu] that are considered so important as condiments to be eaten with the rice.

Page 183: "The Chinese, who are connoisseurs in the art of cooking rice, can never tolerate it being boiled to a pulp... There are also bean curds [tofu] and cucumbers pickled crisp and juicy, and celery and lettuce, and salted beans [fermented black soybeans] and plates of various kinds of fish, and different kinds of soy, which are sprinkled with a sparing hand over the bowl of rice to give it a flavour in order to induce an appetite with the first sip that the customer takes of

the savoury compound." Address: Rev., London Missionary Society and author.

582. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1907. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 3]. 234 Turk St., San Francisco, California. 398 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 6 unnumbered leaves of black and white photos (mostly taken after the San Francisco earthquake and fire) on glossy paper, 18 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last two pages are the table of contents, 176 numbered pages which are the body of the book, 84 unnumbered pages of ads, 75 pages of directory (preceded by an index of the directory) NUJN, 35 pages of ads and back matter NUJN.

There are two tofu shops in San Jose, California, and also two breweries (*jozo-sho*). Note: One may have been for brewing shoyu and the other for sake (p. 153). The San Jose shoyu maker [Sa-shi Shoyu Jozo-sho] helped Komada Shoten [probably not a shoyu maker] in San Francisco last year. Although they used wheat and salt made in the U.S., they had to get soybeans and also the bamboo hoops for the wooden kegs (*taru*) from Japan. It cost them over 50 cents to make one wooden keg; that's a problem (p. 154, top right). There is one tofu shop in Watsonville (p. 154, bottom center).

The Directory shows Japanese companies making soyfoods in California and Utah. Address: San Francisco, California.

583. Senft, Emanuel. 1907. Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Berueecksichtigung der japanischen Militaerkonserven [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 6(3):81-89; 6(4):122-24, 131-32; 6(6):211-12, 219. [19 ref. Ger]

• ***Summary:*** These three sections contain a good review of the literature (especially the Japanese literature) in German. Issue No. 3 begins with "Phanerogams. Chapter 5. Legumes. Soybeans and soybean preparations" (p. 81-89). Contents: Introduction. Varieties: Group I. Soja platycarpa-Harz (5 forms–olivacea-Harz and punctata-Harz, melanosperma, platysperma, parvula Martens). Soja tumida-Harz (3 forms–pallida Roseb. [sic, Roxb = Roxburgh], castanea-Harz [brown], atrosperma-Harz). Anatomy and cell structure of different parts of the plant and seeds. A non-original illustration (line drawing; p. 83) shows a soy bean, full-size and at cellular levels. Haberlandt and the Vienna World Exposition of 1873. Foods made from soybeans in China and Japan described by Charles Bryant (1785): Miso, soy sauce (*sooju-sauce* or soy), Roos, Koji. Tofu, sake. Shoju or Soja-Sauce. Miso (vegetable cheese; "Recently the firm Jul. Maggi & Comp. in Kempthal makes a type of miso and sells it commercially").

Issue No. 4 begins with "Natto and tofu" (*Bohnenkäse*) (p. 122-24) and includes fresh tofu and frozen tofu (*gefrorener tofu*). Yuba. A separate section on miso pickles (*Misozuke;* p. 131-32) describes the different types, especially those made with daikon (*Rettiche*).

Issue No. 6 discusses shoyu (called *Extrakt-Sauce Japonica,* or Shoju-Sauce) (p. 211). A table (p. 212) lists the main food plants of Japan, including five different "varieties" (*"var."*) of soybeans: *Kuro-mame, Shiro-mame, Ao-mame, Goishi-mame, Gankui-mame*. A photo (p. 219) shows various Japanese preserved foods, including a metal box containing "Fukujinsuke" [*fukujinzuke*] consisting of sliced vegetables (cucumbers, bamboo shoots, onions) preserved in soy sauce. Address: Military medicine official, Germany.

584. Smyth, Albert Henry. ed. 1907. The writings of Benjamin Franklin: Collected and edited, with a life and introduction. Vol. 5, 1767-1772. New York, NY: The Macmillan Co.; London: Macmillan & Co., Ltd. xi + 555 p. See p. 245-46. This is a 10-volume work. Also in William B. Wilcox, ed. 1973. The Papers of Benjamin Franklin. Vol 17, Jan. 1 through Dec. 31, 1770. New Haven, CT and London: Yale University Press. p. 22-23. [4 ref]

• ***Summary:*** "To John Bartram. From London, January 11, 1770. My ever dear friend,... I send also some green dry peas, highly esteemed here as the best for making pea soup; and also some Chinese *caravances*, with Father Navarrete's account of the universal use of a cheese made of them in China, which so excited my curiosity, that I caused inquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made, and I send you his answer. I have since learned that some runnings of salt (I suppose runnet) is put into water, when the meal is in it, to turn it to curds. I think we have *caravances* with us, but I know not whether they are the same with these, which actually came from China. They are said to be of great increase... With esteem I am ever, my dear friend, yours affectionately, B. Franklin."

Footnotes state: (1) This letter was "First printed by Sparks." (2) "Domingo-Hernandez [sic, Fernández] Navarrete (1610-1698) went as missionary to China. Many curious observations of Chinese life are contained in his 'Tradutos [sic, Tratados] historicos, politicos, ethicos y religiosos de la monarchia de China' (1676).–Ed." (3) *"Caravances or calavances* seems to be used loosely for various kinds of pease, beans, lentils, etc.–Ed."

© Copyright Soyinfo Center 2013

Note: Franklin's letter is not reproduced here in its entirety; it omits some of his discussion of tofu.

585. Strakosch, Siegfried. 1907. Das Problem der ungleichen Arbeitsleistung unserer Kulturpflanzen [The problem of the unequal production efficiencies of our crop plants]. Berlin: Verlagsbuchhandlung Paul Parey. 110 p. No index. 23 cm. [Ger]

• ***Summary:*** This book, dedicated to Julius Wiesner, "the master of plant physiology," looks at national food supplies from the viewpoint of plant physiology. In the section on "Calculation of assimilative effects," a table (p. 44-45) compares rye, wheat, corn, rice, soybeans, and potatoes in their production per hectare of starch, digestible protein, value of product in German marks, value of nutritive elements consumed, assimilative effect (defined as the ration of the value of the usable substance produced per unit area to the value of the nutritive elements borrowed from the soil by producing this substance), assimilative effect compared with rye, and difference between the production and consumption in German Marks. Soybean produces much more protein per given area of land than the other crops, has the highest assimilative ratio, 6.68 times larger than that of rye. Thus the culture of soybeans should be the most remunerative.

In the same section, a bar chart (p. 48) shows the value (in marks) of physiologically useful substance resulting from withdrawal of one mark worth of soil nutrients. The soybean gives the greatest returns of the 22 plants listed.

In the section on "Consideration of plant production efficiency in crop rotations" (p. 66+), the legumes are praised and soybeans are mentioned on pages 71 (the most productive of all legumes with an enormous number of 668) and 73. In this context, the work of Friedrich Haberlandt with soybeans and his book, *Die Sojabohne* (The Soybean, Vienna, 1878) are described in detail (p. 74-76). Haberlandt died shortly after the publication of this book, and Hecke, his friend, carried on his work.

In the last chapter, "Goals and consequences," a table (p. 102) shows the productivity in the northern U.S. states of nine crops, including wheat, barley, corn, sugar beets, peas, Jerusalem artichokes, and soybeans. In value of crop per hectare, soybeans are third after Jerusalem artichokes (German: Topinambur; French: Topinambour) and sugar beets. Two long footnotes (No. 122 and 123, p. 109-10) discuss the importance in Japan of soybeans and the various foods made from them including shoyu (Shoju, Shoyu), miso, tofu, and yuba. Address: Dr., Wien-Hohenau.

586. **Product Name:** Chinese-style firm tofu, soft tofu (sui-daufu), and soy milk curds (daufu-fa).
Manufacturer's Name: Wing Chong Lung.
Manufacturer's Address: Alameda St., Los Angeles, California. Phone: 213-627-5935.
Date of Introduction: 1907?
New Product–Documentation: Company invoice dated 1 Sept. 1936. Tofu was selling for 5 cents a piece, bean sprouts were 3 cents a pound, leg of pork was 25 cents a pound, and eggs were 25 cents a dozen.

Mildred Lager. 1945. The Useful Soybean. p. 86-87. Every Chinatown has its tofu factory... There is just such a one hidden away in the heart of Los Angeles, run by two old Chinese who grunt at curious visitors and can't be bothered to answer questions. The methods of these two Chinese are both crude and primitive, yet they product an excellent cake of cheese or tofu."

Interview with Bill Lee of Wy Ky. "Wing Chong Lung was the first Chinese company to try to break into the Los Angeles tofu market, controlled by Matsuda-Hinode. They tried in 1952 but Hinode kept them out. They now make bean sprouts." Talk with Shoan Yamauchi. 1982. Aug. 11. Wing Chong Lung had been making tofu in Los Angeles from before the 1920s.

Talk with Grant Tom of Wing Chong Lung. 1988. Oct. 4. He was born in 1934. The company was founded in 1871, importing foods from China and selling them in California. He thinks they were making Chinese-style firm tofu, soft tofu (*sui-daufu*), soymilk curds (*daufu-fa*, eaten with syrup), and soy sprouts at about the turn of the century, probably before 1900. At the time they were located on Alameda St., and the owner was Tom Chong Man. In 1934 the company moved to the present address, 922 South San Pedro St. He thinks they stopped making tofu shortly after World War II because of too much competition from Matsuda and Hinode. They stopped making soy sprouts about 3 years ago. They no longer make any food products. They now have two divisions: produce and meat, both distribute and retail. He is not aware of company archives or any histories written about the company. He talked to the older generation about the company history when he was a kid.

587. Rafu Shinposha. comp. 1908. Rafu nenkan dai 1 kan [Rafu Shimpô's year book, No. 1]. Los Angeles, California: Rafu Shinpôsha. [14] + 107 + 66 + [38]. Plus 4 unnumbered leaves of plates. Illust. 28 cm. [Jap]

• ***Summary:*** Contents: Title page. Foreword (2 p.). Ad. Table of contents (2 p.). Ad. Map of Southern California. Ads (2 p.). Photos (2 leaves, printed one side only). Ads (2 p.). Photos (2 leaves, printed one side only). Ads and New Year's greetings (14 p.). Rafu Nenkan L.A. yearbook: Current events and situations (p. 1-107, numbered). Page 46 (top left): Number of tofu shops in Los Angeles in 1906: Zero. In 1907: Four. Increase: 4. Appendixes: (1) Useful information for Japanese-Americans (*Zaibei Nihonjin Nichiyôbinran*) (p. 1-32). (2) Japanese American Directory (*Zaibei Nihonjin Jûsho Seimeiroku*) (p. 33-66). Ads and New Year's greetings (38 p.). Note: This book focuses on southern California, but also covers Northern California, Colorado, Utah, Oregon, and Washington state. Address: Los Angeles.

© Copyright Soyinfo Center 2013

588. **Product Name:** Tofu.
Manufacturer's Name: Sakana-ya, Tofu-ya Nakakuma (Nakaguma?) (Nakakuma Fish and Tofu shop).
Manufacturer's Address: P.O. Box 15, Santa Anita (near Los Angeles), California.
Date of Introduction: 1908. January.
New Product–Documentation: Rafu Shinposha. 1908. *Rafu Nenkan* [*Rafu Shinpo Japanese-American year book*]. Ad, unnumbered page near front. Sakana-ya, Tofu-ya Nakakuma (Nakaguma?), Ka-shuu Santa Anita Yuubako 15 Yûgô (ariawase?), Oryori, Udon and Soba Restaurant. (Nakakuma Fish and Tofu shop. P.O. Box 15, Santa Anita).

Note: The word *ariawase* in Japanese means "what you happen to have on hand at home." So when welcoming honored guests to the dining table, Japanese love to say humbly: *Kore was ariawase no mono desu ga omeshiagari kudasai.* This might be translated: "I made this with some things I happened to have on hand at home, but I hope you can enjoy it." Thus, this restaurant may feature home cookin.'

589. Lamarche, Cyrille de. 1908. Le soja de Chine [The soybean of China]. *Magasin pittoresque* (*Le*). Nov. 1. p. 494-95, [5 ref. Fre]
• ***Summary:*** The soybean is a sort of pea widely cultivated in China and Japan and used above all in these countries [sic, only in China] to make a thick, viscous oil, which is light yellow in color, which would not be much appreciated in France. It is above all as a food and as forage that this plant could render us a great many services. It could be used as a substitute for wheat in making bread, as a substitute for oats for feeding horses, and as a substitute for hay and lucerne / alfalfa for feeding livestock / animals. The seeds can be consumed like peas or beans at, without having a remarkable flavor, they nevertheless constitute a good food. Roasted, they can be used as a replacement for coffee, and they are, according to this report, superior to chicory.

The seeds furnish a flour which has a high fat content and which gives rapid weight gain to animals that are fattened, such as cattle, pigs, sheep, and poultry. It quickly returns horses that are thin or tired to good shape.

Rich in nitrogen, they are very low in starch (and actually may not have any that is use in nutrition) they furnish an excellent bread for diabetics, and can be very useful in this regard as a medicine since starch, as is well known, is the enemy of diabetes. Used together with wheat flour, soybean flour gives a bread a bright whiteness and decreases by one-third its net cost. Here is a nutritional analysis by Mr. Joulin. A table is given.

One can see from this analysis that soy bread (*le pain de soja*) contains twice as much protein and one-fifth as much starch as wheat bread; as for the fat, it contains ten times as much. Also, a robust man is hardly satiated with a kilogram of wheat bread, but 620 grams of soy bread is enough to obtain the same result.

Here are the results of an experiment made several years ago by Mr. Fortuné, an agronomist at Trie-Chateau (in Oise) which demonstrates the advantages offered by soy in fattening farm animals.

In the countries of its origin, the soybean forms the basis of another important industry; it is used to make a cheese which is widely used in the diets of the people of East Asia. There are some people who do not like this cheese. Address: Member, Société d'histoire naturelle des Ardennes, France.

590. **Product Name:** Tofu.
Manufacturer's Name: Hirano Tofu-ya.
Manufacturer's Address: 446 Jackson St., Los Angeles, California. Phone: Broadway 1910.
Date of Introduction: 1908.

Manufacturer's Name: Tsukamoto Tofu-ya.
Manufacturer's Address: 128 E. First St., Reno, Nevada.
Date of Introduction: 1908.
New Product–Documentation: Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory p. 86 (Japanese numbers). The address is now given as 128 E. Front St., Reno.

Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 121.

Note 1. This is the earliest document seen (July 2011) concerning soybean products (tofu) in Nevada. This document contains the earliest date seen for soybean products in Nevada (1908); soybeans as such have not yet been reported.

Note 2. This is the earliest document seen (July 2011) concerning soybeans in Nevada. This document contains the earliest date seen for soybeans in Nevada (1909). The source of these soybeans is unknown. A tofu shop must have soybeans in order to make tofu.

Note 3. This is the earliest known commercial soy product made in Nevada.

598. Agricultural Bureau, Department of Agriculture and Commerce. 1908. Agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. x + 455 p. See p. 225-29, 434, 439, 448, 453-54. No index. 23 cm. [Eng]

• ***Summary:*** A table of moneys, weights and measures (p. x) includes British equivalents of the following Japanese units: Money–*yen, sen, rin.* Length: *ri, chô, ken, shaku, sun.* Area: *cho, tan, sé, bu* or *tsubo, kô* (*9.724 tan*). Capacity / volume: *koku, tô, sho, go.* Weights: *kwan or kwamme, kin, momme.*

In Chapter 6 titled "Agricultural products," in section 2 on "staple food stuffs" is a subsection titled "Soja beans" (p. 225-29) which begins: "In point of production and use, soja beans occupy an important position among the various beans, they are extensively cultivated from the Hokkaido in the north to Formosa in the south. They find a congenial soil to prosper, the acreage for 1906 was 460,895 *cho* (1 cho = 2.45 acres) which with the exception of the acreage of barley (503,498 *chô*) is equalled by no other products from the upland fields. Their use is quite extensive. They are eaten boiled, baked and powdered while *soy, miso* and *tofu* (bean curd) made out of beans, are found even in the remotest villages. They are found on the table both of high and low. In making *soy* [*sauce*], a by-product in a shape of soy-cakes is obtained and may be used as excellent manure, while in making *tofu*, the remaining ingredients [okara] may be used as a subsidiary diet and as food for cattle. Soja beans may also be pressed, and its oil used for the purpose of diet and for various technical uses, while the residue forms excellent manure. The fresh stalks of soja beans may be used as forage or as effective green manure. In short, soja beans, either as an article of Japanese diet, or as agricultural manure or as food for cattle are indispensable.

"The cultivation of beans under the circumstances was developed from ancient times, and numerous varieties are most extensively cultivated while by its peculiar nature of root, it absolves nitrogen from air so that high priced nitrogenous manure may be dispensed with, and therefore the cultivation of beans like other agricultural products do

© Copyright Soyinfo Center 2013

not exhaust the productive power of the soil, but on the contrary, it operates favourably to improve the soil. As for rotation of crops of wheat, millets, corns and potatoes, beans are indispensable. Seeds are sown early in the beginning of May."

Tables show: (1) Output of soja beans in Japan, 1897-1906." For each year is given the area (in *chô*), the production (in *koku*) and the yield (in *koku* per *tan*) (1 *koku* = 4.962 bushels; 1 *tan* = 0.245 acres). The area increased from 435,605 *chô* in 1897 to a peak of 482,044 *chô* in 1898, then slowly fell to a low of 446,844 *chô* in 1904, then rose to 460,895 *chô* in 1906. Production increased from 3,100,973 *koku* in 1897 to a peak of 4,069,619 *koku* in 1901, then slowly dropped to 3,557,592 in 1906. The yield in 1897 was 0.712 *koku* per *tan*, rising to a peak of 0.830 in 1904. Hokkaido has the largest area (43,924 *chô*) and production (392,140 *koku*). The principal soja bean producing districts are Ibaraki (33,000 *chô*), Saitama (29,000 *chô*), Iwate (26,000 *chô*), Nagasaki (26,000 *chô*), Kumamoto (26,000 *chô*), Niigata (22,000 *chô*). There is no prefecture where the production does not exceed 10,000 *koku.*

(2) "As mentioned above, soja beans are used either boiled, baked or powdered or as material for *tofu* (bean curd), frozen *tofu*, *soy* and *miso* (bean-cheese), and particularly the latter two products besides meeting with domestic demands, are exported abroad in large quantities, as may be seen in the following table." This table shows amount and value (in *yen*) of miso and soy [sauce] exported from Japan each year from 1903 to 1907, inclusive. Miso exports increased from 1,670,092 *kin* (1 *kin* = 1.322 lb) in 1903 to a peak of 5,199,957 *kin* in 1907 (a 3.1 fold increase in 4 years), while soy [sauce] exports increased from 1,974,119 *shô* (1 *shô* = 1.9 quarts) in 1903 to 4,403,851 *shô* in 1907 (a 2.2 fold increase). The total yen value of these two exports rose from 489,213 *yen* in 1903 to 1,354,517 *yen* in 1907 (a 2.8 fold increase). In American units: Miso exports increased from 2.20 million lb (worth $347,647) in 1903 to a peak of 7.50 million lb (worth $132,652) in 1905, dropping to 6.86 million lb (worth $135,833) in 1907.

Shoyu exports increased from 5.92 million lb (worth $204,959) in 1903 to 13.21 million lb (worth $541,425) in 1907. Note that in 1907 shoyu exports are worth about 4 times as much as miso exports.

(3) Because of increasing exports, Japan now needs to import soja beans from abroad. This table (p. 227) shows the amount and value of soybeans imported by Japan for the years 1903-1907, inclusive. They rose from 146,971 tons (worth $3.18 million) in 1903 to a peak of 193,479 tons (worth $4.92 million) in 1905, dropping to 177,365 tons (worth $4.79 million) in 1907. They are mostly imported from Manchuria and Korea. "While a greater portion of these imports is used as material for *soy and miso*, it is also used in making bean-cakes and is sown for obtaining green manure, or used as manure or for feeding cattle."

(4) This table (p. 228) shows the quantity and value of [soy] bean-cakes imported into Japan for the years 1903-1907, inclusive. The cake was used mostly for fertilizer. Cake imports rose from 216,198 tons (worth $3.81 million and representing 57.8% of all fertilizers) in 1903 to 367,210 tons (worth $8.71 million and representing 44.8% of all fertilizers) in 1907. (5) This table (p. 229) shows acreage and production (output) of [soy] beans in Formosa [today's Taiwan]. Acreage doubled in 3 years from 11,226 *kô* in 1901 to a peak of 22,641 *kô* [53,886 acres] in 1904, then decreased slightly to 21,220 *kô* in 1906. Note 1. 1 *kô* = 9.724 *tan*, and 1 *tan* = 0.245 acres. Therefore 1 *kô* = 2.38 acres.

Production in Taiwan increased more than 3-fold from 44,661 *koku* in 1901 to 135,271 *koku* in 1904, then decreased slightly to 100,803 *koku* in 1906. Note 2. Production of soja beans in Formosa in 1904 was only 3.6% as much as production of soja beans in Japan in 1904.

The next section, titled "Red-beans" (p. 229-30) gives similar detailed statistics on acreage, production, and yield for azuki beans in Japan. *Sarashi-an* (the powdered red bean) is made in Osaka, Tokyo, Niigata, and Aomori. A second table gives annual imports of red [azuki] beans to Japan from 1903 to 1907. They are imported mainly from China, Korea, and British India.

In Chapter 9, titled "Agricultural products in commerce," section 2 is on imports to Japan. A table (p. 433-34) gives imports of the following grains and seeds (in quantity / piculs and value / yen) from 1903 to 1907: Italian millet, soja beans, red beans [azuki] (small white), and sesame seeds. Another table (p. 438) titled "Miscellaneous" includes imports of "bean's oil cake" for the same period. An explanation titled "Soja-beans" (p. 439) states: "Not only as foodstuffs, but also as a manure a large quantity of beans are consumed each year, as that from China and Korea a considerable amount is imported. Besides beans, bean-cakes are imported from China in large quantity." Imports of sesame seeds, rice, wheat and rape-seed are also discussed on the same page. In this same chapter, section 3 is on Exports and imports in Formosa. Soy is mentioned on pages 434, 439, 442, 448, 453-54. "Beans, Soja: The demand for soja beans in Formosa is enormous and as the Formosan product was not sufficient to meet the demand, a large amount is imported from abroad. Soja beans produced in Manchuria, and Chin-kiang [Chinkiang, Zhenjiang] are imported from China and Hongkong." "Oil, Beans [soybean oil]: This is principally produced in Manchuria and is brought here through China and Hongkong. Originally it was used as an illumination, but the demand has greatly increased as it is used in making cut tobacco" [to keep it moist]. Ground-nut oil is used for the same purpose (p. 453-54).

Note 3. This is the earliest document seen (Oct. 2003) concerning miso in international trade–exported from Japan; export statistics are also given. Note 4. The preface, by Chuzi [Chuji] Shimooka, explains that this book was compiled for

the International Agricultural Association meeting to be held in Italy in the autumn. The compiler did not have time to explain all the terms [and units] adequately. Address: Tokyo, Japan.

599. Allen, Horace Newton. 1908. Things Korean: A collection of sketches and anecdotes, missionary and diplomatic. New York, Chicago, Toronto, London, Edinburgh: F.H. Revell Co. 256 p. See p. 74. Illust. (black and white photos). No index. 19 cm.
• ***Summary:*** Page 74: "Products.–The great product of Korea is rice, which is the staple of diet. Next come [soy] beans, which are largely used as a food for man and beast, being mixed with rice in the human dietary or used in the form of curd or cake [tofu], while they are indispensable for making the sauce so highly prized in Asia, and which is shipped abroad in vast quantities for the preparation of a celebrated English sauce as well as others, since it is the foundation for most of our sauces. Any one who patronizes a Chinese restaurant will be familiar with this bean sauce. Millet, rye, barley, oats, wheat and some poor corn, together with cotton and vegetables, form the chief farm crops raised in Korea after rice and beans."

Note 1. By "bean sauce" the author probably means "soy sauce," but he might also mean soybean jang (Korean-style soybean miso).

Note 2. The term "celebrated English sauce" clearly refers to Worcestershire sauce.

Preface: The author lived for 22 years "in China and Korea, including practically the whole period of the latter's diplomatic intercourse with the outside world,..." He spent 3 years in Korea as a medical missionary, 3 years in the Korean service, and 15 years in the diplomatic service of the United States government, "beginning as secretary of legation and ending as minister plenipotentiary." The poor Koreans are in desperate straits but opposition by them to their situation "seems at present to be unavailing if not suicidal." Sadly, the United States "deserted them in their time of need and ignored the solemn agreement we had entered into with them as an inducement for their abandoning the centuries-old position of exclusion and non-intercourse and emerging into the dazzling glare of treaty relations. Our treaty with Korea of May 22, 1882, in its first article, makes the following promise: 'If other Powers deal unjustly or oppressively with either government, the other will exert their good offices on being informed of the case, to bring about an amicable arrangement, thus showing their friendly feeling."

The U.S. disregarded this solemn pledge at the time of the Portsmouth convention; we violated our sacred covenant.

Chapter 16, "Political changes and probabilities."

1884–The "haughty Chinese drove the then inconspicuous Japanese so precipitately from the land that they left their dead in the streets to be devoured by the dogs" (p. 243); the Chinese continued their traditional domination of Korea.

1894-1895–First Sino-Japanese War, over domination of Korea; the Japanese won and in Oct. 1895 the treaty of Shimonoseki was signed. During this war the world got its first intimation of the excellence of Japanese military organization and power. But diplomatic mistakes in Korea by Japan, after her victory, enabled Russia to gain the upper hand. Yet Russia too made diplomatic blunders while for 10 years Japan prepared for another war over Korea.

1904-1905–Russo-Japanese war; Japan won, gained control of Korea, and drove Russia from the entire area except in the vicinity of Vladivostok. During the 20 previous years when Korea could have fortified the country, it "played at all manner of silly pastimes." Now Korea is Japan's to exploit for herself. The U.S. position in the area has been weakened. Japan's next great objective will surely be China; it is only a matter of time. Address: Toledo, Ohio; M.D., Late Envoy Extraordinary and Minister Plenipotentiary of the United States.

• ***Summary:*** Wade-Giles reference: *Wei T'ui Chü Sui Pi,* by Huang Shih-Jung. Qing dynasty. A revised edition of this book, edited by Huang's son, appeared in 1916 during the Republican period. This is a summary by Mr. Huang (in China) of a publication by Li Yu-ying–who was in France at

© Copyright Soyinfo Center 2013

the time.

The section titled "Soybeans efficacy and use" (*gongyong*) states: Mr. Li Yu-Ying recommends that China establish an association / society for soybeans and soybean technology for Chinese manufacturing. Li wrote two articles: One, to promote the establishment of a society for soybeans, and the second to promote manufacture of soybean products in China using modern technology. It is most important to invent new methods of production and manufacture, which would have a great effect on the industry. These two, which contained 5,000 words, were published in a Chinese newspaper [probably in China] the 2nd month on the 6th, 7th, 8th, 9th, 10th, 11th, and 12th days. Note: The name of the newspaper is not given. Mr. Huang summarizes the content as follows:

The nutrients of the soybean benefit health, economics, and commercial production; it is worthy of future development. Its wider propagation will improve the fertility of the soil because the roots contain nodules which fix nitrogen to enrich the soil. Soybeans are a rich source of dairy products (milk content) and oil, so they are very nutritious. They can be used to make good substitutes for meat. They are rich in phosphorus and potassium, so they are healthful and strengthen the brain. Since they are lacking in starch, they are good for diabetic diets. Because they are a rich source of dairy products (milk content) and oil, they would be a good material for industrial exploitation. And its very inexpensive; it sells for only about one-fifth as much as legumes from other countries. When you compare the milk / protein content with that of meat, milk, or eggs, or with other legumes and cereal grains, it is at least 2-10 times higher.

The soybean is rich in phosphorus, which is equal to the efficacy of Western medical phosphorus. Other products: Whole soybeans (*douren*). Soybean noodles (*doumian;* wheat pasta enriched with soy); it is a substitute for wheat gluten (*mianjin*). Soybean oil (*douyou*). Soybean cake–defatted (*doubing*). Okara or residue from making soymilk (*douzha;* [mostly fed to animals]). Soymilk (*doujiang*). Spray-dried soymilk (*doujiangfen*). Canned soymilk (*guandoujiang*). Soured soymilk (*suandoujiang;* by lactic acid fermentation). Soybean extract (*doujing*). Tofu (*doufu*). Pressed tofu–sliced (*doufugan yupian*). Fermented tofu (*faxiao doufu*). Whey–from making tofu (*yujiang*). Soy sauce (*jiangyou*). Sweet wheat-flour jiang (*tiandoujiang*). Soy sprouts (*douyacai*). Soybean coffee (*douren jiafei*). (Translated by H.T. Huang, PhD, April 2003).

603. Kato, Yogoro. 1908. Physico-chemical studies on tofu. *Memoirs of the College of Science and Engineering, Kyoto Imperial University* 1:325-31. (Chem. Abst. 3:2182). [2 ref. Eng]

• ***Summary:*** Tofu is a foodstuff made by grinding the soy bean with water, filtering to obtain a milky liquid, and coagulating the suspended matter by the addition of a bitter salt solution (bittern). This bitter salt solution is obtained as the residue in making common salt from sea-water by evaporation. The author concludes that the tofu solution contains a negative colloid and belongs to the class of solutions which might be called colloidal suspension. "It seems quite probable that the manufacture of tofu is based upon the coagulation of the colloid by electrolytes: consequently, several electrolytes containing cation [cations] of high valency, besides calcium and magnesium, may be employed for the coagulation."

Note: This is the earliest English-language document seen (Aug. 2010) that contains the term "physico-chemical" or with the term "physico-chemical" in the title. Address: Chemical Lab., Higher Technological School of Tokyo.

604. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1908. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 4]. 234 Turk St., San Francisco, California. 491 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 3 unnumbered leaves of black and white photos (two show before and after the San Francisco earthquake and fire) on glossy paper, 20 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last four pages are the table of contents, 210 numbered pages which are the body of the book, 84 pages of ads NUJN, 6 unnumbered pages of index and ads, 95 pages of directory NUJN, 37 pages of ads and back matter NUJN.

The import tax on shoyu is either 40% or 4% (unclear, p. 48). There is one tofu shop near (but not in) Oakland, California (p. 180, lower right). There are three tofu shops in San Jose, one in Watsonville, one in Salinas, and a brewery [that may make shoyu and sake] in San Jose (p. 182).

The Directory shows Japanese companies making soyfoods in California and Nevada (Reno). Address: San Francisco, California.

605. Visser, M.W. de. 1908. The fox and the badger in Japanese folklore. *Transactions of the Asiatic Society of Japan* 36(1):1-159. See p. 126. [100+* ref]

• ***Summary:*** "The words and deeds of the persons so possessed are very strange. They ask, for example, for azuki-meshi (rice and red pea-beans mixed), tôfu-juice (bean curd) and tai fish laid in miso (sauce made of wheat, beans and salt), and after having eaten very greedily the possessing fox demands through the mouth of the patient a piece of ground belonging to the family of the latter (in behalf of the fox keeper), menacing the life of the patient if it is refused."

Contains a long discussion about "Inari, the fox-shaped spirit of rice" (p. 129+), but does not mention Inari-zushi. Address: PhD, Japan.

606. Watt, George. 1908. Commercial products of India. Being an abridgment of "The Dictionary of the Economic Products of India." London: John Murray. viii + 1189 p. See p. 564-65. [15 soy ref]

• ***Summary:*** Since Watt's *Dictionary of the Economic Products of India* has been out of print for some time, the Government of India asked him to write an updated 1-volume abridgement. He said that soybeans in India were first introduced from Indonesia. "The Soy Bean; in Indian vernaculars, *bhat, ram, gari-kulay, hendedisom horec, pond disom, an-ing-kiyo, tzu-dza, bhatnas, seta, musa, khajuwa,* etc.

"A sub-erect or creeping annual native of China, Cochin-China, Japan and Java, comparatively recently introduced into India, though recorded as acclimatised and even seen as an escape from cultivation. It might, in fact, be described as extensively cultivated, though more as a garden than a field crop; is especially prevalent in Eastern Bengal, Assam (Barpeta Sub-division), the Khasia hills, Manipur, the Naga hills and Burma. It is not infrequent in the plains of India proper, especially in Busti, Gorakhpur, Patna and Purnea, etc. In Bombay and Madras, however, the Soy Bean has apparently hardly passed the experimental stage.

"Cultivation.–Two chief varieties occur, one called white, the other black. On the plains it is generally grown by itself as a *kharif* (autumn) crop. The seeds are sown from June to September, and harvested from November to December... In Assam it is sown with*áhu* (autumn rice) in April and May. The*áhu* crop is removed in July and August, and its stubble acts as a support for the bean plants, which are ready for harvest in December and January."

"It is eaten in India in the localities where it is cultivated, chiefly in the form of *dál* or *satú.* In Japan it is largely used as a sauce, cheese (*natto*) or paste, and in China an edible oil is obtained from the seed. If cut when the pods are fully formed it makes a most nutritious fodder, and the seed-cake, as already stated, is an extremely rich cattle food."

Also discusses: Alfalfa (p. 778). Almonds (*Prunus amygdalus,* p. 905). Broad bean or Windsor bean (*Vicia faba,* p. 1106-07. "There are two distinct forms, the long-podded and the broad-podded, the latter originating the name 'Broad' or 'Windsor bean'"). Chufa (*Cyperus esculentus,* p. 465; also called Rush-nut, earth-almond, or tiger-nut). Coffee (p. 363-68, with an excellent history). Cowpeas (p. 1107-08). Lucerne or alfalfa (*Medicago sativa,* p. 778-79).

Mung bean, *udid,* and *urud / urd* (*Phaseolus mungo* or *P. radiatus,* p. 880-82). "There has been some confusion regarding the nomenclature of *Phaseolus Mungo* and the species which follows–*P. radiatus,*–due chiefly to Roxburgh having transposed the original Linnean names. *P. Mungo, Linn.,* is the present plant, udid or urd; while *P. radiatus,* Linn., is the plant known in the vernacular as mung. There are two varieties of udid, one with large black seeds, the other with smaller greenish seeds, and these correspond very possibly with *P. Mungo* proper and the variety *Roxburghii.*

Sea-weeds (Kelp, p. 50). Address: Kew Gardens, England; Formerly, Prof. of Botany, Calcutta Univ., Superintendent Indian Museum (Industrial Section) and reporter on economic products to the Government of India.

607. *USDA Bureau of Plant Industry, Inventory.* 1909. Seeds and plants imported during the period from January 1 to March 31, 1908. Nos. 21732 to 22510. No. 14. 64 p. Jan. 9. Also titled USDA Bureau of Plant Industry, Bulletin No. 137.

• ***Summary:*** Soy bean introductions: Glycine hispida (Moench) Maxim. [Note the first use of this terminology in this publication.]

21754-21757. "From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 3, 1908.

"21754. Yellow seeded.

"21755. *Ogemaw.* Extra early, brown seeded.

"21756. Black seeded.

"21757. Extra early, black seeded."

21818. "From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 17, 1908. *Ito San.* Called by the French, *Yellow Etampes.*

21825. "From Hokkaido, Japan. Presented by Mr. K. Hashimoto, Kuchchau Agricultural Society, Abutagun. Received January 14, 1908. *Amherst* (?). 'Used in the manufacture of "soy," "miso," "tifu" [tofu], etc.' (*Hashimoto.*)"

21830/21831. "From Hokkaido, Japan. Presented by the Yokohama Nursery Company, Yokohama, Japan. Received January 24, 1908.

"21830. *Butterball.* Japanese name *Akita.*

"21831. Japanese name *Rumoi.*"

21946. "From Buitenzorg, Java. Presented by Dr. M. Treub, director of the Department of Agriculture. Received February 11, 1908. *'Zwarte kadelee'"* [black soybeans].

21999. "Received through Mr. F.N. Meyer, agricultural explorer for this Department at the Plant Introduction Garden, Chico, Cal., February 12, 1908. From Boshan, Shantung, China. '(No. 799a, Sept. 18, 1907.) A rare variety of soy bean, sparsely grown near Boshan. Chinese name *Ta ha tau.* Used by the higher classes as a vegetable in soups.' (*Meyer.*)"

22311/22312. "From Shanghai, Kiangsu, China. Presented by Rev. J.M.W. Farnham, Chinese Tract Society. Received March 11, 1908.

"22311. Black. 'Similar to *Nuttall* but larger.' (*Nielsen.*)

"22312. Yellow."

22317-22322. "From Erfurt, Germany. Purchased from Haage & Schmidt [seedsmen]. Received March 16, 1908.

© Copyright Soyinfo Center 2013

"22317. Probably *Butterball.*

"22318. *'Giant Yellow.'* Probably *Amherst.*

"22319. Brown.

"22320. *Samarow.* Like No. 17260.

"22321. Probably *Cloud.*

"22322. *'Early Black* from Podolia [Ukraine].' Probably *Buckshot."*

22333-22337. "Grown at Arlington Experimental Farm, Virginia, season of 1907. Received March 19, 1908.

"22333. *Baird.* 'This variety was mixed with *Brownie* when received from Pingyang [Pyongyang / P'yongyang], Korea. This mixture was given S.P.I. No. 6414. The two varieties were grown together under these numbers, 9417, 17256, and Agrost. No. 1542, respectively. The two varieties were separated in the 1907 seed from Arlington Farm, and *Baird* given the above new number, *Brownie* remaining as No. 17256.' (*Nielsen*).

"22334. Flat black. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. The original source of the seed is not known. It is quite similar in growth to *Nuttall,* but the seed is not the same shape, being flatter and larger.' (*Nielsen.*)

"22335. Yellow. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois, where it was grown as *Illinois Medium Yellow.* It is very similar to *Hollybrook,* and perhaps is the same, but appears different on account of having been grown farther north.' (*Nielsen.*)

"22336. *Guelph.* 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Wooster, Ohio.' (*Nielsen.*)

"22337. *Guelph.* 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Fayetteville, Arkansas' (*Nielsen.*)."

22379-22381. "From Canton, Kwangtung [province], China. Presented by Dr. J.M. Swan, Cooks Hospital. Received March 20, 1908.

"22379. Yellow.

"22380. Black.

"22381. Green mixed with yellow and a few brown."

22406/22407. "From Hongkong, China. Presented by Mr. S.T. Dunn, Botanical and Forestry Department. Received March 26, 1908. [Note: It is not clear whether or not they were ever cultivated in Hongkong. These two soybeans (#22406 and #22407, both black seeded) were later given the names "Hongkong" and "Nigra" respectively, and introduced to the USA in about 1910].

"22406. Yellow.

"22407. Black."

22411-22415. "From Naples, Italy. Purchased from Dammann & Co. Received March 25, 1908.

"22411. *Samarow.*

"22412. Black. 'Similar to *Cloud.'* (*Nielsen.*)

"22413. Brown.

"22414. Yellow. 'Similar to *Acme.'* (*Nielsen.*)

"22415. Giant yellow."

"Glycine soja Sieb. & Zucc." [Note the first mention of this species.] 22428. "Grown at Arlington Farm, Virginia, season of 1907, under C.V.P. No. 0474. Received March, 1908. 'Original seed presented by the Botanic Gardens, Tokyo, Japan. A near relative to the soy bean, but a spreading or decumbent plant, abundantly provided with large root nodules. Has considerable promise as a cover or green manure crop.' (*Piper.*)"

22498-22501. "From Hangchow, Chehkiang, China. Presented by Dr. D. Duncan Main, through Mr. J.M.W. Farnham, Shanghai, China. Received March 26, 1908.

"22498. Yellow. Similar to No. 18619.

"22499. Yellow.

"22500. Green. Similar to No. 17857.

"22501. Black."

22503-22507. "From Yokohama, Japan. Purchased from L. Boehmer & Co. Received March 31, 1908. The following seeds with Japanese names quoted; varietal descriptions by Mr. H.T. Nielsen:

"22503. *'Teppo Mame.'* Yellow, similar in appearance to *Amherst,* No. 17275.

"22504. *'Kaze Mame.'* Green.

"22505. *'Gogwatsu Mame.'* Yellow, similar to *Haberlandt,* No. 17271.

"22506. *'Maru Mame.'* Yellow.

"22507. *'Vieuri Lei.'* Green, similar to *Yosho,* No. 17262." Address: Washington, DC.

608. Holland, Edward B. 1909. Soy beans and soy bean oil. *Massachusetts Agricultural Experiment Station, Annual Report* 21(Part II):111-19. Jan. 1909. [30 ref]

• ***Summary:*** Contents: Economic uses. The chemistry of soy bean meal. Table showing composition of Medium Green soy beans. Soy bean oil: Physical tests (tables show specific gravity, specific viscosity, refractive index, mean dispersion), chemical tests (tables show acid number, ether number, Hehner number, insoluble acids, neutralization number, mean molecular weight, iodine number).

The oil was removed from the soy beans by the V.D. Anderson Company of Cleveland, Ohio, using torsional pressure. "An analysis of the resulting cake indicates that from 55 to 60 per cent. of the oil was removed. The oil was passed through a filter press, but was not refined otherwise. The oil was clear and of a dark amber color, with an odor similar to that of other vegetable oils." The author found the oil to have following physical constants: Specific gravity at 15ºC 0.9206. Specific viscosity 8.43. Refractive index at 20ºC 1.4749. Mean dispersion at 20ºC 0.00938.

In chemical tests, the author found the following constants: Saponification (*Koettstorfer*) number 191.95. Acid number 1.27. Ether number 190.68. Iodine number 130.77.

© Copyright Soyinfo Center 2013

"According to the classification of Lewkowitsch, based on iodine number, soy bean oil is a semi-drying oil of the cotton-seed oil group."

Note 1. E.B. Holland is no relation to J.H. Holland of London, who wrote about soy in 1910.

Note 2. This is the earliest English-language document seen (Sept. 2006) with the term "soy bean oil" in the title.

Note 3. This is the 2nd earliest document seen (Sept. 2006) that uses the term "Refractive index" in connection with the soja bean, and the first that gives a value (1.4749 at 20ºC).

Note 4. Values for the specific gravity and saponification number of soy bean oil, attributed to Shukoff in "correspondence with Dr. Lindsey," are the same as those published by Shukoff in *Chemische Revue ueber die Fett- und Harz-Industrie* (Hamburg, Germany) (Dec. 1901, p. 250-51). Address: M.Sc., Assoc. Chemist, 28 North Prospect St., Amherst, Massachusetts.

609. *USDA Bureau of Plant Industry, Inventory.* 1909. Seeds and plants imported during the period from April 1 to June 30, 1908. Nos. 22511 to 23322. No. 15. 81 p. Feb. 25. Also titled USDA Bureau of Plant Industry, Bulletin No. 142.
• ***Summary:*** Soy bean introductions: Glycine hispida (Moench) Maxim.

22534/22535. "From Weihsien, China. Presented by Mrs. C.W. Mateer. Received April 4, 1908.

"22534. Yellow. 'This bean is used for making lamp and cooking oil and for flour to make cakes; also for bean curd (a mush curdled by caustic soda and eaten fried). All these are nourishing, but more esteemed by Chinese than foreigners. The refuse after expressing the oil forms a cake (round) 2 feet in diameter and 3 inches thick. This is exported for feeding animals (pounded fine) and enriching land.' (*Mateer.*)

"22535. Black. Similar in appearance to *Cloud."*

22536-22538. "From Chefoo [Yantai], Shantung, China. Presented by Mr. Hunter Corbett, through Rev. J.M.W. Farnham, of Shanghai, China. Received April 4, 1908. The following seeds, varietal descriptions by Mr. H.T. Nielsen:

"22536. Green. Similar to No. 17857.

"22537. Green. Similar to No. 17262, *Yosho.* 'Chinese names (S.P.I. No. 22536) *Ching teo* and *Luh teo;* (S.P.I. No. 22537) *Whong teo.* These beans are used extensively for the manufacture of oil; the bean cake which remains after the oil has been pressed out is shipped south and extensively used as a fertilizer in vegetable gardens. Will grow well on level or high and hilly land. Is used by the people largely for food, being ground and made into a curd, also put in water and soaked until well sprouted and used as a vegetable. It is also boiled and eaten in the same manner as rice.' (*Corbett.*)

"22538. Black. Similar in appearance to *Cloud.* 'Chinese name *Shao hih teo.* Used chiefly for feeding animals.' (*Corbett.*)"

22633/22634. "From Sheklung, Kwongtung [Kwangtung / Guangdong], China. Presented by Mr. A.J. Fisher, American Presbyterian Mission. Received April 3, 1908.

"22633. Yellow. Similar in appearance to *Acme,* No. 14954, but seed is a trifle larger.

"22634. Black. Seed flatter than any other of the same size received from China."

22644-22646. "From Hangchow, Chehkiang, China. Presented by Mr. John L. Stuart. Received April 18, 1908. The following seeds, varietal descriptions by Mr. H.T. Nielsen:

"22644. Smoky yellow. Looks like it might possibly be a mixture.

"22645. Greenish yellow. Similar in appearance to *Haberlandt,* No. 17263.

"22646. Yellow. Practically identical with No. 18619."

22714. "From Saigon, Cochin China. Presented by Mr. Jacob E. Conner, American consul. Received April 21, 1908. Yellow."

22874-22885. "From Tokyo, Japan. Purchased from the Tokyo Plant, Seed, and Implement Company. Received May 14, 1908. The following seeds, varietal identifications and descriptions made by Mr. H.T. Nielsen:

"22874. Green.

"22875. *Flat King.* Same as Nos. 19982 and 17252.

"22876. Yellow. Similar in appearance to *Hollybrook,* No. 17269.

"22877. *Okute.* Apparently identical with No. 19986.

"22878. *Butterball.* Apparently identical with Nos. 19981 and 17273.

"22879. Yellow. Evidently two varieties; most of the seed very similar in appearance to *Acme,* No. 14954.

"22880. Yellow. Quite closely resembling *Hollybrook.*

"22881. Green.

"22882. Yellow. Apparently identical with No. 20892.

"22883. *Buckshot.* Apparently identical with No. 19987.

"22884. Yellow, with a slight purple marking on many of the seeds.

"22885. *Amherst.* Apparently identical with Nos. 19983 and 17275."

22886. "From Swatow [Shantou], Kwangtung [province], China. Presented by Mr. William Ashmore, Jr., through Rev. J.M.W. Farnham, Chinese Tract Society, Shanghai, China. Received May 14, 1908. Black."

22897-22901. "From Paotingfu, Chihli [later Baoding, Hebei], China. Presented by Rev. J.W. Lowrie, D.D., through Rev. J.M.W. Farnham, Chinese Tract Society, Shanghai, China. Received April 22, 1908. The following seeds. Chinese names in italic as given by Mr. Lowrie. Descriptions of varieties by Mr. H.T. Nielsen.

"22897. *Da ching don.* Green. Similar to No. 17857.

"22898. *Hwang don.* Yellow.

"22899. *'Hei don.* Boiled as a fodder for mules and horses. Oil expressed from it, and refuse used as manure.'

© Copyright Soyinfo Center 2013

(*Lowrie.*)

"22900. '*Da wu don.* Tends to vary after successive plantings.' (*Lowrie.*) Black. Similar in appearance to *Nuttall,* Nos. 17253 and 19183, but has green cotyledons.

"22901. *Hsiao bai hei don.* Smoky yellow."

22919-22922. "From Ingchung, via Fuchau, China. Presented by Mr. J. Willis Hawley. Received May 22, 1908. The following seeds. Varietal descriptions by Mr. H.T. Nielsen:

"22919. Black. Very similar to No. 22886.

"22920. Yellowish green.

"22921. Yellow. Very similar to No. 22714.

"22922. Yellow. Seed resembles *Mammoth* very closely, but slightly smaller."

22927. "From Shanghai, Kiangsu, China. Presented by Rev. J.M.W. Farnham, Chinese Tract Society. Received May 27, 1908. Black. 'Identical with *Shanghai,* No. 14592; cotyledons are green.' (*Nielsen.*)"

23205. "From Shanghai, Kiangsu, China. Presented by Dr. S.P. Barchet, interpreter, American consulate. Received June 30, 1908. 'Similar in appearance to *Ebony,* No. 17254.' (*Nielsen.*) An important bean for dry rice land. Chinese name *Pu chi.'* (*Barchet.*)"

23207-23209/23211-23213/23229/23232. "From China. Received through Mr. Frank N. Meyer, agricultural explorer, and brought by him to the Plant Introduction Garden, Chico, Cal., June, 1908. Forwarded to Washington, D.C., and received July 6, 1908. The following seeds:

"23207. From Soochow, Kiangsu, China. '(No. 960a, April 27, 1907.) A large, greenish soy bean, grown around Soochow on the rather low-lying lands. Used when slightly sprouted as a vegetable. Chinese name *Tsin tou.'* (*Meyer.*)

"23208. From Tangsi, Chehkiang, China. '(No. 961a, April 20, 1908.) A large, yellow soy bean, often purplish colored on one side. Considered locally a very good variety. Chinese name *Sian chu tou.* Grows on the ridges around inundated rice fields.' (Meyer.)

"23209. From Tangsi, Chehkiang, China. '(No. 962a, April 20, 1908.) The ordinary variety of yellow soy bean as grown around Tangsi on the ridges and strips of land around and between inundated rice fields. Chinese name *Huang tou.'* (*Meyer.*)

"23211. From Tangsi, Chehkiang, China. '(No. 964a, April 20, 1908.) A very dark brown colored soy bean, grown near Tangsi; said to be very productive. Chinese name *Tsze pi tou.'* (*Meyer.*)

"23212. From Hangchow, Chehkiang, China. '(No. 965a, April 24, 1908.) An early-ripening, yellow soy bean, called the sixth month's bean, meaning ripening in the Chinese sixth month (our July). Chinese name *Lu ya pai mou tou.'* (*Meyer.*)

"23213. From Hangchow, Chehkiang, China. '(No. 966a, April 24, 1908.) A yellow soy bean called the seventh month's bean, meaning ripening in the Chinese seventh month (our August). Called in Chinese *Chi ya pai mou tou.'* (*Meyer.*)

"23229. From Tientsin, Chihli, China. '(No. 982a, April 4, 1908.) A dark brown colored soy bean; rare. Said to grow near Tientsin. Used for human food; boiled in soups or as a vegetable when slightly sprouted. Chinese name *Tse doh.'* (*Meyer.*)

"23232. From Shanghai, Kiangsu, China. '(No. 985a, May 11, 1908.) The *Barchet* soy bean, growing on wet rice lands. Chinese name *Ma liao tou.* Obtained through Dr. S.P. Barchet, of Shanghai, who procured these soy beans from Chinhuafu, in the Chehkiang Province, central China.' (Meyer.)"

23291/23292/23296/23297/23299/23303/23305/23306/23311/23312. "From China. Received through Mr. Frank N. Meyer, agricultural explorer, and brought by him to the Plant Introduction Garden, Chico, Cal., June, 1908; forwarded to Washington, D.C., and received July 6, 1908. The following seeds:

"23291. From Wutaishan, Shansi, China. '(No. 922a, Feb. 26, 1908.) Black soy bean, growing at 5,000 to 6,000 feet elevation. Are considered by the Chinese the best food for their hard-working mules and horses; they must always be boiled before being fed to the animals; otherwise they may cause colic; the Chinese also mix a liberal quantity of sorghum seed and chopped straw with these beans. Chinese name *Ghae doh.'* (*Meyer.*)

"23292. From Wutaishan, Shansi, China. '(No. 923a, Feb. 26, 1908.) Yellow soy bean. Growing at 5,000 to 6,000 feet elevation. They are used all through northern China for making bean curd and bean vermicelli. Chinese name *Huang doh.'* (*Meyer.*)

"23296. From Taichou, Shansi, China. '(No. 929a, March 2, 1908.) Yellow soy beans, found growing on strongly alkaline lands. Chinese name *Huang doh.'* For further remarks see No. 923a (S.P.I. No. 23292).' (Meyer.)

"23297. From Taichou, Shansi, China. '(No. 930a, March 2, 1908.) Black soy bean. Grows on strongly alkaline lands. Chinese name *Ghae doh.'* For further remarks concerning their uses see No. 922a (S.P.I. No. 23291).' (Meyer.)

23299. "From Tsintse, Shansi, south of Taiyuanfu, China. '(No. 933a, March 12, 1908.) Black and yellow. A rare local variety of a strange soy bean used as a vegetable when slightly sprouted, and after having been scalded for a few minutes in boiling water is eaten with a salt sauce; the skin must be removed before scalding. Chinese name *Yang yen doh,* meaning sheep's eye bean.' (Meyer.)

"23303. From Shiling, Chihli, China. '(No. 949a, Jan. 25, 1908.) Yellow soy bean. Chinese name *Ta huang doh.* For further remarks see No. 923a (S.P.I. No. 23292).' (Meyer.)

"23305. From Peking, Chihli, China. '(No. 951a, Feb.8, 1908.) Large, light yellow soy bean. Used mostly as

© Copyright Soyinfo Center 2013

a vegetable when slightly germinated, and eaten with a salt sauce. Chinese name *Ta huang doh.'* (*Meyer.*)

"23306. From Peking, Chihli, China. '(No. 952a, Feb. 8, 1908.) Large, black soy bean, green inside. Comes from Manchuria and is used mostly like the preceding number (S.P.I. No. 23305.) Chinese name *Ta ghae doh.'* (*Meyer.*)

"23311. From Shiling, Chihli, China. '(No. 957a, Jan. 25, 1908.) Large, green soy bean. Used as a vegetable when slightly sprouted, after having been scalded in boiling water. Chinese name *Ta ching doh.'* (*Meyer.*)

"23312. From Pautingfu, Chihli, China. '(No. 958a, Jan. 28, 1908.) A rare, local variety of soy bean, being small and of greenish yellow color. Chinese name *Shau ching doh.'* (*Meyer.*)"

Note: This is the earliest English-language document seen (Oct. 2004) that uses the term "dark brown" to describe the color of soybean seeds. Address: Washington, DC.

610. Russell, W.P.M. 1909. China. Report for the year 1908 on the trade of Antung. *Diplomatic and Consular Reports, Annual Series* (*Foreign Office, Great Britain*). No. 4185. 18 p. March.

• ***Summary:*** The section titled "Exports for 1908" (p. 7-8) discusses the amount and value of Beans [soybeans], bean cake, and bean oil exported from this port. An excellent full-page map shows the Eastern Manchuria and Shenking Province, including all the major ports, rivers (Antung is a port on the Yalu River), railroads, and bodies of water.

"Products of Eastern Manchuria.–The following are some of the principal agricultural products of Eastern Manchuria: -

"Beans.–Many varieties are produced, of which the chief are: -

"1. Huangtou, yellow [soy] beans.–These are most extensively grown and are used for making bean cake and bean oil. The average bean cake weighs 50 catties and is worth 1 dol. 20 c to 75 c. small money at the place of production. The oil sells for about 15 c. a catty. The beans themselves fetch 10 dol. a picul on an average. [Note: 1 picul = 133.3 pounds weight.] They are also used for making bean curd, which is one of the chief foods of the people. It has the appearance of curds of milk and is made by a somewhat similar process. The beans are also used for feeding cattle.

"2. Hsiaotou, small beans [azuki].–These are used as a vegetable and also for feeding cattle. They are also used for making vermicelli. Note: This is the earliest English-language document seen (March 2006) that uses the term "small bean" to refer to the azuki bean.

"3. Lutou, green beans [mung beans].–The young sprouts of these are used as a vegetable. The bean is principally used for making vermicelli.

"4. Hetou [Heitou], black [soy] beans, are much grown and much used for feeding cattle and also for making oil and bean cake."

The section on "Exports for 1908" under "Beans" states that "owing to an exceptionally heavy supply coupled with a weak demand from the consuming quarters in Japan and South China, there was speedily a very heavy fall in price and 5 taels 50 c. was quoted [down from 7 to 8 taels last year]... It is stated that the restriction of the opium crop has caused an expansion of the area of the bean crop. The returns show an export of bean cake more than doubling that of the year 1907. Beans largely figure in the money market as a standard for deferred payments." Address: Acting Vice-Consul.

• ***Summary:*** This is a summary of the author's pioneering article that first appeared in *Archives of Pediatrics*, July 1909, p. 496-501. Address: M.D., Baltimore, Maryland.

613. Ruhräh, John. 1909. The soy bean in infant feeding; Preliminary report. *Archives of Pediatrics* 26:496-501. July.

• ***Summary:*** This pioneering paper was read before the Twenty-first Annual Meeting of the American Pediatric Society, Lenox, Massachusetts, May 28, 1909. "The soy bean (glycine hispida), sometimes incorrectly called the soja bean, is an annual leguminous plant which originally grew in a wild state from Cochin China to the south of Japan and Java."

There follows a brief but accurate history of the soy bean. "In 1875 Professor Haberlandt began a series of investigations with this plant in Austro-Hungary, and in his work published in 1878 he urges the importance of the soy bean as a food both for man and animals. After his death, which occurred in 1878, very little notice was taken of the soy bean in Hungary and the prophecy that he made for its future failed."

"As early as 1829 Thomas Nuttall wrote an article in the *New England Farmer* concerning the bean as a valuable crop for this country. The Perry expedition to Japan also brought back soy beans, but until the last fifteen or twenty years the plant was known only as a curiosity."

"The plant is grown in America, but is used chiefly for the purpose of a forage crop and comparatively little reference has been made to its use as food for man." The plants "bear a remarkable number of beans and the flowers are self-pollinated, making the yield independent of insects. The bean may be easily grown in Maryland. I am indebted to three friends for experimenting with this plant in their

© Copyright Soyinfo Center 2013

gardens and obtaining good crops..."

Note 1. This is the earliest document seen (May 2009) that mentions soybean pollination–quite remarkable since it is by a pediatrician writing about a completely different subject. It is also the earliest document seen (May 2009) that uses the term "self-pollinated" (or self-pollinating, etc., with or without the hyphen) in connection with soybeans.

"At the present time there are seven varieties handled by seedsmen, and some twenty-two distinct varieties are known." The varieties Mammoth Yellow, Hollybrook, and Ito San have been used in infant feeding experiments. "The other varieties are the Guelph (green), the Samarow (green), the Ogemaw (brown), and the Buckshot (black). All of these latter may be grown in the north."

"I am indebted to Mr. Frank N. Meyer, agricultural explorer for the Department [U.S. Department of Agriculture], for information concerning the use of the beans in the East... The light-colored beans are eaten in soups and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as promoters of appetite; the same varieties are often slightly sprouted, scalded and served with meals in winter time as a green vegetable." Also discusses soybean oil, soy bean milk (which "has a composition nearly the same as that of cow's milk" as shown in a table), "natto, tofu, miso, yuba, shoyu,..." (p. 498).

"The soybeans are sometimes roasted and then used as a substitute for coffee" (p. 499)

"The fact that the soy beans contain little or no starch suggested to Dujardin-Beaumetz that they be used as a food for diabetics. The soy bean flour has been placed on the American market, but was withdrawn owing to the fact that according to the manufacturers it contained 8 per cent. carbohydrate. It contains much less carbohydrate, however, than any of the other diabetic foods."

"As regards the use of the beans in infant feeding it seemed to me that soy bean gruel or milk, either alone or with cow's milk, might be of value in feeding several classes of cases, viz., of marasmus and malnutrition, as a substitute for milk in diarrhea, and in intestinal and stomach disorders, and in diabetes mellitus."

Note 2. This is the earliest document seen (July 2008) that suggests the use of a soybean preparation as a milk substitute for infants."

Note 3. This is the earliest document seen (Aug. 2003) concerning the actual feeding of soymilk to infants or children, or concerning a soy-based infant formula. The author was the world's first pediatrician to use soybeans in infant feeding, and did the first U.S. studies with soyfoods and human nutrition.

Note 4. This is the earliest English-language document seen (Oct. 2003) that uses the term "substitute for milk" to refer to soymilk. Note 5. This is the earliest English-language document seen (Nov. 2002) that uses the word "malnutrition" in connection with soyfoods.

The writer had hoped to conduct experiments and make a more complete clinical report but several misfortunes attended his efforts to secure the beans. "My first crop was eaten by rats, my second moulded in the pods owing to some unusually damp weather, and insects ate about two-thirds of my last crop. Fortunately, the beans may now be obtained from Messrs. T.W. Wood & Son, Richmond, Virginia.

"So far the gruel has been prepared by soaking the beans over night, stirring to remove the envelope surrounding the bean. Three times the amount of water is added to the beans and they are boiled until a smooth gruel results. This is strained if necessary [to make real soymilk]. This has the odor and taste of malt, but with the addition of a little salt is well taken, especially after the first bottle or two. The gruel is retained unusually well and seems to be easily digested. The stools are not more frequent than with other foods. The stools are light brown in color like those from malted milk. This soy bean gruel has nearly the same food value as milk and for certain children may need further dilution. About the same size feedings should be used as if milk were being given. Five percent sugar may be added to increase the fuel value.

"I have not used the beans in a sufficiently large number of cases nor over sufficient periods of time to justify any further statements at this time, but I do feel that properly used they will be a most valuable addition to the dietary of the sick infant. Grinding them to a bean meal would simplify matters very much, and, if success attends their use, a soy bean meal could easily be prepared.

"I hope to be able to make a second report at the next meeting and have called your attention to the bean in hope that other members may try them and report at the same time."

Note 6. Pediatrician Herman F. Meyer (1960, p. x) published a long poem by Dr. John Ruhräh titled "A Simple Saga of Infant Feeding," which described the history and present status of infant feeding. Meyer described Ruhräh as a "philosopher, teacher, poet, pediatrist [pediatrician] and able historian."

Note 7. This is the earliest English-language document seen (Oct. 2001) that uses the term "soy bean flour."

The following photo of Dr. John Ruhräh (1872-1935) was taken in about 1914. Born in Chillicothe, Ohio, he was a graduate of the College of Physicians and Surgeons (Baltimore, 1894), did post-graduate work at Johns Hopkins, the Pasteur Institute, Paris (1897), and in other European schools (1900-1901), and was quarantine physician of the port of Baltimore (1898-1900), where he became Professor of pediatrics in the University of Maryland Medical School and in the College of Physicians and Surgeons.

His autograph is shown below. Address: M.D., Baltimore, Maryland.

615. United States Land & Irrigation Exposition. 1909. Will the United States export rice to the Orient? (Ad). *Chicago Daily Tribune.* Oct. 4. p. 8.
• ***Summary:*** This organization believes that, using highly-productive mechanized agriculture, the answer to the above question is "yes." "Food value of rice: The nutritive value of rice is greater than that of any other cereal, and it is easily digested, With a little seasoning–dried fish, soy sauce or soy bean cheese [tofu, or fermented tofu] it furnishes for the Oriental a large part of the protein necessary for daily diet."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "bean cheese" or the term "soy bean cheese" (regardless of hyphenation) to refer to fermented tofu. Address: 4th Floor (#407) Commercial National Bank Building, 115 Adams Street [Chicago].

616. Edie, E.S. 1909. Cultivation and uses of soya beans. *Liverpool University, Institute of Commercial Research in the Tropics, Bulletin* 1(1):1-7. Oct. 8. [1 ref]
• ***Summary:*** An excellent article. Contents: Introduction. Uses of the soya bean: Forage, hay, ensilage, soya oil, soya milk, a type of cheese made from soymilk [tofu], soya meal [flour]; use of soya bean oil for soap, illumination, paints and other industrial products, soya bean meal used as a fertilizer on Chinese sugar plantations, soya beans as a legume for enriching the soil with nitrogen, planting between rows of maize. Cultivation of soya beans. Varieties of soya beans.

"The Soya bean (*Glycine hispida*) is a native of South-eastern Asia, where it has been cultivated for centuries in China and Japan. It was introduced at a later period into India, and arrived in England towards the end of the eighteenth century. A considerable number of experiments were carried out with the plant were carried out in Austria about thirty years ago, but it is only quite recently that it has become an article of commercial importance in Europe."

After discussing uses as hay and silage: "It is in the bean itself, however, that the chief value of the Soya plant lies. As food for man and domestic animals it is used to a very large extent in the East. In some parts of China the bean forms one of the staple articles of food, and it is cooked much as beans and marrowfat peas are, and also in soups and other forms. The oil is used largely for making salads and sauces, and is also mixed with flour in the manufacture of cakes. Mr. Turner tells me that the Chinese extract casein from the bean, and I have also seen this stated elsewhere.

"A liquid closely resembling cow's milk is prepared from Soya beans in Japan." The process is described. "This condensed product is of considerable value as a food, but it is unsuitable for the use of infants. This "Soya Milk" is also used in the preparation of a kind of cheese" [tofu]. Note: This is the earliest English-language document seen (Oct. 2003) that contains the term "Soya milk."

"Soya bean meal is now use in the manufacture of biscuits, and for mixing with flour for making brown bread in this country. In some parts of the Continent Soya meal is now being used in preference to rye meal for making bread."

"One of the most valuable products of the Soya plant is the oil. As mentioned before, it is used largely for eating purposes in the East, and Mr. Turner tells me that on the Continent a greater percentage of Soya oil than of Copra oil is allowed in the manufacture of margarine.

"Soya oil is largely used for soap making in the East, and I understand that it has recently been tried with very good results in this country also.

"As a considerable proportion of oil is left behind in the cake after expression of the oil, it may be more profitable to extract the oil by solvents such as naphtha and use it all for manufacturing purposes, as extraction by means of naphtha renders the oil unsuitable for edible purposes.

"In the East Soya bean oil is used as an illuminant and also in the manufacture of paints. The oil has a comparatively high iodine value, which is an index of the drying quality of an oil of that class." Note: This is the earliest English-language document seen (March 2008) which states that soy oil can be used in paints (or other coatings) in connection with its iodine number.

Cultivation: "Recently the question of raising this crop in various British colonies has been discussed. In most of the African colonies, including West Africa, the Soya bean would probably be successfully grown, and in rotation with, or along with maize and other crops, its cultivation would be a very profitable investment. I have seen samples of Soya beans at least three years old, which showed no signs of weevilling or deterioration in any way. Cargoes of the beans shipped from Vladivostock [Vladivostok] and Dalny to Hull and Liverpool are stated to have arrived in perfect condition."

Varieties: A table (p. 6) gives a nutritional analysis by S.H. Collins of "a sample of Chinese yellow Soya beans." Moisture: 10.23%. Oil 15.62%. Albuminoids 37.54%. Carbohydrates 27.27%. Woody fibre 5.02%. Ash 4.32%.

"I have analysed samples of five distinct varieties of Soya beans, some of which were obtained from the shop of a Chinaman who sells them to the Chinese in Liverpool for food. I do not, of course, know the age of the samples, nor their source..." After describing the shape and color (2 green, 2 brown, 1 black) of each, and noting that No. 4 came from Hong-Kong, he gives a nutritional analysis of each in tabular form, and the weight of 20 seeds of each in grams.

"In conclusion I have to thank Mr. A. Grenville Turner, Grain and Seed Broker, member of the Liverpool Corn Trade Association, for much valuable information regarding the Soya beans and for his kindness in obtaining samples for me. I am also largely indebted to an excellent article on Soya

© Copyright Soyinfo Center 2013

beans in the *Natal Agricultural Journal,* November, 1908.

"Since the above was written I have been enabled, through the kindness of Sir Alfred Jones, to analyse a sample of yellow Soya beans grown in West Africa from seed sent out by him early this summer." A table shows the analysis. Moisture: 10.52%. Oil 17.26%. Albuminoids 36.05%. Carbohydrates 26.16%. Woody fibre 5.39%. Ash 4.62%.

"The results show that in the first season at least the Soya bean underwent no deterioration in West Africa, and the plants also came rapidly to maturity."

Also published in 1909 as a 7-page booklet by C. Tinling & Co., Liverpool. Also published in 1911 Spanish by: Mexico. *Ministerio de Fomento, Colonización e Industria* under the title "Explotación de la soya," by E.S. Edic [sic, Edie]. The last line of the article seems to say that the author is at the central agricultural station (*Estación Agrícola Central*).–San Jacinto [probably in or near Mexico City], January 1911. Address: M.A., B.Sc, Liverpool Univ.

617. *San Francisco Chronicle.* 1909. Experimenting with the soya bean. Oct. 15. p. 6.

• ***Summary:*** From Consular Report: "The first complete cargo of soya beans that arrived in the United Kingdom reached Liverpool February 14, 1909, and the interest in this new industry has grown apace since then, experiments being made in various other parts of England as well as in Liverpool that range from a blend of soya flour, made by an expert Liverpool baker with flour and meal, about one-fifth for mixing with flour and one-sixth for meal, to a soya dog biscuit.

"The blending of soya flour above referred to is desirable by the reason of its demonstrated food value. In albuminoids soya beans are stated to be nearly three times as rich as oats and wheat, and possessed of more fiber and ash. A few German millers are reported to have mixed soya and rye flour in experiments in the making of the black bread of that country, and local millers here are experimenting with a blend to improve their brown bread.

"A vegetable cheese [tofu] is known to be produced from the caseine [casein] that the bean contains, but this has not advanced from the experimental to the commercial stage. It is reported that one or two important Liverpool merchants have sent their own investigators to Manchuria to study the products of that country, chiefly the soya bean. It is also stated that one of the large shipowners of Liverpool contemplates the introduction of the soya bean into West Africa, where soil and labor conditions are thought to be peculiarly favorable to the growth of good crops. This enterprise is cited as a parallel to the British cotton-growing movement at its inception, and some measure of the same success is confidently predicted for it."

• ***Summary:*** Soy bean introductions: *Glycine hispida* (Moench) Maxim.

"24610. From Trenton, Kentucky. Purchased from Mr. S.J. Leavell. Received January 6, 1909. *Trenton.* 'A brown-seeded variety picked out of *Mammoth* by Mr. Leavell in 1904, and in that year 12 plants produced 7 pounds of seed; in 1905 these 7 pounds produced 10 bushels; in 1906 Mr. Leavell reports that with exactly the same treatment it out-yielded *Mammoth* by 50 percent. Seems like a promising variety.'" (H.T. Nielsen).

24641-43. "From Taihoku, Formosa. Presented by Mr. I. Kawakami. Received January 21, 1909. The following seeds:

"24641. Cream-yellow.

"24642. Black, small.

"24643. Black, very small."

24672/24711. "From India. Presented by J. Mollison, esq., M.R.A.C., Inspector-General of Agriculture in India, Nagpur, C.P. Received February 10, 1909. The following seeds (quoted notes by Mr. Mollison; descriptions of varieties by Mr. H.T. Nielsen):

24672-2490.

"24672. '*Rymbai-ktung.* From Khasi Hills, Assam.' Similar to no. 18258a.

"24673. '*Bhatumsh* (red). From Darjeeling, Assam.' Light chocolate color, looks like no. 17852.

"24674. '*Bhatumsh* (yellow). From Darjeeling, Assam.' Straw-yellow with brown hilum.

"24675. '*Bhatwas.* From Safipur, Unao, U.P. [Uttar Pradesh].' Black, small seed about the same size as *Cloud,* but rather more dull in color.

"24676. '*Bhatwas.* From Hasangani, Unao, U.P.' Black, looks like no. 24675, only seeds are shiny like *Cloud.*

"24677. '*Bhatwas.* From Ranjitpurwa, Unao, U.P.' Black, just like no. 24676, only seeds are a trifle smaller.

"24678. '*Chabeni khurti* (spotted variety). From Hardupurwa, Teh Bidhanna, Etawah, U.P.'

"24679. '*Chabeni khurti* (black variety). From Bant, Teh, Sadar, Etawah, U.P.'

"24680. '*Chabeni khurti* (black variety). From Atsu, Teh, Auraya, Etawah, U.P.'

"24681. '*Bhatwas* (mixture of spotted and black). From Mainpuri, U.P.'

"24682. '*Kali khurti, Chabeni khurti, Khajwa.* From Mainpuri, U.P.'

"24683. '*Chabeni khurti* (black variety). From Kilerman, Teh, Sadar, Etawah, U.P.'

"24684. '*Chabeni khurti* (black variety). From Amapur,

© Copyright Soyinfo Center 2013

Teh, Kasaganj, Etawah, U.P.'

"24685. '*Chabeni khurti* (black variety). From Aliganj, Etawah, U.P.'

"24686. '*Chabeni khurti Bhundadar* (spotted variety). From Jalesar, Etawah, U.P.'

"24687. *Khajwa or kulti.* From United Provinces.'

"24688. '*Bhatwas.* From Cawnpore [Kanpur], U.P.'

"24689. *Bhatwas.* From Nanbasta, Cawnpore, U.P.'

"The preceding S.P.I. Nos. 24678 to 24679 are black, with small seed, about the size and shape of S.P.I. No. 20410. There is some slight variation in the size of the seed, but the entire lot might easily be taken for the same variety if judged by the seed only.

"24690. '*Bharat Safed.* From Dehra Dun, U.P.' Similar to S.P.I. No. 22901."

24693-24711. Japanese varieties of soy beans grown on Poona Farm, Bombay Presidency.

"24693. Straw-yellow, with rather an indistinct hilum, quite similar to *Manhattan,* S.P.I. No. 17277.

"24694. Straw-yellow, very similar to S.P.I. No. 24693; seeds may be a trifle larger.

"24695. Straw-yellow, seed very similar to *Ito San,* but the brown speck at end of hilum is very faint.

"24696. Just like above, S.P.I. No. 24695.

"24697. Similar to S.P.I. No. 20405.

"24698. Olive-yellow, very similar to No. 20893a.

"24699. Straw-yellow, seed about the size of S.P.I. No. 17269.

"24700. Pale straw-yellow, with a black hilum; seed about the size of *Acme,* S.P.I. No. 14954.

"24701. Dirty olive-yellow, with slate-colored hilum; seed about the size of *Ito San,* but more globular.

"24702. Straw-yellow, with very faint hilum; similar to *Butterball,* S.P.I. No. 17273, but seed rather smaller and not so bright in color.

"24703. '*Oylan Dai Dizen.'* Straw-yellow, very similar to *Okute,* S.P.I. No. 19986.

"24704. '*Gosha Dai Dizen.'* Very similar to S.P.I. No. 24700.

"24705. Light shade of chromium-green, similar in appearance to S.P.I. No. 17857, but the color is not quite the same. Note 1. This is the earliest English-language document seen (Oct. 2004) that uses the term "chromium-green" to describe the color of a soybean.

"24706. Black. Apparently just like our *Buckshot,* S.P.I. No. 17251.

"24707. '*Kuru Maru.'* Apparently just like *Nuttall,* S.P.I. No. 17253.

"24708. '*Sirohaha'* [Shiro-haha = white mother]. Apparently just like *Butterball,* S.P.I. No. 17273. "24709. *'Teppo.'* Citron-yellow, seeds about the size of *Butterball.*

"24710. '*Motonari.'* Seed very similar to S.P.I. Nos. 24700 and 24704, but the hilum is russet in this case.

"24711. '*Rokugatsu.'* Citron-yellow, with very faint hilum, seed about the size and shape of *Mammoth."* 24839-40 Grown at the Arlington Experimental Farm, Virginia, from seed obtained from Dr. S.P. Barchet, Shanghai, China, in 1906. Seed of the following:

"24839. Greenish. Grown in 1908 under temporary numbers 0578 and 0579, which proved to be identical.

"24840. Yellow. Grown in 1908 under temporary number 0580."

25116-25118. "From Pithoragarh, Kumaun District, India. Presented by Miss L.W. Sullivan. Received March 26, 1909.

"25118. '*Bhat dal.'* A small black variety of soybean."

25130-31. "From Knoxville, Tennessee. Grown at the Agricultural Experiment Station. Received through Prof. H.A. Morgan, March 29, 1909. Seeds of each of the following.

"25130. Early brown.

"25131. Medium yellow."

25132/25149. "From Soochow, Kiangsu, China. Presented by Rev. R.A. Haden, B.D. Received March 19, 1909. The following seeds:

25133-25137

"25133. Small yellow. 'Tom Thumb soy. The smallest variety; used only for bean sprouts.' Note 2. This observation, that Chinese prefer very small soybeans for sprouting, is very important.

"25134. Large yellow. 'Mammoth yellow soy. This is the very largest of the yellow soys. Used especially for oil and bean curds.'

"25135. Large green. 'Tea green soy. Sutt variety. May be put to all the uses of soy, but in practice they are only used to make parched Sutt beans eaten as a relish.'

"25136. Large reddish brown. 'Mammoth red soy. Used only for eating in the green state, but may be used for all the soy purposes. This is the largest of all the soys.'

"25137. Looks like *Meyer.* 'Mammoth mottled soy. Used especially for bean curd; said to give a special flavor to this; has also abundant oil qualities."

"25161. Grown at the Arlington Experimental Farm, Virginia, season of 1908, under Agros. No. 0824. Numbered for convenience in recording distribution, March 31, 1909. *Eda.* (?) Original seed from the Indiana Agricultural Experiment Station, where it was grown as *Early Brown.* 'This turned out to be identical with *Ito San* in every particular except color of seed. It is a uniform light brown, while *Ito San* is yellow. Neither superior or inferior to *Ito San.'* (H.T. Nielsen.)"

"25138. *Glycine soja:* 'Horse-feed peas, a literal translation of the Chinese. It grows wild over a very large portion of China. In the north peas by the same name, but a different variety, are extensively cultivated. Long vines, climbing on anything in reach; fruited from bottom to top. I think this should receive special attention, for the following reasons: It will be a good nitrogen producer. It is extensively

© Copyright Soyinfo Center 2013

used in Chinese medicine, entering largely into prescriptions taken internally for eye trouble. It will make a better drink than anything except good coffee. Parch until brown the whole pea, grind, and treat as boiled coffee. This I have tried and am very fond of it as a drink.' *Distribution.*- An annual vine, native and cultivated in the eastern part of Asia, extending from Amur and Manchuria through China and eastern India; also in Japan." Address: Washington, DC.

620. Wildeman, É. de. 1909. Le soja [The soybean]. *Agronomie Tropicale; Organe Mensuel de la Societe d'Etudes d'Agriculture Tropicale* 1(12):195-200. Dec. 25; 2(1&2):5-8. Jan/Feb. 1910. [10 ref. Fre]
• ***Summary:*** An overview of the subject, including a brief history, based largely on a summary of about ten documents. It begins: "For some years now, attention has been drawn to the soybean (*Soja hispida* (Mönch) or *Glycine hispida* (Max.)), which comes from Manchuria; its products are now used in various ways in our daily lives."

"It is not a question of exhausting the question, but as the *Bulletin of the Imperial Institute* of London has already devoted several articles to this plant this year and that the first part of vol. I of the *Liverpool University, Institute of Commercial Research in the Tropics, Bulletin* [Edie, 8 Oct. 1909] is entirely devoted to it, it appeared useful to us to insist here on the soybean which would also have a certain importance for our colonies."

This legume originated in Southeast Asia, and has been cultivated for centuries in China and Japan. It is now abundant throughout Manchuria, where the seeds are widely appreciated for their nutritive value. It was later introduced into the Indies (*l'Inde*) and arrived in England at the end of the 18th century. About 30 years, it was the subject of numerous trials [by Haberlandt and co-workers] in Austria, but is only recently that it has become an article of commercial importance in Europe.

"The occupation of Northern Manchuria by Russian troops, during the Russo-Japanese War, gave rise to numerous demands for this bean, which stimulated the extension of [its] agriculture. After the departure of the troops, the local demand fell naturally, and it was necessary to find an outlet in foreign markets. From 1906 to 1908, a large part of the products of N. Manchuria were exported to Japan via Vladivostok, but in 1908 the economic crisis of Japan diverted a part of these products to Europe, which actually received large quantities of soybeans, especially in England. The first large shipment of soybeans contained 5,200 tonnes (metric tons) and arrived at Hull on 2 March 1909. The beans arrived at the destination in perfect condition despite the distance. They were classed in three categories: 1. Shipped from Dalny; 2. Shipped from Vladivostock; and 3. Shipped from Hankow. The value of those in category No. 1 is about £6 8*s.*/tonne [metric ton]; those in No. 2 and No. 3 is about £6 6*s.*/tonne, these prices being, naturally, subject to the fluctuations of the market. Most imported beans are monopolized by the manufacturers of oil who obtain 10-18% of the weight of the beans in oil. [The remaining] oilcake can be used in the feed of livestock."

There follows a long discussion of soybean cultivation and production, including soils, fertilizers, nitrogen fixation by root nodules, planting, intercropping, yields of forage and seed, use as silage, soil restoration, soybean varieties, tables showing the chemical composition of the plant and seeds showing their excellent nutritional value.

"Until recently, soybean cultivation has been confined to Asia and some states of the USA. Recently, the question of cultivating this plant in the various British colonies has been raised. In most of the colonies of West Africa, the soybean could probably be cultivated with success in rotation or mixed with maize or other crops, and give significant yields."

"In China, Japan, and Indo-China the seeds are used to prepare a sort of milky liquid (*liquide lactescent*) [soymilk] and a sort of cheese" [tofu]. A brief description of each process is given. The milk has considerable nutritional value "but is not suited for infants."

"The flour of soybeans (*La farine de fèves de soja*) is used to make biscuits, and, mixed with wheat flour, is used to make a brown bread; it is sometimes even preferred in this application to rye flour. Since it contains neither sugar nor starch, the soybean has been recommended as the basis of diabetic diets." Address: Prof., School of Horticulture, Vilvoorde, Belgium (Professeur au Cors colonial de l'École d'Horticulture de Vilvorde).

621. *Monthly Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*). 1909. Soya bean traffic. No. 351. p. 65-67. Dec.
• ***Summary:*** In the section titled "China: Large profits to several concerns handling them," Vice-Consul Gordon Paddock of Harbin, Manchuria, states: "The exports of these beans in the raw state to England was initiated in this district by the Mitsui Company, one of the most important Japanese mercantile concerns, which is said to have made over 1,000,000 yen ($498,000) in this business alone within the last year. More recently, since the beginning of 1909, several British concerns engaged in business in China, have become interested in the export of these beans to England." These include such important concerns as Jardine, Matheson & Co. (Limited), and Samuel Samuel & Co. (Limited) of London. "No large Chinese concern has thus far been interested in the export of these beans from this district."

The section titled "United Kingdom" states: "There is every prospect of the bean trade in North Manchuria developing into a complicated and highly speculative business... American firms have recently entered the market. German firms, in view of the repeal of the duty on beans

© Copyright Soyinfo Center 2013

in Germany, will undoubtedly buy largely; while a well-known Japanese firm, by far the largest operators till now, were believed to be preparing for export on an even larger scale than hitherto. The tendency promises to be for Chinese merchants to get the business into their own hands, buying from the local producers and selling again to the European firms."

The section titled "Liverpool: Experiments in Europe of mixing with flour, etc." states: "Oil millers of Liverpool are disposed to regard the products of the soya bean as additional articles of trade and not as competing to replace the manufactures of cotton seed... The first complete cargo of soya beans that arrived in the United Kingdom reached Liverpool February 14, 1909, and the interest in this new industry has grown apace since then." An expert Liverpool baker, as an experiment, has made a blend of soya flour and wheat flour for use as a "soya dog biscuit... A few German millers are reported to have mixed soya and rye flour in experiments in the making of the blackbread of that country, and local experimenters her [in Liverpool] are experimenting with a blend to improve their own brown bread.

"A vegetable cheese [tofu] is known to be produced from the caseine [casein] that the bean contains, but this has not advanced from the experimental to the commercial stage."

It is "stated that one of the large shipowners of Liverpool contemplates the introduction of the soya bean into West Africa, where soil and labor conditions are thought to be particularly favorable to the growth of good crops. This enterprise is cited as a parallel to the British cotton growing movement at its inception, and some measure of the same success is confidently predicted for it.

"Soya Bean Growing for Africa." Consul Horace Lee Washington of Liverpool "reports that several British firms displayed in the Liverpool office of a large shipping concern samples of soya-bean products. These samples are to be sent to the Calabar and Lagos [Nigeria] agricultural exhibitions, in order to encourage the cultivation of these beans in West Africa for transport to Liverpool. The samples consist of edible and crude oil, flour (for bread making), meal, biscuits, oil cake, soap, and a substitute for coffee.

"Russia: High Cost of Transportation Restricts Their Use." Consul Hernando de Sota, of Riga [as of 1994, the capital of Latvia] "writes that high freight rates on shipments from Manchuria to that district will probably prevent it use to any large extent. He says: 'The Manchurian soya bean has until the present date neither been imported into nor exported from the ports of this consular district. Some time ago one of the largest mills in this city purchased from Manchuria a few carloads of the bean for the purpose of making experiments in converting the bean into cake." However "on account of the high cost of transportation over the Siberia road, by which the bean could not be delivered at Riga for less than 1.20 rubles (62 cents) per pood (36 pounds), the business would not be profitable."

Note 1. This is the 2nd earliest document seen (Feb. 2005) concerning soybeans in Latvia. This document contains the earliest date seen for soybeans in Latvia (1909) (one of two documents).

Note 2. This is the earliest document seen (Aug. 2009) concerning soybeans/soya in connection with (but not yet in) Nigeria. Address: Washington, DC.

622. **Product Name:** Tofu.
Manufacturer's Name: Aramachi Tofu-ya.
Manufacturer's Address: 1675 Sutter St., San Francisco, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 14.

623. **Product Name:** Tofu.
Manufacturer's Name: Fish & Tofu-ya.
Manufacturer's Address: 416 Front Alley, Spokane, Washington.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 144.

624. **Product Name:** Tofu.
Manufacturer's Name: Hashii Tofu-ya.
Manufacturer's Address: 108 N. San Pedro St., Los Angeles, California. Phone: Main 1948.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 88. Note: Inoue Tofu-ya was at this address and phone number in 1908.

625. **Product Name:** Tofu.
Manufacturer's Name: Hieda Tofu-ya.
Manufacturer's Address: 1620 Park St., Alameda, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 29. Note: Mizoda Tofu-ya was at this address in 1911.

626. **Product Name:** Tofu.
Manufacturer's Name: Kaimei Tofu-ya.
Manufacturer's Address: 79 Jap Alley, Sacramento, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*].

Directory entry p. 39.

627. **Product Name:** Tofu.
Manufacturer's Name: Konishi Tofu-ya.
Manufacturer's Address: P.O. Box 66, Armona, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 48. Note: Armona is in California's Central Valley, south of Fresno, just west of Hanford and further west of Visalia. Also in 1911. Directory entry p. 73.

628. **Product Name:** Tofu.
Manufacturer's Name: Ogata Tofu-ya.
Manufacturer's Address: 1625 Post St., San Francisco, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 14.

629. **Product Name:** Tofu.
Manufacturer's Name: Ogawa Tofu-ya.
Manufacturer's Address: P.O. Box 35, Dinuba, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 72. Also in 1910. Census entry p. 180. The place name in Japanese is written Dainyuubaa. Male owner and no employees. Note: Dinuba is in California's Central Valley, in Tulare County, about 25 miles southeast of the city of Fresno, and a few miles south of Reedley.

630. **Product Name:** Tofu.
Manufacturer's Name: Saza Tofu-ya.
Manufacturer's Address: 1415 Laguna St., San Francisco, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 14.

631. **Product Name:** Tofu.
Manufacturer's Name: Shigematsu Tofu-ya.
Manufacturer's Address: 2119 Berkeley Way, Berkeley, California. Phone: Berkeley 4595.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 27.

632. **Product Name:** Tofu.
Manufacturer's Name: Tofu-ya Shimada (Shimada Tofu-ya).
Manufacturer's Address: 1441 Kern St., Fresno, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 69. Census entry p. 153. Two un-named Japanese tofu makers. Two male owners and one female employee. Also in 1910. Census entry p. 179. Male owner and no employees. Also in 1911, p. 158.

633. **Product Name:** Tofu.
Manufacturer's Name: Tofu-ya Tanabe (Tanabe Tofu-ya).
Manufacturer's Address: 830 F St., Fresno, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 69. Also in 1911. Directory entry p. 72. The address is now Japanese Alley and the company name is now Tanabe Tofu-ya. Also in 1912. Directory entry p. 90. The address is now 847 China Alley. Also in 1913, p. 102. Also in 1914, p. 104. The address is now 847 Japanese Alley. Note: This is the earliest known tofu shop in Fresno, California.

634. **Product Name:** Tofu.
Manufacturer's Name: Tsuruya Tofu-ya.
Manufacturer's Address: 390 L. St., Sacramento, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 39.

635. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Selma, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 153. Male owner, one male and one female employee. Also appeared 1910. Census entry p. 179. Male owner and no employees. Note: Selma, is in California's Central Valley, in Fresno County, about 15 miles southeast of the city of Fresno.

636. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Reedley, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 153. Male owner and one male and one female employee. Also in 1910. Census entry p. 180. Male owner and no employees. The place name in Japanese is

written Reedoray. Note: Reedley is in California's Central Valley, in Fresno County, about 20 miles east southeast of the city of Fresno, and a few miles north of Dinuba.

637. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Santa Barbara, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 158. One tofu shops in Santa Barbara. Male owner and no employees. Also in 1910. Census entry p. 185. Two tofu shops in Santa Barbara. Two male owners and no employees.

638. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Ogden, Utah.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 161. One male owner and one female employee. Also in 1910. Census entry p. 235. One male owner and no employees.

639. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: New York City, New York.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 165. One male owner and no employees. Also in 1910. Census entry p. 248. One male owner and no employees.

Note: This tofu maker might be K. Tanaka & Co. (See 1903?).

640. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Isleton, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 152. Male owner and no employees. Also in 1911. Census entry p. 156. Male owner and no employees. Note: Isleton is in northern California, near Rio Vista, northeast of Antioch.

641. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: San Bernardino, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 157. Male owner and no employees. Note: San Bernardino is in southern California, just north of Riverside and directly east of Los Angeles.

642. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Sparks, Nevada.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 160. Male owner and one female employee.

643. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Boat / Port Burakure, Washington.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 164. Three male owners and 1 female owner.

644. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Portland, Oregon.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 166. Male owner and one female employee.

645. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers (three).
Manufacturer's Address: Seattle, Washington.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 216. There are three tofu shops in Seattle, Washington. Four male owners, 3 male and one female employees. Also in 1910. Census entry p. 216. There are three tofu shops in Seattle, Washington. Three male owners and 3 male employees.

Note: Kitayama Tofu-ten and Mano Tofu-ten both existed in Seattle in 1906. Those are the only two whose names we know before this time.

646. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers (two).
Manufacturer's Address: Tulare, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 154. Male owner and no employees. Also in 1910. Census entry p. 181. Male owner and no employees.

The place name in Japanese is written Tsurare. Note: Tulare is in California's Central Valley, in Tulare County, about 42 miles southeast of the city of Fresno.

647. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers (two).
Manufacturer's Address: Oxnard, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 156. Two tofu shops in Oxnard. Two male owners and no employees. Also in 1910. Census entry p. 184. Two tofu shops in Oxnard. Two male owners and no employees. Note: Oxnard, in Ventura County, is just south of Ventura, near the coast of the Santa Barbara Channel, 30 miles west northwest of Los Angeles.

648. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers (two).
Manufacturer's Address: Riverside, California.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 156. Male owner and no employees. Also in 1910. Census entry p. 184. Two tofu shops in Riverside. Two male owners and no employees. Note: Riverside is south of Los Angeles and 10 miles south Southwest of San Bernardino.

649. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers (two).
Manufacturer's Address: Denver, Colorado.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 162. Two Japanese tofu shops. Two male owners and no employees. Also in 1910. Census entry p. 245. One Japanese tofu shop. One male owner and no employees.

650. **Product Name:** Tofu.
Manufacturer's Name: Ushijima Tofu-ya.
Manufacturer's Address: 2336 Lincoln Ave., Alameda, California. Phone: Alameda 2263.
Date of Introduction: 1909.
New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 29.

651. Baulmont, René. 1909. Le fromage de soja [Soybean cheese {Tofu}]. *Bulletin de la Société d'histoire naturelle des Ardennes* 16:12-16. June. [5 ref. Fre]
• ***Summary:*** The *Magasin pittoresque* (a French magazine), in its issue of 1 Nov. 1908, published an article on the soybean of China (*Le soja de Chine*) by Mr. Cyrille de Lamarche. The author, after describing the cultivation of this plant, discusses its numerous uses.

Note 1. Much of the first 1½ pages of this article is very similar to (or a summary of) the earlier article by Cyrille de Lamarche.

The information is given by Mr. de Lamarche without any indication of the part of China to which it applies.

Note 2. Ardennes is a department in northeast France, bordering on southern Belgium and named after the Ardennes area. Address: Member, Société d'histoire naturelle des Ardennes, France.

652. Carson, John M. 1909. Soya bean and products. *Special Consular Report* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) No. 41. Part 5. 35 p. Erroneously numbered Special Consular Reports, Vol. XL.
• ***Summary:*** Contents: Introduction. I. Countries of production. China: Newchang (Varieties of beans and amount produced {in centals [hundredweights; 1 cental = 112 pounds]}, methods of cultivating and harvesting, prices and exports, shipments to Europe–use by natives), Dalny (Manufacture of bean cake and oil, preparing the cake, expressing the oil and wages paid, freight charges to Dalny, exports, stock on hand, and prices), Chefoo (Beans imported for cake manufacture, quantity and value of output, bean vermicelli made by a peculiar process [from the small green bean lü tou {mung bean}], preparation of beans, drying of product and prices [for vermicelli]), Shanghai (Extent of export trade in beans), Shantung (manufacture of bean oil and cake, harvesting and pressing, shipping and prices), Swatow, Tientsin (Exports of raw beans, shipments of bean cake, extent of trade at Tientsin). Tables (p. 5) show prices and exports of soya beans, bean cake and bean oil at Newchang for the years 1905-1908. Japan: Cost of production and prices (of soya beans, quite detailed), imports of beans and cakes, use of the bean as food (shoyu, miso, tofu, koya-tofu, natto, flour), Kobe (Beans as human food {eaten boiled with a little soy [sauce], "made into bean curd, and a kind of sauce made of wheat, beans, and salt"}–small exports {"The total exports of beans, pease, and pulse [incl. soy] in 1908 were valued at $25,971, of which about $24,000 worth went to Hawaii, the United States, and Canada for use by the Japanese residents in those countries as an article of food"}, manufacture of cake), Nagasaki (Production of beans, imports of beans–market prices). Shipments from Vladivostok * [Russia, of soybeans probably grown in Manchuria] (Fluctuations in prices, shipments during present season, immense shipments planned next season (by Mitsui)).

"It is the intention of Mitsui Bussan Kaisha, the largest

© Copyright Soyinfo Center 2013

exporter from this port, to ship about 200,000 tons of beans via Vladivostok during 1909 and about double that quantity via Dalny. Many large contracts have been made for next season, and from present indications a strong effort will be made against the control of Mitsui Bussan Kaisha as the Chinese are making arrangements to deal direct with the European market without the aid of the Japanese" (p. 18).

Tables show: The quantities and value of soya beans, soya-bean cake, and bean oil imported into Japan during the year 1908 (p. 15). The soya bean harvests (in bushels) reported in various Japanese districts (p. 16).

II. Markets. Denmark: Experimental imports made, views of an importer. France: High duties prevent importation of soya beans, soya-bean flour bread used by diabetics, unknown in Calais district. Germany: Danger of feeding cattle on soya-bean products, oil value–prices at Hamburg, comparative food value of the bean. Italy: Beans imported and cultivated in limited quantities, prices of soya products–American cotton-seed oil, not imported into Catania, home products supply Piedmont district. Netherlands: A great future for the soya-bean trade predicted, prices of the bean and bean cake, soya cake as cattle feed, manufacture of soya-bean products begun, English soya-bean cake defective. Norway: Imports of soya-bean meal and cotton-seed meal. Russia: Beans and products unsatisfactory as feeding stuffs. Spain: Soya bean unknown in Valencia district [They are neither cultivated nor imported in this district]. Straits Settlements [Singapore and Malaya]. Sweden: Soya-bean products introduced through England. Comparative value of cattle feed [work by Nils Hansson of Sweden], comparative prices of feed stuffs. Turkey. England: Liverpool (Conversion of the soya bean into cake and meal), Plymouth (Soya cake and meal extensively consumed), Southampton (The bean appreciated as a fattener and as a dairy ration, the soya bean as human food [for use in diabetic diets]). Ireland: Chinese bean products are favorably received, soya bean introduced in Belfast, small imports at Cork. Scotland: Statistics as to use in Dunfermline not available, test of feeding value of soya cake [by Prof. Douglas A. Gilchrist], Edinburgh mills making experiments (based on 1909 report 1909 of U.S. Consul Rufus Fleming from Edinburgh).

III. Competitive American exports. Tables (p. 35) show exports for 1907, 1908, and 1909 of cotton-seed meal, cotton-seed oil, and cottolene, lardine [not defined: presumably shortening made from cottonseed oil], etc. to major countries, especially in Europe.

The Introduction notes: "In compliance with requests from manufacturers of cotton-seed products in the United States, who desired that an investigation be made of the production and use of the soya bean and its manufacturers in the Far East and of the extent to which they compete with American cotton-seed products in the European markets, the reports following have been submitted by consular officers in the various countries concerned...

"The reports of the consular officers have been placed in two groups, the first having to do with the countries that produce the soya bean and the second with the countries that are sought as markets. Statistics as to the imports of soya-bean products in many European countries were not available at the time the reports were submitted, but inasmuch as the prices quoted were generally lower than for other seed products, emphasis has been laid on the relative merits of the two classes of goods as shown by experiments and analyses in these countries. These manufacturers will have to work in meeting this new competition."

Note 1. This is the earliest document seen (Dec. 2007) concerning soybean products (oil or meal) in Turkey, Denmark, Ireland, the Middle East, or Sweden (one of two documents); soybeans as such have not yet been reported in any of these countries. This document contains the earliest date seen for soybean products in the Middle East or Turkey (1909).

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term "soya-bean flour." Address: Chief of Dep.

653. Carson, John M. 1909. Soya bean and products: Straits Settlements (Document part). *Special Consular Report* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) No. 41. Part 5. p. 26. Erroneously numbered Special Consular Reports, Vol. XL.

• ***Summary:*** "Vice-Consul-General George E. Chamberlin, of Singapore, reports that the soya bean is not cultivated in that district. As to the imports and the uses to which the beans are put, he writes:

"The beans are imported into Singapore and other ports of this district from China, Japan, and India, principally from the former country, in considerable quantities, and are used for making soya [soy sauce] and bean cheese [tofu], or bean cake–popular articles of food among the natives and Chinese. Practically no beans are exported and no bean cake, all being consumed locally.

"Soya beans in this locality are not made into meal, nor are they used for the same purpose as cotton-seed meal and cake. The present market price is about $2 per picul (133 1/3 pounds) for the white soya bean and $1.75 for the black."

Note 1. The Straits Settlements is a former British Colony on the south and west coast of the Malay Peninsula, including adjacent islands, comprising Singapore, Penang, and Malacca settlements.

Note 2. This is the earliest document seen (May 2010) concerning soybeans in Singapore. This document contains the earliest date seen for soybeans in Singapore (1909). Address: Chief of Dep.

654. Carson, John M. 1909. Soya bean and products: Shanghai: Extent of export trade in beans (Document part).

© Copyright Soyinfo Center 2013

Special Consular Report (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) No. 41. Part 5. p. 11. Erroneously numbered Special Consular Reports, Vol. XL.
• ***Summary:*** On page 11, the Vice-Consul-General of Shanghai writes that while the Shanghai district does not produce any beans, there is considerable shipping of beans and bean products from that port. "The soya bean is little known in this district by the name 'soya,' as it is generally stated that the soya bean is any bean from which soy [sauce] is made. The best bean for making soy is the yellow bean [*huang-tou*]. The consular district of Shanghai does not produce any yellow beans of commercial importance... The total reexport of white and yellow beans from Shanghai to foreign countries, Hongkong, and Chinese ports during 1908 was $1,548,572. Bean cake, a product principally of the yellow bean, was reexported to foreign countries, Hongkong, and Chinese ports in 1908 to the value of $791,606.

"The bean curd, or a form of soy, is largely exported to Chinese ports, $17,085 worth being exported in 1908."

"Many of the beans from up the river are shipped into Shanghai and made into soy [sauce] for export."

Note: This is the earliest document seen (April 2001) that contains tofu industry or market statistics by geographical region. Address: Chief of Dep.

655. Carson, John M. 1909. Soya bean and products: Japan (Document part). *Special Consular Report* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) No. 41. Part 5. p. 13-16. Erroneously numbered Special Consular Reports, Vol. XL.
• ***Summary:*** Vice-Consul-General E.G. Babbitt of Yokohama writes: "The soya bean, or soja bean, as it is known here (Common Japanese name 'daidzu' [daizu]), is cultivated throughout the Empire of Japan. The total area of cultivation is in the neighborhood of 1,200,000 acres, or about 3.8 per cent of the total area devoted to the cultivation of rice and other cereals and grains. The soya bean is often cultivated, not in fields by itself, but in rows along the edges of rice or wheat fields. These edges are, as a rule, very soft, for they have been previously plowed, and little labor is required in planting... In harvesting the plants are uprooted, and, after being dried in the sun for several days, flails are used to separate the beans from the pods. The flails are of a very primitive type, with bamboo handle and of light weight. Female and child labor is invariably employed in flailing.

"The kinds of fertilizers used differ by districts. In the prefecture of Miyagi, for example, straw ashes and superphosphate of lime are commonly employed, while in the prefecture of Akita wood ashes, superphosphate of lime, and horse dung are used."

The average yield of soybeans in Japan over the past 10 years is 15.30 bushels per acre. For the year 1907 the highest yield is from Ishikawa prefecture, 21.62 bushels/acre, whereas the lowest yield is from Okinawa prefecture (Loochoo Islands, south of Kiushu [Kyushu]), 8.48 bushels/acre. During 1908 huge amounts of soya beans (3.3 million piculs; 1 picul = 132.277 pounds weight) were imported to Japan from China, Kwantung, and Korea, with small amounts coming from Asiatic Russia. Large amounts of soya-bean cake (7.760 million piculs) were imported from China and Kwantung, with small amounts coming from Asiatic Russia and none from Korea. "The total imports of bean oil in 1908 amounted to only 49,993 pounds, valued at $1,325."

"The soya bean is one of the most important articles of food in Japan. The beans are cooked in various ways, while in brewing soy (shoyu), in the manufacture of miso (pea or bean cheese), tofu (bean curd), koya-tofu (frozen bean curd), and natto (steamed beans) they are the chief ingredient. They are also manufactured into flour and make up the principal part of many Japanese sweetmeats. All these foodstuffs are daily used in Japanese homes.

"To a limited extent soya beans are used as horse or cattle food, being sometimes boiled and mixed with straw, barley, bran, etc."

The vice consul of Kobe states that in 1908 Japan produced 18,812,228 bushels of soya beans. Small amounts are exported "to Hawaii, the United States and Canada for use by the Japanese resident in those countries as an article of food." Three factories in the Kobe district make bean cake, largely from imported, lower-cost soya beans. "The beans are first crushed flat, then put into a big container and steamed, after which they are put into a steam press to extract the oil and to be made into cakes. The cakes come in circular pieces, a yard in diameter and an inch thick, each weighing about 50 pounds. The oil is used for lubricating machinery. The cake is used only as a fertilizer and is not fed to animals as it causes their hair to fall off."

Note 1. This is the earliest document seen (Feb. 2004) stating that soya bean oil can be used as a lubricant.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "koya-tofu" to refer to dried-frozen tofu.

Note 3. This is the earliest document seen (Aug. 2011) in *Chemist and Druggist* in which the toxicity of a soy product is discussed or alleged, namely soya cake "is not fed to animals as it causes their hair to fall off." Address: Chief of Dep.

656. Cornet, Paul. 1909. Le régime alimentataire des malades: Considérations pratiques sur les aliments et les boissons diététiques et sur l'hygiene de l'alimentation [The dietary regimen for the sick: Practical considerations on dietetic foods and drinks and on the hygiene of feeding]. Paris: G. Steinheil, Éditeur. 484 p. No index. 23 cm. [144* ref. Fre]
• ***Summary:*** In Part III, "Foods drawn from the vegetable kingdom," Chapter 20 titled "Starchy vegetables" discusses

© Copyright Soyinfo Center 2013

various fruits, grains, and legumes. The section on "Soya" (p. 269-70) gives the name of the soybean in Japan (*daizu*), Annam (*dau-nauh*), and China (*théou*), and notes that the seeds can be used to make shoyu, miso, and tofu–which are widely appreciated.

"Dietetic uses: Without having recourse to these exotic preparations, the nutritional value of soybeans is not used enough in our country. Soy bread is only used in anti-diabetic diets*, whereas one could prepare a pap and a drink (*boisson,* [soymilk]) no less precious, as well as extracts [soy sauce] which could be substituted for meat extracts." Footnote: *Soya is well suited for diabetics, for the seed contains only 3% starch plus 16% oil and 27% protein.

In Part V, "The regimens," Chapter 30 titled "General solid regimens" has two parts: The first, the "Vegetarian regimen" (p. 341-55) has the following contents: Indications for the vegetarian regimen. Application of the vegetarian cure: Absolute [vegan foods plus water], mitigated (lacto-ovo vegetarian), total vegetarian diet (*régime total*) throughout the seasons (incl. dry legumes such as soybeans, peanuts, etc.), culinary preparations. Vegetal calendar (*Calendrier végétal*)*:* soups, main dishes, and desserts for each month of the year. Address: Dr., Professeur at the municipal schools of the infirmaries of the Hospitals of Paris (aux Ecoles municipales d'Infirmières des Hôpitaux de Paris).

• ***Summary:*** The last entry in the section on "Legumes," titled "Soy peas or beans" (*Pois ou fèves de Soja / Soya*), states: In order to be complete, to the preceding dried legumes I add the soybean, used here only as a therapeutic agent, but whose consumption in China and especially in Japan is considerable.

Its use in food is, moreover, completely justified by its great nutritive value. Here are some analyses of its nutritional composition: A table (p. 495) gives 6 analyses by three authors (each of whom cites other researchers) as follows: Balland (Gautier): maximum, minimum, mean. König (Siderski): black or yellow soybeans. König (Siderski): soy flour.

As you see, despite their great nutritive value, all the other legumes remain below that of the soybean. It contains more than 30% protein and 400 calories per 100 gm. It must be added that no other legume is as rich in minerals, for soy always contains at least 4%.

This legume, known in Japan by the name of *daidzou* [*daizu*], can be made into a cheese, tofu (*tôfou*,) and above all the national sauce, shoyu (*shôyou*) and miso. These three substances result from fermentation, but under different conditions.

Japanese miso is a venerable food; it's the *tao-tzung* of the Chinese. It is made of crushed soybeans, boiled and mixed with rice or wheat koji, then submitted to fermentation. Miso consumption in Japan is 30 million kg.

Tofu is also used frequently but less than the preceding [miso], and much less than soy sauce which constitutes the universal seasoning. The consumption of this last would be, in fact, 5.5 liters per inhabitant.

Discussed in this section are: Dry beans (*haricots secs;* [*Phaseolus vulgaris*]), lentils, peas or round peas (*pois ronds* [Pisum sativum]), square peas (*pois carrés;* probably winged beans {*Psophocarpus tetragonolobus*}, or flat pea / Lathyrus pea / chickly vetch {*Lathyrus sativus*}, or *Pisum sativum medullare*), chickpeas (*pois chiches*), and dry [broad] beans (*fèves sèches;* [probably *Vicia faba*], broad beans). Address: M.D., principal physician for the Naval Reserves, Prof. at the Faculty of Medicine, Toulouse (Médecin principal de réserve de la Marine).

Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]
• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into 17 parts, each numbered separately. Contents: (1) Front matter (5 p.) (2) Table of contents (3 p.). (3) Maps (2 p.): Map of the United States. Map of California (1 p. each, in Japanese). (4) Black and white photos on 6 unnumbered pages (single sided). (5) Advertisements (A-1 to A-32). (6) Front part (p. 1-168), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (7) Ads from San Francisco printers (2 p.). Appendixes: (8) Appendix 1: Table of contents (2 p.) (9) Appendix 1. Japanese agricultural workers in the various states (p. 1-60). (10) Ads (p. B-1 to B-96). (11) Appendix 2 table of contents (2 p.). (12) Ads (3 p.). (13) Appendix 2. Japanese living in America, alphabetically by state, and within each state by city (p. 1-148). (14) Ads (2 p.). (15) Ads on numbered pages (C-1 to C-66). (16) California ads (p. C-1 to C-42). (17) Publication data / Copyright page (1 p.).

Basic information about how this book was compiled

© Copyright Soyinfo Center 2013

and the survey conducted is given on pages 60-66, 140-41, and on the title page of Appendix 1 of this year book. Pages 60-66 show various existing government registration forms that Japanese are required to fill out, such as birth, marriage, death, and divorce certificates, employment / occupation, agricultural details (employer, land use, nature of relationship with employer, etc.), and visa.

The tariff (import duty) on shoyu and miso from Japan is 40% for each (p. 32).

The value of the 1900 soybean crop in the United States is $7,634,262 and the value in California is $1,022,586 (p. 69). Note: This is the earliest document seen (March 2009) that gives soybean production or area statistics for either the USA or California–much earlier than any U.S. Department of Agriculture statistics. Unfortunately, the source of these statistics is not given. During the period 1900 and 1909 many Japanese were farming land in California, and there was a significant number of soyfoods manufacturers in California and, more broadly, west of the Rocky Mountains. Therefore we should not be surprised to learn that these farmers were growing soybeans in California, either for use as edamamé (green vegetable soybeans in the pods) or for sale as whole dry soybeans to soyfoods makers.

Value of selected imports from Japan to the USA in 1906: Miso–Imported to the mainland $55,648. To Hawaii $43,108. Total $98,756. Shoyu [soy sauce]–Imported to the mainland $241,345. To Hawaii $211,265. Total $452,610 (p. 119).

Retail prices of Japanese foods in San Francisco (on 1 Nov. 1908): Amazake [cup] for 15 cents (100 cents apparently = $1.00). Kikkoman shoyu: 1 cho for 300 cents. Yamasa shoyu: 1 cho for 280 cents. Miso: 1 cho for 180 cents. Tai [sea bream] miso: 1 piece (*ko*) for 10 cents. Note: A *cho* is an undefined, vague unit of Japanese measurement. A photo shows the inside of a Japanese retail store (p. 120). Note: The meaning of "1 cho" is unclear.

In 1908 the Japanese population in the United States totaled 103,630, including 93,149 men (89.9%), 6,379 women, and 2,100 male children, and 2,010 female children. Six pages of tables give the Japanese populations of different U.S. states and cities.

The directory (p. 5) gives a listing of sake and shoyu sellers in San Francisco: Hokubei Boeki Kaisha, 318 Front St. Tel. [Phone] Kearny 451. McKendry Shosha, 149 California St. Tel. Kearny 2970. Iwagami Shokai, 441 Commercial St. Tel. 2447. Kagawa Soko Shiten, 41 Commercial St. Tel. 1263. Ichida Shoten, 1968 Bush St. Tel. West 1688. Murai Ishikawa Shokai, 2001 Pine St. Tel. West 5407. Tanaka Kyodai Shokai, 1609 Gough St. Tel. West 6615.

The Directory shows Japanese companies making soyfoods in California, Colorado, Nevada, New York, Oregon, Utah, and Washington.

Note: A big jump in the number (and geographical extent) of Japanese tofu shops occurred in 1909. A translation (from older Japanese) of the pages describing how this book was compiled and the survey conducted (on pages 60-66, 140-41, and on the title page of Appendix 1 of this year) would probably help to explain this jump. William Shurtleff has a theory that it had something to do with contact between the people who conducted the Mackenzie survey of Japanese in America (1910). He spent a large amount of time trying, unsuccessfully, to find out how those surveyors knew where to look. He thinks that they worked with the owners of *Nichibei Shinbun* using its list of subscribers to locate communities of Japanese living in California.

At some point a light when on in the minds of the publishers of the annual directory. (1) If the businesses in those communities started advertising in our annual directory, it could become a major source of income. (2) Each new address of a Japanese person or business we find represents a potential new subscriber to our newspaper. Hence their interest and follow-through. So each helped the other to their mutual satisfaction. A win-win situation. Address: San Francisco, California.

660. Yukawa, Genyô. 1909. Ueber die absolut vegetarische Ernaehrung japanischer Bonzen [The strict vegetarian (vegan) diet of Japanese Buddhist monks]. *Archiv fuer Verdauungs-Krankheiten* 15:471-524. [5 ref. Ger]

• ***Summary:*** The author studied a group of 12 strict vegetarian [vegan] Buddhist monks in Japan and found them to be in good health. He estimated that their daily diets, if evaluated for a 150-pound male, supplied 3,575 calories and 113 gm of protein. The older men ate somewhat less. The diet consisted chiefly of rice and barley, with soy products, vegetables, and rape seed oil.

A table (p. 478-79) summarizes the author's research on the protein content of vegetarian meals by previous Japanese researchers. These meals contained various soy products: Miso (*Soybohnenmus*), soy sauce (*Soy*), and tofu. On pages 489-91 are definitions of miso soup, miso, soy sauce (*Soy*) koji, grilled tofu (*Yakidofu*), cooked soybeans (without the hulls removed), azuki bean paste, and mochi, which are served at Nanshuji temple. A table (p. 497-98) gives the nutritional composition of these and other foods. Amounts served at each meal are shown on p. 501, 514, 522, including daikon pickled in miso. The terms "Makrobiotik" and "Makrobier" are used. Address: Aus der Privatklinik fuer Magen- und Darmkrankheiten von Dr. Yukawa in Osaka, Japan.

661. Hitier, H. 1910. Société Nationale d'Agriculture de France: Le soja [National Society of Agriculture of France: Soya]. *Journal d'Agriculture Pratique* 74(1):24-25. Jan. 6. [Fre]

• ***Summary:*** "Mr. Sagnier, on behalf of Mr. Liyuying [Li

© Copyright Soyinfo Center 2013

Yu-ying], delegate of the government of China in Europe, gave a very interesting presentation on the soybean (*le soja*), and its alimentary, therapeutic, agricultural, and industrial utilization. (This journal will soon publish an article on the soybean.)

After his presentation, Mr. Sagnier showed the members of the Society various products that can be extracted from soybeans: flour, bread for diabetics, cake, seasoning sauce, confections, raw milk, fresh cheeses, etc.

Mr. Schribaux recalled that the soybean, which is widely grown in East Asia, is also cultivated in Europe, but the varieties introduced up to this time have been very sensitive to the cold. In the USA the crop has expanded rapidly.

Mr. Lindet remarked that the soybean contains 16-17% oil, a rather low percentage. Mr. Ch. Girard has cultivated soya at Joinville as a forage plant, but the forage obtained is mediocre, in part because the plant is covered with hairs.

The prince of Arenberg noted that prior to 1908 not one kilogram of soybeans passed through the Suez Canal, yet in 1908 35 million kilograms passed through. This gives a good idea of the commercial development of this plant. Address: France.

662. *Bulletin de l'Association Amicale Franco-Chinoise.* 1910. Le soja [Soya]. 2(1):62-64. Jan. [Fre]

• ***Summary:*** This periodical was established to promote understanding and friendship among the people of France and China.

The name *Soja* or *Soya* comes from the name that the Japanese give to the sauce made from soybeans. In Chinese it is called *tsiang-yeou* (Cc = Chinese characters given [soy sauce]) and it is made from *houang-teou* (Cc [yellow soybeans]). This sauce, which is used in the well-known *Worcester sauce,* is widely used in China and Japan. Some Chinese residing in Paris [incl. Li Yu-ying] recently took the initiative to introduce into France this sauce, as well as several other products derived from these same 'yellow peas' (*pois jaunes*).

They have just built a factory near Paris in a town named Les Vallées (rue Denis-Papin), on the train line going to Saint-Germaine-en-Laye. There, perfected machines / equipment and the resources of western science allows them to obtain from the raw materials a much better yield than could be obtained using the rudimentary Chinese process. These things made it possible, at the same time, to develop many new soy products suited to European tastes.

A retail store named the Golden Jar in Paris (La Jarre d'Or, 4, rue du Renard) received the right to sell these products from *Caséo-Sojaïne.* And an exposition [of the soy products] was organized at the Grand Palace, at the time of the opening, last Nov. 20, of the Food Fair / Expo (*Salon de l'Alimentation*). There various products were offered.

A summary of the contents of an interesting brochure from that exposition is reprinted. Contents of the brochure: Introduction to the soybean. Products based on soymilk (*Le lait de soja, Le lait végétal*)*:* Liquid, powdered, or fermented soymilk, soy cheese (*Le fromage de soja, Le fromage végétal* [tofu]) (fresh, hard, and fermented). Soy sauce. Soy oil. Sweet soya preserves (*Confiture de Soja;* this soy cream {*crème de soja*} resembles chestnut cream {*crème de marron*}). Soybeans used as a vegetable (dehulled dry soybeans, and soy sprouts {*les germes de soja*}). Other soy products (including soy flour, bread for diabetics, whole-meal bread, and soybean cakes–used as feed for animals).

Note 1. It is unclear whether the Chinese-run factory, *Caséo-Sojaïne,* has started to make and sell commercial soy products, or whether they are just about to. They may have started on Nov. 20 of the previous year, however there is no description of soyfood products now being sold in Paris.

Note 2. This is the earliest document seen (April 2013) that contains the term *Caséo-Sojaïne,* which appears to be the name of a business, not of a product. This term would soon be used to also refer to "tofu." Li Yu-ying's name is not mentioned.

Note 3. This is the earliest document seen (Sept. 2002) that mentions soy cream (*crème de soja*).

Note 4. This is the earliest document seen (Sept. 2002) that mentions powdered soymilk (*Le Lait de Soja, en poudre*).

Note 5. This is the earliest document seen (Sept. 2002) that mentions fermented soymilk (*Le Lait de Soja Fermenté*).

Note 6. This is the earliest French-language document seen (Jan. 2013) that mentions soy sprouts, which it calls *les germes de soja.*

663. Sagnier, Henry. 1910. Le soja et ses produits [The soybean and its products]. *Journal d'Agriculture Pratique* 74(1):307-10. March 10. [4 ref. Fre]

• ***Summary:*** The soybean was a curiosity in Europe until 2-3 years ago, when large amounts started to be imported. The prince A. d'Arenberg, president of the Suez Canal Society, told the National Society of Agriculture, that prior to 1908 no soybeans had passed through the Suez Canal, yet in that year 35,000 tons passed through it. It seems that the new commerce has been stimulated by the expansion of the crop in Manchuria and Korea, under Japanese influence. Most of the imports have gone to England and northern Europe. In England, the oil is used to make soaps and the cakes are fed to livestock.

Recently it was announced that the Chinese government, preoccupied with the expansion of exports, would have manifested the intention to prohibit these exports in view of preventing a shortage of soybeans in the interior of the country.

"The Chinese are now greatly expanding their efforts to make known in Europe the advantages to be gained from soya and from the products that can be extracted from its seeds. I recently had the occasion to present to the

© Copyright Soyinfo Center 2013

National Agricultural Society of France a study written by Mr. Liyuying [Li Yu-ying], delegate of the government of China for several missions. It was titled *Le soja, utilisation alimentaire, thérapeutique, agricoles et industrielle*. This study was accompanied by samples of yellow and black soybean seeds, and by the principal products which can be extracted from this plant: flour, bread for diabetics, cake (*gâteau*), seasoning sauce (*sauce condimentaire*), confections (*confitures*), raw milk (*lait cru*), cooked and sweetened milk (*lait cuit et sucré*), cake for livestock feed, (*tourteau pour l'alimentation du bétail*), fresh cheese (*fromage frais* [tofu]), and smoked cheese (*fromage fumé* [smoked tofu]).

"These products originated from processing imported soybeans. They have been prepared at a test factory (a photo, p. 309, shows the interior) set up just outside of Paris, at Vallées, near Asnières. Li Yu-ying's study gives complete details on these products" which are made from imported soybeans. This factory, named *Caséo-Sojaine*, "has been established by the agents of a civil society constituted in China under the name of *Société biologique de l'Extrême-Orient* (Far Eastern Biological Society). Made up of physicians, scholars (men of letters), and businesspeople, this society would seem to have as its principal goal/object to make known and have used in Europe the pharmaceutical and agricultural products of the Far East [East Asia]."

Note: This is the earliest document seen (May 2011) that mentions the Far Eastern Biological Society (*Société biologique de l'Extrême-Orient*)

The author concludes by discussing soymilk (*lait de soja ou lait végétal*), soybean cakes (*les tourteaux d'huilerie*), and a brief history of the soybean in France.

Illustrations (p. 308) show: Mature soy bean plant with pods. Close-up of soy bean pods and seeds. Soy milk and soy flour viewed under a microscope (p. 309).

664. Le Goff, Jean. 1910. Sur l'emploi de la graine du "Soja Hispida" de Chine dans l'alimentation des diabétiques [On the use of soybeans in diabetic diets]. *Gazette des Hopitaux* 83(34):476-78. March 22. Also published as a brochure. [5 ref. Fre]

• ***Summary:*** The writer is interested in using diet to treat or manage diabetes. As early as Feb. 1908, she suggested the use of almond cake in diabetic diets. The almond is not the only oilseed that is available. Nuts, poppy seeds, roasted peanuts, etc. also taste good. "I am here today to call attention to a legume, *Soja Hispida* (Moench), popularly known as the oil-pea of China (*pois oléagineux de Chine*), which serves as the basis of the diet for the inhabitants of that vast country.

"Like wheat, it is an annual plant. It has been cultivated in China since antiquity, and is likewise found in Cochin China, Cambodia, the Indies, and Japan.

"Its cultivation not been tried much in France. The trial by Lechartier (1903), with the goal of using soya as a forage plant, has not yet been repeated.

"Desiring to increase the number of foods permitted for diabetics and, above all, providing them with a fresh vegetable capable of replacing [dry] peas and haricot beans, I had the idea of trying to cultivate soybeans in France. The trials I made in 1909 were very encouraging.

"The soybean (*Le soja*) planted last May in the department of Loir-et-Cher [in north-central France] gave a magnificent stand of plants 100 to 110 cm in height, which bore fruit in September, even though that month was very rainy.

"Just like grapes, soybeans need plenty of heat to mature. The soybean harvest will be greatest in areas which are dry and warm. In short, the best regions for growing grapes would also seem to be preferable for soybean cultivation.

"It seems to me this demonstrates that the soybean can be cultivated in our country, like peas and haricot beans. It is the one new resource for diabetics who are living in the countryside where it is often difficult to obtain starch-free foods.

"Introduction of the soybean as a vegetable garden crop may be easier, since the trade has usually sold seed from the previous year's crop–or even older. Seeds that were not fresh contributed to the poor quality of foods made from them, and contributed to the discredit into when they fell."

"If soybeans are crushed in a mortar and mixed with water, you get a vegetable milk, resembling almond milk. With this milk, as with animal milk, one can make a cheese [tofu], the cost of which is practically insignificant. In China it is consumed in large quantities."

A table, by Mr. Balland, shows the chemical composition of soybeans from Cambodia and Tonkin.

"It is not only because of its low starch content or its richness in protein that one can recommend the soybean to diabetics; it is also because of the oils that it contains. From that point of view its action approaches that of almond cake.

There follows a long discussion of the action and importance of oils in diabetic diets.

Note: This is the earliest article seen (July 2001) by Dr. Le Goff on soy and diabetic diets. Address: M.D., Lauréat de la Faculté de médecine de Paris [France].

665. Japan, Bureau of Agriculture (Norinsho, Nomukyoku), Dep. of Agriculture and Commerce. 1910. Outlines of agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. 132 p. March. Illust. No index. 23 cm. [Eng]

• ***Summary:*** This book was compiled to acquaint foreigners with agriculture in Japan. Company name with diacritics is: Nôrinshô, Nômukyoku. A map near the front shows Japan and its empire (incl. Korea, Formosa, Kwantung, Karafuto, and the Kurile Islands, with an inset pie chart showing the value of Japan's agricultural products). Oval

© Copyright Soyinfo Center 2013

photos show Japan's six top agricultural officials. A full-page table shows the moneys, measures and weights of Japan with English equivalents. Contents of the first part of the book: Introduction: Geographical location, area, population, topographical position, climate. 1. General remarks. 2. Condition of farmers. 3. Condition of agricultural land.

The section titled "Upland fields" (p. 18) states: "Upland fields are those portions of land being located in high and dry places which by wanting means of irrigation could not be converted into paddy fields. The utilization of these fields is commonly made by the rotation system and crops are raised twice a year. The commonest instance is that barely, naked barely, and wheat are raised as the first crop in winter whereas soja beans, sweet potatoes and millets are raised during the summer as the second crop." The profits from upland fields are generally smaller than from lowland / paddy fields. The average yield of soja beans over the past 10 years is given in Japanese units (p. 19).

In Japan only cows and horses are kept as work animals. In 1907 Japan had 1,008,922 cows and 2,204,031 horses. But they were used more for their manure than for plowing.

A table (p. 28) shows the value (in yen) of the principal commercial fertilizers in Japan from 1905 to 1907. "Soja bean cakes" (a key source of nitrogen) is by far the largest, averaging 12.9 million yen for these three years, followed by superphosphate of lime, mixed manure, rape-seed oil cakes, herring cakes, bone dust, and cotton-seed oil cakes. Note 1. This is the earliest English-language document seen (Nov. 2005) that uses the term "cotton-seed oil cakes" (plural or singular) to refer to cotton-seed cakes.

A table (p. 37) gives the cultivated area (in 1,000 *cho*) of major Japanese crops in 1887, 1892, 1897, 1902, and 1907. In 1907 rice had by far the largest area (2,906), followed by naked barley (694), barley (658), soja bean (471), wheat (444), mulberry tree (390), sweet potato (288), Indian millet (202), rape seed (143), small red bean ([azuki], 135). Soja bean area remained almost unchanged between 1887 (466) and 1907 (471).

A table (p. 39) gives average yield (in *koku/tan*) of the same major Japanese crops for the same years shown in the previous table. Yield of soja beans rose from 0.698 in 1887 to 0.777 in 1907. Since 1 *koku* = 4.963 bushels and 1 *tan* = 0.245 acres, the 1907 yield is 15.74 bushels/acre.

A table (p. 40) gives the production (in 10,000 koku) of the same major Japanese crops for the same years shown in the previous table. Production of soja beans rose from 325 in 1887 to 366 in 1907. Since 1 *koku* = 4.963 bushels, and 10,000 *koku* = 49,630 bushels, then 366 *koku* is 18.164 million bushels. The next table (p. 42) shows the value (in yen) of each of these agricultural products in 1905-07, and a table (p. 46) compares the cultivated area of each of these crops with rice; soja beans are 16.2% of rice.

In the section on "Food crops" (p. 47+) is a detailed discussion of each. Concerning "Soja bean" (p. 50-51) we read: "The use of this bean is extremely extensive since they are used for the purpose of supplying to the people low priced starchy food by being made into *miso* (pea cheese), soy, *tofu* (bean curd), and other food-stuffs required by the Japanese. The residue obtained from making these food-stuffs from the bean is used for the purpose of feeding cattle or of pressing oil while as manure it is highly valued. Soja bean is easily cultivated requiring less amount of manure and labour. It is therefore cultivated all over the country and occupies the principal position among summer crops of upland fields. Within recent years the demand for it has considerably increased at home and also the export of various food-stuffs prepared out of bean has shown some increase so that no small amount of bean is imported either from China [Manchuria] or Korea. The amount imported actually reaches 10,000,000 *yen.* Over and above these, the import of bean cakes is approximately figured at 20,000,000 *yen* so that the domestic output has somewhat been affected."

Also discusses: Barley and naked barley. Indian millet, Barnyard millet and sorghum. Small red bean [azuki] ("A large amount of small red bean is used as a material for cakes [confections], Hokkaido being the principal producing district." p. 51). Flax and hemp. Green manure crops, incl. *genge* (*Astragalus sinicus*, *umagoyashi* (*Medicago denticula*)), soja beans, etc.

Note 2. This is the earliest English-language document seen (March 2006) that uses the term "small red bean" to refer to the azuki bean.

Chapter 4, titled "Animal industry and poultry" (p. 69+) contains many statistics which may be of interest to vegetarians. Japanese traditionally ate fish rather than meat. "Even at present, the amount of meat consumed per capita a year does not exceed 1.7 pounds while that consumed in America is 150 pounds and in England 118 pounds per capita." etc.

A table (p. 85) shows imports of principal agricultural products (quantity and value) each year from 1906 to 1908. Imports of soja beans increased from 286 to 352 (x 10,000 piculs) during this period, while imports of [soja] bean cake increased from 433 to 776. Both were imported mainly from China. However "the output of *soy* [sauce] and *miso* made of soja bean is exported to the amount of 1,200,000 yen, while bean cake forms the principal fertilizer in Japan" (p. 86). Address: Tokyo.

666. Brenier, Henri. 1910. La question du soja [The soya question]. *Bulletin Economique de l'Indochine* (*Hanoi*) 13(83):105-28. March/April. Series 2. [22 ref. Fre]
• ***Summary:*** This is an in-depth look at the relevance of the soybean to France, both now and in the future. It is prompted by the rapid growth of soybean imports to Europe from Manchuria. The author has a good knowledge of the literature on soybeans and a familiarity with the crop in the field in French Indochina and China.

© Copyright Soyinfo Center 2013

Contents: 1. Soybean cultivation: Species and varieties, major soybean producing countries (China, Japan, Korea, Indochina), other countries (Java and the Dutch East Indies, France, USA. The Imperial Institute of London is conducting trials in the Cape of Good Hope and Natal [South Africa], in British West Africa, and in Gambia), methods of cultivation and yield. 2. Commerce: Exports of soybeans and soybean cake (beancake, *tourteaux de soja*) from China and especially Manchuria (Newchwang, Dairen/Dalny, Antung, Ta tung kow, Suifenho [Suifenhe] / Sui-fen-ho), importing countries in 1908 in descending order of amount imported (Russian ports on the Pacific [Vladivostok, for re-export to Europe], Great Britain, France, Holland, Italy, Belgium, Germany), prices. 3. Soybean utilization: Chemical composition, use as a forage plant and for improving the soil, use in human foods (tofu, shoyu, Worcestershire sauce, tuong [Annamite soy sauce], miso, natto, soymilk), the soybean as an oilseed (yield of oil from various oilseeds), soybean cakes. Conclusions.

Page 109 discusses soybeans in Indochina, according to information received from M. Crevost, Curator of the Agricultural and Commercial Museum of Hanoi, and from the article by Bui-quang-Chiêu (Dec. 1905). The names of the soybean are different in the various parts of Indochina. In Cochin China (especially in the provinces of Chaudoc and Baria), in Annam (sporadically), and in Tonkin it is called *dau-nanh* or *dau-tuong* (*Tuong* is a sauce made with soybeans, described later under "Uses"). In Cambodia (*Cambodge*) it is called *sandek sieng.* The variety most widely cultivated in Indochina seems to be one with a yellowish-white color, more oblong than round, a little flattened (*soja platycarpa* of Harz [1880, 1885] (?)), different therefore from the fine (*belle*) varieties of Manchuria and Japan that are well rounded and pure yellow.

A table (p. 112) shows soy bean grain exports (in 1,000 metric tons) from different Manchurian ports for the years 1905-1908. The author notes that Indochina could be exporting soybeans to France. One factor that stimulated the large exports of soybeans from Manchuria in 1908 (besides an excellent harvest in 1907) was a program to suppress the cultivation of opium by expansion of soybean acreage (p. 113). The author uses the scientific name *Phaseolus radiatus* to refer to the *petit haricot vert* (probably mung bean). He observed soybeans planted in mixed culture in Szechuan.

Page 116 notes that the rise of soybeans in Manchuria is due in part to the power of the Japanese commercial house Mitsui Bussan Kaisha and the large English oil mills, which joined to develop an industry that had not previously existed. At the end of 1906, Mitsui, which had a dominant commercial role in Southern Manchuria, sent one or two trial shipments of soybeans to England. Mitsui was followed mainly by the British trading houses (Samuel & Samuel, Jardine, Matheson), then by the Germans (Otto Reimers, Arnhold Karberg), and the Russians. Continued suppression of opium growing led to further expansion of soybean cultivation.

A table (p. 117) gives the price of soybeans (per picul of 300 catties = 180 kg), soybean cake (per 10 cakes of 53 catties each or 318 kg for the 10), and soybean oil (per picul of 100 catties = 60 kg) in New chwang [Newchwang] taels and in French francs in the average year from 1882-1891, and in the year 1897. Prices were up in 1897.

Page 124 states: "A factory was recently founded near Paris (at Saint Germain en Laye), with Chinese capital, for the preparation of a series of products derived from soya: milk, *"caséo-sojaïne,"* cheese [tofu], sauce, and sweet soya preserves (*confiture* (*?*) *de soja*)*."* A footnote states: "I owe this curious piece of information to the amicability of the secretary of *Ecole française d'Extrême-Orient,* Mr. Ch. Maybon, who pointed it out in the January 1910 issue of the *Bulletin de l'Association amicale franco-chinoise.*

A table (p. 125) shows that the soybean gives the lowest yield of oil of all major oilseeds: copra (from coconut) yields 67-70% oil, sesame seeds 50-56%, poppy seed (*pavot*) 43-50%, castor oil plant 42-50%, rapeseed (colza) 42-45%, linseed 43%, peanuts 35-47%, cottonseed 21-26%, soybeans from Manchuria 16-18%.

Note: This is the earliest document seen (March 2000) that describes *caséo-sojaïne* as a product. Yet this may well be a mistake since its source of information is given as *Bulletin de l'Association Amicale Franco-Chinoise* (Jan. 1910)–which uses the term to refer to a business name. Address: Inspecteur-Conseil des Services Agricoles et Commerciaux de l'Indochine.

667. Noorden, Carl von; Lampé, Eduard. 1910. Ueber Sarton, ein neues Naehrpraeparat fuer Zuckerkranke [Sarton, a new food for diabetics]. *Therapie der Gegenwart: Medizinische-Chirurgische Rundschau* 51(4):145-46. New Series Vol. 12. [Ger]

• ***Summary:*** This article is mainly about soybeans, their chemical composition, and the various foods that can be made from them. "By coincidence, the soybean (*Soja hispida*), of Japanese origin, fell into our hands. The first experiments on this plant were conducted many years ago, initially in our private clinic in Frankfurt, then later by another one of us in Frankfurt and the other in Vienna.

"Soja hispida, a legume, produces a seed that lies somewhere between peas and beans in appearance. There are numerous varieties of soybeans and each has different qualities. Only certain varieties are useful in the kitchen. In Japan it is used to make the Japanese "bean sauce [*Bohnensauce*], called shoyu; it is also found in fine European kitchens. Moreover, in Japan, a peculiar dish called tofu (*Tofou*) is prepared from soybeans. It is rich in protein; almost all other nutrients of the beans are removed during its preparation. In its simple boiled state, the soybean is used as a vegetable or salad in Japan by the poor. Also in southeast

© Copyright Soyinfo Center 2013

Europe, people have been planting soybeans for three decades, but they don't have the same value here as in Japan.

"The high concentration of protein in soybeans (30-35%), the low concentration of starch and of digestible carbohydrates (ca. 6%) leads us to want to try soybeans in diabetic diets. But the plain, unprocessed bean, regardless of what we add to it, does not suit European palates..."

"Finally a method was found that removes almost all of the carbohydrates from soybean meal (*Sojabohnenmehl*), and also gets rid of the unpleasant tasting materials. Because this process is much too complicated to be carried out in one's household, Bayer & Co., a paint factory in Elberfeld, took over the production on a large scale. The preparation was next produced in the form of a thick puree, put into sterilized tin cans (about 18-19% solids, of which 8-9% was protein). Meanwhile they succeeded in making a dry powder, and the firm even told us that they would probably prefer to sell the preparation in a powdered form.

This soybean puree, given the name Sarton by the factory, contains no starches or red dextrins (*Erytrodextrins*) as indicated by a test with Lugol's solution. If properly prepared, the taste is excellent. All patients, and even healthy workers, accepted it very well. Like pea soup and lentil soup, the Soybean soup invites the use of plenty of butter or other fats, and thereby enables the incorporation of a high level of total nutrients–with little resulting sugar in the urine.

"More detailed communications about the soybean, about the chemistry of this and other preparations, about its digestibility, etc. will soon be published by Dr. E. Jürgensen from the Vienna Medical Clinic (*Wiener I. medizinischen Klinik*).

Note: This product, which originated in Japan, was made in its own factory in Potsdam. Address: 1. Vienna, Austria; 2. Frankfurt am Main, Germany.

668. Langworthy, C.F. 1910. Apendice. La soya como alimento para el hombre [Appendix: The soy bean as human food]. *Boletin de la Sociedad Agricola Mexicana* 34(20):389-92. May 25. [1 ref. Spa]

• ***Summary:*** This is a Spanish-language translation of USDA Farmers' Bulletin No. 58 (1897, Revised 1899). The soybean is referred to throughout as "La haba soya." It describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (3 types; *miso blanco, colorado, Suiza* [*Swiss*]), tofu (*Tofu o queso de haba; Tofu fresco*), soymilk (*leche de la haba soya*), frozen tofu (*Tofu helado*), yuba, soy sauce (*salsa de la haba soya*).

Note 1. This is the earliest Spanish-language document seen (Oct. 2012) that mentions yuba, which it calls *yuba.*

Under the name of coffee beans (*habas de café*), soybeans (*las habas soya*) are sometimes consumed in Switzerland as legumes (*como legumbres*)*;* when they are dry and toasted, they are used as a substitute for coffee (*sustituir al café*). No mention is made of soybeans or soyfoods in Mexico.

Note 2. This is the earliest Spanish-language document seen (April 2013) that uses the term *Tofu* or the term *queso de haba* or the term *Tofu fresco* to refer to tofu

Note 3. This is the earliest Spanish-language document seen (Jan. 2012) that mentions natto, which it calls *natto.*

Note 4. This is the earliest Spanish-language document seen (March 2009) that mentions miso, which it calls *miso.*

Note 5. This is the earliest Spanish-language document seen (Nov. 2012) that mentions soy coffee or soy as a substitute for coffee, which it calls *sustituir al café.*

Note 6. This is the earliest Spanish-language document seen (Oct. 2003) that uses the term *leche de la haba soya* to refer to soymilk.

Note 7. This is the earliest Spanish-language document seen (April 2013) that mentions frozen tofu, which it calls "Tofu helado."

Note 8. This is the earliest Spanish-language document seen (April 2012) that mentions soy sauce, which it calls "salsa de la haba soya." Address: PhD, Office of Experiment Stations, USDA, USA.

669. Blin, Henri. 1910. Valeur alimentaire du tourteau de soja [The nutritional value of soybean cake]. *Journal d'Agriculture Pratique* 74:667-68. May 26. [Fre]

• ***Summary:*** The industry that manufactures soya cakes (*tourteaux de Soja*) is very important in China, and their exportation has expanded greatly in recent years. Europe absorbs a large portion of the production. Major ports of export are Chefou and Newchwang [Manchuria].

In England an oil is extracted from the soybean which is used for food and has great value in soaps. Soybeans (*Les fèves de Soja*) contain a large portion of fermentable materials and a ferment analogous to the diastase of malt, which converts the starch into fermentable sugar. Dr. Calmette, of the Pasteur Institute of Lille, has succeeded in extracting from soybean seeds (*des graines de Soja*) diastases of different effects; they show whether soybeans are more or less advanced in maturity.

A table (from Meissel & Böcker) shows the composition of soybeans. Soya cakes, the usage of which is expanding in France, are manufactured from the residues of two clearly distinct Chinese industries: the extraction of oil and the manufacture of tofu (*fromage de Soja*). These cakes are round and weigh 30-32 kg; they are 9 cm thick and 58 cm in diameter.

A wide table shows the nutritional composition of 11 feeds, including soya cake and three other types of cakes, plus soybeans and six grains. For each is given the content of water, ash, nitrogenous materials (soya cake is by far the highest), nitrogen free extract, crude cellulose, crude fat, and economic value (in French francs) per 100 kg. (soybeans are the highest {20.97 francs}, followed by soybean cake {20.62 francs}). Wolff attributes a value of only 20.02 francs to the

© Copyright Soyinfo Center 2013

soya cake; the small difference is due to small differences in nitrogen content of various cakes. The writer concludes that soya cake has a marked superiority over other feeds; it can therefore be used advantageously in the rations of animals. In Germany and Austria it is already widely used, especially to fatten hogs; it is used with potatoes in the proportion of 1.25-1.5 kg per head per day. This cake is also very well suited for the fattening of cattle, and for nourishing milk cows and sheep. It can be very valuable in enriching forages of mediocre quality.

Soya cake is increasingly used in agriculture in the north of France; it is imported via the ports of Havre [Le Havre, on the English Channel], and Dunkirk–both in northern France. Address: France.

670. Wilkinson, F.E. 1910. China. Report for the year 1909 on the trade of Newchwang. *Diplomatic and Consular Reports, Annual Series* (*Foreign Office, Great Britain*) No. 4440. 23 p. May.

• ***Summary:*** The section titled "Exports" (p. 9) gives a detailed discussion of the amount and value of Beans [soybeans], bean cake, and bean oil exported from this port. An excellent full-page map shows the south of Manchuria and Corea including all the major ports (Newchwang, Port Arthur, Tairen [Dairen], Antung), cities, rivers, railways (existing and proposed), and bodies of water. Export of [soy] beans from Newchwang reached 4,242,943 cwt [1 cwt = hundredweight = 112 pounds], which has only once been exceeded, in 1899, before the port of Dairen came into existence. Export of bean cake has broken all previous records. Some 86% of the 6,365,654 cwts were sold to Japan, "where, owing to the dearth of fish manure, bean cake has become indispensable as a fertiliser in the rice fields... Experimental shipments of bean cake for cattle consumption were made during the year under review both to the United Kingdom and Germany. The shipment to the United Kingdom proved a failure, the cake arriving in a mildewed condition. The result of the shipment to Germany, which as a comparatively large one of about 500 tons, has for some reason or other been kept a secret. Special precautions were taken in this case to keep the consignment in good condition."

The great market for bean oil "is South China, where it is mainly used for cooking purposes as a substitute for lard, which is a more expensive commodity. In spite of its unpleasant odour, the poor consume the oil, as a rule, in its crude state without any attempt at refining it, but amongst the better classes it is boiled before being used and allowed to settle in jars for a couple of months. This process is said to do away to a great extent with the objectionable smell and to improve the flavour. There is also amongst the poorer classes a fairly brisk demand for bean oil for lighting purposes. They find it more economical than kerosene, besides saving them the cost of a lamp, for all they need to do is pour a little into a cup or bottle and drop a proper wick into it... A small quantity of bean oil was shipped to the United Kingdom, where their appears to be a demand for it for soap making... The shipments in 1909 were made in kerosene oil tins, but they have not been a success, as in every case there was a heavy loss by leakage."

"Total production of [soy] beans in South Manchuria." The author will now attempt to estimate this total based on the exports of beans and bean cake from Newchwang and Dairen in 1909. The "consumption by Manchuria of these special products is very limited, and the two ports between them almost monopolise the export. Beans, except to a limited extent, in the form of bean curd [tofu] or vermicelli, which is made of the green variety, do not enter into the diet of the population, nor is any use made by farmers of bean cake either in manuring their fields or feeding their cattle. The staple food of both man and beast in this country is millet, and, for the rich soil in the interior, the ordinary farm manure is the only fertiliser needed. It is probable, therefore, that at least 90 per cent. of the total crop is available for export. In 1909 212,000 tons of beans and 318,000 tons of bean cake were exported from Newchwang, and 438,000 tons of beans and 276,000 tons of bean cake from Dairen, or from the two ports together 650,000 tons of beans and 594,000 tons of bean cake. It is computed that it would require about 653,000 tons of beans to produce 594,000 tons of bean cake, so that the total quantity of beans represented by the combined exports of bean produce from the two ports was 1,303,000 tons. Exports from other places on the coast may account perhaps for another 30,000 tons, which brings the total exports from South Manchuria to 1,333,000 tons. The production therefore, under favorable conditions, may be safely estimated at not far short of 1,480,000 tons."

Tables show: Value of the total trade of Newchwang during 1905-09. Value of trade for beans, bean cake, and bean oil from 1908-09. Distribution of bean, bean cake, and bean oil export from Newchwang. Address: British Consul, Newchwang.

671. *Christian Science Monitor.* 1910. Rapid development of the soy bean trade in China. July 21. p. 2.

• ***Summary:*** London. From the black variety of soy bean "is manufactured soy (so called from the Japanese equivalent So Yu [sic, Shoyu]), a sauce used by the Japanese as well as the Chinese in astonishing quantities with all kinds of cooked food. It is manufactured by boiling the beans and by allowing them to ferment with yeast [sic] after mixing thoroughly with water, flour, and salt, and is sold in glazed earthenware jars.

"The variety of yellow beans is used for making another product of general use, a clear [sic] jelly like substance known as bean curd. It is to be seen on sale in large slabs on every wayside food stall. The cheerful looking coolies in the accompanying photograph are pausing a moment in their work of grinding beans for the purpose under a revolving

© Copyright Soyinfo Center 2013

stone mill. The pulp [okara] so produced will be filtered, [the soy milk cooked], the casein coagulated by the addition of gypsum and the jelly-like coagulated mass pressed into shape for market.

"But it is the cultivation of a third variety, the white bean, which has developed during the last few years from a mere local crop, to supply far eastern demands, into an industry of world-wide importance. At a recent meeting of the Linnaean Society of London Mr. Holland, on behalf of the director of the royal botanic gardens, Kew, gave some statistics of the remarkable innovation for which Manchuria is apparently responsible. The output of soybeans from that country prior to 1907 did not exceed 120,000 tons annually, nearly all being taken by neighboring ports in China and Japan; but during 1908, owing to the demands from Europe, the export rose to 330,000 tons, while the 1909 crop has been estimated at 700,000 to 800,000 tons. The principal use of the beans in Europe is for the extraction of oil, of which they contain some 18 per cent, which is suitable for soap making, while the cake left after crushing is said to be a valuable cattle food likely to prove a serious competitor to cotton seed and linseed cake, at present in use for this purpose. The beans fetch $20 to $21 a ton in London, the oil from $84 to $88 per ton, and the cake about $26 per ton.

"The sudden influx upon the markets of the world of this extremely useful product is, strange as it may seem, undoubtedly due to the Russo-Japanese war, for the cultivation of the crop was extended in Manchuria in direct consequence of the large demand for the bean for food for the Russian army. When the troops were withdrawn other markets had to be sought for the products, the supply of which was at once greatly in excess of demand."

The photo caption reads: The grinding process. Soy beans being prepared for market in a Kwangtung [Guangdong] village. Note: Guangdong is a province in southeast China; its capital is Canton (Guangzhou).

672. Crowe, E.F. 1910. Japan. Report for the year 1909 on the trade of Japan. *Diplomatic and Consular Reports, Annual Series* (*Foreign Office, Great Britain*) No. 4511. 86 p. July.
• ***Summary:*** "Imports of manures.–The question of manures forms one of the most interesting items of 1909. A detailed table showing the quantities and values imported during the past three years will be found in Table 1 (B), page 61. Bean cake, of course, heads the list as regards value. The total amount imported in 1909 was 575,180 tons, worth £2,283,700, or £3 19*s.* 4*d.* a ton, as compared with 461,950 tons, worth £2,220,000 in 1908, or an average of £4 16*s.* 1*d.* a ton.

"Next comes the sulphate of ammonia, but in this item there was a big drop from 66,445 tons, valued at £898,000, to 45,835 tons, worth 604,700, while in the case of both phosphate rock and fish guano there was a decrease of about £100,000. Nitrate of soda made a small gain.

"It is a well-known fact that bean cake has for years occupied the position of the most popular imported fertiliser in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a lesser extent, have become purchasers of Manchurian beans the questions arises as to whether Japan will be able to continue to buy bean cake in huge quantities if the price rises appreciably. In studying this question two factors should not be lost sight of; one is that Japan is herself a large grower of soya beans, having, according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soya beans from China and Corea.

"The greater part of these beans is used for the purposes of human food, *i.e.*, the making of "soy," "miso," and bean curd, but a portion, by no means small, is used also as a fertiliser.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years." A table (p. 18) shows imports of [soy] beans and bean cake (in piculs; 1 picul = 132.27 lb), the value of each, and the average price of silver each year from 1900 to 1909. Imports of [soy] beans increased from 1,575,022 piculs in 1900 to a record 3,623,377 piculs in 1909. Imports of bean cake increased from 2,280,687 piculs in 1900 to a record 9,663,036 piculs in 1909. The average price of silver fell by about 16% during this period. "Should the price in future be forced up very high in consequence of British and other demand, the presumption is that Japan would turn to sulphate of ammonia if the cost per unit of nitrogen therein were to be less than in the bean cake. On the other hand it must be remembered that the removal of duty on sulphate of ammonia in the United States of America means that that country will probably absorb large quantities of the British output and that Japan will have to pay a bigger price if she wants a share of this fertiliser.

"Thus the outlook for nitrate of soda becomes a good deal brighter and now that, owing to the subsidised Japanese line which runs to South America, it is possible to get cheap direct rates of freight, it looks as though the nitrate of soda will be a serious competitor to the other nitrogenous fertilisers, except in the matter of wet rice cultivation."

Page 31 shows the shares of principal countries in the import and export trade of Japan during the years 1908 and 1909. Japan's biggest imports came from the United Kingdom, followed by the USA, then China. The biggest customer of Japan's exports was the United States, followed by China then France (p. 31). Japan's biggest port (in terms of value of imports and exports) was Yokohama, followed by Kobe than Osaka (p. 37). Japan's population at the end of 1909 was estimated at 49,769,704 (not including Formosa or Karafuto [Japanese Sagalien]). Japan's most valuable

© Copyright Soyinfo Center 2013

exports in 1909 were tea, followed by rice then fish. Exports of "Soy" [sauce] rose from £110,500 in 1907 to £111,100 in 1909.

Summarized in *J. of the Board of Agriculture* (*London*), Aug. 1910, p. 410.

Note: This is the earliest document seen (Sept. 2001) that gives statistics concerning industrial utilization of soybeans–in this case soybean meal used as a fertilizer in Japan. Address: Attaché, British Embassy, Tokio [Tokyo].

673. Hervier, F. 1910. Le pois oléagineux de la Chine (*Soja hispida*) [The "oil peas" of China (*Soja hispida*)]. *Jardin* (*Le*) 24:233-36. Aug. 5. [1 ref. Fre]

• ***Summary:*** The elder readers of this garden magazine will know well this plant, which is so useful and versatile. "But that we will take advantage of the resurgence of interest in the soybean to give our young readers a summary of what various people appreciate this useful plant. It can be used as food, forage, in industrial products, and as a medicine. Those who have written about it include Blavet, D. Bois, A. de Candolle, Chevallier, Cusin, Foëx, Fruewirth, Grandeau, Guichard, Haberlandt, Lachaume, Ladureau, de Lunaret, Michelin, de Mortillet, Paillieux, Trabut, Vavin, Vianne, Vilmorin, and many more. We also want to encourage our young readers to at least try cultivating the soybean, since this is not difficult."

Contains a brief botanical description of the soybean, a list of the Asian countries where it is grown and its vernacular names in some of these countries, a long quotation from Kaempfer (1712) describing the soybean, and a history of the soybean in France from about 1740 when it was sent to the *Jardin du Roi* (today called the Museum) by missionaries in China–although the first records date from 1779. In 1821 it was tested by Mr. C. Brun of Beaumes on his land at Champ-Soue, near Etampes (Seine-et-Oise). At the end of 1855 the Society for Acclimatization distributed it to some farmers for trial. "Then in 1880, thanks to the introduction in the catalog of the house of Vilmorin-Andrieux & Co. of a variety cultivated in Austria-Hungary which could be propagated very easily, serious trials were conducted in different parts of France. From these, we can conclude that the early yellow soybean (*Soja jaune hâtif*) or oil-pea of China (*Pois oléagineux de la Chine*) (*Houang-teou* or *Houang-ta-teou*, whether referred to as the dwarf or as the tall variety) could be usefully cultivated" (p. 233).

"Being better advised than we are, the Austro-Hungarians, after the first trial they conducted in 1850, acquired incontestable proof of the value of Soya in the feeding of cattle / livestock (*du bétail*). So they developed this crop more and more; it took off strongly, especially after the Vienna World Exposition of 1873."

"In the climate of Paris, only the yellow Chinese and the Mongolian varieties can be cultivated successfully, since their vegetative cycle is 3-4 months. South of the Loire River, one can add the brownish-red variety of China. Finally, even further south, in Languedoc, Provence [regions in south central France], and Algeria, all the late varieties can be cultivated, especially the ones with black seeds and those from Japan. A large number of these varieties are found in commerce, especially the early ones designed by names such as Early of Podolie and Early of Etampes (see fig. 140).

Gives details on how to sow, cultivate, and harvest the soybean for garden use. Its needs are quite similar to those of the Haricot. "Unlike Haricot beans, which can only be eaten as green beans (pods and all), soybean seeds (*Pois oléagineux de la Chine*) can be consumed either fresh or dry. Moreover, soybeans are easily digested and do not cause the all-too-well-known inconvenience of Haricot beans. To eat them in the fresh green stage, they should be prepared/cooked like small green kidney beans (*flageolets*), which they resemble in taste. For the dry beans, soak them overnight in twice their volume of either rain- or river-water in which you have dissolved (per liter) 3 gm of baking soda or 50 gm of sugar. The next day, drain them then put them like any dry legume in cold water, bring to a boil, and simmer for 2½ hours. Half way through the simmering process, add salt and a walnut-sized piece of butter. After they are cooked, you can serve them either with or without fat [butter or lard] or meatless seasonings (*au gras ou au maigre*). The cooked dry soybeans are also excellent pureed" (p. 234).

A table (p. 234) compiled by Prof. Haberlandt of Vienna compares the composition of seeds of soybeans, haricot, peas, lentils, feves, and yellow lupins. It shows that soybeans are the most nutritive, because they contain the most protein and fat.

A second table (p. 235) shows that this plant, cultivated in the garden solely for its seeds, removes from the soil the following amounts of minerals per 100 kg of seeds: Phosphoric acid 0.729 kg, lime 3.146 kg, magnesia 1.106 kg, and potash 0.811 kg.

A third table shows the amount of these four substances removed when the soybean is grown for forage; the yield is 20,000 to 30,000 kg/ha.

"The Asiatics and particularly the Chinese and Japanese greatly value the seeds of the soybean (*du Soja*), which are both nutritive and rich in fat; they form the basis of their diet, replacing butter, oil, and milk. They are used in culinary preparations greatly appreciated in these regions."

The seeds are the richest of all legumes in the protein legumine, which is actually "solid milk." The Orientals soak, then grind the beans and extract the milk, which they use like dairy milk. "Much of it is coagulated to make a cheese, similar to our *fromage à la pie* (quark), which is called *Teou-fou* in China and *To-fu* in Japan, and which they consume in large quantities, fresh or dry, uncooked or cooked.

"This cheese, when well prepared, is very tasty, and it forms a very exquisite dish when it is deep fried like

potatoes.

When the seeds are roasted with an equal quantity of wheat or barley, then mixed with water and allowed to ferment, they become the appetizing condiment sauce of great renown, known as Tsiang-yeou or Shoyu; at this time it is greatly in vogue in England and America under the name of "Indian Soy." This sauce is greatly appreciated with roasted meat or fish; added to beef or beef bouillon, it communicates a color and savor that are very agreeable."

Aside from these food uses, the soybean is also used in Asia for forage and to make oil and meal. "Finally, the soybean can be used as a coffee substitute–as it has long been in the regions of Languedoc and Tyrol [Tirol]." Also discusses soy flour and its high nutritional value.

A non-original illustration (p. 235) shows a soy bean plant with pods and a close-up of the pods on stem (from an original in Carrière 1880).

674. Lemarié, Charles. 1910. Les sojas du Japon [The soybeans of Japan]. *Bulletin Economique de l'Indochine* (*Hanoi*) 13(85):493-98. July/Aug. [4 ref. Fre]

• ***Summary:*** "As a contribution to the study of the question of soybeans, so clearly revealed by the Inspector-Consul Mr. Brenier in a recent edition of this Bulletin, he judged it useful to ask me for the notes hereafter collected as much over the course of my lectures as upon the occasion of my voyage to Japan in 1903.

"I borrow much from Rein (*The industries of Japan*) and from Messrs. Paillieux and Bois (*Le Potager d'un Curieux* or *The Kitchen-garden of a Curious One*) who summarized all that we know about soybeans (*soja*) in Europe up until recently" (p. 493).

Describes and gives the names of more than twenty cultivated varieties, using the classification system of Rein and the Japanese based on seed coat color.

"I have already said that it [the soybean] needs heat and frequent watering. These considerations explain, in part, the failures encountered up to now in the attempts to introduce this crop into Europe. I fear the same obstacles for Mr. Li-yu-Ying, of Chinese nationality, formerly a student at the school of practical agriculture at Chesnoy, near Montargis (Loiret).

Note: Loiret is a department of France just south of Paris. Montargis is a commune in the Loiret department; the ancient town is located about 110 km (68 mi) south of Paris.

According to a lecture he gave last year to his former classmates, Li set himself the task of taking up these trials on the outskirts of Paris: or was it on the manure fields / sewage farms (*champs d'épandage*) of Gennevilliers or Achères.

"But even if the cultivation of soybeans in France is not profitable, nevertheless the popularization of the diverse products that come from them is no less useful; Indochina, if the need be, could provide for new industrial ventures. With Mr. Albert Demolon, a scientifically educated agriculturist (*ingénieur-agronome*), then professor at Chesnoy, and today director of the Agricultural Station of Aisne [northeast of Paris] and of the Laboratory of Bacteriology at Laon, Mr. Li-yu-Ying again took up his previous studies related to these various products. In particular, he compared soymilk, which he calls *Caséosojaïne*, with animal milk, and he believed [it] possible, employing the highly developed procedures of handling and fermentation used [in France] with cow's milk, to obtain forms of tofu (*Téou-fou*) acceptable for our Western palates. That is to say: first, before any fermentation, a liquid [form of tofu] lends itself to the same uses as milk, especially useful for artificial feeding of livestock; then, after coagulation: 1. a hard cheese, corresponding to cheese of the firm sort (*fromage à pàte ferme*), cooked egg, or cooked meat in richness of protein; 2. a soft cheese, corresponding to fresh cheese (*fromage frais*) and able to be consumed as a legume; 3. a fermented cheese, after sterilization then inoculation with microorganisms of certain special cheeses, corresponding to these diverse fermented animal cheeses" (p. 497-98).

Also discusses: Azuki (p. 497). Address: Directeur des Services agricoles et commerciaux du Tonkin.

675. Choles, H.J. 1910. Soy beans: Their cultivation and uses. A new Natal industry. *Natal Agricultural Journal* 15(3):281-307. Sept. [4 ref]

• ***Summary:*** Contents: Introduction. I. Botany and habitat: Introduction, varieties. II. Cultivation: Conditions of growth, methods of culture, soy bean mixtures. III. Harvesting: When to harvest, curing, frame for curing soy bean hay, harvesting for seed, yield of seed, yield of forage. IV. Chemistry of the soy bean: Introduction, digestibility, soy bean oil, soy bean bake. V. Value and uses of the soy bean: Introduction, the uses of the soy bean (uses of the oil {7 uses}, uses of the bean as a vegetable in Natal {like marrowfat peas or haricot beans}, in bread or biscuits in Paris [France] for diabetics, in France and Switzerland as a coffee substitute or adulterant, soy bean flour used for making bread and biscuits in England, soya meal for cattle feeding, oil-free residue made into cake for stock-breeding purposes, liquid closely resembling cow's milk made in Japan, vegetable cheese [tofu] made from the milk, a sauce called "Shoyu" made in Japan, soy-bean cake used as a fertilizer in Japan and China), as a soiling crop, as a silage crop, as a hay crop, as a pasture plant, as a soil renewer. VI. Value of the bean for feed: Introduction, soy beans for hogs, soy beans for dairy cows, other experiments with milch cows.

Illustrations (non-original line drawings) show: The soy bean plant with pods and roots (p. 280; from an original in Piper 1909). Flowering branch with close-ups on flower, leaves and pods (p. 285; from an original in Lamson-Scribner 1899). Frame for curing soy bean hay (p. 291; reproduced from Messrs. Lever Bros. pamphlet on Soy Bean Cultivation). Roots of soy bean plant with nodules (p. 301).

676. Gilbert, A.W. 1910. Soy beans and fertilizer question. *Daily Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) 13(79):55. Oct. 5. [1 ref]
• ***Summary:*** The following is an extract from the *National Review*, of Shanghai, China: "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a less extent, have become purchasers of Manchurian beans, the question arises whether Japan will to be able to buy bean cake in huge quantities if the price rises appreciably. In studying this question two factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China and Korea. The greater part of these beans is used for the purpose of human food–i.e., in making of 'soy,' 'miso,' and bean curd–but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years. In making such a review it will be noted that, both in the case of beans and of cake, the amounts imported in 1909 were record importations, but that the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake. On the other hand, it must be remembered that the removal of the import duty on sulphate of ammonia in the United States of America means that the United States will probably absorb large quantities of the British output, and that Japan will have to pay a higher price if she wants a share of this fertilizer. Thus the outlook for nitrate of soda becomes a good deal brighter, and now that, owing to the subsidized Japanese line to (South) America, it is possible to get cheap freight rates, it looks as though (Chilean) nitrate of soda will be a serious competitor to the other nitrogenous fertilizers, except in the matter of wet rice cultivation.

"There is a point which, though obvious enough to those intimately connected with the trade, is sometimes overlooked in general discussions on the subject of bean cake, viz, that the British farmer can afford to pay a proportionately higher price for cake than the Japanese farmer, the reason being that in the United Kingdom the cake, after serving for provender, turns into a fertilizer, whereas in Japan it is employed as a fertilizer directly, without any intermediate use.

"As regards rock phosphate, most of the supplies have hitherto come from Ocean and other islands. Owing, however, to the new fertilizer law which prohibits any admixture in Japan of earth and sand with rock, it will probably be found that the phosphate from the above-mentioned islands, being pure and expensive, will be displaced by the cheaper varieties of rock from Tennessee and Algiers, which are naturally mixed with impurities." Address: Vice-Consul, Nanking.

677. *Los Angeles Times.* 1910. Fertilizers for Japan. A scarcity of soy beans makes a market for Tennessee rock phosphate. Oct. 13. p. I13.
• ***Summary:*** "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a less extent have become purchasers of Manchurian [soy] beans, the question arises whether Japan will continue to be able to buy bean cake in huge quantities if the price rises appreciably.

"In studying the question, two factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China [Manchuria] and Korea. The greater part of these beans is used for the purpose of human food–i.e., in making of 'soy' [sauce], 'miso,' and bean curd [tofu]–but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years." In 1909 Japan imported record amounts of beans and cake, but "the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake."

The "British farmer can afford to pay a proportionally higher price for cake than the Japanese farmer," since in the UK the cake, "after serving for provender [feed], turns into a fertilizer [manure], whereas in Japan it is employed as a fertilizer directly, without any intermediate use. "

678. *Oil, Paint and Drug Reporter.* 1910. The soya bean and the fertilizer question. 78(17):41. Oct. 24. [1 ref]
• ***Summary:*** "An extract from the *National Review of Shanghai*, regarding the relation of the soya bean to the fertilizer question, has been sent to the Department of Commerce and Labor by Vice-Consul A.W. Gilbert from Nanking. The discussion of the subject by the Review is as follows:" There follows a long excerpt.

• ***Summary:*** 1. The Chinese pavilion: In the beautiful and grandiose Universal Exposition of 1910, that a frightful fire partially destroyed, the Chinese section merits special mention. It is not an official exposition organized through the care of the Chinese administration. Rather, it is an exposition organized by five Chinese merchants The last one, Mr. Tsu represents both soya and the ideal kite (*soja et cerf-volant idéal*).

Note: The meaning of *cerf-volant idéal* is unclear. The Chinese have long been known for their beautiful and well-designed kites, some with long, flowing tails. However, if Mr. Tsu was exhibiting kites, he would have used the plural form of the noun. Is he saying that soy is like a high-flying kite?

These exhibitors have gathered a certain amount of indigenous and modern objects, commercial and artistic in a pavilion located in the section reserved to foreign countries (start of p. 339).

In the back of the room, to the right are displayed by Mr. Tsu, the different products extracted from one of most utilized plants in China: *Soja hispida*, Houang-teou, the soybean of the leguminous family.

One can observe plates filled with soybean seeds (*graines*), looking like little round (broad) beans (*fèves*), and some dehulled soya beans; jars filled with white soya cheese, looking like quark [tofu], cheese in round boxes, looking like Camembert [fermented tofu]; a jar with the skin of the soya cheese [yuba]; a vial with soya casein [soy protein].

A display case is filled with jars of different types of yellow, green, and black soybeans, of soya flour, of semolina, of a brownish soya coffee in bean and powder form, of bottles of soymilk, of soy oil, and of Soy [sauce], this condiment so utilized in Chinese cuisine. On a table are displayed soya pastries resembling in their shape, the Commercy madeleines [small sponge cakes shaped like sea shells], some noodles, macaroni and soya bread that is prescribed to diabetics as well as a gruel of soya flour. On the floor are placed several square soybean cakes (*tourteaux*), residue of the soya oil production, of a grey-yellow color, to be used as fertilizer. A brochure on soya-based food products, excerpted from the book *The Soybean* (*Le Soja*) by Mr. Li Yu-ying is being handed out through the care of the exhibitor, Mr. Tsu.

This brochure, titled: 'Soya based Food Products' (*Produits alimentaires à base de Soja*), Caseo-Sojaine, rue Denis-Papin, les Vallées (Seine), describes these products and their preparation: soya milk, liquid or in powder form, derived from the grinding of the beans, after immersion, in water, for several hours. The grain content consisting of legumin or vegetable casein, is placed under a grindstone: one derives an homogenous, nutritive and digestible milk product. Fermented and powdered milk is produced, soya casein, extracted from the soya milk, with uses in food and in industry; soya flour, obtained by the grinding of the dehulled beans, completely deprived of their seed coat to lessen the proportion of cellulose and increase its digestibility. It does not contain any starch; soya bread, well utilized to feed diabetics; by perfecting fermentation, one makes a rather light bread, one that reminds one of rye bread; pasta / noodles; cookies, pastries, white- and pink-tinted pasta prepared with soya flour, soy sauce (Soy) with a bouquet that reminds one of burned onion that is used to enhance fish and vegetables; soya jam (*confiture de Soja*), similar in appearance and taste to chestnut cream (à la crème de marrons), soya oil for food use; green vegetable soybeans (*légumes de Soja*), whose sprouts may be used as a salad. As for the soybean cakes (*tourteaux*), these are used for animal feed and fertilizer.

In China, the *Soja hispida* (the soybean), with hairy pods, with yellow, reddish, black, green, white, variegated beans, whose taste echoes the green bean, the lentil, the pea, and that has a high content of culinary oil, is grown, on a large scale, in Mongolia, in Manchuria, and in the provinces of Henan, Zhejiang, Jiangxi (*Ho-nan, Tchokiang, Chan-si et Chang-tong*). It is one of the most utilized plants from the culinary and industrial point of views.

Soy sauce, called Soy in English and in Chinese *Tsiang-yeou*, is a greatly-appreciated condiment that is prepared with yellow soybeans named *Houang-teou* and that one flavors with star anise, green anise, and grated orange rind. It is a blackish liquid, lightly syrup-like used to enhance the flavor of fish, meat, and vegetables. Another Chinese condiment [fermented black soybeans] is made with soybeans mixed with salt and ginger. In Canton, *Kiu-tsu* [*jiuzi*, Cantonese

© Copyright Soyinfo Center 2013

wine starter, a ferment] is made with soybeans, red rice, and leaves of *Glycosmis citrifolia*. As for soya cheese, it is made as follows (see footnote): Soak the soybeans in water for 24 hours to make them swell; drain off the water, grind while adding fresh water to form a slurry that is run through a filter. Stir it by hand, then pour it into a caldron, where it undergoes a slow cooking. Let it cool in a tub and remove and foam with a big spoon.

A thick film [yuba] is formed on the surface. It is lifted off with a round wooden stick shaped like a long chopstick (*baguette*) and it is allowed to dry on thin ropes. This skin is called skin of soya cheese [yuba]. To the remaining soymilk, add a little water mixed with calcium sulfate (*plâtre*) and several drops of nigari, which is magnesium chloride derived from the salt in salt beds.

Footnote at the end of page 342: See (1) *Bulletin of the Society for Acclimatation,* second series, volume 13, page 562, 1866, "On The production of tofu in China," by Paul Champion.

Stir in the liquid coagulant which will cause the casein in the soymilk to coagulate. Pour the warm mass into in a wooden frame or box lined internally with a fine cloth through which the liquid whey will seep. Atop the frame or box place a board loaded with weights to press the cheese which is of a grayish white color, looks like quark, and has a pea-pod taste (*à goût de pois*)*;* with the addition of salt, this cheese will keep; without this precaution, it spoils. It is used to feed the impoverished portion of the population: often, it is fried in soya oil. Soya cheese [tofu] is manufactured on a large scale near Peking and in most of the sea ports of Southern China. It is mostly the town of Ning-po that is the center of this production. Each year, thousands of junks (*jonques*) loaded exclusively with soya cheeses leave this town harbor to reach other Chinese harbors.

Besides cheese [tofu], the most important soya product is the oil that is extracted from its beans, mostly the yellow beans called *Houang-teou.* This yellow oil, which is siccative / drying, has a special smell and a pea-pod taste. At Kaifeng (K'ai-fong) in Henan (Ho-nan) province, at Tsi-nan in the Chan-tong, and at T'ai-yuan in the Chan-si, are located important soya oil manufacturing plants. But it is mostly Ningpo in the Tcho-kiang, that is the center for the production and the centralizing of soya oil. Much is also produced in Newchwang [Nieou-tchouang], and in Chefoo / Tantai (Tche-fou) in Shantung province. The soybean cakes (*tourteaux*), the by-products of soya oil processing, are a major export out of Newchwang and Chefoo; they are shipped to Swatow and Amoy to be used as fertilizer in sugar cane plantations.

These soybean cakes (*tourteaux*) are sought after as much as the beans themselves, and are to feed cattle, as are the pods, the stems and the foliage of the plant. The beans of *Hei-teou,* the black soya bean, mixed with cut up straw, are given as feed to horses and mules in Northern China and in Manchuria.

Note: This periodical was established to promote understanding and friendship among the people of France and China. Soja is mentioned on pages 341, 342, 343, and 346. Address: Dr.

681. *Times of India* (*The*) (*Bombay*). 1910. The soy bean. Nov. 1. p. 4.

• ***Summary:*** From Pioneer: "It will interest those who are now busily engaged in this country in the cultivation of soy beans, in the hope of intercepting some of the wealth that is freely flowing to Manchuria, where this class of cultivation has proved so important and so profitable, to know that, in addition to its many other claims to utility and popularity, a method has just been discovered of converting the soy bean into a kind of coffee, a kind of milk, and also a kind of cheese. Generally speaking imitation food stuffs are harmful, but the claim is made that these latest products of the now famous Manchurian bean are wholesome to a degree and are likely to find a ready sale amongst those classes of the community who cannot always afford a regular supply of pure coffee and milk and sustaining cheese. At all events there now seems to be a run on soy bean specialties."

"Experiments have shown that this bean can be cultivated in many places in India and required no very particular attention. Even when carelessly sown in an ordinary flower pot in a verandah in Calcutta it sprang up in a few days, strong and vigorous. The point to be borne in mind is this: The soy bean has been proved to be such an all-around useful commodity that the demand for it during the past year or so has become enormous in practically all parts of the world, and, as we have seen, new uses continue to be found for it. Secondly, the growth in this trade is such that it is evident that Manchuria will find it difficult to keep pace with it even if there were any desire on the part of those in a position to complete to allow her an undisputed monopoly of this profitable trade. And, finally, it must not be forgotten that the growing popularity of the soy bean is only acquired at the expense of other oil seeds which are chiefly grown in India, and it is not at all improbable that cultivators in this country will soon have to decide whether there are to be less oil seeds or more soy beans."

682. *Times* (*London*). 1910. Soy bean as a fertilizer. Nov. 21. p. 14, col. 6.

• ***Summary:*** "Several subjects of importance to this country are discussed in the *Daily Consular and Trade Reports* published by the Bureau of Manufacturers, Department of Commerce and Labour, Washington [DC]. A note upon soy beans as a land fertilizer is particularly noteworthy in view of the doubt expressed in this country last year as to their manurial value."

Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor). Oct. 5. p. 55.

683. Li, Yu-ying. 1910. Vegetable milk and its derivatives. *British Patent* 30,275. 5 p. Date of application, 30 Dec. 1910. Accepted 29 Feb. 1912.

• ***Summary:*** Li gives his occupation as "Engineer." "This invention consists in the manufacture of a vegetable milk and its derivatives by means of soja grains (Chinese peas), the milk thus produced having the appearance, the colour and the taste of ordinary milk, its chemical composition greatly resembling the same. It has moreover the same nutritive and alimentary properties." The grains are cleaned, decorticated, soaked and ground with water in a mill of the kind specified in British Patent Application 11,903 of 1911. The mechanized mill is composed of a fixed lower millstone above which the upper millstone is mounted on a vertical shaft.

"The clear milky liquid produced by grinding the grain previously mixed with water in combination with the supply of water in the millstone enters a channel then passes into a shoot (*t*) which conveys it to a tank (*u*) from which it is drawn off by a pump (*v*) which forces it under pressure into the filtering press (*x*). On leaving the filter, it falls, after passing through a sieve (*y*) into a vat (*z*). From this vat it is conveyed through a pipe (*a*) to the boiler or digester (*b*)." It is cooked with steam in a water-jacketed vessel, then pasteurized or sterilized. "It is then bottled and is ready for consumption. The soja milk may be utilised in the two following cases. 1st. As a substitute for ordinary milk. It may be consumed as sterilised at temperatures of 110º to 120ºC. 2nd. As a raw material for use in different manufactures (cheeses, casein, and the like). It must then be heated from 60º to about 120ºC.

"It may also be concentrated, dried, or fermented. "The milk obtained may be humanised or animalised," i.e., its composition may be brought to resemble that of human or animal milk. It is coagulated for making cheese by magnesium salts, organic salts, rennet, lactic ferments, or "sojaobacille," a ferment obtained by cultivation in a mixture of the above-described liquid and sodium chloride the fermented paste obtained by putting into salt water soy beans that have been cooked with water and allowed, alone or mixed with cereal flour, to stand in the air.

"For obtaining fermented cheese such as roquefort [Roquefort], parmezan [Parmesan], romatour [Rahmatour; Bavarian cream cheese], camambert [Camembert], and gruyere, suitable ferments are employed."

"For the fermented milk, the special ferment termed 'sojaobacille' is employed or other ferments used for obtaining fermented milks–kephir [kefir], yoghourt [yogurt], koumiss, and the like, and which are the saccharomyces cerevisæ, dispora caucasica, maya bulgare, and the like, and the said milk is modified by the addition of sugar levulose, and the like and particularly of lactose."

In making casein, the oil may be expressed from the beans before the preparation of the milk. The casein, obtained by coagulating the milk, may be used as food, paste, etc., or may be mixed with borax, oxide of zinc, magnesia, gelatin, etc., to obtain a hard industrial (non-food) substance

termed “sojalithe” [resembling ivory, horn, or shell]. The filter press residues may be dried and ground to form a food for human beings, or may be used as food for cattle, or as manure. The liquid expressed in making cheese [soy whey] may also be used for feeding animals.

An illustration shows a longitudinal view of all the equipment used in the invention; each important part is marked with a letter.

Note 1. This is the earliest document seen (Sept. 2012) that mentions soy yogurt or fermented soy yogurt.

Note 2. This is the earliest document seen (Sept. 2012) that mentions kefir in connection with soymilk.

Note 3. This is the earliest document seen (June 2011) that mentions the word “sojalithe” (a hard plastic) or that discusses a specific non-food industrial use for soy protein; “sojalithe” is probably derived from “Galalith” (a registered trademark; see F.G.J. Beltzer, June 1911). Galalith, or Erinoid in the United Kingdom, a synthetic plastic material manufactured by the interaction of casein and formaldehyde, was introduced in 1900 at the Paris Universal Exhibition in France. In France, Galalith was distributed by the Compagnie Française de Galalithe located near Paris in Levallois-Perret. It was first used to make buttons, resulting in a revolution in the button industry. In 1913 some 30 million liters (8 million U.S. gallons) were used to make Galalith in Germany alone. Ever the entrepreneur, Li apparently saw “sojalithe” as a potential substitute for expensive ivory.

Note 4. This is the earliest English-language document seen (Oct. 2011) that uses the term “fermented cheese” to refer to a type of fermented tofu, or to a Western-style soy cheese (Roquefort, Parmesan, Camembert, or Gruyere types). It is interesting to note that all of these Western-style cheeses are traditional mold-ripened cheeses.

Note 5. This is the earliest document seen (Sept. 2012) that mentions a fermented Western-style soy cheese (see above).

Note 6. Levulose, now more commonly called fructose, is a sugar.

Note 7. This is the earliest English-language document seen (Oct. 2003) that contains the term “soja milk.”

Note 8. This is the earliest document seen (Feb. 2011) that mentions the bottling of soymilk or the sale of soymilk in bottles. Address: Engineer, 46 rue Denis Papin, aux Valées [Vallées] (Seine), France.

684. Piper, Charles V.; Morse, W.J. 1910. The soy bean: History, varieties, and field studies. *USDA Bureau of Plant Industry, Bulletin* No. 197. 84 p. Dec. 31. Includes 8 plates showing plants, pods, and seeds, and an excellent 6-page index. [27 ref]

• ***Summary:*** Contents: Botanical history and identity of the soy bean. Botanical classifications of soy-bean varieties. Varietal characteristics of soy beans: Habit of growth, foliage, pubescence, flowers, pods, seeds. Frost resistance. Period of maturity (soybeans were planted at the Arlington Experimental Farm, near Washington, DC, from 3 June 1905 to June 1909). Changes in life period (soybeans were planted at the Arlington Farm in 1902). Pollination and hybridization. Mutations. Nomenclature and classification. Early agricultural history in the United States. Varieties introduced in the United States independently of the Department of Agriculture or previous to 1898: Enumeration, Ito San, Mammoth, Buckshot, Guelph, or Medium Green, Butterball, Kingston, Samarow, Eda, Ogemaw, or Ogema.

Varieties grown in Europe (p. 32-33; Early history, Samarow, Etampes, Chernie [from Khabarovsk, Siberia], “Yellow Riesen,” Buckshot, “Yellow,” “Brown,” Butterball, S.P.I. No. 5039. European seed companies carrying soybeans include Dammann & Co., Naples, Italy; Haage & Schmidt, Erfurt, Germany; Vilmorin-Andrieux & Co., Paris, France).

The soy bean in Asia (p. 34-35): Asiatic sources of soy beans, list of varieties with SPI numbers from each of the following countries and places: Siberia (South Usuri [Ussuri], Khabarovsk, Merkoechofka), Manchuria (Newchwang, Harbin, Tieling), Korea (Pinyang, Ko-bau), Japan (Tokyo, Kobe, Yokohama, Hokkaido, Anjo), China (many places), Formosa (Taihoku), Cochin China (Saigon), India (Darjiling [Darjeeling] and Khasi Hills–Assam; Pithoragarh–Kumaon Dist.; Safipur, Hasangani, Ranjitpurwa–Unao, Uttar Pradesh; Etawah, Manipuri–Uttar Pradesh; Cawnpore, Dehra Dun, United Provinces; and Poona Bombay), Java (Buitenzorg), Celebes (Macassar).

Desirable characters in soy-bean varieties (p. 36-37): Considerations governing choice, habit of the plant (“Erectness of stem with upright or ascending branches is a prime requisite of a desirable variety. A tall habit is also important, as dwarf varieties usually bear pods very close to the ground, so that many will be left on the stubble...”), coarseness (a coarse, woody stem makes mowing difficult. However slender varieties often have small pods and seeds, often with vining tips and a tendency to lodge), ability to retain leaves, color of the seed (“Yellow or green seeds are preferable to darker colors, as the shattered seeds are more easily found by hogs pasturing the field or stubble”), shattering, resistance to disease (“In sections where nematodes and cowpea wilt occur most soy-bean varieties are seriously affected by both these diseases”), nonfilling of pods. Synopsis of the groups (plants bushy vs. twining). Synopsis of the varieties (within each group lists the total number and acquisition numbers of varieties with various colored seeds and germs: Group I–190 varieties (seeds straw-yellow, germ yellow–71 varieties; seeds olive-green, germ yellow–45 varieties; seeds chromium-green, germ green–17 varieties; seeds brown to olive, germ yellow–28 varieties; seeds black, germ yellow–18 varieties; seeds black, germ green–7 varieties; seeds bicolored, germ yellow–4 varieties). Group II–4 varieties. Group III–8 varieties. Group IV–76 varieties. Group V–7 varieties.

© Copyright Soyinfo Center 2013

Of the 285 varieties in the five groups, 152 varieties (53.3%) have yellow (straw-yellow or olive-yellow) seeds, 55 varieties (19.3%) have black seeds, 44 varieties (15.4%) have brown seeds, 24 varieties (8.4%) have green seeds, and 10 varieties (3.5%) are bicolored).

Catalogue of soy-bean varieties (by S.P.I. number, from no. 480 in 1898 to no. 27,501 in 1909; p. 39-74). In 1908 USDA acquired soybean seeds from Vilmorin-Andrieux & Co. (Paris, France), Haage & Schmidt (Erfurt, Germany), and Dammann & Co. (Naples, Italy) (p. 57-60).

The best varieties of soy beans (p. 75, in 7 groups from very early to very late). Explanation of plates. Index.

The "Catalogue of soy-bean varieties" (p. 39) is "a complete list of soy beans imported by the United States Department of Agriculture, arranged chronologically in accordance with the sequential S.P.I. (Seed and Plant Introduction) numbers assigned to them by the Office of Foreign Seed and Plant Introduction." These numbers start at #480 (imported from South Ussuri, Siberia, in 1898) and end at #27501 (imported from Shanghai, Kiangsu, China, in 1909). Concerning No. 21825 (p. 58): "From Hokkaido, Japan, 1908... This variety is said to be used principally in the manufacture of 'soy,' 'miso,' 'tifu' [sic, tofu], etc. It has also been obtained again from the same place and grown under Nos. 21830 and 21831."

"The best varieties of soy beans" (p. 75) lists 35 varieties, each with a name and S.P.I. number, arranged in seven groups based on time to mature, from "Very early.–Ogemaw, 17258" to "Very late.–Barchet, 20798; Riceland, 20797 (In 1908 at Biloxi, Mississippi, it displayed astonishing diversity)." This list is "based primarily on the results at Arlington Experimental Farm [in Virginia], but those obtained in cooperation with various experiment stations have also been given due consideration:

"Very early.–Ogemaw, 17258.

"Early.–Early Brown, 25161 (from Indiana Agric. Exp. Station, 1909); and Vireo, 22874.

"Medium early.–Chernie, 18227; Auburn, 21079 A; Merko, 20412 (from Merkoechofka, Siberia); Elton, 20406; Chestnut, 20405 B.

"Medium.–Ito San, 17268; Medium Yellow, 17269; Tashing, 20854; Shingto, 21079; Swan, 22379; Brindle, 20407; Sedo, 23229; Lowrie, 22898 A.

"Medium late.–Brooks, 16789; Flava, 16789 A; Cloud, 16790; Ebony, 17254; Haberlandt, 17271; Peking, 17852 B; Wilson, 19183; Taha, 21999; Austin, 17263.

"Late.–Mammoth, 17280; Edward, 14953; Acme, 14954; Flat King, 17252; Tokyo, 17264; Hope, 17267; Hollybrook, 17278 (from Arkansas Agric. Exp. Station, 1904); Farnham, 22312.

"Very late.–Barchet, 20798; Riceland, 20797."

Matsuura (1929 and 1933) cites this as the world's earliest publication on soybean genetics: "Recording segregation of seed- and flower-color in its natural hybrids." Page 11 notes that soybeans named "New Japan peas" were obtained from Norway (Source: Martens 1869). Page 20 notes that the Ogemaw variety of soybeans, which takes 92-97 days to mature, was obtained in 1908 from the Idaho Agricultural Experiment Station, where it had been grown for several years. Note 1. This document contains the earliest date seen for soybeans in Idaho, or the cultivation of soybeans in Idaho (about 1906).

Page 20 also notes that Buckshot variety of soybeans, which takes 92 days to mature, was obtained in 1908 from the Minnesota Agricultural Experiment Station, where it had been grown for several years. This is the second earliest document (April 2004) seen concerning the cultivation of soybeans in Minnesota. "Potomac Flats" is not mentioned in this report.

Concerning "Habit of Growth" (p. 12-13), the author states: "All soy beans are strictly determinate as to growth; that is, the plants reach a definite size according to the environment and then mature and die. The great majority of the varieties are erect and branching, with a well-defined main stem (Plates I and III)... In other varieties the stems and branches, especially the elongated terminals, are more or less twining, and usually weak, so that the plant is only suberect or even procumbent (Plates I-III)."

Photos show: (1) Plants of a wild soy bean grown in a greenhouse in a pot. (Fig. 1) (2) Plants of a wild soy bean from Soochow, China, grown at the Arlington Experimental Farm.

(3) Plants of a soy bean from Cawnpore, India. (4) Rows of different varieties of soy beans at Arlington Farm.

(5) Plants of seven varieties of soy beans, showing types of habit: Meyer 17852, Peking 17852 B, Austin 17263, Pingsu 18259, Unnamed 22504, Hollybrook 17278, Haberlandt 17271. (6) The same seven varieties shown in plate 4 after hanging in a dry room for 6 months.

(7-8) Eleven soy bean pods, ranging in size and shape.

(9) 36 varieties of soy bean seeds, showing variation in size and form.

Note 2. This is the most important document ever published on early soybean varieties in the USA.

Note 3. This is the earliest document seen (Oct. 2010) that uses the word "determinate" in connection with soybeans. Determinate plants terminate main stem elongation at, or soon after, the onset of flowering. Indeterminate cultivars continue main stem elongation several weeks after beginning flowering. Determinate / indeterminate is a genetic trait.

Note 4. This is the earliest publication see (Aug. 2011) written jointly by Piper and Morse, two of the most influential early advocates of the soybean in the USA. It is also the earliest document by or about Morse in connection with soybeans. Morse graduated from Cornell University, New York, on 20 June 1907 and 2 days later reported for duty at the Bureau of Plant Industry in Washington, DC, to

© Copyright Soyinfo Center 2013

work under Dr. C.V. Piper.

Note 5. This is the earliest document seen (Feb. 2004) in which Piper or Morse mention miso, tofu, or the use of soy beans as a coffee substitute.

Note 6. This is the second earliest document seen (July 1998) that uses the word "shatter" (or "shattered" or "shattering") in connection with soybeans. The earliest document (in 1854) used the word "shatter" in a very general sense. This document uses it more precisely, as the title of a section and for comparing varieties (p. 36): "When grown for grain alone, shattering is a serious fault. Some varieties, like Guelph, shatter inordinately; others, like Peking, scarcely at all... As a rule the varieties with large pods and seeds shatter much worse than those with small pods and seeds..."

Note 7. This is second the earliest English-language document seen (Oct. 2004) that uses the term "germ" to refer to a part of a soy-bean seed. The germ or embryo is the part of the seed inside the seed coat.

The section titled "Seeds" (p. 15) states: "The germs or embryos of soy-bean seeds are yellow, except in the green-seeded and part of the black-seeded sorts, in which they are green." Address: 1. Agrostologist; 2. Scientific Asst., Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

685. Friedenwald, Julius; Ruhräh, John. 1910. The use of the soy bean as a food in diabetes. *American J. of the Medical Sciences* 140:793-803. Dec. [9 ref. Eng]

• ***Summary:*** The article begins: "The soy bean (Glycine hispida), sometimes incorrectly called the soja bean, is an annual leguminous plant..." It continues with a brief but accurate history of the soy bean in Europe and the USA, a botanical description of the plant, examples of food uses such as boiled whole dry soybeans, green vegetable soybeans ("The beans are eaten as a vegetable, in soups, sometimes picked green, boiled and served cold with a sprinkling of soy sauce and sometimes served as a salad... If the beans are green, the preliminary soaking may be omitted."), soy sauce or shoyu, natto, tofu, miso, yuba, a coffee substitute, and whole dry soybeans. A brief description of the process for making tofu is given, together with nutritional analyses of tofu, and 4 varieties of soybeans. "The most striking point about the bean is that it contains no starch, or, at least a very small quantity, which is strange when one considers it resembles the various beans very closely and all other varieties of beans are extremely rich in starchy materials." An analysis of the "gruel flour from the soy bean" made by the Cereo Co., Tappan, New York, shows it to contain 14.64% protein, 19.43% fat, no starch, and no reducing sugars. "Our own experience with the soy bean in diabetes extends over a series of eight cases." The 8 cases are then described individually. Cooking directions and recipes are given for making gruels, broths, and muffins using "soy gruel flour" or "soy flour."

The authors conclude: "(1) The soy bean is a valuable addition to the dietary of the diabetic on account of its palatability, and the numerous ways in which it can be prepared. (2) The soy bean in some way causes a reduction in the percentage and total quantity of sugar passed in diabetic subjects on the usual dietary restrictions." Address: 1. M.D., Prof. of Diseases of the Stomach, College of Physicians and Surgeons, Baltimore, Maryland; 2. M.D., Prof. of Diseases of Children and Therapeutics same college.

686. Honcamp, F. 1910. Die Sojabohne und ihre Verwertung [The soybean and its utilization]. *Tropenpflanzer* (*Der*) (*Berlin*) 14(12):613-34. Dec. (Chem. Abst. 30:45). [9 ref. Ger]

• ***Summary:*** Contents: Introduction. Utilization as food and food adjuncts (stimulants / enjoyables) (*als Nahrungs- und Genussmittel*). Use for technical purposes. Use for fodder.

According to English consular reports the total production of soya beans in China amounted in 1907 to 580,000 tons, rising in the following year to 850,000 tons. During the year 1909 no less than 35 million kg of the beans passed through the Suez Canal.

Harz classified the varieties of Soja hispida into 2 main groups, one containing those of strongly compressed form and of olive green to brownish-black color, and the other swollen varieties more or less sickle-shaped, and of yellowish-brown to deep brown color.

Dietrich and König [1891] conducted 20 analyses of the soybean and found the following average composition: Water 11.34%, crude protein 35.11%, crude fat 16.98%, nitrogen-free extract 26.18%, crude fiber 5.88%, and ash 4.51%.

An analysis of the inorganic constituents of the beans by Schwackhöfer gave the following results: Potassium oxide, 44.56%; sodium oxide, 0.98%; lime, 5.32%; magnesia, 8.92%; iron oxide, trace; silica, trace; phosphoric acid, 36.89%; sulphuric acid, 2.70%; and chlorine, 0.27%.

Both in China and Japan the black varieties are boiled and roasted and eaten with rice, while the green and white varieties are ground to meal and baked into cakes, etc. The soy sauce, which is now largely exported to England and America, and used in the manufacture of other sauces, is prepared from wheat and a small light yellow variety of the bean, with the addition of salt and water, the prepared mass being fermented in open vessels at as low a temperature as possible for a period of 8 months to 5 years, and the sauce then separated from the residue. Another product made from the beans in Japan, and used in the preparation of soups and flavors for cooking, is know as miso. In addition to these, a so-called bean cheese (tofu), and a similar product from which the bulk of the water has been removed (kori-tofu), are prepared from soya beans in Japan.

Attempts to acclimatize the plant in Germany have not yet proved successful, although it may be possible to introduce an early-ripening variety with a short vegetation

period.

Note: This is the earliest document seen (Aug. 2007) that gives soybean production or area statistics for China. It is not clear whether or not this includes Manchuria, or refers only to Manchuria. Address: Prof., Germany.

687. Honcamp, Fr. 1910. Die Sojabohne und ihre Abfallprodukte [The soybean and its by-products]. *Landwirtschaftlichen Versuchs-Stationen* 73:241-84. Dec. (Chem. Abst. 4:3099). [18 ref. Ger]
• ***Summary:*** Largely a good review of the literature. Contents: Introduction and history. Botanical and microscopic characteristics. The best varieties for production of seeds / beans (incl. Soja platycarpa, Soja tumida, etc.). Soybean cultivation (incl. Fesca, Haberlandt). Chemical composition. Utilization of the soybean and its products: Use as food and food adjuncts (stimulants / enjoyables) (*Genussmittel*) (incl. boiled or roasted soybeans, shoyu or soy sauce {*Shoyu oder Bohnensauce*} made with rice- or wheat koji {*Reis- oder Gerstenkoji*}, miso, tofu {*Bohnenkäse*}, dried-frozen tofu {*Kori-Tofu oder Eisbohnenkäse*}, soybean meal {*Sojabohnenmehl*}, soybean oil {*Sojabohnenöl*}), industrial and technical uses of soybean oil (illuminant, soaps, table of constants), use as a livestock feed (Sheep were fed soybean oil meal and meal {*Sojakuchen, Sojamehl*}, pressed residue {*Pressrückstand*}, or solvent processed {*Extractionsrückständen, Sojamehle, Sojakuchenmehl*}; soybean hay {*Sojabohnenheu*} and straw also make good feeds).

Illustrations show: (1) A soy bean plant with pods (non-original, p. 245; from an original in Fesca 1898). (2) Soy bean pods, seeds, and cells (non-original, p. 246; from an original in C.O. Harz 1885).

Note: This is the earliest German-language document seen (April 2013) that uses the term "Eisbohnenkäse" to refer to dried-frozen tofu. Address: Rostok, Germany.

688. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Oakland, California.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 174. Consists of the male owner and one female employee.

689. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Stockton, California.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 178. Male owner and one male employee. Also in 1911, Census entry p. 157. Male owner and no employees.

690. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Monterey, California.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 186. One male owner and no employees.

691. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Alviso, California.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 187. One male owner and no employees. Note: Alviso is at the southern tip of San Francisco Bay, midway between Fremont and San Jose. Also in 1911, Census entry p. 166.

692. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Oregon.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 201. There is one tofu shop in the state of Oregon. Two male owners and no employees.

693. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Tacoma, Washington.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 216. One male owner and 1 male employee. Note: Tacoma is a seaport city, capital of Pierce County, at the southern tip of Puget Sound, 26 miles south of Seattle.

694. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Bellingham, Washington.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 217. One male owner and 1 male employee. Note: Bellingham is a commercial city, capital of Whatcom County, on Bellingham Bay, about 18 miles south of the Canadian border, between Vancouver, BC, and Seattle, Washington.

695. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu makers

(two).
Manufacturer's Address: Vancouver, BC, Canada.
Date of Introduction: 1910.
New Product–Documentation: Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 224. Two tofu shops in Vancouver, British Columbia, Canada. Two male owners and no employees.

696. Hosie, Alexander. 1910. Manchuria: Its people, resources, and recent history. Boston, Massachusetts: J.B. Millet. x + 320 p. Illust. Index. 25 cm. Oriental Series Vol. 14

• ***Summary:*** This book is similar in many ways to the 1901 edition with the same title except: (1) It contains 25 more total pages. (2) Chapters 7-10 in the 1901 edition have the same titles, are in the same order, and contain most of the same information as chapters 4-7 in the 1910 edition. (3) Most of the information on soybeans and soyfoods in this 1910 edition is identical or similar to that in the original 1901 ed, but usually on different pages. For example, the long, excellent section on tofu and related products on pages 183-84 in the 1901 edition is identical to that on pages 78-79 in this 1910 edition. And the description of how a traditional crush-stone mill and wedge press are used to make bean-cake and bean-oil, on pages 218-24 of the 1901 edition is identical to that on pages 121-27 of this 1910 edition. Many more such examples could be cited. (4) There is extensive and very interesting new information on railways, which are discussed at great length in this 1910 ed.; they are found in a separate record in this database as a "document part."

Editorial note by Charles Welch (p. ix-x): The whole world is now closely linked together as newspapers keep us informed of the events in far-of lands. Manchuria was practically unheard of until the last two wars which Japan had to fight there against China (1894-1895) and Russia (1904-1905). Port Arthur fell easily when held by the Chinese, but its strong defense by the Russians "turned the eyes of the world to the citadel which lay at the point of the far Eastern peninsula called Manchuria." The Trans-Siberian Railway, started in 1889, ran east-west, eventually connected St. Petersburg (the capital of Russia from 1712 to 1918) to the Pacific Ocean port of Vladivstok–a distance of 5,772 miles. The Chinese Eastern Railway, started in 1897, ran north-south, connecting Mukden and Port Arthur. The building of these two railroads has shown to the world the great wealth of Manchuria, a province of China.

The war between Japan and Russia was fought in large part because Russia claimed special exclusive rights to mining, timbering, etc. in Manchuria. Japan fought for an "open door" policy in this wealthy region, the right to trade and commerce in Manchuria. Sir Alexander Hosie has been a resident of China for practically 40 years.

The Chinese call Manchuria the Tung-san-shêng (Three Eastern Provinces); it "is an agglomeration of petty Tartar or Manchu principalities, lying to the north-east of China Proper" (p. 3).

Soy beans or [soy] beans, bean oil, bean cake, or soyfoods are mentioned or discussed on the following pages of this 1910 edition: 69 (outer leaves of kao-liang or tall millet are woven into mats used for packing loads of grains and beans), 71 (barley in large amounts is ground with peas or beans as a ferment in the distillation of native spirit {*Shao chiu*} from tall millet / kao-liang), 75-80 (beans are the most important agricultural crop for external trade, and the second most important article of cultivation after kao-liang. The most important bean, considered together with its products bean-cake and bean oil, is the soy bean–*Glycine hispida;* discusses the many varieties of soy beans and soy bean products), 82 (Mao-Tou, soy beans cultivated as a garden bean for food), 84 (soy bean is one of six plants grown in Manchuria whose seeds yield oil), 101 (each skein or hank of silk is dipped in bean-flour water), 121-28 (how the oil is expressed from soy beans; Recent prices of soy beans and products. 1896 bean oil factory driven by steam), 142 (how boats carry soy beans and other export crops down the Liao River each spring after the ice breaks up), 146-47 (value of exports of soy beans and products; total value in Manchuria), 168 (the flourishing bean-oil and bean-cake industry at Dalny started in 1908, practically speaking), 172 (the 1907 depression in Manchuria's soy bean market), 174 (the 1907 depression is now over and the outlook for American goods in Manchuria is hopeful), 181-84 (value and amount of exports of soy beans and products from Dalny and other ports, mostly in 1908; ports of destination and uses at each), 196 (the matting, woven by hand from the outer sheaths of millet stalks, that rises high around every large cart carrying loads of loose beans and millet), 208-11 (city of T'ieh-ling on the Liao and its growing importance in the soy bean trade; met 1,000 carts heavily laden with produce from the interior), 216 (a large cart carrying beans and pulled in an ongoing sort of race by mules or ponies, has overturned, and the beans are scattered all over the roadway; such accidents are taken as a matter of course, and the way is cleared so that traffic can resume), 234 (Yi-t'ung [pinyin: Yitong, in central Jilin province] Chou, like T'ieh-ling [pinyin: Tieling], is a great storehouse for beans and grain, and there is extensive trade between the two cities), and 237 (met several caravans laden with empty "bean-oil boxes." Beans are carried from Newchwang by boats when the river is open and by carts when it is closed by ice).

Also discusses (see index): Job's tears or pearl barley. *Phaseolus radiatus* (the ray-fruited dwarf bean [azuki] which is red or white). Hemp (*Cannabis sativa*) and Abutilon hemp, the true hemp plant, *Abutilon avicennæ,* both valuable fiber crops. Sesamum seed. Ground-nuts [peanuts] (*Arachis hypogæa,* L.) Seaweed. Address: British Consul-General at Tientsin [Tianjin, China].

697. Hosie, Alexander. 1910. Manchuria: Its people, resources, and recent history. Railroads (Document part). Boston, Massachusetts: J.B. Millet. x + 320 p. Illust. 25 cm. Oriental Series Vol. 14

• ***Summary:*** Railroads in Manchuria are discussed at great length in this book. These include the Chinese Eastern Railway Co., the Siberian Railway (incl. the Trans-Baikal and the Southern Ussuri sections), South Manchuria Railway, Trans-Manchurian Railway, and the Trans-Siberian Railway.

The South Manchuria Railway, the newest, is discussed in the most detail, especially in Chapter 7, titled "Trade of Manchuria" (p. 138-191). Page 145: "In addition to the purely foreign imports, however, there should be mentioned an item of $10,000,000 worth of railway materials imported from the United States by the South Manchuria Railway Company, on which no duties were paid, and which was omitted from the Chinese Customs Returns."

Page 149: "Although considerable interest in the mineral deposits of Manchuria has been evinced by American, British, and German engineers during the year, but little has been accomplished by them toward the development of the country's mineral resources. The South Manchuria Railway Company, on the other hand, has pushed forward development work on the Fu-shun (pinyin: Fushun) coal mines with great energy, and extensive additions to the equipment of the mines have more than doubled the output" daily during the year from 500 tons the beginning to 1,200 tons by the end of December. The Fu-shun coal mines constitute one of the chief assets of the Company."

Page 153. "Railway developments: The South Manchuria Railway has been standardised and the installation of new rolling stock has greatly increased the road's carrying capacity. Under the narrow-gauge regime the line's daily carrying capacity was about 2,000 tons, whereas at the present time, with its standard gauge, new American rolling stock, and improvement in its freight service, the capacity is more than 6,000 tons. Similar improvement has been made in the passenger service."

Page 154: "These trains are thoroughly modern in every respect, the cars and locomotives being of the latest designs of American make. Each train is composed of a mail car, a Pullman sleeper, a diner, and a combination day coach and baggage car. In addition to these improvements the South Manchuria Railway Company has established a weekly steamship service between Dalny and Shanghai, which shortens the time of travel between the latter city and Manchuria by two to five days, and will also bring about a reduction of freight rates. The Company is already issuing through bills of lading between Shanghai and Manchurian points."

Page 162: "The net increase of the Japanese population in Manchuria for the year 1908 was 14,149, of whom 5,296 settled in the leased territory and 8,853 scattered throughout the country, mostly along the line of the South Manchuria Railway. A conservative estimate of the number of Chinese immigrants during the year would place the figure at 25,000, the majority of the newcomers being of the agricultural class, who have come to Manchuria to find permanent homes and have settled in the fertile regions surrounding Fakumen and Chengchiatun. Should the plans of the Government for the settlement of waste lands meet with success, the number of Chinese arrivals will rapidly increase."

Page 165: "The general plans sanctioned by the management of the South Manchuria Railway provide for a northern terminal at Suchiatun, a station on the main line of the South Manchuria Railway some 10 miles south of Mukden. Suchiatun is already the junction of the branch line to the Fu-shun collieries, having the necessary yards and transshipping facilities. By making Suchiatun instead of Mukden the terminal of the line the company will obviate the necessity of bridging the Hun River and at the same time will save several miles of track."

Page 169-70: "First place in the import trade of Dalny is held by goods from Japan, which were valued by the customs last year at $6,824,440, but which Japanese figures place at $8,429,393. This total is made up of a large variety of articles, from lumber and railway material to notions and a great part simply represents the supplies of food, clothing, furniture, etc., drawn from Japan by Japanese residents in Manchuria for their own use. Of the staple goods for the Chinese market, the most important are cotton goods and cigarettes."

"The United States is second in the import list, with $3,762,653, according to customs figures, or about 32 per cent. This was almost entirely trade with the Japanese in Manchuria, and was made up mainly of supplies for the South Manchuria Railway Company. The figure seems to be too small, as the value of railway supplies ordered in America and received during 1907 and 1908 was approximately $10,409,000, of which much less than half came in during 1907. The explanation may be that entries of duty-free goods for the railway or for general consumption in the leased territory are less carefully prepared, as to details, by the consignees."

Page 171: "The domestic goods brought in from Chinese ports were valued at $1,310,622. The rails, locomotives, bridge work, and most of the cars purchased on the first orders for supplies for the South Manchuria Railway were bought in the United States and delivery was completed in 1909. Of the new purchases under this head, the most important were an order placed in Russia for some 6,600 tons of steel rails worth about $250,000, a new electric-power outfit costing $135,000, ordered in the United States; rails, cars, and trucks for the Dalny street railway, ordered in Germany and England and costing approximately $277,000; and a gas-generating plant and distributing pipes, purchased in Germany and Great Britain, respectively."

Page 182-83: "Coal seems destined to become an

© Copyright Soyinfo Center 2013

important item among the exports, but the business is still in an experimental stage. In 1908 shipments to foreign countries amounted to 4,686 long tons. Already the South Manchuria Railway Company has a contract for furnishing coal to the mail steamers of the Osaka Shosen Kaisha, which come here twice a week from Osaka and Kobe. The price has not been made public, but it would seem to be not far from $2.75 to $3 per ton delivered on board, and at this low cost it is said to be quite satisfactory. With the exception of $239,828, representing the customs valuation of [soy] beans shipped to England, and $1,209 for exports to Korea, the entire foreign export trade of Dalny is with Japan, the total value of exports to that country being $4,574,057."

Page 186: "In August, 1908, the South Manchuria Railway Company began a weekly freight and passenger service between Dalny and Shanghai, and while little business offered at first, both the number of passengers and the freight tonnage seem to be steadily increasing, as the railway company is making special efforts to develop this line by selling through tickets and by offering through bills of lading to interior stations at moderate rates.

"The trade to South China ports continues in the hands of two leading British coasting lines, whose business has greatly increased of late, so that they have had as many as eight ships in port at one time loading cargo or waiting for berths." Address: M.A., F.R.G.S., Once Acting British Consul, Tamsui; Now at Aberdeen (Scotland or Hong Kong).

698. Inouye, Jukichi. 1910. Home life in Tôkyô. Tokyo, Japan: Printed by the Tokyo Printing Co. vii + 323 p. No index. Illust. (some color). 23 cm. Facsimile edition reprinted in 1985 by KPI (London & Boston). [Eng]

• ***Summary:*** Chapter 5, "Meals," states (in a description of making breakfast): "But in point of utility the soy bean comes next to rice, for our soy sauce which enters into almost all dishes is made from the bean, wheat, and salt. So extensively is this sauce employed that table salt is comparatively little needed. The bean is also the principal ingredient in *miso,* which is a mixture of the soy bean, steamed and pounded, with rice-yeast [koji] and salt. This *miso* is largely used in making soup; and the soups into which it does not enter are usually flavoured by boiling shavings of sun-dried bonito and straining them off" (p. 58).

"After the rice-pot is removed, another pot is put over the hearth for making *miso*-soup... *Miso*-soup contains strips of garden radish [daikon], edible seaweed (*alopteryx pinnatifida*) [wakame], bean-curd [tofu], egg-plant, or other vegetables according to season. These two, the rice and the soup, are all the cookery required in the morning. There must, of course, be hot water for tea." Pickled vegetables (called *kôkô* or *kô-no-mono*) especially garden radish, invariably accompany Japanese meals (p. 58-59).

"The breakfast, then, is very simple. Sometimes the family take their meals at a large low table which is set before them [as they sit on their heels in the *seiza* position on tatami mats] at each repast; but often a small tray, about a foot square and standing six inches or more high, is placed before each member. In the left corner of the tray near the person before whom it is set, is a small china bowl of rice, while on the right is a wooden bowl of *miso*-soup. A tiny plate of pickled vegetables occupies the middle or the farther left corner, while any extra plate would fill the remaining corner. This plate also holds something very simple, such as [*umeboshi*] plums preserved in red perilla leaves, boiled kidney beans, pickled scallions, minute fish or shrimps boiled down dry in soy sauce, a pat of baked miso, shavings if dry bonito boiled in a mixture of soy and *mirin.*" An illustration (line drawing) shows such an individual meal tray, with chopsticks resting on the rim of the tray (p. 59-60).

"Soy [sauce] is usually sold in wooden kegs as it does not change [spoil] with time; but the poor buy it in half-pint bottles" (p. 68).

The midday meal is very simple. But the "evening repast is the principal meal of the day... fresh fish is more frequently served than at noon. The fish may be boiled in a mixture of *mirin* and soy, be put into a soup made with an infusion of dried bonito shavings, be roasted on the iron netting with a sprinkling of salt or repeated coatings of soy, or be taken raw in thin slices [*as sashimi*]. This raw fish is a peculiarly Japanese dish" (p. 70).

Note 1. In Japan, almost everything is done in an orderly way, followed by nearly everyone. There are rules (often unwritten) for how to do almost everything.

Chapter 6, "Food," states: "Sea-weeds are also in great demand. Of these the principal are the *konbu* (*Laminaria japonica*), which is largely exported into China, and the laver [*Porphyra tenera*], which is obtained in this sheets [*nori*] and taken with soy alone or with rice rolled into it." Yellow chrysanthemum flowers are also used as food, "either fried with a coating of *kuzu* (*pueraria Thunbergiana*) or boiled in brine and pressed" (p. 72).

Eels are eaten, with bamboo skewers passed through them; "they are roasted over a fire, being from time to time dipped in a gravy [sauce] of *mirin* and soy. Tokyo is especially noted for eels served this way." Sun-dried cuttlefish, which are flat and hard, "are cut into slices which are roasted and dipped in soy" (p. 73).

"As we do not use a knife and fork at table, all fowls have to be cut up before they are served... The commonest method with the domestic fowl and duck is to boil them in small slices in a shallow pan with bits of onion in a gravy [sauce] of soy, *mirin*, and sugar." "It is only of recent years that we have begun to eat beef and pork; but we have in Tokyo a large number of shops where they are sold." One kind of shop is "a sort of restaurant where beef is served in the same manner as the domestic fowl and duck above mentioned" (p. 74).

"Though cooking is mostly done at home, no small

© Copyright Soyinfo Center 2013

quantity of small quantity of prepared food is bought for the meals. The most important of such food is the bean-curd [tofu]. For this the soy bean is soaked in water, ground, steamed, and strained; and the liquid is allowed to coagulate by the addition of brine [nigari] and then pressed in a square box with a cotton-cloth bottom until the water has been drawn off, leaving behind a soft white curd. This curd is cut into small slices and put into soup in the morning; it is sometimes thrown into hot water, and as soon as it is warmed [as *yudofu*], dipped into a mixture of soy and *mirin* and eaten. It is also fried. Indeed, the bean-curd shares with the *tai* [sea-bream] the distinction of having a special treatise dealing with a hundred ways of dressing [cooking / serving] it" (p. 74).

"As there is no dessert at a Japanese meal, fruits are commonly eaten at odd hours, especially by children." Apples are grown mostly in Yezo [Hokkaido], "the most northerly of the larger islands" (p. 75).

A common dish for the bever [a light lunch eaten between meals] is the (*soba*) or buckwheat noodles. Soba "is dipped before eating, into an infusion of bonito shavings flavoured with a little soy and *mirin*, to which small bits of onion [*negi*] and Cayenne pepper have been added" (p. 77).

Another inexpensive food "is a kind of cracknel [*senbei*] made by baking and dipping small disks of rice or wheaten flour in soy" (p. 78).

"The bulk of confectionery is made of rice, red beans [*azuki*], millet or sugar. Glutinous rice is steamed, pounded in a wooden mortar into a pasty consistency, and left to cool" [to become mochi]. "The red bean is boiled, pounded, and strained through a coarse cotton bag to get rid of the skin, though the latter is sometimes retained, in which case the straining is unnecessary, and finally mixed with sugar" to make "red bean jam" [*an*], which "is the most important ingredient of Japanese sweetmeats as there is in our confectionery no other equivalent... The red bean jam is also used in making soup into which small rice dumplings are thrown; this soup is much in demand, especially in winter, to while away the tedium of long evenings. The red bean is also boiled with rice to give it a colour; the red-bean is eaten in old-fashioned families three times a month, on the first, fifteenth, and twenty-eighth" (p. 80).

Note 2. This is the earliest document seen (May 2011) that uses the term "red bean jam" to refer to Japanese *an* [sweet azuki bean paste].

"Starch extracted from the root of the *kuzu* (*pueraria Thunbergiana*) is also much employed in confectionery." "By steaming a mixture of red beans, sugar, wheat, and *kuzu*, we get a sweet dark-red cake, which is almost as popular as the sponge-cake" (p. 80).

Inouye, who lived 1862-1929, lived to witness the Meiji period end and westernization begin. A scholar, journalist, translator and Japanese diplomat, he served at Japanese embassies in Belgium and the United States. Returning to Japan in 1918, he devoted the remaining years of his life to compiling English-Japanese and Japanese-English dictionaries.

Note 3. This book comes in an elegant, traditional "folding case" (*chitsu*), consisting of five stiff pieces of paperboard, covered with cloth, and held in place by two ivory-looking pegs (each 3 cm long), each of which slips into a cloth sleeve. This folding case performs much the same function as a Western slipcase. Address: Tokyo, Japan.

699. Kellogg, Ella Ervilla Eaton. 1910. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery; a thousand choice, palatable, and wholesome recipes. Revised and enlarged edition. Battle Creek, Michigan: The Good Health Publishing Co. 508 p. Illust. 23 cm. *

• ***Summary:*** In the last edition of this book, the wife of the famous Dr. John Harvey Kellogg discusses the principles and methods of the vegetarian system employed at the Battle Creek Sanitarium. Address: Battle Creek, Michigan.

700. Lafar, Franz. 1910. Technical mycology: The utilization of micro-organisms in the arts and manufactures. Vol. I. Schizomycetic fermentation. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. xvi + 312 p. Introduction by Dr. Emil Chr. Hansen (Principal of the Carlsberg Laboratory, Copenhagen). Illust. (90 figs). Index is in Vol. II. 23 cm. [Eng]

• ***Summary:*** This first volume discusses bacterial ("schizomycetic") fermentations. Richly illustrated, it also includes accurate historical background on many subjects. An extensive bibliography for both this volume and volume II appears at the back of volume II (p. 417-518).

The Preface, by Emil Chr. Hansen of Copenhagen, states (p. vi): "Within the last two decades the study of Microbiology has made gigantic strides, both in the pathological and technical branches of the subject; and just as investigations into the Physiology of the higher plants gave the first impetus to the establishment of Agricultural Experiment Stations in all countries, so, in like manner, have the Physiology of Fermentation and Technical Bacteriology called into existence, within the last few years, a number of Stations and Laboratories for the development of those branches of industry where micro-organisms play an important part." The first three chapters, comprising the introduction, give an interesting early history of the discovery of fermentation. Their contents: 1. The theory of spontaneous generation: Definition, discovery of fermentative organisms, Needham's demonstration in favour of 'Generatio Æquivoca', Spallanzani's experiments, Franz Schultze's experiment, foundation of the science of antiseptics by Schwann, labours of Schröder and Dusch, Pasteur's examination of

© Copyright Soyinfo Center 2013

the theory, Béchamp's microzyme theory, spontaneous generation only unproven, not impossible. 2. Theories of fermentation: The alchemists–Stahl's theory of fermentation, Gay-Lussac's opinion, Cagniard-Latour's vitalistic theory, Th. Schwann's researches, Fr. Kützing's general theory, Liebig's decomposition theory, Pasteur's theory. Nägeli's physico-molecular theory, the enzymes and M. Traube's ferment theory, general definition of fermentation, so-called spontaneous fermentation of sweet fruits, decompositions effected by light and air.

In Chapter 31, titled "The fermentation of cheese and allied decompositions" (p. 243-52) are sections on "Pure culture ferments" (p. 246-47) and "Natto and miso" (p. 247-48; each a kind of "vegetable cheese"). The latter section also discusses the Soja bean, Fr. Haberlandt, koji, shoyu (called shojou, soy or shoyn), tofu and nukamiso. Reports by H.C. Prinsen-Geerligs "on the preparation (by the aid of fungoid ferments) of other dishes from soja beans in Chinese cookery, such as Taohu or bean-cheese [tofu], the sauce Tao-yu, &c."

In Chapter 33, titled "The fixation of free nitrogen by bacteria" (p. 259-71) are sections on "The discovery of leguminous nodules" (p. 261-62; Malpighi, Boussingault, Hellriegel), "Formation and functions of the nodules" (p. 262-64; Lachmann, Frank, Woronin, Hellriegel, Wilfarth), "The nodule bacteria" (p. 264-66; organized albuminoids, *Bacillus radicicola*), and "The bacteroids" (p. 266-69). Concerning bacteroids: "The first successful, artificial production of nodules by the aid of pure cultures was made by A. Prazmowski. This worker, in view of the absence of the sporogenic faculty in these organisms, changed the name of *Bacillus radicicola*, bestowed on them by Beyerinck, into *Bacterium radicicola."*

Note 3. This is the earliest English-language document seen (March 2003) that uses the word "bacteroids" (or "bacteroid") in connection with root nodules on plants.

Note 4. This is the earliest English-language document seen (April 2013) that uses the word "Taohu" to refer to Chinese-style tofu. Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

701. Li, Yu-ying. 1910. Ta tou: Le soja [The soybean]. Paris: Société Biologique de l'Extrême Orient. 66 p. Illust. 28 cm. [Chi]

• ***Summary:*** This remarkable work, written entirely in Chinese, was the first of Li's major works on soybeans and soyfoods. Published in Paris, it was written in Chinese and meant to be read by young people in China interested in coming to Paris to study or in helping Li with research on Chinese soybean varieties. An expanded and revised version was published into French the next year (1911).

Contents: Soybeans: 1. Introduction. 2. Names and varieties (colors, sizes, and shapes) of soybeans. 3. Where soybeans are produced and their history. 4. The place of soybeans in the hierarchy of plants (taxonomy). 5. Nutritional composition of soybeans. 6. Characteristics of soybeans (physiological, morphological, etc.). 7. Food uses of soybeans (incl. tables comparing the price of tofu with various meats, and the various sicknesses associated with eating different types of meat). 8. Equipment used in making soyfood products (a photo shows the equipment in Li's modern soymilk and tofu plant near Paris; p. 37), and compares soymilk with cow's milk. A large soybean utilization diagram in Chinese (p. 44) shows all the products that can be made from soybeans using the wet process (from soymilk) or the dry process (from flour). Note: This is the earliest document seen (July 2002) that contains a diagram of this type.

9. Value of soybeans in agriculture (incl. fertilizer use). 10. Conclusion. Appendixes: (1) About the *Société biologique de l'Extréme Orient* (Far-East Biological Society). (2) Membership form for the Far-East Biological Society (Paris): Date, name, A.K.A., Address, Occupation or subject of study, Place of birth. Please enclose 2 yuan membership fee (p. A6). (3) Bibliography of publications on soybeans by the Society of the Far East (p. A7-8). (4) Special announcement concerning soybean research (p. A9).

Illustrations (line drawings) show: (1) Comparison of shapes and colors of 7 different colors of soybeans (p. 5). (2) Five views of soybean pods with beans, incl. outside of pod, inside of both halves when open, with beans in one half, the two cotyledons of a single soybean (p. 11). (3) Soybean plant with pods (p. 12). Photos show: (1) The cellular components and layers of soybeans and hyacinth beans (p. 22, 23). (2) The interior and equipment in Li's soymilk and tofu plant on the outskirts of Paris (p. 37). (3) Microscopic views of soymilk (*doujiang*) and a liquid resembling soymilk made from soy flour (p. 38).

Tables show: (1) Size range (length, width, and thickness; maximum, average, and minimum) of 7 colors of soybeans: yellow bean, green skin bean, green bean, dark bean {"black" or "crow" bean}, black bean, red bean, spotted bean (p. 4). (2) Composition of four parts of a soybean plant: Comparison, water, protein, oil, carbohydrates, ash (p. 18). (3) Comparison of oil and protein content of 5 colors of soybeans (red, black, green, white, yellow) from various countries and regions: China, Japan, Southeast Asia, Russia, Hungary, and France (p. 19). (4) Composition of soybeans, hyacinth beans, and wheat (p. 21). (6) Comparison of the price of tofu with that of various meats (p. 29). (7) Ash content of soybeans, hyacinth beans, duck, uncooked rice, cabbage, egg, beef, chicken, lamb, pork, carp, wheat flour (p. 31). (8) Carbohydrate content of uncooked rice, wheat flour, hyacinth bean, soybean (p. 32). (9) Weight of products containing 100 gm of protein: Soybeans, tofu (somewhat firm), hyacinth bean, uncooked rice, bread, cooked rice, vegetables (p. 32).

© Copyright Soyinfo Center 2013

Publications listed in the Bibliography (p. A7-8): *Ta tou–The soybean* (this book; published 1909). *Bean curd–20 centuries of great craftsmanship around the world* (1908). *Soycrafting–China's manufacturing specialty* (1908). *The Paris Bean Curd Company* (1908, illustrated). *An outline of the agricultural societies of France* (1908). Note: the above publications concern industrial matters.

A description of herbs (*Chinese medicinal plants etc.*) (1909). *TB* [*Tuberculosis*] *and its cure* (1909). Note: the above publications concern medicinal herb and health matters.

The benefits of soyfoods (1909). *Smoking and its relationship to health, economics and industry* (1909). Note: the above publications concern industrial and health matters.

Special announcement concerning soybean research (p. A9): "Gentlemen–Many of us in this society are researching the benefits of the soybean. It may be considered as China's greatest resource. We have already published a number of specialized reports. These have been made available to you. In view of the fact that there are so many varieties of soybean in China and that the regions of cultivation are so extensive, we must rely upon you, our colleagues, in all parts of the country to go into the field and collect data for us. Only then will we be able to complete our research into every variety of Chinese soybean. If we should receive your kind consent, we beg you to be so good as to send the soybean varieties to the Peking postal address of this Society (address is given). We are interested only in soybeans (see pages 1-6 of this book) and need one or two catties (0.5-1.0 kg) of each. Once our research into the benefits and properties of these beans is complete, we will submit a further report to this Society, in order to repay your goodwill. If you would please advise us of the cost of the beans and the postal charges, we will make the appropriate refunds. We will also send you a copy of this book as a modest token of our gratitude. Enclosed please find an explanatory document. Please take the trouble to complete this and send it together with the beans.

"The Paris/Far-East Biological Research Society"

On page A-10 is a form to be used when submitting the Chinese soybean varieties.

702. Midorikawa, Kôjirô. 1910. Tôfu to yasai no ryôrihô:*Hôchi Shinbun* kenshô tôsen [Way of cooking tofu and vegetables: *Hochi Newspaper* prize winners]. Tokyo: Kyôdô Shuppan. 87 + 130 p. 23 cm. [Jap]
Address: Japan.

703. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1910. Nichi-Bei nenkan [Japanese-American yearbook. No. 6]. 650 Ellis St., San Francisco, California. 278 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into 10 parts, each numbered separately. Contents: (1) Front matter, incl. 1 ad (5 p.) (2) Table of contents (3 p.). (3) Map of California agriculture (fold out, in Japanese, 1 p.). (4) Black and white photos on unnumbered pages (6 p., single sided). (5) Front part of Nichibei Nenkan No. 6 (p. 1-237), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (6) Ads (9 p.). (7) Nichibei Nenkan continued (p. 238-50). (8) Original printing and publication dates and data (1 p.) (9) Ads (2 p.). (10) New printing and publication dates (2001), data, and ISBN (1 p.).

A table (p. 39) shows Japanese population by states. For each state the population is subdivided by men, women, and children. For Japanese, the 8 most populous states are: California 55,901, Washington 16,930, Colorado 4,557, Oregon 3,873, Utah 2,529, Idaho 2,399, New York 2,260, and Wyoming 1,409. The totals are: Adult men 87,170. Women 7,323. Children 4,222. Total 98,715.

A table (p. 42) compiled from census data, shows that there were 2 shoyu makers in the USA, with 2 male owners and 4 male employees. There were 42 tofu makers with 47 male owners, 10 male employees, and 1 female employee.

Note: Unlike other volumes, this relatively slender 1910 volume has no directory to give us the names the names and addresses of these Japanese tofu and shoyu makers in the USA.

A table (p. 54-55) shows the general population (not only Japanese) each decade in California from 1850 to 1910: It grew from 92,597 in 1850, to 379,994 in 1860, to 1,208,130 in 1890, to 1,484,053 in 1900, to 2,564,363 in 1910.

A table (p. 56) shows the Japanese population of California: 120 in 1878, 270 in 1880, 420 in 1884, 500 in 1885, 1,000 in 1887, 2,300 in 1890, 4,500 in 1892. 6,000 in 1895, 13,000 in 1897, 25,000 in 1900, 30,000 in 1902, 35,000 in 1903.

A table (p. 56-60) shows the 1910 Japanese population in various counties and cities in California. For each it subdivided into men, women, boys, and girls. In 1910 the Japanese population of California was 55,901, which was about 2.2% of California's total population.

A table (p. 62) shows the total value in 1900 of various crops in the USA and California. The soybean crop was worth $7,634,262 in the USA and $1,022,586 in California.

A table (p. 172) gives the population of Japanese in California by occupation; there is 1 shoyu maker (in Oakland) and 32 tofu makers.

The Directory shows Japanese companies making soyfoods in California, Oregon, Washington, Utah, Colorado, New York City, and Vancouver, British Columbia, Canada.
Address: San Francisco, California.

704. Polk's Portland [Oregon] city directory. 1910. Portland, Oregon: R.L. Polk & Co., Inc. *
• ***Summary:*** Ota, Charles. Cook. Residence at 352 Oak St. Address: Portland, Oregon.

705. Sawer, E.R. 1910. Studies in agriculture. Series 2. The soya bean. Div. of Agriculture and Forestry, Natal, South Africa. 33 p. Reprinted from the Natal Mercury. [10 ref]
• ***Summary:*** Contents: 1. The agricultural romance. 2. The commercial aspect. 3. The adaptability of the bean. 4. The cultivation of the crop. 5. Soya bean oil. 6. A food for man. 7. A stock food and fertiliser (the cake is widely used as an agricultural fertiliser in the Far East). A photo (opposite contents page) shows two men standing in a crop of soy beans at the Central Experiment Farm, Cedara, 1908-09.

Concerning "Soya bean oil": "In the Far East it is largely employed for edible purposes; it is suitable for cooking, for a salad oil, and as a component in such butter substitutes as margarine. In the 'Mark Lane Gazette' for Jan. 20, 1910, it is stated that one third of the frying oil used in London kitchens now comes from the soya bean, instead of from cotton seed as heretofore" (p. 21).

Illustrations on unnumbered pages show: (1) A typical soya bean plant. (2) Botanical characters of soya bean, with close-ups of vegetative parts, floral parts, and fruit. (3) Seeds and pods of 7 varieties of soya beans. (4) Soya bean seedlings, with roots. (5) Roots of soya bean plant, with nodules (by Blanchard). (6) Curing frame for harvesting soya beans. Address: Director, Div. of Agriculture, Natal, Durban, South Africa.

706. Wheldon, Rupert H. 1910. No animal food: And nutrition and diet with vegetable recipes. New York, NY; Passaic, New Jersey: Health Culture Co. 125 p. Plus 18 unnumbered pages of advertisements at end. Undated. No index. 19 cm.
• ***Summary:*** A comprehensive appeal to vegetarianism, advocating exclusion of all foods of animal origin [i.e., a vegan diet]. Contents: I. No animal food: 1. The urgency of the subject. 2. Physical considerations. 3. Ethical considerations. 4. The aesthetic point of view. 5. Economical considerations. 6. The exclusion of dairy produce. 7. Conclusion. II. Nutrition and diet: 1. Science of nutrition. 2. What to eat. 3. When to eat. 4. What to eat. Food table. Recipes (100 "strictly vegetarian" [vegan] recipes as they appear in the English edition).

The Preface states that "the following pages are in vindication of a dietary consisting wholly of the products of the vegetable kingdom, and which therefore excludes not only flesh, fish, and fowl, but milk and eggs and products manufactured therefrom." "This work is reprinted from the English edition with changes better adapting it to the American reader."

Pages 30-31: "As to the testimony of individuals it is interesting to note that some of the greatest philosophers, scientists, poets, moralists, and many men of note, in different walks of life, in past and modern times have, for various reasons, been vegetarians, among whom have been named the following:–Manu, Zoroaster, Pythagoras, Zeno, Buddha, Isaiah, Daniel, Empedocles, Socrates, Plato, Aristotle, Porphyry, John Wesley, Franklin, Goldsmith, Ray, Paley, Isaac Newton, Jean Paul Richter, Schopenhauer, Byron, Gleizes, Hartley, Rousseau, Iamblichus, Hypatia, Diogenes, Quintus Sextus, Ovid, Plutarch, Seneca, Apollonius, The Apostles (Matthew, James, James the Less, Peter), The Christian Fathers (Clement, Tertullian, Origen, Chrysostom, St. Francis d'Assisi), Cornaro, Leonardo da Vinci, Milton, Locke, Spinoza, Voltaire, Pope, Gassendi, Swedenborg, Thackeray, Linnaeus, Shelley, Lamartine, Michelet, William Lambe, Sir Isaac Pitman, Thoreau, Fitzgerald, Herbert Burrows, Garibaldi, Wagner, Edison, Tesla, Marconi, Tolstoy, George Frederick Watts, Maeterlinck, Vivekananda, General [Bramwell] Booth, Mrs. [Annie] Besant, Bernard Shaw, Rev. Prof. John E. B. Mayor, Hon. E. Lyttelton, Rev. R. J. Campbell, Lord Charles Beresford, Gen. Sir Ed. Bulwer, etc., etc., etc."

The chapter title "What to eat" states (p. 83): "The Mongol procures his supply of protein chiefly from the Soya bean from which he makes different preparations of bean cheese [tofu] and sauce." "Among the foods rich in protein are the legumes, the cereals, and nuts... Fat is chiefly found in nuts, olives, and certain pulses, particularly the pea-nut."

Several recipes (p. 116-17) call for: Nut-milk, Vegeton, Nutter or nut butter, Marmite, Carnos, Pitman's Vigar Gravy Essence. These can be ordered from stores in England (see p. 111). The last 16 pages contain advertisements for *Health-Culture* magazine (monthly), "health appliances" (such as Dr. Forest's massage rollers and colon syringes), and many books published by The Health Culture Co., Turner Building, 45 Escension St., Passaic, New Jersey.

707. Labbé, Henri. 1911. Le soja et ses usages [The soybean and its uses]. *Revue Scientifique* 49(1):171-76. Jan. 7. [6 ref. Fre]
• ***Summary:*** A summary of earlier publications (mostly in French) on soybeans and soyfoods. Discusses: Soy flour (*farine de soja*) for diabetics. Soy bread (*pain de soja*). Soy flour used to make various foods for diabetics as well as for vegetarians. Soymilk (*lait végétal à base de soja*, p. 174). Soy kefir and soy yogurt (Kephir, Yohourt). Soy sauce (*sauce de Soja, soyou, choyou*). Tofu (*Le fromage de Soja ou Tou-Fou*), which was invented by the ancient Chinese philosopher Whai Nain Tzu. Fresh tofu and dry tofu [dried frozen tofu, containing 53.6% protein]. How shoyu is made.

Note: This is the earliest French-language document seen (April 2012) that uses the word *soyou* to refer to soy sauce.

© Copyright Soyinfo Center 2013

The section on the nutritional value of soy and soy protein (p. 173) ends with this interesting thought: For a long time the Chinese and Japanese, who cared little about the future justification of their habits and customs, have adopted the consumption of soy on a large scale, without realizing that science would perhaps one day come to bestow / confer on them a certificate or testimonial of complete approbation.

The section on soymilk ends as follows: Soya milk, according to trustworthy Chinese persons, is not just a mere curiosity. It is used, in China, for breakfast, being mixed with cow's milk. It is also used for infant formula [literally "artificial breast feeding"] or therapeutically. For this latter purpose, it is the fermented foods, such as Kefir, Yogurt, etc. that appear to be of interest. (*"Le lait de Soja, au dire de Chinois dignes de foi ne serait pas une simple curiosité. On s'en sert, en Chine, pour le dèjeuner du matin, et en mélange avec le lait de vache. On l'utilise aussi pour l'allaitement artificiel, ou dans un but thérapeutique. Dans ce denier but, ce sont plutôt les laits de soja fermentés, genre Kephir, Yohourt, etc. qui paraissent intéressants"*).

The author notes (p. 175, footnote) that a Chinese proverb says: *Le To-Fou est la viande des os* ("Tofu is the meat of the bones"). Note: This makes no sense and appears (April 2013) to be a mistake. Tofu has long been known as "the meat without bones" (Horvath 1927, 1931, 1938, etc.) or "the meat without a bone" (Lager 1945, etc.).

The writer also notes that France is not taking any part in the development of an industry to produce soy oil (p. 176, footnote). Illustrations (p. 72) show: Soy bean plant, with roots and pods. Close-up of soy bean pod and seed. Address: Doctor of Sciences (*Docteur ès-sciences*), France.

708. Li, Yu-ying. 1911. A propos du Soja hispida [About Soja hispida, soybeans]. *Journal d'Agriculture Pratique* 75(1):48-50. Jan. 12. [4 ref. Fre]

• ***Summary:*** This is a the author's point-by-point reply to 12 points of a critical article in this journal on March 24 by M. Demolon, Li's former professor. Note: Li studied the soybean at Demolon's laboratory at the school of practical agriculture at Chesnoy. Li discusses: Carbohydrates and starch in soybeans, soy flour, the quality of vegetable proteins vs. animal proteins, the absence of lactose in soymilk, the lecithin in soybeans (*fèves de soja*), soymilk, soy bread for diabetics and their superiority to gluten breads.

"The soybean will grow in almost all climates, from Manchuria to the south of China. This year [1910], at the Exposition of Nanking, we found nearly 400 soybean varieties exhibited by different provinces. In Europe and America, successful trials have already been conducted. In France the Society for Acclimatization has already studied the soybean for many years. Mr. Paillieux has written a very well documented book on this subject which concludes in favor of the adoption of soybean cultivation in Europe. The fact that there was an isolated unsuccessful trial at the School of Agriculture at Chesnoy does not seem sufficient to demonstrate that soybean culture cannot succeed in France."

"Mr. Demolon represents the soybean to us as being of interest merely from the viewpoint of pure science." Li concludes by re-stating his belief (stated two years earlier in this journal, on 2 July 1908): "The question up to this point has nothing to do with industry and commerce; it is purely scientific, but pure science always precedes applications. And there is nothing to say that tofu or soy cheese (*le to-fou* {*fromage de soja*}) won't one day become a prized food for Europeans."

Note: This is the earliest document seen (Oct. 2004) that mentions the Exposition of Nanking, where 400 soybean varieties were exhibited by different provinces. Address: Paris.

709. Rousset, H. 1911. Chronique et correspondance: Chimie industrielle. Laits et beurres végétaux [Chronicle and correspondence: industrial chemistry. Vegetable milks and butters]. *Revue Generale des Sciences* (*Pures et Appliquees*) 22(1):182-83. Jan. 15. [2 ref. Fre]

• ***Summary:*** Vegetable butters are made from coconut oil. Soymilk is made from the soybean, a unique type of bean which is grown in China. Huge quantities have recently been exported. This paradoxical plant can be used in many different ways–as to make oil and soap, special breads for diabetics, forage and fodder for animals, and confections. The Japanese transform the soybean into a cheese [tofu], the Chinese make it into milk, and the English use it to make sauces [such as Worcestershire sauce].

According to Mr. Li Yu-Ying, who, as a former student at a French school of agronomy, is well qualified by his origins and knowledge to know the soybean, as well as the milk (*les émulsions*) prepared from seeds which have first been submitted to the beginning of germination. This milk is not different, at first glance, to animal milk. A table shows the composition of soymilk. A long discussion of soymilk and its uses follows.

710. *Lancet.* 1911. Notes from China (From our own correspondent): The soya bean. i(4560):202. Jan. 21. Summarized in *J. of the New Zealand Department of Agriculture*, 15 Feb. 1913, p. 149.

• ***Summary:*** "Within the past three years the outstanding merits of this pulse have come prominently to the front, and its export from Manchuria, where most of it is raised, has lately assumed very large dimensions. For the past 2000 years it has been used in North China for making bean curd, a thick nutritious jelly eaten daily by all classes of the people. A widely used vegetable oil is also expressed from it, the refuse left over serving for cattle food and manure for sugar plantations."

"It is a cheap product, each bean when sown multiplying itself, on an average, 450 times. On account of the great

© Copyright Soyinfo Center 2013

nutritive value of the Soy Bean, it is well worth medical attention, more particularly for diabetic cases, because of its low proportion of starch. For making biscuits, soup powder, infant and other foods, it will be widely used in future when its dietetic value becomes better known." The composition is then given, and it is shown to be rich in albumin [protein, 40%], fats (20%), sugar 8-11%, and minerals 4-6%. "The most abundant salt is sodium phosphate. Advocates of the fleshless diet have to contend with large amounts of indigestible cellulose which occurs in vegetarianism. This cellulose is present in 4 to 11 per cent. of the soya bean, but is easily eliminated from the other products. Bean curd is entirely free from it" as is "a most excellent vegetable milk which resembles animal milk in that it coagulates." The author then gives some comparative nutritional figures, based on "the work of a French-trained Chinese chemist, Mr. Li Yu Ying."

711. Shaw, Norman. 1911. The soya bean of Manchuria. *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series* No. 31. 32 p. Also published by P.S. King & Son, 2 Great Smith St., Westminster, London SW, England. [6 ref. Eng]

• ***Summary:*** Contents: Introductory. Varieties. The plant. Soil and climate. Cultivation. Soil infestation. Yield. Uses of the soya bean: In the Far East: Bean sauce or soy (called shoyu in Japan [whence the name "soya"] and *chiang-yu* in China), the Chinese paste *chiang* (incl. *ta chiang* {great, made with yellow soybeans} and *hsiao chiang* {small, made with soybeans and maize}), tofu (incl. firm tofu {*tou-fu kan-tzu*}, tofu curds {*tou-fu nao*, curded with calcium sulphate instead of brine}, curd skin or yuba {*tou-fu p'i*}, layers of tofu pressed in cloth [pressed tofu sheets] {*ch'ien-chang tou-fu*}, and "frozen curd" {*tung tou-fu*, tofu that is frozen then dried}), bean flour, bean refuse {okara}, bean oil for food or industrial uses. Beancake and its uses. Uses in the Western world (beancake in Europe, and bean oil in Europe). The bean oil and cake industry in Manchuria. Trade development (statistics on exports from Newchwang have been kept since 1864). Beginnings of the European trade. Bean oil and cake production in South Manchuria. Chief sources of supply. Map references. Supplementary note.

Appendixes: 1. Table showing values (in Haikwan taels) per picul of [soya] beans, beancake, and bean oil at Newchwang, 1864-1909. 2. Graph showing monthly values (in silver yen) at Dairen of beans, bean oil, and beancake, 1907-10. 3. Table showing estimated [soya] bean production of Manchuria in normal years, compiled by the South Manchuria Railway Co. in 1909. 4. Estimates of [soya] bean production of Manchuria for the last 5 years by province and territory, compiled by the South Manchuria Railway Company in 1909: Fengtien province 1,092,350 tons. Kirin province 626,500 tons. Heilungkiang province 280,250 tons. Grand total for all Manchuria: 1,999,100 tons. Estimated soya bean production in Manchuria has increased from 600,000 tons in 1906 to a peak of 1,500,000 tons in 1908, to 1,400,000 tons in 1910. Percentage contributed by various colors of soya bean in 1910: Yellow 80.1%, green 9.4%, white-eye 3.8%, black-eye 3.2%, and black 3.4%. 5. Table showing total export of [soya] beans and bean products from Manchuria, 1909. For export of soya beans: Dairen 51% of total, Suifenho [Suifenhe] 25%, Newchwang 23%. For export of bean cake: Newchwang 50%, Dairen 44%, Antung 2%. For export of oil: Newchwang 75%, Dairen 21%, Harbin 1%. The writer frequently refers to Sir Alexander Hosie's book on Manchuria (1901, 1904).

The introduction begins: "It is only in the last three years that soya beans have become important in intercontinental commerce, and their rapid emergence from obscurity has, indeed, been one of the most remarkable commercial events of recent times. The circumstance that 'the rise of a great export trade in beans is that fact that overshadows all others,... the soya bean thus taking at a bound a position equal to that of tea in the list of exports and, with the addition of beancake, even challenging the position of silk at the top of the list'"* (Footnote: * = "Statistical Secretary's Report on the Foreign Trade of China in 1909").

The "bean district *par excellence* is the upland country beyond Moukden [Mukden] where the hills... are overlaid with wind-deposited soil..."

"Cultivation: In Manchuria the beans are produced almost entirely by hand methods. The plough, which is drawn by quaintly mixed teams of oxen, mules, and donkeys, has only one handle and a rough steel-tipped cutter. The seed is sown by hand, on top of the drills, in April, and is covered by hand. A heavy hoe is used for a good deal of the turning and breaking. When the plant appears the earth is heaped up round it, so that the roots may derive the maximum of nourishment from the soil."

"The harvest takes place in September, and the pods are usually harvested before they are quite ripe, as otherwise they are liable to burst on drying, a loss of seed being thus occasioned. The plants are pulled up by hand or cut with a straight-bladed sickle in Manchuria, and collected into small heaps in order to facilitate drying, and, when dry, the seed is separated by means of a cylindrical stone roller having longitudinal cuts on its surface, which is dragged over the plants by a mule as they lie on the threshing-floor. After this primitive threshing operation has been completed, the beans are winnowed in the usual Chinese method–that is, by throwing them against the wind. The only manure used is a compost of stable manure and earth, which is often taken from the miry pools formed in the roads–the despair of the carter but a boon to the farmer. In countries where chemical manures are used, it is only necessary to apply potash and phosphoric acid where they are lacking, for nitrogenous manure is unnecessary, owing to the property which the soya

© Copyright Soyinfo Center 2013

bean possesses, in common with other leguminous plants, of obtaining nitrogen from the air by means of colonies of bacteria."

Yield: In 1867 the Rev. A. Williamson, who travelled in the upper Sungari district at the time and who appears to have been a very close observer, estimated a maximum yield of 2,000 lb., or 15 piculs, to the acre.

The Chinese paste *chiang* is not the same as the Japanese paste miso. Chiang "is made by farmers and eaten with fish, meat, and vegetables, while the more expensive Chinese soy [sauce] is only made by wealthy families and restaurant keepers and is not consumed by the very poor. There are two kinds of *chiang: ta* (great) and *hsiao* (small)." Describes in detail how each is made. Great chiang is made from yellow soybeans, salt, and water. Small chiang contains a small amount of maize (p. 7).

Industrial uses of bean oil: (1) As an illuminant, where it has not been superseded by kerosene oil. One advantage is that "no lamp is needed to hold it, the wick being inserted into the basin or plate containing the oil." (2) As a lubricant, bean oil is used to a very considerable extent in north China and Manchuria "for greasing axles and parts of native machinery" (p. 8-9).

In China, bean oil "is used as a substitute for lard, in cooking. Although it is inferior to rapeseed and sesamum oils for this purpose, these oils cannot compete with it in point of price... In spite of its unpleasant characteristic odour and unpalatability, the poorer classes in China consume it in its crude state, but among the rich it is boiled and allowed to stand until it as become clarified" (p. 8). In Europe "Refined bean oil may be used as a salad dressing in place of other oils (but, owing to its unpleasant odour, is usually mixed with an oil of animal origin or with rapeseed oil), or in the manufacture of margarine, when a greater percentage of soya oil than of copra oil is allowed" (p. 10).

Traditional methods of pressing out the oil yield only about half of that present in the seed (9% of the weight of the beans); the rest is left in the cake, and this distracts very much from its fertilizing value. "By gasoline extraction the beans give up practically all their oil, which, as refined by this process, is a clear, pure liquid, hardly resembling the muddy, dark oil produced in the old way" (p. 14).

Photos on unnumbered pages show: (1) Seven varieties of soya beans: Large black, small black, large flat black, small flat black, two green, and two yellow. (2) Soybean root nodules. (3) A massive granite roller for crushing beans. (4) "Steaming vat with grating on which [soya] beans are placed in gunny bags during the steaming process." (5) Native bean press, showing cakes in receptacle and log wedges driven in to press out the oil. (6) Modern bean press [hand turned screw?] set up in bean mill. (7) Oil-motor and crusher. (8) Modern crushing machinery. (9) Piles of beans in sacks awaiting loading onto trains at Changchun. (10) Color fold-out map titled [soya] "Bean districts of Manchuria." A schematic diagram (in the form of a rhombus / diamond) shows the probable relationships of the different groups of soya beans based on their color. A beautiful map, approximately 17 by 22 inches, is attached between page 26 and page 27. "Wuchang" [not Wochan] is in the area labeled "Yellow Beans" in the map. Other labeled growing areas on the map include "Grasslands," "White eye," "Black beans" [soy], "Maize" and "Green beans." The major railways, rivers, roads, and towns / cities (with their Chinese characters) are shown. The major soybean markets (underlined) are Fenghwa / Maimaikai, Kungchuling, Changtufu, Tungkiangtze, Sinminfu, Tienchwangtai, Newchwang, Kaiyüan, Tiehling, Mafengkow, Moukden, Takushan, Antung, Harbin, and Shwangcheng.

Shaw finished writing this yellow book on 31 December 1910.

Note 1. This is the earliest document seen (July 2000) that mentions the South Manchuria Railway Company in connection with soybeans. This company was run by Japan. According to the *Encyclopedia Nipponica* (vol. 22, at "Minami"), the South Manchuria Railway Company (*Minami Manshu Tetsudo K.K.*) was established in 1905 based on the Portsmouth Treaty ending the Russo-Japanese War; Japan took over the rights to the railway from Russia. The company started to actually run the railway in 1907.

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "frozen curd" to refer to dried-frozen tofu.

Note 3. This is one of the earliest English-language documents seen (Sept. 2006) that repeatedly uses the word "bean" (not preceded by the word "soya") to refer to the soya bean.

Note 4. This is the 2nd earliest English-language document seen (Oct. 2012) that uses the term "tou-fu p'i" (regardless of capitalization or hyphenation) to refer to yuba.

Note 5. This is the earliest English-language document seen (April 2012) that uses the term *chiang-yu* to refer to Chinese soy sauce. Address: 4th Asst., Custom House, Dairen.

712. Clerget, Pierre. 1911. La question du Soja [The question of the soy bean]. *Revue Generale des Sciences* (*Pures et Appliquees*) 22(3):100-01. Feb. 15. (Chem. Abst. 5:1637). [2 ref. Fre]

• ***Summary:*** Contains a brief description of the soybean and discusses its commercial importance, distribution, soil requirements, the value of the oil and its uses, and the composition and commercial value of the cake. During the past 2 years, the large amounts of soybeans exported from Manchuria to Europe have called attention to this plant. It is cultivated all over China, but especially in Manchuria (in the Liao Valley, where it is the second most important crop after sorghum), Japan, Korea, and Indo-China. In China it is often cultivated with maize; it demands a great of work, care, and

© Copyright Soyinfo Center 2013

good soil. The main exports come from the Manchurian ports of Newchwang and Dairen, and from Vladivostok. In 1908 some 859,200 tonnes of soybean and cake were exported from Manchurian ports, up from only 88,900 tonnes in 1905. Until 1908, Japan was the principal outlet for Manchurian soybeans (615,900 tonnes), but at the start of that year, exports to Europe began: 69,200 tonnes to Great Britain, 21,390 tonnes to France, 7,290 tonnes to Holland, etc.–for a total of 204,440 tonnes.

According to chemical analyses made at the Colonial garden of Nogent-sur-Marne, Manchurian soybean seeds contain 17.64% oil and 33.5% protein; yellow varieties contain more oil than black varieties. The soybean is used as a forage plant and for soil improvement, but its most important role in China and Japan is as a human food among people who consume little meat. According to Bloch (1908), it is most widely used in making a sauce [soy sauce] and a cheese [tofu]. It is also used to make numerous pastes and a sort of soymilk (*lait de soja*).

It also has industrial uses, thanks to its oil content of 16-18%. Indigenous mills can obtain only 8-10% oil, but modern hydraulic presses can obtain 12-14%. The oil and cake have made the soybean rise so rapidly on European markets. The oil, which has an agreeable smell and taste, is widely employed for culinary purposes in Manchuria. In England, as in France, it is used in making soap and margarine. It is more drying that cottonseed oil and can likewise be used in making paints. Soybean cakes (*Les torteaux de soja*) would give the same results as cottonseed cakes in terms of milk yield from dairy cows. As a fertilizer, they are used throughout Japan and on the sugarcane plantations of southern China.

The soybean could be introduced to Indo-China where, even if it has to compete against Manchurian soybeans, it could be service locally for soil improvement in the rice fields and as a food in the densely populated districts where there is hardly any room for animals, or where the animals have been decimated by disease. Address: Professeur à l'Ecole supérieure de Commerce (Graduate School of Commerce) de Lyon [France].

• ***Summary:*** The nutritional composition and the source of information is given in a table for the following: Soybean seeds (p. 74-77). Soybean oil (*sojaboonen-olie*) (p. 76-77). Soybean flour or meal (p. 154-55). Soybean biscuit (*Beschuit*, 170-71). Japanese soy sauce and soybean tempeh (*Japansche soja, Tempé kedeleh* p. 242-43). Indonesian soy sauce (*Ketjap, Bataviasche soja* p. 244-45). Firm tofu (*Tao-koan*, 79.8% water. p. 244-45). Address: Dr., naar onderzoekingen in het Laboratorium van het Koloniaal Museum verricht onder leiding van Dr. M. Greshoff.

714. Li, Yu-ying. 1911. Charcuterie de soja [Cold cuts and meatlike products from soya]. *French Patent* 428,718. 2 p. Application filed 20 April 1911. Granted 6 Sept. 1911. [Fre]

• ***Summary:*** A very interesting, innovative, and important French patent.

"This invention concerns the products of the pork-butcher's shop (*charcuterie*) such as fresh sausages (*saucesses*), pâtés, etc. to which are added a soy-based product (*un produit à base de soja*) (*pois chinois*). The preparation of these products of the pork-butcher's shop involves the use of tofu (obtained by the coagulation of soymilk) *fromage de soja* (*obtenu par la coagulation du lait de soja*) to replace ordinary meats in part or in totality, tofu being a sort of vegetable meat (*le fromage de soja constituant une sorte de viande végétale*).

Note 1. This is the earliest French-language document seen (April 2013) that uses the term *une sorte de viande végétale* to refer to tofu.

The author then discusses how to cook tofu and use it in to make fresh sausages (*les saucisses*), large dry sausages or salami, (*saucissons*), pâtés, etc. Aromatics (*aromates*) which can be used for seasoning are soy sauce, salt, pepper, and the oil and juice of onions.

Likewise, tofu can be mixed with ordinary meat to obtain charcuterie products.

Note 2. This is the earliest document seen (Aug. 2002) in the Western world concerning soy-based meat alternatives or a soy-based meatless sausage, or soy-based pork alternatives. Address: Resident of France (Seine).

715. *Poverty Bay Herald* (*Gisborne, New Zealand*). 1911. The soya bean. April 22. p. 2.

• ***Summary:*** "Will the soya bean 'boom' extend to Victoria? [Australia], asks the *Age* [an Australian periodical]. Present indications are that it will. In the meantime the bean is here [in New Zealand], if not the 'boom,' and the plant is thriving remarkably well. Last year the Department of Agriculture obtained four tons of the seed from Shanghai, and planted some on its experimental plot at Cheltenham, where the bean attained a height of five feet on sandy soil, one variety yielding 13 tons and another 12 tons to the acre."

Note: Cheltenham is located just southeast of North Shore City, in the Auckland region of New Zealand's North Island."

"On different soil at Ballarat [a city in central Victoria, Australia] an even more vigorous growth is shown. Mr. J.M.B. Connor, Superintendent of Agriculture, said recently that he considered the plant greatly benefited the soil by the nitrogen which the nodules extracted from the air. The uses of the soya bean are manifold. A Chinese in Victoria was handed a parcel of the beans to convert them into

© Copyright Soyinfo Center 2013

merchantable goods. He made them into bottled preparations known as soya milk, soya currants, soya cheese [tofu], straws for making soup and soya curd, which the Japanese use as a cure for sciatica.

Note. This is the earliest English-language document seen (April 2013) that uses the term "soya cheese" to refer to tofu. This is also the earliest English-language document seen (April 2013) that uses the term "soya curd" however it is not clear to what it refers.

"In Manchuria it is primarily utilised for its oil extract and the manufacture of cake. The *London Times* reports that soya beans are now one of the principal imports of Hull, and are likely to seriously affect the importation of cotton seed. Their value is widely recognised by soap makers. The first commercial crop was sent to Europe [from Manchuria] in 1906, and the requirements from Manchuria for the coming season are estimated at 1,000,000 tons, worth £6,500,000. That Victorian farmers are alive to the possibilities of the soya bean is shown by the fact that Mr. Connor disposed of two tons and a half of the seed in small lots in one day."

Note: The meaning of "soya currants" and of "straws for making soup" is unclear.

716. Bontoux, Emile. 1911. Le Soja et ses dérivés [The soybean and its products]. *Matieres Grasses* (*Les*) (*Paris*) 4(36):2195-99. April 25; 4(37):2239-43. May 25; 4(39):2326-29. July 25; 4(40):2364-66. Aug. 25; 4(41):2405-07. Sept. 25. [48 ref. Fre]

• ***Summary:*** Contents. Introduction. The plant: origin and history, species and varieties, culture, and production: USA, Japan, Manchuria, France, England, China, Korea, Indochina (it is cultivated for the needs of the population in Cochin China {especially in the provinces of Chaudoc and Baria}, Annam, Tonkin, Cambodia), Formosa, Java, India, Africa. The soybean–a food plant: The plant, the seed, large table showing many analyses from many countries of the chemical composition of many soybean seed varieties.

Introduction to food products made from soybeans in East Asia. Shoyu [soy sauce] (and koji). Miso. Natto (from Japan). Le Tao-yu (a Chinese condiment also widely used in Japan. It is a thick, clear liquid made from black-seeded soybeans) Tao-tjiung (doujiang, from China). Tuong (from Annam). Tofu. Li Yu-ying. Table showing composition of powdered soymilk, fresh tofu, and soy flour.

The soybean–an oilseed plant. The soybean as an oilseed in the Far East. Table showing exports of soybean cake and oil from various Manchurian and Chinese ports in 1908 and 1909. The soybean as an oilseed in Europe and the United States. Table showing imports of soybeans to various British ports in 1909 and 1910 (the leading port by far is Hull, followed in 1909 by Liverpool, London, Bristol Channel, Scotland, and Other ports {Rochester, etc.}). Table showing exports of soy oil from Great Britain in 1910: To Germany, Austria, Australia, USA, Belgium, Denmark, Egypt, France, Holland, Italy, the Indies (*Indes*), Norway, Russia, Sweden, other, total (115,372 barrels, each weighing 175 kg). Discussion of soy oil and cake in most of the above countries.

Trade in soybean seeds: Mitsui Bussan, Manchuria, England, China, Japan. Soybean cake.

Soy oil: Physical and chemical properties. Applications and uses as food and in industry: Margarine, for illumination, soaps, as a drying oil, paints and varnishes, linoleum, artificial rubber. An extensive bibliography is at the end of the last article in the series.

Note: This is the earliest document seen (May 2010) concerning the cultivation of soybeans in Cambodia. This document contains the earliest date seen for the cultivation of soybeans in Cambodia (April 1911). Earlier documents imply that soybeans were being cultivated in Cambodia by 1900, and it is highly likely that they were being cultivated for at least a century before that time. Address: Ingénieur-chimiste E.C.I.L., France.

Industry and Commerce, Mukden, Manchuria. Received June 2, 1910. Seeds of the following; descriptive notes by Mr. Parker:

"28049. Large yellow. '*White Eyebrow* soy bean. Chinese name, *Paimei.* A well-known and famous variety of the soy bean grown over large areas on the alluvial bottom lands of the Liao Ho River in Manchuria. This seed sample came from valley lands near Kwangning, 42º north latitude, where the variety has been commonly grown for several centuries. Valuable in America as foundation stock for selecting and breeding improved varieties of oil-producing seeds.'

"28050. Small yellow. 'Small, round soybean. Chinese name, *Chinyuan.* This variety is grown in Manchuria as far as 47º north latitude. This seed sample came from a district northeast of Harbin, Manchuria, 46º north latitude. The beans of this variety, grown in northern latitude, are highly prized because of their heavy weight and large percent of oil. This variety should be especially valuable to plant breeders in the upper Mississippi Valley.'

"28051. Black. 'Black curd bean. Chinese name, *Heitou.* Commonly grown in central Manchuria. This seed sample comes from Mukden, Manchuria, 42º north latitude. These beans are principally used for the production of bean curd. The beans are soaked, ground into coarse meal, and a filtrate formed that is coagulated with salt. The coagulated mass is pressed into a curd with stones. A meal made from these beans is mixed with corn meal for baking cakes.'"

28052 is Adzuki bean (*Phaseolus angularis* (Willd)). "Red bean. Chinese name, *Hungchiangtou.* Commonly grown in Central Manchuria for human food."

28053 is mung bean (*Phaseolus radiatus, Lutou*) and 28054 is hemp. The latter is grown in large quantities in Manchuria for the production of fiber. Address: Washington, DC.

718. *USDA Bureau of Plant Industry, Inventory.* 1911. Seeds and plants imported during the period from January 1 to March 31, 1910. Nos. 26471 to 27480. No. 22. 100 p. May 4.
• ***Summary:*** Soy bean introductions: *Glycine hispida* (Moench) Maxim.

"26643-26646. From Mukden, Manchuria. Presented by Mr. Nelson T. Johnson, American vice consul-general in charge. Received January 21, 1910. Seeds of each of the following; quoted notes by Mr. Johnson:

"26643. Black, very similar to *Cloud,* No. 16790. *'Ho tou* or *Hei tou* (black bean) as they are known colloquially. These beans are used solely as food for cattle and horses.'

"26644. Olive brown. '*Mo shih tou* or the *Mo shih* bean. This bean is mostly used for cattle feed. They also sometimes extract the oil and use it for hair tonic.'

"26645. Green, very similar to No. 20854. *'Ch'ing tou* or green bean. This bean is used to make bean curd, an article of food much prized by the Chinese; the sprout of this bean is also much liked.'

"26646. Yellow, very similar to No. 17273. *'Yüan tou* or *Huang tou* (yellow bean). This bean forms the staple crop of Manchuria, and is eaten by the natives in many ways. Oil is also extracted from them and the residuum forms the bean cake of commerce which is used so extensively in Japan for fertilizer.'"

"26839-26840. From Kalgarh, Midnapur [Midnapore], India. Presented by Mr. A.L. Keenan. Received February 17, 1910. Seeds of the following:

"26839. Large black seeded.

"Small black seeded."

"26857\26858. From Shanghai, China. Presented by Rev. J.M.W. Farnham. Received January 31, 1910.

"26858. Yellow"

"27194/27198. From Shanghai, China. Presented by J.M.W. Farnham. Received March 25, 1910.

"27196-27198.

"27196. Large yellow seeded.

"27197. Large green seeded.

"27198. Black seeded." Address: Washington, DC.

719. Teichmann, William C. 1911. Soya-bean industry in Germany. *Daily Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) 14(112):680-81. May 13.
• ***Summary:*** "The recent arrival at the port of Stettin, by direct shipment from Vladivostok, of 4,823 tons of soya beans, valued, according to the local press, at $166,600, marks the entry into this market of a new raw material for industrial exploitation.

"Following the example of Hamburg manufacturers, Stettin capitalists have organised a company with a capital of 1,500,000 marks ($357,000) for the utilisation of the soya bean for industrial purposes. The removal of the German duty on these beans in March, 1910, will develop an industry of importance for several reasons: First, as a competitor of linseed oil, soya-bean oil can be sold at a price one-third lower than the former; second, as a valuable oil for soap manufacture, where such oils can be substituted; third, for cattle-feed purposes the residue remaining in the process of oil extraction can compete with the American cottonseed-oil cake. Meal can also be produced therefrom which, when mixed in correct proportion with wheat flour, makes an edible bread or biscuit, provided the meal has been manufactured by the extraction process, which removes the 8 per cent of oil present in the ordinary meal.

"Some analyses have shown the bean to yield as high as 23 per cent of oil, but this is exceptional, and the average percentage is figured to amount to about 17 per cent; loss in manufacturing reduces this to 8 or 9 per cent. The ordinary meal contains about 8 per cent of oil and 41 per cent of protein, but by a refining process 90 per cent of this oil can be extracted, only 1 per cent of fat remaining in the meal,

© Copyright Soyinfo Center 2013

which has about 45 per cent of protein and 28 per cent of carbohydrates."

"Uses of the bean–Its culture outside of China: In Japan soya-bean oil [sic, soy sauce] is still used as a favored aromatic constituent of sauces, and enormous quantities are said to be absorbed there for this purpose. The bean is much used as a spice [sic]. A cheese called tofu is also prepared therefrom. The cakes are useful to a certain extent as fertilizers and as fodder, although definite conclusions as to the value of this feed have not yet been reached thus far... Scandinavia has become the largest consumer of the cakes made in England, Denmark alone having imported about 150,000 tons during the 1909 season.

"Efforts to cultivate the soya bean on European soil have been made as far back as 40 years ago, especially in Germany and Hungary, but as yet without success. Some investigations resulted in the alleged discovery that all these failures were to be ascribed to the absence of a specific bacterium, present in the plants in Manchuria but absent in those grown in Europe; in fact, not until this so-called *Knoellchenbakterium* [root nodule bacterium] had been cultivated in Japan and the seed inoculated therewith was the plant brought to growth in Europe. In Italy and southern France the cultivation of the bean is said to have shown better results than in Germany.

"The demands made upon the yield in Manchuria, the hinterland of Kiaochow, and Shantung have created the necessity for the cultivation of this bean in other countries, and the Tropics and subtropics, as best adapted, will probably take up its production."

Note 1. This is the earliest English-language document seen (Nov. 2005) that uses the term "cottonseed-oil cake" (plural or singular) to refer cotton-seed cake.

Note 2. Stettin [Sczcecin] is the largest seaport in Poland (as of Feb. 2008); it is located on the Baltic Sea and the Oder River. Address: Consul, Stettin.

720. Dahle, Alfred. 1911. Ueber das fette Oel der Sojabohne [On the oil of the soybean]. Dissertation from University of Jena. Published in Neustadt by J.K.G. Wagner (Wagnerschen Buchdruckerei). 43 p. 22 cm. See Jena Dissertations 1910-11. v.1, no. 7. [28 footnotes. Ger]

• ***Summary:*** The author's advisors were Prof. Dr. H. Matthes, and Prof. Dr. Haussner. Contents: Introduction: Nomenclature, history in Asia and Europe (Kaempfer, Haberlandt), taxonomy, chemical composition, Maggi and shoyu, miso, tofu, soy bread for diabetics, coffee substitute, soy oil in China and Japan, in England and Germany, use in soaps and as a substitute for linseed oil, constants (such as iodine number), fatty acids, the work of Prof. Matthes. Experimental part.

In Japan and China, two fermented products are made from soybeans: Shoyu or bean sauce (*Bohnensauce*) and miso. Shoyu is enjoyed with almost all foods as a seasoning, and for quite some time has been exported in abundance to England and America, where it is used in the manufacture of English and American sauces. Shoyu is even used in the well-known Maggi seasoning. With respect to its nutritional value and stimulating effect (on the appetite), shoyu sauce (*Shoyu-Sauce*) is somewhat comparable to meat extract. For the preparation of shoyu sauce, milled wheat, soybeans broken into large pieces then cooked until half soft, water, and table salt are combined in specific proportions and allowed to ferment in large vats. The fermentation lasts anywhere from 8 months up to 5 years.

The preparation of miso seems similar to that of shoyu except that barley or rice are used [instead of wheat]

Moreover, in Japan, a type of raw cheese, so-called "bean cheese" (*Bohnenkäse*), is made from soybeans (*Soja*); in Japan it is called tofu (p. 8). (p. 8).

Biography: The author was born on 20 March 1884, in Halberstadt, the son of a chemist, who was later the director of a sugar factory. Address: Halberstadt, Germany.

721. Beltzer, Francis J.-G. 1911. Études sur la caséine végétale du "soja" et ses applications [Studies on the vegetable casein of soybeans and its applications]. *Revue Scientifique* 49(23):716-20. June 10. [4 ref. Fre]

• ***Summary:*** The author did his research in Cochin China [today's Vietnam], then a French colony. This is a very original and important article.

Contents: Introduction. Vegetable milk [soymilk]. Vegetable cheese [tofu and fermented tofu]. Industrial vegetable casein (*La caséine végétale industrielle;* i.e. soy protein). Production of vegetable casein: Cleaning and washing the soybean seeds, extraction of the oil (which can be used in soap), extraction of the casein. Industrial [non-food] applications of vegetable casein: Paint, paper coating, Galalith, etc. Conclusion.

The preparation of vegetable milk and vegetable cheese are widely practiced today in Cochin China and in Annam [today's North Vietnam], as recently discussed by Mr. Henri Labbé in *Revue Scientifique* (11 Feb. 1911).

Soymilk (*lait végétal*). After describing the process for preparing soymilk, the author notes: This soymilk serves for the feeding of infants and for general nutrition (*Le lait sert à l'allaitement des enfants et à l'alimentation génerale*); it can also be used for the production of a vegetable cheese (*fromage végétal*).

Tofu (*fromage végétale*): When vegetable milk is treated with a mineral salt or an acid, playing a role analogous to that of rennet, it produces curds through coagulation, resembling those of ordinary casein. By draining and washing, one obtains a sort of white cheese (*fromage blanc*) which plays a major role in the nutrition of the peoples of the Far East. In Indochina the milk is coagulated by the addition of a very small quantity of a powder called Tchach-Kao or plaster [calcium sulfate], which comes from a selenite

© Copyright Soyinfo Center 2013

pulverised by the action of fire.

Tofu is generally eaten fresh, the same day it is made, but it can also be preserved by salting or smoking. In Annam, three main varieties of tofu are found: 1. Fermented tofu, gray or yellow in color, with a flavor resembling Roquefort cheese; 2. White or salted tofu resembling goat's cheese; 3. Baked or smoked tofu, resembling Gruyere cheese. At the market in Saigon, Chinese sell regular tofu to the natives for one-tenth the price of Gruyere cheese.

Industrial vegetable casein: Defatted soybean meal from oil presses is ground between millstones with cold water to give a slurry that is filtered to obtain soymilk. The soymilk is heated to boiling, then calcium sulfate is added to precipitate the protein, which is collected (just like tofu curds) on filter cloths. The presscake is mixed with forage and molasses, then fed to livestock. The curds are then dissolved in diluted soda lye (sodium hydroxide), filtered, precipitated with acetic acid. The finely divided precipitate is filtered out, washed on the filter, left to evaporate in the open air, then dried to a yellowish powder at a low temperature. The casein thus obtained is white, and, from an industrial viewpoint, very pure. It is insoluble in water, but soluble in dilute caustic alkalies and in ammonia. It exhibits almost precisely the same properties as the casein obtained from ordinary milk. It is found on experiment to be susceptible of the same industrial applications as animal casein, and may come to largely supersede this because of lower cost. 100 gm of soybeans yields about 25 gm of this "vegetable protein," which has both food and industrial uses.

Note 1. This is the earliest document seen (June 2011) concerning isolated soy protein. The author says that his "vegetable protein" has both food and industrial uses.

Note 2. This is the earliest French-language document seen (Aug. 2003) that uses the term *caséine végétale du "soja"* or *caséine végétale industrielle* to refer to isolated soy protein.

Industrial applications of vegetable casein: "Like animal casein, industrial vegetable casein, free of fat or buttermilk, can be used in a host of applications. It can be used in making paints, and for the preparation of moisture-resistant products. Note 3. This is the earliest document seen (Oct. 2001) that mentions the use of soy protein in paints.

"It may be used also for the sizing (coating used to fill the pores) of paper, which consumes such large quantities of ordinary casein. Being soluble in ammonia and caustic solutions it is capable of forming a smooth and solid size.

Note 4. This is the earliest document seen (Oct. 2001) concerning the use of soy protein as a sizing for paper.

"Other uses are in certain manufacturing processes in the preparation of silks and artificial textiles, as well as of rubber, leathers, plastic materials, films, photographic emulsions, etc.

Note 5. This is the earliest document seen (Sept. 2001) concerning the use of soy protein to make silks, artificial textiles, or other industrial (non-food) fibers.

Note 6. This is the 2nd earliest document seen (Dec. 2001) concerning the use of soy protein as a raw material for making plastics.

Large amounts of animal casein are at present employed in the manufacture of 'Galalith,' from which are made numerous objects which imitate articles made from ivory, tortoise-shell, bone, horn, etc. The Soya casein, when free from fats, is equally well adapted for these purposes.

"Formol acts upon this casein in the same way as on ordinary casein, rendering it insoluble. Hence it may be used for the water-proofing of fabrics, straw hats, etc., as well as for the preparation of sizes and dressings... A solution of vegetable casein and borax can be successfully utilized in the process of calico printing."

"It will be seen from the foregoing rèsumè, that the fabrication of vegetable casein for industrial purposes has immense possibilities, only exceeded in importance by the alimentary value of its food products for man and for beast.

Note 7. *Webster's Third New International Dictionary* (1963) defines Galalith (a registered trademark)–as "used for a hornlike plastic [also resembling ivory or bone] made from casein [milk protein] and formaldehyde and used especially in making small molded objects (as buttons, beads, or combs)." This is the earliest document seen (Nov. 2003) that mentions Galalith in connection with soy protein. Galalith, "a new horn-like product from cow's milk," was sold commercially by Nov. 1905 and the process was protected by patents "in all civilized countries" (*Monthly Consular and Trade Reports*, USA. 1905. No. 302. Nov. p. 243.)

Conclusion: "A Chinese factory has already been established on the outskirts of Paris (at Vallées near Colombes) to make food products based on soya (*produits alimentaires à base de Soja*). This factory now produces tofu (*Caséo-Sojaïne*) and the following food products: Soy flour, soy bread, soy sauce, sweet soya preserves (*confiture de Soja*), soymilk (*lait de soja*), fermented soymilk (*lait de Soja fermenté*), tofu (*fromage de Soja*), etc.

Note 8. We wonder: Was Beltzer influence more by Li Yu-ying, or was Li influenced more by Beltzer? Both did independent and original research, however by Dec. 1910, some 6-7 months before this article was published, Li had applied for two French patents and three British patents which describe how to make various soy products in detail–including many of those products described by Beltzer. Therefore, we believe that Li influenced Beltzer more than Beltzer influenced Li.

"The Indochinese prepare, in addition, a fermented liquor, a concentrated milk, an alimentary flour, and a casein which forms the essential food of the people... Many Europeans are preoccupied with extracting part of the nutritive principles that exist so abundantly in the seeds, for the feeding of armies at war and of colonial troops... Hopefully the question of food uses of soy will be taken up

© Copyright Soyinfo Center 2013

at the same time as the manufacture of industrial casein, and that this will permit the utilization of the immense resources that our Indochinese colonies offer as raw materials."

Note 9. Later in 1911 this article was summarized in *Scientific American* Supplement and printed as a special booklet.

Note 10. This is the earliest document seen (May 2000) that uses the term *la Caséo-Sojaïne* to refer to a food–clearly to tofu. Li Yu-ying coined this term, apparently after considerable thought and research. However the author also uses the term *fromage végétale* to refer to tofu–perhaps more generically. Martine Liguori, a native French speaker who is interested in tofu, noted in an interview (May 2000): "This term for tofu doesn't sound foreign. Rather it sounds somewhat scientific, learned, and upper-class, as from the techno-elite. If you don't know what it means, that's because you are not well enough educated. In France, people will adopt something that is upper class, but they resist foreign things–even foreign words. This whole idea originated in France when Napoleon created the *Grandes Ecoles* (French graduate schools) to develop an intellectual elite to replace the royal elite."

Note 11. This is the earliest document seen (April 2001) that mentions dried tofu. Address: Ingénieur-chimiste.

722. *Farben-Zeitung.* 1911. Die Sojabohnen-Industrie in Deutschland [The soybean industry in Germany]. 16(37):2067. June 10. [Ger]

723. Figart, D. Milton. 1911. Notes from Malaysia. *Daily Consular and Trade Reports* (*U.S. Bureau of Manufactures, Department of Commerce and Labor*) 14(135):1114-16. June 10. See p. 1116.

• ***Summary:*** "The valuable soya bean: The soya bean has lately come into some prominence by reason of its extensive uses in the manufacture of oil and soap, and also because it forms return cargoes for tramp steamers bringing coal to the East. Dr. Gilbert Brooke, port health officer of Singapore, describes some new uses for the article:

"'The object of this paper is to show that we have at hand an article of diet which is cheap, which can be grown over large areas of the globe, which is palatable, which is not attacked by any known insect or fungus, which forms valuable by-products, and–most important of all–which contains, more nearly than any other known animal or vegetable substance, all the essential and properly proportionate constituents of a perfect diet.

"'Rice is a very badly balanced food, consisting mainly of starch, having next to no nitrogen, and hardly any fat or salts. In this rice stands, in the scale of food values, almost at the bottom, whereas the soya bean stands at the top. But it is remarkable that nature and experience seem to have taught rice-eating races that one of the best accompaniments to rice is some form of leguminous food, such, for instance, as dhal, the small yellow pea so much used by natives of India. Following out this analogy it would seem to be most desirable to foster among Asiatic races that depend mainly upon rice as a staple the simultaneous consumption of the soya bean as supplying in abundance those essential food elements that can not in the least be derived from rice.'

"Among the economic products derived from the soya Dr. Brooke enumerates these:

"'(1) Bean curd. A most nutritious jelly can be made from the soya bean. This has been known and widely used by all classes in north China for the last 2,000 years.

"'(2) Bean milk. The beans are dried, very finely ground, and made into an emulsion with water. This forms a valuable milk, which resembles cow's milk in that it coagulates when heated and acidified. The possibility of this is due to the fact that the proteid is composed of casein, as in the case of animal milk.

"'(3) Bean cheese. A nutritious cheese [tofu] is frequently made in Japan from bean milk.

"'(4) Bean flour. The dried and pulverized bean is most valuable as a soup basis. It is also useful for making biscuits and infant foods. Soya biscuits, produced by a Scotch firm, are supplied on several P. & O. mail boats.

"'(5) Bean oil. There is a very high percentage of fat in the soya bean. This is of commercial value. It is edible, and also forms an excellent basis for candle and soap manufacture.

"'(6) Bean cake. The seed cake left after expression of the oil from the soya bean forms one of the most valuable and rich cattle foods known.

"'(7) Bean sauce. The soya bean ground up and steeped in vinegar or brine forms a basis for Worcestershire and other sauces.

"'(8) Bean coffee. A substitute for coffee may be made from the soya bean, by dry toasting and grinding it, then adding boiling cow's milk or hot soya milk.

"'(9) The straw surpasses in nitrogenous value that of wheat or even hay. It is quite possible that the leaves or root may have medicinal properties, but this has not yet been worked out.'" Address: Vice Consul General, Singapore.

724. **Product Name:** [Tofu or Soy Cheese].
Foreign Name: Caséo-Sojaïne (Fromage de Soja).
Manufacturer's Name: Usine de la Caseo-Sojaine.
Manufacturer's Address: Valles, Colombes (near Asnieres, Seine), northwest of Paris, France.
Date of Introduction: 1911. June.
New Product–Documentation: Beltzer, Francis J.-G. 1911. *"Études sur la caséine végétale du "soja" et ses applications* [Studies on the vegetable casein of soybeans and its applications"]. *Revue Scientifique* 49(23):716-20. June 10. See p. 720. Conclusion: "A Chinese factory has already been established on the outskirts of Paris (at Vallées near Colombes) to make food products based on soya (*produits*

© Copyright Soyinfo Center 2013

alimentaires à base de Soja).*"* This factory now produces tofu (*Caséo-Sojaïne*) and various food products, including soy cheese (*fromage de Soja*).

Scientific American Supplement. 1911. "Extended utilization of soya bean products: Milk, cheese, and a variety of other products from a vegetable seed." Aug. 19. p. 115. "A Chinese factory has been established [by Li Yu-ying] not far from Paris for the purpose of manufacturing alimentary products from Soya, and it has already put on the market... Soya cheese,..." The plant made fresh firm tofu, curded with salt or rennet.

Li, Yu-ying; Grandvoinnet, L. 1911. *"Le soja* [The soybean"]. *Agriculture Pratique des Pays Chauds* (Bulletin du Jardin Colonial) 11(105):459-74. Dec. See p. 471. A chart (p. 471) titled "Soy based food products" (*Produits alimentaires a base de soja*) includes: I. Soymilk and its derivatives. These include tofu (soy cheese) (*Caséo-Sojaïne; fromage de Soja*). A photo (p. 473) shows soymilk being made inside his factory, using modern machines. More detailed information on Li's tofu is given in the Jan. 1912 issue of this magazine (p. 32-38, especially p. 34-35), including: Method of production, coagulants used, perfected modern production methods at Li's factory, tofu yields, preservation and storage, composition of tofu, digestibility of tofu, culinary preparations based on tofu. The introduction (p. 32) states: "Soy cheese (the Teou fou of the Chinese, To fu of the Japanese, Dau Phu of the Annamites) was first developed by the Chinese philosopher Whai Nain Tze before the Christian era."

Fuerstenberg, Maurice. 1917. *Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmoeglichkeiten* [The soybean, a cultivated plant of the future, and possibilities for its utilization]. Berlin: Paul Parey. 40 p. See p. 5-6. The first manufacture of soyfoods in Europe took place in France, at Valees near Asnieres, where they made flour, bread, cakes, cheese [tofu], and soymilk (*Mehl, Brot, Kuchen und Käse, vegetabilischer Milch*)– though only in small quantities and, above all, for diabetics.

725. Barrau, Fernand de. 1911. La situation agricole dans l'Aveyron: La fève soja; Lait et fromage de soja [The agricultural situation in the department of Aveyron. Soybeans, soymilk, tofu]. *Journal d'Agriculture Pratique* 75(2):21-22. July 6. [Fre]

• ***Summary:*** The Roquefort cheese industry in the region of Roquefort is experiencing hard times and the author fears that soy cheese (*le fromage de Soja* [*tofu*]) may offer additional competition. "Many provinces of China, especially Manchuria, and all the countries of East Asia, cultivate on a vast scale the bean called *Soja* or *Soya* from which one can extract at will an excellent bread, oil, milk, butter, or cheese. Already, quite near Asnières (Seine), there exists a factory named *Caséo-Sojaïne*, supplied by soybeans imported from these distant countries. In this factory attempts have been made to make a special bread for diabetics using the flour of this bean. (Soybean seeds are very low in starch, which is the enemy of diabetics, and very rich in oils and protein.) The factory also produces confections, raw milk, cooked and sweetened milk, oil, various cheeses, not to mention the various cakes used to feed livestock.

"In the region of Roquefort, certain people are starting to ask themselves if they won't soon have to fight against another products besides the cheese made in Corsica, or in the Pyrenees region, or in the plains of the Crau (near Avignon in Bouches-du-Rhone province). This product which they see as a competitor in the near future is soy cheese."

"With special reference to soy cheeses, it is stated in the *Revue Scientifique* of last June 11, that the Orientals obtain three varieties of it: (1) A fermented variety, gray or yellow in color, reminiscent of Roquefort; (2) A white, salted variety resembling goat's cheese; (3) A broiled or smoked variety (*cuite ou fumée*) resembling Gruyère."

Since the Orientals themselves make a cheese from soya milk that reminds us of Roquefort, doesn't this tell us that tomorrow the factory at Asnières, with the same milk, won't also imitate Roquefort cheese very well? And how do we know that one day an industrialist won't come right here to Roquefort to establish a factory, similar to that at Asnières, to convert to cheese the milk drawn from soybeans (*fèves de Soja*)*?* "Thus speak those who are always trembling for our old and glorious Roquefort cheese. They would like to limit clearly the territory and the rights of soja, and have Parliament decide that one can never make from it a cheese resembling ours, and above all that such a soy cheese can never be imported into the commune of Roquefort. But is that possible? No. What is possible is to let it be known, by the local tribunals (courts of law), what has already been pronounced 100 times, that Roquefort cheese is made from the milk of sheep, and that a cheese made from vegetable milk cannot be sold under the name of 'Roquefort cheese.'"

"After all this time, we don't really see that soya cheese could jeopardize our Roquefort. And if ever there are measures to take against soya, ordinary local tribunals will doubtless suffice, without national legislators getting involved."

Note: This article also appeared in the *Le Cultivateur du Sud-Centre... Aveyron / Aveyronnais.* 1911. "Chronique agricole: La situation agricole dans l'Avetron." July 16. p. 420-21. Address: France.

726. *Los Angeles Times.* 1911. Wonderful soya bean: Has great food possibilities and is grown in great quantities in China and Japan. July 16. p. II-11.

• ***Summary:*** From *The Pathfinder.* "The Western world is only just beginning to appreciate the possibilities of the soy, soja, or soya bean, which is produced in such vast quantities in China, Japan and other parts of the East and which is

© Copyright Soyinfo Center 2013

adapted to so many different purposes. Large quantities of these beans are now being brought to Europe and this country, as they form a good return cargo for vessels that carry manufactured goods to the oriental markets."

"Dr. Gilbert Brooke, British health officer at Singapore, has issued a paper emphasizing the merits of the soya bean. He recommends it as a very desirable food... and–most important of all–which contains more nearly than any other known animal or vegetable substance, all the essential and properly proportioned constituents of a perfect diet. Among the economic products derived from the soya Dr. Brooks enumerates these:" Bean curd, bean milk, bean cheese [probably tofu–not fermented], bean flour, bean oil, bean cake, bean sauce ("the well-known 'soy' sauce"), and bean coffee.

"The straw surpasses in nitrogenous value that of wheat or even hay. Like other leguminous plants it enriches the land on which it grows, instead of impoverishing it."

July; 22(260):241-51. Aug. (Chem. Abst. 5:3597). Also published in Paris by Librairie Bernard Tignol (1911). Bibliotheque des Actualites Industrielles, No. 144. [13 ref. Fre]

• ***Summary:*** Contents: Introduction: Chemical composition of the soybean and of soy oil. Fermented soyfoods and koji: Li Yu-ying and his soyfoods plant established near Paris (at Vallées, near Colombes), the products it makes (tofu or soy casein {*Caséo-Sojaïne*}, soy flour, bread, sauce, confections, milk, fermented milk, tofu, etc.), soyfoods made in French Indochina. Soymilk (*lait végétal*). Tofu (*fromage végétal* or *to-fou*)*:* fresh tofu, fermented tofu (*La variété fermentée*, which is gray or yellow and has a piquant taste resembling that of Roquefort cheese), white and salted tofu (which resembles a goat's cheese), smoked tofu (which resembles a gruyère cheese)...

Industrial production of vegetable casein from soybeans (cleaning the seeds, extraction of the oil), cost of a plant to make vegetable casein, industrial applications of vegetable casein: in paints, glues, paper coatings, plastics resembling Galalith, conclusion.

An illustration (schematic drawing; p. 248) shows two views (a cross-sectional side view and an overhead floor plan) of a factory for producing vegetable casein, with a capacity to process 10 tons of soybeans per day.

Note: This is the earliest document seen (Sept. 2001) concerning the use of soy protein in glues or adhesives. Address: Ingénieur-chimiste, Expert, Professeur de Chimie Industrielle, France.

728. *Scientific American Supplement.* 1911. Extended utilization of soya bean products: Milk, cheese, and a variety of other products from a vegetable seed. 72(1859):115. Aug. 19. Summary of Beltzer 1911, in Revue Scientifique. [Eng]

• ***Summary:*** "A Chinese factory has been established [by Li Yu-ying] not far from Paris for the purpose of manufacturing alimentary products from Soya, and it has already put on the market Soya flour, Soya bread, Soya sauce, Soya Milk, Soya cheese, preserves, fermented milk, etc."

"The well-known chemical engineer, F.J.G. Beltzer, who has made a careful study of the whole subject, publishes in the *Revue Scientifique* a report of whose most important features we present an abstract."

"For purely industrial applications it is necessary, as we have said, that the vegetable casein be entirely free from fatty matters.

"In the industrial treatment of Soya, therefore, the process is somewhat different. The 3 objects sought are: the pure oil, the casein entirely free from oil, and the residuary cake.

"The oil is extracted by pressing, and 2 grades are obtained. The first or purest is sold for edible purposes, while the second is useful for soap-making and other manufactures where oils and fats are employed...

"The pure casein is prepared from the pulp which remains after the extraction of the oil. The milky liquid obtained by triturating the pulp with cold water, is filtered and treated with powdered gypsum. About 1 kilo of gypsum per 1,000 liters of the liquid is used. The mixture is brought to a boil and the resulting coagulate is drained and washed in cloth filters. The casein thus obtained is dissolved in a quantity of very dilute soda solution, so weak that the reaction is either neutral or very slightly alkaline. The solution is filtered and then precipitated by acetic acid. The finely divided precipitate obtained is filtered out, washed on the filter and finally dried at a low temperature.

"The casein thus obtained is white, and, from an industrial point of view, very pure. It is insoluble in water, but soluble in dilute caustic alkalies and in ammonia. It exhibits almost precisely the same properties as the casein obtained from ordinary milk. It is found on experiment to be susceptible of the same industrial applications as animal casein, and may come to largely supersede this because of lower cost.

"Among the various uses to which it may be applied we may mention its employment in painting, and for the preparation of products having a resistance to moisture.

"It may be used also for the sizing of paper, which consumes such large quantities of ordinary casein. Being soluble in ammonia and caustic solutions it is capable of forming a smooth and solid size.

"Other uses are in certain manufacturing processes in the preparation of silks and artificial textiles, as well as of rubber, leathers, plastic materials, films, photographic

© Copyright Soyinfo Center 2013

emulsions, etc. Large amounts of animal casein are at present employed in the manufacture of 'Galalith,' from which are made numerous objects which imitate articles made from ivory, tortoise-shell, bone, horn, etc. The Soya casein, when free from fats, is equally well adapted for these purposes...

"It will be seen from the foregoing rèsumè, that the fabrication of vegetable casein for industrial purposes has immense possibilities, only exceeded in importance by the alimentary value of its food products for man and for beast.

"The residuary cake left after the extraction of both oil and casein still retains sufficient nutritive qualities to be useful as an addition to the feed of animals."

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term "soya cheese" to refer to fermented tofu.

By 1905 Li presented a paper (in French) describing how he had tofu to make "Fermented cheese (*Le fromage fermenté*). Its color is white, yellow, or gray, and it flavor is very strong, like that of Roquefort." In Dec. 1910 he applied for British Patent 30,275, titled "Vegetable milk and its derivatives." It was accepted / issued on 29 Feb. 1912. It stated: "For obtaining fermented cheese such as roquefort [Roquefort], parmezan [Parmesan], romatour [Romadur, Rahmatour], camambert [Camembert], and gruyere, suitable ferments are employed."

Note 2. This is the earliest document seen (Oct. 2008) that uses the term "Soya casein" to refer to an isolated soy protein product; it is used for industrial purposes.

Note 3. This is the earliest English-language document seen (Dec. 2004) that uses the term "silks" (or "silk") to refer to spun soy protein fiber used like a textile fiber.

729. **Product Name:** [Pressed Tofu Sheets (Salted, or Unsalted)].
Foreign Name: Caséo-Sojaine (Durs); En fueilles minces (Salés, Non salés); En morceaux demi-secs salés.
Manufacturer's Name: Usine de la Caseo-Sojaine.
Manufacturer's Address: Valles, Colombes (near Asnieres, Seine), northwest of Paris, France.
Date of Introduction: 1911. August.
New Product–Documentation: Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds* (Bulletin du Jardin Colonial) 12(106):28-38. Jan. In Li's factory tofu can be made into either non-fermented or fermented cheeses. The non-fermented cheeses {*Fromages non fermentés*} are of two types: Fresh and hard/firm. The fresh are white in color and the consistency of hard-boiled eggs. The hard / firm are of two types: In diced sheets {salted or unsalted}, and in salted, semi-dry pieces / morsels.

Li and Grandvoinnet. 1912. Le soja. p. 101.

730. **Product Name:** [Smoked Tofu].
Foreign Name: Fromage de soja fumé.
Manufacturer's Name: Usine de la Caseo-Sojaine.
Manufacturer's Address: Valles, Colombes (near Asnieres, Seine), northwest of Paris, France.
Date of Introduction: 1911. August.
New Product–Documentation: Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) 12(106):28-38. Jan. See p. 35, 37 (*Fromage fumé*). The smoked tofu is very firm and has a long shelf life, especially when it is sold wrapped in tin foil.

Note: This is the earliest known commercial smoked tofu made or sold in Europe or in the Western world.

731. Li, Yu-ying. 1911. Procédés et dispositifs pour la transformation intégrale du soja [Processes and apparatus for the complete transformation of soybeans]. *French Patent* 433,986. Application filed 6 Sept. 1911. Granted 20 Jan. 1912. [Fre]
• ***Summary:*** The beans, freed from stones and decorticated, are passed into a pipe from which they are withdrawn, through a number of branch-pipes, to be converted into flour (by dry grinding and bolting) suitable for bread-making, etc. They are also converted into oil and press-cake, or into "milk" (by wet grinding and pressing) and press-cake [okara], or into sauce, or after roasting into "coffee" or "chocolate." The "milk" may be concentrated or reduced to powder, or converted into "cheese," or into sauce, or it may be used for the preparation of casein (*sojalithe*, for various industrial uses). The cake obtained on expressing the "milk" may also be used for the preparation of casein, and the cake obtained on expressing the oil from the bean serves for the preparation of "milk" or meal.

Soybeans can be used in seven different food industries: (1) Milling. (2) Dairy and cheese. (3) Baking, pastry, and pâtes. (4) Confectionery. (5) Chocolate. (6) Charcuterie–Pork butcher deli business. (7) Preserves and canned foods.

They can also be used for industrial (non-food) uses in: (1) The casein industry (*Caséinerie*, incl. sojalithe for various industrial uses). (2) The oil industry (*Huilerie*, incl. soap, paint, candles {*bougies*}, and artificial rubber).

Note: This is the earliest document seen (Dec. 2005) that mentions the use of soy oil to make candles (one of two documents). However no description or details are given as to how the candles are actually made. Were they made from hydrogenated soybean oil? Address: Resident in France (Seine).

732. H.L. 1911. Le Haricot soja ou Fève de Mandchourie: Cultures exitoques [The soybean or Manchurian bean: Exotic crops]. *A Travers le Monde* 17(36):288. Sept. 9. Bound in the back of *Le Tour du Monde*. [Fre]
• ***Summary:*** Contents: Introduction. Its utilization by the Japanese: Fertilizer, oil, and oil cakes. Its utilization by the Annamites [Vietnamese]: Milk and cheese. How will

© Copyright Soyinfo Center 2013

soybeans be used: The first exports to Europe. Some figures on the present trade in soybeans. The Germans are becoming masters of the European soybean market. Soya in France: It is utilized by foreigners.

Concerning the Germans: "Until the spring of 1909, the Japanese were the masters of the soybean market. Some German companies have in turn entered into competition in places of production, and there followed a rather significant rise [in production]. There resulted as a counter-measure some soybean cultural trials in terrains that seemed favorable to them in China. The result of these trials is not yet known.

"Be that as it may, the Germans hasten to assume first rank among the importers of soybeans in Europe.

"In effect, it follows from a report published by *The Chemical Trade Journal* (10 June 1911) that the port of Stettin recently received from Vladivostok a shipment of 4,823 tonnes (metric tons) of soybeans; the manufacturers of Stettin have established a society with capitalization of 1,875,000 francs for the utilization of this product.

"Its importation into Germany duty-free will favor its use for several reasons: first, soybean oil, a substitute for linseed oil, can be sold at a price that is one-third lower; secondly, it can be used in soap-making; thirdly, the cakes remaining after the extraction of oil can be used to feed livestock in the same way as cottonseed cakes. Finally, after the appropriate extraction of oil, the pulp, reduced to a flour and mixed with cereal flour, yields an edible bread or biscuit.

"The nascent industry in Germany of cottonseed oil, flour, and oil cakes, whose primary material is cottonseed imported from America, will have before long to struggle against the formidable competition of soybean products."

Concerning soya in France. "Soya (*soja*) is hardly known in France except by a few products that are found in certain food stores and that are bought sometimes, but without realizing their origin. (Footnote: Notably many flour products whose fortifying qualities are incontestable.)

"For, there would be every advantage to introduce this industry into our country where the mechanical and chemical resources would permit an improvement of yields. The example, moreover, is already given, not by French industries, but by the Chinese, who have established a factory at Vallées, Colombes, near Paris, where a Chinese workforce, exclusively employed, make all types of soy-based food products.

"Our industries would draw great profit from entering this path and not allowing themselves to be surpassed by German chemistry any longer."

733. Ruhräh, John. 1911. Soy bean cookery. *Medical Record* (*New York*) 80:626-27. Sept. 23. [4 ref]
• ***Summary:*** Two tables give the nutritional composition of yellow soy beans and of "soy-bean flour" (also called "soy bean flour" and "soy flour" in this article). The flour [a whole- or full-fat soy flour] contains 44.64% protein and 19.43% fat.

"Egasse [1888] first suggested the use of the bean in the diet of various diseases, particularly in diabetes, and the first trials in this disease were made by Dujardin-Beaumetz at the Cochin Hospital in Paris.

"Since publishing the articles referred to above [3 articles relating to soy published between July 1909 and Dec. 1910], I have had so many requests for information about the preparation of the soy bean, especially for diabetics and also for its use in other diseases, that I thought it best to bring together a few of the methods of preparation which have been used with success."

"The simplest way to use the beans is to cook them like the ordinary navy bean, preparing either bean soup, boiled beans, or baked beans, the flavor usually being rather improved by the addition of a piece of fat salt meat. It is also a good plan to soak the beans for eight to ten hours, stir them up, and remove the rather firm envelope which encloses them, most of which will be found to come to the surface, from which they may be easily skimmed off."

The author then gives recipes for using soybeans or soy bean flour: Gruels, broths, muffins, nut-cakes, soy bean cakes, breakfast food, pancakes, soy bean cheese (tofu; "In Seattle, Washington, and other places in the West, I am informed that tofu is made by the Japanese and sold to the Oriental residents"). The following suggestions for cooking the bean are made by Goff (*Gazette des Hopitaux*, 7 March 1911, p. 399): Grilled soy beans, soy beans with butter, soy beans au gras, bread or cakes of soy beans. Address: M.D., 839 North Eutaw Street, Baltimore, Maryland.

734. Abel, Mary Hinman. 1911. Beans, peas, and other legumes as food. *Farmers' Bulletin* (*USDA*) No. 121. 38 p. See p. 11-13, 17-20, 35-36. Revised Nov. 15, 1906. Reprint, Sept. 30, 1911. [1 ref]
• ***Summary:*** This is a reprint of the 1906 revised edition. The information about soy is unchanged. On pages 17-18 is a section titled "The peanut" (*Arachis hypogæa*). On pages 35-36 is a section titled "Peanuts and peanut preparations" which includes a subsection titled "Peanut butter.–The roasted peanut ground to an oily meal has somewhat the consistency of butter and is now marketed under the name of peanut butter. Salt is perhaps quite generally added during the process of manufacture. Water is also sometimes added–usually before serving. Peanut butter is used like other butter to spread on bread, for the making of sandwiches, and in the preparation of a number of made dishes. Many persons like its flavor when it is fresh and of good quality, and it seems fair to say that the use of this and other sorts of nut butter is growing. As regards composition, peanut butter, which is essentially the ground roasted peanut, contains more protein and less fat than ordinary butter. Little is known regarding the digestibility of peanut butter, but the fine grinding would naturally seem to be of an advantage. Judged by Jaffa's

© Copyright Soyinfo Center 2013

experiments with a ration containing peanuts, it would be well digested. (See p. 26)

"Peanut oil.- At present the American peanut crop is not large enough to more than supply the roaster and the confectioner, hence the expressing of oil from the peanut has never become established here, but in Europe large quantities of the African-raised nuts are used for this purpose. The shelled nuts contain from 30 to 50 per cent. of oil. The oil is said to be of fairly good flavor, but inferior to olive oil. In 1899 some 80,000 tons of the nuts were used in Marseille alone for oil making. The unhusked nuts are passed between a pair of rapidly revolving grooved rollers and the shells and red inner skins are then removed by a winnowing process with the use of air currents and oscillating sieves. The cleaned kernels are ground and enveloped in fibrous mats and pressed to extract the oil.

"According to Brannt, "the first cold pressure yields 16 to 18 per cent of very fine table oil. The residue is then broken up, moistened with water, and again cold pressed, yielding 7 to 8 per cent of more or less valuable oil, used for table purposes and burning. The residue from this is heated and then pressed, giving 7 to 8 per cent more oil, unfit for table use, but used for soap and lubricating." The grades of oil are sold as salad oil alone or mixed with olive oil.

"Peanut cake.- When the oil has been pressed from the ground nut, the mass remaining, called oil cake, is used for fattening. Some experiments have also been made as to its food value for human beings. Containing, as it does, 47 per cent of protein and 9 per cent of fat and starch, and costing about 5 cents a pound, this attracted the attention of German scientists. The oil cake broken up and cooked a long time in water and eaten as a soup or porridge in a hospital. Most of those who tried it ate it with apparent relish, not once only, but again and again. No effort have been made to ascertain to what extent it was digested, and the use of the cake does not seem to have passed the experimental stage."

735. **Product Name:** Tofu.
Manufacturer's Name: Japanese Tofu Shop (Name Unknown).
Manufacturer's Address: Seattle, Washington.
Date of Introduction: 1911. September.
New Product–Documentation: J. Ruhrah. 1911. *Medical Record.* Sept. 23. p. 626. "Soy Bean Cookery." "In Seattle, Washington, and other places in the West, I am informed that tofu is made by the Japanese and sold to the Oriental residents."

Henry M. Loomis. 1914. *American Food Journal* 9(8):472-74. Aug. "Food products from the soy bean." Describes tofu made in Seattle, Washington.

736. Dorsey, George. 1911. Skill of the Chinese shown on farms: Few people have grown more food on rocks or developed more plants. Their cookery an art. *Chicago Daily Tribune.* Oct. 29. p. A2.
• ***Summary:*** "No other dense population has so thoroughly adjusted itself to its physical surroundings, depending throughout the course of its history on its own natural resources and the ingenuity of its brain. We speak of the application of science to agriculture as if science were something quite new... Few countries can show such a record of great inventions as the Chinese."

"China is just enough saturated with Buddhism to make people afraid of eating meat at times... There are societies in China, like our temperance societies, the members of which vow never to eat beef. There is in Chinese a formula to the effect that the ox, as man's most useful helper in plowing and winning his daily bread, shall be inviolable [not available for slaughter to eat].

"In parts of China where Mohammedans are numerous, beef and mutton are largely consumed. The butchers of Peking are all Mohammedans. The Chinese abhor milk. Nor do they prepare cheese. Pork is the favorite meat throughout China."

"Variety of grains:... Chinese grow all kinds of pulse– white, yellow, red, green, and black. Bean curd, prepared from the yellow and black bean, is the principal food article in China and Japan. The beans are macerated in water and milled. The liquid filtered [and boiled], and gypsum added to coagulate the casein. Vermicelli and a kind of jelly are made from [mung] bean flour. From the starch extracted from green beans a meat sauce is made; from fermented beans a condiment known as soya [soy sauce]... Turnips and cucumbers are seasoned with soya." Address: PhD, LLD, Hankow, Hupeh Province, China.

737. Barrett, O.W. 1911. Rice ally crops. *Philippine Agricultural Review* 4(11):592-98. Nov. See p. 594-96. [1 ref]
• ***Summary:*** The section titled "Soybeans" (p. 594-96) begins: "Probably every tourist who has visited any of the cities of Japan or China has noticed in the markets these peculiar blocks of a grayish white, jelly-like substance and wondered whether they were really good to eat, but comparatively few have ever tried there the three or four varieties of vegetable 'cheese' prepared from the soybean*."

*Footnote: A 3/4 page footnote, extracted from USDA Farmers' Bulletin No. 58 by Langworthy, discusses five preparations commonly made in Japan from the soybean: natto, tofu or bean cheese (eaten in the fresh state or frozen), miso, yuba, and shoyu.

"Experts in threpsology, the new science of nutrition, seem to be in accord on the fact that in dietary matters two kinds of food are at least four times as good as one... Recently the European food experts have realized the high nutritious value of the soybean and a factory has been established near Paris [by Li Yu-ying] for the manufacture of various food products from this wonderful seed."

© Copyright Soyinfo Center 2013

"Now is the time for the Philippine Agriculturist to take up soybean culture in earnest, and to develop it in the same way, even if not to the same degree, as our neighbors across the way have been doing for centuries. The fact that there are practically no seeds of this valuable crop at the present in the Philippines is a sad commentary on the progressiveness of the Philippine farmer; but it is never too late to learn" (p. 596). Address: Chief of the Div. of Experiment Stations, Philippines.

738. Li, Yu-ying; Grandvoinnet, L. 1911. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) 11(105):459-74. Dec. [18 ref. Fre]
• ***Summary:*** Contents (continued): 2. The soybean in human nutrition. The soybean in general nutrition: From the viewpoints of physiology, economy, and gastronomy. The role of soybeans in special diets/regimens: Vegetarianism and vitalism, remineralization, anti-diabetic, others, lactose-free.

Foods made from soybeans (*Produits alimentaires à base de soja*)*:* 1. Soymilk and its derivatives: Soymilk (developed by the Chinese philosopher Whai Nain Tze {Liu An of Huai Nan} well before the Christian era, method of production, Chinese method, modern method used at Li's factory *l'Usine de la Caséo-Sojaïne* at Vallées (Seine)), cleaning the seeds, steps in soymilk preparation (grinding and filtration), the nature of soymilk (physical properties). A graphic illustration (p. 465) shows a comparison of nutritional elements between soybeans, tofu, and beef. A chart in outline form (p. 471) titled "Soy based food products" (*Produits alimentaires a base de soja*) shows the numerous and varied food products that can be derived from the soybean: I. Soymilk and its derivatives: Normal soymilk, concentrated soymilk, powdered soymilk, fermented soymilk (*lait fermenté*), soy cheese (*Caséo-Sojaïne; Fromage de soja* [*tofu*]), soy casein. II. Soy flour and its derivatives: Soy flour, soy bread for diabetics, whole-grain bread (*Pain complet*), cakes, biscuits (*Biscottes*). III. Soy oil and its by-products (cake). IV. The soybean used as a vegetable. V. Condiment products based on fermented soybeans. VI. Confectionery products: Soy confection, soy powder. VII. Soy coffee. Soy-based ferments: Kiu-tsee, lactic ferments based on soymilk. (*Ferments lactiques à base de lait de soja*).

Photos show: Inside view of Li's factory as the equipment is producing soymilk (p. 473). Microscopic view of soymilk, and of soy flour dissolved in water (p. 474). Also contains various tables, charts, and graphs from other sources.

Note: This is the earliest document seen (March 2000) written by Li Yu-ying which contains the term *Caséo-Sojaïne*. On p. 471 he states clearly that he uses it as a synonym for soy cheese (*Fromage de soja*) [tofu], which is made from soy milk–perhaps to avoid disputes over the word *fromage* with manufacturers of dairy cheese. On p. 472-73 he states that *Usine de la Caséo-Sojaïne* is the name of his modern factory at Vallées (Seine) which makes a variety of soy products. Address: 1. Counseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

739. **Product Name:** Tofu.
Manufacturer's Name: Akaboshi Tofu-ya.
Manufacturer's Address: 1509½ Geary St., San Francisco, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 17. Also in 1912 directory, p. 17. Note: Hidejima Tofu-ya was at this address in 1914.

740. **Product Name:** Tofu.
Manufacturer's Name: Ashiura Tofu-ya.
Manufacturer's Address: 232 Nassau St., Brooklyn, New York City, New York.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 136. Note: This may have been the unnamed Japanese tofu shop in New York City in 1910, or in 1903.

741. **Product Name:** Tofu.
Manufacturer's Name: Fukuzawa Tofu-ya.
Manufacturer's Address: 1629 Oak St., Alameda, California. Phone: Alameda 1589.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 33. Also in 1912 directory, p. 38. The company name has changed slightly, to Fukuzawa Tofu-ten. Also in 1913, p. 40–name changed back to Fukuzawa Tofu-ya. Same phone no. Also in 1914, p. 44.

742. **Product Name:** Tofu.
Manufacturer's Name: Hamada Tofu-ya.
Manufacturer's Address: P.O. Box 683, Vacaville, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 36. 1911 Census entry p. 155. Male owner and no employees. Note: Vacaville is in northern California, between Fairfield and Sacramento. Also in 1912, p. 43. Also in 1913, p. 47.

743. **Product Name:** Tofu.
Manufacturer's Name: Hashii Tofu-ya.
Manufacturer's Address: 319 Jackson St., Los Angeles, California. Phone: A2766.

© Copyright Soyinfo Center 2013

Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 91.

744. **Product Name:** Tofu.
Manufacturer's Name: Hayashi Tofu-ya.
Manufacturer's Address: 1621 Buchanan St., San Francisco, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 17. Also in 1912 directory, p. 17. Note: Ooe Tofu-ya was at this address in 1913.

745. **Product Name:** Tofu.
Manufacturer's Name: Izumi Tofu-ya.
Manufacturer's Address: 950 Front St., San Diego, California. Phone: A2188.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 97. Also in 1912 directory, p. 123.

746. **Product Name:** Tofu.
Manufacturer's Name: Kawaoka Tofu oyobi Sentaku-jo (Tofu shop and laundry).
Manufacturer's Address: P.O. Box 128, Lodi, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 43. Note: Note: Kawaoka Tofu-ya was at this address in 1906. This may have been the un-named Japanese tofu shop in Lodi in 1909 and 1910. Also in 1912 directory, p. 100, but the name is now Kawaoka Sentaku (Laundry), Tofu-ya.

747. **Product Name:** Tofu.
Manufacturer's Name: Kozawa Tofu-ten.
Manufacturer's Address: 6th and Jackson St., Seattle, Washington. Phone: L 5394.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 144. Note: This may have been one of the three un-named Japanese tofu shops in Seattle in 1909 and 1910.

748. **Product Name:** Tofu.
Manufacturer's Name: Matsumoto Tofu-ya.
Manufacturer's Address: P.O. Box 116, Isleton, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 61. Also in 1912. Directory entry p. 72. Also in 1913, p. 81. Also in 1914, p. 87. Note: This may have been the un-named Japanese tofu shop in Isleton in 1909. Isleton is in Sacramento County, California, about 25 miles south of the city of Sacramento, west of Rio Vista and southwest of Walnut Grove.

749. **Product Name:** Tofu.
Manufacturer's Name: Matsumoto Tofu-ya.
Manufacturer's Address: P.O. Box 15, Alviso, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 111. Also in 1912. Directory entry p. 138. Note: This may have been the un-named Japanese tofu shop in Alviso in 1910.

750. **Product Name:** Tofu.
Manufacturer's Name: Minakami Tofu-ya.
Manufacturer's Address: P.O. Box 25, Selma, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 79. Note: This may have been the un-named Japanese tofu shop in Selma in 1910. Also in 1912 directory, p. 94, but the address is now P.O. Box 31. Also in 1913, p. 107.

751. **Product Name:** Tofu.
Manufacturer's Name: Mizoda Tofu-ya.
Manufacturer's Address: 1620 Park St., Alameda, California. Phone: Alameda 3092.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 33. Note: Hieda Tofu-ya was at this address in 1909 (Directory entry p. 29).

752. **Product Name:** Tofu.
Manufacturer's Name: Mizoue Tofu-ya.
Manufacturer's Address: 1 Lake St., Salinas, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 105. An ad also appears on p. C-28. Mizoue Tofu-ya. Owner: Mr. Kamuzo Mizoue. Salinas, Lake St. Also in 1912 directory, p. 131, but the address is now 12 Lake St. Also in 1913, p. 156. Also in 1914, p. 160.

753. **Product Name:** Tofu.
Manufacturer's Name: Motooka Tofu-ya.
Manufacturer's Address: 1319 20th, Denver, Colorado.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha.

© Copyright Soyinfo Center 2013

1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 132. Also in 1914, p. 198. But address is now 1848 Market St. Note: This may have been the un-named Japanese tofu shop in Denver in 1909 and 1910.

Note: This is the earliest known soy product made in Colorado.

754. **Product Name:** Tofu.
Manufacturer's Name: Nakajima Tofu-ya.
Manufacturer's Address: 265 24th St., Ogden, Utah.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 122.

Note: Tofu oyobi Mochi-ya. was at this address in 1907. This may have been the un-named Japanese tofu shop in Ogden in 1909 and 1910.

755. **Product Name:** Tofu.
Manufacturer's Name: Noguchi Tofu-ya.
Manufacturer's Address: 2152 Dwight Way, Berkeley, California. Phone: Berkeley 6629. Home F1490.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 31. Also in 1912 directory, p. 36. The phone has changed to Berkeley 6620.

756. **Product Name:** Tofu.
Manufacturer's Name: Ohta Tofu-ten (Ota Tofu Shop).
Manufacturer's Address: 266 Davis St., Portland, Oregon. Phone: A4069.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 151. In Japanese: Ohta Tofu-ten. In English: 266 Davis St., Portland. Phone: A4069. Note: This may have been the un-named Japanese tofu shop in Portland in 1909. However it is definitely the earliest document seen (March 2013) that mentions Ota Tofu in Portland, Oregon.

Also in 1912 directory, p. 177, but the address is now 96 N. 5th St., and the phone is A1069. Also in 1913 directory, p. 226, but the address is now 86 N. 5th St., and the phone is A 4069.

Hokubei Nenkan–North American Yearbook. 1913, p. 43. The names of the Ota brothers, Saizô and Heiji given in Japanese characters. No address is given, but the entry says they came from Okayama.

Nichibei Nenkan: Also in 1914, p. 215. But the address is now 86½ N. 5th St.

Ad in *Oregon News / Oshû Nippô*. 1915. Jan. 1 (Taisho 4). p. 20. Includes Ota Tofu-ten (at 86½ N. 5th Street, Portland). Note: The new location is only about 3 blocks from the original one. This ad was discovered by Dave Conklin of Portland, Oregon (See March 2007 SoyaScan Interview).

Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan* (*Directory of Japanese in the USA*). p. 357. Ota Tofu-ten, 86½ North 5th St., Portland. No phone number is given.

The Japanese American Directory. 1920. p. 451 (directory; Ota Tofu-ten, 86½ N. 5th St., Portland. Phone: A4069). Also in 1921, p. 471 (directory). Also in 1923, p. 554 (directory; slightly new address: 86 N. 5th St. Slightly new phone: 5-4069). Also in 1924, p. 595 (directory; new address: 86 N. 4th St. New phone number: Bea 4069). Also in 1925, p. O-75. Also in 1926, p. O-76.

The Japanese American Directory. 1930. p. S-319. Ota Tofu-ten, 86 North 4th St., Portland. Phone: BEa 4069. Also in 1932, p. 612 (directory; 86 N. 4th St. Bea. 4089). Also in 1934, p. 519 (directory; new address: 322 N.W. 5th Ave., Portland. Phone: Bea. 4069). Also in 1936, p. 608. Also in 1937, p. 541. Also in 1938, p. 564. Also in 1939, p. 553. Also in 1940, p. 573 (directory; new phone number: BE 1720).

Hokubei Nenkan–The North American Times Year Book. 1936, p. 201. Saijiro? (or Takajiro? Katajiro?) Ota / Ohta. 322 N.W. 5th Ave., Phone: BE. 1720.

Polk's Portland City Directory for 1915 has a listing for "Ota, S. Baths 86½ 5th N." The 1921 edition, p. 954, lists "Ohta, H. (T). Baker. 86½ 5th N. Home same." The 1924 edition, p. 1276, lists "Ota, H. Restaurant 86½ 5th N. Home same." The 1926 edition lists "Ohta, S. Baker. 86½ 5th N. r do" (= Residence, ditto). The 1930 edition, p. 1232, lists "Ohta, Saizo (Shino). Food products. 86½ 5th N. Home, 92 5th N." The 1936 edition, p. 976, lists "Ohta, Saizo wholesale baker 322..." The 1941 edition, p. 1130, lists "Ohta Saizo (Shina) wholesale baker 322 NW 5th av h324 do." The 1950 ed, p. 802, first mentions soy: "Ohta Shina (widow of Saizo) (Soybean Cake Co) home 322 NW 5th av." Note: Why does this Caucasian-owned directory fail to understand that this company makes tofu, when the Japanese-owned directory understands so clearly? (1) It could have been a lack of interest, combined with some racism. (2) There may well have been a language barrier, especially with a word like tofu, which was not yet part of the English vocabulary. (3) The Japanese, who were being persecuted during this time, may not have wanted the dominant culture to know what they were doing–for various reasons.

Crane Portland Directory. 1949, p. 12. "NW 5th–322 Soy Bean Cake Co."

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 410. Under "Stores." Surprisingly, there is no listing for Ota Tofu Co. However there is an entries (p. 413) for four Ohtas residing in Portland: Ohta, George. 4743 S. Hawthorne St. Phone: EM. 5137 Ohta, Zenjiroo (or Yoshijiroo), 415 N. Kiska St. Ohta, Shina, 322 N.W. 5th Ave. Tel. BR. 8363. Ohta, Suejiroo, Rt. 7, Box 80-E. There is also an entry (p. 410) for: In Japanese: Asahi Tofu-ten. In English:

The company is now Ota Tofu Factory, 322 N.W. Everett St., Portland, Oregon 97209. Phone: 222-2456. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Shurtleff & Aoyagi. 1983. Soyfoods Industry & Market. Starting date given as 1919. Dixon. 1987. Willamette Week (Portland, Oregon). May 14. "Tofu and Tortillas on the Line. Third generation members of the Ota clan continue a business started in 1918." The company is now named Ota Tofu Co.

Talk with Eileen Ota. 1992. March 26. History of Ota Tofu Shop in Portland, Oregon (which see)

Talk with Eileen Ota of Ota Tofu Co. in Portland. 2007. May 7 and June 11. The first character of the name Ota has always been written with the character pronounced "futoi" or "Oh" and meaning "fat." Therefore, the name of this company is pronounced "Ota" / "Ohta," not "Futoda." Both of the above addresses were definitely in Japantown, which was north of Burnside Street. Chinatown was south of Burnside. During World War II, when the Japanese were evacuated and relocated, the Chinese moved into Japantown and largely took it over. Eileen (who was born in 1949) recalls that when the Japanese were allowed to return to Portland after World War II, when she was growing up, there were still many abandoned buildings in the old Japantown with winos and gypsies living in them or in their doorways. Today Ohta Tofu is located on the east side of the Willamette River, where they moved in about 1980-81.

Letter (fax) from Geoffrey Wexler, Senior Archivist, Oregon Historical Society, 1200 SW Park Ave., Portland, Oregon, to Mr. Roy Yotsuuye. 2007. June 1. Concerning the Ota Tofu Co. The "two addresses (226 [sic] Davis Street and 96 North Fifth St.) were not the same location. The major street renaming took place around 1892, when the 'alphabet' streets (A, B, C, etc.) were given the names of Portland pioneers (Ankeny, Burnside, Couch, Davis, etc.). The next major change was between 1931 and 1933, when all the house numbers in the city were changed and many street names were altered too. At that time North Fifth Street became Northwest Fifth Avenue, and Davis Street became Northwest Davis Street."

757. **Product Name:** Tofu.
Manufacturer's Name: Okamoto Tofu-ya.
Manufacturer's Address: 87 Jap Alley, Sacramento, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 45. Note: Nishi Tofu-ya was at this address in 1909 (Directory entry p. 39).

761. **Product Name:** Tofu.
Manufacturer's Name: Sasaki Tofu-ya.
Manufacturer's Address: 1675 Sutter St., San Francisco, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 17. Note: Aramachi Tofu-ya was at this address in 1909 (Directory entry p. 14).

762. **Product Name:** Tofu.
Manufacturer's Name: Shigemoto Tamekichi Tofu-ya.
Manufacturer's Address: 370 8th St., Oakland, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 27.

763. **Product Name:** Tofu.
Manufacturer's Name: Tateishi-ya (Tachiishi) Tofu-ya.
Manufacturer's Address: P.O. Box 46, Oxnard, California.
Date of Introduction: 1911.
New Product–Documentation: JAY. 1911. Ad (lower left corner), p. C-14. Public bath (*yuya*), tofu shop (*tofu-ya*). Mr. Kanzo Tateishi. Note: This may have been one of the two un-named Japanese tofu shops in Oxnard in 1910. Also appears in 1912 directory, p. 121.

764. **Product Name:** Tofu.
Manufacturer's Name: Tomita Tofu-ya.
Manufacturer's Address: 1216 3rd St., Sacramento, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 45. Also in 1913, p. 58 at 1216 C 3rd St.

765. **Product Name:** Tofu.
Manufacturer's Name: Un-named Japanese tofu maker.
Manufacturer's Address: Carson, California.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Census entry p. 157. Male owner and no employees. Note: Carson is in Los Angeles County, southeast of the city of Los Angeles.

766. **Product Name:** Tofu.
Manufacturer's Name: Yonemura Tofu-ya.
Manufacturer's Address: 184 E. 14th St., Santa Barbara, California. Phone: A2188.
Date of Introduction: 1911.
New Product–Documentation: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 94. Note: This may have been one of the un-named Japanese tofu shops in Santa Barbara in 1909 or 1910.

767. Boname, P. 1911. Soja [Soybeans]. *Ile Maurice* (*Mauritius*), *Station Agronomique, Rapport Annuel* For the year 1910. p. 67-71. Also titled Bulletin No. 25. [1 ref. Fre]
• ***Summary:*** Summarizes the world soybean situation and soybean uses, then states: "We believe that this crop culture has been tried this year in various small plots on Maurice. We have distributed seed from various sources but we do not have precise information on the results obtained." The need for nitrogen fixing bacteria is discussed.

Note: Moutia (1975, p. 218) states that in this report "Boname called soybean a fashionable plant, referring to the huge quantities being imported into Europe and to the yields of 4 to 10 hectoliters of seed per acre being obtained in the United States. 'It is really a crop to try,' he wrote, 'being better than cowpeas in that flowering is uniform and pods come to maturity all at the same time.' The 1910 trials at Reduit had given better results than those obtained in the past. When sown between December and March, soybean matured in 2½ to 3 months, yielding 7 to 8 hectoliters of well-formed seed per arpent of full stand, or 6,000 to 7,000 kg of green fodder. In addition to hares, the other pests were birds, snails, and the bean fly Agromyza.

"Soybean was planted on a small scale in Mauritius in 1910 and the not very encouraging results were thought to be perhaps due to the absence of the special bacteria–the particular Rhizobium strain–which the newly introduced legume required." Address: Directeur, Station Agronomique, Mauritius.

768. Hooper, David. 1911. Soy bean in India: Glycine hispida. *Agricultural Ledger* (*Calcutta*) No. 3. p. 17-33. (Vegetable Product Series No. 114). Also reprinted in Tropical Agriculturalist, 1912. 38:11-15, 99-103.
• ***Summary:*** Contents: Introduction. Experimental cultivation in India. Vernacular names of the soybean. Method of cultivation: Green manure, harvesting. Races and varieties. Races in India: Yellow [grown in Poona Experimental Farm, Burma, Darjeeling, Dehra Dun, Simla, Punjab], green [Poona], black [Poona, Kashmir to Darjeeling, Simla], brown [Kashmir, Kalimpong to Darjeeling], mottled [Shillong, Assam]. Composition of the seed: From Church, from König, from Dr. J.W. Leather (1903), tables showing analyses made in India of Indian-grown Soy beans from various provinces (Burma, Hill Tracts, United Provinces [black seeds], and Poona). Soy bean oil. Soy bean oil-cake. Composition of hay. Use as food: Soy-bean milk, bean cheese (topo, sic tofu, or "Soy-bean cheese"), shoyu ("Under the name of 'Soy sauce' and other fanciful names it has formed the basis of most of the important sauces of Europe for many years."), roasted soy beans as a coffee substitute, soy beans in diabetic diets.

© Copyright Soyinfo Center 2013

Trade (exports of Soy bean from Manchuria to England). Price.

"The plant was introduced into the United States of America in 1854 and was grown to a small extent in the Southern States, but from the year 1885 its cultivation as a forage crop has gained in importance in all the agricultural centres. Within the last two or three years a great deal of interest has been taken in the cultivation of Soy, and experiments are in progress in Government Farms in Cape Colony, Natal [South Africa], East Africa, Gambia, Mauritius and Australia.

Contains a good early history of the soybean in India: "It is difficult to ascertain the date of the introduction of Soy beans into India. There is no doubt that certain hill tribes, mostly of Mongolian origin, have cultivated the bean for a long time. At the Punjab Exhibition held at Lahore [later divided between India and Pakistan] in 1864 Soy beans identified by Dr. Cleghorn, were sent from the Hill States. This is the first record of the beans being exhibited in this country, and shows that the cultivation was on a insignificant scale.

"Experiments in India. In 1882 Messrs. Jardine, Matheson & Co. of Hong-Kong sent a sample of Soy beans for experimental cultivation in the Saidapet Experimental Farm, Madras. The plants raised from these seeds were healthy but the yield of the crop was small.

"In 1897 Surgeon-Colonel W.G. King, Sanitary Commissioner, Madras, strongly advocated the cultivation of Soy bean as a valuable food worthy of the attention of the people. In two experiments carried on at Saidapet during 1897-98, the yield of seed per acre was 468 to 495 lbs., respectively. Recent enquiries in Madras resulted in the opinion that the cultivation in the Presidency is still in an experimental stage.

"In 1882 some Japanese Soy beans were sent by the Government of India for trial to Saharanpur. In 1885 very good results were obtained, the black seeded variety giving a yield of 1,124 lbs. per acre, and the white seeded variety giving a yield of 561 lbs. per acre. In 1886 the acclimatised seed was widely distributed; in some cases the crop failed and in others it was fairly successful, but as a rule where seed was harvested it was said that the pulse was not popular in any form. The Botanical Gardens grew the crop for a few years longer but as there was no demand for the seeds the cultivation was abandoned. An interest in Soy bean, however, seems to have revived for the Agricultural Department has this year sent to the Reporter on Economic Products samples of the black variety of Soy beans from forty villages of the United Provinces.

"At the Experimental Farm at Nagpur, Central Provinces, the bean was grown experimentally from Japanese seed first planted in 1885. The yield at the end of the first year was at the rate of 180 lbs. per acre, but taking the average of five years the result was 88 lbs. per acre. In the Report for 1908-09 it is stated that Soy beans were grown on a small area under field conditions and the yield was fair, but there was little local demand for the seed. It was, however, ground and formed an excellent addition to the diet of the farm cattle. Last year only 43 lbs. were obtained on light soil on the Nagpur Farm, the crop being practically a complete failure; on heavier soil 380 lbs. of seed were raised.

"Soy beans have been grown at Poona for nine or ten years with varying results, and they have also been tried at Nadiad in Gujrat [Gujarat] and elsewhere in the Bombay Presidency. In the Experimental Farm Report for 1901 a large yield was chronicled, but next year the crops at Poona and Surat failed. In 1904 a yield of 300 lbs. per acre was obtained in light land. One year later nineteen plots were under trial but with unpromising results, for only five yielded seed enough to repay the cost of cultivation. The yield varied from 50 to 293 lbs. per acre, and it was found that only when the yield exceeded 200 lbs. was the crop profitable. In 1905-06 the Manjri Farm, Poona, grew nineteen plots with better results, probably due to better soil. The yield of some of the plots was on an average of 680 lbs. per acre–a highly remunerative return. A year later it was reported by Mr. Fletcher, Deputy Director of Agriculture, that an experiment made on the edge of black cotton soil gave a yield of 1,166 lbs. per acre, while adjacent plots gave from 395 to 650 lbs. per acre.

"In the Agri.-Horticultural Gardens at Lahore Soy bean planted on a small area in 1894 yielded an estimated crop of 349 lbs. of seed per acre and 349 lbs. of fodder. Evidently it varies greatly in suitability to different soils and climates and does not seem to be adapted to the sea level plains of India.

"Gollan observed that the Japanese plant is erect, attaining a height of 12 to 15 inches, while the Himalayan form is a trailing plant. So far this vigorous growing plant does not appear in India to have been attacked by any insect or parasitic fungus.

"With regard to Burma, Mr. Burkill remarks: 'The Burmese grow it under the names of Pe-nga-pi and Pe-kyat-pyin, sowing it never in great quantities along with other beans on the mud banks as the falling rivers leave them bare in October, or more sparingly still away from the rivers. The Kachins and other hill tribes grow a little of it on their hill clearings, the Kachins call it Lasi. The Khasis, the Nagas and other tribes between the Brahmaputra and Upper Assam cultivate it similarly... In the Brahmaputra Valley it is grown as far as known only towards Barpeta in the Kamrup District.'

"Soy beans are called 'Bhut' in the Punjab, 'Bhat', 'Bhatwas' or 'Bhatmas' in the United Provinces and in the hills as far as Darjeeling, and 'Rymbai ktung' in Shillong and the Khasi Hills. Mr. B.C. Basu gives the Assamese name for *Glycine* as 'Patani jokra' and the corresponding Bengali name as 'Chhai.' In the Naga Hills it is called 'Tsudza' or 'Sudza.' It is grown by the Lepchas in Sikkim and is called

© Copyright Soyinfo Center 2013

by them 'Salyang' or 'Silliangdun.' 'Pe-nga-pi' is the usual name for Soy bean in Burma, but it has been received under the name of 'Lasi shapre tum' from Bhamo, and as 'Lasi N'Loi' and 'Lasi N'Hti' from Myitkyina. The Santali name appears to be 'Disom Horee.'"

"Dr. J.W. Leather in 1903 analysed the seeds of seven samples of Soy bean from Japanese seeds cultivated at Manjri, near Poona. The amount of oil in them varied from 14.92 to 23.05 per cent. being on the dry weight 15.97 to 24.41 per cent. with an average of 19.99. In 1902 Dr. Leather examined five samples grown on the Dumraon Farm. They yielded from 14.27 to 19.72 per cent of oil on the air-dried seeds.

"Fourteen samples of the seeds grown from Japanese seeds at the Manjri Experimental Farm were again analysed last year by a leading European firm. The percentage of moisture varied from 9.90 to 12.06, and the percentage of oil from 16.80 to 22.48...

"The following analyses of Indian-grown Soy beans were made in the laboratory of the Indian Museum in 1909 and 1910." Gives names and composition (oil [as is and on a dry basis], water, and ash) for 17 varieties from Burma, 21 from the Hill Tracts, 11 from the United Provinces [black seeds], and 15 varieties from Poona. "An attempt in 1903 to extract oil from these beans with the country *ghani* or indigenous oil-mill was a failure in Bombay."

Note: This is the earliest English-language document seen (April 2013) that uses the term "soy-bean cheese" to refer to tofu.

769. Hutchison, Robert. 1911. Food and the principles of dietetics. 3rd ed. New York, NY: William Wood and Co. viii-xx + 615 p. See p. 234-36, 496. Illust. Index. 22 cm. [100+* ref]

• ***Summary:*** Contains exactly the same information about soy and related products as the 1906 edition, in the same chapters, except it is on slightly different pages: See p. 234-37, and the section on diabetes, which has a subsection on "Diabetic breads" (p. 496-97). Robert Hutchison was born in 1871. Address: M.D. Edinburgh, F.R.C.P., Physician to the London Hospital [London].

770. Jingu Shicho. 1911. Koji ruien [Encyclopedia of early references to things Japanese]. Tokyo: Koten Kokyusho. Revised editions publ. in 1931 and 1971 by Yoshiko Bunkan; 51 volumes. Key volumes are Inshoku (#39) and Shokubutsu (#50). [50+ ref. Jap]

• ***Summary:*** Koji means "ancient things" or "origins." Rui means "varieties" or "description." En means "dictionary." This is one of the best books for doing historical research on Japanese culture, including foods. The book is divided into 30 major subject areas, such as Food and Drink. Within that section all basic Japanese foods and beverages are listed. After each one is listed many of the important early works in which that food is mentioned, with a quote of what is said. Furigana are used liberally to assist with pronunciations of hard-to-pronounce early document names and terms. Compiled from 1896 to 1914, volume 1 of the original edition is dated 1908. The works cited are from ancient times to 1867. The final volume is an index to the whole.

The volume on Food and Drink is titled *Inshoku-bu* (Vol. 51). Whole soybeans, p. 229-35. Black soybeans, p. 235-36. Green soybeans (*ao-daizu*), p. 236-37. Green vegetable soybeans (*edamame*), p. 239-40. Soybean cultivation, p. 240-42. Soybean utilization, p. 243-47. Daizu-ko Mochi, p. 555. Amazake, p. 695-97. Shirozake, p. 697-98. 771. Langworthy, C.F. 1911. Cheese and other substitutes for meat in the diet. *Yearbook of the U.S. Department of Agriculture* p. 359-70. For the year 1910. See p. 363-64.

• ***Summary:*** Physiologists "admit that meat is not essential to a well-balanced diet, and there are many who, for one reason or another, are interested to know the rational ways of lessening the amount of meat which they consume or of replacing it with other foods." "Meat apparently supplies "a greater abundance than other foods of the substances which stimulate the normal or natural flow of the digestive juices" (p. 359).

The section titled "Dried beans and other legumes" (p. 363-64) states: "In Eastern countries, where conditions differ from those in Europe and America, the lack of abundant supply of food animals has been responsible for the production of a series of food products made from legumes, chiefly the soy bean. By ingenious processes, the nitrogenous material and more or less of the fat which the beans contain are separated and made into a number of special articles of diet, for instance, bean cheese or bean curd, a white material not unlike cottage cheese in appearance, and soy, a thick brown sauce which is the common flavoring material as well as a condiment of millions of people who thus supply nitrogenous material and flavor to a diet of vegetables, rice, and other similar foods."

The section titled "Commercial meat substitutes" notes: "There are on the market numbers of proprietary or patent foods recommended by their makers as meat substitutes. For some it is claimed that they are made from nuts, and judging from their flavor and other characteristics they may be prepared from the peanut or other nuts, in part at least. It has been suggested that some of these special foods contain wheat gluten. Undoubtedly considerable quantities of these foods are used by those who follow some one of the vegetarian systems of diet, but they are not used in any general way as substitutes for meat in the average home." Address: Expert in Charge of Nutriton Investigations, Office of Experiment Stations [USDA].

772. Mexico. Ministerio de Fomento, Colonización e Industria. 1911. La soya: Traduccion de varias publicaciones extranjeras sobre la explotación de esta planta [Soya: Translations of various foreign publications on the development and cultivation of this plant]. Mexico: Secretaria de Fomento. 57 p. [3 ref. Spa]

• ***Summary:*** The *Ministerio de Fomento* is the Ministry of Public Works. The first three-fourths of this publication contains Spanish-language translations of the following three articles: (1) "The soybean: A valuable fodder plant" by H.J. Choles (p. 3-26). Contents: Introduction. Botany and history of the soybean (*de la Soya*). Varieties. Cultivation: Conditions of growth, methods of culture. Harvesting: When to harvest, curing, harvesting for seed, yield of forage, yield of seed. Chemical composition. Digestibility. Value and uses of the crop: For green forage, as a silage crop, as a hay crop, as a pasture plant, as manure, value of the soybean as human food.

(2) "Utilization of soybeans" by E.S. Edic [sic, Edie] from *Estación Agrícola Central–San Jacinto.* Jan. 1911 (p. 26-36). Contents: Introduction. Uses of the soyabean: As a forage plant, hay, ensilage, soy oil (*El aceite de soya*), soymilk (*leche de soya*), a type of cheese (*una especie de queso*) [tofu], soy flour (*harina de soya*), use of soybean oil for margarine (*margarina*), for soap, illumination, paints and other industrial products, soy bean meal used as a fertilizer on Chinese sugar plantations, soybeans as a legume for enriching the soil with nitrogen. The cultivation of soybeans. Varieties of soybeans.

Note 1. This is the earliest Spanish-language document seen (April 2013) that uses the term *una especie de queso* to refer to tofu.

(3) "Importance of the Soybean: Products which can be obtained from the soybean. Its marvelous value as food." reprinted from *Milling* magazine, Aug. 1909 (p. 36-42).

The last one fourth of this publication (p. 42-57) discusses the following: The soybean (possibilities for importation to Mexico). The new world trade in soybeans. Soybean production in the British empire (Sir Alfred Jones, soya in Africa, trials in British Columbia). Consumers of soybeans (Countries that import the seeds, especially for their oil to make margarine, soap, and paints; Canadian research commission). As a food. Dark bread. Wheat gluten. The latest news about soya: Products that can be obtained (oil and meal), the soybean (vegetable casein), experiments making bread with soy flour, opportunity for the manufacture of biscuits or crackers (*galletas*). Summary.

Note 2. This is the earliest Spanish-language document seen (Sept. 2006) that mentions soy oil, which it calls *El aceite de soya.*

Note 3. This is the earliest Spanish-language document seen (Oct. 2003) that uses the term *leche de soya* to refer to soymilk. As of Oct. 2003 *leche de soya* is the modern Spanish term for soymilk. Address: Mexico.

773. Sawer, E.R. 1911. Cedara memoirs on South African Agriculture. Vol. II. Containing reports on feeding crops and livestock experiments in South Africa. Natal/ Pietermartizburg, South Africa. 371 p. See p. 131, 177, 183-218. Report X. The Legumes as Grain and Oil Crops: Soya Beans. [15 ref]

• ***Summary:*** A superb, early overview of soybeans and their uses in South Africa and England. Contents: An agricultural romance. Early experiments with the soya bean [in Europe and South Africa]. Export trade from Manchuria. The course of prices. Consumption in Great Britain. Botanical character. The commercial aspect. History of the oil market during 1910. The adaptability of the bean. Germination of seed. Climatic requirements. Classification of varieties. Variety tests at Cedara: Black seeded (Buckshot and Nuttall tested in 1906), brown seeded, green seeded (Samarow and Guelph), yellow seeded (Mammoth and Hollybrook, planted Nov. 1908). The cultivation of the crop. Times of planting. Distances of planting. Manure experiments at Cedara. Nodule formation and composition of the plant. Harvesting soya beans. Storage of seed. Comparative yields of grain. Soya bean oil. Uses of the oil [for cooking, paint, soap, etc.]. Soya beans as human food (incl. natto, tofu, miso, yuba, shoyu {p. 209-11}). Digestion experiments [on humans in Japan]. Milling experiments. Soya beans as stock food and fertiliser. Live-stock experiments. Soya cake as fertiliser. Soya bean as green forage.

Concerning industrial utilization: The Vice-Consul-General at Yokohama writes that "the annual value of fertilisers employed in this country (Japan) amounts on an average to about £8,000,000 represented in equal proportions by artificial fertilisers and soya bean cake." The year 1908 was exceptional, however, in that the value of the bean cake was 3.5 times that of the artificial fertilizers.

During 1910 the linseed oil reached its highest price in 50 years. Soya oil, now produced in large amounts in Manchuria after the Russo-Japanese war took its place. It was used in making paints, candles, and soaps. "Soya bean oil has been found eminently suitable for the soap-makers' purpose on account of its low content of free fatty acids and of unsaponifiable matter or impurities. In the latter respect it has been shown superior to any of the other oils or fats of commerce, whether of vegetable or animal origin. The glycerine, which is secured as a by-product of soap and candle manufacture, is subsequently distilled for explosives, such as dynamite, blasting gelatine, cordite, etc., and for various purposes in the arts, for filling gas-metres, for the manufacture of inks, printers' rollers, etc. The residue from the distillation of glycerine is used in the manufacture of boot blacking."

Concerning germination (p. 191): At Cedara: "The first crop was planted in 1903, and a maximum yield of

© Copyright Soyinfo Center 2013

920 lb. of grain obtained per acre. In the following season, characterized by unfavourable weather conditions, the heaviest yield on a new series of plots was 780 lb. per acre. A third season's trial on the same ground, however, witnessed a marked increase with local seed, the heaviest crop totalling 1,252 lb. of grain."

Concerning soybean cultivation in British colonies in Africa (p. 192): "Early last summer the late Sir Alfred Jones shipped to West Africa soya beans for experimental purposes, and it was subsequently reported by Mr. A.G. Turner, who was entrusted with a special mission to encourage this culture on the west coast, that the soya bean could be successfully cultivated throughout the Gambia, Sierra Leone, Nigeria, and the Gold Coast Colony, but that the yield to the first experiment had only been from six to eight bushels per acre, there having been a considerable loss owing to faulty germination. Later results, however, were phenomenally successful."

Concerning soybean trials in South Africa (p. 192-93): "During the past year favourable results have been received from Umzinto [from Messrs. Archibald and Co., 52 miles south of Durban; elevation 300 feet], Nel's Rust Estate [64 miles north of Durban; elevation 2,710 feet], Nottingham Road [elevation 4,807 feet], and Naval Hill [Mr. J.R.T. Clouston of Garrow planted a few acres in 1908], Colenso [elevation 3,200 feet], and Cedara [82 miles by rail from Durban; elevation 3,540 feet; a number of varieties were tested in 1906] in Natal; and from Barberton and Pretoria in the Transvaal."

Concerning comparative yields (p. 203): "As a grain producer, the soya bean compares very favourably with other leguminous crops, such as field beans, peas, etc. At Cedara no other legume has produced, with chemical manures only, so heavy a yield of seed; and no other legume, except the lupine, has showed itself so much to be depended upon as a grain producer." "Land that will produce 10 muids of maize per acre should yield at least six muids of beans after the second year's cultivation,..."

Concerning human digestion experiments (p. 212): "The general opinion of Japanese investigators, and others familiar with Oriental dietetics, is that the protein in articles of food prepared from soya beans is in a very available form, and that these preparations are most valuable foods."

Five photos show various men standing in a crop of soya beans and in some of the variety plots at Cedara (1909-11). An illustration (line drawing) shows a curing frame for soya beans.

Tables show: (1) Yields in lb. per acre of soya beans sown at different times, during 3 years (19-3-04 to 1905-06). For each year is given: Date of sowing, date of harvest, yield of grain and straw, and manures used (superphosphate, gypsum, and potash). The variety tested was Henderson's Early Green (Guelph) (p. 198). (2) Results of manure experiments with soya bean (Early Green) in lb. per acre. Sown 4 Nov. 1904. Harvested 13 March 1905. Increasing yields "may be attributed to the association of nitro-bacteria, the benefits of constant cultivation, and the accumulation of humus and residues of fertilizers" (p. 200). (3) Feeding value of soya bean cakes for manure, based on experiments by Messrs. Lever Bros., Port Sunlight, Liverpool (p. 215).

Note 1. This is the earliest document seen (June 2004) that mentions the use of a soy oil derivative (glycerine) in printing inks.

Note 2. This is the earliest document seen (May 2004) that mentions the use of soy oil to make candles (one of two documents).

Note 3. This is the earliest document seen (June 2004) concerning the use of soy oil (or the glycerine derived from it) to make explosives.

Note 4. The next section of this report (p. 218+) is about ground nuts (*Arachis hypogoea*). Address: Director, Div. of Agriculture and Forestry, Natal; Principal, Cedara School of Agriculture; Formerly Asst. Secretary of Agriculture, Southern Rhodesia.

774. Stuart, George A. 1911. Chinese materia medica: Vegetable kingdom. Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 189-96, 411. 23 cm. Reprinted in 1928 in Shanghai at the Presbyterian Mission Press. [6 ref]
• ***Summary:*** Below the title is written: "Extensively revised from Dr. F. Porter Smith's work." This excellent book contains good summaries of the information on soyfoods found in the famous *Pen-ts'ao kang-mu* (1578-1597) by Li Shih-chen. Rev. Stuart, a physician (M.D.), minister, and missionary in China, adds a number of observations on medicinal properties ascribed to these foods by the Chinese. He began to write this revision of Dr. Smith's 1871 work in 1900 when the Boxer trouble (movement) drove him to Shanghai. He died shortly before the work was published and before he was able to finish the Preface. The section on the soy bean (p. 189-96) begins: "Glycine hispidia [sic, hispida].–(Ta-tou), (Shu), (Jên-shu), (Jung-shu), (Shih-tou), (Hei-tou), (Huang tou) (Chinese characters given before each term). This is the same as *Soja hispidia* [sic, *hispida*] and *Dolichos soia* [sic, *soja*], and is the Chinese and Japanese *soy bean.* It has been known in China from ancient times, and has always been considered by the Chinese as the most important of the cultivated leguminous plants. A very large number of varieties is found throughout the Empire, especially in the north. The name 'great bean' applies to the plant, not to the seeds, as these are quite small. It is employed in China and Japan in the preparation of three products which are of almost universal use in oriental cookery. These are 'bean oil,' 'bean-curd,' and 'soy.' There are many varieties of this bean, which the Chinese distinguish by the color of the seeds; these being black, white, yellow, gray, azure, and spotted."

"The black sort [of soybean] is used in medicine, and the

© Copyright Soyinfo Center 2013

yellow is especially valued in the preparation of bean-curd [tofu] and soy [sauce]. The black kind is not used much as food as it is thought to render the body heavy. The Chinese regard those things which give lightness to the body with more favor than those which promote flesh and sluggishness. The characters (Shu) (three separate Chinese characters are given) are the classical name, while (Jên-shu) and (Jung-shu) (Chinese characters given before each) are equally ancient compound names for this plant. (Chinese characters given) (Shih-tou), 'bean-relish bean,' indicates its use in making the bean relish and soy [fermented black soybeans and soy sauce].

"Medicinally, the black beans are considered to have much value. Their frequent use is thought to have a most beneficial effect upon the body, giving strength and vigor, albeit with heaviness. This latter fact is the only objection offered to the use of these beans. They are regarded as an admirable counter-poison against most of the vegetable poisons, such as *Aconite* and *Croton tiglii.* Carminative and quieting properties are also ascribed to them. They are prescribed in a large number of difficulties, notably post-partum and sexual disorders; but as they are always in combination with other active drugs, it may be readily supposed that the beans play no very important part in these prescriptions. The green bean hulls, 1317, chewed into a pulp, are applied to small pox ulcers, corneal ulcer, and the excoriation produced in children by urine. The bruised leaves of the plant are used as a local application in snake bite. The flowers, 1310, are used in blindness and opacity of the cornea."

"The *bean sprouts,* called (Ta-tou huang-chüan) and (Tou-nieh) (Chinese characters are given before each term) are also mentioned in the *Pentsao.* Bean-sprouts (Chinese characters are given, Tou-ya) are a common article of diet with the Chinese, but these former are made with the black bean and are especially used in medicine. Li Shih-chen gives the following method of preparation: "On a water day (Three Chinese characters) soak black beans in clear water, and after the sprouts have grown, take off the hulls and dry the sprouts in the shade." Their medical properties are considered to be laxative, resolvent, and constructive. They are reputed to have special influence upon the growth of the hair, and to be curative in ascites and rheumatism.

Note 1. This is the earliest English-language document seen (Jan. 2013) that uses the term *Ta-tou huang-chüan* or the term *Tou-nieh* to refer to soy sprouts.

Note 2. *Webster's Dictionary* defines ascites (pronounced uh-SAIT-ez, and first used in the 14th century) as "accumulation of serous fluid in the spaces between tissues and organs in the cavity of the abdomen."

"The yellow variety of beans is also given a separate discussion in the *Pêntsao.* As was before said, these are used for the most part in the preparation of bean oil, bean-curd, and soy [sauce]. The beans and pods of this variety are larger than those of the black kind, and in the green state they are highly esteemed by the Chinese as an article of food [green vegetable soybeans]. But they are also considered 'heavy,' and if partaken of too freely they are thought to produce jaundice. They are considered to be carminative and deobstruent, and are recommended in ascites. Locally they are applied to smallpox ulcers. The ashes of bean stalks are specially recommended as an application to unhealthy granulations in hemorrhoids (possibly fungous growths of the anus).

"The [soy] oil, (Chinese characters for bean + oil) (Tou-yu), is considered to be very slightly deleterious, and is used as a local application to ulcers and skin diseases, and for removing bandoline (defined by the *Oxford English Dictionary* as "a gummy preparation for fixing the hair or a moustache" and in use by 1846) from the hair. This oil is manufactured in large quantities, especially in Manchuria, and is shipped to every part of China. It is used as food, chiefly by the poorer people, and was formerly used as a burning oil; but kerosene has now almost superseded it for this latter purpose. It is usually dark colored, and has a not very pleasant odor."

On page 411 we read: "Soja hispida–(Chinese characters for white + bean) (Pai-tou). Also called (Chinese characters are given) Fan-tou. This is a small bean, a variety of *Glycine hispidia* [sic, hispida], the stalks of which, when young, are eaten as a pot-herb. The bean is sometimes used to make soy [sauce] and bean-curd, and is eaten boiled and as a congee. It is considered to belong to the kidneys, therefore those suffering from diseases of this organ should use it. The bean is regarded as very nutritious, and both it and the leaves benefit the viscera."

Note 3. Congee is rice cooked with excess water to make a porridge. In China, there are many types of medicinal congee (*jook*) containing grains, vegetables or herbs, eggs, meat, etc. See: Flaws, Bob. 1995. *The Book of Jook: Chinese medicinal porridges.* Boulder, Colorado: Blue Poppy Press. $16.95. Address: Rev., M.D., Shanghai, China.

775. Stuart, George A. 1911. Chinese materia medica: Vegetable kingdom. Bean curd (Document part). Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 194-95. 23 cm.

• ***Summary:*** "Bean curd.–(Chinese characters given) (Tou-fu). The method of making bean curd had its origin in the Han dynasty, during the reign of Huai Nan Wang (A.D. 23), at Liuan. All sorts of black beans, yellow beans, white beans, clay beans, green beans, and peas can be used in its preparation. The process of manufacturing is given in the *Pêntsao* as follows: 'Wash the beans and crush them in water. Skim off what floats, and boil. Make a natron [sodium carbonate] solution, or a decoction of the leaves of Shan-fan (Chinese characters given), *Symplocos prunifolia,* or use sour soy vinegar, and add to the beans. Heat all together in a

© Copyright Soyinfo Center 2013

cauldron. Afterwards pour into a large jar in which has been placed powdered gypsum and mix well together.

"What will be produced is a saltish, bitterish, sour, acrid mixture, and what congeals upon the surface of the compound is to be taken out and dripped clean of the other solution. This is *bean-curd.'* The taste is sweet, alkaline, and cooling. It is considered to be slightly deleterious. It is thought that the ingestion of bean curd prevents the curing of diseases, but if carrots are put with the bean curd, this action is prevented. It is reputed to be beneficial to the internal organs, improving the breath, harmonizing the spleen and stomach, removing flatulence, and expelling evil gases from the bowels. Used warm it disperses subcutaneous hemorrhage. It is prescribed in chronic dysentery, ophthalmia, swellings, and drunkenness." Address: Rev., M.D., Shanghai, China.

776. Tsuyutani, Heiji. 1911. Tôfu no goyô [An order for tofu]. Kobe: Tsuyutani-dô. 71 p. 19 cm. [Jap]*
• ***Summary:*** In the olden days (as late as the 1950s), tofu vendors peddled their wares down every street in major cities. They would wait outside for potential customers to come out and buy. Address: Kobe, Japan.

777. Ward, Artemas. 1911. The grocer's encyclopedia–Encyclopedia of foods and beverages. New York, NY: Published by the author. 748 p. Illust. (color). 29 cm.
• ***Summary:*** Soy-related entries: Bean (p. 49-54): "The bean of European history is the Broad or Windsor variety,..." "The principal beans of United States cultivation are the Kidney and Lima, both of them believed to be native to South America.

"The Kidney Bean is the Haricot of the French and in Great Britain is sometimes called the French bean." The many varieties can be classified into "tough podded" and edible podded." "The 'tough podded' class produces the bulk of the dried beans of commerce, variously known as 'Kidney Beans,' 'Navy Beans,' 'Marrow Beans,' 'Black Beans,' 'Turtle Beans,' etc., in many colors, shapes and sizes." "'Flageolets' are cultivated with special regard to the consumption of the fresh seeds or beans." To the "edible podded" class of kidney beans belong Wax or Butter Beans, the Cranberry Bean or Red Speckled Bean, String Beans, Snap Beans, French Beans. "Pea Beans are the Cowpeas of the agriculturist." "Among numerous other 'special' varieties are the Soy Bean (which see), Asparagus Bean, Frijole, Lab-lab (or Egyptian Kidney), Red Bean, and Scarlet Runner." Asparagus Beans are known as *Tou Kok* by Chinese gardeners in California.

"Catsup, Catchup, Ketchup: a word derived from the name of an East Indian pickle, which was formerly applied specifically to the boiled spiced juice from salted mushrooms, but is now freely attached to various sauces (sold both bottled and in bulk) which consists of the pulp–bottled, strained and seasoned–of various fruits, as tomatoes, green walnuts, etc." Note: At "Catchup" and "Ketchup" we are told to see "Catsup."

Locksoy ([Lock Soy], p. 346): "Rice boiled into a paste and drawn into threads, imported from China. It is used to thicken soups."

Nuts (p. 412-13): A table shows the nutritional composition of all major American nuts, including almonds, chincapin [chinquapin] or water chestnut, chufa (earth almond), cocoanut, peanut, and peanut butter. "Many special nut foods, such as malted nuts, meat substitutes, etc., have been devised and extensively advertised by manufacturers for general dietetic use and for the special needs of vegetarians and fruitarians. It is said that some of these products contain soy beans, but apparently the peanut is very important in their composition.

Sauces (p. 552-53): In bottled sauces, vinegar is the most common liquid ingredient. "Commercial sauces of the Worcestershire kind, if of good quality, generally have Soy (which see) as their chief character ingredient. A typical formula of Worcestershire-style includes, in addition to Vinegar and Soy, a considerable percentage of lime juice, onions and tamarinds and small quantities of garlic, fish (as anchovies or pickled herrings), red chilies and spices. The product, after cooking, is strained through fine hair sieves. Leicester Sauce resembles Worcestershire in general characteristics but is less pungent."

Soy (p. 576): "A brown sauce, valuable to the commercial sauce market, made from the Soy Bean, a native of Southeastern Asia [sic] and widely grown in China and Japan. The beans are boiled, mixed with ground wheat or other grain, salt, etc., and allowed to ferment for a month or 6 months. The liquid is then strained off and clarified. Molasses is frequently added. In appearance it resembles Worcestershire Sauce, of which it is an important ingredient. It should not be too salt [salty] or too sweet, and although thick and syrupy, should be clear. When shaken in a bottle or glass it should, if it is genuine, leave a bright yellow film on the glass. Being a very desirable article, it is often counterfeited."

Soy bean (p. 577): "Commercial and government circles, both in Europe and this country are devoting increased attention to the cultivation of the Soy Bean as a food product, as it contains a large percentage of protein and a fair amount of fat, thus resembling meat in general nutritive value. The cell-walls of the raw bean are very tough, but thorough cooking makes it readily digestible. Boiled with bacon and other fatty broths until soft and then seasoned, the result is a vegetable dish very pleasing to the average palate. If the beans are dry, a preliminary soaking to remove the skins is necessary.

"The Soy Bean is largely consumed in Japan, China and other parts of Asia as an adjunct to rice and other foods, taking the place of meat in the popular dietary. It is most

© Copyright Soyinfo Center 2013

popular in these countries in fermented form, the best known types being *Shoyu* or Soy Sauce; *Tofu*, a kind of cheese; *Miso*, Soy Bean 'Milk' [sic]; *Yuba*, the evaporated product of 'Miso" [sic], and *Matto* [sic, *Natto*], a product obtained by simple fermentation of the boiled beans. The various degrees and styles of fermentation serve the double purpose of rendering the beans more easily digestible and producing new flavors, just as by the fermentation of milk and cream we produce the different flavors of cheese.

"The plant is an annual, growing chiefly in bush form..." The different varieties are classified principally by the color of the beans: "Black, Yellow, White and Brown,... Types of all these four classes are grown to some extent in Germany, Austria, and Switzerland, and the first three also in this country, in North Carolina and other Southern States. Under favorable conditions a single plant may bear a hundred or more pods.

"Because of the fact that the beans contain little if any starch, they have been recommended as a desirable food for diabetics, and Soy Bean Bread and Soy Bean Meal are prepared for that purpose in Paris. The dried beans are also used in Switzerland and elsewhere as a coffee substitute." An illustration shows the top of a soy bean plant, with leaves, pods, and flowers.

Note 1. This book is full of fascinating information about the food system in the USA in 1911, with entries such as cold storage (first attempted in 1860, it has grown to extraordinary proportions), coloring matter (great improvements, no longer harmful), ice and refrigeration (ice manufacture dates from about 1870; today nearly 200 companies produce ice for general sale, mostly using the compressor and anhydrous ammonia). Dictionary of food names in five languages (English, French, German, Italian, and Swedish, p. 710-724) and a dictionary in English of "Culinary and bill-of-fare terms" (p. 741-45).

Note 2. The author, Artemas Ward, lived 1848-1925. His father was Henry Dana Ward (1797-1884), his grandfather was Thomas Walter Ward (1758-1835), and his great-grandfather was Artemas Ward (1727-1800), the first Commander-in-Chief of the colonial troops before the arrival of George Washington (a little-known Virginia planter) on 3 July 1775. Thereafter he served as second in command after Gen. Washington and was a Major General in the American Revolutionary War. Address: Formerly (from 1874) founder and editor of *The National Grocer*, 30 Union Square, New York.

778. Hooper, David. 1912. Soy bean in India: Glycine hispida. *Tropical Agriculturist* (*Ceylon*) 38(1):11-15. Jan. 15; 38(2):99-103. Feb. 15. [1 ref]

• ***Summary:*** This is a reprint of an article by the same author with the same title published in 1911 in *Agricultural Ledger* (Calcutta) No. 3. p. 17-33. Address: Australia.

779. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) 12(106):28-38. Jan. [16 ref. Fre]

• ***Summary:*** Contents (continued): Soymilk (continued): Chemical properties, composition (comparison with 8 animal milks–in bar chart form showing protein, lipids, carbohydrates, and ash), action of ferments [enzymes] and diastases [diastatic enzymes] on soymilk (*Action des ferments et des diastases sur le lait de soja*) (1. The lactic ferments {kefir, yogurt, etc.} act in the same way on vegetable milk and on animal milks. 2. The ferments of certain European cheeses make analogous vegetable cheeses {*fromage végétal d'une façon analogue*}. 3. Rennet coagulates soymilk, but the optimum temperature is a little higher than for cow's milk. 4. The ferments that we have extracted from shoyu [Japanese soy sauce] coagulate animal milks in the same way as vegetable milk).

Uses of soymilk (p. 30): They are the same as those of the animal milks. We will note, mostly, its use in China as a substitute for mother's milk. (Footnote 1. One of our parents was nourished, from the first phase of life, with soymilk. He/she is now 37 years old and has always been in excellent health).

Residues of the [soy] dairy (*residus de laiterie;* okara).

Condensed soymilk (*lait de soja concentré*). Powdered soymilk (*lait de soja en poudre*). Fermented soymilk (Kefir, yogurt, etc. are increasingly used therapeutically. One can compensate for the lack of carbohydrates in vegetable milk by the addition of lactose {or levulose for diabetics}). Tofu–which Li calls *Caséo-Sojaïne* (*fromage de soja*)–meaning "tofu or soy cheese": Method of production, coagulants used, perfected modern production methods at Li's factory (In this factory, tofu can be made into either non-fermented or fermented cheeses. The non-fermented cheeses {*Fromages non fermentés*} are of two types: Fresh and hard/firm. The fresh are white in color and the consistency of hard-boiled eggs. The hard/firm are of two types: In diced sheets {salted or unsalted}, and in salted, semi-dry pieces/morsels. The fermented cheeses {*Fromages fermentés*} may be of the Gruyere, Roquefort, or Camembert types), tofu yields, preservation and storage, composition of tofu (compared with 4 meats on a moisture-free basic, in bar chart form showing protein, lipids, carbohydrates, and ash), digestibility of tofu, culinary preparations based on tofu (tofu omelette with egg, smoked tofu with shoyu, tofu pâté, soy sausage–made like regular sausage except that meat and fat are replaced by fresh, hard tofu plus butter or cocoa butter). Soy casein (*Caséine de soja;* for food or industrial uses). Contains various tables and charts from other sources.

Residues of the [soy] dairy (*residus de laiterie;* okara, p. 30-31): After filtering the [soy] milk, a slightly firm, aqueous oilcake remains in the filter cloth that is still very rich in nutrients (*substances alimentaires*). According to Dr. Bloch, it does not contain any trace of starch (our tests agree

© Copyright Soyinfo Center 2013

with this conclusion). Consisting of torn cells emptied of the largest part of their content, it would have the following percentage composition (see Bloch 1907):

Protein 0.248, water 88.75, ash 0.36, fat .04, other 10.85.

"The oilcake (*torteau*) obtained at the factory of 'Soy-Casein' (*Caséo-Sojaine*) and analyzed at the municipal laboratory of Paris yielded:

Water 80.04, protein 33, fat 8.44, carbohydrates 22.63, mineral salts 4.24.

"This oilcake was very easily dried to 10% water. The milk can only be filtered after boiling, thus according to Prinsen [Geerligs]:

Proteins 29.38, oil 12.81, ash 4.66, carbohydrates that are convertible to sugar 26.80, fiber 11.10, cellulose 10.2.

"The oilcake can be diluted in water. The liquid thus obtained is used in grinding to make the second extraction of [soy] milk."

Soy casein (p. 38): The casein or legumine of soymilk can be prepared by precipitation, purifying it by several dissolutions and precipitations, and finally drying it. One obtains a yellowish powder resembling animal casein obtained by the same processes.

It is generally admitted that vegetable albumins have a coefficient of assimilation greatly inferior to those of animal albumins. But confirmation of this is far from being definitive. The experiments of Messrs. H. [Henri] Labbé and Marchoisne have showed, in effect, that vegetable albumin is as well assimilated as animal albumin.

Legumine is different from animal casein, but the differences are of the same order as those which exist between the various animal caseins. The differences existing between the caseins of the various animal milks have been noted by many chemists.

The casein extracted from soymilk can be used in the same applications as casein from cow's milk. These are of two types: food and industrial. For food uses, one can point out the manufacture of powders, of lacteal flours (*farines lactées*, perhaps wheat flour enriched with soy casein), of whole-grain bread, etc.

Note 1. This is the earliest document seen (April 2001), worldwide, that mentions a Western-style soy cheese (Gruyere, Roquefort, or Camembert types), or a tofu sausage. This is also the earliest French-language document seen that mentions soy cheese, which it calls *fromage de soja*.

Note 2.

Note: This is the earliest document seen (April 2013) concerning the use of tofu in a second generation product.

Note 3. This is the earliest document seen, worldwide, that mentions powdered soymilk or dried soymilk.

Note 4. This is the earliest document seen, worldwide, that mentions soy kefir. Address: 1. Counseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

780. Gibbs, H.D.; Agcaoili, F. 1912. Soja-bean curd, an important Oriental food product. *Philippine J. of Science* 7A(1):47-54. Feb. Section A. [13 ref]

• ***Summary:*** Discusses chemical analyses of soybeans, method of manufacture of the curd around Manila, and adulteration of the product in the locality. "One of the most important foods manufactured from the soy-bean is the curd which is sold in the form of small cakes. The Chinese have introduced and extended the use of this product throughout the East, and Bloch [1906] states that there is no Chinese settlement without one or two bean-cheese factories.

"This curd is known by a number of different designations. In English it is often spoken of as 'bean cake' or 'bean cheese,' although it is not entitled to the designation 'cheese,' since no ripening process takes place in its manufacture... Among the natives of the Philippine Islands surrounding Manila, it is called *toqua* [tokua], a name of Chinese origin. In China the substance is known as *teou-fou* and *tao-hu* and in Japan as *topu* [sic, tofu].

"In this district, as far as observation has extended, the manufacture is carried on entirely by Chinese practically in the manner described by Bloch and Geerligs, except that methods have been introduced which border on adulteration [sic, with powdered gypsum, which coagulates the soymilk].

"The soja-bean, *Glycine hispida* Maxim, is imported into the Philippines from southern China in large quantities, principally from Amoy and Hongkong. In the markets of the latter place they are known as 'soy-beans' or *pak-tau*" ["white beans"].

The author conducted two analyses of baked cakes of *toqua* and found they contained: Moisture: 73.0% and 72.1%. Protein: 13.88% and 17.56%. Fat: 10.78% and 10.99%. Ash: 1.2% and 1.27%.

"The same food product, known locally under the name *tahuri* or *tahuli* [tofu pickled in brine] is imported from southern China in large stone jars. It is preserved by covering the cakes with a strong salt solution. During shipment, the cakes are somewhat broken, giving to the liquid portion the appearance and consistency of an emulsion. The two portions of the mixture were analysed separately." Table III shows that the solid and liquid portions of *tahuri / tahuli* contain: Water: 55.76% and 57.86%. Protein: 14.56% and 9.56%. Fat: 7.12% and 2.09%. Sodium chloride: 12.7% and 16.38%.

Note: In this book the word *tahuri* appears 21 times compared with only 6 times for *tahuli*.

A photo (see next page) shows the inside of a Chinese bean-curd factory in Manila, with four people, seated on stools, working at a table.

Note 1. This is the earliest document seen (April 2013) that uses the term "soja-bean curd" or the word *toqua*, or the word *teou fou* (or *teou-fou*) to refer to tofu.

Note 2. This is the earliest English-language document seen (Oct. 2011) that contains the word *tahuri* or the word *tahuli*. There is no suggestion that the product is fermented.

© Copyright Soyinfo Center 2013

However it is salted, and later documents explain that it is pickled / fermented in this salt solution.

Note 3. This is the earliest English-language document seen (Sept. 2006) with the word "Soja-bean" (or "Soja-beans") in the title. Address: 1. Assoc. Prof. of Chemistry, Univ. of the Philippines. From the Lab. of Organic Chemistry, Bureau of Science, Manila, P.I.

781. *Pure Products* (*New York*). 1912. Products of the soy bean. 8(3):157-60. March.
• ***Summary:*** "Three very interesting food products are manufactured from the soy bean, one known as vegetable milk, another known as vegetable cheese or vegetable casein, and soy sauce." "Vegetable milk, like animal milk, may be may be homogenized; that is to say, it may be passed through an apparatus known as a 'homogenizer'..." Concentrated or "condensed vegetable milk has a characteristic odor, but this can be improved by adding a little coumarin or vanillin, which corrects the taste so as to make it more nearly resemble that of cow's milk."

Vegetable cheese is coagulated "by the addition of a white mineral powder known as tchach-kao, which consists largely of plaster of paris."

"Soy sauce, or fermented soy,... may well serve as the basis of sauces of the Worcestershire type." Address: USA.

782. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) 12(109):302-08. April. [2 ref. Fre]
• ***Summary:*** Contents (continued): Products and condiments based on fermented soybeans (continued): Tuong (an Annamese condiment that can replace nuoc mam or fish sauce; preparation with rice or corn/maize as described by Bui), Tao-yu (a condiment widely used in China and Japan, as described by Prinsen Geerligs; preparation, properties, chemical composition).

6. Confectionery products (*Produits de confiserie*): Sweet soya preserves made from whole soybeans (*Confiture de soja*, such as soy-based *crème de marron*, a chestnut cream), soya powder (two types are made at Li's plant: one by drying soy pâté and one by grinding roasted soybeans {*par mouture des graines de soja grillées*}), soy chocolate. At Li's tofu factory (*l'usine de la Caséo Sojaine*) near Paris, soy chocolate (*Chocolat de soja*) is prepared using roasted soybeans, sugar, and cocoa butter [a pale-yellow, pure edible vegetable fat extracted from the cocoa bean]. From these one is able to obtain almost the same composition, appearance, and flavor as chocolate. But this product has the advantage of containing considerably less toxic theobromine.

Note. This is the earliest French-language document seen (Dec. 2012) that mentions roasted soybeans, which it calls *graines de soja grillées.*

7. Soya used as coffee (*Le soja employé comme café*). For a very long time, soybean seeds, dried and roasted, have been used in certain parts of Europe (Switzerland) to replace coffee. By an infusion of these roasted seeds, a liquid is obtained which resembles coffee in color and flavor. Moreover, under a different name [Cole's Domestic Coffee Berry, 1892], soybeans have been launched in the United States for this usage. This very special use of the soybean will be of interest to those who are forbidden to drink coffee, for they will now be able to enjoy it in a different way. A table shows the composition of Swiss soya coffee, made from dried and roasted soybeans, according to Kornauth.

8. Ferments or starter cultures for fermentation: Kiu-tsee (a special ferment from Canton described by M. Daby de Thiersant), lactic ferments (fermented soymilks).

Industrial uses of soybeans: Uses of the oil to make soap, wax candles (*bougie*), paint, or artificial rubber. Uses of the protein (*caséine de soja*) to give products resembling those made from milk proteins: sojalithe or soy stone resembling lactite, insulators for electrical apparatus, soy glues, etc. Illustrations (line drawings, p. 305) show cellular elements of different soya confections. Address: 1. Counseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

783. *Chicago Defender* (*Big weekend ed.*). 1912. Milk mills. May 11. p. 5.
• ***Summary:*** From the London Globe: According to *L'Opinion*, an "artificial milk" is "already consumed extensively in China, and a mill is to be set up in France. The Chinese drop a few grains of powder [sic] into water, stir it, and it becomes milk. The powder is the soja bean crushed, and the French mill is to treat the bean so as to enable the milk powder to be sold in packets. It is said that an excellent cheese [tofu?] is obtained by the same process."

784. *USDA Bureau of Plant Industry, Inventory.* 1912. Seeds and plants imported during the period from April 1 to June 30, 1911. Nos. 30462 to 31370. No. 27. 99 p. May 31.

• ***Summary:*** Soy bean introductions: *Glycine hispida* (Moench) Maxim.

"30593-601. From Manchuria. Procured through Mr. Edward C. Parker, Agricultural Experiment Station, Mukden, Manchuria. Received April 19, 1911. Seeds of the following; quoted notes by Mr. Parker:

"30593. 'Yellow. Chinese name *Huang tou.* Sample collected at Ninguta, in Kirin Province, 45º north latitude. Ninguta is a Chinese town about 10 miles south of the Trans-Siberian Railway and halfway between Harbin and Vladivostok. The Ninguta beans are famous as seed beans, large quantities being distributed among the Chinese in Kirin province for seed purposes. The date of maturity for this variety is the last weekend in September, the crop having occupied the land about 130 days. This variety is known to have been grown in the Ninguta district for 40 years, or since the time the country was opened for settlement. Chinese state that the variety is prized for its thin skin, heavy weight per bushel, and its high oil content.'

"30594. 'Green. Chinese name *Ching tou.* Sample collected at Ninguta (See No. 30593). No information is available concerning time of maturity or special qualities of this varieties. It has been grown at Ninguta for about 40 years.'

"30595. 'Big, round, green. Chinese name *Tah ching yuan tou.* Sample collected at Antung, in southeast Shengking [Liaoning] Province, 40º north latitude. Antung is west of the Yalu River, which divides Chosen (Korea) and Manchuria. No information is available concerning the time of maturity, special qualities, or length of time this variety has been grown in the Antung region. From my own observations, however, I will say that the green soy beans of the Antung region require more time to mature than the small, yellow soy beans of the north. Antung has been settled by Shantung Province people for about 75 years and the variety is doubtless somewhere near the same age. The first recorded exports of soy beans from Manchuria took place from a port in this region (Takushan) about the year 1830.'

"30596. 'Small, round, green. Chinese name *Hsiao ching yuan tou.* Sample collected at Antung (See No. 30595).'

"30597. 'Big, iron corner, green. Chinese name *Tah tie chiao ching tou.* Sample collected at Antung (see No. 30595).'

"30598. 'Small, iron corner, green. Chinese name *Ilsao tie chiao ching tou.* Sample collected at Antung (see No. 30595).'

"30599. 'Compact, round. Chinese name *Chin yuan tou.* Sample collected near Ninguta. Probably the same variety as the 'yellow soy bean' (No. 30593). No description can be furnished other than that given under that number.'

"30600. 'Compact, round. Chinese name *Chin yuan tou.* Sample collected at Shuangchengfu in Kirin Province, 45º north latitude. Shuangchengfu is a Chinese town about 40 miles south of Harbin on the Southern division of the Russian railway. One of the most extensive and fertile soil areas in Manchuria is tributary to Shuangchengfu. This variety is undoubtedly the same common stock as Nos. 30593 and 30599. It matures in about 130 to 140 days and is prized (according to Chinese report) for its thin skin, heavy weight per bushel, and high oil content. It has been grown in this district for about 40 years.'

"30601. 'Compact, round. Chinese name *Chin yuan tou.* Sample collected near Petuna, southwest of Harbin, at the confluence of the Nonni and the Sungari rivers, about 45º north latitude. Soy beans have not been grown more than 15 years in this district because the land was held until recently as an imperial preserve. The variety is doubtless the same common stock as Nos. 30593 and 30599.'

"30744/30748. From Wulukai, 20 miles north of Kirin, the capital of Kirin Province, Manchuria, 44º north latitude. Procured by Mr. Edward C. Parker, agriculturist, Bureau of Agriculture, Industry, and Commerce, Mukden, Manchuria. Received May 3, 1911. Seeds of the following; quoted notes by Mr. Parker:

"30744-30747.

"30744. 'Black-eyebrow soy bean. Chinese name *Hei mei tou.* This variety is classified by the Chinese as being medium late in date of maturity.' Note: This is the earliest document seen (Aug. 2004) that uses the term "Black-eyebrow"; it is apparently a descriptive term rather than a variety name.

"30745. Yellow. 'White-eyebrow soy bean. Chinese name *Pei mei tou.* This variety is classified by the Chinese as being late in date of maturity.'

"30746. Yellow. 'Compact, round soy bean. Chinese name *Chin yuan tou.* This variety is classified by the Chinese as being late in date of maturity.'

"30747. 'Big black soy bean. Chinese name *Tah hei tou.* This variety is classified by the Chinese as being very early in date of maturity. It is used principally as a feed for work horses and mules, also for bean curd and for oil production.'"

"30839-41. From Bengal, India. Presented by Mr. E.J. Woodhouse, Department of Agriculture. Received May 9, 1911. Seeds of the following:

"30839. Black.

"30840. Yellow.

"30841. Chocolate.

'These varieties of soy beans are cultivated to a very small extent on the plains of Bengal, mostly north of the Ganges. They have probably spread outward from the Himalayas, as their vernacular name, *Bhetmas,* is the same as that used by the Bhutias. They have been grown here for two years and breed true; they have been analyzed by Mr. C.S. Taylor, agricultural chemist to the government, who finds that the black-seeded variety yields an average of 38.4 per cent of proteid (N x 6.3), the yellow variety 36.5, and the chocolate 32.6. They are all decumbent plants with small

© Copyright Soyinfo Center 2013

violet flowers and with the upright end of the branches more twining. The black-seeded variety is not so tall growing and has rather small bullate leaves, so that can be easily distinguished in the field from the other two varieties. Plate II, fig. 2, of Bulletin 197, Bureau of Plant Industry, U.S. Department of Agriculture, gives a fair idea of the vegetative stage of the chocolate and yellow seeded varieties.

"'The seeds are sown here in June at the break of the monsoon and are harvested in December. The plants die out very easily if water-logged early in growth and yield badly if the moisture fails at the flowering season.' (Woodhouse.)" Address: Washington, DC.

785. *Washington Post.* 1912. A new kind of cow. June 30. p. M1.

• ***Summary:*** From The Vegetarian: "Notwithstanding vegetarians are being scoffed at and dubbed 'cranks,' more and more are coming into the field, and the cause is advancing at a rapid rate.

"This is not so much due to the effort of vegetarians as it is the result of sociological conditions." The human population is increasing so "that the raising of cattle for culinary purposes [meat or dairy products] is each year becoming more of a problem. Each year science gives us some new food element to replace the barbarian piece of roast flesh.

"The latest announcement reveals that milk, butter and cheese can be made out of beans. This milk-producing bean is a special variety, however–the Soja bean, a native of China. A Chinese chemist [Li Yu-ying] has a factory in France working out the problem of milk from beans. He has succeeded in making from this Soja bean milk, a fine quality of butter [made of whole soybeans that have been cooked, pureed, and seasoned], and a highly delectable cheese [tofu]."

786. *Christian Science Monitor.* 1912. Famous soya bean of China. July 31. p. 19.

• ***Summary:*** "It is interesting to note in conjunction with the awakening of China that a Chinese article of food, or at any rate a vegetable product which grows most profusely in Manchuria, is attracting the serious attention of Europe and America. Authorities say that the soya bean contains more of the ingredients of a perfect food than any other one known product, and an important experiment is being tried in France, where a wide assortment of foods is being made from soya beans [by Li Yuying, near Paris]. They include milk, cheese [tofu], casein, oil, jellies, flour, bread, biscuits, cakes and sauces.

"Now an article in the *Journal of Chemical Industry* [29 June 1912, p. 572-74] shows that the use of soya bean oil for paint purposes is established as a practical fact. While it is said that soya oil is not yet proved a perfect substitute for linseed oil in exterior painting, in interior painting it is entirely satisfactory and for some sorts of finishings, like 'baking japans,' it is even better than linseed oil.

"Soya beans to the number of 280 varieties are listed already by the United States governmental investigators. The orientals have made a close study of the product, and apparently know beans. Soya beans have been grown in Virginia and used as a substitute for corn to feed stock, Planted with the corn they act as a fertilizer, and the animals that can get soya beans let the corn alone.

"In China and Japan there is hardly a meal in which some preparation of the soya bean is not used. There would seem to be, after all, some subtle affiliation between bean-fed New England culture and the wisdom of the Orient.

"A Georgia man who tried the soya bean declares that he planted in rich soil and got stalks 20 feet high which he could harvest. It is plain that Jack's, then, was a soya beanstalk." Note: Soybean plants typically grow to height of 2-3 feet, never 20 feet.

787. *USDA Bureau of Plant Industry, Inventory.* 1912. Seeds and plants imported during the period from July 1 to September 30, 1911. Nos. 31371 to 31938. No. 28. 71 p. Sept. 10.

• ***Summary:*** Soy bean introductions: *Glycine hispida* (Moench) Maxim.

"31548-31552. From India. Presented by Mr. E.J. Woodhouse, Department of Agriculture, Sabour, Bengal, India. Received July 26, 1911. Seeds of the following.

"31548. Chocolate variety.

"31549. Greenish yellow.

"31550. Black.

"31551. *Nepali.*

"31552. Yellow."

"31780/31832. Received through Mr. Frank N. Meyer, agricultural explorer, September 11, 1911. Seeds of the following:

"31802-31804.

"31802. From Karghalik [Yecheng or Yeh-ch'eng], Chinese Turkestan [in far western China]. '(No. 1494a, December 12, 1910.) A large, green variety of soybean called *Ching tou*, used when slightly salted and roasted as an appetizer before meals. To be tested like No. 1491a (S.P.I. No. 31799).' (*Meyer*).

"31803. From Kashgar [Kashi], Chinese Turkestan. '(No. 1495a, October 23, 1910.) A black soy bean, used like No. 1494a (S.P.I. No. 31802) and also used to make bean curd. To be tried like No. 1491a (S.P.I. No. 31799).' (*Meyer*).

"31804. From Karghalik, Chinese Turkestan. '(No. 1496a, December 12, 1910.) A large, black soy bean called *Ghae tou.* Used like No. 1494a (S.P.I. No. 31802).' (*Meyer.*)"

Note: This is the earliest document seen (April 2008) concerning soybeans in Turkestan, or the cultivation of soybeans in Turkestan (including Chinese Turkestan, which was actually called Sinkiang at this time). This document

© Copyright Soyinfo Center 2013

contains the earliest date seen for soybeans in Chinese Turkestan, or the cultivation of soybeans in Chinese Turkestan (1912). The source of these soybeans is unknown. Address: Washington, DC.

788. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja: Sa culture. Ses usages alimentaires, thérapeutiques, agricoles et industriels [The soybean: Its culture. Its food, therapeutic, agricultural, and industrial uses]. Paris: Augustin Challamel (Rue Jacob 17). 150 p. Illust. Index. 25 cm. Translated into French and expanded from the Chinese edition, published by la Societé Biologique d'Extréme-Orient (1910). [151 ref. Fre]

• ***Summary:*** One of the earliest, most important, influential, creative, interesting, and carefully researched books ever written about soybeans and soyfoods. Its bibliography on soy is larger than any published prior to that time. It was first published as a series of eight articles in *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) from September 1911 to April 1912. Before being published as a book, it was revised slightly by adding a table of contents at the back, dividing the material into 5 parts with 19 chapters, and adding several photos (p. 16-17), a world map showing the distribution of soybean cultivation (p. 21), and an interesting 2-page table (p. 66-67).

Contents: The soybean: Origin and history. Part I: Soybean culture. 1. Species and varieties of soybeans: Botanical characteristics, species, varieties (Chinese, Japanese, Indian, Indochinese, Hawaiian, USA, European). 2. Needs of the soybean: Climatic, geographical area of the soybean by region worldwide, agrological/soil needs, fertilizers, soil preparation, the place of the soybean in crop rotations. 3. Soybean seeds: Study of seeds (by weight, by germination rate, selection of seeds), time of planting, plant spacing, depth of seeding, rate of seeding per hectare, method of seeding (broadcasting, in rows, in mounds). 4. The soybean during its vegetative stage: Germination, transplanting, types of care (e.g., second dressings), irrigation, flowering and fruiting, enemies of the soybean (e.g., insects). 5. Harvest of soybeans: Time for harvest (forage or grain), methods of harvesting (forage or grain; mechanical mower), threshing (use of machine), yields of soybeans (forage and grain in various countries, ratio of seeds harvested to straw is about 1 to 2, yield of nutrients). 6. Fixation of atmospheric nitrogen by soybeans, and improvement of the soil. 7. The soybean in mixed cultures and alternate rows: With corn, cowpeas, rice, sweet sorghum, or millet.

Part II: Chemical composition of the soybean. 1. Composition of the plant: Minerals in the leaves and total plant. 2. Study of the seed: Composition, chemical composition, microscopic comparisons, table of analyses by 28 previous researchers, albumins, sugars, starch, dextrin or dextrine, diastase, lipids, ash/minerals.

Part III: The soybean as human food and animal feed. 1. The soybean as feed for animals: Green forage and hay. 2. The soybean in human feeding: From the viewpoints of physiology, economy, and gastronomy. The role of soya in special diets: Vegetarianism, remineralization, diabetic, and lactose intolerant.

Part IV: Food products based on soya. 1. Soymilk and its derivatives: Soymilk (Methods of manufacture, Chinese and modern at l'Usine de la Caséo-Sojaïne, nature and properties [physical and chemical] and composition of the milk, action of ferments and diastases (enzymes) on the milk, uses of the milk, the residue from the soy dairy [okara], condensed soymilk, powdered soymilk, fermented soymilk (kefir, yogurt, etc.)), tofu (called Caséo-Sojaïne, or fromage de soya; methods of production, coagulants, yield of tofu, storing tofu, composition and comparison with various meats, digestibility, culinary preparations made from tofu (smoked tofu, tofu pâté, tofu sausages)), Soy casein (food and industrial uses). 2. Soy flour and its derivatives: Soy flour, soy bread, wholemeal bread, other products based on soy flour (as biscuits and cakes for diabetic diets). 3. Soy oil and its by-products: Soy oil, physical and chemical properties, usage, residue of the oil mill: the cake, price, uses. 4. Use of the soybean as a legume: Whole soybeans (composition and digestibility), soy sprouts (*germes de soja*), green vegetable soybeans (*le soja frais*). 5. Fermented soy condiments: Solid condiments from Japan: Tokyo natto (*Le Tokio-Natto*) and Ping-Ming natto or tao-tche (*Le Ping-ming-Natto;* fermented black soybeans with salt, ginger, orange rind, etc. A similar product is made in China and called tao-tche). Paste condiments: Miso (four types and composition), tao-tjung (Chinese miso). Sauces: Shoyu (its production, varieties, properties, composition), chiang-yu (*tsiang-yeou*), ketjap [kechap, from Java], tuong (from Annam, with rice or corn), tao-yu (widely used in China and Japan, described by Prinsen Geerligs). 6. Confectionery products: Comparison with chestnuts, roasted soy flour to replace chocolate. 7. Soy coffee (with analysis by Kornauth). 8. Special fermented products: Kiu-tsee (a special commercial ferment from Canton described by Thiersant), fermented soymilks.

Part V: Industrial uses of soybeans. Oil based: soap, wax candles (*bougie*), and paint oils. Protein based: sojalithe or soy stone which corresponds to lactite, insulators for electrical apparatus, glue, etc. Conclusion. Addendum (*Complément*) to Part III, Chapter 1: Soybean straw and stems. Composition of various seeds, including soybeans. Soy flour. The cakes from oil mills. Soymilk and the cake from soy dairies (*tourteau de laiterie*, okara).

A very interesting table (p. 66-67, which does not appear in the original 8 articles) shows earlier nutritional analyses of the composition of soybeans by Steuf (from Hungary, Mongolia and China), Schroeder, Caplan, Pellet (from China, Hungary, Etampes), Muntz, Nikitin (black soybeans from Russia, 2 samples), Lipski [Lipskii] (yellow, from Russia),
